Persley's Victoria. Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.14. Orthographic error for 'Pressley's Victoria', synonym for **Queen Victoria.**

Personality. *(C.japonica*), ACRS., 1988, *Camellia News*, No.107, p.10, Reg. No.359: Originated by Mrs Ellen M. Partridge, Macksville, NSW, Australia. A chance *C.japonica* seedling that first flowered 1982. The 9 cm across x 5 cm deep flowers are informal double to anemone form; medium pink, MHC.12A3, with variegated petaloids. Free flowering over a long period on a vigorous growing, dense plant. Leaves ovate, dark green and glossy, finely serrulate, acute apices, 9 cm long x 5 cm wide.

Personata. (*C.japonica*), Franco Agostoni, 1844, *Catalogo Plantarum Cesarei Regii Horti Modiciam;* van Houtte Catalogue, 1844-1845, 18:17. No description. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, vol.40, p.311: Flower 9-10 cm across, formal double to rose form double, clear cherry-red with a wash of rose and stripes of white. Petals, 5-6 rows, oval, thin, notched; exteror veined dull red, at the centre sometimes petaloids; a

little loosely imbricated. Originated in France. Orthographic errors: 'Personatum', 'Personnata'.

Pete Galli. (*C.reticulata* hybrid). ACS, *The Camellia Journal,* Aug. 1997, p.16, Reg. No.2431. A very large, cardinal red, semi-double cross of 'Crimson Robe' (**Damanao**) x **Mouchang.** Flowers early to late. Originated by Jack L. Mandarich, Grants Pass, Ore., USA. *American Camellia Yearbook*, 1997, p.6, colour photo before p.1. The 11 year old seedling first flowered in 1991. Average flower size is 14 cm across x 7.5 cm deep. Plant growth is upright, spreading and dense, with leaves 12 cm long x 7 cm wide.

Pete Scott. (*C.japonica*), ACS., Nov.1987, *The Camellia Journal*, vol.42, No.4, p.22, Reg. No.2062: Large, bright red, semi-double to peony form *C.japonica* chance seedling. Late blooming. Originated in USA by Mrs H.C. Scott, Aiken, South Carolina. *American Camellia Yearbook*,

1987, p.83, Reg. No.2062, colour photo between pp.60-61: The 17 year old seedling first bloomed 1976. Average flower size, 12.2 cm across x 7.5 cm deep with 22 petals, yellow anthers and filaments. Very cold hardy. Plant growth is upright and dense with dark green leaves, 8 cm x 4 cm.

Peter Betteley. *(C.hybrid).* ICS *Journal,* 2008, p.123 with colour photo; A cross of *C.japonica* **Bokuhan** x *C.hybrid* **Scented Sun** originated by Lee Stenning, Devon, UK from plants in the Betteley collection. First flowered 2004 at circa 8 years. A bushy shrub of slow growth rate. Flowers early. Anemone form with tightly incurving petaloids. Petals are red, petaloid/stamens light pink streaked white. Diameter 8 cm x 4 cm deep. Spent flowers fall whole.

Peter Francisco. (*C.japonica*), G.H.F., 1839, *Magazine of Horticulture*, 5:210: A vigorous growing plant with large, round, thick leaves, deep green; the buds are about the shape and colour of the old striped (**Variegata**); the flower also in shape and number of petals, anthers and stigma, like 'The striped' near the centre, though some flowers have little white; about 15 large petals and 5 smaller ones. A seedling of **Anemoniflora** originated by Gunnell, USA.

Peter Horeni. *(C.sasanqua). American Camellia Yearbook,* 2003, p.66, colour photo p.c4, Reg. No.2609. A seedling of **Narumigata,** pollen parent unknown, very fragrant, and white with pink outer bud petals and edges. Stamens and filaments are golden yellow. Heavy textured, recurved petals. Originated by Molly Barker, Filoli, Woodside, Calif., USA. Plant has a spreading, cascading habit, with vigorous to average growth. Flowers very early. The dark green leaves are 8.2 cm long x 5 cm wide. ACS, *The Camellia Journal,* Mar. 2004, p.24 with colour photo. Flowers measure 9.5 cm across.

Peter J. Hjort. (*C.japonica*), Doty el al., 1950, *American Camellia Yearbook*, p.241, black & white photo SCCS, 1950, *The Camellia. Its Culture and Nomenclature*, p.55: Pink with salmon undertone Medium large, semi-double. Vigorous growth. Early blooming. Fendig, 1951, *American Camellia Catalogue:* Medium, pink with salmon undertone, semi-double, 8-10 cm. across. The stamens are golden yellow, in a central, compact cluster. Leaves, medium dark green, long-elliptic, 10.5 cm x 4 cm. Long slender apex. Light green mid-rib. Sharp, shallow, wide serrations. An open rapid grower. Originated by Peter J. Hjort, Thomasville Nurseries, Thomasville, Georgia, USA from seed of unknown parents imported from China. Registration No.27 with the ACS.

Peter Nyce. Skinner, 1957, *American Camellia Yearbook.* Abbreviation for 'S. Peter Nyce', synonym for **Mikenjaku.**

Peter Pan. (*C.japonica*), SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Creamy white at the base, shading through blush pink to cerise pink at edge with definite orchid overtones. Large, semi-double to peony form. Medium, compact growth. Mid-season to late flowering. Originated by W.J. Robinson and C.J. Hayes, Norfolk, Virginia, USA. First flowered 1947. Registration No.66 with the ACS. See colour photo, pl.125, p.63, *Encyclopedia of Camellias in Colour*, vol.II, 1978.

Peter Reid. (*C.japonica*), *New Zealand Camellia Bulletin*, 1976, vol.IX, No.6, p.27, Reg. No.125: A chance seedling of **Bokuhan** which first flowered 1971. Originated by Mrs I Berg, Whakatane, New Zealand. Growth habit is open and upright. Flowers early to late. Foliage is small, pale green, 7cm x 3 cm. The flower is small, 8-9 cm across, with deeply notched petals and a tight central mass of petaloids and stamens. The colour is RHS.CC. Red Group, 51A.

Peter Woodroof. (*C.japonica*), SCCS., 1981, *Camellia Nomenclature*, p.127: Deep red. Large, semi-double with folded, upright centre petals. Vigorous, compact, upright growth. Originated by W. Woodroof, Sherman Oaks, California, USA.

Pete's Fragrant Pink. *(C.japonica),* ACS 1995, *The Camellia Journal,* vol.50, No.1, p.15, Reg. No.2312: Large size pink, with slight sheen. Subtle shading from darker edges; loose peony

form, *C.japonica* chance seedling. Blooms early to late. Originated by Peter Tedesco, Felto, California, USA. ACS 1995, *American Camellia Yearbook*, p.9 with colour photo: The 10 year old seedling first flowered 1986. Average flower size is 11 cm across x 10 cm deep with golden anthers and cream filaments. Bloom has strong fragrance on the plant. Plant growth is upright with dark green leaves 8 cm long x 5 cm wide.

Petiosa Rubra. (*C.japonica*), Cachet Catalogue, 1845-1846, p.7. No description. Originated in France. (Believed extinct.)

Petit Prince. *(C.hybrid),* Italian CS, *Notiziario,* 2008, No.1, p.10 with colour photo; A seedling of 'Rosa Simplex' **(Aitonia)** x **Coral Delight.** Semi-double, diameter 10 cm x 4 cm deep, 20 petals of elongated form, reticulate, margins entire, colour white at the centre shading to pink at the margins. 60-70 stamens in columnar form, filaments ivory, anthers gold, prominent pistil. Leaves 9.5 cm x 3.5 cm, lanceolate to ovate, apex acuminate, margin slightly serrulate. Raised by Osvaldo Buosi, Treviso, Italy, first flowered in 1998. Upright growth. Flowers mid-season to late.

Petite. (*C.japonica*), Robinson, 1950, *American Camellia Yearbook*, p.61: A seedling originated by Alice Miller, El Cajon, California, USA. A clear red, anemone with red petaloids, each with a white stripe in the centre. The colour is similar to **Bokuhan** but it opens to a flatter flower. Small to miniature.

Petite Boucalaise. *(C.japonica x C.fraterna). Jardins de France,* 1993, March, No.2, p.32. J.C. Rosmann, "Camélias du XXI 1/4; Siècle les objectifs de la recherché": Originated by J.C. Rosmann, Boucau, France from the cross *C.japonica* **Lady Vansittart** x *C.fraterna.* A small size flower, bell shaped, very floriferous and slightly perfumed. Rose coloured.

Petite Hartman. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* No description. Originated in USA. No valid listing located.

Petite Japoneis. (*C.japonica*), Isola Madre Catalogue, 1845 as 'Petitte Japoneis'. No description. (Believed extinct.)

Petite Rosine. (*C.japonica*), *American Camellia Yearbook,* 1973, p.194, Reg. No.1238: A 15 year old chance seedling that first bloomed 1960; originated by M.J. Witman, Macon, Georgia, USA. Plant growth is upright and rapid with dark green leaves, 6 cm x 3.2 cm. The formal double, blush pink bloom has 20 petals and blooms very early. It is a miniature measuring up to 4 cm across x 2.5 cm deep. A 'Sweetheart Rose' type with a prominent peak in the centre. Mid-season blooming.

Photenia. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.182. Abbreviation for **Photenia P.**

Photenia P. (*C.japonica*), May Nursery Catalogue, 1954. Description not seen. SCCS., 1964, *Camellia Nomenclature*, p.90: Pink, sometimes variegated with white. Large, semi-double. Medium, bushy growth. Blooms mid-season. Originated in USA by B. Johnson, Jacksonville, Florida. Abbreviation: 'Photenia'.

Phryne. (*C.japonica*), ACRS., 1978, *Camellia News*, No.70, p.16, Reg. No.211: Originated by Alice Spragg, Sutherland, N.SW, Australia. A seedling of 'Magnoliiflora', (**Hagoromo**) x 'Peachblossom', (**Fleur Dipater**) that first bloomed 1971. The open, upright, vigorous plant blooms early to late. The semi-double, delicate pink to silvery pink flowers are 10 cm across. The midgreen, 8.5 cm x 4.6 cm, acuminate leaves are finely serrate.

Phrynée. (*C.japonica*), Paugam et Blanchard, Oct.1884, *Revue Horticole*, p.450. No description. Louis Leroy Catalogue, 1896, p.61: 'Imbricated, rose.' Originated in France.

Phrynia. (*C.japonica*), Waterhouse, 1949, *Camellia Quest*, p.16. Camden Park seedling No.46/52. Originated in Australia by Sir William Macarthur in 1852, it was not distributed or described and is not identifiable. (Believed extinct.)

Phyl Doack. Ferreira & Celina, 2000, *O Mundo da Camélia*, p.128; Orthographic error for **Phyl Doak.**

Phyl Doak. *(C.saluenensis x C.reticulata*), Doak, 1958, *South Auckland Camellia Bulletin*, No.3, p.11: A large, (up to 12.5 cm) wavy, semi-double. Colour is Rose Bengal (HCC. 25/3) with reverses of outer petals somewhat darker (HCC. 25/2). About 18 petals in two whorls. Stamens old gold. Originated by Dr Brian Doak, Papatoetoe, New Zealand from the cross *C.saluenensis x C.reticulata* **Captain Rawes.** See colour photo, front cover, *New Zealand Camellia Bulletin*, vol.IV, No.2, 1965. Received RHS Highly Commended Certificate 21 April 1987. Orthographic error 'Phyl Doack'.

Phyl Doak Supreme. *(C.saluenensis x C.reticulata*), Harrison's Nursery Catalogue, 1966, p.26: A large, soft pink, semi-double, with outer petals somewhat darker. Splendid form, opening flat with the stamens, petaloids and petals standing out and giving depth to the flower. A companion seedling to **Phyl Doak.** Originated in NZ.

Phyl Shepherd. (C.*hybrid*), ACRS, 1985, *Camellia News.* No.95, p.20, Reg. No.329 with colour photo on rear cover: Originated by Maurice Harman, East Burwood. Victoria, Australia. A *C.cuspidata x* **Cinnamon Cindy** seedling that first flowered 1982. The semi-double to anemone, miniature, pale pink. shading to white flowers. bloom early to mid-season on a spreading plant with dull, deep green. 7.6 cm x 3.2 cm leaves, long-acuminate, finely serrate.

Phylippe I. Scarlatti Catalogue. 1856. Orthographic error for 'Philippe Ier', synonym for **Mexicana.**

Phyllis. (*C.reticulata). American Camellia Yearbook.* 1979, p.110, Reg. No.1564: A large. old rose. semi-double. *C.reticulata* chance seedling. mid-season flowering. Originated by Hubert H. Smith.

Yuba City, California, USA. The 23 year old seedling first bloomed 1972 and has 12-14 petals, yellow anthers and filaments. Average flower size is 11 cm across x 9 cm deep. The flower has loose, irregular, crinkled petals. Plant growth is upright, dense and medium with dark green leaves. 10.5 cm long x 6 cm wide.

Phyllis Austin. (*C.x williamsii). New Zealand Camellia Bulletin.* 1972, vol.VII, No.6, p.36, Reg. No.72: A chance seedling of *C.saluenensis*, regarded as a putative hybrid with *C.japonica.* Originated by B. Rayner, Stratford, New Zealand, that first bloomed 1966. It has open. spreading growth with light green leaves. 10 cm x 5 cm. The flower is formal double with up to 48 petals. 9 cm across x 4 cm high. Deep pink. Flowers mid-season.

Phyllis Cleland. (*C.reticulata* hybrid). *New Zealand Camellia Bulletin,* March 1993, Issue No.114, vol.XVIII, No.1, p.33, Reg. No.334: Originated by R.B. Cleland, Stratford, New Zealand. A chance seedling that first bloomed 1988. Growth habit upright, open and rapid in rate with dark green leaves 12 cm long x 5 cm wide. A semi-double flower coloured Rose Bengal with yellow anthers on white filaments. Size 14 cm across x 6 cm deep with 18 petals. Blooms mid-season. Flowers have prominent rabbit ears, heavy texture and sheen.

Phyllis Hunt. *C.reticulata* hybrid). ACRS, *Camellia News,* 1994, No.131, p.9: Bob Withers, "A Mother Superior". Seedling of *C.reticulata* hybrid **Suzanne Withers** x *C.japonica* **Mrs D.W. Davis Special.** Originated by John Hunt, South Croydon, Victoria, Australia. It is very large, 16.5 cm across, incomplete double in form, with a vivid pink bud opening to a pale pink flower with darker petal margins. As the flower ages the outer mauve pink remains, but the inner cyclamen pink fades to blush pink or white. Velvety petal texture. Some golden pollen is visible.

Physche. Ambroise Verschaffelt, 1853, Supplement to the Catalogue Général, p.10. von Biedenfeld, 1856. *Practische Grundelhren der Cultur von Camellien...,* p.21. Orthographic variant for **Psiché.**

Pia Marchi. (*C.japonica*), Linden Catalogue, 1875. No description. Mercatelli Catalogue, 1881: Large flower of perfect and regular form; petals large, bright red, some spotted, reflexed at circumference. A sport of **Pietro Bouturlin.** Originated in Italy by Cajoli of Leghorn.

Piacenziana. (*C.japonica*), von Biedenfeld, 1856, *Practische Grundelhren der Cultur von Camellien...*,p.50. No description. Originated in Italy by Borghi, Calciati. (Believed extinct.)

Pian Pian. (Fly, Fly) *(C.hybrid).* ACS, *Yearbook* 2012, p.55 with colour photo; Large, rose form double, Suzanne Withers x Kona. Photo shows white centre petals, outer petals pink with a fine white picotee edge. Originated by John Wang, Orinda, Calif., USA.

Pine Shell. Durrant, 1967, *New Zealand Camellia Bulletin*, vol.V, No.4, p.25. Western synonym for **Songzike** under the reading 'Sungtzuko'.

Pinetti. (*C.japonica*), van Houtte Catalogue, 1842, 9:56: 'Light Red'. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.11, as 'Pinettii': Good imbrication. Deep, orange red. Originated in Europe. (Believed extinct.)

Pinetti Major. (*C.japonica*), Charles van Geert Catalogue, 1845, p.11. No description; Charles van Geert, 1847, Catalogue, No.101, p.13: Deep red, rose form which reminds one of **Althaeiflora.** 1848, *Annotations:* Large, coral red, peony form. Originated in Belgium.

Pingban Dalicha. (Flat Petalled Dali Camellia), (*C.reticulata*), Ikeda, 1976, *American Camellia Yearbook*, p.139 as 'Pingbantalicha'. Feng et al. 1981, *Yunnan Shan Chahua*, p.60; (Japanese edition), pl.37, p.24, (Chinese edition) and p.48, *Yunnan Camellias of China*, 1986 as 'Pingbandalicha': Leaves elliptic to elliptic-ovate, apices short-pointed or acuminate and slightly recurved, bases obtuse or broad-cuneate, 6.5-9 cm long x 3.5-5.5 cm wide. Flowers dark red, (RHS.CC.53B-C), diameter 11-13 cm. Petals about 20 in 4-5 whorls, flat or slightly undulate, 1-2 inner whorls slightly curved, erect, margins notched. Stamens numerous, in one central group or divided into several groups by petals. Pistils mostly rudimentary. The leaf form of this cultivar is very similar to that of **Dali Cha** but smaller. The flower colour is deeper. Blooms early to mid-season. Originated in Dali, Yunnan, China. Synonyms: 'Flat Tali Camellia', 'Flat Petalled Tali Camellia', 'Flat Petalled Dali Camellia'. Different reading: P'ing-pan Ta-li-ch'a', 'P'ingpantalich'a'.

Pingguohua. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.416; Chinese synonym for the Japan to USA *C.wabisuke* **Shôwa-wabisuke** ('*C.saluenensis* Apple Blossom').

Ping-pan Ta-li-ch'a. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.24. Different reading for **Pingban Dalicha.**

Pinhung. Durrant, 1972, ACRS., *Camellia News*, No.45, p.3. Synonym for **Yipinhong.**

Pink. Loddige's *Botanical Cabinet*, vol.5, No.455, 1820. Synonym for **Middlemist's Red**. Orthographic variant: 'Pinck`.

Pink Ace. *(C.reticulata* hybrid) C.Aust., *Camellia News,* Autumn 2008, No.176, p.13, colour photo p.19, Reg. No. 577. Originated by Norm Prentice and registered by Judy Prentice, Garfield, Vic, Australia. A chance seedling that first flowered in 2000. The informal double flower has 20 petals and is deep pink (RHS.CC. 57C), has loose stamens, and is 14.5 cm across x 9 cm

deep. Heavy textured petals tend to stand upright. Flowers fall whole. Flowers mid-season to late on an upright, open, rapid growing plant. Leaves dark green, matt, keeled, lanceolate, broad, serrate, 13 cm x 5 cm.

Pink Alba Plena. Fruitland Nursery Catalogue, 1948-1949, p.30. Synonym for **Rose Dawn.**

Pink Alison. Ghislane, Pier Luigi, 1982, *Le Camelie*, p.77. Orthographic error for **Pink Allison.**

Pink Allison. (*C.sasanqua*), SCCS., 1960, *Camellia Nomenclature*, p.121: Shell pink. Small, formal double with 8 rows of petals and 2 small petaloids cupped over the centre. Originated in USA. Orthographic error: 'Pink Alison'.

Pink Amabilis. (*C.japonica*), Portland Camellia Nursery Camellia logue, 1947-1948, p.16: Single, light pink, with a circle of yellow stamens. Sport of **Amabilis Variegated.** Orthographic variant: 'Amabilis Pink'.

Pink Amplissima. *(C.japonica),* Fratelli Rovelli, 1852, Catalogue, p.25: Large, well made pink. Originated in Italy.

Pink and Rose Waratah. Hovey, ed., 1838, *Magazine of Horticulture* as 'Pink and Rose Warratah'. Synonym for **Franklini.**

Pink Boquet. (*C.x williamsii*), SCCS., 1981, *Camellia Nomenclature*, p.198. Orthographic error for **Pink Bouquet (Monrovia).**

Pink Bounty. *(C.x williamsii).* ACRS, *Camellia News,* Autumn 2005, No.167, p.18, colour photo p.19, Reg. No.560. Originated by Neil D. Saltmarsh, Warragul, Vic., Australia. Seed parent *C.x williamsii* **Donation,** pollen parent unknown. A semi-double, delicate pink (RHS.CC.56C-56D), cup-shaped flower of 15 petals, 13.5 cm diameter x 5.5 cm deep. Colour fades to base of petals. Petals notched. Flowers freely over a long season on an upright, bushy plant of rapid growth. Leaves dark green, glossy, flat, narrowly elliptic, acute apex and base, fine serrations, 11 cm long x 4 cm wide. When in full bloom, plant displays a weeping form.

Pink Bouquet. (*C.japonica*), SCCS., 1974, *Camellia Nomenclature*, p.120: Rose pink. Medium rose form double. Medium, compact, upright growth. Blooms mid-season to late. Originated in USA by Hudson.

Pink Bouquet (Monrovia). (*C.x williamsii*), Monrovia Nursery Catalogue, 1975, invalidly and erroneously as 'Pink Boquet'; SCCS., 1981, *Camellia Nomenclature*, p.198: Light rose-pink fluorescent petals. Medium to large semi-double. Blooms mid-season. Raised by Monrovia Nurseries, Azusa, California, USA, as a seedling of *C.japonica* **Pink Parfait** x *C.saluenensis.* Chinese synonym: 'Fendong'.

Pink Briar. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Synonym for **Briar Rose**.

Pink Brooklynia. Gerbing Azalea Gardens Catalogue, 1945. Synonym for **Dixie.**

Pink Bud. (*C.sasanqua*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.257: Soft pink, single. Originated in USA.

Pink Butterfly. (*C.sasanqua*), Camellia Forest Nursery Catalogue, 1988, p.5: Pink, single. Strong grower. Ibid. 1990, Catalogue, p.5: Bright pink, single, very large flower, blooms early to midseason; (Oct to Nov.) vigorous grower. Formerly CF-17. Originated in USA by Dr Clifford Parks, Chapel Hill, North Carolina.

Pink Butterfly. (*C.japonica*), SCCS., Bulletin, vol.11, No.2, p.17, 1949. No description. SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.55: Light pink edged white. Medium size, cup-shaped, semi-double. Vigorous, upright growth. Mid-season blooming. Originated in the USA by Coolidge Rare Plant Gardens. See black and white photo, p.278, Hertrich, *Camellias in the Huntington Gardens*, vol.II, 1955.

Pink Butterfly. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Synonym for **Fenhudie**.

Pink Butterfly Wings. SCCS., 1982, *The Camellia Review*, vol.44, No.1, p.18. Western synonym for **Yinhong Diechi.**

Pink Calusant. Magnolia Gardens and Nursery Catalogue, 1942-1943. Orthographic error for **Pink Calusaut.**

Pink Calusaut. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1942-1943 erroneously as 'Pink Calusant': A pink sport of Madame Marguerite Calusaut. Originated in the USA at Magnolia Gardens, John's Island, South Carolina. Synonyms: 'Madame Marguerite Calusaut Pink', 'Mme Marguerite Calusaut Pink', 'Pink Marguerite Calusaut'. Orthographic errors: 'Madame Calusant Pink', 'Marguerite Calusant Pink', 'Madame M. Calusant Pink', 'Mme Marguerite Calusant Pink'.

Pink Cameo. (*C.pitardii* hybr.), ACRS., 1977, *Camellia News*, No.66, p.27, Reg. No.198, colour photo, p.4: Originated by E.R. Sebire, Wandin North, Victoria, Australia. Seed parent C.*pitardii* var *pitardii.* First flowered 1974. The upright, dense plant produced 10 cm across, double, informal, saluenensis pink flowers with a silver overcast. Flowers mid-season to late. The light green, 7.5 cm x 3.7 cm, lanceolate leaves are acuminate with tapering base.

Pink Cascade. (*C.x williamsii*), *New Zealand Camellia Bulletin*, 1965, vol.IV, No.2, p.29, Reg. No.24: A hybrid seedling *C.saluenensis x C.japonica* **Spencer's Pink;** raised by B.J. Rayner, Stratford,

New Zealand. The plant has a low growing, weeping habit. It is very floriferous with multiple buds at terminal and leaf axils. The pale pink flowers are single with 6 petals, 5 cm across x 2.5 cm deep. Chinese synonym: 'Xiaofenpu'.

Pink Catherine Cathcart. (*C.japonica*), Fruitland Nursery Catalogue, 1946-1947, p.29: A solid pink form of **Catherine Cathhcart.** Medium size, formal double. Blooms mid-season to late. Originated in USA by Fruitland Nurseries, Augusta, Georgia.

Pink Chablis. (*C.reticulata* hybr.), *American Camellia Yearbook*, 1977, p.218, Reg. No.1418: A very large, light rose-pink, semi-double, 12 year old seedling of *C.reticulata* hybrid x **Buddha,** that first bloomed 1964. Originated by Alton B. Parker, Sebastopol, California, USA. The semi-double, Frizzle White type, bloom is light rose-pink with 17 petals, 4 petaloids and yellow anthers and filaments; size 13 cm across x 8 cm deep. Each petal is heart shaped, mixed with petaloids and stamens. Blooms mid-season. Growth is upright, open and rapid with dark green leaves, 11 cm long x 5 cm wide.

Pink Champagne. (*C.japonica*), ACS., 1952, *Quarterly*, No.4; *American Camellia Yearbook*, 1954, p.328, Reg. No.130: A 10 year old seedling of unknown parentage, originated by J.P. Illges, Columbus, Georgia, USA that first flowered 1951. Plant growth is open and rapid, with large, dark green, slightly serrate leaves. The flower is an incomplete double with large petaloids, 28-32 petals produce a full flower up to 13 cm across x 9 cm deep. Its colour is soft pink. Late blooming. Received an RHS., Award of Merit in 1960. Sport: **Pink Champagne Variegated.**

Pink Champagne Variegated. (*C.japonica*), SCCS., 1960, *Camellia Nomenclature*, p.91, as 'Pink Champagne Var.': A virus variegated form of **Pink Champagne** - Soft pink blotched with white. Originated in USA. Received an RHS., Award of Merit in 1960.

Pink Chandleri. Magnolia Gardens & Nursery Catalogue, 1942-1943. Synonym for **Elegans.**

Pink Chandleri Elegans. Vanderbilt, 1941, *Camellia Research, II*, p.6. Synonym for **Elegans.**

Pink Chapeau. (*C.japonica*), Tanaka et al., 1981, 'Studies on the Flower Colour of Camellias, II; *Memoirs of the Faculty of Agriculture, Kagashima University*, vol.XVII, p.90. No description. No valid listing located. Originated in Japan.

Pink Cherry. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.183. No description. Originated in USA. No valid listing located.

Pink Chiffon. *(C.japonica),* ACS, *The Camellia Journal*, Dec. 2005. p.28, with colour photo p.29, Reg. No. 2665. A chance seedling that first flowered in 1994. Originated by C.M. and Lillian Gordy, Ocala, Fla., USA. A 9.5 cm diameter, clear pale pink, formal double flower. Plant is upright and dense with slow growth rate. Flowers mid-season. *American Camellia Yearbook*, 2005, p.46, with colour photo p.c7. Dark green leaves are 10.8 cm x 5 cm.

Pink Chrysanthemum Petal. Feng et al., 1986, *Yunnan Camellias of China*, p.166. Synonym for **Fentongcao.**

Pink Clear. Vanderbilt, 1941, *Camellia Research, II*, p.6. Synonym for **Mathotiana Rosea.**

Pink Clouds. (*C.japonica*), *American Camellia Yearbook*, 1953, p.78, illustr, p.77: (Seedling of **Elegans**). A large petalled affair of creamy white, sparsely speckled pink. A high, semi-double with many waved petals. As the flower ages it takes on a lavender cast. The plant has dark green leaves. Synonym: 'Pink Clouds Pale Pink'. Received the 'Margarete Hertrich Award' in 1953 from the SCCS. See colour photo facing p.178, *American Camellia Yearbook*, 1955. Chinese synonym 'Fenyun'.

Pink Clouds Pale Pink. Mark S. Cannon Scion Catalogue, 1962, p.8. Synonym for **Pink Clouds.**

Pink Countess of Orkney. Lindo Nursery Price List, 1941-1942. Synonym for **Countess of Orkney Rosea.**

Pink Crepe. (*C.pitardii* hybrid). ACRS, *Camellia News*, 1994, No.131, p.7, Reg. No.436, colour photo p.2: Originated by Marjorie Baker, Macleod, Victoria, Australia as a chance seedling of the *C.pitardii x C.fraterna* hybrid **Snow Drop.** First flowered 1992. Single flower of 8 petals, very pale pink (RHS.CC.36D) at the margins, 4 cm across x 2 cm deep, scented. Flowers freely in clusters, early to mid-season on a slow growing, weeping plant. Leaves glossy dark green, flat, elliptical, apices acute, serrulate, 6 cm long x 3.3 cm wide. Petals notched and creped. Stamens columnar with occasional petaloid.

Pink Crepe de Chine. (*C.reticulata*), ACS., Feb.1989, *The Camellia Journal*, vol.44, No.1, p.12, Reg. No.2112: A very large, light rose-pink with a white efflorescence, semi-double *C.reticulata* chance seedling of 'Shot Silk' (**Dayinhong**). Blooms mid-season. Originated by Houghton S. Hall, San Anselmo, California, USA. *American Camellia Yearbook*, 1989, p. 126: The 11 year old seedling first bloomed in 1984. Average flower size is 15 cm across x 6 cm deep with 13 petals, 12 petaloids, golden anthers and cream-white filaments. The flowers are creped, crinkled and moired; central petals are rabbit eared and stand straight up. Plant growth is open and rapid with dark green leaves measuring 11 cm long x 5 cm wide.

Pink Crane. Yashiroda, 1950, *American Camellia Yearbook*, p.14. Synonym for **Benizuru.**

Pink Crickett. Vanderbilt, 1941, *Camellia Research, II*, p.6. Synonym for **Akashigata** as 'Empress'.

Pink Crockett. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.183. Synonym for **Akashigata** as 'Empress'

Pink Cup. (*C.japonica*), Elliot's Nursery Catalogue, 1946: Pink, medium size, single of cupped form. Originated in USA by Elliot's Nursery, San Jose, California.

Pink Cup of Beauty. Camellia Grove Nursery Catalogue, 1944. Synonym for **Madame de Cannart d'Hamale.**

Pink Czar. Chandler Nursery Catalogue, 1936, p.5. Synonym for **Spencer's Pink.**

Pink Dahlia. (*C.x williamsii*), *American Camellia Yearbook*, 1981, p.104, Reg. No.1707: A small, lavender pink, double dahlia form, *C.saluenensis* hybrid chance seedling with slender, pointed petals that blooms mid-season to late. Originated by the Kramer Bros. Nurseries, Upland, California, USA. Plant growth is straight and upright with small, narrow, serrated leaves. See colour photo, *New Zealand Camellia Bulletin*, vol.XV, No.2, p.18, 1987. Sport: **Pink Dahlia Variegated.**

Pink Dahlia Variegated. (*C.x williamsii*), *American Camellia Yearbook*, 1983, p.164, Reg. No.1879 as 'Pink Dahlia Var.': A small, lavender pink blotched white, double dahlia form, *C.saluenensis* hybid seedling, mid-season to late, originated by Kramer Bros. Nursery, Upland, California, USA. Plant growth is straight and upright with small, very slim, serrated leaves.

Pink Daikagura. Magnolia Gardens & Nursery Catalogue, 1946-1947; Fruitland Nursery Catalogue, 1946-1947. Synonym for **High Hat.**

Pink Dauphin. (*C.sasanqua*), Magnolia Gardens & Nursery Catalogue, 1951-1952: Pink, single. Medium small leaves, dense, compact growth. Originated in USA.

Pink Davis. (*C.chimaera*), *American Camellia Yearbook*, 1962, p.223, colour photo facing p.212: A graft mutation or chimaera of **Mrs D.W. Davis** and **J.C. Williams** on 'Colonel Firey', (**C.M. Hovey**) understock, first bloomed 1956. Plant growth is dense and medium with dark green leaves, 9 cm x 5.5 cm. The flowers are a light pink with a salmon cast, 10-12.5 cm across x 6-7 cm deep; semi-double, similar to **Frizzle White;** with yellow stamens. Bloom has 14-16 large, outer petals with a few smaller, inner petals, occasional rabbit ears and petaloids. Blooms midseason. Originated by O.D. Edge, Columbus, Georgia, USA. Sport: **Pink Peony Davis.**

Pink Davis Peony. SCCS., 1966, *Camellia Nomenclature*, p.106. Orthographic variant for **Pink Peony Davis.**

Pink Dawn. (*C.japonica*), Valley Garden Supplies Catalogue, 1946-1947; McIlhenny Catalogue, 1946--1947, p.10: Medium to large, formal double, light pink tinged deeper apricot. Petals recurved, scalloped and very even. First flowered 1934. Leaves glossy green, elliptic, 7.5 cm x 3.8 cm. Apex short, blunt acute, base tapered, venation impressed, finely serrate, reflexed. Plant has hardy, medium, open growth. Blooms early to mid-season. Originated by Clarence S. Hearn, Arcadia, California, USA from a seedling of the cross **Cheerful** x **Daikagura.** Synonyms: 'Dawn Pink', 'Hearn's Pink Dawn'.

Pink Delight. (*C.reticulata*), ACRS., 1971, *Camellia News*, No.43, p.34, Reg. No.136: Originated by Edgar R. Sebire, Wandin North, Victoria, Australia from seed of unknown parents obtained from USA. First flowered 1969. The plant has an open, upright, vigorous growth habit; blooming mid-season with 16 cm. across, semi-double, fuchsine pink flowers. The olive green, reticulate leaves are 10-11 cm long x 5 cm wide with acuminate apices, obtuse bases and margins sharply serrated. Synonym: 'Early Pink Delight`.

Pink Diamond. *(C.hybrid). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan)*, 2010, p.283 with colour photo; Large, deep pink, peony form. Flowers early. Leaves elliptic, medium size. Upright growth. A cross of (**Narumigata** x *C.granthamiana*) x 'Crimson Robe' (**Dataohong**). Originated by Kazuo Yoshikawa, Osaka, Japan, named and released by Yoshiro Yoshikawa in 2009.

Pink Diddy. (*C.japonica*), Mealing, 1950, *American Camellia Yearbook*, p.130: A pink sport has appeared (on **Diddy Mealing**) and has been registered as **Pink Diddy**, the description of which is the same as for **Diddy Mealing** except for the colour. The colour is dawn-pink (Royal Horticultural Society Colour Chart). The petals have a distinctly darker margin which appears as feather stitching. SCCS., 1951, *The Camellia. Its Culture and Nomenclature:*- A sport of **Diddy Mealing** - dawn pink with veins and margins of deeper pink, 11.5 cm. across; buds long and pointed. Sport first observed by Dr & Mrs H.C. Mealing, North Augusta, South Carolina, USA. Registration No.82 with the ACS. Synonym: 'Pink Diddy Mealing'. See colour photo, front cover, 1973, *New Zealand Camellia Bulletin*, vol.VIII, No.l.

Pink Diddy Mealing. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.110. Synonym for **Pink Diddy.**

Pink Doll. (*C.japonica*), *American Camellia Yearbook*, 1972, p.134, Reg. No.1184: A 10 year old chance *C.japonica* seedling that first bloomed 1964; originated by Ted Alfter, Bakersfield, California, USA. Plant growth is average, open and medium with light green leaves, 10 cm x 5 cm. The formal double bloom is light salmon pink, with 60-70 petals, 6-6.5 cm across x 3.7 cm deep. Midseason flowering. Chinese synonym 'Fenwawa'.

Pink Dotchess. Wheeler's Central Georgia Nurseries Catalogue, 1954-1955, p.6. Orthographic error for 'Pink Duchess' (**Duchess of Sutherland Pink**).

Pink Dove. Mark S. Cannon Scion Catalogue, 1963-1964, p.12. Orthographic error for **Pink Doves.**

Pink Dove Variegated. Mark S. Cannon Scion Catalogue, 1963-1964, p.12 as 'Pink Dove Var'. Orthographic error for **Pink Doves Variegated.**

Pink Doves. (*C.x williamsii*), Gerbing Camellia Nursery, 1963, ACS., *The Camellia Journal*, vol.18, No.4, inside rear cover; Hilsman, 1966, *American Camellia Yearbook*, p.122: Raised by Howard Asper, Escondido. California, USA from *C.saluenensis x C.japonica* **Finlandia.** Sport: **Pink Doves Variegated.**

Pink Doves Variegated. (*C.x williamsii*), Cannon, 1963, ACS., *The Camellia Journal*, vol.18, No.5, p.28 as 'Pink Doves Var.' A virus variegated form of **Pink Doves** - Pink blotched white. Originated in USA.

Pink Double. (*C.sasanqua).* Vanderbilt, 1940, *Camellia Research*, p.6. No description. Originated in USA. (Believed extinct.)

Pink Dream. (*C.japonica*), *American Camellia Yearbook*, 1959, p.279, Reg. No.392: A 7 year old *C.japonica* seedling, originated by Truesdale Nursery, West Columbia, South Carolina, USA that first bloomed 1957. Plant growth is open, upright and rapid with dark green leaves, 8 cm x 5.5cm. The anemone form flowers are a light, purplish pink (Nickerson chart 5 RP 8/5), average 8 cm across x 3.7 cm deep with 16 petals, 6 large and numerous small petaloids, and white stamens. Flowers early through mid-season.

Pink Duc d'Orleans. Whitfield, 1945, *Camellias. The Alluring Floral Gem*, p.3. Synonym for **Stardust.**

Pink Duchess. Hillcrest Nursery Catalogue, 1958. Abbreviation for 'Pink Duchess of Sutherland', orthographic variant for **Duchess of Sutherland Pink.**

Pink Duchess. (*C.x williamsii*), Wheeler Central Georgia Nurseries Catalogue, 1954-1955, p.6 as 'Pink Dochess'; Ben Rayner, 1973, ACRS., *Camellia News*, No.50, p.2. No description. Originated by John R. Sobeck, California, USA.

Pink Duchess of Sutherland. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Orthographic variant for **Duchess of Sutherland Pink.**

Pink Duplex. (*C.japonica*), Vanderbilt, 1941, *Camellia Research, II*, p.7: Double, pink. Originated in USA.

Pink Duchess Variegated. Hillcrest Nursery Catalogue, 1958. Synonym for **Ruth Royer.**

Pink E. Franchetti. Thomasville Nursery Catalogue, 1942, p.10. Abbreviation for 'Eleonora Franchetti Pink'.

Pink Eighteen Scholars. Savige, 1983, *International Camellia Journal*, No.15, p.47. Synonym for **Fenshiba Xueshi.**

Pink Eleanora Franchetti. Thomasville Nursery Catalogue, 1941, p.13 as 'Pink Eleanor Franchetti'. Orthographic variant for 'Eleonora Franchetti Pink'.

Pink Elegance. (*C.japonica*), Gambles Nursery Catalogue, 1948, p.8: A single pink of great beauty with golden stamens. Originated at Rookwood Cemetery, N.SW, Australia.

Pink Elegans. Magnolia Gardens and Nursery Catalogue, 1945. A synonym for **Elegans.** This name arose as the variegated form had invalidly usurped the name **Elegans.**

Pink Elephant. (*C.japonica*), Gentry, 1967, ACS, *The Camellia Journal*, vol.22, No.5, p.28. No description. *American Camellia Yearbook*, 1968, p.135, Reg. No.1002: A 5 year old chance seedling that first flowered 1963; originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is upright and medium with light green leaves, 13 cm. x 5.5 cm. The loose, semi-double flower is 14-15 cm. across x 8 cm deep with 18 petals. Clear pink with orchid undertones, golden anthers and white filaments; crinkled centre petals, upright and folded. Blooms early through mid-season. Sport: **Pink Elephant Variegated.**

Pink Elephant Variegated. (*C.japonica*), Haynie, 1969, ACS., *The Camellia Journal*, vol.24, No.4 as 'Pink Elephant Var.': a virus variegated form of **Pink Elephant** - Clear pink blotched white. Originated by J.M. Haynie, Theodore, Alabama, USA.

Pink Elizabeth. Gerbing Azalea Gardens Catalogue, 1943. Orthographic variant and error for **Elisabeth Pink.**

Pink Elizabeth Arden. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1942-1943: Solid rose-pink sport of **Elizabeth Arden**. Originated in USA. Orthographic variant: 'Elizabeth Arden Pink'.

Pink Emperor. (*C.japonica*), Haskins Bros. Nursery Catalogue, 1954: Bright pink. Medium size, semi-double. Originated in England.

Pink Explorer. (*C.japonica*), *American Camellia Yearbook*, 1958, p.290, Reg. No.328: A 7 year old seedling of **Elegans**; originated by Mrs George Shealy, Leesville, South Carolina, USA. Plant growth is rapid, dense and spreading with slightly wavy leaves, 12.5 cm long x 6 cm wide. The flowers are 12.5 cm across x 6 cm deep and resemble **Elegans** in form. There are 12-15 petals and about 50 large and small petaloids and yellow stamens. The colour ranges from pink to rose, with darker rose venation. Petaloids are white or variegated. Blooms early. See colour photo facing p.146, *American Camellia Yearbook*, 1959. Sport: **Pink Explorer Variegated.**

Pink Explorer Variegated. (*C.japonica*), Cannon, 1962, ACS., *The Camellia Journal*, vol.17, No.1, back cover as 'Pink Explorer Var.': a virus variegated form of **Pink Explorer** - Pink to rose blotched white. Originated in USA.

Pink Hikarugenji. Lindo Nursery Price List, 1940-1941. Synonym for **Benibotan.**

Pink Ice. (*C.japonica*), Wylam, 1950, *American Camellia Yearbook*, p.32: Seedling of 'Amabilis' (**Yukimiguruma**) x 'Lotus' (**Gauntlettii**). A vigorous, open grower with large leaves, it has medium size, single blooms of clear, cool pink, tinted lavender and displays a cluster of golden stamens. Originated in USA by Harvey Short, Ramona, California. Orthographic error: 'Pink Icing'.

Pink Icicle. (*C.oleifera* Hybr.), Ackerman, 1987, ACS, *The Camellia Journal*, Feb. vol.42, No.1, pp.17, 27 with black and white photo, Reg No.2034: (80-327). A hybrid of *C.x williamsii* **November Pink** *x* C.*oleifera* (PI.162475). It has withstood two winters outdoors at Ashton, Maryland, USA without injury when exposed to temperatures of 5-8º F. The flowers are peony form, 11 cm across x 6 cm deep with 15 petals and 14 petaloids, shell pink, midseason flowering. The plant is upright, dense, medium growth rate with dark green leaves, 9.5 cm x 4.5 cm. Originated by Dr W.L. Ackerman, Maryland, USA. Chinese synonym 'Fenbing'.

Pink Icing. Hillier Arbotetum, 1987, 'Hampshire County Council List', p.4. Orthographic error for **Pink Ice.**

Pink Imperfection. (*C.japonica*), Rubel Longview Nursery, 1939, 'Winter Hardy Camellias', Price List No.77, p.28: A descriptive name to explain its poor habit of failing to open the numerous flower buds. Origin unknown.

Pink Imura. (*C.japonica*), SCCS., 1954, *The Camellia. Its Culture and Nomenclature*, p.72: Light rose-pink. Large, semi-double. Vigorous, upright growth. Early to mid-season blooming. Originated in USA by May.

Pink Informal Number 2. Camellia Grove Nursery Catalogue, 1945, p.6 as 'Pink Informal No.2. Synonym for **Begonia.**

Pink Incomplete Pendula. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...,* Chen Junzhi and Chen Jinshui, p.47; Incomplete petal group, pink flower with white veins, micro-flora, mid-folia, ovate to elliptic leaves.

Pink Jade. Feng et al. 1981, *Yunnan Shan Chahua,* p.31. Synonym for **Fenyu.**

Pink Jade. (*C.japonica*), *American Camellia Yearbook*, 1981, p.104, Reg. No.1688: A large, blush pink, semi-double, *C.japonica* **Bertha Harms** chance seedling that blooms mid-season to late. Originated by Harold L. Paige, Lafayette, California, USA. The 15 year old seedling first bloomed 1965. Average flower size is 11 cm across x 7 cm deep with 15 petals, golden anthers and creamy filaments. Plant growth is upright, open and medium with dark green leaves, 8 cm long x 5.5 cm wide. For colour photo see p.110, Macoboy. 1981, *The Colour Dictionary of Camellias.*

Pink Jeanerette. Lindo Nursery Retail Price List, 1946. Orthographic variant for 'Jeanerette Pink', synonym for **Rubra Virginalis.**

Pink Jewel. (*C.japonica*), *American Camellia Yearbook*, 1973, p.194, Reg. No.1248: A 15 year old chance japonica seedling that first bloomed 1962. Originated by Ted Alfter, Bakersfield, California, USA. Plant growth is upright and average with dark green leaves, 10 cm long x 5 cm wide. The flower is formal double, rose-red; no anthers, filaments or petaloids. It has 50-60 petals and measures 10 cm across x 3.8 cm deep. Blooms are variable, solid colour and variegated blooms on the same plant. Flowers mid-season to late.

Pink Jewel. Feng et al., 1986, *Yunnan Camellias of China*, p.165. Synonym for **Taohong Baozhu.**

Pink Jordans Pride. SCCS., 1946, *Camellias*, p.17. Synonym for **Benibotan.**

Pink Kagura. Chûgai Nursery Catalogue, 1936-1937. Synonym for **Benidaikagura.**

Pink Lace. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Hishikaraito.**

Pink Lace. (*C.japonica*), Nuccio's Nurseries Catalogue, 1988-1989: #8307. Blush pink. Medium to large, anemone to peony form. Long blooming season. Medium to upright growth. Originated by Nuccio's Nurseries, Altadena, California, USA. This cultivar has been registered with the ACS., as Nuccio's Pink Lace, See *American Camellia Yearbook*, 1989, p.126.

Pink Lacy. Vanderbilt, 1940, *Camellia Research*, p.6. Synonym for **Hishikaraito.**

Pink Lady. Vanderbilt, 1941, *Camellia Reseach, II*, p.7. Synonym for **Lady Loch.** Erroneously used as a synonym for **Paeoniiflora.**

Pink Lady (California). SCCS., Bulletin, vol.11, No.2, p.17, 1949. No description. SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.70. Synonym for **Lady Loch.**

Pink Lady (South). SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.70: Deep pink. Medium, semi-double of trumpet form. Late blooming. Originated by Florida L. & N. Co., Florida, USA.

Pink Lady Vansittart. Peer, 1950, NCCS., *Bulletin*, 4(1):3. as 'Pink Lady Van Sittart'. Orthographic variant for **Lady Vansittart Pink.**

Pink Lassie. (*C.sasanqua*), *American Camellia Yearbook*, 1954, p.328, Reg. No.162: A 12 year old seedling of unknown parentage, originated by Hugh Shackelford, Albany, Georgia, USA that first flowered 1949. Plant growth is upright and rapid with small, pointed leaves. Flower buds like a rose-bud, medium pink in colour. Flower, 7.5-8 cm across with 50 or more petals, similar to **Mine-no-yuki.** Colour of flower, light pink. Early flowering.

Pink Laurel Leaf. Valley Garden Supplies Catalogue, 1946-1947. Synonym for **L'Avvenire.**

Pink Leda. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.184. Synonym for **Wedding Pink.**

Pink Lotus. (*C.japonica*), Nuccio's Nurseries Catalogue, 1948-1949, p.9: Pink. Medium sized, semi-double. Originated in USA by Harvey Short, Ramona, California.

Pink Madonna. Clarke Nursery Catalogue, 1949. Synonym for **Madona Rosea.**

Pink Magic. (*C.japonica*), *American Camellia Yearbook*, 1965, p.244, Reg. No.804: A 9 year old chance seedling that first bloomed 1959. Originated by Hyde Park Nurseries, Jacksonville, Florida, USA. Plant growth is rapid with dark green leaves, 10 cm x 6 cm. The loose, peony form flower, 14-15 cm across x 7.5 cm deep, has a formation similar to **Tomorrow,** with heavy textured petals. Colour is rose-pink with a silky sheen. Blooms mid-season.

Pink Magnolia. Feng et al., 1986, *Yunnan Camellias of China*, p.163. Synonym for **Fenyulan.**

Pink Marguerite Calusaut. Magnolia Gardens and Nursery Catalogue, 1952-1953. Synonym for **Pink Calusaut.**

Pink Marquise d'Exeter. Gerbing Azalea Gardens Catalogue, 1943-1944. Orthographic variant for **Marquise d'Exeter Pink.**

Pink Masterpiece. Gentry, 1967, ACS., *The Camellia Journal*, vol.22, No.5, p.28. Orthographic variant for **Masterpiece Pink.**

Pink Monte. (*C.japonica*), SCCS., 1947, *The Camellia*. *Its Culture and Nomenclature:* A pink sport of 'Monte'. Medium size, rose form double. Mid-season blooming. Originated in USA. Orthographic variant: 'Monte Pink'.

Pink Moon Goddess. Synonym for **Fenchang'e Cai.**

Pink Morning Cloud. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.11. Synonym for **Fenzhaoyun.**

Pink Mrs A. Wilder. Vanderbilt, 1941, *Camellia Research*, *II*, p.7. Synonym for **Mrs Abby Wilder.**

Pink Nobilissima. Vanderbilt, 1941, *Camellia Research, II,* p.7 as 'Pink Nobilis.'. Synonym for **Nobilissima Rosea.**

Pink Ojiao. Goff et al., Feb.1989, ACS., *The Camellia Journal*, vol.44, No.1, pp.16, 17. Synonym for **Fenejiao.**

Pink Paeoniaflora. Lindo Nursery Price List, 1947. Synonym for **Lady Loch.**

Pink Paeony. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.184. Synonym for **Peony Pink.**

Pink Pagoda. (*C.japonica*), *American Camellia Yearbook*, 1965, p.244, Reg. No.759: A 10 year old seedling of **Pink Star** that first bloomed 1957. Originated by Robert D. Moore, Los Gatos, California, USA. Patented variety No.2257. Plant growth is vigorous, compact and upright. The formal double flower, 11 cm across x 4.5 cm deep, is Neyron Rose, (RHS.CC., 623/1), veined deeper. Blooms mid-season. Sports: **Pink Frost, Pink Pagoda Variegated**. See Colour photos: Front cover, SCCS, 1965, *The Camellia* Review, vol.27, No.1. Front cover, 1982, ACRS., *Camellia News*, No.83. ACS., 1967, *The Camellia Journal*, vol.20, No.4, p.9. Chinese synonym 'Fenbaota'.

Pink Pagoda Variegated. (*C.japonica*), Gentry, 1967, ACS., *The Camellia Journal*, vol.22, No.5, p.28 as 'Pink Pagoda Var,': a virus variegated form of **Pink Pagoda** - Neyron Rose blotched white. Originated in USA.

Pink Parade. (*C.japonica*), *American Camellia Yearbook*, 1974, p.173, Reg. No.1275: A 3 year old chance seedling of **Mrs Freeman Weiss** that first flowered 1969. Originated by E.D. Hudson, Hemet, California, USA. Plant growth is upright and medium with dark green leaves, 8 cm x 7 cm. The semi-double type bloom is light rose madder with 26-36 petals, yellow anthers with cream filaments. Mid-season blooming.

Pink Parasol. *(C.sasanqu),* ACS, Yearbook, 2013, p.132 with colour photo; Regn No.2910; Originated and registered by C.M. and Lillian Gordy, Ocala, Fla., USA, and propagated by Loch Laurel Nursery, Valdosta, Ga. An 11 year old seedling, parentage unknown, first flowered 2008. Medium size, 9cm diameter x 3.8cm deep, flower is single with 8 petals. Soft pink with bright gold anthers and pink filaments. Upright, vigorous plant. Dark green leaves average 5cm x 2.5cm with medium serration. Flowers early.

Pink Palace. Savige, 1983, *International Camellia Journal*, No.15, p.46. Synonym for both *C.japonica* **Gongfen** and *C.reticulata* **Gongfen**. (Feng et al. 1986).

Pink Parfait. (*C.japonica*), *American Camellia Yearbook*, 1961, p.229, Reg. No.521: An 11 year old seedling of 'Celtic Rosea' (**Semi-double Blush**), originated by Earl Hudson, Sun Valley, California, USA that first bloomed 1956. Growth habit, rapid, dense and upright with dark

green leaves, 10 cm x 5.5 cm. The soft pink, semi-double flowers, similar to 'Lotus', (**Gauntlettii**), are 11 cm across x 5.5 cm deep with 12-14 petals and yellow stamens. Flowers mid-season.

Pink Passion. (*C.japonica*), ACS, 1961, *The Camellia Journal*, vol. 16, No.2, p.32. No description. *American Camellia Yearbook*, 1962-1963, p.223, Reg. No.614: A 6 year old chance seedling that first bloomed 1959, originated by J.T. Weisner, Fernandina Beach, Florida, USA. Growth habit is upright, dense and rapid with light green leaves, 9.5 cm long x 4.5 cm broad. The semi-double, pink flower is 12 cm across x 6 cm deep with 16-20 petals, 2-3 petaloids and cream stamens. Flowers early through mid-season. Sport: **Pink Passion Variegated.**

Pink Passion Variegated. (*C.japonica*), Cannon, 1963, ACS., *The Camellia Journal*, vol.18, No.1, back cover as 'Pink Passion Var.': a virus variegated form of **Pink Passion** - Pink blotched white. Originated in USA.

Pink Pearl. McIlhenny, 1937, *600 Varieties of Camellia.* This is a form of **Otome** (as 'Pink Perfection') that is believed too unstable to warrant a separate name and has thus been reduced to a synonym.

Pink Pearl (Haskins). (*C.japonica*), Haskin's Nursery Catalogue, 1981, invalidly as 'Pink Pearl': Medium size, pale pink, semi-double. Originated in England by the Haskin's Nursery.

Pink Peoniaflora. Lindo Nurseries Price List, 1947, pp.7, 9. Synonym for **Lady Loch.**

Pink Peony. (*C.japonica*), McIlhenny, 1934, *List of Camellia Japonica:* Flesh pink, shading to white at centre with darker pink streaks radiating to tips of petals. Very heavy double. Originated in USA.

Pink Peony. Ikeda, 1974, *American Camellia Yearbook*, p.114. Synonym for the *C.reticulata* **Fenmudan.**

Pink Peony. Yang, 1965, *Camellia Varieties of Taiwan.* Synonym for the *C.japonica* **Fenmudan.**

Pink Peony Centre. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue:* Medium size, pink, peony form double. Mid-season blooming. Originated in USA.

Pink Peony Davis. (Chimaera), *American Camellia Yearbook*, 1966, p.98, Reg. No.887: A sport of **Pink Davis** observed in 1962 by O.D. Edge, Columbus, Georgia, USA. The plant is the same as its parent. Colour is the same shade of pink as parent, but is peony in form. Size is 12.5 cm across x 7.5 cm deep. Blooms mid-season. Orthographic variant: 'Pink Davis Peony'.

Pink Peonyflora. Overlook Nursery Price List, 1949-1950, p.21. Synonym for **Lady Loch.**

Pink Perfection. W.B. Clarke & Son, San Jose, Nursery Catalogue, (before 1931), according to Manning, 1931, *Plant Buyer's Index*, ed.3. Synonym for **Otome.** Chinese synonym: 'Fenshiquan Shimei'.

Pink Perfume. (C.*hybrid*), *American Camellia Yearbook*, 1976, p.163, Reg. No.1405: A 7 year old seedling of unknown origin that first bloomed 1972, originated by Dr C.R. Parks, Chapel Hill, North Carolina, USA. Plant growth is average with dark green leaves of average size. The semi-double, 'Donckelaeri' (**Masayoshi**) style, bloom is watermelon pink with 18-20 petals, 2-3 petaloids, bright yellow anthers and pinkish white filaments. Average size is 7 cm across x 2.5 cm deep. Fragrant. Blooms mid-season.

Pink Petticoat. (*C.japonica*), *American Camellia Yearbook*, 1948, p.171: From Fruitland Nursery, parentage unknown. Medium size, fully double imbricated, light pink. Petals diminish in size from outer petals to the centre. First flowered 1945. Originated in USA.

Pink Pie IX. Lindo Nursery Price List, 1945. Synonym for **Prince Eugene Napoleon.**

Pink Plena. Vanderbilt, 1941, *Camellia Research, II*, p.7. Synonym for **Otome** as 'Pink Perfection'.

Pink Pom Pom. Good, 1955, *American Camellia Yearbook*, p.278. Orthographic variant for **Pink Pompon.**

Pink Pompon. (*C.japonica*), Thomasville Nursery Catalogue, 1943, p.7. Description not seen. Originated in USA. Orthographic variant: 'Pink Pom Pom'.

Pink Pope Pie IX. Valley Garden Supplies Catalogue, 1946-1947. Synonym for **Prince Eugene Napoleon.**

Pink Popcorn. (*C.fraterna* hybrid). *Kurume Camellia*, 1997, English translation, p.45. A *C.japonica* x *C.fraterna* hybrid. Small, soft pink single. Originated in Japan.

Pink Poppy. (*C.japonica*), Gerbing's Azalea Gardens Catalogue, 1938-1839: A single, soft pink flower, 7.5 cm across x 2.5 cm deep, some are semi-double; about 200 large, spreading, poppy-like stamens. Fragrant. Slow, upright growth. Foliage is round and dark green. Mid-season blooming. Originated by G.C. Gerbing, Fernandina Beach, Florida, USA. See colour photo, p.110, Macoboy, 1981, *The Colour Dictionary of Camellias.*

Pink Posy. (*C.hybrid*). ACRS, *Camellia News*, 1995, No.135, p.13, Reg. No.459: Originated by Mrs Diana Waldon, Wodonga, Victoria, Australia. A chance seedling of *C.japonica x C.fraterna* **Tiny Princess** that first flowered 1985. A semi-double pale pink (RHS.CC.56A), flower, 6 cm across x 2.5 cm deep. Leaves matt green, elliptic to slightly lanceolate, shallowly serrate with apices blunt to blunt-acute, 6 cm long x 3 cm wide. Petals round, slightly emarginated, filaments central, flowers shed whole. Prolific blooming, cluster flowering, fragrant hybrid.

Pink Princess. (*C.sasanqua*), *American Camellia Yearbook*, 1955, p.340, Reg. No.212: A 12 year old seedling of *C.sasanqua* **Mine-no-yuki** x **Rosea,** originated by Mrs A.B. Bristow, Norfolk, Virginia, USA. Plant growth is upright and rapid with very dark green, small, pointed leaves. Flower buds round, deep rose-pink. Flowers are 8-10 cm across, semi-double with 15-20 petals, Rhodamine Pink. Flowers mid-season. Plant patent No.1328. See black and white photo, p.3, SCCS., 1955, *The Camellia Review*, vol.16, No.8.

Pink Purity. Coolidge Rare Plant Gardens Camellia Catalogue, 1950-1951. Synonym for **General George Patton.**

Pink Radiance. (*C.japonica*), Gentry, 1967, ACS., *The Camellia Journal*, vol.22, No.5, p.28: Clear pink. Large, full peony form. Medium, bushy growth. Blooms mid-season to late. Originated by Harvey Short, Escondido, California, USA.

Pink Regina. Lenten, 1963, *Gardeners' Chronicle.* Description not seen. Originated in England. No valid listing located.

Pink Ribbon. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2013, p.27 with colour photo; Regn No. 2880; ACS, *Yearbook*, 2013, p.133 with colour photo; Originated, registered and propagated by Vernon. E. Howell, Lucedale, Miss., USA. A 17 year old seedling, parentage unknown, first flowered 2001. Medium size, 10cm diameter x 5cm deep, flower is pink with minor white variegation, and 45 petals. Heavy petal texture and flowers fall whole. Upright, dense plant with average growth rate. Very cold hardy. Dark green leaves average 7.5cm x 5cm with medium serration. Flowers midseason to late.

Pink Robe. Yang, 1965, *Camellia Varieties of Taiwan.* Synonym for **Fenhong Shang.**

Pink Rose. Vanderbilt, 1940, *Camellia Research*, p.6. Orthographic variant for **Rose Pink.**

Pink Rosea. McIlhenny Catalogue, 1945-1946, p.1. Synonym for **King Rosea.**

Pink Rosette. Camellia Grove Nursery Catalogue, 1944. Synonym for **Belliformis.**

Pink Rosita. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.185. Synonym for **Rosita.**

Pink Ruffles. (*C.sasanqua*), Rayner, Nov.1965, SCCS., *The Camellia Review:* Pink, single sasanqua with fluted petals, originated by Ben Rayner, Stratford, New Zealand.

Pink Ruffles (Sebire). (*C.pitardii* hyb.), ACRS., 1983, *Camellia News,* No.87, p.22, Reg. No.304, and colour photo, p.13, invalidly as **Pink Ruffles:** Originated by E.R. Sebire, Wandin North, Victoria, Australia. A chance seedling from *C.pitardii* var *pitardii* that first flowered 1981. The upright, dense plant produces very light pink, 8 cm flowers, mid-season to late. Leaves shining, dark green, 8 cm x 4 cm, broad base, abrupt apex, finely serrate with a prominent midrib.

Pink Sarasa. (*C.japonica*), SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Solid pink sport of **Sarasa** - Salmon pink semi-double, originated in USA by K. Sawada, Overlook Nursery, Crichton. Alabama.

Pink Satin. (*C.japonica*), *American Camellia Yearbook,* 1961, p.229, Reg. No.539: A 10 year old seedling of **Duchesse Decazes** that first bloomed 1957; originated by Earl Hudson, Sun Valley, California, USA. Plant growth is upright, semi-loose and slow with dark green leaves, 10 cm x 6cm. The rose form double flowers, similar to 'Purity', (Shiragiku) are 11 cm across x 3.8 cm deep, a vivid pink with yellow stamens, 17-20 petals, 4-6 petaloids, heavily textured, fluorescent. Blooms mid-season.

Pink Semi-duplex. (*C.japonica*), J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Cactus, Camelien...,* p.219 as 'Pk. S. duplex'. No description. Vanderbilt, 1940, *Camellia Research,* p.6. No description. Originated in USA. (Believed extinct.)

Pink Sensation. (*C.sasanqua*), Duncan & Davies Nursery Catalogue. 1964: A medium sized, pink semi-double. Originated in New Zealand.

Pink Serenade. *(C.sasanqua).* Camellia Forest Nursery Catalogue, 2008, p.7; Deep pink single flowers. Strong upright habit. Very early. Originated and released by Camellia Forest Nursery, Chapel Hill, N.C., USA.

Pink Shadow. Semmes Nursery Catalogue, 1961-1962. Orthographic error for **Pink Shadows.**

Pink Shadow (Marion Grove). *(C.sasanqua)* C. Aust., *Camellia News*, No.185, Autumn 2011, p.20 with colour photo; Regn No.654-N. Chance seedling of **Rowena Gordon**, first flowered 2001. Originated by Justin Jones, Marian Grove Nursery, Mangrove Mountain, NSW, Australia. Large, very pale pink semi-double, with slightly darker pink shadow around the petal edges, Flared column of yellow filaments and golden anthers. Strong upright grower.

Pink Shadows. (*C.japonica*), SCCS., Bulletin, vol.11, No.5, p.5, 1950: A seedling of 'Lotus (**Gauntlettii**) x **Rainy Sun,** registered by Harvey Short, Ramona, California, USA. Deep salmon pink with shadows of deeper pink. Large semi-double with inner row of fimbriated petals. Medium, pyramidal, compact growth. Blooms early to mid-season. Short, 1951, *American Camellia Yearbook,* p.287: Large semi-double, twotoned salmon-pink flower with inner row of petals fimbriated. Medium, upright, compact growth. Originated in USA by Harvey Short, Ramona, California.

Pink Shell. Vanderbilt, 1940, *Camellia Research*, p.6. Synonym for **Lady St Clair.**

Pink Shishigashira. Chûgai Nursery Catalogue, 1936-1937, p.26: Light pink sport of **Shishigashira.** Synonym for **Umegaka**. Although 'Pink Shishigashira' was first listed, **Umegaka** is the accepted name in Japan. See *Encyclopedia of Camellias in Colour*, vol.I, 1972, pp.218, 391.

Pink Shower. (*C.hiemalis*), *American Camellia Yearbook*, 1958, p.291, Reg. No.318: A seedling of **Shishigashira**, originated by Marjorie Washburne, Port Arthur, Texas, USA. Plant growth is medium and spreading with mid-green leaves, slender and willow-like. The light, pure pink flowers, 7.5-8 cm across x 2.5 cm deep, resemble **Pink Snow** and have 18 petals and a cluster of flared stamens. Petals are notched. Blooms early. Orthographic error: 'Pink Showers'.

Pink Showers. Nuccio's Nurseries Catalogue, 1986-1987, p.16. Orthographic error for **Pink Shower.**

Pink Sieboldii. Whitfield, 1945, *Camellia. The Alluring Floral Gem*, p.3. Synonym for **Tricolor Pink.**

Pink Silk Satin. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Regina dei Giganti.**

Pink Smoke. (*C.japonica*), SCCS., 1970, *Camellia Nomenclature*, p.114, Light lavender pink. Miniature, loose, anemone form. Blooms mid-season. Originated by David Feathers, Lafayette, California, USA. Received the 'William E. Wylam Miniature Award', 1973. See colour pl.128, p.64, *Encyclopedia of Camellias in Colour*, vol.II, 1978. Chinese synonym: "Fenyan'.

Pink Snow. (*C.sasanqua*), Fendig, 1951, *American Camellia Catalogue* with colour pl: Medium, clear, light pink, anemone form, 6-8 cm across. There are 10-15 petals and similar petaloids. Flower resembles **Mine-no-yuki** in form. Leaves mid-green, elliptic, 5 cm x 2 cm, thin, dull point, veining yellowish, finely serrate. Plant habit is low, spreading and rapid. Originated by Paul E. Hines, Beaumont, Texas, USA. A chance seedling from under a plant of **Mine-no-yuki**. Reg. No.55 with the ACS.

Pink Snow Dwarf. *(C.sasanqua)* ACS, *The Camellia Journal*, June 2013, p.25 with colour photo; Regn No.2842; ACS, *Yearbook*, 2013, p.133 with colour photo; Originated, registered and propagated by Vernon E. Howell, Lucedale, Miss., USA. A 14 year old sport of **Pink Snow,** first bloomed in 1997. Small to medium size bloom, 6.5-10cm diameter x 5cm deep, light pink with lavender trace, heavy texture. Semidouble form, 9 petals, small central petals mixed with stamens, which have yellow anthers and yellow filaments. Slow, spreading growth. Dark green leaves average 5cm x 2.5cm with medium serration. Flowers early.

Pink Spangles. Savige, ACRS, 1961, Victorian Branch Newsletter. Synonym for **Mathotiana Rosea.**

Pink Sparkle. (*C.reticulata x C.japonica*), *American Camellia Yearbook*, 1969, pp.165, 166, Reg. No.1030: A 12 year old putative hybrid of *C.reticulata x C.japonica* parentage, originated by Frank W. Maitland, Sylmar, California, USA. Plant growth is upright and medium with dark green leaves, 12.5 cm long x 6 cm wide. The semi-double flower, similar to **Frizzle White**, is 14.5 cm across x 6 cm deep. Light pink with yellow anthers and upright, fluted petals. Blooms mid-season. Chinese synonym 'Fenhuohua'.

Pink Spiral. (*C.japonica*), Findlay, RHS., 1968, *The Rhododendron and Camellia Yearbook*, No.22, p.20: A medium size, pink, formal with a 5 armed spiral petal formation. Synonym for the old Chinese cultivar **Fenluoxuan**. See Gao, Jiyin, 2007, *The Identification. ...Outstanding Camellias,* p.181 with colour photo.

Pink Splash. (*C.japonica*), SCCS., Bulletin, vol.11, No.2, p.17, 1949. No description. SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.56: White, striped and flecked crimson. Large, semi-double with irregular petals and a high centre. Mid-season blooming. Originated in USA by Armstrong.

Pink Sport of Elizabeth. Gerbings Azalea Garden Catalogue, 1943-1944 Supplement. Synonym for **Elisabeth Pink.**

Pink Stamens. (*C.x williamsii*), Allan Nursery Catalogue, 1981. Description not seen. Originated in England. No valid listing located.

Pink Star. (*C.japonica*), Domoto Nursery Catalogue, 1935. Description not seen. Paul J. Howard's 1935, Horticultural Establishment Catalogue, p.14: "It is impossible to adequately describe the beauty of this flower, the texture and substance of the petals which are exquisitely arranged". McIlhenny, 1937, *600 Varieties of Camellia*, p.11: Very large, deep mallow pink, heavily veined mallow purple; semidouble, petals broad and fluted; inner petals in freshly opened

bloom forming a star. Origin unknown, thought to be a Japanese importation by Domoto. See black and white photo, p.276, Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II. See colour pl. on p,179, G.C. Gerbing, 1945, *Camellias.* Sport: **Nellie Ann Phinizy.** Orthographic variant: 'Star Pink'.

Pink Star. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Synonym for **Fenhongxing.**

Pink Star Variegated. Nuccio's Nurseries Catalogue, 1948-1949, p.10. Synonym for **Nellie Ann Phinizy.**

Pink Stellata. (*C.sasanqua*), Hazlewood & Jessep 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.158: Bright, deep pink, semi-double. Originated in the USA.

Pink Sunset. (*C.japonica*), Mark S. Cannon Scion Catalogue, 1963-1964, p.12. No description. Gerbing Camellia Nursery, 1963, ACS., *The Camellia Journal*, vol.18. No.4, inside rear cover. No description. SCCS., 1964, *Camellia Nomenclature*, p.100*:* Light pink. Large, semi-double to loose peony form with fluffy petals. Mid-season blooming. Originated in USA by McDonald's Camellia Nursery, Beach Island, South Carolina.

Pink Superlative. (*C.japonica) American Camellia Yearbook*, 1961, p.229, Reg. No.543: A 6 year old chance seedling that first bloomed 1960; originated by T.L. Sellars, Bolivia, North Carolina, USA. Plant growth is rapid, upright and spreading with dark green leaves, 11 cm x 6 cm. The wildwood pink, formal double flowers are 12 cm across x 3.8 cm deep with 60-65 petals. Flowers early to mid-season.

Pink Surprise. (*C.sasanqua*), Cannon, 1962, ACS, *The Camellia Journal*, vol.17, No.1, back cover. No description. *American Camellia Yearbook*, 1969, p.166, Reg. No.1028: An 8 year old sasanqua chance seedling that first bloomed 1959; originated by Harold Cawood, Americus, Georgia, USA. Plant growth is upright, dense and medium with dark green leaves, 4.5 cm x 2.5 cm. The semi-double flower is 5.5 cm across and is flat, medium pink with yellow anthers and white filaments. Blooms early.

Pink Sweetii Vera. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1942-1943: Pink sport of 'Sweetii Vera' (**Sweetiana**). Originated in USA. Orthographic variant: 'Sweetii Vera Pink'. Orthographic errors: 'Pink Sweeti Vera', 'Sweeti Vera Pink'.

Pink Tea. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.424; No description. Chinese synonym 'Fencha'.

Pink Teutonia. Lindo Nursery Price List, 1945. Orthographic variant for **Teutonia Pink.**

Pink Thread. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.185. Synonym for **Hishikaraito.**

Pink Three Scholars. Savige, 1984, *International Camellia Journal*, No.16, p.13. Synonym for **Fensan Xueshi.**

Pink Tomorrow. (*C.japonica*), Gerbing's Camellia Nursery, 1963, ACS., *The Camellia Journal*, vol.18, No.4, inside rear cover: Solid, medium pink sport of Tomorrow. Originated in USA. Orthographic variant, 'Tomorrow Pink'. Sport: **Pink Tomorrow Variegated.**

Pink Tomorrow Variegated. (*C.japonica*), Cannon, 1965, ACS., *The Camellia Journal*, vol.20, No.1 as 'Pink Tomorrow Var.': a virus variegated form of **Pink Tomorrow** - Medium pink splotched white. Originated in USA.

Pink Tulip. (*C.x williamsii*), Outteridge, 1962, 1000 *Named Camellias in Australia:* Pink, single. Medium sized. Mid-season blooming. Originated in Australia.

Pink Variation. Yü, 1964, *Camellian, The Garden Camellias of Yunnan*, p.6. Synonym for **Shiyangjin.**

Pink Variegated. (*C.japonica*), Lindo Nursery Price List, 1945. Description not seen. Originated in USA.

Pink Velvet. (*C.japonica*), Cannon, 1962, ACS., *The Camellia Journal*, vol.17, No.1, front cover. No description. SCCS., 1964, *Camellia Nomenclature*, p.100: Velvety pink. Medium to large semidouble with irregular petals to loose peony form. Originated in USA by H. Mura, Augusta, Georgia. Sport: **Pink Velvet Variegated.**

Pink Velvet Variegated. (*C.japonica*), SCCS., 1964, *Camellia Nomenclature*, p.100 as 'Pink Velvet Var'. A virus variegated form of **Pink Velvet** - Velvety pink and white. Originated in USA by H. Mura, Augusta, Georgia.

Pink Wabisuke. Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.147. Synonym for **Hina-wabisuke.**

Pink Waratah. Curtis, 1820, *Monograph*, p.2. Synonym for **Anemoniflora Rosea**.

Pink Wave. (*C.x williamsii*), RHS, 1958, *The Rhododendron and Camellia Yearbook*, No.12, p.107, fig.45 facing p.96: Received the RHS., 'Award of Merit', Jan.22, 1957. Raised in 1949 from seed of *C.x williamsii* **J.C. Williams.** Leaves variable, tending to be rather narrow, on the upper surface a shining light green, beneath very pale green. Marginal serration, small and close. Typical flowers, 7.5 cm across, coloured Rhodomine Pink, (HCC.527/2) with pale flushes, with the backs of the outer petals partially coloured Phlox Pink (HCC.625/1). The corolla consists of 6 petals and 3 petaloid appendages. Exhibited by the Crown Estate Commissioner, The Great Park, Windsor, England.

Pink Whirlpool. (*C.japonica*), *American Camellia Yearbook*, 1960, p.205, Reg. No.455: A 10 year old chance seedling, originated by Dr Arthur Mazyck, Dotham, Alabama, USA that first flowered 1953. Plant growth habit, upright, open and rapid with dark green leaves. The pink, formal double flowers are 5-6 cm across x 2.5 cm deep with 50 petals. The flowers are lighter towards the centre with inner petals incurved while others resemble a 'Pink Perfection', (**Otome**). Flowers early.

Pink White. (*C.sasanqua*), Vanderbilt, 1940, *Camellia Research*, p.6. No description. Originated in USA. (Believed extinct.)

Pink Wings. *(C.japonica),* Nuccio's Nurseries Retail Price List, 1993-1994, p.14: Soft pink, medium to large size, irregular semidouble with rabbit ears. Medium, upright, bushy growth. Blooms mid-season to late. Originated in USA by Nuccios Nurseries, Altadena, California.

Pink Winter Camellia. SCCS., 1959, *Camellia Nomenclature*, p.97. Synonym for **Shishigashira.**

Pink Yuletide. ACS, *The Camellia Journal*, Mar 2013, pp.10-11 with colour photo. Later patented #21687 as 'MonDel' and trademarked as **Pink-A-Boo®.**

Pink-a-boo. *(C.japonica),* ACS, *The Camellia Journal,* Mar. 2009, p.29, Regn No. 2758. Originated by John L Spencer, Lakeland, Fla, USA. *American Camellia Yearbook*, 2008, p.124 with colour photo; A 16 year old chance seedling, first flowered 2004. The 9.5 cm x 5.7 cm anmone form flowers open white, then develop a pink blush, finally showing some yellow filaments and anthers among the centre petals. Spreading growth of average rate. Flowers early to mid-season. Medium to dark green leaves average 9 cm x 3,8 cm.

Pink-A-Boo®. *(C.sasanqua),* ACS, *The Camellia Journal*, Mar. 2013, p.111 with colour photo. A pink sport of **Yuletide**, discovered and propagated by Monrovia Nursery, Azusa, Calif. Patent #21687 as 'Mondel', and trademarked as **Pink-A-Boo®**

Pinkette. SCCS., 1951, *Camellia Review,* vol.12, No.6, p.10. Synonym for **Miya.**

Pink-hatsu-arashi. (Pink First Storm), (*C.japonica*), Yokoyama & Kirino,1989, *Nihon no Chinka,* p.101, colour photo & description as 'Pink-hatsuarashi': Small size, pale pink, single with 3 small outer petals and 3 large, rounded, emarginate inner petals and a broad stamen cylinder with

yellow anthers. Leaves shining mid-green, elliptic. Blooms early to mid-season. Originated in Kurume, Fuku'oka Prefecture, Japan. Named and released by Tomita Kunitake in 1965. Synonym: 'Pinku-hatsu-arashi'.

Pink-hime-wabisuke. (Pink Dwarf Wabisuke). (Wabisuke). *Kurume Camellia*, 1997, English translation, p.39. Soft pink. Small, trumpet shaped single. Flowers mid-season.

Pinkie. SCCS., 1942, *Classification of Camellias*, p.4. Synonym for **Teutonia Pink.**

Pinkie (Strothers). (*C.japonica*), *American Camellia Yearbook*, 1970, p.23 invalidly as 'Pinkie': A seedling of Dave Strother, Fort Valley, Georgia, USA. A miniature, anemone form soft pink, shading to deeper pink edges, Growth habit, upright, vigorous and bushy. Flowers mid-season.

Pinkish Jade. Bao, 1980, ACS., *The Camellia Journal*, vol.18, No.2, p.18. Synonym for **Fenyu.**

Pink-miyakodori. *(C.japonica), Kurume Camellia*, 1997, English translation, p.27. Soft pink, medium size, lotus form semi-double. Flowers mid-season.

Pink-tsuratsura-tsubaki. (Shining-leafed Pink Camellia). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.220 with colour photo; English translation p.154. Small, pink, tubular to trumpet-shaped single, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size, flat. Upright growth. Selected from wild japonicas growing on Mt Kose, Nara Prefecture. Named and released by Ikuo Nishihata in 1965.

Pinku-hatsu-arashi. (Pink 'Hatsu-arashi'), ICS., Apr. 1991, *Japanese Camellia Cultivar List*, p.19 as 'Pinku-hatsuarashi': Small size, light pink, campanulate single. Different reading for **Pink-hatsu-arashi.**

Pinku-kingyoba. (Fishtailed Pink) (*C.japonica*) from Chiba Pref. *Japan Camellia* No 59, May 1999: A natural seedling of **Shirokingyoba-tsubaki.** Pale pink, semi-double, medium to large, blooms mid to late season. Leaves fishtailed. Originated by Atsushi Itoh.

Pinlangjian. (Betel Nut Paper), (*C.japonica*), Fang, 1930, *Diannan Chahua Xiaozhi* The colour is reddish purple, similar to betel-nut pattern paper. Different reading: 'Pin Lang Chien'.

Pinnacle. (*C.japonica*), SCCS., 1966, *Camellia Nomenclature*, p.108: Glowing coral red. Large to very large peony form. Medium, upright growth. Flowers mid-season to late.. Originated by Harvey Short, Ramona, California, USA. Sport: Pinnacle Variegated.

Pinnacle Variegated. (*C.japonica*), Belle Fontaine Nursery, 1967, ACS., *The Camellia Journal*, vol.22, No.2 as 'Pinnacle Var.': a virus variegated form of **Pinnacle** - Coral red and white. Originated in USA.

Pinsi. Inazawa Nurseries Catalogue, 1987, C-2. Japanese synonym for Chinese *C.japonica* **Binsi.**

Pinson's Light. (*C.sasanqua*), Macoboy 1981, *The Colour Dictionary of Camellias*, p.177: A new sasanqua propagated by Sydney's 'Camellia Grove Nursery', it bears a medium sized, white bloom of peony form. The reflexed outer petals are tinged with deep pink and the inner consists of a mass of white petaloids, loose and notched. Buds are cherry red. Originated at Camellia Grove Nursery, St Ives, N.S.W, Australia.

Pinto. *(C.japonica), Camellias*, Y.C. Shen, 2009, p.59 with colour photo; Leaves are elliptic and splashed and stripe with yellow-orange variegation. Small white semi-double flower with petals somewhat incurving. Vigorous growth. Originated by Nuccio's Nurseries, Altadena, California, USA.

Pinzochera. (*C.japonica*), de Jonghe, 1851, *Traité de la Culture du Camellia*, p.118. Description not seen. Originated in Italy. (Believed extinct.)

Pio IX. Luzzatti, 1851, *Collezione di Camelie*, p.30. Orthographic variant for **Pie IX.**

Pio Nono. van Houtte Catalogue, 1857, 67:44. Synonym for **Pie IX.**

Pio X. *(C.japonica),* Burdin Maggiore & Co, 1849-1850, Catalogue Général: Large blood red with nearly all the petals striped soft rose, imbricated. Originated in Italy. Description reads the same as for **Pie IX.**

Pionaeflora. Michael Floy, 1823, Catalogue, p.27. Orthographic error for **Paeoniiflora.**

Piovano Toscanelli. (*C.japonica*), Stefano Pagliai Catalogue, 1867: Rose carmine, veined a deeper colour and striped and bordered white, petals diaphanous. Perfectly imbricated. Originated in Italy by Toscanelli.

Pipperi. *(C.japonica),* Verschaffelt, 1844-1845, Catalogue, p.28 as 'Pipperii'. No description. Originated in Italy. (Believed extinct).

Pippin. (*C.japonica*), Charles van der Geert Catalogue, 1847-1849, p.61. No description. Originated in Italy. (Believed extinct.)

Piquant. (*C.japonica*), ACS., 1986, *The Camellia Journal*, vol.41, No.2, p.24, Reg. No.1983. Renamed from 'Charmer': A medium, cream white with cinnamon pink edges, semi-double *C.japonica* (H-16 *C.japonica* x **Golden Gate**). Flowers mid-season to late. Originated in USA by Houghton S. Hall, San Anselmo, California. The 9 year old seedling first bloomed 1980. Average flower size, 8 cm across, golden anthers, yellow-white filaments. Plant growth is upright, dense and rapid with dark green leaves, 11 cm. x 5.5 cm.

Piragmone. (*C.japonica*), Charles van Geert Nursery Catalogue, 1846, p.73. No description or history located. (Believed extinct.)

Pirate's Gold. (*C.japonica*), *American Camellia Yearbook*, 1970, p.168, Reg. No.1106: A 10 year old chance seedling that first flowered 1967; originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is upright, spreading, open and average with dark green leaves, 8 cm x 4.5 cm. The loose, double flower is 12 cm across x 6 cm deep with 34 petals and 34 petaloids. Colour is dark red. Some petals are 6 cm wide. It has a solid cluster of gold tipped stamens and blooms midseason to late. Sport: **Pirate's Gold Variegated.** Chinese synonym: 'Haidao Zhijin'.

Pirate's Gold Variegated. (*C.japonica*), Gentry, 1972, ACS., *The Camellia Journal*, vol.27 as 'Pirate's Gold Var.': A virus variegated form of **Pirate's Gold** - Dark red blotched white. Originated in USA. Chinese synonym: 'Fuse Haidao Zhijin'.

Pircio. von Biedenfeld. 1856, *Practische Grundelhren der Cultur von Camellien...*, p.50. Orthographic error for **Pirzio.**

Pircio Secondo. Von Biedenfeld, 1856, *Practishe Grundelhren der Cultur von Camellien...*, p.50. Orthographic error for **Pirzio Secondo.**

Pirco.(*C.japonica*), Verschaffelt, 1852, *Nouvelle Iconographie*, Book I, pl.II: Supplied by van Geersdale, Ghent, Belgium. Large blossoms with broad petals, with lobed margins, vivid rose coloured with pearly tints. Leaves are large, dark green, widely serrate. Originated in Italy according to Verschaffelt, 1852, *Nouvelle Iconographie*, Book 1, pl.2.

Pire Balli. (*C.japonica*), Peer, 1956, *American Camellia Yearbook*, p.55. No description. Apparently a corruption of an unknown name.

Pirla. (*C.japonica*), Fratelli Rovelli Catalogue, 1852, p.24: [From] Brescia. No description. Originated in Italy. Orthographic error 'Pirlo'. (Believed extinct.)

Pisaro. Verschaffelt. 1851, *Nouvelle Iconographie,* Book.I. pl.II. Orthographic error for **Pizarro.**

Pisaroni. (*C.japonica*), Verschaffelt, 1844, Catalogue, No.50, p.22 as 'Pisaronii'. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, vol.40. p.78: Flower 10 cm across, roseform, double, pure milk white with the centre sometimes showing stamens and sometimes petaloids. Petals are round, entire, cup-like and imbricated. Originated in Italy. Orthographic variant: 'Pizaroni'.

Pisi Xiansheng. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the USA *C.japonica* 'Mr. Pitts'.

Pit Pit Fischer. (*C.pitardii* hybrid). *Kamelien*, Peter Fischer catalogue, 2008, p.29 with colour photo; Semi-double with raised and notched petals, soft pink, small size, with white filaments and yellow anthers. Leaves small, elliptic. Very slow and compact growth. Originated by P. Fischer, Wingst, Germany.

Pitardii. Sharp, Journal of the RHS., 62(8):363-369, 1937. The species *C.pitardii* Cohen Stuart, (1916).

Pitardii Yunnanica. RHS.. 1950. *Camellia & Magnolia Conference Index*, p.130. The species *C.pitardii* var *yunnanica* Sealy, 1949.

Pite. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.99. Chinese synonym for **Bev Piet.**

Pitejin. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.120. Chinese synonym for **Mildred Pitkin**.

Pith Paper Petal. Yü, 1950, RHS., *The Camellia and Magnolia Conference Index*, p.130. Synonym for 'Tongcaopan' (**Juban**).

Pith Paper Petal Pine Cone Shell. Ikeda, 1976, *American Camellia Yearbook*, p.144. Synonym for **Tongcaoban Songzike.**

Pitonessa. (*C.japonica*), Verschaffelt, 1852, *Nouvelle Iconographie*, Book XI, pl.IV: In full bloom the blossoms form an elongated cone, terminated by a rose shaped centre made up of small, serried petals; the following are regularly imbricated, deflected, rounded, obtuse to bilobate at the summit; the colouring a bright cherry-red, streaked with a few white lines. Originated in Italy. Orthographic error: 'Pittonessa'.

Pittardii Cuspidata. Knapp Hill Nursery Ltd Catalogue, 1957-1958, p.26. An illegal cultivar name.

Pittonessa. Loureiro Catalogue No.9, 1872-1873. Orthographic error for **Pitonessa.**

Pittonia. *(C.japonica),* Seidel, 1846, Pflanzen Catalog, p.9. No description. (Believed extinct).

Pittub. J & F Thoby, Gaujacq, France, Catalogue, 2009, p.6; No details.

Pius IX. de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias*, p.132. Carmienche, ch., 1862, *Horticulturalist*, 17:321. Orthographic variant for **Pie IX.**

Pius IX (Farroli). de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias,* p.132. Orthographic variant for **Pie IX (Farroli).**

Pius IX (Mariani). de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias,* p.132. Orthographic variant for **Pie IX (Mariani).**

Pixie. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1942-1943, Bright red veined white. Small, semi-double, with few stamens in the centre. Blooms mid-season to late. Originated by Magnolia Gardens, Charleston, South Carolina, USA.

Pi-yü. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.10: Different reading for **Biyu.**

Pizani. Verschaffelt Catalogue, 1863-1864, p.40. Orthographic variant for **Pisani.**

Pizanni. da Silva, 1880, *Forcing Varieties of Camellias in Oporto,* p.17. Orthographic error for **Pisani.**

Pizaroni. Verschaffelt Catalogue, 1846, p.57. Orthographic variant for **Pisaroni.**

Pizarro. (*C.japonica*), van Houtte Catalogue, 1844-1845, 18:17: Milky white, imbricated, somewhat bushy. Verschaffelt, 1851, *Nouvelle Iconographie*, Book I, pl.II as 'Pisaro': A good sized, pure white blossom, with perfect imbrication. Of Italian origin. One will note the amplitude and rounded form of the petals, their exquisite convexity, the narrow but marked indentation in the summit dividing them into two distinct lobes, and their contrast with the central ones which are smaller, oblong, somewhat pointed and slightly ruffled. Orthographic error: 'Pisaro'.

Pizzati. *(C.japonica),* Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. No description. Originated in Italy. (Believed extinct).

Pizzo.(*C.japonica*), Henrincq, Aug.1847, *Revue Horticole,* p.284: Obtained in Italy 3 years ago, the flower is 12 cm across; petals of the exterior, rounded, with irregular fringe; those at the centre erect, sometimes pointed and jagged; the colour milk white, sometimes washed with soft rose and striped with rose-pink in the middle. At the moment of flowering the flower forms a bell shape, then, opening out with age, takes a form similar to the Chinese peony.

Place Christian. *Camellia Digest,* 1(3),1943. Orthographic error for **Palais de Cristal.**

Placentiana. (*C.japonica*), van Houtte Catalogue, 1849-1850, 38:49: Imbricated, bright pink, superior to 'Sacco Nova' (**Sacco Nova**), formal double, medium size. Originated in Italy by Borghese, Calciati. Orthographic variant: 'Placenziana'.

Placenziana. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.185. Orthographic variant for **Placentiana.**

Placidita. (*C.japonica*), Galeotti, M., 1852, *Journal d'Horticulture Pratique de la Belgique ou Guide des Amateurs et Jardiniers*, vol.10, pp.12, 26: Deep pink, perfectly formed like a rose with regular rounded petals, convex and slightly flecked towards the centre. Obtained by seed by Ch. de Loose. Le Texnier, 1911, *Le camellia, essais sur 1'histoire de quelques fleurs d'ornement*, p.22. No description. Originated about 1850 by Ch. de Loose, Belgium.

Plain Jane. *(C.oleifera).* ACS, *The Camellia Journal,* Aug. 2002, p.21, colour photo p.20, Reg. No.2577. A single white flower, with 8 petals, yellow stamens and creamy white filaments. Imported from Nanking, China, and propagated by Dr William L. Ackerman, Ashton, Md., USA. Very cold hardy and seems to transmit its cold-hardiness to its progeny. *American Camellia Yearbook,* 2002, p.130, colour photo p.c11. First bloomed in 1956. Flowers measure 7.5 cm across x 3.2 cm deep. Plant is upright, with slow, dense growth, and flowers very early. See also article, *American Camellia Yearbook,* 2004, pp.10-11.

Planipetala. (*C.japonica*), Luzzatti, 1851, *Collezione di Camelie,* p.31: A milk white, formal double with petals slightly reflexed. See illustration F1635, van Houtte, 1865-1866, *Flore des Serres ...*, vol.16, p.51 and pl.426, *L'Illustration Horticole,* XII, 1865. Originated in Italy by Borzone. Orthographic error: 'Plenipetala'.

Plantation Pink. (*C.sasanqua*), Camellia Grove Nursery Catalogue, 1948: Large, pink, single. Originated in Australia by E.G. Waterhouse, Gordon, N.S.W. See colour photo, p.176, Macoboy, 1981, *The Colour Dictionary of Camellias.*

Plantation Pink Blanc. *(C.sasanqua).* J & F Thoby, Gaujacq, France, Catalogue, 2009, p.1; Large white single. A sport of **Plantation Pink.**

Plantation Pink Variegated. (*C.sasanqua*), ACRS., NSW, Foundation Branch *Newsletter*, Feb.1990, Issue No.1, p.1: A genetic mutant after the form of **Benten-kagura.** Somewhat distorted leaves, green bordered creamy yellow. A sport of **Plantation Pink**. Originated in Australia.

Plate Petala. Onillon, Angers Nursery Catalogue, 1837, p.3. Orthographic error for **Platipetala.**

Platipetala. (*C.japonica*), Anonymous, 1836, *L'Illustration Belge Journal*, vol.3, p.94; Loddiges Catalogue, 1836, p.25 as 'Platypetala'. According to Berlèse, 1837, *Monographie*, p.100, there are two camellias under this name. One considered to be comparable to 'Imperialis' (**Gray's Invincible**) has been renamed **Platipetala Vera.** The other under consideration here, resembles **Rawesiana** in foliage, with the flower less bright, though of the same form and size. Originated in Belgium. Orthographic errors: 'Platipetela', 'Platypetala', 'Pianipetala', 'Plate Petala'.

Platipetala Vera. (*C.japonica*), Berlèse. 1840, *Monographie*, ed.2, p.204 as 'Platypetala Vera': Leaves, 8cm x 6 cm, broad-oval; bud round-oval, flattened on apex, scales whitish; flowers 8-9 cm across, centre depressed, white striped with red, petals in 7-8 rows, round, emarginate, well imbricated with symmetry from the circumference to the centre. Originated in England. Orthographic variant: 'Platypetala Vera'.

Plato. (*C.japonica*), Guilfoyle Nursery Catalogue, 1866, p.19. No description. Originated in Australia. (Believed extinct.)

Platypetala. Loddige's Catalogue, 1836, p.25. Orthographic variant for **Platipetala.**

Platypetala Vera. Berlèse, 1840, *Monographie*, ed.2, p.204-205. Synonym for **Platipetala Vera.**

Play Mate. (*C.japonica*), Gentry, 1967, ACS., *The Camellia Journal*, vol.22, No.5, p.28. No description. Originated in USA. No valid listing located.

Playing Butterfly. Yashiroda, 1950, *American Camellia Yearbook*, p.16. Synonym for **Chô-no-asobi.**

Plaza Christian. Vanderbilt, 1941, *Camellia Research, II*, p.7. Synonym for **Palais de Cristal.**

Pleasant Memories. (*C.reticulata*), SCCS., 1984, *Camellia Nomenclature*, p.124: Medium pink. Very large, semi-double with irregular petals. Medium, compact, upright growth. Blooms mid-season to late. A chance reticulata seedling, originated by M. Gum, San Gabriel, California, USA. Chinese synonym: 'Yukuai Huiyi'.

Pleasure. (*C.sasanqua*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.258: Rose pink. Originated in USA.

Pleasure of a Long Life. *Camellias*, Y.C. Shen, 2009, p.216 with colour photo; Synonym for **Osaraku.**

Pleasure of Longevity. Macoboy, 1981, *The Colour Dictionary of Camellias*, pp. 136, 139. Synonym for **Osaraku.**

Plena. (*C.japonica*), Cachet Catalogue, 1845-1946; Isola Madre Catalogue, 1845. No description. Originated in Italy. (Believed extinct.)

Plena Alba. Gussone, 1821, *Catalogue Plantarum* as 'pl. Alba'. Orthographic variant for **Alba Plena.**

Plena Carnea. (*C.sasanqua*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.258: Rosy red. Origin unknown. (Believed extinct.)

Plena Coccinea. Gussone, 1821, *Catalogue Plantarum* as 'pl. Coccinea'. Synonym for **Coccinea.**

Plena Coronata. Gaetano, Savi, Catalogue, 1823. Synonym for **Coronata.**

Plena Folia Variegata. Giles & Son Nursery Catalogue, 1881, p.92 as 'Plena fol. variegata'; abbreviation for 'Sasanqua Plena Folia Variegata', synonym for **Sasanqua Foliis Variegatis.**

Plena Pendula. (*C.japonica*), *Camellias Grown at Kew*, 1956. No description. Originated in England.

Plena Rosea. Gussone, 1821, *Catalogue Plantarum* as 'pl. Rosea'. Synonym for **Rosea.**

Plena Rubra. Gussone, 1821, *Catalogue Plantarum* as 'pl. Rubra'. Synonym for **Rubra Plena.**

Plena Superba. McIlhenny, 1937, *600 Varieties of Camellias*, p.11. Synonym for **Julia Drayton** as 'Mathotiana'.

Plena Variegata. Gussone, 1821, *Catalogue Plantarum* as 'pl. Variegata'. Synonym for **Variegata.**

Plenipetala. Burdin Maggiore & Co. Catalogue, 1856-1857. Orthographic error for **Planipetala.**

Plenissima. Baumann & Baumann, 1835, *Collection de Camellias élevés à Bollwieler*, pl.40. Synonym for **Traversi.**

Pleno. Booth Catalogue, 1810, described as 'double'. Abbreviation for **Rubra Plena.**

Pleno Albo. Michael Floy Nursery Catalogue, 1823, p.27. Orthographic variant for **Alba Plena.**

Pleno-Carnea. Loddige's Nursery Catalogue, 1823, p.21. Synonym for *C.maliflora.*

Pleno Rubro. Michael Floy Nursery Catalogue, 1823, p.27. Orthographic variant for **Rubra Plena.**

Plicatilis. (*C.japonica*), Jacob Makoy et Cie Nursery Catalogue, 1842, p.10. No description. van Houtte Catalogue, 1844-1845, 18:17 as 'Plicatillis'. No description. Orthographic error: 'Plicatillis'. (Believed extinct.)

Plicatillis. van Houtte Catalogue, 1844-1845, 17:17. Orthographic error for **Plicatilis.**

Plinio. (*C.japonica*), Jacob Makoy et Cie Nursery Catalogue, 1839, p.17. No description. Berlèse, 1845, *Monographie*, ed.3, p.227: Flower full, deep red, formal double with 10 rows of imbricated petals. Originated in Italy.

Plum Coloured Fivewing. Feng et al., 1986, *Yunnan Camellias of China, p.*166. Synonym for **Mei-hong Wuchi.**

Plum Purty. (*C.japonica*), SCCS., 1960, *Camellia Nomenclature*, p.92: Mauve pink. Medium, formal double. Low, spreading growth. Blooms mid-season to late. Originated in USA by W. Wylam, California.

Plumacia. (*C.japonica*), Berlèse, 1840, *Monographie*, ed.2, p.192: Leaves 8.8 cm x 6 cm, broad-oval, some very pointed, prominent venation, thick, finely serrulate, medium green; bud obtuse, apple green; flower very large, 10.4 cm across, full, irregular, orange-red; outer petals in many rows, long, oval, becoming smaller to the centre, some spoon shaped, emarginate, marked with a small white stripe; those in the middle, not numerous. long, narrow, disposed in a spiral and forming an irregular, twisted centre.

Plumaria. (*C.japonica*), Jacob Makoy et Cie Nursery Catalogue, 1833. No description. Courtois, 1833, *Magazin d'Horticulture*, 1[pt.D]:316: No description. Berlèse, 1837, *Monographie*, ed. 1, p.85: Leaves 9.5 cm x 5.4 cm, broad-oval, mucronate, regularly serrate towards the apex, irregularly at the base, of a dark green; bud long, scales greenish; flower of average size, single, cerise-red, an insignificant flower with 5-7 petals. Originated in Belgium. Orthographic errors: 'Plumeria', 'Plumonia', 'Plumeri', 'Plumarii'.

Plumarii. Burdin Chambery Nursery Catalogue, 1834, p.19. Orthographic error for **Plumaria.**

Plumeria. Prince & Co. Nursery Catalogue, 1844, p.104. Orthographic error for **Plumaria.**

Plumerii. Burdin Maggiore & Co. Catalogue, 1835. Orthographic error for **Plumaria.**

Plumfield White. (*C.japonica*), ACS., 1948, *News Letter*, vol.3, No.4, Reg. No.2: Large, white, incomplete double, 10-12 cm across. Petaloids large and varied. Bud long and pointed. Fragrant. Leaves dark green, elliptic. Growth upright and rapid. Originated in USA by J.P. Illges, Columbus, Georgia, from seed of Semi-double Blush. First flowered 1946.

Plumonia. Berlèse, 1838, *Monographie* (Translated by Dearborne). Orthographic error for **Plumaria.**

Plutans. Auguste van Geert Nursery Catalogue, 1848, p.20. Orthographic error for **Pluton.**

Plutans Lineata. Verschaffelt Catalogue, No. 50, 1844, p.22. Orthographic error for **Pluton Lineata.**

Pluton. (*C.japonica*), Cachet Catalogue, 1840-1841, p.2. Red. Berlèse, 1840, *Monographie*, ed.2, p.230: Leaves large, wide, lanceolate, prominent venation, very deep green; bud obtuse, scales greenish; flower over 10.8 cm across, full cerise-red, petals oval and very wide, veined a darker red, regularly imbricated from the centre to the circumference but widely as one sees in the dahlia, a little like 'Grand Frederic' (**Floyi**). Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.11, as 'Plutone': Well imbricated, deep cerise with some very vivid red veining. Originated in Italy by Mariani. Orthographic variant: 'Plutone'. Orthographic error: 'Plutans'. Synonym: 'Fulgens Plenissima'.

Pluton Lineata. (*C.japonica*), Burdin Maggiore & Co. Catalogue, 1845. No description. Originated in Italy. (Believed extinct.) Orthographic variant: 'Plutone Lineata'. Orthographic error: 'Plutans Lineata'.

Plutone. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.11. Orthographic variant for **Pluton.**

Plutone. van Houtte Catalogue, 1841, 7:16. Synonym for **Fulgens d'Italie.**

Plutone Lineata. Burdin Maggiore & Co, 1849-1850, Catalogue General. Orthographic variant for **Pluton Lineata.**

Plutone Nova. van Geert Nursery Catalogue, 1845. Synonym for **Fulgentissima.**

Plutone Vera. Medici Spada,1858, *Catalogo nel Giardino a Villa Quiete,* p.7 as 'Plutone Vero'. Synonym for **Fulgens d'Italie.**

Plymouth Beauty.(*C.x williamsii*), Woodward, 1987, *International Camellia Journal*, No.19, p.8. No description, Originated in UK. No valid listing located.

Pocahontas. (*C.japonica*), Hogg, 1838, *Magazine of Horticulture,* 4:155: Deep crimson, white centre. Originated by M. Floy, New York, USA.

Pocahontas (Haynie). (*C.japonica*), *American Camellia Yearbook*, 1971, p.49, Reg. No.1157, invalidly as **Pocahontas**: An 8 year old chance *C.japonica* seedling, originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is upright, open and medium with dark green leaves, 8 cm x 4.5 cm. The rose form double flower is 12-13 cm across x 5 cm deep with 19 petals and 2 or more petaloids. The rose colour flower has yellow anthers and light pink filaments. The colour graduates from deeper pink towards the petal tips. Blooms mid-season to late.

Pod Mate. (*C.japonica*), Sewell, 1956, *American Camellia Yearbook*, p.46: Deep pink. Medium, rose form to formal double. Vigorous, upright growth. Mid-season blooming. Originated in USA at the Davis Nursery, Seffner, Florida. Chinese synonym 'Baode'.

Podolfo Giorgetti. Anonymous, 1876, *R. Società Toscana di Orticultura Bollettino.* Orthographic error for **Ridolfo Giorgetti.**

Pojinsi. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.151. Chinese synonym for **Tom Perkins** .

Polaque. *(C.japonica),* Real Campanhia Horticolo-Agricola Portuensis Catalogue, No.29, 1895-1896, p.53: Peony form, vermilion. Origin unclear.

Polar Bear. (*C.japonica*), ANZCRS., 1957, *Camellia Annual*, No.4, p.8, Reg. No.28: Seedling from **Great Eastern,** originated by E.G. Waterhouse, Gordon. N.S.W., Australia. Large, creamy white flowers, 10 cm across, with rounded outer petals and open centre showing short, stunted stamens, mingled with small petaloids. Foliage resembles its parent. See colour pl.XXIX, Urquhart, 1960, *The Camellia.* Colour photo, rear cover, ACRS., 1964, *Camellia News*, No.16. Chinese synonym: 'Beijixiong'.

Polar Ice. (C.*hybrid*), ACS., 1988, *The Camellia Journal*, vol.43, No.2, p.9, Reg, No.2078: Medium size. White, anemone form seedling of *C.hybrid* **Frost Princess** x *C.oleifera.* Early flowering. Originated in USA by Dr W.L. Ackerman, Maryland, USA. *American Camellia Yearbook*, 1988, p.190, colour photo between pp.186-187: The 7 year old seedling first flowered 1986. Average flower size is 8 cm. across x 4 cm deep with 12 petals, 89 petaloids, golden anthers, creamy filaments. Commercially introduced 1987. Cold hardy to -12ºF. Plant growth is spreading, dense and medium in rate with dark green leaves, 8 cm x 4 cm.

Polar Star. (*C.japonica*), Anonymous, 1867, *American Journal of Horticulture & Florist's Companion*, vol.1, p.196. black and white pl. Originated in USA. Description not seen. (Believed extinct.)

Polaris. (*C.x williamsii*), *American Camellia Yearbook*, 1965, p.244, Reg. No.804, colour plate facing p.84: A 9 year old seedling of **Hishikaraito** x *C.x williamsii* **J.C. Williams,** originated in USA by J.L. Sparkman, Jacksonville, Florida. Plant growth is upright, spreading and rapid with dark green leaves, 10 cm x 4.5 cm. The semi-double to open, peony form flower, 11-12.5 cm across x 5-6 cm deep, has 32 petals, separated from each other, narrow and long, scalloped at ends. Colour is radiant pink. Blooms mid-season. Colour pl. inside front cover, 1964, ACS., *The Camellia Journal*, vol.19, No.5. Chinese synonym: 'Beijixing'

Poldi. (*C.japonica*), Fratelli Rovelli Catalogue, 1852, p.24: [from] Rovelli Bros. Imbricated in the form of the **Duchesse d'Orleans,** carmine red. Franchetti, 1855, *Collezione di Camelie*, p.51: Similar in form to the 'Duchesse d'Orleans'- Pale red, some white splashes, imbricated. Van Houtte Catalogue, 1858, 72:21: Beautifully imbricated carmine red. Originated in Italy.

Poldina Vanduri. André, ed.,1873, *L'Illustration Horticole*, vol.XX, p.128, pl.135. Orthographic error for **Poldina Venturi.**

Poldina Vantura. Linden Catalogue, 1874, p.12. Orthographic error for **Poldina Venturi.**

Poldina Vanturi. André, 1873, *L'Illustration Horticole*, vol.XX, index. The name is spelt 'Poldina Venduri' under pl.135. However the publication of the name as **Poldina Venturi** in Linden Catalogue, 1873, p.38 is believed to be orthographically correct.

Poldina Venturi. (*C.japonica*), Linden Catalogue, 1873, p.38: André, ed. 1873, *L'Illustration Horticole*, p.128, pl.135 as 'Poldina Vanduri': A large, bright carmine with fine stripes of a deeper colour, with petals orbiculate, bilobate and well displayed. Originated in Italy. Orthographic variants: 'Poldina Vanduri', 'Poldina Vantura', 'Poldina Vanturi'.

Polette. Ferrari Nursery Catalogue, 1962. Orthographic error for **Paulette.**

Poliantrica. Verschaffelt, 1844-1845, Catalogue, p.28. Orthographic variant for **Polyantrica.**

Polinto. *(C.japonica),* Jose Maria Serra Establecimiento de Horticultura 1855, Catalogue, p.10. No description. Jean Verschaffelt, 1867-1868, Catalogue, No.11, p.45: Large, perfectly formed imbricated flower is soft pink with a paler centre. Note: This appears to be a different cultivar to the original of this name, given as an orthographic error for **Poliuto.** This variation is let stand with the valid name **Polinto.**

Poliuto. (*C.japonica*), Franchetti, 1855, *Collezione di Camelie*, p.51: Light red at the centre, darker at the circumference, imbricated in the form of **Incarnata.** Verschaffelt, 1858, *Nouvelle Iconographie*, Book IX, pl.I as **Polinto:** Originally from Italy from where it was sent 4 years ago by Cesar Luzzatti, Florence, this variety is of the highest order of perfections. Its blossoms, above average in size, are of a rich, vivid carmine-cherry colour, especially in the centre, then veined a deeper shade. The petals are ample, rounded, scarsely lobulate at the summit, outspread and imbricated with perfection. Orthographic errors: 'Polinto', 'Polliuto'.

Polka Dot. *(C.rosiflora* hybrid). *New Zealand Camellia Bulletin,* March 1996, Issue No.123, vol.XIX, No.4, p.47, Reg. No.373: A white to blush pink miniature, the flowers are 3 cm across x 1.5 cm deep with 8 petals, golden anthers and white filaments. Buds are deep pink. Plant is spreading with slow, open growth and dark green leaves 6 cm long x 2.5 cm wide. Flowers mid-season to late. A chance seedling of *C.rosiflora* raised by Dorothy Hansen, Waikanae, New Zealand.

Polliuto. van Houtte Catalogue, 1858, 72:21. Orthographic error for **Poliuto.**

Pollone. (*C.japonica*), Colla, 1843, *Camelliografia*, p.93 [illustr.]: All the petals are red, charmingly united, the margins sometimes are lightly coloured violet. The flower has most of the petals in 3-4 rows, regular, with the outer round-oval, openly spaced, while those of the interior are much smaller, irregular, intermixed with a few stamens. Originated as a seedling in the garden of Sr. Pollone, Italy, 1841.

Pollone Filiae. (*C.japonica*), Colla 1843, *Camelliografia*, p.107, [illustr]: Petals completely red. Corolla of many petals, the exterior 6-9, round-ovate, apart, flat, more or less emarginate; those of the interior smaller, irregular with scanty stamens intermixed. Obtained from seed in 1841 by Sr Pollone, Italy. Similar to 'Splendens'.

Polly. (*C.japonica*), van Houtte Pere General Catalogue, 1937-1938, p.5: Very beautiful semi-double flower, white streaked with red. Originated in UK.

Polly B. (*C.japonica*), Barnes, 1956, *American Camellia Yearbook*, p.37: This pink flowering, mid-season blooming plant is a rapid, upright grower. The seedling was originated in USA by Ingleside Nurseries, Macon, Georgia.

Polly Heaton. (*C.x williamsii*), *American Camellia Yearbook*, 1976, p.163, Reg. No.1393: A 14 year old seedling, *C.x williamsii* **J.C. Williams** x *C.japonica* **Blood of China,** that first bloomed 1969. Originated by Houghton Hall, San Anselmo, California, USA. Plant growth is vigorous and pendulous with dark green leaves, 7.5 cm long x 3.7 cm wide. The semi-double bloom is deep

fuchsine pink with a bluish undertone, with gold anthers and pale yellow filaments. Average size, 11 cm across x 5 cm deep. Extra long-pointed buds. Blooms early to late.

Polly Mitchell. (*C.japonica*), *American Camellia Yearbook*, 1959, p.279, Reg. No.353: A 7 year old chance seedling, originated by Miss Harriet Brandon, Thomasville, Georgia, USA that first flowered 1957. Plant growth is slow and open with leaves 7.5 cm x 3.7 cm. The pure white, semi-double flower, 10-11 cm across x 5 cm deep, with 10-12 petals and 5 petaloids. The inner rows of petals are fluted. Flowers early season.

Polly Morgan. (*C.japonica*), Vanderbilt, 1941, *Camellia Research, II*, p.7. No description. Originated in USA. (Believed extinct.)

Polly Simmons. (*C.japonica*), McIlhenny, 1950, *Introductory List:* A semi-double blossom, 13-15 cm across, 3 rows of very large, rounded, spinel pink petals, deeply V'ed and rabbit eared. The centre is light salmon; filaments tipped deep chrome yellow, interspersed with pink petaloids, sometimes lightly marked white. Leaves very broad. Originated at Jungle Gardens, Avery Island, Louisiana, USA.

Polly Trapnell Dorsey. *(C.japonica),* ACS, *The Camellia Journal*, Sept. 2005, p.28 – details incorrect, and colour photo (correct) p.29. ACS, *The Camellia Journal*, December 2005, p.28 and colour photo p.29, Reg. No.2656. A chance seedling that first flowered in the early 1980's. Registered by John Thornton Hilleary, Baltimore, Md., USA. The 6.5 cm diameter, white, semi-double flower has reflexing petals, and is stated to have pale yellow anthers and light brown stamens. Flowers freely mid-season to late. *American Camellia Yearbook*, 2005, p.46 and colour photo p.c7. Dark green leaves are 11.8 cm x 5 cm.

Polo Bear. Tammia Nursery Catalogue, 1965-1966. Orthographic error for **Polar Bear.**

Polyanna. (*C.hybrid*). *New Zealand Camellia Bulletin*, March 1992, Issue No.111, vol.XVII, No.4, p.47, Reg. No.304: A seedling by the late Les Jury, New Plymouth, New Zealand. The plant is 11 years old and first bloomed 1987. The foliage is dark green on an upright plant of dense growth and medium growth rate; the leaves being 9 cm long x 4.5 cm wide. The flower is a rose form double to formal double in rose pink (RHS.CC.58D), with deeper veining, and is 9 cm across x 4 cm deep with 70 petals which have an occasional white stripe.

Polyanna Maggi. Vanderbilt, 1940, *Camellia Research*, p.3. Orthographic error for **Paolina Maggi.**

Polyantrica. (*C.japonica*), Burnier & Grilli Catalogue, 1846-1847: Deep vivid red, single to semi-double, originated in Italy by Bibbiani.

Polycentrica. (*C.japonica*), Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. No description. Verschaffelt, 1844-1845, Catalogue, p.28 as 'Poliantrica'. Charles van Geert, 1850, Catalogue No.117, p.13: Very regular double, of a brighter red than 'Fulgens Nova' (**Fulgens d'Italie**). From Burma. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.14. No description. Originated in Italy by Ridolfi.

Polydore. (*C.japonica*), Verschaffelt, 1856, *Nouvelle Iconographie*, Book III, pl.IV: This camellia, originated by Mr Van Eeckaute, Ledeberg, Belgium, is regularly imbricated, of an immaculate pink colouring. Leaves coarsely serrate.

Polyhymnia. (*C.japonica*), Anonymous, 1879, *Gardeners' Chronicle. No* description. Originated in England. (Believed extinct.)

Polymorpha Rubra. (*C.japonica*), Tagliabue, 1840, *Nomenclatore Camelliae.* No description. Originated in Italy. (Believed extinct.)

Polyodonta. Camellia Haven Nursery Catalogue, 1997, p.11. Medium sized, dusky pink single. Strong upright growth, quilted leaves. Blooms mid-season to late. Originated in China. The species *C.polyodonta* How. ex Hu. See ICS Register, p.17.

Polypetala. Makino, 1928, *Journal Japanese Botany*, V:46. Synonym for **Chiri-tsubaki.**

Pom Pom Girl. (*C.japonica*), Cannon, 1974, ACS., *The Camellia Journal*, vol.29, No.3. No description. Originated in USA. No valid listing located.

Pomegranate Camellia. Waterhouse, 1970, ACRS., *Camellia News*, No.40, p.7. Synonym for **Shiliu Cha.**

Pomegranate Camellia. Bartholomew, 1982, *American Camellia Yearbook*, p.152. Synonym for **Cailiu Cha.**

Pomegranate Red. Synonym for 'Shiuliuhong'.

Pomo Mound. *(C.grijsii* hybrid*)*, Heartwood Nursery, Seedling List 2009; A 5 cm diameter, single white, slightly fragrant. Flowers early to mid-season. A neat compact selection , female parent *C.grijsii*, male parent not known. Originated by Daniel Charvet, Fort Bragg, Calif., USA (HW-89).

Pomona. (*C.japonica*), Colla, 1843, *Camelliografia*, p.136, [illust.l: Cinnabar red, incomplete double, 8-9 cm across with 10-12 petals, alternatively spaced in 2-3 rows, broad-ovate. Stamens mixed with irregular centre petals. Originated in Italy by Negri, Milan, from seed.

Pomona (Fiaes). (*C.japonica*), José Marques Loureiro Catalogue, No.1, 1865, p.37, & No.9, 1872-1873, p.46: Formal double, purple red, darker veining, with stripes of white. Originated in Portugal at Fiaes.

Pompadoura. (*C.japonica*), Burdin Maggiore & Co. Catalogue, 1835, p.38. No description. Originated in Italy. (Believed extinct.)

Pompadour Magna. Del Lungo e Girardi, 1928, *Le Camelie*, p.120. Orthographic error for **Pompadoura Magna.**

Pompadoura Magna. (*C.japonica*), Berlèse, 1840, *Monographie*, ed.2, pp.139, 230: Leaves long-oval, a little reflexed at apex, coarsely serrate; bud oval, scales yellowish; flower about 10 cm across, not very double, cherry-red to crimson lake, depending on season; outside petals in three rows, very large, not numerous, regularly imbricated, a little notched, deep carmine red, clear, lightly veined pale rose, the others few, strap-like and forming a centre of small petals, short, narrow, intermingled with stamens and pistil. Originated in Italy by Borghese, Calciati.

Pompone. (*C.japonica*), Edward's *Botanical Register*, 1815, vol.1, pl.22 as Pompone or Japanese rose. Imported from China for the Kew Gardens, 1810. The flowers 8-10 cm across, consist of 10-12 large outer petals in 2 rows, around a number of smaller one that rise in the centre in an erect, irregular mass. The colour is white, except for the bases of the petals which are tinged with camellia rose, as well as a small stripe up the centre. Baumann & Baumann, 1829, *Collection de Camellia élevés à Bollwieler*, p.7, pl.9: The flowers are large, the petals undulate. the inner petals small and in clusters. The same plant sometimes bears white, sometimes reddish flowers, sometimes variegated with these two colours, all on the same branch. For colour plates see *Loddige's Botanical Cabinet*, 1821, vol.6, pl.596; Curtis, 1819, *Monograph on the Genus Camellia*, pl.4; Booth, 1839, *Transactions of the Horticultural Society of London*, 7:546. Synonyms: 'Mutabilis', 'Pomponia', 'Kew Blush', 'Variabilis', 'Pompone-Flowered', 'Pomponia Plena', 'Pomponia Incarnata', 'Pomponia Flore pleno', 'Pomponia Bianco-Rosea', 'Pompone Variabile', 'Pomponia Variabilis', 'Pomponia Bicolor', 'Pompon Variabilis', 'Waratah Pomponia', 'Paeoniiflora Diversiflora'. Sports: **Paeoniiflora, Paeoniiflora Pallida, Paeoniiflora Alba.**

Pompone-Flowered. Anonymous, 1836, *American Flower Gardeners' Magazine.* Synonym for **Pompone.**

Pomposa. (*C.japonica*), José Marques Loureiro Catalogue No.1, 1865, p.31, & No.9, 1872-1873, p.46: Formal double, pale pink, veined deeper colour. Catalogue No.15, 1878-1879, p.60, and later catalogues; Formal double, pure white, perfect imbrication. Orthographic variant; 'Pomposa (de Fiaes)'. Orthographic error; 'Pompesa'. Originated in Portugal by Fiaes.

Ponctata Major. Rousseau, Angers Nursery Catalogue, 1842-1843, p.4. Orthographic error for 'Punctata Major', synonym for 'Imperialis', itself a synonym for **Gray's Invincible.**

Ponctata Plena. Rousseau, 1842-1843, Catalogue, p.4. Orthographic error for **Punctata Plena Odorata.**

Pond Lily. (*C.japonica*), Hovey, 1883, *The Garden*, 24:250: Resembles the pond lily. It has only two rows of petals with a few small ones in the centre, but the outer petals are much larger, thick and bold in outline and in a warm tint of white. First flowered 1847. Originated by C.M. Hovey, Massachusetts, USA.

Ponderosa. *(C.sasanqua).* Camellia Forest Nursery Catalogue, 2008, p.7. Large, deep pink-red, semi-double flowers. Originated by Tom Dodd, Marshallville, Ga, USA.

Poniatowski. Charles Vuylsteke, 1872-1873, Catalogue, p.9. Abbreviation for **Dionisia Poniatowski.**

Pontaderese. (*C.japonica*), Franchetti, 1855, *Collezione di Camelie*, p.51: Shade of soft pink with deeper venation, sometimes the petals are lined with white, medium size, imbricated.

Pontica. (*C.japonica*), RHS., *Journal*, 1895, p.95 in a list of new and not sufficiently known older shrubs, not damaged by low temperatures at Dicksons Nursery, Chester. No description. (Believed extinct.) Synonym: 'Ponticata'.

Ponticata. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.186. Synonym for **Pontica.**

Pony Girl. ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.30. Orthographic error for **Peony Girl.**

Poole's Purple. (*C.japonica*), Vanderbilt, 1941, *Camellia Research, II*, p.7: Synonym 'Purple Poole's'. No description. Originated in USA by Poole Bros. Nursery.

Poorman's Purple Dawn. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.6. Synonym for **Brilliant.**

Pop Allen. *(C.japonica),* ACS, *The Camellia Journal*, Nov. 2001, p.21, colour photo p.20, Reg. No.2559. A formal double chance seedling with dark pink blooms having darker pink flashes. Petals are occasionally cupped. Heavy petal texture. The plant is vigorous and upright and blooms mid-season. Originated by Carl M. Allen, Jr, Wilmington, N.C., USA. *American Camellia*

Yearbook, 2001, p.97, colour photo p.c15. The 10 year old seedling first flowered in 1994. Flowers measure 8.2 cm across x 5 cm deep, with 85 petals. The dark green leaves are 7.5 cm long x 3.2 cm wide.

Pop Corn. (C.*hybrid*), Funaku-en Catalogue, Tokyo, 1987-1988, p.13. Very small size, white, single to semi-double. A seedling of *C.fraterna.* Originated in Japan and named by Yoshiaki Andoh.

Pop Gee. (*C.reticulata* x *C.granthamiana*), *American Camellia Yearbook*, 1974, vol.II, p.238, Reg. No.1317: An 8 year old hybrid (*C.reticulata* 'Crimson Robe', [**Dataohong**] x C.*granthamiana)* that first bloomed 1968, originated by Dr W.F. Homeyer Jr., Macon, Georgia, USA. Plant growth is upright, open and rapid with dark green leaves, 11-12.5 cm long x 5.5-6 cm wide, resembling the *C.granthamiana* parent. The semi-double flower with the centre resembling 'Amabilis', (**Yukimiguruma**), is Rose Bengal, 25/3-25/1, with 12-16 petals and white anthers and filaments. Size, 16-17 cm across and flat to 3.5 cm deep. Blooms early to late.

Pop Homeyer. (*C.reticulata* x *C.granthamiana*), *American Camellia Yearbook*, 1979, p.110, Reg. No.1505: A very large, deep rose with white and pink radial stripes in centre; semi-double to anemone to peony to rose form double. A cross of *C.reticulata* 'Crimson Robe' (**Dataohong**) x *C.granthamiana*, early to late flowering. Originated by Dr W.F. Homeyer, Macon, Georgia, USA. The 13 year old seedling first bloomed 1968. Flower has 15-17 petals, 1-2 petaloids occasionally, white anthers and whitish pink filaments. Size 13-17 cm across x 4-5 cm deep. Growth is upright, spreading and rapid with dark green leaves, 11 cm x 7.5 cm. Sport: **Pop Homeyer Variegated.**

Pop Homeyer Variegated. (*C.reticulata* x *C.granthamiana*), Cannon, 1979, ACS., *The Camellia Journal*, vol.34, No.4 as 'Pop Homeyer Var'. A virus variegated form of **Pop Homeyer** - Deep rose, blotched white. Originated in USA.

Popcorn. (*C.japonica*), Mark S. Cannon Scion Catalogue, 1963-1964, p.12. No description. SCCS., 1972, *Camellia Nomenclature*, p.119: White. Large, semi-double with high petaloid centre. Originated in USA by Wilson, 1971.

Pope John XXIII. (*C.japonica*), Gentry, 1967, ACS., *The Camellia Journal*, vol.22, No.5, p.28 as 'Pope John 23rd'. No description. *American Camellia Yearbook*, 1968, p.135, Reg. No.985: A 12 year old chance seedling that first bloomed 1959, originated by F.W. Maitland, San Fernando, California, USA. Plant habit is upright, dense and rapid with dark green leaves, 10 cm x 5 cm. The formal double flower is 10-11 cm across x 5 cm deep; white with heavy textured petals. Blooms mid-season. Orthographic variant: 'Pope John 23rd'.

Pope John 23rd. Gentry, 1967, ACS., *The Camellia Journal*, vol.22, No.5, p.28. Orthographic variant for **Pope John XXIII.**

Pope Pius. Meincher, 1940, *Florist's Review*, 86(2233)29. Orthographic error for 'Pope Pius IX', synonym for **Prince Eugene Napoleon.**

Pope Pius IX. Rubel, 1933, Longview Wholesale Price List, No.60. Synonym for **Prince Eugene Napoleon.** Chinese synonym: 'Bopu'.

Pope Pius 9th. Portland Camellia Nursery Camellia Catalogue, 1947-1948, p.16. Orthographic variant for 'Pope Pius IX', synonym for **Prince Eugene Napoleon.**

Pope Pius XXIII. Sleeve Donnard Nursery Catalogue, 1973-1974. Orthographic error for **Pope John XXIII.**

Popf. (*C.japonica*), M.,1883, *Gardeners' Chronicle*, ser.2, 20:569: Camellia **Popf** is a handsome, cream coloured flower, of exquisite colouring that is quite unique. It has been in commerce for many years. The form is perfect. The plant has large foliage and is a robust grower. Originated in England.

Poppy Queen. (*C.japonica*), Masons Nursery Catalogue, 1968: Large white flecked pink, semi-double; opens flat with yellow stamens. Originated in New Zealand.

Poppy Sans. (*C.japonica*), SCCS, 1964, *Camellia Nomenclature*, p.101: Orange pink. Miniature semi-double with occasional centre petaloids and upright petals. Medium, upright growth. Blooms mid-season to late. Originated in USA by Metcalf, California about 1956.

Pop's Perfection. *(C.japonica),* ACS, *The Camellia Journal*, Mar. 2009, p.29, Regn No. 2755. Originated by John M Davy, Milton, Fla, USA. *American Camellia Yearbook*, 2008, p.124 with colour photo; A 30 year or older chance seedling, first flowered 1977. Propagated by Panhandle Select LLC, Milton, Fla. The 7 cm, formal double flowers are medium pink with flecks and streaks of darker burgundy, to deep coral pink at the centre of the petals. Petals are sometimes tiered in 12 rows. Spreading, open, slow growth. Flowers mid-season to late. Medium to dark green leaves 7 cm x 3.8 cm.

Popsy. (*C.pitardii* hybr.), ACRS., 1985, *Camellia News*, No.95, p.20, Reg. No.331 with colour photo on rear cover: Originated by Edgar R. Sebire, Wandin North, Victoria, Australia. A chance seedling of *C.pitardii* var. *pitardii*, flowered 1983. The miniature single to semi-double, two shades of pink. Blooms mid-season on a plant of open, upright habit with 3 cm long x 2 cm wide, light green leaves, acuminate and finely serrate.

Popu. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for **Prince Eugene Napoleon** as 'Pope Pius IX'. Later changed to 'Bopu'.

Porcelain Doll. *(C.japonica),* ACS, *The Camellia Journal*, May 1997, p.21, Reg. No. 2398. A miniature, blush, formal double chance seedling. Late flowering. Originated by Toichi Domoto, Hayward, Calif., USA. *American Camellia Yearbook*, 1997, p.6, colour photo before p.1. The seedling is over 15 years old. Average flower size is 5 cm across x 2.5 cm deep with 30+ petals. Plant growth is average and slow, with light green leaves. Renaming of 'Domoto's Blush Formal'.

Porcelain Prince. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue.* No description. Originated in USA.

Porloniana. (*C.japonica*), Longone Catalogue, 1846. No description. Originated in Italy. (Believed extinct.)

Porrecta. (*C.japonica*), Herbert, 1837, *Amaryllidaceae & Suppl.:* A fine crimson, branches horizontal or weeping. From the 'Waratah', (**Anemoniflora**) x 'Striped' (**Variegata**). Originated by Rev. Herbert, England. Synonym: 'Bellona'.

Port Barre. (*C.japonica*), McIlhenny, 1934, *List of Camellias for Sale*, p.l: Colour varies from solid rose-pink to solid white. Flowers medium to large, peony centre; centre petals interspersed with stamens; some blossoms having flesh-pink bases with white tips; the tree having, at times, four different colours. Originated in USA. Orthographic errors: 'Port Barrie', 'Port Berrie', 'Porte Barre'.

Port Barrie. McIlhenny Catalogue, 1942, p.3. Orthographic error for **Port Barre.**

Port Berrie. McIlhenny Catalogue, 1941, p.12. Orthographic error for **Port Barre.**

Port of the Rising Sun. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.136. Synonym for **Asahi-no-minato.**

Porta. (*C.japonica*), van Houtte Catalogue, 1841, 7:16: Formed like the double white (Alba Plena), soft pink, streaked with red and white. Berlèse, 1849, *Annales de la Societe Central d'Horticulture de France*, vol.40, p.310: Formal double, 9-10 cm across, blush rose over flesh coloured base, splashed with streaks and stripes of red. Very numerous petals, cup-shaped, some entire, others indented in 8-9 rows and regularly imbricated to form a round convex flower.

Franchetti, 1855, *Collezione di Camelie*, p.51: Flesh colour, all petals lined with white, beautifully imbricated. Originated in Italy.

Porte Barre. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.186. Orthographic error for **Port Barre.**

Porter Sport. (*C.japonica*), Mark S. Cannon Scion Catalogue, 1963-1964, p.12. No description. Originated in USA. No valid listing located.

Porter's Rose. (*C.japonica*), Sharp, 1948, *Camellias Illustrated*, pp.135, 136. Description not seen. Originated in USA.

Portia. (*C.japonica*), Waterhouse, 1947, *Camellia Quest*, p.16. Camden Park seedling, 35/51, originated by Sir William Macarthur, Camden Park, N.S.W., Australia. No description. (Believed extinct)

Portland. (*C.japonica*), SCCS., 1946, *Camellias*, p.20: Light pink, striped red. Small, formal double. Vigorous, compact, upright growth. Late blooming. Originated in USA by Doty & Doerner.

Portlandica. (*C.japonica*), Vershaffelt Catalogue, No.50, 1844, p.22.. No description. (Believed extinct.)

Portlandica Vera. (*C.japonica*), Verschaffelt Catalogue, 1849-1850, p.49. No description. (Believed extinct.)

Portuense. da Silva & Filhos Catalogue, 1958. Abbreviation for 'Portuensis Foliis Aureis Variegatis', synonym for **Japonica Variegata.**

Portuensis Foliis Aureis Variegatis. Companhia Horticolo-Agricolo Portuense, Catalogo, 1895-1896. Synonym for **Japonica Variegata.**

Portuguese Pink. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Portuguese Pink', synonym for **Augusto Leal Gouveia Pinto.**

Portuguese Pink. Hanger, 1957, RHS., *The Rhododendron and Camellia Yearbook*, No. 11, p.123. Synonym for **Augusto Leal Gouveia Pinto.**

Portugal. (*C.japonica*), Companhia Horticolo-Agricolo Portuense, Catalogo 1963-1964, p.23: Large, red flower with strong yellow stamens. Originated in Portugal.

Portuguese Benikarako. (Red Anemone from Portugal). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.117 as 'Portuguese-benikarako'. No description. From Portugal, but assumed to have originated in Japan.

Posêdon. (Poseidon), (*C.japonica*), ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.19: Small size, deep red, tubular to campanulate single. Originated in Japan.

Possi. Agraria Botanico Catalogo, 1861-1862. Orthographic error for **Pozzi.**

Possii Vera. Verschaffelt, 1857, *Nouvelle Iconographie*, Book IV, pI.II. Orthographic error for **Pozzi Vera.**

Possidissima Nova. (*C.japonica*), Cachet Catalogue, 1840-1841, p.3. No description. (Believed extinct.)

Post Time. (*C.japonica*), *American Camellia Yearbook*, 1967, p.232, Reg. No.924: A 10 year old chance seedling that first bloomed 1956. Originated by Mr & Mrs H.E. Ashby, Dotham, Alabama, USA. Plant growth is upright, open and medium with light green leaves, 12.5 cm long x 5 cm wide. The flower is semi-double, similar to 'Donckelaeri' (**Masayoshi**) and is 12.5 cm across x 2.5 cm deep. Colour is pink with golden stamens. Colour fades to lighter pink at petal edge. Blooms early to mid-season.

Postuma de Rossi. (*C.japonica*), Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.14. No description. Originated in Italy. (Believed extinct.)

Potentate. (*C.japonica*), Hastie Jr., 1948, *American Camellia Yearbook*, p.57: A small, rose-red, formal double. An old variety from Magnolia Gardens, it is not known if it is one of Rev Drayton's seedlings or a renamed, imported variety.

Potente. (*C.japonica*), Franco Agostoni, 1844, *Catalogo Plantarum Cesarei Regii Horti Modician.* No description. Berlèse, 1845, *Monographie*, ed.3, p.189: A large, formal double of burning red. Del Lungo e Girardi, 1928, *Le Camelie,* p.120. A large imbricated formal double, light red with 6-7 rows of large rounded petals. Originated in Italy by Mariani.

Potentissima. (*C.japonica*), Oudin, Lisieux Nursery Catalogue, 1845-1846, p.47. No description. Burdin Maggiore & Co. Catalogue, 1845, p.42; Isola Madre Catalogue, 1845. No description. Originated in Italy. (Believed extinct.)

Potomac Pillar. *(C.japonica),* ACS, *The Camellia Journal*, Aug. 1999, p.14, Reg. No.2497. A white, semi-double chance seedling with crepey, flat open petals. Cold hardy. Originated by Arthur A. Maryott, Gaithersburg, Md., USA. *American Camellia Yearbook,* 1999, p.3, colour photo before p.1. The 35 year old seedling first flowered in 1970. Average flower size is 10 cm across x 4.5 cm deep, with 18 petals, yellow anthers, and white filaments in columnar form. The plant gows in tall, columnar form, open, and at a medium rate, with dark green leaves 10 cm long x 3.8 cm wide.

Pouf. (*C.japonica*), *American Camellia Yearbook*, 1965, p.244, Reg. No.722: (SCCS., No.63-16) A 6 year old chance seedling that first bloomed 1961. Originated by Harry Novick, Woodland Hills, California, USA. The peony form flower, similar to **Professor Sargent**, is 5 cm across x 5 cm deep, cream and white with a single red petal and stamens sometimes showing. Blooms mid-season. Plant growth is slow, compact and upright.

Powathan. Charles van Geert Nursery Catalogue, 1845. Orthographic error for **Powhatanii.**

Powder Puff. (*C.japonica*), Griffiths, 1952, *American Camellia Yearbook*, p.48 as an example of a commercial synonym for **Souvenir de Madame Colette van Wassenhove**. *American Camellia Yearbook,* 1960, p.205, Reg. No.513: A 12 year old chance seedling that first flowered 1965. Originated by Alpha M. Hartman, San Fernando, California, USA. Plant growth is average with mid-green leaves 7.5 cm x 5 cm. The white, peony form flowers are 5 cm across x 3.7 cm deep with 10 petals and 139 petaloids, no stamens. Blooms mid-season to late. See colour photo *New Zealand Camellia Bulletin,* 1979, vol.XI, No.2, between pp.16-17.

Powdered Beauty. (*C.reticulata* hybrid). ACS, *The Camellia Journal*, Aug. 2000, p.6, colour photo p.5, Reg. No.2520. A red with silver fluorescence flower, loose peony form, with 28 petals, heavy petal texture, and golden anthers. Flowers early to late. Originated by Jack Lewis, Concord, Calif., USA. *American Camellia Yearbook,* 2000, p.6, colour photo p.c13. The 8 year old seedling first flowered in 1996. Average flower size is 15 cm across x 3.8 cm deep. Plant growth is spreading, upright and vigorous, with dark green leaves 7.5 cm long x 5.7 cm wide.

Powell's Pink. Rhodellia Nursery Catalogue (before 1945). Synonym for **Benibotan.**

Powhaltan. Alexis Dalliere, 1852, Price List, p.21. Orthographic error for **Powhatanii.**

Powhatan. Anonymous, 1846-1846, *Horticulturalist*, 1:432. Orthographic variant for **Powhatanii.**

Powhatanii. (*C.japonica*), Hogg, 1838, *Magazine of Horticulture*, 4:155: Deep Maroon. Very double. Originated in USA by M. Floy, New York. Orthographic errors: 'Powathan', 'Powhattan'. Orthographic variant: 'Powhatan'. Orthographic error: 'Powhaltan'.

Powhattan. van Houtte Catalogue, 1844-1845, 18:17. Orthographic error for **Powhatanii.**

Pozzi. (*C.japonica*), Auguste van Geert, 1848, Catalogue, p.21. No description. de Jonghe, 1851, *Traité de la Culture du Camellia*, p.118. No description. van Houtte Catalogue, 1866, 116:23:

Extremely large. Outstanding imbrication, carmine rose streaked with white. The white blotched form of **Pozzi Vera.** Originated in Italy by Tagliabue. Orthographic error: 'Possi'.

Pozzi Vera. (*C.japonica*), Luzzatii, 1851, *Collezione di Camelie*, p.31: Large, crimson, formal double, perfectly imbricated. Verschaffelt, 1857, *Nouvelle Iconographie*, Book IV, pl.II as 'Possi Vera': Its blossoms, of medium size, are composed of regularly imbricated and remarkably wide petals at the centre; all are of a uniform, delicate pink colour. Van Houtte, 1861, *Flore des Serres...*, vol.XIV, p.275, pl.1499: Unusually large, perfectly imbricated, carmine pink splashed with white. All descriptions after 1861 have white markings, indicating that the stock had become infected with virus. Originated in Italy by Borzone. Orthographic errors: 'Possi Vera', 'Possa Vera', 'Possii Vera'.

Pr. Eugenio Napoleone. Torsanlorenzo Catalogue, 1987-1988. Orthographic variant for **Prince Eugene Napoleon.**

Praecellentissima. (*C.japonica*), Berlèse, 1837, *Monographie.* ed.1, pp.100, 129: Leaves 6 cm long x 5 cm wide, broad-elliptic, slightly acuminate, venation prominent, obscurely serrate, apex reflexed as in 'Reevesii' (**Reevesiana**); bud oblong, scales yellowish green; flower 8 cm across or more, double, cherry-red; petals of the circumference 6, oblong, reflexed to calyx in the form of a star, crenate; those of the interior, numerous, short, equally arranged and forming a bowl; style exposed in the centre. Orthographic error: 'Prae-excellentissima'. Originated in Germany.

Pracclara. Mariotti Nursery Catalogue, 1924, p.16. Orthographic error for **Praeclara.**

Praeclara. (*C.japonica*), van Houtte Catalogue, 1841, 7:16 as 'Preclara'. No description. van Houtte Catalogue, 1859, 77:65: Large, full, peony form, pink veined, all the petals bordered with a wide band of white. Originated in Italy by Carlo Luzzatti. However, de Jonghe, 1851, says "From Casoretti". Orthographic errors: 'Pracclara', 'Preclara', 'Proclara', 'Procclara', 'Preclari', 'Pruclara', 'Procclara', 'Praeclare'.

Praeclara Nuova. (*C.japonica*), Jean Vervaene fils, 1864, Price List, No.1, p.8 as 'Preclara Nuova'. Verschaffelt Catalogue, 1867-1868, p.45. No description. Originated in Italy. (Believed extinct.)

Pretty Bird. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.187. No description. Originated in USA. No valid listing located.

Pretty in Pink. (*C.japonica*), ACS., Nov.1987. *The Camellia Journal*, vol.44, No.2, p.22, Reg. No.2067: Miniature, pink with lighter pink centre, formal double *C.japonica* chance seedling. Blooms mid-season to late. Originated in USA by Don Bergamini, Martinez, California. *American Camellia Yearbook*, 1987, p.84 with colour photo between pp.60-61: The 8 year old seedling first bloomed 1983. Average flower size is 5 cm. across x 2.5 cm deep. Plant growth is average and medium in rate with dark green leaves, 5 cm x 3.8 cm.

Pretty Lady. (*C.reticulata* hybrid). ACRS, *Camellia News*, 1997, No.143, p.17, colour photo p.2, Reg. No.492. Originated by Dr R.M. Withers, Donvale, Victoria, Australia. A cross of **C.reticulata** hybrid **Suzanne Withers** as seed parent, x *C.reticulata* hybrid **Jean Pursel,** which first flowered 1994. The pink (RHS.CC.62B) flower opens formal double, then to informal double with 50 petals. Size is 12 cm across x 5.2 cm deep. Flowers mid-season to late on an upright open plant of rapid growth. Leaves olive green, glossy, keeled, elliptical, serrate margins, acuminate apex, 15 cm long x 6.2 cm wide. Petals notched and folded, and a few filaments.

Pretty Lady (United States). *(C.japonica)*, ACS, *The Camellia Journal*, Dec. 2005, p.28, with colour photo p.29, Reg. No. 2666, invalidly as 'Pretty Lady' – name already used as above. A chance

seedling that first flowered 1994. Originated by C.M. and Lillian Gordy, Ocala, Fla., USA. The 12.7 cm diameter clear pink, semi-double to loose peony flower has has interspersed soft yellow stamens on creamy filaments. *American Camellia Yearbook*, 2005, p.46, with colour photo p.c7. Plant is upright and open with average growth rate. Dark green leaves are 9.5 cm x 4.5 cm.

Pretty Magnolia. Bao, 1980. ACS. *The Camellia Journal*, vol.35, No.2, p.18. Synonym for **Qiaoyulan.**

Pretty One. (*C.japonica*), SCCS., 1976, *Camellia Nomenclature*, p.126: Coral pink shading to white in centre. Medium, semi-double to loose peony form. Early to late blooming. Originated in USA by Novick.

Pretty Pantalettes. (*C.japonica*), McCaskill Gardens Newest Camellias, 1957; Wylam, 1957, *American Camellia Yearbook*, p.30: A 9-10 cm across, semi-double, soft pink flower, edged white. The blooms have ruffled petals with a slightly irregular edge. Small to medium sized leaves. Originated by McCaskill Gardens, Pasadena, California, USA.

Pretty Patsy. *(C.hiemalis).* ACRS, *Camellia News*, Autumn 2005, No.167, p.17, Reg. No.555. Originated by Brian W. Flanagan, Eagle Heights Qld, Australia. Seed parent *C.hiemalis* **Chansonette**, pollen parent unknown. First flowered in 2001. A semi-double, cup-shaped flower of 20 petals, light purple depening at the petal edges (RHS.CC.63A to 92C), and 6 cm across x 2.6 cm deep. Flowers mid-season on a very slow growing, bushy plant. Leaves dark green, glossy, elliptic and curled, 6 cm long x 2.5 cm wide.

Pretty Peach. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1999, p.14, Reg. No.2501. A peach coloured, profuse blooming, chance seedling. Flowers mid-season to late. Dense growth suitable for landscape or exhibition. Originated by W.R. Blackmon, S.C., USA. *American Camellia Yearbook*, 1999, p.4. The 20 year old seedling first flowered in 1972. Plant growth is upright and dense and vigorous. The dark green leaves are 10.8 cm long x 5 cm wide.

Pretty Penny. (*C.japonica*), *American Camellia Yearbook*, 1966, p.98, Reg. No.810: A 6 year old chance seedling that first bloomed 1964; originated by R.W. Wilder, Fairhope, Alabama, USA. Plant growth is upright and rapid with dark green leaves, 7.5-8 cm long x 3.8 cm wide. The formal double flower is 8 cm across x 5 cm deep. Petals, shell pink at sharply pointed outer ends. Longer outside petals with each succeeding row uniformly shorter, forming a semi-cone. Blooms mid-season.

Pretty Pink. Feng et al., 1986, *Yunnan Camellias of China*, p.165. Synonym for **Fenejiao.**

Pretty Thing. (*C.japonica*), *American Camellia Yearbook*, 1972, p.134, Reg. No.1205: A sport of **Nell Ashby,** first observed 1967 by Bob Leeton, Gulfport, Mississippi, USA. Plant growth is upright, dense and rapid with light green leaves, 8 cm x 5 cm. The semi-double, light pink bloom has yellow anthers and filaments with 25 petals and a few petaloids. It measures 11 cm across x 3.8 cm deep. Blooms mid-season.

Previdenza. (*C.japonica*), Verschaffelt Catalogue, 1847-1848, p.61. No description. Van Houtte Catalogue, 1851, 44:15 as 'La Previdenza': Bright red with a white ray in the centre of each petal. Imbricated. Synonym: 'La Previdenza'.

Prima. (*C.japonica*), van Houtte Catalogue, 1851, 44:22: Satiny pink, extra double, magnificently imbricated. Originated in Italy.

Prima Ballerina. (*C.japonica*), Nuccio's Nurseries Catalogue, 1983; *American Camellia Yearbook*, 1984, p.180, Reg. No.1957: A large white, washed and shaded orchid pink, semi-double, *C.japonica* chance seedling. Blooms mid-season to late. Originated at Nuccio's Nurseries, Altadena, California, USA. The 10 year old seedling first bloomed 1972. Flower size, 11 cm across x 5 cm. deep with light green, medium sized leaves. Plant growth is dense and slow. See colour photo *International Camellia Journal*, No.21, 1989, p.7 and on p.87, Fischer, 1986, *Kamellien.*. Chinese synonym: 'Balei Mingxing'.

Prima Dona. (*C.japonica*), Verschaffelt, 1851, *Nouvelle Iconographie*, Book XI, pl.IV: Received from our Italian correspondent who put it for sale in 1850. Its petals are rounded, or sometimes lanceolate, very full, arranged in the form of a star. They are pink at the base with white or roseate margins and pink veining. Orthographic variant: 'Prima Donna'.

Prima Donna. von Biedenfeld, 1856, *Practische Grundlehren der Cultur von Camelien...*, p.50. Orthographic variant for 'Prima Dona'.

Prima Donna. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1944-1945: From the Tea Gardens. Large, open blooming semi-double coloured bright pink, with veined petals. Fendig, 1951, *American Camellia Catalogue:* A medium to large, bright pink, incomplete double, (semidouble to anemone form) 8-10 cm across x 4 cm deep. Petals are round, about 5 cm. in diameter, notably veined with the apex shallowly notched. There are a few crinkled and folded petaloids which are intermixed with the central stamens. Leaves glossy, dark green, 7.5 cm. x 3.8 cm, oval, blunt apex, margins shallowly serrate; vigorous, bushy growth. Blooms late. One of the old Tea Garden varieties previously known as 'Tea Garden No.283', believed to have originally been imported from Europe and renamed, but no relation to **Prima Dona** above. For illustration see p.284, Hertrich, 1954, '*Camellias in the Huntington Gardens',* vol.I. Orthographic variant: 'Primadonna'. Sport: **Prima Donna Variegated.**

Prima Donna Variegated. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1944-1945 as 'Prima Donna Var.': A virus variegated form of **Prima Donna** - Bright pink blotched with white. Originated in USA at Magnolia Gardens, John's Island, South Carolina, USA. Synonyms: 'Tea Garden Number 44', 'Bill Lee'.

Primadonna. Overlook Nursery Catalogue, 1945-1946, p.17. Orthographic variant for **Prima Donna.**

Prima Exposizione Italiana. (*C.japonica*), Stefano Pagliai Catalogue, 1867, p.72: Flowers imbricated and concave, delicate pink, venation a little deeper at the centre; with metallic bands in the

middle of the petals. Originated in Italy by Botti, Chiavari. Abbreviation: 'Prima Esposiz. Italiana'.

Prima Esposizione Romana. (*C.japonica*), Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete*, p.7: Petals numerous, perfectly imbricated, with rare examples in other forms; at the periphery, smooth, rounded and imbricated like a rose; those intermediate cup-shaped, the central ones channelled, pointed, imbricated in a star shape. Outer and intermediate a lilac rose colour, while the centre is white, faintly rosy. Originated in Italy by Delgrande, Rome.

Prima Ristarto. (*C.japonica*), Peer, 1956, *American Camellia Yearbook*, p.57. Originated in Italy. No description.

Primavera. (*C.japonica*), Nuccio's Nurseries Catalogue, 1949-1950, p.10: White. Medium large, formal double with 60-90 petals. Vigorous, upright growth. Mid-season to late flowering. First flowered 1943. Originated at Nuccio's Nurseries, Altadena, California, USA. See illustration p.283, Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II. Synonym: 'Nuccio's Number 105'.

Prime Fragrance. *(C.japonica), New Zealand Camellia Bulletin*, 1995, Issue No.120, vol.XIX, No.1, p.46, Reg. No.361: Originated by J.R. Finlay, Whangarei, New Zealand. The flower is deep red (RHS.CC.53B), peony form with yellow anthers and white filaments, 16 petals, 112+ petaloids and is 8.5 cm across x 6 cm deep. The plant is upright with medium growth rate, and has dark green leaves 8 cm long x 5 cm wide. Blooms mid-season to late, weathers well and is self grooming. A fragrant seedling of *C.japonicas* **Tama-ikari** x **Kramer's Supreme.**

Prime Time. (*C.reticulata x C.japonica*), *American Camellia Yearbook*, 1980, p.172, Reg. No.1671: A very large, deep red, semi-double. *C.reticulata* hybrid 'Crimson Robe' (**Dataohong**) x ['Cornelian' (**Damanao**) x *C.japonica* **Mrs D.W. Davis**] that blooms mid-season to late. Originated by Frank Pursel, Oakland, California, USA. The 6 year old hybrid first bloomed 1977. Average flower size 14.5 cm across. Plant growth is upright and rapid with dark green leaves, 12.5 cm x 7 cm.

Primeiro de Fevereiro. (*C.japonica*), Camillo Aureliano, in *Jornal de Horticlture Practica*, Vol.X, 1879, pp.136-137;. Formal double, pale satiny pink with a light salmon hue, petals striped white in the centre, slightly notched. Originated at Fiaes in Portugal.

Primizia de Rossi. (*C.japonica*), Medici Spada, 1858, *Delle Nuova Camellia che si vengono ottenendo dalle Semine Romane*, p.7: Originated in Italy by F.Albertini. Large, vermilion, peony form.

Prince Albert. van Houtte Catalogue, 1841, 7:16. Synonym for **Albertii.**

Prince Albert Nova. (*C.japonica*), Burdin Maggiore & Co. Catalogue, 1856-1857. No description. Originated in Italy. (Believed extinct.)

Prince du Cionine. Peer, 1956, *American Camellia Yearbook*, p.57. Orthographic error for **Prince de Canino.**

Prince Eugene Napoleon. (*C.japonica*), Verschaffelt, 1859, *Nouvelle Iconographie, Book* VII, pl.I: Originated by M. de Coster, Melle, Belgium. The flowers, larger than average, are formed of small, numerous petals, rounded, even, bilobate at apex and imbricated with rigorous perfection, all of a vivid cherry-red. Leaves light green, ovate, acuminate, 7 cm long x 2 cm wide. Medium compact, upright growth. Blooms mid-season. See illustration, p.111, Macoboy, 1981, *The Colour Dictionary of Camellias.* In Australia it has been erroneously known as 'Venus de Medicis' since 1871. See pl.II, Waterhouse, 1947, *Camellia Quest.* In America it was confused and renamed several times - Synonyms: 'Pope Pius IX', 'Rosedale Beauty', 'Ladiner's Red', 'Mrs Harry Davis', 'Imbricata Rubra Plena', 'Queen of Denmark', 'Flore Plena Atrorubens', 'Rubra Plena Imbricata', 'Conte de Name', 'Venus de Medicis'. Abbreviations: 'Prince Napoleon', 'Pr. Eugenio Napoleone'. Names of other cultivars erroneously applied: **Rubra Plena, Madame Lebois, Carlotta Grisi**. Chinese synonym: 'Popu', later changed to 'Bopu'. Note; *Collected Papers*, ICS Congress, Kurume 2010, p.94; "Characterization and differentiation….; Jose Luis Couselo et al"; Genotyping of the six specimens belonging to Group 2 **Prince Eugene Napoleon** revealed that they were two different cultivars of *C.japonica.*

Prince Eugene Napoleon Variegated. Fendig, 1953, *American Camellia Catalogue.* This is an erroneous synonym for 'Madame Lebois Variegated', synonym for **Admiration.**

Prince F. William. Mark S. Cannon Scion Catalogue, 1962, p.9. Abbreviation for **Prince Frederick William.**

Prince Frederic William. Prudente Besson & Figlio, Catalogue, 1878, p.42. Orthographic variant for **Prince Frederick William.**

Prince Frederick. Warren's Descriptive Catalogue, 1844, p.37. This is probably meant to be 'Grand Frederic' because the only 'Prince Frederick' of 1844 was the 5 year old son of Frederick William IV, Emperor of Prussia. It was also given as a synonym of **Floyi.**

Prince Frederick of Prussia. Giles & Son Catalogue, 1881, p.92. Orthographic error for **Princess Frederick William.**

Prince Fredérick William. Prudente & Besson Catalogue, 1865. Orthographic error for **Princess Frederick William.**

Prince Frederick William. (*C.japonica*), Sheather & Co. Nursery Catalogue, 1872. A delicate shade of light pink. (RHS.CC.China. Rose 024/3) A perfectly imbricated formal double, hardy, vigorous and erect, with ovate, light green foliage. Originated in Australia by Sheather, Paramatta, N.S.W. See pl.IX, Waterhouse, 1952, *Camellia Trail.* **Prince Frederick William** was listed a number of times in Europe from 1865 on, but this seems to be an orthographic error for **Princess Frederick William.** The name 'Early Prince' was given for a supposedly early blooming form, but the difference seems insufficient to warrant a separate name and it is

reduced to synonymity. Orthographic errors: 'Prince Frederick Wilhelm', 'Prince Frederick Williams'. Orthographic variant: 'Prince Frederic William'. Abbreviation: 'Prince F. William'. Received an RHS., Award of Merit in 1953. Sport: **Lady Hope.**

Prince Frederick Williams. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Prince Frederick William.**

Prince Frederick William. William Bull Nursery Catalogue, 1872, p.154. Orthographic error for **Princess Frederick William.**

Prince Frederick Wilhelm. James Rare Plant Nursery, California, Catalogue, 1954-1955, p.10. Orthographic variant for **Prince Frederick William.**

Prince Henry. (*C.japonica*), Malbis Nursery Catalogue, 1945: Red spotted white. Medium, rose form double. Originated in USA by Malbis Nursery, Daphne, Alabama.

Prince Imperial. (*C.japonica*), Rafarin, May,1867, *Revue Horticole*, p.175: A bright red, medium sized, double flower. Originated by Favre Couvel, Nantes, France in 1856.

Prince Leopold. Broome, 1859, *Gardeners' Chronicle*, 3194:870. Synonym for **Roi Leopold.**

Prince Murat. (*C.japonica*), SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Rose-red. Very large rose form double. Vigorous growth. Blooms mid-season. Originated by Richie Rosa, Tallahassee, Florida, USA. For illustration see p.189, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III and colour pl.129, p.64, *Encyclopedia of Camellias in Colour*, vol.II, 1978.

Prince Napoleon. Glen St Mary Nursery Catalogue, 1947-1948. Abbreviation for **Prince Eugene Napoleon.**

Prince of Galles. Luzzatti Catalogue, 1853. Orthographic variant for **Prince of Wales.**

Prince of Joinville. (*C.japonica*), Prince & Co. Nursery Catalogue, 1846-1847, p.9: Brilliant pink, rose form double to formal double, well imbricated, spotted with white. Originated in France by Prosper Nerriére, 1843 as 'Prince de Joinville'. Orthographic errors: 'Prince d'Joinville', 'Principe di Joinville'.

Prince of Orange. (*C.japonica*), *American Camellia Yearbook*, 1950, p.115, illustration; SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.57: Large, deep red tinged with orange, loose to full peony to anemone form, 11-12 cm across. There are 15 large, crinkled petals, with central petaloid formation, similar to Elegans, with a heavy ring of stamens, filaments pale pink, 2 cm long and yellow anthers. Leaves, medium glossy green, broad-oval, 10.5 cm x 6 cm, slight twist, tip short acute, raised venation, shallow, wide serrations. Plant habit compact, willowy and rapid. Originated by Mr & Mrs T.S. Clower, Gulfport, Mississippi, USA. First flowered 1943. Reg. No.86 with the ACS. Illustrated, Fendig, 1951, *American Camellia Catalogue* and p.191, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Not related to the European **Prince d'Orange.** Synonyms: 'Crusader', 'Red Crusader'. Sport: **Governor William Bradford.**

Prince of Orange Variegated. Griffiths & Strother, 1954, ACS, *Nomenclatural Cross-reference List*, pp.5, 10, as 'Prince of Orange Var'. Synonym for **Governor William Bradford.**

Prince of Wales. (*C.japonica*), van Houtte Catalogue, 1843-1844, 12:ccc: Delicate satiny pink, darker near the centre, of beautiful shape, more than 12.5 cm across. Verschaffelt, 1850, *Nouvelle Iconographie*, Book VII, pl.IV: Carmine, darker near the centre, large peony form, 12-13 cm across. Originated in England. Orthographic errors: 'Prince of Whales', 'Princess of Wales'. Orthographic variants: 'Prince de Galles', 'Prince of Galles', 'Prince di Galles', 'Principe di Galles'.

Prince of Whales. Charles van Geert Nursery Catalogue, 1845, p.12. Orthographic error for **Prince of Wales.**

Prince Poniatowski. Loureiro Catalogue No.9, 1872-1873. Orthographic error for **Dionisia Poniatowski.**

Prince Rosea. Jean Verschaffelt, 1864-1865, Catalogue, No.8, p.19. Synonym for **De la Reine Rosea.**

Prince Royal. Cachet Catalogue, 1845-1846, p.7. Orthographic error for **Princess Royal.**

Prince Sibert. (*C.japonica*), Tennant Nursery Catalogue, 1934. No description. (Believed extinct.)

Prince Solerno. Real Campanhia Horticolo-Agricola Portuensis Catalogue, No.29, 1895-1896, p.68. Orthographic error for **Principe di Salerno.**

Prince Tessa. (*C.japonica*), RHS., 1950, *Camellia & Magnolia Conference Report*, p.119: A double white variety shown at the RHS., Camellia & Magnolia Show, Apr.3-4, 1950. Origin unknown.

Prince Tranbezkoy. da Silva. 1880, *Forcing Varieties of Camellias in Oporto*, p.17. Orthographic error for **Prince Troubetzkoy.**

Prince Troubetykoy. Ellis, 1953, *Old Camellia Varieties*, p.282. Orthographic error for **Prince Troubetzkoy.**

Prince Troubetzkoy. (*C.japonica*), Verschaffelt Catalogue, 1847-1848, p.61 as 'Prince de Troubetski'. No description. Verschaffelt, 1851, *Nouvelle Iconographie*, Book VI, pl.I: It is of Italian origin and was dedicated to Prince Troubetzkoy, patron of horticulture. It is a very large bloom, irregular, peony shaped, of the most vivid pink, with one or two rows of extremely ample petals, convex, reflexed, and of an immense number of much smaller ones, quite compact, diversiform, and imitating perfectly the floral arrangement of the peonies. Orthographic variant: 'Prince de Troubetzkoy'. Orthographic errors: 'Prince de Troubetski', 'Prince Tranbezkoy', 'Prince Troubetykoy', 'Principe Trobetskoy', 'Prince de Troubetzkoi'.

Prince Velvet.. Gentry, 1969, ACS., *The Camellia Journal*, vol.24, No.1. No description. Originated in USA. No valid listing of the name located.

Prince Victor. (*C.japonica*), Giles & Son Nursery Catalogue, 1881, p.92. No description. Originated in Australia. (Believed extinct.)

Princeps. (*C.japonica*), Jacob-Makoy, 1829, Catalogue, p.7. No description. Sweet, 1830, *Hortus Britannicus*, ed.2, p.74: 'double carmine'. Trillon, Le Mans Nursery Catalogue, 1845, p.7: Vivid red, blotched white, beautiful flower. Van Houtte's (18441845) equating of this with **Florida** would seem in error as Sweet lists them both separately.

Princeps Albertus. Anonymous, 1847, *Annales de Gand.* Orthographic variant for 'Prince Albert', synonym for **Albertii.**

Princess Adelaide de Carignan. Downing, 1858, Catalogue, p.14. Orthographic variant for **Princesse Adélaide.**

Princess Adelaide of France. Hovey ed., 1841, *Magazine of Horticulture.* Synonym for **Princesse Adélaide.**

Princess Adeline. (*C.japonica*), Luddeman's Pacific Nursery Catalogue 1895-1896: Rose colour with white edge, medium sized rose form double. Originated in USA.

Princess Aldrovandi. Fendig, 1953, *American Camellia Catalogue.* Erroneous synonym for 'Teutonia'. Orthographic error for **Principessa Aldobrandini.**

Princess Alessandro. Mariotti Catalogue, 1924, p. 16. Orthographic variant for **Princesse Alexandra.**

Princess Alexandra. (*C.japonica*), Anonymous, 1873, *Gardeners*' *Chronicle*, 33:546-547: RHS., first class certificate was awarded to Mssrs. E.G. Henderson & Son for a new Camellia ... delicate pink, partially striped with rose. A beautiful shaped flower. Originated in England. Orthographic errors: 'Princesse Alexandria', 'Princess Alexandro'.

Princess Alexandria. Newman's Nursery Catalogue, 1886-1887, p.116. Orthographic error for **Princess Alexandra.**

Princess Ann. Puddle & Hanger, 1960, RHS., *The Rhododendron & Camellia Yearbook*, No.14, p.159, erroneously as the synonym for **Rubescens Major.** Orthographic error for **Princess Anne.**

Princess Anne. (*C.japonica*), SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.57: A virus variegated form of **Rubescens Major** - deep rose marbled and splotched white. Large, formal double. Vigorous, compact growth. Midseason blooming. Imported from Guichard Soeurs, Nantes, France to USA as **Rubescens Major**. The variegated form was named **Princess Anne** after Princess Anne County, Virginia. See illustration, p.192, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Synonym: 'Rubescens Major Variegated', 'Rubescens Variegated'. Orthographic error: 'Princess Ann'.

Princess Bacciochi. Paul, 1879, *Gardeners*' *Chronicle,* p.427. Orthographic error for **Princesse Baciocchi.**

Princesse Bacchioci. Vanderbilt, 1941, *Camellia Research, II*, p.6. Orthographic error for **Princess Baciocchi.**

Princess Bacchocci. Hackett Nursery Catalogue, 1893, p. 134. Orthographic error for **Princesse Baciocchi.**

Princess Baccinochi. SCCS., 1942, *Classification of Camellias*, p.3. Synonym for Margherita **Coleoni Variegated.**

Princess Bacciocchi. Shepherd & Co. Nursery Catalogue, 1880. Orthographic variant for **Princesse Baciocchi.**

Princess Bacciochi. Hovey & Co. Nursery Catalogue, 1852, p.8. Orthographic error for **Princesse Baciocchi.**

Princess Baccniochi. McIlhenny, 1937, *600 Varieties of Camellias.* Orthographic error for **Princesse Baciocchi.**

Princess Bachanachi. Gerbing, 1945, *Camellias*, p.181. Synonym for **Margherita Coleoni Variegated.**

Princess Bachinache. Coolidge Rare Plants Gardens Camellia Catalogue, 1949. Synonym for Margherit**a Coleoni Variegated.**

Princess Bachinachi. Wilson, 1930, *House & Garden*, 57(3):158. SCCS., 1945, *Camellias*, p.20 gives 'Variegated General Macarthur' as a synonym. However this is in error as it is a synonym for **Margherita Coleoni Variegated**. SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.57, gives 'Berkeley Square' as a synonym.

Princess Bachiocchi. Guilfoyle Nursery Catalogue, 1888, p.19. Orthographic error for **Princesse Baciocchi.**

Princess Baciocchi. (*C.japonica*), Armstrong Nurseries Catalogue, 1930: Carmine. Medium semi-double to peony form. Vigorous, bushy growth. Mid-season blooming. Originated in USA by Armstrong Nurseries, Ontario, California. Note: Not the same as Boffi's **Princesse Baciocchi** although used as an orthographic variant for it. Synonym: 'Princess Baciocchi Red'. Orthographic errors: 'Princess Baccahacie', 'Princess Bacchocci'.

Princess Baciocchi Red. Vanderbilt, 1941, *Camellia Research, II.* Synonym for **Princess Baciocchi.**

Princess Baciocchi Variegated. *(C.japonica),* ACS, Nov. 1993, *The Camellia Journal,* vol.48, No.4, p.32. Valdosta Camellia Scions as 'Princess Baciocchi V.': A white blotched, virus variegated form of **Princess Baciocchi.** Originated in USA.

Princess Baciochi. Coolidge Camellia Gardens Camellia Catalogue, 1945-1946. Orthographic error for **Princesse Baciocchi.**

Princess Backiochi. Portland Camellia. Nursery, 1946-1947, p.7. Synonym for **Margherita Coleoni Variegated.**

Princess Charlotte. Paul, 1869, *Gardeners*' *Chronicle*, ser.2, 11: è88. Orthographic variant for **Princesse Charlotte.**

Princess Chula. (*C.x williamsii*), Savige, 1982, *International Camellia Journal*, No.14, p.48: A recent cross of *C.saluenensis x C.japonica* Tomorrow. A large, soft pink, semi-double bloom. Originated by Miss Gilian Carlyon, Tregrehan, Par, Cornwall, England.

Princess Clementine. Berlèse, 1845, *Monographie*, ed.3. Orthographic varaint for **Princesse Clementine.**

Princess Clothilda. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.189. Synonym for **Clotilde.**

Princess Clothilde. Fruitland Nursery Catalogue, 1948. Synonym for **Clotilde.**

Princess Clotilde. Paul, 1889, *Gardeners*' *Chronicle*, p.427. Synonym for **Clotilde.**

Princess Clotilde Rose. Nantes, *Services des Espaces, Collections*, 1980. Synonym for 'Princesse Clotilde Rubra'.

Princess Cochiochi. *The Gardeners' Chronicle and Agricultural Gazette,* No.12, Mar.24, 1856, p.208. Orthographic error for **Princesse Baciocchi.**

Princess d'Austriche. William Paul Nursery Catalogue, 1867, p.18. Synonym for **Princesse Adélaide.**

Princess Demidoff. Hovey Nursery Catalogue, 1857. Abbreviation for **Principessa Matilde Demidoff.**

Princess Di. *(C.hybrid).* ACRS, *Camellia News*, 1998, No.147, p.12, Reg. No.497. Originated by Mr & Mrs G. Waldon, Wodonga, Vic., Australia. A chance seedling that first flowered 1991. A small single white flower of 6-8 petals, 3.5 cm across x 1.1 cm deep. Flowers abundantly on an upright, slow-growing bush. Leaves dark green, slightly glossy, acute to acuminate apex, irregular margins, 4.5 cm long x 2.7 cm wide. Petals wavy and notched. A dainty small bush.

Princess Doria. Villa Pamphili Catalogue, 1856. Orthographic error for **Principe Doria.**

Princess du Mahe. *(C.japonica),* McPenny's of Bransgore Catalogue, 1992: Pale pink double. Planted 1951 by Douglas Bradwell Townes; first flowered 1977. Named for the Princess du Mahe, Burnley, England. Originated in England.

Princess Elizabeth. (*C.japonica*), McIlhenny Catalogue, 1950-1951, p.3: A large, full double bloom, 9.5-10 cm across. Outside four rows of large petals are blush pink, standing straight out from base; other four rows are white and irregularly placed, some compressed, pointing upwards, irregularly grouped around a loose centre of low, white stamens, tipped primuline yellow. Originated at Jungle Gardens, Avery Island, Louisiana, USA. Synonyms: 'Billy Porter', 'Bill Porter'. See illustration p.21, Hertrich, 1959, *Camellias in the Huntington Gardens*, pl.III, as 'Bill Porter'.

Princess Emily. *(C.sasanqua).* C. Aust, *Camellia News*, No.182, Autumn 2010, p.9 with colour photo; Regn No.620-N. A seedling of **Mine-no-yuki.** Semi-double to informal double, 6 cm diameter with 22-24 petlas. Pink buds open to pure white flowers. Broader leaf than other sasanquas. Upright growth and flowers from late autumn to mid-winter. Originated by Bob Person, Ballajura WA, Australia, and released in 2006 by John Coles Nursery, Banjup, WA.

Princess Emily. *(C.hybrid)* C. Aust., *Camellia News,* Spring 2011, No187, p.24 with colour photo. A seedling of **Yume** raised by Gene Phillips, Savannah Ga., USA. Name to be changed, already used for another cultivar.

Princess F. William. de Bisschop Nursery Catalogue, 1937. Abbreviation for **Princess Frederick William.**

Princess Frederick Rosea. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.189. Synonym for **Princess Frederick William.**

Princess Frederic William. van Houtte Catalogue, 1858, 72:17. Orthographic variant for **Princess Frederick William.**

Princess Frederic William of Prussia. *The Gardeners' Chronicle and Agricultural Gazette*, 1859, p.258. *Proceedings of the RHS.*, 1861, p.165. Synonym for **Princess Frederick William.**

Princess Frederick William. (*C.japonica*), van Houtte, 1857, *Flore des Serres...*, vol.12, p.181, pl.1277: A variety brought from China by Robert Fortune for the nurseryman R. Glendenning. It was illustrated by Verschaffelt in the 1858, *Nouvelle Iconographie*, Book V, pl.II. Blossom of medium size and matchless perfection, with a delicate pink ground, liberally striped and fasciated with crimson like a picotte. *Proceedings of the RHS.*, 1861, p. 165 as 'Princess Frederic William of Prussia': ... proves to be one of the most constant and beautiful of the

carnation striped varieties, the flowers being finely imbricated and evenly and constantly flaked with bright pink. Orthographic variants include: 'Princess Frederik William', 'Princesse Frederick William', 'Princess Frederic William', 'Princesse Frederique William', 'Principessa Frederick William'. Synonyms: 'Princess William of Prussia', Princess Frederick Rosea', 'Princess Frederic William of Prussia', 'Princess of Prussia'. Orthographic errors: 'Prince Frederick William', 'Prince Frederick William of Prussia', 'Princess Freiderik William'. 'Princeu Frederice William'. Synonym: 'Lady Dorothea Walpole'. Note: A description of this camellia, but without a name, appeared in *The Gardeners' Chronicle and Agricultural Gazette*, No.11, March 15, 1856.

Princess Frederick William of Prussia. Fraser & Langton Nursery Catalogue, 1874-1875. Synonym for **Princess Frederick William.**

Princess Frederik William. Jules Menoreau, Nantes Nursery Catalogue, 1886, p.10. Orthographic variant for **Princess Frederick William.**

Princess Freiderick William. Scarlatti Catalogue, 1888. Orthographicerror for **Princess Frederick William.**

Princess Irene. (*C.japonica*), Wilmot, 1943, *Camellia Varieties Classification Report*, 1943, p.13. No description. Magnolia Gardens & Nursery Catalogue, 1947-1948: A Magnolia Gardens original, difficult to propagate. Large, rose-pink semi-double with bell-shaped petaloids among stamens. Inner petals tend to become petaloids. Early blooming. Large, heavy, dark green foliage. Slow, upright growth. Originated at Magnolia Gardens, South Carolina, USA. Sport: **Princess Irene Variegated.** See illustration p.285, Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II.

Princess Irene Variegated. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue:* Pink variegated. Semi-double. Early. Hertrich, 1959. *Camellias in the Huntington Gardens*, vol.III, p.193, illustration, p.190 description: Flower semi-double to incomplete double, Camellia Rose 622 with darker veins, some petals with large white blotches, virus induced. Petals about 12, undulate, firm, widely notched. Centre of flower, upright yet spreading cluster of stamens, petaloids and narrow petals mixed and variable; white filaments, yellow anthers. Leaves elliptical, cupped. mid-green, leathery, 10 cm. x 5 cm, fine, shallow serrations, long pointed apex on an open, upright, vigorous plant. Free flowering mid-season.

Princess Katsura. (*C.rusticana*), Tooby, 1980-1981, RHS., *Rhododendrons with Magnolias and Camellias*, p.14: A miniature camellia originated by Kawamura Nursery, Japan.

Princess Koki. *Camellias*, Y.C. Shen, 2009, p.317 with colour photo; Synonym for **Himekôki.**

Princess Lavander. Forrest, Mary, 1985, *Trees and Shrubs Cultivated in Ireland.* Orthographic error for **Princess Lavender.**

Princess Lavender. (*C.japonica*), SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Lavender pink. Large, semi-double. Vigorous, compact growth. Flowers mid-season. Originated in USA by Wilkinson. See illustration, p.286, Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II. Sport: **Princess Lavender Variegated**. Chinese synonym: 'Ziyigongzhu'.

Princess Lavender Variegated. (*C.japonica*), Mark S Cannon Scion Catalogue, 1963-1964, p.9 as 'Princess Lavender Var.': A virus variegated form of **Princess Lavender** - Lavender pink and white. Originated in USA.

Princess Lear. (*C.japonica*), *American Camellia Yearbook*, 1959, p.279, Reg. No.361: A 5 year old seedling of **King Lear,** originated by R.W Ragland, Orange, California, USA which first flowered in 1955. Plant growth is open, upright and rapid. The high built, peony form flower, 9-10 cm across x 6 cm deep is rich coral pink with shadow streaks. There are 36 petals, 20 outer ones, 5 cm x 4 cm and 16 inner ones, folded and wavy, with small groups of stamens interspersed. Flowers mid-season.

Princess Louise. (*C.japonica*), Sheather & Co. Nursery Catalogue, 1877: Pure white. Very fine. Originated by S. Sheather, Parramatta, N.SW. Note no connection with the European **Princesse Louise.**

Princess Louise. Rubel, 1940-1941, *Floral Gems from China*, No.79, p.24; Fruitland Nursery Catalogue, 1940-1941. Erroneous synonym for **Julia Drayton** as 'Mathotiana'.

Princess Lucile. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Princess Lucille', synonym for 'Beauty of Holland'.

Princess Lucille. SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.57. Synonym for 'Beauty of Holland'.

Princess Luise. Mariotti Catalogue, 1924. Orthographic error for **Princesse Louise.**

Princess Margaret. (*C.japonica*), Crown Estates, Windsor, *Camellia List*, 1980-1981. No description. Mount Congreve Gardens, 1994, Computerised List of Camellias…, p.5. Pink formal double. Medium size. Originated in England.

Princess Maria. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.189. Abbreviation and orthographic variant for **Princesse Marie de Saxe.**

Princess Marie. Anonymous, Apr.1875, *The Garden.* Abbreviation and orthographic variant for **Princesse Marie de Saxe.**

Princess Mary. (*C.japonica*), Anonymous, 1865, *Gardeners' Chronicle*, (25):368: Bright crimson red, medium sized, formal double. Inclined to reflex when fully open. Originated in England by Mr. Salter of Hammersmith. Received RHS., First Class Certificate, 1866. Synonym: 'Princess Mary of Cambridge'.

Princess Mary. *(C.japonica),* Downing, 1858, Catalogue, p.15: Perfectly imbricated, first class, delicate rose; petals always divided by a line of pure white. Originated in the USA.

Princess Mary of Cambridge. Brunnings & Son Nursery Catalogue, 1882, Nicholls Nursery Catalogue, 1882. Synonym for **Princess Mary.**

Princess Masako. *(C.japonica),* "Camellias in Kurume", ICS Congress, Kurume 2010, p.114 & 127. Synonym for **Masakohime.**

Princess Mathilde. Charles van Geert, 1848, Catalogue, No.105, p.117. de Jonghe, 1851, *Traité de la Culture du Camellie.* Synonym for **Mathilde.**

Princess Murat. (*C.japonica*), Doty et al., 1949. *American Camellia Yearbook.* p.250: Solid, deep pink, anemone form to loose peony form, 11 cm across. Petals are notched, cup-shaped and slightly crêped. Filaments light yellow, anthers dark yellow. Leaves mid-green, elliptic, 8 cm x 3.5 cm, slightly twisted, wide, shallow serrations. Rapid, spreading grower. Originated by Camellia Nurseries, Tallahassee, Florida, USA from chance seed. See illustration, p.195, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III.

Princess Nagasaki. Vanderbilt, 1941, *Camellia Research, II*, p.6. Synonym for **Mikenjaku** as 'Nagasaki'. Orthographic error: 'Princess Nagasakie'.

Princess Nagasakie. Portland Camellia Nursery Camellia Catalogue, 1946-1947, p.7. Orthographic error for 'Princess Nagasaki', synonym for **Mikenjaku** as 'Nagasaki'.

Princess Nagashie. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Princess Nagaskie', synonym for **Chiyoda-nishiki.**

Princess Nagaski. SCCS., 1946, *Camellias*, p.20. Orthographic error for 'Princess Nagaskie', synonym for **Chiyoda-nishiki.**

Princess Nagaskie. Fruitland Nursery Catalogue, 1945-1946. Synonym for **Chiyoda-nishiki.** There has been confusion between this and 'Princess Nagasaki' which has also been used as a synonym for **Chiyoda-nishiki** as well as 'Nagasaki'. Orthographic errors: 'Princess Nagaski', 'Princess Nagashie'.

Princess of Prussia. (*C.japonica*), Shirley Hibbert, 1860, *The Floral World and Garden Guide*, vol.3, p.95: Pure white striped with pink. Note: This entry gives it as brought from China by Fortune. Backhouse Nursery Catalogue, 1870. No description. Osborn & Son, Fulham Nurseries Catalogue, 1889: Pure white, large and showy. Originated in England. Orthographic variant for **Princesse de Prusse.**

Princess of Wales. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.3. Synonym for **Niveus.**

Princess of Wales. (*C.japonica*), Verschaffelt Catalogue, No.50, 1844, p.22 as 'Princess of Whales'. No description. Shepherd & Co. Nursery Catalogue, 1880, p.9. No description. (Believed extinct.)

Princess Pat. (*C.japonica*), Gerbing Camellia Nursery, 1963, ACS., *The Camellia Journal*, vol.18, No.4, inside rear cover. No description. Originated in USA. No valid listing located.

Princess Rospigliosi. Paul, 1889, *Gardeners' Chronicle*, p.427. Orthographic variant for **Principessa Rospigliosi.**

Princess Royal. (*C.japonica*), van Houtte Catalogue, 1841, 7:16. Similar to Triumphans but darker. Rousseau, Angers Nursery Catalogue, 1842-1843, p.4: Deep pink. Berlèse, 1845, *Monographie*, ed.3, p.191 as 'Princesse Royale': Flower 10-11 cm across, double, peony form, vivid pink to pale cherry red. Outer petals, 3-4 rows, oblong, rounded, indented and gracefully arranged; central petals numerous, packed together in a broad cluster. Orthographic error: 'Prince Royale'. Orthographic variants: 'Princesse Royal', 'Princesse Royale', 'Princesse Roijale'. Synonym: 'Dark Crimson'. Originated by Hugh Low, Clapton, England.

Princess Royal de Francfort. van Geert Nursery Catalogue, 1845. Synonym for **Circe** as 'Albicans'.

Princess Royal de Gruneberg. van Houtte Catalogue, 1844-1845, 18:19 as synonym for 'Schachkoenigen', itself synonym for **Circe** as 'Albicans'.

Princess Salerno. Ed Pynaert van Geert Catalogue, 1883, p.58. Orthographic variant for **Principessa Salerno.**

Princess Sophia. (*C.japonica*), Overlook Nursery Catalogue, 1946: Rose-pink washed light purple and spotted white. Medium large, peony form. Originated in the Overlook Nursery, Crichton, Alabama, USA. No relationship with the European Princesse Sophie. Orthographic variant: 'Princesse Sophia'.

Princess Sophie. van Houtte Catalogue, 1845-1846, 23:50. Orthographic variant for **Princesse Sophie.**

Princess Striata. Abbotsbury Gardens Catalogue, of Plants, 1899, p.21. No description. Originated in England. (Believed extinct.)

Princess Thomasini. Abbotsbury Gardens Catalogue of Plants, 1899, p.21. No description. Originated in England. (Believed extinct.)

Princess Velvet. (*C.japonica*), Gentry, 1969, ACS., *The Camellia Journal*, vol.24, No.1. No description. Originated in USA. No valid listing located.

Princess Vidoni. Abbotsbury Gardens Catalogue of Plants, 1899, p.21. Orthographic variant for **Principessa Vidoni.**

Princess William of Prussia. Anonymous, 1858, *The Cottage Gardener*. Synonym for **Princess Frederick William.**

Princessa Aldabrandini. Paul, 1879, *Gardeners' Chronicle*, ser.2, 11:688. Orthographic error for **Principessa Aldobrandini.**

Princessa Baciocchi. de Jonghe, 1851, *Traité de la Culture du Camellia*, p.119. Orthographic error for **Princesse Baciocchi.**

Princessa Maria Pia. Le Texnier, 1911, *Le camellia, essais sur l'histiore de quelques fleurs d'ornement.* Orthographic error for **Principessa Maria Pia.**

Princessa Mathilde. James Veitch Jr, 1853, Catalogue of Select Stove Plants..., p.14. Orthographic variant for **Princesse Mathilde.**

Princesse Adélaide. (*C.japonica*), Thibault, Paris Nursery Catalogue, 1845, p.12. No description. van Houtte Catalogue, 1847, 30:13; van Houtte Catalogue, 1847-1848, 31:35 as 'Princesse Adelaide de Carignano': White spotted with pink and imbricated in the style of **Duchesse d'Orleans.** Originated by Manetti, Italy. Adelaide of Carignano was the wife of Victor Eminanuel II, King of Italy, 1861-1878. He was Prince of Carignano before his ascension to the throne. She was a Hapsburg Princess, daughter of Archduke Rainer of Austria. See pl.III, Book I, Verschaffelt, 1852, *Nouvelle Iconographie* as 'Princesse Adélaide d'Austriche'. Synonyms: 'Principessa Adelaide', 'Contesse Adélaide de Carignano', 'Princess Adelaide', 'Princesse Adélaide de Carignano', 'Princesse Adélaide d'Austriche', 'Princess Adelaide di Carignano', 'Principessa Adelaide di Carignano', 'Principesso Adelaide', 'Principessa di Carignano', 'Princess d'Austriche', 'Principessa Adle Carignano', 'Princesse Adelaide de Carignan', 'Princesse Adélaide de Carignan'. Orthographic variant: 'Principessa Adelaide'.

Princesse Adelaide Carignan. Charles Vuylsteke, 1876-1877, Price List, p.20. Synonym for **Princesse Adélaide.**

Princesse Adélaide d'Austriche. Vershaffelt, 1852, *Nouvelle Iconographie*, Book III, pl.I. Synonym for **Princesse Adélaide.**

Princesse Adélaide d'Autriche. Auguste van Geert, 1854, Catalogue, No.36, p.43. Orthographic error for 'Princesse Adélaide d'Austriche', synonym for **Princesse Adélaide.**

Princesse Adelaide de Carignan. Alexis Dalliere, 1852, Price List Catalogue, p.21. Synonym for **Princesse Adélaide.**

Princesse Adelaide de Carignon. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.189. Synonym for **Princesse Adélaide.**

Princesse Adélaide de Carignano. van Houtte Catalogue, 1847-1848, 31:35. Synonym for **Princesse Adélaide.**

Princesse Adelbrandis. Peer, 1956, *American Camellia Yearbook*, p.56. Orthographic error for **Principessa Aldobrandini.**

Princesse Aldobrandini. André, 1864, *Plantes de terre de bruyéres...*, p.247. Orthographic variant for **Principessa Aldobrandini.**

Princesse Aldrovandi. Carriere, 1865, *Product et fixation dans le vegetaux....* Orthographic error for **Principessa Aldobrandini.**

Princesse Alexandra. (*C.japonica*), Anonymous, [ca.1904], *Companhia Horticolo-Agricolo Portuense Catalogue*: Like a centifolia rose. Deep pink with broad white stripe. Orthographic variant 'Princess Alessandro'.

Princesse Amelie. Trillon, Le Mans Nursery Catalogue, 1843, p.8. p.119. Synonym for **Marie-Amélie.**

Princesse Bacchinachi. McIlhenny Catalogue, 1939. Synonym for **Margherita Coleoni Variegated.**

Princesse Bacchiocci. Burdin Maggiore & Co. Catalogue, 1845. Orthographic error for **Princesse Baciocchi.**

Princesse Bacchiochi. William Prince, 1860, Selected Greenhouse Plants, 45th ed No.13, p.6. Seidel, 1870, Pflanzen Catalog, p.10. Orthographic error for **Princesse Baciocchi.**

Princesse Bacchionocci. Vanderbilt, 1940, *Camellia Research*, p.6. Synonym for **Margherita Coleoni Variegated.**

Princesse Bacchiotsii. Verschaffelt Catalogue, 1847, p.61. Orthographic error for **Princesse Baciocchi.**

Princesse Bacciocchi. Costa, 1846, *Catalogue de la collection de camellias présentée à sa majesté L'Imperatrice de toutes les Russies et Reine de Pologne.* Orthographic error for **Princesse Baciocchi.**

Princesse Bacciochi. Porcher, 1847, *Revue Horticole*, ser.3, vol.1, p.451. Orthographic error for **Princesse Baciocchi.**

Princesse Baciocchi. (*C.japonica*), van Houtte Catalogue, 1842, 956: Admirably imbricated; 70 petals. The four first rows of petals are a velvety dark crimson, the others are accented by white bands. Originated by Boffi, Desio, Italy. Named for Maria Anne Elisa Bonaparte, sister of Napoleon I and wife of Felix Baciocchi. She became Princess of Piombino and Lucca. Félix Baciocchi's surname is variously spelled in different references. However, the evidence from Italian authorities, which includes Félix's baptismal certificate (as well as his many signatures), clearly established 'Baciocchi' as the correct orthography. It is also the spelling used in the prior valid listing of the camellia name. Besides suffering considerably in its orthography, it was confused in America, with three other cultivars, viz: **Margherita Coleoni Variegated, Chiyoda-nishiki** and another unidentified cultivar which retains the name **Princess Baciocchi,** as against **Princesse Baciocchi** for the valid clone. Its many orthographic errors and variants include:

'Princess Bacchocci', 'Princess Bacchiochi', 'Princess Bacchicoci',
'Princess Baccinochi', 'Princess Bacciocchi', 'Princess Baccniochi',
'Princess Bachiocchi', 'Princess Baciochi', 'Princess Baciocchi',
'Princesse Bacchiocci', 'Princess Bochinachi', 'Princesse Baciochi',
'Princesse Bacchiochi', 'Princesse Bacchionocci', 'Princesse Bacchiotsii',
'Princesse Bacciocchi', 'Princesse Bacciochi',
'Princessa Baciocchi',
'Principesca Bachioki', 'Principessa Baciocchi', 'Principessa Bachiocchi',
'Principessa Bacchiochi', 'Principessa Bacciacchi', 'Principessa Bacciocchi',
'Princess Cochiochi', 'Princess Bacciocchi', 'Princesse Baciotecchi'.

Princesse Baciochi. Berlèse, May,1849, *Revue Horticole*, p.174-178.Orthographic error for **Princesse Baciocchi.**

Princesse Baciotecchii. Joseph Baumann, 1849, Prix Courant, p.7. Orthographic error for **Princesse Baciocchi.**

Princesse Caraccioli. (*C.japonica*), Cachet Catalogue, 1846, p.6. No description. Originated in Italy. (Believed extinct.)

Princesse Charlotte. (*C.japonica*), Burdin, Chambery Nursery Catalogue, 1834, p.19. No description. Verschaffelt, 1851, *Nouvelle Iconographie*, Book IX, pl.II: Pure white blossoms. At the heart a most delicate pink. The regularly imbricated petals, in spite of the small size of the flower, are numerous, lanceolate or rounded, whole or emarginate, slightly concave, outspread and

convex at the circumference. Originated by A. Verschaffelt, Belgium. Orthographic variant: 'Princess Charlotte'.

Princesse Clementine. (*C.japonica*), Lemaire, 1843, *L'Horticulteur Universel*, 4:369-372: Originated in France by Mr Tamponnet, Paris; Scheidweiler, Brussells, June,1843, *Journal d'Horticulture Pratique*, p.122: In the account of the camellia collection of M. Tamponet. Flower, 8-9 cm. across, double white with some central stamens, petals in 5-6 rows, thin, transparent, elongated, indented, embossed and regularly imbricated, outer petals white, centre petals pale yellow. Berlèse, 1845, *Monographie*, ed.3, p.115: Leaves variable, 9 cm x 3 cm, some elongated. acuminate, others oval, slightly pointed, prominent venation. coarse serrations. mid-green; buds oval-obtuse, scales blackish at base, sepals whitish. Flower, 9-10 cm across, rose form. white, double with petals in 5-6 rows, thin, transparent, extended, emarginate, inclined and imbricated with some regularity; sometimes with stamens visible at the centre giving a tint of pale yellow. Orthographic variant: 'Principessa Clementine'.

Princesse Clothilde. Joseph Vervaene, fils, 1875, Price List Catalogue, No.1, p.7. Menoreau Nursery Catalogue, 1890. Synonym for **Clotilde.**

Princesse Clotilde. Morren, ed., 1863, *Belgique Horticole*, p.1, with colour pl. Synonym for **Clotilde.**

Princesse d'Austriche. Paul, 1867, *Gardeners' Chronicle.* Synonym for **Princesse Adélaide.**

Princesse de Carignoni. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* p.190. Synonym for **Princesse Adélaide.**

Princesse de Joinville. Vallon, Apr. 1858, *Revue Horticole.* p.188. Orthographic error for **Prince of Joinville.**

Princesse de Lamballe. (*C.japonica*), Verschaffelt, 1852, *Nouvelle Iconographie*, Book X, pl.II: Obtained form seed in France. The blossoms, with large, rounded and regularly imbricated petals, are a delicate roseate white with crimson stripes; the nearly pure white centre is faintly tinged yellow. Orthographic variant: 'Principessa di Lamballe'. Orthographic error: 'Principessa Lambell', 'Princesse de Lampolla'.

Princesse de Lambolla. von Biedenfeld, 1856, *Practische Grundlehren der Cultur von Camellien…,* p.51. Orthographic error for **Princesse de Lamballe.**

Princesse de Prusse. *(C.japonica),* Verschaffelt, 1857, *Nouvelle Iconographie*, Book 8, pl.2: Flower is first class. Few white camellias can be compared with it for the regularity of its form. Blooms are large with numerous petals imbricated with mathematical regularity, decreasing gradually from the circumference to the centre and arranged in the form of a star. Mr. A. Topf, horticulturist from Erfurt acquired the ownership. Verschaffelt, says it is of Italian origin, while Makoy, 1858, says that it is from Haage. Synonyms: 'Prinzein von Prennus', 'Princesse von Prenssen', 'Principe de Prusse', 'Princess of Prussia'. Erroneously given as a synonym for **Virgine Colubini.**

Princesse de Saxe. Burdin Maggiore & Co. Catalogue, 1845, p.42. Abbreviation for **Princesse Marie de Saxe.**

Princesse Demidoff. Burdin Maggiore & Co. Catalogue, 1856-1857. Abbreviation for **Principessa Matilde Demidoff .**

Princesse des Asturies. (*C.japonica*), Luzzatti Catalogue, 1853. No description. Verschaffelt, 1858, *Nouvelle Iconographie*, Book VIII, pl.III: Originated by Mr Bauwens, Ghent, Belgium. Blossoms are small, of perfect form with the petals of the circumference imbricated, while those at the centre are grouped in a ruffled heart; the colouring is cherry-red with broad pale pink or whitish longitudinal stripes.

Princesse di Piombino. André, 1864, *Plantes de terre de bruyére...*, p.247. Orthographic variant for **Principessa di Piombino.**

Princesse Frederic William. Bahuaud-Litou Nursery Catalogue, 1914-1920 as 'Psse. Frederic William'. Orthographic variant for **Princess Frederick William.**

Princesse Frederick William. Anonymous, 1858, *Jornal Horticolo Pratica.* Real Campanhia Horticolo-Agricola Portuensis Catalogue, No.29, 1895-1896, p.54. Orthographic variant for **Princess Frederick William.**

Princesse Frederique William. André, 1864, *Plantes de terre de bruyére...*, p.247. Orthographic variant for **Princess Frederick William.**

Princesse Gnone. (*C.japonica*), Loureiro Catalogue, No.9, 1872-1873: Pink, formal double to rose form double with white stripes. Originated in France.

Princesse Leopoldine. Charles van Geert Nursery Catalogue, No.101, 1845, p.117. Synonym for **Leopoldina d'Italie.**

Princesse Louise. (*C.japonica*), Seidel Preisverzeichnis, 1897, p.13, as 'Princessa Louise'. Lively variegated, very beautiful. Originated by Seidel, Germany.

Princesse Maria. Anonymous. 1846, *The Floricultural Cabinet.* Orthographic variant for **Princesse Marie de Saxe.**

Princesse Maria Pia. Joseph Baumann, 1856, Prix Courant, p.5. Jacob Makoy et Cie Nursery Catalogue, 1858, p.26. Orthographic variant for **Principessa Maria Pia.**

Princesse Mariana. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.189. Orthographic error for **Princesse Marianne.**

Princesse Mariane. Auguste van Geert, 1854, Catalogue, No.36, p.43. Vanderbilt, 1940, *Camellia Research*, p.6. Orthographic error for **Princesse Marianne.**

Princesse Marianna. Loureiro Catalogue, No.9, 1872-1873. Orthographic variant for **Princesse Marianne.**

Princesse Marianne. (*C.japonica*), Verschaffelt, 1852, *Nouvelle Iconographie*, Book XI, pl.II: Originated from seed in Belgium, it bloomed for the first time in 1850. Large blossom, numerous petals with cupped imbrication, ruddy pink colouring, delicately stippled with crimson, surpassing **Albertii** in regularity. Orthographic errors: 'Princesse Mariana', 'Princesse Mariane', 'Princesa Mariana'. Orthographic variants: 'Princesse Marianna', 'Principessa Marianna'.

Princesse Marie. L.L. Liebig, 1839, *Verzeichnis von Warmen und Kalten Hauspflanzen...*, p.10. Abbreviation for **Princesse Marie de Saxe.**

Princesse Marie de Saxe. (*C.japonica*), Jakob Makoy et Cie Nursery Catalogue, 1839, p.18. No description. Van Houtte Catalogue, 1845-1846, 23:49: Bright salmon pink with curled petals parted by a pure white line. Illustrated in *Flore des Serres…*, 1853, vol.9, p.183, pl.928. Synonym: 'Imbricata Fastuosa'. Orthographic variants: 'Princess Marie', 'Princesse Maria', 'Princesse de Saxe'. Orthographic error: 'Princes Maria'. Originated in Belgium by Van Houtte..

Princesse Mathilde. Burnier & Grilli Catalogue, 1846-1847. Synonym for **Mathilde.**

Princesse Mathilde. (*C.japonica*), Schneider, ed., 1847-1848, *Journal d'Horticulture Pratique*, p.36 as a new camellia shown by Macoy at Leige. Jacob Makoy et Cie Nursery Catalogue, 1849, p.20. No description. Verschaffelt, 1857, *Nouvelle Iconographie*, Book V, pl.I: The mathematical imbrication of the numerous petals, their smallness, their cerise colouring, constitutes a camellia of high order. It is of Italian origin by Spini but must not be confused with **Principessa Mathilda.** Synonym: 'Mathilde Demidoff'. Orthographic variant: 'Princessa Mathilde'.

Princesse of Whales. Verschaffelt Catalogue, 1847-1848, p.61. Orthographic error for **Princess of Wales.**

Princesse Roijales. de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias*, p.133. Orthographic variant for **Princess Royal.**

Princesse Royal. Berlèse, 1844, *Annales de la Société d'Horticulture de Paris*, 34(197):205. Orthographic variant for **Princess Royal.**

Princesse Royale. Trillon, Le Mans Nursery Catalogue, 1843, p.8. Orthographic variant for **Princess Royal.**

Princesse Sophia. Hume, 1946, *Camellias in America*, p.337. Orthographic variant for **Princess Sophia.**

Princesse Sophie. (*C.japonica*), Verschaffelt, 1844-1845, Catalogue, p.28. van Houtte Catalogue, 1845-1846, 23:50 as 'Princess Sophie': Obtained from seed by Mr Caters de Wolf, Berchem, Belgium. Belongs by its imbrication to the class of perfections, with large, rounded, emarginate petals, undulate at the margins, ruffled at the centre, of fine pink, veined deeper and above average in size. Verschaffelt, 1855, *Nouvelle Iconographie*, Book V, pl.IV. Orthographic variant: 'Princess Sophie'. Orthographic error: 'Principessa Sofia'.

Princesse Vidoni. André, ed., 1864, *Plantes de terre de bruyéres...* Orthographic variant for **Principessa Vidoni.**

Princesse von Preussen. Seidel, 1870, Pflanzen Catalog, p.10. Synonym for **Princesse de Prusse.**

Princeu Frederice William. G. Mariotti Catalogue, 1924, p. 18. Orthographic error for **Princess Frederick William.**

Princeza Amelia. *(C.japonica),* Loureiro Catalogue No.1, 1865, p.30, & No.9, 1872-1873, p.46. Perfectly imbricated. Pure white formal double. Orthographic error; 'Princesa Amalia'. Originated in Portugal.

Princeza das Camellias. (*C.japonica*), José Marques Louriero Catalogue, No.1, 1865, p.34, & No.9, 1872-1873, p.46: Peony form, 9similar to Pompone) colour virginal pink, striped and dotted with carmine. Originated in Portugal. Orthographic variants: 'Princesa das Camellias', 'Princesa de las Camelias'.

Princeza Maria Amelia d'Orleans. *(C.japonica),* José Marques Loureiro, Catalogue No.25, 1889-1890, p.95; Formal double, virginal pink, carmine veining, bordered white all around. Originated in Portugal.

Princeza Real. (*C.japonica*), Loureiro Catalogue No.1, 1865, p.31, & No.9, 1872-1873, p.46: Formal double, vivid cherry, blotched with white. Catalogue No.17, 1881-1882, p.73, and later catalogues; Formal double, delicate pink. Originated in Portugal. Orthographic variant: 'Princesa Real'.

Principa Dorea. McIlhenny, 1937, *600 Varieties of Camellias*, p.11. Orthographic error for **Principe Doria.**

Principade Piombino. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Principe di Piombino.**

Principe Alberto. (*C.japonica*), Stefano Pagliai Catalogue, 1867. No description. Escuela di Agricultura Catalogo, 1882: Imbricated vivid red with stripes and splashes of carmine red. Synonym: 'Principe Alberto di Savoia'.

Principe Alberto di Savoia. *Giardino Allegra Catalogo Generale della piante*, No.54, 1915, p.39. Synonym for **Principe Alberto.**

Principe Amedeo. (*C.japonica*), Stefano Pagliai Catalogue, 1867: Large ivory white, formal double. Originated in Italy by Botti.

Principe Amedeo Vera. (*C.japonica*), Mercatelli Catalogue, 1881, p.33: Large, formal double, wine red streaked with white at the centre. Originated in Italy.

Principe Anatolio Démidoff. Prudente Besson Catalogue, 1865. Synonym for **Principe Demidoff.**

Principe Borghese. (*C.japonica*), Burnier Catalogue, 1855-1856. Imbricated. Petals rose with lighter tint, with very pale, almost white streaks. Originated in Italy by Borghese, Rome. Orthographic error: 'Principe Borghesi'.

Principe Borghesi. Stefano Pagliai Catalogue, 1867, p.66. Orthographic error for **Principe Borghese.**

Principe Cancio. (*C.japonica*), Auguste van Geert Nursery Catalogue, No.73, 1875-1876, p.69. No description. van Houtte Catalogue, 1878-1879, 179-ZZ:23: Pure white, imbricated. From Rovelli, Italy.

Principe Carlo di Schwartzenberk. *I Giardini*, *giornal d'orticulture*, 1955. Orthographic variant for **Prince Charles de Schwartzemberg.**

Principe Corsini. (*C.japonica*), de Jonghe, 1851, *Traité de la Culture du Camellia*, p.119. No description. Originated in Italy. (Believed extinct.)

Pricipe d'Asturia. Fréderic Bournier, 1853, Catalogue del l'Etablisement Agraire-Botanique. Orthographic variant for **Principe d'Asturias.**

Principe d'Asturias. (*C.japonica*), Luzzatti Catalogue, 1853. No description. Franchetti, 1855, *Collezione di Camelie*, p.52: Spirally imbricated, salmon red, paler at centre. Originated in Florence, Italy by Franchetti. Orthographic variants: 'Principe dell'Asturias', 'Principe d'Asturia'.

Principe d'Oria. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.7. Orthographic error for **Principe Doria.**

Principe da Beira. (*C.japonica*), Loureiro Catalogue No.14, 1888: Formal double. Rose edged white. A sport of **Dom Pedro V, Rei de Portugal.** Originated in Portugal. Possibly a synonym for **Eugénie de Massèna,** but the colours have been reported as different**.**

Principe de Canino. von Biedenfeld, 1856, *Practische Grundlehren der Cultur von Camellien*…, p.50. Orthographic variant for **Prince de Canino.**

Principe dell'Asturias. Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete,* p.7. Orthographic variant for **Principe d'Asturias.**

Principe Demidoff. (*C.japonica*), Ambroise Verschaffelt, 1851-1852, Catalogue Général, p.17 as 'Prince Demidoff'. Franchetti, 1855, *Collezione di Camelie,* p.52: Bright carmine striped with white, beautifully imbricated. Verschaffelt, 1856, *Nouvelle Iconographie,* Book VIII, pl.IV: About 5 years ago Mr Franchetti sent us this camellia. Amongst the perfections, it is distinguished by blossoms of medium size, of a delicate pink colouring, with more vivid tints and intersected by broad, white stripes. The petals which compose them are oval, full or scarsely emarginate, outspread. perfectly imbricated. Originated in Italy by Franchetti, Florence. Synonym: 'Principe Anatolio Demidoff.

Principe de Prusse. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.190. Orthographic variant for **Princesse de Prusse.**

Principe de Salerno. Charles Vuylsteke, 1876-1877, Price List, p.20. Orthographic variant for **Principe di Salerno.**

Principe di Canino. Burdin Maggiore & Co, 1848-1849, Catalogue Général. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.119. Orthographic variant for **Prince de Canino.**

Principe di Galles. del Lungo e Girardi, 1928, *Le Camelie,* p.106. Orthographic variant for **Prince of Wales.**

Principe di Joinville. Stefano Pagliai Catalogue, 1867. Orthographic variant for **Prince of Joinville.**

Principe di Piombini. Auguste van Geert Nursery Catalogue, No.65, 1869-1870, p.57. Orthographic error for **Principe di Piombino.**

Principe di Piombino. (*C.japonica*), Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete,* p.7. No description. van Houtte catalogue, 1860-1861, 83:51: More beautiful and more double than Targioni. Originated in Italy at the Villa Ludovisi. Orthographic errors: 'Principa de Piombino', 'Principe di Piombini'.

Principe di Salerna. Auguste van Geert Nursery Catalogue, No.65, 1869-1870, p.57. Orthographic error for **Principe di Salerno.**

Principe di Salerne. Verschaffelt Catalogue, 1867-1868, p.46. Orthographic error for **Principe di Salerno.**

Principe di Salerno. (*C.japonica*), Ambroise Verschaffelt, 1850, Catalogue Général, p.50 as 'Prince de Salerne'. No description. van Houtte Catalogue, 1852-1853, 48:43. From Gallino, Italy. No description. Franchetti, 1855, *Collezione di Camelie,* p.52: Large flower. Deep rose tinted with purple at the centre. Edges of petals have a very narrow white margin and are regularly arranged in 7 rows. Imbricated. Orthographic errors: 'Principe di Salerne', 'Prince de Salberne', 'Prince de Salerbne', 'Prince de Salerbini', 'Prince de Salerbren', 'Prince de Salerne', 'Prince de Saterbre', 'Principe di Salerna', 'Prince de Salerno', 'Prins de Salerne', 'Prince Solerno'.

Principe di Schwartzenberg. Burdin Maggiore & Co. Catalogue, 1862. Synonym for **Prince Charles de Schwartzemberg.**

Principe di Valmontone. (*C.japonica*), Villa Pamphilj Catalogue, 1858, p.7.: Carmine rose, formal double. Originated in Italy.

Principe di Wassembler. (*C.japonica*), *Giardino Allegra, Catalogo Generale* No.74, 1926. p.35. No description. Originated in Italy. (Believed extinct.)

Principe Don Marcantonio Borghese. (*C.japonica*), Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.8 as 'Borghese, Principe D. Marcantonio': Imbricated, petals channelled, rose shaded a little deeper with stripes of paler, almost white colour. Originated in the Giardino Borghese, Rome, Italy. Abbreviation: 'Principe Don Mercantonio'.

Principe Don Mercantonio. van Houtte Catalogue, 1860-1861, 83:51. Abbreviation for **Principe Don Marcantonio Borghese.**

Principe Doria. (*C.japonica*), van Houtte Catalogue, 1846-1847, 27:30: Slaty pink, imbricated. From B. Lechi. Franchetti, 1855, *Collezione di Camelie,* p.52: Purplish pink with some white lines. Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete,* p.7: [from] Mose Mauri. Large flower, peony form, blood red, numerous curved petals, grouped in varied centres with great effect. Orthographic variants and errors: 'Prince Doria', 'Prince Dorea', 'Principa Dorea', 'Prince d'Oria', 'Principia Dorea'. Van Houtte Catalogue, 1857, 67:45 gives Francesco Ferrucio as a synonym but this is rejected as the original descriptions vary. Originated from seed collected at the Villa Quiete according to the 1856 Catalogue ed. Inventario delle piante vive esissem nel Giardini.

Principe Marc-Antonio. (*C.japonica*), Auguste van Geert Nursery Catalogue, No.65, 1869-1870, p.57. No description. Originated in Italy. (Believed extinct.)

Priscilla Brooks. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1942-1943 as 'Pricilla Brooks': White striped with red. Large, semi-double with irregular petals. Medium, bushy growth. Originated in USA at Magnolia Gardens, John's Island, South Carolina. Synonym: 'Magnolia Queen'. Sport: **Magnolia Queen Pink.**

Priscilla Rose. *(C.hiemalis),* C.Aust., *Camellia News*, No.193, Spring 2013, p.26 with colour photos; Grown and registered by Cedric D. Bryant, Albury, NSW, purchased as a chance seedling, first flowered early 2000s.. Regarded as probably a seedling of **Shishigashira**. Deep rose pink, informal double to irregular semidouble flowers are 6.5cm diameter x 4-4.5cm high with notched and wavy petals and petaloids. Low-growing, spreading and distinctly weeping plant with average growth rate. Dense, dark green, glossy foliage. Leaves flat, elliptic, finely serrate, bluntly tipped 8 cm x 5 cm with acute apex, petiole 1cm. Flowers mid to late sasanqua season.

Prism. (*C.japonica), Camellias,* Y.C. Shen, 2009, p.59 with colour photo; Light purple, single flower. Leaves medium size, oval, heavily bordered and splashed with yellowish-white. Originated by Nuccio's Nurseries, Altadena, California, USA.

Prissi. Paxton, 1868, *Botanical Dictionary Revised*, p.105. Orthographic error for 'Pressii', synonym for **Press's Eclipse.**

Prissie Miss. (*C.japonica*), SCCS., 1976, *Camellia Nomenclature*, p.127: Pink. Medium to large, formal to rose form double. Vigorous, upright growth. Blooms mid-season to late. Originated in USA by Novick.

Pristine Fragrance. *(C.japonica), New Zealand Camellia Bulletin*, 1994, Issue No.118, vol.XVIII, No.5, p.31, Reg. No.338: Originated by J.R. Finlay, Whangarei, New Zealand. A fragrant, self grooming seedling of **Nioi-fubuki** x **Kramer's Supreme**. Rose pink (RHS.CC.55A), anemone form flower, 5 cm across x 5 cm deep with 12 petals, many petaloids and yellow anthers on white filaments. Blooms early to late on an upright plantof medium growth rate.

Private Secretary. (*C.japonica*), Belle Fontaine Nursery Catalogue, 1962, p.10. No description. Cannon, 1962, ACS., *The Camellia Journal*, vol.17, No.1, back cover. No description. Professor Sargent. (*C.japonica*), Berkmans, 1908, *Country Life in America*, p.548: Large, of vivid dark crimson; the centre petals raised, outer petals imbricated. A remarkable anemone-form flower. The plant is of vigorous growth and a free and early bloomer. Rubel, 1928, *Azaleas and Camellias from Longview Catalogue*, p.4, fig. p.5 as 'Prof. Sargent': One of the best of the dark varieties, a rich deep crimson. Flowers are 8 cm in diameter, globular, solid and compactly built, usually has 12 wide, slightly rumpled guard petals while inner petals are long, narrow, curled or rolled and distinctly incurved, having the appearance of an incurved chrysanthemum. Some of the inner petals are occasionally veined with pink or white, but this is seldom visible due to the compact formation of the flower which usually carries 220-230 petals. Early flowering. Fendig, 1949, *American Camellia Catalogue:* A tight, peony form with many petaloids; shading from rose-pink to dark red, 9-10 cm across x 5 cm deep with 12 outer petals and the centre an irregular mass of petaloids. Leaves dark green, thick, broad-elliptic, 10 cm x 5 cm, acuminate apex on a tall, vigorous, fast growing plant. Sports: **Woody Estes, Professor Charles S. Sargent Variegated.** The name has collected many orthographic variants including: 'Prof. Charles Sprague Sargent', 'Prof. Charles S. Sargent' , 'Prof. C.S. Sargent', 'Prof. Charles Sargent', 'Professor Charles S. Sargent', 'Professor Chas. S. Sargent', 'Professor Charles Sprague Sargent', 'Professor C.S. Sargent'. The origin of the variety is unknown. Professor Hume believed it may have been imported into USA by Berkman's Nursery (later Fruitland) from Seidel Nursery, Germany, then to Magnolia Gardens where it was named by the Rev. John G. Drayton for Professor Charles Sprague Sargent, then Director of the Arnold Arboretum. See colour photo, p.112, Macoboy, 1981, *The Colour Dictionary of Camellias.* Chinese synonym: 'Sajinte Jiaoshou'.

Professor Sartori. (*C.japonica*), Medici Spada, 1858, *Delle nuova Camellie che si vengono ottenendo dalle Semine Romane*, p.7: A magnificent variety from Sig. Delgrande, Rome, who named it for his Doctor who cured him of a serious illness. Flower medium, imbricated with rare perfection, resembling a ranuncula; petals decidedly pointed; colour vivid coral.

Professor Tsai. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* This name was given for what was thought to be a seedling from the cross of *C.reticulata* **Houye Diechi** x **Mudan Cha** with the Chinese name of 'Mayediechi'. It is now considered a Western synonym for **Maye Taohong**. See p.55, Feng et al. 1981, *Yunnan Shancha Hua.*

Punkin. (*C.hybrid*), SCCS., 1972, *Camellia Nomenclature,* p.172: Rose pink outer petals shading to lighter pink at centre. Small formal double with incurved petals. Blooms mid-season. Vigorous growing. Originated in USA by H Novick, Woodland Hills, California. See colour photo, p.27, *New Zealand Camellia Bulletin*, vol.XVI, No.1, Nov.1990.

Punteggiato. Giacomelli, 1847, *La Coltivazione della Camellie.* Synonym for **Gray's Invincible.**

Puquella. Rousseau, Angers Nursery Catalogue, 1842-1843, p.4. Synonym for **Sericea.**

Pure Innocence. *(C.sasanqua)* C. Aust., *Camellia News*, No.185, Autumn 2011, p.20 with colour photo; Regn No.659-N. Chance seedling of **Cherilyn**, first flowered in 2002. Originated by Justin Jones, Marian Grove Nursery, Mangrove Mountain, NSW, Australia. Small, delicate, pure white, informal double flowers. Some cream filaments with golden anthers. Flowers mid to late autumn on a medium growing bush.

Pure Scarlet. SCCS., 1958, *Camellia Nomenclature*, p.77. Synonym for 'Seihi'.

Pure Silk. (*C.sasanqua*), Camellia Grove Nursery Catalogue, 1988, p.15: Medium size, semi-double flower similar to **Little Pearl,** but growth more vigorous. Buds are pink and open pure white. Strong, upright growth with pendulous lateral branches. Flowers early to mid-season. Originated in Australia.

Purinsesu-Masako. (Princess Masako). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.227 with colour photo; English translation p.159. Large, white with a red border and small and large stripes, lotus-form semi-double to peony, tubular to split stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size, Young trees upright, spreading growth later, vigorous. A mutation of **Ikari-shibori.** Named and released by Sôshin Hirai in 1989. From Saitama Prefecture.

Puritan Lass. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue:* White. Medium formal double. Vigorous, bushy growth. Blooms mid-season. Originated in USA by Harvey Short, Ramona, California.

Purity. (*C.japonica*), Schonberg, 1878, *Botanic Gardens, Adelaide List.* No description. Originated in Australia. (Believed extinct.)

Purity. Armstrong Nurseries Catalogue, 1933, p.44. The American synonym for **Shiragiku.** Chinese synonym: 'Zhengjie'.

Purperlena. Wilmot, 1943, *Camellia Variety Classification Report*, 1943, p.13. No description. Originated in USA. (Believed extinct.)

Purple. Anon, 1830, "Ueber die Cultur der Kamellien" in *Der Blumen Gaertner*, p.53. Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.14. Synonym for **Rosea Plena.**

Purple Anemone Flowered. Prince, 1828, *A Short Treatise on Horticulture*, p.170. Synonym for 'Waratah' (**Anemoniflora**).

Purple Baron. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.191. No description. Originated in USA. No valid listing located.

Purple Blue. *(C.japonica), Collected Papers*, ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.47; Purple cloudy pendent group; purple flower, cupped corolla.

Purple Butterfly. *(C.japonica), Collected Papers*, ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.47; Purple cloudy pendent group, purple flower, cupped corolla.

Purple Camellia. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Murasaki-tsubaki.**

Purple Crown. *(C.japonica), Collected Papers*, ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.46; Purple sparrow group, purple flower, plain petals. Magnolia to bowl type corolla, mid-flora, mid-folia, leaves elliptic to broad-elliptic.

Purple Crystal. *(C.japonica), Collected Papers*, ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.46; Purple sparrow group, purple flower, plain petals. Magnolia to bowl type corolla, mid-flora, mid-folia, leaves elliptic to broad-elliptic.

Purple Dawn. McIlhenny, 1934, *List of Camellias for Sale*, p.5. Barron, Mar.1934, *Country Life*, p.51. Synonym for **Julia Drayton**, erroneously as 'Mathotiana'.

Purple Dawn Variegated. River View Nursery Catalogue, 1957-1958. Synonym for **Julia Drayton Variegated.**

Purple Dot. (*C.japonica*), Vanderbilt, 1941, *Camellia Research, II*, p.6. White and purple camellia from Poole Bros Nursery, USA.

Purple Emperor. Kiyono Nursery Catalogue, 1938-1939, p.11. Synonym for **Julia Drayton,** erroneously as 'Mathotiana'.

Purple Empress. Skinner, ed., 1957, *Garden Plants in Colour*, 50:11. Synonym for **Julia Drayton,** erroneously as 'Mathotiana'.

Purple Fire. (*C.pitardii* hybrid). *New Zealand Camellia Bulletin*, March 2004, Issue No.147, vol.XXIII, No.5, p.8, Reg. No.456. Registered by N. Haydon, Takanini, New Zealand. A chance seedling from a *C.pitardii* var. *pitardii* seed parent that first flowered in 1994. Flower is a single of 6-7 petals, 8 cm diameter x 5 cm deep, and the stamens, with gold anthers on pink filaments, form a compact central mass. The flower is a bright, deep rose-purple colour (RHS.CC.61C to 67A

as the flower ages) and there is some veining of a deeper colour. The plant is of average height, dense structure and slow to medium growth rate, with dark green leaves 8 cm long x 3 cm wide. Flowers early to late. The distinctive features are its long flowering season and the unusual colour.

Purple Flower Goldheart. Synonym for **Zihua Jinxin.**

Purple Girl. (*C.japonica*), Mark S. Cannon Scion Catalogue, 1962. p.9. No description. SCCS., 1964, *Camellia Nomenclature*, p.103: Pink with a purple cast. Large semi-double with loose petals. Blooms mid-season. Originated in USA by Malbis, Daphne, Alabama.

Purple Glow. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...,* Chen Junzhi and Chen Jinshui, p.47; Purple cloudy pendent group, cupped corolla.

Purple Gown. Peer, 1949, SCCS., *Bulletin*, vol.11, No.2, p.11. Western synonym for **Zipao.**

Purple Gown Golden Stripes. Ikeda, 1976. *American Camellia Yearbook*, p.140. Synonym for 'Zipao Jindai' (**Zipao**).

Purple Gown Silver Stripes. Ikeda, 1976, *American Camellia Yearbook*, p.140. Synonym for 'Zipao Yindai' (**Zipao**).

Purple Gown Variegated. SCCS., 1951, *The Camellia. Its Culture and Nomenclature* as 'Purple Gown Var.' Synonym for **Zipao Yudai.**

Purple Gown White Stripe. Ikeda, 1976, *American Camellia Yearbook*, p.140. Synonym for **Zipao Yudai.**

Purple Gown with White Tape. Fendig, 1953, *American Camellia Catalogue*. Synonym for **Zipao Yudai.**

Purple Heart. (*C.japonica*), SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.57: Dark, purplish red. Large, formal double. Medium, bushy growth. Late blooming. Originated by Malbis, Daphne, Alabama, USA.

Purple Joy. (*C.japonica*), *Camellia Digest*, 1(3), 1943. No description. Originated in USA. (Believed extinct.)

Purple King. (*C.japonica*), Wada, 1935, *Japanese Garden Treasures*, p.26: Of Chinese origin. The flowers are enormous, full double, bright purple.

Purple Lotus Pendula. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...,* Chen Junzhi and Chen Jinshui, p.47; Purple cloudy pendent group, purple flower, lotus form.

Purple Passion. *(C.japonica),* ACS, *The Camellia Journal,* Sept. 2013, p.26 with colour photo, Regn No.2862; ACS, Yearbook, 2013, p.134 with colour photo; Originated by Richard Dodd, Marshallville, Ga, USA. Registered and propagated by County line Nursery, Byron, Ga. Medium size, 10cm diameter x 1.8cm deep, flower has reddish purple inner petals and deeper purple outer petals. Dark purple radial veining. Flowers fall whole. Upright, dense plant with average growth rate. Dark green leaves average 9.5cm x 5cm with medium serration. Flowers midseason to late.

Purple Peony. Overlook Nursery Catalogue, 1939-1940, p.19. Synonym for **William Penn.**

Purple Petaloid Stamen. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...,* Chen Junzhi and Chen Jinshui, p.47; Semi-double pendent group, purple flower with white veins, both petaloids and stamens.

Purple Pine Cone. (*C.japonica*), SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Rose purple. Medium semi-double of pine cone form. Originated in USA by Pfingstl.

Purple Pine Flower. Synonym for **Zisonghua.**

Purple Plate. *(C.japonica), Collected Papers*, ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.47; Purple cloudy pendent group, purple flower, cupped corolla.

Purple Pompom. (*C,japonica*), NZCS *Bulletin* No.178, July 2014, p.18, no photo; A cross of 'Fuyajo' (**Kon-wabisuke**) x **Zambo**, raised by Mark Jury, Tikorangi, New Zealand. No further details.

Purple Pooles. Vanderbilt, 1941, *Camellia Research, II*, p.6. Orthographic variant for **Poole's Purple**.

Purple Prince. Fruitland Nursery Catalogue, 1940-1941, p.28; Rubel, 1940-1941, *Floral Gems from China Catalogue*, No.79, p.24. Synonym for **Julia Drayton,** erroneously as 'Mathotiana'.

Purple Red. Vanderbilt, 1941, *Camellia Research, II*, p.6. Synonym for **Poole's Purple.**

Purple Red Lotus. Synonym for **Zihonglian.**

Purple Red Plum. Yang, 1965, *Camellia Varieties of Taiwan.* Synonym for **Zihongmei.**

Purple Star. (*C.japonica*), Gerbing Azalea Garden Catalogue, 1958. Description not seen. Originated in USA.

Purple Swirl. (*C.japonica*), Tammia Nursery Catalogue, 1960, p.6. No description. *American Camellia Yearbook*, 1962-1963, p.223, Reg. No.610: A 12 year old seedling of unknown parentage that first bloomed 1951. Originated by Mrs Ferol Zerkowsky, Slidell, Louisiana, USA. Plant growth is upright and rapid with glossy, dark green leaves, heavily serrate and veined, 9.5 cm long x 5 cm wide. The formal double flower averages 7.5 cm across and is old rose in colour, turning rosy purple in cold weather and consisting of 5 swirls ending in the centre of the flower. Blooms mid-season to late.

Purple Trumpet. (*C.japonica*), Williams Nursery Catalogue, 1951, p.9. No description. Originated in Australia. (Believed extinct.)

Purple Waratah. Berlèse, 1841, *Iconographie*, pl.55. Synonym for **Anemoniflora.**

Purple Waratah. Camellia Grove Nursery Catalogue, 1945, p.10. Synonym for **Mariana.**

Purple Warrata. Prince & Co. Nursery Catalogue, 1822. Synonym for **Anemoniflora.**

Purple Warratah. Burdin Maggiore & Co. Catalogue, 1835. Synonym for **Anemoniflora.**

Purple Woronzoff. (*C.japonica*), Jessep, 1955, *American Camellia Yearbok*, p.27: A purple coloured mutant of **Contessa Woronzoff.** Originated in Australia. Synonyms: 'Lavendel', 'Comtesse Woronzoff Rosea'.

Purplerose. (*C.japonica*), Gerbing's Azalea Gardens Catalogue, 1941-1942: Like a loose peony in its form, this rose-red to purple wine red variety with its 10 cm flower, is notable for the way it changes with the weather. In warm weather it is a deep pink tone, in cold weather, lavender to purple. Stamens are mingled with petaloids in the centre. Glossy, deep green foliage on a vigorous, spreading variety. Blooms mid-season. Originated by G.G. Gerbing, Florida, USA. See colour pl.189 G.G. Gerbing, 1945, *Camellias.*

Purplette. (*C.japonica x C.reticulata*), SCCS., 1984, *Camellia Nomenclature*, p.125: Deep purplish red with veining. Miniature, semi-double. Medium, spreading growth. Blooms mid-season to late. Originated by David Feathers, Lafayette, California, USA.

Purpliana. Valley Garden Supplies Catalogue, 1946-1947. Orthographic variant for 'Purplyana', synonym for **Collettii**.

Purplyana. McIlhenny Catalogue, 1941, p.12. Synonym for **Collettii.** Orthographic variant: 'Purpliana'.

Purpurascens. Sweet, 1830, *Hortus Britannicus*, p.74: Dark red single. Orthographic variant for **Purpurescens.**

Purpurascens Plenissima. (*C.japonica*), Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.14. No description. Originated in England. (Believed extinct.)

Purpurascens Waratah. Makoy Nursery Catalogue, 1836, p.17 as 'Purpurescens War.'. Synonym for **Anemoniflora.**

Purpurescens. Jacob-Makoy, 1829, Catalogue, p.7. No description. Sweet, 1830, Hortus Britanicus, p.74: Dark red, single. Burdin Maggiore & Co. Catalogue, 1835, p.38. No description. Orthographic variant 'Purpurascens'.

Purpurea. *Hortus Sempervirens*, 1813. Synonym for **Atrorubens.**

Purpurea. Wada, 1935, *Japanese Garden Treasure*, p.27. Synonym for **Kuro-tsubaki.**

Purpurea Group. Ackerman, 1974, *American Camellia Yearbook*, pp.100, 102. Collective epithet for all the so called 'Black Camellias '. They are also known as *C.iodina* but this has no taxanomical standing.

Purpurea Nova. (*C.japonica*), van Houtte Catalogue, 1844-1845, 18:18; Graulhie, Jun.1844, *Revue Horticole*, p.67 as 'Pupurea Nova'. No description. Originated in France by Tourres. (Believed extinct.)

Pupurea Plenissima. van Houtte Catalogue, 1843-1844, 12:tt as the synonym of **Belle Clymène.**

Purpurea Reale. (*C.japonica*), Auguste van Geert Nursery Catalogue, No.73, 1875-1876, p.69. No description. Originated in Italy. (Believed extinct.)

Purprea Umberto. *(C.japonica),* Charles Vuylsteke, 1876-1877, Price List, p.17. No description. Originated in Italy.

Purvis. (*C.japonica*), Vanderbilt, 1941, *Camellia Research, II*, p.6. as 'red'. Originated in USA. (Believed extinct.)

Putaohong. (Grape Red), (*C.japonica*), Wang & Yü, 1981: Small, grape red, formal double. Originated in China. Synonym: 'Zhang Yuanhong'. See colour photo, 3, p.1444, Cheng, Shao Yun, 1987, *Camellias from Zhejiang*, p.89.

Putaohong. (Grape Red). *Chinese Camellia Culture*, 2003, Appendix, p.568. Synonym for **Hongzhuqiu.**

Putaojiu. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.164. Chinese synonym for **Sparkling Burgundy.**

Putuo Purple Light. ICS Journal 2013, p.93 with colour photo. Translation of **Putuo Ziguang.**

Putuo Ziguang. (The Purple Light from Putuo). (*C.reticulata* hybrid) China Regn No.1, *China Flowers & Horticulture*, Dec 2005, No.24, p.53, with colour photo; A cross of **Suzanne Withers** x male parent **Honeymoon,** originated by John Wang, Orinda, Calif, USA. Rapid growth, twigs slightly pendulous. Leaves dark green, ovate. Flowers semi-double, light purple, paler when fully open, slightly yellowish white in the middle. A white radial stripe in the centre of each petal. Name is from a prominent Buddhist Temple in Zheijiang Province.

Putzeija. de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias,* p.133. Orthographic variant for **Putzeys.**

Putzeys. (*C.japonica*), de Jonghe, 1851, *Traité de la Culture du Camellia*, p.119: Very large, imbricated flower of soft rose or white, petals entirely or partly white, others entirely rose coloured; very

floriferous. Originated in Belgium by de Jonghe and named for the President of the Horticulture Society of Brussels.

Pygmy. (*C.sasanqua*), Hazlewood Nursery Catalogue, 1963: Pink to white margined deep pink with back of petals red with a purplish tint. Dwarf growth habit. Small, single. Originated in Australia by Hazlewood Nurseries, N.S.W. Orthographic error 'Pigmy'.

Pyramidalis. (*C.japonica*), Poiteau, Jan.1836, *Revue Horticole*, pp.166, 170. No description. Originated in France. (Believed extinct.)

Pyremeria. (*C.japonica*), SCCS., 1956, *Camellia Review.* No description. Originated in USA.

Pyrifolia. (*C.japonica*), Courtois, 1833, *Magazin d'Horticulture*, 1[pt.D]:310. A form of 'Pomponia (**Pompone**)' with glandular serrations. (Believed extinct.)

Pyrophore. (*C.japonica*), van Houtte Pere Catalogue, 1896, 265P:109: Semi-double, red. Originated in Italy.

Pyrrha. (*C.japonica*), *Australian Botanical and Horticultural Society Report*, 1849. Camden Park seedling 12.50 - Crimson with outer petals large and well shaped, inner smaller and crowded. Good flower of its kind. Originated in Australia by Sir William Macarthur, Camden Park, N.S.W. (Believed extinct.)

Q.

Q Ball. *(C.japonica),* ACS, *The Camellia Journal,* June 2010, p.29 with colour photo; Regn. No. 2791. Originated by Eleanor Grant, Dothan, Ala., USA. ACS, *Yearbook* 2010, p.81 with colour photo; A 30 year old chance seedling which first flowered 1980. Plant is dense, upright and vigorous. Dark green leaves are 10 cm x 6.5 cm. Large, deep rose colour, peony form flower is 14 cm diameter x 7.5 cm deep. Yellow anthers. Long flowering season, very early to late.

Qiancha. (Alizarin Red Camellia), (*C.japonica*), Ichijima, 1906, *Kokon Yôronkô* vol. 306, p.345 (Reprint Yashiro, 1841): A small, red single camellia from Fukien Province China. (Believed extinct.) Different reading 'Ch'ien cha'.

Qiandaijin. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.406; Chinese synonym for the Japan *C.japonica* **Chiyoda-nishiki.**

Qiannilmian. (Pretty Girl's Face), (*C.reticulata*), Gao & Zhuang, Apr.1989, *The Camellia in China,* p.57, No.376, colour photo, No.234: Large size, 12-13 cm across, spinel pink, open peony form with 20-24 large, rounded, waved petals; those in the centre semi-erect and fluted. Leaves elliptic, medium green, 8-9.6 cm long x 3.8-4.6 cm wide. Blooms mid-season. Originated in Tengchong County, Yunnan Province, China.

Qianlong Mudan. (Qianlong King's Peony), (*C.japonica*), Gao & Zhuang, Apr.1989, *The Camellia in China,* p.35, No.159: Medium to large size, red, peony form double with 3-4 rows of outer petals and central stamen cluster. Blooms mid-season. Originated in China.

Qiannian. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.82. Chinese synonym for **Sennen-fujimurasaki.**

Qiansangnate. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.160. Chinese synonym for **Chansonette.**

Qianyebai. (Thousand Petalled White), (*C.japonica*), Li, Shizen, 1590, *Bencao Gangmu.* It has many petals, regularly arranged and its colour is white. Ono, 1803, *Honzô Kômoku Keimô*: Medium sized white [formal] double. Originated in China. Different reading: 'Chien-yeh-pai'. Synonyms: 'Dabai', 'Nankinshiro', 'Senyôshiro', 'Thousand Petaled white'. Note: This is believed to be the original name for **Alba Plena.** See: Yashiro, 1841, *Kokon Yôrankô*, vol.306. Ichijima reprint, p.344; described as a synonym for **Shiratama.**

Qianyehong. (Thousand Petalled Red), (*C.japonica*), Li, Shizen, 1590, *Bencao Gangmu:* It has many petals regularly arranged and is a red colour. Ono, 1803, *Honzô Kômoku Keimô*: Medium sized, crimson [formal] double. Originated in China. Different reading: 'Chien-yeh-hung'. Synonyms: 'Senyôbeni', 'Higuruma'. See: Yashiro, 1841, *Kokon Yôrankô*, vol.306, Ichijima reprint, p.344.

Qianzouqu. Chinese synonym for Australian *C.reticulata*, **Overture.**

Qiaoe Mudan. (Thin Calyx Peony), (*C.japonica*), Watanabe & Andoh, 1980, Tsubaki, p.147 as 'Chiao-e-mu-tan': Medium sized, light crimson, semi-double to irregular peony form. Originated in China.

Qiaoan. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.411; Chinese synonym for the USA *C.hybrid* **Joanne Gaeta.**

Qiaomei. Gao & Zhuang, Apr.1989, *The Camellia in China,* p.81, No.627. Chinese synonym for the American *C.x williamsii* **Flirtation.**

Qiaomin Furen. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.418; Chinese synonym for the USA *C.japonica* **Colonial Lady.**

Qiaonasen. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* Chinese synonym for USA *C.japonica* **Jonathan.** Earlier spelling was 'Qiaonashen'.

Qiaopailong. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.10. Chinese synonym for the USA *C.japonica* **Joe Pyron.**

Qiaosaifu Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.411; Chinese synonym for the USA *C.japonica* **Joseph Pfingstl.**

Qiaosang. Chinese synonym for the Japanese/American *C.japonica* **Chô-Chô-San.**

Qiaoyi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.411; Chinese synonym for the USA *C.japonica* **Joy Kendrick.**

Qiaoyulan. (Small Magnolia), (*C.reticulata*), Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.10: Magnolia type. Petals straight, rather long, the corolla looks like a magnolia flower when fully open. Crimson, Mid-season, Tengchong. Feng et al., 1986, *Yunnan Camellias of China*, p.33, with colour photo: Leaves oblong, apices acuminate, bases cuneate, margins sparsely and shallowly serrate, dark green above, veins conspicuously sunken, 7.5-10 cm long x 4-4.5 cm wide. Flowers spinel pink, diameter about 9 cm, magnolia-shaped when open. Petals 7-8. Stamens numerous. Pistil well-developed, fertile. Flowers mid-season. This cultivar was selected from an open pollinated plant of wild form reticulata in Tengchong, Yunnan, China. Different reading: 'Ch'iao-yu-lan'. Synonyms: 'Small Magnolia', 'Pretty Magnolia'.

Qiaozhi. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.112. Chinese synonym for **George Firth.**

Qidai Furen. Chinese synonym for USA *C.japonica* **Mrs D.W. Davis Special.**

Qidao. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.419; Chinese synonym for the USA *C.japonica* **King's Ransom**

Qifa. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.416; Chinese synonym for the England *C.hybrid* **Inspiration.**

Qimiao Zhihua. (Wonerful Flower). *(C.japonica),* Gao Jiyin, 1996, *The Observations from the Camellia World,* back page: Originated by Mr Jiang Zongwang, East Flower Nursery, Wenzhou, Zheijiang, China. Pink to light peach pink on inner petals; sometimes a few bright red stripes; petals fimbriated. Flowers medium to large, peony form, fragrant. A chimera formed when a scion of **Scented Sun** was grafted onto **Liujiao Baota,** then a scion of **Flowerwood** grafted onto the **Scented Sun.**

Qingkou. (Empty Mouth), (*C.reticulata*), Chuang, 1959, *Yunnan Shanchahua.* Description not seen. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.10: Trumpet type. Petals flat, rather short, the corolla looks like a trumpet when fully open. Crimson. Mid-season. Kunming, Yunnan, China. Feng et al., 1986, *Yunnan Camellias of China*, p.29 with colour illustration: Leaves ovate, apices acuminate, bases cuneate or broad-cuneate, 6-8 cm long x 3-4 cm wide. Flowers pink (RHS.CC. 55C), single, diameter 3.5-4.5 cm, campanulate when fully open. Petals 7. Stamens numerous. Pistil well-developed, fertile. This is a new cultivar selected from seedlings of open pollinated seed by researchers of the Kunming Botanical Garden, Yunnan, China. Different readings: 'Ch'ing-kou', 'Ching Kou'. Synonyms: 'Empty Mouth', 'Crimson Tulip'.

Qingkou Cha. (Bell Mouth Camellia), (*C.japonica*), Wang, 1621, *Qunfangpu.* Description not seen. Chen, 1688, *Hiden Kakyô*: Petals round and twisted with a shape like a bell. The name 'Qingkou' is now used for a new *C.reticulata*, the character for 'qing' (empty) being used by the *C.reticulata*. However Fang Shumei, 1930 listed 'Qingkou' with the character 'qing' for 'bell'. Different reading: 'Ch'ing-kou Cha'. Synonym: 'Bell Mouth'. See: Yashiro, 1841, *Kokon Yôrankô*, vol.306. Ichijima reprint, 1906, p.345. (Believed extinct).

Qingmeihong Guiye. Feng & Shi, 1966, Zhiwu Yinchong X*unhua Jikan*, 2:105-113. Synonym for **Meihong Guiye.** Different reading: 'Ching-mei-hung Kuei-yeh'.

Qingqiu. Chinese synonym for the Australian *C.japonica*, **Just Sue.**

Qingren Dakate. Chinese synonym for USA *C.japonica* **Carter's Sunburst Sweetheart.**

Qingrenjie. Chinese synonym for the USA, *C.reticulata*, **Valentine Day.**

Qingxing. Shao, Taichong, 1992, *The Observations from the Camellia World*, p.78, No.386. Chinese synonym for the NZ *C.japonica* **Wide Awake.**

Qingzhu. Gao & Zhuang, Apr.1989, *The Camellia in China*, p.80, No.19. Chinese synonym for the English *C.x williamsii* **Celebration.**

Qingzi. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.161, Chinese synonym for **Haresugata.**

Qiongkelai'er. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the New Zealand *C.japonica* sport **Jean Clere.**

Qiongsi. Chinese synonym for the Australian *C.sasanqua*, **Bert Jones.**

Qipu. (The Seven Bodhisattva), (*C.japonica*), Ichijima, 1906, *Kokon Yôrankô*, 1841, vol.306, p.345: A single of purplish colour. Different reading: 'Ch'i-pu'. (Believed extinct.)

Qiqiao. (Lucky Seven), (*C.japonica*), Yang, 1965, *Camellia Cultivars of Taiwan* as 'Ch'i Chiao': Leaves dark green, elliptic, 6.7-8.8 cm. long x 3.4-4.7 cm wide. Flower red formal double, 8 cm. across with about 100 petals. Originated in China. The name refers to the 7 gods of good fortune. Japanese synonym: 'Shichikô'.

Qite Fulangxi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.416; Chinese synonym for the USA *C.reticulata* hybrid **Francie L Surprise.**

Qiuli. Gao & Zhuang, Apr. 1989, *The Camellia in China*, p.80, No.621. Chinese synonym for the Australian *C.granthamiana* hybrid **Autumn Glory.**

Qiumudan. (Autumn Peony), (*C.japonica*), Wang & Yü, 1981, *Shancha Hua:* Medium size, scarlet, peony form. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.74: Double hibiscus type. Small, spreading shrub, foliage sparse. Leaves elliptic, slightly curved, deep green. thick, coarse serrations, base broad-cuneate, venation prominent. Flowers bright scarlet, 8.5-10 cm across. Petals 30-35 in 3-4 rows, crêped. Petaloids many in fascicles, interspersed with petals and over 100 stamens. Pistil generally degenerate. Flowers early to late. Originated in Wenzhou, China. Synonym: 'Huazao Cha'. See Gao & Zhuang, Apr.1989, *The Camellia in China*, p.34, No.148, Colour photo, No.73.

Qiushaoyao. Gao & Zhuang, Apr.1989, *The Camellia in China*, p.74, No.542. Chinese synonym for the Japanese *C.sasanqua* **Fuji-no-mine.** Later changed to 'Fushi Zhi Feng'.

Qiushui Furong. (Autumn Water Hibiscus), *(C.japonica)*, Wang & Yu, 1989, *Camellias*, No.57, p.35, colour pl. [p.129]: A small tree with rough twigs. Leaves 7-9 cm long x 3-4 cm wide. Pubescent on midrib. Buds ovate, pubescent. Flowers red, outer petals in 2 rows; petaloids 3-4

rows with stamens in groups. Bloom 13 cm across, semi-globular. Blooms mid-season. Originated in USA. Chinese synonym for USA cultivar.

Qiuyun. (Autumn Cloud), (*C.japonica*), Gao, Jiyin, Apr. 1990, Nomenclature Convention, Wusi City, Jiangsu Province, China: Peony form, white, medium to large size, semi-double with flared stamens in the centre of the flower and crêped and ruffled petals. Light green leaves, medium growth. Blooms mid-season to late. Originated in Jianxing City, Zhejiang Province, China.

Qiuzhiyu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.420. Chinese synonym for the Japan *C.japonica* **Aki-no-homare.**

Qiwang. Gao & Zhuang, Apr.1989, *The Camellia in China,* p.80, No. 618, colour photo No.320, erroneously as 'Xiwang'. The Chinese synonym for New Zealand *C.x williamsii* **Anticipation.**

Qixiaoding. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.405; Chinese synonym for the Japanese Higo camellia **Nanakomachi.**

Qixin Mudan. (Seven Hearts Peony), (*C.japonica*), Shanghai Botanic Gardens List, 1984: Deep pink peony form. Originated in China.

Qixinbai. (Seven Hearts White), (*C.japonica*), Wang & Yü, 1980, *Shancha Hua:* Medium size, peony form, white, with stamens in 5-7 fasciciles. Originated in China. Sports: **Qixinfen, Qixinhong.** See Gao & Zhuang, Apr.1989, *The Camellia in China,* p.43, No.239.

Qixindahong. *Chinese Camellia Culture,* 2003, p.155 with colour photo, plant only; A tree up to 250 years old in Qiangwei Garden, Nanshan Park, Chongqing City, China. No other details.

Qixinfen. (Pink Seven Hearts), (*C.japonica*), Gao & Zhuang, 1989, *The Camellia in China,* p.43, No.238: Medium size, 8-9 cm across, pink, peony form sport of **Qixinbai.** Late blooming. Originated in China.

Qixinghong. Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.80. (Seven Stars Red). Synonym for **Hongtaige.**

Qixinhong. (Seven Hearts Red), (*C.japonica*), Huang Nursery Catalogue, 1949: Medium size, 8-9 cm across, red, peony form with 5-7 fascicles of stamens. Late flowering. Sport of **Qixinbai.** See Gao & Zhuang, Apr.1989, *The Camellia in China,* p.43, No.237, colour photo No.130. Originated in the Zhejiang Province, China. See colour photos, facing p.44, *International Camellia Journal*, No.16, 1984. Different reading: 'Chi-hsin-hung. Synonym: 'Seven Hearts Red'.

Qixinhong Manao. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.570; A sport of **Qixinhong.** Originated in Sichuan Province, China. Flower has large or small white spots.

Qixinqiu. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.568. Strong, erect growth, young twigs and leaves brown red. Leaf yellowish green, flat, elliptic, apex acuminate, base broad cuneate, 6-7 cm x 3-5 cm, margins sharply serrate. Flower semi-double, deep red, 8-12 cm diameter, petals 40-50, crinkled, arranged irregularly in seven centres. Stamens numerous, pistil degenrate. Flowers mid-season to late. From Jiangsu, China.

Qiyecha. (Unusual Leaf), *(C.japonica),* China Regn No.19. *China Flowers & Horticulture,* Oct 2007, No.20, p.47, with colour photograph. A leaf sport of a *C.japonica*, found in the 1980s by Tang Chenghe, Jinhua, Zhejiang, China. Leaves are irregularly shaped and yellow margined. Flowers red, semi-double, 7-8 cm diameter. Petals obovate with emarginated apex. Flowers early to mid-season.

Quadicolor. Jacob Makoy et Cie Catalogue, 1849, p.20. Orthographic error for 'Quadricolor', synonym for **Billottii.**

Quadrangularis. (*C.japonica*), Loudon, 1839, *The Gardeners' Magazine*, vol.14, p.224. No description. Originated in England. (Believed extinct.)

Quadricolor. *Catalogue la Société Royale de Horticulture de Belgique*, 1842, p.23. Orthographic error: 'Quadicolor'. Synonym for **Billottii.**

Quadripartita. Berlèse, 1840, *Monographie*, ed.2, p.195. Synonym for **Radescky.**

Quadroon. (*C.japonica*), Giles & Son Nursery Catalogue, 1881, p.92. No description. Originated in Australia. (Believed extinct.)

Quaintance. (*C.japonica*), McCaskill Advert. SCCS, 1950 *Camellia Review* vol.12, No.2, p.19. No description. Fendig, 1951, *American Camellia Yearbook*, p.74: A sport of 'Herme', (**Hikarugenji**), rose form double, 9-10 cm across, of soft, clear pink, striped a deeper pink. Leaves glossy mid-green, long pointed, 9 cm x 3.8 cm, fine, shallow serrations. Originated at the McCaskill Gardens, Pasadena, California, USA from a sport of **Hikarugenji** first observed in 1940. Registration No.95 with the ACS in 1951.

Quaker Lady. (*C.japonica*), SCCS., 1960, *Camellia Nomenclature*, p.94: Salmon Pink. Sport of **Carter's Carnival.** Large. Originated by E.H. Carter, Monterey Park, California, USA.

Quamosa Rubra. (*C.japonica*), Castagnola & Casabona Catalogue, 1861-1862. Description. Originated in Italy. (Believed extinct.)

Quangchoufen. Yang, 1965, *Camellia Varieties of Taiwan* as 'Kwangtung Fen'. Synonym for **Otome.**

Quanmeiguo. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.412; Chinese synonym for the USA *C.japonica* **All American.**

Quarte d'Olivera. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.193. Orthographic error for **Duarte de Oliveira.**

Quartet. McIlhenny, 1934, *List of Camellia Japonica for Sale*, p.1, lists 3 forms of Camellia under this name. A coloured flower painting of this name was published on p.52 by Barren, Leonard in the Mar, 1934, *Country Life*, in 'The Camellia Carries On'. In 1935, McIlhenny on p.13 of *List of Camellias now Growing in Camellia Garden of E.A. McIlhenny* lists and describes 'Quartet' as 'Semi-double, large white, blotched and lined with light red and rose-pink. Some blooms solid red. Often four colours on the same bush'.. Later one of these forms was propagated off and listed by McIlhenny in 1942 as 'Quartette Mottled'. Its name was changed to 'Etienne de Bore' in his 1945-1946 catalogue. Another form was known as **Cabeza De Vaca.** In the meantime, in his 1937, *600 Varieties of Camellias* McIlhenny adopted the orthography 'Quartette', a spelling that continued to be used in the USA ever since. From the viewpont of priority this orthography has no standing and 'Quartet' would be the valid form for what is a synonym for 'Ezonishiki' as **Tricolor.**

Quartette. McIlhenny, 1937, *600 Varieties of Camellias.* An orthographic variant for 'Quartet', synonym for 'Ezo-nishiki' as **Tricolor.**

Quartette Mottled. McIlhenny Catalogue, 1942, p.12. A mottled form of 'Quartet', later named 'Etienne de Bore'. Believed to be synonymous with **Lady Mackinnon.**

Quatii. *(C.japonica),* Seidel, 1846, *Pflanzen Catalog,* p.10. No description. Originated in Germany. (Believed extinct).

Quatre-Cent-Quatre Vingt-Treize. *(C.japonica), Les Camélias du Parc Floral de Paris List,* 1995. No description. Originated in France.

Quatre Vingt Treize. J & F Thoby, Gaujacq, France, Catalogue, 2009, p.6, Pink, peony form. Assumed to be the same as **Quatre-Cent-Quatre Vingt-Treize.**

Quatro de Abril. (*C.japonica*), Camillo Aureliano in *Jornal de Horticultua Practica*, 1879, Vol.X, pp.136-137; Virginal pinkish flesh colour, sprinkled, dotted and striped pink… central petals striped with sulphurous yellow and the eye a bit paler. Formal double. Originated in Portugal at Fiaes. Sport of **Primeiro de Fevereiro.**

Quban Huile. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.309, p.75. Chinese synonym for the USA *C.japonica* **Mary J. Wheeler.**

Quban Taohong. (Curved Petal Crimson), (*C.reticulata*), Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.13: Wavy type. Petals wavy or undulating, stamens and pistils well developed or partly becoming petaloid, crimson. Mid-season. Tengchong. Feng et al., 1986, *Yunnan Camellias in China*, p.52 with colour photo: Leaves elliptic to elliptic-obovate, apices acuminate to long-acuminate, bases cuneate, dark green above, slightly reclinate, 7-9 cm long x 4.5-5 cm wide. Flowers pink (RHS.CC.55B), diameter about 10 cm. Petals about 14, slightly curved and erect. Stamens numerous, placed among petals. Pistils mostly rudimentary. Flowers mid-season. The cultivar was selected from an open pollinated plant of wild form reticulata. Different readings: 'Ch'ü-pan T'ao-hung, 'Ch'upant'aohung', 'Qubantaohong'. Synonyms: 'Rolling Crimson', 'Curved Petal Crimson'.

Que Será Será. (*C.japonica*), Nuccio's Nurseries Catalogue, 1982, #7830: Rich coral pink. Large. Highly variable form, everything from semi-double with Higo-type flared stamens to loose anemone and peony forms. Strong and upright. Mid-season. *American Camellia Yearbook*, 1982, p.172, Reg. No.1812: A large, light, coral pink, semi-double to anemone form *C.japonica* chance seedling, that blooms early to mid-season. Originated by Nuccio's Nurseries, Altadena, California, USA. The 4 year old seedling first bloomed 1987. Average flower size is 12-13 cm across. Plant growth is upright and rapid with dark green leaves. See colour photo, front cover, SCCS, 1984, *The Camellia Review*, vol.45, No.4. Chinese synonym: 'Taiyangshen'.

Queem of Beautieu. G. Mariotti Catalogue, 1924, p.17. Orthographic error for 'Queen of Beauty', orthographic variant for **Reine des Beautés.**

Queem of England. G. Mariotti Catalogue, 1924, p.17. Orthographic error for **Queen of England.**

Queen. (*C.japonica*), Masters, 1841, *Gardeners' Chronicle*, 314:66. No description. Originated in England. (Believed extinct.)

Queen Bee. (*C.hybrid*). Nuccio's Nurseries Retail Price List, 1993-1994, p.30, (#8921): Beautiful, soft pink. Very large, irregular semi-double with vigorous upright growth. Blooms mid-season to late. Originated in USA by Nuccio's Nurseries, Altadena, California, USA.

Queen Bee's Tea. *(C.sinensis)* ACS, *Yearbook* 2011, p.133. Miniature, white, single flowers on vigorous, upright, spreading plant with large leaves. Offered by CamelliaShop, Savannah, Ga., USA.

Queen Bessie. (*C.japonica*), Overlook Nursery Catalogue, 1938. Description not seen. McIlhenny Catalogue, 1941, p.12: (Overlook) - Semidouble. White with faint trace of pink. Fendig, 1950, *American Camellia Catalogue:* White, faintly blush pink, semi-double, 10-12.5 cm across. Petals 5.5 cm x 4cm are obovate, tips wavy. Stamens central. united or in fascicles. Filaments are long. Leaves shiny, dark green, oval, 7.5 cm x 3.8 cm. Margins shallowly serrate. Plant growth rapid and upright. Originated by K. Sawada, Overlook Nurseries, Crichton, Alabama,

USA from seed imported from Japan. First flowered 1934. Chinese synonym 'Baisi Wanghou'.

Queen Diana. (*C.japonica*), *New Zealand Camellia Bulletin*, 1985, vol.XIV, No.4, p.39, Reg. No.232: Originated by J.C. Lesnie, Manukau, New Zealand. A hand pollinated *C.japonica* seedling of **Erin Farmer** x **Bea Rogers**. It is a rapid grower with a spreading, open habit and dark green leaves. The flowers are formal double, 10 cm across x 4.5 cm deep with about 86 petals with incurved tips, giving a flat face to the flower. The colour is pale pink outside and white in the centre when first open, but the centre deepens after to be darker than the outer petals. Blooms early to late. Because of Royal protocol it has been found that this name is not aceptable in the United Kingdom where the commercial synonym, 'Diana's Charm' has been approved. Chinese synonym: 'Dianna Wuanghou', spelling later changed to 'Daianna Wanghou'..

Queen Elizabeth. SCCR, 1942, *Classification of Camellias*, p.1. Synonym for the Japanese Camellia **Utsusemi** as 'E.H. Rust'.

Queen (Fielders). James Veitch Jr, 1853, Catalogue of Select Stove Plants…, p.14. Synonym for **Queen of England.**

Queen Escort. SCCS, 1956, *The Camellia. Its Culture and Nomenclature*, p.69. Orthographic error for **Queen's Escort.**

Queen Escort Variegated. Mark S. Cannon Scion Catalogue, 1962, p.9, as 'Queen Escort Var'. Orthographic error for **Queen's Escort Variegated.**

Queen Juliana. River View Nursery Catalogue, 1957-1958, p.12. Synonym for **Southern Charm.**

Queen Maeve. *(C.japonica),* C. Aust, *Camellia News,* No.182, Autumn 2010, p.8 with colour photo; Regn No.608; A chance seedling of **Pukekura.** Medium to large, anemone form to informal double, light pink. Narrow upright plant of open growth. Sun hardy, flowering early to late. Originated by Terence E. Pierson, Jasper's Brush, NSW, Australia.

Queen Mary. (*C.japonica*), Verschaffelt, Catalogue, 1849-1850, p.49. No description. (Believed extinct.)

Queen Mary. (*C.japonica*), Sutton Place Nursery Wholesale Catalogue, 1973-1974. Medium size, pink, double. Originated in England.

Queen of Angland. Trillon, Le Mans Nursery Catalogue, 1843, p.8. Orthographic error for **Queen of England.**

Queen of Beaute's. Jean Verschaffelt Catalogue, No.16, 1871-1872, p.73. Orthographic error for 'Queen of Beauties', orthographic variant for **Reine des Beautés.**

Queen of Beauties. Dombrain, 1862, *Floral Magazine* text following pl.95. Orthographic variant for **Reine des Beautés.**

Queen of Beauty. Manning, 1887. *Biographical Sketch of Marshall, P. Wilder*. Orthographic variant for **Reine des Beautés.**

Queen of Camellias. Loureiro Catalogue No.9, 1872-1873. Orthographic varaint for 'Reine des Camellias'.

Queen of Danemarck. Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete*, p.7. Orthographic error for **Queen of Denmark.**

Queen of Danemark. Auguste van Geert, 1852, Catalogue, No.32, p.37. Verschaffelt, 1852, *Nouvelle Iconographie*, Book 1, Index. Orthographic error for **Queen of Denmark.**

Queen of Denmarck. Alexis Dalliere, 1852, Price List, p.21. Orthographic error for **Queen of Denmark.**

Queen of Denmark. (*C.japonica*), van Houtte Catalogue, 1851-1852, 45:40, Rich poppy red, some petals spotted with white, carnation style. Originated by Hugh Low, Clapton, London, England. Verschaffelt, 1852, *Nouvelle Iconographie*, Book I, pl.I. Upon opening, the regularly imbricated blossoms are cherry red, with, here and there, a few white stripes. At full opening the petals become flat and outspread, and become delicately edged with white. Erroneously used in USA as a synonym for **Rubra Plena.** (See Hertrich, 1959, p.218). Orthographic variants: 'Queen of Danemark', 'Queen of Danemarck', 'Reine de Danemark', 'Queen of Denmarck'.

Queen of Elizabeth's Blush. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.193 -A blush form of **Utsusemi** as 'Queen Elizabeth'. Originated in USA.

Queen of Engeland (Fielders). Verschaffelt, 1844-1845, Catalogue, p.29. Orthographic error for **Queen of England.**

Queen of Engeland d'Italie. Verschaffelt, 1844-1845, Catalogue, p.29. Orthographic error for 'Queen of England d'Italia', synonym for **Regina d'Inghilterra.**

Queen of England. (*C.japonica*), van Houtte Catalogue, 1839, 1:7: Formed like **Imbricata**, very soft pink with white line down the centre of each petal. Originated by Fielder, England. Buist, 1845, *The American Flower Garden Directory*, ed.3, p.22: Dark rosy crimson, occasionally spotted white. Large, imbricated and fully double. Verschaffelt, 1851, *Nouvelle lconographie*, Book VI, pl.IV as 'Queen of England' (Fielder): Obtained from seed in England a few years ago ... It is distinguished by its extremely vivid, cherry-red blossoms, with petals, ample, rounded, convex, quite spread out, delicately veined in a deeper shade, with a few longitudinal, pale or whitish, sometimes double stripes. Apparently, in the intervening years the camellia had sported to a deeper colour. Synonyms: 'Fielder's Queen', 'Fielder's Queen of England', 'Queen of England'(Fielder), 'Queen of England' (Fielders), 'Queen of England' (Low's). Orthographic variant: 'Reginae d'Inghilterra'. Orthographic errors: 'Queen of Angland', 'Queem of England'.

Queen of England d'Italie. Verschaffelt Catalogue, 1847-1848, p.61. As Verschaffelt listed both this name and 'Queen of England' (Fielder) separately in this catalogue it is considered that they were separate cultivars but there is no description and this one presumably originated in Italy. It is a synonym for **Regina d'Inghilterra.**

Queen of England (Fielder). Verschaffelt Catalogue, 1847-1848, p.61. Synonym for **Queen of England.**

Queen of England (Low's). Verschaffelt, 1844, Catalogue, No.50, p.22. Synonym for **Queen of England.**

Queen of Fruitland. (*C.japonica*), Fruitland Nursery Catalogue, 1942, as 'Queen of Fruitland' F.N.: A light rose-pink. Medium large, semi-double with bushy growth. Originated in the USA by Fruitland Nurseries, Augusta, Georgia.

Queen of Great Britain. (*C.japonica*), van Houtte Catalogue, 1843-1844, 12:ccc. No description. Auguste van Geert, 1848, Catalogue, p.21: Admirable flower of the most beautiful satin pink. de Jonghe, 1851, *Traité de la Culture du Camella*, p.120: Medium size, regularly imbricated flower of beautiful satin pink. Originated by Mourant, Belgium. Orthographic error: 'Queen of Great Britannia'.

Queen of Great Britannia. Seidel, 1846, *Pflanzen Catalog,* p.11. Orthographic error for **Queen of Great Britain.**

Queen of Hearts. McIlhenny, 1937, *600 Varieties of Camellias*, p.11. Synonym for **Akebono-shibori** as 'Akebono Variegated'.

Queen of Italy. (*C.japonica*), Joseph Baumann, 1849, Prix Courant, p.3, as 'Queen o' Italie'. No description. Backhouse Catalogue, 1870. No description. Originated in Italy. (Believed extinct.)

Queen of Portugal. (*C.japonica*), Verschaffelt Catalogue, No.50, 1844, p.22. No description; *Nouvelle Iconographie*, 1854, Book V, pl.III: A peony form, white, of good size ... composed of two kinds of petals; those of the first two rows being ample, rounded, emarginate, all the others smaller, grouped in a heart, lobulate and convoluted with a yellowish tint at their base. Originated as a seedling from near London.

Queen of Roses. E.G. Henderson Nursery Catalogue, 1867, p.33. Orthographic variant for **Reine des Roses.**

Queen of Tali. Peer, 1949, SCCS., 'Bulletin', 11(2):11. Synonym for **Dali Cha.**

Queen of the Acres. (*C.japonica*), SCCS., 1951, *The Camellia. Its Culture and Nomenclature*: Sport of **Rose Queen** - white to pale pink with pink to red stripes. Rose form double, about 7.5 cm across. Leaves glossy, dark green, oval, 10-11 cm long x 7-7.5 cm wide; apex short and thick, recurved, venation recessed and obscure, serrations shallow. Originated by Elizabeth Councilman, El Monte, California, USA. Registration No.140 with the ACS.

Queen of the Beauties. van Houtte Catalogue, 1862-1863, 93:72. Synonym for **Reine des Beautés.**

Queen of the Giants. Verschaffelt Catalogue, 1855. Synonym for **Regina dei Giganti.**

Queen of the South. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue:* Pink. Irregular double. Early. *American Camellia Yearbook*, 1954, p.329, Reg. No.183: An 8 year old chance seedling, originated by Hugh Shackelford, Albany, Georgia, USA, that first flowered 1953. Plant growth is dense, compact and upright with smooth, light green leaves. Flower buds are oval and light pink. Flowers 11-15 cm across, complete double, irregular with 50-60 petals. Flower colour blush pink. Early flowering. Sport: **Queen of the South Variegated.**

Queen of the South Variegated. (*C.japonica*), Abbott's Nursery Catalogue, 1961 as 'Queen of the South Var.': a virus variegated form of **Queen of the South** - Blush pink and white. Originated in USA.

Queen of Tomorrow. (*C.japonica*), Charmwood. 1970. ACS., *The Camellia Journal*, vol.25, No.4, p.26. A sport of **Tomorrow Variegated**, thought to be caused by treatment with colchicine. Plant is a heavy, stocky grower with thick, leathery leaves. Blooms size and colour the same as 'Tomorrow Variegated', 16 cm across. Petals very heavy textured, crinkled and fluted. Originated in USA at Charmwood Nursery, Millbrook, Alabama. Synonym: 'Tomorrow Queen'.

Queen, Priestley's. Berlèse, 1841, *L'Horticulteur Universal*, pp.190-192. Synonym for 'Priestley's Victoria' (**Queen Victoria**).

Queen Rose. Marnock, 1839, *Floral Magazine*, 3(32):258. Synonym for **Reine des Roses.**

Queen Tut. *(C.japonica), American Camellia Yearbook,* 1992, p.37, Reg. No.2230, colour photo between pp.40-41: A medium to large size, white peony form chance seedling that blooms mid-season to late. Originated by Johnny Aldrich, Brooklet, Georgia, USA. The 24 year old seedling first

flowered 1973. Average flower size is 10 cm across x 5 cm deep with 14 petals and 210 petaloids. Plant growth is upright and medium in rate with dark green leaves 7.5 cm long x 3 cm wide.

Queen Victoria. (C.*japanica*), van Houtte Catalogue, 1839, 1:7 as 'Queen Victoria' (Priestley's). No description; Buist, 1852, The American Flower Garden Directory, 5th ed, p.217. Crimson, occasionally marked with white; large flower, perfectly imbricated. Originated by Mr Priestley, Bromley, Kent, England. Van Houtte Catalogue, 1841, 7:17: Superb variety of which I possess the entire stock. The red flowers are very deep, well imbricated and streaked with white on each petal. Synonyms: 'Priesley's Queen Victoria', 'Priestley's Victoria', 'Priestley's Victoria Vera', 'Queen Victoria Vera', 'Camellia Reine Victoria', 'Queen Victory'(Presley's), 'Presley's Victora', 'Pressley's Queen Victoria', 'Reine Victoria', 'Priestley's', 'Regina Victoria', 'Regine Vittoria'. 'Victoria'(Priestley's). 'Priestley Victoria', 'Victoria Vera', 'Queen Victoria'(Pressley's), 'Queen Victoria'(true), 'Persley's Victoria', 'Pressley's Victoria da Paola', 'Queen Victoris de Presley'. Orthographic error: 'Quen Victoria'. See pl.33 facing p.354, Anonymous, 1845, *Annales de Gand*, 1:355-356.

Queen Victoria Blush. Rubel Catalogue, 1940-1941, p.25. Synonym for **Jubilee Rosea.**

Queen Victoria de Presley. Seidel, 1846, *Pflanzen Catalog*, p.10. Synonym for **Queen Victoria.**

Queen Victoria (Presley's). Warrens Descriptive Catalogue, 1844, p.38. Synonym for **Queen Victoria.**

Queen Victoria (Pressley's). Franco Agostini, 1844, *Catalogo Plantarum Cesarei Regii Horti Modician.* Synonym for **Queen Victoria.**

Queen Victoria (True). Trillon, Le Mans Nursery Catalogue 1843, p.8. Synonym for **Queen Victoria.**

Queen Victoria Vera. Berlèse, 1840, *Monographie*, ed.2, p.222. Synonym for **Queen Victoria.**

Queen Victoria's Blush. SCCS., 1945, *Camellias*, p.14. Mark S. Cannon Scion Catalogue, 1963-1964, p.12. Synonym for **Jubilee Rosea.**

Queen Victoria's Blush (South). SCCS., 1956, *The Camellia. Its Culture and Nomenclature.* Synonym for **Souvenir de Bahuaud-Litou.**

Queen Wilhelmina. (*C.japonica*), Portland Camellia Nursery Catalogue, 1947-1948, p.3: Salmon pink. Medium large, semi-double with erect centre petals. Originated in USA by Portland Camellia Nursery.

Queen Yang. Yü, 1964, *Camellian*, p.6. Synonym for **Zuiyangfei.**

Queen's Court. (*C.japonica*), SCCS., 1974, *Camellia Nomenclature*, p.125: White. Large, semi-double with heavy petals. Mid-season blooming. Originated in USA by Haynie, Theodore, Alabama.

Queen's Delight. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1942-1943. No description. Originated in USA. (Believed extinct.)

Queen's Escort. (*C.japonica*), SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.79 as 'Queen Escort': Rose-pink. Large, semi-double with upright inner petals around central group of stamen. *American Camellia Yearbook*, 1960, p.205, Reg. No.453: A 9 year old chance seedling, originated by Dr Arthur Mazyck, Dothan, Alabama, USA. Plant growth is upright, dense and rapid with dark green leaves, 6 cm x 2.5 cm. The semi-double, pink flowers, 11-12.5 cm across x 5 cm deep have 15 petals, 3-4 petaloids and yellow anthers. Flowers mid-season. Sport: **Queen's Escort Variegated.**

Queen's Escort Variegated. (*C.japonica*), Mark S. Cannon Scion Catalogue, 1962, p.9, as 'Queen Escort Var.': a virus variegated form of **Queen's Escort** – Rose-pink and white. Originated in USA.

Queen's Jubilee. (*C.japonica*), Ragusa, 1954, *American Camellia Yearbook*, p.228: Probably a local name for an old camellia in the garden of M.C.F. Fitzenreiter, Lake Charles, Louisiana, USA.

Queenslander. (*C.sasanqua*), ACRS., 1967, *Camellia News*, No.28, p.4, Reg. No.76: Originated by Alex Scott, Birkdale, Queensland. Grown from seed imported from France of unknown parentage. First bloomed 1958 on a 4 year old plant. It has vigorous, open, upright growth with plum coloured young foliage. The flowers are 7.5 cm across, of a soft silvery pink with a bud centre opening out to an incomplete double. Leaves pale olive green, 5 cm x 2.5 cm, markedly serrate. Blooms mid-season.

Queli. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.426; Chinese synonym for the USA *C.japonica* **Cheryll Lynn.**

Quen of England. *Notiziaro della Societa Italiana della Camelia,* 1992, No.4, p.19. Orthographic error for **Queen of England.**

Quequehua. Waterhouse, 1970, ACRS., *Camellia News*, No.40, p.9, under the reading 'Ch'ueh Ch'ueh Hua'. Ikeda (1976) says that this is an error for 'Guai Guai Hua'. The first meaning 'speckled flower' the second 'broken pieces flower' relating to variegation. It is believed to be a synonym for **Damanao.**

Quen. Guilfoyle Catalogue, 18866, p.19. Orthographic error for **Queen.**

Quen Victoria. Jacob Makoy et Cie Nursery Catalogue, 1842, p.10. Orthographic error for **Queen Victoria.**

Quercifolia. Verschaffelt Catalogue, 1862. No description. Koch, 1862, *Belgique Horticole*, pp.119-120: A Camellia recently introduced from Japan by Mr Fortune ... The elliptical leaves are divided at the summit to 2 or 3 acutely pointed lobes. The flowers are pink, single, (5 petals), with stamens in three rows. Anonymous, Jan. 1866, *Gardeners' Chronicle*, 3264:51-52: Mr Bull, of Chelsea, has forwarded a leaf and flower of a Camellia which he proposes to call 'Apuaeformis', but which is commonly known as the 'Fish-tailed Camellia'. He observes, 'I believe it is the first time it has flowered in this country, and it is one of Mr Fortune's recent introductions from Japan'. This fish-tail variety is a very interesting plant. The elliptical leaves are divided at the apex into 2 or 3 acutely pointed lobes, which, in the sample before us, are of golden yellow colour, while patches of the same colour exist in irregular blotches on other parts of the leaf. The flowers are single, pink, with the stamens arranged in three rows, the two outermost joined below while the third series are distinct ... We learn that this golden tipped state of the leaves is merely accidental, such as often occurs on the old double striped Camellia. This very novel camellia became widely popular at the time under many synonyms which included: 'Queue de Poisson', 'Spontanea Trifida', 'Fishtail', 'Apucea-formis', 'Apuaeformis', 'Apuciformis', 'Apusiformis', 'Apisi-formis', 'Apicia Formis', 'Trifida', 'Kingyo-tsubaki' (Australia). Orthographic error: 'Quereifolia'. It is also popular in Japan where it carries the following synonyms: 'Kingyoba', **Kingyo-tsubaki,** 'Kingyoba-tsubaki'. In USA the large, carmine, semi-double cultivar named **Mermaid** has been erroneously equated with **Kingyo-tsubaki,** synonym: 'Quercifolia'. See colour photo, p.113, Macoboy, 1981, *The Colour Dictionary of Camellias.* The earliest listing of this cultivar is in Shirai-Bunko, 1789, *Shoshiki Hanagatachô* as **Kingyo-tsubaki.** See 1964, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.5, p.81.

Quercifolia. Henderson, 1871, Spring Catalogue, p.50. Abbreviation for **Fimbriata Quercifolia.**

Quercifolia. Jean Verschaffelt, 1862, Supplement for Price List, 1861-1862, p.2: New introduction raised from seed in Belgium. The flowers are displayed in great numbers at the end of each shoot. They are large, snow-white, with the centre and base of each flower showing a tint of honey yellow. The petals are rounded, hooded, slightly emarginated and becoming lanceolate and mucronate towards the centre. Those at the centre are finely and elegantly fringed. The elliptical leaves are divided into acutely pointed lobes. Two camellias described the same year were given the same name. However Fortune's camellia 'Quercifolia' has the prior Japanese name of **Kingyo-tsubaki,** so **Quercifolia** is let stand as the valid name for the Verschaffelt camellia.

Quereifolia. Verschaffelt Catalogue, 1867-1868, p.46. Orthographic error for **Quercifolia.**

Queue de Poisson. Barral, J.S, 1866, *Revue Horticole*, p.63. Synonym for 'Apicaeformis', itself a synonym for **Kingyo-tsubaki.**

Quiet. (*C.japonica*), Dodd, 1968, *Adventure in Camellia Seedlings*, p.10, colour photo: Soft pink, medium size, semi-double to open peony form double with wavy, notched petals, and irregular, pale yellow stamen cluster. A seedling of 'Magnoliiflora' (**Hagoromo**) raised by Richard Dodd, Marshallville, Georgia, USA.

R.L. Brent. (*C.japonica*), SCCS., 1958, *Camellia Nomenclature*, p.72. Sport of **Dr John D. Bell** - White. Large formal double of tiered form. Originated in USA by Woodland. From the 1968 edition and on, no mention is made of **R.L. Brent** in *Camellia Nomenclature*. It is most unlikely that it could be a sport of **Dr John D. Bell** which is a variegated form of **Beau Harp** - dark red variegated white, large peony form. The name was later invalidly used for a *C.reticulata* hybrid.

R.L.Brent (Pursel). (*C.reticulata* hyb.), *American Camellia Yearbook*, 1982, p.177, Reg. No.1823 invalidly as 'R.L. Brent': Very large, rose red, semi-double *C.reticulata* hybrid (*C.reticulata* 'Crimson Robe' (**Dataohong**) x [*C.reticulata* 'Cornelian' (**Damanao**) x *C.japonica* **Mrs D.W. Davis**]). Medium to late blooming. Originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first bloomed 1979, Average flower size, 15.5 cm across x 7.5 cm deep. Heavy textured petals, stamens hidden until fully open. Plant growth is upright and rapid with dark green, heavily serrated leaves, 13 cm x 6 cm. Sport: **R.L. Brent Variegated.**

R.L. Brent Variegated. (*C.reticulata*.hyb.), Cannon, 1985, ACS., *The Camellia Journal*, vol.40, No.4, p.13 as 'R.L. Brent Var.': a virus variegated form of **R.L. Brent (Pursel)** - Rose-red and white. Originated in USA.

R.L. Wheeler. (*C.japonica*), ACS., 1949, *Newsletter*, vol.4, No.4, Reg. No.20: Large, rose-pink, semi-double to incomplete double, up to 15 cm across. Outer petals, of heavy texture, are twisted and folded. Inner petals, semi-erect, framing a mass of stamens which fan out in a circle. Filaments and anthers yellow. Leaves large, mid to dark green, ovate, glossy, stiff, thick, 12 cm x 6 cm average, apex acuminate, serrations wide and shallow. Plant growth rapid and upright. Originated by Central Georgia Nurseries, Macon, Georgia, USA from seed of unknown parents gathered in the garden of Dr W.G. Lee, Macon, Georgia. First flowered 1948. Winner of the 'Buckley Medal', Garden Clubs of America; the 'Margarete Hertrich Award' for 1978 and the 'William E. Woodroof Camellia Hall of Fame Award' for 1978. See colour photo facing p.210, *American Camellia Yearbook*, 1953 and p.113, Macoboy, 1981, *The Colour Dictionary of Camellias*. Received an 'RHS Award of Merit' in 1959. Granted Plant Patent No. 1137 Oct. 14, 1952. Received the John Illges Medal of the ACS for 1953. Sport: **R.L. Wheeler Variegated.** Chinese synonym: 'Huile'.

R.L. Wheeler Variagata. Fairlight Camelha Nursery Catalogue, 1987. An illegal orthographic variation for **R.L. Wheeler Variegated.**

Rag Doll. (*C.japonica* hybrid). *New Zealand Camellia Bulletin*, March 1998, Issue No.129, vol.XX, No.4, p.22, Reg. No.390. Registered by O. Blumhardt, Whangarei, New Zealand. A cross of *C.japonica* **Bokuhan** ('Tinsie') x *C.lutchuensis* hybrid **Scentuous** which first flowered in 1993. A small peony form with about 15 petals and 50 petaloids. Flowers are a very deep pink with paler petaloids (RHS.CC. 52A for the petal backs; main colour appearance 52B). Plant is upright in habit and average in growth rate and density, with light green leaves 7 cm long x 3 cm wide. Flowers mid-season. Colour photo, ACRS *Camellia News* 1997, Issue No.143, p.23.

Ragged Dragon. (*C.reticulata* hybrid). SCCS 1996, *Camellia Nomenclature* p.141: Orange red; large semi-double. Average dense growth. Seedling of *C.x williamsii* **Coral Delight** x *C.reticulata* hybrid **Royalty**. Originated by T.Croson, Powers, Oregon, USA.

Ragged Robin. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue*, with colour plate: Large, dark lavender pink, semi-double, 10-11 cm across with large flaring petals. Semi-erect petals and erect petaloids stand amongst the central stamens. Foliage medium green, large, elliptic, 8-10 cm long, apices acute, serrations coarse. Originated by Hugh Shackelford, Albany, Georgia, USA as a chance seedling. Registration No.175, *American Camellia Yearbook*, 1954. Sport: **Ragged Robin Variegated.**

Ragged Robin Variegated. (*C.japonica*), Mark Cannon Scion Catalogue, 1962, p.9 as 'Ragged Robin Var.': A virus variegated form of **Ragged Robin** - Dark lavender pink, blotched with white. Originated in USA.

Raggedy Ann. (*C.japonica*), Pyron, 1959, *American Camellia Yearbook*, p.91: A 13-17 cm across dark red, irregular, full peony type with folded, twisted and notched petals intermingled with numerous, wavy petals. Leaves also deeply serrate. Vigorous, upright plant. Blooms early to mid-season. Originated in USA by Braewood Nursery.

Ragland Supreme. (*C.japonica*), *American Camellia Yearbook*, 1970, p.169, Reg. No.1072: A 4 year old chance seedling of 'Gigantea Alba' (**General Washington**) that first bloomed 1958. Originated by Reg Ragland, Pauma Valley, California, USA. Plant growth is upright, average, dense and medium in rate with dark green leaves, 8 cm. x 5 cm. The formal double flower is 9.5 cm across x 5 cm deep with 32 petals. Its colour is milk white with no anthers. Mid-season blooming. Chinese synonym: 'Chaoji Ligelan'.

Ragtime. (*C.japonica*), *New Zealand Camellia Bulletin*, 1989, vol XVI, No.1, p.26, Reg. No.258: Originated by W.L. Ragg, Christchurch, New Zealand, this 8 year old seedling first flowered 1984. The plant has an upright, dense habit with quick growth. The leaves are light green, 8 cm x 4 cm. The semi-double flowers appear mid-season to late, averaging 10 cm across x 3 cm deep with 18 petals, 4-6 petaloids, cream filaments and gold anthers. The flowers are pink (RHS.CC.54C) with a red stripe.

Rainsford Cantelou (Dodd). (*C.japonica*), *American Camellia Yearbook*, 1980, p.172, Reg. No.1622 invalidly as 'Rainsford Cantelou': A very large, red variegated with white, loose peony form to anemone form *C.japonica* chance seedling of 'Donckelaeri', (**Masayoshi**), mid-season flowering. Originated by Richard Dodd, Marshallville, Georgia, USA. Average flower size, 15cm across x 6 cm deep with 15-20 petals, 15-30 petaloids and yellow anthers and filaments. Plant growth is upright and rapid with dark green leaves, 8 cm x 6 cm.

Rainy Sun. (*C.japonica*), McIlhenny, 1937, *600 Varieties of Camellias:* Semi-double. Deep rose red. Fendig, 1953, *American Camellia Catalogue* description and illustration: Medium sized, red, semi-double, about 8 cm across. The colour is Solferino Purple, RHS.CC.26/3. The flower opens with the petal margins incurved but it usually flattens out after several days. Stamen cluster is sparse and twisted. Filaments are blush, shading to petal colour at base. Leaves glossy, mid-green, lanceolate to elliptic, 10 cm x 4 cm. Long prominent apex, tapered base, veins sunken, serrations medium-fine and sharp. Plant habit, hardy, upright and informal. McIlhenny procured this cultivar from Lindo Nurseries, Chico, California and is thought to have come from Japan to Coolidge Gardens. It is the solid colour form of the Japanese **Saifu** listed by Chûgai in 1934.

Rainy Sun Variegated. SCCS., 1951, *The Camellia. Its Culture and Nomenclature as* 'Rainy Sun Var'. Synonym for **Saifu.**

Rampey E. Thomas. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1999, p.14, Reg. No.2490. A white, semi-double chance seedling. Flowers early to late. Originated by Luther W. Baxter, Seneca, S. C., USA. *American Camellia Yearbook,* 1999, p.2, colour photo before p.1. The 28 year old seedling first flowered in 1987. Average flower size is 10 cm across x 4.5 cm deep, with 17 heavy textured petals, yellow anthers and white filaments. Plant growth is average and upright with medium green leaves 10.8 cm long x 6.3 cm wide. Buds and leaves are cold hardy. A seed pod was set at -5° F.

Ram's Choice. *(C.japonica), American Camellia Yearbook*, 1992, p.37, colour plate between pp.40-41, Reg. No.2245: A large size, pink, rose form double to formal double, *C.japonica* **Tiffany** x Seedling No.716. Originated by Jack Mandarich, Menlo Park, California, USA. The 12 year old seedling first flowered 1986. Average flower size is 11 cm across x 3 cm deep. with 60+ petals and golden anthers. Plant growth is upright, dense and average in rate with light green leaves 10 cm long x 5 cm wide.

Ranbeni. Different reading for **Rankô.**

Ranbu. (Boisterous Dance), *(C.rusticana)*, Hagiya, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, p.18: Large, red, peony to anemone form, 8-9 cm across, with a double row of 15 large, waved and emarginate outer petals and a small centre of small, erect, folded petals, mixed with petaloids and stamens. Leaves long-ovate, 8-9 cm long, tapering acuminate, sharply serrate. Different reading: 'Rambu'. See Seibundô Shinkôsha, 1979, *Senchinshû*, p.161. Originated with a private family in Kita-kanbara District, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1966.

Ranbyôshi. (Wild Rhythm), (*C.japonica*), Itô, Ihei, 1696, *Kandan Chikinshô*, #16; Itô, Jukyû, 1739, *Honzô Hamamaki'e:* Large, semi-double to rose form double, red with white spots. Shirai Bunko, 1789, *Shoshiki Hanagatachô;* 1812, *Tsubaki Nayosechô.* Red with 4 tiers of petal, small and large white spots. Stamens like a bamboo whisk. Also listed by Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû* and Minagawa, 1933. *Chinkashû.* See following colour illustrations & descriptions: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.154; Tuyama, 1968, *Camellias of Japan*, pl.299, p.151. *Encyclopedia of Camellias in Colour*, vol.1, 1972, pl.270, p.124 & p.331. Seibundô Shinkôsha, 1979, *Senchinshû*, p.161 & p.256. Yokoyama & Kirino. 1989, *Nihon no Chinka*, p.326: Leaves elliptic to narrowly obovate-elliptic, long acuminate, coarsely serrate. Flowers double, rosy (Rhodonite Red 122/1), petals overlapping, with irregularly wavy, inner petals and deformed staminal tube and varying shade of white blotching. Flowers mid-season. Originated in Kantô area, Japan. The present **Ranbyôshi** is believed to be identical to **Ômidare**. Different readings: 'Rambyôshi', 'Rambyohshi', 'Midarebyôshi'. Corruption of the name: 'Rambuohshi'. See: JCS., 1983, *Tsubaki*, No.22, p.120; ibid, 1969, No.7, p.27; Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.79.

Rancho. Different reading for **Ran-i.**

Ranchûba-tsubaki. (Lionhead Goldfish Leaves Camellia), (*C.japonica*), Tomino, Kôji, Kyôto Engei Kurabu, 1968, *Tsubaki Tokushû*, No.9, p.35: Seibundô Shinkôsha, 1979, *Senchinshû*, p.246: Sport of **Benihitoe-kingyo-tsubaki.** Flower red, single. Small leaves are produced from the main leaves. Synonym: 'Bonten-tsubaki'. Synonyms: 'Ranchû-kingyô-tsubaki', 'Bonten', 'Bontenjiro', 'Bontenba-tsubaki'..

Ranchû-kingyô-tsubaki. (Lion Head Goldfish Camellia), (*C.japonica*), Craig, 1972, *American Camellia Yearbook*, pp.52, 57, black & white photo: Most of the leaves usually of the typical 'fishtail' form, but a small percentage of them are of an oblong disc shape and the end of the central leaf midrib extends beyond the main leaf with a goldfish tail like a tassel. There are both red and white single flower forms. Originated in Japan. 'Ranchû-kingyo' in Japan is a small round goldfish with large protruberances on its head. Synonym for **Ranchûba-tsubaki.**

Randell Corbett. (*C.sasanqua*), *American Camellia Yearbook*, 1968, p.135, Reg. No.967: A 6 year old chance sasanqua seedling of Rosea that first bloomed 1963. Originated by R.O. Corbett, Cairo, Georgia, USA. Plant growth habit is average with dark green leaves. The semi-double to rose form flower is 11 cm across x 3.7 cm deep with 11 petals. White with pink edges. Stamens yellow. Blooms very early.

Rando. (Disordered Degree), (*C.japonica*), Hamamatsu, 1825, *Setsuyô Kikan.* No description. Originated in Japan. (Believed extinct.)

Randolph Maphis. (*C.reticulata* hybrid). ACS, *The Camellia Journal*, Mar.2008, p.C11 with colour photo, Regn No.2712; A chance seedling that first flowered in 1998. Originated and propagated by E. Hulyn Smith, Valdosta Ga., USA. The 17 cm diameter x 11.5 cm deep, red with white frosting, semidouble to peony flower has raised and curled petals. Golden anthers and red filaments. Flowers mid-season. Plant is upright and vigorous. *American Camellia Yearbook*, 2008, p.125 with colour photo; Dark green leaves are 12 cm x 7 cm.

Rangerette. (*C.japonica*), *American Camellia Yearbook,* 1961, p.229, Reg. No.589: A 10 year old chance seedling that first bloomed 1959. Originated by Dr Gilbert E. Fisher, Union Springs, Alabama. Plant growth is upright, dense and rapid with leaves, 12.5 cm x 6 cm; dark green, many variegated. The peony form flowers, 13 cm across x 7.5 cm. deep, are soft rose-pink, mottled and moired white, with yellow stamens, more than 20 petals, 6-7 petaloids intermingled with stamens. Blooms mid-season. The SCCS., *Camellia Nomenclature* lists this cultivar as a synonym for **Liberty Variegated** which is a virus variegated form of **Liberty,** originated by G.G. Gerbing in 1958.

Rangiku. (Orchid Chrysanthemum), (*C.granthamiana* Hyb.), JCS., 1989, *Japan Camellia,* No.30, p.4, colour photo: Seedling of **Kikuzuki** x *C.granthamiana.* Medium size, semi-double of 8-9 petals, crinkled, emarginate, irregular, opening cup-shape, colour pale pink deepening to petal edge. Size 11 cm across. Centre a cluster of short, golden stamens. Plant shape is compact. Originated in Chiba Prefecture, Japan.

Rangiura. *(C.japonica), New Zealand Camellia Bulletin,* March 2007, No.156, p.88, Reg. No.477. Registered by A. & R. Hannam, Waikanae, New Zealand. A chance seedling that first flowered 1999. Plant is of average growth rate, structure and size. Dark green leaves are 8.5 cm x 4.25 cm. The dark pink (RHS.CC. 52B) flower is 9 cm wide by 3.5 cm deep, single, with 8 near-circular, lightly waved petals that lie out flat. The cream coloured stamens form a compact ring about 2cm high in the centre. Flowers mid-season.

Rangitira. (*C.saluenensis x C.reticulata*), Doak, 1961, *American Camellia Yearbook,* p.93. A seedling raised by Les Jury, New Zealand from the cross *C.saluenensis x C.reticulata* **Captain Rawes.** No description. No valid listing located.

Rangyoku. (Disordered Music), (*C.japonica*), Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* True vermilion red with pure white spots. Double with 6 tiers of petals. Cylindrical stamens. Originated in Japan. Different reading: 'Midaregyoku'. (Believed extinct.) See: JCS., 1969, *Tsubaki,* No.7, p.34.

Ran-i. (Fierce Wild Boar), (*C.japonica*), Itô, Ihei, 1695, *Kadan Chikinshô,* #109; Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô. 1859, *Tsubaki lrohanayose Irotsuki:* Rose form double, medium sized red with some variegation. Originated in Japan. See: JCS., 1969, *Tsubaki,* No.7, p.34. (Believed extinct.) Different readings: 'Midare-i', 'Rancho'.

Ranieri. Charles van Geert Nursery Catalogue, 1845, p.12. Orthographic error for **Raniesii.**

Raniesii. (*C.japonica*), Loudon 1840, *The Gardeners' Magazine,* vol.16, as 'Raniesi' as a seedling of Dr. Sacco, Milan, Italy. Orthographic error: 'Ranieri'. (Believed extinct.)

Ranjishi. (Disordered Lion), (*C.japonica*), Okumura [ca.1810], *Chinka Hin'i:* Deep red, large sized single with anemone centre. Different reading: 'Midarejishi'. Originated in Japan. (Believed extinct.)

Ranjô. (Piece of Gagaku Music), (*C.amplexicaulis* hybrid), *Japan Camellia* 101, May 2014, p.5 with colour photo, JCR Regn No.2014-6 (Ser. No.19). A selected seedling of *C.amplexicaulis,* pollen parent unknown. Flower and plant similar characteristics to seed parent, but with extra petals. Stamens dispersed among the inner rows of petals, a form known as 'Lion-formed' (rose form) Early to mid-season flowering. Originated by Kimihide Hashimura.

Ranju. (Disordered Tree), Late 19th Century, *Tsubaki Hachiboku Sanbokutsuki Nayose Hanagatatsuki Meisai:* Crimson, with a few spots, rose form double. Medium size. Originated in Japan. Different reading for **Midare-gi.** See: JCS., 1982, *Tsubaki,* No.21, p. 108. (Believed extinct.)

Rankan. (Blue Gateway), (*C.sasanqua*), Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.14: Shiny white. Medium semi-double with round petals. Originated in Japan.

Rankei. (Orchid Valley), (*C.japonica*), *Chinka Zufu*, (before 1700), Watanabe, 1969, p13; Hirayama, Tokuo, (Late 17th Century), *Tsubaki Byôbu.* See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2. p.48. Red, large size, anemone form with compact petaloid centre around a group of stamens. Originated in Japan. (Believed extinct.)

Rankei. (Orchid Valley), (*C.japonica*), *Chinka Zufu*, (before 1700), Watanabe, 1968, pl.713: Large, dark red, Medium to large size, open peony form with irregular petals and fascicles of stamens intermixed in the centre. Originated in Japan. (Believed extinct.)

Rankei-tsubaki. (Indigo Blue Valley Camellia), (*C.japonica*), Sakuden. 1630. *Hyakuchinshû:* Large, red, double, stamens irregular. Originated in Japan. (Believed extinct.) The original tree was said to be in the precincts of the Daitoku Temple, Kyôto. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.103.

Rankô. (Confused Red). *(C.sasanqua).* Itô, Ihei, 1710, *Zôho Chikinshô:* Large single flower, white with red speckles. Originated in Japan. Different readings: 'Midarebeni', 'Ranbeni'. (Believed extinct).

Ranman. (Glorious), (*C.rusticana*), Seibundô Shinkôsha, *Garden Life*, No.17, 1966, p.38 and back cover colour photo; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.175, description, pp.316, 317: Medium sized, deep red, informal double with an outer row of oblong, slightly cupped petals and a centre of small, ragged, erect petals mixed with petaloids and stamens. Leaves midgreen, elliptic, long acuminate, finely serrate. Petioles hirsute. Flowers mid-season. See Seibundô Shinkôsha, 1979 *Senchinshû*, p.161 & p.256. Different reading: 'Ramman'.Originated with a private family in Higashi-kanbara-gun, Niigata Prefecture, Japan. Collected, named and released by Yaichi Kawamura in 1966.

Ranny. (*C.sasanqua*), Fruitland Nursery Catalogue, 1950-1951, p.32: White edged pink. Large, single. Originated in USA by Fruitland Nursery, Augusta Georgia.

Ranshakushi. (Disordered Ladle), (*C.japonica*), Tateyama Nursery Catalogue, 1957, Large, peony form red with white spots. Originated in Japan. There is a possibility that this is an orthographic error for **Ranbyôshi.**

Ranunculata Coccinea. (*C.japonica*), Franchetti, 1855, *Collezione di Camelie,* p.54 as 'Ranunculata Loccinea': Large, imbricated, brilliant red flower. Originated in Italy.

Ranunculata Loccinea. Franchetti, 1855, *Collezione di Camelie, p.*54. Orthographic error for **Ranunculata Coccinea.**

Ranunculata Sanguinea. (*C.japonica*), Tagliabue, 1840, *Nomenclatore Camelliae.... No* description. Originated in Italy. (Believed extinct.)

Ranunculiflora. (*C.japonica*), Jacob Makoy Catalogue, 1836, p.17. No description. Loddige's Nursery Catalogue, 1836, p.25. No description. Originated in England. Trillon 1845, Catalogue as 'Ranunuliflora Vera': Formal double, violet carmine; magnificent. Synonym: 'Ranunculiflora Vera'.

Ranunculiflora Alba. (*C.japonica*), Rovelli Catalogue, 1874, p.31: Large, white, early blooming. Originated in Italy.

Ranunculiflora Striata. (*C.japonica*), Harrison, ed., 1836, *Floricultural* Cabinet, vol.4, p.155, under British and Continental varieties; variegated; 1838, vol.6, p.28: Double, red with white stripes. Originated in England. Orthographic error: 'Renunculiflora Striata'.

Ranunculiflora Vera. Trillon, Le Mans Nursery Catalogue, 1845, p.7, as 'Ranonculiform Vera'. Synonym for **Ranunculiflora.**

Ranzan. Different reading for **Arashiyama.**

Rasenzome. (Selected Dyed Silk), (*C.japonica*), Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*. Section on double form. See; JCS., 1969. *Tsubaki*, No.7, p.36; Itô, Ko'emon, 1879, *Chinkashû:* Double. Cardinal red mottled white, large. See colour illustrations and descriptions in the following: Satô, 1975, *Chûbu no Tsubaki*, p.110; Adachi, 1960, *Camellia. Its Appreciation & Arctistic...*, p.90; Tuyama, 1966, *Camellia Cultivars of Japan*, pl.144; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.258; description, p.328; Seibundô Shinkôsha, 1979, *Senchinshû*, p.161, description, p.256: Large, variable semi-double to irregular double, 11 cm, across. Flowers from white with light pink blotches and streaks, pink with white blotched to red with white blotches. There are two rows of 12-13 long, outer petals and an upright centre of small petals and petaloids, intermixed with stamens, to a centre of stamens only. Leaves dark green, thin, elliptic, 7.5 cm. long x 3.8 wide, serrate, apices acuminate, recurved. Orthographic errors: 'Raseb-zome', 'Rasenjome'. Different reading: 'Rasen-zome'. Corruptions of the Japanese name: 'Razen-Zone', 'Razen-Zome'. Resembles: **Suzuka-no-seki, Monjusu.** Originated in the Kantô area, Japan.

Rashômon. (Ancient Gate of Hei'ankyô Palace, Kyôto), (*C.japonica*), Uekiya Seigorô, 1874, *Tsubaki Hyakuro no Zu.* vol.I. Medium sized, red, semi-double with central column of yellow anthered stamens. See: Kyôto Engei Kurabu, 1975, *Kyôto Engei*, No.73, p.22. Originated in Japan. (Believed extinct.)

Raspberry Delight. *(C.hybrid),* SCCS., 1974, *Camellia Nomenclature*, p.178: Raspberry-rose, Large, semi-double with large, fluted petals. Vigorous, open, upright growth. Mid-season to late blooming. A cross of **William's Lavender** x *C.japonica.* Originated by McCaskill Gardens, Pasadena, California, USA.

Raspberry Flambé. *(C.hybrid).* ACS, *The Camellia Journal,* Sept. 2006, p.29 with colour photo; Reg. No. 2689. A chance, non-reticulata hybrid, first flowered 1988. Originated by Kramers Bros Nursery, Calif., and propagated by Roscoe Dean Nursery, Lucedale, Miss., USA. The 9.5 cm diameter, formal double flower is deep rose-coloured. The plant is upright with average growth rate and flowers mid-season. Chinese synonym 'Limei'.

Raspberry Glow. *(C.reticulata), New Zealand Camellia Bulletin*, 1990, vol.XVI, No.5, p.42, Reg. No.273: Originated by H.B. Cave, Wanganui, New Zealand as 2nd generation chance seedling from *C.reticulata* 'Crimson Robe' (**Dataohong**), it first bloomed in 1983. It is of open, upright growth with a medium growth rate and dark green leaves, 11 cm. long x 4.5 cm wide. The semi-double bloom is about 17 cm across x 9 cm. deep with 16 petals. The colour is crimson red (RHS,CC.53C to 58D), with an unusual lightness at the base of the petals. Anthers are yellow, filaments cream. Chinese synonym 'Shanmei Zhi Guang'.

Raspberry Ice. (*C.japonica*), Cannon, 1975, ACS., *The Camellia Journal*, vol.30, No.4, No description. *American Camellia Yearbook*, 1987, p.84, Reg. No.2050 with colour photo between pp.60-61: A sport of **Cinderella,** originated by Len Freeman, Bakersfield, California, USA and Monrovia Nursery, Azusa, California: Large, semi-double; pink fading to white background with red streaks and flecks. Petals large, emarginated and crêped. First observed and propagated in 1960. Plant growth is upright, average, dense and medium in rate with dark green leaves, 11 cm x 5cm. See colour photo: 1978, *New Zealand Camellia Bulletin*, vol.XV, No.2, p.18. Chinese synonym: 'Bingshanmei'.

Raspberry Parfait. (*C.japonica*), *American Camellia Yearbook*, 1974, p.174, Reg. No.1288: A 10 year old *C.japonica* chance seedling that first flowered 1970. Originated by Mrs M.J. Witman, Macon, Georgia, USA. Plant growth is upright and medium with dark green leaves, 7.5 cm x 1.3 cm. The formal double, **Alba Plena** type, bloom is raspberry red with touches of creamy white, with 56 petals. It has small, round petals in 16 very tight rows, 6 cm. across, petals incurved. Blooms late.

Raspberry Ripple. (*C.japonica*), *New Zealand Camellia Bulletin*, 1990, vol.XVI, No.5, p.42, Reg. No.272: Originated by R.J. Macdonald, Waiuku, NZ, as a chance seedling of **Tiffany;** white with pink stripes. The flower is semi-double, 14 cm across x 8 cm deep with 30 petals and about 10 petaloids. The anthers are yellow, filaments cream and it blooms from early to late. The plant is of an average growth habit and rate and the leaves are 10 cm long x 4.5 cm. wide and dark green. Stripes are pink RHS.CC.52B.

Raspberry Sherbert. *(C.japonica),* ACS, *The Camellia Journal*, Sept. 2008, p.31 with colour photo, Regn No. 2733; An 11.5 cm diameter x 7.5 cm deep, semi-double with separated layers of petals. Light fuschia, with yellow anthers and white filaments. Flowers mid-season to late. A chance seedling, first flowered in 2003, originated by Gordon E. Eade, Pensacola, Fla., USA. *American Camellia Yearbook,* 2008, p.125 with colour photo; Spreading growth, average rate. Dark green leaves are 9-10 cm x 3.8 cm.

Rast's Conglomerate. Wilmot, 1943, *Camellia Variety Clasification Report*, 1943, p.13. Synonym for **Harlequin.**

Rathcooney. (*C.japonica*), Dodd, *1968, Adventure in Camellia Seedlings,* p.15, colour photo: Medium large, white, semi-double; outer rows of petals notched and folded back, one or two small petals in the centre. A seedling of **Ville de Nantes,** originated by Richard Dodd, Marshallville, Georgia, USA.

Rathmoreana. (*C.japonica*), Makoy Nursery Catalogue, 1838 as 'Rathmoriana'. Description not seen. Berlèse, 1843, *Iconographie*, p. facing pl.246 as 'Dahleni' or 'Rathmoreana'. Flower about 10cm across, double of a scarlet crimson of a brilliance difficult to describe. The petals of the circumference, disposed in many rows, are full, cup-shaped, with touches of soft rose; those at the centre are erect, a little crêped, numerous and grouped in fascicles. The corolla is rounded, broad, sometimes flat and almost regular. Synonyms: 'Dahlenii', 'Daelenii', 'Dalleni'. Orthographic error: 'Rathmoriana'.

Rawe's Variegated Waratah. Chandler & Booth, 1831, *Illustrations and Descriptions of Camellia…,* pl.32. Synonym for **Rawesiana.**

Rawesiana. (*C.japonica*), Saml. Curtis, 1820, Monograph on the Genus Camellia, p.2 as 'Semidouble Waratah'. Introduced by Captain Rawes for Mr Palmer in 1816. Loudon, 1826, *The Gardeners' Magazine*, vol. 1, p.341 as 'Rawsiana': A blossom of a new camellia named 'Rawsiana' recently imported from China by T.C. Palmer. It is a deep crimson red colour, double, with tufted petals in the centre. (As the camellia was named after the Captain Rawes who brought it from China the correct orthography is **Rawesiana**.) A full description was given under the synonym 'Speciosa' by Chandler & Booth, 1831, *Illustrations & Descriptions of Camellias,…*pl.32 - Flowers of a deeper red than 'Waratah' (**Anemoniflora**), usually 10 cm. across. Outer petals 2.5-3.6 cm in breadth, slightly cordate, generally rounded, a little recurved and faintly veined, 10-12 placed in 2 rows irregularly, with a few unequal white blotches. Above these is a set of small, incurved petals like **Anemoniflora,** which rise upright and increase in size to the centre. A third set of 8-10 petals, concave and erect, overtops the last and surrounds another set of incurved petals and has the appearance of one flower growing out of another. Most petals have an little white stripe at the base. Synonyms: 'Rawe's Plena', 'Rawe's Showy', 'Rawe's Variegated', 'Rawe's Variegated Waratah', 'Rawe's Striped Waratah', 'Speciosa', 'Rawesii Vera', 'Parksii Vera', 'Roseana', 'Rozeana', 'Roseanum', 'Rawesiana Vera', 'Roscii', 'Rossii', 'Ross's', 'Ghiersdaelli', 'Palmer Carnation Waratah', 'Giante des Battailles', 'Staminea', 'Ghiersdaelle', 'Staminea Plena', 'Park's Vera', 'Staminea Flore Plena', 'Greyii Nova', 'Large China', 'Chinese striped Waratah', 'Rawesii', 'Reevesi Major', 'Waratah de la Chine', 'Variegata Chinensis', Waratah Speciosa', 'Raweesii Speciosa', 'Futting' (now 'Foding' = Buddha's crown) is the old Chinese name for this cultivar. Orthographic errors: 'Rawsiana', 'Rausiana', 'Rawesii', 'Roweriana', 'Raweriana', 'Ravvesiana', 'Ravesiana', 'Reawesi', 'Rawsi'.

Rawesiana Vera. Berlèse, 1835, *Annales de la Société d'Horticulture de Paris*, 16:417. Synonym for **Rawesiana.**

Rebecca Margaret. *(C.reticulata* hybrid*)*, ACS, *The Camellia Journal*, Dec. 2009, p.29, Regn No. 2783; Originated by E. Hulyn Smith, Valdosta, Ga., USA. *American Camellia Yearbook*, 2009, p.116 with colour photo; A cross of **Suzanne Withers** x **Annabelle Fetterman,** first flowered in 1998. Medium size flower is 9 cm diameter x 7.5 cm deep, dark pink, and semi-double to loose peony form with many petals folded. Golden anthers and yellow filaments. Spreading, dense, vigorous growth. Dark green leaves average 10 cm x5 cm. Flowers mid-season to late.

Rebecca Renee. (*C.japonica*), ACS., Aug. 1987, *The Camellia Yearbook*, vol.42, No.3, p.6, Reg. No.2053: Medium size, vibrant chinese red, semi-double, *C.japonica* seedling. Blooms mid-season. *American Camellia Yearbook*, 1987, p.84 with colour photo between pp.60-61: Originated by Walter L. Smith, Tylertown, Mississippi, USA. The 14 year old seedling first bloomed 1981. Average flower size, 8 cm across x 3.8 cm deep with 29 petals and striped, white petaloids. Plant growth is upright, average and medium with dark green leaves, 7.5 cm long x 4 cm wide. Very cold hardy.

Rebecca Richardson. (*C.*x *williamsii*), *American Camellia Yearbook*, 1978, p.134, Reg. No.1500: A medium sized, medium pink, semi-double, hybrid chance seedling *(C.japonica x C.x williamsii* **Donation**). Blooms mid-season. Originated by Ferol Zerkowsky, Tammia Nursery, Slidell, Louisiana, USA. The 15 year old seedling first bloomed 1968. The flower has 36 petals, bright yellow anthers. Average size, 11 cm across x 5 cm deep. Plant growth is upright, dense and medium. Leaves 7-7.5 cm long x 3.2-3.4 cm wide.For colour photo see front cover, ACS., 1978, *The Camellia Journal*, vol.33, No.3.

Rebecca Wilson. (*C.japonica*), ACRS., 1987, *Camellia News*, No.103, p.22, Reg. No.349: Originated by E. Wilson, Heidelberg Heights, Victoria, Australia. A chance seedling of **Fiona Capp** that first flowered 1985. The pale pink, RHS.CC.56D, single to semi-double flower of 9-12 petals, 10.5cm across x 4.5 cm deep, opens mid-season to late on a slow, spreading plant. Leaves long, glossy green, elliptic, serrate, apex acuminate, 10 cm long x 5 cm wide. Flowers fall complete.

Rebel Lady. *(C.reticulata* hybr.), ACS., 1980, *American Camellia Yearbook*, p.172, Reg. No.1669: A very large size, deep red, semi-double *C.reticulata* hybrid (**Arch of Triumph** x [‘Cornelian’ x **Mrs D.W. Davis**]) that blooms early to late. Originated by Frank Pursel, Oakland, California, USA. The 8 year old hybrid first flowered 1975. Average flower size, 13 cm across x 6-8 cm deep with high centre petals and bright yellow stamens. Plant growth is upright, average and medium in rate with dark green leaves 12.5 cm x 8 cm.

Rebel Viney. (*C.japonica*), SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Brilliant red. Large, semi-double. Loose, upright growth. Blooms mid-season. Originated by Mrs W Viney, Covina, California, USA.

Rebel Yell. (*C.japonica*), *American Camellia Yearbook*, 1961, pp.229, 230, Reg. No.534: A 7 year old chance seedling that first bloomed 1953, originated by Wheeler’s Central Georgia Nurseries, Macon, Georgia, USA. Plant growth is upright and medium with dark green leaves 10 cm x 5cm. The white, semi-double flowers have a large number of red specks and stripes, giving a moired effect. Petals and petaloids are crepey, twisted and curled. Flowers are 13 cm across x 6 cm deep with 20 petals and 5 petaloids. See colour photo, front cover, ACS., 1961, *The Camellia Journal*, vol.16. No.1. Sports: **Rebel Yell Blush, Rebel Yell Blush Variegated, Rebel Yell Pink. Rebel Yell Pink Variegated, Rebel Yell Red. Rebel Yell Red Variegated, Rebel Yell White.** Orthographic error: ‘Rubel Yell’. Chinese synonym ‘Libei Mudan’.

Rebel Yell Blush. (*C.japonica*), SCCS., 1968, *Camellia Nomenclature*, p.116: A blush pink mutation of **Rebel Yell**. Originated by Wheeler’s Central Georgia Nurseries, Macon, Georgia, USA.

Rebel Yell Blush Variegated. (*C.japonica*), SCCS., 1968, *Camellia Nomenclature*, p.116, as 'Rebel Yell Blush Var.': a virus variegated form of **Rebel Yell Blush** - Blush pink and white. Originated in USA by Wheeler's Central Georgia Nurseries, Macon, Georgia.

Rebel Yell Pink. (*C.japonica*), Mark Cannon Scion Catalogue, 1964-1965, p.3. No description. SCCS., 1968, *Camellia Nomenclature*, p.116: A pink mutation of **Rebel Yell.** Originated in USA. Orthographic error: 'Rubel Yell Pink'. Sport: **Rebel Yell Pink Variegated.**

Rebel Yell Pink Variegated. (*C.japonica*), Mark Cannon Scion Catalogue, 1964-1965, p.3. No description. Tammia, 1967, ACS., *The Camellia Journal*, vol.22, No.5, inside rear cover. No description. SCCS., 1968, *Camellia Nomenclature.* p.116 as 'Rebel Yell Pink Var.': A virus variegated form of **Rebel Yell Pink** - Pink blotched with white. Originated in USA. Orthographic error: 'Rubel Yell Pink Variegated'.

Rebel Yell Red. (*C.japonica*), SCCS., 1966, *Camellia Nomenclature*, p.111: Solid red mutation of **Rebel Yell.** Originated in USA. Sport: **Rebel Yell Red Variegated.**

Rebel Yell Red Variegated. (*C.japonica*), *SCC*S., 1966, *Camellia Nomeclature*, p.111 as 'Rebel Yell Red Var.': A virus variegated form of **Rebel Yell Red** - Red blotched white. Originated in USA.

Rebel Yell White. (*C.japonica*), SCCS, 1968, *Camellia Nomenclature*, p.116: A white mutation of **Rebel Yell.** Originated in USA.

Reboreda. *(C.japonica), La Camelia .....Diputación Provincial de Pontevedra*, 2004, p.156, Register No.114. Peony form, colour variable, pale pink or with white and pink dots, and with darker pink stripes (RHSCC 54B). 25-35 petals, rounded and with irregular margins. Numerous large petaloids intermingled with stamens, long and thick white filaments, yellow anthers. Leaves mid-green, 9-9.5 cm x 4-5 cm, lanceolate, denticulate and slightly outcurved, pointed apex. Flowers mid-season to late. Average, dense, compact growth. Originated by Maciñeira Nursery, Galicia, Spain.

Reboulliana. *(C.japonica),* Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. No description. Originated at Bibbiani, Italy. (Believed extinct).

Rebra Ellis. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Reba Ellis.**

Reclari. (*C.japonica*), Charles van Geert Catalogue, 1845, p.12. No description. Originated in Italy. (Believed extinct.)

Red 100. (*C.japonica*), Wilmot, 1944, *Camellia Variety Classification Report*, 1944, p.5. No description. Originated in USA. (Believed extinct.)

Red Althaeiflora. Phelps, 1934, *Garden Club of America Bulletin*, ser.5,(7-12):55 as 'Red Altheaflora'. Synonym for **Althaeiflora.**

Red and White. *(C.sasanqua),* Vanderbilt, 1940, *Camellia Research*, p.7. No description. Originated in USA. (Believed extinct.)

Red and White Wakanoura. Portland Camellia Nursery Camellia Catalogue, 1947-1948. Synonym for **Lady Mackinnon.**

Red Anniversary. (*C.japonica*), Mark Cannon Scion Catalogue, 1963-1964, p.13. No description. Originated in USA. No valid listing located.

Red Anita. Magnolia Gardens and Nursery Catalogue, 1952-1953. Synonym for **Rio Rita.**

Red Apricot Blossom. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.138. Synonym for **Kôbai.**

Red April. (*C.japonica*), Fendig, 1953: Red. Semi-double. Late. SCCS., 1954, *The Camellia. Its Culture and Nomenclature*, p.75: Deep red. Large, semi-double, late blooming. Originated by Elizabeth Councilman, California, USA.

Red Arendo. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* No description. (Believed extinct.)

Red Aurora. *(C.japonica),* Camellia Forest Nursery Catalogue, 2008, p.16; Large semi-double to rose form. Strong rich red with a hint of pink. Flowers mid-season. Upright and spreading, making a globular plant with large leaves. Very hardy. **Snow Bell** x **Midnight.** Originated and released by Camellia Forest Nursery, Chapel Hill, N.C., USA.

Red Ball. (*C.japonica*), SCCS., 1954, *The Camellia. Its Culture and Nomenclature*, p.75: Dark red. Medium large, heavy, full peony form. Compact growth. Early blooming. Originated by Clower, USA. No relationship to **The Monarch.**

Red Ball. McIlhenny, 1937, *600 Varieties of Camellias*, p.11. Synonym for **The Monarch** as 'Monarch'.

Red Beauty. (*C.japonica*), SCCS., 1942, *Classification of Camellias*, p.4: Formal double red, 7.5 cm across. Blooms mid-season. The solid red form of **Kasuga-shibori**. Originated in USA by Reeves.

Red Beauty Variegated. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Kasuga-shibori.**

Red Begonia. (*C.japonica*), Clark Nursery Catalogue, 1949. Red sport of **Begonia.** Originated in USA.

Red Bella Romana. Valley Garden Supplies Catalogue, 1946-47; Lindo Nurseries Price List, 1946. Orthographic variant for **Bella Romana Red.**

Red Bird. Coolridge Gardens Catalogue, 1952. Synonym for **Hiryû.**

Red Bird. (*C.japonica*), SCCS., 1981, *Camellia Nomenclature*, p.134: Dark red veined deeper. Medium, formal double with some swirled and incurved petals. Compact, upright growth. Mid-season to late blooming. Originated in USA by J.M. Haynie, Theodore, Alabama.

Red Blossom. (*C.japonica*), *American Camellia Yearbook*, 1986, p.93, Reg. No.2001: A large, very red, peony form *C.japonica* chance seedling that flowers early to mid-season. Originated by Paul Gilley, Grand Ridge, Florida, USA. The 6 year old seedling first bloomed 1983. Average flower size is 11 cm across x 7.5 cm deep with 20 petals, red filaments and yellow anthers. Plant growth is average and light green leaves, 7.5 cm wide.

Red Bowl. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Western synonym for **Hongwan Cha.**

Red Bowl Camellia. Feng et al. 1980, *Yunnan Shancha Hua*, p.29. Synonym for **Hongwan Cha.**

Red Bugle. (*C.japonica*), Dekker, 1964, *American Camellia Yearbook*, p.67: Originated by Harry Novick, Woodland Hills, California, USA. A very large semi-double to loose peony form, 13-15 cm across x 6 cm, deep. A vivid red bloom with centre petaloids forming a bugle-like centre piece around the stamens. An 8 year old *C.japonica* chance seedling that first bloomed 1960. Reg. No.721, *American Camellia Yearbook*, 1965.

Red Burgundy. (*C.japonica*), Griffith, ed., 1955, *Camellian*, 9:14. No description. Originated in USA.

Red Button. (*C.japonica*), *American Camellia Yearbook*, 1960, p.205, Reg. No.514: A 10 year old seedling that first bloomed 1958. Originated by John Andsey, Sylmar, California, USA. Plant growth is upright and dense. The light green leaves average 7 cm x 4.5 cm. The deep red, anemone form flower is 5 cm across x 2 cm deep with 8 petals and 60 petaloids in a tight centre. Blooms early to mid-season.

Red Candles. (*C.japonica*), SCCS., 1962, *Camellia Nomenclature*, p.88: Ruby red. Medium single of cupped form with pointed petals. Vigorous, upright growth. Blooms mid-season. Originated by Harvey Short, Ramona, California, USA.

Red Cap. (*C.japonica*), *American Camellia Yearbook*, 1962-1963, p.224, Reg. No.650: A chance seedling that first bloomed 1951. Originated by Wheeler's Central Georgia Nursery, Macon, Georgia, USA. Plant growth is average with very dark green leaves, large pointed. New growth red. The complete, formal double flowers are 9-11 cm across with 78 petals. Colour is rose-pink to red. Petals half folded and pointed, open to a 6 point star-shape. Blooms early to late. Sport: **Red Cap Variegated.**

Red Cap Variegated. (*C.japonica*), SCCS., 1968, *Camellia Nomenclature*, p.116 as 'Red Cap Var.': a virus variegated form of **Red Cap** – Rose-pink to red blotched with white. Originated in USA. by Wheeler's Central Georgia Nurseries, Macon, Georgia.

Red Cardinal. (*C.japonica*), Synge, 1958, RHS., *The Rhododendron and Camellia Yearbook*, No.12, p.103: A deep pinkish red single, of medium size. Originated in England.

Red Chandler. Lindo Nurseries Price List, 1946. p.6. Synonym for **Vedrine.**

Red Chandleri Elegans. Lindo Nurseries Price List, 1941-1942. Synonym for **Vedrine.**

Red Chief. (*C.japonica*), SCCS., 1981, *Camellia Nomenclature*, p.134: Dark red. Large, semi-double. Bushy, upright growth. Flowers mid-season to late. Originated in USA by J.M. Haynie, Theodore, Alabama.

Red China. *(C.reticulata), New Zealand Camellia Bulletin*, 1971, vol.VII, No.2, p.48, Reg. No.53: A cross between **Trewithen Pink** x **Damanao** ('Cornelian'). It has a vigorous, open, upright growth habit. Flowers early. The leaves are medium to dark green, 11 cm. x 5 cm. The flower is semidouble with 15 petals - Crimson to carmine red and up to 15 cm across x 9 cm deep. Originated in New Zealand by Felix Jury, Waitara. See colour photo, front cover, *New Zealand Camellia Bulletin*, 1979, vol.XI, No.3.

Red Chrysanthemum Petals. Ikeda, 1976, *American Camellia Yearbook*, p.140. Synonym for **Dahong Juban.**

Red Clarke. Lindo Nurseries Price List, 1940-1941. Synonym for **Sarah Frost.**

Red Cloud. Bao, 1980, ACS., *The Camellia Yearbook*, vol.23, No.2, p.18. Western synonym for **Hongxia.**

Red Cloudy Pendula. *(C.japonica), Collected Papers*, ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.47; Semi-double pendent group. Red flower with white veins, semi-double.

Red Cornelian. Yü, 1950, RHS., *Camellia & Magnolia Conference Index*, p.130. Synonym for 'Hongmanao' (**Damanao**).

Red Crinkley. Fendig, 1953, *American Camellia Catalogue.* Orthographic variant for **Red Crinkly.**

Red Crinkly. (*C.japonica*), Sunny Knoll Orchard & Nursery Co. Wholesale Price List, 1939: Red with a purplish cast. Medium semi-double. Originated by Abbott's Nursery, Mobile, Alabama, USA. Orthographic variants: 'Crinkly Red', 'Red Crinkley'.

Red Crusader. Henderson, 1951, SCCS., *The Camellia Review*, vol.12, No.5, p.16. Synonym for **Prince of Orange.**

Red Crystal. *(C.reticulata x C.japonica), New Zealand Camellia Bulletin*, 1984, vol.XIII, No.6, p.23, Reg. No.210: A controlled cross of *C.reticulata* 'Crimson Robe' (**Dataohong**) x *C.japonica* **Wildfire,** originated by O.Blumhardt, Whangarei, New Zealand, that first flowered 1976. It has large, single to semi-double, bright scarlet fowers with heavy texture, 14 cm across x 5 cm

deep. Anthers are yellow and filaments pink at the base. The plant has an open habit, mid-season flowering and dark green leaves, 10 cm long x 6 cm wide. Chinese synonym 'Hongshuijing'.

Red Cup. (*C.japonica*), Tammia Nursery Catalogue, 1965-1966: Red, cup-shaped semi-double. Originated in USA.

Red Czar. R.E. Harrison, Palmerston North Nursery Catalogue, 1955-1956, p.37. Synonym for **The Czar.**

Red Dahlia. (*C.*x *williamsii), American Camellia Yearbook*, 1981, p.104, Reg. No.1704: A medium, scarlet red, loose, peony form, chance seedling, originated by Kramer Bros. Nurseries, Upland, California, USA. Blooms midseason. Bushy plant habit.

Red Daikagura. Coolidge Camellia Nursery Camellia Catalogue, 1946 as as 'Red Dai Kagura'. Synonym for **Benidaikagura.**

Red Dainty. Hillcrest Nursery Catalogue, 1958. Orthographic variant for 'Dainty Red'.

Red Dale. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Pride of Greensville.**

Red Dandy. (*C.japonica*), Nuccio's Nurseries Catalogue, 1975: #6370, Brilliant orange red. Large, semi-double with irregular petals. Vigorous, compact, upright growth. Blooms mid-season to late. Originated by Nuccio's Nurseries, Altadena, California. USA. Chinese synonym: 'Juhong Huahua Congzi'.

Red Darby. McIlhenny, 1937, *600 Varieties of Camellias.* Synonym for **Lady de Saumarez.**

Red Derby. Vanderbilt. 1940, *Camellia Research*, p.6. Synonym for **Lady de Saumarez**.

Red Devil. *(C.japonica),* SCCS, *The Camellia Review*, Jan-Mar 2010, p.13; Small, dark red semi-double with somewhat "V" shaped petals. Late flowering. Originated by Nuccio's Nurseries, Altadena, California, USA.

Red Donckelarii. The Pacific Camellia Society. 1946, *Camellia Nomeclature*, p.31. Synonym for **Eugene Bolen.**

Red Donckelarii California. Valley Garden Supplies Catalogue, 1946-1947. Synonym for **Shusugasane**.

Red Donklaeri. SCCS., 1942, *Classification of Camellias*, p.2. Synonym for **Eugene Bolen.**

Red Douglas. Vanderbilt, 1941, *Camellia Research, II*, p.6. Synonym for **Lady de Saumarez** as 'Wakanoura Red'.

Red Dragon. (*C.x williamsii), New Zealand Camellia Bulletin*, 1982, vol.XII, No.7, p.52, Reg. No.185: A putative hybrid of *C.saluenensis x C.japonica* originated by G.B. Greenfield, Whangarei. The plant has an open, upright habit of growth with thin textured, dark green leaves. 9 cm long x 4cm wide. Flowers are semi-double, 8 cm across x 2 cm deep, a bright, clear, deep cherry red with 16 petals and 6 petaloids. Anthers are yellow. Flowers very early. New growth bright red.

Red Eagle. (*C.japonica*), Lindo Nursery Price List, 1940-1941: Semi-double, cup-shaped flowers showing stamens, red, very large size. Vigorous growth. Blooms mid-season. Originated in USA by Lindo Nursery, Chico, California. For black and white photo see p.295, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I.

Red Eighteen Scholars. Synonym for **Hongshiba Xueshi.**

Red Elegans. Hume 1946, *Camellias in America*, p.337. Synonym for **Vedrine.**

Red Elephant. (*C.japonica*), Pyron, 1960. *American Camellia Yearbook*, p.27: A 13-15 cm across x 8 cm deep, crimson red, peony form with yellow stamens amongst upstanding petals. Originated by

Dr Gilbert Fisher. Union Springs, Alabama, USA as a seedling of **King Size.** Reg. No.591, *American Camellia Yearbook.* 1962-1963. Blooms mid-season. Note SCCS, *Camellia Nomenclature* lists this cultivar as a synonym for **King Size**. Sport: **Red Elephant Variegated.**

Red Elephant Variegated. (*C.japonica*), Cannon, 1962. ACS., *The Camellia Journal*, vol.17, No.1 as 'Red Elephant Var.': a virus variegated form of **Red Elephant** - Red blotched white. Originated in USA.

Red Emperor. *(C.reticulata),* Gentry, 1970, ACS., *The Camellia Journal*, vol.25, No.4. No description. Pyron, 1972. *American Camellia Yearbook*, p.68: Deep red. Very large, semi-double with irregular petals. Medium, compact growth. Mid-season blooming. Originated by Howard Asper, Escondido, California from the cross *C.reticulata* 'Crimson Robe' (**Dataohong**) x 'Cornelian' (**Damanao**). Sport: **Red Emperor Variegated.**

Red Emperor Variegated. *(C.reticulata),* Gentry, 1970, ACS., *The Camellia Journal*, vol.25, No.4 as 'Red Emperor Var.': a virus variegated form of **Red Emperor** - Deep red with white blotches. Originated in USA.

Red Emperor Wilhelm. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.31. Synonym for **Gigantea Red** as 'Jacksonii'.

Red Ensign. (*C.japonica*), ANZCRS., 1955, *Camellia Annual*, No.2, 1955, p.5, Reg. No.3; A seedling of **Gauntlettii,** originated by G.C. Linton, Somersby, N.S.W., Australia. Foliage is similar to parent but flower is a brilliant scarlet crimson. Blooms single to semi-double with a few petaloids. Size 13-15 cm across. First bloomed 1952. See colour photo, p.113, Macoboy, 1981, *The Colour Dictionary of Camellias*, and p.22, ACRS., 1977, *Camellia News*, No.66.

Red Fanny Bolis. SCCS., 1942, *Classification of Camellias*, p.2. Synonym for **Latifolia.**

Red Fearn. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue.* No description. Originated in USA.

Red Fellow. *(C.hybrid).* ACS, *The Camellia Journal*, Aug. 2000, Reg. No.2520. A bright neon red, semi-double cross of *C.japonica* 'Tricolor Red (Siebold)' [**Lady de Saumarez**], x *C.oleifera.* Originated by Dr William L. Ackerman, Ashton, Md., USA. *American Camellia Yearbook*, 2000, p.6, colour photo p.c13. The 19 year old seedling first flowered 1988. Flower has 14 petals, 4 petaloids, yellow anthers and white filaments. Average flower size is 10.8 cm across x 5.7 cm deep. Plant growth is spreading, with average density and medium growth rate. The dark green leaves are 10.8 cm long x 5.7 cm wide.

Red Fiesta. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Varieties from Nursery Catalogues*, p.195. No description. Originated in USA. No valid listing located.

Red Finlandia. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Orthographic variant for **Finlandia Red.**

Red Five Hearts. Bao, 1980, ACS, *The Camellia Journal*, vol.35, No. 2, p.18. Synonym for **Hongwuxin.**

Red Garnet. (*C.japonica*), Kramer Bros. Nursery Catalogue, 1980: Garnet red, formal double. *American Camellia Yearbook*, 1981, p. 104, Reg. No. 1705: A medium sized, garnet red, formal to rose form double *C.japonica* chance seedling. Originated by Kramer Bros. Nursery, Upland, California, USA. Blooms mid-season to late. Sport: **Red Garnet Variegated.**

Red Garnet Variegated. (*C.japonica*), Kramer Bros. Nursery Catalogue, 1983 as 'Red Garnet Var.': a virus variegated form of **Red Garnet** - Garnet red blotched white. Originated in USA by Kramer Bros Nursery, Upland, California.

Red Gem. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.47; Red gem pendent group. Red flower, cupped corolla

Red Giant. Wilmot, 1943, *Camellia Variety Classification Report*, 1943, p.13. Synonym for **Julia Drayton.**

Red Giant. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue:* Red. Incomplete double. Early. *American Camellia Yearbook*, 1954, p.329, Reg. No.182: A 6 year old chance seedling, originated by Hugh Shackelford, Albany, Georgia, USA. First flowered 1953. Plant growth average with medium to large green leaves, serrated. Flower buds large, oval and red. Flowers 13-17 cm across, incomplete double, 30 petals and many large petaloids. Flower colour, red. Flowers early through mid-season. Synonym: 'Apache'. See colour photo, p.113, Macoboy, 1981, *The Colour Dictionary of Camellias.*

Red Gold. (*C.japonica*), McIlhenny Catalogue, 1947-1948: Small, six petalled, single; petals broad, stamens in the form of a broad, compact crown, standing upright. Blooms mid-season. Originated in USA by McIlhenny, Jungle Gardens, Avery Island, Louisiana.

Red Goshoguruma. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Kara-ito.**

Red Governor Mouton. Valley Garden Supplies Catalogue, 1946-1947. Synonym for **Aunt Jetty.**

Red Grant. Griffin, ed., 1958, *Camellian.* Orthographic error for **Red Giant.**

Red Heart White Petals. Bartholomew, 1982, *American Camellia Yearbook*, p.152. Synonym for **Hongxin Baiban.**

Red Herme. Greenbriar Farms Nursery Catalogue, 1944. Synonym for **Benibotan**.

Red Hexagonal. Yang, 1965, *Camellia Varieties of Taiwan.* Synonym for 'Hongliujiao' (**Myrtifolia**).

Red Hibiscus. (*C.japonica*), *Camellia Digest*, 1943, 1(3). No description. Magnolia Gardens and Nursery Catalogue, 1946-1947: A red semi-double, with stamens that sometimes change to petaloids, forming a peony type, An early bloomer with stiff, serrated leaves. Originated by K. Sawada, Overlook Nurseries, Crichton, Alabama. Sport: **Red Hibiscus Variegated.**

Red Hibiscus Variegated. (*C.japonica*), Harris' Longview Nursery Price List, 1955-1956. A virus variegated form of **Red Hibiscus** - Red with white blotches. Originated in USA.

Red Hikarugenji. Griffith & Strothers, 1954, ACS., *Nomenclature Cross Reference List.* Synonym for **Benibotan.**

Red Horkan. Steffek, 1949, *Plant Buyer's Guide*, ed.5, p.51. Synonym for **Paeoniiflora.**

Red Hot. (*C.japonica*), Dekker, 1959, *American Camellia Yearbook*, p.73: Across between **Kumasaka** x **Sweet Delight.** Originated by Earl Hudson, Sun Valley, California, USA. A bright red, large, full peony form with occasionally one or two small, white petals in the centre. Upright, compact habit. Blooms mid-season.

Red Hots. (*C.japonica*), Nuccio's Nurseries Catalogue, 1991-1992, (#8722): Medium size, tubular, brilliant red semi-double with pointed petals. Dark green foliage. Growth habit compact and upright. Blooms early to mid-season. Originated by Nuccio's Nurseries, Altadena, California, USA. Chinese synonym 'Chire'. Colour plate between pp.36-37, *International Camellia Journal,* 1993, No.25. No relationship with Earl Hudson's **Red Hot.**

Red Imura. (*C.japonica*), Cannon, 1965, ACS., *The Camellia Journal*, vol.20, No.1. No description. Originated in USA. No valid listing located.

Red Incomplete Pendula. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.47; Incomplete petal group. Red flower with white veins, micro-floras, mid-folia, ovate and elliptic leaves.

Red Ink Camellia. Synonym for **Nihong Cha.**

Red Jackson. Hazlewood & Jessep, 1972, *Checklist -Camellia Cultivars from Nursery Catalogues.* Synonym for **Gigantea Red.**

Red Jade. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of* "Naidong" Camellias..., Chen Junzhi and Chen Jinshui, p.47; Red gem pendent form. Red flower, cupped corolla.

Red Jade (Parks). *(C.japonica),* Camellia Forest Nursery Catalogue, 2008, p.16; Small to medium size, light red semi-double flowers. Heavy budset and extended flowering from early season. Cold hardy. Well shaped bush with moderate compact growth. **Berenice Boddy** x **Midnight.** Originated and released by Camellia Forest Nursery, Chapel Hill, N.C., USA.

Red Jade. Macoboy, 1981, *The Colour Dictionary of Camellias*, pp.167, 147. Synonym for **Yudaihong.**

Red Jade. Feng et al., 1986, *Yunnan Camellias of China*, p.166. Synonym for **Hongbaoshi.** Chinese synonym 'Danyu'.

Red Jewel. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Western synonym for **Baoyuhong.**

Red Jewellery. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Synonym for **Baozhu Cha.**

Red Jordan. SCCS., 1942, *Classification of Camellias*, p.3. Synonym for **Benibotan.**

Red Jordan's Pride. Valley Garden Supplies Catalogue, 1946-1947. Synonym for **Benibotan.**

Red Latifolia. Magnolia Gardens and Nursery Catalogue, 1943. Synonym for **Gloire de Nantes.**

Red Leaf Bella. ACS, *The Camellia Journal*, Dec. 2009, p.18 with colour photo; Western synonym for **Hongye Beila.**

Red Leaf Bella Variegated. ACS, *The Camellia Journal,* Dec. 2009, p.19 with colour photo; Western synonym for **Hongye Huabeila.**

Red Light. *(C.sasanqua),* Vanderbilt, 1940, *Camellia Research*, p.6. No description. Originated in USA. (Believed extinct.)

Red Lion. (*C.japonica*), SCCS., 1974, *Camellia Nomenclature*, p.126: Large to very large, full peony form. Red. Vigorous, upright growth. Blooms mid-season. Originated by Hugh Shackelford, Albany, Alabama, USA.

Red Lotus. (*C.japonica*), ICS, Oct. 1992, *International Camellia Journal*, No.25, cover colour photo: Large size, red, rose form double with rounded, cupped petals and mid-green leaves, elliptic with suddenly acute apices and serrulate margins. Originated in South Africa by Boskoop Nursery, Pretoria.

Red Lustre. (*C.japonica*), Anonymous. 1948, *American Camellia Yearbook,* p.169: McCaskill Seedling No.179 - Seedling of **Elegans,** similar in form, foliage, growth habit and flower size. The colour is crimson with a darker sheen. Leaves are medium green, elliptic, acute apex. margins serrate, undulate, 10 cm x 5 cm. First flowered 1944. Originated by McCaskill Gardens, East Pasadena, California, USA. See black and white photo, p.296, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I.

Red Magnolia. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Synonym for **Yulan Cha.**

Red Maiden. Vanderbilt, 1941, *Camellia Research, II*, p.6. Synonym for **Kô-otome.**

Red Margaret Jack. Coolidge Rare Plant Gardens Camellia Catalogue, 1950. Synonym for **Finlandia Red** as 'Pert'.

Red Moon. (*C.japonica*), Eagle Heights Nursery Catalogue, 1965: Deep rose-red. Large, flat, semi-double with centre petaloids. Vigorous, compact growth. Mid-season blooming. Originated in Australia by E.G. Waterhouse, Gordon, N.SW. Orthographic error: 'Red Noon'. Sport: **Red Moon Variegated.**

Red Moon Variegated. (*C.japonica*) Gentry, 1968, ACS., *The Camellia Journal*, vol.23, No.4, p.8 as 'Red Moon Var.': a virus variegated form of **Red Moon** - Deep rose-red with white blotches. Originated in USA.

Red Moon Goddess Splendour. Synonym for **Hongse Chang'e Cha.**

Red Mountain. *(C.japonica),* ACS, *The Camellia Journal*, Sept. 2013, p.27 with colour photo; Regn No.2873; ACS, *Yearbook*, 2013, p.134 with colour photo. Originated, registered and propagated by James & Elaine Smelley, Moss Point, Miss., USA. A 15 year old seedling, parentage unknown, first flowered 2000. Small size, 6.5cm diameter x 6.5cm deep, flower is full peony form, dark red. Yellow anthers and white filaments. Flowers fall whole. Plant is upright, with average growth rate. Dark green leaves average 7.5cm x 3.2cm with medium serration. Flowers early to midseason.

Red Mume. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.17. Synonym for **Hongmei.**

Red New Orleans. (*C.japonica*), Wilmot, 1943, *Camellia Variety Classification Report*, 1943, p..13. No description. Originated in USA. (Believed extinct.)

Red Noon. Mount Congreve Gardens, 1988, Wholesale Nursery Price List, p.4. Orthographic error for **Red Moon.**

Red Otome. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Kô-otome.**

Red Paeoniflora. Coolidge Rare Plant Gardens Catalogue, 1950. Synonym for **Otahuhu Beauty.**

Red Paeony-Flowered. Booth, 1830, *Transactions of the Horticultural Society of London*, vol.7, p.549. Synonym for **Paeoniiflora.**

Red Peony. (*C.japonica*), McIlhenny, 1934, *List of Camellia Japonica for Sale*, p.4: Very dark red, double peony type blossoms with prominent stamens distributed throughout loose central petals. Large blossom of loose type. Originated in USA by McIlhenny, Avery Island, Louisiana, USA.

Red Peony. Yang, 1965, *Camellia Varieties of Taiwan.* Synonym for **Hongmudan.**

Red Perfection. Lindo Nurseries Price List, 1941-1942. Synonym for **Romany.**

Red Perfection. *(C.japonica),* SCCS, Bulletin, vol.11, No.1, p.1, Nov. 1949: Similar to **Elena Nobili** in colour but holds a tight rosebud centre for several days, then bursts into golden stamens. Originated by Rosebud Farm, Sacramento, California, USA.

Red Pine Cone. SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.80. Synonym for 'Aranin' (**Hitosuji**).

Red Pine Cone Shell. Ikeda, 1976, *American Camellia Yearbook*, p.144. Synonym for **Songzike.**

Red Planet. *(C.japonica), New Zealand Camellia Bulletin*, March 2004, Issue No.147, vol.XXIII, No.5, p.10, Reg. No. 462. Registered by N. Haydon, Takanini, New Zealand. A seedling of *C.japonica* **Royal Velvet,** pollen parent unknown. Flower is 9 cm diameter x 5 cm deep, semi-double with the petals forming 3-4 distinct layers, having about 22 broadly obovate,

slightly cupped petals; while the stamens which form a compact mass have gold anthers and cream/pink filaments. The flower is s superb deep velvety pillar box red (RHS.CC.53A) with darker veining. The plant is upright, and of average density and growth rate with dark green leaves 8 cm long x 3 cm wide. Flowers mid-season to late. Champion japonica seedling, NZ National Show 2003.

Red Precious Pearl.. *American Camellia Yearbook,* 2009, p.41 with colour photo; "*Camellia azalea* in its habitat"; You Muxian. A peach red, anemone form of *C.azalea,* with quite an amount of variegation. Unstable.

Red Pressii. Duncan & Davies Nursery Catalogue, 1924, p.31. Synonym for **La Pace Rubra**. This name was also given as a synonym for **Wrightii** by Nobelius, 1941. While 'Red Pressii' would nominally be a synonym for **Pressii Rubra** it appears to have been consistently and erroneously applied for the red sports of other formal double camellias such as **Lavinia Maggi Rouge.**

Red Prince. (*C.japonica*), Malbis Nursery Catalogue, 1945: Large, red, peony form, originated by the Malbis Nursery, Daphne, Alabama, USA.

Red Prince Albert. (C.*japonica*), Thomasville Nursery Catalogue, 1942, p.10. Solid red sport of **Albertii.** Originated in USA.

Red Queen. Wilmot, 1944, *Camellia Variety Classification Report*, 1944, p.5. Synonym for **Margherita Coleoni.** Also in SCCS, 1945, Camellias, p.17 erroneously as a synonym for **General Douglas MacArthur.**

Red Queen. (*C.x williamsii*), The Sandhurst Nurseries Catalogue, 1957, (*C.saluenensis* x **Apollo**). Single, cherry red. Raised here. Puddle, 1958, NCCS., *Bulletin,* vol.12, No.1, p.24: A cross between the deep coloured form of *C.saluenensis* and the semi-double *C.japonica* **Apollo**. Its deep, cherry-red, single flowers are the deepest of this group. Originated in England by R. Veitch, Exeter. Chinese synonym: 'Honghuanghou'.

Red Ragland. River View Nursery Catalogue, 1957-1958, p.13. Orthographic error for **Reg Ragland.**

Red Ragland Variegated. Feray's Fine Flowers Catalogue, 1960 as 'Red Ragland Var'. Orthographic error for **Reg Ragland Variegated.**

Red Red Rose. (*C.japonica*). Goertz, 1970, *American Camellia Yearbook*, p.24: A medium to large, bright red, formal double which has a rose-like high centre and blooms mid-season to late. Growth habit, upright and dense. Originated by McCaskill Gardens, East Pasadena, California, USA. See colour photo, p.114, Macoboy, 1981, *The Colour Dictionary of Camellias.*

Red Reine des FIeurs. Hearn Nursery Catalogue, 1945. Orthographic variant for **Reine des Fleurs Red.**

Red Rhythm. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue:* Red. Complete double. Mid-season. SCCS, 1954, *The Camellia. Its Culture and Nomenclature,* p.76: Clear red. Large, formal double. Vigorous, open, upright growth. Mid-season blooming. A seedling of **Professor Sargent,** originated by Harvey Short, Escondido, California, USA.

Red Robin. (*C.japonica*), *American Camellia Yearbook*, 1959, p.279, Reg. No.435: An 11 year old chance seedling, originated by A.M. Hartman, San Fernando, California, USA that first bloomed 1955. Growth habit is upright and average with mid-green leaves, 8 cm long x 5 cm wide. The dark red, rose form double flowers, 10 cm across x 6 cm deep, have 45 petals and occasionally a few petaloids, with yellow stamens. Blooms early to mid-season.

Red Rogue. (*C.japonica*), Nuccio's Nurseries Catalogue, 1963: Deep red to maroon, large anemone to peony form flower. *American Camellia Yearbook*, 1965, p.245, Reg. No.716: A 6 year old

seedling of **Vedrine** that first flowered 1961. A large flower. 12.5-13 cm across x 7.5 cm deep. Colour deep red to maroon. The flower is an anemone to peony form with loose petals. Blooms midseason on a vigorous, compact, upright plant. Originated by Harvey Short, Ramona, California, USA. Orthographic error: 'Red Rouge'. Sport: **Red Rogue Variegated.**

Red Rogue Variegated. (*C.japonica*), Cannon, 1965, ACS., *The Camellia Journal*, vol.20, No.1 as 'Red Rogue Var.': A virus variegated form of **Red Rogue** - Deep red to maroon and white. Originated in USA.

Red Rose. *(C.reticulata x C.japonica),* ACS., 1983, *The Camellia Journal*, vol.38, No.2, p.23, Reg. No.1872: A large, red, semi-double *C.reticulata* hybrid *(C.reticulata* 'Crimson Robe' (**Dataohong**) x [*C.japonica* 'Tinsie' (**Bokuhan**) x *C.reticulata* 'Cornelian' (**Damanao**)]). Flowers mid-season to late. Originated by Frank Pursel, Oakland, California, USA.

Red Rouge. Trehane Camellia Nursery Catalogue, 1966. Orthographic error for **Red Rogue.**

Red Rowe. *(C.japonica),* Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, 1997, p.5: Medium size, red formal double, on an upright, vigorous plant. Blooms mid-season. Originated in Australia.

Red Sanders. West End Nursery Catalogue, 1986, p.1. Orthographic error for **Fred Sander.**

Red Shadow. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Synonym for **Professor Charles S. Sargent Variegated.**

Red Shiraz. *(C.japonica)* Camellias Aust., *Camellia News*, Autumn 2013, p.28 with colour photo; Regn No.665N; Originated by Craig Carroll, Mt. Tomah, NSW. A chance seedling of **Bob Hope.** Medium size, elegans form, red bloom. Average compact growth.

Red Stamens. *(C.saluenensis),* Treseder's Nursery Catalogue, 1971-1972, p.23: Rose coloured, single flower with a boss of rust red stamens. As the anthers open the yellow pollen changes the appearance of the flower. A *C.saluenensis* seedling raised from the Forrest collection at Trewithin, Cornwall. Synonyms: 'Saluenensis Red Stamens', 'Saluenensis Trewithen Red'.

Red Star. (*C.japonica*), Vanderbilt, 1941, *Camellia Research, II*, p.6: A large, red, semi-double. Originated in USA by Doty & Doerner, Portland, Oregan.

Red Supreme.. *(C.japonica), Camellias,* Y.C. Shen, 2009, p.163 with colour photo; Red peony form, diameter 10 cm. Upright plant habit.

Red Three Scholars. Synonym for **Hongsan Xueshi.**

Red Tricolor. Lindo Nurseries Catalogue, 1945. Synonym for **Lady de Saumarez.**

Red Tricolor Sieboldi. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Synonym for **Lady de Saumarez.**

Red Tulip. *(C.japonica),* Nuccio's Nurseries Catalogue, 2007, p.12; Dark red medium size single with pointed petals. Very tubular shape. Fast, open, upright yet somewhat spreading growth. Flowers mid-season. Originated by Nuccio's Nurseries, Altadena, Calif., USA.

Red Vansittart. Camellias Grown at Kew List, 1956. Synonym for **Lady Vansittart Red.**

Red Velvet. (*C.japonica*), McIlhenny Catalogue, 1950-1951, p.3: A full double, 7.5-8 cm across. Petals carmine red, deeply veined and splotched with pomegranate purple; few petals lightly cupped in the centre with pomegranate purple petaloids and stamens tipped mustard yellow. Originated at Jungle Gardens, Avery Island, Louisiana, USA.

Red Velvet Nuccio. Pyron, 1969, *American Camellia Yearbook*, p.102, invalidly as 'Red Velvet'. Orthographic variant for **Nuccio Red Velvet.**

Red Ville des Nantes. Fruitland Nursery Catalogue, 1947-1948. Orthographic variant for **Ville de Nantes Red.**

Red Viola. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 2002, p.21, colour photo p.20, Reg. No.2578. A chance seedling with flowers an unusual shade of red, with lighter and darker veining. Single, with yellow anthers and white to pink filaments. Originated by John L. Spencer, Lakeland, Fla., USA. *American Camellia Yearbook,* 2002, p.130, colour photo p.c11. The 10 year old seedling first flowered 1998. Flowers measure 7.5 cm across x 3.8 cm deep. Flowers early to late. Plant is upright and vigorous with dark green leaves 10.8 cm long x 3.8 cm wide.

Red Virginalis. Vanderbilt, 1941, *Camellia Research, II,* p.6. Synonym for **Rubra Virginalis.**

Red Wakanoura. Lindo Nursery Catalogue, 1945. Synonym for **Lady de Saumarez.**

Red Walker. Lindo Nursery Price List, 1940-1941. Synonym for **Enrico Bettoni (US).**

Red Wander. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Red Wonder.**

Red Waratah. Hay, D. & Sons, Nursery Catalogue, 1891-1892. Synonym for **Mariana.**

Red Waratah. Harrison ed., 1833, *The Floricultural Cabinet,* p.47 as 'Red Warrahtah Camellia'. Synonym for **Anemoniflora.**

Red Waukanoura. Portland Camellia Nursery Camellia Catalogue, 1947-1948. Orthographic error for 'Red Wakanoura', synonym for **Lady de Saumarez.**

Red White. *(C.sasanqua),* Vanderbilt, 1940, *Camellia Research,* p.6. No description. Originated in USA. (Believed extinct.)

Red Willow. *(C.sasanqua),* Hazlewood's Nursery Catalogue, 1964, p.52: Pink. Medium semi-double with long weeping habit of growth with the branches reaching to the ground. Originated by Mrs McCloy, Wahroonga, N.SW., Australia. See colour photo, p.177, Macoboy, 1981, *The Colour Dictionary of Camellias.* Chinese synonym: 'Hongliu'.

Red Wine. (*C.japonica*), *American Camellia Yearbook,* 1959, p.280, Reg.No.364: A 4 year old chance seedling, originated by Dr Mervin B. Wine, Thomasville, Georgia, USA, which first bloomed 1957. Plant growth is open, spreading and medium with dark green leaves, 7.5 cm long x 5 cm. wide. The semi-double flowers are 12.5-15 cm. across x 7.5 cm deep with 10-12 petals and 2-4 petaloids. Colour is deep flame red. Flowers mid-season. Sport: **Red Wine Variegated.**

Red Wine Variegated. (*C.japonica*), Cannon, 1962, ACS., *The Camellia Journal,* vol.17, No.1, back cover as 'Red Wine Var.': a virus variegated form of **Red Wine** - Deep flame-red and white. Originated in USA.

Red Wing. River View Nursery Catalogue, 1957-1958, p.13. Orthographic error for **Red Wings.**

Red Wings. (*C.japonica*), SCCS, 1951, *The Camellia. Its Culture and Nomenclature:* Dark red. Medium large, semi-double with upright petals. Vigorous grower. A 12 year old seedling, of unknown parents, originated by Hugh Shackelford, Albany, Georgia, USA, that first flowered 1949. Flowers similar to **Ville de Nantes.** 13-15 cm across, with 22 petals. Flowers mid-season. Reg. No.160, *American Camellia Yearbook,* 1954.

Red with Jade Belt. Macoboy, 1981, *The Colour Dictionary of Camellias,* pp.147, 167. Synonym for **Yudaihong.**

Red Wonder. (*C.japonica*), Armstrong Nursery Catalogue, 1948: Sport of Julia Drayton. Deep red. Very large, irregular, rose form double with 2-3 rows of flat, outer petals and a centre of long, folded and curled inner petals. Originated in USA by Armstrong Nurseries, Ontario, California. See black and white photo, p.293, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II. Synonym: 'Island Echo'. Orthographic error 'Red Wander'. Sport: **Red Wonder Variegated.**

Red Wonder Variegated. Fendig, 1958, *American Camellia Yearbook*, p.27 as 'Red Wonder Var.': a virus variegated form of **Red Wonder** - Deep red blotched white. Originated in USA. Synonym: 'Island Echo Variegated'.

Reda Scott. (*C.japonica*), ACS., Nov.1987, *The Camellia Journal*, vol.42, No.4, p.22, Reg. No.2059: Medium size, white, formal double, *C.japonica* chance seedling. Blooms mid-season to late. Originated by Elizabeth R. Scott, Aiken, South Carolina, USA. *American Camellia Yearbook*, 1987, p.84 with colour photo between pp.60-61: The 15 year old seedling first bloomed 1977. Average flower size, 8 cm across x 5 cm deep with 44 petals. Plant growth is upright, dense and rapid with dark green leaves, 11 cm x 5 cm.

Redaelli. Burdin Maggiore, & Co. Catalogue, 1845, p.43. Orthographic error for **Radaelli.**

Redaellii. Oudin, Lisieux Catalogue, 1845-1846, p.3. Orthographic error for **Radaelli.**

Redbird. Coolidge Rare Plant Gardens Camellia Catalogue, 1949. Synonym for **Hiryû.**

Redbud. (*C.japonica*), SCCS., 1974, *Camellia Nomenclature*, p.127: Deep red. Miniature, full, peony form. Medium, upright growth. Blooms mid-season. Originated in USA by A.W. Garner, Glendale, California.

Reddish Gold Wing. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.23. Synonym for **Hongjinling.**

Reddish Jewellery. Synonym for **Hongbaozhu.**

Redgrove. (*C.japonica*), Camellia Grove Nursery Catalogue, 1944: A red sport of **Helenor.** Originated at Camellia Grove, St Ives, N.S.W., Australia. Synonym: 'Helenor Rosea'. Chinese synonym 'Hailunnuo Meigui', as 'Helenor Rosea'.

Redi. (*C.japonica*), van Houtte Catalogue, 1845-1846, 23:50. No description. Originated in Italy by Conte Caraccioli. (Believed extinct.)

Redwood City. *(C.reticulata x C.japonica)*, *American Camellia Yearbook*, 1980, p.172, Reg. No.1592: A large to very large, medium red, semi-double to anemone form *C.reticulata* hybrid ([*C.reticulata* 'Cornelian', (**Damanao**), x *C.japonica* **Mrs D.W. Davis**] x *C.reticulata* 'Crimson Robe' (**Dataohong**)), that blooms mid-season to late. Originated by Frank Pursel, Oakland, California, USA. The 3 year old seedling first bloomed 1977. Flower size, 13 cm across x 6 cm deep. Plant growth is spreading and rapid with dark green leaves, 13 cm x 6 cm.

Redwood Number 2. (*C.japonica*), Gaygean Nurseries Catalogue, 1962, p.1 as 'Redwood No 2'. Single pink. Originated in USA. No valid listing located.

Redwood Number 3. (*C.japonica*), Gaygean Nurseries Catalogue, 1962, p.1 as 'Redwood No. 3'. Red double. Originated in USA. No valid listing located.

Reeves. Loudon, 1840, *Encyclopedia of Plants.* Abbreviation for **Reevesiana.**

Reeves Major. van Geert Nursery Catalogue, 1845. Orthographic variant for 'Reevesii Major', synonym for **Rawesiana.**

Reeves Sweetheart. (*C.japonica*), SCCS., 1962, *Camellia Nomenclature*, p.89: Light pink. Small to medium, formal double. Vigorous, open, upright growth. Blooms mid-season. Originated in USA by Reeves.

Reevesian. Harrison ed., 1835, *The Floricultural Cabinet*, p.99. Orthographic error for **Reevesiana.**

Reevesiana. (*C.japonica*), Edwards, 1832, *Botanical Register*, vol.18, pl.1501: This is one of the most striking camellia hitherto imported, its richness of colour surpassing any yet seen. The foliage has a curled appearance represented in our plate. From the bamboo tally accompanying it, numbered in Chinese characters, 42, it was probably procured from China by Mr Beale or Mr

Reeves. We have named it in compliment to Mr Reeves. The drawing was done in the nursery of Mr Tate who states the flowers are very variable. Paxton's, 1831-1832, *Horticultural Register*, vol.II, p.609: 'Mr Reeves Crimson Camellia'. Flowers double, very rich crimson, but liable to variation. A native of China from whence it was imported by Mr Tate. It is named in compliment to Mr Reeves, a zealous botanical collector in the Celestial Empire. Courtois, 1833, *Magazin d'Horticulture*, p.313 has: 'leaves very undulate'. Mertens & Fontaine, *Collection de cent espèces.....camellia*, 1845, pl. 35 as 'Rewesii vera'. Synonyms: 'Mr Reeve's Crimson Camellia', 'Mr Reeve's Crimson', 'Reevesiana Vera', 'Captain Reeves', 'Rossii de Loddiges'. Orthographic errors: 'Reevesian', 'Reewesiana', 'Reevesii', 'Rievesiana', 'Reewesii', 'Revesii', 'Revisii', 'Reewesii Vera', 'Reewe's Nova', 'Revesiana', 'Reevsiana', 'Revesiana', 'Revesiana Vera', 'Reves Nova', 'Rewesii'.

Reevesiana Major. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.197. Orthographic variant for 'Reevesii Major', synonym for **Rawesiana.**

Reevesiana Vera. van Houtte Catalogue, 1842, 9:57. Synonym for **Reevesiana.**

Reevesii. Hovey & Co. Nursery Catalogue, 1834-1835, p.26. Synonym for **Reevesiana.**

Reevesii Carminea. van Houtte Catalogue, 1839, 1:7 as 'Reevesi Carminea'. Orthographic errors: 'Reewesii Carminea Vera', 'Reveesii Carminea'. Synonym for **Gilesii.**

Reevesii Longifolia. (*C.japonica*), Loudon, 1835, *Gardeners' Magazine*, vol. 11, p.215. Exhibited at London Horticultural Society by T.C. Palmer. No description. (Believed extinct.)

Reevesii Major. van Houtte Catalogue, 1841, 7:8 as a synonym for 'Futtung', itself a synonym for **Rawesiana.** Orthographic errors: 'Reewesii Major', 'Reveesii Major', 'Reeve's Major'.

Reevesii Vera. Berlèse, 1843, *Iconographie*, facing pl.122. Synonym for **Reevesiana.** Orthographic errors: 'Reewesii Vera', 'Reevesi'(Vera), 'Revesi Vera'.

Reevsiana. Johnson, Geo. W. 1863, *The Cottage Gardener's Dictionary*, ed.7. Orthographic error for **Reevesiana.**

Reeve's Nova. Berlèse, 1841, *Iconographie* facing pl.72 as a synonym for **Reevesiana.**

Reewesiana. Berlèse, 1841, *Iconographie*, facing pl.72. Orthographic error for **Reevesiana.**

Reewesii Carminea Vera. Berlèse, 1845, *Monographie*, ed.3, p.229. Synonym for **Gilesii.**

Reewesii Major. Del Lungo e Girardi, 1928, *Le Camelie*, p.143. Orthographic variant for 'Reevesii Major', synonym for **Rawesiana**

Reewesii Vera. Berlèse, 1837, *Monographie*, ed.1, p.111. Synonym for **Reevesiana.**

Refals. Shepherd Nursery Catalogue, 1913, p.54. Orthographic error for **Rafia.**

Refinement. McIlhenny, 1937, *600 Varieties of Camellias*, p.5. Synonym for **Shiragiku.**

Reflecting Wave. (*C.pitardii* hybrid). C. Aust, *Camellia News*, No.182, Autumn 2010, p.9 with colour photo; Regn No.617; A cross of *C.pitardii x pitardii* x *C.japonica* **Alta Gavin,** first flowered 1999. Single, shallowly cup-shaped flower with fluted petals, 9 cm x 3 cm.. Light pale pink, outer petals edged with slightly deeper pink Columnar stamens, flowers fall whole. Early flowering on an upright plant of average growth. Originated by Bob Cherry, Paradise Plants, Kulnura, NSW, Australia.

Reflexa. (*C.japonica*), Sweet, 1830, *Hortus Britannicus* ed.2, p.74: Medium sized, crimson, single with reflexed petals. Originated in England.

Refugee. Magnolia Gardens and Nursery Catalogue, 1942-1943. Synonym for **Hakurakuten.**

Refulgens. (*C.japonica*), Fraser & Langton Nursery Catalogue, 1874-1875: Dark Crimson. Large and showy. Originated in UK.

Reg Raglan. Robinson's Nursery Catalogue, 1970-1971. Orthographic error for Reg Ragland.

Reg Ragland. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue:* Variegated red. Semidouble, Late. *American Camellia Yearbook*, 1955, p.340, Reg. No.245: A 9 year old seedling of **J.J. Pringle Smith,** originated by William E. Woodroof, Sherman Oaks, California, USA, that first flowered 1952. Plant growth is compact and rapid with large, dark green leaves. Flowers, 13-15 cm across, full semi-double with smaller, upright centre petals, similar to 'Donckelaeri' (Masayoshi). Flowers are red but often become variegated on grafted plants. Flowers early to mid-season. See colour photo, *American Camellia Yearbook*, 1955 facing p.18; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.193; Nuccio's Nurseries Catalogue, 1956, pp.11, 17; Sharp's 1957, *Camellias Illustrated*, p.105. Awards received include: 1978, 'National Camellia Hall of Fame Award'; 1955, 'John Illges Award'; 1954, 'Margarete Hertrich Award'; 1978, William E. Woodroof, Camellia Hall of Fame Award'. Synonym: 'Reg Ragland Red'. Orthographic variant: 'R.W. Ragland. Chinese synonym: 'Baiban Ligelan'. Orthographic errors: 'Red Ragland', 'Reg Raglan'. Sports:. **Reg Ragland Supreme, Reg Ragland Variegated, Reg Ragland Pink.**

Reg Ragland Pink. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.197: A pink sport of **Reg Ragland**. Originated in USA.

Reg Ragland Red. Griffin ed., 1957, *Camellian.* Synonym for **Reg Ragland.**

Reg Ragland Supreme. (*C.japonica*), Charmwood Nursery Catalogue, 1967: Amenone to peony form sport of **Reg Ragland.** Originated in USA by Charmwood Nursery.

Reg Ragland Variegated. (*C.japonica*), Tammia Nursery Catalogue, 1958: A virus variegated form of **Reg Ragland** - Red blotched white in various degrees. Originated in USA.

Regal Rose. (*C.japonica*), SCCS., 1964, *Camellia Nomenclature*, p.105: Bright, clear pink. Large, rose form double with wide, undulating petals and crinkly centre petals surrounding white stamens. Vigorous, upright growth. Originated in USA by Reg Ragland, Orange, California. *American Camellia Yearbook*, 1965, p.245, Reg. No.741: (SCCS.No.63-20). A 5 year old chance seedling of **General George Patton** that first bloomed 1959. Flowers 11 cm across x 7.5 cm deep with 18 wide, undulating petals with 5-6 upright petals in the centre.

Regal Splendor. (*C.japonica*), *American Camellia Yearbook*, 1968, p.135, Reg. No.972: An 8 year old chance seedling that first bloomed 1962. Originated by Louis W. Strohmeyer, San Gabriel, California, USA. Plant growth is upright, dense and medium with mid-green leaves, 10 cm long x 5 cm wide. The peony form flower is 12.5 cm across x 6 cm deep with many petals and petaloids. Colour is deep pink with yellow stamens. Mid-season blooming.

Regalis. (*C.japonica*), Buist, 1839, *Camellias*, p.13. Description not seen. Van Houtte Catalogue, 1839, 1:7. No description. Berlèse, 1840, *Monographie*, ed.2, pp.170, 230: Flower formal double, 10-12 cm across. full, regular, of an orange red carmine to crimson. Petals are rounded, emarginate, imbricated from the circumference to the centre and resembles somewhat **Leeana Superba.** Originated in Scotland.

Regalis. (*C.japonica*), Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.12: Crimson cerise red, often well blotched with white. Ridolfi, Florence Catalogue, 1848, pp.8, 9: Distinctive flower. Beautiful, dark red double. Lemaire, 1844, *Des Genres Camellia*…, p.160: Average size, vivid cherry-red double; petals outspread forming an open flower like **Corralina.** Originated in Italy by Ridolfi, Florence. Synonym: 'Regalis Vera d'Ercosse'.

Regalis Vera d'Ercosse. Burdin Maggiore & Co, 1849-1850, Catalogue General. Synonym for **Regalis.**

Regalis-Royal. van Houtte Catalogue, 1841, 7:11. Synonym for **Kingii** as 'King'.

Regea. Anonymous, 1862, *Journal of Horticulture and Cottage Gardener.* Orthographic error for **Regia.**

Regia. (*C.japonica*), *Journal of Horticulture and Cottage Gardener*, 1862 as 'Regea'. A.J.,Camellia Culture, 1867, *Gardeners' Chronicle*, 3274:1192 as **Regia.** No description. Originated in England. Orthographic error: 'Regea'. (Believed extinct.)

Regina. Trillon, Le Mans Nursery Catalogue, 1845, p.9. Abbreviation for 'Regina Gallicarum', synonym for **Press's Eclipse**

Regina. Baumann, Mulhouse Catalogue, 1841-1842, p.14. van Houtte Catalogue, 1841, 7:17: Gained by Hellebuyck; very good flower, medium white with carmine lines. Orthographic variant for **Reginae.** Anonymous, 1847, *Horticulture Universal*, pp.173-178 with colour pl. opposite p.173 with the title **De la Reine** which is also given as a synonym for 'Regina'.

Regina. (*C.japonica*), Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.12: White with carmine stripes. de Jonghe, 1851, *Traité de la Culture du Camellia*, p.120: (Marc. Ridolfi). Large size, double, imbricated red flower, the centre variegated white. The stiff growth of this variety, its form and colour recall **Birro**. Fratelli Rovelli, 1885 Nursery Catalogue, p.45: Very large imbricated double, white splashed red. Originated in Italy by Ridolfi, Florence.

Regina Anglais. Colla, 1843, *Camelliografia* (Illust.4), p.128. Orthographic variant for **Queen of England.**

Regina Angliae. Burdin, Maggiore & Co. Catalogue, 1845-1846, p.43. Orthographic variant for **Queen of England.**

Regina Belgica. Baumann, Mulhouse Catalogue, 1841-1842, p.13. Synonym for **Bruxelliensis.**

Regina Bianca. (*C.japonica*), Medici Spada, 1858, *Delle Nuove Camellie che si vengono ottenendo dalle Semine Romane*, p.7: Large flower, 12 tiers of petals, broad and rounded, admirably imbricated like a rose; white reflecting a tint of straw colour at the centre. Originated in Italy by Delgrande, Rome.

Regina Camelliarum. van Houtte Catalogue, 1839, 1:7 as a synonym for 'Nobilissima Nova', which is itself a synonym for **Duchesse d'Orleans.**

Regina d'Gianti. Steffek, 1949, *Plant Buyer's Guide*, ed.5, p.51. Orthographic error for **Regina dei Giganti (US).**

Regina d'Inghilterra. (*C.japonica*), van Houtte Catalogue, 1841, 7:17. Beautifully arranged peony form, soft white with some wide, pink streaks. Auguste van Geert Catalogue, 1848, p.21: Good formation, peony form, white base, some broad, pink striped. Orthographic errors: 'Regina d'Inglitera', 'Regina d'Inghilterria', 'Regina d'Ingiltera'. Synonym: 'Queen of England d'Italie'. Originated in Italy by Mariani.

Regina d'Ingiltera. Trillon, 1845, Catalogue, p.7. Orthographic error for **Regina d'Inghilterra.**

Regina d'Inglitera. Vallon, Apr.1858, *Revue Horticole*, p.188. Orthographic error for **Regina d'Inghilterra.**

Regina d'Ingliterria. Cachet Nursery Catalogue, 1845-1846, p.6. Orthographic error for **Regina d'Inghilterra.**

Regina d'Italia. (*C.japonica*), Alex Verschaffelt, 1847-1848, Catalogue, p.61. Fratelli Rovelli Catalogue, 1852, p.25: [from] Croff. Imbricated, carmine pink, striped with white. Verschaffelt, 1853, *Nouvelle Iconographie*, Book X, pl.I, as 'Regina d'Italie': This camellia,

of Italian origin, has been grown for 4 or 5 years. It belongs to the class of perfections, with blossoms of average size, formed of very large petals, rounded, outspread, of a bright pink colour and sometimes intersected by a pinkish white, longitudinal stripe. Originated in Italy by Croff about 1848. Orthographic variant: 'Regina d'Italie'.

Regina d'Italie. Verschaffelt, 1853, *Nouvelle Iconographie*, Book X, pl. I. Orthographic variant for **Regina d'Italia.**

Regina de Gianti. Hume, 1946, *Camellias of America*, p.337. Orthographic error for **Regina dei Giganti (US).**

Regina de Giganti. Portland Camellia Nursery Camellia Catalogue, 1948-1949, p.14. Orthographic error for **Regina dei Giganti (US).**

Regina dei Giganti. (*C.japonica*), Verschaffelt, 1855, *Nouvelle Iconographie*. Book XII, pl.I: Its blossoms are the largest we know, surpassing **Mathotiana.** Its form cannot be improved upon for perfect imbrication. It is composed of numerous, oval petals at the centre, oblong and emarginate towards the circumference. Colour cherry-red. Originated as a seedling in Italy by Charles Luzzatti, Florence. Orthographic errors: 'Regina del Gigand', 'Regina deo Gigantea', 'Reginea del Gigantea', 'Regina del Gigantea'. Note: In America the name has been applied erronously to a different cultivar. See below.

Regina dei Giganti (US). (*C.japonica*), SCCS, 1945, *Camellias,* p.15: Semi-double, bright pink. Late flowering as 'Regina dei Giganti'. SCCS., 1947, *The Camellia. Its Culture and Nomenclature*, invalidly as 'Regina dei Giganti': Bright pink. Medium to large, semi-double with fluted petals. Medium, compact, upright growth. Blooms mid-season to late. Note: This is not the camellia illustrated and described by Verschaffelt, 1855 and (US) has been added to distinguish it from the valid cultivar. Synonyms: 'Gloriosa Superba', 'Gloriosa', 'Pink Silk Satin', 'Rosalie', Rosalie'(South), 'Rainsford Cantelou', 'Hall Townes', 'W.H. Hastie'. Orthographic errors: 'Regina de Gianti', 'Regina des Giantes', 'Regina d'Gianti', 'Regina Gigantea', 'Reginae del Gigantea', 'Regina del Gianti', 'Regina des Gigantea'.

Regina del Bosco. (*C.japonica*), Medici Spada, 1858, *Delle nuova Camellie che si vengono ottenendo dalle Semine Romane,* p.7: Flower completely imbricated, 11 tiers of petals; those of the circumference amply rounded including the interior; the middle and central are acuminate, folded and shell-like; background bright flesh coloured with reflections and reticulation of light carmine, with the margins of the central and middle petals distorted and pale rose colour. Originated in Italy by Delgrande, Rome.

Regina del Gigantea. Shirley Hibberts, 1862, *The Floral World and Garden Guide*, vol.5, p.90. Orthographic error for **Regina dei Giganti.**

Regina del Giganti. Rollisson Nursery Catalogue, 1871. Orthographic error for **Regina dei Giganti.**

Regina del Lago. (*C.japonica*), Medici Spada, 1858, *Delle nuova Camellie che si vengono ottenendo dalle Semine Romane*, p.7. No description. Medici Spada, 1858, *Catalogo nel Giardino a Ville Quiete*, p.7: Flower medium to large, petals small, oval, in 10 rows, exquisitely imbricated and the colour of bright vermilion. Originated in Italy at the Giardino Borghese, Rome.

Regina deo Gigantea. da Silva, 1880, *Forcing Varieties of Camellias in Oporto*, p.18. Synonym for **Regina dei Giganti.**

Regina des Giantes. Wilmot, 1943, *Camellia Variety Classification Report,* 1944, p.5. Orthographic error for **Regina dei Giganti (US).**

Regina des Gigantea. Portland Camellia Nursery Camellia Catalogue, 1946-1947, p. 11. Orthographic error for **Regina dei Giganti (US).**

Regina Gakliarum. von Biedenfeld, 1856, *Practische Grundlehren der Cultur von Camellien*, p.20. Orthographic error for 'Regina Gallicarum', synonym for **Press's Eclipse.**

Regina Galliarum. Berlèse, 1837, *Monographie*, ed.1, pp.114, 131. Orthographic error for 'Regina Gallicarum'. Synonym for **Press's Eclipse.**

Regina Gallicarum. Baumann & Baumann, 1835, *Collection de Camellias élevés à Bollweiler* #42. Orthographic errors: 'Regina Galliarum', 'Regina Gallicorum', 'Regina Gallorum', 'Regina Gakliarum'. Synonym for **Press's Eclipse.**

Regina Gallicorum. Le Texnier Catalogue, 1911, p.14. Orthographic error for 'Regina Gallicarum', synonym for **Press's Eclipse.**

Regina Galliorum. Baumann, Mulhouse Catalogue, 1841-1842, p.14. Orthographic error for 'Regina Gallicarum', synonym for **Press's Eclipse.**

Regina Gallorum. Colla, 1843, *Camelliografia*, [Illustr.], p.88. Orthographic error for 'Regina Gallicarum', synonym for **Press's Eclipse.**

Regina Gigantea. Giles & Son Nursery Catalogue, 1881, p.92. Orthographic error for **Regina dei Giganti.**

Regina Leopolda. (*C.japonica*), Stefano Pagliai Catalogue, 1867, p.67. No description. Originated in Italy. (Believed extinct.)

Regina Margarita. Real Campanhia Horticolo-Agricola Portuense Catalogue, No.29, 1895-1896, p.54. van Houtte Pere Catalogue, 1896, 265P:109. Orthographic variant for **Regina Margherita.**

Regina Margharita. de Bisschop Nursery Catalogue, 1935, p.7. Orthographic error for **Regina Margherita.**

Regina Margherita. (*C.japonica*), van Houtte Catalogue, 1881-1882, 194-L:17: Rovelli obtained this variety from seed in his nursery - A perfectly imbricated white; shade light flesh tone, petals firm texture. Early flowering. Auguste van Geert Catalogue, No.82, 1881-1882, p.14: Large size, imbricated flower. White tinted pale pink, perfect form. Flowers when opening resemble a rosebud. Originated in Italy by Rovelli, according to Roda, 1885 and Rovelli, 1896. Tirocco, 1928 says "Large flower, rose with red spots". Orthographic errors: 'Regina Margarita', 'Regina Margharita'.

Regina Nova. (*C.japonica*), Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. Cachet Nursery Catalogue, 1845-1846, p.7. No description. Originated in Italy by Burnier & Grilli. (Believed extinct.)

Regina Pomaré. (*C.japonica*), Fratelli Rovelli Catalogue, 1852, p.25: [from] Rosani. Imbricated, vivid red, lined white. Orthographic error: 'Regina Pomarea'. Originated in Italy. (Believed extinct.)

Regina Pomarea. Catalogo della Stablimento Agrario-Botanico di Castagnola e Casabono, 1867-1868. Orthographic error for **Regina Pomaré.**

Regina Victoria. Burnier & Grilli Catalogue, 1846-1847. Orthographic variant for **Queen Victoria.**

Reginae. (*C.japonica*), Loddiges Catalogue, 1836, p.25. No description.Van Houtte Catalogue, 1841, 7:17 as 'Regina': Gained by Hellebuych: Very good medium size, white white with carmine lines. Originated in Belgium. Orthographic error: 'Regina'.

Reginae. Ch. Lemaire, 1846, *Flore des Serres...*, vol.11, p.205, pl.V. Synonym for **De la Reine.**

Reginae del Gigantea. Scott. J. & Sons Nursery Catalogue, 1868. Orthographic error for **Regina dei Giganti.**

Reginae d'Inghilterra. Verschaffelt, 1844, Catalogue, No.50, p.22. Synonym for **Queen of England.**

Regine Vittoria. Stefano Pagliai Catalogue, 1867. Orthographic variant for 'Regina Victoria', synonym for **Queen Victoria.**

Regret Sky High. Waterhouse, 1970, ACRS., *Camellia News*, No.40, p.7. Synonym for **Hentiangao.**

Regularis. (*C.japonica*), Berlèse, 1843, *Iconographie*, vol.3, pl.261: The flower, 11 cm across, is full, rounded and regular at its circumference; deep cerise, tinged with carmine. The petals are in 6 rows at the circumference, notched, cup-shaped, regularly imbricated, while those at the centre are numerous, sometimes petaloid, sometimes entire; in the first case, erect, imperfect, in fascicles, rounded with white markings; in the second case they are long, of varying dimensions, strap-like, forming a raised centre. Originated in Italy by Conte Guicciardini, Florence. Synonym: 'Regularis Nova'.

Regularis Imbricata. (*C.japonica*), Verschaffelt Catalogue, 1847-1848, p.61. No description. Verschaffelt, 1858, *Nouvelle Iconographie*, Book VI, pl.III: A flawless perfection, with petaline imbrication and ruddy pink colouring, measuring about 10 cm, across and formed of numerous, small, rounded petals, emarginate at the apex; those near the centre, smaller and lanceolate, often intersected by a white band. Originated in Belgium by Verschaffelt from seed.

Regularis Nova. Verschaffelt Catalogue, 1844, No.50, p.22. Synonym for **Regularis.**

Regularis Rosea. (*C.japonica*). Vershaffelt Catalogue, 1849-1850. p.49. No description or history. (Believed extinct.)

Rei Artista. (*C.japonica*). José Marques Loureiro Catalogue No.1, 1865, p.37, & No.9, 1872-1873, p.47: A medium size, regular rose form of vivid scarlet with white stripes. Orthographic variant; 'Rei-artista'. Originated in Portugal.

Reides Funchs. (*C.japonica*), Medici Spada. 1857, *Catalogo nel Giardino a Villa Quiete*, p.14. No description or history. Originated in Italy. (Believed extinct.)

Reifû. (Pleasant Breeze). *(C.japonica), Nagoya Camellia Society Bulletin,* 1992, No.25, p.5, colour plate No.14: Originated in Japan by Kôji Funakoshi, Nagoya. A chance seedling of 'Saga-hatsu'arashi' (**Hatsu-arashi-Saga**). Small to medium size flowers, 7-8 cm across, loose peony form with fuffled petals and divided stamens. Weak fragrance. Blooms mid-season to late.

Reiga. (Elegant Beauty). *(C.japonica), Nagoya Camellia Society Bulletin,* 1992, No.25, p.5, colour plate No.13: Originated by Kôji Funakoshi, Nagoya, Japan. Small size, 7-8 cm across, single of 5 petals. White with red stripes. Chance seedling of 'Saga-hatsu'arashi' (**Hatsu-arashi-Saga**). Flower shape similar to its parent. Very vigorous. Weak fragrance. Blooms mid-season to late.

Reiganji-akayabu-tsubaki. (Red Wild Camellia from the Reigan Temple), (C.*japonica*), Yokoyama & Kirino. 1989, *Nihon no Chinka*, p.188, colour photo and description: Small size. red. open cupshaped single camellia of 5 rounded, overlapping petals and a central stamen column. pinched in at top, with pinkish filaments, joined for their lower half, and yellow anthers. Leaves elliptic, shining mid-green, apices acute, margins shallowly serrate. Mid-season to late flowering. Originated in Reigan Temple, Kyôto Prefecture, Japan. Named and released by Misoji Yamaguchi in 1989. Different reading: 'Reikanji-akayabutsubaki'. Note: 'Reiganji' is said to be the valid name for this temple. but it has also been popularly called 'Reikanji'. It is the Buddhist convent famous for its collection of ancient dolls and camellias.

Reiganji-akebono. Different reading for **Reikanji-akebono.**

Reiganji-ezo-nishiki. Different reading for **Reikanji-ezo-nishiki.**

Reiganji-hakubotan. Different reading for **Reikanji-hakubotan.**

Reiganji-hayazaki-akayabu-tsubaki. (Early Flowering Red Camellia from the Reigan Temple), (*C.japonica*), Yokoyama & Kirino. 1989, *Nihon no Chinka.* p.187, colour photo and description: Small size. deep red, campanulate single with 5 emarginate, rounded, overlapping. somewhat reflexed petals and a central stamen column with white filaments, united for the lower half. and yellow anthers. Leaves bright mid-green, elliptic, apices acuminate, margins serrate. Blooms early to mid-season. Different reading: 'Reikanji-hayazaki-akayabu-tsubaki'. Originated in the Reigan Temple, Kyôto Prefecture. Japan. Named and released by Misoji Yamaguchi in 1989.

Reiganji-shirobotan. Different reading for **Reikanji-hakubotan.**

Reiganji-shiroyabu-tsubaki. (White, Wild Camellia from the Reigan Temple), (*C.japonica*), Yokoyama & Kirino, 1989, *Nihon no Chinka,* pp.38, 39, colour photo and description: Small size, campanulate single, white with 5-6 broad, overlapping, slightly reflexed petals and central stamen column with white filaments, joined for the lower third, and yellow anthers. Leaves long-elliptic to obovate, dark green, apices acute, margins finely and obscurely serrulate. Blooms mid-season. Originated in Reigan Temple, Kyôto Prefecture, Japan. Named and released by Misoji Yamaguchi in 1989. Different reading: *'*Reikanji-shiroyabu-tsubaki*'*. Another tree of the same variety is growing in Koishikawa Botanical Garden in Tokyo.

Reigyoku. (Beautiful Jewel), (*C.rusticana*), Satomi, 1956, *Camellia Varieties of Japan,* p.17. See also colour photos: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.457, description, p.361; Seibundô Shinkôsha, 1979, *Senchinshû,* p.162, description, p.256: Medium to small, single, light red, of 5 petals of irregular length and a central burst of golden anthers with yellow filaments. Leaves genetically variegated with a feather of gold along the midrib which is pink on new growth. Medium green, elliptic, serrulate. Blooms mid-season. Originated in Niigata Prefecture, Japan. Named and released by Jitarô Nagao. Resembles **Mangetsu.** Chinese synonym: 'Bianselong'.

Reihô. (Dark Mountain), (Higo), Craig, 1971, *American Camellia Yearbook*, p.61: New and not yet in general circulation. This large, white sport of Ôaso (**Ô-aso**) possesses all of the superb qualities of its parent but is snow white in colour. Originated in Japan. For colour photos and descriptions see: *Encyclopedia of Camellias in Colour,* vol.I, 1972, p.368 and ibid, vol.II, 1978, pl.339; Seibundô Shinkôsha, 1978, *Senchinshû,* pp.163, 257: A mutation of **Shintsukasa-nishiki** (Which also sports 'Ôaso'), originated by Inoue Issoku in 1965. Name approved by the Higo Camellia Society of Japan in 1970. Late flowering. The flower is 12 cm across, single with 6-7 petals, snow white, petals thick and margins wavy. Stamens radiate centrally, white, 170-200; pistil white, extending just beyond the stamens. Leaves are oval and lustrous, dark green. Plant form and growth habit are the same as **Shintsukasa-nishiki.** Originated in Kumamoto Prefecture, Japan. Synonym: 'Shiro-shintsukasa'.

Reihô. (Mt. Suzuka). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.285 with colour photo; English translation p.200. Medium size, vermilion, tubular single, cylindrical stamen cluster. Flowers mid-season to late. Leaves elliptic, small, flat. Upright, vigorous growth. Selected from wild japonicas at the foot of Mt. Suzuka, Mi'e Prefecture. Named and released by Minoru Satô in 1975.

Reijin. (Beauty), (*C.rusticana*), Tateishi et al. 1970, *Journal of Botany*, vol.45. No description seen. Originated in Japan.

Reikanji-akayabu-tsubaki. Different reading for **Reiganji-akayabu-tsubaki.**

Reikanji-akebono. (Dawn Camellia from Reigan Temple), (*C.japonica*), *Kyô no Tsubaki to Tera,* 1981, p.84 with colour photo: Red, heavily blotched with white, medium sized, open peony form,

3-4 rows of large outer petals with long, erect centre petals mixed with fascicles of stamens. Leaves dull mid-green, elliptic, apex tapering acuminate, margins obscure, finely serrulate. Originated in Reigan Temple, Kyôto Prefecture, Japan. Different reading: 'Reiganji-akebono'.

Reikanji-ezo-nishiki. (Ezo Brocade from the Reigan Temple), (*C.japonica*), *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.124, description, p.309: Medium size, white, single, 7-9 petals with red stripes. Large higo-like, spreading stamen cluster with yellow anthers and filaments. Leaves broad-elliptic, apex apiculate, margins sharply serrate. Originated in the Reigan Temple, Kyôto Prefecture, Japan. Synonym: 'Yûshôki'. Different reading: 'Reiganji-ezo-nishiki'. Resembles **Shishôka.**

Reikanji-hakubotan. (White Peony from Reigan Temple), (*C.japonica*), *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.237, description, p.326: Large, white, semi-double, 12-14 petals, oblong, crinkled, with a central stamen cylinder, gold anthers, white filaments joined at lower third. Leaves ovate, acuminate, margins shallowly serrate, gently wavy, dark green. Originated in the Reigan Temple, Kyôto Prefecture, Japan. Synonym: 'Furômon'. Different reading: 'Reiganji-hakubotan', 'Reikanji-shirobotan'. 'Reiganji-shirobotan'.

Reikanji-hayazaki-akayabu-tsubaki. Different reading for **Reiganji-hayazaki-akayabu-tsubaki.**

Reikanji-maizuru. (Dancing Crane from Reigan Temple), (*C.japonica*), *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.101, p.69, description, p.306: A medium size, single, 5-6 petals, opening cup-shaped, cherry-red with white markings. Compact, central stamen column, yellow anthers and filaments. Leaves mid-green, elliptic, apex rounded acuminate, margins medium serrate. Originated in Reigan Temple, Kyôto Prefecture, Japan. See colour photo, Seibundô Shinkôsha, 1979, *Senchinshû*, p.162. Very similar, if not the same, as **Hakkan.** Resembles **Norikoboshi.** (Andoh believes it is a synonym). Synonym: 'Maizuru-Reikanji'

Reikanji-shiroyabu-tsubaki. Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.11, A-532. Different reading for **Reiganji-shiroyabu- tsubaki.**

Reikô (Serene Light), (*C.japonica*), Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.212 as 'Reikoh'; *Encyclopedia of Camellias in Colour*. vol.I, 1972, pl.266, p.122, description, p.330: Large, semidouble, red with white markings; petals standing apart in two rows, edges emarginate and crinkled, 12-13 cm across; central stamen cluster, yellow anthers and whitish filaments. Leaves dark green, broad-oval, acute, serrate. Originated in Shiku'oku Island, Japan. Different reading: 'Reikoh'. Resembles **Haru-no-yuki.** Synonyms: 'Iyo-iwane', 'Tsuzure-nishiki'.

Reikô-sunago. (Reikô's Dotted), (*C.japonica*), Itô, Ko'emon, 1879, *Chinkashû:* Pink striped deeper pink, large. Variegated leaves. Originated in Japan.

Reikoh. Hazlewood & Jessep. 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* Different reading for **Reikô.**

Reimei. (Dawn Light), (*C.japonica*), ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.19: Small size, red, long, tubular single. Originated in Gotô Island, Nagasaki Prefecture, Japan.

Rein de Fleur. Bergami Catalogue, 1858. Orthographic error for 'Reine des Fleurs', synonym for **Commensa.**

Reina Margarita. (*C.japonica*), Cuvelier, 1887, *Revue de L'Horticulture Belge et Etrangere*, vol.13, p.35. Description not seen. (Believed extinct.)

Reine. van Houtte Catalogue, 1846-1847, 27:31. Abbreviation for **De la Reine.**

Reine à Fleurs Roses (de la). van Houtte Catalogue, 1860-1861, 83:51. Synonym for **Reine des Roses.**

Reine Amelie. Peer, 1956, *American Camellia Yearbook*, p.56. Synonym for **Marie-Amélie.**

Reine d'Angleterre. van Houtte Catalogue, 1839, 1:3 Synonym for **Duchesse d'Orleans**. Note: As the translation is 'Queen of England', this became confused with Fielder's **Queen of England,** particularly as they are very similar, however the **Duchesse d'Orleans** is an Italian camellia, originated by Mariani.

Reine d'Espagne. (*C.japonica*), Verschaffelt, 1852, *Nouvelle Iconographie*, Book IV, pl.I: Recently obtained from seed in France where it bloomed for the first time in 1849. Note the perfect arrangment of its numerous petals, which are rounded, emarginate, forming an imbricated, convex whole, of bright cherry-red at the circumference, followed by a delicate rose, then a depressed centre of the same red as the circumference.

Reine d'Holland. (*C.japonica*), Costa, 1846, *Catalogue de la Collection de camellias présentée à sa majesté L'Imperatrice de toutes les Russies et Reine de Pologne*, p.14. No description or history. (Believed extinct.)

Reine de Beautes. Mercatelli Catalogue, 1912-1913. Orthographic error for **Reine des Beautés.**

Reine de Belges. Hovey & Co. Nursery Catalogue, 1857, p.10. Orthographic error for **Reine des Belges.**

Reine de Bretagna. (*C.japonica*), Burdin Maggiore & Co. Catalogue, 1845. No description. Originated in France. (Believed extinct.) Orthographic variant: 'Reine de Bretagne'.

Reine de Bretagne. Burdin Maggiore & Co. Catalogue, 1856-1857. Orthographic variant for **Reine de Bretagna.**

Reine de Danemark. Vallon, Apr.1858, *Revue Horticole*, p.188. Orthographic variant for **Queen of Denmark.**

Reine de Flores. SCCS., 1942, *Classification of Camellias*, p.4. Orthographic error for 'Reine des Fleurs', synonym for **Commensa.**

Reine de Fleuris. Gerbings Azalea Gardens Catalogue, 1938-1940. Orthographic error for 'Reine des Fleurs', synonym for **Commensa.**

Reine de Fleurs. Nairn & Son Nursery Catalogue, 1906. Orthographic error for 'Reine des Fleurs', synonym for **Commensa.**

Reine de France. Burnier & Grilli Catalogue, 1846-1847. Synonym for 'Punctata Plena' which is itself a synonym for **Gray's Invincible** which originated in England. However Spae, 1858 *Belgique Horticole* listed the same name as originated by Donckelaer, and van Houtte in 1849-1850 as from Le Comte so there may be more than one cultivar involved.

Reine de France. *(C.japonica),* Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.12: Anemone form, globular centre with innumerable petals, very serried, long and close together, pink base, splashed and tinted with white and red. Originated by Donckelaer, Belgium.

Reine (de la). Fendig, 1953, *American Camellia Catalogue.* Synonym for **De la Reine.**

Reine des Beautés. (*C.japonica*), Lemaire, 1861, *L'Illustration Horticole*, vol.8, pl.299: Originated by Vervaene, Ledeberg, Belgium. A formal double of delicate, soft pink from the centre to the periphery. Its numerous petals are rounded and bilobate towards the exterior and oval and entire towards the centre. It was described in vol.4, *The Floral Magazine*, 1865 as 'blush' and van Houtte, 1873-1874 Catalogue and Rollisson's Plant catalogue, 1877-1878 as 'delicate, clear rose'. Illustrated in Urquhart's *The Camellia*, 1956, it is reported to be a sport of the old American variety Mrs Abby Wilder but no mention of this is made in the early descriptions. SCCS., *Camellia Nomenclature* gives 'Grace Sherwin Wilder' as a synonym. Synonyms: 'Queen of Beauties', 'Queen of the Beauties', 'Grace Sherwin Wilder'. Orthographic errors: 'Reines des Beauties', 'Reine des Beauties', 'Reine de Beautes', 'Roi des Beautés'.

Reine des Beauties. Giles & Son Nursery Catalogue, 1881, p.9. Orthographic error for **Reine des Beautés.**

Reine des Belges. (*C.japonica*), Poiteau, 1835, *Annales de la Société d'Horticulture de Paris*, 16:350. Description not seen. Verschaffelt, 1849, *Nouvelle Iconographie*, Book X, pl.IV: This camellia come from the old and famous 'Donckelaeri' (**Masayoshi**), through the care of Mr Donkelaar, chief gardener of the botanical gardens of Ghent, pollinated by an unknown variety. The blossom is rather large, of a cherry-red colour, deeper at the base of the petals, with a distinct and rather broad white margin. They are regularly imbricated, wide, rounded at the circumference, small, narrow and lanceolate at the centre, all distinctly veined a deeper shade. Orthographic variant: 'Reine de Belges'. Note: the Poiteau date of 1835 is too early to apply to a seedling of 'Donckelaeri' so must refer to another unidentified cultivar.

Reine des Blanches. (*C.japonica*), Baptist Nursery Catalogue, 1864. No description. Originated in Australia. (Believed extinct.)

Reine des Camellias. van Houtte Catalogue, 1839, 1:7 with 'Nobilissima Nova' as a synonym. Then in the same catalogue, he gives it as the synonym of **Duchesse d'Orleans** and this is repeated in later catalogues.

Reine des Fleurs. Verschaffelt, 1844, Catalogue, No.50, p.22. Cachet Catalogue, 1845-1846. No description. van Houtte Catalogue, 1845-1846, 23:50. Synonym for **Commensa.** This is a chance seedling of 'Donckelaeri' (**Masayoshi**), raised by M. Donkelaar and first listed by Berlèse, 1843 as **Commensa**. Orthographic errors: 'Reine des Fleiris', 'Reine de Fleurs', 'Reine de Flores', 'Rene de Fleurs', 'Reine des Flores', 'Reine des Fleurs Variegated', 'Rheine de Flour'. Sport: **Reine des Fleurs Red.**

Reine des Fleurs de Roses. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.197. Synonym for **Reine des Roses.**

Reine des Fleurs Red. (*C.japonica*), Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.202, description, p.205 black and white photo: Flower complete double, formal type, currant red 821/3, veins 821; 7 cm across x 3 cm deep; petals about 55, orbicular, outer reflexed, 3.5 cm x 3.2 cm wide, becoming progressively smaller to the centre with small inner petals and, occasionally, a few petaloids. Leaves broad-elliptic, curved, cupped, semi-glossy dark green, heavy texture, 8-10 cm long x 4.5-6 cm wide, fine serration; short pointed apex, pronounced venation. Originated in USA. A solid red form of **Commensa** as 'Reine des Fleurs'.

Reine des Fleurs Variegated. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Commensa** as 'Reine des Fleurs'.

Reine des Flores. SCCS., 1942, *Classification of Camellias*, p.4. Orthographic error for 'Reine des Fleurs', synonym for **Commensa.**

Reine des Pays-Bas. (*C.japonica*), Jacob-Makoy, 1829, Catalogue, p.7. No description. This is 'Double Nouveau No. 11' of the 1828 catalogue. Courtois, 1833, *Magazin d'Horticulture*, 1[pt.D]:316 as 'Reine des P.B.'. No description. Berlèse, 1937, *Monographie*, ed.1, pp.85, 125: Leaves shining like 'Rubra Simplex' (**Rubra**); bud with calycinal scales, greenish; flower 7.5 cm across, double, clear cherry-red; petals of the circumference recurved and rumpled; those of the centre erect and distorted. Originated in Belgium.

Reine des P.B. Jacob Makoy Nursery Catalogue, 1836, p.17. Abbreviation for **Reine des Pays-Bas.**

Reine des Roses. (*C.japonica*), Verschaffelt, 1849, *Nouvelle Iconographie*, Book X, pl.II: Originated by Mr Boddaert, Tronchiennes (Drongen in Flemish), near Ghent, Belgium. The flower, of medium size, is formed of a large number of small, imbricated petals decreasing in size to the centre, rounded, slightly emarginate in the outer rows, very small, oval-lanceolate, slightly acute in the interior, the outer a delicate pink with veining in a deeper shade, liberally striped

with white. Synonyms: ‘Queen of the Roses’, ‘Reine à Fleurs Roses’. ‘Queen Rose’. ‘Reine des Fleurs de Roses’.

Reine des Vierges. (*C.japonica*). van Houtte Catalogue. 1848, 33:15. No description. van Houtte Catalogue, 1848-1849, 35:44: Pure white, perfectly imbricated. [Boll]. Originated in Belgium.

Reine di Würtemberg. (*C.japonica*), Croff Catalogue [before 1890]. No description or history. (Believed extinct.)

Reine Laine. Mariotti Catalogue, 1924. Orthographic error for **Reine Louise.**

Reine Littone. (*C.japonica*), Kaye, Reginal, Ltd Nursery Catalogue, 1955, p.46: Average size, pink, double. Originated in France.

Reine Louisa. Lenten, 1963, *Gardeners’ Chronicle*, p.411. Orthographic error for **Reine Louise.**

Reine Louise. (*C.japonica*), van Houtte Catalogue, 1851, 44-24: Perfectly imbricated. Petals vivid carmine red at the centre and the circumference, in between, satiny blush. [from] Defresne. Originated in Belgium by Defresne. Orthographic errors: ‘Reine Laine’, ‘Reine Louisa’.

Reine Maria-Henriette. (*C.japonica*), Verschaffelt Catalogue, 1867-1868, p.46. No description. Van Houtte Catalogue, 1868, 123:58 as ‘Reine Marie-Henriette’. Very compact bush with good foliage, all of its branches covered each year with buds. Its flowers are of an excellent imbricated form, of a beautiful pink speckled with white. Auguste van Geert Catalogue, No.71, 1874-1875, p.85: (L.van Houtte), Beautiful pink, often speckled pure white, perfect imbrication. Free growing. Rollisson’s Plant Catalogue, 1877-1878: Rose, often spotted with pure white, beautifully imbricated. Originated in Belgium by L. van Houtte. Orthographic variants: ‘Reine Marie-Henriette’, ‘Reine Marie Henrietta’, ‘Reine Mary Henriette’.

Reine Marie Henrietta. Rhodellia Nursery Catalogue, 1944. Orthographic variant for **Reine Maria-Henriette.**

Reine Marie-Henriette. van Houtte Catalogue, 1868, 123:58. Orthographic variant for **Reine Maria-Henriette.**

Reine Mary Henriette. Nicholls Nursery Catalogue, 1888. Orthographic error for **Reine Maria-Henriette**.

Reine Victoria. Berlèse, 1845, *Monographie*, ed.3. Orthographic variant for **Queen Victoria.**

Reisho-in-shiratama. (White Jewel of Reishô’in Temple). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.285 with colour photo; English translation p.200. Palest pink changing to white, tubular to trumpet shaped single, fat stamen cylinder. Flowers early. Leaves elliptic, small. Spreading, vigorous growth. The original tree, with a trunk circumference of 1.1 metres, grows in front of the main hall of Reishô-in Temple. Named and released by Nagaharu Niwa in 1990. Released by Gifu Camellia Club. From Gifu Prefecture.

Reizanhô. (Beautiful Mountain Ridge), *(C.rusticana)*, Tateyama Catalogue, 1957: Leaf variegated with white spots on blue-green. Flower, red, single, small. See: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.454 & p.360; Seibundô Shinkôsha, 1979, *Senchinshû*, p.163 as ‘Reizan-hô’, pp.360, 257: Medium to small, deep red, single with 5 petals of irregular length and a centre cluster of golden stamens. Leaves genetically variegated with pale, creamy white marks, dark green, apices tapering acute, margins medium serrate. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.208 as ‘Reizanpô’. Different readings: Reizanpô’, ‘Reizanhoh’. Originated in Niigata Prefecture, Japan.

Reizanhoh. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* Different reading for **Reizanhô.**

Reizanpô. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.208. Different reading for **Reizanhô.**

Reland Westgate. (*C.japonica*), *American Camellia Yearbook*, 1993, p.70, colour plate p.74, Reg. No.2276: A large size, medium to dark pink, loose peony form *C.japonica* chance seedling, that blooms mid-season to late. Originated by Grover C. Chester, Augusta, Georgia, USA. The 22 year old seedling first flowered 1974. Average flower size is 12.5 cm across x 5 cm deep with 22 petals and 6 petaloids. Plant growth is upright and vigorous with dark green leaves 10 cm long x 5.5 cm wide.

Remember. (*C.japonica*), Mark S. Cannon Scion Catalogue, 1962, p.17. No description. SCCS., 1962, *Camellia Nomenclature*, p.89: Blush pink. Medium sized semi-double. Originated in the USA by Hugh Shackelford, Albany, Georgia.

Remembrance de David Moor. Mariotti Catalogue 1924. Orthographic error for **Remembrance of David Moore.**

Remembrance of David Moor. Del Lungo e Girardi, 1928, *Le Camelie,* p.157. Orthographic variant for **Remembrance of David Moore.**

Remembrance of David Moore. (*C.japonica*), van Houtte Catalogue, 1879-1880, 184:239: New variety, large, well imbricated, of a deep rosy colour, lined with white in the centre of the petals. Originated in Belgium by L. van Houtte. Orthographic variants: 'Remembrance of David Moor', 'Remembrance de David Moor'.

Rena Bergamini. (*C.reticulata* hybrid). *American Camellia Yearbook*, 1994, p.62, colour plate between pp.64-65, Reg. No.2286: A large size, medium red, rose form double to formal double, *C.reticulata* hybrid **Bernadette Karsten** x *C.japonica* **Eleanor Martin** that blooms early to mid-season. Originated by Jack Mandarich, Grants Pass, Oregon, USA. The 12 year old seedling first flowered 1984. Average flower size is 12.5 cm across x 7.5 cm deep with 18+ petals and golden stamens. Firstly opens formal, then all petals twist and go upright to rose form. Plant growth is upright, spreading and vigorous in rate with light green leaves 8 cm long x 5.5 cm wide.

Rena Campbell. Fruitland Nursery Catalogue, 1938-1938, p.18. Synonym for 'Variabilis', itself a synonym for **Pompone**. Orthographic errors; 'Rene Campbell', 'Renee Campbell'.

Rena Swick. (*C.japonica*), *American Camellia Yearbook*, 1960, p.206, Reg. No.485: A 6 year old chance seedling that first bloomed 1957; originated by Julington Nurseries, Inc. Jacksonville, Florida, USA. Plant growth habit is medium with dark green leaves, 7.5-10 cm long x 5-6 cm wide. The semi-double flowers, 11 cm across x 6 cm deep, are bright pink with darker veining and have 30-35 petals and white tipped, light yellow stamens. There are 5 rows of large, sweetpea-like petals standing apart. Blooms mid-season. Sport: **Rena Swick Variegated.**

Rena Swick Variegated. (*C.japonica*), SCCS., 1964, *Camellia Nomenclature*, p.106 as 'Rena Swick Var.': A virus variegated form of **Rena Swick** - Bright pink and white. Originated in USA.

Rena Travis. (*C.japonica*), SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Red. Medium size, rose form double. Vigorous, open, upright growth. Mid-season flowering. Originated by Mrs R.B. Travis, Savannah, Georgia, USA. *American Camellia Yearbook,* 1954, Reg. No.62.

Renate. (*C.reticulata* hybrid). *Camellias*, Y.C. Shen, 2009, p.27 with colour photo; A large semi-double, pink with darker veining. Raised and separated layers of wavy petals. A chance seedling of **Lasca Beauty** originated by Boskoop Nursery, South Africa.

Rendevous. Cannon, 1981, ACS., *The Camellia Journal*, vol.36. Orthographic error for **Rendezvous.**

Rendezvous. (*C.x williamsii*), *New Zealand Camellia Bulletin*, vol.IX, No.5, p.11, Reg. No. 120: A seedling of **Joyful Bells** x *C.japonica* **Australis,** originated by L Jury, New Plymouth, New Zealand. The plant has average growth habit, dark green foliage, 8 cm x 4 cm and first flowered 1971. The blooms are semi-double, with 8-9 petaloids and up to 9 petaloids. The

flower is 10 cm across, anthers gold, filaments pink. Colour, scarlet crimson. Chinese synonym 'Rundai'.

Rene Campbell. Rubel, 1940-1941, *Floral Gems from China*, catalogue No.73, p.23. Orthographic error for 'Rena Campbell', synonym for 'Variabilis', itself a synonym for **Pompone.**

Rene Dagouat. *(C.japonica),* ICS *Journal*, 2008, p.123 with colour photo; An open pollinated seedling, originated by Marie Therese Bleuzen, Guengat, France. First flowered 1995 at circa 18 years. An upright shrub of moderate growth rate. Blooms mid-season. Semi-double flower with a central tube of golden anthers on cream filaments. Rose red (RHSCC 48C), with darker veining (52A). Diameter 10 cm x 4-5 cm deep. Scented.

Rene de Fleurs. John Waterer Sons & Crisp Nursery Catalogue, 1916. Orthographic error for 'Reine des Fleurs', synonym for **Commensa.**

Renee Campbell. *Camellia Digest*, 1(1), 1942. Orthographic error for 'Rena Campbell', synonym for 'Variabilis', itself a synonym for **Pompone.**

Renee Land. (*C.reticulata* hybrid). *American Camellia Yearbook*, 1994, p.62, colour plate between pp.64-65, Reg. No.2303: A very large size, pink, semi-double seedling of *C.reticulata* 'Crimson Robe' (**Dataohong**) x **Jean Pursel** that blooms mid-season to late. Originated by Frank Pursel, Oakland, California, USA. The seedling first bloomed in 1984. Average flower size is 15 cm across x 10 cm deep with 35-40 petals and golden anthers. Plant growth is upright and vigorous with light green leaves 13 cm long x 7.5 cm wide. Chinese synonym 'Laini Lande'.

Renegade. (*C.reticulata* hybr.), SCCS., 1990, *Camellia Nomenclature*, p.133: Deep purple red, large size, semi-double to anemone form. Vigorous, open, upright growth. Blooms mid-season to late. Originated in USA by Dr Walter Homeyer, Macon, Georgia from the cross 'Crimson Robe' (**Dataohong**) x **Jean Pursel.** ACS., 1989, Nov. *The Camellia Journal*, vol.44, No.4, p.17, Reg. No.2170. *American Camellia Yearbook*, 1989, p.127, colour photo (p.135): The 11 year old seedling first bloomed 1984. Average flower size, 15 cm across x 7.5 cm deep. Plant growth is upright, open and rapid with dark green leaves 10 cm long x 7 cm wide.

Renee Claire. Shackelford, 1971, ACS., *The Camellia Journal*, vol.26, No.4. Orthographic variant for **Claire Renee.**

Renge. (Lotus Flower), (*C.japonica*), *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.349: Small, dark red, rose form double. Originated in Japan. (Believed extinct.) Note: The lotus flower is particularly revered in Buddhism and symbolizes the ideal world of Buddhism. It is believed that Buddha sits at the centre of a lotus flower. Many camellia names in Japanese include 'Renge' (or lotus) and often the expression 'Rengezaki' or lotus-shape is used to describe flower form.

Renge. (Lotus Flower), (*C.japonica*), Hamamatsu, 1825, *Setsuyô Kikan*, vol.23. No description. *Chinka Zufu*, (before 1700), Watanabe, 1968, pl.606: Last character different to 'Renge' above, but meaning the same. Very dark red, medium sized double with the centre petals elevated and standing upright, forming a second flower rising from the centre of the first. Originated in Japan. (Believed extinct.)

Rengeboshi. (Starred Lotus), (*C.japonica*), *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.118: Large, dark red with white spots, double with 6-7 rows of pointed petals. Originated in Japan. Thought to have been a sport of **Renge**, immediately above. (Believed extinct.)

Rengekô. (Red Lotus Flower), (*C.japonica*), Itô, Ihei, 1695, *Kadan Chikinshô*, #57; Yashiro, 1841, *Kokon Yôrankô*, vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Described as resembling **Hi-no-renge.** Medium large, formal double, convex flower. The corolla is red with pointed petals, resembling a lotus flower. Originated in Japan. (Believed extinct.)

Different reading: 'Rengebeni'. See: JCS., 1969, *Tsubaki,* No.7, p.34 & ibid, 1982, No.21, p.103.

Rengesekai. (Lotus World), (*C.rusticana*), JCS., 1973, *Tsubaki,* No.12, p.8, colour photo 31: A medium sized, formal double to rose form double, 7 cm across with 20-25 petals, rhodomine pink fading to white at the petal bases. Petals large, rounded, concave, opening from a bud shaped centre to expose some stamens. Blooms mid-season. Leaves ovate, 10 cm x 4.5 cm, finely serrate, petioles hirsute, 8 mm long, reticulate venation. See colour photos: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.379; Seibundô Shinkôsha, 1979, *Senchinshû*, p.163 and description, p.257. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.306. Originated with a private family at Hosoiri village, Nei-gun, Toyama Prefecture, Japan. Collected and named by Shûhô Kirino in 1963, released by Mitsuroku Makino in 1975. Chinese synonym 'Lianhua Shijie'.

Rengetsu. (Lotus Moon), (*C.rusticana*), Ishizawa, 1966, *Garden Life*, No.16, p.36, black and white photo and description: Medium sized, soft pink, with white spots and stripes, formal double, outer rows of petals opening flat, exposing a small, round, bud-shaped centre. Originated in Takada City, Niigata Prefecture, Japan. For colour photo see: Seibundô Shinkôsha, 1979, *Senchinshû*, p.163.

Renge-tsubaki. Yashiro, 1841, *Kokon Yôrankô*, vol.306, Ichijima reprint, 1906, p.344. (Lotus Flower Camellia). Cited from *Honzô Kômoku Keimô*, (1810). Synonym for **Ise-tsubaki** as 'Sekiryû-cha'. Chinese reading: 'Shiliu Cha'.

Rengezaki. (Lotus Blooming), (*C.japonica*), Shirai, 1926, *Tsubaki Kai* (Copy of an older anonymous work): Red double with pointed petals like a lotus. Originated in Japan.

Renhakujiro. (obscure), (*C.japonica*), Wada, 1941, *Japanese Garden Treasures*, p.31: White, very large full double of the 'Shiragiku' form but with longer petals. Originated in Japan.

Renira. (*C.japonica*), Berlèse, 1837, *Monographie*, ed.1: Leaves 6 cm long x 2.5 cm wide, lanceolate, oblong, finely serrate, prominent venation, pale green. Flower, 7.5 cm across, double, deep orange red; petals of the circumference very broad, oblong, crenated at the summit, those of the centre not numerous, long, narrow, folded over each other, and resembling the interior of an anemone.

Renjianqi. *(C.japonica), Chinese Camellia Culture*, 2003, p.258 with colour photo; Genetically variegated leaf with irregular yellow edges. Dark pink formal double, a few layers of large outer petals and a small bud centre. Thin, crimped petals. Diameter 8-10 cm. Flowers early to mid-season. Discovered by Mr Tang Chenghe, Jinhua, China.

Renjô-no-tama. (Jewels on a Lotus), (*C.japonica*), Minagawa, 1933, *Chinkashû:* Pure white, petals incurved. Double, large. See colour photos and description: Tuyama, 1966, *Camellia Cultivars of Japan,* p.120, pl.70; Tuyama, 1968, *Camellias of Japan,* pl.43, description, p.98; JCS., 1972, Encyclopedia of Camellias in Colour, vol.1, p.364; Satô, 1975, *Chûbu no Tsubaki,* p.92; Seibundô Shinkôsha, 1979, *Senchinshû,* pp. 163, 257: Leaves obovate-elliptic to ovate-elliptic, rather small, venation impressed, apex acuminate, recurved, margins coarsely serrate. Flower pure white double with 15-20 broad petals in 5-6 rows, enfolded and becoming smaller towards the centre. Stamens few and irregular, sometimes with rare, small petaloids. Late flowering. Different readings: 'Renjyonotama', 'Renjoh-no-tama'. Originated in Kantô area, Japan. Erroneously equated with **Shiragiku** as 'Purity' in the USA.

Renjoh-no-tama. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.212. Different reading for **Renjô-no-tama.**

Renjyonotama. Satô, 1975, *Chûbu no Tsubaki,* p.92. Different reading for **Renjô-no-tama.**

Renken. *Tsubaki Hachiboku Sanbokutsuki Nayose Hanagata Irotsuki Meisai* (Late 19th century); See Yokoyama's article in JCS., 1982, p.104, No.21 with comments on the list of names in

this bibliography. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* See JCS., 1969, *Tsubaki*, No.7, p.27: A medium sized, snow white camellia, double. Originated in Japan. Different reading for **Neriginu.**

Retellino. Mariotti Catalogue, 1924, p.17. Orthographic error for **Rettelino.**

Retic Rose. (*C.reticulata* hybrid). *Camellias,* Y.C. Shen, 2009, p.26 with colour photo; Pink rose form to formal double, large. A chance seedling of **Mandalay Queen** originated by Boskoop Nursery, South Africa.

Reticulata. Lindley, 1827, Edward's *Botanical Register*, XIII, t.1078 where it was described as a 'splendid new species of camellia, *C.reticulata*, **Captain Rawes** Camellia'. The coloured

illustration, t.1078 was taken from a plant brought to England by John Dampier in 1824. However the first plant of this species was brought to England from China by Captain Rawes, who, on one of his voyages, brought a plant for Thomas Carey Parker in 1820. This flowered for the first time in 1826 in England. See also Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 5.

Reticulata Alba Flora. McIlhenny, Jungle Gardens Catalogue, 1941. Synonym for **Shiro--wabisuke.**

Reticulata Alba-Rosea. Wada, 1941, *Japanese Garden Treasures*, p.27. Synonym for **Hatsukari.**

Reticulata Bicolor. McIlhenny, Jungle Gardens Catalogue, 1941. Synonym for **Wabisuke.**

Rettelino. (*C.japonica*), Auguste van Geert Catalogue No.73, 1875-1876, p.69. No description. Mariotti Catalogue, 1924, p.17 as 'Retellino': Vivid rose with bright centre, striped and spotted white. Originated in Italy.

Returning Cloud. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.15. Translation of 'Guixia', Chinese synonym for **Captain Rawes.**

Reubena Helms. (*C.japonica*), Camellia Show Reports, 1950, *American Camellia Yearbook*, p.323: A large, red, semi-double with interspersed stamens; Neyron rose 623/1, about 11 cm across x 4cm deep with 25 petals, obovate, somewhat undulate, channelled in early opening. Centre of flower, slightly spreading cluster of stamens, united for lower third of length; anthers light yellow. Leaves broad-elliptic, rounded base, glossy dark green, 6-8 cm long x 4-5.5 cm wide, coarsely serrate; apices short pointed. Plant habit, upright, open, medium. Flowers mid-season to late. A seedling originated in USA by David L Feathers, Lafayette, California. For black and white photo see p.207, Hertrich, *Camellias in the Huntington Gardens*, 1959, vol.III. Orthographic errors: 'Reabena Helms', 'Reubens Helms'.

Reubens Helms. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivar from Nursery Catalogues*, p.198. Orthographic error for **Reubena Helms.**

Reuel Adams. (*C.japonica*), *American Camellia Yearbook*, 1970, p.169, Reg. No.1099: A 12 year old chance seedling that first bloomed 1962, female parent **Imura**, male parent unknown. Originated by R.T. Adams Sr., Jacksonville, Florida, USA. Plant habit is upright, open and rapid in rate with small, dark green leaves. The semi-double, **Frizzle White** type, is rose variegated with white, with yellow anthers and white filaments. It measure 12 cm across x 6 cm deep with 20 petals. It has good texture, long lasting, drops whole. Blooms mid-season. Orthographic error: 'Revel Adams',

Reuskii. (*C.japonica*), Cachet Catalogue, 1840-1841, p.3. No description. Originated in Italy. (Believed extinct.)

Revelation. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1942-1943. A loose peony, pink and white flower. Originated in USA at Magnolia Gardens, John's Island, South Carolina.

Reverend Claude Fullerton. *(C.japonica),* ACS, *The Camellia Journal,* May 1998, p.18, Reg. No.2450. A large size, coral pink, anemone form chance seedling. Flowers mid-season. Originated by John Fowler, Smithville, Ga., USA. *American Camellia Yearbook,* 1998, p.6, colour photo before p.1. The 9 year old seedling first flowered in 1996. Average flower size is 12.7 cm across x 3.8 cm deep, with 24 petals, 22 petaloids, golden anthers and cream filaments. Plant growth is spreading and average, with light green leaves 8.2 cm long x 3.8 cm wide.

Reverend Connie Johnson. (*C.japonica*), *American Camellia Yearbook,* 1966, p.98, Reg. No.874 as 'Rev. Connie Johnson': A 7 year old chance seedling that first bloomed 1962; originated by the Julington Nurseries, Jacksonville, Florida, USA. Plant habit is upright, open and rapid in rate with dark green leaves, 7.5 cm long x 5 cm wide. The peony form flower is 11 cm across x 6 cm deep. It is a bright tomato-red with golden anthers and white to red at base filaments. Blooms early to mid-season.

Reverend Ida. *(C.sasanqua).* Camellia Forest Nursery Catalogue, 2008, p.7; Small semi-double of an intense dark reddish-pink. A seedling of **Shishigashira** with a similar spreading, compact growth. Early flowering. Originated by Tom Dodd Jr, Semmes, Ala., USA.

Reverend John Bennett. (*C.japonica*), Wilson, 1930, *Home and Garden*, 57(3):158. Description not seen; Hume, 1931, *Azaleas and Camellias,* p.33: Double salmon pink to rose-pink with veined petals. Size 11 cm across x 5 cm deep with 13 outer petals in 2 rows averaging 6 cm long; the inner petals, surrounding about 60 stamens, are faintly variegated with white. Leaves long-oval, glossy dark green, undulate, margins shallowly, bluntly serrated, 9.5 cm long x 4.5 cm wide. Plant habit, loose, upright, spreading growth. Blooms mid-season to late. Probably an old Magnolia Garden's Seedling. See colour pl, Fendig, 1949, *American Camellia Catalogue.* Abbreviations: 'Rev J. Bennett', 'Rev. John Bennett'. Sport: **Reverend John Bennett Variegated.** Chinese synonym 'Liweide'.

Reverend John Bennett Variegated. (*C.japonica*), Gerbing's Azalea Gardens Catalogue, 1938-1939: Red and white semi-double flower 8-10 cm across, very compact, bushy growth. Mid-season blooming. Very profuse. Originated in USA. See black and white photo, p.297, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I. Abbreviations: 'Rev. John Bennett Variegated', 'Rev. John Bennett Var', 'Reverend John Bennett Var.'

Reverend John Bowman. (*C.japonica*), Griffin, ed., 1957, *Camellian*, p.19. Description not seen. *American Camellia Quarterly*, 13(4),1958 as 'Rev. John Bowman': A 14 year old chance seedling originated by Dr Gilbert E. Fisher, Union Springs, Alabama, USA. The flower, 12.5 cm across x 7.5-8. cm deep is the colour of 'Pink Perfection' (**Otome**) and resembles a loosely constructed **Debutante.** There are 20-25 petals. Blooms mid-season to late. *American Camellia Yearbook,* 1958, Reg. No.347. Abbreviations: 'Rev. John Bowman', 'Rev. J. Bowman'. Orthographic error: 'Rev. John Boman'. Sport: Reverend John Bowman Variegated.

Reverend John Bowman Variegated. (*C.japonica*), SCCS, 1960, *Camellia Nomenclature*, p.96 as 'Rev. John Bowman Var.': A virus variegated form of **Reverend John Bowman** - Shell pink variegated with white. Originated in USA. Abbreviations: 'Rev. John Bowman Var', 'Rev. John Bowman Variegated'.

Reverend John Bryant. (*C.japonica*), *American Camellia Yearbook*, 1967, p.232, Reg. No.938 as 'Rev. John Bryant': A 9 year old chance seedling that first bloomed 1962; originated by the Reverend John R. Bryant, Shreveport, Louisiana, USA. Plant growth is upright and average, rapid in rate with dark green leaves, 12.5 cm x 4.5 cm. The formal double flower is 12.5 cm across x 6 cm. deep. Colour is white to delicate light orchid. Occasionally produces a rose form double bloom with yellow stamens. Blooms mid-season.

Reverend John Drayton. Magnolia Gardens and Nursery Catalogue, 1942-1943. Abbreviation for **Reverend John G. Drayton.**

Reverend John G. Drayton. (*C.japonica*), Simon's Nursery Catalogue, 1938. Description not seen. Gerbing's Azalea Gardens Catalogue, 1938-1939 as 'Rev. John G. Drayton': A loose peony form of deep pink, petals wavy, intermingled with golden stamens, tall angular growth, light green foliage. Early bloomer. See p.299, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I: Flower 8 cm across x 3.8 deep. Outer petals obovate, notched apices; centre of flower consists of folded, erect petals intermixed with inconspicuous stamens. Leaves medium sized, light green, 8 cm x 4.5 cm, apices abruptly acuminate, small serrations on a plant of vigorous, compact, upright growth. Believed to be a seedling originated at Magnolia Gardens, John's Island, South Carolina, USA and named for the founder. Synonym: 'Mary E.M.'. Abbreviations: 'Rev. John G. Drayton', 'Rev. J.G. Drayton', 'Rev. John Grimke Drayton', 'Reverend John Drayton', 'Rev. John Drayton' 'John G. Drayton' 'John C. Drayton'. Note: A white cultivar erroneously carried this name in California. It was known in the Eastern States as 'Alba Superba' [**Alba Superba (MG)].** Sport: **Reverend John G. Drayton Variegated.**

Reverend John G. Drayton Variegated. (*C.japonica*), SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* A virus variegated form of **Reverend John G. Drayton** - Deep pink and white. Originated in USA.

Reverend Lawrence V. Bradley. (*C.japonica*), ACS., 1989, *The Camellia Journal*, vol.44, No.3, p.9, Reg. No.2149 as 'Rev. Lawrence V. Bradley': Medium size, soft pink, formal double *C.japonica* chance seedling of **Elizabeth Boardman.** Blooms mid-season to late. Originated in USA by Walter A Wilson. *American Camellia Yearbook*, 1989, p.127, colour photo [p.135] as 'Rev. Lawrence V. Bradley': The 10 year old seedling first bloomed 1983. Average flower size, 10 cm across x 4 cm deep with 78-102 petals. Plant growth is average and medium with light green leaves, 7.5 cm long x 3.8 cm wide.

Revere's Baby Pink. (*C.japonica*), SCCS., 1964, *Camellia Nomenclature*, p.106: Light pink shading to rose-pink at edge. Small, semi-double. Medium, upright growth. Blooms early to late. Originated by Mrs F. Revere, Theodore, Alabama, USA.

Revere's Variegated. (*C.japonica*), River View Nursery Catalogue, 1957-1958, p.8. Description not seen. Originated in USA.

Reverie des Fleurs. (*C.japonica*), McIlhenny, 1937, *600 Varieties of Camellias*, p.12: Small, formal double, pale amaranth pink, irregularly flecked and spotted white; many rows of petals gradually reducing in size to the centre; inner petals narrow and long with a group of tiny, upstanding petals in the centre. (McIlhenny, 1948-1949 Cat.) Flowers mid-season. Originated by McIlhenny, Avery Island, Louisiana, USA.

Ridolfi. (*C.japonica*), Cachet Catalogue, 1840-1841, p.3. No description. Burnier Catalogue Supplement, 1842. No description; Colla, 1843, *Camelliografia*, [Illustr.], p.130 as 'Ridolphii': Complete double, irregular 9 cm across; outer rows, 3-4 with regular petals, rounded, ovate; those of the interior, very small, forming an irregular tuft. Vivid red with a few streaks of white. Originated in Italy by the Marquis Ridolfi. of Florence. van Houtte Catalogue, 1843-1844, 12:ddd as **Ridolfi:** Soft white with wide blood-coloured bands, some petals tender pink standing out from the background. This appears the same as the Berlèse 'Ridolfii-Striata'. Ridolfi, 1848, Catalogo delle Piante, p.9: In the same class as **Triumphans** and **Imperialis** but yet distinct by the greater effect of the increased stripes of vivid red and rose. Note: Some listings use the Marquis Ridolfi's name unchanged, others use the latinised form. It is considered that for uniformity the name will be used unchanged. Orthographic errors: 'Ridolfiana', 'Ridolphiana', 'Ridolphii', 'Rudolpi', 'Rudolphi', 'Ridolphi', 'Rudalphi', 'Ridolfii'. Synonyms: 'Caterina Ridolphi', 'Ridolfi Marchese', 'Comte Ridolfi', 'Ridolphii-Bonardiana', 'Marquis Ridolfi', 'Ridolfiana'. Chinese synonym 'Lidaofei'.

Ridolfi Bianco. (*C.japonica*), Burdin Maggiore & Co. Catalogue, 1855-1856, as 'Ridolfii Bianco'. No description. Originated in Italy. (Believed extinct)

Ridolfi Marchese. Burnier & Grilli Catalogue, 1846-1847. Synonym for **Ridolfi.**

Ridolfi Nobilissima. (*C.japonica*), Burdin Maggiore & Co. Catalogue, 1845, p.45. No description. Ibid, 1849-1850, Catalogue Général: Vivid rose, imbricated in a spiral. Lichtenthal, 1852, *Manuale botanico enciclopedica popolare:* Vivid rose, imbricated in a spiral. Originated in Italy.

Ridolfi Striata. (*C.japonica*), Burnier Catalogue Supplement, 1842; Berlèse, 1843, *Iconographie*, vol.2, pl.128 as 'Ridolphii Striata': The flower is 9-10 cm across; full, of a soft white with stripes and band of blood red, irregularly placed, principally on the petals of the circumference; these are oval, somewhat broad, entire, often rounded and notched. The middle petals are numerous, unequal, irregularly disposed and forming a convex heart. The entire flower is irregular, however, sometimes more or less imbrication appears in the disposition of the outer petals, those of the centre are then better disposed. 'Ridolfii Striata' was obtained by seed in Florence some years ago by Marquis Ridolfi and was introduced 4 years ago by Mr Bonard, formerly chief gardener for the Marquis. Mr Bonard imported, at the same time a second camellia which he believed was without a name, and which Mr Paillet named *'*Bonardii*'* but was found to have long borne the name **Ridolfi** in Florence. Thus to regularize the nomenclature of these two varieties the first is nominated **Ridolphi Striata** and the second 'Ridolphi-Bonardiana'. Note: As the first camellia is Italian and named in Italy for an Italian Marquise, the Italian orthography takes precedence over the French, also **Ridolfi** has precendence over 'Ridolphi-Bonardiana' due to prior publication. Orthographic variant: 'Ridolphi Striata*'*.

Ridolfi Vera. (*C.japonica*), Burdin Maggiore & Co, 1849-1850, Catalogue Général. No description. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare:* A bright rose coloured formal double, imbricated like **Incarnata.** Originated in Italy.

Rish Number 2. Charmwood Nursery, 1970, ACS., *The Camellia Journal*, vol.25, No.1 as 'Rish No.2'. Synonym for *C.oleifera.*

Rish Plant. *(C.oleifera)*, Hilsman, 1956, SCCS., *Camellia Review*, 18(8), inside back cover: A small, white, single, early flowering. Petals thin, papery, twisted and recurved - separate, long, narrow, notched. Stamens in a cup, short, numerous, filaments white, anthers yellow. Leaves dull green, oval, acuminate, base tapered, keeled, margins crenate with fine tips. Origin unknown.

Rising Sun. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.137. Synonym for **Hi-no-maru.**

Rising Sun. (*C.japonica*), van Houtte Catalogue, 1845-1846, 23:59: Dark red, very full and pefectly imbricated. Originated in Belgium by Morant. For colour pl. see Verschaffelt, 1852, *Nouvelle Iconographie*, Book IX, pl.I.

Rising Sun (Overlook). (*C.japonica*), Vanderbilt, 1940, *Camellia Research* p.7 invalidly as 'Rising Sun'. No description. SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* Crimson red with darker veins and red stamens, tipped with yellow anthers. Large, single. Medium, bushy growth. Mid-season blooming. Originated in the USA at the Overlook Nursery, Crichton, Alabama.

Rising Sun on the River Yodo. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.126. Synonym for **Yodo-no-asahi.**

Risleri. (*C.japonica*), Cachet Catalogue, 1840-1841, p.3. No description. Originated in France by Baumann. (Believed extinct.)

Ristoni. Backhouse Nursery Catalogue, 1873. Orthographic error for **Ristori.**

Ristori. (*C.japonica*), van Houtte Catalogue, 1841, 7:17: Formal double, roseatte white, flecked and striped with light or dark carmine. Then in his 1844-1845, Catalogue, 18:18 he changes the description to 'Imbricated, violet red with broad, white stripes'. For colour pl. see Verschaffelt, 1852, *Nouvelle Iconographie*, Book V, pl.I as 'Ristorii': Good-sized bloom, ample rounded petals, regularly imbricated, fully emarginated at the summit, slightly incurved at the edges, a rich pink colouring with broad white stripes in the centre of most petals, a heart formed by numerous, small, erect petals. Rovelli, 1852, Catalogue, p.26: Beautifully imbricated violet red with large white border.. This appears a different cultivar. Originated in Italy by Ridolfi. Orthographic errors: 'Ristoni', 'Ristoria', 'Ristorii'. Synonym: 'Il Ristori'.

Ristori (Rovelli). *(C.japonica),* Fratelli Rovelli, 1858, Catalogue, p.26 as **Ristori:** Pure white, very beautiful, well formed flower. Rovelli 1896, Catalogue, p.39: Very beautiful, solid pure white flower. p.42: Imbricated glowing pure white, perfect form. Compact habit. Originated in Italy.

Ristoria. Mariotti Catalogue, 1924. Orthographic error for **Ristori.**

Rita Blythe. *(C.japonica),* ACRS, *Camellia News,* 1996, No.139, p.9, colour photo p.2, Reg. No.464. Registered by Douglas J. Blythe, Kojonup, Western Australia. A chance seedling that first flowered in 1979, and has elegans-form white flowers of 35-45 petals and petaloids, diameter 11 cm. Flowers mid-season on a slow growing bushy plant. Leaves olive green, glossy, flat, elongated, with fine serrations. Petals undulating. Flowers hold on bush.

Rita Thornton. (*C.reticulata* hyb.), ACRS., 1976, *Camellia News*, No.62, p,21, Reg. No.182: Originated by Edgar R. Sebire, Wandin North, Victoria, Australia. Seed parent **Buddha,** first bloomed 1973. The upright, vigorous plant has pink, 15-16 cm across, informal double flowers which open early to mid-season. The dark green, lanceolate leaves, 11.5 cm x 5.5 cm, are acuminate and finely serrate. Chinese synonym 'Lida'.

Ritrosa. (*C.japonica*), Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete,* p.8. No description. Originated in Italy at Giardino Borghese. (Believed extinct.)

Ritrovo d'Amore. Mercatelli Catalogue, 1881, p.34. Synonym for **General Cialdini.**

Rival.(*C.japonica*), Cachet Catalogue, 1840-1841, p.3. No description. van Houtte Catalogue, 1841, 7:18.: Dark, poppy red, peony form, Centre petals slashed with white. Then in van Houtte 1844-1845 Catalogue, 18:18: Deep poppy-red peony, flashed with white. Originated in Italy.

River Farm Beauty. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2004, p.24 with colour photo; Reg. No.2629. A cross of **Mrs Bertha A. Harms** x 'Variety Z' **(Z),** first flowered 1992, introduced in 2006. Originated by Dr William L. Ackerman, Ashton, Md., USA. The rose form double flower is 9 cm across, bright crimson red, with 24 petals and 6 petaloids. Cold hardy to -5º F. Flowers mid-season to late. *American Camellia Yearbook,* 2004, p.95, colour photo p.c3. Flower has yellow anthers and creamy filaments. Plant is dense with slow growth rate. Dark green leaves are 7.5 cm long x 3.8 cm wide.

River Nova. Catalogo della Stablimento Agrario-Botanico di Castagnola e Casabono, 1867-1868. Orthographic error for 'Rives Nova', synonym for **China.**

River Song. (*C.japonica*), Dodd, 1969, *Adventure in Camellia Seedlings*, p.5, colour photo: A very pale pink, rose form double, medium size, seedling of **Elegans;** originated by Richard Dodd, Marshallville, Georgia, USA.

River Tatsuta. Yashiroda, 1950, *American Camellia Yearbook*, p.15. Synonym for **Tatsutagawa.**

Rivers Yeager. Wheeler's Central Georgia Nursery Catalogue, 1955-1956, p.6. Orthographic error for **Rivers Yerger.**

Rivers Yerger. (*C.japonica*), *American Camellia Yearbook*, 1955, p.340, Reg. No.227: A 10 year old chance seedling, originated by Central Georgia Nurseries, Macon, Georgia, USA and first flowered 1950. Plant growth is average, upright, medium, compact with mid-green leaves, oval, abruptly cuspidate and serrate, 8 cm x 4.5 cm. The white flowers are striped with pink, 10-12.5 cm across, range from incomplete double with large mixed petaloids, to complete double irregular, similar to **Lady Loch.** Flowers mid-season. Orthographic error: 'Rivers Yeager'. Sports: **Rivers Yerger Pink, Rivers Yerger Pink Variegated.**

Rivers Yerger Pink. (*C.japonica*), SCCS., 1968, *Camellia Nomenclature*, p.118: A rose-pink sport of **Rivers Yerger.** Mid-season blooming. Originated by Central Georgia Nurseries, Macon, Georgia. Sport: **Rivers Yerger Pink Variegated.**

Rivers Yerger Pink Variegated. (*C.japonica*), SCCS., 1968, *Camellia Nomenclature*, p.118: A virus variegated form of **Rivers Yerger Pink** - Pink and white. Originated in USA.

Riverside. *(C.sasanqua)*, SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.101: White. Large single with white, creped petals. Originated in USA.

Rives. (*C.japonica*), Harrison ed., 1837, *The Floricultural Cabinet*, vol.5, p.172: A hybrid with double, white flowers. Originated in England.

Rives-nova. J.E. von Reider, 1834, Die Beschreibung und Kultur der Azaleen, Cactus, Camelien..., p.220. Berlèse, 1837, *Monographie*, ed.1, pp.107, 130. Orthographic error 'River Nova'. Synonym for **China.**

Rives Nova China. Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.14. Synonym for **China.**

Rivinii. (*C.japonica*), Anon, 1830, "Ueber die Cultur der Kamellien" in *Der Blumen Gaertner*, p.53. Jacob Makoy et Cie Catalogue, 1833. No description. Courtois, 1833, *Magazin d'Horticulture'* 1[pt.D]:316 as 'Rivini': [from] de Rivin. No description. Berlèse, 1837, *Monographie*, ed.1, pp.111, 130: Leaves 8.5 cm. x 3.5 cm, ovate, elongate, acuminate, veined, serrate; petiole 10 mm long, of a pale red, which often extends for a third of the length of the midrib; bud elongate, pyramidal with green scales; flower 8 cm. across, of a deep orange red, very double; petals of the circumference in several rows, oblong, a little spatulate or spoon shaped, crenate at the apex, and arranged in rows; those of the interior, very numerous, erect and forming a dome as in 'Reewesiana' (**Reevesiana**); of the same colour and form.

Rizhiwan. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.407; Chinese synonym for the Japan Higo **Hinomaru.**

Rizzio. (*C.japonica*), RHS., *Journal*, 1852, p.xxxv: Messrs Henderson, St. Johns Wood for a continental camellia named **Rizzio** with two blooms on it, exhibiting the familiar sport of one flower being red, the other with white, faintly striped red. Received an RHS. Certificate of Merit.

Ro-akari. (Fire Glow of the Hearth). *(C.japonica)*, Seibu Maizuru Institute of Botany, 1991-1992, *Seibu no Tsubaki*, No.315: Single white striped red, cup-shaped with cylindrical stamen cluster. Small to medium size. Originated in Ishikawa Prefecture, Japan.

Roalina. (*C.japonica*), Harrison ed., 1837, *The Floricultural Cabinet*, vol.V, p.172: Pale or light red flower. Medium size. Originated in England. (Believed extinct.) Orthographic errors: 'Roaline', 'Roalino'.

Roaline. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.199. Orthographic error for **Roalina.**

Rob Roy. *(C.reticulata* hyb.), SCCS., 1972, *Camellia Nomenclature*, pp.158, 159: Pale pink with a deep pink edge. Medium to large, semi-double with irregular petals. Medium, upright, bushy growth. A seedling of *C.reticulata* 'Shot Silk' (**Dayinhong**) x *C.x williamsii* **J.C. Williams;** originated by T.E. Crosen, Simi, California, USA. Chinese synonym 'Luoyi'.

Rôbai. (Old Japanese Apricot). (*C.chekiangoleosa* hybrid). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan)*, 2010, p.284 with colour photo; Large red single flower, bowl-formed petals, stamens ume-jin (apricot type). Flowers early to mid-season. Leaves ovate, medium size. Upright, vigorous growth. A cross of **Tamagasumi** x *C.chekiangoleosa*, originated and named by Shinichi Noguchi, Tokyo, Japan, released in 2004.

Robbie. (*C.cuspidata* x *C.saluenensis)*, James, 1958, NCCS, *Bulletin*, vol.12, No.1, p.13: Deep orchid pink. Large semi-double. Slow, compact, upright growth. Mid-season blooming. A seedling of **Sylvia May** originated by V. James, California, USA. Orthographic error: 'Robby'. Chinese synonym 'Luobiye'.

Robbie Anne. (*C.japonica*), SCCS, 1962, *Camellia Nomenclature*, p.90:.Old Rose blotched and spotted white. Large, semi-double, with yellow stamens occasionally mixed with inner petals and petaloids. Blooms mid-season to late. Originated in USA.

Robbioni. (*C.japonica*), Isola Madre Catalogue, 1845.No descripton. Originated in Italy. (Believed extinct.)

Robby. Stewart's Nursery, Savannah Catalogue, 1964, p.2. Orthographic error for **Robbie.**

Rôben-tsubaki. *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.306. Synonym for **Norikoboshi.**

Robe of Feathers. Waterhouse, 1962, ACRS., *Camellia News*, No.9, p.3. Synonym for **Hagoromo.**

Robersoni. de Bisschop Nursery Catalogue, 1937. Orthographic error for **Robertsonii.**

Roberstonii. Franchetti, 1855, *Collezione di Camelie*, p.55. Orthographic error for **Robertsonii.**

Robert Buntin. (*C.japonica*), Dodd, 1968, *Adventure in* Camellia *Seedlings*, p.6, colour photo: Medium sized, irregular semidouble, deep pink with orchid tonings; outer petals oblong, irregular, notched and folded; centre consists of fascicles of stamens divided by a few, small, erect petals. A seedling of **Imura** originated by Richard Dodd, Marshallville, Georgia, USA.

Robert Casamajor. (*C.japonica*), SCCS., 1945, *Camellias*, p.17: Rose red, semi-double. Fendig, 1952, *American Camellia Catalogue:* Small, deep crimson, semi-double, 6 cm across x 5 cm. deep. The flower is cup-shaped and similar to 'Madame Jannoch' but the colour is deeper and petals more numerous. Holds colour well with age. Petals are spoon shaped, centre petals erect, forming a cup surrounding the stamens; filaments pink-red, anthers yellow. Foliage medium dark green, oval, 7 cm x 3.2 cm. Bends upward from the midrib. Tip long and slender, serrulate on a compact, bushy plant. Originated in the Huntington Botanic Gardens, San Marino, California, USA. It is a seedling of **Madame Jannock,** a locally renamed Japanese import. Sport: **Robert Casamajor Variegated.** Chinese synonym 'Luobete'.

Robert Casamajor Variegated. (*C.japonica*), Funchess, 1951, *American Camellia Yearbook*, p.35 as 'Robert Casamajor Var.': A virus variegated form of **Robert Casamajor** - Turkey red, variously marbled with white. Originated in USA.

Robert Dunn. (*C.japonica*), McDonald Camellia Nursery Catalogue, 1962: Rose-pink to rose-red with a silky satin sheen. Large, loose, peony form. Originated by McDonald Nursery, Beech Island, North Carolina, USA.

Robert E. Lee. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1942-1943. Originated at Magnolia Gardens, John's Island, South Carolina, USA. An extremely dark red; in mid-season it opens almost black buds into glowing, dark red, irregular, loose, semi-double flowers. The veins in the petals are even darker in colour. Stamens are red with a few petaloids. For illustration see Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I, p.303, description p.302. Synonym: 'General Robert E. Lee'. Abbreviations: 'General Lee', 'Gen. Robt. E. Lee', 'R.E. Lee'.

Robert Fortune. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Songzilin.**

Robert Fowler. *(C.reticulata* hyb.), *American Camellia Yearbook*, 1982, p.178, Reg. No.1839: A very large, red, semi-double C.reticulata ['Crimson Robe' (**Dataohong**) x **Jean Pursel**], mid-season to late blooming; originated by Frank Pursel, Oakland, California, USA. The 6 year old seedling first bloomed 1981. Average flower size is 15 cm across x 7.5 cm, deep. Anthers are yellow. Plant growth is spreading and dense with dark green leaves, 10 cm x 7 cm.

Robert Hendrick. (*C.japonica*), Fendig, 1951, *American Camellia Catalogue:* Large rose-pink with light pink petaloids, incomplete double (anemone form), 12.5 cm across x 6 cm deep. Small petaloids are interspersed with stamens. Buds are large, oval, with a light brown colour. Leaves are medium green, elliptic, apices acute on a plant of open hardy growth. First flowered 1947. Originated by Robert Hendrick, Greensville, Alabama, USA as a seedling of 'Robin Hood'. *American Camellia Yearbook*, 1954, Reg. No.103.

Robert Henty. (*C.japonica*), ACRS., 1975, *Camellia News*, No.58A, p.9, Reg. No.169: Originated by Henry J. Henty, Balwyn, Victoria, Australia. A mutant of **Charles Henty;** originated in 1968. White with pink stripes and markings. In all other respects identical with its parent.

Robert Hills. (*C.japonica*), *American Camellia Yearbook*, 1981, p.104, Reg. No.1708: A medium to large, dark pink with white petals, formal double, *C.japonica* chance seedling. Mid-season blooming. Orignated by Ferol & Sam Zerkowsky, Tammia Nursery, Slidell, Louisiana, USA. The 6 year old seedling first bloomed 1978. Average flower size 10 cm across x 6 cm deep with 56+ petals, some petals imbricated, 12-15 rows, moired effect. Plant growth is upright, average and medium in rate with dark green leaves, 8 cm. long x 5 cm wide. See colour photo, back cover, ACS., 1981, ACS., *The Camellia Journal*, vol.36, No.1.

Robert Lasson. *(C.japonica),* A. Stervinou, Catalogue 2008, p.11; Medium size semi-double, dark red mottled with white. Central column of stamens with gold anthers. Discovered in Japan by R. Lasson, and possibly already named there.

Robert Lowell Cooper. (*C.japonica*), ACS., 1986, *The Camellia Journal*, vol.41, No.3, p.17, Reg. No.2014: Medium, vibrant deep red, formal double *C.japonica* (**Letitia Schrader** x **Dr Tinsley**). Flowers mid-season. Originated by Mrs Henry S. Stone, Baton Rouge, Louisiana, USA. *American Camellia Yearbook*, 1986, p.93: The 17 year old seeding first bloomed 1975. Average flower size 10 cm across x 2.5 cm deep with 78+ petals, about 12 tiny petals in the centre. Plant growth is slow and average with medium green leaves, 8 cm long x 5.5 cm. wide.

Robert Martin. Hume 1951, *Camellias*, pp.95, 149. Synonym for **Woodville Red.**

Robert McNeese. (*C.japonica*), *American Camellia Yearbook*, 1982, p.178, Reg. No.1810: A small, soft pink, anemone to rose form double to formal double *C.japonica* chance seedling; originated by Robert McNeese, Bogalusa, Louisiana, USA. The 8 year old seedling first bloomed 1974. Average flower size is 6-7.5 cm across x 2.5 cm deep with 55 petals and 36 petaloids with a crinkled, flat centre. Plant growth is average, compact and medium with dark green leaves, 7.5cm long x 3.8 cm wide.

Robert Norton. (*C.japonica*), Overlook Nursery Catalogue, 1944. Our seedling No.156: Large size, semi-double, 10-12.5 cm across, comprised of 17 large, thick, obovate petals and numerous yellow stamens. White with one or two narrow pinkish stripes. Leaves medium to large, obtuse and of a leathery texture. Early blooming. SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* White with one or two narrow pink stripes. Large, semi-double. Medium, compact growth. Originated by K. Sawada of Overlook Nursery, Crichton, Alabama, USA from Japanese seed. First flowered 1933. Sport: **Jean Norton.**

Robert 0. Rubel. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue:* Pink. Complete double. Mid-season blooming. Originated in the USA.

Robert Peel. (*C.japonica*), Fratelli Rovelli Catalogue, 1852, p.26. Large size, light red, marbled at the centre. Originated in England.

Robert Plunket Day. (*C.japonica*) Dodd, 1968, *Adventure in Camellia Seedlings*, p.3, colour photo: Large, bright red, peony form double with some golden stamens visible. Originated by Richard Dodd, Marshallville, Georgia, USA.

Robert Strauss. (*C.japonica*), Haworth, 1987-1988, RHS., *Rhododendron with Magnolias and Camellias*, p.92. Exhibited as a semi-double by D. & R. Strauss. A sport of **Cinderella,** semi-double, carmine rose veined deeper rose madder and fading to white at the petals margins. Early flowering. Dense, bushy habit. Very similar, if not the same as **Raspberry Ice.**

Robert Train. (*C.japonica*), Wheeler's Central Georgia Nursery Catalogue, 1967; *American Camellia Yearbook*, 1967, p. 163, Reg. No.890: A 10 year old chance seedling, originated by Wheeler's Central Georgia Nursery, Macon, Georgia, USA. Plant habit is upright and medium with dark green leaves, 7.5 cm long x 3.8 cm wide. The semi-double flower is 11 cm across x 5 cm deep with 18 petals and 4-12 petaloids. Very dark red with yellow anthers. Rabbit ears with occasional white or red trumpet petaloid. Blooms early to mid-season. Sport: **Robert Train Variegated.**

Robert Train Variegated. (*C.japonica*), SCCS., 1968, *Camellia Nomenclature*, p.119: A virus variegated form of **Robert Train** - Very dark red, heavily variegated with white. Originated in USA.

Robert Walker Wilder. (*C.japonica*), *American Camellia Yearbook*, 1965, p.98, Reg. No.811: A 5 year old chance seedling that first flowered 1964; originated by R.W. Wilder, Fairhope, Alabama, USA. Plant growth is open and average with dark green leaves, 10 cm long x 5 cm wide. The anemone form flower measures 12.5-13 cm across x 5-6 cm deep. The colour is light red with yellow anthers and white filaments. Large, loose petals form rabbit ears in the centre. Small groups of stamens amongst the petaloids. Blooms mid-season.

Roberta. (*C.japonica*), Waterhouse, 1952, *Camellia Trail*, p.19. A large, light pink sport of **Paul Jones.** Originated by E.G. Waterhouse, Gordon, N.S.W., Australia.

Roberta Hardison. (*C.japonica*), ACS 1992, *The Camellia Journal*, vol.47, No.4, p.13. Valdosta Camellia Scions. No description. *American Camellia Yearbook*, 1992, p.39, Reg. No.2240: A large size, deep rose with purple overtones, formal double *C.japonica* chance seedling that blooms mid-season. Originated in USA by D.P. Hardison, Tallahassee, Florida. The 8 year old seedling first flowered 1987. Average flower size is 10 cm across x 5 cm deep with

approximately 109 petals. Plant growth is upright, average and medium in rate with dark green leaves 10.5 cm long x 5 cm wide. See colour photo between pp.40-41.

Roberta Ragland. (*C.japonica*), *American Camellia Yearbook*, 1959, p.280, Reg. No.433: A 9 year old chance seedIng, originated by W.W. Ragland, Orange, California, USA that first bloomed 1956. Plant growth habit is upright and open. The dark green leaves average 8 cm long a 5 cm wide. The cameo pink, semi-double flowers, 10 cm across x 5 cm deep have 20 petals - 10 outer petals, 4.5 cm x 4.5 cmm, 6 folded petals, 5 cm long, and 4 small petals in a mass of cream coloured petaloids. Blooms early to midseason.

Robertii. (*C.japonica*), Verschaffelt, 1844, Catalogue, No.50, p.23. Cachet Catalogue, 1845-1846, p.7, as 'Roberti': No description. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, vol.40, p.80: Flower 10 cm. across, ranunculiform, full, silky flesh-rose. Petals in 7-8 rows, well disposed with perfect imbrication. Frères Noisette Nursery Catalogue, 1857, p.38 gives **Schiavone** and **Il Robertii** as synonyms; however the colour given in the original descriptions is quite different and this is rejected. Originated in Italy.

Roberto Van-Zeller. (*C.japonica*). José Marques Loureiro Catalogue No.1, 1865, p.36, & No.9, 1872-1873, p.47: Medium size, formal double, of light pink, veined scarlet and striped with white. Originated in Portugal.

Roberts Jewel. *(C.reticulata), American Camellia Yearbook*, 1980, p.173, Reg. No.1599: A large, rose coloured, semi-double *C.reticulata* hybrid ('Crimson Robe' (**Dataohong**) x [**Arch of Triumph** x No.5]), mid-season flowering; originated by Frank Pursel, Oakland, California, USA. The 5 year old seedling first bloomed 1978. Average flower size, 15 cm across x 7.5 cm deep. The flower has yellow anthers. Plant growth is upright, dense and rapid in rate with dark green leaves.

Robertsonii. (*C.japonica*), Jacob Makoy et Cie Catalogue, 1838, p.10: Very double flower of the same beautiful colour and form as **Corallina.** van Houtte Catalogue, 1841, 7:18: Scarlet. Very fine form. Verschaffelt, 1853, *Nouvelle Iconographie*, Book IX, pl.II: Deserves a choice by reason of the size of blooms, their splendid colouring, a deep poppy crimson with fine veining of the petals which are ample, obovate, full or scarsely emarginate, spread out and imbricated with perfect regularity; in the middle a slight depression makes them somewhat channelled. The centre is composed of smaller, upright, uniform petals. Orthographic errors: 'Robersoni', 'Roberstonii', 'Robertsoni', 'Robertstonii'. Synonym: 'Robertson (2)'.

Robertsonii (1). (*C.japonica*), Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, vol.40, p.76 as 'Robertsoni(1)': In commerce there are two camellias with the name **Robertsonii** of entirely different forms. The first is a peony form, 10 cm. across of vivid cherry-red with a convex centre of a mixture of unequal petals. Originated in Italy.

Robertsonii (2). Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, vol.40, p.76 as 'Robertsoni (2)'. Synonym for **Robertsonii.**

Robertstonii. Rovelli Catalogue, 1902-1903, p.37. Orthographic error for **Robertsonii.**

Robin. (*C.japonica*), Waterhouse, 1952, *Camellia Trail*, p.31: Single, vivid cherry-red (RHS. Chart Cherry 722/3), 6-7 broad petals, obcordate, emarginate at apices and arching outwards, 8 cm across, borne freely at the ends of branches, Buds pointed. Leaves small to medium, narrow, concave and serrate to the base. Early blooming. A seedling originated by E.G. Waterhouse, Gordon, N.S.W., Australia. Synonym: 'Robin'(Australia).

Robin (Australia). SCCS., 1966, *Camellia Nomenclature*, p.114. Synonym for **Robin.**

Robin (Langston). (*C.japonica*), SCCS, 1956, *The Camellia. Its Culture and Nomenclature*, p.61, invalidly as 'Robin': Delicate pink in the centre, fading to palest pink at the outer edge. Medium anemone to loose peony form with slightly waved petals. Vigorous, upright growth.

Blooms mid-season to late. Originated in USA by J.T. Langston, Jr., Darlington, South Carolina.

Robin Rise. (*C.x williamsii*), ACRS., 1982, *Camellia News,* No.83, p.22, Reg. No.286: Originated by F.S. Tuckfield, Berwick, Victoria, Australia as an open pollinated seedling from *C.x williamsii* **Margaret Waterhouse** that first flowered 1972. Flowers salmon pink, semi-double, 10 cm across. Blooms early to mid-season. Leaves 8 cm x 3 cm, mid-green, apices acute. Plant habit upright, vigorous and open.

Robin Ruth Ray. *(C.japonica),* SCCS *Camellia Nomenclature* 2006, p.105. Medium size semi-double. White at centre blending to pink at petal edges. Average, open growth. Originated in 1998 by W. and M.A. Ray, Fresno, Calif., USA.

Robinhood. Coolidge Rare Plant Gardens Camellia Catalogue, (ca.1936). Synonym for **Lady de Saumarez** as 'Wakanoura Red'. Synonym: 'Robinhood I'.

Robinhood I. SCCS., 1950, *The Camellia. Its Culture and Nomenclature, p.*56: Synonym for **Lady de Saumarez** as 'Wakanoura Red'. Orthographic variant for 'Robinhood'.

Robinhood II (*C.japonica*), McIlhenny Catalogue, 1945-1946 invalidly as 'Robinhood'; SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.59: Purplish white with rose-pink stripes and flecks and blotched. Medium semi-double. Mid-season blooming. Originated at Jungle Gardens, Avery Island, Louisiana, USA.

Robinhood III. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1944-1945, invalidly as 'Robinhood'; SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.69: Bright cherry-red. Medium semi-double. Originated in the USA at the Tea Gardens.

Robin's Candy. (*C.japonica*), ACS., Nov. 1990, *The Camellia Journal*, vol.46, No.4, p.18, Reg. No.2190: Medium size, pink with red stripes, formal double. Blooms early to mid-season. Originated in USA by Wilbur & Mary Anne Ray, Fresno, California. *American Camellia Yearbook*, 1990, p.90 with colour photo between pp.90-91. Average flower size 9.5 cm, across x 3 cm deep, with 65-70 petals. Growth habit is uright and medium with dark green leaves, 7.5 cm x 2.5 cm. Sport of **Candy Cone.** Chinese synonym 'Jiejietian'.

Robinson 56. McIlhenny Catalogue, 1947-1948. Synonym for **Chô-no-hanagata.**

Robinson White. (*C.japonica*), Elliot's Nursery Catalogue, 1947-1948: Semi-double. Tissue paper white. Originated in USA.

Robinsonii. (*C.japonica*), Isola Madre Catalogue, 1845. No description. Originated in Italy. (Believed extinct.)

Robiraki. (Opening of Tea Ceremony), *(C.rusticana x C.sinensis),* JCS., 1981, *Tsubaki*, No.20, pp.6-12: Very soft pink miniature, single cupped form. A hybrid from the cross *C.rusticana x C.sinensis* var. *sinensis.* Very early to mid-season blooming. Yokoyama and Kirino, 1989, *Nihon no Chinka*, p.134, colour photo & description: Small size, pink, fading a little at the base, single with 5 crinkled, irregular petals and a central burst of short stamens with yellow anthers. Leaves ovate to obovate, strong green, apices acute, recurved, margins sharply serrate. Originated in Tochio City, Niigata Prefecture, Japan. Collected by Masaharu Kabuto, named and released by Hideyo Katô in 1980. Different reading 'Rohiraki'. Named by Katô, Hidyo.

Rob's Pink. *(C.sasanqua),* Davidson's Nursery - Azalea and Camellia Catalogue, 1985: Medium sized, midpink, semidouble. Originated by W. Hooper, Camellia Vale Nursery, Bexley, N.S.W., Australia. ACRS., 1986, *Camellia News,* colour photo back cover; Reg No.338.

Robyn Dunne. *(C.sasanqua),* ACRS., 1975, *Camellia News*, No.58A, p.9, Reg. No.171: Originated by Alice Spragg, Sutherland, N.SW., Australia. A chance *C.sasanqua* seedling that first flowered 1971. Open, vigorous plant with 10.5 cm. diameter, soft, mauvey blooms with notched, white

tips and some rabbit ears. Blooms early to mid-season. Dark green leaves, 6 cm x 2.5 cm, are lanceolate, medium pointed, distinctly serrate.

Robyn Jay. *(C.japonica),* ACS, *The Camellia Journal*, Sept. 2012, p.26 with colour photo; Regn No.2831; Regd by Mrs Robyn Yankie, Carmichael, Calif. ACS, *Yearbook,* 2012, p.180 with colour photo, as a 14 year old chance *C.reticulata* seedling, originated by Donald Lesmeister, Calif; Large size, 11.5cm x 7.5cm, rose form double flower is bright pink with 35 petals. Yellow anthers and yellow filaments. Upright growth at average rate. Dark green leaves are 11.5cm x 5cm. Late flowering.

Robyn McMinn. (*C.x williamsii)*, ACRS., *Camellia News*, No.40, p.27, Reg. No.128: Originated by Erica McMinn, Camellia Lodge Nursery, Noble Park, Victoria, Australia. Seed parent **Donation**, first bloomed 1967. Plant habit is upright, dense and vigorous. Flowers 9-10 cm across, soft, clear pink flushed deeper pink, formal double blooms. Early to late season flowering. The dark green, 9.4 cm long x 4-4.5 cm wide, lanceolate leaves have a prominent midrib and shallow serrations.

Rocchi. Burdin Maggiore & Co. Catalogue, 1855-1856. Orthographic error for **Rochii.**

Rochii. (*C.japonica*), Verschaffelt Catalogue, 1849-1850, p.49. No description or history. Originated in Italy. Orthographic error: 'Rocchi'. (Believed extinct.)

Rocco. *(C.reticulata). American Camellia Yearbook*, 1992, pp.37, 38, Reg. No.2262: A very large, rose red semi-double, *C.reticulata* **Mouchang** x 'Purple Gown' (**Zipao**), that blooms early to late season. Originated by Jack Mandarich, Menlo Park, California, USA. The 11 year old seedling first flowered 1985. Average flower size is 13 cm across x 5.5 cm deep with 18 petals and golden anthers. Commercially introduced 1991 by Dean's Nursery, Lucedale, Catalogue. Plant growth is upright and average with dark green leaves 13 cm long x 5.5 cm wide.

Rochelle. *(C.japonica),* ACS, *The Camellia Journal*, Sept. 2003, p.13 with colour photo, Reg. No.2602. A semi-double to rose form double chance seedling, pink with red dashes. Blooms early to late. Originated by Robert Ehrhart, Walnut Creek, Calif., USA. The 12 year old seedling first flowered in 1998. *American Camellia Yearbook*, 2003, p.66, colour photo p.c5. Flowers measure 8.2 cm across x 3.2 cm deep, with 60 petals and 20 petaloids. The dark green leaves are 10 cm long x 3.2 cm wide.

Rodds. Camellia Grove Nursery Catalogue, 1944. Synonym for **Carlotta Papudoff**.

Rodiana Superba. *(C.japonica),* L.L. Liebig, 1839, *Verzeichnis von Warmen und Kalten Hauspflanzen...,* p.10. No description. Originated in Germany. (Believed extinct).

Rodolfo Giorgetti. (*C.japonica*), *R. Società Toscana di Orticulture Bolletino*, 1876: A large, formal double flower, light red striped with white. Well imbricated. Originated in Italy by Santarelli, Florence as a seedling of 'Imbricata Rubra'.

Rodomonte. van Houtte Catalogue, 1841, 7:18. Orthographic error for **Rhadamante**.

Rodschildiana. Louis Leroy, 1863, Catalogue, p.124. Orthographic error for **Rothschildiana.**

Roger Hall. (*C.japonica*), ACRS., 1979, *Camellia News*, No.72, p.26, Reg. No.215: Originated by Roger Hall, Tea Tree Gulley, South Australia. A chance *C.japonica* seedling with a vigorous, upright, dense habit of growth. Flowers are formal double, 6.5-7.5 cm. across, clear red. Blooms early to late season. The leaves are lanceolate, dark green, 9 cm x 4.5 cm, medium pointed, finely serrate. Chinese synonym 'Heer'.

Rogersonii. (*C.japonica*), Vanderbilt, 1940, *Camellia Research*, p.7. No description. Originated in USA. (Believed extinct.)

Roget's White. Wall Cottage Nursery Catalogue, 1982, p.5. Corruption of the Japanese name **Rôgetsu.**

Rôgetsu. (December), (*C.japonica*), Minagawa, 1933, *Chinkashû:* White. Early to mid-season blooming. Belongs to the **Shiratama** group. Tuyama, 1968, *Camellias of Japan*, pl.15, p.8, description, p.89: Leaves thick, deep green, roundish-elliptic, broadly ovate, shortly caudate, prominent venation, sharply serrate. Flowers single, pure white, widely opening; petals 5-6, waved and reflexed at the margins, compact stamen column, joined for lower third; anthers yellow. A famous cultivar in the Kansai district of Japan. Very old trees are found around Ikeda City, Ôsaka Prefecture. Described as 'Kakuba-shiratama' by Minagawa, 1933; however **Rôgetsu** is an older name in the Kansai district. 'Rô' = waxing and 'getsu' = month, in this case December of the lunar calender, alluding to the early flowering of this cultivar. For colour photos & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.49, p.90 & p.303; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.82, p.63; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.163, 257; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.33, p.12 as 'Rohgetsu'. Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.48, 49. Synonyms: 'Bonshiratama' in the Chûbu area and 'Shirorôgetsu', 'Kakuba-shiratama'. Parent of: **Shibori-rôgetsu**, **Aka-rôgetsu**. SCCS., *Camellia Nomenclature* gives 'Oborozuki' and 'Seiganji' as synonyms. While 'Oborozuki' is a different reading of the characters for **Rôgetsu**, the first character 'Rô' = 'oboro' is different and translates as 'hazy'. **Oborozuki** means 'Hazy Moon' and is actually a different cultivar to **Rôgetsu**; both being listed separately by Satomi, 1956. It is also the name of an ancient variety listed in Sakuden's *Hyakuchinshû*, 1630. **Seiganji** is also a different cultivar being a white with red spots, double camellia listed by Mizuno, 1681, *Kadan Kômoku.* Corruption of the name: 'Roget's White'. Different reading: 'Rohgetsu', 'Rowgetsu'.

Rogetsu. (Dew Moon), (*C.japonica*), Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1. First character different, 'Ro' = dew. No description. Originated in Japan.

Rôgetsu. With first character for 'hazy'. Different reading for **Oborozuki.**

Rôgetsu-aka. Kanaoka Catalogue, [Ca.1957]. Synonym for **Aka-rôgetsu.**

Rôgetsu-nishiki. McIlhenny Catalogue, 1941. Synonym for **Shibori-rôgetsu.**

Roi des Beautes. Jean Verschaffelt, 1863-1864, Price List, p.42. Orthographic error for **Reine des Beautés.**

Roi des Belges. (*C.japonica*), van Houtte Catalogue, 1864-1865, 104:79, as 'Contessa Lavinia Maggi Roi des Belges'. See also van Houtte, 1877, *Flore des Serres…,*vol.22, p.185, pl.2356-57: A virus

variegated form of **Lavinia Maggi Rosea;** originated by Dominique Vervaene and first exhibited in Brussels about 1864. Its flowers are large, of different colours on the same plant, sometimes self red (**Lavinia Maggi Rosea**), sometimes red with splashes of white. Synonyms: 'Contessa Lavinia Maggi Roi des Belges', 'Contessa Lavinia Maggi Multicolor', 'Contessa Lavinia Maggi Nuova'. Orthographic error: 'Roi de Belges'.

Roi des Blanches. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.200. Orthographic error for **Roi des Blancs**

Roi des Blancs. (*C.japonica*), Ambroise Verschaffelt, 1852-1853, Catalogue, p.20. No description. Veitch Catalogue, 1856. Description not seen. Verschaffelt, 1857, *Nouvelle Iconographie*, Book IV, pl.III: With perfect imbrication, snow-white colouring, flat, outspread surface, it is one of the most beautiful camellias. It was obtained from seed by L. Hellebuyck of Gentbrugge-lez-Gand, Belgium. Orthographic errors: 'Roi de Blanc', 'Roi des Blanches'.

Roi des Pays-Bas. (*C.japonica*), Jacob-Makoy, 1828, Catalogue, p.5. No description. Debonnaire, 1832, *Annales de la Société d'Horticulture de Paris*, 11:15-20. A new cultivar in Berlèse collection of 88. Courtois, 1833, *Magazin d'Horticulture*, 1[pt.D]316 as 'Roi des P.B.'. No description. Berlèse, 1843, *Iconographie*, Index. With reference to pl.161: Flowers usually 9 cm across, sometimes 10, a rose form double, dark cherry-red, showing a flat crimson red or carmine mixed with vermilion. Exterior petals are not numerous, broad, rounded, channelled, reflexed and imbricated with somewhat regularity; those of the centre are small, of different forms and irregularly placed with some stamens visible in the centre. Synonyms: 'Rex Bataviae', 'Superba', 'Rubra Excelsa'. Orthographic errors: 'Rois des Pays Bas', 'Roi de Pays Bas'. Abbreviation: 'Roi des PB'.

Roi des P-B. Jacob Makoy et Cie Catalogue, 1836, p.17. Abbreviation for **Roi des Pays-Bas.**

Roi Leopold. (*C.japonica*), van Houtte Catalogue, 1851, 44:24: Magnificent formal double, very round, vivid pink petals, all splashed with white and a central white line; compact, upright growth. Blooms mid-season. Originated in Belgium by Defresne. Synonyms: 'Prince Leopold', 'Leopold I'. Orthographic errors: 'Roy Leopold', 'Rou Leopold', 'Rio Leopold'. Received an F.C.C. from the RHS., in 1865.

Rois des Pays Bas. Arnaud Catalogue, 1939-1840. Orthographic error for **Roi des Pays-Bas.**

Roka. (Ro Aroma), *(C.rosiflora)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.85, colour photo and description: Very small size, soft pink, single of 6-7 petals, some reflexed, in 2 rows, opening saucer-shaped with a central cylinder of stamens, white filaments and pale yellow anthers. Fragrant. Leaves elliptic-lanceolate, dark green, apices long acuminate, margins sharply serrate. Blooms early to mid-season. A natural seedling of *C.rosiflora* origin. "Ro" = rosiflora. "ka" = fragrant. Originated in Okayama Prefecture, Japan. Named and released by Nobuo Sasai in 1978.

Rokka. (Six Petals), (*C.japonica*), Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.9, A-456: Small, white, cup-shaped single that is good for the Chabana ceremony. Early blooming. Originated in Japan.

Rokkau-shiro. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.154. Orthographic error for **Rokkakushiro.**

Rokkakuhaku. JCS., 1983, *Tsubaki*, No.22, p.119. Different reading for **Rokkakushiro.**

Rokkakushiro. (White Hexagon), (*C.japonica*), Itô, Jukyû, 1739, *Honzô Hanamakie*, vol.15; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large, white, formal double, usually of tiered form like a 6 pointed star. Different readings: 'Rokkaku-haku', 'Rokkaku-jiro'. Chinese reading: 'Liujiaobai'. While this camellia is believed to have originated in China where it is still most popular, no prior listing has been located in that country. Therefore the Japanese

reading of the name has priority. See: JCS., 1969, *Tsubaki*, No.7, p.22; ibid, 1982, No.21, p.98; ibid, 1983, No.22, p.119.

Rokkakujiro. Different reading for **Rokkakushiro.**

Rokkasen. ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.41. Different reading for **Rokukasen.**

Rokkô. (Mt. Rokkô). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.286 with colour photo; English translation p.201. Small, purplish red, tubular to trumpet shaped single, thick and channeled petals. Flowers mid-season. Leaves narrowly elliptic, medium size, plicate. Upright growth. Selected from wild japonicas growing in Hyôgo Prefecture. Collected by Yoshihiko Mishama, named and released by Nobuo Sasai in 1981. From Hyôgo to Okayama.

Rokuchôme. (The Sixth Town), (*C.japonica*), *Chinka Zufu*, (before 1700), Watanabe, 1968, pl.304: Small, red, irregular anenone form with ragged, crinkled petals and petaloids, cushion centre. Originated in Japan. (Believed extinct.)

Rokujô. (Sixth Avenue), *(C.japonica)*, Hamamatsu, 1825, *Setsuyô Kikan*, No description. Originated in Japan. (Believed extinct.)

Roma Resorta. Giles & Son Nursery Catalogue, 1881, p.92. Orthographic error for **Roma Risorta.**

Roma Risorta. (*C.japonica*), Lemaire, 1866, *L'Illustration Horticole*, vol.13, pl.465: This variety was obtained from seed by Delgrande, Rome. Italy. The flowers are large, 12 cm across, of the form of a Centifolia rose of bright pink colour, whipped and lined closely with carmine, each petal lightly bordered white. In Australia it has been confused with the local variety **Helenor** which, however, has a paler background and less petals. Sport: **Roma Risorta Rosea.** Orthographic error: 'Roma Resorta'. See colour pl. 131, p.65, *Encyclopedia of Camellias in Colour*, vol.II. 1978. Chinese synonym 'Luoma'.

Roma Risorta Nuova. (*C.japonica*), Mercatelli Catalogue, 1894. No description. Originated in Italy. (Believed extinct.)

Roma Risorta Rosea. (*C.japonica*), Hazlewood Bros. Nursery Catalogue, 1947, p.13: Incomplete double, rose form, crimson, 22/1, veined crimson 22, sport of **Roma Risorta.** Originated in Aus-

tralia by Hazlewood Bros, N.S.W. See p.209, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.3. Synonym: 'Colac Rose'. Note: Hazlewood's 'Roma Risorta Rosea' originally proved to be a rosea sport of **Helenor.**

Romagnesii. (*C.japonica*), van Houtte Catalogue, 1841, 7:18 as 'Romagnesi'. No description. Originated in Italy. Orthographic errors 'Romagnosii', 'Rogmanesii', 'Romagnossii'. (Believed extinct.)

Romagnosii. Verschaffelt Catalogue, 1844-1845, p.29. Orthographic error for **Romagnesii.**

Roman Soldier. (*C.japonica*), Griffin ed., 1958, *Camellian,* vol.IX, No.4, p.14: In the September issue were listed two new camellias from Hugh Shackelford, Albany, Georgia. One was 'Romance' and that name has been changed and registered as **Isle of Capri** while the other, 'Sir Galahad' has been renamed **Roman Soldier** due to names already in use. Very large, thick peony camellia, bright red in colour. It has a beautiful formation and opens to 13-15 cm across. Blooms mid-season. SCCS., *Camellia Nomenclature* lists the ACS., 1961 Reg. No.590, **War Eagle** as a synonym. Sport: Roman Soldier Variegated.

Roman Soldier Variegated. (*C.japonica*), SCCS., 1960, *Camellia Nomenclature,* p.97. Virus variegated form of **Roman Soldier** - Bright red blotched white in various degrees. Originated in USA.

Romana. Vanderbilt, 1941, *Camellia Research, II,* p.6. Abreviation for **Bella Romana.**

Romance. (*C.japonica*), SCCS., 1942, *Classification of Camellias*, p.4: Formal double red, 7.5 cm across. Blooms mid-season. SCCS., *The Camellia. Its Culture and Nomenclature*, p.59: Deep red, medium sized, formal double. Vigorous growth. Blooms mid-season. Originated in USA by Clarence Hearn, Arcadia, California.

Romanensis. Burdin Maggiore & Co, 1849-1850, Catalogue General. Verschaffelt Catalogue, 1858, p.49. Orthographic error for **Romaniensis.**

Romaniana. Guilfoyle, Catalogue of the Melbourne Botanic Gardens, 1883, p.172: Orthographic error for **Romaniensis.**

Romaniensis. (*C.japonica*), van Houtte Catalogue, 1846-1847, 27-31: In the same class as the **Duchesse d'Orleans.** [from] Mariani. For colour pl. see Verschaffelt, 1851, *Nouvelle Iconographie*, Book VIII, pl.I: Regularly imbricated; a delicate roseate white, fasciated with bright pink, with rounded petals, whole or slightly bilobate at apex, the centre a full heart, serried and upright. Originated in Italy as a seedling raised by Negri according to Rovelli. 1852. Orthographic errors: 'Romaniana', 'Romanensis'.

Romanoff. (*C.japonica*), Isola Madre Catalogue, 1845 as 'Romanow'. No description. Berlèse, 1849, *Annales Société Central d'Horticulture de France*, vol.40, p.275: Flower 9-10 cm across, often more, regular rose form, vivid rose or clear cherry-red with touches of pale rose and crimson and an uneven, white stripe, sometimes unicolour. Outer petals broad in the first rows, not numerous, emarginate; centre a bright rose; sometimes composed of a group of small petals. The flower is sometimes rose form, sometimes peony form. Orthographic error: 'Romanow'.

Romanow. Isola Madre Catalogue, 1845. Orthographic error for **Romanoff.**

Romany. (*C.japonica*), Coolidge Rare Plants Garden Catalogue, ca. 1936: Rose-red. Medium sized, formal double. Vigorous, upright growth. Mid-season blooming. Origin unknown. Said by SCCS., *Camellia Nomenclature* to be the same as 'Roi Leopold', but the original descriptions do not match so this is rejected. Synonyms: 'Belgium Red', 'Red Perfection'.

Roméo. (*C.japonica*), van Houtte Catalogue, 1848, 33:15. [from] Boll. No description. Originated in USA. (Believed extinct.)

Romola. Joseph Baumann, 1849, Prix Courant, p.7. Orthographic error for **Romolo.**

Romolo. (*C.japonica*), Verschaffelt Catalogue, 1847-1848, p.62. No description. Verschaffelt, 1951, *Nouvelle Iconographie*, Book VIII. pl.II: Recently received from Italy, it has exquisite blooms of vivid pink like a hundred petalled rose; the petals are considerably emarginate, convex and spread out in the first rows and comparatively much smaller and erect in the centre. de Jonghe, 1851, *Traité de la Culture du Camellia*, p.121: Orthographic error 'Romola'. No description.

Romona. *Camellias,* Y.C. Shen, 2009, p.162 with colour photo; Orthographic error for **Ramona.**

Romulea. (*C.japonica*), Medici Spada, 1858. *Delle Nuova Camellie che si vengono ottenendo dalle Semine Romane,* pp.7, 8: Medium sized flower, perfectly imbricated, the first 4 rows of petals cherry-red, the others intense rose, like a picotee; the same tints are found in grades of varying intensity. Originated in Italy by Delgrande, Rome.

Roncharbar. (*C.japonica*), SCCS., 1858, *Camellia Nomenclature*, p.74: Cream white. Medium sized, semi-double with irregular petals to rose form double. Medium, open growth. Mid-season blooming. Originated by Miss E.W. Boorman, Temple City, California, USA.

Rongguan. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.419. Chinese synonym for the Japan *C.hybrid* **Eikan.**

Rongqia. (Harmony). Shao, Taichong, 1992, *The Observations from the Camellia World,* No.344, p.77. Synonym for the Australian *C.reticulata* hybrid **Simpatica.**

Rongqiu. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.566. From Zheijiang Province, China. No further details.

Rongtuancha. *(C.japonica), Chinese Camellia Culture*, 2003, Appendix, p.566.; Leaf elliptic, base broad and thick, 7-9 cm x 4-5 cm. Flower deep red, 7-8 cm diameter, flat petals in 2 rows, short and thick, apex slightly concave, regular arrangement, stamen petaloids in several bundles, regularly arranged to form a hemisphere shape. Flowers mid-season to late. From Sichuan Province, China.

Rongyao. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.419; Chinese synonym for the USA *C.japonica* **Blaze of Glory.**

Rookwood Waratah. Camellia Grove Nursery Catalogue, 1945, p.5. Synonym for **Speciosissima.**

Roon. (*C.japonica*), Dodd, 1968, *Adventure in Camellia Seedlings*, p.4, Colour photo: A medium sized, deep pink, peony to anemone form with outer petals notched and reflexed and a large cushion of small, twisted and erect central petals, with some whitish petaloids intermixed. A seedling of 'Donckelaeri', (**Masayoshi**), originated by Richard Dodd, Marshallville, Georgia, USA.

Roosevelt. (*C.japonica*), Youtz, 1949, *American Camellia Yearbook*, p.189: **Roosevelt,** a large, informal red, similar to a red sport of **Uncle Sam.** Originated in USA.

Roosevelt Blues. (*C.japonica*), Rubel Catalogue No.79, 1940, 'Introducing Camellia **Roosevelt Blues,** Longview Lot No.333: The flowers are dark blue with a maroon shade and are up to 12.5 cm across, of an open anemone form with large guard petals and a centre of a few small, folded and erect centre petals, with a few petaloids and scattered stamens. The form is variable from a loose semi-double of about 30 petals to a peony form with stamens hidden. Growth is upright and compact. First flowered 1938 when 6 years old. Originated by Robert 0. Rubel Jr., Longwood Nursery, Crichton, Alabama, USA. Rubel was anti-Roosevelt and used this camellia as part of his personal campaign against the election of Roosevelt as President of the USA for a fourth term. Synonym: 'Frankie Bray'. Sport: **Roosevelt Blues Variegated, Roosevelt Blues Pink.**

Roosevelt Blues Pink. (*C.japonica*), Mark Cannon Scion Catalogue, 1962, p.9. A pink sport of **Roosevelt Blues.** Originated in USA.

Roosevelt Blues Variegated. (*C.japonica*), Nuccio's Nurseries Catalogue, 1950-1951 as 'Roosevelt Blues Var.': a virus variegated form of **Roosevelt Blues** - Purplish red variously blotched with white. Originated in USA.

Rôran. (Place name where Ruins of Ancient Chinese Kingdom), (*C.japonica*), JCS., 1987, *Japan Camellia*, No.25, p.13 with colour photo: A seedling of **Berenice Boddy.** Like its parent, it has a white base, graduating to a peach-pink ground. Size, medium to large. Flowers very early to mid-season. Originated in Ishikawa Prefecture, Japan by Tadao Yamaguchi, named and released in 1977. See p.130, Yokoyama & Kirino, 1989, *Nihon no Chinka* colour photo.

Rôranka. (Flower of Rôran), (*C.japonica*), Himuro, 1982, *Mura Suzume:* A medium sized, soft pink, anemone form. Originated in Kanagawa Prefecture, Japan. A seedling of **Mikuni-no-homare.** Originated by Seiji Himuro, registered to the Ministry of Agriculture and Fishery in 1993, No.3492.

Rosalinda. *(C.japonica),* Loureiro Catalogue No.1, 1865, p.31, & No.9, 1872-1873, p.47: Formal double. Delicate pink. Originated in Portugal.

Rosalinda (Garcia). *(C.reticulata),* Sociedad Española de la Camelia, *Camelia,* No.14, June 2009, p.37 with colour photo, as 'Rosalinda'; Large flower, 12 cm diameter, deep pink (RHS.CC. N66C), semidouble, about 20 wavy petals, and up to 50 stamens in 4-5 fascicules. Filaments cream with a pink base, anthers yellow. Petaloides 3-6, irregular form, pink with white markings. Leaves 10 cm x 5.2 cm, dark green (RHS.CC.147A), lanceolate-elliptic. A chance seedling of a reticulata cultivar, originated by Manuel Garcia, Vilagarcia, Pontevedra, Spain.

Rosalinda (McCaskill). *(C.japonica),* SCCS., 1945, *Camellias*, p.15: invalidly as 'Rosalinda': Bright pink. Large, peony form. Vigorous, loose, upright growth. Mid-season blooms. Originated by McCaskill Gardens, Pasadena, California, USA. Orthographic error: 'Rosalind'. For illustration see p.308, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I.

Rosalinda Rilla. Auguste van Geert Catalogue, No.73, 1875-1876, p.69. Orthographic error for **Rosalinda Rolla.**

Rosalinda Rolla. *(C.japonica),* Rovelli Catalogue, 1874. No description. Orthographic errors: 'Rosalinda Rilla', 'Rosolinda Rilla'. Originated in Italy.

Rosaline. *(C.japonica),* Waterhouse, 1949, *Camellia Quest*, p.16. Camden Park Seedling No. 60/52. Originated by Sir William Macarthur, N.S.W., Australia. Never described or distributed. (Believed extinct.)

Rosaline Spang. (*C.japonica*), Buist, Catalogue, 1857-1858, p.11: Rosy crimson. Originated by Buist, USA. (Believed extinct.)

Rosamoena. *(C.japonica),* Seidel, 1846, Pflanzen Catalog, p.10. No description. Originated in Germany. (Believed extinct).

Rosamund. *(C.japonica),* Haskins Bros. Nursery Catalogue, 1954: Rich pink, formal double. Then in the Haskins 1965 Catalogue, p.6, the description was changed to: Peony form, loose petalled, light red. Rapid, open growth. Originated in England.

Rosamunda. *(C.japonica),* William Paul Nursery Catalogue, 1867, p.18. No description. Originated in England. (Believed extinct.)

Rosamundi. Anon, 1830, "Ueber die Cultur der Kamellien" in *Der Blumen Gaertner,* p.53. Barthere, Toulouse Nursery Catalogue, 1838, p.12. Orthographic variant for **Rosa Mundi.**

Rosanna Winspeare. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.140 with colour photo; Medium to large size, semi-double, red (RHS.CC.50A). A seedling of **Tricolor Florentine** x 'Rosa Simplex' **(Aitonia).,** first flowered in 1997. Originated by Dott. Guido Cattolica, Livorno, Italy.

Rosary. *(C.japonica),* Anonymous, 1948, *American Camellia Yearbook*, p.170: This variety was first described as 'Finlandia F.N.' before it was known that **Finlandia** had already been used for another variety. It is a seedling of unknown parentage that first flowered 1938. The large blossoms are soft pink in colour, semi-double with long, fluted and twisted petals. Blooms mid-season. Medium, open, upright growth. Originated in USA at Fruitland Nurseries, Augusta, Georgia. Synonyms: 'Pink Glory', 'Finlandia F.N.', 'Finlandia Pink'.

Rosary Superba. *(C.japonica),* Fruitland Nursery Catalogue, 1956-1957, p.19. A peony form sport of Rosary. Originated by Fruitland Nurseries, Augusta, Georgia, USA. Sport: **Rosary Superba Variegated.**

Rosary Superba Variegated. *(C.japonica),* Fruitland Nurseries Catalogue, 1956-1957, p.19 as 'Rosary Superba Var.'- A virus variegated form of **Rosary Superba.** Pink blotched white. Originated at Fruitland Nurseries, Augusta, Georgia, USA.

Rosary Variegated. *(C.japonica),* Fruitland Nurseries Catalogue, 1948-1949 as 'Rosary Var.': a virus variegated form of **Rosary** - Light pink, variously blotched white. Originated in Fruitland Nurseries, Augusta, Georgia, USA. Synonyms: 'Pink Glory Variegated', 'Finlandia, F.N. Variegated'.

Roscanvel. (Higo). ICS Journal, 2002, p.87, Reg. No.39: An open pollinated seedling of Higo **Hinomaru**. Originated in France by T. & A. Lemaitre, Carquefou. First flowered in 2000 at circa 4 years. An upright shrub of slow growth rate. Flowers moderately mid-season to late. White with red stripes, typically with one stripe darker red (general stripes RHS.CC.54C, darker stripe 46B). A single flat Higo type, 8 cm diameter, with 8 petals and 150 stamens.

Roscii. Berlèse, 1837, *Monographie,* ed.1, pp.102, 129. Synonym for **Rawesiana,** according to Berlèse, 1837, *Monographie*, p.103.

Roscii Minor. Colla, 1843, *Camelliografia*, p.81. Synonym for **Staminea Simplex.**

Roscoe Dean. (*C.reticulata* hybrid). ACS, Aug. 1996, *The Camellia Journal,* vol.51, No.2, p.30, Reg. No.2371. A very large, deep rose pink, semi-double to peony form, **Mouchang** x **Pharaoh.** Flowers mid-season to late. Originated by Marvin Jernigan, Warner Robins, Ga., USA. *American Camellia Yearbook,* 1996, p.4, colour photo before p.1. The 9 year old seedling first flowered in 1990 Average flower size is 15 cm across x 9 cm deep, with 15 petals, yellow anthers and white filaments. Plant growth is upright, spreading, open and vigorous with dark green leaves 12.7 cm long x 3.8 cm wide.

Rose. Ellis, 1953, *Old Camellia Varieties*, p.308. Orthographic error for **Rosea.**

Rose. *(C.japonica)*, Thurburn, J.M., Nursery Catalogue, 1841: Crimson and white, peony flowered. Originated in USA. (Believed extinct.)

Rose Agathe. L.L. Liebig, 1839, *Verzeichnis von Warmen und Kalten Hauspflanzen...*, p.10. Synonym for **Vandesiana Carnea.**

Rose Alba. *(C.japonica)*, Vanderbilt, 1940, *Camellia Research*, p.2. No description. Originated in USA. (Believed extinct.)

Rose and Snow. *(C.japonica)*, Gerbing Azalea Gardens Catalogue, 1941-1942: New Camellia from Middleton Place (Middleton No.31). Semi-double, medium sized flowers which are rose-pink spotted white, and the petaloids in the centre are marked with the stamens. Three rows of petals make up this 8 cm bloom. Long pointed, deep green foliage and bushy growth. Mid-season flowering. Originated in South Carolina, USA. Synonym: 'Emma Ladd'.

Rose Anemone. *(C.japonica)*, McIlhenny, 1934, *List of Camellias for Sale* as 'Rose Emry'; Rubel, 1936, Wholesale Price List, No.74, p.4: The colour of the flowers varies from deep crimson to rose-pink. A medium sized, anemone form. Originated in USA. Synonyms: 'Orient', 'Carnation', 'Carnation Red', 'Orientalis', 'Christmas Glory', 'Rose Emery'. Pseudonyms: 'Fireball', 'Ignescens'. Orthographic errors: 'Rose Emry', 'Rose Emory', 'Rose Enemy'. Note: Rubels conjecture that the various forms of 'Rose Emery' stemmed from a misspelling of the name **Rose Anemone** is accepted as the most likely explanation. In USA 'Rose Emery' is given as a valid name and referred to Berlèse, 1837, *Monographie.* However the only connection with Berlèse camellia is through the pseudonym, **Ignescens** which is a valid name for a different cultivar, being a flat semi-double. Therefore this is rejected.

Rose Ann. (*C.japonica*), Stowe, 1951, *American Camellia Yearbook*, p.282, illustrating facing p.288: Irregular, complete double, 8 cm across x 6 cm deep, of a delicate shade of pink with a lavender tinge at the tips of the petals. Its form is similar to **Debutante**. The plant is a slow, upright grower, blooming mid-season. Originated in USA as a chance seedling, by Mrs & Mr J.L. Kahn, Pensacola, Florida.

Rose Ann (Matthews). *(C.hiemalis)*, ACRS., 1969, *Camellia News*, No.36, p.14, Reg. No.108, invalidly as 'Rose Ann': Originated by H.P. Matthews, East Brighton, Victoria, Australia as a seedling of **Kanjiro** that first bloomed 1967. The flowers are 7 cm across, deep rose, fading as flower ages. Early blooming on an upright, dense, vigorous plant. Flowers incomplete double.

Rose Bouquet. (*C.x williamsii), New Zealand Camellia Bulletin*, 1979, vol.XI, No.3, p.22, Reg. No.152: A seedling of *C.saluenensis x C.japonica* **Tiffany,** raised by F.M. Jury, Waitara, New Zealand and first flowered 1975. Plant growth habit is spreading, of average density and dark green leaves, 7.5 cm x 3.5 cm. The flowers are rose form to formal double with 50 petals, size 12.5 cm across x 7 cm deep; Neyron rose with occasional yellow stamens. Mid-season flowering. See colour photo: *New Zealand Camellia Bulletin*, 1982, vol.XII, No.7, p.25. Chinese synonym 'Meiguishu'.

Rose Bowl. *(C.saluenensis)*, Marchants, Keepers Hill Nursery Catalogue, [ca.1948]: Warm rose pink throughout. Crimped like a cistus. Originated in England by Mr Marchant, Wimborne, Dorset.

Rose Brooks. (*C.japonica*), *American Camellia Yearbook*, 1956, p.64, Reg. No.285: A 15 year old seedling of **Elegans**; originated by Mrs E.R. Harlan, McComb, Mississippi, USA and flowered for the first time in 1947. Plant growth is upright, compact and medium with dark green, oval, crenate leaves. The flowers, 10 cm across, are radiant pink (No.137 Super Kemtone) in colour, with 2735 petals; semi-double and early flowering.

Rose Hill Rubra. Fruitland Nursery Catalogue, 1944-1945, p.27. Synonym for **St. André.** Orthographic variant: 'Rose Hill Red'.

Rose Hollard. (*C.x williamsii), New Zealand Camellia Bulletin*, 1972, vol.VII, No.6, p.35, Reg. No.70: A chance seedling of *C.saluenensis*, originated by B.J. Rayner, Stratford, New Zealand that first flowered 1967. The plant is of a spreading, open habit, the foliage is dark green, 8 cm x 4.5 cm. The flower is a rose form double with up to 32 petals, gold anthers on white filaments, 11 cm across x 5 cm. deep. Its colour is rose-pink and blooms mid-season to late. See colour photos: front cover, 1976, *New Zealand Camellia Bulletin*, vol.IX, No.5; front cover, 1980, SCCS., *The Camellia Review*, vol.41, No.5, erroneously titled 'Mrs George Bell'.

Rose la Reine. *(C.japonica),* Ambroise Verschaffelt, 1854, Catalogue, p.19. No description. Originated in France. Franchetti, 1855, *Collezione di Camelie*, p.55: Enormous flower, full of petals and perfectly imbricated. Carmine rose with darker tints at the tips of the petals, similar in form and colour to Rose 'La Reine'. Burnier Catalogue, 1855-1856: Flower enormous size, petals rich and of perfect imbrication, rosy carmine with darker shading at the extremities. Resembles the rose 'La Reine' in form and colour. Originated in Florence, Italy by Boschi.

For illustration see, Verschaffelt, 1859, *Nouvelle Iconographie*, Book VI, pl.II. Orthographic errors: 'Rose de la Reine', 'Rosa de la Reine'.

Rose Lotus. Synonym for **Meigiulian.**

Rose Madiai. Anderson & Co. Nursery Catalogue, 1902, p.77. Orthographic variant for **Rosa Madiai.**

Rose Magnolia. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.202. Orthographic variant for **Magnolia Rose.**

Rose Mahan. *(C.japonica), American Camellia Yearbook*, 1966, p.98, Reg. No.884: A rose-pink, peony form chance seedling that first bloomed 1962, aged 6 years. Originated by J.R. Murdock Sr., Monticello, Florida, USA. Similar to **Kramer's Supreme** in form. Anthers yellow, filaments pink. Size is 13 cm across x 6 cm deep with 45 petals and 30 petaloids that are twisted and interspersed with the stamens. Colour is bright rose-pink. Blooms mid-season to late.

Rose Mallow. (*C.japonica*), Wilmot, 1943, *Camellia Variety Classification Report*, 1945, p.7; Magnolia Gardens and Nursery, 1945-1946: Soft pink with darker veins. Very large, semi-double. Slow, open growth. Late blooming. Originated by Overlook Nursery, Crichton, Alabama, USA from seed imported from Japan. First flowered 1936. Synonyms: 'Overlook Seedling No.126', 'Frances M. Solomon'. Sport: **Rose Mallow Variegated.**

Rose Mallow Variegated. (*C.japonica*), Fendig, 1950, *American Camellia Catalogue:* A virus variegated form of **Rose Mallow** - Pink with white blotches and dots. Originated in USA.

Rose Marie. (*C.japonica*), McIlhenny, 1935, *List of Camellias* as 'Rose Mary': Deep rose, large, perfect double, opening flat. Magnolia Gardens and Nursery Catalogue, 1946-1947: Rose-pink. Medium, formal double. Medium, compact growth with very large leaves. Blooms mid-season to late. Said to have come from Europe to Magnolia Gardens, Georgia about 1848. Orthographic errors: 'Rose Mary', 'Rosemary'. (Believed extinct.)

Rose Marie Chin. (*C.japonica*), Rubel Catalogue No.79, 1940-1941, p.25: No description. Originated at Longview Nursery, Crichton, Alabama. (Believed extinct.)

Rose of Autumn. *(C.hiemalis)* ACS, *The Camellia Journal*, May 2002, p.12 with colour photo, Reg. No.2564. A seedling of *C.hiemalis* **Kanjiro**, pollen parent unknown. The semi-double to rose form flower is a glowing rose-pink. Flowers early to mid-season. Originated by Robert Green, Jr, Fairhope, Ala., USA. *American Camellia Yearbook*, 2002, p.130, colour photo p.c11. The

11-plus year old seedling first flowered in 1994. Flowers measure 9.5 cm across, with fluorescence or sheen. Plant is upright, dense and vigorous, with dark green leaves 5.7 cm long x 2.5 cm wide.

Rose of China. Vanderbilt, 1941, *Camellia Research, II,* p.6. Synonym for **Semi-double Blush** as 'Celtic Rosea'.

Rose of Dawn. Vanderbilt, 1941, *Camellia Research, II,* p.6. Synonym for **Hagoromo** as 'Magnoliiflora'.

Rose of Denmark. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* No description. Originated in USA.

Rose of Freedom. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.202. No description. Originated in USA,

Rose of Kastellorizo. *(C.japonica),* ACRS, 1997, *Camellia News,* No.143, p.15, Reg. No.474: Originated by F.K. Abbott, Rossmoyne, Western Australia: A chance seedling that first flowered 1989. White formal double of 93 petals, 7 cm across x 3 cm deep. Flowers mid-season to late on a bushy, upright, medium growing plant. Leaves deep green, elliptic, finely serrate, smooth, acuminate, 8 cm long x 5 cm wide. Petals slightly cupped. Renamed from illegal name 'Kastellorizo Rose'.

Rose of the Dawn. Chandler Nursery Catalogue, 1936, p.6. Synonym for **Hagoromo** as 'Magnoliiflora'.

Rose of the World. Wilder, 1835, *Magazine of Horticulture,* 1(1):15. Synonym for **Rosa Mundi.**

Rose Optima. Treseder's Nursery Catalogue, 1964-1965, p.8. Orthographic error for **Optima Rosea.**

Rose Otome. McIlhenny, Catalogue, 1942, p.10. Synonym for **Casablanca.**

Rose Paeony. Camellia Grove Nursery, 1946, p.8. Synonym for 'Lady Beresford' (**Mrs Beresford**).

Rose Parade. (*C.x williamsii*), Nuccio's Nurseries Catalogue, 1969, #6415: Medium, deep rose-pink, formal double cross *C.x williamsii* **Donation** x *C.japonica* that blooms early to mid-season; originated by Nuccio's Nurseries, Altadena, California, USA. The 14 year old seedling first bloomed 1964. Average size, 8 cm across. Plant growth is upright, dense and rapid. See colour photo facing p.196, *American Camellia Yearbook,* 1970. *American Camellia Yearbook*, 1979, p. 111, Reg No.1510. Chinese synonym: 'Meiquihong' changed to 'Meiqui Dianli'.

Rose Pendant. (*C.sasanqua*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*. No description. *What Camellia Is That?*, Macoboy, Stirling, 1997, p.45; Semi-double, twisted petals, bright musk pink. Large central boss of golden stamens.

Rose Pendant. *(C.sasanqua).* Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, 1997, p.2: Large white semi-double with tall growth. Blooms mid-season.

Rose Perfecta. (*C.japonica*), Haskins Nursery Catalogue, 1954:- Medium size, bright pink, formal double. Originated in England.

Rose Perfection. (*C.japonica*), McIlhenny Catalogue, 1946-1947, p.11. Rose-pink. Small, formal double. Mid-season blooming. Originated by Clower, Florida, USA.

Rose Pink. Chandler & Booth, 1831, *Descriptions and Illustrations of Camellias* .... Synonym for **Middlemist's Red** as 'Carnea'.

Rose Pink. *(C.japonica)*, McIlhenny, 1934, *List of Camellias Japonicas*, p.3: Light rose pink, semi-double flowers with faint veining in white through the centre petals; outer petals self coloured. A medium sized bloom with a few stamens.

Rose Pink B. *(C.japonica)*, Van der Vis, Boskoop Camellia List, 1964-1965, p.1. No description. Originated in Holland.

Rose Pink Magnolia. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.202. Synonym for **Magnolia Pink.**

Rose Pink (Nobelius). *(C.sasanqua)*, Nobelius Nursery Catalogue, 1941, p.31, invalidly as 'Rose Pink': A medium sized, pink, single with fluted petals. Originated in Australia.

Rose Plena. Overlook Nursery Price List, 1949-1959. Orthographic error for **Rosea Plena (M.G.).**

Rose Quartz. (*C.x williamsii)*, Tregrehan Camellia Nursery Catalogue, 1984: Semi-double, large, soft pink with apricot tones. Originated by Gillian Carlyon, Tregrehan, Par, Cornwall.

Rose Queen. *(C.japonica)*, Coolidge Rare Plants Garden Camellia Catalogue, [ca.1936]; McIlhenny, 1937, *600 Varieties of Camellias:* Rose-pink. Medium, formal double. Vigorous, bushy growth. Blooms mid-season. Originated from a old unidentified plant in the old Busch Garden, Pasadena, California. It was also released as 'Busch Garden Red' at the same date. Austin Griffith, who researched these names, believes it synonymous with 'Beaute de Nantes'. Sports: **Rose Queen Variegated, Queen of the Acres.**

Rose Queen Variegated. *(C.japonica)*, Wilmot, 1945, *Camellia Variety Classification Report*, 1945, p.7: A virus variegated form of **Rose Queen** - Rose-pink spotted white. Originated by J.S. Tormey, Temple City, California, USA. See illustration, p.295, Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II. Synonym: 'Variegated Busch Garden Red'.

Rose Red. *(C.sasanqua)*, Camellia Grove Nursery Catalogue, 1944: A medium sized, single, star-like, red sasanqua. Originated in Australia.

Rose Royale. *(C.japonica)*, Magnolia Gardens and Nursery Catalogue, 1944-1945: Rose-pink. Large, rose form double. Vigorous, compact, upright growth. Blooms mid-season. Originated in USA by Tea Gardens as 'Tea Gardens No.245'.

Rose Shepherd. *(C.japonica)*, *American Camellia Yearbook*, 1960, p.206, Reg. No.493: A 7 year old chance seedling that first bloomed 1958; originated by George W. Shepherd, Orlando, Florida, USA. Plant growth is medium with dark green leaves, 10.5 cm x 5 cm. The rose-pink, semi-double flowers (similar to **Finlandia**), 10.5 cm across x 5 cm deep, have 14 petals and 4-12 petaloids and light yellow stamens. Flowers early to mid-season.

Rose Waratah. Camellia Grove Nursery Catalogue, 1945. Synonym for **Speciosissima.**

Rose Waratah. Hibbert & Buist, 1832, *The American Flower Garden Directory*, p.80 as 'Rose Warratah'. Courtois, 1833, *Magazin dHorticulture*, 1 [pt.D]:316. Synonym for **Amenoniflora Rosea.**

Rose Waratah de Low. Jacob Makoy et Cie Catalogue, 1836, p.17 as 'Rose War. de Low'. Synonym for **Anemoniflora Rosea.**

Rose Weller. *(C.japonica)*, Jim Senko, Tacoma, Wash., USA, Nursery list, 1997. Formal double, white with light pink tones. Medium size. Blooms mid-season.

Rose White. *(C.japonica)*, Van der Vis, Boskoop Camellia List, 1964-1965, p.1. No description.

Rosebud. Klumpp, 1959, *American Camellia Yearbook*, p.224. Synonym for **Rosita.**

Rosea. *(C.japonica)*, Sweet, 1826, *Hortus Britannicus*, p.61: Small, rosy coloured, open peony form. Brought from China in 1821 for the Horticultural Society of London by Captain Le Blanc.

Berlèse, 1840, *Monographie*, ed.2, pp.194, 234 as 'Rosa Species Nova': Leaves, 8 cm x 5.4 cm, ovate-oblong, very acuminate, lanceolate, twisted, apex recurved, dark green; buds small, oblong, scales green and reddish; flower about 8 cm across, full, rose orange violet; difficult to designate; corolla regular; petals imbricated from the centre to the circumference, a perfect rose form. Sometimes on the plant the flowers are of an angular form, with the petals rounded and fanned out. Originated in China. Charles van Geert Catalogue, 1848, p.4 gives 'Rosea Nova' or 'Rosea Species' as: 'Imbricated, truly lilac with blue tints.' Synonyms: 'Rosa de la China', 'Rosea de la. Chine', 'Rosa. della Chine', 'Rosa Nuova della China', 'Rosa della China', 'Madame Felice', 'Rosa Nova Species', 'Rosa Speciosa Nova', 'Rosa Nova Species', 'Rosa Species Nova', 'Rosea Species', 'Rosea Nova', 'Rosa Chinae Nova', 'Rosea Vera Specie'.

Rosea. Andrews *Botanical Repository,* 1812, as 'Flore Pleno Rosea'. Synonym for **Middlemist's Red.** Burnel, ed., 1837, *The Magazine of Botany and Gardening,* vol.3, new ser., p.151, where it is stated that the **Rosea** of Chandler and Booth; the **Rosea Plena** of Bollweiler and **Middlemist's Red** are all the same variety.

Rosea. Prince, William, Nursery Catalogue, 1822. Description not seen. Hume, 1955, *Camellias in America*, p.385: 'Rosea' is one of the first, if not the first, of the sasanqua varieties grown in America and for many years was the only variety obtainable. A camellia under this name was introduced from England by Williarn Prince and catalogued in 1822. As there is no evidence that sasanquas were introduced to England prior to 1867 and the name had been erroneously attached to *C.maliflora* and *C.oleifera* cultivars, Prince's 'Rosea' is considered to be *C.maliflora.*

Rosea. (*C.sasanqua*), Hume, 1931, *Camellias & Azaleas,* 1st. ed., p.31: Single pink with a rim of 5 petals around clustered stamens which suggest the anemome (Cherokee) rose. Gerbing's Azalea Gardens Catalogue, 1938-1939: Deep pink, medium large, single, golden stamens. Of Japanese origin, probably imported into America by Fruitland Nurseries. See colour pl. on frontispiece, *American Camellia Yearbook,* 1949. In 1966, Walter C. Slowcock Ltd. Nursery listed a sasanqua 'Rosea' as 5 cm across, rosy pink, small leaved plant. Chinese synonym: 'Meigui'.

Rosea. Wada, 1937, Japanese Garden Treasures, p.37 as Thea rosea. Pink form of the Japanese Tea plant. Botanical designation *C.sinensis* var. *sinensis* f. *rosea.*

Rosea Amabilis. (*C.japonica*), Verschaffelt Catalogue, 1850, p.49. No description; 1851, *Nouvelle Iconographie*, Book XII, pl.IV: This Italian camellia is not new in our collections. It is distinguished by its numerous petals, the first rows of which are close imbricated, rounded and emarginate; the following ones, ovate, oblong with an erect, ruffled centre of a deeper shade of pink.

Rosea Amabilis Nova. (*C.japonica*), Verschaffelt Catalogue, 1844-1845, p.29. No description. (Believed extinct.)

Rosea Chandleri. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.67. Synonym for **Elegans.**

Rosea Cincta. (*C.japonica*), van Houtte Catalogue, 1846-1847, 27:31. No description. (Believed extinct.)

Rosea Damascena. *(C.japonica),* Shneiderff ed., 1841, *Catalogo della piante che si Trovano nel Giardino nel Sig. Enrico Shneiderff,* p.9. No description. Originated in Italy. (Believed extinct.)

Rosea de la Chine. Jacob Makoy et Cie Catalogue, 1836, p.17. Synonym for 'Rosa Species Nova', synonym for **Rosea.**

Rosea Delicata. *(C.japonica),* Verschaffelt Catalogue, 1849-1850, p.49. No description. (Believed extinct.)

Rosea Delicatissima. *(C.japonica),* Medici Spada, 1858, *Catalogue nel Giardino a Villa Quiete,* p.8. No description. Originated in Italy. (Believed extinct.)

Rosea Delicatissima Nova. (*C.japonica*), Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete,* p.8. No description. Originated in the Giardino Borghese, Rome, Italy. (Believed extinct.)

Rosea de Denholm. Cachet Catalogue, 1845-1846, p.3. Orthographic error for **Rosea Denholuis.**

Rosea de la Chine. Cels, Paris Nursery Catalogue, 1839, p.30. Synonym for **Rosea.**

Rosea Den Halm. van Houtte Catalogue, 1839, 1:8. Orthographic error for **Rosea Denholuis.**

Rosea Denhalm. van Houtte Catalogue, 1842, 9:57. Orthographic error for **Rosea Denholuis.**

Rosea Denham. Seidel, 1846, Pflanzen Catalog, p.100. Orthographic error for **Rosea Denholuis.**

Rosea Denholm. van Houtte Catalogue, 1845-1846, 23:50. Orthographic error for **Rosea Denholuis.**

Rosea Denholuis. (*C.japonica*), Harrison ed., 1838, *The Floricultural Cabinet,* p.150: Medium sized, light rose, double. Orthographic errors: 'Rosea Denholm', 'Rosea Den Halm', 'Rosea Denhalm', 'Rosa Denholuis', 'Rosea Denham'.

Rosea Elegans. (*C.japonica*), van Houtte Catalogue, 1844-1845, 18:18. No description. van Houtte Catalogue, 1846-1847, 27:31 says from R Buist of America. (Believed extinct.)

Rosea Elegans Nova. (*C.japonica*), de Jonghe, 1851, *Traité de la Culture du Camellia,* p.121. No description. (Believed extinct.)

Rosea Flavescens. Baumann & Baumann, 1829, *Collection de Camellias élevés à Bollweiler* pl.22. Synonym for **Incarnata.**

Rosea Flavescens Hume's Blush. J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Cactus, Camelien...,* p.220. as 'ros. flavesc. Humesblush'. Synonym for **Incarnata.**

Rosea Flavescens Plena. J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Cactus, Camelien...,* p.220 as 'ros. flavesc. plena'. Synonym for **Incarnata.**

Rosea Flore. Lemaire, 1854, *Jardin Fleuriste,* p.11 as *Rosea fl.*. Synonym for *C.maliflora.*

Rosea Formosa. (*C.japonica*), Koch, 1862, *Belgique Horticole,* pp.119-120. No description. Originated in Belgium. (Believed extinct.)

Rosea Grandiflora. *(C.japonica),* Makoy Nursery Catalogue, 1838. No description. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.12: 'Suzannah' type but a much lighter red. van Houtte Catalogue, 1839, 1:8. No description. Charles van Geert Catalogue, 1845, p.13: Imbricated; large salmon-pink, streaked with white. Orthographic error: 'Rosa Grandiflora'.

Rosea Grandiflora. Overlook Nurseries Catalogue, 1942-1943, p.42. A *C.sasanqua* whose name was changed to **Splendor.**

Rosea Grandiflora Simplex. Baumann & Baumann, 1831, *Collection de Camellias élevés à Bollweiler*, #13: The large single bloom is rose-red, always two or three together. The growth of the shrub is upright but not luxurious. The shoots are green but on the sunny side are brownish. The long leaves are flat, serrate. Synonym for **Aitonia.**

Rosea (Hydon). *(C.japonica),* Hydon Nursery, Surrey, Catalogue, 1960, p.16, invalidly and illegally as 'Rosea': Single scarlet. Originated in England. Illegal according to the Horticultural Code as no latin names acceptable after 1958.

Rosea Identa. SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.59. Orthographic error for **Rosea Indenta.**

Rosea Imbricata. *(C.japonica),* Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. No description. Originated at Bibbiani, Italy. (Believed extinct).

Rosea Indenta. *(C.japonica),* Gerbing's Azalea Gardens Catalogue, 1941-1941: New camellia from Middleton Place ('Middleton No.23'). Semi-double, delicate pink flower with three rows of petals. The 10 cm. blooms have short stamens. Leaves acuminate, deep green. Growth tall; late flowering. Originated in USA. Orthographic error: 'Rosea Identa'.

Rosea Lilacina. *(C.japonica),* Tagliabue, 1840, *Nomenclatore Camelliae* .... No description. Originated in Italy. (Believed extinct.)

Rosea Linensis. Abbotsbury Gardens Catalogue of Plants, 1899, p.20. Orthographic error for 'Rosea Sinensis', synonym for **Rosea.**

Rosea Magnifica. *(C.japonica),* Trillon, Le Mans Nursery Catalogue, 1843, p.8. No description. Originated in Italy. (Believed extinct.)

Rosea Magnifica. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* This *C.sasanqua* was renamed **Rosy Mist.**

Rosea Marmorata. Del Lungo e Girardi, 1928, *Le Camelie*, p.157. Orthographic variant for 'Rosa Marmorata'.

Rosea Mastiani. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.67. No description. Originated in Italy. (Believed extinct.)

Rosea Minima. *(C.japonica),* Costa, 1846, *Catalogue de la collection de Camellias présentée à sa majesté L'Imperatrice de toutes les Russies et Reine de Pologne*, p.16. No description. (Believed extinct.)

Rosea Mundi. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Deep pink. Large, wavy petalled, irregular, semi-double. Medium, compact growth. Originated in USA at Magnolia Gardens, John's Island, South Carolina. Note: Not the same as Press's **Rosa Mundi.**

Rosea Nobilissima. Killiow Nursery Catalogue, 1980. Orthographic variant for **Nobilissima Rosea.**

Rosea Nova. *(C.japonica),* Tagliabue, 1840, *Nomenclatore Camelliae...* No description. Van Houtte Catalogue, 1841, 7:18: Extra wide flower, delicate pink, imbricated with the most beautiful form, and having a rose-like perfume. Charles van Geert, 1846, Catalogue Général, p.75: Perfect imbrication. Soft pink with bluish tints. Longone Catalogue, 1910-1911, p.77 lists 'Rosea Nova' as 'Cherry-red'. Synonym: 'Rosea Novissima Odorata'.

Rosea Nova de la Chine. ... Anonymous, Jun.1839, *Revue Horticole*, pp.205-207. Synonym for 'Rosa Species Nova', synonym for **Rosea.**

Rosea Nova Sinensis. Cachet Catalogue, 1845-1846, p.3. Synonym for 'Rosa Species Nova', synonym for **Rosea.**

Rosea Nova Vera. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.201. Synonym for **Sacco.**

Rosea Novissima Odorata. Giardino Inglese, Caserta Catalogue, 1856.Synonym for **Rosea Nova.**

Rosea Odorata. Jacob Makoy et Cie Catalogue, 1839, p.17. Synonym for **Parksii.**

Rosea Palasiana. *(C.japonica),* Charles van Geert Nursery Catalogue, 1845, p.13. No description. *Annotations*, 1848: Vivid cherry-red, semi-double. Orthographic error: 'Rosa Palasiana'. (Believed extinct.)

Rosea Papaver. Overlook Nursery Catalogue, 1942-1943, p.41. It was listed as 'Rosea Papaver' in this catalogue only. All following catalogues listed it just as **Papaver,** by which name it is generally known.

Rosea Perfecta. *(C.japonica),* Jacob Makoy et Cie Catalogue, 1842, p.10. No description. Verschaffelt, 1850, *Nouvelle Iconographie*, Book III, pl.I: This camellia has been grown commercially for a few years. It is of Italian origin - Medium sized blossoms; petals full, oblong, outspread, of a soft pink with a transverse stripe of a paler shade in the centre and delicately veined; imperfectly imbricated. Said to be a mutation of **Sacco.** Synonym: 'Rosea Perfecta Nova'. Orthographic variants: 'Rosea Perfection', 'Rosa Perfecta'.

Rosea Perfecta Nova. Verschaffelt Catalogue, 1844-1845, p.29. No description. Franchetti, 1855, *Collezione di Camelie*, p.56: Soft pink with paler central stripe. Imbricated. Synonym for **Rosea Perfecta.**

Rosea Perfecta Nova Extra. Verschaffelt Catalogue, 1844-1845, p.29. Synonym for **Rosea Perfecta .**

Rosea Perfecta Superba. *(C.japonica),* Martin y Girard, 1978-1979, *Gran Jardin de la Bomba Catalogue*, No.4, p.40: Beautiful new imbricated variety, delicate clear pink. Originated in Spain. Note: The name is illegal as it was named in latin after 1958.

Rosea Perfection. Jean Vervaene fils, 1864, Price List, No.1, p.8. Fendig, 1953, *American Camellia Catalogue.* Orthographic variant for **Rosea Perfecta.**

Rosea Plena. Maupoil Catalogue, 1827; Baumann & Baumann, 1831, *Colllection de camellia élevés à Bollweiler* as 'Camellia Sesanqua Rosea Plena'. pl.15. Synonym for *C.malifora.*

Rosea Plena. *(C.japonica),* Baumann & Baumann, 1829, *Collection de camellia élevés à Bollweiler* as 'Camellia J. Rosea Plena', pl.16: The flower is large, rose-red, of variable form and arranged in cluster of 2 or 3. The plant habit is stong and compact. Young shoots bright green with new growth copper coloured. Leaves are small, long and flat, serrate from base to apex. Berlèse, 1837, *Monographie*, ed.1, p.62, 126: Leaves elongated, flat, recurved, venation conspicuous, heavily serrated. Bud obtuse, rather large, scales greenish. Flower 7.5 cm across, double rose colour, arranged from 2-3 in the extremities of the branches. Originated in France. Orthographic variant: 'Rosea Pleno'. Synonym: 'Purple', 'Blow Rosea (Plena)', 'Rosa Pleno'.

Rosea Plena. Loddige's Nursery Catalogue, 1814, p.25 as 'Rosea pl.'. Synonym for **Middlemist's Red.**

Rosea Plena. Courtois, 1833, *Magazin d'Horticulture*, p.317. Synonym for *C.maliflora.*

Rosea Plena (MG). *(C.japonica),* Magnolia Gardens and Nursery Catalogue 1942-1943, invalidly as 'Rosea Plena'. Description not seen. SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* Rose pink with dark veins. Medium large, formal double. Vigorous, compact, upright growth. Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, pp.210, 211: Medium, formal double; Neyron Rose 623/1, heavily veined Neyron Rose 623; to 10 cm across x 4.5 cm deep; petals about 40, obovate, good substance, 4.75 cm long x 3.24 cm wide, becoming progressively smaller towards the centre which consists of a tight cone of 20 incomplete petals. Leaves elliptic, slightly cupped and curved, dark glossy green, 7-9 cm long x 2.5-5 cm wide, apices short to medium pointed, pronounced venation, petiole stout, to 12 mm long, fine serration. Plant habit upright, bushy, medium growing; early to mid-season flowering. Originated from an old plant at Magnolia Gardens, John's Island, South Carolina, USA, either as a lost label imported plant or a seedling. Sport: **Rosea Plena Variegated.** Chinese synonym: 'Shenwen Meigui'.

Rosea Plena (Hillier). *(C.sasanqua),* Hillier Nursery Catalogue, 1941-1942, p.10, invalidly as *Rosea Plena:* Medium sized, rose-pink, semi-double. Originated in England.

Rosea Plena Variegated. *(C.japonica)*, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, pp.210, 212: A virus variegated form of **Rosea Plena (MG)** - Rose-pink blotched white; Camellia Rose 622 fading to 622/1 at centre, unrolled margins Crimson 22. Size 9 cm across. Originated at Huntington Gardens, San Marino, California.

Rosea Plenissima. van Geert Nursery Catalogue, 1845. Orthographic variant for 'Rosa Plenissima' (**Paulowski**).

Rosea Pleno. Harrison, ed., 1837, *The Floricultural Cabinet*, 1837, p.267. Orthographic variant for **Rosea Plena.**

Rosea Punctata. *(C.japonica)*, Debonnaire, 1832, *Annales de la Société d'Horticulture de Paris*, vol.II, p.15-20: New cultivars of 88 varieties in Berlèse collection. Berlèse, 1837, *Monographie*, ed.1, pp.87,128 as 'Rosa Punctata': Leaves 6 cm long x 5 cm wide, roundish-oval, acuminate, near horizontal, regularly serrate, deep green; flower 7.5 cm across, double, well formed, colour cherry-red with some white spots. Originated in Italy, Synonym: 'Rosea Punctata d'Italie'.

Rosea Punctata d'Italie. Charles van Geert Catalogue, 1846, p.14. Synonym for **Rosea Punctata.**

Rosea Rubra. *(C.japonica)*, Berlèse, 1840, *Monographie*, ed.2, p.143: Leaves long, recurved, of average size, irregularly serrate; buds long, pointed, scales greenish. Flowers semi-double, about 8 cm across, cherry-red, circumferential petals in two rows, heart shaped; those of the interior, small, long, recurved outside and inside, sometimes with touches of white and fertile stamens in the centre. Originated in Italy.

Rosea Semiplena. *(C.japonica)*, J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Cactus, Camelien...*, p.185: Rose red semi-double with 9 petals. Originated in Germany.

Rosea Simplex. Courtois, 1833, *Magazin d'Horticulture*, p.311. Synonym for 'Rosea Grandiflora Simplex', synonym for **Aitonia.**

Rosea Simplex Grandiflora. J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Cactus*, Cam*elien...*, p.184. Synonym for **Aitonia.**

Rosea Sinensis. André Leroy, Angers Catalogue, 1833, p.13. Orthographic variant for **Rosa Sinensis.**

Rosea Species. André Leroy Catalogue, 1911, p.48. Abbreviation for 'Rosa Species Nova'. Synonym for **Rosea.**

Rosea Species Nova. van Houtte Catalogue, 1839, 1:8 as 'Rosea sp. Nova'. Orthographic variant for 'Rosa Species Nova'. Synonym for **Rosea.**

Rosea Spectabilis. *(C.japonica)*, Verschaffelt, 1852, *Nouvelle Iconographie*, Book XII, pl.III: Obtained from seed in Ghent, Belgium by Mr Mathot, flowered for the first time 1851. Colour a vivid pink with crimson tints. Petals are large, imbricated, fully rounded or lobulate, outspread. At the centre they are suddenly smaller to form a rose-shaped heart. Orthographic variants: 'Rose Spectabilis', 'Rosa Spectabilis'.

Rosea Splendida. *(C.japonica)*, Berlèse, 1848, *Monographie*, ed.2, pp.142-143, 230: Leaves 8 cm x 5 cm, some oval, rounded, others elongated, tips a little recurved, prominent venation and serration; buds oval, rounded, scales pale green; flowers 9 cm across, double, clear cherry-red; exterior petals large, almost round, several rows imbricated and deeper coloured than the others; those in the centre, short, twisted, of a small number with 3-4 petaloids. Originated at the Vauxhall Nurseries, London, England.

Rosea Superba. *(C.japonica)*, Robert Tyas, 1843, *Popular Flowers*, p.86. No description or history. Loddiges Catalogue, 1844, p.7. Originated in England. Note: There are three cultivars to which this name has been applied. There is the original valid one; Gheldorf, Const., 1844,

Catalogue of Plants and Price List, p.12: Handsomely imbricated double, deep reddish carmine; the sport of **Mathotiana Alba**; and a sport of **Julia Drayton** as 'Mathotiana' which is the cultivar distributed in the USA under this name.

Rosea Superba. Whitfield, J.J., 1945, *Camellia, the alluring floral gem*, p.3. Synonym for **Mathotiana Rosea.**

Rosea Superba Brooksie. Cannon, 1970, ACS., *The Camellia Journal*, vol.25, No.1 as 'Rosea Superba'(Brooksie). A sport of **Rosea Superba (US).** Synonym for **Brooksie's Rosea**.

Rosea Superba Nova. *(C.japonica)*, Berlèse, 1843, *Iconographie*, p. facing pl.175: Flower, 10 cm or more across, full, regular, bright carmine red from circumference to rose centre. Exterior petals are large, notched, symmetrically surrounding inner petals which are small and elegantly imbricated. Pale to deep pink madder. Originated in Italy.

Rosea Superba (Sandusky). Shackelford, 1969, ACS., *The Camellia Journal*, vol.24, No.4. Synonym for Rosea Superba Variegated.

Rosea Superba (US). *(C.japonica)*, Gerbing's Azalea Gardens Catalogue, 1940-1941 invalidly as 'Rosea Superba': 'Formerly catalogued as **Mathotiana Rosea.** Since many nurseries have the pink sport of **Mathotiana Alba** listed as **Mathotiana Rosea,** which is not the same as our large 'rosea' we are changing the name of our variety to 'Rosea Superba'. A full double, very large, to 15 cm across, deep pink bloom resembling [its parent] **Julia Drayton** in form and foliage. Early to late flowering. It is a sport of **Julia Drayton**. imbricated on first opening, changing to incomplete double. Deep pink at petal base with the outer petals streaked deep pink. Pseudonym: 'Mathotiana Rosea'. Synonyms: 'Ada Wilson', 'Laura Dasher', 'Maquachu'. Sport: 'Rosea Superba Variegated'. See colour pl. G.C. Gerbing, 1945. *Camellias*, p.193; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.115. Chinese synonym: 'Saimeigui'.

Rosea Superba Variegated. *(C.japonica)*, Semmes Nursery Catalogue, 1945-1946, p.22 as 'Rosea Superba Var.': A virus variegated form of **Rosea Superba (US)** - Deep pink variously blotched with white. Originated in USA. See illustration, p.297. Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II. Synonyms: 'Margaret Sandusky', 'Rosea Superba'(Sandusky), 'Ada Wilson Variegated'. Orthographic error: 'Rosea Superba Variant'.

Rosea Superba Variant. Blackwell Catalogue, 1947-1948, p.12. Orthographic error for **Rosea Superba Variegated.**

Rosea Transparens. *(C.japonica)*, Verschaffelt, 1859, *Nouvelle Iconographie*, Book XI, pl.IV: This owes its name to the semi-lucidity or transparence through the tenuity of the petals. It was sent from Italy in 1858. It belongs, by the regular imbrication of its petals, to the class of 'Perfection', distinguished by its ruddy pink colour with a light blush tint and a few white stripes at the centre. Orthographic error: 'Rosa Transparens'

Rosea Triumphans. (*C.japonica*), Burdin Maggiore & Co. Catalogue, 1945, p.43. No description. Cachet Catalogue, 1845-1846, p.7. No description. Verschaffelt, 1851, *Nouvelle Iconographie,* Book X, pl.II: Of Italian origin. Its blossoms, of medium size, are a charming pink colour, embellished by broad, longitudinal, white stripes. The petals are ample, rounded, oblong, obtuse or faintly emarginate. Orthographic variants: 'Triumphans Rosea', 'Rosa Triomphant'. Synonym: 'Cockii'.

Rosea Variegated. (*C.japonica*), Horton, Thomas, Ltd. Catalogue, ca.1915, p.76: Rose and white blotched. Originated in England. Orthographic error 'Rosa Variegata'.

Rosea Vera. Arnaud Catalogue, 1839-1840. Synonym for **Rosea.**

Rosea Vera Specie. Francesco Asione, 1856, Catalogo della piante…nel Giardino Inglese de Caserta, p.15. Synonym for **Rosea.**

Rosea Virginalis. (*C.japonica*), Berlèse, 1843, *Iconographie,* pl.242 and facing p.: The flower, 10-11 cm across, is full, of a soft roseate white or soft rose crossed by white streaks. The corolla is regular and perfectly round. The petals are numerous, rounded, serried and imbricated regularly from the centre to the circumference. Originated as a sport of Imbricata Alba. Synonym: 'Alba Virginalis'. Orthographic error: 'Rosa Virginalis'.

Roseacum. Seidel, 1846, Pflanzen Catalog, p.19. Orthographic error for **Roseana.**

Roseaflora. McIlhenny, 1937, *600 Varieties of Camellias*. Orthographic error for *C.rosiflora.*

Roseaflora Floreplena. McIlhenny, 1937, *600 Varieties of Camellias*. Orthographic error for 'Rosaeflora Flore Plena', synonym for *C.maliflora.*

Roseana. (*C.japonica*), Loddiges Catalogue, 1836, p.25. No description. Berlèse, 1837, *Monographie*, ed.1, p.62, 126: Leaves 3.8 cm broad x 6 cm long, horizontal, roundish oval, a little acute, very finely serrulate; form colour and dimensions of 'Speciosa Vera' (**Rawesiana**); flower large, full, irregular, of a pale red, inclining to rose; petals of the circumference ample, reflexed and slightly crenate; those of the centre small, erect, edges reflexed, some longer, rumpled. Originated in England. According to Berlèse, 1841, *Iconographie* this is synonymous with 'Speciosa Vera'. Orthographic errors: 'Roseanum', 'Roseanna'.

Roseanna. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.201. Orthographic error for **Roseana.**

Roseanum. Cels, Paris Nursery Catalogue, 1836-1837, p.10. Orthographic error for **Roseana.**

Rosebud Red. Vanderbilt, 1941, *Camellia Research*, II, p.6. Synonym for **Bealei Rosea.**

Rosedale Beauty. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Synonym for **Madame Lebois.**

Rosedale's Beauty. The Pacific Camellia Society, 1946, *Camellia Nomenclature*. Synonym for **Madame Lebois.**

Roseflora. Trillon, Le Mans Nursery Catalogue, 1845, p.7. Orthographic error for 'Rosaeflora', synonym for **Middlemist's Red.**

Rosehill Red. Mulberry Plantation Catalogue, 1934. Synonym for **St. André.**

Roseland Red. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.202. No description. Originated in USA. (Believed extinct.)

Roseland White. (*C.japonica*), Vanderbilt, 1941, *Camellia Research*, II, p.6. No description. Originated in USA. (Believed extinct.)

Roselle Bell. (*C.japonica*), *American Camellia Yearbook*, 1966, p.99, Reg. No.827: A sport of **Finlandia,** first observed 1948; originated by Mr & Mrs R.A. Bell, Cairo, Georgia, USA. Plant growth is upright and average with light green leaves, 8-11 cm long x 3.7-5 cm wide. The anemone form flower is pure white with yellow anthers and light, greenish yellow filaments. It is 10 cm across x 5-6 cm deep with 17-35 petals and 5-7 petaloids. Early blooming.

Rosemaniana. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* No description. (Believed extinct.)

Rosemarie Ostberg. *(C.japonica),* ACS, *The Camellia Journal*, Dec. 2013, p.29 with colour photo; Regn No.2900, Originated and registered. by C.M. & Lillian Gordy, Ocala, Fla., USA. ACS, Yearbook, 2013, p.136 with colour photo; Propagated by Loch Laurel Nursery, Valdosta, Ga. An 11 year old seedling, parentage unknown, first flowered 2006. Medium size, 9cm diameter x 5cm deep, flower is semidouble to anemone form and very dark pink, with gold anthers. Falls in one piece. Upright plant with average growth. Dark green leaves average 9.5cm x 4.5cm with medium serration. Flowers midseason.

Rosemary. McIlhenny, 1937, *600 Varieties of Camellias*. Orthographic variant for **Rose Marie.**

Rosemary Elsom. (*C.japonica*), ANZCRS., 1955, *Camellia Annual*, No.2, p.6, Reg. No.7: Originated by Charles F. Cole, Canterbury, Victoria, Australia from the cross **Spencer's Pink** x **Elegans.** Informal double, anemone type bloom, 9-10 cm across. Colour delicate shell pink. Blooms midseason.

Rosemary Jean. *(C.japonica), New Zealand Camellia Bulletin,* March 2002, Issue No.141, vol.XXII, No.5, p.9, Reg. No.425. Registered by S. & J. Levy, Auckland, New Zealand. A chance seedling which first flowered in 1990. Flower is a medium size formal double, 8 cm diameter x 4 cm deep, having about 40 petals that are incurved and almost circular in shape. Colour is an interesting, polychrome, dusty pink (RHS.CC.70C) with lavender shading at the outside edges (RHS.CC.75A), and marked venation (RHS.CC.67C). The flower lasts well, becoming mauve-blue with age. The bush is upright and dense, and of medium growth rate, with dark green leaves 9 cm long x 4 cm wide. Flowers mid-season to late.

Its Culture and Nomenclature:* Salmon pink, with occasional small white spots. Medium sized, semi-double. Late blooming. Originated from an old plant in Magnolia Cemetery, Mobile, Alabama. For illustration see p.298, Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II. Synonym: 'Pride of Houston'.

Ross Clark. *(C.saluenensis x C.reticulata),* Anderson's Camellia Catalogue, 1967, p.8: Spinel pink, very large, semi-double. *New Zealand Camellia Bulletin*, 1967, vol.V, No.3, p.10, Reg. No.38: A hand pollenated cross *C.saluenensis x C.reticulata* **Buddha;** originated by H.J.Clark, New Lynn, New Zealand that first bloomed 1963. Habit is upright with dark green leaves, 10 cm x 2.5cm. Flowers semi-double with 20 petals, 14 cm across; colour Tyrian Rose HCC.CC.24/2. See colour photo front cover, *New Zealand Camellia Bulletin*, vol.XIV, No.4, 1985.

Rossane. *(C.japonica),* Anonymous, 1876, *R. Società Toscana di Orticultura Bollettino:* Very large, formal double similar to **L'Avvenire**. Petals a vivid red colour. Originated in Italy by Santarelli.

Rossetta. *(C.japonica),* Standish & Noble Nursery Catalogue, 1847-1848: Fine, mottled rose. Originated in England. (Believed extinct.)

Rossiana. Berlèse, 1843, *Iconographie* facing pl. 167. Synonym for **Rawesiana.**

Rossiana Superba. *(C.japonica),* J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Cactus, Camelien...,* .p.220 as 'Rossia Sup'. Berlèse, 1837, *Monographie*, ed.1, pp.102, 129: Leaves elliptic, venation prominent, coarsely serrate, medium sized, semi-double flowers of deep cherry-red. Originated in Italy.

Rossi. Burnett ed., 1837, *The Magazine of Botany & Gardening...*, vol.3, p.152. The 'Rossi' of French catalogues, said to be the **Speciosa** of Chandler & Booth. Erroneous synonym for **Rawesiana**.

Rossii. *(C.japonica),* Loddiges Catalogue, 1826, p.21. No description. Sweet, 1827, *Hortus Britannicus*, p.469 as 'Ross's Camellia': The flower is often 10 cm across, in the form of **Elegans,** but a much darker and deeper red. All petals are finely veined; the outer ones nearly flat, are from 12-17 in number in 2-3 rows around the smaller ones in the centre. The cultivar originated as a seedling of **Anemoniflora,** grown by Mr Ross of Stoke-Newington. See pl.37, Chandler & Booth, 1831, *Illustrations and Descriptions of Camellias…*and F.1707, *Loddiges Botanical Cabinet*, vol.XVIII, 1831. Synonyms: 'Ross's', 'Mr Ross's', 'Gloriosa', 'Rossii Vera', 'Ross's Gloriosa', Orthographic errors: 'Rochii', 'Rossi', 'Rosii'. van Houtte Catalogues, 1839, 1:8 and 1841, 7:8, equates this cultivar with **Rawesiana** synonym **Speciosa**. This is an error as **Rawesiana** originated in China while **Rossii** is an English seedling. Berlèse, 1837, *Monographie* incorrectly gives its place of origin as Japan and in his 1843 *Iconographie*, as Italy. This is repeated by Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.210. There is the possibility that the Berlèse **Rossii** was a different cultivar. The name was also invalidly used as a synonym for **Rawesiana.** Baumann & Baumann, 1832, *Collection le Camellias éléves à Bollwiller*, p.36: This entry has an early reference to being applied to **Rawesiana** with 'Ross's' being given in brackets.

Rossii de Loddiges. Jacob Makoy et Cie Catalogue, 1842, p.10. Synonym for **Reevesiana.**

Rossii Minor. Colla 1843, *Camelliografia*, [illustr], p.10. Synonym for **Rawesiana.**

Rosy Lady. *Calendar,* 2014. Chin Shiang Josme Camellia Nursery, Taichung City, Taiwan. Photo of an irregularly shaped single, mainly white at petal edges and pink towards centre. No other information.

Rosy Mist. *(C.sasanqua),* Overlook Nursery Catalogue, 1948-1949: Rose-pink, medium single. Fendig, 1951, *American Camellia Catalogue:* Medium, rose-pink, single, 7.5 cm across. There are 7-10 rather round petals which stand semi-erect, forming a cup-shaped bloom when opening. Tips are crinkled and shallowly notched. Stamens are central and open sunburst fashion. Filaments are light yellow. Leaves, dark, glossy green, elliptic, 7 cm x 3.8 cm. Turns up from the midrib. Apex is short but sharp, base rounded, serrations shallow. Plant habit is vigorous and spreading. Profuse bloomer. Early flowering. Originated by K. Sawada, Overlook Nurseries, Crichton, Alabama, USA who originally gave it the name of 'Rosea Magnifica' but

changed it to **Rosy Mist** in his 1948-1949 catalogue and on. See p.327, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III for illustration. Chinese synonym: 'Hongyu'.

Rosy Morn. *(C.sasanqua),* ACRS., 1981, *Camellia News*, No.79, p.28, Reg. No.272: Originated by G.W Hooper, Camellia Vale Nursery, Bexley North, N.SW, Australia. A chance seedling that first flowered 1970. The plant has a spreading, dense habit with 4.5 cm x 2.5 cm, pointed, elliptic, mid-green leaves. The semi-double, deep rose, 6.2-8.1 cm across flowers, bloom early to late.

Rosy Osmanthus Leaf. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Western synonym for **Meihong Guiye.**

Rosy Peony Flowered. Paxton, 1831-1832, *Horticultural Register.* Synonym for **Paeoniiflora.**

Rosy Pillar. *(C.hybrid).* SCCS *Camellia Nomenclature* 2009, p.187. Rose pink, medium size single. Upright and columnar, average growth rate. Originated in 2007 by Nuccio's Nurseries, Altadena, California, USA. Listed by Nuccios in their sasanqua section.

Rosy Posy. *(C.japonica),* Robinson, 1958, *American Camellia Yearbook*, p.62: Bright pink, semi-double to rose form double, miniature, similar to **Fircone.** Originated at the McCaskill Gardens, Pasadena, USA.

Rotondiflora. Cachet Catalogue, 1841-1842, p.2. Orthographic error for **Rotundiflora.**

Rothschildiana. *(C.japonica),* Verschaffelt, 1844, Catalogue, No.50, p.23. No description. .van Houtte Catalogue, 1845-1846, 23:50: [from] Gruneberg. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, vol.40, p.83: Flower, 10-11 cm across, irregular, a flat orange-red. Exterior petals in 3-4 rows, rounded, notched, veined blood red, colour deepening at base and apex of petals. Those of the interior are numerous, broad and long, curved, placed without order, channelled, thin, rumpled, irregular similar to 'Reevesii Major' (**Rawesiana**). Originated in Germany by Gruneberg, Frankfurt. Orthographic errors: 'Rotschildi', 'Rothscildii', 'Rotschidiana', 'Rothschildi', 'Rodschilliana'. Synonym: 'Rothschildii'.

Rothschildii. Baxter & Wooster, 1850, Loudon's *Hortus Britannicus*, Suppl., p.508. Synonym for **Rothschildiana.**

Round Leaf Butterfly Wings. Yü & Bartholomew, 1980. *American Camellia Yearbook*, p.16. Synonym for **Tuanye Diechi.**

Rouse's Big Red. *(C.japonica)*, ACS, *The Camellia Journal*, Sept. 2013, p.26 with colour photo; Regn No.2855; Originated by Dr Dennis Rouse, Auburn, Ala., USA. ACS, Yearbook, 2013, p.137 with colour photo; Registered by the Auburn-Opelika Men's Camellia Club. The 30-plus year old seedlingis a large to very large, 12.7cm diameter x 6.5cm deep flower, semidouble, red (RHSCC 46B), with 18 petals. Heavy petal texture and falls in one piece. Yellow anthers, filaments white with red base. Plant is upright, spreading and open with average growth rate. Mid-green leaves average 10cm x 5cm with low serration. Flowers late.

Rouvroy. *(C.japonica)*, Berlèse, 1840, *Monographie*, ed.2, pp.216-217, 237: Leaves long-oval, thick, short acuminate, pronounced venation. Flower about 9 cm across, double; ground deep cherry-red with large splashes of white; exterior petals in 2-3 rows, long, reflexed, imbricated with little regard to regularity, sometimes entirely red, other times with broad bands of white, sometimes entirely white. Interior petals anemone-like, very numerous, erect, narrow, colour bright red. Originated in Belgium. Synonyms: 'Comte de Rouvroy', 'Rouvroy (Comte de)'.

Rouvroy (Comte de). Berlèse, 1845, *Monographie*, ed.3, p.308. Synonym for **Rouvroy.**

Rowan Tree. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.14, colour photo: Medium large, 11 cm. across, open, peony form, red with fluted and twisted petals; stamens intermixed with small, erect petals in the centre. Originated by Richard Dodd, Marshallville, Georgia, USA.

Rowena. *(C.japonica), Australia Botanical & Horticultural Society Report*, 1849. No description. Camden Park seedling 21/50, originated by Sir Williarn Macarthur, Camden Park, N.SW., Australia. Not distributed. Unidentifiable. Extinct.

Rowena Craig. *(C.japonica),* ACRS., 1983, *Camellia News*, No.87, p.22, Reg. No.299, colour pl. p.13: Originated by Eric Craig, Warrawee, N.S.W., Australia. Published in the N.S.W. Foundation Branch Newsletter, July, 1979. A seedling of the cross **Cho Cho San** x **Edith Linton** that first flowered 1973. Single white flowers with a carmine fleck and pencil stripe on one or more petals, 10-11 cm across; golden stamens. Tulip to cup-shape on maturity. Early flowering. The plant has dark green leaves, upright, open habit and vigorous growth.

Rowena Gordon. *(C.sasanqua),* ACRS., 1969, *Camellia News*, No.36, p.14, Reg. No.104: Originated by S.W. Gordon, Pymble, N.S.W., Australia - A chance seedling that first flowered 1966. Flower 8cm across, pink, semidouble, usually some petaloids. Early to midseason flowering. The plant has a dense habit of growth with smaller than average leaves. Chinese synonym 'Luowenna'.

Rowena Hooks. (*C.japonica*), Griffin, ed., 1955, *Camellian*, 9:14: Pink. Medium, semi-double with fluted and curled petals. Originated in USA by J.R. Hooks, Fayetteville, North Carolina. Sport: **Rowena Hooks Variegated.**

Rowena Hooks Variegated. *(C.japonica),* Belle Fontaine Nursery, 1965, ACS., *The Camellia Journal*, vol.20, No.2, p.27. A virus variegated form of **Rowena Hooks** - Pink blotched with white. Originated in USA.

Rox Cowley. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* White to cream suffused with pink specks and small blotches. Medium, full peony form. Vigorous, compact growth with dark green leaves, heavily veined, deeply serrate, oval, apex abrupt acute. Flower 8-11 cm across, 18-24 guard petals in 3-4 rows and 75-100 petaloids. Flowers mid-season. A 14 year old seedling of unknown parentage, originated by G.W. Wilkinson, Pensacola, Florida, USA, that first flowered 1949. Orthographic error: 'Rex Crowley'. See *American Camellia Yearbook*, 1954, Reg No.149. Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.215, for black and white photo.

Roxane Superbe. *(C.japonica),* L.L. Liebig, 1839, *Verzeichnis von Warmen und Kalten Hauspflanzen...*, p.12. No description. . Originated in Germany. (Believed extinct).

Roxanne. *(C.japonica),* Pierates Cruz Gardens Catalogue, 1953: White. Large, peony form with heavy, china-like petals and blonde stamens. Medium, compact growth. Mid-season flowering. See black & white photo, p.216, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Originated at the Pierates Cruz Gardens, Mount Pleasant, South Carolina, USA. Orthographic variant: 'Rox Anne'.

Roxie Reid Gill. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings*, p.10, colour photo: Average size, about 10 cm across, white, incomplete double, open peony form with stamens mixed with erect, twisted and curled petals in the centre. A seedling of **Louise-Onetta**, originated by Richard Dodd, Marshallville, Georgia, USA.

Roy Iles. *(C.japonica), New Zealand Camellia Bulletin*, March 2001, Issue No. 138, vol.XXII, No.2, p.20, Reg. No.421. Registered by A.V. Iles, Waimana, New Zealand. A chance seedling, parentage unknown, with *C.japonica* characteristics. The flower is a large semi-double, 10 cm diameter x 6 cm deep, with 21-24 heavy textured petals that are almost circular in outline, and

of a glowing deep pink (RHS.CC.55A). The stamens form a small tight column about 11 mm across. The plant first flowered in 1991, and is upright, dense and rapid growing. The dark green leaves are 10 cm long x 5 cm wide. Flowers early to late. Won Clark Cup, Best Japonica seedling, 2000 NZ Camellia Society National Show.

Roy Leopold. Hume, 1953, *Azalea and Camellias*, p.41. Orthographic error for **Roi Léopold.**

Roy Stringfellow. *(C.reticulata* hyb.), *American Camellia Yearbook*, 1981, p.104, Reg. No.1748: A very large, red, semi-double *C.reticulata* hybrid ['Crimson Robe' (**Dataohong**) x **Jean Pursel**]. Blooms mid-season to late; originated by Frank Pursel, Oakland, California, USA. The 7 year old seedling first bloomed 1978. Average flower size, 16 cm across x 7.5 cm deep. Plant growth is upright, average and rapid in rate with dark green leaves, 15 cm long x 8 cm. wide.

Roy Whitehead. *(C.japonica),* ACS., 1963, *The Camellia Journal*, vol. 18, No.1, p.2. No description. *American Camellia Yearbook*, 1965, p.245, Reg. No.666: An 11 year old chance seedling that first bloomed 1960; originated by Mrs R.B. Whitehead, Valdosta, Georgia, USA. Plant growth is upright and rapid with dark green leaves, 10-12.5 cm long x 5-6 cm wide. The semi-double flowers, similar to 'Donckelaeri', (**Masayoshi**) are 11-12.5 cm across x 8-10 cm deep and have 14-16 petals. The blooms are salmon pink with yellow anthers and white filaments. Early blooming. See colour photo front cover, ACS., 1963, *The Camellia Journal*, vol.18, No.1 as 'R.B. Whitehead'.

Royal Beauty. (*C.japonica*), Magnolia Gardens and Nursery Catalogue, 1942-1943: Vivid red. Medium size semi-double. Spreading growth. Early flowering. Originated at Magnolia Gardens, John's Island, South Carolina, USA.

Royal Carriage. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.89. Synonym for **Goshoguruma.**

Royal Chinook. Vanderbilt, 1941, *Camellia Research*, II, p.6. Synonym for **Marchioness of Exeter.**

Royal Coachman. *(C.japonica), American Camellia Yearbook*, 1970. p.170, Reg. No.1093: An 8 year old chance seedling that first bloomed 1963. Originated by T.E. Croson, Simi, California, USA. Plant growth is upright, average and medium with small, dark green leaves. The semi-double 'Donckelaeri' (**Masayoshi**) type bloom is coral red with yellow anthers and filaments. Size, 12.5 cm across x 5 cm deep with 12 petals. Flowers early through mid-season.

Royal Decoration. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.137. Synonym for **Ichû.**

Royal Flag. (*C.japonica*), Harris' Longview Nursery Catalogue, 1955-1956. No description. Originated in USA.

Royal Flush. (*C.japonica*), *American Camellia Yearbook*, 1956, pp.64-65, Reg. No.284: A 9 year old chance seedling, originated by Earl B. Hudson, Sun Valley, California, USA that first flowered 1954. Plant growth upright, average density and rapid. Leaves average 8 cm long x 4.5 cm wide, with slight but regular serration. The Venetian Pink (RHS,CC.420/3) semi-double flowers resemble **Finlandia** in form, 10-12.5 cm across x 5 cm deep with 25-30 petals and a few petaloids. Flowers mid-season to late.

Royal Intrigue. *(C.x williamsii).* Camellia Forest Nursery Catalogue, 1995, p.10: A seedling of *C.japonica* **Princess Lavender** x *C.x williamsii* **William's Lavender.** Originated by Dr Clifford Parks, Chapel Hill, N.C., USA. A very large semi-double with bright orchid red flowers produced late in the season. A very strong, vigorous, free flowering plant.

Royal Lady. (*C.japonica*), Mark Cannon Scion Catalogue, 1962, p.9. No description. SCCS., 1968, *Camellia Nomenclature*, p.121: Coral rose. Medium to large, semi-double with loose petals

and petaloids in centre. Medium, compact growth. Mid-season blooming. Originated in USA. Sport: **Royal Lady Variegated.**

Royal Lady Variegated. *(C.japonica)*, Walden Jr., 1965, ACS., *The Camellia Journal*, vol.20, No.1 as 'Royal Lady Var.': a virus variegated form of **Royal Lady** - Coral rose with white blotches. Originated in USA.

Royal Robe. (*C.japonica* x *C.reticulata)*, Feathers, 1958, NCCS, *Bulletin*, 12(1):31: Red. Medium, semi-double to peony form with irregular, upright petals. [('Waterloo' (**Etherington White**) x **Debutante**) x 'Crimson Robe' (**Dataohong**)]. Originated by David Feathers, Lafayette, California, USA. First flowered 1957. Leaves are glossy, dark green, leathery, heavily veined, 12-15 cm long x 7.5-9 cm wide. Flowers 10 cm across x 7.5 cm deep with 15-20 petals and 20-30 petaloids. Flowers early to midseason.

Royal Trumpeteer. SCCS., Oct. 1955, *The Camellia Review*. Orthographic error for **Royal Trumpeter.**

Royal Trumpeter. (*C.japonica*), Tourje, 1955, *American Camellia Yearbook*, p.35: A 'Magnoliiflora' (**Hagoromo**) seedling, originated by Marshall's Camellia Nursery, San Gabriel, California, USA. The colour is a faint blush overcast in bud form but pure white when open. The semi-double flowers have 16 petals, the centre three not opening as much as the others and forming a trumpet effect in centre to the flower. The size is from 10-12.5 cm across and flowering extends from mid-season through late. The plant has upright growth wth dark green leaves. Orthographic error: 'Royal Trumpeteer'.

Royal Velvet. *(C.japonica)*, Nuccio's Nurseries Retail Price List, 1987-1988, p.13, #8306: Dark velvet red. Large. semi-double. Vigorous, compact, upright growth. Mid-season blooming. Originated by Nuccio's Nurseries. Altadena, California. USA. ACS.. 1989, *The Camellia Journal*, vol.44, No.2, p.9. Reg. No.2126. *American Camellia Yearbook.* 1989. p.127, colour photo [p.135]: The 10 year old seedling first bloomed 1983. Plant growth is upright. dense and rapid. Chinese synonym: 'Huangjia Tian'erong'.

Royal Velvet Variegated. *(C.japonica)*, Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.410. A virus variegated form of **Royal Velvet**. Chinese synonym 'Baiban Huangjia Tiane'rong'.

Royal White. (*C.japonica*). Fruitland Nursery Catalogue, 1946-1947, p.29: White. Large, semi-double, rose form to formal double. Spreading growth. Late flowering. Originated at Overlook Nursery, Crichton. Alabama, USA.

Royale. (*C.japonica*), Hazlewood & Jessep, 1972. *Checklist - Camellia Cultivars from Nursery Catalogues*, p.204. No description. Originated in the USA. No valid listing located.

Royalty. (*C.japonica* x *C.reticulata*). *American Camellia Yearbook*, 1970, p.169, Reg. No.1094: A 7 year old cross *C.japonica* **Clarise Carleton** x *C.reticulata* 'Chang's Temple' (**Zhangjia Cha**), originated by T.E. Croson. Simi. California, USA. Plant growth is average with dark green leaves. 11 cm x 6 cm. The semi-double, Frizzle White type, flowers are bright pink with white filaments and yellow anthers. They measure 13 cm across x 6 cm deep with 12 petals. The centre of the petals is a deeper colour (RHS.CC.Red. Group,53C) and they are ruffled. Blooms early to mid-season. Sport: **Royalty Variegated.** Received RHS. Award of Merit, 1986. *Rhododendron, Magnolia and Camellias*, p.88. Chinerse synonym: 'Huangzu'.

Royalty Variegated. *(C.japonica x C.reticulata)*, SCCS., 1981, *Camellia Nomenclature*, p.180 as 'Royalty Var.': a virus variegated form of **Royalty** - Bright pink and white. Originated in USA.

Royston. *(C.japonica*), C.Aust., *Camellia News,* Autumn 2008, No.176, p.13, colour photo p.19, Reg. No. 573. A chance seedling of **Charlie Bettes.** Originated by by Roy. H. Campbell, Maddington, Western Australia. The off-white, rose form double flower has 48 petals, is 13

cm across x 6 cm deep, and flowers early to mid-season on a compact , bushy plant. Leaves mid-green, glossy and keeled. Flowers fall whole.

Roza Harrison. *(C.japonica)*, Napier, 1969, RHS., *The Rhododendron and Camellia Yearbook*, No.23, p.105: In Class 6 for a white single cultivar. Major-General E.G.W.W.Harrison, Tremeer, Cornwall won first prize with **Roza Harrison** a new cultivar named for his wife.

Rozakura. (Rosiflora Cherry), *(C.rosiflora* hyb.) Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.138, colour photo & description: Very small size, tubular form single, deep pink. Flowers profusely. Leaves ovate, dark green, apices acuminate, margins sharply, coarsely serrate. Blooms midseason. A natural seedling of *C.rosiflora.* Originated in the Okayama Prefecture, Japan. Named and released by Nobuo Sasai in 1978.

Rozeana. van Houtte Catalogue, 1839, 1:8. Synonym erroneously of 'Rossii' as 'Rossi', then in 1841 Catalogue 7:8: as 'Futtung', synonyms: 'Speciosa', 'Rozeana', 'Rossii', 'Reevesii Major', 'Parksii Vera' 'Palmer Carnation Waratah'. Orthographic error for 'Rozeanum', synonym for **Rawesiana.**

Rozeanum. Courtois, 1833, *Magazin dHorticulture*, 1[pt.D]:316. Synonym for **Rawesiana.**

Rubel's No. 10. SCCS., 1945, *Camellias*, p.16. Synonym for **Wilder's Rose.**

Rubens. *(C.japonica),* van Houtte Catalogue, 1845-1846, 23:50. [from] Moens. There is no description but from the dates of origin, does not seem to be the same as Donkelaar's **Rubens**. Rollisson, 1875-1876, Plant Catalogue, p.103: Deep rose, well formed and finely imbricated.

Rubens. *(C.japonica),* van Houtte Catalogue, 1854-1855, 53:46: Enormous imbricated, dark red flower with wide, pure white stripes; formed like **Princesse Baciocchi.** [from] Donkelaar. Verschaffelt, 1856, *Nouvelle Iconographie*, Book VI, pl.I. A seedling of Alexander Donkelaar, Chief Gardener of the Botanic Gardens of Ghent, Belgium, who put it up for sale two years ago. A 'perfection' distinguished by the star-shaped imbrication of its lanceolate petals, full or scarsely emarginate, of a vivid rose colour, intersected by a white strip. Le Texnier, 1911, pp.20, 28 says 'Grown from seed by Donkelaar, 1847 and sold commercially in France in 1853 by Miellez of Lille.' The name was erroneously used as a synonym for **L'Avvenire.**

Rubens. Carberry Nursery Catalogue 1962-1963, p.18. Erroneous synonym for **L'Avvenire**.

Rubens (L'Avenir). E.B. Champernowne Catalogue, 1972-1973, p.3. Synonym for **L'Avvenire.**

Rubens Major. Vanderbilt, 1941, *Camellia Research*, II, p.7. Orthographic error for **Rubescens Major.**

Rubens Striata. Auguste van Geert, 1858, Catalogue, Catalogue No.45, p.33. Synonym for **Rubescens.**

Rubescens. (*C.japonica*), Courtois, 1833, *Magazin d'Horticulture*, 1[pt.D]:317 as 'reddish'. van Houtte Catalogue, 1839, 1:8: Very wide, round, salmon red petals with white lines. [from] Low. Originated by the Low Nursery, Clapton, England. de Jonghe, 1851, *Traité de la Culture du Camelie*, p.121 as 'Rubescens'(Low): Regular imbricated double, of deep pink or salmon; the petals striped white. Very vigorous growth and a naturally pyramidal habit. Synonyms: 'Rubescens de Low', 'Rubescens'(Low) ' 'Rubescens Nova', 'Rubens Striata'. Orthographic error: 'Rubiscens'.

Rubescens de Low. Berlèse, 1845, *Monographie*, ed.3, p.271. Synonym for **Rubescens.**

Rubescens (Low). van Houtte Catalogue, 1839, 1:8. Synonym for **Rubescens.**

Rubescens Major. (*C.japonica*), Jules Menoreau Nursery Catalogue, 1886, p.13: Imbricated. Beautiful carmine pink. Puddle & Hanger, 1960, RHS., *The Rhododendron and Camellia Yearbook*, No.14, p.159: Rose form. Petals very broadly obovate, apex rounded, thick in texture, 5 cm x 5.5cm. Some stamens showing in centre of fully opened flowers. Size, 11 cm in diameter. Colour Crimson 22/1 with darker veining. The flower has a characteristic boss of unopened petals in its centre untill it is almost fully blown. Foliage, deep green, glossy, very variable from narrowly elliptic (15 cm x 6 cm) to broadly elliptic (8 cm x 5 cm), apex short to long acuminate, margins shallowly serrate. Plant habit, compact and bushy. Originated at Nantes, France. This variety was listed for many years by Henri Guichard of Nantes, France during which time it was confused with **Paolina Guichardini.** Sport: **Princess Anne.** Received RHS., Award of Merit, 1959. Sport: **Rubescens Major Variegated.**

Rubescens Major Variegated. Outteridge, 1962, *1000 Named Camellias in Australia*, p.15 as 'Rubescens Var'. Synonym for **Princess Anne.**

Rubescens Nova. Seidel, 1846, Pflanzen Catalog, p.10. Synonym for **Rubescens.**

Rubra Monstrosa. (*C.japonica*), Alex Verschaffelt, 1847-1848, Catalogue, p.62. Verschaffelt Catalogue, 1850. p.49. No description; 1853, *Nouvelle Iconographie,* Book IX, pl.IV: An irregular, complete double, 10-11 cm across, of the form of a tea rose with large, erect, hooded petals of a bright pink with poppy tints, sometimes with a white streak. Originated in Italy.

Rubra Nova. (C.*japonica*), Tagliabue, 1840, *Nomenclatore Camelliae...* No description. Originated in Italy. (Believed extinct.)

Rubra Perfecta. (*C.japonica*), Cachet Catalogue, 1845-1846, p.7 as 'Rubra Perfection'. No description. Costa, 1846, *Catalogue de la collection présentée à sa majesté L'Imperatrice de toutes les Russies et Reine de Pologne,* p.12. No description. Verschaffelt, 1853, *Nouvelle Iconographie,* Book I, pl.IV: Flowers medium size, with numerous, imbricated petals, compact, bilobate, outspread. The central ones, somewhat oblong, form a rose-shaped heart. All are vivid crimson red with roseate tints. Originated in Italy. Synonym: 'Rubra Perfecta Nova'. Orthographic variant: 'Rubra Perfection'.

Rubra Perfecta Nova. Verschaffelt Catalogue, 1849-1850, p.49. Synonym for **Rubra Perfecta.**

Rubra Perfection. Cachet Nursery Catalogue, 1845-1846, p. 7. Orthographic variant for **Rubra Perfecta.**

Rubra Plena. *(C.japonica),* Andrew's, 1802, *Botanical Repository,* vol.3, pl.199 as 'Rubro Plena'; Curtis, Samuel, 1819, *Monograph on the Genus Camellia,* pl.3; Loddiges, 1823, *The Botanical Cabinet*, vol.4, pl.397; Chandler & Booth, 1831, *Illustrations and Descriptions of Camellias…*pl.18: The flowers are about 8-9 cm across. They are of a crimson red colour and resemble the flowers of a large, double, hibiscus. The petals are numerous, of an irregular shape, comparatively long, narrow and pointed, with their edges compressed so as almost to meet. They are nearly upright, and diminish in size towards the centre, which is not elevated. Sometimes the flower has a different appearance, the petals being smaller, similar in colour and formation, but fewer in number and more regular with several parcels of stamens in the centre. It was imported from China in 1794 by Sir Robert Preston, Essex, England. One of the first of the horticultural varieties of *C.japonica* to reach the Western World, its nomenclature has a long history of confusion. Orthographic variants of the name **Rubra Plena** include: 'Flore Rubro Pleno', 'Flore Pleno Rubra', 'Rubro-plena', 'Rubro Pleno', 'Rubro Plena', 'Rubra Pleno'. Synonyms: 'Old Red', 'Double Red', 'Grevellii', 'Greville's Red', 'Rouge Double', 'Greavill's Double Red', 'Crevelle's Red', 'Queen of Denmark', 'Rubra Maxima', 'Rubra Maxima Plena', 'Rubro Maxima', 'Rubro Flore Pleno', 'Old Double Red', 'Newington', 'Madame Lavis'. The name **Rubra Plena** has been erroneously applied to the following cultivars: **Prince Eugene Napoleon,** 'Pope Pius IX'. **C.M. Hovey, Carlotta Grisi, Middlemist's Red, Madame Lebois.** Chinese synonym 'Lubola'.

Rubra Plena. The Pacific Camellia Society, 1946, *Camellia Nomenclature,* p.33. Erroneous synonym for **C.M. Hovey** as 'Colonel Firey'.

Rubra Plena. Magnolia Gardens and Nursery Catalogue, 1944-1945. Erroneous synonym for: **Prince Eugene Napoleon, 'Pope Pius IX', Carlotta Grisi.**

Rubra Plena Grandiflora. *(C.japonica),* Anon, 1830, "Ueber die Cultur der Kamellien" in *Der Blumen Gaertner,* p.53. No description. Synonyms: 'Rubra Grandiflora', 'Rubra Gigantea'. (Believed extinct).

Rubra Plena Imbricata. Vanderbilt, 1941, *Camellia Research*, II, p.7. Synonym for **Prince Eugene Napoleon.**

Rubra Supreme. *(C.japonica)*, Stewart's Nursery, Savannah Catalogue, 1964, p.2. No description. Illegal name, part latin. Not validly listed.

Rubra Tenera. *(C.japonica)*, Berlèse, 1843, *Iconographie*, p. facing pl. 248: The flower, 10-11 cm across, is full, regular and deep red with a touch of crimson lake. The exterior 4-5 rows of petals are broad-oval; the others long, a little curled, imbricated irregularly; those at the centre are very small and forming a centre of almost peony form with some aborted stamens. Originated in France by Mr Drouard, Gouillon, Nantes. Orthographic variants: 'Rubrum Tenerum', 'Rubra Tenere'.

Rubra Tenere. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.204. Orthographic error for **Rubra Tenera.**

Rubra Variegata. Lecoq Catalogue, 1846, p.138. Herbarium specimen, Paris dated 1821. Synonym for **Variegata.**

Rubra Venusta. *(C.japonica)*, van Houtte Catalogue, 1843-1844, 12:ddd: No description seen. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.12: Handsomely imbricated double. Large, deep crimson red, often with broad white stripes. Berlèse, 1845, *Monographie*, ed.3, p.231: A full rose form flower with external petals in numerous rows, well imbricated, becoming smaller to the centre; dark red speckled with white. Originated in Italy.

Rubra Virginalis. *(C.japonica)*, McIlhenny, 1934, *List of Camellia japonica for Sale*, p.3: Light pink. Medium large, full peony form. Medium, upright growth. Mid-season blooming. Originated at Jungle Gardens, Avery Island, Louisiana. USA as pink sport of **Harlequin.** See colour pl, p.195, G.G. Gerbing, 1945, *Camellias.* Synonyms: 'Jeanerette Pink', 'Andrews Pink', 'Jeanerette Bolles Pink', 'Red Virginalis', 'Opelousa. Pink', 'Stiles Perfection Pink'.

Rubria. *The Gardeners' Chronicle and Agricultural Gazette*, No.12, Mar. 24, 1856, p.208. Orthographic error for **Rubra.**

Rubricaulis. *(C.japonica)*, Sweet, 1818, *Hortus Suburbanus Londinensis.* No description. Baumann & Baumann 1831, *Collection de camellias élevés à Bollweiler*, pl.19 as 'Rubicaulis': The flower is large, dark carmine red, two to three together, with large and fairly small white spots. The growth of the plant is medium dense, upright, the young growth is dark green with new tips copper coloured. The mature leaves are somewhat arched, dark green and sharply serrate. The buds are brownish-yellow, large, oval, longish acute. Berlèse, 1837, *Monographie*, ed.1,

pp.86, 97, 128: Leaves 8 cm x 6 cm, broad-oval, thick, coarsely serrate, venation prominent; bud ovate-oblong, scales yellowish; flower, semi-double, (9-12 petals) 7 cm diameter, regular form, cherry-red; petals broad, rounded; corolla vase-shaped with numerous central stamens. It is also known as 'Rubricaulis Variegata' as it sometimes produces flowers marked with white. Synonyms: 'Lady Campbell's', 'Lady Adelaide Campbell's', 'Lady Admiral Campbell', 'Rubricaulis Variegata', 'Rubricaulis Panache', 'Rubricaulis Maculata', 'Lady Campbell', 'Fulgens de Gand', 'Lady Campbell's Red'. Orthographic errors: 'Rubicaulis', 'Rupicaulis'.

Ruby. Skinner, ed., 1957, *Garden Plants in Colour*, sec.50:18. Synonym for **Kôgyoku.**

Ruby Anniversary. *(C.japonica), New Zealand Camellia Bulletin,* March 1997, Issue No.126, vol.XX, No.1, p.20, Reg. No. 382. Registered by R.M. Young, Marton, New Zealand. A 16 year old chance seedling which first bloomed about 1986. A medium to large formal double, 9 cm in diameter with 60 – 65 petals. Flower colour is ruby red with darker veining (RHS.CC.53C-59C), and the outer petals have a bold white stripe down the middle. The plant is upright and of medium density and growth rate, with leaves 8 cm long x 4 cm wide. Flowers mid-season to late.

Ruby Bells. (*C.x williamsii), New Zealand Camellia Bulletin***,** 1982, vol.XII, No.7, p.52: An unregistered seedling of the cross *C.saluenensis x C.japonica* 'Fuyajô' (**Kon-wabisuke**). A small, deep red, single, originated by O. Blumhardt, Whangarei, New Zealand. *New Zealand Camellia Bulletin*, 1988, vol.XV, No.5, p.25, Reg. No.252: First flowered 1964. Bush has an open, spreading habit with dark leaves, 7 cm x 2.5 cm. The single, dark red flower (RHS.CC.Red Group,53C) has 6 petals, reddish filaments and yellow stamens, 5 cm across x 5 cm deep. Blooms early to mid-season. Chinese synonym 'Lubi'.

Ruby Davidson. *(C.sasanqua).* ACS, *The Camellia Journal,* June 2003, p.25, colour photo p.24, Reg. No. 2598. A semi-double chance seedling with white petals with blush on the outer edges, deep yellow anthers and light yellow filaments. Originated by Ralph Davidson, Birmingham, Ala., USA. *American Camellia Yearbook,* 2003, p.66, colour photo p.c5. The 7 year old seedling first flowered in 1999. Flowers have 45 petals and 12 petaloids, and measure 7.5 cm across x 3.8 cm deep. Plant is spreading with average growth rate. Flowers early to mid-season. The dark green leaves are 6.5 cm long x 3.8 cm wide.

Ruby Girl. (*C.reticulata* hybrid). ACRS, *Camellia News,* Autumn 2005, No.167, p.17, colour photo p.19, Reg. No.554. Originated by Donal R. Coe, Albury, NSW, Australia. A cross between *C.reticulata* hybrid **Nuccio's Ruby** x *C.japonica* **Drama Girl** which first flowered in 1977. A large semi-double, salmon rose flower with pink overcast and iridescent colour (RHS.CC.54B-54D), 16 cm diameter x 8 cm deep. Early to mid-season flowering on a compact, upright plant of medium growth. Leaves dark green, flat, keeled, glossy, elliptic, apiculate apex, broadly cuneate base, serrulate margins, 11 cm long x 5 cm wide. Flowers small when opening, then expand to 16 cm. Stamens tubular. Chinese synonym 'Baoshinü'. Note: Later advice is that first flowering was in 1997.

Ruby Glow. Vanderbilt, 1941, *Camellia Research,* II, p.7. Synonym for **Vedrine.**

Ruby Glow Variegated. Valley Garden Supplies Catalogue, 1946-1947 as 'Ruby Glow Var'. Synonym for **Eleanor of Fairoaks.**

Ruby Mathews. *(C.japonica), American Camellia Yearbook*, 1956, p.65, Reg. No.279: A 9 year old chance seedling, originated by Julington Nurseries, Jacksonville, Florida. First bloomed in 1953. Plant growth is compact and average, and with medium sized, oval, dark green leaves. Flowers, complete double, similar to **Candidissima,** with 70-80 petals, 6-8 cm across. Colour is dark, ruby red, shaded lighter on the inside of incurved petals. Blooms mid-season. Orthographic error: 'Ruby Matthews'.

Ruby Matthews. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.204. Orthographic error for **Ruby Mathews.**

Ruby Queen. *(C.reticulata),* Koromiko Nursery Catalogue, 1984; *New Zealand Camellia Bulletin*, 1986, vol.XIV, No.5, p.10, Reg. No.233: Originated by O. Blumhardt, Whangarei, New Zealand; a cross *C.reticulata* 'Crimson Robe' (**Dataohong**) x 'Purple Gown' (**Zipao**). The 10 year old plant first bloomed 1980 and has an upright, medium growth habit. The semi-double flowers are 14-16 cm across x 7 cm deep with about 17 petals and a mass of stamens with bright yellow anthers. The colour is a glowing red. (RHS.CC.Red Group,53B). Mid-season flowering.

Ruby Tatum. SCCS., 1984, *Camellia Nomenclature*, p.126. Orthographic error for **Rudy Tatum.**

Ruby Velvet. *(C.japonica), New Zealand Camellia Bulletin,* March 2005, Issue No.150, vol.XXIV, No.2, p.35, Reg. No.467. Registered by M. & L. Mangos, Tauranga, New Zealand. A 4 year old chance seedling which first flowered in 2003. Flower is peony form, 9 cm across x 4.5 cm deep, with 32 petals and 13 petaloids. Petals are upstanding, and the central petals and petaloids are fluted, and surround a substantial centralised cluster of gold anthers on pinkish-white filaments. Colour is deep red (RHS.CC.53B) and the petal edges have a purplish tinge which moves inward as the flower matures. A spreading, open plant of medium growth rate, with dark green leaves 7 cm long x 4 cm wide. Flowers mid-season to late.

Ruby Wedding. *(C.x williamsii). New Zealand Camellia Bulletin,* March 1992, Issue No.111, vol.XVII, No.4, p.7, Reg. No.296: Originated by Les Jury, New Plymouth, New Zealand, from a cross between *C.japonica* **Kimberley** and *C.x williamsii* **Dark Nite**. A medium size bloom of currant red in anemone to peony form, with an outer row of deep wavy petals and a central mass of red, rabbit eared, fluted petaloids intermixed with paler ones and golden stamens. There are 16 petals and about 137 petaloids. Flower size is 8 cm across x 5 cm deep. Flowers mid-season. The plant is upright, dense and of medium growth rate. The leaves are dark green and 9 cm long x 5 cm wide. The 12 year old plant first bloomed 1987. Petal colour is RHS.CC.51B with some petaloids RHS.CC.46A-B, 55B and 19D.

Ruby Woodroffe. *(C.reticulata), New Zealand Camellia Bulletin,* 1981, vol.XII, No.2, p.6, Reg. No.164: A chance seedling of *C.reticulata* **Confucius**; originated by Mrs A.B. Durrant, Rotorua, New Zealand, that first flowered 1975. Growth habit is upright and rapid with mid-green leaves, keeled, sharply serrate, 16.5 cm long x 5 cm wide. Flowers vary from semi-double to peony form, 13 cm across x 7 cm deep with 15-16 petals of clear pink, (RHS.CC.Red Group, 55A), becoming lighter towards the centre. Anthers are golden, filaments cream. Flowers have a high, rabbit eared centre. Flowers early to mid-season.

Ruchi Rhodes. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2013, p.28 with colour photo; Regn No.2890; ACS, *Yearbook,* 2013, p.137 with colour photo; Originated, registered and propagated by Howard & Mary Rhodes, Tallahassee, Fla., USA. The large size, 10.8cm diameter x 3.8cm deep flower is semidouble, bright red and white, bright yellow anthers and white filaments. Flowers fall whole. Plant is upright, dense, and with average growth rate. Mid-green leaves average 9cm x 5cm with medium serration. Flowers midseason.

Ruckeri. *(C.japonica),* Harrison, ed., 1838, *The Floricultural Cabinet,* vol.6, p.149 as 'Ruckerii': Medium, double, dark red. Originated in England.

Rudalphi. Maupoil & Figlio Catalogue, 1847. Orthographic error for **Ridolfi.**

Rudis Rubra. *(C.japonica),* Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. No description. Ridolfi, Florence Nursery Catalogue, 1848, p.9. No description. Originated in Italy. (Believed extinct.)

Ruddigore. *(C.japonica),* Trehane Nursery Catalogue, 1980: A medium sized, red, semi-double; originated in USA by David Feathers, Lafayette, California, USA. Feathers seedling: KT 69.

Rudolph. *(C.japonica), American Camellia Yearbook,* 1982, p.178, Reg. No.1811: A medium, deep red, peony form *C.japonica* chance seedling that blooms early to mid-season to late. Originated by Nuccio's Nurseries, Altadena, California, USA. The 5 year old seedling first flowered 1976. Average flower size 8-9.5 cm across. Plant growth is upright and medium with dark green leaves. Nuccio's number 7611. See colour photo, front cover, SCCS, 1984, *The Camellia Review,* vol.45, No.3 and colour photo, p.8, *International Camellia Journal,* No.21, 1989. Chinese synonym 'Ludaofu'.

Rudolph Variegated. *(C.japonica),* Nuccio's Nurseries Catalogue, 1996, p.17. A virus-variegated form of **Rudolph.** Brilliant dark red, mottled white. Medium size, full peony to anemone form. Medium, upright to columnar growth. Blooms early to mid-season. Originated in USA.

Rudy Tatum. *(C.reticulata* hyb.), *American Camellia Yearbook*, 1981, p.105, Reg. No.1749: A very large, red with deeper veining, semi-double, *C.reticulata* hybrid *(C.reticulata* 'Crimson Robe' (Dataohong) x [(*C.reticulata* 'Cornelian' (Damanao) x *C.japonica* Mrs D.W Davis) x *C.reticulata* 'Cornelian']), mid-season to late blooming. Originated by Frank Pursel, Oakland, California, USA. The 6 year old seedling first bloomed 1980. Size is 16 cm across x 7.5 cm deep. Plant growth is upright and medium with dark green leaves, 12.5 cm x 7.8 cm. Orthographic error: 'Ruby Tatum',

Rudy's Magnoliiflora. SCCS., 1990, *Camellia Nomenclature*, p.96 as 'Rudy's Magnoliaeflora', synonym for **Magnolia** (da Silva).

Ruffian. (C.*japonica*), *American Camellia Yearbook*, 1979, p.111, Reg. No.1504: A very large, white, with yellowish tinge, peony form *C.japonica* seedling of **Charlie Bettes** x **Tomorrow** that blooms mid-season to late; originated by Dr. W.F. Homeyer Jr, Macon, Georgia, USA. The 8 year old seedling first bloomed 1974. Its flower has 40 petals, 150 petaloids, yellow anthers, white filaments. Average flower size, 13-16 cm across x 8-10 cm deep. blooms are heavy, large and dense. Plant growth is upright, dense and medium in rate with dark green leaves, 11 cm x 7.5cm.

Ruffled Beauty. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1944-1945: From the Tea Gardens, Summerville, South Carolina, USA. Rose-pink, loose, irregular peony with wavy petals whose texture seem to be that of crepe paper; even the borders of the petals are ruffled. Blooms mid-season to late. See illustration, p.220, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III.

Ruffled Blush. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* No description. Originated in USA. No valid listing located.

Ruffled Princess. *(C.japonica), American Camellia Yearbook*, 1958, p.91: Pink, medium sized, semi-double to anemone form with ruffled petals. Vigorous, compact, upright growth. Blooms mid-season. Originated by Hugh Shackelford, Albany, Goergia, USA. Sport: **Ruffled Princess Variegated.**

Ruffled Princess Variegated. SCCS, 1960, *Camellia Nomenclature*, p.99: as 'Ruffled Priness Var.': A virus variegated form of **Ruffled Princess** - Pink blotched white. Originated in USA.

Ruffles. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature.* p.92: White. Large, loose, peony form with undulated petals. Vigorous, bushy growth, Flowers mid-season. Originated in USA by Marshall.

Rugosa. *(C.japonica),* Berlèse, 1840, *Monographie*, ed.2, pp.194-195, 234: Leaves, 9.5 cm x 6.8 cm, some oval, some elliptic, apex sharp, margins lightly serrate, dark green; bud large, long, scales wrinkled and blackish; Flower over 9 cm across, full, orange red; petals of the first rows, broad, perfectly imbricated and scalloped at the apex. Those of the centre, of different forms, some erect, others flat, in groups. Originated in Italy. Orthographic error: 'Rugossima'.

Runt. *(C.japonica), American Camellia Yearbook,* 1962-1963, p.224, Reg. No.644: A 17 year old chance seedling, originated by Wheeler's Central Georgia Nursery, Macon, Georgia, USA. Plants are columnar, upright and rapid with foliage similar to 'Debutante'. The anemone form flowers, similar to **Elegans,** are light pink, miniature, 3.8-5 cm across with 10 petals and a mass of petaloids. Flowers early through mid-season.

Rupert Carlyon. Treseder & Hyman, 1975, *Growing Camellias*, p.141: A cross of *C.x williamsii* **J.C.Williams** x *C.japonica* **Adolphe Audusson** in England by Gillian Carlyon, Par, Cornwall. The flowers resemble large, double, white begonias. The plant has an open, spreading habit and blooms late in the season. Synonym for **E.T.R. Carlyon.**

Rupicaulis. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.205. Orthographic error for **Rubricaulis.**

Rupie. *(C.japonica)* ACS, Yearbook. p.138 with colour photo; Regn No.2904. Originated, registered and propagated by Rupert E. Drews, Charleston, S.C., USA. A 28 year old seedling, parentage not recorded. The medium to large, 10cm diameter x 6.5-7.5cm deep, flower is semidouble to loose peony form (photo is of a loose anemone form), white with dark pink stripes or spots.

Gold anthers and yellow filaments. Blooms fall whole. Plant is upright with average growth rate. Dark green leaves average 6.5cm x 2.5cm with medium serration. Flowers midseason.

Rupie's Charleston. *(C.japonica),* ACS, *The Camellia Journal,* June 2004, p.28, colour photo p.29, Reg. No.2612. A sport of **Miss Charleston Variegated,** propagated by Rupie Drews, Charleston, S. C., USA in 1998. The high-centred, highly variegated pink and white flower is 12.7 cm across, with heavy petal texture. Best suited for exhibition. Flowers mid-season. *American Camellia Yearbook,* 2004, p.95, colour photo p.c3. Plant is upright with average growth rate. Dark green leaves are 11.5 cm long x 6.5 cm wide.

Ruri-tsubaki. (Ruri Camellia), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.90, colour photo & description: Small size, pale pink, single with 7 petals with incurved lateral margins and a short, broad stamen cluster with yellow anthers. Leaves elliptic-ovate, dark green, apices acuminate, margins shallowly serrate. Blooms mid-season. Originated in Kansai area, Japan. This variety was found near the Jôruri Temple in the Kyôto Prefecture and the name 'Ruri' was taken from the temple name.

Ruschi. *(C.japonica),* Franchetti, 1855, *Collezione di Camelie*, p.56: Deep red. Rayed with white, imbricated, variable. Originated in Florance, Italy.

Rusii. Burdin Maggiore & Co. Catalogue, 1845, p.43. No description, Orthographic error for **Russii.**

Russelliana. Jacob Makoy et Cie Catalogue, 1839, p.18. Synonym for **Conspicua de Loddiges.**

Russell Cates. *(C.japonica), American Camellia Yearbook*, 1959, p.280, Reg. No.376: A 5 year old chance seedling, originated by Mrs Russell Cates, Albany, Georgia, USA which first bloomed 1957. Plant growth is upright and rapid with long, slender, dark green leaves. The rose-red, incomplete double flowers, 11-12.5 cm across, have about 30 petals with a large number of petaloids. Early to mid-season flowering. Orthographic error: 'Russell Gates'.

Russell Gates. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* Orthographic error for **Russell Cates.**

Russhay. *(C.sasanqua).* ACRS., 1981, *Camellia News*, No.79, p.28, Reg. No.271: Originated by R. Green, Killarney Heights, N.S.W., Australia. A chance seedling of Plantation Pink that first bloomed 1974. The upright, vigorous plant has deep green leaves, 5 cm x 3 cm, apex acute and margins strongly serrate. The flowers are semi-double, 10-12.5 cm across, orchid pink shading to deeper pink towards the centre. Flowers early to mid-season.

Russian Snow. *(C.japonica),* Williams & Thompson, 1952, *American Camellia Yearbook*, p.5: White with small red flecks. Large, formal double. Seedling of unknown parentage. Originated by Reynard Way Camellia Nursery, San Diego, California, USA.

Russian White. *(C.japonica), New Zealand Camellia Bulletin*, 1973, vol.VIII, No.3, p.24, Reg. No.82: A chance seedling of **Emperor of Russia,** 12 years old, first flowered 1966; originated by Mrs Ida Berg, Whakatane, New Zealand. Growth habit is upright and dense with dark green leaves, 8 cm x 5 cm, coarsely serrate. The flower is peony form, 10-11 cm across with 20 petals and numerous petaloids. The colour is white, showing cream at the centre, anthers gold, filaments white.

Russii. *(C.japonica), La Société Royale d'Horticulture de Belgique,* 1842, p.23. No description. Burdin Maggiore & Co, 1849-1850, Catalogue General as 'Rusii': Red, full. Flower large and majestic. Originated in Italy. Orthographic error: 'Rusii'.

Rust. SCCS., 1958, *Camellia Nomenclature,* p.42. Synonym for **Harlequin.**

Rusticana. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* The species *Camellia japonica* subsp. *rusticana* Honda (1950). The snow camellia. 'Yuki-tsubaki'.

Rusty. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Synonym for **Undaunted.**

Ruta Hagmann. (*C.reticulata* hybrid). *American Camellia Yearbook,* 1992, p.38, Reg. No.2246: A very large size, light blush coral pink, chance seedling of *C.reticulata* hybrid **Curtain Call** that blooms mid-season to late. Originated by David Hagmann, Orinda, California, USA. The 10 year old seedling first flowered 1986. The flower is 15 cm across x 10 cm deep with 17 basal petals and 15 rabbit ear petals, yellow anthers and light yellow filaments. Petals are of excellent substance with blush pink shading to light coral pink at tips. Plant growth is upright, spreading, open, and medium in rate with dark green leaves 12.5 cm long x 7.5 cm wide. Chinese synonym 'Hageman. See colour photo, front cover, ACS 1993, *The Camellia Journal*, vol.48, No.1.

Ruth Anderson. *(C.japonica), American Camellia Yearbook*, 1966, p.99, Reg. No.850: A 7 year old chance seedling that first bloomed 1961; originated at Julington Nurseries, Jacksonville, Florida, USA. Plant growth is upright, open and rapid in rate with dark green leaves, 8 cm x 5 cm. The semidouble, white flower is 10 cm across x 7.5 cm deep with 36 petals and 15-18 flagged petaloids. Anthers light yellow, filaments white. The bloom has three alternative rows of sweet-pea shaped petals forming a flared, cup-shaped form with a loose centre of 5 groups of white stamens and flagged petaloids. Flower is fragrant. Blooms mid-season.

Ruth Blackwell. (*C.japonica*), May's Nursery Catalogue, 1956-1957: Brilliant red. Medium, semi-double with fluted petals.. Medium, compact growth. Mid-season flowering. Originated in USA by G.G. Gerbing, Fernandina, Florida.

Ruth Boyer. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Orthographic error for **Ruth Royer.**

Ruth Brooks. *(C.japonica),* SCCS., 1974, *Camellia Nomenclature*, p.132: Rose colour with snowy white centre. Medium sized, formal double. Mid-season blooming. Originated by J.M. Haynie, Theodore, Alabama, USA.

Ruth C. McNair. *(C.japonica),* ACS, *The Camellia Journal*, Mar. 2009, p.29, Regn No. 2756. Originated by John M Davy, Milton, Fla, USA. *American Camellia Yearbook*, 2008, p.126 with colour photo; A 25-30 year old seedling of **Betty Sheffield**, first flowered 1982. Propagated by Panhandle Select LLC, Milton, Fla. The 12 cm diameter x 7.5 cm deep flower is white, peony form, with 3-4 layers of large broad petals and many central petaloids, bright yellow anthers and white filaments. Slight fragrance, heavy petal texture. Flowers mid-season. Dense, spreading growth at average rate. Dark green leaves average 10-11.5 cm x 4.5 cm.

Ruth Goff. (*C.japonica*), *American Camellia Yearbook*, 1966, p.99, Reg. No.864: A 14 year old chance seedling that first bloomed 1958; originated by O.C. Roberts, Ocean Springs, Mississippi, USA. Plant growth is spreading and dense with dark green leaves, 8 cm x 5 cm. The semi-double flower, similar to 'Herme' (**Hikarugenji**), is 10 cm across x 5 cm deep. Colour is light red with yellow anthers and white filaments. Blooms early to mid-season.

Ruth Hightower. *(C.japonica), American Camellia Yearbook*, 1992, p.38, Reg. No.2243: A large size, carmine rose semi-double *C.japonica* chance seedling. Originated by William H. Hightower Jr., Thomaston, Georgia, USA. The 15 year old seedling first flowered 1980. Average flower size 10.5 cm across x 3.8 cm deep with 10 petals and 3-4 petaloids, yellow anthers and cream filaments. Plant growth is open and average with dark green leaves 8 cm long x 4.8 cm wide. See colour photos between pp.40-41.

Ruth Jernigan. *(C.reticulata). American Camellia Yearbook*, 1991, p.79, Reg. No.2209: A very large size, red with frosted sheen on front of petals, semi-double seedling of *C.reticulata* **Harbinger** x *C.reticulata* 'Crimson Robe' (**Dataohong**), that blooms early to mid-season.

Originated by Marvin Jernigan, Warner Robins, Georgia, USA. The 10 year old seedling first flowered 1987. Average flower size is 17.5 cm across x 8 cm deep with 23 petals, yellow stamens, clear filaments. Plant growth is upright and rapid in rate with dark green leaves 11 cm long x 4 cm wide. For colour photos see between pp.80-81.

Ruth Kemp. (*C.japonica*), Hazlewood's Nursery Catalogue, 1941: Originated at Camellia Grove, Ashfield, N.S.W., Australia and transferred to the garden of G.C. Linton, Somersby, N.S.W. A semidouble, light rose, of the hose-in-hose type. The flowers are medium size and display a prominent cluster of central stamens. See illustration, p.299, Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II.

Ruth Lane. (*C.japonica*), Thomasville Nursery Catalogue, 1953: Fendig, 1953, *American Camellia Catalogue*: Pink. Large, cupped semi-double. Originated in USA at Thomasville Nursery, Thomasville, Georgia.

Ruth Laurent. (*C.reticulata* hyb.), *American Camellia Yearbook*, 1983, p.164, Reg. No.1875: A very large, red, semi-double *C.reticulata* hybrid ['Crimson Robe' (**Dataohong**) x **Jean Pursel**] that blooms mid-season to late; originated by Frank Pursel, Oakland, California, USA. The 7 year old seedling first bloomed 1981. Average flower size, 13 cm across x 5 cm deep. Plant growth is upright and medium with dark green leaves, 12.5 cm x 6 cm.

Ruth Lennon. (*C.reticulata* hybrid). *American Camellia Yearbook*, 1991, p.80, Reg. No.2214, colour photo between pages 80-81. A large size, bright orchid pink, semi-double seedling of *C.reticulata* hybrid **Valley Knudsen** that blooms mid-season to late. Originated by Luther W. Baxter Jr., Seneca, South Carolina, USA. The 15 year old seedling first flowered 1985. Average flower size is 11 cm across x 5.5 cm deep with 15-22 petals, light yellow anthers and white filaments. Flowers have a special sheen with upright, wavy petals. Plant growth is dense and medium in rate with dark green leaves 9.5 cm long x 3.5 cm wide.

Ruth McLean. *(C.japonica), Camellias, A Photo Dictionary*, Don Ellison, 1997, p.73 with colour photo; peony form, red, medium to large, medium growth, upright. Ferreira & Celina, 2000, *O Mundo da Camélia*, p.107 with colour photo; Dark red peony form, medium to large, flowers mid-season. Plant is upright and of medium growth rate. Origin not given. Note; Photos in the two publications do not match each other. Plants in Portugal match the Ellison photo.

Ruth Norman. (*C.japonica*), *American Camellia Yearbook*, 1981, p.105, Reg. No.1728: A very large, brilliant red, semi-double *C.japonica* chance seedling that blooms early to mid-season. Originated by G.C. Norman, Tallahassee, Florida, USA. Average flower size, 15 cm across x 7cm deep with 42 petals, yellow anthers and filaments. Plant growth is upright and medium with light green leaves, 9.5 cm long x 5 cm wide.

Ruth R. Dunn. *(C.japonica), American Camellia Yearbook*, 1983, p.164, Reg. No.1905: A medium pink, semi-double, *C.japonica* chance seedling originated by J. Ralph Dunn, Sumter, South Carolina, USA. Average flower size, 8 cm across x 2.5 cm deep. Plant growth is upright and rapid with mid-green leaves, 8 cm x 3.2 cm.

Ruth Royer. (*C.japonica*), Funchess, 1951, *American Camellia Yearbook*, p.35: A sport of the **Duchess of Sutherland** - pink and white, shading from clear pink to pure white with various amounts of white variegation. Originated at the Flowerwood Nursery, Mobile, Alabama, USA. See illustration, p.221, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Synonyms: 'Thelma Sanford', 'Pink Duchess Variegated'. Orthographic error: 'Ruth Boyer'.

Ruth Seibels. *(C.japonica), American Camellia Yearbook*, 1975, p.241, Reg. No.1379: A 9 year old chance seedling that first bloomed 1970; originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is upright, open and medium with light green leaves, 10 cm x 5 cm. The semi-double type bloom is white with 20 petals, 7 petaloids, yellow anthers and white filaments. Average size, 12-13 cm across x 7 cm deep. Blooms mid-season.

Ruth Smith. (*C.x williamsii),* ACS., 1989, *The Camellia Journal*, vol. 44, No.3, p.9, Reg. No.2144: Medium size, pale pink edged deeper pink, peony form. A seedling of *C.x williamsii* **Donation,** x **Anticipation,** originated by Marvin Jernigan, Warner Robins, Georgia, USA. Blooms mid-season. *American Camellia Yearbook*, 1989, p.127: The 4 year old seedling first bloomed 1986. Average flower size, 8 cm across x 5 cm deep with 37 petals and 210 petaloids. Plant growth is upright, open and rapid with mid-green leaves 10 cm long x 3.8 cm wide.

Ruth Stewart. (*C.japonica*), *American Camellia Yearbook*, 1969, p.166, Reg. No.1038: A 5 year old chance seedling that first bloomed 1962; originated by Ruth M. Stewart, Minden, Louisiana, USA. Plant growth is upright, dense and medium, with dark green leaves, 12.5 cm long x 5 cm wide. The peony form flower, similar to **Debutante,** is 12.5 cm across x 5 cm deep. Rose colour. Blooms mid-season.

Ruth Tinkle. *(C.japonica)* ACS, *The Camellia Journal*, Dec 2010, p.29 with colour photo; Regn 2806. Originated by Oscar Tinkle, Portland, Ore., USA. ACS, *Yearbook* 2010, p.82 with colour photo; A 25 year old chance seedling, first flowered 1990. Propagated by Collier Brown, Portland. Plant is upright, with average growth rate. Dark green leaves are 10 cm x 5 cm. Medium size, rose form to semi-double flower is 9 cm diameter x 4.5 cm deep, red with faint white streaks on the innermost petals. White anthers (yellow in photo). 65 petals and 5 petaloids. Flowers midseason to late.

Ruth Vaughn. *(C.japonica), American Camellia Yearbook*, 1967, p.232, Reg. No.930: A 9 year old seedling of 'Alba Superba' that first bloomed 1959; originated by Dr J.W. Vaughn, Lakeland & Auburnvale, Florida, USA. Plant growth is upright and willowy, spreading and rapid with light to medium green leaves, 15 cm x 8 cm. The peony form to rose form double flowers are 13-17 cm across x 7-8 cm deep with 80-95 petals. Colour is porcelain white with golden yellow stamens. Often petals have a slight pink undertone. Blooms early through mid-season.

Rutherfordiana. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* No description. Originated in USA. (Belived extinct.)

Ruthie K. *(C.reticulata* hyb.), *American Camellia Yearbook*, 1975, p.241, Reg. No.1357: A 7 year old hybrid with reticulata parentage (**Buddha** x unknown) that first bloomed 1969; originated by Howard Foust, El Toro, California, USA. Plant growth is upright, medium and open with dark green leaves, 8 cm long x 3.8 cm wide. The semi-double bloom is vivid rose-pink with yellow anthers and filaments and 17-20 petals. Average size, 15 cm across x 10 cm deep. Blooms midseason.

Ruthie Pope. *(C.japonica), American Camellia Yearbook*, 1981, p.105, Reg. No.1718: A large, bright pink and white variegated, loose peony form *C.japonica* chance seedling. Blooms early to mid-season. Originated by C.R. Pope, Lafayette, Louisiana, USA. The 12 year old seedling first bloomed 1977. Average flower size, 12 cm across x 8 cm deep with 15 petals, 24 petaloids, yellow anthers and flesh filaments. Plant growth is open and medium with light green leaves, 11cm long x 6 cm wide. Sport: **Ruthie Pope Solid.**

Ruthie Pope Solid. *(C.japonica), American Camellia Yearbook*, 1982, p.178, Reg. No.1805: A large to very large, rose-pink anemone form *C.japonica* mutant of Ruthie Pope. Originated by C.R. Pope, Lafayette, Louisiana, USA. Mutant first observed 1977. Blooms early to mid-season. Average flower size, 12 cm across x 7 cm deep with 26 petals, 32 petaloids, yellow anthers, pink petaloids.

Rutilans. *(C.japonica),* L.L. Liebig, 1839, *Verzeichnis von Warmen und Kalten Hauspflanzen...,* p.11. Tagliabue, 1840, *Nomenclatore Camelliae....* No description. Berlèse, 1840, *Monographie*, ed.2, pp.195, 234: Leaves 8 cm x 7 cm, wide-oval, almost round, finely, regularly serrate, shining dark green, recurved apex; buds average size, scales blackish; flowers over 9 cm

across, petals in 6 rows, well imbricated, deeply scalloped at the apex; centre a flattened group of petals gathered together. Synonym: 'Rutilans Perfection'.

Ryan's Argyle. *(C.japonica),* ACS, Aug. 1996, *The Camellia Journal*, vol.51, No.2, p.30, Reg. No.2370. A miniature, dark pink single chance seedling which flowers mid-season. Originated by Paul Eleazer, Dawson, Ga., USA. *American Camellia Yearbook*, 1996, p.4, colour photo before p.1. The 9 year old seedling first flowered in 1990. Average flower size is 5.7 cm across x 5 cm deep with 5 petals and yellow anthers. Plant growth is upright, dense and slow, with dark green leaves 7.5 cm long x 3.2 cm wide.

Rye Heriot. *(C.japonica),* Walter Allan Nursery Catalogue, 1947. SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.61: Light pink.Very large, open semi-double. *American Camellia Society Quarterly*, vol.6, No.2, p.9, Reg. No.119: An 8 year old seedling of unknown parentage. First flowered 1946. Originated by Walter Allan Nursery, Summerville, South Carolina, USA. Type of plant growth is average, compact and rapid. Rather long, serrated leaves, slightly twisted. Buds are large and pointed. Colour deep rose-pink. Flower is semi-double, 10-12.5 cm across. Early flowering.

Ryôgen-no-hi. (Wildfire), *(C.rusticana),* Kyôto Engei Kurabu, *Tsubaki Tokushû*, Mar. 1968, No.9, colour pl.; see also Seibundô Shinkôsha, 1979, *Senchinshû*, pp.162, 256: Medium sized, dark scarlet, semi-double with 2 outer rows of large, rounded, notched petals of unequal length. The centre consists of a spreading cluster of stamens with yellow anthers, sometimes broken by an odd vertically folded petal. Leaves mid-green, undulate, margins finely serrate, apex acute, recurved, petioles hirsute. Originated in Kitakanbara-gun, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1959.

Ryôgoku. (Place Name in Edo), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Widely open double, large size, white with bold, dark red stripes. See Kyôto Engei Kurabu, *Tsubaki Tokushû*, 1964, No.5, p.80. Originated in Japan. (Believed extinct.)

Ryôjuhai-tsubaki-fukurin. (Ryôju's Cup-shaped Camellia with Margined Leaves). Mizuno, 1829, *Sômoku Kinyôshû*, vol.5: White semi-double in the 'Margined Leaves' Section. Different readings: 'Ryôjuhai-tsubaki-hukurin', 'Ryôjusakazuki-tsubaki-fukurin'. Synonym: 'Ryôzyuhai-tsubaki'. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.168. (Believed extinct.)

Ryôjuhai-tsubaki-hukurin. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.154. Different reading for **Ryôjuhai-tsubaki-fukurin.**

Ryômen. (Both faces), *(C.japonica),* In the *Chinka Zufu*, (before 1700), Watanabe, 1968 there are three different Camellia cultivars named Ryômen. The only red double amongst them is pl.582. Nakayama, 1847, *Senka'ôden:* Dark red, double, flowers do not fully open. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.80. Originated in Japan. (Believed extinct.)

Ryômen. (Both faces), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.391: Small to miniature, red, double with white variegations. Originated in Japan. (Believed extinct.) Possible synonym for **Saifu.**

Ryômen. (Both Faces), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.623: Large, rose form double with 3 rows of imbricated petals, coloured red at the base, with the colour running into a white edge, some small central petaloids and aborted stamens. Originated in Japan. (Believed extinct.)

Ryômen. (Both faces), *(C.sasanqua)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.l; Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Small to medium sized, red, double. Early flowering. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.81.

Ryômenaka-manyô. (Both faces red - Manyô), *(C.sasanqua)*, Ichijima, 1906, *Kokon Yôrankô* vol.344, p.569. (Reprint of Yashiro, 1841): Blossoms rather small, red, semi-double. Blooms early. Originated in Japan. 'Manyo' is the famous ancient anthology of Japan. (Believed extinct.) Note: This may be the transcription error for the *C.sasanqua* **Ryômen** in *Kadan Chikinshô*, 1695.

Ryômenbeni. Wada, 1941, *Japanese Garden Treasures*, p.28. Different reading for *C.japonica* **Ryômenkô.**

Ryômenbeni. (Both faces red), *(C.sasanqua)*, Wada, 1941, *Japanese Garden Treasures*, p.32: Semi-double, autumn flowering varieties of sasanquas. Intense crimson. Medium size. Different reading 'Ryômenkô', which is also the name of a different sasanqua cultivar.

Ryômenkô. (Both Faces Red), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Nakamura, Tsuneo, Sebundô Shinkôsha, 1965, *Tsubaki to Sazanka*, p.126: Semi-double, crimson with white stripes; medium size. Originated in the Kantô area, Japan.

Ryômenkô. (Both faces red), *(C.sasanqua)*, Yashiroda, 1950, *American Camellia Yearbook*, p.24: Both sides of the petals are crimson as the name implies, and slightly white shaded; medium cup-shaped, well arranged; fleshy, thick stamens are centered in the upright bloom. Plant of a spreading nature, not vigorous. Originated in Japan. Different reading is 'Ryômenbeni', which is also the name of a different sasanqua cultivar.

Ryômenkô. (Both faces red), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in the early blooming section. See: JCS., 1969, *Tsubaki*, No.7, p.36; Itô, Ko'emon, 1879, *Chinkashû:* Castilian red, small, formal double, sometimes spotted white. Early blooming. For colour photos & descriptions see: Tuyama, 1966, *Camellia Species of Japan*, pl.123; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.395, p.351; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.162, 256. Different reading: 'Ryômenbeni', which is also the name of a sasanqua. Originated in Kantô area, Japan.

Ryômen-sazanka. (Both faces sasanqua), *(C.sasanqua)*, Ichijima, 1906, *Kokon Yôrankô* vol.344, p.571. (Reprint of Yashiro, 1841). Cited from *Yamato Honzô*, (1708) and *Hidenkakyô*, (1688). Both side of the petals are red, hence the name 'Ryômen'. This is a variety of **Hoshiryômen.**

Ryôzuhai-tsubaki. Mizuno, 1829, *Sômoku Kinyôshû.* Synonym for **Ryôjuhai-tsubaki-fukurin.**

Ryûbi. (Holding Beauty), *(C.japonica)*, JCS., 1989, *Japan Camellia*, No.31, p.13, pl.(a): Large size, bowlshaped single of 5 pink cast, white, concave, creped, overlapping petals with emarginated and waved edges. Large, higo-like burst of stamens with bronze anthers and greenish-yellow filaments. Late blooming. A seedling of 'Sodekakushi' (**Gauntlettii**) x **Asahi-no-minato.** Originated by Kôji Funakoshi, Nagoya, Japan.

Ryûge. (Legendary meeting of Buddhism), *(C.japonica)*, Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, pl.193, p.63, description, p.212 as 'Ryuhge': Large, white, semi-double with two rows

of large, white, crinkled, undulate petals numbering 10-12, about a slightly spreading, yellow stamens cluster. Originated in Japan. Different reading: 'Ryuhge'. Chinese synonym 'Fohui'.

Ryuhge. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.212. Different reading for **Ryûge.**

Ryûgû. (Palace of Dragon King), (*C.rusticana*), Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.240, illustration and description: Very small, vermilion red, single with 4 oval petals and a wide, spreading centre of yellow stamens. Leaves mid-green, elliptic, deeply, coarsely serrate, like **Hiiragi-tsubaki,** prominent venation. Plant habit bushy. Originated in Kashiwazaki City, Niigata Prefecture, Japan. Named and released by Tokuji Ôoka in 1970. For other illustrations see: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.272; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.162, 256; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.215.

Ryuguh. Nuccio's Nurseries Retail Price List, 1993-1994, p.36. Different reading for **Ryûgû.**

Ryûhô. (Dragon's Treasures). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.284 with colour photo; English translation p.199. Medium size, crimson, tubular single, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size. Upright, vigorous growth. A cross between the red flower sport of **Hanamiguruma** and **Mado-no-tsuki**. Named and released by Ayano Satô in 1972. From Aichi Prefecture.

Ryûjin. (Dragon King), (*C.x vernalis*), Hakoda, JCS., 1987, *Tsubaki,* No.26, p.51; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.41: Medium size, dark red, single. Blooms early to mid-season. Originated in Shizuoka. Prefecture, Japan.

Ryûkô (Dragon Light), (*C.x vernalis*), Yamazaki, Fusako, 1972, *Shokubutsu Kenkyû Magazine,* No.47: Small size, dark red, single. Camellia Forest Nursery Catalogue, North Carolina, 1990, p.61: Small, deep red, single blooms in between seasons; the parent species *C.sasanqua* x *C.japonica*. A very attractive, fine textured triploid camellia with deep green leaves, 4.7 cm x 2.4 cm. Corruption of the Japanese name: 'Ryuku'. Chinese synonym: 'Longguang'. Discovered and named by Katsuhiro Maeda in 1972 at an old family home in Hanamatsu City, Shizuoka Prefecture, Japan. The age of the plant was estimated at 150 years. Note: Different kanji characters with different meaning but same pronunciation to cultivar below.

Ryûkô (Red Dragon), (*C.x vernalis*), Parks, 1982, *International Camellia Journal*, No.14, p.30: Red, semidouble, medium size. Originated in Japan.

Ryuku. Camellia Forest Nursery Catalogue, 1988, p.3. Corruption of the Japanese name **Ryûkô.**

Ryûkyû. (Another name for the Okinawa Isles), (*C.japonica*), *Tsubaki Hachiboku Sanbokutsuki Hana-gata Irotsuki Meisai,* (before 1868): Large, red, single camellia, with stamens like a bamboo whisk. Originated in Japan. See: JCS., 1969, *Tsubaki,* No.7, p.24 & ibid, 1982, No.21, p.100. (Believed extinct.)

Ryûkyû. (Place Name). *(C.japonica),* JCS 1994, *Tsubaki,* No.33, p.35, illustration p.33: Deep red, small size, cup-shaped single with bright yellow anthers. Early blooming. Leaves medium size, glossy green, elliptic. Plant growth upright and sturdy. A chance seedling of **Uminaibi.** Originated by Hiroshi Matsuda, Okinawa, Japan.

Ryûkyû-chidori. (Ryûkyû Plover). *(C.japonica),* JCS 1994, Tsubaki, No.335, p.35, illustration p.34: A very small size, bright red, campanulate single that blooms early Leaves are small, elliptic with serrulate margins. Plant growth is spreading and sturdy. Selected form of *C.hozanensis* from North Okinawa. Selected by Hiroshi Matsuda, Okinawa, Japan.

Ryûkyû-shirota'e. (Beautiful White from Okinawa). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.283 with colour photo; English translation p.199. Large, white formal double. Flowers early. Leaves narrowly elliptic, medium size. Upright, vigorous growth. The original tree is growing with the Momohara family in Ginowan City. The tree is believed to have been

transplanted from Shuri, the ex-capital, during the era of the Ryûkyû dynasty. Named and released by Shûhô Kirino in 1975. From Okinawa Prefecture.

Ryûmon. (Dragon Gate) (*C.reticulata* hybrid). Seibu Maizuru Institute of Botany, 1991-1992, *Seibu no Tsubaki,* No.12: Large size, pink double. Originated by the Kunming Institute of Botany, China.

Ryûsagawa. (Dragon Sands River), (*C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Cherry pink with red splashes and streaks; small, formal double to rose form double. Originated in Japan. See: JCS., 1969, *Tsubaki,* No.7, pp.24, 33, & ibid, 1982, No.21, p.100. Different reading: 'Rhusagawa'. (Believed extinct.)

Ryûsatsu. (obscure), (*C.japonica*), Ichijima, 1906, *Kokon Yôrankô,* vol.306, p.337. (Reprint of Yashiro, 1841): Cherry pink, double, small with red splashes. Originated in Japan. Note: This description resembles that of **Ryûsagawa** in 1695, *Kadan Chikinshô.* Possible transcription error for **Ryûsagawa** in *Kadan Chikinshô,* (1695).

Ryûsei (Shooting Star) (*C.japonica*) from Kodaira, Tokyo. *Japan Camellia* No.84, August 2007: White, occasionally with red dots and brush-pattern splashes, single, trumpet shaped with long, narrow, trough-like petals, tubular stamens, small, blooming in March. Leaves elliptic, small. Tree spreading growth. A seedling of **Yuri-shibori.** Produced by Shinichi Noguchi and named in 2004.

Ryûseikô. (Gleam of Shooting Star), (*C.japonica*), Satô, 1975, *Chûbu no Tsubaki*, p.49, illustration and description: Small, campanulate single red with large white patches, 5 petals and a broad stamen cylinder with yellow anthers and pale yellow filaments. Leaves oval to broad-oval, apex acute, recurved, mid-green, serrate. Originated in Chûbu area, Japan by Minoru Satô. Mid-season blooming. Plant habit bushy. See color photo, p.244, Yokoyama & Kirino. 1989, *Nihon no Chinka.*

Ryûseki-no-tsubaki. (Dragon Jewel Camellia), (*C.rusticana*), JCS., ed. *Encyclopedia of Camellias in Colour,* 1972, vol.I, p.25.; Seibundô Shinkôsha, 1979, *Senchinshû,* p.162 colour photo, p.256, description: Medium sized, single, wide opening, rose-pink finely veined deeper with some white marbling. Central stamen cluster, spreading in top half, yellow anthers. whitish filaments. joined for lower third. Leaves broad oval, mid-green, abrupt acute, prominent venation, serrate. Flowers mid-season. Originated in Ishikawa Prefecture. Japan. The original tree was found in the Kenroku Gardens, Kanagawa City. Named and released by Hisakichi Kimura in 1966.

Ryûshi. (Willow Branch), (*C.sasanqua*). Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16: White with red splashes, small single flower. Plant habit weeping. Originated in Japan. (Believed extinct.)

Sabi-no-haru. (Springtime in Sabi), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.386, p.157, description, p.254: Very pale pink, semi-double, 10 cm across, of 14 petals, notched, oblong, and a small, slightly ragged central stamens cluster of pale yellow. Mid-season flowering. Originated in Shimo-shinkawa District, Toyama Prefecture, Japan. Named and released by Yasufumi Fukuda in 1980. Leaves, mid-green, elliptic, long acuminate, finely, shallowly serrate. See colour photos: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.64, 218; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.305; Katei Gahô, ed. 1984, *Chabana Koyomi. Vol.1*, *Tsubaki*, p.53.

Sabin's White. Marnock, 1839, *Floral Magazine*, 3(32):208. Orthographic error for 'Sabine's White', synonym for **Sabiniana.**

Sabrina. *(C.japonica)*, SCCS., 1981, *Camellia Nomenclature*, p.141: Light coral pink, with a few red stripes and bordered white on the petals. Medium, formal double. Originated in USA by R Gentry. Orthographic error: 'Sabina'. Chinese synonym 'Shabunina'.

Saburôza. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.114 with colour photo; English translation p.77. Large, red, peony form. Flowers mid-season to late. Leaves elliptic, large. Upright, vigorous growth. A chance seedling of unknown parentage. Named and released by Totsurô Nakamura in 1994.

Sacai. Gexplant Catalogue, 1984. Orthographic error for **Sacco.**

Sacca Nova. Harrison, ed., 1855, *The Floricultural Cabinet*, p.130. Orthographic error for **Sacco Nova.**

Saccanovia. Guilfoyle Nursery Catalogue, 1866, p.19. Orthographic error for **Sacco Nova.**

Sacci de Lainate. Francesco Ascione, 1856, Catalogo delle piante…nel Giardino Inglese de Caserta, p.15. Orthographic error for **Sacco de Lainate.**

Sacco. *(C.japonica)*, Van Houtte Catalogue, 1839, 1:8 as 'Saccoi'. No description. Berlèse, 1840, *Monographie*, ed.2, pp.103, 227: Leaves 12.2 cm long x 6 cm wide, lanceolate, twisted, dark green, prominent venation; buds large, elongated-oval, scales whitish green; flower 9.5 cm across, soft, clear rose; petals broad, close, numerous, even, imbricated. The ground colour is rose with a wash of pale rose on as much as half the petals. The centre of the flower is composed of some unequal petals; colouring intense rose towards the circumference and a wash of pale rose to the centre. Originated in Italy by Dr. Sacco, Milan about 1832. Synonyms: 'Luna', 'Rosea Nova Vera', 'Alcina', 'Normanni', 'Halfida', 'Alfida', 'Sacco Prima', 'Sacco Superba', 'Sacco Magnifique'. Orthographic errors: 'Sacai', 'Saccoy', 'Saccoi, 'Jaco', Jacco Prima', 'Saccoia', 'Saccoiana'. This variety has become inextricably confused with **Sacco Nova** and **Sacco Vera.** SCCS., *Camellia Nomenclature* regards them as synonymous with the description: 'Rose pink to rose pink spotted white to deep red. Medium formal double'. The spotted white form is a virus variegated form as variegation is not mentioned in the early descriptions. However van Houtte Catalogue, 1858-1859, 72:6 gives 'Augustina Superba' (**Augustiniana Superba**) as the white blotched form of **Sacco.** For further information see under 'Saccoi'. Chinese synonym 'Saku'.

Sacco de Lainate. *(C.japonica)*, Berlèse, 1843, *Iconographie*, vol.3, pl.234 and facing page.: The flower, 10 cm across, full, regular of a delicate, soft rose, rayed with white lines to the centre of the flower, forming a star effect. The petals in 6 rows, are of average size, rather elongated, lightly notched at the apex. Originated by Sacco, Milan Italy. Orthographic errors: 'Sacci de Lainate', 'Sacco de Lainate', 'Sacco Lainatensis', 'Sacco Leinatensis', 'saccoi de Lainate'.

Sacco de Nova. Hume, 1931, *Azaleas and Camellias*, p.33. Orthographic error for **Sacco Nova.**

Sacco di Casoretti. van Geert Nursery Catalogue, 1845. Synonym for **Sacco Nova.**

Sacco di Lainate. Luzzatti, 1851, *Collezione di Camelie*, p.35. Synonym for **Sacco de Lainate.**

Sacco di Milano. Burdin Maggiore & Co, 1849-1850, Catalogue General. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare.* Synonym for **Sacco Vera.**

Sacco Lainatense. Longone Catalogue, 1910-1911. Orthographic error for 'Sacco de Lainate', synonym for **Sacco de Lainate.**

Sacco Lainatensis. Burnier & Grilli Catalogue, 1846-1847. Orthographic error for 'Sacco de Lainate', synonym for **Sacco de Lainate.**

Sacco Leinatensis. Burdin Maggiore & Co. Catalogue, 1846-1847. Orthographic error for 'Sacco de Lainate', synonym for **Sacco de Lainate.**

Sacco Magnifique. Wilmot, 1943, *Camellia Variety Classification Report*, 1945, p.5. Synonym for **Sacco.**

Sacco Mariana. *(C.japonica)*, Charles van Geert Nursery Catalogue, 1845. p.13: Anemone form with spherical, high centre. Rich carmine colouring. Originated in Italy.

Sacco Nova. *(C.japonica)*, van Houtte Catalogue, 1839, 1:8 as 'Saccoi Nova', (Colore di Lacca). No description. Jacob Makoy Catalogue, 1839, p.18 as 'Saccoii Nova'. No description. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.12, as 'Saccoi Nova': Identical in foliage and flower to **Mathilde** as shown in Ghent, 1844. Often confused with **Sacco.** Rare, whitish pink at the centre, 7 rows of transparent petals like gauze, and sparkling like glass. Rovelli Catalogue, 1852, p.26: Lainate. Imbricated, formal double, vivid pink with petals evenly rayed with white lines to form a star. The centre of each petal a bright rose, shaded off to soft rosy pink towards the margins; a well formed flower. Originated in Italy by Casoretti. Orthographic errors: 'Sacca-nova', 'Saccoi Nova', 'Saccoi de Nova', 'Sacco de Nova', 'Sacca Novia', 'Sacoie Nova', 'Saquinova', 'Sacoinova', 'Sacoi Nova', 'Jaccoiana Nova Vera', 'Saccai Nova', 'Saccoinova'. Synonyms: 'Sacco Nuova', 'Sacco Nuovissima', 'Sacco di Cassoretti', 'Jacoy Prima Nova', 'Rosa'. For further information see under 'Saccoi'.

Sacco Nuova. van Houtte Catalogue, 1841, 7:18. Synonym for **Sacco Nova.**

Sacco Nuovissima. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.14. Synonym for **Sacco Nova.**

Sacco Prima. Tagliabue, 1840, *Nomenclatore Camelliae…* Synonym for **Sacco.**

Sacco Rose. *(C.japonica)*, Gerbings Azalea Gardens Catalogue, 1938-1939: Mid-season flowering, full double, pink; medium size bloom. splendid cut flowers. Small, deep green foliage; tall growth. The solid pink mutant of 'Matosi'. Orthographic variant: 'Sacco Rosea'. Orthographic errors: 'Sacco Rosen', 'Saccoi Rosea'.

Sacco Rosea. Vanderbilt, 1940, *Camellia Research*, p.7. Orthographic variant for **Sacco Rose.**

Sacco Rosen. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Sacco Rose.**

Sacco Superba. Franco Agostoni, 1844, *Catalogo Plantarum…* Synonym for **Sacco.**

Sacco Vera. *(C.japonica)*, Cachet Catalogue, 1840-1841, p.1: 'Pink'. Berlèse, 1843, vol.3, pl.229 and facing p.: Regular formal double of vivid rose, glossed with a velvety, misty white. Petals are rounded, numerous, lightly notched with carmine red venation. Originated by Paolina, Milan, Italy from Sacco's seed. Orthographic errors: 'Saccoi Vera', 'Saccoiana Vera', 'Jacco Vera', 'Sacoi Vera', 'Socco Vera', 'Saco Vera'. Synonym: 'Sacco di Milano'.

Saccoi. Jacob Makoy Catalogue, 1839, p.18; van Houtte Catalogue, 1839, LS. No description; Anonymous, Jun. 1839, *Revue Horticole.* p.205-207. This is the form of **Sacco** in botanical latin. As Dr Sacco was Italian and the Italian catalogues generally use **Sacco** as the name of the camellia this is accepted as the valid form and is the basis for all names in this group. The latin form 'Saccoi' was first introduced by van Houtte and most French and English listings followed suit. The three varieties, **Sacco, Sacco Nova** and **Sacco Vera** appear to be slightly different in their early descriptions and credited to different originators. As well, they are listed separately in a number of Italian catalogues of the time and are considered to have been separate cultivars, irrespective of van Houtte lumping them all together with many other synonyms, orthographic errors and pseudonyms. These are as follows: 'Normanii', 'Colore de Lacca', 'Color di Lacca', 'Rosa Nova Vera', 'Saccoi', 'Saccoi Nova', 'Sacco Nuova', 'Saccoi Vera', 'Saccoiana', 'Saccoiana Vera', 'Jaco', 'Jacco Prima', 'Jakoi', 'Luna', 'Luaa', 'Aluna', 'Alcina', 'Alcina Rosea', 'Amidina', 'Augustina', 'Augustina Superba', 'Augustiniana Superba'. Note; *Camelie Dell'Ottocento nel Verbano*, 2000, vol.1, pp.212-215, with colour photographs, describes two cultivars as **Sacco** and 'Saccoi', with small variations in flower and leaf characteristics.

Saccoi de Lainate. Oudin, Lisieux Catalogue, 1845-1846, p.48. Orthographic error for **Sacco de Lainate.**

Saccoi de Nova. Buist, 1852, *The American Flower Garden Directory*, ed.5, p.217. Orthographic error for **Sacco Nova.**

Saccoi des Pientres. *(C.japonica)*, Prince & Co. Nursery Catalogue, 1844, p.105. No description seen. (Believed extinct.)

Saccoi Nova. van Houtte Catalogue, 1839, 1:8. Orthographic error for **Sacco Nova.**

Saccoi Nova Vera. Verschaffelt Catalogue, 1846, p.58. Orthographic error for **Sacco Nova.**

Saccoi Ova. Osborn & Son, Fulharn Nursery Catalogue, 1880, p.48. Orthographic error for 'Saccoi Nova', synonym for **Sacco Nova.**

Saccoi Rosea. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.206. Synonym for **Sacco Rose.**

Saccoi Vera. van Houtte Catalogue, 1848-1849, 35:44. Orthographic error for **Sacco Vera.**

Saccoiana. van Houtte Catalogue, 1841, 7:18 and 1842, 9:19. Synonym for **Augustiniana Superba.**

Saccoiana Nova Vera. Linden Catalogue, 1875. Synonym for **Sacco Nova.**

Saccoiana Vera. van Houtte Catalogue, 1841, 7:18. Synonym for **Sacco** as 'Saccoi'.

Saccoianna Nova. William Paul, Nursery Catalogue, 1867, p.18. Synonym for **Sacco Nova.**

Saccoy. Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete*, p.14. Orthographic error for **Sacco.**

Sachiko. (Female Name). *(C.japonica),* Kinji Ohara, Tateyama, Chiba, 1993-1994, *List of Camellias*: Dark red, cup shaped single. Originated in Japan.

Sachi-no-i-tsubaki. (Camellia from Sachi-no-i), *(C.japonica)*, *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.202, p.101, description, p.320: A medium size, rose form double with 2-3 rows

of large, light pink petals, veined deeper pink, emarginate with 4-5 fascicles of stamens in the centre, divided by small, upright petals. The leaves are glossy mid-green, elliptic, acuminate, finely serrate. See colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, p.63. originated in Kansai area, Japan. Original tree was found by the side of the pond 'Sachi-no-i' in the Kyôto Gosho Garden and named by Kanaoka - Chinju'en in 1967. Water from the pond was used for the first bath of the Meiji Emporor.

Saco Vera. Jose Loureiro, 1872,1873, Catalogue No.9, p.60. Orthographic error for **Sacco Vera.**

Sacoi Nova. Corbelli Catalogue, 1882. Orthographic error for **Sacco Nova.**

Sacoiana. Charles van Geert Catalogue, 1845. Orthographic error for 'Saccoiana', synonym for **Augustiniana Superba.**

Sacoii. William Prince, 1860, *Select Greenhouse Plants,* 45th ed. No.13, p.6. Orthographic error for 'Saccoi', synonym for **Sacco.**

Sacoii Vera. William Prince, 1860, Select Greenhouse Plants, 45th ed., No.13, p.6. Orthographic error for 'Saccoi Vera', synonym for **Sacco Vera.**

Sacoinova. Newman's Nursery Catalogue, 1982-1983. Orthographic error for **Sacco Nova.**

Sacramento. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.206. Synonym for **Chiyoda-nishiki.**

Sacramento Pink. Vanderbilt, 1940, *Camellia Research*, p.7. Synonym for **Chiyoda-nishiki.**

Sade-Gakushi. Vanderbilt, 1940, *Camellia Research.* p.7. Corruption of Japanese name 'Sodekakushi' synonym for **Gauntlettii.**

Sadie. *(C.japonica),* ACS, Aug. 1995, *The Camellia Journal*, vol.50, No.3, p.37, Reg. No.2351: Large size, deep rose pink, formal double *C.japonica* chance seedling. Late blooming. Originated in USA by Ernest Aycock, Smithfield, North Carolina. ACS 1995, *American Camellia Yearbook,* p.9 with colour photo: The 15 year old seedling first flowered 1981. Average flower size is 12.5 cm across x 3.2 cm deep with 62 petals. Plant growth is upright and vigorous with dark green leaves 9.5 cm long x 3.2 cm wide.

Sadie Mancell. Feray's Fine Flowers Catalogue, 1960. Orthographic error for **Sadie Mancill.**

Sadie Mancill. *(C.japonica), American Camellia Yearbook*, 1956, p.56, Reg. No.260: An 8 year old seedling, originated by E.N. Mancill, Lafayette, Louisiana, USA. First flowered 1950. Plant growth is upright, open and rapid with leaves, 5-7.5 cm long x 3.7-5 cm wide, heavily veined and serrated, crinkled edges, bright green. Flower - very pale pink, striped and blotched rose; 10-14 cm across x 7.5 cm deep with 12-20 petals, 7-13 petaloids; clusters of stamens intermixed with large, crinkly petaloids. Blooms early to mid-season. Sports: **Sadie Mancill Dawn, Sadie Mancill Pink, Sadie Mancill Variegated.**

Sadie Mancill Dawn. *(C.japonica), American Camellia Yearbook*, 1965, pp.65, 245, Reg. No.786: A sport of **Sadie Mancill** first observed 1959. Propagated by Kenneth G. Durio Jr., Opelousas, Louisiana, USA. Plant growth is medium, open and rapid. The bright green leaves average 10cm x 5.5 cm. Flowers semi-double, similar to 'Herme' (**Hikarugenji**) are 13 cm across x 7.5 cm deep with 15-17 petals and 7-9 petaloids. Colour is deep, soft pink, veined rose and edged with white. Anthers yellow and filaments cream. Similar colour to **Tomorrow's Dawn.** Blooms mid-season.

Sadie Mancill Pink. *(C.japonica),* Cannon, 1962, ACS., *The Camellia Journal,* vol.17, No.1, Back cover. No description. SCCS., 1964, *Camellia Nomenclature*, p.110: Pink sport of **Sadie Mancill.** Originated in USA by Kenneth G. Durio Jr., Opelousas, Louisiana.

Sadie Mancill Variegated. *(C.japonica), American Camellia Yearbook*, 1967, p.42 as 'Sadie Mancill Var.': A virus variegated form of **Sadie Mancill Pink** - Pink blotched white. Originated in USA.

Sadie Nichols. *(C.japonica),* Cannon, 1962, ACS., *The Camellia Journal*, vol.17, No.1, Back cover. No description. Originated in USA. No valid listing located.

Sado. (Sadogashima Island), (*C.x vernalis*)**,** Hakoda, JCS., 1987, *Tsubaki***,** No.26, p.51; ICS., Apr. 1990, *Japanese Camellia Cultivar List***,** p.41: Small size flower, light pink single. Blooms early to mid-season. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.300 with colour photo; English translation p.210. The original tree grows in Hamo Town, Sado Island, Niigata Prefecture, Japan. Discovered by Tokuji Ôoka around 1980.

Sado-benifukurin. (Red Bordered Sado), *(C.japonica),* Inazawa Nurseries Co. Ltd. Catalogue, 1988--1989, p.5, A-210 with illustration; Yokoyama & Kirino, 1989, *Nihon no Chinka***,** p.350, colour photo and description: Large size, light pink with stripes and an irregular border of red, semidouble with central stamen column. Leaves mid-green, broad-ovate, apices abrupt acuminate, margins serrate. Originated in Hamo Town, Niigata Prefecture, Japan with a private family. Named and released by Tokuji Ôoka in 1975. Sport of **Ezo-nishiki.**

Sado-biwaba. (Loquat Leaved Sado), *(C.rusticana),* Yokoyama and Kirino, 1989, *Nihon no Chinka*, p.207, colour photo and description: Small size, red, tubular to vase-shaped single of 5 rounded, over-lapping petals and a broad stamen cluster with reddish filaments, joined at lower third, and golden anthers. Leaves mid-green, broad-ovate, bullate, blunt apices, margins curved under, serrate. Leaves resemble those of the loquat. Mid-season blooming. Originated in Hamo Town, Sado Island, Niigata Prefecture, Japan. Named and released by Chôji Nagao in 1968.

Sado Number 1. *(C.rusticana),* Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement*, colour photo, p.22 as 'Sado No.1'. A provisional name: Medium size, soft pink, formal double, with 6-7 rows of small, pointed petals. Originated in Sado Island, Niigata Prefecture, Japan.

Sado Number 2. *(C.rusticana),* Adachi, 1960. *Camellia. Its Appreciation and Artistic Arrangement*, colour photo, p.24, as 'Sado No.2'. A provisional name: Formal double, pale pink with white blotches; petals oval, emarginate. Originated in Sado Island, Niigata Prefecture, Japan.

Sado Number 3. *(C.rusticana),* Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement*, colour photo, p.29 as 'Sado No.3'. A provisional name: Pink, semi-double. 14-18 petals, ragged and creped; stamens broken by small, erect petals. Originated in Sado Island, Niigata Prefecture, Japan.

Sado Number 4. *(C.rusticana),* Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement*, colour photo, p.34 as 'Sado No.4'. A provisional name: Dark purple red, formal double to rose form double with the odd spot of white. Originated in Sado Island, Niigata Prefecture, Japan.

Sado-wabisuke. (Wabisuke from Sado), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.263, p.116, description, p.237: Very small, red, campanulate single, 4 cm across with 5-6 reflexed petals and a cylinder of sterile stamens with pale cream anthers. Leaves broad, oval, dark, glossy green. Mid-season blooming. See also colour photos: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.64, 218; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.157. Originated in Sado Island, Niigata Prefecture, Japan. Note: This camellia is a mutation of a wild camellia from Sado Island and is a *C.japonica* in spiteof the name 'wabisuke'. Synonym: 'Shônagon'. Named and released by Tokuji Ôoka in 1970

Sado-yabutsubaki. (Sado Bush Camellia), *(C.japonica),* Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.6, A-274: Purplish red, small, tubular, single. Originated in Japan.

Saeka. (Originator's Name), *(C.japonica),* JCS., 1986, *Japan Camellia***,** No.21, p.4, colour photo: Open peony form, creamy white in the centre, blending to pink and light red towards the outer edges of the petals. Stamens yellow in 4-5 fascicles. Originated in Ôsaka, Japan from a seedling obtained from Australia in 1969 by Okuno, Saeko. Flowers mid-season. **Saeka.** (Saeko's Flower). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.108 with colour photo; English translation p.73.

Saeka-unryû. (Saeka's Unryû). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.108 with colour photo; English translation p.74. Medium size red single, fragrant. Flowers early to late. Leaves channelled like the bottom of a boat. Branches flexible, zigzagged in the "Unryû" manner. A chance seedling of **Tennin-matsushima,** originated by Shigeo Naitô in the 1980s. From Izu Ôshima.

Saffo. *(C.japonica),* van Houtte Catalogue, 1841, 7:8. No description. Van Houtte Catalogue, 1842-1843, 9:19: Peony form, streaked red. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France***,** vol.40, p.79: Flower 9-10 cm across, rose form of deep red. Originated in Italy. Orthographic error: 'Safo'. Synonym: 'Saffo Superba'.

Saffo Superba. Franco Agostoni, 1844, *Catalogo Plantarum* ... Synonym for **Saffo.**

Safo. Cachet Catalogue, 1845-1846, p.4. Orthographic error for **Saffo.**

Saga. (Place name in Kyôto), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Uesa, 1844, *Sômoku Benran;* Nakayama, 1847, *Senka'ôden:* Medium size, single, white with long, tapering buds. Similar to 'Saga-hatsuarashi'. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.76; ibid, 1963, No.4, p.79, ibid, 1961, *Kyôto Engei***,** No.65, p.6.

Saga. Synonym for 'Saga-hatsu-arashi'. Uesa, 1844, *Sômoku Benran.*

Saga-hatsuarashi. Seibundô Shinkôsha, 1976, *Garden Life,* Apr., p.43 as 'Hatsu-arashi B'. *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.322, p.135, description, p.245: Small, white, single, cup-shaped with 5 large, overlapping petals and central stamen cluster. Reduced to synonym for **Hatsuarashi-saga.** P.114, Seibundô Shinkôsha, 1979, *Senchinshû*, and Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.17. **Hatsuarashi-Saga** is now the popular name in Japan. Originated in Niigata Prefecture, Japan. There is a possibility that this cultivar is the same as the ancient 'Saga'. See: Yashiroda, 1961, Kyôto Engei Kurabu, *Kyôto Engei*, No.65, p.6.

Saga-honami. Different reading for Saga-honnami.

Saga-honnami. (Saga's Honnami), *(C.japonica),* Uesa, 1844, *Sômoku Benran;* Nakayama, 1847, *Senka'ôden.* Tuyama, 1966, Camellia Cultivars of Japan, p.96: Single, white with pale red stripes. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Kyôto Engei*, No.65, p.8 and Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.81. (Believed extinct.) Note: Tuyama's description refers to the ancient **Saga-honnami,** not to the existing one.

Saga-honnami. (Saga's Honnami), *(C.japonica),* Noguchi Nursery Catalogue; Seibundô Shinkôsha, 1985, *Garden Life:* Pink. single, large, early blooming. A pink colour sport of **Kamo-honnami.** Registered by the Agriculture & Forestry Ministry, No. 113. Discovered by Noguchi, Tokyo, Japan. Synonym 'Kamo-honnami Pink'**.** Named and released by Shinichi Noguchi in 1986.

Sagamigenji. (Sagami's Genji), Himuro, 1982, *Murasuzume:* Pink with deeper pink stripes, bordered white. Medium size, anemone form. Originated in Kanagawa Prefecture, Japan by Shôji Himuro.

Sagami-goshiki-botan. (Sagami's Five Coloured Peony), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.124, illustration and description; Seibundô Shinkôsha, 1979, *Senchinshû*, p.61, colour photo: Light pink, veined deeper pink, occasionally wide crimson streaks, white edges to petals or pure white to deep purplish red, Resembles **Kyôbotan, Kôkirin**. Medium sized, peony form. Originated in Atsugi City, Tokyo, Japan.

Sagamiguruma. (Sagami's Carriage), *(C.japonica),* Himuro, 1982, *Murasuzume:* Crimson, single, stamens in a cup shape. Originated in Kanagawa Prefecture, Japan by Shôji, Himuro.

Sagami-karako. (Sagami's Anemone), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.61 colour photo, p.217, description: A medium size, anemone form with 5 elongated, red petals, deeply notched and a centre cushion of small, white petaloids. Leaves elliptic, olive green, bluntly serrate. Originated in Kantô area. Japan.

Sagami-tarô'an. (Sagami's Tarô'an), *(C.japonica),* Himuro, 1982, *Murasuzume:* Rose pink, striped rose, single. Early flowering. Originated in Kanagawa Prefecture, Japan by Shôji, Himuro.

Sagami-wabisuke. (Sagami's Wabisuke), (Wabisuke), Seibundô Shinkôsha, 1976, *Garden Life*, Apr. p.36; Seibundô Shinkôsha, 1979, *Senchinshû*, p.61, colour photo, p.217, description: Small fuchsine pink, single, 6-7 petals, notched and channelled. Leaves shiny green, elliptic, acute apex, recurved, serrate. A natural seedling of **Tarôkaja** from a prvate family in Ebina City. Synonyms: 'Moza'emon-wabisuke', 'Shigezaemon-wabisuke'. See p.135, Yokoyama & Kirino, 1989, *Nihon no Chinka*, colour photo. For botanical drawings, colour photos and description see Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No.11. Originated in the Kantô area, Japan.

Saga-shibori. (Saga Variegated), *(C.japonica),* Satomi, 1956, *Camellia Varieties of Japan*, p.11: White striped pink, medium sized single, early flowering. Originated in Japan. Saga is a place name in Kyôto.

Saga-shimeri. (Damped Saga), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.363: Small, white, open peony form with multiple pink streaking. Originated in Japan. (Believed extinct.)

Saga-shiratama. (Saga's White Jewel). *(C.japonica),* Inazawa Nursery Co. Ltd, Catalogue, 1986-1987, p.9, A-448: White striped pink, single. Originated in Japan.

Sagimai. (Heron's Dance). (*C.reticulata* hybrid). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.273 with colour photo; White semi-double with raised centre petals, medium size, petals are serrated. Flowers mid-season to late. Leaves elliptic, small to medium size. Spreading growth, densely branched. A seedling of **Hiten,** released by Misoji Yamaguchi, Kyoto, Japan.

Sagi-no-miya. (Place Name), *(C.japonica),* Satomi, 1958, *Camellia Varieties in Japan*, p.11: White striped pink, small single to semi-double. Early blooming. Originated in Japan.

Sagi-no-yama. (Heron Mountain), *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* No description. Originated in Japan.

Sagi-shibori. (Dappled Heron), Itô, Ihei, 1695, *Kadan Chikinshô:* Medium large, white, rose form double with 5 rows of tapered petals and tubular stamens. Originated in Japan. (Believed extinct.)

Sahifu. Itô, Ihei, 1695, *Kadan Chikinshô.* Different reading for **Saifu.**

Sahifu-kasuri. Different reading for **Saifu-tobi'iri.**

Sahifu-shibori. Synonym for **Saifu-tobi'iri.**

Saho-chiritsubaki. (Saho's 'Chiri-tsubaki'). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.329 with black and white photo; English translation p.232. Medium size, peach red semi-double, cupped petals, split stamens. Flowers mid-season. Leaves elliptic, medium size. Upright growth. A natural seedling germinated at the growing site of **Shiratama.** Named and released by Taneo Okada in 1996. From Osaka.

Sahohime. (Princess Saho). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.329 with black and white photo; English translation p.232. Small, red, tubular single, cylindrical stamen column. Flowers early to mid-season. Leaves narrowly elliptic, medium size. Upright growth. A natural seedling found in the forest on Mt Saho in the Hokusetsu Ranges. Named and released by Taneo Okada. From Osaka.

Sahohime. Sakata & Arisumi, 1983, *International Camellia Journal*, p.22 as 'Saho Hime': Flower small size, pink, single. Originated in Shizu'oka Prefecture, Japan. Different reading for **Saohime.**

Sahonoakebono. (Dawn Goddess), *(C.japonica),* Watanabe, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushûû*, No.9, pp.131-133: Pale pink, single, early flowering. Thought to be a seedling of **Hatsuarashi-shiratama**. Resembles **Akebono, Tarô'an.** Originated in Ibaragi City, Ôsaka, Japan. Named by Takeshi Watanabe, released by Taneo Okada in 1967.

Saho-no-kômyô. (Light from Saho). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.114 with colour photo; English translation p.78. Medium size, with multi-colour patterns such as all white, all pink, all red, bordered, striped etc. Tubular stamen cluster. Flowers early to late. Leaves elliptic, medium size, recurved. Upright growth. A chance seedling of Shiratama. Named by Yoshishige Awara, released by Taneo Okado in 1993. From Osaka.

Saho-no-shô. *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.114 with colour photo; English translation p.78. Medium size, large and small stripes of red on white ground, peony form. Flowers mid-season to late. Leaves elliptic, medium size, flat. Upright, vigorous growth. An old tree being grown by a private family in Tenri City, details obscure. Named and released by Ikuo Nishihata in 1960. From Nara Prefecture.

Saho-no-zuiun. (Saho's 'Zui-un'). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.329 with black and white photo; English translation p.232. Medium size, white, bowl shaped single, thick petals, cylindrical stamen column. Flowers mid-season. Leaves broadly elliptic, medium size, curved outwards. Spreading growth. A natural seedling of a white wild japonica. Named by Hôun Kohara, released by Taneo Okada in 1975. From Osaka.

Sai-chû-pan. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.24. Different reading for **Saijuban.**

Saierqiao. *(C.reticulata) Fine Camellia Garden, Chuxiong,* 2012, p.23 with colour photo. No details. Photo shows a semi-double with incurving petals, white with tinges of pink on the outer petals. Loose group of central stamens.

Sai Kung Fen. Different reading for **Saigongfen.**

Saifa. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.206. Corruption of the Japanese name **Saifu.**

Saifu. (Provincal Government), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku.* Red, formal double, white. Tuyama, 1968, *Camellias of Japan,* pl.309, p. 156, description, p. 183. Seibundô Shinkôsha, 1979, *Senchinshû*, p.60, colour photo, p.216, description: Rose-red coloured with white spots, rose form double, opening to 4-5 rows of imbricated petals with a small, central stamen cluster. Leaves small, oblong to broadly elliptic, long acuminate, impressed venation, manifestly serrate. Flowers rose form, holding a bud centre, rosy red (Rose Opal 122), variously blotched white. Flowers mid-season to late. For other colour photos and

descriptions see: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.290, pp.131, 334; Tuyama, 1966, *Camellia Cultivars of Japan*, pl.158 & p.274. Synonyms: 'Saifu-shibori', 'Kyôkosode', 'Chûbu-kyôkosode'. Different readings: 'Sahifu', 'Saihu'. Corruption of Japanese name: 'Saify', 'Saifa'. Saifu is thought to be an abbreviation of 'Dazaifu' an ancient local government in Fuku'oka Prefecture and can be written a number of ways. It also means a purse. Note: There are at least 7 different ways of writing the kanji for this variety. See: Nakayama, 1847, *Senka'ôden;* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Although it is not certain that all these old varieties are the same as the existing one, their references are added for the further study of ancient camellia literature in Japan. Note: *Senka'oden* states that there are two distinct cultivars under the name **Saifu.** One is from Settsu (now Ôsaka) and the other is from Washû (now Wakayama). The former's leaves have impressed venation. A tree of more than 250 years of age is at the river side at Kiso, Gifu Prefecture. See: JCS., 1965, *Tsubaki*, No.5, p.29; Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.80; ibid, 1964, No.5, p.80.

Saifu. (Provincial Government), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pls.57, 191, 260: One is deep red, rose form double to formal double with white spots; another is double with divided stamen cluster. Red with white spots. Originated in Japan. There is the possibility that the former is the same as the previous camellia.

Saifû. (Coloured Wind). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.165 with colour photo; Red bordered white, single, medium size, prominent central stamen column. Flowers early to mid-season. Leaves ovate, small. Upright growth. A cross of **Shiratama** x 'Tamahibiki', named and released by Soshin Hirai, Saitama Pref., Japan, in 2004.

Saifubotan. (Saifu's Peony), *(C.japonica),* Kaempfer, 1712, *Amoenitatum Exoticarum.* No description. Originated in Japan. (Believed extinct.) See: Andoh, JCS., 1989, *Tsubaki*, No.28, p.11.

Saifujung. Feng et al., 1986, *Yunnan Camellias of China*, p.166. Different reading for **Saifurong.**

Saifukasuri. Itô Jukyû, 1739, *Honzô Hanamaki'e*, vol. 15. Different reading for 'Saitobi-iri' (**Saifu-tobi'iri**).

Saifurong. (Superior Hibiscus), *(C.reticulata).* Feng et al., 1986, *Yunnan Camellias of China*, p.89, colour photo and description: Leaves ovate, apices acuminate, bases broad-cuneate, 7-8.5 cm long x 3.5-5 cm wide. Flowers pink (RHS.CC.55A), fully double, diameter 11-13 cm. Petals 30-32 in 7 whorls, regularly arranged, inner whorls with white stripes. Stamens mostly petaloid, only a few remaining. Stigmas rudamentary, flattened. Flowers early to mid-season. This cultivar was selected from seedlings of open pollinated seed at No.2 Farm, Kunming. Introduced to the Kunming Botanical Garden in 1973. Originated in China. Different reading: 'Saifujung.

Saifurong. (Hibiscus Supreme), *(C.japonica),* Gao, Jiyin, Apr. 1990, CCS. Nomenclature Convention, Wusi City, Jiangsu Province, China, Report: Medium large size, hibiscus form, coral pink, semi-double, good texture. Blooms early to late. Leaves dark green; growth medium. Originated in Jianxing City, Zhejiang Province, China.

Saifu-shibori. Tuyama, 1966, *Camellia Cultivars of Japan*, p.274; Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.155 as 'Saihu-shibori'. Synonym for **Saifu.**

Saifu-tobi'iri. (Saifu Variegated), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, #110: Large, red flower with white spots. Resembles a lotus. Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.15 lists it as synonym for 'Minamoto'; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Originated in Japan. Different readings: 'Saihu-tobi'iri', 'Saifu-kasuri', 'Saihu-kasuri', 'Sahifu-tobi'iri', 'Sahifukasuri'. See: JCS., 1983, *Tsubaki*, No.22, p.123; ibid, 1969, No.7, p.30.

Saify. McIlhenny Nursery Catalogue, 1942. Corruption of Japanese name **Saifu.**

Saigongfen. (Superior Palace Pink), *(C.japonica)*, Wang, 1621, *Qunfangpu:* Colour a slightly pale shade of pink. Double. Originated in China. Different reading: 'Sai-kung-fen'.

Saihu-shibori. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.155. Synonym for **Saifu.**

Saihu-tobiiri. Watanabe, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.9, p.163. Different reading for **Saifu-tobi'iri.**

Saijinguang. (Surpassing Golden Glory), *(C.japonica)*, Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.49, colour pl. [p.148]: Leaves dark green, long-elliptic, curved, drooping at apex, side veins 7-8 pairs, indistinct. Flowers single, campanulate, 5.5-7 cm. across, bicolor, pink lineate and maculate on white petals; rarely solid pink flowers appear on the same plant; petals 7 in 2 rows, basally connate. Normal stamens, up to 100, basally united at lower third to form a cylinder. Pistils normal. Buds long-elliptic, light green. Flowers early to mid-season. Originated in Wuxi, Jiangsu Province, China.

Saijuban. (Superior Chrysanthemum Petal), *(C.reticulata).* Ikeda, 1974, *American Camellia Yearbook*, p.114 as 'Saitsueban'. Feng et al., 1986, *Yunnan Camellias of China*, p.85, colour pl. and description: Leaves elliptic or elliptic-ovate, apices acuminate or short-pointed, bases obtusely rounded, surface yellowish-green with yellow spots, 6.4-9.5 cm. long x 3-4.5 cm wide Flowers pink (RHS.CC.57D), diameter 10-12 cm. Petals about 25 in 6-7 whorls, margins slightly reclinate, regularly arranged. Corolla radiate. Stamens about 10, the others petaloid. Pistil rudimentary, flattened. Originated in Dali, Yunnan Province, China. Late flowering. Different readings: 'Sai-chü-pan', 'Sai Chu Pan', 'Saitsueban'. Synonyms: 'Superior Chrysanthemum Petal', 'Rival Chrysanthemum Petals', 'Super Chrysanthemum Petals', 'Super Rose Flower'.

Saika. (Coloured Mist). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of* **Japan),** 2010, p.56 with colour photo; Medium size single, pink ground shading to white at the centre, tubular shape, central column of stamens with white filaments. Flowers mid-season to late. Leaves elliptic, flat. Upright growth. A natural seedling of **Seiôbo**, grown in 1995 by Takashi Shiota, Ishikawa Pref., Japan, named and released in 2007.

Saikai. (Western Sea), *(C.sasanqua)*, Seibundô Shinkôsha, Mar. 1978, *Garden Life*, pp.70, 77; Sakata et al., Mar.1981, 'Study of flower Colours in Camellias, II'; *Memoirs of the Faculty of Agriculture*, Kagoshima University, vol.XVII, p.92; Yusuke, Sakata & Ken-ichi, Arisumi, 1983, *International Camellia Journal*, p.22. No description. JCS., 1987, *Tsubaki*, No.26, p.46: Peach red, single, medium size, early blooming. ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.35: Medium size, single, crimson. Originated in Nagasaki Prefecture, Japan. Named by Hakoda.

Saikai-no-homare. (Honour the Western Sea), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.216: White margins and streaks on clear peach pink ground. Blooms shaped like a sake cup to slender tubular form, single. Filaments pale pink colour, cylindrical, very small. Blooms early to mid-season. Leaves ovate to obovate, medium size. Leaf edges curved on the

out-side, undulate, venation prominent. Plant growth upright and vigorous. Originated in Japan as a wild 'Yabu-tsubaki' from Nagasaki Prefecture.

Saikaku. (Personal Name), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.60, colour photo, p.216, description: Small, campanulate, soft orchid pink, single, 5-6 overlapping petals, channelled; centre column of stamens, orange-yellow anthers and white filaments. Leaves small, dark green, twisted, elliptic, apex acuminate, margins bluntly serrate. Originated in Kansai area, Japan. This name was taken from that of the ancient botanist, Saikaku, Morino. An old tree survives at Morino Kyukaku'en Garden. Named and released by Ikuo Nishihata.

Sai-kung-fen. Watanabe & Andoh, 1980, *Hana to Ki no Bunka, Tsubaki*, p.156. Different reading for **Saigongfen.**

Sailabo. Shao, Taichong, 1992, *The Observations from the Camellia World*, No.405, p.81. Chinese synonym for the USA *C.hybrid* **Salab.**

Saimudan. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the USA. *C.japonica*, sport of **Elegans - Elegans Splendor.**

Saimudan. (Superior Peony), (*C.reticulata*), Fang, 1930, *Diannan Chahua Ziaozhi:* It is peach red, bright and flashy. Feng et al., 1986, *Yunnan Camellias of China*, p.97, colour pl. and description: Leaves large, thick, broad-elliptic to broad-ovate, apices acuminate or acute, bases rounded or broad-cuneate, 8-12 cm long x 3.5-6.5 cm wide. Flowers deep spinel pink (RHS.CC.61D), diameter 13-14 cm, corolla spherical. Petals 22-27 in 3-4 whorls; outer 1-2 whorls large, flat; inner whorls curved, erect or two petals united at the base. Stamens divided into 6-7 groups by curved petals. Pistils rudimentary, flattened. A new cultivar selected from open pollinated seedlings at the Kunming Botanical Gardens. It is characterized by its large bright, deep pink flowers, terminal flower buds, large leaves and thick branches. Early flowering. Western

synonym: ‘Superior Peony’. Different readings: ‘Sai Mu Tan’, ‘Saimoutan’, Saimoudan’, ‘Chia Mu Tan’, ‘Chiamoutan’. Synonyms: ‘Peony Rival’, ‘False Peony’, ‘Super Peony’.

Sai Mu Tan. Waterhouse, 1970, ACRS., *Camellia News*, No.40, p.7. Different reading for **Saimudan.**

Sai-no-toki. (Resurrection of Ibis), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon No Chinka,* p.304, colour photo and description: Medium size, pale pink, semi-double with 2-3 rows of wide, emarginate petals and a small, irregular stamen cluster. Leaves dark green, elliptic. Originated in Hamada, Shimane Prefecture, Japan. The original tree fell over, but was resurrected from a cutting; hence the name. A wild japonica from Hamada City, discovered by Masayo Watazu, named and released by Kôsaku Masuda in 1983.

Saint André. Fruitland Nursery Catalogue, 1945-1946, p.26. Orthographic variant for **St. Andrè.**

Saint Germain-des-Prés. *(C.sasanqua).* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.18; Single white.

Saint Michael. (*C.x williamsii*), Southdown Nursery Catalogue, 1973 as ‘St. Michael’: A very prolific, medium sized, deep pink single. Originated in England RHS., 1987-1988, *Rhododendron with Magnolias and Camellias,* p.98 Award of Merit, 21 April. 1987. Originated by J.C. Williams, Caerhays Castle, Gorron, St. Austel, Cornwall, UK The plant is vigorous, erect, slightly spreading, free flowering. Leaves, 7.5 cm x 4 cm, fairly dark green. Flowers, 6.6 cm across, single, 2 row of petals, Red Purple Group 66D, veined 57D. Flowers midseason to late. Abbreviation: ‘St. Michael’. Note: As **St. Andrè** and **St. Ewe** predated the implementation of the Horticultural Code in 1959, they are let stand. However, following the recommendations of the Code since that date, abbreviations should be avoided for subsequent cultivars.

Saint Patrick. (*C.reticulata* hybrid). ACRS, *Camellia News*, 1997, No.143, p.17, colour photo p.2, as ‘St. Patrick’. Reg. No.494. Originated by Dr R.M. Withers, Donvale, Victoria, Australia. Seed parent, *C.reticulata* hybrid **Mouchang,** pollen parent unknown. First flowered 1986. An informal double, light red (RHS.CC.51A) flower with 24 petals and occasional petaloids, 15 cm diameter x 8 cm deep. Flowers freely mid-season on a rapid growing, upright, open plant. Leaves dark green, glossy, elliptical, keeled, serrate margins, acuminate apex, 11 cm long x 5 cm wide. Petals notched, fluted and folded in centre. Filaments in groups.

Saint Philibert. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.18; No description.

Sainty’s Special. *(C.japonica),* Outteridge, 1962, *1000 Named Camellias in Australia,* p.15: Large, white, peony form. Flowers mid-season. Originated in Pymble, N.S.W, Australia as a large plant of unknown origin. Named by E.G. Waterhouse.

Saiô. (Western King), *(C.japonica),* Takii & Co. Ltd., 1956, *Engei Shinchishiki,* p.40: Large pink. Blooms in winter. Originated in Japan.

Saiô. (See Note), *(C.reticulata* hybr.*),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.30: Medium size, deep red, double, with light red stripes. Late blooming. A seedling of *C.japonica*

Goshiki-chiritsubaki x *C.reticulata* 'Lionhead' (**Ôtani-tô-tsubaki**). Originated in Kyôto Prefecture, Japan. Note: **Saiô** is the name that was given to a noble Princess who was sent to Ise to serve at the Ise Shrine, representing the Emperor in ancient times and means "serving the god". *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.106 with colour photo; English translation p.72 with the name translated as (Western King). Medium size, all white, all pink, white bordered pink etc on the same plant. Tubular to trumpet shaped single tubular stamens. Late flowering. Leaves elliptic, medium size. Upright growth. Originated and released by Katsuyoshi Yoshikawa in 1973.

Saishôji. (Saishô Temple), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.14 as 'Saisho-ji': Light rose-pink. Large semi-double with round petals. Originated in Japan.

Saishô-shirobana. (Smallest White Flower). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.107 with colour photo; English translation p.73. Miniature, white tubular single with tubular stamen cluster. Flowers mid-season. Leaves narrowly elliptic, small. Somewhat upright. A chance seedling of **Kasenzan,** originated by Tomita Kunitake in 1994. Named and released by Kairyô-en Nursery. From Kurume.

Saishû. (Colourful Autumn), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.60, colour photo, p.216, description: Medium size, trumpet shaped to bowl-shaped, single, white with red streaks and ticks and some pink areas. Yellow stamens are in an irregular, spreading central cluster. Early flowering. Leaves broad-oval, apex acute, margins serrate. Originated in Ishikawa Prefecture, Japan. A seedling of **Kaga-hassaku.** Collected from a private family in Kanazawa City by Seizo Matsui, named by Taku Shiota in 1975.

Saishun. (Early Spring), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka.* p.335, colour photo and description: Medium size, pale pink with pink flecks and peppering, lotus shape, semi-double with 3 rows of rounded emarginate petals and a central stamen column with yellow anthers. Leaves mid-green, elliptic, apices tapering acuminate, margins serrate, waved edges. Blooms mid-season to late. Originated in Niigata Prefecture, Japan as a sport of **Tanushi-maru.** Different reading: 'Senshun'.

Saisongzi. (Supreme Pine Cone), *(C.reticulata).* China Regn No.15. *China Flowers & Horticulture,* Apr 2007, No.14, p.50, with colour photo; A seedling of **Damanao** originated by Zhang Yuekun, Kunming, Yunnan, China. Flowers rose form double, peach red, 10-12 cm diameter. 25-30 petals in 5-6 whorls, the inner petals have white stripes or spots and are crimped. Stamens as petaloids. Leaves flat, sub-elliptic, thick and tough, 9-11 cm long x 4.8-5.7 cm wide, apices acuminate, bases cuneate. Flowers mid-season.

Saitaohong. (Superior Crimson), *(C.reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook*, p. 17: Butterfly wing type. The outer whorl of petals larger and flat, the inner ones twisted and upright, stamens united into fascicles, rarely seen. Crimson. Early flowering. Feng et al., 1986, *Yunnan Camellias of China*, p.73, colour pl. and description: Leaves elliptic to ovate, apices short acuminate, bases broad-cuneate, 9.5-10 cm long x 4.5-6 cm wide, reclinated in a V-shape. Flowers deep pink (RHS.CC.58B), diameter 11-12 cm. Petals 25-31 in 4-5 whorls, outer whorls larger than inner ones, flat; inner whorls curved or two petals united at the base to form a raised centre. Stamens numerous, divided into 5-7 groups by curved petals. Pistils mostly rudimentary, flattened. New cultivar selected from open pollinated seedlings at the Kunming Botanical Gardens, Yunnan, China. Different reading: 'Sai-t'ao-hung'. Synonyms: 'Superior Crimson', 'Super Crimson'.

Sai-t'ao-hung. Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.26. Different reading for **Saitaohong.**

Saite. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.17. Chinese synonym for **Betty Sette.**

Saito. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.107 with colour photo; English translation p.73. Large white formal double. Flowers early to mid-season. Leaves elliptic, medium size, recurved. Somewhat upright, vigorous. A chance seedling of unknown parentage, originated by Yukie Hisatomi in 1994, named by Kazuyuki Yamabe. From Kurume, Fukuoka Prefecture.

Saito-Ohnishiki. (*C.sasanqua* Higo type). *Collected Papers*, ICS Congress, Kurume 2010, p.33, "Introduction of Higo-sasanqua, Takayuki Tanaka"; Single flower with red margin, 8-10 petals and 82-91 stamens, 10.4 cm diameter. Leaves 5 cm x 2.5 cm. Originated in Japan.

Saitsueban. Ikeda, 1974, *American Camellia Yearbook*, p.114. Different reading for **Saijuban.**

Saiwaka. (Second Youth), *(C.japonica)*, Shôji Himuro, 1982, *Murasuzume:* White, striped deep rose, semi-double. Originated in the Kanagawa Prefecture, Japan. A seedling of **Tori-no-ko.**

Saixili. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.429; Chinese synonym for the Italy *C.japonica* **Cécile Brunazzi.**

Sajin Baozhu (Pearls Sprinkled with Gold), *(C.japonica)*, Gao & Zhuang, 1989, *The Camellia in China*, p.53, No.343, colour photo No.201: Small size, 7-8 cm across, anemone form, white with red streaks, 5 large guard petals and a compact centre of white petaloids and golden stamens. Leaves dark green, ovate to broad-ovate, apices acute. Originated in China. Camellias, Y.C. Shen, 2009, p.188, colour photo.

Sajin Guang. *(C.japonica), Collected Papers,* ICS Congress, Falmouth, 2008, Genetic Analysis on 20 Camellia Varieties by ISSR Markers, Sui Ni and Jiyuan Li, as 'Sa jin guang'; White single with mauve stripe. From east of China.

Sajinte Jiaoshou. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.72, No.263. Chinese synonym for the USA *C.japonica* **Professor Sargent** as 'Professor Charles E. Sargent'.

Sajyragoromo. *(C.sasanqua). "Sasanquas, The Winter Flowers"* ICS Congress, Kurume 2010, English translation, p.63; Pale pink, white at centre, single, early. Medium size with wrinkled petal margins. From Kumamoto, a Higo *sasanqua* type.

Sakachûhana. (Intoxicated Flower). Hantei, Kinta, 1827, *Sômoku Kihin Kagami.* Synonym for **Shuchûka-tsubaki.**

Sakadzuki-ba. Chûgai Nursery Catalogue, 1939-1940, p.18. Different reading for **Sakazukiba.**

Sakaeba. Different reading for **Eiyô**. Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.119 as **Eiyô,** but 'Sakaeba' is the more popular reading. See: Heibonsha, Tomita, Tatsuhiko et al., 1980, *Tsubaki*, p.141.

Sakae-wabisuke. (Glory Wabisuke), (Wabisuke), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.160, colour photo and description: Small size, red, wide campanulate single with 5 rounded, overlapping petals and a centre of infertile stamens. Leaves dark green, elliptic, apices long-acuminate, recurved, margins serrate, some undulate. Blooms mid-season. Originated in Izu Ôshima, Japan. A natural seedling of **Funatsu.** Originated and released by Takeo Ogawa in 1979.

Sakaki-tsubaki. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.6. Common Japanese name for *C.tegmentosa* (Koidz), Makino & Nemoto.

Sak-araha. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Sakuraba.**

Sakasafuji. (Inverted Reflection of Mt. Fuji), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.212; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.50, pp.54, 298; Seibundô Shinkôsha, 1979, *Senchinshû*, p.61, colour photo, p.216, description: Campanulate single of soft pink, flower usually pendulous, 5-6 petals, pointed or notched; central column of stamens, anthers orange, filaments white. Leaves small, green, elliptic, apex acuminate, margins serrate. Originated in Aichi Prefecture, Japan. Named by Satô, Minoru in 1970.

Sakazukiba. (Cup-leafed Camellia), *(C.japonica),* Kasuya, Kamegorô, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* Small, single. Castilian Red. Tuyama, 1968, *Camellias of Japan*, pl.152, description, p.133: Leaves thick, ovoid, rounded at base; apex acuminate, upper surface strongly concave and flat, impressed venation. Flowers single, widely cup-shaped, red (Rose Opal 022-022/1), petals rounded at apex, wavy surface. Stamen tube with sterile anthers. Late flowering. Originated in Kantô area, Japan. See colour pls.: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.442, description, p.358; Seibundô Shinkôsha, 1979, *Senchinshû*, p.61, description, p.216 as 'Sakazukiba-tsubaki'. Different reading: 'Sakadzuki-ba'. Synonyms: 'Sakazukiba-tsubaki', 'Sakazuki-tsubaki'.

Sakazukiba-tsubaki. Satomi, 1956, *Camellias Varieties in Japan*, p.11. Synonym for **Sakazukiba.**

Sakazuki-tsubaki. Saitama Botanic Gardens Catalogue, 1960. Synonym for **Sakazukiba.**

Saki No Yume. W.C. Slowcock Ltd Nursery Catalogue, 1960, p.59. Corruption of the Japanese name **Seki-no-yume.**

Sakigake. *American Camellia Yearbook*, 1950. p.34 as supplied to McIlhenny by Chûgai Camellia Nursery Co, 1934-1935. (Charging Ahead). Synonym for **Hakumyôrenji.**

Sakin. (Sand Gold), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô*, vol.310. No description. (Believed extinct.)

Sakiwake. (Variable Flowering), *(C.japonica),* Iwasaki, 1828, *Honzôzufu*, 49: A variety with two different coloured flowers, a pink double and a white, dappled pink. Originated in Japan. (Believed extinct.). See: JCS., 1981, *Tsubaki*, No.20, p.114.

Sakiwake-wabisuke. (Variable Flowering Wabisuke), (Wabisuke), Katayama, 1960, *Tsubaki Ochabana*, p.9: Small double blooms on a plant on which appears sports of both pink and white flowers. Originated in the Kansai area, Japan. Synonym: 'Katayama-yae-wabisuke'.

Sakiya Little Princess. ACS 1992, *The Camellia Journal*, vol.47, No.4, p.21. Orthographic error for for **Sukiya.**

Sakohime. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.206. Corruption of the Japanese name **Saohime.**

Sakon-jiro. (Sakon's White). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.110 with colour photo; English translation p.75. Small, white, tubular single with thick petals and cylindrical stamen column. Flowers early to late. Leaves elliptic, medium size, recurved. Upright, vigorous growth. Selected from wild camellias growing in Mure town. Discovered and named by Saneichi Ogawa, released by the Kagawa Branch of the JCS in 1997. From Kagawa Prefecture.

Saku. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.425; Chinese synonym for the Italy *C.japonica* **Sacco.**

Sakura. (Cherry), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, p.16, Hamamatsu, 1828, *Setsuyô Kikan*, vol.23: Small. single, white; opening wide cup-shaped. Stamens white. Originated in Japan. (Believed extinct.)

Sakura. (Cherry), *(C.hybrid)*, Funaki-en Catalogue, 1986-1987, No.5, p.90: Very small, pale pink, double, inner petals curved. Named by Tuyama. Originated in Japan. A hybrid of *C.japonica* x *C.fraterna.*

Sakuraba. (Cherry Leaf), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Splashed pink on white ground, semi-double in 3 tiers, with divided stamen cluster. Itô, Ko'emon, 1879, *Chinkashû:* Cherry pink, splashed pink, large single. Leaves deeply serrate, like a cherry leaf. Tateyama Nursery Catalogue, Mar.1957: Dark red, white stripes, single, large. Originated in Japan. Corrupted name: 'Sak-araha'. Chinese reading: 'Yinghua'. Thought to be a synonym for **Shôkei-sakaraba** and the modem **Sakuraba-tsubaki.** See: JCS., 1969, *Tsubaki Tokushû*, No.7, pp.35, 37.

Sakuraba. (Cherry Leaved) (Higo), Tateyama, 1957, Camellia Nursery Catalogue: Large single pink. Originated in Japan.

Sakuraba Party Dress ('Sakuraba' Party Dress) (*C.hybrid*) from Kodaira, Tokyo. *Japan Camellia* No.84, August 2007: Pink, single, petals frilled, cylindrical stamens, small to medium, blooming in March. Leaves lanceolate, waved, margins roughly serrated as in cherry leaves. ('Sakuraba' means 'cherry leaves'.) Tree upright. A crossing between **Kishibe-no-sakuraba** and a **Tulip Time** descendant. Produced by Shinichi Noguchi and named in 2002.

Sakuraba-genghi. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Sakuraba-genji.**

Sakuraba-genji. (Genji's Cherry Leaves), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in section on variegated leaves; Itô, Ko'emon, 1879, *Chinkashû:* Pink, edged white, large flower in 'Leaf metamorphosed' group. See: Satô, 1975, *Chûbu no Tsubaki*, p.104; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.444, pp.182, 358 as 'Sakuraba-genji-tsubaki'; Seibundô, Shinkôsha, 1979, *Senchinshû*, p.62, description, p.217: Very pale pink ground with deep pink streaks and lines, occasionally with a white edge. Flower double with pointed petals. Leaves deeply crenate, apex caudate; like a cherry leaf. Originated in Japan. Synonym: 'Sakuraba-genji-tsubaki'. Corruption of name: 'Sakuraba-genghi', 'Sakuraba-Gengi'.

Sakuraba-genji-karako-pink. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.18; A pink flowered sport of **Sakuraba-genji.**

Sakuraba-genji-tsubaki. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.444, p.182. Synonym for Sakuraba-genji.

Sakuraba-Gengi. Vanderbilt, 1940, *Camellia Research*, p.7. Corruption of the Japanese name Sakuraba-genji.

Sakuraba-shiro-nadeshiko ('Sakuraba' White Dianthus) (*C.japonica*) from Kodaira, Tokyo. *Japan Camellia* No.84, August 2007: White, single, petal margins serrated and frilled, blooming in March to April. Leaves oblanceolate, somewhat waved, margins with noticeable cherry flower type serrations. Tree upright. A crossing between **Party Dress** and a seedling of a 'White Peacock' (**Shiro-kujaku**) descendant. Produced by Shinichi Noguchi and named in 2006.

Sakuraba-Tokyo. (Cherry Leaved Camellia from Tokyo), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.352, p.178, description, p.195: Leaves obovate, rhomeo-obovate to broadly elliptic, apex suddenly acuminate, upper surface strongly concave, venation raised, deeply, obtusely and unequally serrate. Flowers semi-double, palest pink to white, scantily striped rosy red,

petals wide opening and partly serrulate. Late flowering. Originated in Japan. Synonym for **Sakuraba-tsubaki.**

Sakuraba-tsubaki. (Cherry Leaves Camellia), *(C.japonica)*, Satomi, 1956, *Camellia Varieties in Japan*, p.11. *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.358, pl.443; Seibundô Shinkôsha, 1979, *Senchinshû*, p.62, colour photo, p.217, description: Large size, white with pink and red specks and peppering to red streaks, single with 7-9 wide, overlapping, crinkled petals and a small, central stamen cluster. Leaves dark green, undulate, coarsely serrate to crenate, like cherry leaves. Flowers mid-season to late. See p.334, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Synonym: 'Sakuraba'. This cultivar is thought to be a synonym for the ancient **Shôkei-sakuraba** of *Sômoku Kinyôshû*, 1829 or 'Gagari-tsubaki' of *Sômoku Kihin Kagami*, 1827.

Sakurabeni. Satomi, 1958, *Nomenclature List of Sasanqua of Japan.* p.14. Synonym for **Goshozakura.**

Sakuradaijin. Satô, 1975, *Chûbu no Tsubaki*, p.83. Synonym for **Hanadaijin.**

Sakurado. (Cherry Coloured of Toya Family). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.330 with black and white photo; English translation p.232. Medium size, pale pink, lotus-form semi-double, poor-looking stamens. Flowers mid-season. Leaves elliptic, medium size. Upright, somewhat weak growth. Selected from cultivars raised by a private family in Tamayu Town. Named and released by Tomohisa Arikawa in 1973. From Shimane Prefecture.

Sakura-fubuki. (Cherry Petals in the Wind), *(C.japonica),* Inazawa Nurseries Co.Ltd., 1987-1988, p.3, A-128: Bright peach pink, large peony form. Early flowering. Originated in Japan.

Sakura-fubuki. (Cherry Petals in the Wind), *(C.sasanqua),* Seibundô Shinkôsha, 1970, *Garden Life*, No.36, p.119: Medium size, soft pink semi-double with waved petals. Elliptic, sharply serrate leaves. Originated by Satô, Chûbu area, Japan.

Sakura-fubuki. (Cherry Petals in the Wind), *(C.hiemalis),* Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49; ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.39: Large size, deep pink, semi-double. Blooms early to mid-season. Originated in Aichi Prefecture, Japan. Selected and named by Minoru Satô in 1960s.

Sakuragai. (Pink Sea Shell), *(C.rusticana), Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.211, p.104, description, p.322: Large size, rose form double, 10-11 cm across, 15-17 petals; pale pink fading to almost white in some areas. Leaves shiny mid-green, oval to broad-oval, apex acute, margins shallowly serrate. Blooms late. Originated in Tochio City, Niigata Prefecture, Japan. See colour pl., Seibundô Shinkôsha, 1979, *Senchinshû*, p.61. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.309. Different reading: 'Sakurakai'. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.109 with colour photo; English translation p.74. Named and released by Kaoru Hagiya in 1967. From Niigata Prefecture.

Sakuragaki. (Cherry Hedge), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Red, single, inner petals curved. Profuse stamens and anthers. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77. (Believed extinct.)

Sakuragari. (Cherry Viewing), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Large, blush pink, 10 cm across, 6-7 petals with about 120 light yellow stamens in a spreading, circular cluster. Originated in Kumamoto Prefecture, Japan. For colour photos and descriptions see: Hiratsuka, 1964, *Higo Camellia*, p.22 and back p.12 in English. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.35 & p.296; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.62, 217. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.138. Resembles **Sakura-tsukasa.** Sport: **Yozakura.**

Sakuragari. (Cherry Hunting), *(C.japonica)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Red splashes on white ground. Flat flower. Originated in Japan. (Believed extinct.)

Sakuragawa. (Cherry River), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large double, pale pink, peony form, tubular stamen cluster. Originated in Japan. (Believed extinct.) See: JCS., 1969, *Tsubaki*, No.7, p.10.

Sakuragi. (Cherry Tree), *(C.japonica)*, Yashiro, Kôken, 1841, *Kokon Yôrankô*, vol.309, Ichijima reprint, 1906, p.361. No description seen. Originated in Japan. (Believed extinct.)

Sakura-goromo. (Cherry Kimono), *(C.sasanqua)*, Seibundô Shinkôsha, Dec. 1971, *Garden Life;* Kuriya, p.18. Hakoda, JCS., 1987, *Tsubaki*, No.26, p.46; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.35: Medium size, white ground, graduating to light red, single form. Early blooming. Originated in Kumamoto Prefecture, Japan. Designated as a Higo sasanqua in 1968 by the Higo Sasanqua Society. Chinese synonym 'Yingyi'.

Sakuraha-gengi. Fendig, 1953, *American Camellia Yearbook.* Corruption of Japanese name **Sakuraba-genji.**

Sakurahime. (Cherry Princess), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.217: Peach pink, semi-double, size, deep red, shading to white, lotus form semi-double. Medium large size. Originated in the Chûbu area, Japan.

Sakurahime. (Cherry Princess), *(C.reticulata* hybr.*)*, ICS., 1990, *Japanese Camellia Cultivar List*, p.30: Medium size, deep red shading to white, lotus form, semi-double. Late flowering. A seedling of *C.japonica* **Miyakodori** x *C.reticulata* hybrid **Barbara Clark.** Originated in Ôsaka Prefecture, Japan.

Sakurajima. (Island in Kagoshima Prefecture), *(C.japonica).* Seibundô Shinkôsha, 1979, *Senchinshû*, p.62, colour photo, p.217, description: Small, burning red, single with 7-8 incurved petals and a large, central stamen cluster. Leaves green, broad oval, apex short acute, margins shallowly crenate. Originated in Kagoshima Prefecture, Japan.

Sakurajima-gakkô (Gakkô from Sakurajima), (Wabisuke), Seibundô Shinkôsha, 1987, *Garden Life*, Autumn: Very small, deep red, single, wabisuke type, sterile white anthers. Thin waved leaves. Discovered by Enomoto; named by Noguchi, Japan.

Sakura-kagami. (Cherry Blossom in a Mirror), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan*: White with pink graduations, semi-double. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.14: Light pink. Medium semi-double with narrow, incurved petals. Originated in Kantô area, Japan.

Sakura-kagami. (Cherry Blossom in a Mirror), (*C.x vernalis)*, Nakamura, 1971, *Genshoku Satsuki Tsubaki.* p.274; JCS., 1987, *Tsubaki*, No.26, p.51: Pale pink ground, semi-double, medium size. An **Egao** type triploid member of the 'vernalis' group; late blooming. Originated in Katayama Juraku'en, Ikeda City, Ôsaka, Japan.

Sakurakai. Inazawa Nurseries Co. Ltd Catalogue, 1986-1987, p.4, A.201. Different reading for **Sakuragai.**

Sakura-kingyo. (Cherry Goldfish), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.19. No description. Originated in the Aichi Prefecture, Japan.

Sakura-kô. Different reading for 'Sakurabeni' as synonym for **Goshozakura.**

Sakura-komachi. (Cherry Blossom Beauty), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Rose pink, single, 7 cm across with 7 petals and 100 light yellow stamens, spreading in a circle. Mid-season blooming. Originated in Kumamoto Prefecture, Japan. Seibundô Shinkôsha,

1979, *Senchinshû*, pp.62, 217. Hiratsuka, 1964, *Higo Camellia*, p.16, back p.12 (English); *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.368.

Sakura-komachi. (Cherry Blossom Beauty), *(C.sasanqua)*, Satô, 1975, *Chûbu no Tsubaki*, p.115: Large, pink, single with 5 broad, overlapping petals. Originated in Chûbu area, Japan.

Sakurasato. Different reading for **Ôri.**

Sakurasumi. (Cherry Corner), (Higo), Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, as 'Sakura-sumi'. No description seen. Originated in Japan.

Sakura-tsubaki. (Cherry Camellia), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Cherry pink, double, deep red stripes, large flower. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.80. (Believed extinct.)

Sakura-tsukasa. (Lord of the Cherries), (Higo), Taniguchi, *Chinka Kyôkan*, 1912: Cherry pink, 8-9 cm across, 6 petals with 100 white stamens in a spreading circle. Mid-season blooming. See pls. Hiratsuka, 1964, *Higo Camellia*, p.43, back p.12. (English). *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.37, p.50; Macoboy, 1981, *The Colour Dictionary of Camellias*, pp.139, 296; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.62, 217. Originated in Kumamoto Prefecture, Japan. Resembles **Sakuragari.**

Sakura-tsukasa. (Lord of the Cherries), *(C.sasanqua)*, Hakoda, 1987, JCS., *Tsubaki*, No.26, p.46; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.35: Medium size, pink, single. Early blooming. Originated in Kumamoto Prefecture, Japan.

Sakura-tsukiyo. Andoh, 1974, *Tsubaki Nyûmon*, 1974, Different reading for **Sakura-zukuyo.**

Sakurazima-gakkô. ('Gekkô' from Sakurajima). (Wabisuke). *Kurume Camellia*, 1997, English translation, p.39 as 'Sakurazima-gattkô'. Deep pink. Miniature, trumpet shaped single. Flowers early to mid-season.

Sakura-zukiyo. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.571. Different reading for **Sakura-zukuyo.**

Sakura-zukuyo. (Cherry Blossom in the Moonlight), *(C.sasanqua)*, *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.571, pp.220, 395: large, soft pink, 11-13 cm across, single, 6-7 petals, crinkled and emarginate. Originated in Kumamoto Prefecture, Japan. Different readings: Sakura-tsukiyo'. Corrupted names 'Zakuro-Zukujo', 'Zakuro-Zukiyo'. Different reading: 'Sakura-zukiyo'. A seedling selected by Saitô, Kiyofusa. Designated as a Higo sasanqua by the Higo Sasanqua Society in 1967.

Sakuyahime. (Princess Sakuya). *(C.x williamsii). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.109 with colour photo; English translation p.74. Small, peach red, sake cup-shaped single, slender petals and tubular stamens. Flowers mid-season. Leaves narrowly elliptic, somewhat small. Upright growth. A cross between *C.japonica* **Senju** and *C.saluenensis*, originated by Nobuo Sasai in 1984, released in 1997.

Sakyôde-chaga'eshi. Hantei, Kinta, 1827, *Sômoku Kihin Kagami.*' 'Chaga'eshi' is an ancient word for brown cloth. Different reading for **Sabashide-chaga'eshi.**

Sakyôde-otome. Hantei, Kinta, 1827, *Sômoku Kihin Kagami.* Different reading for **Sabashide-otome.**

Sakyôde-seminohane. Hantei, Kinta, 1827, *Sômoku Kihin Kagami.* Different reading for **Sabashideseminohane**.

Salab. *(C.hybrid)*, Feathers, 1971, *American Camellia Yearbook*, p.85: An **Apple Blossom** x *C.saluenensis* cross originated by David L. Feathers, Lafayette, California, USA. Plant habit

extremely compact, strong growing, prolific seed bearer, with small, light green foliage. Flower medium size, single, pink with a somewhat musky fragrance.

Salamanda. (*C.x williamsii)*, SCCS., 1962, *Camellia Nomenclature*, p.122: Bright red. Medium single. Open, upright growth. Blooms early to late. A seedling from *C.saluenensis x C.japonica* **Moshio,** originated by L. Jury, New Zealand.

Salar the Salmon. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.14, colour photo: A light red, rose form to semi-double seedling of **Rainy Sun**, with a centre of irregular petals and petaloids, mixed with irregular stamens. Originated by Richard Dodd, Marshallville, Georgia, USA.

Salcata. von Biedenfeld, 1856, *Practische Grundlehren der cultur von Camellien.* Orthographic error for **Sulcata.**

Salian. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.81. Chinese synonym for **Sally Ann.**

Salicifolia. *(C.japonica)*, J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Cactus, Camelien...,* p.220. No description. Makoy Nursery Catalogue, 1838. No description. Michael Floy & Son Catalogue, 1832: Narrow leaved. scarlet anemone, very double and showy. Originated by M. Floy, New York, USA. Synonyms: 'Crassifolia', 'Salicifolia'(Floy's), 'Floy's Salicifolia'.

Salicifolia. The species *C.salicifolia* Champion ex Bentham in Hooker's *Journal of Botany*, III. 309 (1851).

Salicifolia (Floy's) ... van Houtte Catalogue, 1841, 7:18. Synonym for **Salicifolia.**

Salicifolia Alba. *(C.japonica)*, Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete*, p.8. No description. Originated in Italy. (Believed extinct.)

Salifen. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.127. Chinese synonym for **Sally Christine.**

Sallie Harrill. Feray's Fine Flowers Inc. Catalogue, 1960. Orthographic error for **Sally Harrell.**

Sallie Liles. *(C.japonica), American Camellia Yearbook*, 1977, p.218, Reg. No.1422: A medium size, rosepink, amenone form. A chance seeding originated by Brook S. Liles, Badin, North Carolina, USA. The **Elegans** style bloom has 13 petals and 40-50 petaloids with yellow anthers. Average size is 9.5 cm across x 5.5 cm deep. Blooms mid-season to late. Plant growth is upright and medium with dark green leaves, 8 cm x 3.2 cm.

Sallie Mayes. *(C.japonica), American Camellia Yearbook*, 1956, p.65, Reg. No.259: A 16 year old chance seedling, originated by Central Georgia Nurseries, Macon, Georgia, USA that first flowered 1949. Plant growth is strong, upright and medium. Leaves 10 cm long x 4.5 cm wide; long pointed, serrated and slightly twisted. The flowers, light peach pink (slight orchid pink as flower ages), 10 cm across x 7.5 cm deep with 25 petals and 5-10 petaloids. Resembles **Eugene Lizé** in form. Blooms mid-season. Orthographic error: 'Sally Mayes'.

Sallo Rosea. *(C.japonica),* Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, 1997, p.5: Medium size, pink formal double flower on an upright, compact plant. Note: the name is illegal under the Nomenclature Code, as using Latin after 1956.

Sallour. *(C.x williamsii). Jardins de France*, No.2, p.31. No description. Originated by J.C. Rosmann, Boucou, France. Seedling of *C.saluenensis* x *C.japonica* **Madame Lourmand.**

Sally. *(C.japonica)*, Sander Nursery Catalogue, [before 1914]: Striped pink, semi-double. A charming flower with pronounced stamens. Originated in Belgium.

Sally (McIlhenny). *(C.japonica),* McIlhenny Catalogue, 1942, p.10, invalidly as 'Sally': Variety originated at Jungle Gardens, Avery Island, Louisiana, USA. Medium sized begonia rose, edged thulite pink, fully imbricated and well built up with many rows of small, somewhat pointed, petals.

Sally (Trehane). *(C.japonica),* Trehane Nursery Catalogue, 1972-1973, invalidly as 'Sally': A very vigorous, pale pink single. Originated in Australia.

Sally Anaclerio. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1999, p.14, Reg. No.2498. A deep bright red, semi-double to peony form chance seedling with dark yellow anthers. Petals stand erect around deep yellow filaments. Originated by Elizabeth R. Scott, Aiken, S.C., USA. *American Camellia Yearbook,* 1999, p.3, colour photo before p.1. The 15 year old seedling first flowered 1989. Average flower size is 10 cm across x 6.5 cm deep with 31 petals. Flowers have heavy petal texture and sheen. Plant growth is average, spreading and dense, with dark green leaves 8.2 cm long x 7 cm wide.

Sally Ann. *(C.japonica),* ACRS., 1983, *Camellia News,* No.87, p.22, Reg. No.300, colour photo, p.13: Originated by Peter Levick, Wahroonga, N.S.W, Australia. A chance seedling of **Hagoromo** which first bloomed 1977. Semi-double. shell pink, with occasional petaloids, size 12 cm across. Blooms early to mid-season. The upright, dense, vigorous plant has lanceolate, shiny, dark green leaves, 7-8 cm long x 3-4 cm, wide.

Sally Christine. (*C.reticulata* hybrid). ACRS, *Camellia News,* 1996, No.139, p.10, colour photo p.2. Reg. No.468. Registered by Dr R.M. Withers, Donvale, Victoria, Australia. A cross between *C.reticulata* hybrid **Suzanne Withers** as seed parent x *C.reticulata* hybrid **Lasca Beauty,** that first flowered 1993. The semi-double, pale pink (RHS.CC.65B) flower of 10-11 petals is 14 cm diameter x 6.5 cm deep, and flowers mid-season on a rapid growing, upright, open plant. Leaves are dark green, glossy, keeled, elliptic, acuminate apex, serrate margins, 13 cm long x 5.5 cm wide. Petals notched and fluted. Filaments columnar. A paler pink than **Lasca Beauty.**

Sally Fisher. *(C.japonica),* Camellia Grove Nursery Catalogue, 1980, p.11: Medium size, semi-double. Palest pink, shading to deeper pink at the edges of the rounded petals. Medium growing yet pendulous plant. Flowers early to late season. Originated by David L. Feathers, Lafayette, California, USA and sent to Jim Fisher at Camellia Grove Nursery who named it for his daughter. See colour photo on front cover ACRS., 1987, *Camellia News*, No. 108.

Sally Halstead. *(C.japonica),* Hillcrest Nursery Catalogue, 1958. Description not seen. Originated in USA.

Sally Harrell. *(C.japonica), American Camellia Quarterly,* 1954, vol.7, No.4, Reg. No.125: A 5 year old seedling of **Mrs F.L. Gibson** x **Debutante,** originated by E.H. Harrell, Thomasville, Georgia, USA. Plant growth is compact. Flower buds large and rounded with white colouration. Flowers incomplete double with mixed petaloids, resembling **Debutante** in shape, 10 cm across, white. Early flowering. Orthographic errors: 'Sallie Harrill', 'Sally Hurrell'. See Sharp, 1951, *Camellias Illustrated,* p.91 for illustration.

Sally Hayes. Mark S. Cannon Scion Catalogue, 1962, p.9. Orthographic error for **Sallie Mayes.**

Sally Huested. *(C.japonica),* The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.3: Clear pink. Large, anemone type. Vigorous, bushy growth. Blooms mid-season. Originated in USA. Synonym: 'All Out'.

Sally Hurrell. Tammia Nursery Catalogue, 1965-1966. Orthographic error for **Sally Harrell.**

Sally J. Savage. (*C.x williamsii*), ACRS., 1981, *Camellia News*, No.79, p.28, Reg. No.277: Originated by Charles A. Newman, Bayswater, West Australia, it first bloomed 1975. A chance seedling of **Debbie**. The upright plant has light green, lanceolate leaves. Flowers formal double, 5-7.5 cm across, mid-pink with lilac overlay. Blooms mid-season to late.

Sally Jane. *(C.sasanqua),* ACRS., Dec. 1990, *Camellia News*, No. 115, p.10, Reg. No.380: Originated by Alex M. Scott, 60 Broadwater Terrace, Redland Bay, Queensland, Australia. A chance seedling that first flowered 1957. Large size, single, 8 petalled flower, white shading to blush shell pink. Free flowering on an upright, rapid growing, bushy plant. Leaves elongate, light, glossy green, flat, apex acute, finely serrate. Flat petals with Higo form filaments. Similar growth habit to **Queenslander.** Chinese synonym 'Saili'.

Sally Kennedy. *(C.japonica), American Camellia Yearbook*, 1954, p.331, Reg. No.207: A 12 year old seedling, originated by Filo H. Turner, Pensacola, Florida, USA, that first flowered 1949. Plant growth is open, upright and rapid in rate. Leaves very large, dark green, elliptical, tapering acuminate, margins crenate. Flowers semi-double, similar to 'Donckelaeri' (**Masayoshi**), with 9-11 petals and 11-15 cm across. Colour light salmon pink. Flowers early to mid-season. (Mr Turners No.31).

Sally Mayes. Hillcrest Nursery Catalogue, 1958. Orthographic error for **Sallie Mayes.**

Sally Reuthe. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.206. No description. Originated in USA. No valid listing located.

Salma Walker. (*C.reticulata*), ACRS., 1980, *Camellia News*, No.74, p.24, Reg. No.246: Originated by T.E. Pierson, Hurstville, N.S.W., Australia of *C.reticulata* **Damanao** x **Buddha** seedling that first bloomed 1978. Plant habit open, upright with dull green leaves, 10.9 cm x 4 cm, apex sharp pointed. Flowers deep rose-pink, informal double, 12-17 cm across x 4 cm deep. Flowers early to mid-season. See colour photo, p.40, ACRS., 1981, *Camellia News*, No.79 erroneously as 'Selma Walker'.

Salmon Beauty. *(C.japonica),* Cottage Gardens Co. Inc. Catalogue, 1932: Salmon pink, medium large, semi-double. Originated in USA. For illustration see, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I, p.317. Synonym: 'Salmon Pink Beauty'.

Salmon Pink. *(C.japonica),* Nobelius Nursery Catalogue, 1939, p.35: Medium sized, salmon pink, semi-double. Mid-season blooming. Originated in Australia.

Salmon Pink Beauty. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.207. Synonym for **Salmon Beauty.**

Salmon Princess. *(C.japonica),* SCCS., 1978, *Camellia Nomenclature*, p.142: Salmon pink. Large, semi-double. Medium, upright growth. Blooms mid-season. Originated in USA by Hugh Shackelford, Albany, Georgia.

Salmon Queen. *(C.japonica),* Vanderbilt, 1940, *Camellia Research*, p.7. No description. Coolidge Nursery Catalogue, 1845-1846: Pure salmon pink. Large double, opening like a rose with outer petals distinct and inner, smaller and more clustered. Vigorous, upright growth with light green foliage. Heavy bloomer. Originated in USA by Doty & Doerner, Portland, Oregon.

Salmonea. *(C.japonica),* Arthur Chandler Nursery Catalogue, 1957, p.11: Pale pink, semi-double. Originated in England.

Saloia. *(C.japonica),* Loureiro Catalogue No.1, 1865, p.37, & No.9, 1872-1873, p.47: Rose form double, semi-regular; carmine with white marks radiating from the centre. Orthographic variant; 'Salôia'. Orthographic error; 'Soloia'. Originated in Portugal.

Salome. *(C.japonica),* Hilcrest Nursery Catalogue, 1958. No description. Originated in USA. Sport: **Salome Variegated.**

Salome Variegated. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.9 as 'Salome Var.': a virus variegated form of **Salome.** Originated in USA.

Salomonii. *(C.japonica),* Verschaffelt Catalogue, No.50, 1844, p.23. No description. Synonym: 'Salomoni Vera'. (Believed extinct.)

Salomoni Vera. Vershaffelt Catalogue, 1850, p.50. Synonym for **Salomonii.**

Salonica. (*C.x williamsii),* Sleeve Donard Nursery Catalogue, 1966-1967. Bright carmine pink flowers, bright carmine in bud, opening to carmine pink. Vigorous growth. The name is a combination of *C.japonica* and *C.saluenensis* and is illegal according to the Nomenclature Code. The cultivar was previously listed by Sleeve Donnard as a *C.saluenensis* form in 1959-1960 Catalogue. New Zealand Camellia Bulletin, 1992, Issue No.112, vol.XVII, No.5, p.6. Renamed **Shimna** in 1992 to conform with the Horticultural Code.

Salour. J & F Thoby, Gaujacq, France, Catalogue, 2009, p.7; No details.

Salter's Variegated. *(C.japonica),* Hume, 1946, *Camellias in America*, p.338. No description. Originated by Malbis, Daphne, Alabama, USA.

Saluenensis. The species, *C.saluenensis* Stapf ex Bean, Trees and Shrubs, III66, c. tab. (1933).

Saluenensis Bartley Pink. Treseders Nurseries Ltd Catalogue, 1964-1965, p.10. Synonym for **Bartley Pink.**

Saluenensis Exbury Trumpet. Treseders Nurseries Ltd Catalogue, 1964-1965, p.10. Synonym for **Exbury Trumpet.**

Saluenensis forma. Sleeve Donard Nursery Catalogue, 1959-1960. Renamed **Salonica.**

Saluenensis Haydon's Compact. NZCS *Bulletin*, March 2005. See **Haydon's Compact.**

Saluenensis Red Stamens. Treseders Nurseries Ltd Catalogue, No.11, 1971-1972, p.22. Synonym for **Red Stamens.**

Saluenensis Trewithen Red. Treseders Nurseries Ltd Catalogue, 1979, p.3. Synonym for **Trewithen Red.**

Salusbury. *(C.japonica), American Camellia Yearbook*, 1948, p.50: An old cultivar, thought to have been brought to Natchez before the Civil War and planted in the Salusbury Gardens, Summet, Mississippi, USA. It makes very slow growth. The flower is a semi-double with 3-4 fascicles of stamens and is variable in colour, ranging from self pink to self white. Blooms mid-season.

Salut. *(C.saluenensis x C.lutchuensis), American Camellia Yearbook*, 1981, p.105, Reg. No.1730: A miniature orchid pink, single, *C.hybrid (C.saluenensis x C.lutchuensis),* mid-season blooming. Originated by Mrs Henry Stone, Baton Rouge, Louisiana, USA. The 20 year old seedling first bloomed 1966. Average flower size, 5 cm across x 2.5 cm deep. The flower has 2 tiny under-petals, 3 petals one size and 3 smaller petals. Very fragrant. Plant growth is spreading, open and rapid with dark green leaves, 5 cm x 2.5 cm. Chinese synonym 'Sailute'.

Salute. Heartwood Nursery, Seedling List 2009; Name changed to **Heartwood Salute,** being too close to **Salut,** and also of the same breeding.

Salutation. (Borde Hill Hybrid), RHS., Award of Merit, 1936, *Gardeners' Chronicle*, ser.3, 99, 204. pub. Mar.28: A beautiful variety raised from *C.saluenensis x C.reticulata.* The large, round flowers have two rows of soft pink petals and a neat cluster of stamens. Originated by Lt. Col. Stephenson R. Clarke, Borde Hill. Haywards Heath, Sussex, England. See p.43, Sharp, 1948, *Camellias Illustration* for colour photo. Note: There was considerable early controversy about this cross as the reticulata involved was the infertile **Captain Rawes** and many early listings gave the combination *C.saluenensis x C.japonica* 'Donckelaeri' (**Masayoshi**). However a chromosome count established that **Captain Rawes** was one parent.

Salvatore Rosa. *(C.japonica),* Rovelli Catalogue, 1893-1894: Imbricated form. Red variegated with white. Originated in Italy. Probably named after the Italian painter, Salvator Rosa, 1615-1673. Orthographic variant: 'Salvador Rosa'.

Salvator Rosa. Mercatelli Catalogue, 1894. Orthographic variant for **Salvatore Rosa.**

Salvo D'Aquisto. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias*, 2005, p.141 with colour photo; Medium to large size, semi-double, pink (RHS.CC.50A). A seedling of 'Rosa Simplex' **(Aitonia)** x 'Latifolia Rubra' **(Latifolia),** first flowered in 2003. Originated by Dott. Guido Cattolica, Livorno, Italy.

Salzangua. André Leroy, Angers Nursery Catalogue, 1823, p.10. Orthographic error for Sasanqua, probably as **Lady Bank's.**

Sam Barranco. *(C.japonica),* Fendig, 1953, *American Camellia Yearbook:* A medium-sized, white-variegated, complete-double (formal), 9-10 cm across. Colour is white dashed with pink. There are no less than 65 petals. Buds are small, round and light green. Foliage is oval, dark green with tapered base and average serrations on a plant of slow growth. Originated by Sam Barranco, Beaumont, Texas, USA. First bloomed 1949. *American Camellia Yearbook*, 1954, p.332, Reg. No.136. Sports: **Sam Barranco Blush, Sam Barranco Pink.**

Sam Barranco Blush. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature*, p.93: Blush pink sport of **Sam Barranco.** Originated by Sam. Barranco, Beaumont, Texas.

Sam Barranco Pink. *(C.japonica), American Camellia Yearbook*, 1960, p.206, Reg. No.451: A sport of **Sam Barranco** originated by Feray Greenhouses, Beaumont, Texas, USA. Plant habit is slow and of average density with dark green leaves, 7.5 cm x 4.5 cm. Formal double flowers, 6 cm across x 2.5 cm deep with 75-100 petals. Deep pink with some white variegation. Flowers early to midseason.

Sam Barranco Variegated. *(C.japonica),* Mark S. Cannon Scion List, 1962, p.10: A virus variegated form of **Sam Barranco Pink** - Pink blotched white. Originated in USA.

Sam Burridge. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.207. No description. Originated in USA. No valid listing located.

Sam Harn. *(C.japonica), American Camellia Yearbook*, 1956, p.65, Reg. No.280: This 9 year old chance seedling which first flowered 1954, was originated by Julington Nurseries Inc., Jacksonville, Florida, USA. Plant growth is upright and compact with mid-green leaves, oval, lightly veined and medium sized. The bright, cherry-red flowers, 9-10 cm across, are incomplete double with 2 rows of large, wavy petals, and many white stamens tipped with small red petaloids, interspersed with golden yellow anthers. Flowers early through mid-season.

Sam Simpson. *(C.japonica). American Camellia Yearbook*, 1960, p.206, Reg. No.487: An 11 year old chance seedling that first bloomed 1953; originated by Emmett S. Simpson, Pensacola, Florida, USA. Plant growth is upright, open and medium rapid with light green leaves, 11 cm x 4.5 cm. The rose-red, semi-double flowers have rabbit ears, are 12.5 cm across x 4.5 cm deep with 12 petals, 3-4 large petaloids and 4-5 short petaloids at the base of the stamens. Flowers mid-season.

Sam Zerkowsky. *(C.japonica), American Camellia Yearbook*, 1976, p.163, Reg. No.1385: A 12 year old chance *C.japonica* seedling that first flowered 1970. Originated by Ferol & Sam Zerkowsky, Tammia Nursery, Slidell, Louisiana, USA. Plant growth is upright, dense and medium with dark green leaves, 10 cm x 6 cm. The anemone form, 'Elegans' type, bloom is medium, soft pink, 100 petals, 50 petaloids, yellow stamens. Average size 12 cm across x 7.5 cm deep. Loose to full anemone with a centre of white and pink petaloids with a centre of golden

stamens. Two rows of wide, pink petals form a skirt effect. Blooms mid-season. See colour photo on front cover, ACS, 1975, *The Camellia Journal*, vol.30, No.3.

Sandozuki. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Sandanzaki', synonym for **Sandanka.**

Sandra Ann. (*C.pitardii* hybrid). *New Zealand Camellia Bulletin*, March 1997, Issue No.126, vol.XX, No.1, p.19, Reg. No. 379. Registered by E. Hansen, Waikanae. A chance seedling of *C.pitardii* var. *pitardii,* pollen parent unknown. Flowers are soft pink (RHS.CC. 65B – D), large and rather flat, 10 cm diameter x 3 cm deep. A semi-double of about 15 petals with firm texture, with slightly reflexed long oval notched petals and bold yellow stamens. The plant is upright, rather slow growing, and very floriferous, thus well suited to the small garden. Leaves are 6cm long x 4 cm wide. Flowers early to mid-season.

Sandra Gaeta. *(C.reticulata x C.chrysantha),* SCCS., 1990, *Camellia Nomenclature,* p.134: Pink, large size, semi-double with upright, twisted petals. Medium, open, spreading growth. Blooms early to late. A seedling of *C.reticulata* hybrid **Arcadia** x *C.chrysantha* **Olympic Gold.** Originated by Piet & Gaeta, California, USA.

Sandra Gail. *(C.sasanqua).* C.Aust., *Camellia News*, Autumn 2006, No.170, p.12, Reg. No. 562. Originated by Albert Raymond and Gwenda Norris, Capalaba, Qld, Australia. A chance seedling that first flowered in 1993. A loose peony, cyclamen pink flower of 20 petals and 25 petaloids, 7 cm across x 3 cm deep. Flowers heavily early to mid-season on a slow growing, bushy, dwarf plant. Leaves dark green, glossy, elongated and serrated, 5.5 cm x 2 cm. Flowers shatter. Chinese synonym 'Gaier'.

Sandra Williams. *(C.japonica),* ACS, *The Camellia Journal,* 2005, p.28 and colour photo p.29, Reg. No. 2657. A chance seedling that first flowered in 1996. Originated and propagated by Jay Ellis Jr, Keystone Heights, Fla., USA. The 6.5 cm diameter flower has a full anemone centre, and combines dark pink to medium red with white variegation. Some interspersed yellow anthers. Plant growth is upright, dense and vigorous and flowers profusely early to mid-season. *American Camellia Yearbook,* 2005, p.47 and colour photo p.c8. Dark green leaves are 6.5 cm x 3.2 cm.

Sanduohua. (Triple flower). Gao & Zhuang, 1989, *The Camellia in China*, p.73, No.533. Chinese synonym for the Japanese *C.x vernalis* Sandanka.

Sandusky Rosea Superba. Shackelford, 1967, ACS., *The Camellia Review*, vol.22, No.5. Synonym for **Rosea Superba Variegated.**

Sandy. *(C.japonica), American Camellia Yearbook*, 1970, p.170, Reg. No.1120: A 6 year old chance seedling that first bloomed 1967. Originated by Standley G. Holtzclaw, Greer, South Carolina, USA. Plant growth is average with dark green leaves, 10 cm x 4.5 cm. The peony form flowers average 12 cm across x 5 cm deep with 65 petals. They are bright rose-red with yellow anthers. Early to mid-season flowering.

Sandy Clark. *(C.reticulata* hyb.), SCCS., 1972, *Camellia Nomenclature*, p.157: Soft pink. Large, semi-double. Blooms mid-season. Vigorous upright growth. A seedling of *C.reticulata* **Buddha** x *C.saluenensis*, raised in New Zealand by Jack Clark.

Sandy Sue. *(C.japonica),* Movich, 1972, *American Camellia Yearbook*, p.65: White. Large, loose, peony form with heavy textured, wavy petals. Medium, compact, upright growth. Mid-season blooming. Originated by C. Pitkin, San Marino, California, USA. See colour photo facing p.20, *American Camellia Yearbook*, 1974; Front cover, ACS, 1973, *The Camellia Journal*, vol.28, No.3; Front page, SCCS, 1974, *The Camellia Review*, vol.35, No.5. Chinese synonym: 'Sangdixiu'.

Sandy Walker. *(C.japonica),* Fendig, 1950, *American Camellia Catalogue:* Medium sized, rose-pink, semi-double, 8 cm across. Has a slight orange cast. Petals are 5 cm long and wide. Filaments are light yellow with brown anthers. Leaves are dark green, stiff, 7.5 cm x 4 cm on a vigorous, erect plant. Originated as a seeding of unknown parents by Mr & Mrs W.T. Woods, Macon, Georgia. USA.

Sandy Walters. *(C.japonica),* SCCS, 1978, *Camellia Nomenclature*, p.142: White streaked red. Large semi-double with loose petals. Medium, upright growth. Mid-season flowering. Originated in USA. by J.M. Haynie, Theodore, Alabama.

Sanemori. (Ancient Personal name in Nô dancing), Hôrin's Diary, 1645; *Kakumeiki; Chinka Zufu*, (before 1700), Watanabe, 1969, pl.255: Small size, red, anemone form flower with a mass of small petaloids and the odd, small, erect petals filling the centre. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.47.

Sangalli. *(C.japonica),* Lemaire, 1869, *L'Illustration Horticole*, vol. XVI, pl.641: A shrub of good appearance, well branched with small leaves, very finely and remarkably reticulate (veins seemingly yellowish). Originated in Italy by Sangalli. Flowers of average size, white, very

lightly tinted a tender pink with fairly small, delicate petals, very numerous, perfectly imbricated, rounded and slightly notched at the apex.

Sanga-no-tsu. (Three Harbours), *(C.sasanqua)*, Ashizawa, 1898, *Chabaika Taishû;* Ishii, 1932, *Genshoku Engei, Shokubutsu Zufu*, vol.4: Medium sized, anemone form, resembling **Kin-no-zai,** but with lighter tone and white shading on both petals and petaloids; a prostrate, weak grower. Early flowering. A sport of **Kin-no-zai.** Different reading: 'Mika-no-tsu', 'Sanko-no-tsu'. Synonyms: 'Kin-no-zai-shibori', 'Harkara-mikawa', 'Mikawa-no-tsu'.

Sangashi. (Child of Mountain Village), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.64, colour photo, p.218, description: Small, soft pale pink, campanulate single of five overlapping petals with a cylinder of stamens, joined on lower half, white filaments, orange-yellow anthers. Leaves lanceolateelliptic, apex acute, margins shallowly serrate, mid-green. Originated in Shimane Prefecture, Japan. Selected from a wild japonica community in Matsu'e City, named and released by San-in Camellian Club in 1976.

Sangdimasi. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the USA *C.japonica* **San Dimas.**

Sangdixiu. Chinese synonym for the USA *C.japonica* **Sandy Sue.**

Sangdon. *(C.japonica)*, Kiyono Nursery Catalogue, 1934, p.15: Shell pink, medium sized, semi-double. Vigorous, loose, upright growth. See illustration, p.244, 1958, *American Camellia Yearbook.* Originated in USA.

Sangemen. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the USA *C.reticulata* hybrid **Three Dreams.**

Sangen. (Three Truths), (*C.x williamsii)*, Yokoyama & Kirino. 1989, *Nihon no Chinka*, p.226, description, p.227, colour photo: Medium size, bright, deep red, single with 5-6 channelled petals and a central column of stamens with pinkish filaments and golden anthers. Leaves mid-green, elliptic to broad-elliptic, apices tapering-acute, margins shallowly serrate. Blooms mid-season. Originated in the Okayama Prefecture, Japan. A seedling of **Tulip Time** x **Kon-wabisuke.** Named and released by Nobuo Sasai.

Sangokaku. (Coral Palace), *(C.reticulata* hyb.), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.205, colour photo and description: Large size, deep red, bowl-shaped single with 5 long, strap-like, channelled and emarginate petals, opening star-shaped and a central stamen cylinder with pinkish filaments, joined for the lower half, and golden anthers. Leaves deep green, elliptic, apices acute, margins serrulate. Blooms early to mid-season. Originated by Ogawa in Izu Ohshima, Japan, 1975. A natural seedling of **Brian.** Originated and named by Takeo Ogawa in 1975.

Sangoku. (Three Countries), *(C.japonica)*, Mizuno, 1681, *Kadan Kômoku:* Purple spotted and edged white. Double. Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Deep red with lighter red stripes, large size, double. Originated in Japan. Resembles **Hikarugenji.** Different reading: 'Mikuni'. Any three adjacent countries are called 'Sangoku' or 'Mikuni'. See: JCS., 1965, *Tsubaki*, No.5, p.29; Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.79. (Believed extinct.)

Sangoshi. (Three, Five, Four), (*C.japonica*), Sakuden, 1630, *Hyakuchinshû:* Semi-double, white. Outer row, 3 petals, middle row, 5 petals, inner row, 4 petals. Occasionally opens as a single. Originated in Japan. Different reading: 'Migoshi'. See: Kyôto Engei Kurabu, 1961, No.1, p.96. (Believed extinct.)

Sangoshô. (Coral Reef). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.165 with colour photo; Deep red single with white border. Somewhat slim central stamen column with yellow anthers on white filaments. Flowers mid-season to late. Leaves elliptic, medium size. Upright growth. A cross of **Aoi-sangoshô** x **Tama-no-ura**, released by Tokuji Ôoka in 2008.

Sangre de Pichón. *(C.japonica), La Camelia .....Diputación Provincial de Pontevedra*, 2004, p.158, Register No.174. Anemone form, 9 cm diameter, Red purple, very dark garnet, (RHSCC 60A-59A). 8 to 10 external petals, centre a mixture of petals and numerous petaloids. Stamens hidden, but with white filaments and yellow anthers. Leaves pale green, 7.5 cm x 3.5 cm, elliptic, apice blunt. Flowers mid-season. Growth is bushy, compact and increasingly erect and columnar. Originated by Maciñeira Nursery, Galicia, Spain.

Sangre de Toro. *(C.japonica), La Camelia .....Diputación Provincial de Pontevedra*, 2004, p.159., Register No.156. Anemone to peony form, 10 cm diameter, red (RHSCC 53B to C) with darker veins. About 20 large petals and 40 to 50 petaloids of different sizes, some speckled with white or lighter red. 35 to 70 stamens mixed with the petaloids, filaments light yellow to rose at the base, anthers yellow. Leaves mid to dark green, 9 cm x 4.5-5 cm, elliptic, apice blunt. Flowers mid-season to late. Bushy, dense plant. Originated by Maciñeira Nursery, Galicia, Spain.

Sanguinea. *(C.japonica)*, Jacob-Makoy, 1828, Catalogue, p.5. No description. Sweet, 1830, *Hortus Britannicus*, ed.2, p.74: Single, crimson. Berlèse, 1837, *Monographie*, ed.1, pp.102, 129: Leaves of a medium size, form and colour of **Aitonia**; bud oblong, pointed, scales greenish; flower 10 cm across, single, cherry-red, sometimes blood colour; stamens numerous, anthers small, styles long, surpassing by a third, the length of the stamens; bears seed. Originated in England by Chandler. Synonyms: 'Sanguinea Nova', 'Sanguinea Chandlers', 'Sanquinea de Chandler', 'Sanguinea'(New York), 'Sanguinea Nova de Chandler'. Orthographic errors: 'Sanquinea', 'Sanguinnova'.

Sanguinea Chandlers. Maupoil & Figlio Catalogue, 1847 as 'Sanguinea Chaudlers'. Synonym for **Sanguinea.**

Sanguinea de Chandler. Jacob Makoy Nursery Catalogue, 1839, p.17. Synonym for **Sanguinea.**

Sanguinea (New York). Rousseau, Angers Nursery Catalogue, 1842-1843,p.4. Synonym for **Sanguinea.**

Sanguinea Nova. Courtois, 1833, *Magazin d'Horticulture.* 1[pt.D]:317. Synonym for **Sanguinea.**

Sanguinea Nova de Chandler. Jacob Makoy Nursery Catalogue, 1836, p.17. Synonym for **Sanguinea.**

Sanguinea Plena. Ridolfi, Florence Catalogue, 1848, p.9. No description. Originated in Italy. (Believed extinct.)

Sanguinnova. Ysabeau, ed., 1848-1849, *Journal d'Horticulture Pratique de la Belgique*, p.302. Orthographic error for 'Sanguinea Nova', synonym for **Sanguinea.**

Sanguohong. (Three Kingdoms Red), Gao & Zhuang. 1989, *The Camellia in China*, p.74, No.535. Chinese synonym for the Japanese *C.sasanqua* **Mikunikô.**

Sanhehui. (Trinity), *(C.japonica)*, Yang, 1965, A *Study of the Camellia Cultivars of Taiwan*, p.4 as 'San Hohiu': Erect growth, leaves 7.3 cm long x 3.8 cm wide, elliptic. Flowers 7.7 cm across, white with some pink stripes; petals about 40, sometimes the flower is deep red and pink. Early flowering. Originated in Japan. Different readings: 'San-ho-hui', 'Sanhowha'.

Sanhei-tsubaki. Different reading **Sanpei-tsubaki.**

San-Ho-Hui. Waterhouse, 1965, *International Camellia Journal.* No.3, p.26. Different reading for **Sanhehui.**

Sanhô-no-mai. *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.365. Different reading for **Sanpô-no-mai.**

Sanjin Baozhu. (Variegated Pearl), *(C.japonica),* Wang & Yu, 1989, *Camellias,* No.17, p.23, colour photo [p.110]: Peony form. White with red stripes and splashes with an outer row of large reflexed petals around a full pompom centre of petaloids, and small petals and stamens. Originated in China.

Sanjô-beni. (Red Camellia from Sanjô). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.116 with colour photo; English translation p.79. Medium size, vermilion, tubular to bowl-shaped single, thick petals, cylindrical stamen cluster. Flowers early to mid-season. Leaves elliptic, medium size, thick, flat. Upright growth. Selected from wild japonicas growing in Ômura City. Discovered and named by Yoshinori Amano in 1989. From Nagasaki Prefecture.

Sanjûka. (Flower of Three Vertical Lines), *(C.japonica), Chinka Zufu* (before 1700), Watanabe. 1969, pl.80 as 'Sanjyûka': Small, red flower, formed like one flower of single shape. growing from the centre of another single flower with a crown of golden stamens on top. Originated in Japan. (Believed extinct.)

Sanka. (Admired Flower), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.65, colour photo, p.218. description: Large, single, deep red, opening saucer shape; three large, rounded petals, two smaller, reflexed petals veined deeper red. Stamens in central cylinder, yellow anthers, light pink filaments, joined at basal third; mid-season blooming. Plant habit strong and vigorous. See: Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.231. Originated in Chûbu area, Japan. Nippon Tsubaki - Sasanqua Meikan, 1998, p.115 with colour photo; English translation p.78. A cross between **Shûfûraku** and **Hanamiguruma.** Named and released by Minoru Satô in 1971.

Sankô (Three Lights), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* White. Single. Originated in Japan. (Believed extinct.) Different reading: 'Sankoh'. The three lights refer to the sun, moon and stars. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.1, p.94.

Sankô. (Three Lights), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.65: A white striped pink and red; large, flat bloom. Single of 5 petals. Originated in Japan. (Believed extinct.)

Sankô. (Three Lights), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu;* Chûgai Nursery Co. Catalogue, 1935-1936, p.26: White with a crimson margin. Very Large flower. Semi-double with slightly cupped crêped petals. Originated in Japan. Sport: **Sankô-nishiki.** Different reading: 'Sankow'.

Sankôka. (Three Daimyo's Fragrance). *(C.x williamsii). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.115 with colour photo; English translation p.79. Small, reddish purple, tubular to trumpet shaped single, thick petals channelled along the centre, cylindrical stamen cluster, fragrant. Flowers early to late. Leaves elliptic, medium size, somewhat waved. Upright, vigorous growth. A chance seedling of **Tulip Time.** Named and released by Nobuo Sasai in 1983. From Okayama Prefecture.

Sankoku. Different reading for **Sangoku.**

Sankô-nishiki. ('Sankô' Variegated), (Higo), Taniguchi, 1912, *Chinka Kyôkan;* Yoshimura, 1961, *Higo Tsubaki Meikan:* Rose-pink striped white, single. Stamens spread in a ring form. Originated in Japan. Synonym: 'Sankô-tsubaki'. Used as a pseudonym for **Akebono Pink** in USA.

Sankô-nishiki. ('Sankô' Variegated), *(C.sasanqua),* Ishii, 1932, *Genshoku Engei Shokubutsu Zufu:* White with red towards the petal margins, large size, cup-shaped, semi-double. See: JCS., 1988, *Tsubaki,* No.26, p.46. Sport of the *C.sasanqua* **Sankô.** Originated in Japan.

Sankô-nishiki. (Sankô Variegated), *(C.japonica),* Chugai Nursery Catalogue, 1934-1935: Rose pink with some petals lightly lined white. Small semi-double with incurved petals. Originated in Japan. Synonym: 'Sankô-tsubaki'.

Sankô-nishiki. Yashiroda, 1950, *American Camellia Yearbook*, p.20; Ishii, 1950, *Engeijiten*, vol.2. Synonym for **Sankô.**

Sanko-no-tsu. Wada, 1941, *Japanese Garden Treasures.* Different reading for **Sanga-no-tsu.**

Sanko-tsubaki. McIlhenny Nursery Catalogue, 1941. Synonym for **Sankô-nishiki.**

Sankô-tsubaki. (Three Lights Camellia), *(C.japonica)*, Hino, 1637, *Sukekatsukyôki*. No description. See: JCS., 1986, *Tsubaki*, No.25, p.14. Originated in Japan. (Believed extinct.)

Sankoh. Andoh, 1985, *International Camellia Journal*, No.16, p.46. Different reading for **Sankô.**

Sankow. Hume, 1946, *Camellias in America*, p.341. Different reading for **Sankô.**

San-no-shina. (Three different kinds of flowers), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Large, red, double with three different types of flower forms. Stamens partly divided and grown into petaloids. Very irregular form. Different reading: 'Mitsu-no-shina'. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.101. (Believed extinct.)

San-no-tsubaki. (Number Three Camellia), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.244, 358: Large, red, flat semi-double with white filaments and yellow anthers. Originated in Japan. (Believed extinct.)

San-no-tsubaki. (Number Three Camellia), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.456: Large, semi-double, white with red streaks, divided stamen cluster with white filaments and yellow anthers. Originated in Japan. (Believed extinct.)

Sanpei-tsubaki. (Sanpei's Camellia), *(C.japonica)*, Tuyama, 1966, *Camellia Cultivars of Japan*, p.326 as 'Sampei-tsubaki'; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.147, p.84, description, p.312; Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.127:: Medium sized, single, 6-7 petals, deep pink at base, fading towards the edge, veined a deeper colour, white borders. Stamen cylinder with pale yellow filaments joined at lower third. Leaves ovate, margins rolled or undulate, serrate, apex acuminate. See colour photos & descriptions: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.65, 218 and Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.264. Originated in Aichi Prefecture, Japan. Very early blooming. Named for Oguri, Sanpei in the 1950's by Adachi, Chôka. There is a story in the Journal of the Nagoya Camellia Society by Mr Oguri, Sanpei Jr, telling how this camellia was passed down from the Owari Tokugawa family to the Oguri family in the Meiji era.. This camellia is believed to be synonymous with **Adelina Patti.** Resembles **Nihon-no-homare.** It is also close to **Kashû-karanishiki** of Kanazawa but the leaf veining is different. Synonym: 'Sampei-tsubaki', 'Sanhei-tsubaki'. Chinese synonym 'Canpingchun'.

Sanpô-nishiki. (Three Treasures Brocade), *(C.sasanqua)*, Ishii, 1950, *Engei Daijiten*, vol.2; Hakoda, JCS., 1987, *Tsubaki*, No.26, p.46; ICS., Apr.1990. *Japanese Camellia Cultivar List*, p.35: Medium size, white with red margins to petals, single. Early blooming. Originated in Kyôto Prefecture, Japan. Different reading: 'Sampô-nishiki'.

Sanpô-no-mai. (Dance of the Three Treasures of Buddhism). *(C.japonica)*, Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.127. Shufu no Tomo Sha, 1976, *Tsubaki to Sazanka*, p.32; *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.365; ibid, vol.II, 1978, pl.415, p.167: Large size, open peony form with 3-4 rows of large, outer petals of white or palest blush pink, finely dotted, stippled, streaked and splashed light red; petals are large, wide and cleft at apex, with a centre of 4-6 fascicles of stamens, divided by small, erect petals. Anthers are yellow, filaments white. Flowers mid-season to late. Leaves are large, dark green, long oval, apices acuminate, shallowly, obscurely serrate. Plant growth is strong, erect, spreading. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.65, 218 and Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.375. Different readings: 'Sambô-no-mai', 'Sampô-no-mai'. 'Sanpô' refers to the three treasures of Buddhism: Buddha, the sutras, and the priesthood. The cultivar came from the

collection of the late Kurihara, Yoshifumi, Nerima-ku, Tokyo, Japan. Named by Kazutoshi Ôhira around 1960.

Sanpô-tsubaki. (Three Treasures of Buddhism Camellia), *(C.japonica)*, Wada, 1941, *Japanese Garden Treasures* as 'Sanbotsubaki'; Fuji-en Catalogue, 1957: Very large, beautiful red, triangular shaped. Different readings: 'Sanbo-tsubaki', 'Sambô-tsubaki', 'Sanbô-tsubaki'. Originated in Japan.

Sanpôyama. Different reading for **Sanpôzan.**

Sanpôzan. (Mount Sanpô), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in the section on double form: See JCS., 1969, *Tsubaki*, No.7, p.35; Itô, Ko'emon, 1879, *Chinkashû;* Satomi, 1956, *Camellia Varieties in Japan*, p.11: White streaked red. Large semi-double. Mid-season flowering. Originated in Japan.

Sanquinea. Cachet Catalogue, 1845-1846, p.4. Orthographic error for **Sanguinea**.

Sanraku. (Meaning uncertain), *(C.japonica)*, ICS., Apr. 1990. *Japanese Camellia Cultivar List*, p.19. No description. Originated in the Shimane Prefecture, Japan.

Sans Famille. *(C.japonica)*, Claude Thoby, 1993, *Camélias*, pp.13, 19, 23: Medium size single, vivid pink, funnel shaped. Flowers mid-season. Originated by Claude Thoby Nurseries, Carquefou, France.

Sansan. (Vivid and Beautiful). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.108 with colour photo; Bright pink, semi-double, large, lotus form with long narrow petals in separated layers, small stamen column. Flowers mid-season to late. Leaves elliptic, medium size. Fast upright growth with somewhat slender branches. A chance seedling of **Hagoromo**, released by Misoji Yamaguchi, Kyoto, Japan.

Sanse. Shao, Taichong, 1991, *The Observations from the Camellia World,* p.13. Chinese synonym for the Japanese *C.japonica* 'Ezo-nishiki' (**Tricolor**).

Sanse Huapai. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.405; Chinese synonym for the Italy *C.japonica* **Tricolor Florentine.**

Sansehong. (Three Red Colours), *(C.japonica)*, Fang, 1930, *Diannon Chahua Xiaozhi*. It is pink, bright red and peach red with the three different colours on the one plant. Originated in China. Different readings: 'San-se-hung', 'Sansehung'.

Sansehung. Ikeda, 1976, *American Camellia Yearbook.* Different reading for **Sansehong.**

San-se-hung. Different reading for **Sansehong.**

Sanseto. (see below), *(C.hybrid)*, ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.30: Small to medium size, pale pink to pink, campanulate single. Blooms mid-season. A seedling of **Tulip Time** x **Chôchidori**. Named and released by Nobuo Sasai. Originated in the Okayama Prefecture, Japan. 'San' alludes to 'Sanuki' the old name for the Kagawa Prefecture and 'Seto' is the name of the inland sea: 'Seto-naikai'.

Sanshidi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.405. Chinese synonym for the USA *C.japonica* **Thirty Drops.**

Sanshiki-shibori. Yashiroda, 1961, Kyôto Engei Kurabu, *Kyôto Engei*, No.65, p.6. Different reading for **Sanshoku-shibori.**

Sanshô. (Three Smiles), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Light red with deeper red stripes and fine dots, semi-double with 3-4 rows of petals; tubular stamen cluster. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.35. (Believed extinct.)

Sanshoku-shibori. (Three Colour Dapple), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Uesa,, 1844, *Sômoku Benran:* Tricolor of rose-pink, purplish pink and pale pink, medium size, single of sake cup form. Early flowering. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5. p.80, & *Kyôto Engei*, No.65, p.6. (Believed extinct.) Different reading: 'Sanshiki-shibori'.

Sanshirô. (Personal Name), *(C.japonica)*, Hamamatsu, 1828, *Setsuyô Kikan; Chinka Zufu*, (before 1700), Watanabe, 1969, pl.621: Small, campanulate, single, white with pink and red stripes; white filaments and yellow anthers. Originated in Japan. (Believed extinct.)

Santa Clara. *(C.reticulata x C.japonica)*, Perkins, Thomas, 1984, *International Camellia Journal*, No.16, p.37, colour photo, p.44B: Large, formal double, soft apricot pink, veined deeper colour; petals with feathery edges. Originated in USA by Frank Pursel, Oakland, California.

Santa Craz. *(C.hybrid)*, Sharp, 1957, *Camellias Illustrated*, p.151: Deep pink. Medium size, 10-12 cm across, rose form to formal double. Fragrant. A seedling of **Sylvia May,** originated by Vernon James, Atropos, California.

Santa Maria del Fiore. *(C.japonica)*, Stefano Pagliai Catalogue, 1867: Large, imbricated, carmine red; petals numerous, veined, round, large at the circumference, smaller and pointed towards the centre. See: Claudia Sala, 1985, *Armonie di colori*, p.30, colour illustration. Originated in Italy by Franchetti, Florence. Orthographic error: 'Santa Maria del Fiori'.

Santiana Speciosa. Cachet, 1840-1841, Catalogue, p.3. Orthographic variant for **Santiniana Speciosa.**

Santiniana. *(C.japonica)*, Tagliabue, 1840, *Nomenclatore Camelliae...* No description. Catalogue la Société Royale d'Horticulture de Belgique, 1842, p.23. No description. Berlèse, 1843, *Iconographie*, pl.107 & facing p., vol.3: The flower is full, 12-14 cm across, of a soft red with streaks of white on the inner petals. Exterior petals in 3-4 rows, 4.5 cm long x 4 cm wide, deeply notched at apex; others short and mixed with longer ones, irregular; colour dull, whitish rose. Originated in Italy as a seedling by Jean Casoretti, gardener for Traversi of Desio, near Milan, Italy. Orthographic error 'Santana'. Synonym: 'Santiniana Vera'.

Santiniana Speciosa. *(C.japonica)*, Cachet, 1840-1841, Catalogue, p.3, as 'Santiana Speciosa'. No description. van Houtte Catalogue, 1841, 7:18. No description. Berlèse, 1843, *Iconographie*, p.284 and facing p., vol.3: The flower is full, 10-11 cm across, with a high centre, orange red carmine, a little weak with touch of crimson. The exterior petals are in 3 rows, large, 4 cm long x 5 cm wide, deeply notched, veined blood red, forming a cup-shape and imbricated. Those of the centre in a cluster, intermingling large and small, numerous with some white spots and streaks on the inner petals. Originated in Italy by Casoretti.

Santiniana Vera. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.207. Synonym for **Santiniana.**

Santôka. (Triple Flowered), *(C.hiemalis)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.39: Medium size, crimson, irregular double. Blooms early to mid-season. Originated in the Kanagawa Prefecture, Japan.

Santo Andrea di Compito. (*C.rusticana* hybrid). Cattolica, G., *Le mie Camelie, My Camellias*, 2005, p.142 as 'S. Andrea di Compito', with colour photo; Medium size, cup-shaped semi-double, red (RHS.CC.46A). A seedling of 'Rubra Simples' **(Rubra)** x a form of *C.rusticana*, first flowered in 1986. Originated by Dott. Guido Cattolica, Livorno, Italy.

Santo Saki. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.259. Corruption of the Japanese name: **Santôzaki.**

Santouguan. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.405. Chinese synonym for the Japan *C.sasanqua* **Santôzaki.**

Santôzaki. (Three Flowered), *(C.sasanqua)*, Minagawa, Jisuke, 1930, *Jissai Engei*, No.9-5, pp.484-488; Wada, 1941, *Japanese Garden Treasures*, p.32: From a single bud, sometimes three medium sized flowers, rose coloured, are formed. Some of the dark green leaves on a branch are three-notched at the apex and such branch bears the triple bloom. Leaves are twisted. Growth is fast. Originated in Saitama Prefecture, Japan. Flowers early to mid-season. See: pl.529, pp.213, 385, *Encyclopedia of Camellias in Colour*, vol.I, 1972. Sport:: **Gosho-nishiki.** Corruption of Japanese name: 'Santo Saki'. Chinese synonym 'Santouguan'.

Sanuki. (Place Name), (*C.x vernalis)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.51; ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.41: Small size, deep red, semi-double. Blooms early to mid-season. Originated in Kagawa Prefecture, Japan. An old variety, discovered and named by Shûhô Kirino in 1951.

Sanuki-iwane. (Sanuki's 'Iwane'), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.64, colour pl., p.218, description: Medium size, semi-double with 3 rows of broad, red petals with white blotches and crinkles on inner petals, opening saucer-shaped. Leaves mid-green, ovate, impressed venation, margins coarsely serrate, apex acute. Originated in Takamatsu City, Kagawa Prefecture, Japan. Raised by a private family, named and released by Sanaichi Ogawa in 1979.. 'Sanuki' is the ancient name for 'Kagawa'.

Sanuki-shirayuri. (Sanuki's White Lily), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.21, colour photo and description: Small size, white, long, campanulate single, lily-like with 5 long, rounded, reflexed petals with somewhat crinkled margins, broad stamen column, white filaments, joined for the lower third, yellow anthers. Blooms profusely, mid-season to late. Leaves olive green, ovate, apices acuminate, margins serrulate. Originated in Mure Town, Kagawa Prefecture, Japan as a seedling of a wild japonica. Named and released by Saneichi Ogawa in 1974.

Sanuki-tsukasa. (Sanuki's Lord). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.113 with colour photo; English translation p.77. Medium size, peach red, formal double, occasionally with white blotches in the centre of outer petals, split stamens. Flowers mid-season to late. Leaves elliptic, medium size, flat. Upright growth. Selected from cultivars raised by a private family in Mure Town. Discovered and released by Saneichi Ogawa in 1997. From Kagawa Prefecture.

Sanuki-yukihime. (Sanuki's Snow Princess). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.113 with colour photo; English translation p.77. Medium size, lion form, wrinkled petals. Flowers mid-season to late. Leaves narrowly elliptic, medium size, somewhat recurved. Selected from cultivars raised by a private family in Mure Town. Named and released by Saneichi Ogawa in 1997. From Kagawa Prefecture.

Sanxing Dafurong. (Three Hearts, Large Hibiscus), *(C.japonica)*, Shanghai Botanic Gardens List, 1985: A medium size, pink, semi-double to incomplete double, with large, fluted and notched outer petals and centre stamens broken into fascicles by a few small, erect petals. Originated in China.

Sanxueshi. (Three Scholars), *(C.japonica)*, Huang, Shanghai Nursery Catalogue, 1947: A medium size, formal double, imbricated and tiered to form a star shape. White with pink markings and petals incurved at the apex. Originated in China. Different reading: 'San-hsioh-shih'.

Sanya. Watanabe, Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.155. Different reading for **Yamaya.**

Sanya-shibori. (Sanya Dapple), Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.128, black and white photo and description. Synonym for **Sanyasô.**

Sanyasô. (Three Nights Inn), *(C.japonica)*, *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.357, p.149 colour photo, p.250, description. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.65, 218. Katei, Gahô, ed., 1984, *Chabana Koyomi*, *vol.I*, *Tsubaki*, p.9; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.255, colour photo and description: Small to medium size, pale pink, speckled and dashed deeper pink, campanulate single with 5 petals. Blooms late to mid-season. Leaves mid-green, elliptic, apices tapering acuminate, margins serrate. Originated in the Kansai area, Japan. Synonym: 'Sanya-shibori'. This name was taken from the house (or Inn) at the Nishi-Honganji Temple, Kyôto. Named and released by Yoshiaki Andoh.

Sanzen'in-wabisuke. (Wabisuke from Sanzen Temple), (Wabisuke), Inazawa Nurseries Co. Ltd Nurseries Catalogue, 1988-1989, p.7, A-357: A small size, mauve red, tubular single. Originated in Japan. Synonym for **Gyozan-tsubaki.**

Saohime. (Goddess of Spring), (*C.x vernalis)*, Hakoda, Seibundô Shinkôsha, Dec.1973, *Garden Life*, p.44; JCS., 1987, *Tsubaki*, No.26, p.51; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.41: Small size, pink, single, occasionally with white spots. Blooms early to mid-season. Discovered by Katsuhiro Maeda in 1972 at a private family in Hamamatsu, Shizu'oka Prefecture, Japan. Named and released by Fusako Yamazaki. Different reading - 'Sahohime'

Sao-otome. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.207. Corruption of the Japanese name **Sa-otome.**

Sa-otome. (Rice Maid), *(C.japonica)*, Taniguchi, 1912, *Chinka Kyôkan*, Medium size, blush pink, formal double. Originated in Japan. Corruption: 'Sao-otome'

Sa-otome. (Rice Maid), *(C.hiemalis)*, Kirino, 1973, *Bunka Shuppankyoku*, *Sazanka*, *Misesu no Engeisho*, pp. 132-137; Seibundô Shinkôsha, Dec. 1973, *Garden Life*, p.44. Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49. ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.39: Medium size, deep pink, semi-double to irregular informal double. Originated in Kurume, Fuku'oka Prefecture, Japan.

Saotome. McIlhenny Catalogue, 1941. Synonym for **Sukiya.**

Sapho. *(C.japonica)*, Trillon, Le Mans Nursery Catalogue, 1843, p.9: Red, streaked. Originated in Italy.

Sara C. Hastie. Wilson, 1930, *House and Garden*, 57(3):158: A plant of unknown origin found at Magnolia Gardens, John's Island, South Carolina, USA. It was first listed as 'Sara C. Hastie' in 1930. It was later listed by Fruitland Nurseries, 1936 as 'Sara C. Hastie'(Debutante) and in 1938-1939 by Gerbings Azalea Gardens Catalogue as **Debutante**. In the meantime it has become well known world-wide as **Debutante** and this is now accepted as its valid name. Orthographic error: 'Sarah C. Hastie'.

Sara Dean. Pyron, 1967, *American Camellia Yearbook*, p.72. Orthographic error for **Sarah Dean.**

Sara Dunham. *(C.reticulata), American Camellia Yearbook*, 1983, p.164, Reg. No.1903: A large, rose-pink, semi-double to rose form double *C.reticulata* ['Cornelian' (**Damanao**) x **Jean Pursel**], blooming mid-season to late. Originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first bloomed 1981. Flower size is 10 cm across x 5 cm deep. Plant growth is upright and medium with dark green leaves, 11 cm x 8 cm.

Sara Ehrlich. Pyron, 1964, *American Camellia Yearbook*, p.72. Orthographic error for **Sarah Ehrlich.**

Sara Frost. Overlook Nursery Catalogue, 1939-1940. Orthographic error for **Sarah Frost.**

Sara Hall. *(C.japonica), American Camellia Yearbook*, 1980, p.173, Reg. No.1674: A small, pink with white, peony form, *C.japonica* chance seedling; originated by Bagby Hall, Jackson, Mississipi, USA. The 8 year old seedling first bloomed 1975. Average flower size, 7 cm across x 3.8 cm deep. Blooms early to mid-season. Plant growth is upright and medium with light green leaves.

Sara-Henri S. Mayer. *(C.japonica), American Camellia Yearbook*, 1961, p.230, Reg. No.568: An 8 year old chance seedling that first bloomed 1959. Originated by Arthur W. Solomon, Savannah, Georgia, USA. Plant growth is upright, dense and medium with dark green leaves, 8 cm x 4.5cm. The semi-double flowers, similar to **Frizzle White,** 11 cm across x 4.5 cm deep, are blush with white stamens. The flower has 18-26 petals and 4-6 petaloids. Blooms mid-season.

Sara Oliver. *(C.reticulata)*, SCCS., 1978, *Camellia Nomenclature*, p.180: Deep salmon pink, large to very large, loose peony form. Vigorous, spreading, upright growth. Blooms mid-season. Originated in USA by Kramers Bros. Nursery, Upland, California. Orthographic error: 'Sarah Oliver'.

Sara Paul. (*C.reticulata* hybrid). ACS, *The Camellia Journal*, June 2008, p.32 with colour photo, Regn No.2723; A cross of **Suzanne Withers** x **Delta Dawn** which first bloomed in 1997. Originated and propagated by E. Hulyn Smith, Valdosta, Ga., USA. The 14.5 cm diameter x 7.5 cm deep, semi-double to rose form flower is medium pink, and has a limited number of golden anthers on white filaments. Heavy petal texture and flowers mid-season. Plant is upright, spreading and vigorous. *American Camellia Yearbook*, 2008, p.126 with colour photo; Dark green leaves are 11.5 cm x 6.5 cm.

Sara Ritter. *(C.pitardii x C.japonica), American Camellia Yearbook*, 1974, p.174, Reg. No.1268: An 8 year old hybrid *(C.pitardii x C.japonica)* that first bloomed 1967. Originated by C.D. Cothran, Pomona, California, USA. Plant growth is upright, dense and slow with medium dark green leaves, 5.5 cm x 2.7 cm. The semi-double, **Frizzle White** type, blooms range from pink to mauvette. They measure 7 cm across x 3.7 cm deep with 14 petals and 2 or 3 petaloids; golden anthers and filaments. Petals loose, notched, irregular, slightly swirled and fluted. Blooms mid-season to late.

Sara-Sa. SCCS., 1945, *Camellias*, p.20. Orthographic error for **Sarasa. (Sawada).**

Sara-shibori. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name 'Sarasa-shibori', (**Aki-no-sarasa**).

Sara-tsubaki. Inazawa Nurseries Co. Ltd. Wholesale Catalogue, 1986-1987. Synonym for 'Natsu-tsubaki', Japanese for the Stuartia.

Sara Watson. *(C.japonica)*, Fendig, 1953, *American Camellia Yearbook.* No description. Originated in USA.

Sarah. *(C.japonica)*, Verschaffelt Catalogue, 1846, p.58. No description. Rovelli Catalogue, 1874: Imbricated, red with stripes. Originated in Italy. Orthographic error: 'Sarrah'.

Sarah. *(C.hybrid).* C. Aust, *Camellia News,* No.182, Autumn 2010, p.8 with colour photo; Regn No.616-N.; A chance seedling of *C.hybrid* **Paradise Little Jen.** Miniature single to semi-double flowers with rather sprayed stamens, unusual plum red colour, slightly cluster flowering. Upright growth, slightly open and bushy. Flowers mid-season to late. Originated by Terence E. Pierson, Jaspers Brush, NSW, Australia.

Sarah Abigail. *(C.japonica)*, Gentry, 1970, ACS., *The Camellia Journal*, vol.29, No.4. No description. Originated in USA. No valid listing located. Sport: 'Sarah Abigail Variegated'.

Sarah Abigail Variegated. *(C.japonica)*, Gentry, 1967, ACS., *The Camellia Journal*, vol.22, No.5 as 'Sarah Abigail Var'. No description. Originated in USA. No valid listing located.

Sarah Alice Ruffin. *(C.japonica), American Camellia Yearbook*, 1978, p.134, Reg. No.1494: A very large, white, semi-double *C.japonica* chance seedling, mid-season to late blooming. Originated by the Belle Fontaine Nursery, Theodore, Alabama, USA. The 8 year old seedling first bloomed 1972, and has yellow anthers. Average size 15 cm across x 7.5 cm deep. Plant growth is upright, open and medium with dark green leaves 12.5 cm x 6 cm.

Sarah Ann Gavin. *(C.japonica), New Zealand Camellia Bulletin,* 1993, Issue No.114, vol.XVIII, No.1, p.32, Reg. No.326: Originated by Mrs D.L. Cameron-Gavin, Auckland, New Zealand. A chance *C.japonica* seedling that first bloomed 1983. Rapid, upright growth with dark green leaves 13 cm long x 7 cm wide. Semi-double flowers of soft rose pink (RHS.CC.62D), 11cm across x 5 cm deep with 17 petals, yellow anthers on cream filaments. Blooms mid-season to late.

Sarah Bellamy. *(C.japonica), American Camellia Yearbook*, 1965, p.246, Reg. No.772: An 8 year old seedling that first flowered 1962. Originated by S.L. Marbury, Wilmington, North Carolina, USA. Plant growth is upright and rapid with dark green leaves, 7.5 cm long x 4.5 cm wide. The semi-double flower, similar to 'Herme' (**Hikarugenji**) is light pink with yellow stamens. Blooms are 10 cm across x 6 cm deep with 20 petals. Blooms mid-season. Sport: **Sarah Bellamy Variegated.** Orthographic error: 'Sara Bellemy'.

Sarah Bellamy Variegated. *(C.japonica), American Camellia Yearbook*, 1965, p.246: A virus variegated form of **Sarah Bellamy** - Light pink blotched white. Originated by S.L. Marbury, Wilmington, North Carolina, USA.

Sarah Bernhardt. *(C.japonica)*, Magnolia Gardens and Nursery Catalogue, 1942-1943: Medium to large, irregular semi-double, white striped pink with stamens and petals intermixed. Originated at Magnolia Gardens, John's Island, South Carolina, USA. Orthographic error: 'Sara Bernhardt'.

Sarah Bettes. *(C.japonica), American Camellia Yearbook,* 1972, p.135, Reg. No.1182: An 11 year old chance seedling that first bloomed 1967, originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is upright, open and average with dark green leaves, 8 cm long x 5 cm wide. The semi-double flower is 13 cm across x 7.5 cm deep, bright pink, silver tipped petals and petaloids, yellow anthers, light pink filaments. Some inner petals and petaloids folded and creped with stamens intermingled. Blooms mid-season to late.

Sarah C. Hastie. Fruitland Nursery Catalogue, 1936-1937. Orthographic error for 'Sara C. Hastie', synonym for **Debutante.**

Sarah Dean. *(C.japonica), American Camellia Yearbook,* 1968, p.136, Reg. No.969: An 8 year old chance seedling of **Elizabeth Boardman** that first bloomed in 1964. Originated by W.F. Bray, Pensacola, Florida, USA. Plant growth is spreading, open and rapid with dark green leaves, 8 cm long x 4.5 cm wide. The semi-double flower is 15 cm across x 7.5 cm deep with 38 large and 32 small petals and 27 small, round petaloids. Colour is white with golden anthers and white filaments. Blooms mid-season. Orthographic error: 'Sara Dean'.

Sarah Dunham. ACS 1992, *The Camellia Journal,* vol.47, No.4, p.13 Orthographic error for **Sara Dunham.**

Sarah Ehrlich. *(C.japonica),* Hillcrest Nursery Catalogue, 1958: Deep pink, large, anemone form. Blooms early to mid-season. Originated by Mrs Ehrlich, Bambridge, Georgia, USA. Orthographic errors; 'Sara Ehrlich', 'Sarah Ehruich'.

Sarah Ehruich. Mark S. Cannon Scion Catalogue, 1962, p.10. Orthographic error for **Sarah Ehrlich.**

Sarah Foulds. (*C.reticulata* hybrid). Ac 1995, No.135, p.12, Reg. No.450: Originated by Jim Powell, Helensburgh, NSW, Australia. A chance seedling of **Arbutus Gum** that first flowered 1988. Semi-double to informal double, china rose flower with 11-19 petals with purplish overtones to the centre, 10 cm across x 4 cm deep. Growth average. Leaves long and narrow, dark green, ovate, margins serrate, apices acuminate, 8 cm long x 2.5 cm wide. Petals large and wavy and have distinctive purplish-blue overtones. Flowers shed intact.

Sarah Frost. Berlèse, 1948, *Annales de la Société Central d'Horticulture de France,* vol.40, p.226: Originated by Ritchie & Dick, USA. Flower ranunculiform, 10 cm across, clear cherry red or crimson rose. Corolla perfectly round, composed of 8-9 rows of petals, superimposed one on the others with perfect regularity. Petals numerous, well displayed, proportional to the row which they occupy, sometimes divided by a white line. Leaves dull green, rounded, shallow serrations, 8 cm x 5 cm. Plants are vigorous, compact and hardy. Flowers mid-season to late. Synonyms: 'Clarke's Red', 'Owl Face', 'Sarah Frost' (South), 'Frostii', 'Red Clarke', 'Sarah Frost (1)', 'Frosti'. Orthographic errors: 'Sara Frost', 'Sarrah Frost', 'Froostii'. Pseudonyms: **Adrien Lebrun** and **Enrico Bettoni** have been erroneously equated wth **Sarah Frost** in USA. See colour illustrations: Fendig, 1949, *American Camellia Catalogue.* Verschaffelt, 1850, *Nouvelle Iconographie,* Book X, pl.IV; G.G. Gerbing, 1945, *Camellias,* p.197; Hume, 1955, *Camellias in America,* vol.II, p.272.

Sarah Frost Improved. (*C.japonica*), McIlhenny, 1937, *600 Varieties of Camellias*: Medium size, Tyrian pink, heavily veined aster purple; double, imbricated; inner petals forming a bud centre. Blooms mid-season. Originated in USA.

Sarah Frost of South. SCCS., 1942, *Classification of Camellias,* p.4. Synonym for **Sarah Frost.**

Sarah Frost of West. SCCS., 1942, *Classification of Camellias,* p.2. Synonym for **Enrico Bettoni (US).**

Sarah Frost (South). SCCR, 1945, *Camellias,* p.16. Synonym for **Sarah Frost.**

Sarah Hall. *(C.japonica),* SCCS., 1981, *Camellia Nomenclature*, p.143: Pink mixed with white, small peony form. Medium, upright growth. Early to mid-season flowering. Originated in USA by Bagby Hall, Jackson, Mississippi.

Sarah Jane. (*C.reticulata* hyb.), ACRS., 1987, *Camellia News*, No.103, p.22, Reg. No.348 with colour photo on rear cover: Originated by K. Strudwick, Crafers, South Australia. A seedling of unknown parentage that first flowered 1978. The pale pink, formal double, 14 cm across x 6 cm deep blooms opens to rose form. Mid-season flowering on an upright, dense growing plant. Fluted petals, silver veining at centre of bloom. Leaves elliptic, dark green and glossy, 11 cm long x 4 cm wide, finely serrate.

Sarah Jean Toland. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2013, p.28 with colour photo; Regn No.2893; ACS, *Yearbook,* 2013, p.138 with colour photo; Originated, registered and propagated by James R.D. Toland, Sacramento, Calif., USA. A 20 year old seedling, first flowered 1998. Small to medium size, 6.5-8.2cm diameter x 3.8cm deep, flower is semidouble form with 9 petals (photo shows a few central petals upright), Colour cerise pinky red (photo shows shows colour on the petal edges, a variable amount of white from the base). Yellow anthers and white filaments. Flowers fall whole. Plant is upright with average growth rate. Dark green leaves average 6.5cm x 2.5cm with medium serration. Flowers midseason.

Sarah Katherine. (*C.reticulata*), ACRS., 1984, *Camellia News*, No.91, p.22, Reg. No.320: Originated by Jack Greentree, Kingsgrove, N.S.W., Australia. A chance reticulata seedling that first flowered 1979. The 11-12 cm across, loose peony to informal double, silvery pink blooms have petals with indented edges. Leaves pale green, 8 cm x 6.5 cm. Blooms mid-season to late.

Sarah Lee. *(C.japonica), American Camellia Yearbook,* 1992, p.38, colour photo between pp.40-41, Reg. No.2250: A miniature to small size, 2 rows of pink petals and 6 rows of creamy white petals, formal double *C.japonica* chance seedling that blooms mid-season. Originated by Dr O.V. Lewis, Picayune, Mississippi, USA. The 20 year old seedling first flowered 1972. Average flower size is 6 cm across x 3 cm deep with 60 petals. Blooms always have one bright red dot and sometimes several. Plant growth is open and slow in rate with dark green leaves 8 cm long x 3.2 cm wide.

Sarah Lee Cannon. (*C.japonica*), *American Camellia Yearbook*, 1978, p.134, Reg. No.1417: A medium white, anemone, *C.japonica* chance seedling that blooms mid-season to late. Originated by Mike Cannon, Covington, Louisiana, USA. The 9 year old seedling first bloomed 1973. Flower has 16 petals, 235 petaloids, white filaments and yellow anthers. Average size, 9 cm across x 6 cm deep. Plant growth is upright and rapid with dark green leaves, 9 cm long x 3.2 cm wide.

Sarah Oliver. Cannon, 1984, ACS., *The Camellia Journal*, vol.39, No.4, p.19. Orthographic error for **Sara Oliver.**

Sarah R. (*C.japonica*), Mark S. Cannon Scion Catalogue, 1962, p.10. No description. SCCS., 1962, *Camellia Nomenclature*, p.93: Light pink sport of Big Beauty. *American Camellia Yearbook*, 1965, p.246, Reg. No.808: A sport of **Big Beauty** first observed 1956. Plant growth is the same as parent. The semi-double to peony form flower is 13-16 cm across x 6-8 cm. deep. Colour is light pink to blush with a white border. Blooms mid-season to late. Originated by L.W Ruffin, Ellisville, Mississippi, USA. Very similar to, if not the same as **Tillie Wirth.**

SCCS., *Camellia Nomenclature,* 1968, p.123, lists **Dr George Bunch** as a synonym for **Sarah R.** Sport: **Sarah R Variegated.**

Sarah R Variegated. *(C.japonica),* Cannon, 1965, ACS., *The Camellia Journal*, vol.20, No.1 as 'Sarah R Var.': a virus variegated form of **Sarah R** - Pale pink blotched white. Originated in USA.

Sarah Red. *(C.japonica),* Belle Fontaine Catalogue, 1961. No description. Originated in USA. No valid listing located.

Sararahime. (Sarara Princess), *(C.japonica x C.transarisanensis),* Hagiya, 1986, *Studies in Interspecific Hybridizing of Camellias,* No.2, Colour pl.9, p.6, description, p.7, cultivar No.H.1431: Small, white with a touch of pink, semi-double to peony form with the centre a few erect petals and rare stamens with white filaments. First flowered 1983, Fragrant. Early flowering in leaf axils. Leaves, small, green, oval; venation and serration obscure. Habit bushy and spreading, branches slender. Originated by Dr Kaoru Hagiya, Niigata University, Japan, from the cross *C.japonica* **Tamagasumi** x *C.transarisanensis.*

Sarasa. (Calico Chintz), *(C.japonica),* Yashiro, Kôken, 1841, *Kokon Yôrankô,* vol.309; *Chinka Zufu* (before 1700), Watanabe, 1969, pl.163: A medium size, white, semi-double, peppered with crimson specks and dashes, white filaments and pale yellow anthers. Originated in Japan. Synonym: 'Edo-sarasa'. (Believed extinct.)

Sarasa. Satomi, 1956, *Camellia Varieties of Japan,* p.11. Synonym for **Aki-no-sarasa.**

Sarasa. Overlook Nursery Catalogue, 1939. Synonym for **Sarasa (Sawada).**

Sarasa-fukurin-tsubaki. (Bordered Calico Chintz Camellia), *(C.japonica),* Hantei, Kinta, 1827, *Sômoku Kihin Kagami.* Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.159: Flower, red with white spots, leaves with white, broad yellow edge on each leaf. Originated in Japan. Different reading: 'Sarasa-hukurin-tsubaki'. (Believed extinct.) Note: The description of the flower is the same as **Ranbyôshi.**

Sarasa-hukurin-tsubaki. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.156. Different reading for **Sarasa-fukurin-tsubaki.**

Sarasa-kasuri. (Calico Chintz Variegated), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.338: A small to medium size, semi-double with long, white petals having a few lines and streaks of crimson. Originated in Japan. Different reading: 'Sarasa-tobi'iri'. (Believed extinct.)

Sarasa-kingyo. Fendig, 1953, *American Camellia* Catalogue. Abbreviation for **Sarasa-kingyo-tsubaki.**

Sarasa-kingyo-tsubaki. (Dappled Goldfish Camellia), Hantei, Kinta, 1827, *Sômoku Kihin Kagami;* Itô, Ko'emon, 1879, *Chinkashû:* Small, single, rose-red flower with leaves having multiple apices like the tail of a goldfish and variegated with gold patches. Originated in Japan. Abbreviation: 'Sarasa-kingyo'. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p. 161.

Sarasa Pink. *(C.japonica),* Overlook Nursery Price List, 1947: Pink sport of 'Sarasa'(Sawada). Originated at Overlook Nursery, Crichton, Alabama, USA. Synonym: 'Sawada Salmon Pink'.

Sarasa-ryômen. Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.14. Synonym for **Namiryômen** as 'Uzu-ryômen'.

Sarasa (Sawada). *(C.japonica),* Overlook Nursery Catalogue, 1939. invalidly as 'Sarasa': Our seedling No.119. semi-double, 10-12.5 cm across, has 12 large petals and yellow stamens in the centre. Flesh colour, dotted and streaked a darker pink. Mid-season blooming. Leaves large, A vigorous grower. Gerbings Azalea Gardens Catalogue, 1941-1942: (Formerly called 'Sawada') A hybrid from Alabama, this semi-double, salmon pink flower, 12.5-13 cm, across, is streaked

and speckled with white, and some are solid pink flowers. Round. dark green foliage. Tall apex growth. Mid-season blooming. Originated by K. Sawada, Overlook Nursery, Crichton, Alabama from seed sent from Japan about 1925. See colour pl.199, G.G. Gerbing, 1945, *Camellias* and illustration, p.321, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I. Sport: **Sarasa Pink.** Synonym: 'Semi-double Salmon Pink'.

Sarasa-shibori. McIlhenny, 1937, *600 Varieties of Camellias.* Synonym for **Aki-no-sarasa.**

Sarasa-tobi'iri. Different reading for **Sarasa-kasuri.**

Sarashina. (Old name for Nagano), *(C.japonica),* Yashiro, Kôken, 1841, *Kokon Yôrankô* vol.309. No description. Originated in Japan. (Believed extinct.)

Sara-Tsubaki. Synonym for 'Sharaju'. Synonym 'Natsu-tsubaki'. Japanese name for *Stuartia pseudocamellia.*

Sargasso. *(C.japonica),* Haasis & Winstead, 1954, *American Camellia Yearbook,* p.32. No description. Originated in USA

Sarge Freeman. *(C.japonica),* ACS, Aug. 1996, *The Camellia Journal,* vol.51, No.2, p.30, Reg. No.2373. A large, bright red, sometimes with large white splotches, semi-double chance seedling. Flowers early to mid-season. Originated by Elizabeth R. Scott, Aiken, S.C., USA. *American Camellia Yearbook,* 1996, p.4, colour photo before p.1. The 12 year old seedling first flowered in 1990. Average flower size is 12.7 cm across x 6.5 – 7.5 cm deep, with 22 petals, bright yellow anthers and bright yellow filaments. Strong upright centre petals circle patches of the stamens. Plant growth is spreading and average in rate, with dark green leaves 9.5 cm long x 5 cm wide.

Sargeant Barrios. Glen St. Mary Nursery Catalogue, 1949, p.27. Orthographic error for **Sergeant Barrios.**

Sargent Barrios. Gerbing Azalea Gardens Catalogue, 1945. Orthographic error for **Sergeant Barrios.**

Sarita. *(C.sasanqua), New Zealand Camellia Bulletin,* 1978, vol.X, No.6, p.11, Reg. No.140. A chance sasanqua seedling, originated by Mrs D. Hume, Katikati, New Zealand that first flowered 1973 and has dark green leaves, 7-8 cm long x 2.5 cm wide. The flower is semi-double with 10 petals and an occasional petaloid, golden stamens. The flower is 10 cm across x 2.5 cm deep; deep pink [Red-Purple Group, 58B-C], becoming paler towards the centre. Flowers early to mid-season.

Sarmiensis. Cachet, 1840-1841, Catalogue, p.3. Orthographic error for **Sarniensis.**

Sarmii. Giles & Son Nursery Catalogue, 1881, p.92. Orthographic error for 'Sarnii', synonym for **Sarniensis.**

Sarniensis. *(C.japonica),* Berlèse, 1840, *Monographie,* ed.2, pp.146, 230: Flower about 10 cm across, full, cherry-red to vivid carmine rose; petals wide, well imbricated, numerous, reflexed and forming a regular but flat flower. Van Houtte Catalogue, 1841, 7:19: Good carmine red, perfectly imbricated. Originated in France. Synonym: 'Sarniensis Vera'. Orthographic error: 'Sarmiensis'.

Sarniensis Speciosa. *(C.japonica),* Seidel, 1847, *Pflanzen Catalog,* p.11. No description. Originated in France. (Believed extinct).

Sarniensis Vera. Van Houtte Catalogue, 1845-46, 23:51. 'Considered up to now to be a duplicate of **Fordii,** but the true **Sarniensis** is…entirely different'. Synonym for **Sarniensis.**

Saron Leguay. Forrest, 1985, *Trees and Shrubs Cultivated in Ireland.* Orthographic error for **Baronne Leguay.**

Sarrah. Fratelli Rovelli, 1852, Catalogue, p.26. Orthographic error for **Sarah.**

Sarrah Frost. Berlèse, 1849, *Annales de la Societe Central d'Horticulture de France,* p.226. Ellis, 1953, *Old Camellia Varieties,* p.321. Orthographic error for **Sarah Frost.**

Sarrel. *(C.sasanqua).* ACS, *The Camellia Journal,* Feb. 1998, p.13, Reg. No.2444, (repeated May 1998, p.18). A small, medium pink with some slight variegation ageing to lavender pink, anemone to peony form chance sedling. Flowers early. Originated by Robert Green, Sr, Fairhope, Ala., USA. *American Camellia Yearbook,* 1998, p.6, colour photo before p.1. The 20 year old seedling first flowered in 1979. Average flower size is 7.5 cm across x 2.5 cm deep. Plant growth is spreading, dense and slow, with medium green leaves 3.8 cm long x 1.8 cm wide.

Sarta. *(C.sasanqua),* SCCS, 1981, *Camellia Nomenclature,* p.189; Purple red, shading towards the centre. Large, semi-double. Originated in USA.

Saruin-tsubaki. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.156. Common Japanese name for *C.saluenensis.*

Saruiwa-tsubaki. Makino, 1940, *Illustrated Flora of Nippon.* Tuyama, 1966, *Camellia Cultivars of Japan,* p.10; Seibundô Shinkôsha, 1979 *Senchinshû,* p.165. Common name for *C.japonica* ssp. *rusticana.* Synonyms: 'Yuki-tsubaki' and 'Oku-tsubaki'.

Saryûô. (obscure). *(C.vernalis). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.300 with colour photo; English translation p.210. Medium size, white, flat semi-double, flowers shatter, apricot stamens. Flowers early. Leaves elliptic, medium size. A natural seedling of 'Ryûô'. Originated and named by Ikunosuke Tanabe in 1989, released by the Kagoshima Camellia Society. From Kagoshima Prefecture.

Sasa. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.421; Chinese synonym for the Australian *C.japonica* **Sassafras Zoe.**

Sasaba. (Bamboo Leaves), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Long narrow leaves, single red flower, sometimes with red spots. Originated in Japan. Thought to be a synonym for **Yuriba.** See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.77.

Sasabu. (Place Name), *(C.japonica),* ICS., Apr. 1990, *Japanese Camellia Cultivar List,* p.19: Small to medium size, dark red, tubular to bowl shape. Blooms mid-season. Originated in the Shimane Prefecture, Japan with a private family. Discovered by Hiroshi Ibara, named and released by Nobuo Sasai in 1982.

Sasabune. (Toy Boat of Bamboo Leaves). *(C.japonica),* Seibu Maizuru Institute of Botany, 1991-1992, *Seibu no Tsubaki*, No.391: Small size, dark red single. Tubular shape with long petals. Cylindrical stamen tube. Narrow leaves. Originated in Hiroshima Prefecture, Japan.

Sasada-beni. (Sasada's Red Sasanqua) (*C.sasanqua*) from Shizuoka Pref. *Sazanka, Winter Flowers* published by National Museum of Japanese History in 2001. Brilliant red, single, flat, medium, blooms in late autumn to early winter. Long narrow petals with gaps between, and twisted at the ends. Originated in a plant nursery in Shimizu City in the 1970s..

Sasagawa. (Place Name), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.62, colour photo, p.217, description: small, soft pink, single with 7 petals, opening wide trumpet shaped with short centre column of yellow stamens. Leaves glossy, mid-green, broad-lanceolate, apex acuminate, recurved, margins shallowly serrate. Originated in wild camellias in Asahi Town, Toyama Prefecture, Japan. Discovered and named by Hiroshi Ôta.

Sasago-kuro. (Black Camellia from Sasago). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.72 with colour photo; Medium size, deep red single, tubular form. Stamens tubular, pinched at the top, yellow anthers on white filaments. Leaves ovate, medium size. Upright growth with somewhat drooping branches. Found by Ryozo

Osawa in a wild population at the seashore of Sasago, Mihonoseki Town, Shimane Pref., Japan, and released in 2004.

Sasahara. (Place Name), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.240, p.122, description p.163. Leaves obovate to broad-elliptic, apex shortly cuspidate-acuminate, impressed venation, margins serrulate, 5.6 cm long x 3.8 cm wide: petioles 5 mm long, very hairy. Flower peony type, rosy red, (Cherry 722/2) with long, recurved, wavy and lobulate petals, 10-15 in number. Stamens in several groups arranged in double circles. Flowers mid-season to late. Found in the wild state in Toyama Prefecture, Japan. 'Sasahara' was the place of collection.

Sasameyuki. (A Little Snow), *(C.japonica)*, JCS., ed. Mainichi Shinbun, 1971; *Tsubaki*, p.118; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.61, p.58, description p.300. Small greenish tinged white, tubular single of 5 petals, having edges curved inwards; a centre column of pale yellow stamens in the shape of a tea whisk, white filaments. Leaves green, elliptic, apex acute, base cuneate, keeled mid-rib, margins medium serrate. Plant habit is bushy but not vigorous. Originated in Chûbu District, Japan. See colour photos and descriptions; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.62, 219, and Yokoyama and Kirino, 1989, *Nihon no Chinka*, p.15. Note: there are two cultivars of this name, both white, usually treated together. It is an important old variety in the Aichi Prefecture. It is the so-called 'Shiro-wabisuke' prized by the masters of the tea ceremony. When used for Chabana (Tea ceremony flower) it was called 'Wabisuke Tsubaki'. Because there was a prior variety with the name 'Shiro-wabisuke' (known as 'Kochoshirowabisuke' in *Chûbu Tsubaki Kyôkai)*, its name has been changed to **Sasameyuki.** Synonym: 'Sasameyuki A'.

Sasameyuki A. Seibundô Shinkôsha, 1979, *Senchinshû*, p.217. Synonym for **Sasameyuki.**

Sasameyuki B. (Lingering Snow B), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.217: White petal edges are curved outwards and this is the distinguishing difference with **Sasameyuki.** Small, campanulate single with cylindrical stamen cluster. Early blooming. Leaves, small oval, folded at midrib. Plant habit upright and vigorous. Originated in the Chûbu District, Japan. Synonym: 'Shiro-wabisuke' (Chûbu).

Sasanaki. (Nightingale's Winter Song), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.82, p.41, description, p.110: Leaves broadly-elliptic, apex shortly-acuminate with fine tip, margins crenate-serrate, thick. Flowers medium size, widely campanulate, 5 petalled, single, pale rose (Neyron Rose 623/3). Blooms early to mid-season. Originated in an abandoned camellia garden in Momoyama, Fushimi-ku, Kyôto City, Japan. Named by Kaoru, Miyake.

Sasanaki. (Nightingale's Winter Song) *(C.japonica)*, Seibundô Shinkôsha, 1978, *Garden Life*, Mar., pp.68, 74; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.14, colour photo and description: Very small size, white, campanulate single with 5 broad, rounded, embracing petals and a broad stamen cylinder with pale creamy filaments, joined for the lower half, and deep yellow anthers. Blooms early to mid-season. Leaves shining mid-green, elliptic, apices tapering-acuminate, margins shallowly and obscurely serrate. Originated in Hirado City, Nagasaki Prefecture, Japan. This variety bears large fruits and is supposed to be a progeny of 'Ringo-tsubaki' (Apple Camellia). Discovered by Saburô Kumazawa in 1975, named by Eiko Kumazawa.

Sasanami. (Ripples), *(C.japonica)*, Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Oboechô* with the characters 'Sasa' = small and 'nami' = waves. Originated in Japan. Different reading: 'Sazanami'. (Believed extinct.)

Sasanami. (Ripples in the Grass), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* with the characters 'sasa' = bamboo and 'nami' = waves, that is waves or ripples in the grass.

A medium sized, double white, with red splashes and pointed petals. See: JCS., 1964, *Tsubaki,* No.7, pp.30, 35. Different reading: 'Sazamami'. (Believed extinct.)

Sasangua Roseo Plena. Verschaffelt Catalogue, 1850, p.49. Orthographic error for 'Sasanqua Rosea Plena', synonym for *C.maliflora.*

Sasankua. Burdin Catalogue, 1822, p.56. White. This name is an orthographic variant for 'sasangua', in this case it is an error for a form of *C.oleifera.*

Sasankua Flore Plena Roseo. Burdin Catalogue, 1822 as 'Sasankua Fl. Pl, Roseo'. Synonym for *C.maliflora.*

Sasankua Rosea Plena. Burdin Chambery Nursery Catalogue, 1834, p.18. Orthographic error for 'Sasanqua Rosea Plena'; synonym for *C.maliflora.*

Sasa-no-yuki. (Snow on Bamboo), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû:* White, medium size. Originated in Japan.

Sasanqua. Originally described in Thunberg's *Flora Japonica,* 1784; the name was later applied to forms of *C.oleifera* and *C.maliflora.* However as *C.sasanqua* is a species name, it is rejected as a varietal name. Orthographic errors: 'Sazanka', 'Sesanqua', 'Sasan-kuwa', 'Sassanqua'.

Sasanqua Alba. Catalogue of Plants Sold by James Colvill, 1823, p.13. Synonym for the *C.oleifera* **Lady Bank's.**

Sasanqua Alba. *(C.sasanqua),* B.S. Williams, 1891, New & General Catalogue, p.84: Flowers white, fragrant. Orthographic variant: 'Sasanqua 'Bianca'. Originated in Japan.

Sasanqua Alba Plena. *(C.sasanqua),* G. Reuthe Ltd Catalogue No.62, p.84, 1935: Double, white flowers. Originated in England.

Sasanqua Alba Duplex. Jacob Makoy Catalogue, 1836, p.17. Synonym for **Lady Bank's.**

Sasanqua Alba Simplex. Burdin Maggiore & Co. Catalogue, 1835. Synonym for **Lady Bank's.**

Sasanqua Alba Semi-plena. Baumann & Baumann, 1831, *Collection de Camellias élevés à Bollwieler,* vol.4. Synonym for **Lady Bank's.**

Sasanqua Albo Duplex. Makoy Nursery Catalogue, 1838. Synonym for **Lady Bank's.**

Sasanqua Anemoniflora. Vanderbilt, 1941, *Camellia Research* II, p.7, as 'Sasanqua Anemonaefl.', synonym for 'Sasanqua Rosea', synonym for *C.maliflora.*

Sasanqua A. Flore Rubro Simplici ... Edwards, 1819, *Botanical Register.* Synonym for *C.rosiflora.*

Sasanqua Bataviae. Bon Jardinier, 1882. Synonym for **Sasanqua Foliis Variegatis.**

Sasanqua B. Flore Incarnato Multiplici ... Edwards, 1819, *Botanical Register.* Synonym for *C.maliflora.*

Sasanqua B.Flore Pleno-Carneo. Ellis, 1953, *Old Camellia Varieties,* p.322 as 'Sasanqua B. Fl. Pleno Carneo'. Synonym for *C.maliflora.*

Sasanqua Blanc. André Leroy, Angers Nursery Catalogue, 1833, p.13. Synonym for **Lady Bank's.**

Sasanqua B. Stricta. Ellis, 1953, *Old Camellia Varieties,* p.322. Synonym for *C.maliflora.*

Sasanqua Ben. Fairlight Camellia Nursery Catalogue, 1987: Early, single, white blooms with yellow stamens. Small leaves, vigorous growth. Synonym for **Ben.**

Sasanqua Bianca. Tirocco, 1928, *Le Camelie,* p.12. Orthographic variant for **Sasanqua Alba.**

Sasanqua Blush. *(C.sasanqua),* Vanderbilt, 1941, *Camellia Research*, II, p.7: White flowered, with blush on reverse side, single, yellow stamens. Small leaves; vigorous growing. Originated in USA.

Sasanqua Cleopatra. McIlhenny, 1935, *List of Camellias.* Synonym for **Cleopatra (Sawada).**

Sasanqua Compacta. *(C.sasanqua),* Nuccio's Nurseries Catalogue, 1982, p.22: Very dark, green, dwarf sasanqua. Blooms only occasionally but produces a very large, single, white blossom, bordered rose-red. Originated by Nuccio's Nurseries, Altadena, California. An illegal name according to the code due to using Latin after 1958.

Sasanqua Dawn. *(C.sasanqua),* McIlhenny, 1935, *List of Camellias*, p.14: Large, semi-double blossom with yellow stamens. Ivory white with flesh pink at margins of petals. Originated in USA by Jungle Gardens, Avery Island, Louisiana, USA.

Sasanqua Double. E.B. Champernowne Catalogue, 1967, p.4. Synonym for **Mine-no-yuki.**

Sasanqua Double Pink. *(C.sasanqua),* Veitch Catalogue, 1922: Large, pink, semi-double. Originated in England by Veitch & Son Nurseries, Exeter.

Sasanqua Double White. James Veitch Catalogue, 1913, p.171. Synonym for **Fuji-no-mine.**

Sasanqua Flora Simplici. Curtis, 1820, *Monograph…,* p.2. Synonym for **Lady Bank's.**

Sasanqua Flore Albo. Piccioli Catalogue, 1841 as 'Sasanqua fl. albo'. Synonym for **Lady Bank's.**

Sasanqua Flore Pleno. Edward's, 1827, *Botanical Register.* Synonym for *C.maliflora.*

Sasanqua Flore Roseo Pleno. *Annales Société d'Horticulture de Paris*, 1831. Synonym for *C.maliflora.*

Sasanqua Folia Variegata. Hazlewood Nurseries Catalogue, 1949, p.15. Orthographic variant for **Sasanqua Foliis Variegatis.**

Sasanqua Foliis Variegatis. *(C.sasanqua),* Jean Verschaffelt, 1866-1867, Catalogue No.10, as 'Sasanqua fol. var.'. Henderson, E.G. Sasanqua Plena Bianca. *(C.sasanqua),* Tirocco, G.B., 1928, *Le Camelie,* p.12. No description. Originated in Japan. (Believed extinct).

Sasanqua Plena Folia Variegata. Giles, & Son Nursery Catalogue, 1881, p.92 as 'Sasanqua Plena fol. variegata'. Synonym for **Sasanqua Foliis Variegatis.**

Sasanqua Plena Rosea. Tirocco, G.B., 1928, *Le Camelie,* p.12. Synonym for *C.maliflora.*

Sasanqua Pleno-Carnea. Loddiges Catalogue, 1823. Synonym for *C.maliflora.*

Sasanqua Rose. André Leroy, Angers Nursery Cataloguye, 1833. p.13. Synonym for *C.maliflora.*

Sasanqua Roseaflora. Hillcrest Nursery Catalogue, 1939-1940. Orthographic error for *C.rosiflora.*

Sasanqua Rosea. Catalogue of Plants sold by James Colvill, 1823, p.13. Synonym for *C.maliflora.*

Sasanqua Rosea. *(C.sasanqua),* Rollisson 1875-1876, Plant Catalogue, p.103: A single flower of pretty bright rose, fine habit. Foliage small and elegant. Originated in Japan.

Sasanqua Rosea. *(C.sasanqua),* McIlhenny, 1935, *List of Camellias:* Deep rose madder with purple lake cast. Single type blooms. Originated in USA. Synonym: 'Sasanqua Semi-double'.

Sasanqua Rosea Plena. Warren's Descriptive Catalogue, 1844, p.38. Synonym for *C.maliflora.*

Sasanqua Rosea-pleno. Baumann & Baumann, 1831, *Collection de Camellias élevés à Bollweiler*, pl.15. Synonym for *C.maliflora.*

Sasanqua Rubra. *(C.sasanqua),* Rovelli Catalogue, 1874 as 'Sassanqua Rubra'; Reuthe, G. Nursery Catalogue, No.62, 1935, p.84: Bright rose flowers. Abbreviation: 'Rubra'.

Sasanqua Rubra Plena. Jacquin, Paris Nursery Catalogue, 1845, p.14, Synonym for *C.maliflora.*

Sasanqua Semi-double. Vanderbilt, 1941, *Camellia Research*, II, p.8. as 'Sasanqua Semi Do.'. Synonym for **Sasanqua Rosea.**

Sasanqua Semiplena. J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Cactus, Camelien...,* p.187. Synonym for **Lady Bank's.**

Sasanqua Semiplena Alba. McIntosh Nursery Catalogue, 1838. Synonym for **Lady Bank's.**

Sasanqua Shell Pink. *(C.sasanqua),* Nobelius Nursery Catalogue, 1937: Large, cupped, single of delicate shell pink. Originated in Australia.

Sasanqua Shell Pink Double. Vanderbilt, 1941, *Camellia Research*, II, p.8. as 'Sasanqua Sh. Pk. Do.'. Synonym for **Shell Pink.**

Sasanqua Single Red. Veitch & Son Nursery Catalogue, 1914. Synonym for **Mikunikô.**

Sasanqua-tsubaki. Sakuden, 1630, *Hyakuchinchû.* Different reading for **Sazanka-tsubaki.**

Sasanqua Variegata. *(C.sasanqua),* Veitch & Sons Nursery Catalogue, 1867: A Japanese variety of *C.sasanqua*, rendered by the distinct variegation of its small, elegant foliage. Pale pink, single flower with variegated leaves. Originated in Japan.

Sasanqua White. *(C.sasanqua),* Exbury Gardens Ltd. Catalogue, 1972-1973, p.7. Medium size, white, single. Winter flowering. Originated by John Allan, Guernsey, Channel Isles.

Sasa-otome. ('Otome' from Sasabu). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.330 with black and white photo; English translation p.232. Medium size, pink formal double. Flowers mid-season. Leaves narrowly elliptic, medium size, plicate. Upright, fast growing. Selected from cultivars raised by a private family in Shinji Town. Named and released by Tomohisa Arikawa in 1973.

Sasaukua. Cels, Paris Nursery Catalogue, 1819, p.9. Orthographic error for 'Sasanqua'.

Sasayaki. (Whispering), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.63, colour photo, p.217, description: Medium size, white, semi-double, lotus shape, with 3 rows of long, somewhat channelled petals and a small, irregular stamens cluster with white filaments and orange-yellow anthers; long petioles. Originated in Jo'etsu City, Niigata Prefecture, Japan with a private family. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1971..

Sasayama. (Bamboo Mountain), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, Kasuya, Kamegorô, 1859, *Tsubaki lrohanayose Irotsuki.* See: JCS., 1969, *Tsubaki*, No.7, pp.30, 35: A light pinkish white, anemone form flower with red spots. The points of the stamens are white. Flower is convex in shape. Originated in Japan. (Believed extinct.)

Sasayamajinja-akayabu. (Red Wild Japonica of Sasayama Shrine). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p31 with colour photo; Deep rose, small size, tubular single. Vigorous, upright growth. Leaves medium size, elliptic. Tubular stamen cluster. Late flowering. A 300 year old tree at the Sasayamajinja Shrine, Sasayama-machi, Japan.

Sashimajiri. Different reading for **Sashimaze.**

Sashimaze. (Mingling), *Chinka Zufu*, (before 1700), Watanabe, 1969, pls.97, 312: Large, double, white with red stripes and cylindrical stamen cluster. Originated in Japan. (Believed extinct.)

Sashimaze. (Mingling), Itô, Ihei, 1695, *Kadan Chikinshô*, #126: Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Small, formal double, red and white mingled coloured flower. Convex in shape. Very similar to **Hoshiguruma.** Different readings: 'Sashimajiri', 'Sachimaze'. Originated in Japan. (Believed extinct.) See: JCS., 1969, *Tsubaki*, No.7, pp.30, 35; ibid, 1983, No.22, p.129.

Sassafras Zoe. *(C.japonica)*, ACRS, *Camellia News*, Spring 2003, No.163, p.10, colour photo p.2, Reg. No.548. Originated by Katherine Shaw, Sassafras, Vic., Australia. A chance seedling that first flowered in 1994. The single, cup-shaped flower is pink, occasionally striped deeper pink, fading to a white edge, 10 cm diameter x 5 cm deep. Flowers very freely mid-season to late on a dense bushy plant of medium growth. Leaves mid-green, oblonceolate, glossy and twisted, 6 cm long x 4.5 cm wide. Arrangement of stamens is tubular. Unusual foliage. Chinese synonym 'Sasa'.

Sasu. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.100: Soft pink. Medium to large, semi-double with irregular petals. Vigorous growth. Mid-season blooming. Originated by E.F. Heard, Hampton, Virginia, USA. Orthographic error: 'Sasue'.

Sasue. Feray's Fine Flowers Catalogue, 1960. Orthographic error for **Sasu.**

Satake-shibori. (Satake's Striped), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan*, pl.343, p.173, description, p.192: Leaves oblong to obovate; apex acute, venation a little impressed, margins sharply serrulate, 7.2-8 cm, long x 3.5-4 cm wide; petioles, 7-11 mm long, hairy. Flowers semidouble, not so widely opened, white, striped with deep rose; petals 11-15, largest 4.6 cm x 3 cm; stamens cylindrical, filaments pinkish-yellow. Blooms mid-season. Originated in the Hyôgo Prefecture, Japan. Collected by Mr Satake.

Sata-misaki. (Sata Promontory), *(C.japonica),* ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.19. No description. Originated in the Nagasaki Prefecture, Japan.

Satan Satin. Mark S. Cannon Scion Catalogue, 1962, p.10. Orthographic error for **Satan's Satin.**

Satanella. *(C.japonica),* Berlèse, 1849, *Annales Société Central d'Horticulture de France*, vol.40, p.82. Urquhart, 1957, *The Camellia*, with colour pl. A large, peony form flower, 11-12 cm, across x 5 cm deep. Blood red. Outer petals of firm substance, broad heart shape, notched at the apex; a high crowned centre of small petal segments intermingled with stamens. Leaves large, broad-elliptic, glossy dark green, margins coarsely serrate, apices sharp pointed. Plant habit vigorous and spreading. Blooms mid-season. The flowers are borne singly at the end of long stems. Said to be of Italian origin. Orthographic errors: 'Satinalia', 'Saternalia', 'Saternella'. Pseudonym: 'Saturnia' under which erroneous name it received an RHS., Award of Merit, 1956. See illustration in Urquhart, 1956, *The Camellia.*

Satanella Variegated. *(C.japonica),* Don Ellison, 1997, "Camellias - A Photo Dictionary", 1997, p.74 with colour photo: A large, semi-double to peony form, blood red marked white. Blooms mid-season to late. A virus-variegated form of **Satanella.** Originated in USA.

Satan's Robe. *(C.reticulata* hyb.), SCCS, 1968, *Camellia Nomenclature*, p.161: Oriental red. Large, semidouble. Vigorous, upright growth. Blooms mid-season. Originated in USA by David L. Feathers, Lafayette, California from the cross *C.hybrid* **Satan's Satin** x *C.reticulata* 'Crimson Robe' (**Dataohong**). See colour photo: *New Zealand Camellia Bulletin*, vol.XII, No.6, between pp.16-17.

Satan's Satin. *(C.hybrid),* Hazlewood Nursery Catalogue, 1965: Brilliant red with sheen. Medium sized single. Early to mid~season flowering. Originated in USA by David L. Feathers, Lafayette, California.

Satellite. *(C.japonica), American Camellia Yearbook*, 1960, p.207, Reg.No.500: A 12 year old seedling of 'Donckelaeri' (Masayoshi) that first bloomed 1954; originated by C. Breschini, San Jose, California. Growth habit is upright, dense and medium with dark green leaves, 11 cm x 5 cm.

The red peony form flower, 11 cm across x 5 cm deep, has 12 petals and 140 petaloids. Blooms early to mid-season. Sport: **Satellite Variegated.**

Satellite Variegated. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature*, p.94: A virus variegated form of **Satellite** - Red blotched and marbled with white. Originated by C. Breschini, San Jose, California.

Saternalia. Quaymont -Kings Lynn Catalogue, 1984-1985. Orthographic error for **Satanella.**

Satin Doll. (*C.japonica*), ACS, *The Camellia Journal*, Nov. 1999, p.19, Reg. No.2510. Originated by Ray Bond, Dallas, Tex., USA. *American Camellia Yearbook,* 1999, p.5, colour photo before p.1. A medium to large semi-double seedling of **Dr Tinsley,** pollen parent unknown. White with some petals edged in pink, pink sepals, 46 heart shaped petals, yellow anthers and filaments. Petals have a satin-like texture. The 11 year old seedling first flowered in 1991. Flowers are 10 cm across x 3.2 cm deep. Plant growth is upright, vigorous to average, with dark green leaves 9 cm across x 5 cm wide.

Satin Gown. *(C.x williamsii), New Zealand Camellia Bulletin*, 1975, vol.IX, No.1, p.29, Reg. No.100: A seedling of *C.saluenensis x C.japonica* **Waiwhetu Beauty** that first flowered 1958. Plant habit is average with light green foliage, 8 cm x 4 cm. Flower semi-double, colour satin pink size 10-12 cm across. Flowers mid-season to late. Originated in New Zealand by L. Jury, New Plymouth.

Satin Pink. *(C.sasanqua),* Wylam, 1956, *American Camellia Yearbook*, p.27: Small, thick, dark green leaves; slow, compact growth producing a mass of single, satiny pink flowers with no shading. Originated in USA by McCaskill Gardens, Pasadena, California.

Satinalia. RHS., 1956, *Rhododendron and Camellia Yearbook*, p.142. Orthographic error for **Satanella.**

Satin's Robe. Foss, Wilbur, 1970, SCCS., *The Camellia Review*, vol.32, No.1, p.5. Orthographic error for **Satan's Robe.**

Satô-aka-yabu. (Satô's Red Bush), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.190. Selected from wild camellias in Ogôri City, Fuku'oka: Medium size, bright red, wide campanulate single of 5-6 wide emarginated, overlapping petals and a narrow stamen column with red filaments, joined for their lower third and yellow anthers. ICS., 1990, *Japanese Camellia Cultivar List*, p.19: Medium size, deep red, tubular to campanulate single. Mid-season blooming. Originated in Kurume, Fuku'oka Prefecture, Japan. Released by Shunsuke Hisatomi in 1985.

Sato-benifukurin. (Sato's Red Ornamental Border). *(C.japonica*), JCS, 1997, *Japan Camellia*, No.54, p.10, illustration No.9: Medium size, semi-double, pink with irregular red ornamental border, 12 petals with central stamen cluster. Originated in Niigata Prefecture, Japan.

Satokihime. Kurume Shibu colour poster illustration, 1997. Corruption of **Satsuki-hime.** See ICS Journal, 1`997, No.29, p.91.

Satomomo. (Village Peach), *(C.x vernalis),* Tanaka et al., 1987, *Journal of Japanese Horticultural Science*, 55(2):208 as a 'Gaisen Type' tetraploid cultivar (2n = 60) from Japan: Small size, pink, single with spreading stamens and leaves 4.3 cm long x 1.9 cm. wide.

Sato-musume. (Village Maiden), (*C.rusticana*), Hagiya & Ishizawa, 1970, *Snow Camellia. Its Distribution and Varieties.* Seibundô Shinkôsha, 1979, *Senchinshû*. p.64, colour photo, p.218, description: Rhodonite red, lotus-shaped semi-double, veined deeper colour; petals 11-13 in two rows, outer petals rounded, inner with irregular edges; stamens in a central cylinder. Leaves midgreen, elliptic, apex acuminate, margins shallow crenate. Originated in Toyama Prefecture, Japan. Named and released by Mitsuroku Makino in 1980s.

Sato-no-aki. (Village in Autumn). *(C.sasanqua x C.yuhsienensis).* Takii's Catalogue, Takii Shubyo Co. Ltd, Tokyo, 1994, Engei Shin Chishiki – *Hana no Gaido:* Flower colour is pale pink and flower shape is magnolia type. Originated by Dr Kaoru Hagiya, Niigata, Japan. The colour illustration shows a small size single of 7-9 irregular petals, emarginated, sometimes with petaloids. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.112 with colour photo; English translation p.76. A cross between *C.sasanqua* **Asahi-no-umi** and *C.yuhsienensis*.

Sato-no-fuji. (Mt. Fuji of Village). *(C.hiemalis). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.320; English translation p.242. Medium size, semi-double, inner petals white and backs of outer petals pale pink. Flowers early. Leaves elliptic, medium size. Spreading, vigorous growth. Registered in 1992 to the Ministry of Agriculture and Fishery. Originated, named and released by Shigeru Anma, Shizuoka Prefecture.

Satsuki-hime. (Princess of May). *(C.japonica),* JCS, 1996, *Japan Camellia*, No.51, p.11 with colour plate: Brilliant deep red single, tubular to trumpet shape, of 5-6 petals and small neat stamen column. Leaves somewhat narrowly elliptic, medium size. Selected from wild *C.japonica* growing in Mt. Kosho. Named and released by Masahiro Kiine in 1990. From Kurume, Fukuoka Prefecture.

Satsukijiro. (White May), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.63, colour photo, p.217, description: Small, tubular, white, single of 5 overlapping petals about a central stamen column. Late flowering. Leaves mid-green, elliptic, apex acute, margins crenate. Originated in Chûbu area, Japan. Known as 'Haru-wabisuke' in the Mikawa District. Small growing, suitable for a potplant. Named and released by Eimei Nagata.

Satsuma. (Ancient Name for Kagoshima), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.218; Izu Ohshima, 1980, Hawaii Botanic Gardens Catalogue: Pure white, multiple embracing blooms. Perfect pistil but stamens are lacking. Petals number about 120. Petal edges are clawed. Leaves ovate, small, apex acuminate, margins curved outwards, dark green. The tree is upright and vigorous. Originated in Japan at Kagoshima Prefecture, South Kyûshû. Corruption of name: 'Satuma'. The original tree can be found in the Iso-tei'en Garden in Kagoshima City. Named and released by the Biological Hobbyists' Club of Kagoshima in 1973. Chinese synonym 'Samo'.

Satsuma-akebono. (Satsuma Dawn), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.63, colour photo, p.217, description: A large, somewhat irregular, semi-double with 3 rows of petals of the palest blush pink, profusely peppered and dashed with pink. The central stamen cluster can be broken into fascicles by the occasional small, erect petal segment in the centre. Leaves medium dark green, elliptic, margins shallowly serrate. The original tree is growing with a private family in Kagoshima City, Japan. Sport: **Satsuma-shirotae.** Named and released by Biological Hobbyists' Club of Kagoshima in 1973.

Satsuma-beni. (Satsuma Red), *(C.japonica).* Funaki-en Catalogue, 1986-1987, No.94, p.6; Inazawa Nurseries Co. Ltd Catalogue, 1988-1989, p.9, A-435: Large size, scarlet, single with a bloom like a dahlia. Originated in Japan.

Satsuma-benishigure. (Red Satsuma Drizzle), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.63, colour photo, p.217, description: Medium size, red semi-double with 11-12 rounded, oval petals, slightly channelled, set hose-in-hose, with a small, slightly irregular, central stamen cluster. Leaves, light green, ovate-elliptic; apex acuminate, margins crenate. Originated in Kagoshima Prefecture, Japan.

Satsuma Crimson. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.30. Synonym for **Satsuma-kurenai.**

Satsuma-fiji. *(C.japonica), Kurume Camellia*, 1997, English translation, p.28. White ground with crimson streaks. Medium size single. Flowers mid-season.

Satsuma-kurenai. (Satsuma Crimson), (*C.reticulata*), Macoboy, 1981. *The Colour Dictionary of Camellias*. p.30, where it is stated that it is a *C.reticulata* from China. Chinese synonym 'Samohong'. Ferreira & Celina, 2000, *O Mundo da Camélia*, p.129 with colour photo; Carmine red, formal double, medium to large, flowers mid-season.

Satsuma-kurenai. (Satsuma Red). *(C.japonica)*, Nuccio's Nurseries Catalogue, 1996, p.17. Brilliant red, rose form flower. Medium to large size. Vigorous, upright, columnar growth. Blooms mid-season to late. Originated in Japan. ICS *Journal*, 1998, p.94, Kurume Shibu colour poster with illustration. Text reference to a Chinese *C.reticulata* appears to be incorrect.

Satsuma-musume. (Satsuma Girl), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.63, colour photo, p.218, description: Small size, double, deep purplish red, single with 5-6 thick petals, long oval, channelled, with a compact, pinched central stamen column. Leaves deep green, glossy, obovate; apex acute, recurved. Originated in Kagoshima Prefecture, Japan. Synonym: 'Satsuma-ogojo'.

Satsuma-nishiki. (Satsuma Brocade), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.63, colour photo, p.218, description: Large size. open peony form, red with white spots and marbling; stamens in 5 fascicles. Leaves broad-lanceolate, apex acuminate, deep green, margins serrulate. Produces divers sports. Originated in Kagoshima, Japan. Named by the Biological Hobbyists' Club of Kagoshima in 1973.

Satsuma-ogojo. Seibundô Shinkôsha, *Senchinshû*, 1979, p.18. Synonym for **Satsuma-nishiki.**

Satsuma-otome. (Satsuma Maiden), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû*, p.218: Purple banded, purplish pink, formal double. Petals curved inwards. Flowers are small, perfect **Otome** form. Blooms mid-season. Leaves small, oval, serrulate, dark green; petioles hairy. Originated in Kagoshima Prefecture, Japan.

Satsuma-shibori. (Satsuma Dappled), *(C.japonica)*, Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.198, p.64, colour photo, p.212, description: Large size, peony form, pink with red veining developing into full colour at base of petals. Some patches of white on the petals. Leaves lanceolate-elliptic; apex acuminate; margins sharply serrate. Slow growth. Originated in Kagoshima Prefecture, Japan.

Satsuma-shirasagi. (Satsuma White Heron), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.218: Pure white, single, of sake cup form, closed stamen cluster, small. Blooms late season. Leaves small, long-ovate; apex acuminate, margins undulate, dark green. Growth habit upright and vigorous. A sport of 'Yabu-tsubaki'. Originated in Kagoshima Prefecture, Japan.
,

Satsuma-shirotae. (Satsuma Exquisite White), (*C.japonica*), Seibundô Shinkôsha, 1979, *Senchinshû*, p.218: A pure white sport of Satsuma-akebono. Originated in Kagoshima Prefecture, Japan.

Satuma. Inazawa Nurseries Wholesale Catalogue, 1986-1987. Orthographic error for **Satsuma.**

Satuma. Kurume Shibu colour poster illustration, 1997: Corruption of **Satsuki-hime.**

Saturna. van den Broek Nursery Catalogue, 1977-1978. Orthographic error for **Saturnia.**

Saternella. Treseder's Nursery Catalogue, 1972. Orthographic error for **Satanella.**

Saturnia. *(C.japonica)*, Magnolia Gardens and Nursery Catalogue, 1942 - Bright red semi-double. Medium large. Fendig, 1950, *American Camellia Catalogue:* Bright red, incomplete double, 8 cm across x 3.8 cm deep. Outer petals 5 cm long, tapering to base. Inner petals red, smaller and occasionally show whitish stripes. Stamens are central and in fascicles. Leaves dark

green, oval, 10.5 cm long x 3.8 cm, wide, tapered at both ends. Serrations coarse, blunt. Plant habit vigorous, loose, upright growth. An old variety imported over 120 years ago by Rev. John G. Drayton of Magnolia Gardens, John's Island, South Carolina and renamed by him. Note: This name was erroneously used in England for **Satanella** by Veitch and for **Empereur de Russie** by Tregrehan Camellia Nursery. Sport: **Saturnia Variegated.** Chinese synonym 'Fanrong'.

Saturnia Variegated. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.208 as 'Saturnia Var.': a virus variegated form of **Saturnia.** Red mottled with white. Originated in USA.

Saudade de Camillo Aureliano. *(C.japonica),* Loureiro Catalogue No.19, 1883-1884, p.78: Pure white, rose form double. Originated in Portugal. Orthographic errors: 'Sandade de Camillo Aureliano', 'Saudade de Camello Aureliano'.

Saudade de José Francisco Desidério. *(C.japonica),* José Francisco Desidério, Simões & Co, Coimbra, Catalogue No.9, 1930, p.43; Very large flowers, three ros of undulating petals with a cluster of stamens in the centre, dark red, sometimes blotched white. Very shiny leaves. Elegant shrub. Obtained by seedling at this Nursery. Originated in Portugal.

Saudade de Martins Branco. *(C.japonica),* Companhia Horticolo-Agricola Portuense, Limitada, Catalogue, No.81, 1942-1943, p.8, ref 1102: Cherry red. Alfredo Moreira da Silva, Catalogue No.78, 1944, p.15, ref 72; Vivid pink, variegated with white. Urquhart, 1960, *The Camellia*, vol.II, pl.XXXIII: A medium size, semi-double to incomplete double, 10 cm acoss. Bright turkey red, irregularly marbled with white in varying degrees. Petals about 20, broad, rounded and entire or shallowly notched, reflexing at the margins and overlapping to form a symmetrical flower. Stamens yellow in a loose central cluster, sometimes intermingled with petaloids. Leaves dark green, oblong-elliptic, 10 cm x 5 cm, apices long tapered, serrations broad and shallow. Blooms mid-season. Colour photos in Catalogues, VII Camellia Exhibition, Porto, 1994, and IV Camellia Exhibition, Santo Tirso, 2001. Originated in Portugal.

Saul Habas. *(C.japonica). American Camellia Yearbook*, 1984, p.180, Reg. No.1926: A very large, brilliant red, semi-double to peony form *C.japonica* chance seedling, originated by Ferol and Sam Zerkowsky, Tammia Nursery, Slidell, Louisiana, USA. Blooms mid-season. The 8 year old seedling first bloomed 1981. Average flower size, 16 cm across x 10 cm deep with 72 petals, yellow anthers and filaments. Plant growth is upright, open and medium with dark green leaves, 9.5 cm x 5 cm. See colour photo, front cover ACS., 1983, *The Camellia Journal*, vol.38, No.4.

Sawada. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.425; Chinese synonym for the USA *C.japonica* **K. Sawada.**

Sawada Hybrids. Hilsman, 1966, *American Camellia Yearbook*, p.124 as a Group name for *C.japonica x C.fraterna* hybrids.

Sawada Number 14 Variegated. Cannon, 1967, ACS., *The Camellia Journal*, vol.22, No.1 as 'Sawada #14 Var'. Synonym for **Fashionata Variegated.**

Sawada Number 18. *(C.japonica)*, Walden Jr., 1965, ACS., *The Camellia Journal*, vol.20, No.3. No description. Originated in USA. No valid listing located.

Sawada Number 25. *(C.japonica)*, SCCS., 1974, *Camellia Nomenclature*, p.134: Ivory white. Medium, formal double. Slow, open growth. Blooms mid-season. Originated in USA by K. Sawada, Overlook Nurseries, Crichton, Alabama.

Sawada Salmon Pink. Gerbing's Azalea Gardens Catalogue, 1938-1939. An invalid name given without the permission of the originator, K. Sawada who named it 'Sara-sa'. The variegated form is designated **Sarasa (Sawada)** and the solid colour form **Sarasa Pink**. Synonym: 'Sawada Salmon Pink'(South).

Sawada Salmon Pink (South). Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II, p.300. Synonym for **Sarasa Pink.**

Sawada Seedling Number 218. Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I, p.146. Synonym for **General Dwight Eisenhower.**

Sawada Variegated. *(C.japonica)*, Orton Plantation Plant List, 1941-1942. A virus variegated form of Sarasa Pink - Salmon pink blotched with white. Originated in USA.

Sawada's Dream. *(C.japonica)*, *American Camellia Yearbook*, 1959, p.281, Reg. No.350: A 12 year old seedling of **Imura** x **Dr W.G. Lee,** originated by K. Sawada, Crichton, Alabama, USA, which first bloomed 1953. Plant growth is medium with thick green leaves, finely serrate with sharp apices. The full, formal double flower averages 10 cm across x 3.8 cm deep with 80-90 petals. The colour is white shading to a delicate pink on or about the outer third of the petals. Flowers mid-season to late. Received the National Camellia Hall of Fame Award, 1978. See colour photos: Macoboy, 1981, *The Colour Dictionary of Camellias*, p.115; Front cover, ACS., 1968, *The Camellia Journal*, vol.23, No.2; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.134, p.66. Orthographic error: 'Sawarda's Dream'. Chinese synonym: 'Saweida Demong'.

Sawada's Mahogany. *(C.japonica)*, ACS, *The Camellia Journal*, June 2008, p.32 with colour photo, Regn No.2718; A chance seedling which first flowered in 1971. Originated by K. Sawada, Mobile, Ala., USA, and propagated by Bobby Green, Fairhope, Ala. The 10 cm diameter x 5 cm deep, anemone to peony form flower is dark red, and the petaloids are speckled with white. Flowers early to late. Upright, vigorous plant. *American Camellia Yearbook*, 2008, p.127 with colour photo; Dark green leaves are 10 cm x 5 cm.

Sawada's Number 12 Variegated. Cannon, 1969, ACS., *The Camellia Journal*, vol.24, No.1 as 'Sawada's No.12 Var'. No description. Originated in USA. No valid listing located.

Sawarda's Dream. The Fairlight Camellia Nursery Catalogue, 1983. Orthographic error for **Sawada's Dream.**

Saway Clark. *(C.japonica)*, Cannon, 1970, ACS., *The Camellia Journal*, vol.25, No.4. No description. Originated in USA. No valid listing located.

Saweida Deming. Chinese synonym for **Sawada's Dream.** Later as 'Saweidade Meng'.

Sawoya. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.425; Chinese synonym for the Italy *C.japonica* **Margherita di Savoia.**

Saxon. Griffiths, 1952, *American Camellia Yearbook*, p.48. Proposed synonym for **Frau Geheimrat Oldevig.**

Sayaka-wabisuke. (Sayaka's Wabisuke) (Wabisuke). JCS, 1996, *Japan Camellia*, No.51, p.11 with colour plate: Small single, deep red, sake cup-shaped, degenerated stamens. Blooms late autumn to midwinter. A new cultivar of wabisuke. Originated in Fukuoka Prefecture, Japan. Discovered and released by Teruo Satô, Kurume, in 1994.

Sayake. (Clear), *(C.japonica)*, Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.127, illustration and description: A small, white, 5 petalled, campanulate single with a short, compact stamen column in the centre. Leaves lanceolate, apex acuminate, recurved, margins sharply serrate, edges rolled, late flowering. Resembles **Chôchidori** but smaller and round petals. A seedling of **Wakanoura,** selected in 1971. Originated in Kanagawa Prefecture, Japan. Named by Sa'e Suzuki, released by Totsurô Nakamura.

Sayako. (Obscure), *(C.japonica)*, Hamamatsu, 1825, *Setsuyô Kikan.* No description. Originated in Japan. (Believed extinct.)

Sayogoromo. (Night Gown), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.593 as 'Sayogoromo': A medium sized, irregular semi-double, opening in two tiers as if one flower grew out of another. Colour white with pink areas, streaked crimson. Originated in Japan.

Sayohime. (Princess of Sayo), *(C.x vernalis)*, Seibundô Shinkôsha, Mar.1978, *Garden Life*, pp.70, 76; Yûsuke, Sakata & Ken-ichi, Arisumi, 1983, *International Camellia Journal*, No.15, p.19. A triploid cultivar from Japan. No description. JCS., 1987, *Tsubaki*, No.26, p.51: Flowers red, single, small size. The original tree is growing at a private family in Hirado City, Nagasaki Prefecture, Japan. Discovered and named by Saburô Kumazawa and Mamoru Oda in 1973. Takana et al., Sept.1986, 'Cytological Studies of the origin of *C.vernalis*', *Journal of the Japanese Society for Horticultural Science*, vol.55, No.2, pp.208, 211: Small size, pink, single with united stamens. Leaves deep green, 7.8 cm long x 2.6 cm wide.

Sayoko. (Meaning uncertain), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1968, pl.677: Small, deep crimson, 5 petalled, with white stripe in the centre of each petal. Originated in Japan. (Believed extinct.)

Sayokyoku. (Serenade), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.64, colour photo, p.218, description: Small size, single, soft pink, fading almost to white at petal base. Six overlapping petals, opening cup-shaped, Thick, central stamen column, pale cream filaments, light yellow anthers. Leaves dark green, oval-elliptic, apices acute, undulate, margins finely shallowly serrate. Originated in Kantô area, Japan. Resembles **Tsumagome** and **Hatsugeshô**.

Sayonara. *(C.x williamsii)*, Eagle Heights Nursery Catalogue, 1965: A medium semi-double of clear pink. Flowering mid-season. Originated by E.G. Waterhouse, Gordon, N.SW, Australia. See p.187, Macoboy, 1981, *The Colour Dictionary of Camellias.*

Sayo-no-tsuki. (Evening Moon), *(C.japonica)*, Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.10, A-471: Pale peach pink, small, single campanulate bloom. Early flowering. Suitable for Chabana. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.100: colour photo and description: Small size, pale pink, spherical shaped single, with a short stamen column, ivory white filaments, joined for their lower half, and light yellow anthers. Blooms early to mid-season. Leaves deep green, broad-elliptic, apices tapering acuminate, margins serrulate. Originated in Kurume, Fuku'oka Prefecture, Japan.

Sayoshigure. (Evening Drizzle), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.14: Deep pink. Large single with petaloids. Originated in Japan. Synonym: 'Kinkô-nishiki'.

Sayo-wabisuke. (Evening Wabisuke), (Wabisuke), Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No.11, pp.112-114; Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, A-30: Red, single bloom, campanulate form. Anthers retrogressive, white stamens and pistil, very small. Early to mid-season blooming. Suitable for Chabana. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.158, colour photo and description: Small size, red, tubular single, with central stamen column and yellow anthers. Leaves dark green, ovate to broad-ovate, apices acute, Margins serrate. Originated in Kurume, Fuku'oka Prefecture, Japan. Released by Katsunari Higuchi in 1980. Synonym: 'Kurenai-ikkyû.

Sazameki. (Chattering), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.212, p.107, description, p.152: Leaves rhombeo-elliptic to broadly elliptic, base cuneate, apex shortly acuminate, margins finely serrulate, venation impressed, 5.5-8.5 cm long x 3.6-4.6 cm wide. Flowers peony form, dark rose (Spinel red 0023/2) veined deeper. Petals 10-20, flat, slightly recurved at apex, inner petals smaller, intermingled with the stamens and a few petaloids, filaments white or pale pink. Flowers mid-season to late. Originated in a private garden in Ishikawa Prefecture, Japan.

Sazamiyuki. Savige, 1974, *International Camellia Journal*, No.6, p.29. Different reading for **Sasameyuki.**

Sazanami. (Ripples), *(C.japonica).* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1: Medium sized eight-fold flower. The top of the corolla is a little slender. The name is repeated in Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki; Tsubaki Hachiboku Sanboku Tsuki Meisai* (before 1868); Itô, Ko'emon, 1879, *Chinkashû*, as one of the 7 favourites: Pinkish white, splashed and streaked deeper pink; large spherical form. The modern **Sazanami** is illustrated & described in the following publications: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.156, p.272; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.72, p.34; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.304, pp.136, 336; Shufu no Tomo-sha, 1976, *Tsubaki to Sazanka*, p.33; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.63, 217. These show a large, semi-double with a background varying from white to blush pink, striped red in varying degrees. The name characters for 'Ripples' have been written in various ways. Watanabe's *Chinka Zufu*, 1969 is a different cultivar. Itô, Ko'emon, 1879. Different reading: 'Sasanami'. The differences between these camellias is obscure and cannot be clearly decided. Originated in Kantô area, Japan. See: JCS., 1969, *Tsubaki*, No.7, pp.30, 35; ibid, 1982, No.21, p.107. Chinese synonym 'Lian'.

Sazanami. (Ripples), *(C.sasanqua)*, Ashizawa, Yagorô, *Chabaika Taishû*, Nihon Shubyô Co. Catalogue, 1910: White stripes on pink. Small double, Early blooming. Originated in Japan.

Sazanami. *Chinka Zufu*, (before 1700), Watanabe, 1969. Synonym for **Sazarenami.**

Sazanka. Japanese group name for *Camellia sasanqua.* Chinese reading: 'Chabai'.

Sazanka-modoki. Japanese group name for *Camellia tegmentosa* (Koidz), Makino & Nemoto.

Sazanka-tsubaki. (Sasanqua-like Camellia), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Leaves and flowers like sasanquas; pointed flower petals. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.95. Different reading: 'Sasanqua-tsubaki'. Originated in Japan. (Believed extinct.)

Sazanka-tsubaki. (Sasanqua-like Camellia), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe reprint, 1969: Small size, single, stamens in a ring form. A Chinese bellflower form. It cannot be confirmed if this is the same as the previous listing. Originated in Japan. (Believed extinct).

Sazan-tsubaki. Matsumura, 1883. Synonym for *C.sasanqua.* Chinese reading: 'Chabai', 'Chamei'.

Sazare-ishi. (Pebbles), *(C.japonica)*, Satô, 1975, *Chûbu no Tsubaki*, p.58, colour photo and description: Medium size, white, single with 5 crinkled and fluted petals, cup-shaped about a solid, central stamen column with white filaments and yellow anthers. Late flowering. Leaves large, dark green, broad-lanceolate, apices blunt-acute. Originated in Chûbu area, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.63, 217. A chance seedling, originated and released by Masaichi Satô in 1974.

Sazarenami. (Small Wavelet Camellia), *(C.japonica)*, Itô, Ihei, 1710, *Zôho Chikinshô* #2; Itô. Jukyû, 1739, *Honzô Hanamaki'e;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Variegated with red on white ground. Tidy and pretty in shape. The corolla is piled up 3-fold to formal double. The stamens resemble a bamboo whisk. Iwasaki, 1828, *Honzô Zufu*, repeats a similar description for **Sazarenami.** As **Sazanami** is included separately in the *Kadan Chikinshô.* 1695, they are thought to be separate cultivars, although this is not certain. See: JCS., 1983, *Tsubaki*, No.22, p.126; ibid, 1981, No.20, p.108; 1982, No.21, p.107; 1969, No.7, p.30. (Believed extinct.)

Sazarenami-tsubaki. Synonym for **Sazarenami.**

Scamander. *(C.japonica)*, de Jonghe, 1851, *Traité de la Culture du Camellia*, p.121. No description. (Believed extinct.)

Scaramouche. *(C.japonica)*, Burnier & Grilli Catalogue, 1845: A large spherical shaped peony form double of crimson red. Originated in Italy by Burnier & Grilli, Florence.

Scarlet. Loudon, 1830, *Hortus Britannicus*, p.293. Synonym for **Coccinea.**

Scarlet Ball. Synonym for 'Dahonggui'.

Scarlet Ballerina. *(C.japonica)*, *New Zealand Camellia Bulletin*, 1992, Issue No.112, vol.XVIII, No.5, p.6, Reg. No.292: Originated by Les Jury, New Plymouth, New Zealand. A 13 year old seedling that first bloomed 1987. A cross between *C.japonica* 'Fuyajo' (**Kon-wabisuke**) x **Zambo**. Plant growth is upright, average density and medium growth rate with leaves 9 cm long x 4 cm wide. The flowers are guardsman red (RHS.CC.45A), small size, semi-double, 8 cm across x 6 cm deep with 25-28 petals, about 3 petaloids, aureolin (yellowish) anthers and mallow purple filaments. Heavy flowering, mid-season and is hose-in-hose type with tiered petal arrangement.

Scarlet Bird. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.174. Synonym for **Hiryû.**

Scarlet Bird Brocade. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.174. Synonym for **Hiryû-nishiki.**

Scarlet Buoy. *(C.japonica)*, *New Zealand Camellia Bulletin*, 1981, vol.XII, No.2, p.7, Reg. No.169: A seedling from *C.japonica* 'Fuyajo' (**Kon-wabisuke**) x **Moshio**, originated by L.E. Jury, New Plymouth, New Zealand, that first flowered 1969. Growth habit is upright and average with light green leaves, 7cm x 4 cm. The single, scarlet flower has 6 petals and is 6.5 cm across x 5 cm. deep. The anthers are yellow with cream filaments. Flowers early to late. Synonym: 'Scarlet Superior'.

Scarlet Chrysanthemun Petal. Waterhouse, 1970, ACRS., *Camellia News*, No.40, p.7. Synonym for **Zhuhong Juban.**

Scarlet Cup. *(C.japonica)*, Valley Garden Supplies Catalogue, 1946-1947: Rich red. Large, cupped single with very long buds. Vigorous, compact, upright growth with large leaves. Mid-season blooming. Originated in USA by Valley Garden Supplies.

Scarlet Don. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.208. Orthographic error for 'Scarlet Door', synonym for **Emperor of Russia.**

Scarlet Door. Camellia Grove Nursery Catalogue,, 1948, p.15. Synonym for **Emperor of Russia.**

Scarlet Dragon. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.174. Synonym for **Hiryû.**

Scarlet Gem. *(C.japonica)*, van den Broek Nursery Catalogue, 1977-1978, p.18. No description. No valid listing located. 1\

Scarlet Glory. *(C.japonica), American Camellia Yearbook*, 1984, p.181, Reg. No.1953: A very large, scarlet, semi-double *C.japonica* chance seedling. Originated by Nuccio's Nurseries, Altadena, California, USA. Blooms mid-season. First flowered 1978. Average flower size, 13 cm wide. Plant growth is upright, dense and medium with dark green, medium sized leaves. Chinese synonym: 'Hongrongyao'.

Scarlet King. *(C.sasanqua)*, Mason's Supplementary List, 1961-1962: Large, scarlet, single. Early blooming. Originated in New Zealand.

Scarlet Lotus. Synonym for **Dahonglian.**

Scarlet Maiden. *Camellias*, Y.C. Shen, 2009, p.326 with colour photo; Synonym for **Hi-otome-sazanka.**

Scarlet Nine Hearts. Waterhouse, 1970, ACRS., *Camellia News*, No.40, p.9. Synonym for **Zhuhong Jiuxin.**

Scarlet O'Hara. Vanderbilt, 1941, *Camellia Research*, II, p.8. Orthographic error for **Scarlett O'Hara.**

Scarlet Peony. Synonym for **Dahong Mudan.**

Scarlet Perfection. *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue:* Red. Incomplete double. Mid-season blooming. Originated in USA.

Scarlet Queen. *(C.sasanqua)*, Mount Congreve Wholesale Nurseries Catalogue, 1990-1991, p.9: Bright red, vigorous, early flowering. Originated in Ireland.

Scarlet Queen. *(C.sasanqua)*, Trehane Nursery Catalogue, 1966: From Japan. A good grower with bright red flowers.

Scarlet Red. *(C.japonica)*, Vanderbilt, 1941, *Camellia Research*, II, p.8. No description. Originated in USA.

Scarlet Ribbons. *(C.japonica)*, ACS, *The Camellia Journal*, Dec. 2013, p.28 with colour photo; Regn. No.2897; Originated and registered by C.M. & Lillian Gordy, Ocala, Fla., USA. ACS, *Yearbook*, 2013, p.139 with colour photo; Propagated by Loch Laurel Nursery, Valdosta, Georgia. An 11 year old seedling of **Jean Clere**, first flowered 2006. Medium size, 10cm diameter x 7cm deep, flower is loose peony to rose form double, vibrant red. Stamens shown in photo dispersed among central petals, gold anthers and cream filaments. Flowers fall whole. Plant is spreading and open, with average growth rate. Mid-green leaves average 10cm x 4.5cm with medium serration. Flowers midseason.

Scarlet Sinensis. Seidel, 1847, *Pflanzen Catalog*, p.11. Synonym for **Rosa Sinensis.**

Scarlet Skirts. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.137. Synonym for **Hi-no-hakama.**

Scarlet Superior. Jury, 1974, *American Camellia Yearbook*, vol.II, Colour pl. facing p.45. Synonym for **Scarlet Buoy.**

Scarlet Temptation. *(C.hybrid)* Camellia Forest Nursery Catalogue, 2008, p.22; Large, intense bright rose red single with prominent yellow stamen cluster. Upright growth with good branching.

Good cold resistance. *C.x williamsii* **William's Lavender** x *C.reticulata* **Purple Gown**. Originated and released by Camellia Forest Nursery, Chapel Hill, N.C., USA.

Scarlet Toned Red. *Camellias*, Y.C. Shen, 2009, p.327 with colour photo; Synonym for **Hi-inkô.**

Scarlett O'Hara. *(C.japonica),* Flowerwood Nursery Catalogue, 1940: A virus variegated form of **C.M. Hovey** - Dark red spotted white. Has the same form and habit as **C.M. Hovey.** Originated in USA at Flowerwood Nursery, Mobile, Alabama. Synonyms: 'Colonel Firey Variegated'. 'C.M. Hovey Variegated'. Orthographic error: 'Scarlet O'Hara'. See illustration, p.323, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I.

Scassosi. *(C.japonica),* Costa, 1846, *Catalogue de la Collection de Camellias présentée à sa majesté L'Imperatrice de toutes les Russies et Reine de Pologne*, p.15. No description. Originated in Milan, Italy. Orthographic variant: 'Scazzosi'. (Believed extinct.)

Scattering Camellia. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.77. Synonym for **Chiritsubaki.**

Scazzosi. Burdin Maggiore & Co, 1849-1850, Catalogue General. Fratelli Rovelli Catalogue, 1852, p.26. Orthographic variant for **Scassosi.**

Scchrynmakersii. Courtois, 1833, *Magazin d'Horticulture*, 1[pt.E]:66. Orthographic error for **Schrynmakersii.**

Scent of Sunset. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.194. Synonym for **Akatsuki-no-kaori.**

Scentasia. *(C.japonica), New Zealand Camellia Bulletin,* March 1997, Issue No.126, vol.XX, No.1, p.19, Reg. No. 377. Raised by J.R. Finlay, Whangarei, New Zealand. A cross of C.Higo **Nioi-fubuki** x *C.japonica* **Kramer's Supreme.** The plant is 10 years old and first bloomed in 1990. Flowers are a bright full red (RHS.CC. 46A – B) and area large peony form, 10 cm diameter, having about 12 petals and 16 petaloids, of firm texture, and displaying bold prominent yellow anthers, and a nice positive fragrance. The medium sized bush is spreading and open with leaves 8 cm long x 5 cm wide. Flowers mid-season.

Scented Fireglow. *(C.japonica), New Zealand Camellia Bulletin*, 1995, Issue No.120, vol.XIX, No.1, p.46, Reg. No.360: Originated by J.R. Finlay, Whangarei, New Zealand. Bright orange red (RHS.CC.46C-D), semi-double, with yellow stamens and parchment coloured filaments, 9 petals and 2 petaloids, 11 cm across x 3 cm deep. Growth habit is upright and medium in rate with dark green leaves 8 cm long x 5 cm wide. Blooms mid-season to late. A seedling of *C.japonica* **Nioi-fubuki** x **Kramer's Supreme**. Fragrant. Flowers weather well and fall intact.

Scented Gem. *(C.lutchuensis x C.japonica),* Nuccio's Nurseries Catalogue, 1983: Fuchsia pink with white petaloids. Miniature semi-double. Open, upright growth. Blooms early to mid-season, Fragrant. A cross of *C.lutchuensis x C.japonica* 'Tinsie' (**Bokuhan**), originated by Toichi Domoto, Hayward, California, USA. See colour photo, front cover, 1988, ACRS, *Camellia News*, No.107.

Scented Red. *(C.japonica),* Trewidden Estate Nursery Catalogue, 1987: Small, single, red, scented. Round leaves. Originated in UK. at Trewidden Estate Nursery, Penzance, Cornwall.

Scented Snow. *(C.hybrid).* Camellia Forest Nursery Catalogue, 2008, p.8; Large white anemone form flower with an especially sweet scent. Early flowering. Rapid upright growth. Leaves are dark green and larger than usual *C.sasanqua*. A cross between *C.sasanqua* **Northern Lights** x *C.oleifera* hybrid **Snow Flurry.** Originated and released by Camellia Forest Nursery, Chapel Hill, N.C., USA.

Scented Storm. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.194. Synonym for **Nioi-fubuki.**

Scented Sun. *(C.hybrid),* ACS., 1985, *The Camellia Journal*, vol.40, No.4, p.47, Reg. No.1984: A very large white with an occasional pink stripe, semi-double *C.hybrid* (Seedling D4(2) – **Mrs Bertha A. Harms** x **Salab** x seedling L.B.F.634), originated by Ken Hallstone, Lafayette, California, USA. Midseason blooming. The 10 year old seedling first bloomed 1983. Average size, 12.5 cm. across x 7.5 cm deep with 11 petals, 6 petaloids, golden anthers, creamy filaments. It takes 4-5 days to open and forms 3-4 rabbit ears. It has a good apple blossom fragrance. Plant growth is upright and rapid with dark green reticulated leaves, 10 cm x 5 cm. Chinese synonym: 'Xiang Taiyang'.

Scented Swirl. *(C.hybrid). New Zealand Camellia Bulletin*, 1994, Issue No.118, vol.XVIII, p.32, Reg. No.345: Originated by J.R. Finlay, Whangarei, New Zealand.A fragrant seedling of an unnamed seedling x (*C.hybrid* **Scentuous** x **Kramer's Supreme**). Deep pink, peony form flower, 12 cm across x 6 cm deep, with 16 petals and 16 petaloids, yellow anthers on white filaments. Petals large and upstanding surround the stamens. Plant growth open and average with light green leaves 10 cm long x 5 cm wide. Blooms mid-season to late.

Scented Treasure. *(C.japonica),* SCCS, 1950, Bulletin, vol.11, No.5, p.5. Short, *American Camellia Yearbook*, 1951, p.286: Rose-red to wine red. Medium, full, peony form. Medium, compact growth. Fragrant. Blooms mid-season. Originated by Harvey Short, Ramona, California, USA. See colour photo, p. 196, Macoboy, 1981, *The Colour Dictionary of Camellias*, and illustration, p.223, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Chinese synonym 'Xiangwu'.

Scentimental. *(C.japonica),* Gentry, 1968, ACS., *The Camellia Journal*, vol.23, No.4, p.8. No description. Originated in USA. No valid listing located.

Scentimental. *(C.japonica), New Zealand Camellia Bulletin*, March 1997, Issue No.126, vol.XX, No.1, p.19, Reg. No. 376. Raised by J.R. Finlay, Whangarei, New Zealand. A cross of **Lily Pons** x **Kramer's Supreme,** 12 years of age which first flowered in 1988. Flowers are a bright red (RHS.CC. 47A), and fragrant. A large peony form, 10.5 cm diameter, with yellow anthers, having about 20 petals and 12 petaloids. The plant is of medium size, shape and density and is somewhat early flowering. Leaves are 9 cm long x 3.5 cm wide.

Scentsation. *(C.japonica),* Pitkin, 1968, *American Camellia Yearbook*, p.122: As the name implies **Scentsation** has sweet fragrance; it is large and a silvery pink peony form. Blooms early to mid-season. The plant is upright, compact and vigorous. Originated by Nuccio's Nurseries, Altadena, California, USA. For colour photo: *American Camellia Yearbook*, 1982, facing p.45; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.190; Front cover, 1968, SCCS., *The Camellia Review*, vol.29, No.8; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.135, p.66. Chinese synonym: 'Xiangshen'.

Scentuous. *(C.hybrid), New Zealand Camellia Bulletin*, 1981, vol.XII, No.2, p.6, Reg. No.165: A hybrid seedling originated by J.R. Finlay, Whangarei, New Zealand fron *C.japonica* **Tiffany** x *C.lutchuensis*, which first bloomed 1976. Growth habit is medium and open. The light green leaves are 5 cm x 2.5 cm. The semi-double flower has 8 petals and 16 petaloids and measure 7 cm across. It is white with a pink flush on the back of the petals. Anthers are white with light green filaments. It flowers mid-season to late and has the lutchuensis fragrance.

Scherzo della Regina. van Houtte Catalogue, 1878-1879, 179-ZZ:22. (from) Geo. Bapt. Vitta. Large flower composed of broad petals of glowing rose, veined and striped with vivid carmine. Originated in Italy.

Schiavone. *(C.japonica)*, Franco Agostini, 1844, *Catalogo Plantarum…* No description. van Houtte, 1846-1847, Catalogue, 27:31: [from Casoretti]. No description. van Houtte, 1849-1850, Catalogue, 38:55: Deep blood-red, superbly imbricated, with white bordered petals and some streaking. Synonym: 'Zavonio'. Verschaffelt, 1851, *Nouvelle Iconographie*, Book VII, pl.II as 'Zavoni'. Presumed to be of Italian origin. The blossoms are of medium size, but their form and imbrication gives them a place in the first rank. The petals are rather small, ovate, rounded, fairly emarginate. At the centre they become compact, ruffled, slightly longer and form an outspread heart. Note: **Il Robertii,** Verschaffelt, 1848, is the variegated form of **Schiavone** (Casoretti). Orthographic errors: 'Schavionii', 'Zawonia', Schiavoni'. Synonym: 'Schiavone' (Casoretti).

Scrosati. *(C.japonica)*, Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.14. No description. Orthographic error: 'Scorsati'. Originated in Italy. (Believed extinct.)

Scuddy Roussel. *(C.japonica)*, *American Camellia Yearbook*, 1968, p.136, Reg. No.991: A 5 year old chance seedling of 'Peach Blossom' that first bloomed 1966; originated by J.S. Roussel, Shreveport, Louisiana, USA. Plant growth is upright and average with dark green leaves, 8 cm x 3.8 cm. The formal double flower is 10 cm across x 5 cm deep with 38 petals and petaloids, curled up in the centre. Deep pink with a vein in the centre of each petal. Early blooming.

Scutonii. *(C.japonica)*, Galeotti. M., ed. 1852, *Journal d'Horticulture Pratique de la Belgique ou Guide des Amateurs et Jardiniers*, p.12. No description. Originated in Belgium. (Believed extinct).

Scylla. *(C.japonica)*, van Houtte Catalogue, 1841, 7:19: Peony form, pink interior petals ruffled, spotted with white. Originated in Italy. Orthographic error: 'Seylla'. Orthographic variant; 'Scilla'.

Se Ba Bian. (18 Years Young Lady), (*C.reticulata* hybrid), ACS,*Yearbook* 2012, p.56 with colour photo. Large size, Wang "WW#8" x **Ruta Hagmann.** Photo shows a loose anemone form flower, white with small patches of pink to red on the outer petals. Originated by John Wang, Orinda, Calif., USA.

Sea Foam. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature*, p.64: White. Large, formal double, upright growth. Originated in USA by Weisner. Not to be confused with the sasanqua **Seafoam.** Chinese synonym: 'Haipao'.

Sea Foam. *(C.x williamsii),* Phillips & Rix, 1989, *Shrubs*, the Pan Gardens series, text, p.65, colour plate, p.64: Semi-double white. Originated in UK. Note: this name is invalid as already in use.

Sea Foam. Bristow, 1985, *The Practical Guide to Successful Gardening*, p.35. This appears identical to the Semmes C.sasanqua **Seafoam.**

Sea Gull. *(C.hybrid),* Trehane, James & Son Ltd. Nursery Catalogue, 1979: Raised in USA by David Feathers and numbered S.J.35. A large, regular semi-double, white with a circle of gold stamens when grown under glass. Outdoors it is a 10 cm across, loose peony form flower with notched and waved petals, mixed with the gold stamens. Leaves 10 cm x 7 cm, coarsely serrate. The bush is vigorous, spreading, well branched. Flowers mid-season. 2007-2008 Catalogue, p.11, photo p.26, as 'Seagull'.

Sea Pearl. *(C.japonica),* ACRS., 1971, *Camellia News*, No.43, p.36, Reg. No.153: Originated by F.S. Tuckfield, Berwick, Victoria, Australia. A chance seedling that first bloomed 1966. The early to midseason, shell pink, semi-double flowers have 5 fascicles of stamens forming a central bunch. It has a vigorous, open habit of growth with obovate, acuminate leaves 8 cm x 5 cm.

Sea Shell. SCCS., 1942, *Classification of Camellias*, p.1. Orthographic variant for **Seashell.**

Sea Shell. *(C.japonica),* Thoby et al., 1988, *Tsubaki -A Propos de Camellia*, p.3 with illustration: From the colour photo this is obviously not Coolidge's **Seashell.** It is a medium size, ivory white, formal double with 7-8 rows of petals, becoming pointed towards the centre of the flower and spaced in a hose-in-hose formation. Chinese synonym 'Haibei'.

Sea Witch. *(C.japonica), New Zealand Camellia Bulletin,* 1992, Issue No.112, vol.XVII, No.5, p.36, Reg. No.308: Efforts to trace the origin of this camellia have failed. Registered by Yvonne Cave, Wanganui, New Zealand. Plant growth is average, the mid-green leaves are 8 cm long x 6 cm wide and the formal double flower is 7-8 cm across x 3.5 cm deep with 90 petals. The colour is deep pink with slightly darker veining (RHS.CC.54B with veining 54A), and lighter petal edges. Blooms mid-season.

Seafoam. *(C.sasanqua),* Fendig, 1952, *American Camellia Catalogue:* A small to medium. single, 7 cm across, with colour white with margins shaded magenta, (RHS.CC,27/ 2). Petals 5, about 3.2 cm. long, round, ruffled and crêped margins. Stamens in a sun-burst fashion. Leaves mid-green, elliptic, 3.8 cm long x 2 cm wide, apex acute, margins serrulate. The plant is compact, dense and vigorous. Originated by the Semmes Nursery, Mobile, Alabama from seed of unknown parents. Synonym: 'Semmes Number 5'. Chinese synonym: 'Haipao'.

Seagull. Trehane Nursery Catalogue, Cornwall, 2007-2008. p.11. Originally catalogued as **Sea Gull.**

Sealion. (*C.reticulata* hybrid), Heartwood Nursery, Seedling List 2009; Very large, up to 16.5 cm diameter, mid-pink, dense peony form. Upright habit, but stems bend under the weight of flowers. Suggested best for exhibition rather than landscape. A cross of **Buddha** x **Forty-Niner.** Originated by Heartwood Nursery, Fort Bragg, Calif., USA (HW9210).

Sean Armijo. *(C.reticulata x C.granthamiana),* SCCS., 1990, *Camellia Nomenclature*, p.134: Brilliant red, speckled white, large to very large size, semi-double with upright petals. Blooms early to

mid-season. *C.reticulata* 'Crimson Robe' (**Dataohong**) x *C.granthamiana*, originated by Piet & Gaeta, California, USA.

Sean Roberta. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings*, p.8, colour photo: A large, red, irregular double with fluted and twisted petals and golden stamens intermingled with the centre petals. A seedling of **Lindsay Neill,** originated by Richard Dodd, Marshallville, Georgia, USA.

Seaport's Spring. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.46; Pink bell group, pink flower, bell type corolla, mid-flora, mid-folia.

Sears Special. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.100: Medium pink. Large, formal double of flat form with slightly curved petal edge. Blooms mid-season. Originated in USA. Orthographic error: 'Spear's Special'.

Seashell. *(C.japonica),* Vanderbilt, 1940, *Camellia Research*, p.7. No description. SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* Pink pencilled in deeper tone. Small, semi-double. Vigorous growth. Mid-season to late blooming. Originated in USA at the Coolidge Rare Plant Gardens, East Pasadena, California. See illustration, p.324, Hertrich, 1954, *Camellias of the Huntington Gardens*, vol.I. Orthographic variant: 'Sea Shell'.

Seaspray. *(C.pitardii x C.fraterna). New Zealand Camellia Bulletin*, March 1996, Issue No.123, vol.XIX, No.4, p.47, Reg. No.368: Originated by N.G. haydon, Papakura, New Zealand. A single, white, miniature flower of 6 petals, golden anthers and white filaments, 4 cm across x 2 cm deep and clustered at terminals and leaf axils. The plant is upright and rapid in growth, with very dark green leaves 5 cm long x 2.5 cm wide. Blooms mid-season to late. A seedling of the *C.pitardii* var. *pitardii* hybrid **Snow Drop.**

Seaweed Salt. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.105. Synonym for **Moshio.**

Seben. ('Camellia' in Yi language) *(C.reticulata)*), Feng Guomeng, 1989, Chuxiong Camellia Catalogue as 'Sebon', with colour illustration: Large, 12-13 cm across, open, red, peony form. Centre stamen cluster mixed with some small erect petals. Mid-season blooming. Originated in Chuxiong, China. *Chinese Camellia Culture,* 2003, p.152 with colour photo as 'Seben'.
Records of Camellia Ancient Trees in Chuxiong, p.21 with colour photos. The maternal tree is located at the relic of Shisang City, Zixi Mountain, Chuxiong China. Named by Li Wanqing in 1989. Loose peony form, red. Flowers early to late.

Sebina. *(C.japonica),* Guilfoyle, 1883, *Catalogue of Melbourne Botanic Gardens*, p.172. No description. Originated in Australia. (Believed extinct.)

Sebon. *(C.reticulata),* (Yi Nationality), Feng Guomeng, 1989, Chuxiong Camellia Catalogue, with colour illustration: Large, 12-13 cm across, open, red, peony form. Centre stamen cluster mixed with

some small erect petals. Mid-season blooming. Originated in Chuxiong, China. *Chinese Camellia Culture*, 2003, p.152 with colour photo as 'Seben'.

Secchû. (In the Snow), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô:* Snow white, medium size double, slender shape. Originated in Japan. Different readings: 'Settyû', 'Setchû'. (Believed extinct.)

Secchûka. Tuyama, 1966, *Camellia Cultivars of Japan*, p.388. JCS., ed. *Encyclopedia of Camellias in Colour*, 1972, vol.I, p.362; Seibundô Shinkôsha, 1979, *Senchinshû*, p.238. Katayama, Jurakuen named this as 'Secchûka'. Synonym for **Shôwa-wabisuke.**

Secchû-no-hana (Flower in Snow) (*C.hybrid*) from Kodaira, Tokyo. *Japan Camellia* No.84, August 2007: White outer, graduating to red inner petals, semi-double, medium, sasanqua-like stamens, fragrant, blooming in November to March. Leaves ovate, medium. Tree upright growth. An interspecific hybrid between *C.yuhsienensis* and *C.hiemalis*. Originated by Shinichi Noguchi and named in 2002.

Secchû-no-hi. (Light on the Snow). *(C.japonica)*, Seibu Maizuru Institute of Botany, 1992-1993, *Seibu no Tsubaki*, No.305: A small size, pale pink, single of Sake cup shape. Blooms mid-season to late. Originated by Toyama Prefecture, Japan.

Secchû-no-matsu. (Pines in the Snow), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.83, colour photo, p.225 description: Medium size, white, single, with 6-7 irregular petals opening saucer-shaped with a large, spreading, central mass of stamens with golden anthers. Leaves light green, elliptic, serrulate margins, blunt acute apices, petioles hirsute. Originated in Nangô, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Tsutoshi Sakata in 1975. Different reading: 'Setchû-no-matsu'.

Sechû. Different reading for **Secchû.**

Secilide Valtange. Catologus Imperial Gardens, Petrograd, 1860, p.26. Orthographic error for **Cécile Voltange.**

Seconda de Rossi. *(C.japonica)*, Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.14. Analogous to the first of this name but it is a little larger and the colour is clearer.

Seconda Speciosa. *(C.japonica)*, Verschaffelt Catalogue, No.50, 1844, p.23, as 'Secunda Speciosa'. No description. Originated in Italy. (Believed extinct.)

Sedilla. *(C.japonica)*, Burdin Maggiore & Co. Catalogue, 1845, p.43. No description. Burdin Maggiore & Co, 1849-1850, Catalogue Général: Rosy white with stripes and spots of carmine. Fratelli Rovelli, 1852, Catalogue, p.26: Very large white striped and spotted with carmine. From Negri. Franchetti, 1855, *Collezione di Camelie*, p.57: Irregular, rosy white with splashes and stripes of carmine. Originated in Italy.

Seduction. van Houtte Pere Catalogue, 1896, 265P:109. A Japanese cultivar imported by Waller and renamed by Caledonia Nursery: Rose-red single.

Seduction. *(C.hybrid).* C. Aust, *Camellia News*, No.182, Autumn 2010, p.9, Regn No.618-N; A chance seedling of **Nicky Crisp.** Medium to large semi-double blooms, pink-lavender to violet, with upright central boss of stamens. Very floriferous, mid-season to late. Originated by John Emery, Raraflora Nurseries, Forth, Tasmania, while at Jaspers Brush. Applicant Terence E. Pierson, Jaspers Brush, NSW, Australia.

Seedling (Skirving's). van Houtte Catalogue, 1844-1845, 18:19. Synonym for **Waltonensis.**

Sefton. Hillcrest Nursery Catalogue, 1958. Abbreviation for **Lady Sefton.**

Seguslita. *(C.japonica)*, Peer, 1956, *American Camellia Yearbook*, p.55. No description.

Seiboldii. Lenten, 1964, *Gardeners' Chronicle*, p.447. Orthographic error for 'Sieboldii', synonym for **Candidissima.**

Seidenstern. (Silk Star). *(C.japonica), International Camellia Journal,* 2005, p.130 with colour photo; Reg. No. 58. An open pollinated seedling of **Moshio**. Originated by Peter Fischer, Wingst, Germany. First flowered 1993. An upright shrub with medium growth rate, flowering mid-season. A dark red (RHS.CC. 46A), hose-in-hose form semi-double, 7 cm diameter x 4.5 cm deep. Golden stamens. Flowers fall whole.

Seifû. (Breezy, Fine Day). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.144 with colour photo; English translation p.98. Small, white, swelling tubular form single. Very early. Leaves narrowly elliptic, medium size. Upright, vigorous growth. A cross between **Seiôbo** and **Hatsu-arashi.** One of the earliest bloomers. Originated and released by Takeo Ogawa in 1990. From Izu Ôshima.

Seigaiha. ICS., Apr. 1990, *Japanese Camellia Cuiltivar List*, p.39.Different reading for **Seikaiha.**

Seigangi. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* p.209. Corruption for **Seiganji.**

Seiganji. (Seigan Temple), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku: A* medium size, double, white spotted red. Originated in Japan. This name has been erroneously used for **Rôgetsu.** Corruptions of name: 'Sei-Gongi', 'Seigangi'. See: JCS., 1965, *Tsubaki*, No.5, p.29. (Believed extinct.)

Seigenji-osaraku. ('Osaraku' from Seigen's Temple), (Higo), Tamura, 1956, *Higotsubaki Shinkaki*, No.9, p.33: Medium white, single with large stamen ring. Synonym for **Shiro-osaraku.** 'Osaraku' is a popular name for camellias in Japan.

Seigen-sakurahime. (Seigen's Cherry Princess). *(C.japonica),* Seibu Maizuru Institute of Botany, 1993-1994, *Seibu no Tsubaki,* No.102: Bright pink fading to white at bottom. Double with distinctive rows of narrow, keeled petals. Medium to large size. Originated in the Kansai District, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.143 with colour photo; English translation p.98. A cross between **Miyakodori** and **Ballet Dancer**. Originated and named by Shinichirô Kishikawa in 1989.

Seigetsu. (Chaste Moon), (*C.rusticana*), Nagao, Sôsei-en, 1958, *Tsubaki, Mokuroku Tokushû*. Seibundô Shinkôsha, 1979, *Senchinshû,* p.82, colour photo, p.225, description: A small, single of 5 petals, red with occasional white spot and a spreading bunch of stamens. Leaves lanceolate-elliptic, apex acuminate, margins serrulate, medium olive green with feathers of gold down the midrib, petioles hirsute. Originated in Niigata Prefecture, Japan. See also pl.455 & p.361, *Encyclopedia of Camellias in Colour*, vol.I, 1972.

Seigi. Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.6, A-281: Translation error for **Masayoshi.**

Sei-gongi. Vanderbilt, 1941, *Camellia Research*, II, p.7. Corruption of the Japanese name **Seiganji.**

Seigyoku. (Noble Gem), *(C.japonica),* Tateyama Nursery Catalogue, 1957, in section for camellias with variegated leaves. White and yellow spots on dark green leaves. Flower small, red, single. Originated in Japan.

Seihaku. (Pure White), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large, snowy white. JCS., 1969, *Tsubaki*, No.7, p.33: Pure white, large double with 3 tiers of petals, inner curved. Originated in Japan. See: JCS., 1969, *Tsubaki,* No.7, p.33.(Believed extinct.)

Seihaku. (Pure White), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16: White, single, large. Originated in Japan. (Believed extinct.)

Seihi. Nippon Engei Kaisha Ltd. Catalogue, 1904, p.9. This variety has at least three sets of characters, the first translating as 'flying star', the second as 'pure scarlet' and the third as 'pure sun'. It is rose-pink mottled white. A very early, large, irregular double and is considered to be a synonym for **Daikagura,** a name used in the Ôsaka district. Another synonym for this is 'Shôjitsu' in Takarazuka, Hyôgo Prefecture. See: Tuyama, 1966, *Camellia Culture of Japan*, p.62; Seibundô Shinkôsha, 1979, *Senchinshû*, p.229.

Seihitairin. (Blue-red, Large flower), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Nakayama, 1851, *Senka'ôden*, 1st ser. vol.5: Peony form, large, described as three types of colour. One is red, others are red with white spots and white with red spots. Early flowering. Originated in Japan. Thought to be a synonym for **Shôhitairin** in 1844, *Benran Sômoku*. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.80; ibid, 1963, No.4, p.79.

Seija. Macpennys of Brancore Catalogue, 1992, p.2. Orthographic error for **Seiji.**

Seiji. (Meaning uncertain), *(C.japonica),* Wada Nursery Catalogue, [before 1937], p.27: Medium size, rose-carmine, peony form. Slieve Donnard Nursery Co. Ltd Catalogue, 1973-1974, p.16: A fine double, clear red variety. Originated in Japan.

Seijitsu. (Serene Day), *(C.japonica), C*hôshun-en Nursery, 1955, *Shokubutsu Mokuroku*, No.291: Very large, double, red with white spots. Early flowering. Originated in Japan. Probably synonymous with **Daikagura.**

Seiju. (Pure Life), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.20. No description. Originated in Nagasaki Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.143 with colour photo; English translation p.98. Small, white tubular single cylindrical stamen cluster. Flowers early to late. Selected from wild japonicas in Hirado City. Discovered and named by Hirado Camellia Club in 1980.

Seika. (Pure Flower), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô:* Light blue, double, medium size. Originated in Japan. Different readings: 'Seikwa', 'Kiyoka'. (Believed extinct.)

Seika. (Pure Fragrance). (C.hybrid). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.327. English translation p.233. Medium to large, transparent bluish white, tubular to cup-shaped single, cylindrical stamen column. Flowers early to mid-season. Leaves broadly elliptic, medium size, thick. Upright, vigorous growth. A cross of *C.japonica* **Shûfûraku** x *C.rusticana* **Senbazuru.** Named and released by Minoru Satô in 1984. From Aichi Prefecture.

Seikaiha. (Quiet Ocean Waves), *(C.hiemalis),* Seibundô Shinkôsha, Dec.1971, *Garden Life*, p.16; Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.39 as 'Seigaiha': Medium size, white, irregular, informal double. Blooms early to mid-season. Originated in Kumamoto Prefecture, Japan. Different readings: 'Seigaiha', 'Seikai-no-nami'.

Seikai'ia. Camellia Forest Nursery Catalogue, 1988, p.2. Corruption for the Japanese name: **Seikaiha.**

Seikai-no-nami. Hakoda, 1974, *Nôkôdai Nôjôhô*, No.6, p.51. Different reading for **Seikaiha.**

Seikisai. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.143 with colour photo; English translation p.98. Medium size, white, bowl-shaped single, cylindrical stamen column. Flowers early to late. Leaves broadly elliptic, medium size, thick, recurved. Upright growth. A seedling of a white camellia. Named by Kinya Nakao, released by Taneo Okada in 1976. From Osaka.

Seikô. (obscure), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô*. No description. Yashiro, 1841, *Kokon Yôrankô*, vol.344. No description. Originated in Japan. (Believed extinct.)

Seiko-no-hasu. (Seiko Lotus). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Seibu Maizuru Institute of Botany Bulletin*, No.8, pp.1-9, colour plate No.16 p.9, (H3703): A seedling of *C.japonica* **Sadie Mancill** x *C.chekiangoleosa*. Colour is deep red (RHS.CC.52A), large size, double with approximately 50 petals, poor stamens and degenerate pistil. Upright habit. Originated in Japan by Kaoru Hagiya, Niigata. Colour photo, ICS Journal, 1995, p.81.

Seiko-no-tsuki. (Seiko Moon). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Seibu Maizuru Institute of Botany Bulletin*, No.8, pp1-9, colour plate No.17 p.9, (H3361): A seedling of *C.japonica* **Tamatsuyu** x *C.chekiangoleosa.* Colour vermilion (RHS.CC.45C, large size, single, cup to spherical shape with a thick mass of stamens, higo or apricot type with red filaments and long, protruding pistil. Habit upright, with average branching. Originated in Japan by Kaoru Hagiya. Colour photo, ICS Journal, 1995, p.81.

Seiko-no-yûyake. (Evening Glow on Seiko). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Seibu Maizuru Institute of Botany Bulletin,* No.8, pp.1-9, colour plate No.18 p.9, (H1765): A seedling of *C.japonica* **Tôkai** x *C.chekiangoleosa.* Colour vermilion (RHS.CC.45C), large size cup shaped single. Mildly fragrant. Stamens thick cylindrical form with red filaments and protruding style. Growth habit upright with average branching. Originated in Japan by Kaoru Hagiya. Colour photo, ICS Journal, 1995, p.81.

Seikwa. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.l, p.62 as 'Sei-kwa'. Different reading for **Seika.**

Seimei. (Pure and Clear), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan*, pl.137, p.69, description, p.128: A snow Camellia of low, bushy nature. Leaves small, elliptic, venation impressed, midgreen, finely, shallowly serrulate, 4.6-6.9 cm long x 2.1-2.8 cm wide; petioles 4-7 mm long, hairy, light green. Flower rose (Claret rose 021/1), petals unequal, strongly convex, thin, 5-6 in number; stamens 16-17 mm long, slightly irregular and scattered, filaments reddish. Mid-season blooming. Collected in a Temple garden, Shinjô City, Yamagata Prefecture, Japan.

Seimei. (Pure and Clear), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.82, colour photo, p.225, description: Medium size, cup-shaped single, soft light pink, white base, with 5-6 rounded regular concave petals with a white centre, and a compact central column of stamens, with golden anthers and creamy filaments. Early to mid-season flowering. Leaves mid-green, elliptic, apex acuminate, margins serrulate. A seedling of **Seiôbo.** Originated in the Toyama Prefecture, Japan. See colour photos, p.98, Yokoyama & Kirino, 1989, *Nihon no Chinka* and JCS., 1988, *Japan Camellia*, No.27, p.4. Named and released by Hisako Kamo.

Seiôhô. (Western King), *(C.japonica),* Mizuno, 1681 *Kadan Kômoku:* Pale pink, double. Originated in Japan. (Believed extinct.)

Seiôbo. (Mother of Western King), *(C.japonica),* Satomi, 1956, *Camellia Varieties in Japan*, p.12: (St Mary) White. Single, medium large. Early to mid-season blooming. Originated in Japan. 'Sei-ô-bo' is the Japanese version of the Chinese 'Xiwangmu', the celestial bearer of the passive or female 'yin' principle. Different readings: 'Seiohbo', 'Seioobo'.

Seiôbo. (Mother of Western King), (Wabisuke), Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.29 by Watanabe, Takeshi. Tuyama, 1968, *Camellias of Japan*, pl.403, p.205, description, p.209: Leaves broadly elliptic to broadly lanceolate-elliptic, dark matt green, venation impressed, margins crenate-serrulate, petioles hairy. Flower single, pink, paler to the periphery, (Carmine rose 621/1-621/3), campanulate, petals thick, concave, outer petals with darker rose similar to the fruit of the peach, 5-7 cm across. Stamens spreading, filaments and anthers yellow. Flowers very early to mid-season. Habit semi-erect, dense and strong. An old cultivar from Kanazawa City, Ishikawa Prefecture, Japan where it has often been used in the tea ceremony since the Edo Era. Seiôbo, the legendary Chinese goddess usually carried a peach in her hand.

For further colour photos & descriptions see: Satomi, 1956, *Camellia Varieties in Japan.* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.195, p.63; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.468, pp.189, 363; Satô, 1975, *Chûbu no Tsubaki*, p.11. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.82, 225. Different readings: 'Seiohbo', 'Seioobo'.

Seichbo. Andoh, 1971, *Tsubaki, Meika to Shôkai to Saibai*, p.212. Different reading for **Seiôbo.**

Seioobo. Andoh, 1982, *International Camellia Journal*, No.14, p.55. Different reading for **Seiôbo.**

Seiran. (Place Name), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.259, colour photo and description: Medium size, white with pink and deep, clear red streaks, wide, vase-shaped single of 5-6 petals and central stamen coloumn with yellow anthers. Blooms mid-season. Leaves bright green, elliptic, margins crenate. Originated in Matsu'e City, Shimane Prefecture, Japan. Note: 'Seiran' is the name of one of the eight scenic spots in Matsu'e City. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.144 with colour photo; English translation p.99. A chance seedling of 'Katsura-nishiki'. Named and released by San-in Camellian Club in 1985.

Seiryû. (Clear Stream) (*C.hybrid*) from Tokyo. *Japan Camellia* No.67, February 2002: A crossing of *C.hybrid* **Pop Corn** × *C.hybrid* **Wirlinga Belle.** White, outer petals pinkish, semi-double, small, blooms in early to mid season. Leaves medium. Tree vigorous with long nodes. Originated by Yaichirô Fujimoto.

Seiryû. Different reading for **Aoyagi.**

Seiryûji. (Azure Dragon Temple), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.82, colour photo, p.225, description: Small, campanulate single, with 5 overlapping petals of blush pink, fading to their base, and compact stamen column with gold anthers and cream filaments. Leaves lanceolate, shining dark green, apex acuminate, margins medium serrate. Originated in Chûbu area, Japan.

Seisai. (Star Colour), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.89, colour photo and description: Medium size, faint pink, wide, cup-shaped single with 5 broad, crinkled, reflexed petals with irregular margins and a short, central stamen column with pale lemon filaments, joined for their lower third, and yellow anthers. Blooms early to mid-season. Leaves mid-green, broad-ovate, apices blunt-acute, margins serrulate. A cultivar from a private family in Yatsuo Town. Named and released by Tokuji Ôoka in 1983.

Seisan. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.62; ibid 1970, No.10, p.156. Believed to be a misreading for the similar characters for 'Setsusan' (**Sessan**).

Seishi. (Written Pledge), *(C.japonica)*, Botan-en Nursery Catalogue, 1955, *Engei Hôchi* No.234. Description not seen. Originated in Japan.

Seishi. (Female Name). *(C.hybrid). Nagoya Camellia Society Bulletin*, 1992, No.25, p.17, colour plate No.59, p.6: Originated by Kôji Funakoshi, Nagoya, Japan. A seedling of *C.japonica* **Shigi-tatsusawa** x 'T.D. Wipper' (**Dave's Weeper**). Small size, 6-7 cm across. Single pink flower of 6-7 petals. Intense fragrance. Seishi was the name of a peerless beauty from Go in the Shunjû era. Fusa, Lord of Go, bewitched by her beauty, endangered his dynasty. She was of Chinese and Persian parentage and it is said that she had a body fragrance like *Rosa rugosa.*

Seishô. (Noble Make-up), (*C.rusticana*), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.291, colour photo and description: Medium size, white, semi-double, opening wide cup-shape, with broad, overlapping petals in 2-3 rows and a central cluster of yellow stamens. Late blooming. Leaves mid-green, elliptic, apices tapering acute, margins serrulate. Selected from cultivars at enshôji Temple, Toyama City. Named by Toyama Snow Camellia Enthusiasts Club in 1980s.

Seishu. *(C.japonica), Nagoya Camellia Society Bulletin,* 1994, No.27, p.17, colour plate p.6: Chance seedling of **Matoba-nishiki.** A few red stripes on some petals, with white background. Spherical to cup shaped single with massive stamen cylinder. Early blooming. Moderately fragrant. Originated by Kôji Funakoshi, Nagoya, Japan.

Seishun. (*C.sasanqua* Higo type). *Collected Papers*, ICS Congress, Kurume 2010, p.33, "Introduction of Higo-sasanqua, Takayuki Tanaka". Pink single with 5-8 petals and 39-81 stamens, 8.2 cm to 8.7 cm diameter. Leaves 5 cm x 3 cm. Originated in Japan.

Seisô (Gala Dress), (*C.rusticana*), Hagiya & Ishizawa, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.9, illustration (H): A medium size, 7-8 cm across, anemone to peony form, soft pink, with a row of 7 large outer petals, rounded, emarginate, and a centre cushion of 7-10 erect, folded, small petals and 10 petaloids. Stamens mixed with petaloids. Collected in Nishi Kubiki-gun, Niigata Prefecture, Japan, in 1960. Collected by Susumu Nishizawa, named and relased by Kaoru Hagiya. Leaves long-ovate; petioles hirsute. For colour photos and descriptions see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.380, p.348; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.82, 225; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.366.

Seishûhaku. (Western White), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.14: Pure white. Large, semi-double with crêped petals. Originated in Japan.

Seisui. (Personal Name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.144 with colour photo; English translation p.98. Medium size, red stripes on white ground, single, cupped form as it opens. Flowers early to late. Leaves ovate, medium size. Upright growth, lower branches weeping. A chance seedling of **Hatsu-arashi,** named after the painter, Seisui Morigami. Released by Taneo Okada in 1975. From Osaka.

Seisuikô. (Sparkle of Pure Water). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.144 with colour photo; English translation p.98. Medium size, bluish white, tubular single, cylindrical stamen cluster. Flowers mid-season to late. Upright, vigorous, multi-stock. A chance seedling of **Kamogawa.** Originated and named by Ayano Satô in 1973. Different readings: 'Shimizuhikari', Shimizukô'.

Seiten. (Clear Sky), (*C.japonica*), Itô, Ihei, 1695, *Kadan Chikinshô*, #102: White, single. Large flower variegated with small and large spots of red in a splashed pattern. Originated in Japan. (Believed extinct.)

Seizanbô. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.327. English translation p.233. Small, dark red, tubular to trumpet shaped single, petals channelled, cylindrical stamen column. Flowers mid-season. Leaves elliptic, medium size. Vigorous growth, weeping branches. Selected from wild japonicas growing in Niihama City. Named and released by Tokihiro Kôno in 1984. From Ehime Prefecture.

Seizoroi. (Make an Array), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû,* p.225: Scarlet, medium size, semi-double of 10 petals. Mid-season blooming. Leaves ovate, medium sized, curved, margins with obscure serration. Plant habit bushy and vigorous. Originated in Nishi Kubiki-gun, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1970.

Sekai-no-zu. (World Map), *(C.sasanqua),* Taniguchi, Shinkichi, 1918, *Engei no Tomo*, No.15, pp.53-56. No description. Originated in Japan.

Sekidera. (Title of Yôkyoku Drama), (*C.rusticana*), Tuyama, 1968, *Camellias of Japan,* pl.130, p.65, description, p.126: Leaves narrowly obovate-oblong, surface flat, shiny, margins minutely serrulate, venation slightly impressed, 5.7-8.1 cm. long x 2.3-4 cm. wide; petioles 3:5 mm long, pale green, copiously hairy. Flowers irregular, complete double, pink (Neyron rose 623/1 to crimson 22/2), outer petals 8-12, inner petals very numerous, 28-124, filamentously

stalked petaloids 6-22. Stamens concentric and few, filaments yellow to pinkish. Late flowering. Originated in Yatsuo-machi, Toyama Prefecture, Japan.

Sekido-no-tarô'an. Different reading for **Sekido-tarô'an.**

Sekidoshiro-tarô'an. (Sekido's White Tarô'an), *(C.japonica),* Funaki-en Catalogue, 1986-1987, No.124, p.7; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.27, colour photo and description: Small to medium size, white, cup-shaped single, with 5 large, emarginate, concave, overlapping petals with a broad stamen column with white filaments, joined for their lower third, and yellow anthers. Blooms early to mid-season. Leaves mid-green, broad-elliptic, apices abrupt-acute, margins serrate. A seedling of **Sekido-tarô'an** discovered and released by Toshiaki Kosaki in 1968**.** Originated in the Chûbu area, Japan.

Sekido-tarô'an. (Sekido's 'Tarô'an), *(C.japonica),* Satô, 1975, *Chûbu* no *Tsubaki*, p.19; Seibundô Shinkôsha, 1976, *Garden Life,* p.40, as 'Tarô'an'(Sediko): Small, bright, silvery pink, tubular single of 6 petals, with a cylinder of stamens with yellow anthers and cream filaments, joined for the lower third of their length. Leaves glossy, dark green, ovate to broad-ovate, apex acuminate, margins serrulate, venation somewhat raised. Originated in Chûbu area, Japan in the garden of a merchant of the Sekido family. The cultivar was then grown in the Jômanji Temple, Inuyama City, Aichi Prefecture. For colour photos see: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.309; Katei Gahô, 1984, *Chabana Koyomi, vol.1, Tsubaki,* p.51. Synonyms: 'Tarô'an'(Sekido), 'Usujômanji'. Tarô'an was a famous votary of Chabana, the tea ceremony. Different reading: 'Sekido-notarô'an'.

Sekidô-zan. (Mt. Sekidô), *(C.japonica),* Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.49: White, single, small flat flower, late blooming. Leaves long, elliptic. Plant bushy, spreading wide growth. Originated in Ishikawa Prefecture, Japan.

Sekikawa-koshimino. (Straw Raincape from Sekikawa), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.212: White. Medium size, single with a large corolla. Originated in Japan.

Sekimon-de-benikarako. (Sekimon's Red Anemone), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyô Sha*, vol.5 in section of 'Margined leaves'. Long leaves, slender at base and apex with blue margin. Red anemone form flower. Originated in Japan. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.168. (Believed extinct.)

Sekimori. (Gate Keeper), *(C.japonica),* Itô Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Double, in 3-4 rows, pink with red mottles and stripes. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.33. (Believed extinct.)

Sekimori. (Gate Keeper), *(C.japonica),* Iwasaki, 1829, *Honzô Zufu*; Yashiro, 1841, *Kokon Yôrankô*, vol.311: A light red, with sparse stripes, single, with cylindrical stamen cluster. Originated in Japan. See: JCS., 1981, *Tsubaki*, No.20, p.105. (Believed extinct.)

Sekimori. (Gate Keeper), *(C.japonica),* Uekiya, Seijirô, 1874, *Tsubaki Hyakuro no Zu*, vol.2, No.20: Large, formal double with many small petals, mostly white with some coloured red. Originated in Japan. (Believed extinct.)

Sekimori. (Gate Keeper), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.43, colour photo and description: Small size, white, single with 5-6 fluted petals, tubular, opening saucer--shaped, and a central stamen column with white filaments, joined for their lower third and yellow anthers. Blooms mid-season. Resembles **Ikkyû** but with a longer stamen column. Leaves dark green, elliptic, apices tapering-acute, margins shallowly serrate. Originated in Kurume, Fuku'oka Prefecture, Japan.

Sekimori. Hakoda, JCS., 1987, *Tsubaki*, No.26, p.46. Synonym for the *C.sasanqua* **Shuchûka.**

Sekimoto-shiroyae. (Sekimoto's White Double). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.146 with colour photo; English translation p.100. Medium size, white semi-double. Flowers mid-season to late. Leaves elliptic, medium size. Upright growth. A chance seedling of unknown parentage being raised at the garden of the Sekimoto family in Takatori Town. Named and released by Ikuo Nishihata in 1985. From Nara Prefecture.

Seki-no-kariginu. (Hunting Wear at Gateway). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.146 with colour photo; English translation p.100. Small, deep red, trumpet shaped single, somewhat irregular stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size, waved. Upright, vigorous growth. A chance seedling of unknown parentage. Named and released by Toshikazu Iwamoto in 1987. From Shizuoka Prefecture.

Seki-no-to. (Barrier Door), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.14: Pinkish white. Large double with rounded petals. Originated in Japan.

Seki-no-tsubaki. (Camellia at Barrier), *(C.japonica),* Hino, Sukekatsu, 1638, *Sukekatsukyôki. No* description. Originated in Japan. (Believed extinct.) See: JCS., 1986, *Tsubaki,* No.25, p. 14.

Seki-no-yume. (Gateway of Dreams), (*C.rusticana*), Huttleston Catalogue, 1959; Seibundô Shinkôsha, 1973, *Garden Life*, May, pp.16, 17; Seibundô Shinkôsha, 1979, *Senchinshû* p.82, colour photo, p.225, description: Large, light red with deeper red veining, semi-double with 25-27 slender petals in 3 rows, emarginate, becoming longer and narrower towards the centre, finishing with 3-5 small, spatulate petals mixed with about 30 golden stamens; outer petals reflexed. Leaves ovate, serrations obscure. A cultivar at a temple in Murakami City, Niigata Prefecture, Japan. Named and released by Jitarô Nagao in 1958.

Sekiryû-cha. (Pomegranate Camellia), *(C.japonica),* Ono. 1803, *Honzô Kômoku Keimô;* Iwasaki, 1829, *Honzô Zufu*: Pink, large outer petals, numerous small petals in the centre. Different readings: 'Sekiryû-sa', 'Zakuro-tsubaki'. Chinese reading: 'Shiliu Cha'. (Pomegranate Camellia). Thought to be a synonym for **Zakuro** in the *Kadan Chikinshô*, 1695. Other synonyms 'Isetsubaki', 'Renge-tsubaki'. See: JCS., 1981, *Tsubaki*, No.20, p. 103.

Sekiryû-sa. Different reading for 'Sekiryû-cha', synonym for **Zakuro.**

Sekishin. (Red Heart), (*C.rusticana*), Tuyama, 1968, *Camellias of Japan,* pl.153, p.77, description, p.133 as 'Seki-shin': Leaves dark green, oblong-elliptic, rounded at base, shortly acuminate, closely serrate, venation a little raised. Petioles very hairy. Leaves 5.4-6.3 cm long x 2.2-3.3 cm wide. Flowers single, red (Rhodonite red 0022), widely cup-shaped; petals 5-7, very broad, rounded at apex, emarginate; stamen cluster small, 1.6-2 cm high. Late flowering. Originated in Fujibayashi's Garden, Suwa-machi, Toyama Prefecture, Japan. The name 'Red Heart' (which means sincerity) alludes to the colour of the filaments.

Sekishô. (Evening Shine), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.313, colour photo and description: Medium size, deep red single of 8-9 rounded, emarginate petals and a pinched in central stamen column with pinkish filaments, joined for their lower half, and yellow anthers. Blooms mid-season to late. Leaves glossy deep green, elliptical, apices acuminate, recurved. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1983. This is the parent of **Yomi-no-ginka.**

Sekishô (Kansai). (Evening Shrine). *(C.chekiangoleosa hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.145 with colour photo; English translation p.99. Medium size, vermilion, sake cup-shaped single. Flowers mid-season. Leaves elliptic, large, glossy. Upright, vigorous growth. A cross between *C.japonica* **Kuro-tsubaki** and *C.chekiangoleosa.* Named and released by Kazuo Yoshikawa in 1991. From Osaka.

Sekishun. (Precious Spring), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû*, p.82, colour photo, p.225, description: Large, hemispherical, anemone form, deep pink, with one row of large,

overlapping exterior petals and the centre a large hemisphere of small erect, twisted and folded petals with rare stamens. Leaves small, elliptic, mid-green, apex acute, margins serrulate. Originated in Toyama Prefecture, Japan.

Sekishun. (Regret over the Passing of Spring). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.145 with colour photo; English translation p.99. Medium to large, peach red, peony to lion form. Late flowering. Leaves elliptic, medium size. Upright, vigorous growth. Selected from cultivars raised by a private family in Fuchû Town. Named and released by Shûhô Kirino in 1960. From Toyama Prefecture.

Sekitei. (Personal Name), *(C.japonica),* JCS., 1988, *Japan Camellia,* No.27, p.13, Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.92, colour photo and description: Soft pink single of 3 large petals and 2 smaller petals, recurved, emarginate, lightly fluted. Stamens in a cylindrical cluster, narrowing towards apex; white filaments joined for lower third, yellow anthers. Leaves mid-green. Flowers early to mid-season. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1974. The name is from Hara, Sekitei, a poet of Shimane who loved camellias.

Seki-un. (Red Cloud), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.444: Medium size, deep red, single, opening widely saucer-shape. Petals 5 with deeper colour in the centre. Stamen column, yellow anthers, white filaments. Originated in Japan.

Sekiyô (Setting Sun), (Higo), Tamura, 1956, *Takiishubyô Shinkaki:* A sport of **Yamato-nishiki** - Deep pink, splashed and dotted white, 12 cm wide, 6-7 petals. Stamens opening circular, light yellow. Leaf small, obovate-elliptic. Originated in Japan. Different readings: 'Sekiyoh', 'Yûhi'.

Sekiyô. (Setting Sun), *(C.sasanqua),* Shimada, Yaichi, 1957, *Kumamoto no Sazanka ni Tsuite. Dantairin;* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.14: Bright pink Large, single, early flowering, fragrant. Selected and named by Ono, Matao, Kumamoto Prefecture, Japan. See: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.575 & p.395.

Sekiyoh. Vi Stone, 1983, SCCS., *The Camellia Review,* vol.45, No.2, p.20. Different reading to **Sekiyô.**

Sekizakura. (Cherry at the Barrier), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.36, colour photo and description: Medium size, white, wide campanulate single, with 6-7 wide, rounded, overlapping petals and a central stamen cylinder with white filaments joined for their lower third and pale yellow anthers. Blooms mid-season. Leaves light green, ovate, apices acute, margins serrulate. Originated in the Toyama Prefecture, Japan. Named and released by Mitsuroku Makino in 1980s.

Sekka. (Snow Flower), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.63, p.32, description, p.103: Leaves ovate, apex shortly acuminate, flat, venation slightly impressed, 7.7-8.7 cm long x 3.74.8 cm wide; petioles hairy, 9 mm long. Flowers pure white, formal double, opening flat, petals 27-37, oblong or broadly elliptic, manifestly emarginate, often denticulate. Stamens and pistil degenerate. Flowers mid-season to late. Originated at the Buddhist Temple, Joryûji, Yatsuomachi, Toyama Prefecture, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû,* pp.83, 225. Named and released by Takeda Pharmaceutical Company in 1968.

Sekkei. (obscure), *(C.japonica),* Yashiro, 1841, (Ichijima, 1906), *Kokon Yôrankô,* vol.309, p.361. No description. Originated in Japan. (Believed extinct.)

Sekkô. (Red Snow), *(C.japonica),* Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô:* Single, Chinese bell-flower form with tea-whisk style stamen cluster. Red ground with white spots. Originated in Japan. (Believed extinct.) Different reading 'Yukibeni', 'Setsukô'.

Sekkô. (Red Snow), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô:* vol.309. No description. Originated in Japan. (Believed extinct.) Possible different reading for 'Yukibeni' in *Kadan Chikinshô*, 1695.

Seko-no-yuki. *(C.rusticana).* Claude Thoby, 1993, *Camélias,* pp.13, 19, 57: Vivid pink, semi-double. Blooms mid-season. Collected in Japan, Named in France.

Selby Sears. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* No description. Originated in USA.

Selena. Shepherd & Co Nursery Catalogue, 1883-1884, p.38. Orthographic error for **Seline.**

Selina. Shepherd & Co. Nursery Catalogue, 1880. Orthographic error for **Seline.**

Selina Louise. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* White with a definite yellow centre. Large, rose form double. Vigorous, upright growth. Blooms mid-season to late. Originated in USA by C. Grischow, Portland, Oregon.

Seline. *(C.japonica),* Guilfoyle Nursery Catalogue, 1866, p.19. No description. Originated in Australia. Orthographic errors: 'Selina', 'Selena'.

Selma Shelander. *(C.japonica),* ACS, *Newsletter*, vol.4, No.4, Oct.1949, Reg. No.19; Wood, 1949, *American Camellia Yearbook*, p.281 for the Illges Medal Award: A 17 year old seedling of unknown parents; originated by C.S. Tait, Brunswick, Georgia, that first flowered 1946. Plant growth is average, compact and upright. Leaves dull green, 8 cm x 3 cm, tips curve inwards and downwards, margins undulate, slightly, shallowly serrate. Flowers large, white, semi-double, 11-15 cm across, can vary to incomplete double with small petaloids, usually 14-17 petals. Buds have a pink tinge. Stamens in a central group, anthers large, dark yellow, filaments light yellow. See colour pl. - Fendig, 1950, *American Camellia Catalogue.* Orthographic errors: 'Thelma Selander', 'Selma Variegated'.

Selma Variegated. Abbott's Sunny Knoll Nursery Inc. Camellia Price List, 1954 as 'Selma Vari.'. Orthographic error for **Selma Shelander.**

Selma Walker. ACRS., 1981, *Camellia News,* p.40. Orthographic error for **Salma Walker.**

Selvaggia del Vergiolesi. *(C.japonica),* Scarlatti Catalogue, 1888: Flower very large, perfectly imbricated, ivory white lined with rose. Originated in Italy by Franchetti, Florence. Orthographic error: 'Selvaggio del Vergiolesi'.

Selvaggio del Vergiolesi. Rovelli Catalogue, 1902-1903. Orthographic error for **Selvaggia del Vergiolesi.**

Semi de Mariani. *(C.japonica),* Verschaffelt Catalogue, 1844-1845, p.29. No description. Note: This name probably should be 'Semis de Mariani', that is, "seedling of Mariani". (Believed extinct.)

Semi de Vetillart. *(C.japonica),* Verschaffelt Catalogue, 1844-1845, p.29. No description. Note: This name probably should be 'Semis de Vetillart', that is, "seedling of Vetillart". (Believed extinct.)

Semi-double Blush. *(C.japonica),* Kiyono Nurseries Catalogue, 1933, p.8: A fast growing, pale pink, semi-double, medium sized with 11 petals. (8 cm across). Colour the same as Incarnata. Beautiful yellow stamens. Originated from an unnamed stock plant imported from France. Leaves narrow, light green, apex acuminate, finely serrulate, 8 cm x 3.2 cm. Slow, upright, willowy growth. For colour pl. see Fendig, 1949, *American Camellia Catalogue.* Synonyms: 'Celtic Rosea', 'Pearl of China', 'Rose of China', 'Kiyono Semi-double Blush' and erroneously 'Hagoromo'.

Semi-double Crimson. Puddle and Hanger, 1961, RHS., *The Rhododendron and Camellia Yearbook*, No. 15, p. 120. Synonym for **Mars.**

Senbazuru. (Thousand Cranes), *(C. rusticana),* JCS., Jan. 1973, *Tsubaki*, No. 12, colour photo No.7, p.3, description, p.10: Small, 5-6 cm across, light to dark red, irregular, open peony to semi-double. Outer petals, about 10, oblong, emarginate, are in two rows. In the centre from a short stamen cluster of about 30 to a mixture of stamens, petaloids and small, erect petals, twisted and folded in various degrees, filaments yellow. Leaves dull green, ovate-elliptic, apex acute, margins sharply, shallowly serrate; petioles 7-8 mm long hirsute. Flowers early to mid-season. The tree is low growing and compact; heavy flowering. Originated in Yamamoto, Ojiya City, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1973. See: Seibundô Shinkôsha, 1979, *Senchinshû,* p.84, colour photo. Resembles **Aiaigasa,** but smaller in size and paler in colour.

Senbazuru (Chûbu). (A Thousand Cranes). *(C.japonica),* Kurume Shibu, colour poster illustration, 1997 as 'Senbazuru': Small, trumpet-shaped, 5-petalled single. Faint blush pink fading to pale yellow at centre. Cylindrical stamen column with ivory filaments and pale yellow anthers. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.149 with colour photo; English translation p.102. Leaves narrowly elliptic, medium size, curved outwards at margins. Multi stock type, upright, vigorous. Named and released by Minoru Satô in 1973. From Aichi Prefecture.

Senbon-kasuri. (Thousand Patches), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku:* Red spotted white; double. Originated in Japan. Different reading 'Senbon-tobi'iri'. See: JCS., 1965, *Tsubaki*, No.5, p.29. (Believed extinct.)

Senbon-tobi'iri. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.157. Different reading for **Senbon-kasuri.**

Seneca. *(C.japonica),* Dick, Robert, 1842, *Magazine of Horticulture*, 8:223: Raised from **Coccinea**; its foliage is rather narrower than its parent; the flower is pale or light pink with 17 large petals, very few stamens and an imperfect style. Originated in USA by Robert Dick, Georgetown, D.C.

Sen'e-kotsubaki-kasuri. (Many Tiers, Small Variegated Camellia), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.289 as 'Sen-e-kotsubaki-kasuri': Small, dark red, informal double. Originated in Japan. Different reading: 'Sen'e-kotsubaki-tobi'iri'. (Believed extinct.)

Sen'e-kotsubaki-tobi'iri. Different reading for **Sen'e-kotsubaki-kasuri.**

Sen'e-zaki. Synonym for **Somekawa.**

Sengokubune. (Wooden Sailing Vessel of the Edo Era), *(C.japonica),* Nagoya Camellia Society Bulletin, 1984, *Tsubaki,* No.17: Found by Hikozô, Hayashi at the Yama-no-kama shrine where it was known as 'Yama-no-kama-tsubaki'. Small to medium size, single, lavender pink flower. Blooms early to late. Originated in Japan.

Senhime. (Name of Tokugawa Princess), *(C.japonica),* Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.36. Inazawa Nurseries Co. Ltd Catalogue, 1980, A-266, p.10: Dark red, peony form. Large flower. Originated in Kantô, Japan.

Senhime. Seibundô Shinkôsha, 1979, *Senchinshû*, p.231. Different reading for 'Chihime', synonym for **Chiyohime.**

Senicea. *(C.japonica),* Berlèse, 1838, *Monographie of the Genus Camellia* -Translated by Dearborn -There exists three different camellias under this name; the foliage of the first resembles that of **Florida;** buds large, roundish, depressed, scales yellowish; flower large, full, cherry red, opening gradually in the form of a cup; petals of the circumference arranged in several rows, broad, rounded and imbricated; those of the other rows are much smaller, a little rumpled in the centre, sometimes striped with white, a little twisted and contains one or two stamens. The second variety has leaves 5 cm wide x 7.5 cm long, ovate lanceolate, very acuminate, of a faded green; flower is large, of a cherry-red, very double, well formed; petals well arranged and imbricated regularly. The third variety has rather large leaves, inclined towards the earth, and of a pale green; the flower is composed of 7 large petals in the circumference; the petals of the middle very nearly like those of **Anemoniflora.**

Senjô-ga-take. (Name of a Mountain), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.14: Dark pink. Large single with broad, incurved petals. Originated in Japan.

Senju. (Thousand Hands & Thousand Ages), *(C.japonica),* Hamamatsu, 1825, Setsuyô Kikan; C*hinka Zufu,* (before 1700), Watanabe, 1969, pl.284; Iwasaki, 1829, *Honzô Zufu*: Medium size, single,
dark red, 5 petals and a cushion of small petaloids in the centre, anemone form. Originated in Japan. Different reading: 'Senshu'. (Believed extinct.) Iwasaki describes this as with a normal stamen cluster, somewhat different from the *Chinka Zufu*. Note: The kanji characters for this cultivar are written in two ways; one is 'Thousand Hands', the other is 'Thousand Ages'.

Senkô-sancha. Ichijima, 1906, *Kokon Yôrankô.* vol.344, (Yashiro, 1841, reprint), p.568. Different reading: 'Asabeni-sancha', 'Seikô'. Chinese readings: 'Jianhong Shancha', 'Chien-hung Shanch'a'. Synonyms: 'Gyokumeika', 'Kaikôka'. A group name for the species *Camellia sasanqua.*

Sennen-fujimurasaki. (Sennen Lavender). *(C.japonica),* Funakien Catalogue, 1986. p.7. No. 128. Inazawa Nurseries Co. Ltd. Wholesale Catalogue, 1986-1987: Clear lavender purple, tinged blue, depending on temperature and environment. Medium size, single; cup to trumpet form. Spreading growth, vigorous. Blooms mid-season. Selected from a seedling of a wild *C.japonica* by Sennen Matsumoto, Japan. Yokoyama & Kirino, 1989, *Nihon no Chinka*,

p.232, colour photo and description: Small size, lavender red to purple, tubular single with broad-ovate leaves of mid-green, shallowly, coarsely serrate. Blooms mid-season. Selected from wild camellias in the Shimabara Peninsula, Nagasaki Prefecture, Japan. Discovered and named by Sennen Matsumoto in 1982.

Sennengiku. Wada, 1941, *Garden Treasures of Japan*, p.30. Different reading for **Chitosegiku.** Tuyama, 1966, *Camellia Cultivars of Japan*, pp.366, 417.

Sennin. (Hermit), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.202, colour photo and description: Medium size, deep red, wide campanulate single, with 5 broad, emarginate, over-lapping petals and a tall stamen coloumn with pinkish filaments, joined for the lower third, and yellow anthers. Blooms early to mid-season. Leaves deep green, elliptic, apices acuminate, margins shallowly serrate. Selected from wild japonicas in Kurume City, Fuku'oka Prefecture, Japan. Named and released by Saisuke Hisatomi in 1965.

Sennin-bokuhan. *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.85 with colour photo. A seedling of **Momoiro-bokuhan**, selected and named by Sachie and Yukie Hisatomi, Kurume, Japan in 2003. Deep red guard petals. White petaloids mingled with yellow anthers, anemone form. Vigorous, somewhat upright growth.Leaves medium size, oblong, deep green. Flowers mid-season. .

Senogawa. JCS., 1987, *Japan Camellia*, No.25, p.10, No.1. Synonym for **Senogawa-yuri.**

Senogawa-yuri. (Senogawa Lily), *(C.japonica)*, JCS., 1986, *Japan Camellia*, No.21, p.4, colour photo; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.177 as 'Senogawa': Small to medium size, translucent dark red, campanulate single of 6-7 petals, outer rounded, inner pointed. Central cluster of sterile stamens with pale yellow anthers, white filaments. Anthers sterile. Selected from wild japonicas growing in Hiroshima, collected by Yoshimi Kaneko, named and released by Nobuo Sasai in 1982. Synonym: 'Senogawa'.

Señor Fillios. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.209: Medium size. formal double, white with some carmine markings. Originated in USA.

Senora de Monza. Louis Leroy, 1893, Catalogue, p.100: Imbricated pink. Orthographic variant for **La Signora Di Monza.**

Senorii. *(C.japonica)*, Ambroise Verschaffelt, 1851-1852, Catalogue Général, p.18. No description. Originated in Belgium. (Believed extinct).

Senorita. *(C.x williamsii), New Zealand Camellia Bulletin*, 1975, vol.IX, No.1, p.28, Reg. No.99: A seedling of *C.saluenensis x C.japonica* **Hikarugenji,** which first flowered 1957. Plant habit is tall and spreading with light green leaves, 8 cm x 4 cm. The flower is anemone form with variable number of petals (12-30) and 4-7 petaloids, curved and waved; colour rose-pink with deeper margins. Flowers mid-season to late. Originated in New Zealand by L.E. Jury, New Plymouth.

Senpu. (Occupying Wealth), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, reprint, pl.72: Small, dark red, incomplete double with a second tier of petals rising from the middle. Different reading: 'Sempu'. (Believed extinct.)

Senritsu-ko. (*C.nitidissima* hybrid). ACS, *The Camellia Journal*, Sept. 2009, p.17 with colour photo; A back-cross of **Hahuko** on *C.nitidissima*. Light yellow, small to medium, formal to rose form double with peach pink petal edges.. Moderately fast, open, upright growth. Flowers mid-season. SCCS, *Supplementary List* 2011. Breeding is given as **Kiho** x *C.nitidissima.*

Senryû. (Hermit Willow), *(C.hybrid)*, ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.30: Very small size, white, single. A seedling of *C.tsaii x C.rusticana* **Mizuyoshi.** Originated in the Ôsaka Prefecture, Japan by Mr. Yoshikawa, Toyonaka..

Sensation. Vanderbilt, 1940, *Camellia Research*, p.7. Synonym for **Eureka Red.**

Sensation (Armstrong). *(C.japonica)*, SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* White to cream white with light rose stripes. Large semi-double. Vigorous, compact, upright growth. Mid-season blooming. Originated by Armstrong Nurseries, Ontario, California, USA.

Sensazione. *(C.japonica)*, Cattolica, G., *Le mie Camelie, My Camellias*, 2005, p.143 with colour photo; Medium to large size, semi-double to loose peony form, red (RHS.CC.53B). Petaloids sometimes have white variegation. A seedling of 'Pomponia Semiplena' **(Pomponia Semi-duplex),** first flowered in 2001. Originated by Dott. Guido Cattolica, Livorno, Italy.

Senshibeni. (obscure), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chinkinshô*, vol.I: Medium size, eightfold flower, red with slender top. Stamens cylindrical. Originated in Japan. Different reading: 'Senshikô'. (Believed extinct.)

Senshikô. Anonymous, 1969, *American Camellia Yearbook*, p.90 as 'Senshiko'. Different reading for **Senshibeni.**

Senshin-tsubaki. (Clean Heart Camellia), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.226: Medium to large, snow-white double. Blooms mid-season. Leaves medium size, ovate, thick, blackish green. Plant habit, vigorous. Originated in Kagawa Prefecture, Japan as an old camellia owned by a family in Mure Town. Named and released by Saneichi Koyama in 1979..

Senshu. Iwasaki, 1828, *Honzô Zufu.* Different reading for **Senju.**

Senshû-an. (Senshû Hermitage), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.225: Clear red. small single tubular flower, stamens like a tea whisk (Chasen), anthers light yellow. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.220, colour photo and description: Small size, deep red, campanulate single, with 5 irregular, slightly reflexed petals, and a short, central stamen group with yellow anthers. Leaves mid-green, obovate, recurved, margins shallowly serrate. Plant habit diminutive. Blooms early to mid-season. Originated in Ishikawa Prefecture, Japan. Named and released by Shûhei Niwa in 1950.

Senshuh. ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.19. Orthographic error for 'Senshun', different reading for **Saishun..**

Senshun**.** (Early Spring), *(C.,japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.19 as 'Senshuh': Medium size, white ground with small, purplish pink variegation, lotus form semi-double. Blooms mid-season to late. Different reading for **Saishun.**

Senshûraku. (Concluding Program), *(C.japonica)*, ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.20. No description. Originated in Toyama Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.148 with colour photo; English translation p.101. Small, white mottles on red ground, tubular to trumpet shaped single, cylindrical stamen cluster. Flowers early to late. Leaves elliptic, small, waved. Upright growth. A variegated form of **Hinamusume**. Named and released by Mitsuroku Makino in 1980s. **Sensuikyô**. (Higo) Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details.

Sensuguruma. (Folding Fan Carriage), (Higo), Uekiya, Bunsuke, 1830, *Uekiya Bunsuke Hikki*. Large flower; resembles **Tatsutagawa.** See: Hiratsuka, 1964, *Higo Camellia*, p.124. Originated in Japan. (Believed extinct.)

Sensuikyô. (Higo) Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details.

Senta-ôbakifu. (Senta's Large Yellow Variegated), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyoshû*, vol.5: Listed in the section for leaves with yellow variegation. Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.166: Leaves round, very large, yellow variegation. Originated in Japan. Different reading: 'Senta-ôba-kihu'. (Believed extinct.) 'Senta' is said to be the abbreviation for the ancient personal name: Senba, Tarô.

Senta-ôba-kihu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.157. Different reading for **Senta-ôbakifu.**

Senta-shirafu. (Senta's White Variegated), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû*, vol.5: Listed in section of leaves with white variegation. Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.162: Small, slender leaves with white variegation. Originated in. Japan. Different reading: 'Senta-shirahu'. (Believed extinct.)

Senta-shirahu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.157. Different reading for **Senta-shirafu.**

Senta-tsubaki. (Senta's Camellia), *(C.japonica)*, Hantei, Kinta, 1827, *Sômoku Kihin Kagami.* Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.159: Leaves with white variegation on more than twothirds of each leaf. Originated in Japan. (Believed extinct.)

Sentinel. SCCS., 1962, *Camellia Nomenclature*, p.94. Abbreviation for **Sentinel-Star.**

Sentinel-Star. *(C.japonica), American Camellia Yearbook*, 1962-1963, p.224, Reg. No.595: A 4 year old chance seedling that first bloomed 1960, originated by Sanlando Springs Nursery, Longwood, Florida, USA. Plant growth is upright, spreading and medium with dark green leaves, 7 cm x 3.8cm. The semi-double flower, similar to **Frizzle White,** is 10.5 cm across x 7 cm deep with 19-21 petals and 10-12 petaloids. The white, red candy-stripe flowers are heavy, with crinkled petals and a whirl of large petals and petaloids mixed with stamens in the centre. Blooms early. Abbreviation: 'Sentinel'.

Sentoku-an. (Sentoku Hermitage), *(C.japonica)*, Funaki-en Catalogue, 1987-1988, No.132, p.8; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.136, description, p.137, colour photo: Small size, pink, paler at periphery, single with 5 broad, irregular, emarginate petals and a central stamen cylinder with creamy filaments, joined for their lower third and yellow anthers. Blooms very early to mid-season. Leaves dark green, elliptic to broad-elliptic, apices tapering acuminate, margins shallowly serrulate. A seedling of **Kaga-wabisuke.** Originated by Matsui, Seizô, in the Ishikawa Prefecture, Japan.

Sen-wabisuke. (Hermit's Wabisuke). (Wabisuke). *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.112. No description. From Kurume City, Japan.

Senyô. (Many Petals), *(C.japonica)*, Uekiya, Seigorô, 1874, *Tsubaki Hyakuro no* Zu, vol.III, No.26: Medium size, formal double with a large number of small petals, white with pink edges. Originated in Japan. (Believed extinct.)

Senyôbeni. Ono, 1803, *Honzô Kômoku Keimô.* Different reading for 'Senyôkô' as 'Chibabeni'. Chinese readings: 'Jianyehong', 'Chien-yeh-hung'. Synonym for **Higuruma.**

Senyôhaku. (Many Petalled White), *(C.japonica)*, Iwasaki, 1829, *Honzô Zufu;* Ono, 1803, *Honzô Kômoku Keimô;* Yashiro, 1841, *Kokon Yôrankô*, vol.306, Ichijima reprint, p.344, describe this as a synonym for 'Shiratama' but now **Shiratama** is a single. Different reading: 'Senyôbeni'. Many petals, pure white, small size. Iwasaki described this as the same as **Kagiri** in *Zoho Chikinshô*, 1710. Originated in Japan. See JCS., 1981, *Tsubaki*, No.20, p.121.

Senyôhaku. Different reading for 'Senyôshiro'. Synonym for **Alba Plena.**

Senyôkô. Different reading for Senyôbeni'. Synonym for **Higuruma.**

Senyôkô. (Many Petalled Red), *(C.japonica),* Iwasaki, 1829, *Honzô Zufu.* Many petals, deep red, thick corolla. Iwasaki described this as a synonym for Karajishi. Originated in Japan. Ono, 1803, *Honzô Kômoku Keimô;* Yashiro, 1841, *Kokon Yôrankô*, vol.306, Ichijima reprint, p.344 describes this as a synonym for Higuruma from *Honzô Hanamaki'e*, 1738. See: JCS., 1981, *Tsubaki,* No.20, p.115. Different readings: 'Senyôbeni', 'Chibakô'.

Senyôshiro. Ono, 1803, *Honzô Kômoku Keimô*. Different readings: 'Senyôhaku', 'Chibashiro'. Chinese readings: 'Jianyebai', 'Chien-yeh-bai'. Synonym for **Alba Plena.**

Senzai. (Rare Chance), *(C.hiemalis),* Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49; ICS., Apr. 1990, *Japanese Camellia Cultivar List,* p.39: Medium size, deep red, formal double. Blooms early to mid-season. Originated in Ehime Prefecture, Japan.

Separately Falling Camellia. Kitamura, 1956, *American Camellia Yearbook, p.*17. Synonym for **Chiri-tsubaki.**

Seppôzan. (Snowy Jewel Mountain), (*C.rusticana*), Tuyama, 1968, *Camellias of Japan*, pl.157, p.79, description, p.135: Leaves lanceolate, dull green, thin, flat, finely denticulate, 6.5-8 cm. long x 3-3.3 cm wide; petioles a little hairy. Flowers semi-double, widely opening, rose (Rhodonite red); petals 12-15, deeply emarginate, often with small, incurved petaloids, 2-6, outside the stamens. Anthers deep, cadmium yellow. Flowers mid-season to late. Originated at Higashi Kanbara-gun, Niigata Prefecture, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.83, 225. Different reading: 'Setsupôzan'.

Sept Bonheurs. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.18; Single pink.

Septangularis. Colla, 1843, *Camelliografia,* [Illust.], p.96. Synonym for **Welbankiana.**

September Morn. Flowerwood Nursery Price List, 1945-1946. Synonym for 'Yoheihaku' (**Shirabyôshi**). Chinese synonym: 'Jiuyue Zhichen'.

September Song. *(C.sasanqua),* Fendig, 1953, *American Camellia Catalogue:* Light pink, large, single. Originated at the McCaskill Gardens, Pasadena, California, USA. For illustration see p.328, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III.

Sera Belle. *(C.japonica),* Lindo Nursery Camellia List, 1941. No description. Originated in USA at Lindo Nurseries, Chico, California.

Serafina. Del Lungo e Girardi, 1928, *Le Camelie*, p.96. Orthographic variant for **Seraphina.**

Serafino Masseti. *(C.japonica),* Scarlatti Catalogue, 1888: Large flower, perfectly imbricated, colour rose, a little clearer at the centre, a large stripe of white traverses half of the major part of a sole petal. Originated in Italy by Scarlatti, Florence.

Seraphim. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Dark pink. Medium size, semi-double with erect centre petals. Blooms mid-season. Originated in USA by Magnolia Gardens, John's Island, South Carolina. Sport: **Seraphim Variegated.**

Seraphim Variegated. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1944-1945: A virus variegated form of **Seraphim** - Dark pink blotched with white. Originated in USA by Magnolia Gardens, John's Island, South Carolina.

Seraphina. *(C.japonica),* Berlèse, 1845, *Monographie*, ed.3, p.116: Medium size, white, single. Fertile. Originated in Italy.

Seratifolia. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.13. Orthographic error for **Serratifolia.**

Serbelloni. Ellis, 1953, *Old Camellia Varieties*, p.324. Abbreviation for **Duca Serbelloni.**

Serbelliana. Loureiro Catalogue No.9, 1872-1873. Orthographic error for **Duca Serbelloni.**

Serbelloniana. Franco Agostoni, 1844, *Catalogo Plantarum* .... Synonym for **Duca Serbelloni.**

Serbilliana. Jacob Makoy et Cie Catalogue, 1849, p.20. Orthographic error for **Duca Serbelloni.**

Serena. *(C.japonica), New Zealand Camellia Bulletin,* 1994, Issue No.118, vol.XVIII, No.5, p.31, Reg. No.337: Originated by Mrs S. Blackie, Putaruru, New Zealand. A chance seedling of **Mrs. Bertha A. Harms.** The flower is a white semi-double with golden anthers, 10 cm across with 16 petals. Blooms mid-season. Upright plant with average density and growth rate. Leaves dark green, 8 cm long x 4 cm wide.

Serenade. (*C.japonica*), *American Camellia Yearbook*, 1957, p.302, Reg. No.312: A 5 year old seedling of **Finlandia,** originated by Mr & Mrs Albert E. Johnson, Beaverton, Oregon, USA that first bloomed in 1957. Plant growth is upright, dense and medium with large, glossy, dark green leaves, deeply veined, 11 cm 7 cm. The cream-white flowers are 12.5 cm across x 6 cm deep with 12, very broad petals and 84-109 petaloids, intermingled with 100 stamens. Fragrant. Blooms mid-season to late. See colour photo: Front cover, 1958, SCCS., *The Camellia Review*, vol.19, No.6.

Sergeant Barrios. *(C.japonica)*, Semmes Nursery Catalogue, 1942 as 'Semi-double Rosea' but changed in the 1944-1945 catalogue to 'Sgt. Barrios': Rose-red. Large, semi-double. Vigorous, compact, upright growth. Blooms mid-season. Originated in USA by Semmes Nursery, Alabama. Orthographic errors: 'Sargent Barrios', 'Sargeant Barrios'. See colour pl., Fendig, 1950, *American Camellia Catalogue.* Synonyms: 'Semi-double Rosea', 'Wade Hampton', 'Wade Hamilton'.

Serica. Jacob Makoy Catalogue, 1836, p.17. Orthographic error for **Sericea.**

Serica Vera. Berlèse, 1840, *Monographie*, ed.2, p.145, 230. Orthographic error for 'Sericea Vera', synonym for **Sericea.**

Sericea. *(C.japonica)*, Sweet, 1830, *Hortus Britannicus,* ed.2, p.74: Double, silky. Berlèse, 1837, *Monographie,* ed.1, pp.87, 128: Leaves 6-10 cm long x 3 cm wide, lanceolate, apex reflexed, coarse serrations. Flower over 10.8 cm, across, cherry-red, sometimes darker and dull; anemone form, similar to 'Waratah Alba' (**Anemoniflora Alba**) only larger and flatter; petals of the circumference are in 4 rows, broad, round-oval, regularly placed but unequal in size, very notched; the centre is a hemisphere composed of variable petals. short, very numerous, collected together. Originated in England. Synonyms: 'Sericea Vera', 'Puquella'. Orthographic errors: 'Serica', 'Cericea', 'Serica Vera'.

Sericea Striata. *(C.japonica)*, Verschaffelt, 1850, *Iconographie*, Book VII, pl.1: It was obtained from seed in Italy. It is a perfection with imbricated petals, red with distinct white stripes, either single or sometimes double, which separate the petals into two distinct parts. Franchetti, 1855, *Collezione di Camelie*, p.57: Deep pink bordered white, sometimes self-carmine. The flower resembles **Nassiniana.** Orthographic error: 'Cericea Striata'.

Sericea Vera. Berlèse,. 1840, *Monographie*, ed.2, pp.145, 230, as 'Serica Vera'. Synonym for **Sericea.**

Serojac. Guichard & Soeurs Nursery Catalogue, 1894. Orthographic error for **Serojah.**

Serojah. *(C.japonica)*, Franchetti, 1855, *Collezione di Camelie.* p.57: White with lines and spots of carmine, some rows of petals imbricated, those in the centre erect. Originated in Italy. Orthographic error: 'Serojac'.

Serotina. *(C.japonica)*, Burdin, Chambery Nursery Catalogue, 1834, p.19. No description. Originated in Italy. (Believed extinct.)

Seroyang. Wang & Yu, 1989, Camellia, No.30, p.27. Erroneous translation for **Sailuoyang.**

Serpentina. *(C.japonica)*, Anonymous, 1877, *R. Società Toscana di Orticultura Bollettino*, 2:101-107 as a seedling of **Pompone**. Originated in Italy. No description. (Believed extinct.)

Serra. *(C.japonica)*, Verschaffelt, 1844-1845, Catalogue, p.29. No description. Oudin, Lisieux Nursery Catalogue, 1845-1846, p.48. Verschaffelt Catalogue, 18471848, p.62. No description. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, vol.40, p.311: Flower 9-10 cm, across, peony form, of soft white, dotted and streaked with carmine red, the streaks multiple and diverse in form. Petals of the circumference in 2-3 rows, oval-obtuse, very notched, irregular, thin and transparent; those of the interior, numerous and varied, forming a dome at the centre. Originated in Italy.

Serra 2. *(C.japonica)*, Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.14. No description. Originated in Italy. (Believed extinct.)

Serratifolia. *(C.japonica)*, Harrison ed., 1838, *The Floricultural Cabinet*, p.149: Double, fine dark red. Makoy Nursery Catalogue, 1838. No description. Berlèse, 1843, *Iconographie*, vol.3, pl.268: The flower is 10 cm across, full, regular, largely imbricated, red-purple with spots of rose and white lines which regularly divide the petals which are in 8-9 rows, rounded, nearly entire, concave, erect, somewhat compact; the three outside rows are deep red with many veins of blood-red; those of the centre are cherry-red with numerous spots and lines of white. Originated in England. In USA it became confused with an American cultivar **William Penn.** Orthographic error: 'Seratifolia'.

Serratifolia. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.34. Pseudonym for **William Penn.**

Serratula Major. *(C.japonica)*, Prince & Co. Nursery Catalogue, 1846-1847, p.9. Description not seen. Originated in USA. (Believed extinct.)

Servi. *(C.japonica)*, Verschaffelt, 1844-1845, Catalogue, p.29. No description. van Houtte Catalogue, 1842, 9:57: Very beautiful, perfect, wine-red flower. Verschaffelt, 1852, *Nouvelle Iconographie*, Book XII, pl.I as 'Servii': This variety, of Italian origin, has been grown for a few years. The arrangement of its petals is in distinct imbricated serries, increasing in size from the centre towards the circumference. A better than average floral amplitude, a rich poppy-rose colouring, recommend this camellia. Orthographic error: 'Servii'. Synonym: 'Servi d'Italie'.

Servi d'Italie. van Houtte Catalogue, 1843-1844, 12:ddd. Synonyn for **Servi.**

Servii. Verschaffelt, 1852, *Nouvelle Iconographie*, Book XII, pl.I. Orthographic error for **Servi.**

Servoodii. Burdin Maggiore & Co. Catalogue, 1845, p.43. Orthographic error for **Sherwoodii.**

Sesanqua. Curtis, 1820, *Monograph*…, p.1. Michael Floy Nursery Catalogue, 1823, p.27. Synonym for **Lady Bank's.** Mertens & Fontaine, *Collection de cent espèces.....camellia*, 1845, pl.100. Appears to be a synonym for *C.maliflora.*

Sesanqua Alba Semiplena. Baumann & Baumann, 1831, *Collection de Camellias élevés à Bollweiler*, p.9, pl.14. Synonym for **Lady Bank's.**

Sesanqua Rosa. Michael Floy Nursery Catalogue, 1823, p.28. Synonym for *C.maliflora.*

Sesanqua Rosea Plena. Baumann & Baurnann, 1831, *Collection de Camellias élevés à Bollweiler.* Synonym for *C.maliflora.*

Sese-no-shiranami. (Torrent of White Waves), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* White striped and splashed deep pink; small, 6 petalled single. Originated in Japan. Different reading 'Sezeno-shiranami'. (Believed extinct.) See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.105.

Sessan. (Snowy Mountain), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White, semi-double in 3 rows, medium size with a big centre cluster. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.33. Different readings: 'Setsuzan', 'Yukiyama', 'Setsusan'. (Believed extinct.)

Sessan. (Snowy Mountain), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshô'en Chabaifu:* Snow white, large. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.517, p.210, description, p.383: White, single of 7-8 petals opening flat; 7-10 cm across; petals broad, overlapping, crêped, emarginate. Stamens pale yellow in a spreading cluster. Leaves small, dark green, ovate, apex acute, margins crenate. Originated in Japan. Synonym: 'Setsuzan'(Edo). Different readings: 'Setsuzan', 'Setsusan', 'Yukiyama'.

Sessan. (Snowy Mountain), *(C.sasanqua),* Itô, Ihei, 1719, *Kôeki Chikinshô:* White, semi-double, large, early blooming. Originated in Japan. Different readings: 'Sessan-sazanka', 'Setsuzan', 'Setsu-san', 'Yukiyama'. (Believed extinct.)

Sessan. (Snowy Mountain), *(C.hiemalis),* Shimada, Yaichi, 1957, *Kumamoto no Sazanka ni tsuite*, *Dantairin; Encyclopedia of Camellia in Colour*, vol.I, 1972, pl.568, p.220, description, p.394: White single to semi-double, 8-10 petals, 6-9 cm. across, opening wide cup-shaped, fragrant. Petals broad, deeply cleft to cordate, crinkled. Named by Saitô, Kiyofusa. Originated in Kumamoto Prefecture, Japan. Different readings: 'Yukiyama', 'Setsuzan', 'Setsusan'. Synonym: 'Setsuzan'(Higo).

Sessan-sazanka. Itô, Ihei, 1719, *Kôeki Chikinshô*. Different reading for **Sessan.**

Sessen. (Pen Name of Poet), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.74, colour photo & description: Small size, faint pink, tubular to campanulate single of 5 rounded, broad, overlapping petals and a broad stamen cylinder with white filaments, joined for their lower third and yellow anthers. Mid-season blooming. Leaves glossy, mid-green, broad-ovate, apices abrupt acute, margins shallowly serrate. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellia Club in 1980.

Sesshû. (Name of Ancient Famous Painter), *(C.japonica),* Funaki-en Catalogue, 1986-1987, No.126, p.7; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.28, colour photo & description: Small to medium size, white, wide campanulate single with 5 broad, emarginate, reflexed petals and a tall stamen column with white filaments, joined for their lower third and yellow anthers. Blooms early to mid-season. Leaves dark green, elliptic, apices tapering acuminate, margins serrate. Originated in Matsu'e, Shimane Prefecture, Japan. Selected from the wild camellias near the northern side of Lake Shinji, Matsu'e City. Named and released by Yasushi Ihara around 1981.

Seta-no-nagahashi. (Long Bridge of Seta), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* White with red stripes and splashes. Large single with 5 petals incised at points. Originated in Japan. The long bridge at Seta, Shiga Prefecture, was the scene of many famous battles. (Believed extinct.) See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.108.

Setchû. Itô, Ihei, 1695, *Kadan Chikinshô*, #75: Different reading for **Secchû.**

Setchûka. Satomi, 1956, *Camellia Varieties in Japan*, p.6 as synonym for **Hatsukari** as **Shôwa-wabisuke**. (Flower in Snow). Different reading: 'Secchûka'.

Seto-egao. (Seto's Smiling Face), (Higo), Seibundô Shinkôsha, 1979, *Senchinshû*, p.84, colour photo, p.225, description: Large, soft pink with colour fading to base of petals, 5-6, broad, fluted, somewhat crinkled and irregular in size. Stamens in a ring with old gold anthers and cream filaments. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.118, colour photo, p.119, description. Originated in Kumomoto Prefecture, Japan. Resembles **Sakuragari, Egao** and

Asomusume. Seto was the person who brought this variety, which was thought extinct, from Kumamoto to Tokyo around 1914.

Setogawa-bashi. (Setogawa Bridge). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.147 with colour photo; English translation p.101. Medium size, deep red, semi-double to open peony form, with a small number of irregularly scattered stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size, waved. Upright, vigorous growth. A chance seedling of unknown parentage. Selected and released by Toshikazu Iwamoto in 1986. From Shizuoka Prefecture.

Seto-no-musume. (Seto Girl), (Wabisuke), ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.20: Very small size, purple with a band of light pink, shading to red; sake-cup shaped single. Medium to late season blooming. Originated in Ehime Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.147 with colour photo; English translation p.101. Regarded as being a chance seedling of 'Uraku' (**Tarôkaja**). Named and released by Isamu Ochi in 1981.

Seto-no-tsuki. (Seto Moon), *(C.japonica),* Rothschild, 1963, RHS., *The Rhododendron and Camellia Yearbook*, No. 17, p. 144. No description. Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.36, 37, colour photo, p.37, description: Small size, white, campanulate single with 6 rounded, overlapping, slightly reflexed petals and a central stamen column with white filaments, with pinched in apex, joined for their lower third, and yellow anthers. Blooms mid-season. Leaves deep green, elliptic, margins serrulate. Selected from wild japonicas in Tabira Town, Nagasaki Prefecture, Japan. Discovered by Jitsuji Urata in 1981, named by Kichinosuke Aburatani.

Setosuke. Different reading for **Seto-no-suke.**

Seto-no-suke. (Seto Lineage), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, white, single. See JCS., 1969, *Tsubaki*, No.7, p.33, and ibid, 1982, No.21, p.110: White, single, medium size, with light red cast on margins of petals. Different reading: 'Setosuke'. Originated in Japan. (Believed extinct.)

Seto-uchi. (Inner Seto), *(C.japonica),* Seibundô Shinkôsha 1979, *Senchinshû*, p.83, colour photo, p.225, description as 'Setouchi': Medium size, rose-pink, single with petals veined deeper colour, large, overlapping, emarginate. Stamens in a central column with golden anthers and white filaments joined for the lower third and pinched in apex. Leaves shiny green, obovate, apex acuminate, margins shallowly serrate. Originated in Kansai area, Japan. Named and released by Katayama Juraku'en Nursery.

Setsugekka. (Snow, Moon and Flowers), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô*, vol.311, as originated by Yasaburo. No description. Originated in Japan. (Believed extinct.)

Setsugekka. (Snow, Moon and Flowers), *(C.japonica),* Tuyama, 1966, *Camellia Cultivars of Japan*, p.342, gives this cultivar as listed in the *Tsubaki Meikan,* (before 1925); Shufu no Tomo-sha, 1976, *Tsubaki to Sazanka,* p.51; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.99, p.35; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.114, p.74; Seibundô Shinkôsha, 1979, *Senchinshû*, p.83, description, p.225: Medium size, single of 5 petals with a ground of pale blush pink to white, dashed and peppered pale red, broad, overlapping, opening wide cup-shaped. Stamens in a central column, widening at the top, yellow anthers, whitish filaments joined for the lower third. Leaves elliptical to broad-ovate, shiny mid-green, apex blunt acuminate, margins serrate, strongly twisted, often with white spots. Plant habit is not vigorous. Originated in Kansai District, Japan.

Setsugekka. (Snow, Moon and Flowers), *(C.sasanqua),* Ashizawa, 1898, *Chabaika Taishû;* Saitama Engei & Co. Catalogue, 1911, p.7: A peculiar, large white double. See the following colour photos: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.516; Macoboy, 1981, *The*

Colour Dictionary of Camellias, p.177; Tuyama ed., 1979, *Ishii's Selected Japanese Camellias*, pl.117, (35): Large, pure white, semi-double of 8-12 incurved petals. Leaves deep green, a little weeping. Upright, fast grower. Early flowering. Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.329, photo, p.326, description: Flower single, white with occasional tinge of Rhodamine pink 527/1 at apices, deepening on reverse, up to 10 cm broad. Petals 7-9, heavily undulate, variable in shape, firm, apices double notched, heavily crimped, light yellow anthers, greenish-white filaments. Leaves oblong-elliptic, medium to dark, semi-glossy green, 5-7 cm long x 2-3 cm wide, margins serrate-crenate, apices tapering. Originated in Japan by Jisuke Minagawa. Synonyms: 'Fluted White', 'Wavy White', 'Elegant Friends'. Different readings: 'Setsugekwa', 'Setsugekkwa', 'Setsugetsuka', 'Setsugetsekwa', 'Setsu Gekka'.

Setsugekka (Izu). (Snow, Moon and Flowers). *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.146 with colour photo; English translation p.100. Medium size, small stripes and splashes of pink and red on white ground, trumpet shaped to flat single, cylindrical stamen column. Flowers mid-season to late. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Appeared in *Senchinshû* in 1979, origin details obscure.

Shades of Evening. *(C.japonica)*, Gerbing's Azalea Garden Catalogue, 1941-1942: A new camellia from Middleton Place, ('Middleton No.5'). A rose-like semi-double form with deep to dark red colouring. When fully opened the petaloids are intermingled with the stamens. There are 5 rows of outer petals. Leaves long and narrow, dark, glossy green. Late flowering. Originated in USA at Middleton Gardens, South Carolina.

Shadow Play. *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue.* Pink. Semi-double. Mid-season. Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.225, illustration, p.222, description: Large semi-double with twisted petals, Neyron rose 623 fading to 623/1; 9 cm across x 5 cm deep. Petals about 15, firm substance, undulate, recurved, broad-obovate, apices notched, margins crimped. In the centre of the flower is a group of small petals, petaloids and stamens in fascicles, white filaments, small, light yellow anthers. Leaves elliptic, cupped, dull dark green, 10-12 cm long x 5.5 cm wide, margins coarsely serrate, long pointed apex and pronounced venation. Plant habit upright, vigorous, free flowering. Originated by Harvey Short, Ramona, California, USA.

Shaguma. (Red Bear – see note), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.205: Medium size semi-double. Long narrow petals about 20 in 3 rows, emarginate, red with paler edges. Originated in Japan. For the unusual pronunciation of this, see Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.157. Different reading: 'Akaguma'. (Believed extinct.) Note: 'Shaguma' refers to the red dyed fur wig used in classical dramas and dances.

Shala's Baby. *(C.japonica)*, ACS., 1986, *The Camellia Journal*, vol.41, No.1, p.28, Reg. No.1986: A small white with a slightly yellow centre, anemone form *C.japonica* chance seedling that blooms early to late. Originated in USA by Robert and Shala McNeil. This 14 year old seedling first bloomed 1974. Average flower size, 7 cm across x 3 cm deep with 12 petals, 60 petaloids and yellow anthers. The flower has a full, tight centre. Plant growth is spreading and medium, with dark green leaves, 7.5 cm x 4.5 m.

Shalimar. *(C.japonica)*, Coolidge Rare Plant Garden Catalogue, 1941. Light pink, medium semi-double. Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.227: Flower semi-double to incomplete double, China rose 024/1 with petal pieces China rose 024; 10 cm across x 5 cm deep with up to 30 petals, outer reflexed, slightly undulate. Centre of flower a duster of crimpled stamens, united for one third of their length, white filaments, yellow anthers. Leaves broad-elliptic, slightly cupped, dull, dark green, heavy texture, 6-9 cm long x 4-5 cm wide, margins broad, shallow, serrations; apices medium, long pointed. Plant habit, upright, spreading, vigorous. Mid-season flowering. A chance seedling originated by Coolidge Gardens, Pasadena, California, USA. Orthographic error: 'Shallimar'.

Shalimar Sunset. *(C.japonica)*, ACS., Feb.1989, *The Camellia Journal*, vol.44, No.1, p.12, Reg. No.2118: Medium to large size, dark red, rose form, sometimes formal double, *C.japonica* chance seedling. Blooms mid-season. *American Camellia Yearbook*, 1989, p.127, colour photo (p.136): The 8 year old seedling first bloomed 1985. Average flower size, 7.5 cm across x 5 cm deep with 60 petals and yellow anthers. Plant growth is dense and medium with dark green leaves, 8cm long x 6 cm wide. Originated in USA by Edwin & June Atkins.

Shallimar. Vanderbilt, 1941, *Camellia Research*, II, p.7. Orthographic error for **Shalimar.**

Shaman. (*C.japonica* x *C.reticulata*), ACS., Nov.1987, *The Camellia Journal*, vol.42, No.4, p.22, Reg. No.2068: Very large, crimson, peony form *C.hybrid (C.japonica* **Hi-no-maru** *x C.reticulata* **Buddha**). Late flowering. Originated by Yoshiaki Andoh, Japan. *American Camellia Yearbook*, 1987, p.84: The 11 year old seedling first flowered 1980. Average flower size 13 cm across x 7.5cm deep with 28 petals, yellow anthers and cream filaments. The flowers have wavy, folded petals and some small petals. Plant growth is upright and rapid with dark green leaves, 8 cm x 5.8 cm.

Shamuro. (obscure), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.I #205: Pale pink, edged white flower mixed with red spots in a splashed pattern. Medium size. double. Itô, Jukyû, 1739, *Honzô Hanamaki'e:* Double with 3-4 petal rows, pale purple ground with white edges and red spots: Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Purple ground with red spots, 3-4 petal rows. Originated in Japan. (Believed extinct.) Note: There are three different colour plates in the *Chinka Zufu*. See: JCS., 1983, *Tsubaki*, No.22, p.122; ibid, 1969, No.7, p.31.

Shamuro. (obscure), *(C.japonica), Chinka Zufu,* (before1700), Watanabe, 1969, pl.330: A medium size, semi-double, white, finely streaked and speckled fuchsine pink. Originated in Japan. (Believed extinct.)

Shamuro. (obscure), *(C.japonica), Chinka Zufu*, (before1700), Watanabe, 1969, pl.676: A large size, double with 4-5 rows of petals, colour white, with large, crimson streaks. Originated in Japan. (Believed extinct.)

Shari Thompson. *(C.japonica)*, ACS., Feb. 1989, *The Camellia Journal*, vol.44, No.1, p.12, Reg. No.2115: Medium size, blush pink with pale pink edges and, sometimes splotched of deeper pink, formal double *C.japonica* chance seedling. Blooms mid-season to late. *American Camellia Yearbook*, 1989, p.127: The 15 year old seedling first bloomed 1978. Average flower size. 8 cm across x 2.5 cm deep with 62 petals. Plant growth is upright and medium with mid-green leaves 8 cm long x 3.8 cm wide. Originated in USA by Johnny Aldrich, Brooklet, Georgia.

Sharlie Rayner. (*C.pitardii x C.japonica*), *New Zealand Camellia Bulletin*, 1972, vol.VI, No.6, p.35, Reg. No.71: A chance seedling originated by B.J. Rayner, Stratford, New Zealand as a *C.pitardii x C.japonica* hybrid that first bloomed 1971. Growth habit, open and upright with

dark green leaves, 7 cm x 3.5 cm. The flower is semi-double with up to 28 petals and measures 7 cm across x 2.5 cm deep. Colour is soft pink fading to white at the centre. mid-season to late flowering.

Sharon. *(C.japonica),* Sander & Fils Nursery Catalogue, 1961, p.11: Double, rose, large size flower. Originated in Belgium.

Sharon Ann Wylie. *(C.japonica),* ACRS., 1965, *Camellia News*, No.20, p.16, Reg. No.68: Originated in Australia by Percy A. Wylie, Dundas, N.SW, as a seedling of **Great Eastern** that first flowered 1959. The plant is a vigorous, upright, compact grower and flowers very early. The flowers are 7.5-8 cm across, white, informal double. Leaves are dark green, elliptic, apex acuminate, 8 cm long x 3.8 cm wide.

Sharon Elizabeth. *(C.sasanqua), American Camellia Yearbook*, 1971, p.49, Reg. No.1153: A mutant of **Cleopatra** first observed by Albert Q. Bell, Roanoke Island Gardens, Manteo, North Carolina, USA. A pygmy growth form reaching 60 cm high by one metre wide. Flowers are semi-double, rose-pink, 5.5 cm across and open flat with 5-8 petals, yellow anthers and white filaments. Early blooming.

Sharon Lee. *(C.japonica),* ACS., 1951, *Quarterly*, vol.VI, No.2, p.8, Reg. No.117: A 13 year old seedling of unknown parentage that first flowered 1943. Originated by Riverbank Camellia Nursery, Riverbank, California. Growth is compact and average, Flowers are irregular complete double, rose colour (1-J-4 Maertz & Paul Chart), size 8-11 cm across. Mid-season flowering.

Sharon Pelton. *(C.japonica), American Camellia Yearbook*, 1971, p.49, 60, Reg. No.1152: A chance seedling that first bloomed 1965, originated by Dr. James B. Tarver, San Marino, California, USA. Plant growth is upright and medium with light green leaves, 10 cm x 3.8 cm. The semi-double, 'Herme' (Hikarugenji) type, soft pink bloom is 10-12.5 cm across x 5 cm deep with 25 petals and golden anthers. Blooms mid-season.

Sharon Raye Pearson. *(C.japonica),* SCCS, 1949 Bulletin, vol.11, No.2, p.19. No description. SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.62: Medium pink sport of **Feastii,** originated in USA. See illustration, p.302, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II.

Sharon Rose. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* A 5 year old seedling of unknown parentage, originated by Cecil R. Allen, Milton, Florida, USA that first flowered 1950. Plant growth open and slow. The 10 cm across flower is an incomplete double with large petaloids. There are three rows of large, almost square petals, followed by a row of curled petals, small petaloids and stamens. Then a couple of rows of imbricated petals with smaller petals in the centre. Flower colour is red (3-U-6 M&P). Flowers mid-season.

Sharon Shuman. *(C.japonica),* ACS, *The Camellia Journal*, Dec. 2002, p.20 with colour photo, Reg. No.2585. A pale pink formal double chance seedling. Flowers mid-season to late. Flowers are 9.5 cm across. Originated by Johnny Aldrich, Brooklet, Ga., USA. *American Camellia Yearbook*, 2002, p.131, colour photo p.c11. The 30 year old seedling first flowered in 1980. First introduced soon after 1980. Flowers have 72 petals, and 8 small petals in the bud centre. Plant is open, with average growth rate and dark green leaves 9.5 cm long x 5 cm wide.

Sharon Smith. *(C.japonica),* ACS., May 1987, *The Camellia Journal*, vol.42, No.2, p.8, Reg. No.2040: Large, light rose, rose form double *C.japonica* chance seedling. Blooms early. Originated by Walter L. Smith. Tylertown, Mississippi, USA. *American Camellia Yearbook*, 1987, p.85 with colour photo between p.60-61. The 15 year old seedling first flowered 1981. Average flower size, 10 cm across x 5 cm deep with 60 petals and yellow anthers. Plant growth is upright, open and medium with dark green leaves, 8 cm x 6 cm.

Sharon-no-hana. (Flower of Sharon). *(C.japonica), Japan Camellia*, 1991, No.39, p.13, Kairyô-en Mail Order Catalogue, 1995, p.3, colour plate: Medium size, anemone form. The delicate outer petals are white and washed pink. Central mass of creamy white petaloids. Early flowering. Originated in by Dr Kaoru Hagiya, Niigata, Japan.

Sharwoodii. Jean Verschaffelt, 1860-1861, Price List, p.12. Orthographic error for **Sherwoodii.**

Sharyn's Blush. *(C.japonica),* ACRS., 1984, *Camellia News*, No.91, p.22, Reg. No.316: Originated by T.E. Pierson, Hurstville, N.S.W., Australia from a chance seedling of **Furô'an** that first flowered 1982. The formal double, 14 cm across x 5 cm deep flower has rose to red petals, similar in colour to a sliced strawberry. Blooms mid-season to late. An open, upright plant with 10 cm x 4.5 cm mid-green, ovate leaves.

Sharyû-ô. (Dragon God), *(C.x vernalis)*, ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.41 as 'Syarû-ô: Medium size, white, semi-double, flat flower. Early blooming. Originated in Kagoshima Prefecture, Japan.

Sherry Lynn. *(C.japonica), American Camellia Yearbook*, 1994, p.62, Reg. No.2284, colour plate between pp.64-65: A medium size, blush pink, formal double *C.japonica* seedling of **Nina Avery** that blooms early to late. Originated by Marvin Jernigan, Warner Robins, Georgia, USA. The 10 year old seedling first flowered 1987. Average flower size is 8 cm across x 3.5 cm deep with 66 petals. Plant growth is upright, dense and average with dark green leaves 9.5 cm long x 3.5 cm wide.

Shetao Mudan. (Purple Tree Peony), *(C.japonica),* Wang & Yu, 1989, *Camellias,* No.64, p.37, colour pl.[p.137]: Red semi-double with 3 rows of rounded, slightly emarginated petals. A small tree. Leaves and flowers resemble **Taohong Mudan** but colour is a deeper purple. Originated in China.

Shibagaki. (Brushwood Fence), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* #198: Inside of flower is pale yellow and the rest is white. Large, double flower. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White, double, large column of stamens, egg yellow. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.32, ibid, 1982, No.21, p.103.

Shiba-onkô. (Historical Character from the Tsung Dynasty), *(C.japonica),* Sakuden, 1630, *Hyakuchin-shû:* Red, double. The size of each flower is variable, some have no stamens. Late flowering. Originated in Japan. (Believed extinct.) Shiba-onkô's Chinese name was Sze Ma Kwang, who was an ancient Chinese scholar and politician. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.102.

Shiba Xueshi. (Eighteen Scholars), *(C.japonica)*, Liu, 1959, *Chungkuo Chu Ming Tichi Chung Hua Hui.* This is a famous old variety. There can be many different coloured blooms on the one branch. It mutates readily and has many forms such as 'Hongbai Mudan', 'Zuoxuanzhuan, 'Yuxu-anzhuan', 'Fenxin Zhuanban', and 'Hongbaiyun'. See pl.161, p.75, *Encyclopedia of Camellias in Colour*, vol.II, 1978 for the pink form under 'Sheboshushi'. This is a medium size, silvery pink, formal double. Leaves mid-green, ovate, apex acute, recurved, margins serrulate. Originated in China. There are white, red, pink and variegated forms. Different reading: 'Shih-pa-hsüeh-shih'. Taiwanese reading: 'Sheboshushi'.

Shibenashi-gokayama. (Stamenless 'Gokayama'), (Wabisuke), Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No. 11, pp. 115, 117, 119, with botanical drawing, colour photo and description: Very small size, red, saucer-shaped, single of irregular petals and vestigal stamens. Leaves bright green, ovate, very shallowly serrate, apices acuminate. Originated in Japan. Collected by Ogawa from a wild camellia at Gokayama, Toyama Prefecture, Japan.

Shibenashi-no-tsubaki. (Stamenless Camellia), *Sukekatsukyôki*, 1632. No description. Originated in Japan. (Believed extinct.) See: JCS., 1986, *Tsubaki*, No.25, p.14.

Shibenashi-wabisuke. (Stamenless Wabisuke), (Wabisuke), Seibundô Shinkôsha, 1976, *Garden Life*, Apr., p.36; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.277, p.121, description, p.239; Seibundô Shinkôsha, 1979, *Senchinshû*, colour photo, p.68, description, p.219; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.148: Leaves oblong-elliptic, shortly-acuminate, base acute, margins serrate, impressed venation. Flowers at terminals and leaf axils, small, up to 6 cm across, purplish rosy, 5-6 petals. Stamens vestigal. Blooms mid-season. Botanical classification: *Camellia wabisuke* f. *subvidula* Kitamura. (1950), synonym: *Thea reticulata* var. *campanulata* f. *subvidula* Makino, (1918). Originated in the Kantô area, Japan. Synonyms: 'Nyogo-ga-shima' (Women's Island), 'Goke-tsubaki' (Widow's Camellia), 'Campanulata Subuvidula'. It is considered likely that **Shinkuri** (Scooped Stamens), described in 1798, *Shoshiki Hanagatachô* may be the same variety. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77. Present name given by Takashi Tsuyama in 1966.

Shibori. (Dappled), *(C.japonica)*, Hirayama, (late 17th century), *Tsubaki Byôbu.* Hamamatsu, 1825. *Setsuyô Kikan*, vol.23. No description. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.48. (Believed extinct.)

Shibori. (Dappled), *(C.sasanqua)*, Saitama Engei & Co. Catalogue, 1911, p.7: Large flower, spotted with carmine. Originated in Japan.

Shibori-benikagura. (Variegated Red Kagura), *(C.japonica)*, Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.157. No description. Originated in Japan.

Shibori-beni-wabisuke. (Variegated Red Wabisuke), (Wabisuke), Satô, *Tsubaki Meihan Chûbu*, 1957. No description. Originated in Chûbu area, Japan.

Shibori-bokuhan. Tuyama, 1966, *Camellia Cultivars in Japan*, p.370. Synonym for **Shibori-karako.** Local name in Chûbu.

Shibori-botan. (Variegated 'Botan'). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.123 with colour photo; English translation p.84. Large, bud-centred to peony to semi-double, pink and red stripes on white to pale pink ground, split stamens. Late flowering. Leaves elliptic, medium size, flat. Upright growth. A cross between **Berenice Boddy** and **Tomorrow**. Originated and released by Atsushi Itô in 1987. From Chiba Prefecture.

Shibori-chôji. (Striped Anemone), *(C.rusticana)*, Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, pl.186, p.61, description, p.211 as 'Shibori-chohji': A medium size, red spotted white, anemone form, with 2 rows of deeply cleft outer petals and a centre cushion of small, erect,

twisted and folded petals, petaloids and stamens. Leaves mid-green, broad-ovate, apex short acuminate, margins sharply serrate. Late blooming. Plant habit, dwarf type. Different reading: 'Shibori-chohji'. A variegated form of **Benichôji.** See: Seibundô Shinkôsha, 1979 *Senchinshû*, p.69 colour photo, p.220, description. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.384, colour photo. Originated in the Niigata Prefecture, Japan. Named and released by Susumu Ishizawa in 1960.

Shibori-chohji. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.211. Different reading for **Shibori-chôji.**

Shibori-daikagura. Tateyama Catalogue, 1957. Synonym for **Daikagura.**

Shibori-dewatairin. Seibundô Shinkôsha, 1979, *Senchinshû*, p.69. Synonym for **Manzairaku.**

Shibori-eago. Donnan, 1981, *American Camellia Yearbook*, p.84. Orthographic error for **Shibori-egao.**

Shibori-egao. (Variegated Smiling Face), *(C.x vernalis)*, Hakoda, 1974, *Nôkôdai Nôjôhô*, No.6, p.52; SCCS., 1981, *Camellia Nomenclature*, p.191: A virus variegated form of **Egao** - Deep rose blotched white. Originated in Kurume, Fuku'oka Prefecture, Japan, by Yoshioka. Synonym: 'Egao-nishiki'.

Shibori-Egao Corkscrew. *(C.vernalis).* SCCS, *The Camellia Review*, Jan. 2009, p.11 and colour photo inside front cover. Pink mottled white form of **Egao Corkscrew.**

Shibori-hagoromo. (Striped 'Hagoromo'), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.336, description, p.337, colour photo: Medium size. white with deep pink stripes, hose-in-hose semi-double (lotus shape) with ovate, fluted petals in 3 rows and a few stamens intermingled with some erect, central, small petals and petaloids. Blooms mid-season to late. Leaves light green, ovate, apices blunt acute, margins serrate. Originated in Niigata Prefecture, Japan as a seedling of **Hagoromo** x **Yuri-tsubaki.** Named and released by Hideyo Katô in 1975.

Shibori-hassaku. ('Hassaku' Variegated), *(C.japonica)*, Tateyama Nursery Catalogue, 1957: Large and small red spots on white. Medium size. Originated in Japan. *Chûbu Tsubaki Kyokai*, 1960; Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1. Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.41 as **Hassaku-shibori.** Synonym for **Hassaku-shibori.** Sport: **Benihassaku.** 'Hassaku' means August by the lunar calendar, implying very early flowering. Originated in the Chûbu area, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp,69, 220. Sport: 'Beni-hassaku'.

Shibori-hatsu'arashi. (Variegated 'Hatsu'arashi'), *(C.japonica)*, Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.132, photo: A small, blush pink, wide-campanulate single with the 5 petals finely peppered with red and a central column of stamens with golden anthers. Blooms early. Leaves mid-green, elliptic, apices tapering acuminate, margins serrate. A natural seedling of 'Saga-hatsu'arashi' (**Hatsuarashi-Saga**). See: *Encyclopedia of Camellias in Colour*, vol.II. 1978, pl.363, p.148; Katei Gahô, ed., 1984, *Chaban Koyomi*, *vol.I*, *Tsubaki*, p.60; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.69, 220; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.250. Originated in Kurume, Fuku'oka Prefecture, Japan. Named and released by Tomita Kunitake in 1965.

Shibori-hiko-osaraku. (Young 'Osaraku' Variegated), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.220: Peach red ground with white variegation, semi-double to peony form. Size medium-large; mid-season flowering. Leaves medium size, wide-oval, undulate. Petiole hir-sute. Plant growth upright and vigorous. Originated in Kurume, Fuku'oka Prefecture, Japan.

Shibori-itsukamachi. (Variegated 'Itsukamachi'). *(C.rusticana). "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.111. No description. From Niigata Pref.

Shibori-hiryû. Yôshun-en Catalogue, 1954. Synonym for **Hiryû-nishiki** as 'Hoshi-hiryû'.

Shibori-hôju. Seibundô Shinkôsha, 1979, *Senchinshû*, p.253. Synonym for **Yatsuo-nishiki.**

Shibori-jesu. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.105. Corruption of the Japanese name 'Shibori-jusu', synonym for **Monjusu.**

Shibori-jusu. Chûgai Catalogue, 1935. Tuyama, 1966, *Camellia Cultivars of Japan*, p.28. Corruption of **Monjusu.**

Shibori-kagura. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushûû*, p.62. Synonym for **Daikagura.**

Shibori-kanako. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Shibori-kanoko.**

Shibori-kanoko. (Variegated 'Kanoko'), *(C.japonica)*, Wada, 1941, *Garden Treasures of Japan*, p.29 as 'Shiborikanoko': White bells striped with red, petaloid anthers in the throat. Originated in Japan. Corruption of name: 'Shibori-kanako'.

Shibori-karako. (Variegated Anemone), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in the section for anemone form. See: JCS., 1969, *Tsubaki*, No.7, p.36; Itô, Ko'emon, 1879, *Chinkashû:* White striped pink. Medium size, anemone form. Vigorous, spreading growth. Blooms mid-season. See pls. & description: Adachi, 1960, *Camellia. Its Appreciation and Artistic...*, p.106; Tuyama, 1966, *Camellia Cultivars in Japan*, pl.211, p.370. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pp.163, 349. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.69, 220; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.361. Synonyms: 'Nishiki-mino' in Kansai and 'Shibori-bokuhan' in Chûbu. Sport: **Fukurin-nishiki-mino.**

Shibori-kingyo. Craig, 1972, *American Camellia Yearbook*, p.54, illustration. Synonym for **Shiborikingyo-tsubaki.**

Shibori-kingyo-tsubaki. (Variegated Goldfish Camellia), *(C.japonica)*, Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.214. No description. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.276, Colour photo & description as 'Shibori-kingyo': Medium size, white with red streaks, including rare pink markings, wide campanulate single with 5-6 broad, overlapping, reflexed, somewhat crinkled petals and broad, central stamen cluster with gold anthers. Late flowering. Leaves mid-green, broad ovate with multi-apices. (Fishtail). Originated in Niigata Prefecture, Japan. Synonym: 'Shibori-kingyo'. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.122 with colour photo; English translation p.83. A chance seedling of unknown parentage. Collected in Kita-kanbara District. Named and released by Yoshitaka Fujii in 1979.

Shibori-man'e. (Variegated Multifold), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.237: A medium size, irregular anemone form, white with crimson striping. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.16. (Believed extinct.)

Shibori-mannyô (Striped Double), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.376, p.191, description, p.201: Leaves elliptic to obovate-elliptic, flat, veinlets flat or a little impressed, manifestly serrate upper half of leaf, 7-8.5 cm long x 3.6-4.8 cm wide. Flowers irregular, rose form double, pale rosy pink (Spinel pink 0625/2) occasionally striped rose (Spinel pink 0625-0625/1), outer normal petals 11-45, inner normal petals 4-22, embracing each other. Androecium in two concentric circles, mostly petaloids, normal stamens few. Late flowering. Originated in a private garden, Kuroda, Yatsuo-machi, Toyama Prefecture, Japan.

Shibori-monjusu. Ishii & Hosaka, 1954-1959, *Genshoku Engei Shokubutsu Zufu*. Synonym for **Monjusu.**

Shibori-myôrenji. (Variegated 'Myôrenji'), *(C.rusticana)*, Katayama, 1963, Juraku-en Catalogue; Tuyama, 1966, *Camellia Cultivars of Japan*, p.184; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.220, 69: Leaves broad-elliptic, dark green, shortly acuminate at apex, manifestly crenate; petioles hairy. Flowers single, widely cupshaped, red (Spinel red 0023), delicately blotched white. Flowers mid-season to late. Propagated by Katayama, Juraku-en, Kibe-machi, Hyôgo Prefecture, Japan. Originated in the Chûbu area, Japan. See: Tuyama, 1968, *Camellias of Japan*, pl.285, p.144; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.106 & p.307; A sport of **Beni-myôrenji.**

Shibori-nankin. (Small Striped), *(C.japonica)*, Tuyama, 1969, *Camellias of Japan*, pl.371, p.189, description, p.200: Leaves elliptic, long acuminate, venation sub-impressed, margins crenate-serrulate, 6.8-7.3 cm long x 3.4-4.2 cm. wide. Flowers double, flat topped, palest pink striped rosy red (Cherry 722/3), petals suddenly diminishing in size at centre, 42-58 in number, emarginate. Stamens lacking. Late flowering. Originated at Hosono, Shirohata-machi, Toyama Prefecture, Japan.

Shibori-no-rôgetsu. Chûgai Catalogue, 1934-1935: Two or three lines of crimson on snow white, perfectly round petals, single. Early blooming. Synonym for **Shibori-rôgetsu.**

Shibori-oborozuki. (Variegated Hazy Moon), *(C.japonica)*, Fuji-en Catalogue, 1955: Very large, white with red stripes or graduations. Originated in Japan.

Shibori-ôkarako. (Variegated, Large Anemone), *(C.japonica)*, Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.36; *Encyclopedia of Camellias in Colour*, vol.II, 1978. pl.452, p.178 description, p.263: A large, petaloid centered, semi-double red, with white blotches. Large, rounded, emarginate, overlapping outer petals, 12-14 in number, surrounding a small, compact group of petaloid stamens. Originated in Kantô area, Japan. Sport of **Ô-karako.** Sport: **Kyôkarako**. Synonym: 'Ôkarako-shibori'. See colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.69, 219.

Shibori-otome. (Variegated 'Otome'), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in section on formal double. See: JCS., 1969, *Tsubaki*, No.7, p.36; Itô, Ko'emon, 1879, *Chinkashû:* Formal double, medium size, white striped pink. Blooms mid-season. See: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.204 & p.360; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.433 & p.356; Adachi, 1960, *Camellia. Its Appreciation and Artistic...*, p.96; Seibundô Shinkôsha, 1979, *Senchinshû*, p.69; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.399. Originated in Kantô area, Japan.

Shibori-owari-wabisuke. (Variegated 'Owari-wabisuke'). (Wabisuke). *Kurume Camellia*, 1997, English translation, p.39. Crimson ground with white blotches. Miniature, sake-sup shaped single. Stamens vestigial. Flowers mid-season. A sport or virus variegated form of **Owari-wabisuke.**

Shibori-renge. (Variegated 'Renge'). *(C.hybrid). "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.111. No description. From Kurume City, Japan.

Shibori-rinzu. *(C.japonica)*, Williams & Thompson, 1950, *American Camellia Yearbook*, p.40 in a list of camellias imported from Japan by Mr Uyematsu of the Star Nursery, Montebello, California, USA. No literature citation in Japan has been located. Probabaly a corruption of a Japanese name.

Shibori-rôgetsu. ('Rôgetsu' Variegated), *(C.japonica)*, Tuyama, 1966, *Camellia Cultivars of Japan*, pl. 166 & p.288; Tuyama, 1968, *Camellias of Japan*, pl.329, p.166, description, p.188; *Encyclopedia of Camellias in Colour*, vol.I, pl.131; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.69, 220; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.260, colour photo, p.261, description: Leaves broadly elliptic to elliptic, apex shortly acuminate, margins undulate,

crenate, venation slightly impressed, petioles glabrous. Flower widely open, medium size, single, white, narrowly striped red in various degrees. Flowers early to mid-season. Originated in Ikeda City, Ôsaka. Japan. Sports: **Kakureiso, Nihon-no-homare.** Note: No relationship with **Rôgetsu.**

Shibori-sashu. McIlhenny Catalogue, 1941. Corruption of the Japanese name 'Shibori-jusu', synonym for **Monjusu.**

Shibori-seiôbo. ('Seiôbo Variegated), *(C.japonica)*, Funaki-en Catalogue, 1987-1988, No.103, p.6; JCS., 1988, *Japan Camellia*, No.27, p.4, colour photo: Medium size, single of 8-9 petals opening widely cup-shaped, petals broad, emarginate, overlapping; a white ground with a peppering and streaking of pink and carmine. Early to mid-season flowering. Leaves glossy mid-green. Originated at a temple in Ukino Town, Ishikawa Prefecture, Japan as a natural seedling of **Seiôbo.** Named and released by Ryôji Nakamura in 1979.

Shibori-shishigashira. (Variegated 'Shishigashira') *(C.vernalis). Kurume Camellia*, 1997, English translation, p.50. Crimson blotched white, small semi-double. A sport or virus variegated form of **Shishigashira.** Originated in Japan.

Shibori-shôwa. *"Camellias in Kurume"*, ICS Congress, Kurume 2010, p.27; Synonym for **Shibori-shôwa-no-sakae.**

Shibori-shôwa-no-sakae. (Variegated 'Shôwa-no-sakae'), *(C.hiemalis).* Deep peach pink with white spots, formal double, medium size. Originated in Japan. Synonym: 'Shôwa-no-sakae Variegated'. Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49. Sport of **Shôwa-no-sakae.**

Shibori-shusu. Sakata Catalogue, 1938. Different reading for 'Shibori-jusu', synonym for **Monjusu.**

Shibori-tamatsuyu. (Jewels of Dew Variegated), *(C.japonica)*, Hagiya, Kaoru, 1984, ACS, *The Camellia Journal*, vol.39, No.2, p.18. No description. Originated in Japan.

Shibori-tarô'an. ('Tarô'an' Variegated), *(C.japonica)*, Izu Ohshima Hawaii Botanic Garden, 1980, *List of Plants*, p.11 as 'Shiboritarôan':- A variegated form of **Tarô'an** - soft pink blotched white. Originated in Japan.

Shibori-tatsuta. (Variegated Tatsuta), *(C.sasanqua)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.46: White, variegated form of **Momoyama**. Originated in Japan..

Shibori-tsubaki. Sakuden, 1630, *Hyakuchinshû.* Synonym for **Shimo-no-momiji.** See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.109.

Shibori-wabisuke. Chûgai Catalogue, 1936-1937. Synonym for **Wabisuke.**

Shibori-wabisuke. (Variegated Wabisuke). (Wabisuke). *Kurume Camellia*, 1997, English translation, p.39. Crimson ground with white blotched. Small, trumpet shaped single. A sport or virus variegated form of **Beni-wabisuke**. Flowers early to mid-season.

Shibu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.410; Chinese synonym for the Japan *C.japonica* **Shikibu.**

Shicenglou. (Ten Storied Pavilion), *(C.japonica)*, Wang & Yü, 1980, *Shancha Hua:* Scarlet, peony form. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.83: Peony form, spherical form double, flowers velvety scarlet, 10 cm across. Stamens highly petaloid, clustered together with petals like a ball. Pistil degenerate. Buds long ovate. Flowers mid-season. Leaves ovate, large, dark green, margins serrulate, veins prominent. A dwarf shrub. An ancient Chinese cultivar, originally named 'Ceng Ceng Lou' (Double Petalled Pomegranate), (personal ltr, Y.C. Shen).

Shichifuku-benten. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.62 as 'Shichi-huku-benten'. Different reading for **Shichifukujin-benten.**

Shichifukujin. (7 Gods of Good Fortune), *(C.sasanqua),* Ashizawa, 1898, *Chabaika Taishû;* Tokio Nursery Catalogue, 1896, p.14: Pale pink edged mallow pink. Very large, semi-double with crinkled petals. Originated in Japan. Different readings: 'Shichihukujin', 'Shichi Fukujin'. Orthographic errors: 'Shishifukujin', 'Hichifukujin'. Synonyms: 'Shinonome', 'Good Fortune'. See: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.525, p.385: Deep pink, peony form. (Somewhat different from the original description.)

Shichifukujin. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, p.62. Satô, 1975, *Chûbu no Tsubaki*, p.60: Small campanulate, red single of 5 petals and a central column of yellow stamens. Leaves dark glossy green, distorted to rounded and trumpet shapes. No apices or serrations. Synonym for **Shichihenge-tsubaki.**

Shichifukujin-benten. (Benten of the 7 Gods of Luck), *(C.japonica),* Katayama, 1957, *Tsubaki Ochabana;* Tuyama, 1966, *Camellia Cultivars of Japan*, p.64 as 'Benten-kaguri': Large, peony form, red. Leaves irregularly variegated at margin with gold. Originated in Japan Synonyms: 'Shichihenge-benten', 'Shichifuku-benten', 'Benten-kagura'. Sport of **Daikagura.** Different reading: 'Shichihukujin-benten'.

Shichige-tsubaki. (7 Changes Camellia), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.80: Red of 7 different shapes. Originated in Japan. (Believed extinct.)

Shichigosan. (See below), (Higo), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.128, colour photo & description: Medium to small size, pink with colour fading to base, single, of 5 emarginate, irregular petals, opening flat with a flaring centre of stamens with pale yellow filaments and yellow anthers. Blooms mid-season to late. Leaves dark green, lanceolate-elliptic, apices abrupt acuminate, margins serrate. The smallest flower in the Higo group. Recognised by the Higo Society in 1984. Occasionally produces anemone form flowers. 'Shichigosan' is November 15th. A gala day for children 3, 5 & 7 years old. Originated in Kumamoto Prefecture, Japan. Corruption of name: 'Hichigosan'.

Shichihenge-tsubaki. (Seven Changes Camellia), *(C.japonica),* Aoyama Kinta, 1827, *Sômoku Kihin Kagami:* Itô, Ko'emon, 1879, *Chinkashû:* Rose-red, small, single with variable leaf forms. Plant habit, weak. Originated in Japan. Synonym: 'Shichihenge-tsubaki'. See *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.452, pp.184, 360; Seibundô Shinkôsha, 1979 *Senchinshû*, pp.68, 219. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.152 as 'Shichihenge-tsubaki'. Synonyms: 'Shichihenge-tsubaki', 'Shichifukujin'. This is also said to be the same as the variety **Heigorô-nanabake** in Mizuno, 1828. Note: An old tree of this variety was found at Matsunaga, Tôkichi's garden in Inazawa, Aichi Prefecture. Two different originations are given; the *Chûbu no Tsubaki* and *Encyclopedia of Camellias in Colour*, 1972 give the Chûbu area, while *Senchinshû*, 1979 and *Nihon no Chinka*, 1989 give the Kantô area. Different readings: 'Shichi-henge', 'Hichihenge'. Note: Asai, Keitarô asserts that this cultivar is distinct from Nanabake-tsubaki which resembles Benten and the leaves colour change depends on the season. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.159.

Shichihenge. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* Synonym for **Shichihenge-tsubaki**. See: JCS., 1969, *Tsubaki*, No.7, p.37.

Shichihenge-benten. Craig, 1972, *American Camellia Yearbook*, p.55, with illustration on p.54. (Benten of the 7 Changes). Synonym for **Shichifukujin-benten.**

Shichihôden. (Edifice of 7 Treasures), *(C.sasanqua),* Kajitsu-en, 1905, *Chabaika-meikan;* Ishii, 1932, *Genshoku Engei Shokubutsu Zufu*, vol.4: Rose-pink, large, semi-double with long, narrow petals. Round leaves. Originated in Japan. Different readings: 'Shichihowden', 'Shippôden', 'Shichi-hôden'.Corruption of name: 'Hichi-hôden', 'Schichihowden'.

Shichihôden. (Seven Treasury Houses) (*C.sasanqua*) from Saitama Pref. *Sazanka, Winter Flowers* published by National Museum of Japanese History in 2001. Peach red, flat, single, medium, blooming in late autumn to early winter. Described in *Baichaka Meikan* in 1905.

Shichihowden. Chûgai Nursery Co. Catalogue, 1935. Different reading for **Shichihôden.**

Shichihuku-benten. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.62. Different reading for **Shichifukujin-benten.**

Shichihukujin. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.62. Different reading for **Shichifukujin.**

Shichihukujin-benten. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.158. Different reading for **Shichifukujin-benten.**

Shichikô. Inazawa Nursery Catalogue, C.20, 1987. Japanese synonym for the Chinese *C.japonica* **Qigiao.**

Shichikomachi. Different reading for **Nanakomachi.**

Shichiôden. ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.36. Orthographic error for **Shichihôden.**

Shichiseiden. (Edifice of 7 stars), (Higo), Taniguchi, 1912, *Chinka Kyôkan.* No description. Originated in Japan. (Believed extinct.)

Shidare-botan. (Weeping Peony). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.120 with colour photo; English translation p.82. Small, yellowish white, anemone to open peony with thick petals. Flowers mid-season. Leaves narrowly elliptic, medium size, waved, thick. Weeping branches, somewhat weak growth. A chance sedling of **Kamo-honnami.** Named and released by Shinichi Noguchi in 1987. From Tokyo.

Shidare-kochô. (Weeping Butterfly), *(C.hybrid)*, ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.30: Very small size, pale pink, double. A seedling of **Tiny Princess,** originated in the Ôsaka Prefecture, Japan. Named and released by Kazuo Yoshikawa in 1980.

Shidare-tsubaki. (Weeping Camellia), *(C.japonica),* Satomi, 1956, *Camellia Varieties of Japan,* p.12: Deep pink. Medium sized single. Blooms mid-season. Originated in Japan.

Shido. (Place Name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.59: Small, semi-double, pink with white edges and scarlet stripes, with divided stamen cluster. Originated in Japan. (Believed extinct.)

Shien. (Purple Fence), Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Nakamura, JCS., 1969, *Tsubaki*, No.7, p.32 as an erroneous transcription for **Shibagaki.**

Shi-en. (Purple Blaze), *(C.hybrid)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.30: Large size flower, somewhat purple, with graduations, peony form, early flowering. A seedling of **Show Girl** x *C.granthamiana* from Ôsaka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.117 with colour photo; English translation p.80. Parentage stated to be **Flower Girl** x *C.granthamiana.* Named and released by Kazuo Yoshikawa in 1980s.

Shigakasuri. (Shiga Variegated), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.60 as 'Shiga-kasuri': Medium size, semi-double, white with blush pink areas and red streaks. Originated in Japan. Shiga is place name for Shiga Prefecture. Different reading 'Shiga-tobi'iri'. Resembles 'Waka-no-ura'. (Believed extinct.)

Shiga-tobi'iri. Different reading for **Shigakasuri.**

Shigenbeni. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.62. Different reading for **Shigenkô.**

Shigenkô. (obscure), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1, #145: Double. Beautiful pink flower, large, flat in shape. Originated in Japan. (Believed extinct.) Different reading 'Shigenbeni'.

Shigenshû. JCS., 1969, *Tsubaki*, No.7, p.36. Orthographic error for **Jigenkô.**

Shigi-tatsusawa. (Snipe in a Marsh), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.67, colour photo, p.219, description: Small, campanulate, white with 5 overlapping petals and a column of pale yellow anthers. Early blooming. Leaves light green, lanceolate-elliptic, apex long acuminate, margins serrulate. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.33 colour photo as 'Shigitatsusawa'. A seedling of **Seiôbo.** Originated in Ishikawa Prefecture, Japan. Different reading: 'Shigi-tatsuzawa'. Chinese synonym 'Minglichi'. *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.118 with colour photo; English translation p.80. Originated and released by Seizô Matsui in 1975.

Shigi-tatsuzawa. Different reading for **Shigi-tatsusawa.**

Shigoden. (Meaning Uncertain), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Very large size, pure red, single. See JCS., 1969, *Tsubaki*, No.7, p.31; ibid, 1983, No.22, p.143. Originated in Japan. (Believed extinct.)

Shigure. (A Drizzle), *(C.japonica)*, Iwasaki, 1828, *Honzô Zufu:* This flower has many white petals with small red dots. Originated in Japan. Possibly the same as **Shigure** from *Chinka Zufu*, pl.555. See: JCS., 1981, *Tsubaki*, No.20, p.110. (Believed extinct.)

Shigure. (A Drizzle), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.555: White, semi-double with occasional pink mark. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.145. (Believed extinct.)

Shiguredaki. (Name of a Waterfall), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Large, blush pink, splashed pink. Originated in Kumamoto Prefecture, Japan.

Shiguresome. (Soaking Drizzle), *(C.japonica)*, Uesa, 1844, *Sômoku Benran:* White, moired rose, medium size, single. Mid-season flowering. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Kyôto Engei*, No.65, p.8. (Believed extinct.)

Shigyokuden. (Purple Treasure Palace), *(C.japonica)*, Satô, 1975, *Chûbu no Tsubaki*, p.101: Rose-pink, rose formed double, 9 cm across; petals in 4-5 rows, opening cup-shaped, outer rows flexing when fully open. Leaves mid-green, broad-ovate, apex short-acute, margins finely, shallowly serrate. Collected in Mi'e Prefectrue, Japan. Named and released by Minoru Satô in 1960.

Shih-ching-cha. Watanabe & Andoh, 1980, *Tsubaki*, p.147. Different reading for **Shijing Cha.**

Shih Liu Cha. Ono. 1803, *Honzô Kômoku Keimô.* Different reading: 'Shiliu Cha'. Japanese reading: 'Sekiryû-cha', synonym for **Ise-tsubaki.**

Shih-ching-feng-wei. Watanabe & Andoh, 1980, *Tsubaki*, p.147. Different reading for **Shijing Fengwei.**

Shih-pa-hsueh-shih. Liu, 1959, *Chungkuo Chu Ming Tichi Hua Hui.* Different Reading for **Shiba Xueshi.** Taiwanese reading: 'Sheboshushi'. Synonym: 'Eighteen Scholars'.

Shihpashushi. Yang, 1965, *Camellia Varieties of Taiwan.* Different reading for **Shiba Xueshi.**

Shihô. (Greatest Treasure), *(C.rusticana)*, JCS., 1973, *Tsubaki*, No.12, pl.4, p.1, description, p.9: Soft salmon pink, 8 cm across, single to semi-double with up to 10 overlapping petals and wide-spread, somewhat Higo-like, inner curved in a cup-shape, light yellow stamen cluster and occasional petaloids. Mid-season to late blooming. Leaves mid-green, lanceolate to broad--ovate, apex short acute, margins shallowly serrate; petioles hairy. Originated in Japan, Jôetsu

City, Niigata Prefecture, in 1962. Discovered by Susumu Ishikawa, named and released by Kaoru Hagiya in 1971. See Seibundô Shinkôsha, 1979, *Senchinshû*, p.219.

Shihô. (Purple Treasure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.121 with colour photo; English translation p.83. Small, purplish red, tubular single, cylindrical stamen column. Flowers early to late. Leaves ovate, medium size. Upright growth. Selected from wild camellias growing in Okinawa. Collected by Mokichi Tachibana in 1985, named and released by Takeo Ogawa. From Okinawa to Izu Ôshima.

Shihôka. (Flower of Greatest Treasure), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.136, colour photo and description: Medium size, pink, wide vase-shaped single, with 5 wide, irregular, overlapping petals and a broad stamen cylinder with white filaments, joined for the lower half, and golden anthers. Blooms very early to mid-season. Leaves mid-green, flat, obovate to elliptic, margins serrate. Originated in Chûbu area, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.121 with colour photo; English translation p.83. A cross between **Tarô'an** and 'Tennin-no-an' (**Tennin-no-iori**). Originated and released by Minoru Sato in 1977.

Shihtzetou. RHS., Hü, 1950, *Magnolia & Camellia Conference Index*, p.130. A corruption of 'Shitzut'ou', different reading of **Shizitou.**

Shih-tzu-t`ou. Watanabe & Andoh, 1980, *Tsubaki*, p.147. Wade reading for **Shizitou.**

Shihzexiao. Wang & Yu, 1989, *Camellias*, p.33. Different reading for **Shizixiao.**

Shihzutou. RHS., 1970, *Rhododendron & Camellia Yearbook*, No.24, first page with colour photo and caption. Different reading of the Chinese name **Shizitou.**

Shih Yang Cha. Yü & Feng, 1956, *Yunnan Shan Cha Hua Tuchih.* Different reading for 'Shiyang Cha'.

Shih Yang Ching. Huang Nursery Catalogue, 1949. Different reading for **Shiyangjing.**

Shihyangchin. Yü, 1964, *Camellian.* Different reading for **Shiyangjin.**

Shijin Hehua. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.54. Synonym for **Honghehua.**

Shijing Cha. (10 Views Camellia), *(C.japonica),* Watanabe & Andoh, 1980, *Tsubaki*, p.147 as 'Shih-ching-cha': White lines on peach pink ground. Small formal double. Originated in China. Different reading: 'Shih-ching-cha'.

Shijing Fengwei. (10 View Phoenix Tail), *(C.japonica),* Watanabe & Andoh, 1980, *Tsubaki*, p.149 as 'Shih-ching-feng-wei': Light pink ground with vertical stripes of red. Medium size, semi-double to open peony form. Originated in China.

Shijing Mudan. (Multicolour Peony), *(C.japonica),* Wang & Yü, 1981, *Shancha Hua:* Red, formal double with white splashes and a bud centre. Flowers more than 90 petals, 15 different colour patterns on one plant from milk white with dark red strips, to half white, half red or red or pink or white. See colour photo, Chang, 1987, *Camellias from Zhejiang*, [p.130] as 'Huachang-e Cai'. Originated in China.

Shijing Tingtai. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.569 as 'Shijingtingtai'; Fast, erect growth with strong branches. Leaf yellowish green, lustrous, elliptic, 7-8 cm x 3-4 cm, apex acute, base broad cuneate, veins obscure, margins finely serrate. Flower hibiscus form, deep red 6-8 cm diameter. Outer petals large in one row, smaller petals about 100 folded to overlap, including one outer layer of larger petals. Late flowering. Name refers to a pavilion shape of the centre petals. From Sichuan Province.

Shijûgara. (Manchurian Great Tit), *(C.japonica)*, Satomi, 1956, *Camellia Varieties in Japan*, p.12: White. Large, single, cylindrical stamens. Early to mid-season. See colour photo: Seibundô Shinkôsha, 1979, *Senchinshû* p.68. Originated in Kansai area, Japan. Sport: **Idaten.** Different reading: 'Shijûkara .

Shikainami. (Waves of Four Oceans), *(C.japonica)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15; Shirai-Bunko, 1812. *Tsubaki Nayosechô:* Light red ground with white spots. Medium sized single with one flower in a larger flower, in another largest flower, in 3-4 tiers, standing apart. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Red with white spots, semi-double with 3 rows of petals. Originated in Japan. See: JCS., 1983, *Tsubaki*, No.22, p.132; ibid, 1969, No.7, p.31, ibid, 1982, No.21, p. 109; Tuyama, 1968, *Camellias of Japan*, appendix, p.35. (Believed extinct.)

Shikainami. (Waves of Four Oceans), *(C.japonica)*, Ishii, Yugi, 1932, *Genshoku Engei, Shokubutsu Zufu*; Minagawa, 1933, *Chinkashû;* Tuyama, 1966, *Camellia Cultivars of Japan*, p.322, pl.184; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pls. 327, 328, p.339; Satô, 1975, *Chûbu no Tsubaki*, p.73; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.66, 219, as 'Shikainami-Kantô'; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.346, as 'Shikainame-Kantô': Medium size, white with a few red streaks, petals in 2-3 rows., some small, erect, centre petals, stamens and pistil mostly aborted. Synonyms: 'Shikainami-Kantô', 'Shikainami-Tokyo'. Note: The colour range of this cultivar is variable, white with red stripes; blush with rare red stripes; pink veined deeper; white bordered and striped red. Originated in Kantô area, Japan. Sport: **Shikainamibeni.** *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.117 with colour photo; English translation p.80. An old tree survives at Kezôji Temple in Kira Town.

Shikainami. (Waves of Four Oceans), *(C.sasanqua)*, Kajitsu'en, 1905, *Chabaika Meikan:* White with pink graduations. Originated in Japan.

Shikainamibeni. ('Shikainami' Red), *(C.japonica)*, *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.339: Solid red sport of **Shikainami-Nagoya** as 'Chûbu-shikainami'. Originated in Japan.

Shikainami (Chûbu). Seibundô Shinkôsha, 1979, *Senchinshû*, pp.66, 219. Synonym for **ShikainamiNagoya.**

Shikainami (Chûbu Fukurin). Seibundô Shinkôsha, 1979, *Senchinshû*, p.66. Synonym for **Shikainami-Nagoya.**

Shikainami (Kantô). Seibundô Shinkôsha, 1979, *Senchinshû*, p.66, colour photo, p.219, description; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.346. Synonym for **Shikainami.**

Shikainami-Nagoya. (Shikainami from Nagoya), *(C.japonica)*, Tuyama, 1968, *Camellias in Japan*, pl.368, p.187, description, p.199: Leaves ovate-elliptic to broad-elliptic, apex long acuminate, margins coarsely serrate. Leaves bigger and thicker than Shikainami. Flowers double, white to pink (Rose madder 23/2), striped deep red (Cardinal red 822/3), with deep pink veining. Late flowering. Sometimes white with deep pink. Satô, 1975, *Chûbu to Tsubaki*, p.73 erroneously lists this as 'Shikainami'. Synonyms: 'Chûbu-shikainami', 'Shikainami'(Owari), 'Shikainami'(Chûbu), 'Shikainami'(Chûbu Fukurin). Sport: **Shikainamibeni.** Originated in Nagoya, Japan.

Shikainami (Owari). Seibundô Shinkôsha, 1976, *Garden Life*, Apr., p.40. Synonym for **ShikainamiNagoya.**

Shikainami-Tokyo. Tuyama, 1968, *Camellias of Japan*, p.199. Synonym for **Shikainami.**

Shikami. (Obscure), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.309, Ichijima reprint, p.361. Description not seen. Originated in Japan. (Believed extinct.)

Shikamura. (4 Villages & Deer Village), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô* #104: Flower is single and the petals have red and white dapples. Large flower. Also listed in the following ancient bibliographies. All are thought to be the same: Itô, Jukyû, 1739, *Honzô Hanamaki'e.* See: JCS., 1983, *Tsubaki*, No.22, p.119 as 'Deer Village'. Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.78 as 'Shikainami-tairin', 'Deer Village, Large'. Iwasaki, 1829, *Honzô Zufu.* See: JCS., 1981, *Tsubaki*, No.20, p.109 as 'Deer Village'. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* See: JCS., 1969, *Tsubaki*, No.7, p.31; ibid, 1982, No.21, p.109 as 'Deer Village'. Originated in Japan. Different reading: 'Shikason'. (Believed extinct.)

Shikamura-tairin. Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Synonym for **Shikamura.**

Shikan. Japanese reading for the Chinese **Ziguan.**

Shika-no-koe. (Call of the Deer), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Red, large size, double. Petals narrow and twisted. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.100. (Believed extinct.)

Shika-no-matsu. (Deer Amongst Pine), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.80: Single, red with deep red stripes, sake cup shape. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.80. (Believed extinct.)

Shikason. (Four Villages). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.117 with colour photo; English translation p.80. Small, white, cup-shaped to tubular single, cylindrical stamen column. Flowers early to late. Leaves elliptic, medium size. Upright, vigorous growth. The original tree, of 130 cm in circumference, survives in Matsu'e City. Named and released by San-in Camellian Club in 1975. From Shimane Prefecture.

Shikason. Different reading for **Shikamura.**

Shikason. (Four Villages), *(C.japonica),* Seibundô Shinkôsha, 1976, *Garden Life*, Apr., p.48; *Encyclopedia of Camellia in Colour*, vol.II, 1978, pl.334, p.139, description, p.247: Small size, white, campanulate single with 5-6 large, frilled, overlapping petals; stamens in a cylindrical cluster, anthers yellow. Leaves mid-green, broad-lanceolate, apex short-acuminate, margins shallowly serrulate, raised venation. Blooms early season. Originated in Matsu'e, Shimane Prefecture, Japan. See: Katei Gahô, ed., 1984, *Chabana Koyomi, vol.I, Tsubaki*, p.144; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.67, 219. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.19. It is said that this cultivar had been a favourite camellia of Matsudaira, Fumaiko, and often used for the first tea ceremony of the year.

Shikibu. (Master of Ceremonies) *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.50, p.19, description, p.211: A medium small, anemone centered form with outer petals, 7-9 in number, in one row, crimson, rounded to obovate, slightly emarginate, surrounding a compact, central cushion of small, erect, folded petals, crimson with white edges. Blooms from early to late. Leaves pale green, elliptic, apex acuminate, margins shallowly serrulate. Very similar to **Bokuhan** but larger than it and with more petals. Originated in the Chûbu area, Japan. A chance seedling of **Bokuhan**, named and released by Eimei Nagata in 1957 in Nagoya City. See: Satô, 1975, *Chûbu no Tsubaki*, p.37; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.443, p.175; Katei Gahô, ed., 1984, *Chabana Koyomi, vol.I, Tsubaki,* p.57; Seibundô Shinkôsha, 1980, *Senchinshû*, pp.66, 219; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.356. Chinese synonym 'Shibu'.

Shikimatsuba. (Scattered Pine Needles), *(C.japonica),* Himuro, 1982, *Muramusume:* White, lined and splashed rose, anemone. A sport of **Kyôkarako.** Originated in Kanagawa Prefecture, Japan.

Shikimi. (Place Name), *(C.japonica),* JCS., 1989, *Japan Camellias*, No.31, p.4, colour photo: A wild Yabutsubaki, small, about 4.5 cm across, red, single with 5 rounded, oval, emarginate petals of uneven length and a slender, central stamen column with white filaments, joined for their lower half, and yellow anthers. Originated in Nagasaki Prefecture, Japan.

Shikinami. (Wide Expanse of Waves), *(C.japonica),* Uesa, 1840, *Sômoku Benran:* Pure red, mottled with white, single. Flower japonica-like, leaves sasanqua-like. Flowers early. Originated in Japan. (Believed extinct.)

Shikishima. (Poetic Name for Japan), *(C.hiemalis),* McIlhenny, 1937, *600 Varieties of Camellias;* Shimada, Yaichi, 1957, *Kumamoto no Sazanka ni tsuite. Dantairin:* Rose-pink. Medium sized double, 5-6 rows of petals, deeply cleft. Originated by Shishido, Yajirô, Kumamoto Prefecture, Japan. See colour photo, pl.580, p.222, *Encyclopedia of Camellias in Colour*, vol.I, 1972. Chinese synonym: 'Fudao'.

Shikishima Splash. *(C.sasanqua).* Camellia Forest Nursery Catalogue, 2008, p.8; A genetic variegation of **Shikishima**. Bright yellow splashes on the leaves. Other details as for the original. Pruning recommended to maintain a striking plant. Found and released by Camellia Forest Nursery, Chapel Hill, N.C., USA.

Shikô. Different reading for the Higo **Tsukasa-beni.**

Shikô. (Official Red), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, pp.67, 219: Medium size, campanulate red single, 5 petals, cleft, overlapping; compact column of stamens with gold anthers. Leaves mid-green, ovate, apex acute, margins bluntly, shallowly serrulate. Originated in the Kansai area, Japan.

Shikoku Stars. *(C.sasanqua)* C. Aust., *Camellia News,* Winter 2011, No.186, p.12 with colour photo. White single with widely sprayed stamens. Collected by Camellia Forest Nursery, Chapel Hill, N.C., USA, from the northern regions of Shikoku Island, Japan.

Shikoku-beni. (Shikoku Red), *(C.hiemalis),* Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49; ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.39: Medium size, deep red, double. Blooms early to mid-season. Originated in the Shikoku district, Japan.

Shikoku-sarasa. (Calico of Shikoku), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô*, vol.306; Kasuya, Kamegorô, 1959, *Tsubaki Irohanayose Irotsuki:* Persimmon coloured with small, white splashes, white edges. Medium to small size. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.31. (Believed extinct.)

Shikoku-sazanami. (Ripples of Shikoku), (Higo), Alpen, 1977, ACRS., *Camellia News*, No.63, p.9: Medium size, semi-double, splashed rose-pink. Leaves are oval with fine serrations down the entire leaf margin. Originated in Japan.

Shikoku-shirayuri. (White Lily from Shikoku). *(C.japonica), Kurume Camellia,* 1997, English translation, p.29. Pure white, medium size, tubular single. Flowers mid-season.

Shikonfu (Purple Note) (*C.japonica*) from Hachiôji, Tokyo. *Japan Camellia* No.82 published in February 2007: Purplish red with prominent white variegation, single, tubular to campanulate, medium size, blooming February to April. Tree upright, branches slender, slow growing. Leaves long elliptic, reddish deep green in winter. Nameless when bought at Kairyôen Nursery in around 1988. Named by Hiroshi Okado in 2005.

Shiko no mai. *(C.japonica), Camellia Photo Collection,* 1997 Japan, p.35 with colour photo; Small open single, flower colours variable from white to red, including striped and pink edged white.

Shikon-tsubaki. (Purple-blue Camellia), *(C.japonica),* Satomi, 1956, *Camellia Varieties of Japan*, p.12 gives this name as a synonym for 'Murasaki-tsubaki'. However a new cultivar carries this

name in modern Japanese camellia books. See: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.3, pp.40, 292; Seibundô Shinkôsha, 1979, *Senchinshû*, p.67, description p.219: A 5 petalled, campanulate single of deep red with a purplish cast. Large, central stamen column with yellow anthers. Leaves broad, oblong-oval, mid-green, apex short acute, margins manifestly serrate, petioles hirsute. Resembles 'Kon-wabisuke'. Originated in Kansai area, Japan.

Shikon-tsubaki. (Puplish Dark Blue Camellia). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.118 with colour photo; English translation p.81. Medium size, deep red, purplish red in cold season, tubular to trumpet shaped single, tubular stamens. Flowers mid-season to late. Leaves elliptic, medium size. Somewhat upright growth. Released by Katayama Juraku'en Nursery in Ikeda City. From Osaka.

Shikon-wabisuke. Botan-en Catalogue, 1957. Synonym for **Kon-wabisuke.**

Shikun. (Purple Ruler), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.232, colour photo, p.233, description: Small size, deep red, with a purplish cast, wide campanulate single of 6 petals, a Chinese bellflower form, rounded to pointed by incurved lateral margins and a central stamen column with yellow anthers. Blooms mid-season to late. Leaves mid-green, elliptic, flat or cupped, margins serrate. Originated in the Ishikawa Pefecture, Japan.

Shikunami. (Spreading Wave), *(C.japonica)*, Kana-oka, 1960, *Tsubaki no Shiori.* No description seen. Originated in Japan.

Shikunshi. (Four Princely Plants), (*C.japonica*), Inazawa Nurseries Co. Ltd. Catalogue, 1980-1981, p.12, C-60: Peach red coloured, single, large, cup-shaped with spreading stamen cluster. Yokoyama & Kirino, 1989. *Nihon no Chinka*, p.171 colour photo & description: Large size, red, higo form single, opening flat with 5-6 large, irregular, overlapping petals and a circular burst of numerous, yellow stamens. Leaves mid-green, elliptic, apices acuminate, margins serrate. Blooms mid-season to late. Originated in Chûbu area, Japan. A seedling of **Surusumi.** Discovered and named by Masaichi Satô in 1973.

Shikuro-tsubaki. (Purplish Black Camellia). *(C.japonica), "Camellias in Kurume*", ICS Congress, Kurume 2010, p.111; No description. From Kurume City, Japan.

Shilian. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.409. Chinese synonym for the USA *C.japonica* **Audrey Claire.**

Shilin Loutai. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.62. Synonym for **Simianjin.**

Shiliu Cha. (Pomegranate Camellia), *(C.japonica)*, Li, Shizhen, 1590, *Bencao Gangmu:* The colour is fiery red and the central petals are like a freshly split pomegranate. Originated in China. Different reading: 'Shih-liu-ch'a. Gao & Zhuang, 1989, *The Camellia in China*, p.52, No.336, colour photo No.194: Medium size, 7-8 cm across, fiery crimson, anemone form with 7-8 large, irregular guard petals, and a centre of erect petaloids, tipped with white, giving the appearance of seed in an open pomegranate. Leaves matt green, elliptic, apices acuminate. Mid-season flowering.

Shiliuhong. (Pomegranate Red), *(C.japonica)*, Wang & Yü, 1981, *Shancha Hua:* Medium size, bright red, anemone form with small, compact petaloid centre. Originated in China. See also colour photo, [p.136], Chang, Shao Yun. 1987, *Camellias from Zhejiang*, p.62. Synonyms: 'Jixianghong', 'Shizixiao'. This name is also given as a synonym for **Xingtao Mudan** on p.50.

Shiliutiao. *Proceedings of the ICS Congress*, Chuxiong 2012, p.197. No details.

Shimabara-no-komoriuta. (Lullaby of Shimabara), *(C.japonica)*, ICS., Apr.1990. *Japanese Camellia Cultivar List*, p.20. No discription. Originated in Nagasaki Prefecture, Japan.

Shimachidori. (Striped Plover), (*C.rusticana*), Kyôto Engei Kurabu, *Tsubaki Tokushû*, 1967, No.8, p.19, black & white photo, p.18, description: Crimson, semi-double, 4-5.5 cm across, of 15-17 petals, cordate, hose-in-hose type, lotus shape with white blotches and a few, small, compact stamens with yellow anthers. Leaves dark green, 7-9 cm long, elliptic. Collected in Kamo City, Niigata Prefecture, Japan, 1957 at a private family. Named and released by Kaoru Hagiya in 1967.. See: Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.173, p.58; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.295 & p.335; Seibundô Shinkôsha, 1979 *Senchinshû*, pp.70, 220; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.326.

Shimafubuki. (Island Snowstorm), *(C.japonica)*, Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.9, A-418: Large, double white, sprinkled with red spots. Originated in Japan.

Shimahenge. (Island Change), *(C.japonica)*, Ôoka Chinka-en Catalogue, [before 1980]. Description not seen. Originated in Niigata Prefecture, Japan.

Shimakage. *(C.japonica), Camellia Photo Collection*, 1997 Japan, p.46 with colour photo; small sake cup-shaped pinksingle, strong central column of stamens. Broad leaves heavily marked with yellow genetic variegation

Shimakikyô. (Island Balloon Flower), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.310, Ichijima reprint, p.362. Description not seen. Originated in Japan. (Believed extinct.)

Shima-kinsekai. (Island Golden World), *(C.japonica)*, Shufu no Tomosha, Kirino, 1976, *Nihon no Tsubaki*, p.80, colour photo, p.225, description: Red, single, tubular form, medium size, mid-season flowering. Leaves with golden variegation on the midrib. Originated in the Izui Ôshima, Tokyo, Japan.

Shima-musume. (Island Girl), *(C.japonica)*, Satô, 1975, *Chûbu no Tsubaki*, p.34; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.78, colour photo & description: Campanulate single of the faintest blush pink. Cup shape with five broad, irregular, overlapping petals and a central stamen column with small, yellow anthers. Small flower. Leaves mid-green, broad-ovate, apex blunt acute, margins shallowly crennate. Originated in Chûbu area, Japan as a seedling of **Chûbu-yobukodori.** See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.70, 220. Named and released by Minoru Satô in 1972.

Shima-no-aki. (Autumn on an Island). *(C.japonica), Kurume Camellia*, 1997, English translation, p.29. Small, pink, campanulate single. Flowers early to mid-season.

Shima-no-haru. (Island's Springtime). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.124 with colour photo; English translation p.84. Medium size, deep red mottled white, semi-double with split stamens. Flowers mid-season to late. Leaves ovate, medium size, somewhat plicate, occasionally with yellow blotches. Upright growth. Selected from cultivars raised by a private family in Utsumi Town, Shôdoshima Island. Named and released by Hasechika Imoto in 1976. From Kagawa Prefecture.

Shima-no-nishiki. (Island Brocade), *(C.rusticana)*, Seibundô, Shinkôsha, May, 1973, *Garden Life*, p.14, colour photo, p.27. description: Medium size, 7-9 cm across, open peony form with about 25 petals and a ground of faint blush pink finely peppered, spotted and streaked crimson. Stamens in fascicles amongst erect, wavy, central petals. Leaves olive green, small, even, elliptic, apex acuminate, raised venation, serrations finely uniform. Habit densely spreading. Originated in Sado Island, Niigata Prefecture, Japan. Collected, named and released by Susumu Ishizawa in 1967. See: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.437; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.70, 220; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.373. Synonym: 'Okesa-nishiki'.

Shima-no-tomoshibi. (Island Light), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.38: Small size, tubular to vase-shaped, white, with a greenish tinge at the base of the petals, single

with 5 petals, ovate, channelled, reflexed, overlapping, and a central stamen column with white filaments, joined at their lower half and yellow anthers. Blooms early to mid-season. Leaves deep green, broad-ovate, apices abrupt acute, margins serrate. Originated in Hirado City, Nagasaki Prefecture, Japan. Discovered by Hirado Camellia Club in 1981, named by Kichinosuke Aburatani.

Shima-sazanka. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.6. *Encyclopedia of Camellias in Colour*, 1972, vol.I, p.378. Synonym: 'Miyama-sazanka'. Japanese group name for *C.brevistyla* Hayata. This group resembles 'Taiwan-sasanqua'. Distribution Formosa on mountain ridges.

Shima-sakigake. (Island Harbinger), *(C.japonica)*, Shufu no Tomosha, 1976, Kirino *Nihon no Tsubaki:* colour photo, p.81, description, p.225: Red, single, small size, tubular form, very early blooming. Originated in Izu Ôshima, Tokyo, Japan.

Shima-shichihenge. (Island of change), *(C.japonica)*, Ohoka Chinka'en Catalogue (before 1900). No description. Originated in Japan. (Believed extinct.)

Shimasodachi. (Brought up on an Island). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.123 with colour photo; English translation p.84. Medium size, dark red, tubular single. Mid-season to very late flowering. Leaves elliptic, somewhat plicate at the midribs. Upright, vigorous growth. Selected from wild camellias growing in Sarugashima Island. Named and released by Minoru Satô in 1983. From Aichi Prefecture.

Shima-sudaki. Satomi, 1958, *Nomenclature List of Sasanqua of Japan.* Error for 'Shima-tsubaki'.

Shima-tsubaki. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.6 as 'Shima-sudaki'. Japanese group name for *C.gracilis* Hemsl.

Shima-tsubaki. The group name for camellias originating in the Izu Ohshima Island, Tokyo, or in the Sado Island, Niigata Prefecture.

Shime-otome. Stonehurst Estate Nursery Catalogue, 1962. Corruption of the Japanese name **Hime-otome.**

Shimeo Tome. Toynbee, N. Catalogue, 1957-1958. Corruption of the Japanese name **Hime--otome.**

Shimeo-tome. Winkfield Manor House Nursery Catalogue, 1954, p.2. Corruption of the Japanese name **Hime-otome.**

Shimeo Tomi. Pennell & Son Ltd Nursery Catalogue, 1965-1966, p.8. Corruption of the Japanese name **Hime-otome.**

Shimeo-Tonil. Try, 1962, RHS., *Rhododendron & Camellia Yearbook*, No.16, p.130. Corruption of the Japanese name **Hime-otome.**

Shimeri. (Moisture), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.697: Small, campanulate single, white dotted pink and streaked crimson, cylindrical stamen cluster. Originated in Japan. (Believed extinct.)

Shimeri-hayazaki. (Moisture, Early blooming), (*C.japonica*), *Chinka Zufu*, (before 1700), Watanabe, 1968, pl.570: Medium small, semi-double, petals white becoming pinkish towards the base, ticked with crimson. Originated in Japan. (Believed extinct)

Shimio Tonil. Haskin's Nursery Catalogue, 1962, p.5. Corruption of the Japanese name **Hime-otome.**

Shimisi. Chinese synonym for the USA *C.reticulata* **Hulyn Smith.**

Shimizu-hikari. Different reading for **Shimizukô.**

Shimizukô. (Sparkle of Pure Water), *(C.japonica)*, Inazawa Nursery Co. Ltd Catalogue, 1980-1981, p.12, C-30: White, single, central stamen cluster. Medium size. Originated in Japan. Different reading: 'Shimizuhikari'.

Shimizu-shibori. (Shimizu Variegated), *(C.japonica)*, Mizuno, 1681, *Kadan Kômoku:* Double. White variegated with pink. Originated in Japan. (Believed extinct.) See: JCS., 1965, *Tsubaki*, No.5, p.29.

Shimizu-shimeri. (Pure Water Moisture), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.617: Large, open peony. White variously streaked red. Originated in Japan. (Believed extinct.)

Shimmer. *(C.japonica)*, SCCS.**,** 1990, *Camellia Nomenclature*, p.99: Brilliant orange red, medium to large size, semi-double with irregular petals, to anemone form. Medium, compact, upright growth. Blooms mid-season to late. Originated by Langdon Nursery Catalogue, Sebastapol, California, USA.

Shimmering Sequins. Wylam, 1956, *American Camellia Yearbook*, p.26. Synonym for **Bill Wylam.**

Shimna. *(C.x williamsii). New Zealand Camellia Bulletin*, 1992, Issue No.112, vol.XVII, No.5, p.6: A renaming of 'Salonica' which was an illegal name according to the Horticultural Code, as it was formed by combinig parts of the latin epithets of the parent species. Bright carmine pink flowers, bright carmine buds, opening to carmine pink. First listed as *C.saluenensis forma* in 1952-1953, Sleeve Donnard catalogued it under this name 1953-1954, 1957-1958, 1959-1960 and 1961-1962, renaming it 'Salonica' in 1966-1967 Catalogue. Originated in Ireland, and believed to be a seedling raised by Harry Bryce, the original shrub surviving at the nursery. Shimna is the name of the river that passes the site of the now defunct nursery.

Shimobijiro. (Shimobi's White), *(C.japonica)*, Satô, 1975, *Chûbu no Tsubaki*, p.43: Medium size, white, campanulate single with 5 irregular petals and a central stamen column with yellow anthers and white filaments. Leaves dark green, small, elliptic, apex acuminate, margins serrate. Originated in Shinmei Shrine, Shimobi Village, Aichi Prefecture, Japan. Named and released by Minoru Satô in 1973. See colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.70, 220.

Shimoda-shiroyabu. (Wild White Camellia from Shimoda). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.11. No description. From Kumamoto Pref., Japan.

Shimofuri. (Frost Fall), *(C.japonica)*, Hamamatsu, 1825, *Setsuyô Kikan.* No description. Originated in Japan. (Believed extinct.)

Shimofusa-wabisuke. (Shimofusa Wabisuke), (Wabisuke), Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No.11, pp.66, 68, 70, botanical drawing, colour photo and description; ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.21: Small size, crimson, sometimes with white spots, tubular to trumpet shaped single of 5 cordate petals of irregular size. Blooms early to mid-season. Originated in the Chiba Prefecture, Japan. Named by Mr. Utsugi in 1980. Note: 'Shimofusa' is an ancient name for the northern part of Chiba Prefecture.

Shimo-no-momiji. (Frosted Maple), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* White with 2 or 3 lines of red stripes. Medium size, single. Originated in Japan. (Believed extinct.) Synonym: 'Shibori-tsubaki'. Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.109.

Shimotsui. (Place Name), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.21: Small to medium size, reddish purple, tubular single. Blooms mid-season. Originated in Okayama Prefecture, Japan.

Shimotsuki. (November). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.124 with colour photo; English translation p.85. Medium size, white bordered pale pink, flat single to semi-

double. Early flowering. Leaves narrowly elliptic, small, glossy, clear veins. Upright, somewhat vigorous growth. A cross between *C.sasanqua* **Narumigata** and *C.granthamiana.* Named and released by Kazuo Yoshikawa in the 1980s. From Osaka.

Shimo-tsuki. Seibundô Shinkôsha, 1979, *Senchinshû.* Synonym for **Koshi-no-yoso'oi.**

Shimotsuma. Yashiro, 1841, *Kokon Yôrankô*, vol.311; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Tuyama, 1966, *Camellia Cultivars of Japan*, p.100. This is the ancient name for **Yukimiguruma** and means the third spouse. Different reading: 'Shimozuma'. See: JCS., 1969, *Tsubaki*, No.7, p.32.

Shimoyo. (Frosty Night), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.272: Medium size, white, semi-double with stamen cluster broken by odd small petaloid. Originated in Japan. (Believed extinct.)

Shimoyo. (Frosty Night), *(C.japonica), Chinka Zufu*, (Before 1700), Watanabe, 1969, pl.538: Large, white semi-double with emarginate petals. Stamens with yellow anthers and white filaments. Originated in Japan. (Believed extinct.)

Shimozuma. Yashiro, 1841, *Kokon Yôrankô.* Synonym for **Yukimiguruma**. Different reading: 'Shimotsuma'.

Shimura. (Four Villages), *(C.japonica)*, SCCS., 1958, *Camellia Nomenclature*, p.78: Pink. Large, peony form. Originated in Japan.

Shin-aka-seiôbo. (New Red Seiôbo). *(C.japonica),* Kurume Tsatsuji Seisan Kumiai Catalogue, 1989-1990, "Kurume no Kaboku", p.7, Seibu Maizuru Institute of Botany, 1991-1992, *Seibu no Tsubaki*, No.271: Red, single with cylindrical stamen tube. Small to medium size. Blooms mid-season. A seedling of **Seiôbo**. Originated in Fukuoka Prefecture, Japan.

Shin-akebono. Nuccio's Nurseries Catalogue, 1948-1948, p.11. Synonym for Minagawa's **Akebono.** Imported to USA by Domoto as **Akebono** but changed to 'Shin-akebono' (New Akebono) as 'Akebono' was already invalidly used for 'Valentine' (**Akebono Pink**). Orthographic errors: 'Shino-Akebono', 'Shin-Ake'bono'.

Shin-Ake'bono. Burncoose & Southern Nursery Catalogue, 1985. Synonym for **Akebono.**

Shinano. (Ancient place name for Nagano), *(C.japonica),* Yashiro, 1841. *Kokon Yôrankô*, vol.309. No description. Originated in Japan. (Believed extinct.)

Shina-no-miyaka. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Shina-no-miyako.**

Shina-no-miyako. (Capital of China), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Wada, 1941, *Garden Treasures of Japan,* p.32: Rose exterior, white, pink-flushed interior. Medium size, single. Autumn flowering. SCCS., 1954, *The Camellia*. *Its Culture and Nomenclature:* White with pink shades at petal tips, pink on petal reverse. Medium size, single with incurved, twisted petals. Early flowering. Long leaves. Originated in Japan. Corruption of name: 'Shina-no-miyaka'.

Shinate. Chinese synonym for the USA., *C.granthamiana* hybrid **Lois Shinault.**

Shin-azuma-nishiki. (New Eastern Brocade), *(C.sasanqua),* Minagawa, Jisuke, 1930, *Jissai Engei*, No.9, *Chabai no Chomeihinshu to Saibai;* Ishii, 1932, *Genshoku Engei Shokubutsu Zufu*, vol.4: Blush pink, dotted and striped with white. Large, semi-double with curled petals. Originated in Japan.

Shinbô-aka. (Shinbô Red), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.218, p.110, description, p.155: Leaves elliptic, base cuneate, apex finely acuminate, glossy green, impressed venation, 6.2-8.5 cm, long x 2-3.8 cm wide. Flowers of peony type, deep rose (Spinel red 0023/1), the

centre full of small petaloids; outer petals 7-9, emarginate, slightly recurved; inner petals, 2-12, intermingled with stamens and 11-27 petaloids. Stamens, anthers orange-yellow, filaments pinkish orange yellow. Late flowering. Originated at Shinbô, Kanazawa City, Ishikawa Prefecture, Japan.

Shin Cha. Different reading for the Chinese 'Tien Cha'. Japanese reading for *C.reticulata*.

Shinchû-kakehashi. (Suspension Bridge of Shinchû), *(C.japonica)*, Mizuno, Motokatsu, 1829, *Sômoku Kinyôshû* in the section on margined leaves: Flowers white, single, with red stripes. Long leaves, wide bases, white margins. See; Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.168. Originated in Japan. (Believed extinct.) 'Shinchû is thought to be a nurseryman of the time. Different reading: 'Fukachû-kakehashi'.

Shinchû-otome. (Shinchû's 'Otome'), *(C.japonica)*, Mizuno, Motokatsu, 1829, *Sômoku Kinyôshû* in section on yellow variegated leaves: whitish leaves with large white spots. Different reading: 'Fukachû-otome'. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.165. Originated in Japan. (Believed extinct.)

Shin-chûrippu-taimu. (New 'Tulip Time'). *(C.x williamsii). "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.112. No description. From Kurume City, Japan.

Shinchû-surugamiyage. (Gift of Suruga fom Shinchû), *(C.japonica)*, Mizuno, Motokatsu, 1829, *Sômoku Kingyôshû in* section with marble-like variegated leaves: leaves, long pointed apex, wide base, undulate, white spots appear as it grows. Originated in Japan. (Believed extinct.)

Shindaika. (obscure), *(C.japonica)*, Kan, Yashiroda Ltd, Kagawaken Nursery Catalogue, 1931-1932, p.8: Largest crimson. Originated in Japan.

Shin-en. (Swallow of God), *(C.japonica)*, Angyô, 1955, *Shokubutsu Shunjû*, p.5: Small red spots on white. Small size, single. Originated in Japan.

Shinginryû. (New Silver Dragon), *(C.sasanqua)*, Yôshun-en Nursery, 1958, *Engei Hôchi*, No.598: Formal double. Red on pink cast white. Early blooming. Originated in Japan.

Shin-hagoromo. (New 'Hagoromo'), (Higo), Hiratsuka, 1964, *Higo Camellia*, No.44, pp.13, 31: Deep crimson, 8-12 cm across, 7-8 petals, 100 light red stamens in a spreading cluster. Leaves large, ovate to long-ovate, lustrous dark green, sometimes showing yellow to white variegation. Originated in Kumamoto Prefecture, Japan. Resembles **Higo-hagoromo,** of which it may be a mutation. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.223.

Shin-harugasumi. (New 'Harugasumi'). (*C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.138 with colour photo; English translation p.94. Medium size, pale pink bordered white, trumpet to flat single, cylindrical stamen column. Flowers mid-season. Leaves narrowly elliptic, medium size. Upright, profuse. Discovered by Kikutoshi Mizokoshi from the cultivars in his garden, released in 1981 by an enthusiast. From Nagasaki Prefecture.

Shin-hatsu-arashi. (New 'Hatsu-arashi'). *(C.japonica)*, *Kurume Camellia*, 1997, English translation, p.10; Pure white, small to medium tubular single. A seedling of **Hatsu-arashi,** originated by Sac. Hisatomi. Flowers early to mid-season.

Shinheiwa. (New Harmony), *(C.sasanqua)*, Fuji-en Catalogue, 1958: Pale pink. Large, double. Early blooming. Originated in Japan.

Shinhiryû. (New Red Dragon), *(C.sasanqua)*, Sôsei-en Catalogue, 1955; Ka'ô-en. Catalogue, 1955: Large red. Early blooming. Originated in Japan. Synonymous with **Shokkô.**

Shining Hour. *(C.japonica)*, SCCS., 1968, *Camellia Nomenclature*, p.125: Clear, delicate pink. Medium, full peony form. Medium, compact growth. Early to mid-season blooming. Originated in USA by Harvey Short, Ramona, California.

Shining Star. *(C.sasanqua),* McCaskill Gardens advert. SCCS, 1950, *Camellia Review,* vol.12, No.3, p.18. SCCS., 1951, *The Camellia*. *Its Culture and Nomenclature:* White, single. Originated by McCaskill Gardens, Pasadena, California, USA. See illustration p.332, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III.

Shining Sun. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.138. Synonym for **Kiyô.**

Shinjika. (Flowers for Shinto Ceremony), *(C.x vernalis),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.51; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.41: Small size, deep pink, semi-double form. Blooms early to mid-season. Originated in Shimane Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.303 with colour photo; English translation p.212: Description and photo are of a single flower. Leaves narrowly elliptic, medium size, clear venation. Upright, vigorous growth.

Shinjôji-beni. (Red of Shinjô Temple), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka* p.190, colour photo & description: Medium size, deep red, wide vase-shaped single with 5 broad, rounded, overlapping petals and a central stamen column with red filaments, joined for their lower third and bright golden anthers. Blooms early to mid-season. Leaves deep green, elliptic to broad-elliptic, apices acute, recurved, margins shallowly serrate. Originated in the garden of the Shinjô Temple, Gifu Prefecture, Japan. Named by Nagaharu Niwa in 1987, released by Gifu Camellia Club.

Shinkiraku. (New Rare Pleasure), (*C.rusticana*), Seibundô Shinkôsha, 1973, *Garden Life Magazine*, May, p.16, illustr; Seibundô Shinkôsha., 1979, *Senchinshû*, p.79 colour photo, p.223 as 'Shin-kiraku': Medium size, deep red, semi-double; petals about 25, large, rounded, a little crinkled and pleated, opening wide cup-shaped; stamens in a small, irregular central cluster with small, yellow anthers. Flowers early to mid-season. Originated in Higashi Kanbara-gun, Niigata Prefecture, Japan.

Shinkô (True Red), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki, Irohanayose Irotsuki.* JCS., 1969, *Tsubaki,* No.7, p.31; ibid, 1982, No.21, p.109: Red, double, large size with separated stamens. Originated in Japan. (Believed extinct.) Different reading: 'Shinku'.

Shinkô. (True Red), *(C.sasanqua).* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Deep, lustrous red, single. See Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.5, p.81. Originated in Japan. (Believed extinct.) Different reading: 'Shinku'.

Shin-kôbai. (New 'Kôbai'), *(C.japonica),* Izu-Ôshima, 1980, *Hawaii Botanic Garden of Plants,* p.12. No description. Originated in Japan.

Shinkokkô. Different reading for **Shinkoku-beni.**

Shinkoku-beni. (Red of God's Nation), *(C.sasanqua),* Hosaka, 1937, *Kômoku Zufu;* Seibundô Shinkôsha, Nakamura, 1965, *Tsubaki to Sazanka,* p.130: Bright red single. Originated in Japan. Different readings: 'Shinkokukô', 'Shinkokkô'. Synonymous with **Mikunikô.**

Shin-kokuhô. (New Black Treasure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.136 with colour photo; English translation p.93. Medium size, purplish dark red, trumpet shaped single, short and fat cylindrical stamen cluster. Flowers mid-season to late. Leaves elliptic, medium size, somewhat recurved. Upright, vigorous growth, dense branches. A chance seedling of **Kon-wabisuke.** Named and released by Kan Utsugi in 1985. From Chiba Prefecture.

Shinkô-sazanka. Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.6. Japanese group name for *C.shinkoensis* Makino. Synonym: 'Shinkô-tsubaki'.

Shinkô-tsubaki. Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.6. Japanese group name for *C.shinkoensis* Makino.Synonym: Shinkô-sazanka'.

Shinku. Different reading for **Shinkô.**

Shinkumagai. (New 'Kumagai'), (Higo),Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, p.159 as 'Shinkumagae'. No description. Originated in Kumamoto Prefecture, Japan. Synonym: 'Higo-shinkumagai'.

Shinku-no-fusa. (Scarlet Tassel), *(C.sasanqua).* Yashiro, 1841, *Kokon Yôrankô*, vol.344. Ichijima reprint, 1906, pp.571, 572. No description seen. Originated in Japan. (Believed extinct.)

Shinkuri. (Scraped Stamens), (Wabisuke), Kaempfer, 1712, *Amoenitatum Exoticarum* as 'Sjinkuri'. See: Andoh, JCS., 1989, *Tsubaki*, No.28, p.7. Listed in Shirai-Bunko, 1789, *Shoshiki Hanagatachô* Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77: Very small size, red, cup-shaped, no stamens. Hamamatsu, 1825, *Setsuyô Kikan. No* description. (Believed extinct.) Different reading 'Shinsan'.

Shinkuri-wabisuke. (Scraped Stamen Wabisuke), (Wabisuke), Uesa, 1844, *Sômoku Benran:* Small, rose-pink single. Lacks stamens. It is believed that this is the same as the **Shinkuri** listed in the *Shoshiki Hanagatachô.* Originated in Japan. See:, Kyôto Engei Kurabu, 1961, *Kyôto Engei*, No.65, p.5, & Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77. (Believed extinct.)

Shinnihon. Different reading for **Shinnippon.**

Shinnippon. (New Japan), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* White ground, marbled with pink, very large; rich stamens. Originated in Kumamoto Prefecture, Japan. Different readings: 'Shinnihon', 'Shinyamato'. Sport of **Yamato-nishiki.** Synonym for **Shôwa-no-hikari**

Shinnone. Nuccio's Nurseries Catalogue, 1973-1974. Corruption of Japanese name **Shinonome.**

Shino-Akebono. Starling, 1987-1988, RHS., *Rhododendrons* with *Magnolia and Camellias*, p.74. Orthographic error for 'Shin-akebono', synonym for **Akebono.**

Shinobu. (Endure), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Semi-double with 2-3 row of petals, white ground, fine speckles, medium size, cylindrical stamen cluster. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.31. (Believed extinct.)

Shinobudera. (Hidden Temple), *(C.japonica)*, Yokoyama and Kirino, 1989, *Nihon no Chinka*, p.76, colour photo & description: Small size, faint pink, cup-shaped single of 5-6 broad, concave, rounded, embracing petals and a broad, circular stamen cluster with white filaments, joined for their lower half, and yellow anthers. Blooms mid-season to late. Leaves dark green, elliptic. Originated in Mount Sekidô, Ishikawa Prefecture, Japan. Named and released by Tadao Yamaguchi in 1979.

Shinobu-yûgiri. (Creeping Evening Mist), *(C.japonica)*, JCS., 1973, *Tsubaki*, No.12, pl.2, p.1, description, p.9: Medium size, 8-9 cm, across, semi-double of 20 soft pink petals, large, overlapping, rounded, a little emarginate, in 3 rows about an irregular stamen cluster, broken into fascicles by petaloids. Leaves thick, lustrous green, broad-ovate, apex blunt acute, margin shallowly crennate. Blooms mid-season. Originated in Japan in a 100 year old tree at Nanpei, Fukushima City. The name refers to Mt. Shinobu near place of origin.

Shinobu-no-koromo. (Concealing Robe), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Petals, red mixed with white, full double. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.10.

Shinobu-zuri. (obscure), *(C.japonica)*, Kasuya, Kamegorô 1859, *Tsubaki Irohanayose Irotsuki:* Red, small, semi-double. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.35. (Believed extinct.)

Shinoda-shibori. (Shinoda Variegated), *(Cjaponca)*, Uekiya, Seijirô, 1874, *Tsubaki Hyakuro no Zu*, vol.2: Large, single, wide opening; white with broad crimson stripes, a short, solid, broad stamen cylinder. Originated in Japan. See: Kyôto Engei Kurabu, 1975, *Kyôto Engei*, No.73, p.20. (Believed extinct.)

Shinogani. (Shino Crab), *(C.sasanqua)*, Murayama, Seibundô Shinkôsha, 1971, *Garden Life*, Dec., p.16 as originated in Kumamoto, listed in an ancient, unknown bibliography. (Believed extinct.)

Shinohara. (Bamboo Field). *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.706: Small, red, anemone form with a red centre. Originated in Japan. (Believed extinct.)

Shinome. (Bamboo Grasses), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.350 as 'Shinonome': Large, soft pink, semi-double with white petal edges, cylindrical stamens. Originated in Japan. Different reading: 'Shinonome'. (Believed extinct.)

Shinonome. (Eastern Light), *(C.japonica)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Itô, Toku'emon, 1788, *Tsubaki Hanagatatsuki Obo'echo:* Double, pale pink ground with white spots. Semi-double with 3 rows of petals, stamens widely spread. Originated in Japan. See: JCS., 1983, *Tsubaki*, No.22, p. 119. (Believed extinct.)

Shinonome. (Eastern Light), *(C.japonica)*, Kasuya Kamegorô, 1859. *Tsubaki Irohanayose Irotsuki:* Light red, white, semi-double with 3 rows of petals, large size, stamens widely spread. Thought to be the same as the above **Shinonome**. Originated in Japan. (Believed extinct.) Note: There are six cultivars named 'Shinonome'. The first two are in Kanji meaning "Eastern Light", the others are in Kanji meaning "Eastern Cloud". Both imply "daybreak".

Shinonome. (Eastern Cloud), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in the section with variegated leaves: Red, single, small. See: JCS., 1969, *Tsubaki*, No.7, p.37. Itô, Ko'emon, 1879, *Chinkashû:* Small, red, single, with some white spots and spreading stamens. Leaves variegated. Originated in Japan. (Believed extinct.)

Shinonome. (Eastern Cloud), *(C.sasanqua)*, Ashizawa, 1898, *Chabaika Taishû;* Chûgai Nursery Co. Catalogue, 1936-1937: Flesh, single, broad petalled, very large flower. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.519, pp.211, 383: Light rose-pink, very large, semi-double, 7-12 cm across with 9 petals of creped texture, slightly notched. Central stamens with light yellow filamens and dark yellow to brown anthers. Leaves dark green, elliptic, 5 cm x 2 cm, apex blunt, base rounded, margin coarsely serrate. Resembles **Shichihôden**. Originated in Kantô area, Japan. Corruption of name: 'Shionome'. Synonym: 'Dawn'. See Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III**,** p.333.

Shinonome. (Eastern Cloud), (Higo), Satomi, 1956, *Camellia Varieties in Japan*, p.16; Tamura, 1956, *Shinkaki*, No.9; Hiratsuka, 1964, *Higo Camellia*, p.35, No.51, back page 13. Seibundô Shinkôsha, 1979, *Senchinshû*, p.219: Large, single. Scarlet streaks on pink with rose-pink filaments in a central burst. Mid-season blooming. Originated in Japan. Sport of **Yamato-nishiki.** Often produces diverse sports.

Shinonome. (Eastern Cloud), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.67, colour photo & description: Palest pink, becoming white as the flower opens. Medium size, white, cup-shaped single with 6 broad, irregular, overlapping petals, some slightly reflexed, emarginate and a cenral column of stamens with ivory filaments, joined for their lower half, and golden anthers. Blooms mid-season to late. Leaves dark green, ovate. Originated in the Chûbu area, Japan. Nippon Tsubaki - Sasanqua Meikan, 1998, p.121 with colour photo; English translation p.82. A cross between **Yobukodori** and **Shûfûraku.** Named and released by Minoru Satô in 1976.

Shinonome. Different reading for **Shinome** in *Chinka Zufu*.

Shin-osaraku. (New Osaraku), (Higo), Tamura, 1956, *Shinkaki*, No.9: Pink, single. Originated in Japan.

Shin-ôtahaku. (Ôta's New White), (Higo), Vi Stone, 1983, SCCS., *The Camellia Review*, vol.45, No.1, p.20: Large, white, single, 11 cm across, opens vertically, with wide spreading stamens. See colour photo, p.59, Yokoyama & Kirono. 1989, *Nihon no Chinka* as 'Shin-ôta-haku'. Originated in Kumamoto Prefecture, Japan.

Shin-otome. (New Maiden), *(C.hiemalis)*, Yôshun-en, 1956, *Engei Hochi:* Pink double. ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.39: Medium size, deep pink, double. Blooms early to mid-season. Originated in Fuku'oka Prefecture, Japan. Chinese synonym 'Xin Yinü'.

Shinpô. (God's Treasure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.138 with colour photo; English translation p.94. Medium size, red trumpet to sake cup-shaped single, fat stamen cylinder. Flowers mid-season to late. Leaves broadly elliptic, large, flat. Upright, vigorous growth. A wild japonica found in Kagamihara City. Named by Nagaharu Niwa in 1990, released by Gifu Camellia Club. From Gifu Prefecture.

Shinpu. (New Wife), *(C.japonica)*, ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.21. No description. Originated in Kurume, Fuku'oka Prefecture, Japan.

Shinroku. (Shrine Deer), *(C.japonica)*, Tateyama Nurserey Catalogue, 1957: Small red spots on white, small size, single. Originated in Japan.

Shinsan. Different reading for **Shinkuri.**

Shinsan. (Meaning Uncertain), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.202, 659: Small, red, campanulate single of 6-7 irregular petals with a centre of white infertile stamens and a protruding style. Originated in Japan. Possible synonym for **Beni-wabisuke.**

Shinsan. (Meaning Uncertain), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl. 659: Very small, dark red, single with 5-6 irregular cordate petals and no visible stamens. Originated in Japan. Thought to be the same as the above.

Shinseiki-no-hikari. (Light of New Century), *(C.japonica), Japan Camellia* 99, p.3 with colour photo, JCR Regn 2013-10, (ser. No.10); A seedling of **Tama-no-ura** x **Black Magic,** originated by Atsushi Itô., Single, fresh blood red, tubular to trumpet shape, small to medium size. Spreading plant, mid-season to late blooming.

Shinseikô. (New Radiant Star), *(C.japonica)*, Satô, 1975, *Chûbu no Tsubaki*, p. 50: Medium size, red with clear white markings, single. A central stamen cylinder, pinched in at the top, yellow anthers, white filaments joined for lower third. Leaves glossy, dark green, lanceolate, apex acuminate, margins coarsely serrate. Plant habit inclined to be weak. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.243, colour pl. Originated in Chûbu area, Japan. Named and released by Minoru Satô in 1969.

Shinseishi. (New Clean Official), *(C.japonica)*, Hiroshima Nô'en Catalogue, 1958: Red spots on white, double. Large. Originated in Japan.

Shinsekai. (New Universe), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.79, colour photo, p.223, description: Large, deep pink, veined deeper pink, semi-double to open peony form, with large, waved, irregular petals, with stamens divided into fascicles by erect centre petals. Leaves mid-green, ovate, margins sharply serrate, petioles hirsute. Originated in Kariba-gun, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1971.

Shinsetsu. (New Snow), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.65, p.33, description, p.104 as 'Shin-setsu'; Seibundô Shinkôsha, 1979, *Senchinshû*, p.223; Pure snow-camellia. Leaves rhombeo-ovoid to broadly-elliptic, olive green, keeled; petioles green to light green, very hairy. Magnolia flowered, palest pink (Rose-pink 427/3), petals 12-16, oblong, rounded, recurved. Stamens in a central cylinder 2.5 cm long x 2 cm in diameter, filaments bright

yellow. Late flowering. Originated in Naka-uonuma-gun, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1969.

Shin-setsugekka. (New 'Setsugekka'). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.137 with colour photo; English translation p.93. Medium size, red splashes and stripes on white ground, tubular to sake cup-shaped single. Flowers early to late. Leaves narrowly elliptic, medium size. A cross between **Shûraku** and **Kotobuki.** Named and released by Minoru Satô in 1995. From Aichi Prefecture.

Shinshi. (obscure), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, #151; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*. See: JCS., 1969, *Tsubaki*. No.7, pp.32, 35; ibid, 1982, No.21, p.109: Small, eight-fold, pale yellow flower. Small in shape. Originated in Japan. (Believed extinct.)

Shinshi-nishiki. Different reading for **Shintsukasa-nishiki.**

Shin-Shi-Ko. Fruitland Nursery Catalogue, 1950-1951, p.278. Corruption of Japanese name **Shunshokô.**

Shinshioko. SCCS, 1949, Bulletin, vol.11, No.2, p.19. SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.62. Corruption of the Japanese name **Shunshokô.**

Shin-shiratama. Seibundô Shinkôsha, 1979, *Senshinshû*, p.197. Synonym for **Akitsu-shiratama.**

Shinshoko. Lindo Nursery Camellia List, 1944-1945. Corruption of Japanese name **Shunshokô.**

Shin-tarô'an. (New 'Tarô'an'), *(C.japonica)*, Inazawa Nurseries Co. Ltd. Catalogue, 1980-1981, p.10, A-243: White, single, cylindrical stamen cluster. Medium size. Originated in Japan.

Shintsukasa. (New Lord), (Higo), Satomi, 1958, *Camellia Varieties of Japan.* Adachi, 1960, *Camellia. Its Appreciation & Artistic Arrangement...*, colour photo, p.62, description, p.71 as 'Shin-tsukasa'; Hiratsuka, 1964, *Higo Camellia*, p.29, No.38, back p.13: Flower red, 11 cm. across, 5-6 petals. Stamens pale pink, large, spreading group. Leaves medium broad-ovate, edges curled. Originated in Kumamoto Prefecture, Japan. See: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.23 & p.294; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.139. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.79, 223. A sport of **Shintsukasa-nishiki.**

Shintsukasa-nishiki. (New 'Tsukasa-nishiki'), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* White, spotted pink. Very large, single. Hiratsuka, Taizô, 1964, *Higo Tsubaki*, p.2, description, back p.14 & p.36: Crimson spots on white, 11 cm across, 6 petals, 160 light yellow stamens in a spreading burst. Late blooming. Leaves large, broadly-elliptic, suddenly acuminate, margins coarsely crenate. Originated in Kumamoto Prefecture, Japan. See: Tuyama, 1968, *Camellias of Japan*, pl.336, p.170; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.117 & p.308. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.79, 223. Different reading: 'Shinshi-nishiki'. Sports: **Shintsukasa, Asahizuru, Reihô, Bishônen, Ô-aso.** Corruption of name: 'Shin Tukasa Nishiki'.

Shin-tsukimiguruma. (New 'Tsukimiguruma'), *(C.japonica)*, Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.132, p.45, description, p.211: Large, single, soft pink, with colour fading towards the haft of the petals to the number of 6-7, broad, rounded, overlapping to open cup-shaped; stamens in central column, anthers golden, filaments very pale cream. Mid-season to late flowering. Originated in Kantô area, Japan by Minagawa Chinka'en Nursery. See: Seibundô Shinkôsha, 1979 *Senchinshû*, pp.79, 223. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.131.

Shin Tukasa Nishiki. Inazawa Nurseries Wholesale Catalogue, 1986-1987. Corruption of name **Shintsukasa-nishiki.**

Shinyamato. Tamura, 1956, *Shinkaki.* Different reading for **Shinnippon.**

Shinyamato-nishiki. (New 'Yamato-nishiki'), (Higo), Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.62, as 'Shin-yamato-nishiki'. No description. Originated in Japan.

Shioda-kasuri. Different reading for **Shiota-kasuri**

Shiogama. (Place Name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.57: Single, pale red fading to white, anemone form, small. Originated in Japan. (Believed extinct.)

Shiogama. (Place Name), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.310 & 311: Flower single, with cylindrical stamen cluster. Thin red lines on soft pink or solid, soft peach pink. Originated in Japan. (Believed extinct.)

Shiogama. (Place Name), *(C.japonica)*, Nakayama, 1847, *Senka'ô-den.* Resembles Momoiro-bokuhan. Originated in Japan. (Believed extinct.) Thought to be the same as **Shiogama** from *Chinka Zufu*.

Shiogama. (Place Name), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Single, White with light red spots. Cylindrical stamen cluster. Originated in Japan. (Believed extinct.)

Shioginu. (Bathing Suit), *(C.sasanqua)*, Ashizawa, 1898, *Chabaika Taishû;* Chûgai Nursery Co. Catalogue, 1935-1936, p.26: White ground with pink graduations. Large, single. Originated in Japan. Different reading: 'Shiogoromo'.

Shioginu. (Bathing Suit), *(C.japonica)*, Kasuya, Kamgoro, 1859, *Tsubaki Irohanayose Irotsuki*, in section on early blooming; Itô, Ko'emon, 1879, *Chinkashû:* Light pink, streaked deeper pink. Large. Early blooming. (Believed extinct.) Different reading: 'Shiogoromo'. See: JCS., 1969, *Tsubaki*, No.7, p.36.

Shiokaze. (Sea Breeze), *(C.x vernalis)*, Tanaka et al., 1986, *Journal of Japanese Society of Horticultural Science*, 55(2):208, as a triploid cultivar (3n = 45) from Japan. See JCS., 1987, *Tsubaki*, No.26, p.51: Small size, pink, single. Originated in the Shizu'oka, Prefecture, Japan.

Shiogoromo. Different reading for **Shioginu.**

Shiomihakka. (White Flower of Shiomi), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.333, p.139, description, p.247 as 'Shiomi-hakka': White, cup-shaped, single with 7-8 rounded, slightly cleft, overlapping petals and a compact stamen column, pinched in at the top, anthers yellow, filaments white. Leaves bright mid-green, ovate, apices acute, margins shallowly serrate. Blooms mid-season to late. Originated in Matsu'e City, Shimane Prefecture, Japan. See: Seibundô Shinkôsha, 1.979, *Senchinshû*, pp.66, 219, and Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.40.

Shiomihakka. (White Camellia from Shiomi). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.117 with colour photo; English translation p.80. Small, white tubular to trumpet shaped single, cylindrical stamen cluster. Flowers mid-season to late. Leaves narrowly elliptic, medium size, curved inwards. Upright growth. Selected from wild japonicas growing around the former residences of samurais in Shiomi-nawate. Discovered and released by Tomohisa Arikawa. From Shimane Prefecture.

Shiosai. (Sea Roar), *(C.rusticana), Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.186, p.97, description, p.318: Medium size, 8-9 cm across, irregular, informal double, red with long, strap-like petals and a centre of long petaloids and small, erect petaloids and stamens. Anthers dark yellow, filaments yellow. Mid-season blooming. Leaves, mid-green, long-elliptic, apex long acuminate, margins a little undulate, serrate, venation impressed. Originated in Jô'etsu City, Niigata Prefecture, Japan. Discovered by Susumu Ishizawa, named and released by Kaoru Hagiya in 1969. Similar to **Beni-arashi, Midaregami.** See Seibundô Shinkôsha, 1979, *Senchinshû*, p.219.

Shiota-kasuri. (Shiota Variegated), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô; Chinka Zufu*, (before 1700), Watanabe, 1969, pls.165, 357, 443: Large size, peony form, white ground striped with crimson in varying degrees; occasionally solid red or solid white. Originated in Japan. Different readings: 'Shioda-tobi'iri', 'Shioda-kasuri,' 'Shiota-tobi'iri'. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.159. (Believed extinct.) See: JCS., 1969, *Tsubaki*, No.7, pp.32, 35.

Shiota-tobi'iri. Anonymous, 1969, *American Camellia Yearbook*, p.90. Different reading for **Shiotakasuri.**

Shippôden. Different reading for **Shichihôden.**

Shiquan Dataile. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the New Zealand *C.x williamsii* **Taylor's Perfection.**

Shirabokuhan. Different reading for **Shirobokuhan.**

Shira-boyoshi. SCCS., 1958, *Camellia Nomenclature*, p.89. Corruption of the Japanese name **Shirabyôshi.**

Shirabyohshi. Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, p.211. Different reading for **Shirabyôshi.**

Shirabyôshi. (Medieval Female Dancer), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in section on early blooming; *Nagoya Chinzue* (ca.1910). Owned by Usami, Naohachi. For this see Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû*, No.6, p.127. Large size, white, peony form camellia. Itô, Ko'emon, 1879, *Chinkashû:* White, formal double. Large peony form. Early blooming. There are many flowers forms for this cultivar, anemone form, formal double, semidouble. Resembles **Shiro-daikagura.** See colour pls. and descriptions: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.65 & p.114; Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, pl.106; Satô, 1975, *Chûbu no Tsubaki*, p.6; *Encyclopedia of Camellias in Colour*, 1972, vol.I, pp.116, 327; Seibundô Shinkôsha, 1979 *Senchinshû*, pp.75, 222. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.364. Originated in Kantô area, Japan. Different readings: 'Shirobyôshi', 'Shirabyohshi', 'Hakubyôshi'. Synonyms: 'Yohei-shiro', 'Yohei Haku', 'Yohei-jiro', 'Albatross'. 'September Morn', 'Shirosakushi', 'Dancing Girl'. Chinese synonym: 'Jiuyue Zhichen'. See: JCS., 1969, *Tsubaki*, No.7, p.36. Note: Nakamura in the *Encyclopdia of Camellias in Colour*, vol.I, 1972, describes **Shirabyôshi** as a synonym for 'Yohei-jiro' (**Yoheishiro**), but Tuyama, 1966, *Camellia Cultivars of Japan* asserts that they are distinct. See ibid, p.471: Leaves of 'Yohei-jiro' are smaller than this and the flower produces more often anemone and peony forms.

Shira-fukurin Benten. *(C.japonica), Camellias,* Y.C. Shen, 2009, p.59 with colour photo; Medium size single flower, with a prominent tubular ring of yellow stamens. Leaves elliptic, finely bordered with white. Originated in Japan.

Shirafu-no-taka. (White Marked Hawk), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* White. Large, single with petaloids mixed, long and short. Flower form is similar to **Ise-tsubaki.** Originated in Japan. (Believed extinct.) Different readings : 'Shirahu-no-taka', 'Shira-huno-taka'. Synonym: 'Shiro-ise'. See pl.628, *Chinka Zufu*, (before 1700), Watanabe, 1969. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.96.

Shira-fuyô. (White Cotton Rose). *(C.japonica), Kurume Camellia*, 1997, English translation, p.10; White, medium size, wide open single. A seedling of **Miyakodori**. Originated by K. Inoue, Kurume, Japan.

Shiraga. (White Hair), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.637: Dark red double of pine-cone form, with white, hair-like markings on centre petals. Originated in Japan. (Believed extinct.) Different readings: 'Shira-hige', 'Shiro-hige'.

Shira Gaki. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.11. Corruption of the Japanese name **Shiragiku.**

Shiragayama. (Mount Shiraga), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.17, colour photo & description: Small to medium size, white, tubular to campanulate single with 5 rounded, overlapping petals and a central stamen column with yellow anthers. Blooms mid-season. Leaves bright mid-green, ovate, apices acute, magins shallowly serrate. Selected from wild japonicas on Mt. Shiraga, Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1987.

Shiragika. Nobelius Nursery Catalogue, 1939. Corruption of Japanese name **Shiragiku.**

Shiragiku. (White Chrysanthemum), *(C.japonica)*, Mizuno, Genshô, 1681, *Kadan Kômoku:* White, large, double. *Kadan Chikinshô*, 1695; Itô, Jukyû, *Honzô Hanamaki'e*, 1739: Medium size; Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* A lotus shaped flower. Yashiro, *Kokon Yôrankô*, 1841, vol.310; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Colour photos & descriptions in the following: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.76, pp.130, 472; Tuyama, 1968, *Camellias of Japan*, pl.59; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.409, 410 & p.353; Satô, 1975, *Chûbu no Tsubaki;* Macoboy, 1981, *The Colour Dictionary of Camellias*, p.116; Seibundô Shinkôsha, 1979 *Senchinshû*, p.75, description, p.222: Well branched cultivar with dense foliage rapid growth. Leaves elliptic to broadly elliptic with petioles glabous to a little hairy. Flowers white, flattened in appearance, strongly wavy, leaving a tight pointed bud centre. Flowers mid-season to late. Originated in Kantô area, Japan. Synonyms: 'Tama-usagi' (of Hôkyô, Kyôto), 'Gardenia', 'Neige d'Oree', 'Refinement', 'Harriet I. Laub', 'Lord Chesterfield', 'Purity', 'Japanese Perfect White', 'Japanese Perfection', 'Perfection White II', 'Golden Snow', 'White Japanese Purity'. Corrupted names: 'Shirigiku', 'Shiragika'. Pseudonyms: Erroneously as 'Renjo-no-tama', 'Il Cygno'. Chinese synonym: 'Zhengjie'. See: JCS., 1965, *Tsubaki*, No.5, p.29; ibid. 1983, No.22, p. 116; 1969, No.7, pp.31, 36 and Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.80.

Shiragiku-goromo. (Coat of White Chrysanthemums), *(C.japonica)*, Angyô, 1955, *Shokubutsu Shunjû*, p.5: Snow white, peony form. Originated in Japan.

Shiragiku-kasuri. Different reading for **Shiragiku-tobi'iri.**

Shiragiku-tobi'iri. (Dotted Shiragiku), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Like a white chrysanthemun. White with a few spots. Originated in Japan. (Believed extinct.) Different reading: 'Shiragiku-kasuri'. See: JCS., 1969, *Tsubaki*, No.7, p.22.

Shiragiku-toji. (Closed White Chrysanthemun), *(C.japonica)*, Itô Ihei, 1695, *Kadan Chikinshô*, vol.I. Large flower. The corolla is snow white and piled up. Originated in Japan. (Believed extinct.) Different readings: 'Shirakiku-toji', 'Shirokikutoji'. This is a possible synonym for the **Shirokikutoji** in the *Chinka Zufu* (before 1700), Watanabe 1969 reprint.

Shiragiku-zuki. Katayama Catalogue, 1960, *Tsubaki Ochabana.* Different reading for **Shirokikuzuki.**

Shiragiku-tou. (obscure), *(C.japonica)*, Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* White, formal double, piled up corolla. Thought to be an orthographic error for **Shiragiku-toji.** See: JCS., 1969, *Tsubaki*, No.7, p.35; ibid, 1982, No.21, p. 109.

Shiragoromo. Fendig, 1953, *American Camellia Catalogue.* Different reading for 'Shirogoromo'.

Shiragumo. Different reading for **Haku-un.**

Shirahama. (White Beach), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.16 as 'Shira-hama': Pure white. Large, single with round, incurved petals and some petaloids. Originated in Japan.

Shirahama. (White Beach), *(C.japonica)*, JCS., 1989, *Japan Camellia*, No.31, p.4, colour photo: Medium to large size, white, with a greenish cast at the base, single with 8-9 large, rounded, embracing petals, opening wide campanulate and a compact, central stamen cylinder with yellow anthers and white filaments, joined at their lower third. A seedling of the Higo **Jitsugetsusei**. Originated in Chiba Prefecture, Japan. Named and released by Atsushi Itô in 1987.

Shirahato-tsubaki. (White Dove Camellia), *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.496, p.375. Synonym for *C.fraterna.*

Shirahige. (White Beard), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, #76: Pale pink, large size, double, with a few red streaks. Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki;* see JCS., 1969, *Tsubaki*, No.7, p.32; ibid, 1982, No.21, p.108: Faint pink, large size, double, with little red spots. Originated in Japan. (Believed extinct.) Different readings: 'Shirohige', 'Shiraga'. Erroneously described as 'Shiraga' in *Tsubaki Irohanayose Irotsuki.*

Shirahige. (White Beard), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.401: Medium size, red, hose-in-hose with white filaments. Originated in Japan. (Believed extinct.) Different reading: 'Shiraga'. Thought to be a transcription error for **Shiraga.**

Shirahime. (Place name), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.44, colour photo & description: Medium size, white, cup-shaped single, with 5 overlapping, concave, crinkled petals and a broad, central stamen cluster having white filaments, joined for their lower half, and yellow anthers. Blooms early to mid-season. Leaves dark green, elliptic. Originated in Ishikawa Prefecture, Japan. Natural seedling of **Jômanji.** Named for the Shiroyama-hime Shrine by Tadao Yamaguchi in 1980.

Shirahito. (obscure), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.309. No description. Originated in Japan. (Believed extinct.)

Shirahu-no-taka. Asai Kietarô, 1966, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.7. Different reading for **Shirafu-no-taka.**

Shira-ito. (White Threads), *(C.japonica), Chinka Zufu,* (Before 1700), Watanabe, 1969, pl.373 as 'Shi-raito': Large, open peony form, white with central stamens with white filaments. Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Pure white, double, cup-shaped; stamens divided, somewhat different from the *Chinka Zufu* type. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.78. Originated in Japan. (Believed extinct.)

Shirajishi. Wada, 1941, *Garden Treasures of Japan*, p.30, as 'Shira-jishi'. Different reading for **Hakujishi.**

Shirajusu. (White Satin), *(C.japonica)*, Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.63. No description. Originated in Japan.

Shirakanoko. Different reading for **Shirokanokô.**

Shira-Karaho. Vanderbilt, 1940, *Camellia Research*, p.7. Corruption of Japanese name **Shi-rokarako.**

Shira Karako. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.211. Different reading for **Shirokarako**

Shirakawa. (Personal name or District in Fukushima), *(C.japonica), Chinka Zufu* (before 1700), Watanabe, 1969, pl.714: Small, white, semi-double with waved petals. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p. 158. (Believed extinct.)

Shirakawa-gengo. (Personal Name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.113: Large, white, single with central stamen cluster, white filaments, yellow anthers. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p. 100. (Believed extinct.)

Shirakawa-tobi'iri-tsubaki. (Shirakawa Margined Camellia), *(C.japonica)*, Hino, Sukekatsu, 1633, *Sukekatsukyôki*. No description. Originated in Japan. See: JCS., 1986, *Tsubaki*, No.25, p.15. (Believed extinct.)

Shirakawame. (Girl from Shirakawa), *(C.japonica)*, ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.21: Small to medium size, brilliant red, cup-shaped single. Late blooming. Originated in Kyôto Prefecture.

Shirakikutoji. *Chinka Zufu*, (before 1700), Watanabe. 1969, pl.392. Different reading for **Shirokikutoji.**

Shira-kokenoe. Camellia Forest Nursery Catalogue, 1988, p.2. Corruption of the Japanese name: **Shiro-kokonoe**

Shira-koshiminio. Different reading for **Shirokoshimino**.

Shirakumo. (White Clouds), *(C.japonica)*, Mizuno, 1681, *Kadan Kômoku:* White with red stripes. Double. Originated in Japan. See: JCS., 1965, *Tsubaki*, No.5, p.28. (Believed extinct.)

Shirakumo. (White Clouds), *(C.rusticana)*, JCS., 1987, *Japan Camellia*, No.24, p.4, colour photo: Originated by Makino, Kôroku, Toyama Prefecture, Japan, by grafting the wild snow camellia **Kiridani** onto 'Tachikan-tsubaki', (**Kanjirô**) which has a white variegating virus which gives a beautiful cloud quality of an individual nature. Wild snow camellias are difficult to variegate, but using the variegated 'Tachikan-tsubaki' this can be facilitated.

Shirakumo-tsukasa. (Lord of White Clouds), (Higo), Taniguchi, 1912, *Chinka Kyôkan. No* description. Originated in Kumamoto Prefecture, Japan. (Believed extinct.)

Shiraku-tsubaki. (Shiraku Camellia), *(C.japonica)*, Mizuno, 1681, *Kadan Kômoku:* Multiple double. White patches on red ground. Originated in Japan. Different reading: 'Jiraku-tsubaki'. (Believed extinct.)

Shiramine. (White Peak), *(C.japonica)*, Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.1, A-37 with illustration: Pure white, single, tubular, opening to cup-shaped. Medium size. Flowers early. Originated in Japan.

Shiranami. (White Capped Waves), *(C.japonica)*, Hino, Sukekatsu, 1637, *Sukekatsukyôki*. No description. *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.50: Medium size, dark red and white, single with central stamen column. Originated in Japan. Resembles **Amagashita**. (Believed extinct.)

Shiranami. (White Waves), *(C.sasanqua)*, Seibundô Shinkôsha, 1971, Dec. *Garden Life*, No description. Originated in the Kumamoto Prefecture, Japan.

Shiranubi. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.63. Different reading for **Shiranui.**

Shiranuhi. Nuccio's Nurseries Catalogue, 1974-1975. Different reading for **Shiranui.**

Shiranui. (Fishing Lights on the Sea), (Higo), Taniguchi, 1912, *Chinka Kyôkan;* Hiratsuka, 1964, *Higo Camellia*, p.41 and back p.14: Deep bright pink. Very Large. See colour pls: Satô, 1975, *Chûbu no Tsubaki*, p.108; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.140. Scarlet with rare white marks, single, 6-7 petals, 9-10 cm across with 130 light pink filaments

in a ring and small leaves. Different reading: 'Shiranuhi', 'Shiranubi'. Synonym: 'Crimson Cup'. Corruption of Japanese name: 'Shiranuhu'. Originated in Kumamoto Prefecture, Japan by Tamehachi Yoshimura. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.222, 265 as 'Shiranui' (Higo). Chinese synonym 'Buzhihuo'.

Shiranui. (Fishing Lights on the Sea), *(C.japonica)*, Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.42; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.222, 265 as 'Shiranui' (Kansai): Dark red, single, opening evenly. Stamens change their ratio with filaments short and reddish. Large flower, mid-season blooming. Leaves oval to long-oval, medium sized to large, thick, apex acuminate. Growth habit upright, sparse and vigorous. Originated in the Kansai District, Japan or possibly in China. It closely resembles **Chûbu-kumagai** or could be synonymous.

Shiranui (Higo). Seibundô Shinkôsha, 1979, *Senchinshû*, pp.222, 265. Synonym for Higo **Shiranui.**

Shiranui (Kansai). Seibundô Shinkôsha, 1979, *Senchinshû*, pp.222, 265. Synonym for *C.japonica* **Shiranui.**

Shira-nuhu. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Shiranui.**

Shira-ôgi. Nuccio's Nurseries Catalogue, 1974-1975: White. Medium sized single, heavily flared, golden stamens. Different reading for **Hakusen.** See Seibundô Shinkôsha, 1979, *Senchinshû*, pp.111, 237.

Shira-otome. Vanderbilt, 1941, *Camellia Research*, II, p.7. Different reading for 'Shiro-otome' (**Haku-otome**).

Shira-ryoshi. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Shirabyôshi.**

Shira Sag. Stone, Vi, 1983, SCCS., *The Camellia Review*, vol.45, No 2, p.20. Corruption of the Japanese name **Shirasagi.**

Shirasa-shibori. Vanderbilt, 1941, *Camellia Research*, II, p.7. Corruption of the Japanese name 'Sarasa-shibori', synonym for **Aki-no-sarasa.**

Shirasagi. (White Heron), (Higo), SCCS., 1984, *Camellia Nomenclature*, p.96: Large, single, white. Originated in Japan.

Shirase. (Name of a River). *(C.japonica)*, Hiroshi Matsuda, Okinawa, 1994, JCS, *Tsubaki*, No.33, p.35: Small size, campanulate, bright red single. Early blooming. Plant habit spreading and sturdy. Selected from the wild at Shirase River, Kume Island, Japan.

Shirasumi. Nippon Engei Kaisha Catalogue, 1904, p.9; Tuyama, 1966, *Camellia Cultivars of Japan*, p.124; *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.353: Synonym for **Shiro-suminokura.** Different readings: 'Shirosumi', 'Shirozumi'. Local name in Kansai area.

Shirataka. (White Hawk), (Higo), Cho, [Ca. 1800], *Chinka fu*, illustr. [p.12-13]: Large leaves. Snow white. Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangements*, p.69 as 'Shira-Taka' = 'Haku-Taka': White. 10 cm across with 6 petals. Stamens, 120 or more, fully open, yellowish. Leaves large, ovate to broad-elliptic, venation heavy. Different readings: 'Hakutaka', 'Shirotaka'. Synonym: 'Higo-hakutaka'. See colour photos: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.78, pp.62, 302 as 'Higo-hakutaka'. Seibundô Shinkôsha, 1979 *Senchinshû*, p.112 as 'Hakutaka-higo'. Originated in Kumamoto Prefecture, Japan. In Japan the different reading **Hakutaka** is commonly used for this cultivar and this is accepted to differentiate this cultivar from others of the same name characters.

Shirataka. (White Hawk), *(C.japonica)*, Satô,1975, *Chûbu no Tsubaki*, p.35, colour photo and description: Snow white, large, 10 cm across, 5-6 petals, opening wide cup-shaped, crinkled about the margins. Stamens in a ring formation, about 129 with thick white filaments. Leaves thick, dull dark green, long-ovate. Plant habit dense, erect, vigorous. Originated in the Chûbu area, Japan. See Seibundô Shinkôsha, 1979, *Senchinshû*, p.222 for description. An old tree can be found in Sofu'e-chô, Nakajima-gun, Aichi Prefecture. Named and released by Minoru Satô in 1957.

Shirataka. (White Hawk), *(C.japonica)*, Wada, 1941, *Garden Treasures of Japan*, p.30: Large size, semidouble, smooth petalled, showing stamens and petaloids in the centre, pale, fading pink. Wada gives 'Albatross' as the translation of **Shirataka** but 'White Hawk' may be closer to the intended meaning.

Shirataki. (White Waterfall), *(C.japonica)*, Iwasaki, 1829, *Honzô Zufu:* Double. Pure white. Yashiro, 1841, *Kokon Yôrankô*, vol.311; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* See: JCS., 1969, *Tsubaki*, No.7, p.32; ibid, 1982, No.21, p.109; 1981, No.20, p.123: Semi-double with 2 row of petals, sake-cup shaped, pure white. Originated in Japan. (Believed extinct.)

Shiratama. (White Bead), *(C.rusticana)*, Kaempfer, 1712, *Amoenatatum Exoticarum* as 'Siratamma'. No description. Iwasaki, 1829, *Honzô Zufu*; Yashiro, 1841, *Kokon Yôrankô*, vol.308 & vol.362; Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* White, medium size, single of 7 petals. Vigorous, compact growth. Early blooming. Note: These 'Shiratama' from the ancient lists are probably not the same. See: Tuyama, 1966, *Camellia Cultivars of Japan*, p.86; p.142, Yokoyama, 1975, *Gendai Tsubaki Meikan.* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.16 as 'Hatsuarashi'(Shiratama). See: *Encyclopedia of Camellias in Colour*, 1972, vol.I, pl.68, p.59 and description, p.301. Resembles **Hatsuarashi (Shiratama).** Synonym: 'Hatsu-arashi-Kansai'. Different reading: 'Shirotama'. Note: Sakuden, 1630, *Hakuchinshû* describes 'Shiratama' as the group name for the white camellia generally. Nakayama, 1847, *Senkaôden* describes it as a synonym for 'Hatsu-arashi'. Iwasaki, 1829, *Honzô Zufu* lists it as 'Fuyuzaki-no-shiratama' which means 'winter flowering white camellia'. Kasuya. Kamegorô lists two 'Shiratama's', one is a single, the other a double with 3-4 rows of petals. For these see: JCS., 1981, *Tsubaki*, No.20, p.124; ibid, 1969, No.7, pp.31, 32; Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.94; ibid, 1963, No.4, p.73.

Shiratama. (White Bead), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White, large size, double with divided stamens. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.32; ibid, 1982, No.21, p.109.

Shiratama. (White Bead), *(C.japonica)*, Yokohama Nursery Co. Ltd. Catalogue, 1895: Double, white ball. Note: This appears to be the origin of **Shiratama** as it is known in the West. According to SCCS., 1950. *The Camellia. Its Culture and Nomenclature*, p.60 as 'Shirotama' its description is: White. Medium sized, rose form to formal double. Vigorous, open, upright, growth. Midseason blooming. However, in Japan 'Shiratama' is a white single, never double. Synonyms: 'Egret', 'Hearn's Egret', 'Abundance', 'Senyôhaku'. Yashiro, 1841, *Kokon Yôrankô* cites *Honzô Kômoku Keimô* 1803 as giving **Senyôhaku** as a synonym. Different readings: 'Shirotama', 'Tamashiro'. See p.327, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I.

Shiratama. (White Bead), *(C.sasanqua)*, Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu:* White, large size. Originated in Japan. (Believed extinct.)

Shiratama-bana. (Shiratama Blossom), Okumura, 1810, *Chinka Hin'i*, illustr. [p.8-9]. Description not seen. Originated in Japan. Different reading: 'Hakugyokuka'. (Believed extinct.)

Shiratama-benten. Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.210; Izu-Oshima, 1980, Hawaii Botanic Garden, *List of Plants* as 'Shiratamabenten'; Inazawa Nurseries Co Ltd. Catalogue,

1980-1981, p.16, D-121: Single white with variegated leaves. Synonym for **Benten-shiratama.**

Shiratama-hôju. (White Bead Treasure). *(C.japonica), Kurume Camellia,* 1997, English translation, p.10; Medium size, rose form double, pure white. Spreading growth, flowers mid-season. Named by S. Kirino, Kurume, Japan.

Shiratama-hôshu.(‘Shiratama’ Gem). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.134 with colour photo; English translation p.92. Medium size, white, bud-centred, round and thick petals. Flowers early to late. Leaves narrowly elliptic, medium size. Upright, vigorous growth. An old variety raised in Kurume, details unknown. Named and released by Shunsuke Hisatomi in 1993. Former name ‘Yae-shiratama’. From Kurume.

Shiratama-monogurui-tsubaki. (White Curled Blossom Camellia), *(C.japonica),* Joshiau Condor, 1893, *Landscape Gardening in Japan.* No description except that contained in its name. Originated in Japan.

Shiratama-Nagoya. (Shiratama from Nagoya), *(C.japonica),* Tuyama, 1966, *Camellia Cultivars of Japan,* p.88: Single, white, early blooming. Originated in Nagoya, Japan.

Shiratama-Reikanji. (Shiratama from Reikanji), *(C.japonica),* Tuyama, 1966, *Camellias Cultivars of Japan*, p.88; Tuyama, 1968, *Camellias of Japan*, pl.9, p.5, description, p.87: Leaves thick, broad-elliptic, apex suddenly acute, deep green. Flower pure white, petals broad and wavy at margin, keeping a ball shape for a period before fully opening. Thick stamen column. Blooms mid-season to late. One of the most beloved cultivars for the tea ceremony. There are many similar cultivars in Kyôto. ‘Shiratama’ is a common name for the single white camellia and there are many of this name distinguished only by slight differences such as **Honshiratama** (Genuine ‘Shiratama), **Akayama-shiratama** (‘Shiratama’ from Akayama) etc. See: Katei Gahô, ed., 1984, *Chabana Koyomi vol.I, Tsubaki*, p.43 as ‘Shiratama’.

Shiratama-shibori. (Variegated Shiratama), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Iro-hanayose Irotsuki*, in the early blooming section; See: JCS., 1969, *Tsubaki*, No.7, p.36; Itô, Ko’emon, 1879, *Chinkashû:* White streaked pink. Single. Leaves elliptic, prominent venation, early blooming. For colour photos see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.129, & p.310; Satô, 1975, *Chûbu no Tsubaki*, p.10. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.167 & pp.290, 477; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.75, 222. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.275. Originated in Kantô area, Japan. Resembles **Matsushima** and **Shibori-rôgetsu.** Sport: **Gyoku-un.** Corruption of Japanese name: ‘Shiratima-shibori’. Different reading: ‘Shirotama-shibori’.

Shiratama-tsubaki. Chidamian, 1953, *American Camellia Yearbook*, p.163. Synonym for **Shiratama.**

Shiratima-shibori. Chûgai Nursery Co. Catalogue, 1938-1939. Corruption of the Japanese name **Shiratama-shibori.**

Shiratori. Different reading for **Hakuchô.**

Shiratori-no-mai. (Dance of White Bird). *(C.sasanqua). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.296 with colour photo; Medium size white single, cupped petals, flared stamens. Flowers early. Leaves ovate, medium size, flat. Upright, vigorous growth. Found in Sofu’e-machi, Inazawa City, Japan, by Minoru Satô in the 1970s.

Shiratsuyu. (White Dew), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, #39; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* see: JCS., 1969, *Tsubaki*, No.7, p.35: Large, white flower with a double, piled up corolla. Originated in Japan. Different reading: ‘Hakutsuyu’, ‘Shirotsuyu’, ‘Hakuro’. (Believed extinct.)

Shiratsuyu-nishiki. Wada, 1941, *Garden Treasures* of Japan, p.28. Different reading for **Hakuro-nishiki**. Different reading: 'Shirotsuyu-nishiki'.

Shirayae. Different reading for **Shiroya'e.**

Shirayae-dairin. Minagawa, 1960, *Chinkashû.* Synonym for **Ginsekai.**

Shirayae-kikyô. Different reading for **Shiroya'e-kikyô.**

Shira-wabisuke. Vanderbilt, 1940, *Camellia Research,* p.7. Different reading for **Shiro-wabisuke.**

Shirayuki. (Snow White), (Higo), Tamura, 1966, *Shinkaki* No.9: White, single, 8 cm across, 8 petals, 100 white stamens in a spreading cluster. Originated in Kumamoto Prefecture, Japan. See colour photos: Adachi, 1960, *Camellia. Its Appreciation and Artistic ...*, pl.30; Hiratuka, 1964, *Higo Camellia,* p.7, No.2, back p.11; Tuyama, 1968, *Camellias of Japan,* pl.29, p.15; Different reading: 'Shiroyuki'. Synonym: 'Shirayuki'(Higo).

Shirayuki. (White Snow), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.321: Medium size, white, open peony form with irregular stamen cluster. Originated in Japan. (Believed extinct.)

Shirayuki. (White Snow), *(C.japonica), Encyclopedia of Camellias in Colour*, 1972, vol.I, pl.95, pp.67, 305; Seibundô Shinkôsha, 1979, *Senchinshû*, p.222: White, single, opening easily, but more inward curved and cup-shaped than the Higo 'Shirayuki'. Large, whorled stamens. Blooms early to mid-season. Leaves oval to long oval, medium sized, margins strongly. curved outwards, undulate. Plant habit upright and vigorous. Branch mutations are numerous. Originated in Kansai area, Japan. A sport of 'Fukurin-shokkô' and sports to 'Shokkô-beni'.

Shirayuki (Higo). Stone, Vi, 1983, SCCS., *The Camellia* Reuiew, vol.45, No.2, p.20 as 'Shira-Yuki'(Higo). Synonym for 'Shirayuki'.

Shirayuki-hime. (Snow-white Princess), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.40, p.20, description, p.97: Leaves broadly-elliptic, rounded at base, shortly acute, 6.7-9 cm long x 4.2-5.5 cm wide, dull deep green, flat, venation flat or impressed. Flower white, medium size, peony form; outer petals 16-35; inner petals strongly wavy, 16-24, mixed with irregular, numerous stamens with yellow filaments. Blooms late season. Originated in Mr Matsui's private garden, Yatsuo-shi Toyama Prefecture, Japan.

Shirayuki-hime. (Snow-white Princess), *(C.hiemalis),* Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.39: Small size, white, irregular, informal double. Blooms early to late. Selected from seedlings of **Fuji-no-mine** in 1960s. Originated in Kurume, Fuku'oka Prefecture, Japan. Chinese synonym: 'Baixueji'.

Shirayuki-tsubaki. (White Snow Camellia). *(C.rusticana). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.133 with colour photo; English translation p.90. Medium size, white, flat single, rusticana-like flared stamens. Flowers mid-season to late. Leaves somewhat oblong, medium size, waved. Cespitose, dwarf, of rusticana parentage. A cultivar growing at a private family in Kita-kanbara District. Collected, named and released by Yaichi Kawamura in 1966. From Niigata Prefecture.

Shirayuri. (White Lily), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.20, description, p.21, colour photo: Small to medium size, white, wide campanulate single with 5 regular, rounded, reflexed, slightly emarginate petals and a narrow stamen column with white filaments, joined for their lower third, and yellow anthers. Blooms mid-season. Leaves bright green, elliptic, apices acute, margins bluntly serrate. Selected from wild japonicas growing in Hirado City, Nagasaki Prefecture, Japan. Discovered and named by Kenji Maeda in 1981. Different reading: 'Shiroyuri'.

Shirazono. (White Garden), *(C.sasanqua),* Murayama, Seibundô Shinkôsha, 1971, *Garden Life*, Dec. p.16. No description. Originated in Japan.

Shirazuru. Different reading for **Hakutsuru.**

Shire Otome. Humble, 1963, *Gardeners' Chronicle*, p.373. Corruption of Japanese name 'Shiro-otome' (**Haku-otome**).

Shirigiku. Portland Camellia Nursery, Camellia Catalogue, 1946-1947, p.6. Corruption of the Japanese name **Shiragiku.**

Shirley Anne. *(C.japonica),* ACRS, *Camellia News,* Autumn 2002, No.158, p.8, colour photo front cover, Reg. No.537. Originated by Leslie Round, Geilston Bay, Tasmania, Australia. A seedling of *C.japonica* **Brushfield's Yellow,** pollen parent unknown. First flowered 1997. The semi-double flower of 12-15 petals is light pink, occasionally shading to lighter tonings, with the possibility of 1-3 petaloids. Flowers freely mid-season to late on an upright, bushy plant of medium growth. Firm textured and long lasting on bush. Petals reflexed. Leaves mid-green, obate to obovate, variable in size, average 10 cm long x 6 cm wide.

Shirley Estes. *(C.hybrid).* ACS, *The Camellia Journal,* Dec. 2006, p.13 with colour photo; Reg. No. 2691. A cross between **Jury's Yellow,** seed parent, x 'Homeyer's 257' (**Elizabeth Boardman** x **Colonial Dame**). First flowered in 2000. Originated by Hyman R. Norsworthy, Beaumont, Tex., and propagated by Glenn Read Nursery, Lucedale, Miss., USA. The 9 cm diameter, loose peony flower is white, and is stated to have white anthers. Plant is upright and dense, with average growth rate, and blooms mid-season. *American Camellia Yearbook,* 2006, p.65 with colour photo; Dark green leaves are 7.5 cm x 3.8 cm. Flower is incorrectly described.

Shirley J. Stimson. *(C.japonica),* ACRS., *Camellia News*, No.115, p.11, Reg. No.384, 1990: Originated by Walter Allan Stimson, Hafey Road, Kenthurst, NSW., Australia. A cross between *C.japonica* **Catherine Stimson** x **Laurie Bray** that first flowered 1981. The single, 8 petalled, bright red flower, 13cm across x 6.5 cm deep, colour METH 11C8, opens early to mid-season. Leaves ovate, curled, glossy green, finely serrate, acute apex, 9 cm long x 5 cm wide. Petals fluted, filaments columnar.

Shirley Meneice. *(C.japonica),* ACS, *The Camellia Journal,* Sept. 2004, p.29 with colour photo; Reg. No.2626. A chance seedling originated by R.E. Dodd, Marshallville, Ga., USA. First bloomed in the early 1990s. The magenta pink flower has 14-15 heart shaped petals with unusual brushed, lighter pink markings, bright yellow anthers and white filaments. Flowers mid-season to late. *American Camellia Yearbook,* 2004, p.95, colour photo p.c4. Plant is upright with average spreading growth. Dark green leaves are 9.5 cm long x 3.8 cm wide.

Shirley Norup. *(C.japonica),* ACRS, *Camellia News,* Spring 2003, No.163, p.10, colour photo p.2, Reg. No.549. Originated by Len Norup, Eight Mile Plains, Qld., Australia, registered by John Butler, Cabarlah, Qld. A chance seedling of *C.japonica* **Debutante** that first flowered in 1999. A formal double, pale pink flower of 73 petals, imbricated with petals paling towards edge, 8 cm diameter x 3.5 cm deep. Flowers freely mid-season to late on a compact, medium growing plant. Leaves mid-green, glossy, rounded at base, apiculate apex, 8,5 cm long x 5.5 cm wide. Long lasting flowers.

Shirley Spencer. *(C.sasanqua),* ACRS., 1978, *Camellia News*, No.70, p.16, Reg. No.208: Originated by Alice Spragg, Sutherland, N.S.W., Australia as a seedling of **Cherilyn.** First flowered 1975. The upright, dense plant has leaves 5.5-7 cm long x 2.5-3.3 cm wide, with distinct serrations. The 7.5 cm across **Debutante** pink flowers have fringed petals and flower early to late. Chinese synonym 'Sheli'.

Shirley Temple. *(C.japonica),* Elliot, Douglas, Nursery Catalogue, 1959, No description. Originated in USA. No valid listing located.

Shirley's Own. *(C.japonica),* ACRS, *Camellia News,* 1995, No.135, p.11, colour plate p.2, Reg. No.442: Originated by Kenneth Brown, Mitcham, Victoria, Australia. A seedling of **Fiona Capp** x **Easter Morn** that first flowered 1989. Flower colour soft, pale pink (RHS.CC.62D), fading to off-white (RHS.CC.36C), 12 cm across x 6 cm deep. Flowers freely mid-season to late on a spreading, slow growing plant. Leaves glossy olive-green, ovate, flat, with serrate margins and acuminate apices, 8.2 cm long x 5.5 cm wide. Petals notched, opening flat. Filaments and petaloids medium red. Flowers shed whole.

Shirley's Surprise. *(C.japonica), New Zealand Camellia Bulletin,* March 2008, No.159, p.3, Reg. No.478. Registered by Shirley Munroe, Waikanae, New Zealand. A chance seedling that first flowered in 2000. Plant is of average density, form and growth rate. Dark green leaves are 10 cm x 6.5 cm. The flower is of single form, 9 cm wide by 6 cm deep, with 7-8 petals. About 100 ivory-cream anthers and bright yellow filaments form a compact columnar central mass. Flower colour is bright rose (RHS.CC. 53C/D), edged with an unusual darker grey-purple (RHS.CC. 186A) covering up to one third of the flower area. Flowers last well when picked. Flowers early to mid-season.

Shiro Azahani. *(C.japonica),* Ayling, 1977, RHS., *Rhododendrons with Magnolias and Camellias*, p.96. A single white camellia entered by Sir Giles Loder in the RHS Camellia Competition. Apparently a corruption of an unknown Japanese name.

Shiro Chan. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* White. Incomplete double. Mid-season. *American Camellia Yearbook*, 1954, p.332, Reg. No.209: A 3 year old sport of **C.M. Wilson** that first flowered 1950. Originated by Toichi Domoto, Hayward, California, USA. Plant type and growth are the same as for **Elegans**. Flower incomplete double anemome form, similar to **Elegans**. Colour white. Some petals show very light basal pink on first opening. Flowers mid-season. The name is formed from 'Shiro', Japanese for white and 'Chan' for Chandler. Sport: Snow Chan. Names previously used for this white sport of **C.M. Wilson** or **Elegans** are 'Chandleri White', (McIlhenny, 1937); 'Chandler's White', (Vanderbilt, 1941) and 'White Elegans', (Fruitland, 1943). The cultivar **Madge Miller** named in 1938, believed to be seedling of **Elegans,** being very similar, caused confusion by collecting synonyms such as 'Chandleri Alba', 'White Chandleri' and 'Chandleri White'. This casts doubt on this complete group of synonyms and, while McIlhenny's 'Chandleri White', 1937 has priority it is considered that **Shiro Chan** is now in such universal use that it be let stand as the valid name. Orthographic errors: 'Chiro-Chan', 'Shirto Shan'. Chinese synonym: 'Shichen'.

Shiro-asukagawa. (White Asuka River), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.600: White with red stripes, medium size, irregular semi-double with erect centre petals and irregular stamen cluster. Originated in Japan. (Believed extinct.)

Shirobana-kingyo. (White Flowered Fishtail), Ohoka Chinka-en Catalogue, (before 1982). Synonym for **Shirokingyoba-tsubaki.**

Shirobana-tarô'an. Botan-en Nursery Catalogue, 1957, p.12. Synonym for **Shiro-tarô'an.**

Shirobandai. (White 'Bandai'), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka.* p.62, colour photo & description: Small size, white, single with 5 long, narrow, oval petals, separated, arranged star-shaped and a central cluster of stamens with pale lemon filaments and light yellow anthers. Blooms mid-season to late. Leaves dark green, long, elliptic, apices tapering acuminate, margins deeply serrate. Originated in Niigata Prefecture, Japan. A cultivar from a private family in Jô'etsu City, named and released by Mutsuo Sakata in 1983.

Shirobishi. (White Rhombus), *(C.japonica),* Uekiya, Seigorô, 1874, *Tsubaki Hyakuro no Zu,* vol.1. No description. Originated in Japan. Different reading 'Hakubishi'. See: Kyôto Engei Kurabu, 1975, *Kyôto Engei*, No.73, p.21. (Believed extinct.)

Shirobokuhan. (White 'Bokuhan'), *(C.japonica),* Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki;* See: JCS., 1969, *Tsubaki*, No.7, p.32; ibid, 1982, No.21, p.109: A small, white, anemone form with 8-9 outer petals, somewhat emarginate, in 2 rows and a central boss of creamy white petaloids. Leaves mid-green, lanceolate to broad-elliptic, apex acuminate, margins sharply serrate. Originated in Kansai area, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.78, 223: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.353: Katei Gahô, ed., 1984, *Chabana Koyomi*, *vol.I*, *Tsubaki*, p.46. Resembles **Shirokarako** but larger.

Shiroboshi. (White Star), *(C.japonica),* Uekiya Seigorô, 1874, *Tsubaki*, *Hyakuro no Zu*, vol.2. No description. Originated in Japan. Synonym: 'Hatsuyuki'. Different reading: 'Shirohoshi'. See: Kyôto Engei Kurabu, 1975, *Kyôto Engei*, No.73, p.21. (Believed extinct.)

Shirobotan. (White Peony), *(C.japonica),* Overlook Nurseries Catalogue, 1949 as 'Shiro-Botan': White. Medium, semi-double to loose peony form. Unique with its cup and saucer form before fully opening. Vigorous growth. Mid-season flowering. Originated from seed from Japan planted 1931 by K. Sawada, Mobile, Alabama, USA. The different reading **Hakubotan** is reserved for the old Japanese cultivar, Itô, Ko'emon, 1879, *Chinkashû.* Synonym: 'Wonder Grow'. Corruption of name: 'Shirabothian'. Has been erroneously equated with **Yukibotan.**

Shirobotan. Wada Nursery Catalogue, 1937, p.36. Different reading for **Hakubotan.**

Shirobotan(2). Fendig, 1953, *American Camellia Yearbook.* Synonym for **Leviathan.**

Shirobotanzaki-kingyo. Ôoka Catalogue, 1980, *Chinkaen.* Abbreviation for **Shirabotanzaki-kingyoba-tsubaki.**

Shirobotanzaki-kingyoba-tsubaki. (White Peony, Goldfish Leaf Camellia), *(C.japonica): Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.439, p.181, description, p.357: A white, open peony form, 12 cm across with 'fishtail' leaf forms of medium green, multiple apices, margins serrulate. Originated in Japan. The original tree was found at Seijô, Setagayaku, Tokyo in 1962. Abbreviation: 'Shirobotanzaki-kingyo'. For colour photos see: Sufu-no-Tomosha, 1976, *Tsubaki to Sazanka*, p.36; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.76, 223. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.365. This camellia has the largest flower in the 'fishtail' group

Shirobotanzaki-kingyo-tsubaki. Synonym for **Shirobotanzaki-kingyoba-tsubaki.**

Shirobothian. Knight's Nursery Ltd. Catalogue, 1976-1977. Corruption of the Japanese name **Shirobotan.**

Shirobyôshi. Fendig, 1950, *American Camellia Catalogue.* Different reading for **Shirabyôshi.**

Shirochasen-kagura. Seibundô Shinkôsha, 1979, *Senchinshû*, p.237. Synonym for **Hakuchô-no-mizu'umi.**

Shirochijimi. (White Crepe), *(C.sasanqua*, Itô, Jukyû, 1739, *Honzô Hanamaki'e:* White, large size, creped petals. Originated in Japan. (Believed extinct.)

Shirochinka. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*. Tuyama. 1966, *Camellia Cultivars of Japan*, p.130. See: JCS., 1969, *Tsubaki*, No.7, p.31. Different reading for **Hakuchinka.**

Shirochirimen. (White Crepe), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White. Large size, single with thick creped petals and cylindrical stamen cluster. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.31. (Believed extinct.)

Shirochirimen. (White Crepe), *(C.sasanqua),* Ishii, Yûgi, 1933, *Jissai Engei*, No.15; *Chabai no Hinshu Kaisetsu:* White, single, medium size, creped petals. Originated in Japan.

Shiro-chiritsubaki. (White Scattering Camellia), *(C.japonica),* Izu-Ohshima, 1980, Hawaii Botanic Gardens *List of Plants* as 'Shirochiritsubaki'. No description. Originated inJapan.

Shiro-daibotan. Different reading for **Shiro-ô-botan** in *Chinka Zufu* (before 1700).

Shirodaika. Kan, Yashiroda Ltd Kagawaken Nursery Catalogue, 1931-1932, p.8. Orthographic error for **Shiro-daikagura.**

Shiro-daikagura. (White 'Daikagura'), *(C.rusticana),* Yokohama Gardeners' Association Nursery Catalogue, 1891, p.8; Ishii, Yûgi, 1932, *Genshoku Engei Shokubutsu Zufu;* Minagawa, 1933, *Chinkashû:* White, finely twinned double with twinned and curled petals and stamens irregularly scattered between them. Medium size, loose peony form. Medium, compact, upright growth. Early flowering. Leaves resemble **Arajishi,** petioles hirsute. In spite of its name it has no relationship with **Daikagura.** Resembles **Shirabyôshi.** Different reading: 'Hakudaikagura'. Synonyms: 'Daikagura White', 'White Daikagura', 'Shirodaika', 'White Kagura', 'Shirodaikagura (1)'. Sport: **Maifubuki.** See: Tuyama, 1966, *Camellia Cultivars of Japan*, p.142 as 'Haku-daikagura'. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.248, p.327; Katei Gahô, ed., 1984, *Chabana Koyomi*, *vol.I*, *Tsubaki*, p.45; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.77, 223. In USA a white sport in the **Daikagura** group was named 'White High Hat', also 'Conrad Hilton' and has been confused with **Shiro-daikagura.** Chinese synonym 'Bai Taishenle'.

Shiro-daikagura (Chubu). (White 'Daikagura'). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.134 with colour photo; English translation p.91. Large, white, peony to lion form, thick petals, split stamens. Flowers early to mid-season. Leaves narrowly elliptic, large, flat. Upright, vigorous growth. A chance seedling, originated and named by Ryôichi Kosaki in 1955. No connection to the earlier **Shiro-daikagura.**

Shiro-daikagura (1). SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.62. Synonym for **Shiro-daikagura.**

Shiro-daikagura (2). SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.62. Synonym for **Joshua E. Youtz.**

Shiro-echigo. (White 'Echigo'), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Flower pinkish white, large size. Synonym: 'Echigo-haku'. Originated in Japan. (Believed extinct.)

Shiro-ezo. Izu-Ohshima, 1980, Hawaii Botanic Garden, *List of Plants*, p.11 as 'Shiroezo'. Abbreviation for **Shiro-ezo-nishiki.**

Shiro-ezo-nishiki. (White 'Ezo-nishiki'), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.76, description, p.222: Medium size, white, semi-double; petals large, rounded, emarginate, in 2 rows, hose-in-hose type petals; stamens in central column. anthers yellow, filaments white. Leaves, deep green, broad-elliptic, apex acuminate, margins serrulate turned under. Originated in Kantô area, Japan. Sport of **Ezo-nishiki.** Probably synonymous with Tricolor White. Other sports: **Miyako-no-nishiki, Dainty, Nishiki-gasane**, 'Aka-ezo'.

Shiro-funatsu. (White 'Funatsu'). *(C.uraku). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.136 with colour photo; English translation p.92. Small, white, tubular to trumpet shaped single, cylindrical stamen column. Flowers early to late. Leaves elliptic, medium size. Upright growth. A chance seedling of **Funatsu.** Originated and released by Takeo Ogawa around 1970. From Izu Ôshima.

Shirofu-hiboke. (White Variegated 'Hiboke'), *(C.sasanqua);* Hantei, Kinta, 1827, *Sômoku Kihin Kagami:* Variegated leaves, flowers crimson. Originated in Japan. See: Kyôto Engei Kurabu,

1966, *Tsubaki Tokushû*, No.7, p. 161. Corruption: 'Shirofu-momoboke-sazanka'. (Believed extinct.)

Shirofu-momoboke-sazanka. Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7. Corruption for **Shirofu-hiboke.**

Shirofu-no-taka. Different reading for **Shirafu-no-taka.**

Shirofuji. (White Fuji), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* White, large flat flower with wide spreading stamens. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.78. Originated in Japan. (Believed extinct.) Different reading: 'Shirohuji'

Shirofunatsu. (Shipping Harbour), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.35, colour photo & description: Small size, white with palest pink graduating on the outer petals, single with 5 broad, rounded, emarginate, overlapping petals and a central stamen column with white filaments, joined for their lower half, and yellow anthers. Blooms mid-season. Leaves mid-green, elliptic, apices tapering acuminate, margins serrate. Originated by Mr. Ogawa, on Izu, Ohshima, Japan. Sport of **Funatsu**. Resembles **Shiroseiôbo** and **Suzugao.**

Shirogan. Different reading for **Hakugan.**

Shirogasane. (White Pile), *(C.sasanqua)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô*, vol.344: Small, transparent white, semi-double. Originated in Japan. (Believed extinct.) Different reading: 'Shirokasane'.

Shirogenna. (White Genna), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.642 as 'Shirogenna': Medium size, white, peony form. Originated in Japan. Possible synonym for **Shirokenna** in *Shoshiki Hanagatachô*, 1789. (Believed extinct.)

Shirogeshi. (White *Poppy)*, *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.297, 390 as 'Shiro-geshi': Medium small, white, peony form, divided stamens. Thought to be a synonym for **Shirokarako.** Originated in Japan. (Believed extinct.) Different reading: 'Shirokeshi.

Shirogeshi. (White Poppy), *(C.japonica)*, Nakayama, 1847, *Senka'ôden:* Large size, single, anemone form. Originated in Japan. (Believed extinct.)

Shirogifu. (White Gifu), *(C.sasanqua)*, Shirai-Bunko., 1789, *Shoshiki Hanagatachô;* Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.81: Large size, white, single. Originated in Japan. (Believed extinct.) Thought to be synonym for **Gifu** in *Kadan Chikinshô*, 1695.

Shirogoromo. Fendig, 1953, *American Camellia Catalogue.* Different reading for 'Shiragoromo'.

Shirogyôkô. (White 'Gyôkô'), *(C.japonica)*, Uekiya Seigorô, 1874, *Tsubaki Hyakuro no Zu*, vol.1, No.2: Single of 5 round petals, white with red veins and markings. Anthers in a short, wide cluster with yellow anthers. Synonym: 'Shirokikô'. Originated in Japan. See: Kyôto Engei Kurabu, 1975, *Kyôto Engei*, No.73, p.21. (Believed extinct).

Shiro-hachiman. (White Hachiman Shrine), *(C.japonica)*, *Tsubaki Byôbu*, (Late 17th century). Owned by Hirayama, Tokuo; *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.616: Large, formal double, white with some stamens showing when fully open. Originated in Japan. (Believed extinct.)

Shiro-hachiman. (White Hachiman Shrine), *(C.japonica)*, *Chinka Zufu*, (Before 1700), Watanabe, 1969, pl.393: Large, white, peony form. Originated in Japan. (Believed extinct.)

Shiro-hagoromo. (White 'Hagoromo'), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.78, description, p.223: White, hose-in-hose semi-double, 14-16 petals in 3 rows, rounded, slightly emarginate, chanelled. See colour photo, p.295, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated in Ehime, Japan as a seedling of **Hagoromo.** Named and released by Shigeichi Yagi in 1975.

Shirohassaku. (White 'Hassaku'), *(C.japonica)*, Satô, 1960, Chûbu Tsubaki Kyôkai, *Tsubaki Meikan;* Tuyama, 1968, *Camellias of Japan*, pl.13, p.7, description, p.88: Leaves elliptic, tapering both ends, venation impressed. Flower white, single, rather small, narrowly campanulate, petals roundish, slightly wavy, a little emarginate. Very early flowering. A very old cultivar from the Aichi Prefecture, Japan. Hassaku is the 8th conjunction of the lunar calendar, that is 1st August referring to the very early flowering. Colour pls: Satô, 1975, *Chûbu no Tsubaki*, p.23; Katei Gahô, ed., 1984, *Chabana Koyomi*, *vol.I, Tsubaki*, p.43; Seibundô Shinkôsha., 1979, *Senchinshû*, pp.78, 223. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.32. Resembles **Kaga-hassaku.**

Shirohassaku. (White Hassaku), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.223: Early flowering, white, single. Larger than the Satô, 1960 **Shirohassaku.** Originated in Kanazawa, Ishikawa Prefecture, Japan.

Shirohige. Different reading for **Shirahige.**

Shirohito. Yashiro, 1841, *Kokon Yôrankô*, vol.309. Different reading for **Shirahito.**

Shirohitoe-kingyoba-tsubaki. (Single White Brocade, Goldfish Leaf Camellia), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.76, description, p.223: Medium size, single, white, opening wide cup-shaped with central stamen cylinder, anthers pale yellow, filaments white. Leaves large with multi-apices, 'fish-tailed', dark green, margins serrulate. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.52, colour photo. Originated in Chûbu area, Japan. A cultivar of a private family in Mikawa District, discovered and released by Giichirô Kôzu in 1957. Resembles **Shirokingyoba-tsubaki.**

Shirohôju. Seibundô Shinkôsha, 1979, *Senchinshû*, p.246. Synonym for **Hôshu.**

Shiro-hon'inbô. (White 'Hon'inbô'), *(C.japonica). Chinka Zufu*, (before 1700), Watanabe, 1969, pl.229 as 'Shiro-hon-imbô': Medium size, white, peony form. Originated in Japan. (Believed extinct.) Hon'inbô is the name of the Master of the Igo game.

Shiro-hoshi. Different reading for **Shiroboshi.**

Shiro-huji. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.160. Different reading for **Shirofuji.**

Shirohu-no-taka. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.63. Different reading to **Shirafu-no-taka.**

Shiroi Hagi. (White Hagi) (*C.hybrid*) from Tokyo. *Japan Camellia* No.60, August 1999: Thought to be a natural crossing between **Wirlinga Belle** and **Pop Corn.** White, 4cm across, flowers and plant similar to **Pop Corn.** Leaves small. Branches pendulous. Found by Yaichiro Fujimoto.

Shiro-ise. Sakuden, 1630, *Hyakuchinshû*. Synonym for **Shirafu-no-taka.**

Shiro-ise. (White Ise Shrine), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.628: Medium size, white, anemone form with 5 broad petals surrounding a cushion of white petaloids. Originated in Japan. (Believed extinct.). It is possible that this is a synonym for **Shirafu-no-taka** from *Hyakuchinshû*, 1630.

Shirojishi. Iwasaki, 1828, *Chinka Hin'i.* Different reading for **Hakujishi.**

Shiroji-shokkô (Rouge of Old China), (Higo), *Uekiya Bunsuke Hikki*, 1830; Taniguchi 1912, *Chinka Kyôkan:* White striped pink. Medium size. Originated in Japan. See: Hiratsuka, 1964, *Higo Camellia*, p.123.

Shirojusu. Different reading for **Shirajusu.**

Shirokaga-ume. (White Kaga Plum), *(C.rusticana)*, *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.76, p.61, description, p.302: Medium size, white, single, petals 6-8, large rounded, overlapping, emarginate, opening widely cup-shaped; stamens spreading, anthers yellow. Leaves mid-green, elliptic, apex acuminate, margins sharply serrulate. Late flowering. Originated in Ishikawa Prefecture, Japan. 'Kaga' is old place name for Ishikawa Prefecture.

Shirokagura. (White Sacred Music), *(C.japonica)*, McIlhenny, 1937, *600 Varieties of Camellias:* Large size, loose peony form. White. Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.42; Seibundô Shinkôsha, 1979, *Senchinshû*, p.222: White, peony form, hemispherical with stamens inter-mixed with the interior petals. Large size. Mid-season flowering. Leaves long-oval, medium large, margins partly turned outwards and distorted. Plant habit upright, variable to weak growing. A similar type to **Yukibotan**. Originated in Kansai area, Japan.

Shirokakae. (All Embracing White), *(C.rusticana)*, Hagiya & Ishizawa, 1967; Tuyama, 1968, *Camellias of Japan*, pl.32, p.16, description, p.94; Seibundô Shinkôsha, 1979, *Senchinshû*, p.222: Pure snow Camellia. Leaves ovate-elliptic to oblong-elliptic, surface dull green, concave, venation impressed, margins sharply serrulate; petioles hairy. Flower white, semi-double, petals 15-20 with occasional petaloid, obovoid, wavy, incurved, convex on inner surface, medium size, 8-11 cm. across. Stamen cluster small, spreading, light cadmium yellow. Late flowering. Collected at Sasaoka. Machi, Minami-Kanbara-gun, Niigata Prefecture, Japan by Susumu Ishizawa, named and released by Kaoru Hagiya in 1969..

Shiro-kanako. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Shirokanoko.**

Shirokane-shinzô-tsubaki. (Camellia of Shirogane, Shinzô), *(C.japonica)*, Hantei Kinta, 1827, *Sômoku Kihin Kagami.* Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.163: Leaves long and slender, white with variegation, matt. Originated in Japan. (Believed extinct.)

Shiro-kasane. Different reading for **Shirogasane.**

Shirokanoko. (White Fawn), *(C.japonica)*, Wada, 1941, *Japanese Garden Treasures*, p.29: White bell shape with a disc of petaloids in the throat. Originated in Japan. Different reading: 'Shirakanoko'. Corruption of name: 'Shiro-kanako'.

Shiro-kantsubaki. (White Winter Camellia), *(C.hiemalis)*, Gao & Zhuang, 1989, *The Camellia in China*, p.75, No.555: Medium size, white, 7-8 cm across, double with 30-35 petals. Originated in China. Chinese synonym: 'Baiyu'. (White jade).

Shirokarako. (White Anemone), *(C.rusticana)*, Itô, Toku'emon, 1788, *Tsubaki, Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* White, medium size. Early blooming. This ancient camellia is thought to be the same variety as 'Shirokeshi' in Nakayama, 1847, *Senkaôden.* For colour photos & descriptions see: Adachi, 1960, *Camellia. Its Appreciation and Artistic...*, p.106; *Encyclopedia of Camellias in Colour.* vol.I, 1972, pl.386 & p.349; Tuyama, 1966, *Camellia Cultivars of Japan*, pl.84, p.142; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.352; Seibundô Shinkôsha, 1979, *Senchinshû*, p.76, description, p.222: White, medium size, anemone form with 6 outer petals, a little irregular and notched. Leaves small, dark green and elliptic and dense. Vigorous, spreading growth. Early to mid-season blooming. Originated in Kansai area, Japan. Synonyms: 'Kotohajime', 'Kaga-tsubaki', Different reading: 'Shirakarako', 'Shiro Karako'. Resembles **Shirokoshimino, Shirobokuhan.** See: JCS., 1969, *Tsubaki*, No.7, pp.31, 36. Corruption of name: 'Shira-Karaho'.

Shirokari. Tokio Nurseries Catalogue, 1896. (White Goose).Different reading for **Hakugan.**

Shirokenkyô. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1. Different reading for **Shiromi-odoroki.**

Shirokenna. (White Kenna), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77: Pinkish white, double, channelled lotus flower. Thought to be a synonym for **Shirogenna** in the *Chinka Zufu* (before 1700). (Believed extinct.)

Shirokeshi. Tuyama, 1966, *Camellia Cultivars of Japan.* Different reading for 'Shirogeshi' as synonym for **Shirokarako.**

Shiro-kiji. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Hakugan.**

Shirokikô. Uekiya, Seigorô, 1874, *Tsubaki Hyakuro no Zu;* Kyôto Engei Kurabu, 1975, *Kyôto Engei*, No.73, p.21. Synonym for or corruption of **Shirogyôkô.**

Shirokikutou. Corruption for **Shiragiku-toji** in Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* JCS., 1969, *Tsubaki*, No.7, p.35; ibid, 1982, No.21, p.109.

Shirokiku. Saitama Nursery Catalogue, 1911. Different reading for **Shiragiku.**

Shirokikutoji. (White Kikutoji), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl. 146 as 'Shiro-kikutoji': Large, white, rose form double. Originated in Japan. (Believed extinct.) Different readings: 'Shirakikutoji', 'Shiragikutoji'. Thought to be a synonym for **Shiragiku-toji** in *Kadan Chikinshô*, 1695. Corruption: 'Shirokikutou'.

Shirokikutoji. (Close of White Chrysanthemum), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.394 as 'Shiro-kikutoji': Medium size, white, peony form. Originated in the Japan. (Believed extinct.) Different reading: 'Shirakikutoji'. Corruption: 'Shirokikutou'.

Shirokikuzuki. (White Chrysanthemum Moon), *(C.japonica)*, Katayama, 1957, *Tsubaki Ochabana:* Medium small, white, campanulate single; petals large, rounded, emarginate, crinkled; stamen cylinder short, anthers golden, slightly fragrant. Leaves large, elliptic, dull, dark green with occasional yellow variegation. Early to mid-season flowering. Flower shape and leaves resemble **Kikuzuki,** but there is no reference to any relationship. See: Tuyama, 1966, *Camellia Cultivars of Japan*, p.180; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.63, pp.58, 300; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.32. Seibundô Shinkôsha, 1979, *Senchinshû*, p.76. Originated in Kansai area, Japan.

Shirokikyô (White Balloon Flower), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, #66: Small size, white, double, resembling Chinese Balloon Flower. Originated in Japan. (Believed extinct.) Synonym: 'Shirokikyô-tsubaki'.

Shirokikyô (White Balloon Flower), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* White flower, very small single, flower shape like a balloon flower. Synonym: 'Shirokikyô-tsubaki'. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77; JCS., 1969, *Tsubaki*, No.7, p.31; ibid, 1982, No.21, p.109. (Believed extinct.)

Shirokikyô-tsubaki. Yashiro, 1841, *Kokon Yôrankô*, vol.311. Synonym for **Shirokikyô.**

Shirokimura. (White 'Kimura'), *(C.japonica)*, Hino, Sukekatsu, 1637, *Sukekatsukyôki.* No description. Hamamatsu, 1825, *Setsuyô Kikan.* No description. *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.247 as 'Shiro-kimura': Small, white double with pinkish tone at base of petals. Originated in Japan. See: JCS., 1986, *Tsubaki*, No.25, p.15. (Believed extinct.)

Shirokimura. (White 'Kimura'), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.275 as 'Shiro-kimura': Medium size, white, semi-double with divided stamens. Originated in Japan. (Believed extinct.)

Shirokingyo. Hillebrand Nursery Catalogue, 1976. Abbreviation for **Shirokingyoba-tsubaki.**

Shirokingyoba-tsubaki. (White Goldfish Camellia), *(C.japonica)*, Satô,1957, *Chûbu Tsubaki Kyôkai*, p.65: Tuyama, 1966, *Camellia Cultivars of Japan*, p.376 as 'Shirokingyo-tsubaki'. Medium size, white, single with 6-7 petals, broad, waved, emarginate and a large, spreading stamen cluster with brownish-yellow anthers and white filaments. Leaves, deep glossy green, multi-apices, 'fishtail' shape. Synonym: 'Shirokingyo-tsubaki'. Abbreviation: 'Shirokingyo'. Corruptions of name: 'Shirokyngyo', 'Shiro Kinjo'. For colour photo see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.436, pp.181, 357. Resembles **Shirohitoe-kingyoba--tsubaki** and there are other similar varieties. Originated in Chûbu area, Japan.

Shirokingyo-tsubaki. Tuyama, 1966, *Camellia Cultivars of Japan*, p.376. Abbreviation for **Shirokingyoba-tsubaki.**

Shiro Kinjo. Giorgetta Franco, 1984, *Floriculture Lago Maggiore*, p.15. Corruption of the Japanese name **Shirokingyoba-tsubaki.**

Shirokirin. (White Giraffe), *(C.japonica)*, Katayama, 1960, *Tsubaki Ochabana*, p.5: Large, full double, white. Originated in Japan.

Shirokochô. (Pretty White Butterfly), (Wabisuke). RHS., 1968, *The Rhododendron and Camellia Yearbook*, No.22, p.20 - Finlay - 'Camellias at Windsor' a Japanese cultivar from Wada under the different reading 'Shirokochyo'. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan)*, 2010, p.256 with colour photo; Miniature white single, tubular form, lacking stamens. Flowers mid-season. Leaves ovate, small. Upright growth. A cross of a seedling of **Tarôkaja** x a wild white japonica, released by Shinichi Noguchi, Tokyo, Japan, in 2008.

Shirokochyo. Different reading for **Shirokochô.**

Shiro-kokonoe. (Nine Rows White), *(C.hiemalis)*, Seibundô Shinkôsha, Dec.1971, *Garden Life*, p.14, colour photo; Hakoda, JCS, 1987, *Tsubaki*, No.26, p.49: Medium size, white, double with many petal rows. Blooms early to mid-season. Originated in Kumamoto Prefecture, Japan. Different reading: 'Shirakokonoe'.

Shirokomachi. (White Beauty), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Yoshimura, 1963, *Higo Tsubaki Meikan:* Medium size, pure white. Leaves round and thin. Originated in Kumamoto Prefecture, Japan.

Shirokoshimino. (White Straw Cape), *(C.japonica)*, Hino, Sukekatsu, 1637, *Sukekatsukyôki;* Monk Hôrin, 1639, *Kakumeiki;* No description. *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.34 as 'Shiro-koshiniino'; Yashiro, 1841, *Kokon Yôrankô*, vol.309: White with one flower growing from another. A flower in 2 tiers. Originated in Japan. Different reading: 'Shirakoshimino'. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.49; JCS., 1986, *Tsubaki*, No.25, p.15. (Believed extinct.)

Shirokoshimino. (White Straw Cape), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.267 as 'Shiro-koshimino': Medium size, single, white with a centre a mixture of stamens and fan-shaped petaloids. Originated in Japan. Thought to be the same as the above. (Believed extinct.)

Shirokoshimino. (White Straw Cape), *(C.japonica)*, Nihon Shokubutsu Kaisha Ltd. Catalogue, 1912-1913, p.27; Tuyama, 1966, *Camellia Cultivars of Japan*, p.220: White anemone form double. Seibundô Shinkôsha, 1979, *Senchinshû*, p.77, description p.222 as 'Shiro-koshimino': Medium size, anemone form double, white with 5 large, overlapping outer petals, opening wide cup-shaped with the centre almost filled with small, erect, folded petaloids. Leaves dark green, broad-ovate, margins coarsely crennate, apex bluntly acute, venation impressed. Originated in Kansai area, Japan. Sport of 'Nishiki-mino'. See colour photo: Katei Gahô, ed., 1984, *Chabana Koyomi, vol.I, Tsubaki*, p.46. Resembles: **Shirobokuhan, Shirokarako.**

Shiro-kotsubaki. (Small White Camellia), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl. 143 as 'Shiro-kotsubaki': Very small, white, single. Originated in Japan. (Believed extinct.)

Shiro-kujaku. (White Peacock) (*C.japonica*) from Kodaira, Tokyo. *Japan Camellia* No.81, August 2006: White, large, lotus form semi-double, long narrow petals, irregular stamens, blooming in February to May. Tree spreading and weeping. Leaves lanceolate, medium. A descendant of a crossing between **Kujaku** and **Miyakodori.** Originated by Shinichi Noguchi, and named in 2004.

Shirokyngyo. Parks et al. 1981, *American Camellia Yearbook.* Corruption of the Japanese name 'Shirokingyo' abbreviation for **Shirokingyoba-tsubaki.**

Shiro-matsugae. (White Pine Branch), *(C.japonica),* Itô, Ihei, 1696, *Kadan Chikinshô,* #44; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, formal double white, glossy round flower. Snow white stamens. Originated in Japan. See: JCS., 1969, *Tsubaki,* No.7, p.35. (Believed extinct)

Shiro-matsushima. (White Pine Island), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, white, formal double, single. See JCS., 1969, *Tsubaki,* No.7, p.32; ibid, 1982, No.21, p.109. Originated in Japan. Thought to be an orthographic error for **Shiro-matsugae.** (Believed extinct.)

Shiro-matsukasa. (White Pine Cone), *(C.japonica), Chinka Zufu,* (before 1700) Watanabe, 1969, pl.498: Medium size, rose form double with many rows of petals like a pine cone. Originated in Japan. (Believed extinct.)

Shiromidare-zaki. (White Irregular Bloom), *(C.japonica),* Izu-Ohshima, 1980, Hawaii Botanic Garden *List of Varieties.* No description. Originated in Japan.

Shiromi-odoroki. (White Amazing Display), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô* #20; Tuyama, 1966, *Camellia Cultivars of Japan,* p.126: Large size, double, white flower, like a chrysanthemum. The corolla is short and it resembles a chrysanthemum. Originated in Japan. (Believed extinct.) Different reading: 'Shirokenkyo'. Tuyama believes this is the same as the existing **Kenkyô.**

Shiromomiji. (White Maple), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* #94; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, white, double. The apices of the petals are slender and arranged in line. Originated in Japan. See: JCS., 1969, *Tsubaki,* No.7, p.31. (Believed extinct.)

Shiromyohrenji. Andoh, 1974, *Tsubaki Nyûmon.* Different reading for 'Shiro-myôrenji'.

Shiro-myôrenji. (White Myôren Temple), *(C.japonica),* Minagawa, 1933, *Chinkashû:* Single white. Tuyama, 1966, *Camellia Cultivars of Japan,* p.184; Tuyama, 1968, *Camellias of Japan,* pl.12, p.6, description, p.88 as 'Shiro-myôren-ji': Leaves dark green, thick, broadly-elliptic, apex suddenly acute, margins grossly serrate, evoluted, side veins impressed. Flower campanulate single, white, petals broad, undulate and wrinkled. Simple stamen tube with stout white filaments united basal third. Long known in the Aichi and Kansai districts, Japan. Different readings: 'Shiramyôrenji', 'Haku-myôrenji', 'Shiro-myohrenji'. Synonym: 'Myôrenji White'. See: Seibundô Shinkôsha, 1979, *Senchinshû,* pp. 113, 237 and Yokoyama & Kirino. 1989, *Nihon no Chinka,* p.41 as 'Haku-myôrenji'. Synonym for **Hakumyôrenji.**

Shironagaraku. Different reading for **Shiro-osaraku.**

Shiro-no-botan. Treseders Nurseries (Truro) Ltd Catalogue, 1962-1963, p.4. Synonym for **Shirobotan.**

Shironome. Chûgai Nursery Catalogue, 1936-1937. Corruption for **Shinonome.**

Shiro-ô-botan. (Large White Peony), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.295: Large, white, open peony form with irregular petal edges. Originated in Japan. Different reading 'Shiro-daibotan'. (Believed extinct.)

Shiro-oimatsu. (White Old Pine), *(C.japonica),* Nihon Shokubutsu Kaisha Ltd. Catalogue, 1912-1913, p.27: Snow white. Originated in Japan.

Shiro-ôkagura. Fendig, 1953, *American Camellia Catalogue.* Different reading for **Shiro-daikagura.**

Shiro-osaraku. (White 'Osaraku'), (Higo), Taniguchi, 1912, *Chinka Kyôkan;* Hitatsuka, 1964, *Higo Camellia*, p.7 and back p.11: 8-10 cm across, 5-7 crinkled petals, 150 white, spreading stamens. Leaves medium sized, ovate to oblong-elliptic. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.92 & p.304; Seibundô Shinkôsha, 1979, *Senchinshû*, p.76; Yokoyama & Kirino. 1989, *Nihon no Chinka*, p.58. Synonym: 'Seigenji-osaraku'. Different reading: 'Haku-osaraku'. Originated in Seigenji, Ara'o City, Kumamoto Prefecture, Japan.

Shiro-otome. (White Maiden). *(C.hiemalis). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.302 with colour photo; English translation p.212. White formal double, late flowers show a few stamens, medium size. Flowers early. Leaves narrowly elliptic, small. Almost upright, dense branches, slow growing. A stable mutation of **Otome-sazanka**, originated in Kurume, Japan.

Shiro-otome. Different reading for **Haku-otome.**

Shiro-owari. (White 'Owari'), *(C.japonica),* Hino, Sukekatsu, 1637, *Sukekatsukyôki.* No description. Hamamatsu, 1825, *Setsuyô Kikan.* No description. *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.274: Medium size, open peony form, white. Originated in Japan. (Believed extinct.) 'Owari' is the old name for Aichi Prefecture. See: JCS., 1986, *Tsubaki*, No.25, p.15.

Shiro-owari. (White 'Owari'), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.663: Medium size, formal double; petals with pointed apices; pink fading to a broad white border. Originated in Japan. (Believed extinct.)

Shiro-ragura. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Shirokagura.**

Shiroranchû-kingyo. (White Four-tailed Goldfish Leaves), *(C.japonica),* Perkins, 1975, *American Camellia Yearbook*, p.112, black and white illustration of leaves p.109 as 'Shirorancho-kingyo': Plant develops many forms of 'fishtails' on its leaves, including separate hanging tails. (Usually egg-shaped). White single flower. This appears to be the white form of 'Ranchu-kingyotsubaki' or **Ranchûba-tsubaki.** Originated in Japan.

Shirorenge. Itô, Ihei, 1695, *Kadan Chikinshô* #70; Okumura, (ca.1810), *Chinka Hin'i;* Iwasaki, 1829, *Honzô Zufu*; *Chinka Zufu*, (before 1700), Watanabe, 1969: Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû,* No.10, p.161. Different reading for **Hakurenge.**

Shirorôgetsu. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.63. Synonym for **Rôgetsu.**

Shiroryômen. (White Both Faces), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77: Pure white, medium size, single. Originated in Japan. (Believed extinct.)

Shiroryômen. (White Both Faces), *(C.x vernalis),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* White; no other description. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.85. (Believed extinct.)

Shiro-ryoshi. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Shirabyôshi.**

Shirosakasa-fuji. (White Inverted Fuji), *(C.japonica)*, Funaki-en Catalogue, 1986, No.7, p.114; Inazawa Nurseries Co. Ltd, Catalogue, 1988-1989, p.1, A-42: Medium size, white, campanulate single. Late blooming. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.35, colour photo & description: White, campanulate single with 5 irregular sized petals, central stamen cylinder with white filaments, joined for their lower half, and yellow anthers. Leaves bright green, elliptic to narrow-elliptic, apices tapering acuminate, margins shallowly crennate. Originated in Chûbu area, Japan. A chance seedling, originated and released by Toshiaki Kosaki in 1980.

Shiro-sazanka. (White Sasanqua), *(C.sasanqua)*, Settsu Raikôyen Co. Nursery Catalogue, 1938-1939: Large, single flowers, pure white; strong growth. Good grafting stock. Originated in Japan.

Shiroseiôbo. (White 'Seiôbo'), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.77, description, p.222 as 'Shiro-Seiôbo': Medium size, campanulate single, white of 5 overlapping petals, rounded and slightly crinkled; large central, light yellow stamen cylinder with exposed style; early blooming. Leaves dull green, obovate, apex blunt acute, margins sharply serrate. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.33, colour photo. Originated in Ishikawa Prefecture, Japan as a seedling of **Seiôbo.** Named and released by Ryôichi Nakamura in 1965.

Shirosekima. JCS., 1969, *Tsubaki*, No.7, p.32. Orthographic error for **Shirosekimori.**

Shirosekimori. (White Sekimori), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, #191; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Yashiro, 1841, *Kokon Yôrankô*, vol.306: Medium large, white, mixed with red, anemone centre. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.35. (Believed extinct.)

Shirosemi. (White Cicada), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Description not seen. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.79. (Believed extinct.)

Shiroshakushi. Tateyama Nursery Catalogue, 1957. Different reading for **Shirabyôshi.**

Shiro Shan. W.C. Wicks Ltd Nursery Catalogue, 1967, p.9. Orthographic error for **Shiro Chan.**

Shiroshidare. Abbreviation for **Shiroshidare (Ishikawa).**

Shiroshidare (Ishikawa). (White Weeping Camellia from Ishikawa), *(C.japonica)*, Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.47 as 'Shiroshidare'. Seibundô Shinkôsha, 1979, *Senchinshû*, p.77, description, p.222: Medium size, translucent white, 5 petalled single, opening cup-shaped with a spreading stamen cluster, white filaments. petioles with minute hairs. Plant habit pendant. Synonyms: 'Shiroshidare', 'Shiroshidare-tsubaki'(Ishikawa), 'Kagashidare'. Originated in Ishikawa Prefecture, Japan.

Shiro-shidare (Nara). (White Weeping Camellia). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.328 with black and white photo; English translation p.233. Small, white, tubular to trumpet shape single, cylindrical stamen column. Flowers mid-season. Leaves narrowly elliptic, small, waved. Weeping branches. A natural seedling of **Kegon**. Named and released by Ikuo Nishihata in 1980. From Nara Prefecture.

Shiroshidare-tsubaki. (White Weeping Camellia), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.332, p.138, description, p.247: Small, single, white with 5 irregular petals, waved petal edge, opening flared campanulate; stamens in a large, somewhat spreading, group. Leaves mid-green, lanceolate, apex acuminate, margins serrulate. Plant habit pendant. Originated in Kansai area, Japan. Synonym: 'Kagashidare', 'Shiroshidare-tsubaki'(Kansai).

Shiroshidare-tsubaki (Kansai). Seibundô Shinkôsha, 1979, *Senchinshû*, p.77. Synonym for **Shiroshidare-tsubaki.**

Shiroshidare-tsubaki (Ishikawa), Seibundô Shinkôsha, 1979, *Senchinshû*, p.77. synonym for **Shiroshidare (Ishikawa).**

Shiroshin-tsukasa. Higo Society of Japan, 1975. Synonym for **Reihô.**

Shiro-shôkarako. (Small White Anemone). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.32 with colour photo; Small white anemone form, guard petals trumpet shape. Flowers early to late. Leaves ovate, small. Upright, slow growth with slender branches. An old and rare cultivar, but old plants now not known. Synonym for **Himekarako.**

Shiroshôwa-no-sakae. (White 'Shôwa-no-sakae'), *(C.sasanqua),* Yôshun-en, 1955, *Engei Hôchi*, p.47: White, sometimes with a pale red rim. Blooms early. Originated in Japan. Orthographic error: 'Shiroshowa-cha'.

Shiroshôwa-cha. Yôshun-en, 1955, *Engei Hôchi*, p.26. The character for 'cha' erroneously used for 'sakae'.

Shirosumi. Boten-en Nursery Catalogue, 1955. Different reading for 'Shirasumi' as synonym for **Shiro-suminokura.**

Shirosumikura. Satomi, 1956, *Camellia Varieties of Japan*, p.12. Different reading for **Shiro-suminokura.**

Shirosumi-magai. (Fake 'Shirosumi'), *(C.japonica),* Nakayama, 1847, *Senka'ô-den;* Resembles **Suminokura,** but flower form is different. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.80. (Believed extinct.)

Shiro-Suminikura. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.221. Corruption of the Japanese name **Shiro-suminokura.**

Shiro-suminokura. (Suminokura's White), *(C.japonica),* Nakayama, 1851, *Senka'ô-den*, 1st ser., vol.5 as 'Shiro-suminokura-tsubaki'; Nihon Shokubutsu Kaisha Co. Catalogue, 1912-1913, p.27 as 'Shiro-sumi-no-kura'; Tuyama, 1968, *Camellias of Japan*, p.54, p.27, description p.101 as **Shiro-suminokura**: Formal double white. Leaves broadly elliptic, rounded base, apex cuspidate, impressed venation. Petals small, numerous, convexed inner surface, but outer eventually reflexed leaving a small bud centre. Originated in Kansai area, Japan. See: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.72, p.124; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.414 & p.353; Katei Gahô, ed., 1984, *Chabana Koyomi*, *vol.I, Tsubaki*, p.47; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.77, 222; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.387, color photo. Synonym: 'Shirasumi'. Corruption: 'Shiro-Suminikura'. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.79. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.134 with colour photo; English translation p.91. Description and photo are of a semi-double flower with a central group of anthers.

Shiro-suminokura-tsubaki. Synonym for **Shiro-suminokura.**

Shirosuzume. (White Sparrow), *(C.sasanqua),* Kajitsu-en, 1905, *Chabaika Meikan:* White, small size. Originated in Japan. (Believed extinct.)

Shirotae. (Exquisite White), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Iwasaki, 1828, *Honzô Zufu:* Pure white, very large size, formal double. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.78; JCS., 1981, *Tsubaki*, No.20, p.123. (Believed extinct.)

Shirotae. (Exquisite White), *(C.rusticana), Encyclopedia of Camellias in Colour*, 1978, vol.II, pl.390, p.158: Flower with many large, white petals, rose form double to formal double, opening cup-shaped with bud centre, ultimately showing a few abortive stamens. Leaves mid-green, elliptic, margins finely, shallowly serrulate, petioles minutely hairy. One of the earliest flowering cultivars of *C.rusticana.* Originated in Toyama Prefecture, Japan. For colour photos see: Kantei Gahô, ed., 1984, *Chabana Koyomi, vol.I, Tsubaki*, p.47. Seibundô Shinkôsha, 1979, *Senchinshû*, p.78 & description, p.223. Named and released by Minoru Takeuchi. Dec. 1995, *Fleur*, No.42, p.17 with colour plate. Edited by Kodansha.

Shirotae. (Exquisite White), (Higo), Yoshimura, 1961, *Higo Tsubaki Meikan:* White with medium sized leaves. Originated in Japan.

Shirotae-no-sode. (Name derives from a poem on a white peony by Chinese poet Tao Yuan Ming), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* White, very large double. Satomi was of the opinion that this was the same as the modern 'Sodekakuchi' (**Gauntlettii**). The name means 'sleeve of white silk appearing behind green leaves.' Originated in Japan. See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.96.

Shirotaka. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.161. Different reading for **Shirataka.**

Shirotakukai. *(C.japonica)* Chûgai Nursery Catalogue, 1934-1935, p.32 as 'Shiro-takukai': Transliteration error for **Shiro-wabisuke.**

Shiro-takai. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Shiro-wabisuke.**

Shirotama. Fendig, 1951, *American Camellia Catalogue.* Different reading for **Shiratama.**

Shirotama-hoshu. (Hoshu's White Jewel). *(C.japonica)*, JCS, 1996, *Japan Camellia*, No.51, p.11 with colour plate: White, bud centred formal double, medium size. Blooms mid-season. Originated in Fukuoka Prefecture, Japan.

Shiro-tama'ikari. (White 'Tama-ikari'), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.21: Small to medium size flower, white, bowl-shaped single with overlapping petals. Blooms mid-season to late. Fragrant. Originated in Chiba Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.134 with colour photo; English translation p.91. A cross between **Hikarugenji** and **Tama-ikari** , bred by Atsushi Itô in 1986, released in 1990.

Shirotama-karako. (White Jewel Anemone). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.328 with black and white photo; English translation p.233. Medium to large, white anemone. Flowers early to mid-season. Leaves broadly elliptic, medium to large. Upright, vigorous growth. Selected from cultivars raised by a private family in Matsu'e City. Named and released by San-in Camellian Club in 1975. From Shimane Prefecture.

Shirotama-shibori. A.J. Mackie Nursery Catalogue, 1963, p.18. Different reading for **Shiratama-shibori.**

Shiro-tarô'an. (White 'Tarô'an'), *(C.japonica)*, 1955, *Chûbu Tsubaki Kyôkai:* White, single, opening campanulate; petals 7 in number, wide, rounded, overlapping; stamens in a compact, wide, central column. Leaves dark green, ovate, keeled, apex acute, margins shallowly serrulate, slightly undulate. Originated in Inazawa City, Aichi Prefecture, Chûbu area, Japan from a seedling of **Tarô'an** x **Mado-no-tsuki.** See colour photos: Satô, 1975, *Chûbu no Tsubaki*, p.26; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.81, p.303; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.78, 223, as 'Shirotarô'an'(Satô).

Shiro-tarô'an. (White 'Tarô'an'), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.223: Palest pink at early stage of blooming, opening wide cup-shaped; early blooming. Leaves waved at

edge. Often confused with the above cultivar. Plant habit spreading. Originated in the Chûbu area, Japan.

Shiro-tarô'an (Satô). Seibundô Shinkôsha, 1979, *Senchinshû*, p.78. Synonym for **Shiro-tarô'an.**

Shirotome. Yokohama Nursery Catalogue, 1891, p.8. Corruption of Japanese name 'Shiro-otome', different reading for **Haku-otome.**

Shirotomo'e. (White Swirl), *(C.japonica)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e:* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* See: JCS., 1983, *Tsubaki*, No.22, p.119; ibid, 1982, No.21, p.109 & 1969, No.7, pp.31, 36; Uekiya, Seigorô, 1874, *Tsubaki Hyakuro no Zu:* White, double, large size. Petals arranged in a whirl and piled up, in some cases in a peony form. Originated in Japan. Synonym: 'Tomoe'. (Believed extinct.)

Shirotori. Different reading for **Hakuchô.**

Shiro-tsubaki. (White Camellia), *(C.japonica)*, Nobelius Nursery Catalogue, 1934-1935, p.32: Small, white, single. Mid-season flowering. Originated in Japan. This is also the common name for the group of white camellias in Japan.

Shirotsuru. Different reading for 'Hatsutsuru' and synonym for 'Hatsutsuru (Higo)'.

Shirotsuyu. Different reading for **Shiratsuyu.**

Shirotsuyu-nishiki. Different reading for **Hakuro-nishiki.**

Shiro-wabisuke. (White Wabisuke), (Wabisuke), Uesa, 1844, *Sômoku Benran;* Itô, Ko'emon, 1879, *Chinkashû;* Usami, Naohachi's *Nagoya Chinzu'e,* (ca. 1910): White, small, single, early blooming. Wada, Hakoneya Nurseries Catalogue, 1935, p.26: Large, funnel-shaped single. Flowers early. Tuyama, 1968, *Camellias of Japan*, pl.395, p.201, description, p.207: Leaves elliptic to long-elliptic, long acuminate at the apex, flat on upper surface, but veinlets impressed, obscurely crenate-serrulate at the margin. Flowers very small, single, white, half-opened, sake cup-shaped, petals incurved. Staminal tube small with sterile, vestigial anthers. Flowers early to mid-season. Slow, compact growth. Minute hairs on ovary. This cultivar was given species status by Kitamura as *Camellia wabisuke* Kitamura, (1950). It has been known as 'Wabisuke' in Kyôto, but the red with white spots form has priority for this name. Originated in Kantô area, Japan. Different reading: 'Shira-wabisuke'. For colour photos & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.219 & p.384; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.466 & p.362; Seibundô Shinkôsha, 1979 *Senchinshû*, pp.79, 223. For botanical drawings, colour photo and description see: Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No.11, pp.23-26. Sports: **Fukurin-hina-wabisuke, Hina-wabisuke.** Synonym: 'Wabisuke-shiro'. Corruptions: 'Shirotakukai', 'Shiro-takai'. See: Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû*, No.6, p.127, ibid, 1961, *Kyôto Engei*, No.65, p.7.

Shiro-wabisuke (Chûbu). Seibundô Shinkôsha, 1979, *Senchinshû*, p.265. Synonym for **Sasameyuki B.**

Shiro-wakanoura. (White 'Wakanoura'), *(C.japonica)*, Satomi, 1956, *Camellia Varieties of Japan*, p.12: A white sport of **Wakanoura.** Large, semi-double, white. Mid-season blooming. The synonyms 'Waka-no-ura White' and 'White Wakanoura' erroneously apply to the white sport of **Ezo-nishiki** as the name **Wakanoura** has been confused with **Tricolor** ('Ezo-nishiki') in America. Therefore the application of the name **Leucantha** as a synonym for **Shiro-wakanoura** is erroneous.

Shirowashi. (White Eagle), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Large size, white, double. Early flowering. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.76. Originated in Japan. (Believed extinct.)

Shiroyabu-tsubaki. (White Bush Camellia), *(C.japonica),* Tuyama, 1966, *Camellia Cultivars of Japan*, pl.2, description, p.8: White, campanulate single of 5 petals, with mid-green, ovate leaves, acute apex, manifestly serrate margins. The common Japanese name for the wild bush camellia. Originated in Japan.

Shiroya'e. (White Double), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô:* White, double with 3 rows of petals. Shirai-Bunko, 1739, *Shoshiki Hanagatachô:* White, semi-double with two rows. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû* No.5, p.81. Yashiro, 1841, *Kokon Yôrankô*, vol.306: White, semi-double in 3 rows. Originated in Japan. (Believed extinct.)

Shiroya'e-kikyô (White Double Balloon Flower), *(C.japonica),* Kasuya, Kamegorô 1859, *Tsubaki Irohanayose Irotsuki:* Small, white, double; like a Chinese balloon flower. Originated in Japan. Different reading: 'Shirayaekikyô'. See: JCS., 1969, *Tsubaki*, No.7, p.32. (Believed extinct.)

Shiroyae-kingyo. Ohaka Chinka-en Catalogue, 1980. Abbreviation for **Shiroya'e-kingyo-tsubaki.**

Shiroya'e-kingyo-tsubaki., (White Double Goldfish Camellia), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.214: Semi-double, white with leaves having multi-apices (Gold fish tail form). Originated in Japan as a seedling of Kingyo-tsubaki. Abbreviation: 'Shiroyae-kingyo'.

Shiroya'e-nagai. Tomita et al., Heibonsha, 1980, *Tsubaki*, p.138. Abbreviation for **Shiroya'e-nagaiichimasa**.

Shiroya'e-nagai-ichimasa. (White double of Nagai-ichimasa), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.195 as 'Shiro-yae-nagai-ichi-masa': Medium size, white, semi-double flat flower, with central stamen column having white filaments. Abbreviation: 'Shiroya'e-nagai'. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.111. (Believed extinct.)

Shiroya'e-sazanka. (Double White Sasanqua), *(C.sasanqua), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.507 as 'Shiro-yae-sazanka': Medium size, white semi-double with irregular petals. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.166.

Shiroya'e-sazanka-tsubaki. (Double White Sasanqua-like Camellia), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.715 as 'Shiro-yae-sazanka-tsubaki': A small campanulate white, single. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.158.

Shiro-yae-wabisuke (White Double Wabisuke). (Wabisuke) *"Camellias in Kurume"*, ICS Congress, Kurume 2010, p.112. No description. From Aichi Pref., Japan.

Shiroyagura. (White Tower), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.212: Medium size, white, peony form, double. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.43. (Believed extinct.)

Shiroyama-shônagon. *(C.japonica),* Chinka-en Niigata Retail List, 1986-1987, colour photo front back, description p.1: Small size, red single with degenerate, white stamens. Early flowering. Suitable for tea ceremony. A "wabishin" tsubaki. Named and released by Sôji Okubo in 1974. Note: 'Shônagon' was an official rank in the government system in ancient times. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.136 with colour photo; English translation p.93. Leaves elliptic, medium size, flat, recurved. Spreading growth. Selected from wild japonicas growing in Koki Town, Sado Island. From Niigata Prefecture.

Shiroyamato-sangai. (White 'Yamoto-sangai'), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, #165; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White, medium large, convex. Petals in 3 layers. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, pp.32, 35. (Believed extinct.)

Shiroyasaka. (White Eight Slopes), *(C.japonica)*, Tateyama Nursery Catalogue, 1957: White, single, medium size, early flowering. Originated in Japan.

Shiroyawata. Hamamatsu, 1825, *Setsuyô Kikan.* Different reading for **Shiro-hachiman.**

Shiro-yobukodori. (White 'Yobukodori'), *(C.japonica)*, Satomi, 1956, *Camellia Varieties of Japan*, p.12: White sport of **Yobukodori.** Originated in Japan.

Shiroyuki. Different reading for **Shirayuki.**

Shiro-yukitsubaki. (White Snow Camellia), *(C.rusticana)*, Tuyama, 1966, *Camellia Cultivars of Japan*, p.10: Medium size, 7-8 cm across, white, single with 6 irregular sized, rounded petals, opening flat, edges rolled in, with a spreading group of dark yellow stamens. Flowers late. Leaves waved, prominent venation; petioles hirsute. For colour photo see: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.78, 223; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.61. Originated in Higashi-Kanbara-gun, Niigata Prefecture, Japan. Note: There are many similar varieties with this name and 'Shiro-yukitsubaki' is often used as a common name for white *C.rusticana*.

Shiroyuri. Inazawa Nurseries Co. Ltd. Catalogue, 1988-1989, p.8, A-398. Different reading for **Shirayuri.**

Shiro-yuriba-tsubaki (White 'Yuriba-tsubaki') (*C.japonica)* from Kodaira, Tokyo. *Japan Camellia* No. 81, August 2006: White semi-double, small, petals slenderly campanulate, cylindrical stamens, blooming in March to April. A descendant of a crossing between **Yuri-tsubaki** and **Shiro-kujaku.** Originated by Shinichi Noguchi and named in 2004.

Shirozumi. Different reading for 'Shirasumi'.

Shirozuru. Wada, 1941, *Garden Treasure of Japan.* Different reading for **Hakkaku.**

Shirshigeshira. Woodward, 1987, *International Camellia Journal*, No.19. Corruption of the Japanese name **Shishigashira**.

Shiruku-rôdo. (Silk Road), *(C.reticulata* hybrid*)*, ICS., Apr,1990, *Japanese Camellia Cultivar List*, p.30: Large size, pink to deep pink ground, outer petals red, campanulate semi-double, arrayed in a whirl form. Late flowering. Originated in Kyôto Prefecture, Japan. A seedling of 'Shot Silk', (**Dayinhong**) x **Kara-nishiki.** Named and released by Ryo Nagao.

Shirving's Seedling. van Houtte Catalogue, 1843-1844, 12:ddd as 'Seedling (Skirving's)'. Synonym for 'Alba Illustrata' (**Waltonensis**).

Shisang. (Shisang Town), *(C.reticulata)*, China Regn No.49, *China Flowers & Horticulture*, June 2009, No.12, p.49 with colour photo; Flowers rose form, peach red, 12-13 cm diameter. Petals 22 in 3 whorls, incurved. Leaves wide elliptic, 8-11.5 cm x 4.7-6.7 cm, apices acuminate, bases cuneate to wide cuneate, deep green, slightly incurved, shallowly serrate. Flowers mid-season. Propagated from a tree in the remains of Shisang Town, and dating back to the Song Dynasty (A.D. 1300).

Shisantaibao. (obscure), *(C.japonica)*, Yûsuke, Sakata & Ken'ichi, Arisumi, 1983, *International Camellia Journal*, No.15, p.19. No description. Sakata et al., Mar. 1981, 'Flower colours in the Camellia, II; *Memoirs of the Faculty of Agriculture,* vol.XVII, p.89, Kagoshima University. No description. Originated in China.

Shisen. (Purple Fountain), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.231, colour photo & description: Small size, deep red, compact, vase-shaped single with 5 broad, rounded, overlapping petals and a central stamen column with pinkish filaments, joined for their lower half and golden anthers. Blooms mid-season to late. Leaves bright green, ovate, apices tapering acute, margins crennate. Selected from the wild in Ôzu City, Ehime Prefecture, Japan. Named and released by Ôzu Camellia Enthusiasts' Club.

Shishi. (Lion), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô:* Pink white graduation, single, large size flowers. Yashiro. 1841, *Kokon Yôrankô*, vol.344. Originated in Japan. (Believed extinct.)

Shishi. (Lion), *(C.japonica)*, Itô, Toku'emon, 1788, *Tsubaki*, *Hanagata tsuki Oboechô;* Shirai-Bunko, 1812, *Tsubaki Nayosechô:* Red coloured, double, with 5 rows, small, white dots, short petals. Originated in Japan. See: JCS., 1983, *Tsubaki*, No.22, p.139. (Believed extinct.)

Shishi. (Lion), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe reprint, 1969, pl.375: Red ground, white blotches, double peony form, divided stamens. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.145. (Believed extinct.)

Shishifukujin. McIlhenny Catalogue, 1941. Corruption of Japanese name **Shichifukujin.**

Shishigasane. (Many Layered 'Shishi'). *(C.japonica)*, Cho, [before 1867], *Chinka-fu*, illustr. [p.6-7]. Description not seen. Originated in Japan. (Believed extinct.)

Shishigashima. Vanderbilt, 1940, *Camellia Research*, p.7. Corruption of Japanese name **Shishigashira.**

Shishigashira. JCS., 1968, *Tsubaki*. The Japanese reading of the characters for the Chinese *C.reticulata* **Shizitou.**

Shishigashira. (Lion's Head), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.311; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in the section on peony form; Itô, Ko'emon, 1879, *Chinkashû:* Light rose-pink. Small to medium size, peony form. Tuyama. 1968, *Camellias of Japan*, pl.131, p.126, description, p.126 as 'Shishi-gashira': Leaves small, broadly elliptic to oblong elliptic, venation slightly impressed. Flowers pink (Carmine 621/2), anemone to peony form with 8-9 broadly expanded outer petals and small, erect, folded petals and petaloids forming a large, rounded mass in the centre. Flowers mid-season. For colour pls. & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.103 & p.176; *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.365; Seibundô Shinkôsha, 1979 *Senchinshû*, pp.68, 219; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.353. Originated in the Kansai area, Japan. Resembles **Kagura-jishi.** Corruption: 'Shishirô'.

Shishigashira. (Lion's Head), *(C.hiemalis)*, Nihon Engei Kai Zasshi, 1894; Chûgai Nursery Catalogue, 1935-1936, p.26: Red, double, dwarf, free flowering. For colour photos see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.536, pp.214, 387; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.178. Chinese synonym 'Shizitou Chamei'. Synonyms: 'Beni-kantsubaki', 'Kan-tsubaki' in Minagawa, 1933, *Chinkashû*, 'Shishi-sazanka', 'Lion's Head', 'Beni Kantsubaki'. Corruption of name: 'Shishigashima', 'Shirshigeshira', 'Shishigashira-Kansai'. In Japan the most popular name for this cultivar is 'Kantsubaki'. Sport: **Umegaki.** Originated in Ikeda City, Kansai area, Japan.

Shishigashira-Kansai. Tuyama, 1966, *Camellia Cultivars of Japan*, p.400. Synonym for the *C.hiemalis* **Shishigashira** as synonym for 'Kan-tsubaki'.

Shishigashira-Minagawa. Tuyama & Yamada, 1979, *Ishii's Selected Japanese Camellias, Including Sasanqua*, p.82, 83. Synonym for **Shishigashira Tall.**

Shishigashira. (Lion's Head), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan:* Red, double, medium size. Originated in Japan.

Shishigashira Pink. *(C.hiemalis).* Camellia Grove Nursery, Sydney, Catalogue 2002, p.24. A sport of the *C.hiemalis* **Shishigashira** with similar slow dense growth, but flowers are lighter pink and smaller. Flowers early to mid-season. Possibly the same as **Umegaka.**

Shishigashira Tall. *(C.hiemalis),* Yashiroda, 1950, *American Camellia Yearbook*, p.22, as 'Shishigashira': Medium, pale pink bloom of 10 or more petals which are curled and amongst which stamens are mingled. Slow dense grower. Early flowering. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.15 as 'Shishigashira'. Hazlewood Nursery Catalogue, 1963: Pink. Medium large, tall growing. Mid-season blooming. Satomi says: It is recognised that there are two sort called **Shishigashira**; one dark crimson-red, small, semi-double with a spreading habit; the other pure pink, medium-large and tall habit. Hazlewood's Nurseries listed the latter as **Shishigashira Tall.** Originated in Japan by Jisuke Minagawa. Butterfield, 1952, *Camellia Culture for the Home Gardener*, 5:18 states that **Shishigashira** is a sport of **Shôwa-no-sakae** (as 'Showa no Saki'). There is no evidence to support this contention

Shishikasuri. (Variegated Lion), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.105: Small, deep crimson, single with white splashes. Originated in Japan. (Believed extinct.) Different reading: 'Shishi-tobi'iri'. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p. 100; ibid, 1964, No.5, p.135.

Shishiku. (Lion's Roar), *(C.japonica),* Itô, Ihei, 1710, *Zôho Chikinshô*, vol.II, #12: Both flowers and leaves are disordered and the flower is variously variegated white on red ground. Large size, double. Flower and leaves resemble **Ranbyôshi**. Originated in Japan. (Believed extinct.)

Shishiku. (Lion's Roar), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.15: Deep pink. Large, double with narrow, incurved petals. Originated in Japan.

Shishima. (Place Name of Origin), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.31, colour photo & description: Small size, white, with a greenish cast at the base, campanulate single with 5 petals, reflexed, wide, overlapping, rounded, with a central stamen column having white filaments, joined at their lower half, and yellow anthers. Blooms mid-season. Leaves shining mid-green, broad-ovate, apices blunt acute, margins obscurely crennate. Originated in Ehime Prefecture, Japan. A chance seedling of a wild camellia. Named and released by Toshi'e Tasaka in 1970.

Shishimai. (Lion Dance), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.219: Red. 18 irregular petals with central petaloids, which are red with white lines; filaments pale yellow. Medium size. Mid-season blooming. Leaves medium size, wide oval, short, petiole hirsute. Similar type to **Arajishi** but flower smaller and paler. Originated in Naka Kubiki-gun, Niigata Prefecture, Japan.

Shishimino. (Lion in Straw Rain-cape), *(C.japonica)* Watanabe, 1961, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.2, p.48. This variety was painted on the 'Byôbu' screen in late 17th century, reserved by Hirayama, Toku'o, Matsuyama City, Ehime Prefecture, Japan. (Believed extinct.)

Shishimura. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, p.63. Orthographic error for **Shikamura.**

Shishinden. (Emperor's House), *(C.japonica),* Sawada, 1947, *American Camellia Yearbook*, p.48. No description. Originated in Japan.

Shishi-ô. (King of the Beasts), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Pink. Very large. Originated in Japan. Different reading 'Shishi-oh'.

Shishi-odori. (Lion's Dance), *(C.sasanqua),* Kajitsu-en, 1905, *Chabaika Meikan:* Red, medium size. Originated in Japan.

Shishi-oh. Different reading for **Shishi-ô.**

Shishirô. JCS., 1969, *Tsubaki*, No.7, p.36: Corruption for **Shishigashira.**

Shishi-sazanka. Katayama, 1960, *Tsubaki Ochabana.* Synonym for the *C.hiemalis* **Shishigashira.**

Shishito. *(C.hiemalis),* Hagiya, 1986, *Studies in Hybridization of Camellias,* No.2, p.11 as the seed parent of **Sûrin**. No description. Originated in Japan.

Shishi-tobi'iri. Different reading for **Shishikasuri.**

Shishi-tsubaki. (Lion Camellia), *(C.japonica),* Hino, Sukekatsu, 1637, *Sukekatsukyôki.* No description. Originated in Japan. (Believed extinct.) Monk Horin, 1645, *Kakumeiki*. See: JCS., 1986, *Tsubaki,* No.21, p.15; Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.47. Possible synonym for **Shishi.**

Shishi-tsubaki. (Lion Camellia), *(C.japonica),* Mizuno, Katsuhiko, 1981, *Kyô no Tsubaki to Tera*, 1981, p.84, illustration: Medium size, deep pink wth white blotching, open, peony form with 1-2 rows of outer petals and a confused centre of erect, twisted, small petals, mixed with a large number of yellow stamens. Originated in Kyôto Prefecture, Japan.

Shishôka. (Meaning uncertain), (*C.japonica*), Katayama, 1960, *Tsubaki Ochabana*, p.7: White ground, striped pink. Large single, higo form stamens, spreading in a ring. Midseason flowering. Tuyama, 1968, *Camellias of Japan*, pl.325, p.164, description, p.187: Leaves ovate-oblong to oblong-elliptic, shortly acuminate at the apex, manifestly serrulate at the margin. Flower single, white, sparsely and thickly striped with rosy red (Rose opal 022 to Rhodonite red 0022), petals incurved and wavy. Late flowering. Received from Katayama Juraku-en, Kibe-machi, Ikeda-shi, Ôsaka Prefecture, Japan. Mr Minoru Satô says that a very old tree of this cultivar is at Chiyoda-mura, Inazawa-shi, Nagoya Prefecture. See colour photo & description: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.68, 219. Very similar to 'Yûshôki' as **Reikanji-ezo-nishiki** if not the same.

Shisu. Mariotti Catalogue, 1924. Synonym for 'Monjusu Red' (**Shusugasane**).

Shitatsuki. (obscure), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô*, vol.344; Ichijima, 1906 reprint, p.573. No description. Originated in Japan. (Believed extinct.)

Shitatsuma. Different reading for 'Shimotsuma' (**Yukimiguruma**).

Shitsu. (obscure), (*C.japonica*), Yashiro, 1841 (reprint); Ichijima, 1906, *Kokon Yôrankô*, vol.309, p.361 reprint from pictures in *Hyakuchinzu, owned* by Katô, Isenokami Fujiwara Yasuhiko. Originated in Japan. (Believed extinct.)

Shitsukura. (obscure), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* #148: Pale, egg yellow double, large. Stamens in a cylinder. Originated in Japan. (Believed extinct.) Different reading: 'Shizukura'.

Shitsuo. (Obscure), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Eggshell white, stamens cylindrical. Double. Originated in Japan. (Believed extinct.) Possible orthographic error for 'Shitsukura'. See: JCS., 1969, *Tsubaki*, No,7, pp.31, 35; ibid, 1982, No.21, p.109.

Shitzetou. Yü, 1950, RHS., *Camellia and Magnolia Conference Report.* Different reading for **Shizitou.**

Shiujingqiu. (Crystal Ball), *(C.japonica),* Fang, 1930, *Diannan Chahua Xiaozhi:* The petals are round and drooping and the colour is like crystal. Originated in China.

Shiu-chiu. Watanabe & Andoh, 1981, *Tsubaki*, p.147. Error for 'Hsiu-ch'iu' (**Xiuqiu**).

Shi-un. (Purple Clouds), *(C.rusticana)*, Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.46; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.459, p.180, description, p.264: Small to medium size, rose form double, eventually opening to show a centre of small, erect petals and rare stamens. Colour is violet-red with white blotching. Leaves lanceolate to broad-lanceolate, mid-green, acuminate apex, margins coarsely serrate. Flowering very late. Originated in Toyama Prefecture, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.67, 219; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.398. Named and released by Minoru Takeuchi in 1975.

Shi-undai. (Heights of Purple Cloud), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Nihon Shubyô Co. Catalogue, 1910; Chûgai Nursery Catalogue, 1938, describes it as: 'White with scarlet variegation, full double, large flower' and Wada, 1941, *Garden Treasures of Japan*, as 'Intense red, large, semi-double'. The first was designated 'Shiundai (2)' and the second 'Shiundai (1)' by Fendig in *American Camellia Catalogue,* 1953. However there is considered to be only one cultivar as follows: Large, rose-pink, single, with 7-8 petals, outer edges tinted deeper with violet, the inner parts a lighter pink. Stamen cluster small, spreading, filaments light yellow, anthers small and yellow. Leaves mid-green, oval, 7.5 cm x 3.8 cm, apex acute, recurved. Originated in Japan. See colour photo: *Encyclopedia of Camellias in Colour*, vol.I. 1972, pl.522, pp.211, 384. Synonyms: 'Shiundai (1)', 'Shiundai (2)'. Corruption of name: 'Shun-Dai'. SCCS *Camellia Nomenclature* gives **Shishima** as a synonym. Chinese synonym 'Ziyuntai'.

Shiundai (1). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Shi-undai.**

Shiundai (2). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Shi-undai.**

Shivel Duncan. *(C.japonica)*, Sewell, 1956, *American Camellia Yearbook*, p.49: Semi-double with some incurved petals that stand erect, brilliant red, similar to **Blood of China.** Blooms early with flowers 11-13 cm across. Originated by Mr & Mrs W.S. Duncan, Pensacola, Florida, USA. Sport. **Shivel Duncan Variegated.**

Shivel Duncan Variegated. *(C.japonica)*, Griffin, ed., 1957, *Camellian:* A virus variegated form of **Shivel Duncan** - Brilliant red blotched white. Originated in USA.

Shiyangjin. (Ten Brocades), *(C.japonica)*, Fang, 1930, *Diannan Chahua Xiaozhi:* The petals are white with red spots. It can have one flower with several colours, or the whole tree can have several colours. Yü, 1964, *Camellian* describes it as follows: Leaves elliptic, apex short acuminate, base cuneate, shining dark green, 4-5 cm long x 2-2.5 cm wide. Flowers pale rose, variegated with white stripes, formal double, 6 cm across. Petals rounded, diminishing in size towards the centre. Due to the variation in proportions of red and white, it consists of 10 variations. Originated in China. Synonym: 'Shiyangjing'. Sport: **Baishiyangjin.**

Shiyangjing. Huang Nursery Catalogue, 1949. (10 Appearances). Synonym for **Shiyangjin.**

Shiyue Yunshi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.405. Chinese synonym for the USA *C.japonica* **October Affair.**

Shizaki. (obscure), *(C.japonica)*, Uekiya, Seijirô, ca,1874, *Tsubaki Hyakuro no Zu*, vol.I. See Kyôto Engei Kurabu, 1975, *Kyôto Engei*, No.73, p.20. No description. Originated in Japan. (Believed extinct.)

Shiziqiu. (Lion's Ball), (*C.japonica*), Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.83, colour photo [p.140]: Medium size, deep pink, full peony form, no stamens visible, centre a mass of irregular, twisted, small petals and petaloids. Leaves ovate, dull green, apex blunt acute, margins serrulate. Originated in China.

Shiziton. Cannon, 1983, ACS., *The Camellia Journal*, vol.38, No.3. Corruption of Chinese name **Shizitou.**

Shizitou. (Lionhead), (*C.reticulata*), Fang, 1930, *Diannan Chahua Xiaozhi* as 'Jiuxin Shibaban' or **Shizitou.** (Nine hearts eighteen petals or Lionhead). The colour can be dark or light. The flowers are well developed and like a 'suanni' (mythical lion) lifting up its head and leaping. Feng et al., 1986, *Yunnan Camellias of China*, p.95, colour pl. and description: Leaves oblong-ovate to oblong-obovate, apices acuminate, bases cuneate, slightly reclinate, 6-9 cm long x 3-4.5 cm wide. Flowers dark red (RHS.CC,53C-D), diameter 10-15 cm. Petals about 30 in 4-5 whorls, outer whorls flat, inner folded, forming a raised flower centre. Stamens numerous, divided into 5-9 groups by folded petals. Pistils mostly rudimentary, very few partially fertile. The cultivar is fast growing and tall. It is widely cultivated in Kumning and Dali and there are many trees aged several hundred years. It is commonly called 'Dahongchahua' (Dark red Camellia Flower) in Dali. It flowers mid-season. Different readings: 'Shih-tzu-t'ou', 'Shihtzetou', 'Shitzetou'. Western synonyms: 'Lionhead', 'Lion Head'. Sport: **Damanao.** Japanese reading: 'Shishigashira'. The Japanese **Shishigashira** is different to this in spite of the same kanji characters. Corrupted name: 'Shiziton'. See colour photos in Macoboy, 1981, *The Colour Dictionary of Camellias*, p.165. Received the RHS Award of Merit in 1975.

Shizitou. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.82. Synonym for **Jiuxing Cha.**

Shizitou. Gao & Zhuang, 1989, *The Camellia in China*, p.77, No.587. Chinese synonym for the Japanese *C.hiemalis* **Shishigashira.** Later changed to 'Shizitou Chamei'.

Shizitou Chamei. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.421; New Chinese synonym for *C.hiemalis* **Shishigashira,** replacing 'Shizitou'.

Shiziwu. (Lion Dance), *(C.japonica)*, Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.73, colour photo (p.139): Scarlet, variable, irregular, spherical peony form, 10 cm across with one row of large, reflexed petals; the centre a mass of over 200 small, irregular petals and petaloids. Leaves deep green, glossy, obovate elliptic, variable from flat to undulate, thin, deeply irregularly serrate, apex acute, base obtuse, 6.4-7.2 cm, long x 4.2-4.8 cm wide, elevated midrib. Originated in China in 1983. Japanese reading: 'Shishimai'.

Shizixiao. (Lion's Smile). Chang & Yü, 1981, *Shan Chahua.* Used as a synonym for both **Simianjin** and **Shiliuhong.**

Shizu. Vanderbilt, 1941, *Camellia Research*, II, p.9. Orthographic error for 'Shuzu', synonym for **Shusugasane.**

Shizuka. (Quietude), *(C.japonica)*, Okumura, [about 1810], *Chinka Hin'i:* Red, single. Yashiro, 1841, *Kokon Yôrankô*, vol.310, reprint from pictures owned by Katô, Isnokami. Originated in Japan. (Believed extinct.)

Shizuka. (Quietude), *(C.rusticana), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.283: Large, red, single; petals, 6-7, rounded, overlapping, waved margins; stamens in large, compact cylinder, anthers yellow. Leaves mid-green, ovate, apices acuminate, margins serrate. Originated in Chûbu area, Japan by Shunichi Sakuragi in 1975, named by Eimei Nagata. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.68, 219.

Shizuka-sarasa. (Variegated 'Shizuka'), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.574, 590: Medium size, semi-double to open peony form, white with red markings. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.2, p.1 07. (Believed extinct.)

Shizukiyama. (Mt. Shizuki). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.120 with colour photo; English translation p.82. Small, pale pink narrowly bordered white with occasional stripes, tubular single, cylindrical stamen column. Leaves elliptic, medium size. Upright growth. A mutation from an old tree on Mt. Shizuki in Hagi City. Flower colour of the mother

tree is peach red. Named and released by Shigeru Yoshimatsu in 1984. From Yamaguchi Prefecture.

Shizukura. Different reading for **Shitsukura.**

Shizumu-ariake. (Setting Moon at Dawn), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Semi-double to anemone form, red with white variegated petaloids. Originated in Japan. (Believed extinct.)

Shizu-no-kurenai. (Red Camellia from Shizu). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.119 with colour photo; English translation p.81. Small, deep red, trumpet shaped single, cylindrical stamen column. Flowers early to mid-season. Leaves elliptic, medium size, flat. Somewhat upright growth. A wild camellia found in Shizuno District in Seki City. Named by Nagaharu Niwa, released by "Gifu Tsubaki Kai". From Gifu Prefecture.

Shizu-no-minato. *(C.japonica), Camellia Photo Collection,* 1997 Japan, p.98 with colour photo; Red anemone form, some petaloids have white markings, a few stamens mixed with the petaloids.

Shizunoya-no-chasen. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.63. Different reading for **Shizuya-no-chasen.**

Shizutani. (Quiet Valley), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.82, colour photo & description: Small size, pale pink, campanulate single, with 5 regular, reflexed, overlapping petals and a pinched in stamen column with white filaments, joined for the lower third, and yellow anthers. Blooms mid-season. Leaves shining mid-green, broad-elliptic, apices acute, margins serrulate. Originated in the Okayama Prefecture, Japan. Collected and released by Nobuo Sasai in 1980.

Shizuya-no-chasen. (Spread Stamens of Humble House), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Red, single, magnolia form with 5 long petals. Originated in Japan. (Believed extinct.) Different reading: 'Shizunoya-no-chasen'. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, pp.101, 102.

Shneiderff. *(C.japonica*, Shneiderff, ed., 1841, *Catalogo della piante che si Trovano nel Giardino del Sig. Enrico Shneiderff,* p.9. No description. Originated in Italy. (Believed extinct.)

Shoalhaven. *(C.reticulata* hybrid), ACRS., 1984, *Camellia News*, No.91, p.22, Reg. No.315: Originated by T.E. Pierson, Hurstville, N.S.W., Australia as a seedling of **Balderdash**. First flowered 1982. The 14cm. across x 6 cm deep, rose-pink, irridescent single to semi-double flowers open mid-season to late. Upright, spreading growth habit with leaves mid-green, ovate, reticulate, 15.1 cm long x 6 cm. wide.

Shô-an. (Small Hermitage), (*C.japonica*), Seibundô Shinkôsha, 1979, *Senchinshû*, p.73, colour photo, p.221, description: Medium size, deep pink, cup-shaped single, 5-6 rounded, emarginate petals with some crinkling. Central stamen column, yellow anthers, creamy white filaments. Leaves mid-green, lanceolate, apex acuminate. Originated in Chûbu area, Japan. A chance seedling originated and named by Kiraku Sakuragi in 1973.

Shocking Pink. *(C.x williamsii)*, Camellia Grove Nursery Catalogue, 1955: Tyrian rose. Medium size, rose form to formal double. Medium, compact, upright growth. Blooms mid-season to late. Originated by E.G. Waterhouse, Gordon, N.S.W., Australia as a chance seedling from *C.saluenensis.* For colour photo see front cover, Savige, 1967, *Camellias.*

Shochika. Inazawa Nurseries Co. Ltd. Wholesale Price List, 1985-1986. Back cover, colour photo. Orthographic error for **Shuchûka.**

Shôdo-koku. (Dark Red of Shôdo Island), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.I, 1972, p.366: Small, purple red, single, opening narrow campanulate, 5-7 petals, outer densely tomentose on reverse. Stamens in central cyclinder. Leaves small size, medium green, long-elliptic, apex acuminate, margins serrate, waved, thick. New growth black-red. Selected

from a wild japonica community on Shôdo Island, Kagawa Prefecture, Japan. Named and released by Hasechika Imoto in 1972. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.221.

Shodon. (Classical Ryûkyû Dance). *(C.japonica)*, Hiroshi Matsuda, Okinawa, 1994, JCS, *Tsubaki*, No.33, p.35: Small size, red, cup-shaped single. Early blooming. Foliage medium size, elliptic. Growth spreading and sturdy. Selected in the wild from northern part of Okinawa Island, Japan.

Shôdoshima. (Shôdo Island), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.218, colour photo & description: Small size, burning red, cup-shaped single with 5 rounded, concave petals and a yellow stamen cluster. Blooms mid-season. Leaves narrow-lanceolate to lanceolate, apices tapering acuminate, margins rolled up, sharply serrate. Originated in Kagawa Prefecture, Japan. Named and released by Nobuo Sasai in 1989.

Shôemon. (Personal Name), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.651: White, rose form double, medium size. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p. 150. (Believed extinct.)

Shôemon. (Personal Name), *(C.japonica)*, *Chinka Zufu*, (Before 1700), Watanabe, 1969, pl.691: Pink with white edges, rose form double. Medium size. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.155. (Believed extinct.)

Shoen-no-iro. Botan-en, 1957, *Engei Hôchi*, No.237, p.9: Single, medium size, 6-7 large, round petals. Blooms in 5 ways, white, spotted dark red, half white, red with white border, pale red. Different reading for 'Yukari-no-iro', as synonym for **Shokkô-nishiki.**

Shôgenkifu. (Shôgen Yellow Cloth),, *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû* in the section with yellow variegation; Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.166: Large leaves, round, bluish green with yellow margins. Originated in Japan. (Believed extinct.) Different reading: 'Shôgenkihu'.

Shôgenkihu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.162. Different reading for **Shôgenkifu.**

Shô-heiguri. (Small Heiguri). *(C.japonica)*, Chinka-en Catalogue, Niigata, 1989-1990, p.2. Seibu Maizuru Institute of Botany, 1993-1994, *Seibu no Tsubaki*, No.333: Small size, tubular, light pink single. Flowers mid-season. Originated by Ishikawa Prefecture, Japan.

Shôhitairin. (Large Shôhi), *(C.japonica)*, Uesa, 1844, *Sômoku Benran:* Rose-pink, blotched white. Large, peony form. Variegated leaves. Thought to be a synonym for **Seihitairin** in *Shoshiki Hanagatachô*, 1789 and *Senka'ôden*, 1847. Possible synonym for or sport of **Daikagura.** Different reading: 'Shôjitsu-tairin'. See: Kyôto Engei Kurabu, 1961, *Kyôto Engei*, No.65, pp.5, 6. Originated in Japan. Synonym: 'Teruhi-tsubaki'. (Believed extinct.)

Shôhô-an. ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.22: Orthographic error for **Shûhô-an**.

Shôhôkarako. Tateyama Nursery List, 1957. Synonym for: **Shûhô-karako.**

Shôhôzan. (Mt. Shôhô). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.328 with black and white photo; English translation p.233. Small, vermilion, trumpet shaped single, cylindrical stamen cluster. Flowers mid-season. Leaves narrowly elliptic, small, somewhat waved. Upright, fast growing, slender branches. A natural seedling of **Kasenzan**. Named and released by San-in Camellian Club in 1989.

Shohwa-no-akebono. Different reading for **Shôwa-no-akebono.**

Shohwa-no-hikari. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.211. Different reading for **Shôwa-no-hikari.**

Shohwa-no-homare. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.211. Different reading for **Shôwa-no-homare.**

Shoin. (Study), (Wabisuke), JCS., 1987, *Japan Camellia*, No.25, p.10, No.6: Pale peach pink, single, sake cup form, very small. Retrogressive anthers. Mid-season blooming. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.84, colour photo. A seedling of **Sukiya.** Originated by Sasai in Okayama Prefecture, Japan.

Shoin-no-iro. (Colour of Studio), (Higo), Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No. 1, p.64 as 'Syoin-no-iro'. No description. Originated in Japan.

Shô-isahaya. Yashiro, 1841, *Kokon Yôrankô.* Different reading for **Ko-isahaya.**

Shôjitsu. (Bright Sun), *(C.japonica)*, Tuyama, 1966, *Camellia Cultivars of Japan*, p.62. Synonym for 'Daikagura'. 'Shôjitsu' was a popular name for **Daikagura** in Takarazuka City, Hyôgo Prefecture. Different reading 'Shôhi'. Synonym for 'Seihi', which was the local name in Ikeda City, Ôsaka Prefecture.

Shôjitsu-tairin. Different reading for **Shôhitairin.**

Shôjoh. Sakata et al., Mar. 1981, 'Flower Colour in the Camellia. II'; *Memoirs of the Faculty of Agriculture*, vol.XVII, p.90, Kagoshima University. Different reading for **Shôjô.**

Shôjô. (See below), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, #93: Large, convexed, double, red flower with a few white spots and piled up petals. Originated in Japan. (Believed extinct.) Synonyms: 'Shôjôbeni', 'Shôjôkô. The 'Shôjô' are legendary beings with the body of a monkey and long red hair. They are especially fond of sake. The name is sometimes translated as Orangutang.

Shôjô. (Orangutang), *(C.sasanqua)*, Itô, Ihei, 1695, *Kadan Chikinshô* Red, single, large size with long, narrow petals. Originated in Japan. (Believed extinct.)

Shôjô. (Orangutang), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.112: Medium size, scarlet, anemone form single with 5-6 large outer petals and a central cushion of scarlet petaloids. Originated in Japan. Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.100. (Believed extinct.)

Shôjô. (Orangutang), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.370: Small, crimson flower with 5 large outer petals and a large, widely spreading centre of crimson petaloids, sparsely streaked with white. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.87. (Believed extinct.)

Shôjô. (Orangutang), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.308, 310: Large size, red with white spots, double, lotus form bloom with cylindrical stamen cluster. Originated in Japan. (Believed extinct.)

Shôjô. (Orangutang), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large size, red, with a few white spots, formal double, regular, piled up form. Originated in Japan. (Believed extinct.)

Shôjô. (Orangutang), *(C.japonica)*, Inazawa Nurseries Co. Ltd Catalogue, 1980-1981, p.6, A-8: Large size, dark red double, lotus form. Originated in Japan. It is doubtful that this is the same as the Yashiro, 1841 cultivar.

Shôjô. (Old Expression for 'Love at First Sight'). *(C.japonica)*, *Nagoya Camellia Society Bulletin*, No.25, p.11, Colour plate No.38: Originated by Kôji Funakoshi, Nagoya, Japan. A chance seedling of **Seiôbo.** Small size, 7-8 cm across, sinle of 6-7 recurved petals, apple pink deepening to light pink. The colour graduation is better than **Seiôbo,** but flower is flatter in shape. No fragrance. Early flowering.

Shôjô. Yoshimura, 1961, *Higo Tsubaki Meikan*, No.5. Synonym for **Shôjôhi.**

Shôjôbeni. Itô, Jukyû, 1739, *Honzô Hanamaki'e.* Different reading for 'Shôjôkô'. Synonym for **Shôjô.**

Shôjôhi. (Red Orangutang), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Scarlet, very large, 11 cm across. Leaves large and broad. Originated in Kumamoto Prefecture, Japan. Abbreviation: 'Shôjô'.

Shôjôin. (Shôjôin Temple). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.328 with black and white photo; English translation p.233. Small, pale pink, tubular single, cylindrical stamen column. Flowers mid-season. Leaves narrowly elliptic, small to medium. Upright, slender but fast growing. A natural seedling of a white japonica growing at Manganji Temple in Matsu'e City. Named and released by San-in Camellian Club in 1991. From Shimane Prefecture.

Shôjôkô. Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol. 16. Synonym for the *C.sasanqua* **Shôjô.**

Shôjômai. Nihon Shubitsu Co. Catalogue, 1910. Different reading for **Shôjô-no-mai.**

Shôjô-no-mai. (Dance of Orangutang), *(C.sasanqua)*, Ashizawa, 1898, *Chabaika Taishû;* Nihon Shubyô Co. Catalogue, 1910 as 'Shôjômai'. Wada, 1941, *Garden Treasures of Japan* as 'Shojo-no-mai', p.32: Medium size, very bright pink with 5-6 broad petals. Upright, slender growth. Blooms early. Variegated leaves. Yashiroda, 1950, *American Camellia Yearbook*, p.16: Deep red, medium size. Weak, poor grower. Originated in Japan. Different readings: 'Shojyô-no-mai', 'Shôjômai'.

Shojû. (Happiness & Long Life), *(C.rusticana)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.303, colour photo & description: Small size, very pale pink fading to creamy tone at centre, semi-double with 8-10 ovate petals, cleft at apices, and a short, yellow stamen column. Leaves dark green, elliptic. Late blooming. Originated in Mt. Sekidô, Ishikawa Prefecture, Japan. Named by Tadao Yamaguchi in 1984.

Shôkaen. (Flower-admiring Banquet). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.165 with colour photo; Small single, tubular to trumpet shape, red widely bordered with white. Flowers early to late. Leaves elliptic, small. Fast, upright growth. A seedling of 'Tamahibiki', thus third generation from **Tama-no-ura.** Named after Shokaen Nursery, and released by Soshin Hirai, Saitama Pref., Japan, in 2007.

Shôkei. (Personal Name), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* White flower, variegated with red. Orignated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.81. (Believed extinct.)

Shôkei-benikakari. Watanabe, 1970, Kyôto Engei Kurabu, *Tsuabaki Tokushû*, No.10, p.162. Different reading for **Shôkei-benikake.**

Shôkei-benikake. (Shôkei's Pink), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû*, vol.5: Cultivars with very large, white variegated leaves. 'Shôkei' is a personal name; 'benikake' is an old name for a flower which appears a pink colour. Different reading: 'Shôkei-benikakari', 'Syôkei-benikake'. Originated in Japan. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.162. (Believed extinct.)

Shôkei-sakuraba. (Shôkei's Cherry Leaf), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû*, vol.5: Leaves like a cherry leaf. Flower, double, white striped pink, large. Originated in Japan. Different reading: 'Syôkei-sakuraba'. Thought to be synonymous with **Sakuraba-tsubaki.**

Shôki. (Right Account), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû.* No.5, p.79: Large size, semi-double with 2 tiers of petals, cup-shaped, red with white stripes. Originated in Japan. (Believed extinct.).

Shokka-Nishiki. Newman's Nursery Catalogue, 1982-1983. Corruption of Japanese name **Shokkô-nishiki.**

Shokkô. (Sechuan Red), *(C.japonica)*, Itô Jukyû, 1739, *Honzô Hanamaki'e*, vol. 15 as ('Sechuan River'). Originally the name was written as 'Sechuan River' but now the kanji for 'Sechuan Red' is popularly accepted. Iwasaki, 1828, *Honzô Zufu*, p.10; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* The flowers are small to medium, single, white with petals red borders or red with white blotches. Originated in Kantô area, Japan. Different reading: 'Shokkoh', 'Shokkou'. For colour photos see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.137; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.70; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.99, pp.69, 305; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.244. Seibundô Shinkôsha, 1979 *Senchinshû*, p.74, description, p.221: Medium size, single, 5-6 petals, irregular, waved, red with white blotches and speckles; stamens in a compact, central cylinder, anthers yellow, filaments light yellow, joined lower half. Leaves strong, glossy green, ovate to obovate, apex acute, margins shallowly crenate-serrulate. Similar to 'Reiganji-maizuru', **Amagashita, Hakkan, Yoshitsukasa** and **Yokogumo.** Synonym: 'Shokko (1)'. Note: In America the name 'Shokko' was erroneously applied to **Hakurakuten.** See: JCS, 1983, *Tsubaki*, No.22, p.113; ibid, 1981, No.20, p.105; 1969, No.7, p.31.

Shokkô. (Sechuan Red), *(C.japonica)*, Wada, 1941, *Japanese Garden Treasures*, p.29: Intense, blackish crimson with a suffusion of vermilion; one of the rarest; effective, golden yellow, sasanqua-like stamens. Originated in Japan.

Shokkô. (Sechuan Red), (Higo), Taniguchi, 1912, *Chinka Kyôkan* lists 'One is a large size, single, white with red stripes, spreading stamens; another is a large, red, semi-double'. Satomi, 1956, *Camellias of Japan:* Medium size, pink with some marbling of white. A sport of the Higo **Shokkô-nishiki.** Originated in Kumamoto Prefecture, Japan. Different reading: 'Syokkô'. Note: The identification of Taniguchi's two cultivars is difficult at the present time.

Shokkô (Sechuan River), *(C.x vernalis)*, Ishii, Yûgi, 1933-1934, *Jissai Engei. 15 Chabai no Hinshu Kaisetsu, 13-:* Deep red, single, small size. Round leaves, Originated in Japan.

Shokko (1). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Shokkô.**

Shokko (2). Fendig, 1953, *American Camellia Catalogue.* Erroneously for **Hakurakuten.**

Shokkôbeni. (Sechuan River Red), *(C.japonica)*, Kaempfer, 1712, *Amoenetatum Exoticarum* as 'Sokkobin'. No description. Originated in Japan. (Believed extinct.) It is possible that this variety is the same as **Shokkô** in Itô, Jukyû, 1739, *Honzô Hanamaki'e.* See JCS., 1989, *Tsubaki*, No.28, p.10.

Shokkôbeni. ('Shokkô' Red), (*C.japonica*), Watanabe, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8: A red sport of Shirayuki: Rose-red, medium size, single with 6-7, wide, rounded, over-lapping petals amd a large, spreading stamen cluster. For pl. see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.9 & p.293. Common in the Kansai area, Japan. Sports: **Shokkô-nishiki, Fukurin-shokkô**. Different reading: 'Shokkôkô'.

Shokkoh. Andoh, 1971, *Tsubaki*, *Meika* no *Shôkai to Saibai*, p.211. Different reading for **Shokkô.**

Shokkoh-nishiki. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.211. Different reading for **Shokkô-nishiki.**

Shokkoh Red. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.212. Synonym for **Shokkôbeni.**

Shokkôkô. Different reading for **Shokkôbeni.**

Shokko Nishike. Craig, 1971, *American Camellia Yearbook*, p.63. Corruption of Japanese name **Shokkô-nishiki.**

Shokkô-nishiki. (Sechuan Red Brocade), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Pink marbled white, large. Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement*, [p.64], colour photo: Large, 10 cm, across, semi-double, 14 pink marbled white petals. Stamens spreading, filament cluster, white. Leaves medium sized, oblong-elliptic. Originated in Kumamoto Prefecture, Japan. For colour photos & descriptions see: Hiratsuka, 1964, *Higo Camellia*, p.39, back p.14. *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.396, p.161; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.140; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.75, 221, lower picture. Synonym: 'Candlelight Brocade'. Different readings: 'Syokkô-nishiki', 'Shokkoh-nishiki'. Corruption of name: 'Shokko Nishike'.

Shokkô-nishiki. (Light of Sechuan Brocade), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.310 as (Sechuan River Brocade); Uesa, 1844, *Sômoku Benran:* The modern camellia of this name was raised by Katayama and is different to the Yashiro one above which is now unidentifiable. Single white, large size, 5-6 emarginate petals, a little fluted at the edges, with pink and light red streaks, opening wide cup-shaped. Stamens, large and widely spreading with prominent style, Higo-like. Originated in Kansai area, Japan. See colour photos & descriptions: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.125, p.77 & p.309; Katei Gahô, ed., 1984, *Chabana Koyomi, vol.I, Tsubaki*, p.61. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.284. Seibundô Shinkôsha, 1979, *Senchinshû*, p.75, top RH picture as 'Shokkô-nishiki' (Katayama), p.221. Sports: **Shokkôbeni, Fukurin-shokkô, Shirayuki.** Synonym: 'Yukari-no-iro'. See also: Kyôto Engei Kurabu, 1961, *Kyôto Engei*, No.65, p.8; Tuyama, 1966, *Camellia Cultivars of Japan*, p.236.

Shokkô-nishiki. (Sechuan Red Brocade), *(C.x vernalis)*, Wada, 1941, *Japanese Garden Treasures*, p.32: Red, white stars. Medium size, small, single. Sport of the *C.x vernalis* **Shokkô.** Originated in Japan.

Shokkô-nishiki (Kanaoka). (Light of Sechuan Brocade from Kanaoka), *(C.japonica)*, Kanaoka Camellia Garden, 1963: Leaves lanceolate-elliptic, wavy, manifestly crenate-serrulate. Flowers single, widely opening to almost flat, white, striped in varying degrees with rose (Rose opal 022--022/3). Petals large, lobulate. Stamens cylindrical. Originated at Kanaoka Camellia Garden, Takarazuka City, Hyôgo Prefecture. Japan. The name is made up from 'Shoku' an ancient provincial name for the province of Sechuan, China. The centre character is 'ko' = light and 'nishiki' = brocade. Light of Sechuan Brocade. For colour photos & descriptions see: Tuyama, 1968, *Camellias of Japan*, pl.326; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.75, 222, top LH picture. Synonym: 'Shokkô-nishiki'.

Shokkô-nishiki (Katayama). Seibundô Shinkôsha, 1979, *Senchinshû*, p.221. Synonym for *C.japonica* **Shokkô-nishiki.**

Shokkou. Different reading for Shokkô.

Shokô (First Yellow), *(C.japonica x C.chrysantha)*, JCS., *Japan Camellia*, No.32, July 1989, p.4, colour photo, p.5, text: A seedling of *C.japonica* **Shigi-tatsuzawa** x *C.chrysantha*, raised by Tadao, Yamaguchi, Tsurugi-chô, Ishikawa Prefecture, Japan. Pale butter yellow, single, 4 cm across, opening through a spherical shape to cup-shaped; with 6 concave, emarginate petals and a centre of golden anthers. Leaves intermediate between parent species, slightly resembling *C.chrysantha* in shape, 12 cm long x 5 cm wide. Blooms early to mid-season. See: *International Camellia Journal*, Oct. 1990, No.22, p.58. Chinese synonym 'Chuhuang'.

Shôkôshi. (Little Prince), *(C.japonica)*, Yokoyama. 1975, *Gendai Tsubaki Meikan*, p.138, black and white photo and description: Small, pink, campanulate single with 5-6 irregular, wavy petals; stamens in a central column, anthers yellow, filaments pale cream, united for basal third.

Leaves medium size, dark green, obovate, apex acute, margins shallowly serrulate. Flowers early to mid-season. Originated in Kansai area, Japan. Originated and named by Itsurô Munakata around 1970. Different reading: 'Shoo-koo-shi'. See colour photos: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.302; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.74, 221. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.123.

Shoku-no-nishiki. (Sechuan Brocade), *(C.x vernalis),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu;* Saitama Engei Co. Catalogue, 1911: White, striped pink. Medium size, single to semi-double. Early blooming. Originated in Japan.

Shôkyô. (Personal Name. *(C.japonica), Nagoya Camellia Society Bulletin,* No.25, p.15, colour plate No.56: Originated by Kôji Funakoshi, Nagoya, Japan. A seedling from *C.japonicas* **Seiôbo** x 'Gozen-no-kaori' (**Hinoyama-tarô**). A small size, 6-7 cm across, single with 6-7 petals, pale pink fading to white at centre. Flower and leaf shape resemble 'Gozen-no-kaori', with similar but more intense fragrance. Flowers mid-season. "Shôkyô" is the younger of the beautiful sisters in the Chinese historical novel *Sangokushi.*

Shômomiji. Sakata, T. and Co. Catalogue, 1938 as 'Shô Momiji'. Different reading for **Komomiji.**

Shômonsasu. Sakuden, 1630, *Hyakuchinshû.* Different reading for **Yoinimonsasu.**

Shomura. *(C.japonica),* Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* Very large, single, red with white spots. The kanji characters and description of this flower is similar to **Shikamura** in *Kadan Chikinshô*, 1695 and *Honzô Hanamaki'e*, 1739. and it is possible that an ancient translator miswrote this for 'Shikamura'.

Shônagon. Seibundô Shinkôsha, 1979, *Senchinshû*, p.64 as a synonym for **Sado-wabisuke.**

Shônan-no-haru. (Shônan Spring), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.74, colour photo, p.221, description: Large, single of 6-7 petals, opening wide cup-shaped, palest blush pink, peppered, dotted and streaked deep pink stamens in a large, central, spreading cluster, anthers yellow. Leaves ovate, waved, prominent venation, mid-green, widely, shallowly serrate. Blooms mid-season. Resembles **Kantô-hanamiguruma**. Originated in Kantô area, Japan.

Shônichi. Seibundô Shinkôsha, 1979, *Senchinshû*, p.229. Different reading for 'Teruhi', 'Shôhi', 'Seihi', synonyms for **Daikagura.**

Shônoya. (House of Village Headman), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.258, colour photo, p.259, description: Medium size, white with red and pink splashes, wide campanulate single, with 5-6 broad, emarginate petals and a central stamen cylinder, with white filaments, joined for their lower third and yellow anthers. Blooms mid-season to late. Leaves deep green, elliptic, apices long tapering acuminate. Originated at Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1980.

Shô-ô. (Smiling Old Man), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Hiratsuka, 1964, *Higo Camellia*, p.18 and back p.12 as 'Syô-oh': Blush pink, medium size, (8 cm across), filaments white, pistil yellow green. Leaves sharply serrate. Originated in Kumamoto Prefecture, Japan. Different reading: 'Shô-oh', 'Syô-oh'. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.221.

Sho-oh. Stone, Vi, 1983, SCCS., *The Camellia Review*, vol.45, No.2, p.20. Different reading for **Shô-ô.**

Shoo-koo-shi. Alpen, 1977, ACRS., *Camellia News*, No.63, p.9 where it is erroneously given as a Higo. Different reading for **Shôkôshi.**

Shooting Star. *(C.rusticana). American Camellia Yearbook,* 2002, p.131, colour photo p.c11: Reg. No.2571. A white semi-double chance seedling, flowering mid-season to late. Originated by Nuccio's Nurseries, Altadena, Calif., USA. Nuccio's #8744. Introduced in their 2000 catalogue. The seedling first flowered in 1991. Plant growth is dense and average with dark green leaves 9.5 cm long x 4.5 cm wide.

Shôroku-tsubaki. Mizuno, 1829, *Sômoku Kinyôshû*, vol.5. Synonym for **Mumei-tsubaki**. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû***,** No.7, p. 163.

Shorty. *(C.japonica), American Camellia Yearbook*, 1980, p.173, Reg. No.1659: A large, red, variegated white, semi-double, chance seedling japonica, late flowering; originated by Dr J.M. Habel, Suffolk, Virginia, USA. The 20 year old seedling bloomed for the first time in 1970. Average flower size, 12.5 cm across x 6 cm deep with 15 petals, yellow anthers and white filaments. Plant growth is average with dark green leaves, 11 cm x 5 cm.

Shôtaishi. (Small Thai Child), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.74, colour photo, p.221, description: Very small, crimson, 5 petalled, campanulate single with a central, sterile stamen column, whitish anthers, red filaments. Leaves mid-green, lanceolate, apex acuminate, manifestly serrate, recurvd. outwards. Originated in Shimane Prefecture, Japan.

Shot Silk. Peer, 1949, SCCS., *Bulletin*, 11(2):11. Western synonym for **Dayinhong.**

Shot Silk Narrow Leaved. Lammerts, 1950, *American Camellia Yearbook*, p.10. Synonym for **Liuye Yinhong.**

Shot Silk Reticulate. Peer, 1954, NCCS., *Bulletin*, vol.8, No.1, p.9. Synonym for **Maye Yinhong.**

Shou Hsing Ch'a. Wade reading for the pinyin 'Shouxing Cha'.

Shouyan. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the Nuccio, *C.reticulata***, Debut.**

Shouji. (Hunting Jacket), *(C.japonica)*, Chang, Shao Yun, 1987, *Camellias from Zhejiang***,** p.94, colour photo, [p. 146]: Medium size, formal double or rose type double. Plant habit, spreading, dense with leaves similar to **Hongchang'e Cai,** obovate, flat, narrower with tips sharper. Flowers singly or in pairs, abundant, white, tinted flesh colour, variegated with broad pink lines and a few scarlet splashes, 80-85 petals in 8-9 rows. Flower cup-shaped, petals arranged regularly. Flower buds heart-shaped, green. Late flowering. Originated in Hangzhou, China. Synonym: 'Shijing Mudan'. See colour photo, No.155, Gao & Zhuang, 1989, *The Camellia in China.* Different reading; 'Shouyi'.

Shoutao. (Birthday Peach). *(C.japonica),* Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.44 with colour photo; Grown in the Chengdu area, Sichuan, China. Flowers soft pink, graduating to deep pink at the petal edges, formal double, petals nearly round, outer petals flat, centre petals usually remain closed in a raised ball. Light green leaves, broad-ovate, shiny. Compact, vigorous plant. Flowers mid-season. Synonym 'Magu Shoutao'.

Shouxiang. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* for the USA *C.japonica* **Premier.**

Shouxing Hong. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.569.; From Sichuan Province, China. No further details.

Show Girl. *(C.sasanqua x C.reticulata)*, Hilsman, 1966, *American Camellia Yearbook***,** p.140: A **Narumigata** (5n = 75 hybrid) x *C.reticulata* **Damanao**, (6n = 90). Raised by Howard Asper, Escondido, California, USA. Pink. Large to very large, semi-double to open peony form. Vigorous, open, upright growth. Mid-season blooming. See colour photo; front cover, SCCS., 1969, *The Camellia Review*, vol.30, No.4, erroneously as **Cover Girl.** Orthographic variant: 'Showgirl'. Chinese synonym: 'Genü'.

Show Time. *(C.japonica),* Nuccio's Nurseries Catalogue, 1978: Light pink semi-double. *American Camellia Yearbook***,** 1979, p.111, Reg. No. 1528: A very large, clear, light pink, semi-double with fluted petals, *C.japonica* chance seedling that blooms early to mid-season; originated at Nuccio's Nurseries, Altadena, California, USA. The 6 year old seedling first bloomed 1972. Average flower size, 13 cm across. Plant growth is upright and average with dark green leaves, 12.5 cm x 6 cm. See colour photos: Front cover, SCCS., 1979, *The Camellia Review*, vol.40, No.3; Front cover, ACRS., 1981. *Camellia News***,** No.79. Chinese synonym: 'Huazhan Shijie'.

Shôwa-benisuzume. (Red Sparrows in Shôwa Era). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.130 with colour photo; English translation p.89. Medium size, deep red, tubular single, cylindrical stamen column. Flowers early to late. Upright growth, sparse branching, buds, leaves and branches dark red in winter. A chance seedling of **Bokuhan.** Originated and released by Shigeichi Hirano in 1982. From Kanagawa Prefecture.

Shôwa-nishiki. (Brocade of Shôwa Era), *(C.japonica)***,** Minagawa, 1956, *Chinkashû;* Tateyama Nursery Camellia List, 1957: Pink and red stripes on white, medium size, single with 5 petals, 3 large and rounded, 2 small, opening wide campanulate. Leaves glossy, deep green, lanceolate, apex acuminate, margins serrulate. Originated by Minagawa, Jisuke, in Saitama Prefecture area, Japan. Resembles **Aki-no-yama,** but larger. For colour photos see: Tuyama, 1966, *Camellia Cultivars of Japan***,** pl.165. *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.343, p.142; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.74, 221. Synonym: 'Shôwa-no-nishiki'. Note: 'Shôwa' refers to the modern era in Japan which began with the accession of Emperor Hirohito in 1925. It means 'Enlightened Peace'.

Shôwa-nishiki. (Brocade of Shôwa Era), *(C.sasanqua)***,** Kurume Tsutsuji Seisan Corp., 1970, *Tsutsuji no Furusato:* Flower, large size, semi-double, white with pink cast at margins. Originated in Kumamoto Prefecture, Japan.

Shôwa-nishiki. (Brocade of Shôwa Era), *(C.sasanqua), Encyclopedia of Camellias in Colour***,** vol.I, 1972, pl.585, p.223, description, p.397: Large, white, single, 9-10 cm. across, 7-8 petals, showing some pink near margins and on reverse, crinkled and waved. Stamens in a small, spreading group, anthers brownish-yellow, filaments creamy. Originated in Angyô, Saitama Prefecture, Japan.

Shôwa-no-akebono. (Dawn of New Era), *(C.japonica),* Minagawa, 1957, *Chinkashû;* Minagawa Nursery, 1960, *Shinsen Chinkashû:* Blush pink, semi-double. Tuyama, 1966, *Camellia Cultivars of Japan*, p.166. Tuyama, 1968, *Camellias of Japan*, pl.93, p.47, description, p.114: Leaves flat, suddenly acuminate at the apex, all margins crenate. Flowers pink (Rose pink 427/2), semi-double, widely cup-shaped, with irregular, rather thin staminal tube, filaments whitish. Originated as a seedling of **Akebono** by Jisuke Minagawa, Ryôke, Angyô, Saitama Prefecture, Japan. See colour photos and descriptions: *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.364; ibid, vol.II, 1978, pl.380; Katei Gahô, ed., 1984, *Chabana Koyomi, vol.I, Tsubaki*, p.51; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.300. Seibundô Shinkôsha, 1979, *Senchinshû*, p.74. Different readings: 'Shohwa-no-akebono', 'Syôwa-no-akebono'.

Showa-no-hikara. Camellia Forest Nursery Catalogue, 1990, p.3. RHS, Anthony Huxley ed. 1992, Dictionary of Gardening, No.1, p.483. Corrupton of the Japanese name: **Shôwa-no-hikari.**

Shôwa-no-hikari. (Light of Shôwa), (Higo), Adachi, 1960, *Camellia. Its Appeciation and Artistic Arrangement*, p.53, colour photo, p.73, description: Sport of **Yamato-nishiki.** Flowers light pink, striped pink, sometimes irregularly variegated white on edges of petals, 8 cm across, 6 petals. Stamens full, spreading, slightly pinkish white. Leaves medium size, ovate to ovoid, often with yellowish white variegation. Originated in Kumamoto Prefecture, Japan. See: Hiratsuka, 1964, *Higo Camellia*, pp.18, 34 & back p.13; *Encyclopedia of Camellias in*

Colour, vol.I, 1972, pl.153; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.140. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.74, 221. Different readings: 'Shohwa-no-hikari', 'Syôwa-nohikari'. Synonym: **Shinnippon.** Chinese synonym: 'Zhaohe Ronguang', later amended to 'Zhaohe Zhi Guang'.

Showa-no-homare. (Glory of Shôwa), *(C.japonica)*, Overlook Nursery Catalogue, 1948-1949: Very large size, single flower, with petals somewhat crêped; snow white. Fruitland Nursery Catalogue, 1948-1949: Large, white, single with petals 5 cm across, somewhat crêped. Stamens in a large, slightly spreading, cylinder, anthers golden yellow, filaments white, joined at basal third. Leaves dark green, oval, 8 cm x 4 cm with sharp, shallow serrations, stiff and flat. Originated in Kantô area, Japan by Minagawa, Jisuke, as a seedling of **Yukimiguruma**. Imported into USA in 1940 by T. Kiyono from the Yokohama Nursery Co., Japan. See colour photos & descriptions: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.55, p.180. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.97 & p.305; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.74, 221. Different reading: 'Shohwa-no-homare', 'Syôwa-no-homare'. Chinese synonym: 'Zhaohe Rongguang'.

Shôwa-no-homare. Nihon Kaki, 1961, *Hana no Hope.* Synonym for **Hi-otome-sazanka.**

Shôwa-no-kagayaki. (Glory of Shôwa), *(C.x vernalis)*, Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.28; Shufu no Tomo Sha, Kirino, 1976, *Nihon no Tsubaki*, pp.119, 235; Tanaka et al., 1986, *Journal of Japanese Society of Horticultural Science*, 55(2):208: A 'Gaisen Type' tetraploid cultivar from Japan. Clear red, single, small size, narrow petals. Different reading: 'Syôwa-no-kagayaki'.

Shôwa-no-koromo. (Robe of Shôwa), *(C.japonica)*, Katayama, 1957, *Tsubaki Ochabana*, according to Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû* No.10, p.162. No description. Originated in Japan. Different reading: 'Shôwa-no-goromo', 'Syôwa-no-koromo'.

Shôwa-no-nishiki. Minagawa, 1960, *Shinsen Chinkashû.* Same characters as for **Shôwa-nishiki.**

Showa-no-saka. Sawada, 1954, RHS., *Camellia and Rhododendron Yearbook*, No.8, p.26. Corruption of the Japanese name **Shôwa-no-sakae.**

Showa-no-sakaae. Ghislain, 1982, *Le Camelie*, fig.25, pp.45, 77. Corruption of the Japanese name **Shôwa-no-sakae.**

Shôwa-no-sakae. (Glory of Shôwa Era), *(C.hiemalis)*, McIlhenny, 1937, *600 Varieties of Camellias:* New, double white. Fendig, 1950, *American Camellia Catalogue:* Medium sized, light pink, incomplete to irregular double, 6.5-7.5 cm across, about 24 petals. Has a rosebud centre which opens wide. Musky fragrance, Leaves dark, olive green, 5.5 cm x 3.2 cm, manifestly serrate. Plant habit vigorous and spreading. Ishii, Yûgi, 1950, *Engei Daijiten.* Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.15: Soft pink, occasionally marbled white. Medium large, double to rose form double. Early. Said to be a seedling of **Shishigashira** from Kansai area, Japan, origin about 1928. Synonyms: 'Glory of Showa', 'Usuirokan-tsubaki', 'Usuiro Kantsubaki', 'Usubeni'. Sport: **Shibori-shôwa-no-sakae.** Corruption of name: 'Showa-no-saka', 'Showa-no-sakaae', 'Showa-no-shaki', 'Showanosaleae', 'Shawa-no-saki', 'Showa-no-saki'. See: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.528, p.385. First imported by McIlhenny from Chûgai Nursery, Japan for USA in 1935 and listed in 1937 with an incorrect description. Also imported by Kiyono to USA from Yokohama Nurseries, Japan in 1940 as 'Usuiro-kantsubaki'. Chinese synonym: 'Huazhaohe Zirong', later amended to 'Zhaohe Zhi Rong'.

Showa-no-sakae Variegated. Harris' Longview Nursery Retail Price list, 1955-1956, p.6 but as the *C.heimalis* Shôwa-no-sakae is occasionally marbled with white, this listing is reduced to synonymity. Synonym for **Shibori-shôwa-no-sakae.**

Showa-no-sakai. Domoto Outstanding Selected Camellias, 1953. Corruption of Japanese name **Shôwa-no-sakae.**

Showa-no-saki. Butterfield, 1952, *Camellia Culture for the Home Gardener.* Corruption of the Japanese name **Shôwa-no-sakae.**

Showanosaleae. Chidamian, 1949, *National Horticutural Magazine,* 28(l):1-3. Corruption of Japanese name **Shôwa-no-sakae.**

Showa-no-shaki. Lord, 1986, *The Plant Finder*, p.57. Corruption of Japanese name **Shôwa-no-sakae.**

Shôwa-no-wabisuke. Botan-en Nursery Catalogue, 1955.Synonym for **Shôwa-wabisuke.**

Shôwa-otome. Yôshun-en Catalogue, 1973. Synonym for the *C.sasanqua* **Otome.**

Showa Supreme. *(C.hiemalis),* Wylam, 1956, *American Camellia Yearbook*, p.26: A seedling of **Shôwa-no-sakae,** originated by Nuccio's Nursery, Altadena, California, USA. The colour is similar to its parent but the flowers are larger and a loose, fluffy, peony effect. A vigorous, compact grower with beautiful green foliage. See colour pl. facing p.240, *American Camellia Yearbook*, 1957. See also Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.353. Chinese synonym 'Chaoji Zhaohe'.

Shôwa-wabisuke. (Wabisuke of the Shôwa Era), (Wabisuke), Botan-en Nursery Catalogue, 1938 as 'Shôwa-no-wabisuke'. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.221, p.388; Tuyama, 1968, *Camellias of Japan*, pl.397, p.207, description, p.27: Leaves narrowly elliptic, concave and channelled on upper surface, manifestly serrulate at the margins, petioles glabrous. Flower single (5 petals), widely opened, palest pink with a nuance of deeper pink on the outer petals and at base. Flowers mid-season. Sexual parts retrogressive. Originated in Takarazuka. City, Hyôgo Prefecture, Japan. Recent Japanese camellia publications such as *Nihon no Chinka*, p.248 and *Senchinshû* pp.115, 238, describe this cultivar as identical to **Hatsukari** and this is now accepted. Synonyms: 'Shôwa-no-wabiske', 'Secchûka', 'Little Princess', 'Yanagiba-wabisuke', **Hatsukari.** See: Mainichi Shinbun, 1971, *Tsubaki*, p.167; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.26; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.465, p.362. For the identification of this see Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.140. Chinese synonym 'Pingguohua'.

Showboat. *(C.hybrid).* SCCS, *Supplementary List,* 2014. White, with pink petal edges occasionally incurved. Large rose form double. Vigorous, upright, somewhat open growth. Flowers early to late. Originated by Nuccio's Nursery, Altadena, Calif., USA, catalogued 2012.

Showfire. *(C.japonica),* ACRS., 1989, *Camellia News*, No.111, p.12, Reg. No.366: Originated by Donal Coe, Albury, N.S.W., Australia. A chance seedling of **Wildfire** that first bloomed 1985. A deep red, (RHS.CC.64B with 46A veining) single of 6 petals, campanulate form, 10 cm across x 4.5 cm deep. Central stamen cylinder with filaments joined for their lower half, becoming red with age. Leaves mid-green, matt, elliptic, apex acuminate, margins serrate, 7 cm x 4.5 cm. Flowers early to mid-season. A fast growing, upright plant.

Showgirl. Mount Congreve Wholesale Nursery, 1989-1990, Price List. Coghurst Nursery Catalogue, early 1990s p.7. Orthographic variant for **Show Girl.**

Showie. *(C.japonica),* ACS 1992, *The Camellia Journal*, vol.47, No.4, p.13. Valdosta Camellia Scions. No description. Originated by Houghton Hall, San Anselmo, USA.

Shoya-no-hadashiro. (White Skin at First Night), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku:* Pale pink, single. Early flowering. Originated in Japan. (Believed extinct.) See: JCS., 1965, *Tsubaki*, No.5, p.29. Different reading 'Hatsuyo-no-hadashiro'.

Shu-aka-otome. (Vermilion Red Maiden), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.134: Medium size, formal double, scarlet red with deeper veining. Flower form resembles 'Otome'. Originated by Funaki-en, Musashino-shi, Tokyo, Japan.

Shuangban Cha. (Double Petal Camellia), *(C.japonica),* Yang, 1965, *Camellia Varieties of Taiwan* as 'Shuang-pan Ch'a': Large, white semi-double, 11.5 cm across, 15 petals. Originated in Korea. Different reading 'Twanbanchu'.

Shuangban Chaoxian Cha. (Double Petal Korean Camellia), *(C.japonica),* Yang, 1965, *Camellia Varieties of Taiwan* as 'Shuang-pan Ch'ao-hsin Ch'a': Purple red variegated white, semi-double, 11 cm across, 15 petals. Originated in Korea. Different reading 'Twanbanchuchinchu'.

Shuangban-mei. (Twin Petalled Plum). *(C.sasanqua),* Yang, 1965, *Camellia Varieties of Taiwan*, p.7 as 'Shuang-pan Mei': Small, semi-double, white with red edges and reverses, 9-12 petals, about 7.8cm across. Originated in Taiwan.

Shuangfeiyan. Feng et al., 1986, *Yunnan Camellias of China*, p.70. (Bright Red Beauty). Synonym for **Dandahong.**

Shuangfoding. (Buddha's Twin Crown), *(C.japonica),* Shanghai Botanic Gardens List, 1985: A medium sized, red, open, incomplete double with 3-4 rows of fluted and keeled outer petals and an irregular centre of stamens and petaloids. Leaves mid-green, lanceolate to broad-oval, acuminate to blunt-acuminate, margins shallowly serrate. Originated in China.

Shuangheding. (Twin Crane's Heads), *(C.japonica),* Shanghai Botanic Garden List, 1984: A red, medium sized, peony form incomplete double with oblong petals, fluted and keeled, with the stamens broken into many fascicles, scattered through the flower. Leaves mid-green, elliptic to broad-elliptic, apex acute, margins shallowly serrulate. Originated in China.

Shuanghuazhu. (Double Styles). *(C.japonica), Chinese Camellia Culture*, 2003, p.259 with colour photos; A special flower form with two bud centres, developed by Ge Lumei and Ge Yunfeng, Ningbo City, Zheijiang, China. Flower would otherwise be classified as formal double with about 68 large petals, notched at the edges, and a further 60 small petals in the bud centres. White with occasional red spots and 10 or more flat filaments. Flowers mid-season to late.

Shuangmian Zhinü. (Double Faces Weaver), *(C.japonica),* Gao, Jiyin, 2007, *The Identification ....Outstanding Camellias*, p.77 with colour photo; A sport of **Elizabeth Weaver** which originated in the Shanghai Camellia Garden, Shanghai, China. Flowers light pink, outer petals deep pink, formal double, medium to large. Petals regularly arranged with two centres to each flower. Leaves dark green, small-elliptic. Spreading, vigorous growth. Flowers early to mid-season.

Shuang-pan Cha. Yang, 1965, *Camellia Varieties of Taiwan.* Different reading for **Shuangban Cha.**

Shuang-pan Ch'ao-hsin Cha. Yang, 1965, *Camellia Varieties of Taiwan.* Different reading for **Shuangban Chaoxin Cha.**

Shuangse Hongmeigui. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.78. Chinese synonym for **Red Red Rose Variegated.**

Shuangse Meigui. (Two Coloured Rose), *(C.sasanqua),* Gao & Zhuang, 1989, *The Camellia in China*, p.74, No.541, colour photo No.304: Medium size, rose-pink with white variegation, semi-double to informal double with 3 rows of somewhat irregular petals. Originated in China.

Shuangxing. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for USA *C.sasanqua* **Frosted Star.**

Shuben Hitoe. Fruitland Nursery Catalogue, 1948-1949. Corruption of Japanese name 'Shubeni-hitoe'. Synonym for **Mihata.**

Shubeni-hitoe. Overlook Nursery Catalogue, 1948-1949: Large, deep crimson, single to anemone form, 13cm across x 5 cm deep. The anthers modify to small, pinkish white petaloids, crowding the centre to form an anemone type flower. Petals are round, wavy and notched. Stamens have white filaments and pink anthers. Leaves dark green, ovate, 8 cm x 6 cm, flat, apex abrupt acute, bases rounded, margins coarsely serrate. This is a Japanese cultivar that was imported to USA in 1940 by T. Kiyono. It has been found to be a synonym for the higo **Mihata**. Corrupted names: 'Shubeni Hotae', 'Shu-Beni-Hito', 'Shu-beni Hitor', 'Shuben Hitose'.

Shu-beni-hito. Steffek, 1949, *Plant Buyer's Guide*, ed.5. Corruption of Japanese name 'Shubeni-hitoe', synonym for the higo **Mihata.**

Shu-beni-hitor. Griffiths, 1953, *American Camellia Quarterly*, 7(3):5-6. Corruption of Japanese name 'Shubeni-hitoe', synonym for **Mihata.**

Shubeni Hotoe. Abbot's Nursery Catalogue, 1961. Corruption of Japanese' name 'Shubeni-hitoe', synonym for **Mihata.**

Shûbô-karako. Different reading for **Shûhô-karako.**

Shuchûhana. Nihon Shubyô Catalogue, 1910. Different reading for **Shuchûka.**

Shuchuhka. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.211. Different reading for **Shuchûka.**

Shuchûka. (Flower in Sake), *(C.japonica)*, Yashiro, 1841, *Kokon Kôrankô.* No description. Originated in Japan. (Believed extinct.)

Shuchûka. (Flower in Sake), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Double, white with red markings. See: Kyôto Engei Kurabu, 1969, *Tsubaki Tokushû*, No.5, p.79; Minamoto, Yoshiro, 1844, *Sômoku Benran:* Double, white with true red markings, medium size. See: Yashiroda, Kyôto Engei Kurabu, 1961, *Kyôto Engei*, No.65, p.6. Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* Description similar to above. See: JCS., 1969, *Tsubaki*, No.7, p.32; Itô, Ko'emon, 1879, *Chinkashû:* White, with rose-pink border, open peony form. Tuyama, 1968, *Camellias of Japan*, pl.377, p.192, description, p.22 as 'Shuchû-ka': Leaves oblong to oblong-elliptic, suddenly acuminate at the apex, manifestly serrulate at the margin half above, venation prominent, petioles glabrous. Flowers medium size, vase shaped, double, petals 18-35, undulate, pale pink, striped with narrow and short rosy-red marks (Spinel red 0023/1) at the margin. Petals falling after flower. Late flowering. Plant habit bushy and spreading. Originated in Kantô area, Japan. Sport: **Ôshôkun.** See: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.189; Adachi, 1960, *Camellia, Its Appreciation and Artistic...*, p.97; Andoh, 1971, *Tsubaki, Meikai no Shôkai to Saibai*, pl.128; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.360 & p.345; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.72, 221. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.372. Different readings: 'Shuchuhka', 'Shuchûhana', 'Shuchuu-ka', 'Shuchû-no-hana'. Corruptions of name: 'Shuchuka Pickate', 'Shuchakwa', 'Syutyûka', Synonyms: 'Shuchuka (1)', 'E.A. McIlhenny'. Chinese synonym 'Jiuzhonghua'.

Shuchûka. (Flower in Sake), *(C.japonica)*, *Tsubaki Hachiboku Sanboku Tsuki Meisai*, (before 1868): Small size, single, white with red petals edge and fine red speckles. Originated in Japan. Note: except for the description 'single' this is similar to the above. There is the possibility of a description error of 'single' for 'double' and being synonymous with the above.

Shuchûka. (Flower in Sake), *(C.sasanqua)*, Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu;* Wada, 1941, *Garden Treasures of Japan*, p.32: White, rosy edges, medium. Yashiroda, 1950, *American Camellia Yearbook*, p.16 as 'Shuchukwa': Medium sized single, white, finely bordered with purple touched pink, flat bloom; fast upright growth. Originated in Kantô area, Japan. Different readings: 'Shuchukwa', 'Shuchû-no-hana', 'Syucyûka'. Corruption of name: 'Shochûka'. See: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.542, p.215 & p.388; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.178. Synonym: 'Shuchuka (2)'.

Shuchuka (1). Fendig, 1953, *American Camellia Catalogue.* Synonym for 'E.A. McIlhenny', itself a synonym for **Shuchûka.**

Shuchuka (2). Fendig, 1953, *American Camellia Yearbook*. Synonym for **Shuchûka.**

Shuchûka-tsubaki. (Camellia Flower in Sake), *(C.japonica)*, Hantei, Kinta, 1827, *Sômoku Kihin Kagami;* Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.161: Leaves narrow and long, waved edges, bluish margins. Flower is good. Originated in Japan. (Believed extinct.)

Shuchukwa. Yashiroda, 1950, *American Camellia Yearbook*, p.16. Different reading for the sasanqua **Shuchûka.**

Shuchû-no-hana. Takii Nursery Catalogue, 1955. Different reading for **Shuchûka.**

Shuchura Pickate. Piet, 1978, SCCS., *The Camellia Review*, vol.40, No.1. Corruption of the Japanese name **Shuchûka.**

Shuchuu-ka. Iimure, Gorô, 1987, *International Camellia Journal*, No.19, p.47. Different reading for **Shuchûka.**

Shûfûraku. (Music of Autumn Wind), *(C.japonica)*, Yoshida, Shigekurô, (Aichi), Hôka'en, 1931, *Tsubaki Meikan;* Tateyama Nursery Camellia List, 1957: Snowy white, single, medium size, Blooms early. Tuyama, 1968, *Camellias of Japan*, pl.20, p.10, description, p.91: A bush camellia of moderate growth. Leaves broadly oblong-elliptic, rounded at the base, suddenly acute at the apex, slightly revolute at the margin. Flowers single, campanulate, pure white, in rare cases, with very small red stripes or spots. Petals roundish, delicately wrinkled all round. Mid-season flowering. Slightly fragrant. A famous camellia from the Chûbu District, Japan. Different readings: 'Shuhûraku', 'Shuhfuhraku'. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.72, p.60 & p.302; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.27; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.71, 220. Resembles **Kamo-honnami,** but smaller.

Shûgaku-in. (Palace & place name in Kyôto), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.111, p.56, description, p.120: Leaves broadly elliptic, coarsely serrate, deep green, 5.1-9.4 cm. long x 2.6-4.7 cm wide, petiole 6-8 mm long, more or less hairy. Flowers broadly cup-shaped, petals, 5-7, pink (Spinel pink 0625/2) on outer side, paler pink (Rhodomine pink 621/3) on inner with deeply coloured veins. Stamen cluster, cylindrical and stout, 3.5-4.3 cm. long, with large anthers and pale yellow filaments. Flowers early to late. Originated in Momoyama, Fushimi-ku, Kyôto City, Japan. Different reading: 'Syûgaku-in'.

Shûgetsu. (Autumn Moon), *(C.japonica)*, Mainichi Shimbun, 1971, *Tsubaki*, anemone form with 5 irregular petals, 3 large cordate, 2 small and almost hidden. The centre consists of a compact cushion of folded, red petaloids. Petioles hirsute. See colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.71, 220, as 'Shûgetsu' (Kansai). Originated in Kansai, Japan.

Shûgetsu. (Excellent Moon), *(C.japonica)*, Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.40; Seibundô Shinkôsha, 1979, *Senchinshû*, p.71, colour photo, p.220, description: Medium size, soft pink, single with the colour lighter towards the petal base, opening wide, cup-shaped, petals 6-8, somewhat fluted and crinkled. Stamens in a stout, central cylinder, anthers yellow, filaments

white. Resembles **Mado-no-tsuki.** The first character of the name is different to the cultivar above, 'Shu' = excellent instead of autumn. Originated in Chûbu, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.125 with colour photo; English translation p.85. Stated to be a mutation of 'Tsuki-no-mado' (**Mado-no-tsuki**). Discovered by Shôichi Satô in 1973, named by Chûbu Camellia Society.

Shugetsu. (Vermilion Moon), (Higo), Seibundô Shinkôsha, 1979, *Senchinshû*, p.72, colour photo, p.220: Large size, vermilion red, Higo form with 6-7 petals and a wide spreading stamen cluster, small, gold anthers and stout, pale yellow filaments. Originated in Kumamoto Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.126 with colour photo; English translation p.86. Leaves elliptic, large, recurved. Upright, vigorous growth. A mutation of **Daikanhô.** Designated as a new Higo by the Higo Camellia Society in the 1980s.

Shûhô-an. (Hermitage of Heavenly Fragrance), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.97, colour photo and description: Medium size, soft pink, cup-shaped single with 5 irregular, crinkled, concave petals and a wide stamen cylinder with ivory filaments, joined at their lower half, and yellow anthers. Blooms mid-season. Leaves flat, mid-green, broad-ovate, apices abrupt-acute, margins serrulate. Originated in the Chûbu area, Japan. A seedling of 'Engei-tarô'an' (**Tarô'an**), which it resembles but is paler in colour. Named and released by Toshiaki Kosaki in 1980.

Shûhô-karako. (Shûhô Anemone), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in the section on anenome form; Itô, Ko'emon, 1879, *Chinkashû:* Deep red, medium sized, anemone form. Watanabe, 1968, *Camellias of Japan*, pl.197, p.100, description, pp.147, 148: Cultivar of stout growth, making a thick crown. Leaves very broadly elliptic, dark green, veinlets impressed, petioles glabrous. Flowers double, red (Delft rose 020), petals oblong, rounded at the apex, slightly emarginate, manifestly plicated along the middle, and horizontally spreading. In the centre of the flower are many small petals intermingled with stamens. Late flowering. Resembles **Ô-karako.** Originated in Shaô-en Garden, the nursery of ancient Itô, Kingorô, from the Somei village of the Edo period in Japan. Different reading: 'Shuhhoh-karako', 'Shûbo-karako'. For colour photos & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl. 127 & p.218; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.368; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.72, 221; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.358. See: JCS., 1969, *Tsubaki*, No.7, p.36.

Shuhhoh-karako. Andoh, 1971, *Tsubaki*, *Meika no Shôkai* to *Saibai*, p.211. Different reading for **Shûhô-karako.**

Shuifurong. (Watery Hibiscus), (*C.reticulata*), Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.12: Spinel Pink. Mid-season, Tengchong, China. Feng et al., 1986, *Yunnan Camellias of China*, p.49 colour photo and description: Leaves oblong, apices short acuminate, bases cuneate, margins sparsely and shallowly serrate, dark green above, light green and bright beneath. 7.5-11 cm long x 3.5-6 cm wide. Flowers pink (RHS.CC.55B), diameter about 11 cm. Petals more than 15, outer whorls flat, inner slightly curved and erect. Stamens numerous, irregularly arranged. Pistils mostly rudimentary. Flowers mid-season. The cultivar was selected from an open pollinated plant of *C.reticulata* f. *simplex* from Tengchong, Yunnan,

China. Different reading: 'Shui-fu-jung'. Synonym: 'Pink Hibiscus'. See colour photo in Feng et al, 1981, *Yunnan Chahua*, p.59.

Shuihonglian. (Sleeping Red Lotus), (*C.reticulata*), Gao & Zhuang, 1989, 1989, *The Camellia in China*, p.60, No.401, colour photo No.258, as 'Muhonglian': Leaves mid-green, elliptic; flower medium to large size, semi-double to incomplete double, 11-12 cm across with 26-36 petals, with 2-3 rows of large, rounded, outer petals and the centre a mixture of small, semi-erect petals and stamens. Colour cherry red. Blooms mid~season. Originated in Tengchong, Yunnan Province, China.

Shuihong Wubao. (Pink Jewel), *(C.japonica),* Liu, 1959, *Ching Kuo Chu Ming Tichi Chung Hua Hui.* No description. Originated in China. Different reading: 'Shui Hung Wu Pao'.

Shui Hung Wu Pao. Liu, 1959, *Chung Kuo Chu Ming Tichi Chung Hua Hui.* Different reading for **Shuihong Wubao.**

Shuijingbai. (White Crystal), *(C.japonica),* Wang & Yü, 1981, *Shancha Hua:* White, formal double. Originated in China.

Shuijingqiu. (Crystal Ball), *(C.japonica),* Fang, 1930, *Diannan Chahua Xiaozhi:* The petals are round and drooping and the colour is like crystal. Originated in China.

Shuixiangzi. (Narcissus Child), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China*, p.33, No.142: Large size, white, double. Blooms mid-season. Originated in China.

Shujakumon. Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.11, A-521. Different reading for **Suzakumon.**

Shujing Huanghaou. (Crystal Queen), *(C.hybrid).* Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.368 with colour photo; Originated by Xinzhu Camellia Society, Taiwan. Flower light pink with some wide red stripes, formal double, medium size.

Shujing Tianshi. (Crystal Angel), *(C.hybrid).* Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.368 with colour photo; Originated by Xinzhu Camellia Society, Taiwan. Flower light pink, formal double, medium size.

Shuko-no-tsuki. (Scarlet Moonlight), (Higo), *Higo Rokka*, 1989, p.32: Large size, 13-15 cm across with 6-7 petals with red ground and cloudy white spots. Sport of **Shugetsu.** Originated in Kumamoto Prefecture, Japan. Designated as a new Higo by the Higo Camellia Society in 1984.

Shun-en. (Spring Garden). *(C.japonica),* Seibu Maizuru Institute of Botany, 1991-1992, *Seibu no Tsubaki,* No.233: Bright red, anemone form. Medium to large size. Early flowering. Originated in Chûba District, Japan.

Shungaku. (Mountain Springtime), *(C.japonica),* Satô, 1969, Chûbu Tsubaki Kyôkai, ed., *Tsubaki Meikan:* Snow white, single, medium to large size, 5 round, inward curved petals. Higo-like

ring of stamens; late flowering. Originated in Chûbu area, Japan. Different reading: 'Syun-gaku'. Named and released by Minoru Satô in 1967.

Shungetsu. Seibundô Shinkôsha, 1979, *Senchinshû*, p.215; Name changed to **Kotohime** in 1975.

Shungetsu-an. (Hermitage of Spring Moon). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.128 with colour photo; English translation p.87. Small to medium size, pink, tubular single. Flowers mid-season to late. Leaves narrowly elliptic, small, veins protruding. Upright, vigorous growth. A cross between **Hôgetsu** and **Shiratama**. Named and released by Minoru Satô in 1963. From Achi Prefecture.

Shungyo-kô. Chûgai Nursery Catalogue, 1935-1936. Different reading for **Shunshokô.**

Shungyoko-nishiki. Fendig, 1953, *American Camellia Catalogue.* Different reading for 'Shunshokô-nishiki' as synonym for **Fuiri-shunshokô.**

Shuni-e. (Resembling a Painting in Vermilion), *(C.japonica).* Himuro, 1982, *Murasuzume:* Coral red, semi-double, blooms opening flat, large. Originated in Kanagawa Prefecture, Japan. A seedling of **Monjusu.**

Shunkô. (Spring Radiance), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.73, colour photo, p.221, description: Small, soft orange pink, campanulate single of 5 irregular, emarginate petals. Leaves deep green, long elliptic, apex acuminate, margins shallowly crenate, slightly waved. Plant habit slow growing. Originated in Kagawa Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.128 with colour photo; English translation p.87. A chance seedling of a wild japonica in Mure Town. Named and released by Saneichi Ogawa in 1974. Similar to **Mure-akebono.**

Shunkôbeni. (Red Spring Light), *(C.japonica)*, Minagawa, Jan. 1956, *Engei Shin Chishiki:* Double, rose colour, medium to large flowers. Good shaped bush with many flowers. Lasts well as a cut flower which has the appearance of a rose. Originated in Japan.

Shunkôji. (Shunkô Temple), *(C.japonica)*, Inazawa Nursery Co. Ltd. Wholesale Catalogue, 1986-1987, No. 100 as 'Syunkohji': Light pink with red variegation or red fading to white at the tips of each petals. Small, single, cupped form. Early blooming. Originated in Japan.

Shunmei. (Place Name), *(C.vernalis).* Nagoya Camellia Society, 1979, *Tsubaki*, No.12: Discovered by Hiroshige, Hayakawa of Shunmei, Ichi-no-miya, Aichi Prefecture. A small single with *C.japonica*-like flowers of light lavender pink. Young branches hairy, ovaries pubescent. Small, round, slightly wavy leaves. Upright growing. Mid-season blooming. Seedlings: **In-no-shô** and **Kira-no-shô.**

Shunpû. (Spring Breeze), *(C.saluenensis x C.lutchuensis)*, Funaki-en Catalogue, 1986, No.106, p.6; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.86, colour photo & description: Small size, faint pink, cup-shaped single with 5 petals, 3 broad, rounded, concave and 2 smaller outer petals, all overlapping, with a central stamen column, having white filaments, joined for their lower half and yellow anthers. Rather strong fragrance. Blooms mid-season to late. Leaves dull, dark green, broad-ovate, margins crennate. Plant is compact. Originated in Niigata Prefecture, Japan. Resembles **Minato-no-haru.**

Shunrai. (Spring Thunder). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.129 with colour photo; English translation p.87. Small, white, long tubular single, cylindrical stamen column. Leaves narrowly elliptic, small, somewhat waved. Upright growth, dense branches, compact. A chance seedling of unknown parentage. Named and released by Shinichi Noguchi in 1992. From Tokyo.

Shunrai. (Spring Thunder). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.329 with black and white photo; English translation p.232. Medium size, peony form, large and small stripes

of deep red on white to pale pink ground. Flowers mid-season. Leaves elliptic, medium size, somewhat plicate. Upright growth. Selected from cultivars grown by a private family in Matsu'e City. Named and released by San-in Camellian Club in 1973. From Shimane Prefecture.

Shunsetsu. (Spring Snow), *(C.japonica)*, Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.64 as 'Syun-setsu'. No description. Originated in Japan.

Shunsetsu. (Spring Snow), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.245, colour photo & description: Medium size, dark red with pure white blotched, cup-shaped single of 5 regular, rounded petals and a pinched in central stamen column with yellow anthers and light yellow filaments, joined for their lower half. Mid-season blooming. Leaves deep, glossy green, broad-ovate, margins crennate. Originated in Hirado City, Nagasaki Prefecture, Japan. Discovered by Tsukasa Isomoto in 1980, named by Kichinosuke Aburatani.

Shunshô. (Spring Evening), *(C.japonica)*, Shirai-Bunko, 1789. *Shoshiki Hanagatachô:* Medium size, semi-double, white with red stripes, sake-cup shape. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.80. Different reading: 'Haruyoi'; Watanabe, 1970, Tsubaki Engei Kurabu, *Tsubaki Tokushû*, No.10, p.122. Originated in Japan. (Believed extinct.)

Shunshô (Spring Evening), *(C.japonica)*, Mainichi Shinbunsha, 1971, *Tsubaki*, p.140, colour photo: Deep pink, semi-double to rose form double, opening cup-shaped; petals in 3 rows, veined deeper pink, centre a few irregular stamens mixed with 2-3 small, erect petals. Leaves mid-green, lanceolate-elliptic, apex acute, Margins shallowly serrulate. Originated in Chûbu area, Japan. See colour photo: Seibundô Shinkôsha, 1980 *Senchinshû*, p.73. A sport of **Chûbu-tamatebako.** Discovered by Haruichi Sakuragi in 1968. Different reading: 'Haru-no-yoi', Satô, 1975, *Chûbu no Tsubaki*, p.76.

Shunshokka. (Flower of Spring Dawn), *(C.japonica)*, Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.64; ibid, 1970, No.10, p.163, as 'Shunshokkwa': No description. Originated in Japan.

Shunshokkô. Seibundô Shinkôsha, 1979, *Senchinshû*, p.73 as 'Shun-shokkô'. Different reading for **Shunshokô.**

Shunshokkwa. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, p.64. Different reading for **Shunshokka.**

Shunshokô (Red Dawn Light in Spring), *(C.japonica)*, Minagawa, 1932, *Chinkashû;* Ishii, Yûgi, 1932, *Genshoku Engei Shokubutsu Zufu; :* A soft, rose-pink, with a yellowish cast at the centre, semidouble, opening cup-shaped; petals rounded, emarginate in 3-4 rows. Small, irregular stamen cluster with large, golden anthers and white filaments. Leaves dark green, apex blunt acute, margins strongly serrate. Flowers mid-season. Originated in Angyô, Saitama Prefecture, Japan, by Minagawa, Iza'emon from a seedling in 1907. For colour photos & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.99, pp.168, 473; Tuyama, 1968, *Camellias of Japan*, pl.101, p.51; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.208 & p.321; Satô,1975, *Chûbu no Tsubaki*, p.89 as 'Shunsyokô'. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.307. Seibundô Shinkôsha, 1979 *Senchinshû*, p.73, description, p.221 as 'Shun-shokkô'. Different readings: 'Shun-shokkô', 'Syun-shokkô', 'Shun-shokow', 'Shunshokoh', 'Shunsyokô', 'Shungyokô', 'Syunsyokkô'. Corruption of name: 'Shuin-Shio-Ko'. Synonym: 'Angels Blush'. Sport: **Fuiri-shunshokô.**

Shunshokoh. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.211. Different reading for **Shunshokô.**

Shunshokô-nishiki. Synonym for **Fuiri-shunshokô.**

Shunshokô-shibori. (Dawn Light in Spring Variegated), Izu Ohshima, 1980, Hawaii Botanic Gardens, *List of Camellias*, as 'Shunshokôshibori. Synonym for **Fuiri-shunshokô.**

Shunshokow. Chûgai Nursery Catalogue, 1938-1939, p.19 as 'Shunshokow': Different reading for **Shunshokô.**

Shunshunka. (Spring Flowers), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.73, colour photo, p.221, description: Small, deep pink, campanulate single, 5 rounded petals, slightly crinkled on margin, surrounding a robust, central stamen column. Leaves slightly waved. Originated in Shimane Prefecture, Japan.

Shunsyokô. Satô,1975, *Chûbu no Tsubaki*, p.89. Different reading for **Shunshokô.**

Shuran. (Drunken Frenzy), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large, red, double, with long, pointed petals like a lotus flower. A few white stars. Originated in Japan. Different reading: 'Syuran'. See: JCS., 1969, *Tsubaki*, No.5, p.29. (Believed extinct.)

Shûran. (Excellent Orchid). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.126 with colour photo; English translation p.86. Small, pink at the petal margin, graduating to white at the centre, sake cup-shaped single, cylindrical stamen column. Flowers mid-season. Leaves narrowly elliptic, medium size, recurved, plicate. Upright, vigorous growth. A chance seedling of **Peter Pan.** Named and released by Tadao Yamaguchi in 1988. From Ishikawa Prefecture.

Shurei. (Shurei Gate to Shuri Castle). *(C.japonica),* Hiroshi Matsuda, Okinawa, 1994, JCS, *Tsubaki*, No.33, p.35: Small size, dark red, cup-shaped single with bright yellow anthers. Blooms early. Leaves are oblong-elliptic. Plant growth is upright and sturdy. Chance seedling of **Uminaibi.** Illustration on p.33.

Shûrei. (Graceful). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.126 with colour photo; English translation p.86. Medium size, vermilion, tubular to bowl-shaped single, cylindrical stamen column. Flowers early to mid-season. Leaves narrowly elliptic, medium size. Upright, vigorous growth. A chance seedling of a cultivar. Originated and released by Mitsoroku Makino in the 1980s. From Toyama Prefecture.

Shûrei. (Graceful). (Higo). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.329. English translation p.232. Large, pale pink, flat single, apricot anthers, filaments white. Flowers mid-season. Leaves broadly elliptic, medium size. Spreading growth. A mutation of **Chôjuraku.** Designated as a Higo by the Higo Camellia Society in 1984. From Kumamoto Prefecture.

Shûren. (Beautiful Screen), (Higo), ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.22. No description. *Higo Rokka*, 1989, p.29: Medium size, 10 cm across, pale rose-pink with 5 petals. Originated in Kumamoto Prefecture, Japan.

Shuri-jô. (Shuri Castle). *(C.japonica),* Hiroshi Matsuda, Okinawa, 1994, JCS, *Tsubaki*, No.33, p.35: Bright red, small size, campanulate to cup-shaped, single. Early blooming. Leaves medium size, elliptic. Bush is upright and sturdy. Chance seedling of **Uminaibi**. Illustration on p.34.

Shuri-otome. ('Otome' of Shuri). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.132 with colour photo; Medium size, vermilion formal double, a few stamens. Flowers mid-season. Leaves elliptic, medium size. Upright, vigorous growth. History unknown. Similar to **Kumekurenai** and 'Kume-naka'. Named and released by Sanekazu Tsuwa in 2008.

Shûsai. (Autumn Colour), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.212, colour photo and description: Medium size, deep burning red, open, cup-shaped single with 5 irregular, overlapping petals and a central, pinched, stamen cylinder with reddish filaments, joined

for their lower half, and yellow anthers. Blooms early to late. Leaves dark green, elliptic, apices tapering acuminate, margins serrulate. Originated by the late Kamo, Zenji, Taka'oka City, in Toyama Prefecture, Japan.

Shushaka. (Meaning uncertain), *(C.japonica)*, Mizuno, 1681, *Kadan Kômoku:* White, spotted red. Double. Originated in Japan. (Believed extinct.) Different reading: 'Syusyaka'. See: JCS., 1965, *Tsubaki*, No.5, p.29.

Shûsô. (Autumn Grass), *C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.293, colour photo & description: Large size, white, lotus form double to incomplete double with 2-3 rows of large overlapping, emarginate, outer petals and a bud centre, opening to show small, erect petals, petaloids and stamens intermixed. Leaves dark green, ovate, apices acuminate, margins serrulate. Originated in the Niigata Prefecture, Japan. Seedling of **Daijôkan.** Named by Jirô Kamiyama in 1978.

Shûsô. (Autumn Frost) (*C.hybrid*) from Ehime Pref. *Tsubaki* No.38, Japan Camellia Society in 1999. Seed parent *C.japonica* **Seiôbo**, pollen parent *C.granthamiana*. White, slight pink shadings occasionally seen at limited areas, single, flat, early blooming. Leaves resembling but smaller than those of *C.granthamiana*. Tree upright growth, vigorous. Originated by Hiroyasu Watanabe in 1996.

Shusu. Vanderbilt, 1941, *Camellia Research*, II, p.7. Synonym for **Shusugasane.**

Shusugasane. (Double Satin), *(C.japonica)*, Iwasaki, 1828, *Honzô Zufu;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* See: JCS., 1981, *Tsubaki*, No.20, p.16; ibid, 1969, No.7, p.31; 1982, No.21, p.108. Itô, Ko'emon, 1879, *Chinkashû:* Cardinal red, large, rose form double. Tuyama, 1968, *Camellias of Japan*, pl.199, p.101, description, p.148: Leaves elliptic to narrow-elliptic, flat on upper surface, venation a little impressed, petiole glabrous. Flowers double, dark rosy (Claret red 021/1), petals rather small, convex on upper surface, wavy, incised at the apex. Stamen cluster, little irregular. Late flowering. Originated in Kantô area, Japan. A solid red form of **Monjusu.** Different reading: 'Shusukasane'. Synonyms: 'Monjusu-aka', 'Monjusu Red', 'Carmen', 'Otome Red', 'Hijusu', 'Red Donckelarii California', 'California Donckelarii Red', 'Shusu', 'Shuzukayama'. For colour illustrations & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.11 & p.26; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.163; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.318. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.72, 221. Thought to be the same as **Suzukayama.**

Shusuguruma. (Satin Carriage), *(C.japonica)*, Tateyama Nursery Catalogue, 1957: Large, red, double. Originated in Japan.

Shusukasane. Different reading for **Shusugasane.**

Shutendohji. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.211. Different reading for **Shutendôji.**

Shutendôji. (Tumbling Drunken Boy), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.521: Open, medium to large size, peony form, double red; petals with irregular margins, bordered pink and blotched white, in 4-5 rows, small central stamen cluster. Originated in Japan. (Believed extinct.) Note: There are 4 cultivars whose name characters transliterate as 'Shutendôji' and although some of the characters are different they all refer to the same old Japanese fable of the ogre 'Shutendôji'. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.139.

Shutendôji. (Sake Heaven Drunken Boy), *(C.japonica), Chinka Zufu* (before 1700), Watanabe, 1969, pl.42: Red, single with 5 petals, widely open, and a cushion of green stamens, interspersed with a few red and white petaloids. Originated in Japan. See: Kyôto Engei, Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.92. (Believed extinct.)

Shutendôji. (Sake Drinking Boy), *(C.japonica)*. Itô, Ihei, 1695, *Kadan Chikinshô*, #114; Yashiro, 1841, *Kokon Yôrankô*, vol.306; Hamamatsu, 1825, *Setsuyô Kikan:* Double, large and quite red flower. Originated in Japan. (Believed extinct.)

Shutendôji. (Sake Drinking Boy), *(C.japonica)*, Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.203, p.65, description, p.211 as 'Shutendohji': Very large size, up to 14 cm across, semidouble, 13-15 petals, oblong, channelled and notched, spaced apart. Centre consists of a small group of stamens and long, slender petaloids, red with some white streaking. Flower shapes are of different types. For further colour photos see: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.418, p.168. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.319. Seibundô Shinkôsha, 1979 *Senchinshû*, pp.72, 221. Originated by Nyohô-zenji, Ôzu City, Ehime Prefecture, Japan. A plant at Nyôhoji Temple is designated as a protected plant of Ehime Prefecture. Different reading: 'Shutendohji'. Chinese synonym 'Jiutian Tongzi'.

Shûtô. (Autumn Peach). *(C.rusticana), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.45 with colour photo; Small, palest pink single, sake-cup shaped, round petals, columnar stamens, Flowers early to mid-season. Leaves ovate, medium size. Bushy, vigorous growth. A seedling of **Momosuzume**, earlier flowering than the parent. Named by Yoshiharu Yano, Yamaguchi Pref., Japan.

Shuûrei. (Graceful). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.126 with colour photo; English translation p.86. Large, pale pink, semi-double, slender petals, cylindrical to split stamens. Flowers mid-season. Leaves narrowly elliptic, medium size, somewhat waved. Upright, vigorous growth. A cultivar growing with a private family, believed to be a seedling of 'Sodekakushi' (**Gauntlettii**). Named and released by Tetsushi Mure in 1997. From Kagawa Prefecture.

Shûyô. (Autumn Sunshine), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.220: Very light peach pink to white ground with large and small vertical marks of red. Single, bowl-shaped blossoms with round spread stamens. Medium to large size. Early blooming. Leaves medium sized, ovate, blunt acute apex, thick, dark green, petiole hairy. Plant habit upright and vigorous. Similar to **Kantô-hanamiguruma** from the Kantô district but a different flowering period. Originated in Ishikawa Prefecture, Japan.

Shûzan. (Place Name in Kyôto Prefecture), *(C.japonica),* Chûgai Nursery Catalogue, 1936-1937, p.25: Large, single flower, red with white variegation, incurved petals. Originated in Japan. Corruption of name: 'Shuzon'.

Shûzan. (Place Name in Kyôto), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.71, colour photo, p.220: Small, campanulate single, deep crimson, with 5-6 rounded, overlapping petals and compact, regular shape; central stamen column with yellow anthers and pink filaments. Leaves medium to dark green, ovate, apex acuminate, margins serrulate. Blooms mid-season. See colour photo, p.191, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated by the side of the Shûzan thoroughfare, Kyôto Prefecture, Japan. Named and released by Motoharu Miyazawa.

Shuzon. Vanderbilt, 1940, *Camellia Research*, p.7. Corruption of the Japanese name **Shûzan.**

Siam. William's Nursery Catalogue, 1949. Synonym for **Comtesse du Hainaut.**

Sibolai. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.362, p.78. Chinese synonym for Australian *C.japonica* **Michael Spry.**

Siboriseiobo. Kurume Shibu colour poster illustration, 1997: Corruption of **Shibori-seiôbo.** See ICS Register, p.1677.

Siccardi. *(C.japonica),* Fratelli Rovelli Catalogue, 1852, 1851: Imbricated, dark blood red with wide white border and even marbling. Leguay, Jan. 1853, *Revue Horticole*, p.31 as 'Siccardii':

Very new in 1853. Franchetti, 1855, *Collezione di Camelie*, p.57: Deep blood red with broad, uniform, marble-white stripes. Superb imbrication. Originated in Italy by Rovelli Bros.

Sichifukuhin. Hazlewood Nursery Catalogue, 1964, p.57. Corruption of the Japanese name **Shichifukujin.**

Sichouxing. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.410. Chinese synonym for the Germany *C.japonica* **Seidenstern.**

Sichuan Baozhu. *(C.japonica), Camellias,* Y.C. Shen, 2009, p.189 with colour photo; . Red, full peony form. Leaves narrow elliptic. A gift to the Shen family in China in the 1940s. Now may be extinct.

Sichuanmanao. *(C.japonica), Chinese Camellia Culture,* 2003, p.214 with colour photo; A virus variegated variet of **Manao.**

Sidney Woodroffe. SCCS., 1984, *Camellia Nomenclature*, p.126. Orthographic error for **Sydney Woodroffe.**

Sidonia. *(C.japonica),* Verschaffelt, 1851, *Nouvelle Iconographie*, Book XI, pl.II: Obtained from seed in Italy, this Camellia belongs to the class of perfections, with pure white blossoms, broken by soft pink maculae. The petals are of two forms, those of the first rows are rounded, bilobate, convex, outspread; the following and central ones are rounded, apiculate, upright, and decrease gradually in size to the heart, which is depressed.

Sidonnie Megan. *(C.sasanqua).* C. Aust, *Camellia News,* No.182, Autumn 2010, p.7 with colour photo; Regn No.602-N.; Masses of small, pink semi-double flowers. Vigorous, upright growth. Originated by Bill Parker, Camellias-R-Us, Glenorie, NSW, Australia.

Silver Plume. *(C.japonica)*, SCCS., 1958, *Camellia Nomenclature*, p.79: Soft peach pink. Medium to large, loose, peony form. Upright growth. Blooms mid-season to late. Originated in USA by Harvey Short, Ramona, California.

Silver Powder. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.212: Rose-pink striped a soft pink. Originated in USA.

Silver Ruffles. *(C.japonica)*, Nuccio's Nurseries Catalogue, 1965: White. Large to very large, loose, semi-double with ruffled petals, 13-15 cm across x 7.5 cm deep. Vigorous, slightly open, upright growth. Mid-season blooming. Originated by Nuccio's Nurseries, Altadena, Califor-

nia, USA. See colour pl. facing p.210, *American Camellia Yearbook*, 1966 and front cover, SCCS., 1966, *The Camellia Review*, vol.27, No.5.

Silver Screen. *(C.sasanqua). New Zealand Camellia Bulletin*, March 2003, Issue No.144, vol.XXIII, No.2, p.13, Reg. No.443. Registered by N. Haydon, Takanini, New Zealand. A chance *C.sasanqua* seedling which first flowered in 1997. The flower is 10 cm diameter x 4.5 cm deep, a semi-double with 10-11 petals that are waved and undulate, slightly obcordate in shape. Colour is almost pure white with a hint of cream colouring at the base, and is lightly scented. Flower is very similar to **Setsugekka,** but plant growth is denser and more compact and slower growing, making it a good choice for low hedges. The dark green leaves are 5.5 cm long x 2.5 cm wide, and flowering is early season.

Silver Shadow. *(C.reticulata* hyb.), ACS., 1988, *The Camellia Journal*, vol.43, No.1, p.6, Reg. No.2071: Very large, silvery pink and white moired, rose form double *C.reticulata* hybrid, chance seedling of **Carl Tourje.** Blooms mid-season. Originated by Houghton Hall, San Anselmo, California, USA. *American Camellia Yearbook*, 1987, p.85 with colour photo between pp.60-61: The 13 year old seedling first bloomed 1978. Average flower size, 13 cm across x 6 cm deep with 35 petals, yellow anthers and white filaments. Petals are in 4-5 tiers, imbricated and incurved, two outer tiers pink moired white, other petal rows continue with lighter pink edges and moired all the way to the centre. Plant growth is upright, open and medium with dark green leaves, 12.5 cm long x 4 cm wide. See colour photo, front cover, SCCS., Sept.-Oct.1990, *The Camellia Review*, vol.52, No. 1.

Silver Star. *(C.japonica)*, SCCS., 1976, *Camellia Nomenclature*, p.141: Blush pink. Medium anemone to loose, peony form. Vigorous, spreading growth. Originated in USA by Novick.

Silver Tip. Youtz, 1949, *American Camellia Yearbook.* p.188. Synonym for **Madame Hovey.**

Silver Tower. *(C.japonica)*, Nuccio's Nurseries Catalogue, 1988-1989, p.14, #8069: Medium semi-double, white, narrow petals, clean and simple. Vigorous, upright, columnar growth. Mid-season blooming. ACS., May,1989, *The Camellia Journal*, vol.44, No.2, p.9, Reg. No.2128. Originated by Nuccio's Nurseries, Altadena, California, USA. *American Camellia Yearbook*, 1989, p.127: The 14 year old seedling first bloomed 1980. Plant growth is upright, columnar and rapid in rate.

Silver Triumph. *(C.japonica)*, Nuccio's Nurseries Catalogue, 1973-1974; *American Camellia Yearbook*, 1979, p.111, 112, Reg. No.1520: A very large white with golden stamens, semi-double, *C.japonica* chance seedling that blooms early to mid-season. Originated by Nuccio's Nurseries, Altadena, California, USA. Nuccio's #6384. The 15 year old seedling first bloomed 1963. Average flower size 13cm across. Plant growth is upright and rapid with dark green leaves, 8 cm x 5 cm. See colour photos: Macoboy, 1981, *The Colour Dictionary of Camellias*, p.117 and back cover ACRS, 1981, *Camellia News*, No.79. Chinese synonym: 'Yinkaixuan'.

Silver Waves. *(C.japonica)*, Goertz, 1970, *American Camellia Yearbook*, p.25: A *C.japonica* seedling, 13 cm across, irregular semi-double, white bloom. Flowers midseason on a vigorous, upright plant. Originated at Nuccio's Nurseries, Altadena, California, USA. Nuccio's #6503. See colour photo, p.117, Macoboy, 1981, *The Colour Dictionary of Camellias*. Chinese synonym: 'Yinlangtao'.

Silverado. *(C.japonica)*, SCCS, 1995, Sept-Oct, *The Camellia Review*, vol.57, No.1, p.22, Nuccio's Advert. No description.. Originated in USA by Nuccios. Nuccio's Nurseries Catalogue, 2007, p.34. Medium size single, white with faint rose border. Unusual foliage colour, frosty light grey-green small leaves. New growth reddish-brown. Upright, fairly slow growth.

Silvercrest. SCCS., 1954, *The Camellia. Its Culture and Nomenclature.* Orthographic variant for **Silver Crest.**

Simeon. *(C.japonica),* Fendig, 1950, *American Camellia Catalogue;* Doty et al., 1950, *American Camellia Yearbook*, pp.250, 253; ACS., 1950 *Quarterly,* vol.5, No. 1, Reg. No.35: A seedling resulting from a cross of **Reverend John Bennett** x **Hikarugenji** made by T.S. Clower, Gulfport, Mississippi, USA in 1937. The parent listed as 'Reverend John Bennett' was not the true variety of that name, but a misnomer (for **Alba Superba (MG))** distributed in the trade at that time. The seedling first flowered 1944. Plant growth is rapid, upright and compact but some branches are pendulous while others are upright. Leaves: some are moderately wrinkled while others are smooth. Flower buds light green, long, pointed. Flowers semi-double, 15 cm across. colour a delicate rose. Blooms mid-season. See p.305, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I. Sport: **Simeon Variegated.** Chinese synonym 'Ximeng'.

Simeon Variegated. *(C.japonica),* Tammia Nursery Catalogue, 1958 as 'Simeon Var.': A virus variegated form of **Simeon** - Rose blotched white. Originated in USA.

Simetrica. Burnier & Grilli Catalogue, 1846-1847. Orthographic variant for **Symetrica.**

Simianjin. (Beautiful from Four Sides), *(C.japonica),* Liu, 1959, *Chung Kuochu Ming Tichi Chung Hua Hui:* Flower large red, anemone type, resembling an hibiscus. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.62, colour photo, (pp.132, 133): One outer row of large, red, guard petals (7-8) with a centre cushion of small, twisted petaloids with a few stamens intermixed. Leaves, bright mid-green, broad-ovate, apex tapering acute, margins serrate.

Originated in China. Synonyms: ‘Shizixiao’, ‘Shijin Loutai’, ‘Simianjing’. Different reading: ‘Szu Mien Chin’.

Simianjing. (Four Sided Mirror) Wang & Yü, 1981, *Shancha Hua* Note: Wang & Yü use the final character ‘jing’= mirror while Liu has used the character for ‘jin’= view.

Simmetrica. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare.* Orthographic variant for **Symetrica.**

Simmons Gipsy. *(C.japonica), New Zealand Camellia Bulletin,* Mar.1991, vol.XVII, No.1, p.47, Reg. No.274: A chance seedling, purchased at a plant stall. First flowered 1976, and in 1991 is 16 years old. The semi-double flower is rose-pink, 7.5 cm across x 4.5 cm deep with about 22 petals, 4 petaloids and cream anthers. Plant growth is medium, upright with dark green leaves 7 cm long x 4.5 cm wide, RHS.CC. 54B colour.

Simmons Magic. *(C.japonica), New Zealand Camellia Bulletin,* March 1999, Issue No.132, vol.XXI, No.1, p.18, Reg. No.415. A chance seedling of **Bob’s Tinsie,** pollen parent unknown, which first flowered 1995. The handsome ‘Tinsie’ (**Bokuhan**) type flower is a medium size anemone form, 8.5 cm diameter x 4 cm deep, made up of about 12 petals, 100 petaloids and no stamens. The outer ring of petals is well separated from the tidy central mass of petaloids, which are large and even in size. The petals have a heavy texture and their colour is a solid, vivid red (RHS.CC.46C). Plant is upright, fast growing and of average density, with dark green leaves 8.5 cm long x 4.5 cm wide. Flowers mid-season to late.

Simon Bolitho. *(C.x williamsii).* Trewidden Estate Nursery Retail Price List, 1995, p.8: A seedling from Trengwainton, Cornwall, UK. Glossy foliage and flowers of good deep pink. Single. Free flowering. *Camellias, The Gardener's Encyclopedia,* 2007, Jennifer Trehane, p.296 with colour photo.

Simon Bolivar. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.145 with colour photo; Medium size, anemone form, red (RHS.CC.50A). A seedling of ‘Rubra Simplex’ (**Rubra**) x **Moshio**, first flowered in 1989. Originated by Dott. Guido Cattolica, Livorno, Italy.

Simons Lucas. *(C.japonica),* Fendig, 1951, *American Camellia Catalogue:* Medium to large, deep rose-red, anemone form, 9-11 cm. across with 22 petals and about 69 petaloids. Stamens are hidden among the petals; filaments and anthers yellow. Buds are oval and green to brown. Leaves are medium dark green, 8.2 cm x 5 cm. Stiff, glossy acuminate apex bending downwards, shallow serrations. Plant habit is upright, rapid in rate, producing several types of flower formation. Originated in the garden of Dr Simons Lucas. Florence, South Carolina, USA. Reg. No. 70 with the ACS.

Simpatica. (*C.reticulata*), ACRS., 1980, *Camellia News*, No.74, p.25, Reg. No.259: Originated by T.J. Savige, Wirlinga, N.S.W., Australia. A chance seedling that first flowered 1976. The upright, open plant has 10 cm x 6 cm, mid-green, elliptic leaves, apex apiculate, base obtuse, medium serrations. The 12-14 cm across, formal double blooms are deep rose (RHS.CC.54A fading to 54B). Blooms mid-season to late. Chinese synonym: ‘Rongqia’.

Simple Grandiflora. Jacob-Makoy, 1828, Catalogue, p.5. Synonym for **Aitonia.**

Simple Rubra. Jacob-Makoy, 1828, Catalogue, p.5. Synonym for **Rubra.**

Simplicifolia. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* No description. Originated in Europe. (Believed extinct.)

Simplicity. *(C.japonica),* Hearn Nursery Catalogue, 1940: For those who like a single flower, this variety gives an abundance of medium sized, red flowers with fluted petals and golden stamens. Bushy, medium growth. Originated by Hearn, USA.

Simplicity (Australia). *(C.japonica),* Camellia Grove Nursery Catalogue, 1944, invalidly as 'Simplicity': White, medium large, magnolia-like semi-double with waved petals, 8-10 outer and 4-5 smaller ones amongst golden stamens. Originated in the Royal Botanic Gardens, Melbourne, probably as a stock survival. It was first designated **Simplicity (Australia)** in the SCCS, 1954, *The Camellia. Its Culture and Nomenclature,* p.80 to distinguish it from Hearn's **Simplicity.** Synonym: 'Simplicity' (Waterhouse).

Simplicity (Waterhouse). Fendig, 1953, *American Camellia Catalogue* Synonym for **Simplicity (Australia).**

Simply Red. *(C.sasanqua).* C. Aust, *Camellia News,* No.182, Autumn 2010, p.8 with colour photo; Regn No.607-N.; Seedling of **Jane Morgan.** Informal double, bright pink to deep rosy red, 5 cm diameter. Leaves 6 cm x 2.5 cm. Fast, pendulous growth. Flowers mid to late season. Originator Roger Nancarrow, Orange, NSW, Australia, and released by Camellia Grove Nursery, Glenorie, NSW.

Simpolai. Chinese synonym for the Australian *C.japonica*, **Michael Spry.**

Simpson Pink. *(C.japonica),* Acorn Ridge Farm Catalogue (before 1944). No description. Originated in USA.

Simsii. *(C.japonica),* Jacob Makoy Nursery Catalogue, 1829; Courtois, 1833, *Magazin d'Horticulture*, 1[pt.D]:317. No description. *Floricultural Cabinet,* 1838: Medium sized, dark red, single. Originated in England. Orthographic error: 'Semsii'.

Simsii Plena. *(C.japonica),* Berlèse, 1840, *Monographie,* ed.2, p.174, 175: Leaves small, similar to those of **Derbyana,** buds large, ellongated, with greenish scales; the flower about 9 cm across, full, deep, clear, cherry-red; exterior petals very large, not numerous but well imbricated, while those of the centre are quite small, elongated and numerous, forming a central vase shape. Originated in England.

Sincerely. *(C.japonica), American Camellia Yearbook,* 1966, p.99, Reg. No.862: A 13 year old chance seedling that first bloomed 1959; originated by John F. Marscher, Beaufort, South Carolina, USA. Plant growth is upright with light green leaves, 10 cm long x 4.5 cm wide. The anemone form flower measures 12.5 cm across x 7.5 cm deep with 10 petals and about 102

petaloids. Colour is strong, purplish red (10 PR 4/12) with yellow anthers and red filaments. Numerous petaloids have bell-shaped ends. Blooms mid-season.

Sinensis. Linnaeus, 1753. The common tea plant *Camellia sinensis* var *sinensis.* White, small, single flower.

Sinensis Benibana Cha. *(C.sinensis),* Nuccio's Nurseries Catalogue, 1982: Small nodding pink single, flowers, 1.5-2 cm across. Dark purplish, new growth. Leaf and flower form typical of the species *C.sinensis* var *sinensis.* This cultivar has been botanically designated *Camellia sinensis* var. *sinensis* f. *rosea* (Makino) Kitamura (1950).

Sinensis Black Sinensis. *(C.sinensis).* SCCS *Camellia Nomenclature* 2009, p.195. Very dark maroonish green foliage with small maroonish pink flowers. Rounded, compact growth. Flowers early to mid-season.

Sinensis 89/3. *(C.sinensis).* SCCS *Camellia Nomenclature* 2009, p.195. Small white single, elongated flower stem. Soft green reticulated leaves. Medium, upright growth. Flowers early to mid-season.

Sinensis Madison Tea. *(C.sinensis).* SCCS *Camellia Nomenclature* 2009, p.195; Light pink, miniature single. Vigorous, compact growth. Medium size, crinkled leaf. Floweres early. Originated in 2008 by CamelliaShop, Savannah, Ga., USA.

Sinensis Moundy. *(C.sinensis).* A white, single seedling with a more mounding, compact growth than the usual *C.sinensis.* Originated by Nuccio's Nurseries, Altadena, California, USA.

Sinensis Old Savannah Tea. *(C.sinensis).* White miniature single. Vigorous, upright, spreading growth. Large leaf. Flowers early. Originated in 2008 by CamelliaShop, Savannah, Ga., USA.

Sinensis Queen Bees Tea. *(C.sinensis).* SCCS *Camellia Nomenclature* 2009, p.195; White miniature single. Vigorous upright growth. Large leaf. Flowers early. Originated in 2008 by CamelliaShop, Savannah, Ga., USA.

Sinensis Rosea. *(C.japonica),* Berlèse, 1837, *Monographie,* ed.1: Leaves smaller than **Rosa Sinensis,** but alike in form, colour and nerves; buds elongated and pointed; flower 6.2 cm across, often more, double, rose; petals of the circumference bent down, broad, a little reflexed externally and notched at the apex; the others smaller, rumpled, forming an irregular centre.

Sinensis Rosea. ACS, May 1995, *The Camellia Journal,* vol.50, No.2, p.20: Florida Star Nurseries & Supply Co., Marrianne, Florida, USA. Synonym for *C.sinensis* **Benibana Cha.**

Sinensis f. variegata. *(C.sinensis).* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.18. Form of *C.sinensis* with variegated leaves.

Sing Westbrook. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings*, p.12, colour photos: A medium sized 'Sweet Pea' coloured, open peony form, with large, irregular petals, white colour with soft pink towards margins; stamens in 4-5 fascicles. A seedling of **Nina Avery** originated in USA by Richard Dodd, Marshallville, Georgia.

Singapore Sal. *(C.reticulata), American Camellia Yearbook*, 1977, pp.218, 219, Reg. No.1407: A very large, deep Magenta red, semi-double. An 8 year old chance *C.reticulata* seedling of **Mary Williams**, that first flowered 1969; originated by Mr & Mrs H.S. Putman, Long Beach, California, USA. The flower has 23 petals with yellow stamens. Average size, 18 cm across x 10 cm deep. Blooms early to mid-season. Plant growth is upright, open and rapid with dark green leaves 8 cm x 3.8 cm.

Singing Fountain. *(C.japonica),* Short, 1960, *American Camellia Yearbook*, p.134: A vigorous, upright plant with long, willowy growth, suitable for espalier, weepers or vining. Two tone shades of

pink of **Berenice Boddy** type blooms. Flowers along the stem. Originated in USA by Harvey Short, Ramona, California.

Singing River. *(C.sasanqua),* *American Camellia Yearbook*, 1954, p.333, Reg. No.166: A 6 year old seedling of **Cleopatra**, originated by Woodland Nursery, Pascagoula, Mississippi, USA that first flowered 1953. Plant growth is average in density and rapid. Flowers resemble **Narumigata,** more numerous but smaller, 6-8 cm across with 5-9 petals. Early flowering.

Singing Waters. *(C.japonica),* Griffin ed., 1958, *Camellian:* Clear pink. Medium to large, loose peony form. Vigorous, compact, upright growth. Blooms mid-season. Originated in USA by Hugh Shackelford, Albany, Georgia.

Single Blush Pink. *(C.sasanqua),* McIlhenny, 1937, *600 Varieties of Camellias:* Medium sized, blush pink, single, 5 petals, about 8 cm across. Originated in USA at Jungle Gardens, Avery Island, Louisiana.

Sir C.H. Buzacott. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.213, No description. Originated in the UK. No valid listing located.

Sir Eric Pearce. *(C.reticulata),* ACRS., 1984, *Camellia News*, No,91, p.22, Reg. No.319, colour photo rear cover: Originated by Keith Ballard, Mount Waverly, Victoria, Australia. A chance seedling from *C.reticulata* **Buddha** that first flowered 1979. The flowers are informal to formal double, 15 cm across, colour RHS.CC.55B, light pink, darker towards the centre and lighter pink towards the petal edges. Blooms mid-season. The open, upright plant has dark red juvenile growth, mature leaves 12.5 cm x 8 cm, shining green with numerous, deep serrations.

Sir Galahad. *(C.japonica),* Anonymous, 1948, *American Camellia Yearbook*, p.170: Originated at Fruitland Nurseries, Augusta, Georgia, USA, parentage unknown. Double formal white, occasionally marked with carmine stripes. Shows no stamens. Sometimes flowers are solid pink. Large flower. Vigorous, upright growth. Late blooming.

Sir Gallahad (Shackelford). *(C.japonica),* SCCS, 1966, *Camellia Nomencture*, p.122: Red. Very large, loose, peony form. Medium, compact growth. Blooms mid-season. Originated in USA by Shackelford, Albany, Georgia, invalidly as 'Sir Gallahad'.

Sir Ivanhoe. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias*, 2005, p.146 with colour photo; Medium size formal double, pink (RHS.CC.57D). A seedling of **Moshio** x 'Pomponia Semiplena' (**Pomponia Semi-duplex**), first flowered in 1984. Originated by Dott. Guido Cattolica, Livorno, Italy.

Sir Robert Muldoon. (*C.reticulata* hybrid). *New Zealand Camellia Bulletin*, July 1992, Issue No.112, vol.XVII, No.5, p.36, Reg. No.310: Originated by A.P. Gamlin, Manaaia, New Zealand. A 9 year old plant which first bloomed in 1987. It is an upright plant of medium rate, open growth with dark green foliage, leaves 11 cm long x 7 cm deep with 35 petals, 13 of these being large outer petals and the remainder smaller and upright centre petals intermingled with the stamens. The colour is a glowing pink (RHS.CC.58C-D), and the stamens are yellow anthers on cream filaments. Named after a famous Prime Minister of New Zealand.

Sir Thomas Williams. *(C.japonica),* Southern Camellia Garden Catalogue, 1942. Immense, double, deep red flower. Originated in USA.

Sir Victor Davies. *(C.japonica), New Zealand Camellia Bulletin,* March 1992, Issue No.111, vol.XVII, No.7, p.7, Reg. No.293: A seedling cross by Les Jury, New Plymouth, New Zealand. 'Fuyajo' (**Kon-wabisuke**) x **Zambo.** The plant has a neat form and tidy habit with dark green leaves 7 cm long x 4 cm wide. The formal double to peony form flower is of small size, 8 cm across x 3.5 cm deep with about 53 petals and 68 petaloids. The flower colour is cardinal red veined darker, almost violet rose (RHS.CC.53B-186D), and the inner petals fading to magenta rose. Flowers open to formal double, then change to peony form, the petals changing from deep red to smoky lavender and fading at petal margins. Blooms mid-season to late. Originated in New Zealand, and named for a very prominent pioneering nurseryman. Orthographic error 'Sir Victor Davis'.

Sir Victor Davis. Ferreira & Celina, 2000, *O Mundo da Camélia*, p.109; Orthographic error for **Sir Victor Davies.**

Sir Walter Scott. Rousseau, Angers Catalogue, 1842-1843, p.4. Synonym for **Sweetiana.**

Sir Winston Churchill.. *(C.japonica), American Camellia Yearbook*, 1970, p. 170, Reg. No. 1107: A 10 year old chance seedling that first bloomed 1964; originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is upright, average and open, with dark green leaves, 10 cm x 5cm. The semi-double type flowers range from 12-15 cm across x 7 cm deep with 20 petals and 13 petaloids. Colour is white with yellow anthers and cream coloured filaments. Blooms mid-season to late.

Siria. *(C.japonica),* Franchetti, 1855, *Collezione di Camelie*, p.57: Dark red. Perfectly imbricated. Originated in Florence, Italy.

Sishaluo. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the American *C.japonica* **Tiffany.** Later spelling 'Sishalou'.

Sissi. *(C.reticulata),* Originated by Roger Salaün, "Stervinou", Guipronvel, France. A 16 year old seedling, parentage unknown, first flowered 2009. Plant is upright and fast-growing, with bright, ribbed, dark green leaves, 14cm x 7cm. Flower is semi-double to rose form double, colour bright rose, 14cm diameter x 3-4cm deep. Stamens yellow, filaments white. Flowers mid-season to late. Flowers drop whole.

Sissy Lackey. *(C.japonica),* Pyron, Joe, 1958, *American Camellia Yearbook*, p.89. The flower is a large to very large, semi-double, pink, similar to **Ethel Davis** or **Wildwood** but parentage is unknown. The petals are thick and velvety and the plant has a strong, upright growth. Originated by Middleton Gardens, Charleston, South Carolina, USA. Sport: **Sissy Lackey Variegated.**

Sissy Lackey Variegated. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.103: A virus variegated form of **Sissy Lackey** - Pink and white. Originated in USA.

Sister. *(C.japonica),* Marjorie Washburne, 1961, SCCS., *The Camellia Review*, vol.23, No.1, p.10: A flower of 11 cm across but lacking substance. Anderson's Camellia Nursery Catalogue, 1967, p.33: Very large, flat single; light rose-pink. Strong, open growth with deep green foliage. Originated by Marjory Washburne, Port Arthur, Texas.

Sister Camilla. *(C.hybrid).* C.Aust., *Camellia News,* Autumn 2006, No.160, p.12, colour photo p.19, Reg No.566. Originated by Marjorie Baker, McLeod, Vic., Australia. A chance seedling of *C.hybrid* **Snowdrop.** First flowered in 1993. A pure white miniature single, cup-shaped flower 3.5 cm across x 2 cm deep. Flowers freely mid-season to late on a dwarf, dense, weeping plant. Leaves light green, matt, keeled, narrowly ovate, 5 cm x 2.5 cm. Stamens arranged in a column. Flowers fall whole. Pleasant strong perfume. Flowers along stem.

Sister Mary Leo. *(C.reticulata x C.saluenensis), New Zealand Camellia Bulletin*, vol.VII, No.6, p.36, 1972, Reg. No.73: A chance seedling of an unnamed *C.reticulata x C.saluenensis* hybrid which first flowered 1969. Originated by Jack Clark, Auckland, New Zealand. Growth habit is open and upright, leaves dark green, 9 cm x 4 cm. The flower is semi-double with 20 petals, 6 petaloids and golden anthers with white filaments. The colour is deep rose (RHS.CC.57C) and average size, 14 cm across x 8.5 cm deep. Abbreviation: 'Mary Leo'.

Sister Rosalie. *(C.sasanqua).* ACRS, *Camellia News*, 2000, No.154, p.18, colour photo p.2, Reg. No.533. Originated by Charles A. Newman, Western Australia, and registered by Jean Evans. Seed parent *C.sasanqua* **Beatrice Emily,** pollen parent unknown. First flowered 1993. The semi-double to peony form flower of 27 petals is cup-shaped, white, with a touch of pink on the edge of some petals, and is 9 cm across x 4.5 cm deep. Flowers floriferously early to mid-season on an upright plant. Leaves mid-green, curled, 7 cm long x 3.5 cm wide.

Skip. *(C.japonica), American Camellia Yearbook*, 1962-1963, pp.224, 225, Reg. No.595: A 4 year old chance seedling that first bloomed 1960; originated by Sanlando Springs Nursery, Longwood, Florida, USA. Plant growth is upright, spreading and medium with dark green leaves, 7 cm x 4.5 cm. The semi-double flower, similar to **Frizzle White,** is 11 cm across x 7 cm deep and has 19-21 petals and 10-12 petaloids. The white-red flowers, candy-striped, are heavy, with crinkled petals, and have a swirl of larger outer petals and petaloids intermingled with golden stamens in the centre. Early blooming.

Skip & Carolyn Evans. *(C.japonica), Camellias,* Y.C. Shen, 2009, p.170 with colour photo; Light rose to purple semi-double with darker veining, also irregular red flecks and spots, and some white marbling at the petal edges. 10 cm diameter. Sprayed and irregular central stamen cluster with a few petaloids.

Skip's Choice. *(C.reticulata* hybrid*),* ACS, *The Camellia Journal,* Sept. 2013, p.27 with colour photo; Regn No.2875; ACS, Yearbook, 2013, Originated, registered and propagated by James & Elaine Smelley, Moss Point, Miss., USA. A 10 year old seedling of **Phyllis Hunt**, pollen parent unknown, first flowered 2004, Medium size, 8.2cm diameter x 5cm deep, flower is semidouble with 10 petals, photo shows central petals raised. Colour pink, darker at petal edges, bright yellow anthers and white filaments. Heavy petal texture and flowers fall whole. Plant is spreading and open, with average growth rate. Mid-green leaves average 10cm x 5cm with medium serration. Flowers late.

Skylark. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.103: Light lavender pink. Medium semi-double of trumpet form. Medium, bushy growth. Blooms mid-season. Originated in USA by Harvey Short, Ramona, California.

Skyline. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Red. Semi-double. Mid-season. SCCS, 1954, *The Camellia, Its Culture and Nomeclature*, p.80 as 'Sky Line': Mulberry red. Large, semi-double with fringed petals. Medium, bushy growth. Mid-season blooming. Originated in USA by Harvey Short, Ramona, California.

Skyrocket. *(C.japonica),* ACS, Aug. 1996, *The Camellia Journal*, vol.51, No.2, p.31, Reg. No.2384. A large white flower with flecks and stripes of deep pink. An anemone form chance seedling which flowers early to late. Originated by Houghton S. Hall, San Anselmo, Calif., USA. *American Camellia Yearbook,* 1996, p.4, colour photo before p.1. The 18 year old seedling first flowered in 1985. Average flower size is 10.7 cm across x 7.5 cm deep with 12 petals, 8-

10 petaloids, golden anthers and white filaments. Plant growth is average and medium with shiny, glossy, dark green leaves 10 cm long x 6.5 cm wide.

Sleeping Beauty. (*C.reticulata* hybrid). *New Zealand Camellia Bulletin,* March 2003, Issue No.144, vol.XXIII, No.2, p.16, Reg. No.453. Registered by O. Blumhardt, Whangarei, New Zealand. A cross between a wild *C.reticulata* x the *C.reticulata* x *C.japonica* **False Howard Asper** which first flowered in 1982. The flower is single or semi-double, 12 cm diameter x 5 cm deep, with 8-10 petals of a heavy texture, lightly waved and of nearly circular shape. Outer parts of the flower are mid-pink (RHS.CC.68D), shading to near-white inside. The stamen mass is wide, about 4 cm across, with erect stamens having sulphur-yellow pollen on yellow filaments. The plant is spreading, open, and of medium growth rate, with dark green leaves 11 cm long x 5.5 cm wide. Flowers mid-season. The main characteristics are of a flat flower of heavy texture and lightly waved petals.

Sleeping Scent. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 1998, Issue No.129, vol.XX, No.4, p.21 Reg. No.386. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between a seedling [(**Mrs Bertha A. Harms** x C.hybrid **Salab**) x **Erin Farmer**] x **Tama-ikari.** Flower is a medium size semi-double, 9 cm diameter x 3 cm deep, with about 14 petals, and loosely packed stamens which occupy about 2/5 of the flower diameter. Colour is a deep pink at the petal tips shading lighter in towards the midrib and to the base of the petals (RHS.CC. 55B fading to 62D; main body of petals and overall appearance of 55B – 55C). Plant is of average growth habit and medium vigour, with light green leaves 7 cm long x 3 cm wide. Flower has a light fragrance.

Sleeve Hider. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.119. Synonym for **Gauntlettii** as 'Sodekakushi'.

Sleigh Bells. *(C.japonica),* ACRS., 1961, *Camellia News,* No.8. p.25, Reg. No.47: Originated by John R. Williams, Turramurra, N.S.W., Australia from a seedling of 'Peach Blossom' (**Fleur Dipater**). It has an upright, bushy habit. The flower is a semi-double, white with small to medium size flower. First bloomed 1960. Blooms mid-season to late.

Slendens. *(C.japonica),* Stuart Low, (Enfield) Ltd, Park View Nursery Catalogue, 1959-1960, p.14: Striped pink and white. Originated in England.

Slenderlee. *(C.sasanqua),* Overlook Nursery Catalogue, 1948-1949: Watermelon pink, medium size, single, formerly known as 'Mutt's Watermelon Pink'. Originated by K. Sawada, Crichton, Alabama, USA from seed imported from Japan. See illustration, p.335, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III.

Slidell Centennial. *(C.japonica),* ACS., Nov.1987, *The Camellia Journal*, vol.42, No.4, p.22, Reg.No.2065: Large, dark, rosy pink, peony form to rose form double, *C.japonica* chance seedling. Mid-season blooming. Originated by F. & S. Zerkowsky, Tammia Nursery, Slidell, Louisiana, USA. *American Camellia Yearbook,* 1987, p.85: The 16 year old seedling first bloomed 1972. Average flower size, 12.5 cm across x 7.5 cm deep with 46-50 petals in 10-15 tiers. Plant growth is upright, open and medium in rate with dark green leaves, 9.5 cm long x 4 cm wide.

Slim 'N Trim. *(C.sasanqua). American Camellia Yearbook,* 2002, p.131, Reg. No.2570: A deep rose pink single chance seedling. Flowers early to mid-season. Originated by Nuccio's Nurseries, Altadena, Calif., USA. Introduced in their 1999 catalogue. Nuccio's #9222. The seedling first flowered in 1991. Flowers measure 7.5 cm across with 7-9 petals. Plant is dense, with excellent columnar growth, and dark green leaves 3.8 cm long x 1.2 cm wide.

Smitty. *(C.japonica),* ACS, Aug. 1995, *The Camellia Journal,* vol.50, No.3, p.36, Reg. No.2330: Large size, deep rosy red, rose form to formal double *C.japonica* chance seedling. Blooms early to late season. Originated in USA by A.Fendig & Jane F. Ledbetter, St. Simons Island, Georgia. ACS 1995, *American Camellia Yearbook,* p.10 with colour photo: The 15 year old seedling first flowered 1975. Average flower size is 10.5 cm across x 6 cm deep with 34 petals and 3 petaloids, yellow anthers and milky white filaments. Plant growth is upright, dense and average in rate with dark green leaves 7.5 cm long x 3.2 cm wide.

Smitty Ledbetter. *(C.japonica),* Flanders, 1969, *American Camellia Yearbook*, p.108: Originated by A.Fendig, St Simons Island, Georgia, USA. An early blooming, large, red double.

Smoke Ring. *(C.japonica), New Zealand Camellia Bulletin,* March 2005, Issue No.150, vol.XXIV, No.2, p.36, Reg. No.470. Registered by R. & V. Bieleski, Manukau City New Zealand. A sport of **Dona Herzilia de Freitas Magalhaes,** first observed in 2000, and propagated and verified by Camellia Haven. The flower is a well-defined anemone form, 10 cm across x 4 cm deep, with 11 petals in 2 rows, and 90-100 tightly clustered petaloids held on short, white, fused filaments. As with the parent, flower colour is variable according to growing conditions, ranging from light red with a violet tinge (RHS.CC.61C) to a pure light violet (RHS.CC.70A) and occasionally to darker violet shades. Growth is similar to the parent, upright, dense and strong, with dark green leaves 7.5 cm long x 5 cm wide. Flowers mid-season to late.

Smooth Fragrance. (*C.japonica* hybrid). *New Zealand Camellia Bulletin*, March 1999, Issue No.132, vol.XXI, No.1, p.17, Reg. No.411. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between C.hybrid **Scented Sun** and *C.japonica* **Tama-ikari.** The flowers are large and range from semi-double to peony form, 12 cm in diameter x 6 cm deep, with about 35 petals, few or no petaloids, and a central mass of stamens. Colour is deep bright pink (RHS.CC.58C), with some veining of the petals. Flowers have a light scent. The plant is upright, of average density and vigorous growth rate, with dark green leaves 9 cm long x 4 cm wide. Flowers early to mid-season.

Smythe White. *(C.japonica), Camellia Digest,* 1(1), 1942. No description. Originated in USA. (Believed extinct.)

Smythy. Scuola di Agricultura Catalogue, 1882. Orthographic error for **Smithii.**

Snells Blush. *(C.japonica),* ACRS, *Camellia News,* 1998, No.147, p.12, Reg. No.499. Originated by Mr Peter Snell, Bundaberg, Qld., Australia. A chance seedling that first flowered in 1988. A light blush pink, formal double flower of 60 petals, 12 cm across x 5 cm deep. Flowers mid-season to late on a slow growing, bushy plant. Leaves mid-green, glossy, curled, oval, serrations absent, acute apex, 9.5 cm long x 6 cm wide. Petals notched. Colour the same as **Twilight**, petals more rounded and flowers later.

Snippet. *(C.pitardii), New Zealand Camellia Bulletin*, 1971, vol.VII, No.3, p.9, Reg. No.55: A seedling with dwarf characteristics, originated by Mrs A.B. Durrant, Rotorua, New Zealand. A seedling of *C.pitardii* var. *pitardii.* A small, open, semi-double with 15-16 long, narrow petals with multiple notched margins and a small number of stamens, fused at the base, with white filaments and golden stamens. The flowers are 5-6 cm across. Opening flowers and buds are a soft pink (RHS.CC.55B), fully open the centre petals are white and translucent, the outer petals RHS.CC.55C or D. Leaves are dark green, keeled, lanceolate, recurved, 5 cm x 2 cm. Free flowering with bud set in leaf axils. Habit is dwarf and compact. See colour photo, front cover *New Zealand Camellia Bulletin,* vol.X, No.6, 1978.

Snooty Beauty. *(C.japonica)*, SCCS., 1964, *Camellia Nomenclature*, p.114: Glowing rose-pink. Large semi-double with white tipped petaloids, intermixed with golden stamens. Originated by H.Mura, Augusta, Georgia, USA. Sport: **Snooty Beauty Variegated.**

Snooty Beauty Variegated. *(C.japonica)*, Gentry, 1969, ACS., *The Camellia Journal*, vol.24, No.4 as 'Snooty Beauty Var.': a virus variegated form of **Snooty Beauty** - Rosepink blotched white. Originated in USA.

Snow. *(C.japonica)*, Merino, 1966, *American Camellia Yearbook*, p.61: A snow white, anemone flower that first bloomed 1959. A chance seedling raised by the McCaskill Gardens, Pasadena, California, USA. A good upright grower. Blooms mid-season.

Snow (Marian Grove). *(C.sasanqua)* C. Aust, *Camellia News*, No.182, Autumn 2010, p.6 with colour photo; Regn No.592-N as 'Snow'. (Name already used).; A white flowered sport of **Marge Miller,** first found late 1990s. Late blooms slightly pinkish in cooler areas. Flowers mid-autumn to early winter. Same groundcover habit as parent. Originated by Marian Grove Nursery, Mangrove Mountain, NSW, Australia.

Snow. McIlhenny, 1935, *List of Camellias for Sale*, p.14. Synonym for **Mine-no-yuki.**

Snow Baby. *(C.japonica)*, McCaskills Gardens Catalogue, 1965: White, Miniature, anemone form. Medium, compact, upright growth. Blooms mid-season. Originated by McCaskill Gardens, Pasadena, California, USA.

Snow Ball. Gerbing Azalea Garden Catalogue, 1938-1939. Orthographic variant for **Snowball.**

Snow Bell. *(C.japonica)*, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.232, black & white photo, description, p.230: Flowers semi-double, white, to 11 cm across x 5 cm deep; petals about 15, firm, broad-ovate, inner crêped, apices notched, sometimes fluted. Centre of flower a loose arrangement of a few petaloids and stamens, filaments creamy, fused one third their length, anthers small, dark yellow. Leaves oblong-elliptic, semi-glossy, dark green, 10 cm x 5 cm, margins shallowly crenate; apices short to long pointed, venation obscure upper surface. Plant habit spreading, dense and medium. Blooms mid-season. Imported unnamed from Japan by the Huntington Botanic Garden. Chinese synonym 'Xuezhong'.

Snow Belle. *Camellias*, Y.C. Shen, 2009, p.211 with colour photo; Synonym for **Yukikomachi.**

The pure white flowers, 4-5 cm across, are semi-double to peony in form with 12-16 outer petals around a centre of petaloids. Flowers early to mid-season.

Snow in Sunrise. Yashiroda, 1950, *American Camellia Yearbook*, p.22. Synonym for **Hinode-no-yuki**.

Snow on Flower. Yashiroda, 1950, *American Camellia Yearbook*, p.21. Synonym for **Hana-no-yuki.**

Snow of Mountain. Rubel, 1933, Choice Pot Grown Camellias List No.63. Synonym for **Mine-noyuki**.

Snow Oguni Basin. *Camellias,* Y.C. Shen, 2009, p.213 with colour photo; Synonym for **Yuki-oguni.**

Snow on Pine. Yashiroda, 1950, *American Camellia Yearbook*, p.18. Synonym for **Matsu-no-yuki.**

Snow on Peak. Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.306. Synonym for **Mine-no-yuki.**

Snow on the High Peaks. *Camellias*, Y.C. Shen, 2009, p.176. Synonym for **Takane-no-yuki.**

Snow on the Mountain. Fruitland Nursery Catalogue, 1933-1934. Synonym for **Mine-no-yuki.**

Snow Paeony Camellia. Urquhart, 1956, *The Camellia.* Synonym for **Yukibotan.**

Snow Palace. *(C.japonica)*, SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.85: White. Large semi-double to anemone form with large outer, undulate guard petals. Medium, compact growth. Blooms mid-season. Originated in USA by Harvey Short, Ramona, California. See colour photo, front cover, SCCS., 1959, *The Camellia Review*, vol.20, No.7. Colour photo, (p.100), Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement.*

Snow Peony. Savige, 1986, *International Camellia Journal*, No. 18, p.112. Synonym for **Xuemudan.**

Snow Peony. *Camellias*, Y.C. Shen, 2009, p.77 with colour photo; Synonym for **Botanyuki.**

Snow Princess. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* White. Medium large, semi-double to occasional formal double. Vigorous, compact, upright growth. Originated by Hugh Shackelford, Albany, Georgia, USA. First flowered 1949; petals 40; late blooming.

Snow Queen. SCCS., 1942, *Classification of Camellias*, p.4. Synonym for **White Perfection.**

Snow Swirl. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2005, p.28, with colour photo, p.29, Reg. No.2667. A chance seedling that first flowered 1994. Propagated by C.M. and Lillian Gordy, Ocala, Fla., USA. The 11.5 cm diameter, pure white, formal double flower sometimes has slightly ruffled petals. *American Camellia Yearbook,* 2005, p.47, with colour photo. p.c8. Plant is upright, open and vigorous. Dark green leaves are 8.2 cm x 5.7 cm. Flowers mid-season to late.

Snow Tulip. *(C.japonica),* Vanderbilt, 1941, *Camellia Research*, II, p.7. No description. SCCS, 1942, *Camellias*, p.3: White, single, 6.5 cm across. Blooms mid-season to late. SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* White. Medium large, single to semi-double. Vigorous, upright growth. Originated in USA by Carter. See illustration, p.329, Hertrich, 1954, *Camellias of the Huntington Gardens*, vol.I.

Snow White. McIlhenny, 1937, *600 Varieties of Camellias.* Synonym for **Shiragiku** as 'Purity'.

Snow White. Rosedale, 1958, Los Angeles Times. Synonym for **Thomas D. Pitts.**

Snow White. *(C.japonica),* Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II, p.307, illustrations, p.304, description: Complete double formal type, white, 9 cm across x 4.5 cm deep. Petals to 35, orbicular to broad-ovate; centre of flower, small segments fused with stamens, white filaments, light yellow anthers. Leaves lanceolate, tapering both ends, dark green, semi-glossy, medium leathery, margins shallowly, broadly serrate, venation light. Habit upright, compact grower. Blooms mid-season to late.

Snow White Chrysanthemum Petal. Ikeda, 1976, *American Camellia Yearbook*, p.144. Synonym for **Xuebai Juban.**

Snow White Princess. *Camellias,* Y.C. Shen, 2009, p.212 with colour photo; Synonym for the *C.rusticana* **Hime-shirayuki.**

Snow White Princess. *Camellias,* Y.C. Shen, 2009, p.329 with colour photo; Synonym for the *C.hiemalis* **Shirayuki-hime.**

Snow White (Rosedale). SCCS., 1960, *Camellia Nomenclature*, p.103. Synonym for **Thomas D. Pitts.**

Snow White (Star). *(C.japonica),* SCCS, 1960, *Camellia Nomenclature*, p.103, invalidly as 'Snow White': White. Large, semi-double with central mass of golden stamens and occasional petaloid. Blooms mid-season. Originated by the Star Nursery, California, USA.

Snowball. *(C.japonica),* Domoto Camellia Catalogue, 1932, White. Large, full peony form. Slow, upright growth. Originated in USA by Domoto, California. Orthographic variant: 'Snow Ball'. Synonym: 'Snowball White'.

Snowball White. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.34. Synonym for **Snowball.**

Snowbird. *(C.japonica),* ACRS., June, 1983, N.S.W. Foundation Branch News Letter, Issue 5: Bears semi-double, white flowers after the style of **Miyakodori.** Originated in Australia.

Snowcloud. *(C.sasanqua).* Camellia Grove Catalogue, St. Ives, NSW, Australia, 1997, p.21: Medium size, semi-double white with a touch of pink on some petal edges. Vigorous, upright growth. Early blooming sport of **Jennifer Susan.** Note: Name is illegal according to the Nomenclature Code, as being too similar to **Snow Cloud.** See ICS Register, p.1736. C.Aust., *Camellia News,* Autumn 2010, p.7 with colour photo; Regn No.605-N.

Snowdoll. Lindo Nursery Catalogue, 1944-1945. Synonym for **Pax.**

Snowdrift. *(C.japonica),* Domoto Nursery Catalogue, 1935: Semi-double, white. Medium large. Fendig, 1949, *American Camellia Catalogue:* Regular, White, semi-double. 8.5 cm across x 4 cm deep. The uniform-sized petals are 4 cm long, are in 3 rows, There are about 70 golden stamens, sometimes united. Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II, p.306: Semi-double, cup & saucer shape when a central bud-like cone is unopened, white, 9 cm across x 5 cm deep. Petals to 20, roughly spatulate, apically notched, channelled. The centre of the flower is a cone formation which opens to reveal an erect column of slender stamens, white filaments, golden anthers. Central petal segments creped. Leaves tapering to both ends, cupped, 7-9 cm long x 4-4.5 cm wide, dull, dark green above, broad, sharp serrations, apices long pointed, venation well defined. Mid-season flowering. Imported from Japan by T. Domoto in 1932. Orthographic variant: 'Snow Drift'. Synonym: 'Snowdrift (2)'.

Snowdrift 1. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.34. Synonym for **Tricolor White.**

Snowdrift (1). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Miyakodori.**

Snowdrift (2). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Snowdrift.**

Snowdrop. *New Zealand Camellia Bulletin,* vol.XIV, No.2, p.21. Orthographic variant for **Snow Drop.**

Snowfall. *(C.sasanqua).* SCCS, 1996 *Camellia Nomenclature,* p.151: White, small size single. Originated by Nuccio's Nurseries, Altadena, California, USA.

Snowflake. *(C.japonica), The Garden*, 1912. A medium sized, white single. Originated in the UK. Hillier's *Manual of Trees and Shrubs*, 1971, p.59: White, medium size, single.

Snowflake (Sawada). *(C.sasanqua),* Wilmot, 1945, *Camellia Variety Classification Report*, 1945, p.7, invalidly as 'Snowflake'. No description. Nuccios Nurseries Catalogue, 1955, p.19: Beautiful flat, large petalled, white, with large, deep green foliage and vigorous, upright habit. Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.336 illustration, p.334, description: Flower single, white, to 10 cm across. Buds elliptic. Petals broad, 5-7, slightly undulate, apices deeply notched. Centre of flower a spreading group of large stamens, greenish-yellow filaments, golden-yellow anthers. Leaves broad-elliptic, semi-glossy, mid-green, coarse serrations, tapering apices. Pant habit upright, medium growing and free flowerng. Blooms early. Originated as a chance seedling by K. Sawada, Mobile, Alabama, USA. Orthographic variant: 'Snow Flake'.

Snowie. *(C.japonica),* The Little Red Barn Catalogue, 1971. *American Camellia Yearbook*, 1972, pp. 135, 136, Reg. No. 1203: A 7 year old chance japonica seedling that first bloomed 1967; originated by Mary Alice and Neal Cox, Georgetown, South Carolina, USA. Plant growth is upright, dense and medium with medium, dark green leaves, 8 cm x 5-6 cm. The rose form double, 'Purity' (**Shiragiku**) type, bloom is white with some pale blush. It measures 5.5-6 cm across x 2.5-3.2 cm deep, has good texture, a prolific bloomer, opens 3 rows of medium guard petals and a tight rose-bud centre. Blooms mid-season. Orthographic variant: 'Snowy'.

Snowish Peony. SCCS., 1954, *The Camellia. Its Culture and Nomenclature*, p.88. Synonym for **Yukibotan.**

Snowman. *(C.japonica), American Camellia Yearbook,* 1965, p.247, Reg. No.758: A 6 year old chance seedling that first bloomed 1961; originated by Wilmer Stewart, Savannah, Georgia, USA. Plant growth is upright, rapid and spreading with dark green leaves, 10 cm long x 3.8 cm wide. The semi-double, 'Frizzle White' type, flower is 15 cm across x 10 cm deep with 35 petals and 12 petaloids, pure white with white filaments and yellow anthers. Inner petals are curled and twisted, forming a high centre, outer petals distinctly notched and curved backwards. Midseason blooming. Received the John Illges Award of the ACS for 1976. See colour photo, back cover, ACS., May, 1985, *The Camellia Journal*, vol.40, No.2. Chinese synonym: 'Xuerin'.

Snowmist. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997, p.15, Reg. No. 2405. A miniature, white, single, chance seedling. Flowers early to mid-season. Originated by Toichi Domoto, Hayward, Calif., USA. *American Camellia Yearbook,* 1997, p.7, colour photo before p.1. The seedling is over 15 years old. Average flower size is 2.5 cm across x 1.2 cm deep with 7-8 petals. Plant growth is dense and slow. Previously named 'Domoto's Snowflake'.

Snowstorm. (*C.pitardii* hybrid). SCCS, 1996, *Camellia Nomenclature,* p.165: White miniature single with notched petals. Vigorous, spreading, weeping growth. Blooms early to mid-season. A seedling of **Snow Drop** originated by A.Raper, The Patch, Victoria, Australia.

Snowy. Valdosta Camellias Nov.1990, *The Camellia Journal,* vol.46, No.4, p.22. Orthographic variant for **Snowie.**

Snowy Egrets. *(C.japonica), American Camellia Yearbook,* 1973, p.195, Reg. No.1242: An 18 year old chance japonica seedling that first bloomed 1957; originated by M.J. Witman, Macon, Georgia, USA. Plant growth is open and pendulous with dark green leaves, 7.5 cm long x 2.8 cm wide. The semi-double, white bloom has golden anthers and creamy yellow filaments, 16 petals and 8 narrow, tubular petaloids. The bloom measures 11 cm across x 7.5 cm deep. The corolla consists of long, narrow, fluted petals, twisted and exposing a large, loose bunch of golden stamens. Blooms mid-season to late.

Snowy Spots. Savige, 1986, *International Camellia Journal,* No.18, p.108. Synonym for **Dianxue.**

Sôan-wabisuke. (Thatched Arbor Wabisuke). (Wabisuke). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.263 with colour photo; Miniature to small red single, sake cupped form, ovary densely pillose. Flowers early to late. A natural seedling of **Tarôkaja,** named by Shuho Kirino, Tokyo, Japan in 2001.

Sobeck Hybrids. Hilsman, 1966, *American Camellia Yearbook,* p.140. Collective epithet for *C.reticulata x C.granthamiana* hybrids.

Sobeck's Supreme. *(C.x williamsii),* ACRS., 1973, *Camellia News,* No.48, p.8 and Ben Rayner, 1973, ACRS., *Camellia News,* No.50, p.2. No description. Originated by John R. Sobeck, California, USA. No valid listing located.

Soderakushi. McEarcharn, 1963, *Catalogue of Plants in the Garden of Villa Taranto*, p.61. Corruption of Japanese name 'Sodekakushi', synonym for **Gauntlettii.**

Sodeshiga-ura. (Sodesiga-ura Bay), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.258, colour photo and description: Small to medium size, white with pink and red stripes, wide campanulate single of 5-6 wide, rounded, overlapping, pointed, reflexed petals with tall stamen cylinder having white filaments, joined for their lower thirds, and yellow anthers. Leaves strong green, elliptic, apices tapering acuminate, margins serrate. Blooms mid-season to late. Originated in Matsu'e City, Shimane Prefecture, Japan.

Sodôrihime. Different reading for **Sotôrihime.**

Sôemon. (Ancient Personal Name), *(C.japonica)*, Hamamatsu, Utakuni, 1825, *Setsuyô Kikan.* No description. Originated in Japan. (Believed extinct.)

Sôen. (Personal Name), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.188: Medium size, white, flat, semi-double, round and uniform with a central stamen column. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.110. (Believed extinct.)

Sôen. (Personal Name). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.327 with black and white photo; English translation p.234. Small, pale pink, tubular single, cylindrical stamen cluster. Flowers mid-season. Leaves elliptic, medium size. Upright growth. Parentage unknown, named and released by Nonoichi Town Camellia Lovers Club, Ishikawa Prefecture, Japan in 1990.

Sôen-koshimino. (Sôen's Straw Raincoat), *(C.japonica)*, Horin, 1645, *Kakumeiki.* No description. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.47. (Believed extinct.)

Sôetsu. (Personal Name), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.609: Large, Medium size, double, red fading to light pink, numerous, small petals with divided stamens. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.145. Originated in Japan. (Believed extinct.)

Sofia. *(C.japonica)*, Medici Spada, 1858, *Delle Nuove Camellie che si vengono ottenendo dalle Semine Romane*, p.8: Large flower with 12 petals, large sized, level, lobulate; those central, erect; the innermost, acuminate, folded shell-like, of a vivid rose, lighter at the periphery, becoming darker towards the centre. Originated in Italy by Delgrande, Rome.

Sofia Chiarugi. *(C.japonica)*, Franchetti, 1855, *Collezione di Camelie*, pp.57, 58: Vivid red, deeper at the centre, the petals often lightly edged with white. Becomes violet with age. Imbricated. Mercatelli Catalogue, 1881: Bright red, imbricated, darker towards the centre, petals often lightly striped or tinted white. See pl.I, Book IV, Verschaffelt, 1859, *Nouvelle Iconographie* as

'Sophia Chiarugi'. Originated in Italy by Nencini, Florence. Orthographic variant: 'Sophia Chiarugi'. Orthographic errors: 'Sophia Charugie', 'Sophia Chiarugia', 'Sophie Chiartugie', 'Sophia Charurgi', 'Sophia Chiarurghi', 'Sophia Chiarrugi'.

Sofia Mazzetti. *(C.japonica),* Rovelli Catalogue, 1896-189. Beautiful variety, No description. Originated in Italy. (Believed extinct.)

Sofia Onesti. *(C.japonica),* Linden Nursery Catalogue, 1875. No description. Mercatelli Catalogue, 1881, p.35: Large, regularly imbricated flowers, central petals light rose, veined red; those of the circumference vivid red. Originated in Italy. Orthographic variant: 'Sophia Onesti'.

Sofia Rocaglia. Waterhouse, 1955, *American Camellia Yearbook*, p.87. Orthographic error for **Sofia Roncaglia.**

Sofia Roncaglia. *(C.japonica),* Anonymous, 1879, Conferenza orticolo del 16 Marzo, *R. Società Toscana di Orticultura, Bollettino,* 4:66-71. A formal double of bright rose with white spots. A virus varieated form of **Virginia Franco Rosea.** Originated in Italy. Orthographic error: 'Sofia Rocaglia'.

Sofia Santarelli. E.G.Henderson & Son, 1870, Spring Catalogue, p.18. Auguste van Geert Nursery Catalogue, No.82, 1881-1882, p.14. Orthographic variant for **Sophia Santarelli.**

Soft Branch Lion's Head. Ikeda, 1976, *American Camellia Yearbook*, p.144. Synonym for **Ruanzhi Jiuxin.**

Soft Branch Nine Hearts. Waterhouse, 1970, SCRS., *Camellia News*, No.40, p.9. Synonym for **Ruanzhi Jiuxin** as 'Juan-chih-chiu-hsin'.

Softglow. (*C.reticulata* hybrid). ACRS, *Camellia News*, 1993, No.129, p.8, colour plate No.2, Reg. No.429: Originated by Donal Coe, Glenroy, NSW, Australia. Seedling of *C.reticulata* hybrid **Lasca Beauty;** pollen parent unknown. First flowered 1988. Semi-double of 14 petals in 3 rows; soft pink (RHS.CC.55C), 16 cm across x 5.5 cm deep. Flowers early to mid-season on an erect, compact, medium growing plant. Leaves dark green, broad-ovate, apices blunt-acute, base flat, surface matt, margins serrate, coriaceous, 10 cm long x 7 cm wide. Petals wavy and frilled at edge; stamens central and spreading.

Softly. *(C.x williamsii), New Zealand Camellia Bulletin*, 1983, vol.XIII, No.2, p.12, Reg. No.193: Originated by Felix Jury, Waitara, New Zealand. An 8 year old seedling of *C.saluenensis x C.japonica* **Joshua E. Youtz.** It forms an upright plant with dark green leaves, 8 cm long x 4 cm wide. The formal double flower is 10 cm across x 4 cm, deep with 50 petals; the colour of the outer ones is soft lavender, suffusing to cream at the centre. Flowers mid-season to late. See: Front cover, *New Zealand Camellia Bulletin*, vol.XVII, No.1, Mar.1991. Chinese synonym: 'Piaorou'.

Softly Fragrant. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 2002, Issue No.141, vol.XXII, No.5, p.11, Reg. No.436. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between C.hybrid **Fragrant One** x *C.japonica* **Scentasia,** which first flowered in 1997. The flower is peony form, 10 cm diameter x 5.5 cm deep, with 10 petals and about 5 flag petals inside the somewhat compact mass of petaloids (around 70-90) admixed with visible stamens. The flower is pale pink (RHS.CC.49D) and has a light, somewhat spicy scent. Plant is of average height, upright and rapid growing, with dark green leaves 9 cm long x 5 cm wide. Flowers mid-season to late.

Sofue-no-homare. (Pride of Sofue). *(C.sasanqua). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.306 with colour photo; Medium size, pink peony form with ruffled petals. A few stamens among the petals. Flowers early. Leaves ovate, medium size. Upright, very vigorous growth. Found in Sofue-machi, Niigata Pref., Japan in 1970s. Finder unknown.

Sôfuku-shiratama. (Sôfuku's White Single Camellia), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.21. No description. Originated in the Gifu Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.150 with colour photo; English translation p.103. Medium size, white, trumpet to sake cup-shaped single, cylindrical stamens, round flowering buds. Flowers early to mid-season. Leaves narrowly elliptic, medium size. Upright, vigorous growth. The original tree, measuring 80 cm in circumference, grows at Sôfukuji Temple in Gifu City. Named by Nagaharu Niwa in 1987, released by Gifu Camellia Club.

Sôfuren. Seibundô Shinkôsha, 1970, *Garden Life*, No.36, p.12; Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49. Synonym for **Kôgyoku.**

Sôgenhaku. (Sôgen's White), (*C.japonica*), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.18, colour photo & description: Small size, white, wide vase-shaped single of 5 large, rounded, overlapping petals and a broad stamen column with white filaments, joined for their lower third, and yellow anthers. Leaves mid-green, broad-elliptic, apices blunt acute, margins widely, shallowly serrate. Blooms mid-season. Originated with a private family in Okayama Prefecture, Japan. Collected and released by Nobuo Sasai in 1976.

Sogetsu. (August in old Japanese Calendar). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.150 with colour photo; English translation p.103. Small, palest pink with red graduation on petal margins, tubular to cup-shaped single, cylindrical stamen cluster. Flowers early to mid-season. Leaves elliptic, medium size. Upright growth. A cross between **Tsurugata** and **Takara-no-hana.** Originated and released by Nobuo Sasai in 1997. Name reflects the very early flowering habit. From Okayama Prefecture.

Sôginhaku. (Sôgin's White) (*C,japonica*) from Ibaragi Pref. *Japan Camellia* No. 67 February 2002: Parents unknown. White, peony, petals channeled, large, blooms in spring. Leaves somewhat lanceolate, medium, flat. Originated by Kunimitsu Suzuki in 1995.

Sogliana. *(C.japonica),* Charles van Geert Nursery Catalogue, No.105, 1848, p.119. No description. Originated in Italy. (Believed extinct.)

Sohaku. (Simple White), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.85, colour photo, p.226, description: Small, campanulate single with 5 creamy white petals, rounded, overlapping, surrounding a pinched in stamen cluster, white filaments joined for their lower third, and yellow anthers. Leaves, glossy mid-green, lanceolate, apex tapering acuminate, shallowly serrate. See colour photo, p.33, Yokoyama & Kirino. 1989, *Nihon no Chinka.* Originated in Japan. Selected from wild camellias in Narutaki, Kyôto City. Named and released by Motoharu Miyazawa in 1980.

Sôhen-wabisuke. (Sôhen Wabisuke), (Wabisuke), Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No. 11, pp. 102, 104, 105, with colour photo and botanical drawing: Very small size, red, campanulate single of 7 somewhat crinkled petals and a centre of pale yellow, abortive stamens. Leaves bright green, lanceolate, apices long caudate, margins serrulate. Originated in Toyohashi-shi, Aichi Prefecture, Japan.

Sohshiarai. Different reading for **Sôshi-arai.**

Sôhuku-shiratama. Different reading for **Sôfuku-shiratama.**

Sô-i. (Religious Desire), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.382: Medium size, white, single with 7 petals, opening flat with tall stamens, yellow anthers and white filaments fused for the lower third. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû* No.3. p.161. Originated in Japan. (Believed extinct.)

Sokay. *(C.japonica),* Cels, Paris Nursery Catalogue, 1839, p.30. Originated in France. No description. (Believed extinct.)

Sokei-no-yosôi (Adorned with Simple Blessing), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.282, colour photo & description: Medium size, soft pink striped deep red, wide campanulate single of 5 petals of irregular size, somewhat reflexed, and a central cylinder of stamens with creamy filaments, joined for their lower third, and yellow anthers. Leaves glossy deep green, elliptic, apices tapering acuminate, margins serrate. Blooms mid-season. Originated in Okayama Prefecture, Japan. Collected by Seiichirô Sasai, released by Nobuo Sasai in 1983. Different reading: 'Sokei-no-yoso'oi'.

Sokei-no-yoso'oi. Different reading for **Sokei-no-yosôi.**

Sokobeni. (Red Base), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô* vol.311. Cited from the ancient nursery Yasaburô. Description not seen. Originated in Japan. (Believed extinct.)

Sokobeni. (Red Base), *(C.sasanqua)*, Itô, Ihei, 1719, *Kôeki Chikinshô:* Pale pink, with deeper pink base, single, large size. Originated in Japan. (Believed extinct.)

Sôkojiro. Different reading for **Sokoshiro.**

Sôkokuji. (Sôkoku. Shrine), *(C.japonica)*, *Tsubaki Byôbu*, 17th century: Owned by Hirayama, Tokuo, Matsuyama City, Ehime Prefecture, Japan. See: Watanabe, 1961, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.2, p.48. (Believed extinct.)

Sokokuri. (Scraped Base), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.309. Description not seen. Originated in Japan. (Believed extinct.) The name alludes to degenerate, wabisuke type stamens.

Sokoshiro. (White Base), *(C.japonica)*, Itô, Ihei, (before 1801), *Hyakka Tsubaki Nayose Irotsuki*, No.89; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pink single. Bamboo whisk form stamens. See: JCS., 1969, *Tsubaki*, No.7, p.27. Originated in Japan. Described as a synonym for **Kamitsuma** (The first spouse). Different reading: Sôkojiro'. (Believed extinct.)

Sokotsu. (Hasty), *(C.japonica)*, Mizuno, 1681, *Kadan Kômoku:* White spotted pink. Double. See: JCS., 1965, *Tsubaki*, No.5, p.28. Originated in Japan. (Believed extinct.)

Sol d'Oro. Fendig, 1953, *American Camellia Catalogue*. Orthographic variant for **Sol de Oro.**

Sol de Oro. *(C.japonica)*, Rhodellia Nursery Catalogue, [before 1945]: Pink. Medium single with a mass of stamens and petaloids in the centre. Medium, compact growth. Mid-season blooming. Originated in USA.

Solaris. McIlhenny, 1935, *List of Camellias for Sale*, p.14. Synonym for **C.M. Hovey.**

Solcata Rosea. *Il Giardiniere*, 1852. Orthographic error for **Sulcata Rosea.**

Sole d'Italia. *(C.japonica)*, de Jonghe, 1851, *Traité de la Culture du Camellia*, p.122: Regular double, pure white, lined and streaked crimson. Luzzatti, 1851, *Collezione di Camelie*, p.35: Double imbricated, ivory white with large spots and stripes of rose and carmine. Originated in Italy.

Solenne in Quest'ora. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.4, colour photo: Crimson, loose peony form, centre a mass of small, irregular petals with some stamens intermixed. A seedling of 'Donckelaeri', (**Masayoshi**), originated by Richard Dodd, Marshallville, Georgia, USA.

Solfatare. Carlo Constantine Catalogue, 1886. Orthographic error for **Solfatara.**

Solfatara. *(C.japonica)*, Burdin Maggiore & Co. Catalogue, 1863: Flower of Canary shade, becoming pure white at the periphery; petals broad, numerous, imbricated, rounded at periphery, becoming acuminate towards the centre. Originated in Italy. Named for the famous rose 'Solfatara', first exhibited 1852. Sport: **Virginia Cesana.** Orthographic error: 'Solfatera'.

Solfatera. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.214. Orthographic error for **Solfatara.**

Solferino. *(C.japonica),* Burdin Maggiore & Co Catalogue, 1862: Medium sized, imbricated, delicate pink. Originated in Italy by Sangalli.

Solid. Fruitland Nursery Catalogue, 1940-1941, colour photo, p.26. Synonym for **Latifolia.**

Solid Latifolia. Magnolia Gardens and Nursery Catalogue, 1942-1943. Synonym for **Latifolia.**

Solitaire. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* White. Complete double. Mid-season. SCCS., 1954, *The Camellia. Its Culture and Nomenclature*, p.81: White. Medium large, formal to rose form double. Medium, bushy growth. Blooms mid-season to late. Originated in USA by Harvey Short, Ramona, California.

Soloia. *(C.japonica),* Scuola di Agricultura Catalogue, 1882. No description. Originated in Spain. (Believed extinct.)

Solomon Number 10. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1963-1964, p.14 as 'Solomon No.10'. No descripion. Originated in USA. No valid listing located. Sport: 'Solomon Number 10 Variegated'.

Solomon Number 10 Variegated. Belle Fontaine Nursery, 1963, ACS., *The Camellia Journal*, vol.18, No.3, as 'Solomon No.10 Var.' No description. Originated in USA. No valid listing located.

Soloman's Pink. *(C.japonica),* Walter Allen Nursery Catalogue, 1949: Deep pink. Large formal to rose form double; vigorous, upright growth. Blooms mid-season. Originated in USA by A.A. Solomans, Sumpter, South Carolina.

Solstice. *(C.hybrid).* ACS, *The Camellia Journal*, Sept. 2010, p.10; A cross of *C.flava* x *C.japonica*, originated by Dr Clifford Parks, and propagated by Camellia Forest Nursery, N.C., USA. Light yellow, medium size, rose form double. SCCS, *Supplementary List*, 2011; Narrow, light green leaves, with long leaf tips.

Somailoff. Franchetti, 1855, *Collezione di Camelie*, p.58. Orthographic error for 'Samailoff', abbreviation for **Contessa Samailoff .**

Somarazu. (Not Dyed), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki*, p.57, colour photo and description: White coloured, single, small size, cup-shaped with 5 broad, overlapping petals and a solid column of stamens of irregular length, yellow anthers, light yellow filaments. Leaves broad-ovate, glossy, deep green, serrate margins, acute apices. See colour photo, p.18, Yokoyama & Kirino,1989, *Nihon no Chinka.* Originated in Chûbu area, Japan. A seedling of **Shûfûraku** x **Hôgetsu.** Named and released by Minoru Satô in 1961.

Somayoff. Angelo Longone, 1891, Catalogue. Orthographic error for **Contessa Samailoff.**

Somechiyo. (Personal Name), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.85, colour photo, p.226: Fuchsine pink, veined deeper, large 5 petalled single with broad, rounded, overlapping petals, opening almost flat, a central stamen cylinder with small yellow anthers and light cream filaments. Originated in Chûbu area, Japan.

Somefude. (Painting Brush), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.280, colour photo & description: Small size, pink, becoming paler towards the centre, single with 6-7 rounded petals of irregular length, opening wide cup-shaped, and a short, wide, central stamen group with yellow anthers. Leaves mid-green, elliptic, apices tapering caudate, margins serrulate. Blooms mid-season to late. Originated in Izu Ohshima, Japan. A seedling of **Tarôkaja** x **Nukifude.** Named and released by Takeo Ogawa in 1979.

Somegawa. Different reading for **Somekawa.**

Someginu. (Dyed Clothes), *(C.sasanqua)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.46; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.36: Large size, white, merging to pink at petal base, single. Blooms mid-season. Originated in Tokyo Prefecture, Japan.

Someginu. (Dyed Clothes). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.151 with colour photo; English translation p.104. Small, vermilion graduating to white at centre, tubular single, cylindrical stamen cluster. Flowers mid-season to late. Leaves elliptic, medium size, flat. Upright, vigorous growth. A chance seedling, named and released by Totsurô Nakamura in 1994. From Tokyo.

Someisan. (Somei Mountain), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Deep red, large size, thick petals. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77. Originated in Japan. (Believed extinct.)

Somekawa. (Name of Kabuki Character), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Large size, white ground with pink speckles. Originated in Japan. (Believed extinct.)

Somekawa. (Name of Kabuki Character), *(C.japonica)*, Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* Medium sized double, white ground with pink spots; early flowering. Originated in Japan. (Believed extinct.)

Somekawa. (Name of Kabuki Character), *(C.japonica)*, Itô, Ko'emon, 1879, *Chinkashû:* Formal double. Light pink, spotted and striped deeper pink, medium size. Yokohama Gardeners'Association Nursery Catalogue, 1891. p.8: White with carmine striped. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.45, p.84; Tuyama, 1968, *Camellias of Japan*, pl.391, p.199, description, p.206: Leaves ovate-oblong to oblong-elliptic, dark green, a little plicate along the midrib, venation lightly impressed, margins obscurely crenate, petioles more or less hairy. Flowers complete double, pink, narrowly and densely striped or spotted dark red, (Cardinal red 82/3). Late flowering. Sports to **Haku-otome.** See: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.439, p.356; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.401. Originated in Kantô area, Japan. Somekawa is the family name of a famous actor of the Edo period. Different reading: 'Somegawa'. Sports: Sumizome, Somekawa Rosea. For colour photo see, Seibundô Shinkôsha, 1979, *Senchinshû*, pp.85, 220. In America this cultivar name has been erroneously confused with **Eureka Variegated** and **Mrs Confer.** Synonym: 'Somekawa Variegated'. Resembles 'Kikusarasa'.

Somekawa Rosea. *(C.japonica)*, Hazlewood Nursery Catalogue, 1945, p.14, as 'Somegawa Rosea': Rose-pink sport of **Somekawa.** Originated at Hazlewood Nurseries, Epping, N.S.W., Australia.

Somekawa Variegated. Domoto Nursery Catalogue, 1935. Synonym for **Somekawa.** This name was also used erroneously in America for **Eureka Variegated** and **Uncle Sam Variegated.**

Somekawa Variegata. McIlhenny Catalogue, 1941, p.14 as 'Somegawa Variegata'. Orthographic error for 'Somekawa Variegated', synonym for **Somekawa.**

Someka-no-ko. (Spotted Fawn), *(C.japonica)*, Katayama, 1960, *Tsubaki Ochabana:* Medium sized, red, anemone form single with many petaloids, with white stripes. Blooms mid-season. Slow growing habit. See colour photo, p.356, Yokoyama & Kirino, 1989, *Nihon no Chinka* as 'Somekanoko'. Originated in Ôsaka, Japan.

Somekô. (obscure), *(C.japonica)*, Uekiya Seijirô, 1874, *Tsubaki*, *Hyakuro no Zu*, vol.1, No.7: Medium size single red with colour fading to white at the centre. Synonym: 'Somekoma'. See: Kyôto Engei Kurabu, 1975, *Kyôto Engei*, No.73, p.21. Originated in Japan. (Believed extinct.)

Somekoma. Uekiya, Seigorô, 1874, *Tsubaki*, *Hyakuro no Zu*, vol.2, No.7: Medium, single, red fading to white at the centre. Synonym for **Somekô.** Originated in Japan. (Believed extinct.)

Somekosode. (Dyed Small Sleeve), *(C.japonica)*, Itô, Ihei, 1710, *Zôho Chikinshô*, vol.11, #5; Itô, Jukyû, 1739, *Honzô Hanamaki'e:* The corolla is variegated wih pure red on light coloured ground. A three fold flower with good shape. The stamens resemble a bamboo whisk. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Double with 5-6 tiers of petals, white ground with pink spots, early flowering, good shape. Resembles 'Oki-no-nami'. See: JCS., 1983, *Tsubaki*, No.22, p. 134; ibid, 1969, No.7, p.27. Originated in Japan. (Believed extinct)

Somerby. Duncan & Davies Nursery Catalogue, 1964. Orthographic error for **Somersby.**

Somersby. *(C.japonica)*, Camellia Grove Nursery Catalogue, 1944: Ruby red, edged deeper red. Medium, rose form double to peony form. Blooms mid-season. Originated by E.G. Water-house, Gordon, N.S.W, Australia. For colour photos see front cover, *New Zealand Camellia Bulletin*, 1963, vol.III, No.4 and pl.136, p.66, *Encyclopedia of Camellias in Colour*, vol.II, 1978.

Somerset. *(C.hiemalis)*, *New Zealand Camellia Bulletin*, 1984, vol.XIII, No.6, p.24, Reg. No.214: A chance seedling of the *C.hiemalis* **Kanjiro;** originated by H.J. Colbert, New Plymouth, New Zealand, that first flowered 1965. It has rapid, open, upright growth with light green leaves, 6 cm x 3.5cm. The deep pink, semi-double flowers have a silvery cast, are 8 cm across x 3 cm deep with 9 petals, creamy filaments and gold anthers. Flowers early to mid-season.

Something Beautiful. *(C.japonica)*, *American Camellia Yearbook*, 1983, p.165, Reg. No.1900: A miniature, pale pink with a burgundy edge, formal double *C.japonica* chance seedling; originated by Edwin & June Atkins, Shalimar, Florida, USA. The 8 year old seedling first bloomed 1979. Average flower size, 5 cm across x 3.8 cm deep with 80-85 petals. Plant growth is upright, dense and rapid with dark green leaves, 7.5 cm x 4.5 cm. Chinese synonym: 'Fanli'.

Something Special. *(C.sasanqua)*, Davidsons Nursery Catalogue, 1985 as 'Somethings Special': Large, single, white with a pink border and yellow stamens, Originated by Pat Goonan, Sydney, N.SW, Australia. Orthographic error: 'Somethings Special'.

Someya-no-teishu. (Owner of Dyer's Shop), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Red, medium sized, double with white and pink petaloids. In section on camellias which sport various coloured blooms. Originated in Japan. (Believed extinct.) Synonym: 'Tonda-monogurui'.

Somma Campagna. *(C.japonica)*, Burnier Catalogue, 1855-1856: Vivid rose, tinted at the centre with a few white lines on the outer petals; small flower, well imbricated. Originated in Italy by Franchetti, Florence. Franchetti, 1855, *Collezione di Camelie*, p.58 as 'Somma Campagnia': Vivid pink, paler at the centre with white streaks on outer petals. Small size, fully imbricated flower. Note: 'Somma Campagna' is correct orthography for 'Beautiful Country'. Orthographic variants: 'Somma Campagne', 'Somma Campagnia' 'Sommacampagna'. Chinese synonym 'Sama'.

Somma Campagne. Ambroise Verschaffelt, 1857, Catalogue, No.63, p.27. Orthographic error for **Somma Campagna.**

Somma Campagnia. Franchetti, 1855, *Collezione di Camelie*, p.58. Orthographic error for **Somma Campagna.**

Sommacampagna. Hillebrand, *Antiche Camelie del Lago Maggiore*, 2003, p.337 with colour photo; Orthographic variant for **Somma Campagna.**

Sommelliana. van Houtte Catalogue, 1842, 952. Synonym for **Emmeliana.**

Somnabula. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Sonnambula', synonym for **La Sonnambula.**

Somnambula. Guichard fils Nursery Catalogue, 1894. Orthographic variant for 'Sonnambula', synonym for **La Sonnambula.**

Somnambula (La). van Houtte Catalogue, 1872-1873, 144:367. Orthographic variant for **La Sonnambula.**

Son Hackney. *(C.japonica)*, Cannon, 1963, ACS., *The Camellia Journal*, vol.18, No.1, back cover. No description. SCCS, 1964, *Camellia Nomenclature*, p.115: Blush pink. Large, semi-double to loose peony form with twisted petals. Originated in USA.

Son Patin. *(C.japonica)*, Gentry, 1970, ACS., *The Camellia Journal*, vol.25, No.4. No description. Originated in USA. No valid listing located.

Sonata. *(C.japonica)*, *American Camellia Yearbook*, 1955, p.341, Reg. No.223: A 9 year old seedling of **Pink Star** x 'Marquis d'Exeter', (**Marquis of Exeter**); originated by Wm. E. Schmidt Nurseries, Palo Alto, California, USA. First flowered 1950. Plant growth is upright but pendulous. The glowing, rose-pink, large flowers with numerous petals are complete double, irregular, similar to Professor Sargent. Blooms mid-season.

Sonata-no-mine. (Yonder Peak), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Pink, large, single, striped white, one line across a petal, occasionally dotted white. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.107. (Believed extinct.)

Soncholei. Lindo Nursery Catalogue, 1940. Orthographic error for **Soucholei.**

Song of Paris. *(C.japonica)*, Goertz, 1970, *American Camellia Yearbook*, p.24: Clear, warm pink, rose form double with inner petals cupped and pointed. Blooms mid-season to late. Originated at McCaskill Gardens, Pasadena, California, USA.

Song Bird. SCCS., 1942, *Classification of Camellias*, p.4. Synonym for **Biho.**

Songbird. *(C.japonica)*, Lindo Nursery Catalogue, 1944-1945. White flecked pink. Large, formal, imbricated double. Vigorous, compact, upright growth. Late blooming. Originated in USA. According to Olrich, 1958, this camellia was named by E.H. Carter because the owner of the plant was named 'Vogelsang', German for 'Songbird'.

Songchunqui. (Farewell to Spring), *(C.reticulata)*, Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.17: Crimson, mid-season. Originated at Tengchong. Feng et al., 1986, *Yunnan Camellias of China*, p.74, colour photo and description: Leaves oblong to elliptic, apices acuminate to long-acuminate, bases cuneate, 8-10 cm long x 3.5-5.5 cm wide. Flowers pink (RHS.CC.57C), diameter about 11 cm. Petals 14-17, folded over. Stamens numerous, divided into groups or undivided, placed among petals in the flower centre. Pistils well developed or rudimentary. Mid-season flowering. This cultivar was selected from an open pollinated plant of *C.reticulata* f. *simplex* in Tengchong. Synonyms: 'Farewell to Spring', 'Late Spring'. Different reading: 'Sung-ch'un-kuei'.

Songdasi. Gao, Jiyin, 1993, *The Observations from the Camellia World*, No.501, p.64. Chinese synonym for the New Zealand *C.hybrid* **Souza's Pavlova.**

Songhuapian. (Pine Cone Scales), *(C.japonica)*, Shanghai Botanic Garden List, 1985. Savige, 1986, *International Camellia Journal*, No.18, p.111: A rose form double of the faintest pink blush, opening petals layered and apart like an opened pine cone. Petals narrow-oval, cleft, opening to show a few yellow stamens. Leaves, small, dull dark green, elliptic, acuminate.

Songshang Yanzhi. (Pine Rouge), *(C.japonica)*, Waterhouse, 1965, *International Camellia Journal*, vol.2, p.27 as 'Sonshanyenchi': Spreading growth, leaves crenate, green, 7.4 cm x 3 cm. Flowers, 11.2cm across, 5 rows of irregular petals, white and pink. Flowers mid-season. Synonym 'Pine Rouge'. Different reading: 'Sung-shang Yen-chih'.

Songyanghong. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.86. (Songyang's Red). Synonym for **Yuanyang Fengguan.**

Songzi. (Pine Cone), *(C.japonica)*, Wang & Yü, 1981, *Shancha Hua:* Red, rose form double, opening with petals separated and a small group of yellow stamens. Originated in China. Synonym: 'Xiaosongzi'. See colour photo, [p.137] Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.58 as 'Xiaosongzi'.

Songzi. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.66. Chinese synonym for **Matsukasa.**

Songzike. (Pine Cone Shell), *(C.reticulata)*, Yü & Feng, 1958, *Yunnan Shanchahua Tuzhi.* Feng et al., 1986, *Yunnan Camellias of China*, p.88, colour pl. and description: Leaves elliptic to ovate-elliptic, apices short pointed or obtusely rounded, bases obtusely rounded or broad-cuneate, 6.5-7.5 cm. long x 3.5-4.5 cm wide. Flowers rose-red (RHS.CC.53C), diameter 8-10 cm. Petals about 30 in 5-6 whorls, regularly imbricate. Stamens about 31. Pistil mostly rudimentary, flattened. The leaves of this cultivar are very similar to **Juban** except that they have spots. The flower form is similar to **Songzilin** but with fewer petals and smaller flowers. Blooms mid-season to late. It originated in Dali, Yunnan, China. Different readings: 'Sungtzuko', 'Sungtzeke', 'Sung-tzu-k'o'. Synonyms: 'Pine Cone Shell', 'Pine Nut Shell', 'Pine Shell'. See colour photo, p.165, Macoboy, 1981, *The Colour Dictionary of Camellias.*

Songzilin. (Pine Cone Scales), *(C.reticulata)*, Fang, 1930, *Diannan Chahua Xioazhi:* The colour is light red and the petals are like a pine cone opening its scales. Feng et al., 1986, *Yunnan Camellias of China*, p.83, colour photo and description: Leaves flat, nearly ovate or orbicular, margins revolute, apices obtusely rounded or acute, bases long-cuneate or obtusely rounded, 6-8 cm long x 3.6-4.8 cm, wide. Flowers deep pink (RHS.CC.53D), diameter, 10-13 cm. Petals about 48 in 9-10 whorls, obovate, becoming gradually smaller from outer to inner whorls. Stamens mostly petaloid, very few remaining rudimentary. Pistil rudimentary, flattened. This is a fully double cultivar with flat, dense petals which are easily deciduous and resemble the scales of a pine cone when first open, hence the name. Blooms mid-season. There was an old tree of this cultivar at the Taihua Temple in the Western Hills of Kunming. It was said to have been planted by Jianwen, an Emperor of the Ming Dynasty. The tree died in 1962. Another tree at the Panglong temple of Jinning County has a height of more than 10 meters and a diameter of 52 cm. This tree was planted in the Yuan Dynasty, (1347). Synonyms: 'Robert Fortune', 'Pagoda', 'Pine Cone', 'Pine Cone Scales', 'Flore-Plena', 'Dobrada'. Probably first reached England in 1824 as part of a collection of plants by Parks in 1824. Also imported by Robert Fortune in 1844 as 'Reticulata Flore Pleno'. Different readings: 'Sungtzelin', 'Sung-tzu-lin'. See colour photos: *American Camellia Yearbook*, 1956, facing p.114; Front cover, *New Zealand Camellia Bulletin*, 1965, vol.IV, No.4 as 'Pagoda'. Received an RHS First Class Certificate in 1865 as 'Reticulata Flore Pleno'.

Sonju-in. (Sonju Temple), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.121, p.61, description, p.123: Leaves rather small, broadly elliptic to ovate-elliptic, acute at apex. Flowers semi-double, pink (Carmine rose 622/2-3), petals orbicular, widely expanded, notched and with poor stamens. Late flowering. Long cultivated in the garden of the Buddhist Temple Sonju-in, Ninnaji, Omuro, Ukyô-ku, Kyôto City, Japan.

Sonnambula. Del Lungo e Girardi, 1928, *Le Camelie*, p.109. Orthographic variant for **La Sonnambula.**

So-no-kimi. (Personal Name of Satsuma), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.368, colour photo & description: Large flower, red, peony form with a centre of small, erect, folded petals mixed with stamens. Leaves bright green, elliptic, apices acute, margins serrate. Blooms mid-season to late. Originated in Kagoshima Prefecture, Japan. Named and released

by Kagoshima Camellia Society in 1980. Red sport of **Hayato-no-mai.** Sport: **Satsuma-nishiki.** Satsuma is the old name of Kagoshima Prefecture.

Sonora. *(C.japonica)*, Riverbank Camellia Nursery Catalogue, 1949; ACS., 1951, *Quarterly*, 6(2):9: A seedling of unknown parentage, 13 years old; first flowered 1944. Originated by Riverbank Camellia Nursery, Riverbank, California, USA. Plant growth is average in density and rapid in rate with light green foliage. Flowers are complete double, imbricated. Colour Nilson rose, (2-1-2 Maerz & Paul Chart), 8-10 cm across. Flowers mid-season. Registration No.123 with the ACS.

Sonshanyenchi. Waterhouse, 1965, *International Camellia Journal*, pp.26, 27. Taiwanese reading for **Songshang Yanzhi.**

Sophia. *(C.japonica)*, Verschaffelt, 1853, *Nouvelle Iconographie*, Book IX, pl.II: Very large blooms, with large petals in the first row and a peony form centre, pink with white variegation. Named for the Queen of the Netherlands. Obtained as part of an unknown breeder's collection in Belgium by Glym, Utrecht, Netherlands. Blooms midseason. Habit of growth and colour of flower similar to **Elegans,** but flower more cup-shaped with lesser petals. Synonyms: 'Sophia No.2, Longview', 'Sophie Glym'.

Sophia. Oudin, Lisieux Catalogue, 1844, p. 13: Very large flower. Vivid red. Orthographic variant for **Sophie.**

Sophia (Rubel). SCCS., 1945, *Camellias*, p.16. Synonym for **Sophie.**

Sophia Santarelli. *(C.japonica)*, Auguste van Geert Nursery Catalogue, No.76, 1878-1879, p.76: A new colour for camellias. Centre yellowish-orange fading to white, pink edges and all blotched orange. Originated in Italy. Orthographic variant: 'Sofia Santarelli'.

Sophia Ziurine. Peer, 1956, *American Camellia Yearbook.* Orthographic error for **Sophia Zizurin.**

Sophia Zizuren. *(C.japonica)*, Jean Vervaene fils, 1864, Price List, No.1, p.8. Jean Verschaffelt Catalogue, 1872-1873 as 'Sophia Zizurin'. No description. Originated in Belgium. (Believed extinct. Orthographic error: 'Sophia Zuirine'.

Sophiana. *(C.japonica)*, Poiteau, 1835, *Annales de la Société d'Horticulture de Paris*, 16:212-214; Berlèse, 1837, *Monographie*, ed.1, pp.88, 118, 128: Leaves oval, slightly acuminate, deeply serrate, green; bud large, conical; Flower cherry-red, 8.5 cm across, 15-20 petals, broad, well imbricated, reflexed towards the centre, convex in the middle, concave a the base; petals of the centre disposed like a lily; filaments in 5 fascicles. Originated from seed by Mr Mathieu of Paris, France and named by Mr Poiteau.

Sophie. *(C.japonica)*, Berlèse, 1840, *Monographie*, ed.2, p.172: Flower brilliant cherry-red, regular, over 11cm across; exterior petals in 4 rows, the largest 4.5 cm wide x 5 cm long, oval, sometimes round, notched; those of the interior are small, elongated, upright or curved, forming a central heart 3 cm across. Originated in Germany and introduced to France by M. Cachet, Angers. Synonyms: 'Sophia No.1', 'Sophii No.2'.

Sophie d'Italie. van Houtte Catalogue, 1845-1846, 23:51. Synonym for **Belle Sophie.**

Sophie Ducker. (C.hybrid). ACRS, *Camellia News*, 1998, No.147, p.13, Reg. No.508. Originated by Dr R. Withers, Donvale, Vic., Australia. Seed parent C.hybrid **Our Melissa,** pollen parent unknown. First flowered 1994. A bicolour elegans-form flower with 5 petals shading from pink (RHS.CC.64D) to white at base of petals, and a large boss of pale pink (RHS.CC.62D) petaloids in the centre. Size is 4.2 cm across x 2 cm deep. Flowers early with a short season on an open, bushy, slow growing plant. Leaves dark green, matt, keeled, elliptic, fine serrations, acuminate apex, 5 cm long x 2.5 cm wide. Petals notched and fluted. Occasional filaments.

Sophie Glym. van Houtte Catalogue, 1859, 77:68. Synonym for **Sophia.**

Sophie (Italie). van Houtte Catalogue, 1841, 7:19. Synonym for **Belle Sophie.**

Sophie L. Meakin. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.14, colour photo: Medium sized, deep pink, open, informal double seedling of **Sarasa.** Originated by Richard Dodd, Marshallville, Georgia, USA.

Sophie No.2. Longview, SCCS, 1942, The Classification of Camellias, p.4. Synonym for **Sophie**.

Sophie Strothers Meakin. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.16, colour photo: Medium sized red, informal double seedling of **Ville de Nantes.** Originated by Richard Dodd, Marshallville, Georgia, USA.

Sophocles. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.15, colour photo: Soft pink, semi-double, 11 cm across with petals slightly fluted and a short cluster of stamens. A seedling of **Victory White,** originated by Richard Dodd, Marshallville, Georgia, USA.

Sorin-an. (Sorin Hermitage), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.198, colour photo, p.199, description: Small size, deep, brilliant red, single, wide campanulate with 5 wide, long emarginate, overlapping petals and a central stamen column with white filaments and yellow anthers. Leaves bright mid-green, broad-elliptic, apices abrupt acute, margins serrate. Blooms very early to mid-season. A cultivar growing at a temple in Obama City, Fukui Prefecture, Japan. Named by Yoshizumi Tobiyama in 1978, released by Tokuji Ôoka.

Sorrioso di Amore. Bull, Wm. Nursery Catalogue, 1869, p.80. Orthographic error for **Sorriso di Amore.**

Sorriso di Amore. (*C.japonica*), van Houtte Catalogue, 1858, 72:24: The petals at the circumference are vivid pink with darker veins and nearly all lined with white lines; those at the centre are pale pink, streaked and suffused with white and imbricated. Originated in Italy. Orthographic error: 'Sorriosi di Amore', 'Sorisso de Amore'.

Sôryû. (Blue Dragon), *(C.reticulata* hyb.), ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.30: Medium size, white to white with red variegation, single. Late blooming. Originated in the Kyôto Prefecture, Japan from the cross, *C.japonica*, **Goshiki-chiritsubaki** x *C.reticulata* **Shizitou.** Originated by Katsuyoshi Yoshikawa, released in 1969.

Sosetsu. (Personal Name), *(C.sasanqua)*, Seibundô Shinkôsha, 1971, *Garden Life*, Dec. p.16: White. Higo sasanqua. Originated in the Kumamoto Prefecture, Japan.

Sôshi. Williams and Thompson, 1950, *American Camellia Yearbook*, p.41 as 'Zo-shi'. Synonym for **Sôshi-arai.**

Sôshi-arai. (Washed out Writing), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* See: JCS., 1969, *Tsubaki*, No.7, p.27: Very large size, double with 3-4 rows of petals, white ground with red spots. Itô, Ko'emon, 1879, *Chinkashû:* Double. Light pink, blotched and spotted reddish pink, large. Originated in Japan. Tuyama, 1968, *Camellias of Japan*, pl.355, p.180, description, p.195: Leaves narrowly ovate-elliptic, acuminate at the apex, remotely crenate-serrulate at the margin; Petioles glabrous. Flowers double, vase-shaped, heavily striped with deep red (Cardinal red 822/3) lines and dots. Petals tend to fall after flowering. Late flowering. Variegation of colour appears in the big, old trees of **Sôshi-arai.** Originated in Kantô area, Japan. 'Sôshi' = booklet; 'arai' = washing out a stain. The name **Sôshi-arai** is an abbreviation of Sôshi-arai-komachi, the title of a Yôkyoku drama. Synonyms: 'Sôshi-awase', 'Zozhi'. For colour photos & descriptions: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.10, p.24; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.305 & p.336; Katei Gahô, ed., 1984, *Chabana Koyomi, vol.1, Tsubaki*, p.62. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.84, 226. Yokoyama & Kirono, 1989, *Nihon no Chinka*, p.346 as 'Sôshiarai'. Different reading: 'Sohshiarai', 'Soushi-arai', 'Sôshi Arai'. Resembles **Nukifude, Ezo-nishiki.** Chinese synonym 'Caozhixi'.

Sôshi-awase. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No,10, p.163. Synonym for **Sôshi-arai.**

Sôshin-wabisuke. (Soshin's wabisuke) (*C,japonica*) from Saitama Pref. Published as the front cover of *Japan Camellia*, No.78, August 2005: A natural seedling of **Shimofusa-wabisuke**, clearly a hybrid with **Tama-no-ura,** growing next to the mother tree. Bloomed first in 1995, miniature, red widely bordered white, single. White filaments with degenerated anthers, slightly hairy ovary. Profuse blooming from late autumn to mid-season. Leaves waved like those of **Tama-no-ura.** Tree vigorous. Originated by Sôshin Hirai and named for himself.

Sôshisen. Sakata, T. & Co. Catalogue, 1938: Misstranslation of **Sôshi-arai.**

Soshô. (Simple Makeup), *(C.japonica)*, Funaki-en Catalogue, 1987-1988, p.8, No.136. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.130, colour photo & description: Medium size, pink fading to white in the centre, single with 6 broad, rounded petals, opening wide cup-shaped, with a central stamen column with white filaments, joined for their lower half, and yellow anthers. Mid-season to late blooming. Leaves bright green, elliptic, apices tapering acuminate, margins serrate. Originated in Ishikawa Prefecture, Japan. A chance seedling of unknown parentage, originated and released by Taku Shiota in 1985. Chinese synonym 'Suzhuang'.

Soshô-zakura. (Cherry as Simple Adornment), *(C.sasanqua)*, Fendig, 1953, *American Camellia Catalogue:* Pink. Single. Early blooming. Originated in Japan.

Sôshun. (Early Spring), Inazawa Nursery Co. Ltd. Catalogue, 1986-1987, p.12, C-23: Japanese reading for the Chinese *C.japonica*, **Zaochun.**

Sôshunfu. (Ode to Early Spring), (*C.rusticana*), Hagiya & Ishizawa, Kyôto Engei Kurabu *Tsubaki Tokushû*, No.9, 1968, p.60, illustration (I), p.V: Medium sized, open, peony form, clear dark pink with 16 outer petals and a tuft of 10 petaloids in the centre. Stamens about 100. Early flowering. Leaves wide-ovate. Collected at Nishi Kubiki-gun, Niigata Prefecture, Japan in 1960. Different reading: 'Sôsyunfu'. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.84, 226.

Sôshunka. (Fragrance of Early Spring), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.68, colour photo and description: Medium size, white, wide campanulate single with 3 large, rounded, emarginate petals and 2 small, irregular, outer petals. Stamens in a central cylinder with pale lemon filaments, joined for their lower third, and yellow anthers. Mid-season blooming profusely. Leaves dark green, slightly undulate, elliptic to obovate, apices acuminate, margins serrate. Originated in Chûbu area, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.149 with colour photo; English translation p.102. A chance seedling of **Shûfûraku.** Named and released by Minoru Satô in 1964.

Sôsyunfu. Different reading for **Sôshunfu.**

Sospiro. *(C.japonica)*, Medici Spada, 1858, *Delle Nuove Camellie che si vengono ottenendo dalle Semine Romane*, p.8: Small flower, outer petals rounded; those of the middle and centre somewhat acuminate, channelled and a little undulate, regularly imbricated, colour vivid rose in various graduations of stripes, or variations of the same with more intense colour. Originated in Italy by Delgrande.

Sosyô. Kurume Shibu colour poster illustration, 1997. Different reading for **Soshô.** See ICS Register, p.1748.

Sôtan. Satomi, 1956, *Camellia Varieties of Japan*, p.13. Synonym for **Kamo-honnami.** Note: There are three kinds of 'Sôtan'. i.e. 'Sôtan', synonym for **Kamohonnami; Sôtan (Katayama)** or 'Katayama-Sôtan', and **Sôtan** which was found at Jukô-in, Daitokuji, Kyôto.

Sôtan. (Personal Name). *(C.japonica)*, Kyôto Engei Kurabu, 1968, *Tsubaki Tokushû*, No.9, colour photo, (p.3), as 'Sôtan-tsubaki'; *Encyclopedia of Camellias in Colour*, 1972, vol.I, p.366: Flower white with a pale pink cast, single, small size, long, cup-shape, petals emarginate; stamens in a compact cylinder. Late flowering. Leaves compact, ovate, long. The original tree was in the precincts of the Jukô-in Temple, Daitokuji, Kyôto City, Japan. See colour photos & descriptions: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.84, 226; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.70. Synonym: 'Sôtan-tsubaki' from Kyôto Engei Kurabu, 1968, *Tsubaki Tokushû*, No.9.

Sôtan. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.70. Synonym for **Sôtan (Katayama).**

Sôtan (Kamohonnami). Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.163. Synonym for **Kamo-honnami.**

Sôtan (Katayama). (Katayama's Sôtan), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.84, lower RH, colour photo, p.226, description: Small, white, 5 petalled single; petals rounded, overlapping, opening cupshaped, slightly reflexed; stamens in a compact cylinder, anthers yellow, filaments white, joined lower third, blooms early to mid-season. Leaves ovate to broadovate, mid-green, apex acute, margins serrulate. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.28 as 'Katayama-sôtan', Originated in Kansai area, Japan. Selected from the wild in Daitokuji Temple, Kyôto City. Sôtan was Grand Master of the Tea Ceremony in the 16th Century.

Sôtan-tsubaki. Kyôto Engei Kurabu, Mar. 1968, *Tsubaki Tokushû*, No.8, (p.3). Synonym for **Sôtan.**

Sothern Charm. Tammia Nursery Catalogue, 1960, p.7. Orthographic error for **Southern Charm.**

Sotoori-hime. ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.30. Different reading for **Sotôrihime.**

Sotôrihime. (Princess in Ancient Japan), *(C.japonica x C.lutchuensis)*, Hagiya, 1986, *Studies on Interspecific Hybridization of Camellias*, No.2, colour pl.2, p.4, description, p.5: A seedling of Higo **Sakura-tsukasa** x *C.lutchuensis*, originated by Dr Kaoru Hagiya, Niigata University, Japan. Flower is light peach pink 10-11 petals, embracing, semi-double, 5-6 cm across, petals ovate, thick, stamens apricot-like, filaments white. Strong perfume. Blooms mid-season in the leaf axils. Leaves small, ovate, veins and serrations obscure. Pendant habit. See p.105, colour photo, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Different readings: 'Sodôrihime', 'Sotoorihime'. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.151 with colour photo; English translation p.103. Parentage is stated to be **Sakura-tsukasa** x *C.hiemalis.*

Soulangiana Plenissima (Italie). van Houtte Catalogue, 1841, 7:19. Synonym for **Soulangiana Nova.**

Sound of Music. *(C.japonica),* Redwood Empire Nursery Catalogue, 1974; *American Camellia Yearbook*, 1978, p.135, Reg. No.1478: A very large, light pink with some blending to darker pink, peony form to semi-double *C.japonica*, chance seedling that blooms mid-season to late. Originated by Clarence E. Jones, Elizabeth City, North Carolina. USA. The 18 year old seedling first bloomed 1964 and has 30-75 petals, 5-20 petaloids. yellow anthers, light yellow filaments. Average size, 14.5 cm across x 7.5 cm, deep. Plant growth is average, spreading and rapid with mid-green leaves, 10 cm long x 5 cm wide.

Soushi-arai. Different reading for **Sôshi-arai.**

South City. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.215: Pink touched with white. Originated in USA.

South Pacific. *(C.saluenensis x C.reticulata)*, *New Zealand Camellia Bulletin*, 1972, vol.VII, No.6, p.36, Reg. No.75: A seedling cross of *C.saluenensis x C.reticulata* **Buddha,** originated by Jack Clark, Auckland, New Zealand, that first flowered 1966 and has open. upright growth with dark green leaves. The flower is semi-double with 9 petals, China rose HCC.24/1, 16 cm across x 7.5 cm deep. Blooms mid-season.

South Port. *(C.reticulata), American Camellia Yearbook*, 1980. p.174, Reg. No.1668: A very large, deep red, semi-double *C.reticulata* hybrid (**Arch of Triumph** x ['Cornelian'(**Damanao**) x **Mrs D.W. Davis**]), early to late flowering; originated by Frank Pursel, Oakland, California, USA The 7 year old hybrid first bloomed 1977. Average flower size is 14.5 cm across x 7-8 cm deep with bright yellow anthers and high, centre rabbit ears. Plant growth is upright, average with dark green leaves, 12.5 cm x 8 cm.

South Seas. *(C.x williamsii), New Zealand Camellia Bulletin*, 1967, vol.V, No.2, p.9, Reg. No.31: A seedling of *C.saluenensis x C.japonica* **C.M. Wilson;** originated by Felix M. Jury, Waitara, New Zealand. The plant is upright, open with mid-green leaves, 9 cm long x 4 cm wide. Flowers semi-double with up to 15 petals and occasional petaloids. Size is 10 cm across x 4.5 cm deep, white flushed Rose Bengal (HCC.25/3). The shading becoming paler as the flower ages. The petals have waved margins, thick texture and anthers are gold. Blooms mid-season. Chinese synonym: 'Nanhai'.

Southeastern Flower Show. *(C.japonica).* ACS *Yearbook* 2011, p.145 with colour photo; Regn No.2811. Originated by Richard Dodd, Marshallville, Ga. USA, date unknown. Registered by the ACS, Fort Valley, Ga., and propagated by Tommy Alden, County Line Nursery, Byron, Ga. Very large flower is 13.3 cm diameter x 6.5 cm deep with 16 petals and 160 petaloids. Guard petals lay flat on each other. Medium pink (RHSCC 54A), semi-double to anemone form. About 200 stamens with yellow anthers and light yellow filaments inside the petaloids. Average, upright, open growth. Flowers early to late. Dark green leaves average 10 to 12.5 cm x 4.5 cm. Note; The flower pictured is pink with white variegation.

Southern Belle. *(C.japonica)*, Magnolia Gardens and Nursery Catalogue, 1942-1943: Light pink. Large, semi-double, late flowering. Upright growth. Originated by Magnolia Gardens, Charleston, South Carolina, USA.

Southern Charm. *(C.japonica)*, SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.86: Cream white. Very large semi-double to anemone form with stamens and petaloids mingling in the centre. Medium, upright growth. Originated in USA by Fisher. Synonym: 'Queen Juliana'. Orthographic error: 'Sothern Charm'.

Southern Cross. *(C.japonica)*, Camellia Grove Nursery Catalogue, 1951, Crimson Red. Medium large peony form. Upright growth. Blooms mid-season. Originated by Camellia Grove, St. Ives, N.S.W., Australia.

Souvenir de Beruard Litou. Haskins Nursery Catalogue, 1980. Orthographic error for **Souvenir de Bahuaud-Litou.**

Souvenir de Claude Brivet. *(C.hybrid).* Pépinières Thoby, Gaujacq, France, *Catalogue,* 2014. Their own seedling of *C.oleifera* **Jaune** x *C.sasanqua* **Crimson King**. Single flower, with varying mixture of pink and white on petals. Scented. Rapid, vigorous growth.

Souvenir de Col. Van Wasenhove. Abbot's Sunny Knoll Nursery Catalogue, 1950, p.6. Orthographic error for **Souvenir de Madame Colette Van Wassenhove.**

Souvenir de Colette Van Wassenhove. Fruitland Nursery Catalogue, 1949-1950. Abbreviation for Souvenir de **Madame Colette Van Wassenhove.**

Souvenir de Desio. *(C.japonica),* Verschaffelt, 1854, *Nouvelle Iconographie*, Book Xl, pl.IV: Originated in Italy. Blossoms of medium size, vivid cherry-red, belonging to the rose form class. Its rounded or oblong petals are somewhat irregular, with a few white stripes.

Souvenir de Emile Defresne. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.215. Orthographic variant for **Souvenir d'Emile Defresne.**

Souvenir de Ferdinand Favre. *(C.japonica),* ICS *Journal,* 2004, p.73 with colour photo, Reg. No.44: Originated in Carquefou, France, by M. Alfred LeMaire. A sport of **Roi des Belges,** having all petals finely fimbriated. First observed 1994, propagated 1995 with 100% stability. An upright shrub of medium growth rate. Long blooming period, mid-season to late. A red (RHS.CC.45D) formal double, 8-11 cm across x 4-5 cm deep. Named for Ferdinand Favre, 18-19th century politician, and the first person to introduce camellias to Nantes.

Souvenir de Frans van Damme. *(C.japonica),* de Bisschop Nursery Catalogue, 1935, p.8. as 'Souvenir de F. Van Damme'. No description. Originated in Belgium.

Souvenir de Francfort. *(C.japonica),* Verschaffelt, 1853, *Nouvelle Iconographie*, Book III, pl.III: A vivid cherry rose colouring, blossoms of the largest size, formed by oval petals, regularly imbricated, outspread, bilobate and an anemone shaped heart of small, compact petals. Originated in Germany by the Baron de Pronay. Orthographic variant: 'Souvenir de Frankfort'.

Souvenir de Frankfort. von Biedenfeld, 1856, *Practische Grundlehren der Cultur von Camellien...*, p.54. Orthographic variant for **Souvenir de Francfort.**

Souvenir de Gaston Allery. *(C.japonica),* Guichard Soeurs Nursery Catalogue, (ca.1924) as 'Sir. De Gaston Allery': A large, semi-double, salmon rose-pink, lined with white. Originated in France by Guichard Soeurs, Nantes. Abbreviations: 'Sir. de Gaston Allery', 'Souv.de Gaston Allery' .

Souvenir de Henri Guichard. Guichard fils Nursery Catalogue, 1908 as 'Sir. de Henri Guichard', synonym for **Hikarugenji.** Abbreviations: 'Sir. de Henri Guichard', 'Souv d'Henri Guichard', 'Souv. de Henri Guichard.'. Orthographic errors: 'Souv, de Henri Gouchard', 'Souv d'Henri Guichaud'.

Souvenir de Hubert Thoby. *(C.japonica),* Claude Thoby, 1993, *Camélias*, pp.13, 19, 51, colour plate p.4: Large size flower, formal double to rose form double, brilliant red to deep pink. Stamens mixed with petaloids. Originated by Dr Clifford Parks, USA. Introduced by Thoby Nurseries, Frnce, 1979.

Souvenir de Jean la Bihan. *(C.hybrid)* ACS Journal, Mar-May 2012, pp.13-14 with 2 colour photos. Originated by Fanch le Moal, Guingamp, France, in 2008. A seedling of **Mary Christian.** The 2 photos vary. One has a few petaloids mixed with a smallish centre of stamens. The other shows an extremely wide centre of stamens surrounded by more regularly placed petals.

Souvenir de la Beaujoire. *(C.japonica),* Guichard Soeurs Nursery Catalogue, 1973, No.460: Originated in France by Guervel. The flower is semi-double, white shaded pink, lightly stippled and edged white with streaks, more or less large, of bright pink to red.

Souvenir de la Somaglia. *(C.japonica)*, Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.15. No description. Stefano Pagliai Catalogue, 1867: Vivid carmine, veined deeper, Imbricated. Originated in Italy by Gianetto.

Souvenir de Litou. Sander & fils Nursery Catalogue, 1928. Orthographic error for **Souvenir de Bahuaud-Litou.**

Souvenir de Louis Sander. *(C.japonica)*, Treseder Special List, 1964-1965: A large, bright rose, semi-double. Originated in Belgium. Abbreviation: 'Souv. de Louis Sanders'. Orthographic error: 'Souvenir de Louis Sanders.

Souvenir de Louis Sanders. Thoby et al., 1988, *Tsubaki - A Propos de Camellia*, p.48. Orthographic error for **Souvenir de Louis Sander.**

Souvenir de Madame Colette van Wassenhove. *(C.japonica)*, Guichard & Fils Nursery Catalogue, 1894 as 'Souvenir. de Mme. Colette van Wassenhove': Cream white. Large with a pompom in the centre. Hertrich, 1955, *Camellias in the Huntington Garden*, vol.II. p.308, 308 with illustration as 'Souv. de Mme Colette van Wassenhove': Flower, incomplete double to irregular double, anemone to peony form, self white, up to 10 cm across x 4 cm. deep. Petals, 12-15 base segments, broad orbicular, to 5 cm long x 4.5 cm broad with deep apical notching, recurved to undulate, firm texture. Centre of flower, incomplete petals and petaloids, large and small, wavy and folded, intermingled closely with stamens, white filaments, dark anthers. Buds near globular. Leaves broad-elliptic, 7.5-8.5 cm long x 4.5-5 cm. wide, dark glossy green, flexible, very shallow and broad serration, Apices short pointed to abrupt. Mid-season to late flowering. Orthographic errors: 'Souvenir de Col. Van Wasenhove', 'Souv. de Mme. Coletti', 'Souv. Von Warrenhaven', 'Madame Coletti Van Wassenhove'. Abbreviations: 'Souv. de Mme Colette van Wassenhove', 'Souvenir de Mme Colette van Wassenhove', 'Colette van Wassenhove', 'Souvenir de Col. Van Wassenhove'.

Souvenir de Madame Coletti. Peer, 1956, *American Camellia Yearbook*, p.56 as 'Souv. de Mme. Coletti'. Abbreviation for **Souvenir de Madame Colette van Wassenhove.**

Souvenir de Madame Francillon. Waterers Nursery Catalogue, 1930-1931, as 'Souv. de Mme. Francillon', p.35. Synonym for **Monsieur Faucillon.**

Souvenir de Madame Faucillon. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivar from Nursery Catalogues*, p.215. Synonym for **Monsieur Faucillon.**

Souvenir de Madame Tally. *(C.japonica)*, Hearn Nursery Catalogue, 1941 'Souv. de Mme. Tally': Soft pink blotched white. Large formal double. Originated in USA by Clarence S. Hearn, Arcadia, California.

Souvenir de mon Père. *(C.japonica)*, Pépinières Thoby, Carquefou, France, Plant List, 2003, p.19; No description.

Souvenir de Philippe. *(C.japonica)*, Scarlatti Catalogue, 1888 as 'Souvenir de Phylippe': Flower very large, imbricated, petals round, bright red with large splashes and spots of white. Originated in Italy.

Souvenir de Phylippe. Scarlatti Catalogue, 1888. Orthographic variant for **Souvenir de Philippe.**

Souvenir de Vervaene. *(C.japonica)*, James Veitch Nursery Catalogue, 1914, p.28. No description. Originated in Belgium. (Believed extinct.)

Souvenir du Prince Albert. Paul, 1889, *Gardeners' Chronicle*, p.427. Synonym for **Albertii.**

Souvenir Madam Cachet. Vanderbilt, 1940, *Camellia Research*, p.7. Synonym for **Madame Cachet.**

Souvenir Nova. *(C.japonica)*, Guilfoyle, 1876, *Melbourne Botanic Gardens List.* No description. (Believed extinct.)

Souvenir of Anne Marie Hovey ... *(C.japonica)*, Hovey, 1883, *The Garden*, 24:249-250. An exquisite double white flower of medium size, with perfectly rounded petals, broad and incurved, forming, when fully expanded, a perfect cup-shaped flower. First flowered 1850. Originated by C.M. Hovey, Boston, Massachusetts, USA.

Souvenir Vendéen. *(C.japonica)*, Claude Thoby, 1993, *Camélias*, pp.13, 19, 20, 51: Flowers semi-luminous, orange-red. Beautiful long stamens, sometimes mixed with petals. Blooms mid-season to late. Originated in France by Claude Thoby's Nurseries, Carquefou, France.

Soyokage. Cannon, 1974, ACS., *The Camellia Journal*, vol.29. Corruption of the Japanese name Soyokaze.

Soyokaze. (Zephyr), (Higo), Murayama, 1961, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.2, p.10; Hiratsuka, 1964, *Higo Camellia*, p.14 & back p.12: Light pink, single, 8-9 cm across, of 7-8 petals with a large, spreading burst of short, white stamens. See colour photo: pl.54, p.55, *Encyclopedia of Camellias in Colour*, vol.I, 1972 & description p.299: Mid-season blooming. Originated in Kumamoto Prefecture, Japan. Different readings: 'Bifû', 'Bihû'. Seibundô Shinkôsha, 1979, *Senchinshû*, p.226.

Soyokaze. (Zephyr), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû*, p.226: Peach pink coloured, medium size, peony form with 15 outer petals and a centre of small, erect petals, petaloids and

stamens intermixed. Filaments yellow. Mid-season flowering. Leaves medium sized, ovate, coarsely serrate, undulate; petioles hirsute. Plant habit upright and vigorous. Of snow camellia lineage, originated in Arai City, Niigata Prefecture, Japan.

Soyokaze. (Zephyr). *(C.hybrid), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.152 with an incorrect colour photo, English translation p.152. Miniature, pink, trumpet shaped single, thick and rounded petals, cylindrical stamen cluster. Flowers mid-season. Leaves narrowly elliptic, miniature, recurved. Spreading growth, weeping branches. A cross between a *C.x williamsii* and *C.hybrid* **Wirlinga Belle.** Originated and released by Kaoru Hagiya. From Niigata Prefecture.

Spada. *(C.japonica),* Le Texnier, 1911, *Le camellia, essais sur 1'histoire de quelques fleurs d'ornement:* Grown in 1854 by Francois Mariani of Milan, Italy. No description. (Believed extinct.)

Spafortiana. Dauvesse Nursery Catalogue, 1855-1856. Orthographic error for **Spofforthiana.**

Spanish Dancer. (*C.reticulata* hybrid). C. Aust, *Camellia News,* No.182, Autumn 2010, p.7 with colour photo; Regn No.604-N; Seedling of **Flower Girl,** originated by Bob Cherry, Kulnura, NSW, Australia, grown and released in 1998 by Camellia Grove Nursery, St. Ives, NSW. Lavender pink, informal double flowers , about 11 cm diameter. Leaves about 9 cm x 5 cm. Vigorous, upright growth. Flowers early to late..

Spanish Dancer. (*C.reticulata* hybrid). *New Zealand Camellia Bulletin,* Nov. 2008, p.18, Regn. No.483. A cross of *C.sasanqua* x *C.reticulata* hybrid **Gael's Dream** x *C.japonica* **Takanini,** first flowered in 2004. Name later changed to **Tarantella** because of the earlier published, but later registered, Australian cultivar.

Spanked Baby. *(C..hybrid),* James, 1958, NCCS., *Bulletin,* 12(1):13: Baby pink. Medium sized semi-double. Slow, spreading growth, blooms early to mid-season. A seedling of **Sylvia May** originated by V. James, California, USA.

Spariglio. *(C.japonica),* Verschaffelt, 1857, *Nouvelle Iconographie,* Book X, pl.IV: Blossoms of virginal pink, larger than the average, formed of regularly imbricated, oval petals. Originated in Italy by Luigi & Co.

Sparkler. *(C.reticulata* hybr.), *American Camellia Yearbook,* 1985, p.185, Reg. No.1979: A very large, light, irridescent pink, peony form *C.reticulata* hybrid seedling of Pink Sparkle, mid-season flowering; originated by Houghton S. Hall, San Anselmo, California, USA. The 11 year old seedling first bloomed 1979. Average flower size is 15 cm across x 10 cm. deep. Plant growth is open, upright and rapid with dark green leaves, 12.5 cm. x 4.5 cm.

Sparkling Burgundy. *(C.hiemalis),* American Association of Nurserymen, 1957, p.37, Plant Patent No.1539, granted to Rene Casadaban, Abita Springs, Louisiana, USA, originator. *American Camellia Yearbook,* 1959, Reg. No. 424, colour pl. 'F', p.178: A 9 year old seedling of **Hinode-gumo** x **Shôwa-no-sakae** with an upright, compact habit and rapid growth. The dark green leaves are 5 cm. x 2 cm. The flower, Rose Bengal in colour (Pl.2 5/1 Wilson), average 8-10 cm across x 5 cm deep with aproximately 39 petals, intermingled with petaloids and stamens. Early blooming. See colour photo, back cover, ACRS., 1982, *Camellia News,* No.83. Selected as the 'All-America' Camellia for 1960.

Spear's Special. Gerbing's Azalea Garden Catalogue, 1958. Orthographic error for Sears Special.

Special Delivery. *(C.japonica)*, *American Camellia Yearbook*, 1962-1963, p.225, Reg. No.656: A 9 year old chance seedling that first flowered 1961; originated by D. Bernard Brockman, Greer, South Carolina, USA. Plant growth is upright, open and rapid with dark green leaves, 10 cm x 3.7 cm. The flower is 13-15 cm across x 10 cm deep, semi-double, white with golden stamens, interspersed with clusters of petaloids, surrounding 3-7 rabbit ears. The flower has 30 or more petals and 80 petaloids. Fragrant. Blooms mid-season.

Special Pink. Nobelius Nursery Catalogue, 1939, p.36. Abbreviation for sasanqua 'Chandler's Special Pink', synonym for **Fukuzutsumi.**

Special Tribute. *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue:* Pink. Complete double. Late. SCCS, 1954, *The Camellia*. *Its Culture and Nomenclature*, p.81: Salmon pink. Large, formal to rose form double. Medium, open growth. Blooms mid-season to late. Originated in USA by Harvey Short, Ramona, California. See illust. p.235, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol..III.

Specie della China. Burdin Maggiore & Co. Catalogue, 1862. Synonym for *Camellia japonica.*

Speciosa. Booth, 1830, Horticultural Society of London. *Transactions* 7:554. Loddiges Catalogue, 1830, p.22; Synonym for Rawesiana. In the USA it was erroneously equated with **Professor Charles S. Sargent Variegated**. In England the name was also used for the species *C.saluenensis* and *C.pitardii.* See pp.183, 185, 225, 229, Sealy, 1958, *A Revision of the Genus Camellia.*

Speciosa. *(C.japonica),* J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Cactus, Camelien...,* p.220. No description. James Burnett ed., 1837, *The Magazine of Botany and Gardening...*, vol.3, new series, p.153: In addition to 'Speciosa' syn. 'Rawesiana', **Rossii** of France and 'Rawes Variegated Camellia' there is also listed a **Speciosa** in French catalogues. A large, dark crimson, single camellia; a good variety for seed, and not inferior in beauty to any of the double sort. (Believed extinct). Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl.64. The flower measures 7.5 cm. The 4 exterior rows of petals are overlapping, broad, rounded convex, bent outward and indented. Centre petals are small, tight, shredded and in a globule Colour draws on red-cherry.

Speciosa Alba. *(C.japonica),* Oudin, Lisieux Nursery Catalogue, 1845-1846. p.48: From Guicchardini. Very large, full flowers, superb. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France,* vol.40, p.77: Peony form, 10 cm across, white, rarely splashed pink. Originated in Italy by Guicchardini. Synonym: 'Speciosa Alba de Guicchardini'.

Speciosa Alba de Guicciardini. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.122. Synonym for **Speciosa Alba.**

Speciosa Atrorubens. *(C.japonica),* Ridolfi, 1843, *Catalogue of Camellias Cultivated at Bibbiani.* No description. Originated in Italy by Ridolfi. (Believed extinct).

Speciosa Rosea. *(C.japonica),* Harrison ed., 1838, *The Floricultural Cabinet,* vol.6, p.149: Double. Fine rose. Originated in England.

Speciosa Simple. Makoy Nursery Catalogue, 1838. Synonym for **Staminea Simplex.**

Speciosa Vera. Berlèse, 1837, *Monographie,* ed.1 , pp.99, 100, 103. Synonym for **Rawesiana**.

Speciosima. Rasmussen's Catalogue, 1922, p.13. Orthographic error for **Speciosissima.**

Speciosissima. *(C.japonica),* Jacquim, Paris Nursery Catalogue, 1845, p.14. No description. Originated in France. (Believed extinct.)

Speciosissima. *(C.japonica),* Shepherd & Co. Nursery Catalogue, 1862: A large and well-shaped, free-flowering variety, raised by ourselves. Can be confidently recommended as the most showy camellia at present in cultivation. Flowers brilliant scarlet, paeony shaped, and unusually elevated in the centre. The variety is robust and a free grower, blooms early to mid-season. Waterhouse, 1952, *Camellia Trail,* p.29, description, pl.XXI: With two to three rows of outer petals, flat or curving downwards and a waratah-like central cushion of small, incurving petaloids, colour carmine rose (RHS.Chart 21/1). In its early stages the bloom resembles a large **Anemoniflora**; but later the central cushion becomes much elevated and a concave, crater-like cavity forms in the middle. A robust and erect-growing shrub with large characteristic foliage. It blooms early and continues in flower for a long period. Synonyms: 'Shepherd's Red', 'Pink Waratah', 'Arnenoniflora Rosea'. Orthographic errors: 'Speciossima', 'Speciosima'. There is a variegated form for which a separate name has not been given.

Speciossima. Jessep, A.W., 1948, *Plants in the Melbourne Botanic Gardens,* p.4. Orthographic error for **Speciosissima.**

Speckled Flower. Waterhouse, 1970, ACRS., *Camellia News,* No.40, p.9. Synonym for 'Quequehua' as 'Chueh Chueh Hua'.

Speckles. Valley Garden Supplies Catalogue, 1946-1947. Synonym for **Finlandia Variegated** as 'Margaret Jack'.

Spectabile. *(C.japonica),* Hogg Nursery Catalogue, 1834. No description. Originated by Thomas Hogg, New York, USA. Renamed 'Spectabilis' by Hogg, 1836, in *Magazine of Horticulture,* 2:59.

No description. Van Houtte Catalogue, 1844-1845, 18:19 as 'Spectabilis' (Hogg): Splendid, globeshaped camellia, very full, milky white superbly splotched with pink. Synonyms: 'Spectabilis d'Amerique', 'Hogg's Spectabilis'. Orthographic error: 'Hoog's Spectabilis'. Note: This name is preferred to prevent confusion with the Berlèse and Loddige **Spectabilis.**

Spectabilis. *(C.japonica)*, Berlèse, 1837, *Monographie*, ed.1, pp.63, 70, 87, 126: Large double, 8 cm flower, of medium, vivid pink; exterior petals, regularly arranged in 3 rows, are wide and sometimes spotted with white; the centre petals are smaller, oval and ruffled and often streaked with white. Verschaffelt, 1856, *Nouvelle Iconographie*, Book V, pl.II. Grown from seed in Paris and also known as 'Celsiana' and 'Lutetiana'.

Spectabilis d'Amerique. Oudin, Lisieux Nursery Catalogue, 1844, p.13. Synonym for **Spectabile.**

Spectabilis d'Angleterre. Seidel, 1846, Pflanzen Catalog, p.10. Synonym for **Spectabilis de Loddiges.**

Spectabilis de Loddiges. *(C.japonica)*, *Catalogue de la Société Royale d'Horticulture de Belgique*, 1842, p.23 as 'Spectabilis Loddiges'. No description. Berlèse, 1843, *Iconographie*, pl.210 and opposite p.: Double, slightly irregular, medium deep cerise, softening to pale cerise at the edges of the central petals, deeper cerise veining, large, ruffled bulging centre. Synonyms: 'Loddigesii', 'Spectabilis Loddiges', 'Spectabilis d'Angleterre'. Originated in England.

Spectabilis des Pays-Bas. *(C.japonica)*, Seidel, 1846, *Pflanzen Catalog*, p.10. No description. Originated in Italy. (Believed extinct).

Spectabilis Grandiflora. *(C.japonica)*, Cachet Catalogue, 1840-1841, p.3. No description. Berlèse, 1843, *Iconographie*, pl.182: Medium, vivid cerise, heavily veined a darker colour. Three outer rows of large, wide, regularly imbricated petals, with a paeonyform centre of narrow, ruffled petals with edges shading to white. Originated in Italy.

Spectabilis (Hogg's). Jacob Makoy Catalogue, 1841, p.11; van Houtte Catalogue, 1844-1845, 18:19 with **Spectabilis de Loddiges** given as a synonym, but believed to refer to Hogg's **Spectabile.**

Spectabilis (Loddiges). van Houtte Catalogue, 1843-1844, 12:ddd with the same description as 'Spectabilis' (Hogg's) (**Spectabile**).

Spectabilis Loddigesii. Lichtenthal, 1852, *Manuale botanico enciclopedico populare.* Orthographic variant for **Spectabilis de Loddiges.**

Spectabilis Lodigesii. Burdin Maggiore & Co, 1849-1850, Catalogue Général. Orthographic error for **Spectabilis de Loddiges.**

Spectabilis Maculata. Cels, Paris Nursery Catalogue, 1839, p.30. No description. Harrison, ed., 1839, *The Floricultural Cabinet*, vol.7, p.56, White, red stripes. van Houtte Catalogue, 1841, 7:11 gives it as a synonyn of 'King'. Berlèse, 1843, *Iconographie*, opposite pl.158 says: There are two 'Spectabilis Maculata' in commerce; the first to appear was 'King's', originally from England. It appears in catalogues under 'Spectabilis Maculata des Belges' and 'King's', and Burdin, 1845, gives 'King's Royal' as a synonym. The second of this name is known as **Spectabilis Maculata de Loddiges**. A synonym for **Kingii.**

Spectabilis Maculata de Loddiges. *(C.japonica)*, Jacob Makoy Catalogue, 1838, p.18. No description. Berlèse, 1843, *Iconographie*, p. facing pl.158: White, washed pale pink, 9-10 cm across, with occasional cerise pink streaks and many small, pink spots, full, irregular with 3-4 exterior rows of round-ovate petals. Orthographic variants: 'Spectabilis Maculata Loddigesii', 'Spectabilis Maculata Loddiges', 'Spectabilis Maculata Vera'.

Spectabilis Maculata des Belges. Berlèse, 1843, *Iconographie*, pl.158. Synonym for **Kingii** as 'King's'.

Spectabilis Maculata Loddiges. Berlèse, 1843, *Iconographie*, facing pl.158. Orthographic variant for **Spectabilis Maculata de Loddiges.**

Spectabilis Maculata Loddigesii. Fendig, 1953, *American Camellia Yearbook.* Orthographic error for **Spectabilis Maculata de Loddiges.**

Spectabilis Maculata Vera. Berlèse, 1843, *Iconographie*, pl.158. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.13: Petals are blush white. Synonym for **Spectabilis Maculata de Loddiges.**

Spectacular. *(C.japonica)*, *American Camellia Yearbook*, 1967, p.232, Reg. No.932: A 7 year old chance seedling of **Elegans,** that first bloomed 1959; originated by Harold Cawood, Americus, Georgia, USA. Plant growth is upright and slow with light green leaves, 10 cm x 6 cm. The anemone form bloom is 10 cm across, red with yellow stamens. Blooms mid-season.

Spellbound. *(C.japonica)*, *American Camellia Yearbook*, 1966, p.99, Reg. No.825, colour photo, p.114: A 10 year old seedling that first bloomed 1954; originated by Malbis Nursery, Mobile, Alabama, USA. Leaves are over 10 cm x 6 cm in size. Plant growth is open, upright and rapid. The shrimp pink flowers are semi-double to peony form, with yellow stamens. Blooms measure 13 cm across x 8 cm deep with 30 petals and 1-5 petaloids. Blooms mid-season to late. According to SCCS., *Camellia Nomenclature*, 1968 this is a synonym for **Marie Bracey.** See colour photo, back cover, ACS., 1965, *The Camellia Journal*, vol.20, No.5.

Speme. *(C.japonica)*, Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete*, p.8. No description. Originated in Italy. (Believed extinct.)

Spencer Hill. *(C.japonica)*, Fruitland Nursery Catalogue, 1950-1951, p.31: Deep rose-pink. Medium, semi-double. Blooms late. Originated in USA at the Fruitland Nursery, Augusta, Georgia.

Spencer Smiley. (*C.reticulata*), ACS., 1986, *The Camellia Journal*, vol.41, No.3, p.17, Reg. No.2013: Soft phlox pink, large, semi-double chance seedling of *C.reticulata* **Damanao.** Blooms mid-season to late. Originated in USA by Houghton S. Hall, California. *American Camellia Yearbook*, 1986, p.94: The 10 year old seedling first bloomed 1981. Average flower size is 15 cm across x 6 cm deep with 13 petals, golden anthers and creamy white filaments. Plant growth is upright and rapid with dark green leaves, 10 cm x 5 cm.

Spencer Walden. (*C.reticulata* hybr.), *American Camellia Yearbook*, 1981, p.105, Reg. No.1760: A very large, red, semi-double, *C.reticulata* hybrid (**Arch of Triumph** x [*C.reticulata* **Damanao** x *C.japonica* **Mrs D.W. Davis**]), that blooms mid-season to late. Originated by Frank Pursel, Oakland, California, USA. The 10 year old seedling first bloomed 1976. Average flower size is 15 cm across x 8 cm deep with rabbit ears and yellow anthers. Plant growth is upright and medium with dark green leaves, 13 cm long x 8 cm wide.

Spencer's Delight. *(C.x williamsii)*, Hilsman, 1966, *American Camellia Yearbook*, p.122. Originated in New Zealand as a seedling of the cross *C.saluenensis* x *C.japonica* **Debutante** by Felix M. Jury. No description. No valid listing located.

Spencer's Pink. *(C.japonica)*, Nobelius Nursery Catalogue, 1939: Pink single. Hazlewood Nursery Catalogue, 1941: Single. Flesh pink, medium sized flowers, with a cluster of golden stamens. A seedling of unknown parentage, sold to Mrs G.A.P. Weymouth, Malvern, Victoria, Australia and transferred to their property at Ferntree Gully in 1908; the property was sold to Sir Baldwin Spencer, 1922 and again sold on his death. The flowers of the single pink were sold to a florist who called it 'Pink Czar'. Mr Alan Bolton, Nobelius's propagator in 1933, obtained cuttings and plants were listed in their catalogue of 1935 as 'Pink Czar', but afterwards in their 1939 catalogue and on the name was changed to **Spencer's Pink** as it had come from the old property of Sir Baldwin Spencer. This name has been generally adopted as being more appropriate than 'Pink Czar' as it has no relationship with **The Czar**. A further

synonym is 'Lady Spencer'. For colour illustrations see: pl..XVIII, Waterhouse, 1952, *Camellia Trail* and p.118, Macoboy, 1981, *The Colour Dictionary of Camellias*. Chinese synonym 'Fenyi'.

Speranza. van Houtte Catalogue, 1858, 72:24. Auguste van Geert, 1859 Catalogue, No.47, p.35. Abbreviation for **La Speranza.**

Speranzo. Auguste van Geert, 1863-1864, Catalogue No.54, p.47. Synonym for **La Speranza.**

Sperenza. Peer, 1956, *American Camellia Yearbook*, p.57. Orthographic error for 'Speranza', abbreviation for **La Speranza.**

Spicata. *(C.japonica),* Prince & Co. Nursery Catalogue, 1844, p.104; Landreth Catalogue, 1844; Buist Catalogue, 1844: Bright Red. Originated in the USA. (Believed extinct.)

Spicatum. *(C.japonica),* Buist, 1839, *American Flower Garden Directory*, p.248. No description. Buist, 1845, *The American Flower Garden Directory*, p.225: Foliage, very dark, shining green, 10 cm long x 6 cm wide, very pointed; the flower bright red, nearly 10 cm in diameter, circumferential petals large and round, gradually diminishing to the centre and concealing a few stamens. The plant grows and flowers freely and has an upright, branching habit. Originated in USA.

Spicy Pink. *(C.hybrid). New Zealand Camellia Bulletin*, July 1993, Issue No.115, vol.XVIII, No.2, p.47, colour plate p.48: A seedling of *C.japonica* **Bokuhan** ('Tinsie') x *C.lutchuensis*, originated by John Lesnie, Manukau City, New Zealand. Small size, red semi-double. Scented.

Spindletop Centennial. *(C.japonica),* ACS, *The Camellia Journal*, Feb. 2000, p.11, Reg. No.2516. A white formal double flower. Flowers early to mid-season. Originated by Hyman R. Norsworthy, Beaumont, Tex., USA. *American Camellia Yearbook*, 2000, p.7, colour photo p.c14. The 10 year old seedling first flowered in 1993, and is a cross of **Yukibotan** x (**Elizabeth Boardman** x **Mary Lilla Dumas**). Flower has 30-35 petals, with 5-6 very small petaloids at the centre. Average flower size is 7 cm across x 4.5 cm deep. Plant growth is upright, dense and average growth rate. Flowers early to mid-season. Dark green leaves are 9 cm long x 4.5 cm wide.

Spindrift. *(C.japonica), American Camellia Yearbook,* 1992, p.38, colour illust. between pp.40-41: Miniature white with light pink stripes, semi-double *C.japonica* seedling of **Finlandia Variegated**. Blooms mid-season to late. Originated by Houghton S. Hall, San Anselmo, California, USA. The 30 year old seedling first flowered 1965. Average flower size is 5 cm across x 3.2 cm deep with 17 petals and 5-6 petaloids, dark gold anthers, white filaments. Plant growth is average, dense and medium in rate with dark green leaves 6 cm long x 3.8 cm wide.

Spinea. Halliday, 1880, *Camellia Culture,* p.141. Orthographic error for **Spini.**

Spinel. Pink. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Dayinhong.**

Spinel Pink Ball. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Synonym for **Taohong Xiuqiu.**

Spinel Pink Butterfly Wings. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.15. Synonym for **Yinhong Diechi.**

Spinel Pink Chrysanthemun Petal. Ikeda, 1976, *American Camellia Yearbook*, p.140. Synonym for 'Yinhong Juban' (**Tongzimian**).

Spinel Pink Lion. Feng et al., 1986, *Yunnan Camellias of China*, p.165. Synonym for **Yinhong Shizi.**

Spinel Pink Peony. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Synonym for **Yinfen Mudan.**

Spinel Pink Perfection. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Synonym for **Taohong Zhaoyang.**

Spineo. Verschaffelt Catalogue, 1849-1850, p.49. Orthographic error for **Spini.**

Spineo var. Rosea. Verschaffelt 1859, *Nouvelle Iconographie*, Book X, pl.III. Orthographic variant for **Spini Rosea.**

Spini. *(C.japonica)*, van Houtte Catalogue, 1849-1850, 38:52: Milky white with 2 or 3 stripes down the centre of each petal; perfectly imbricated. Verschaffelt, 1855, *Nouvelle Iconographie*, Book V, pl.III as 'Spineo': A perfection of flawless form and snow white blossoms, larger than average, a small, compact foliage. We received it a few years ago from Italy ... The central petals are lanceolate-acute, their form contrasting with that of the exterior rows which are all ample, rounded and faintly emarginate. Von Biedenfeld, 1956 gives 'Spineo' and **Spini** as synonymous. If so, apparently the form described by Vershaffelt had a minimum of pink markings. It must have had some as it sported a 'rosea' form. Orthographic errors: 'Spinii', 'Spinea', 'Spineo', 'Spinio'. Sport: *Spini Rosea.*

Spini Rosea. *(C.japonica)*, van Houtte Catalogue, 1858, 72:24. No description. Verschaffelt, 1859, *Nouvelle Iconographie*, Book IX, pl.III as 'Spineo var. rosea': Delicate pink, formal double sport of **Spini,** fixed by grafting. In spite of their relatively small size, the blossoms are formed of numerous and rather ample, rounded petals, outspread, and imbricated with perfect regularity. Originated in Belgium. Orthographic variant: 'Spineo var. rosea'.

Spinii. Giardino Inglese Caserta Catalogue, 1856. Orthographic error for **Spini.**

Spinio. Auguste van Geert Nursery Catalogue, 1849, p.23. Orthographic error for **Spini.**

Spink. *(C.pitardii x C.fraterna)*, ACRS., 1986, *Camellia News*, No.99, p.22, Reg. No.344: Originated by E.R. Sebire, Wandin North, Victoria, Australia. A chance seedling from *C.hyrid* **Snowdrop** that first flowered 1984. A single rose-pink flower (MHC 12A4) of 6 petals, 5 cm across x 3 cm deep, produced on an upright, open plant. The leaves, 6.5 cm x 3.5 cm, are olive green with fine serrations, acute apex and matt surface. For colour photo see rear cover, ACRS, 1986, *Camellia News*, No.99.

Spinola Alba. *(C.japonica)*, Burnier Catalogue, 1855-1856: Magnificent flower, colour ivory white, centre greenish, petals narrow, close packed, numerous, perfectly imbricated and cupped. Franchetti, 1855, *Collezione di Camelie*, p.58. No description. Originated in Genoa, Italy.

Spiral. *(C.japonica)*, Magnolia Gardens and Nursery Catalogue, 1942-1943. No description. Originated in USA.

Spiralater. Mercatelli Catalogue, 1881, p.35. Orthographic error for 'Spiraliter', synonym for **Spiraliter Imbricata.**

Spiralis. *(C.japonica)*, Anonymous, 1830, *Annales de la Société d'Horticulture, de Paris*, 7:280-281: Raised from seed sown in 1821 by M. Noisette and named by him. Form of the old 'Double White' (**Alba Plena**), a crimson colour delicately lined with white. Originated in France. Synonyms: 'Spiralis B', 'Spiralis Vera', 'Spiralis Imbricata'.

Spiralis A. *(C.japonica)*, van Houtte Catalogue, 1841, 7:19. No description. Lemaire, 1844, *Des Genres Camelia…,* p.161 as 'Spiralis': Large, double pale cherry-red flower, very numerous, broad, uneven outer petals, irregularly arranged and of diverse forms. Origin unknown.

Spiralis B. van Houtte Catalogue, 1841, 7:19. Synonym for **Spiralis.**

Spiralis Imbricata. Trillon, Le Mans Nursry Catalogue, 1843, p.9. Synonym for **Spiralis.**

Spiralis Incarnata. *(C.japonica)*, Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.13: Cerise pink, handsomely imbricated. Oudin, Lisieux Nursery Catalogue, 1844, p.13. Originated in France.

Spiralis Nova. Jacob Makoy Nursery Catalogue, 1841, p.11. Synonym for **Spiralis Novissima.**

Spiralis Novissima. *(C.japonica)*, Tagliabue, 1840, *Nomenclatore Camelliae.* No description. Originated in Italy. Synonym: 'Spiralis Nova'. (Believed extinct.)

Spiralis Rosea. Isola Madre Catalogue, 1845. Synonym for **Spiralis Rosea Plena.**

Spiralis Rosea Plena. *(C.japonica)*, Oudin, Lisieux Nursery Catalogue, 1844, p.13: This camellia differs from 'Spiralis Imbricata' and 'Spiralis Incarnata' by its vivid colour, its form is equally very perfect and its petals are arranged in a regular spiral. Synonym: 'Spiralis Rosea'. Originated in France.

Spiralis Rubra. *(C.japonica).* Mead, ed., 1861, *Horticulturalist*, 16:328, frontispiece: We present for a frontispiece this month a remarkable camellia raised by the late Noel J. Becar ... This is the camellia which Mr Becar first dedicated to A.J. Downing; this name was subsequently given to another seedling. The flower now presented has never been named, but by some has been vulgarly called 'The Screw'...We now give it the name of **Spiralis Rubra.** The form is constant ... It will be noticed that the spirals are remarkably symmetrical ... The colour and substance are unexceptional and the habit good. The illustration shows five spirals, each of about 9 petals Synonym: 'Cochlidea'.

Spiralis Vera. van Geert Catalogue, 1845. Synonym for **Spiralis.**

Spiraliter. Burnier & Grilli Catalogue, 1846-1847. Abbreviation for **Spiraliter Imbricata.**

Spiraliter Imbricata. *(C.japonica)*, Tagliabue, 1840, *Nomenclatore Camelliae.* No description. Berlèse, 1843, *Iconographie*, vol.2, pl.115: The flower is 9-10 cm across, it is full and regular, of a carmine red colour with touches of rose. The flower is perfectly round, a little depressed in the centre. The petals are in 5 rows, imbricated regularly from the centre to the circumference. Burnier & Grilli Catalogue, 1846-1847 as 'Spiraliter': Flower large, imbricated, bright vermilion: petals regularly orbicularly imbricated and disposed in a spiral, external petals emarginate, internal ovate-acuminate, sexual parts abortive. Said to have been originated by Tagliabue, Milan, Italy. Orthographic errors: 'Spirality', 'Spiraltor'. Synonyms: 'Imbricata Spiraliter', 'Imbricata Spiralis'. Abbreviation: 'Spiraliter'.

Spirit of Troy. *(C.sasanqua x C.reticulata)*, Piet, 1980. SCCS., *The Camellia Review*, vol.42, No.1, p.5: A seedling from the cross *C.sasanqua* **Narumigata** x *C.reticulata* **Dataohong**, originated by Meyer Piet,, Arcadia, California, USA. Large, red, semi-double with some inner petals forming rabbit ears. Large, light yellow boss of stamens in centre. See colour photo, p.44B, *International Camellia Journal*, No.16, 1984.

Spitfire. *(C.x williamsii).* C.Aust., *Camellia News,* Autumn 2006, No.160, p.12, colour photo p.19, Reg. No. 568. Originated by Mr. P.G. Edwards, Boronia, Vic, Australia. A seedling of *C. x williamsii* **Wynne Rayner,** possible pollen parent **Kramer's Supreme.** A semi-double, bright cherry red (RHS.CC. 63A), hose-in-hose flower of 12 petals, 11 cm across x 6 cm deep. Flowers freely over a long period on an upright, bushy, rapid growing plant. Leaves dark green, glossy, curled, lanceolate, with sharp serrated margins, 11 cm x 3.5 cm. Columnar stamens. Flowers shed whole. Petals narrow, fluted and luminous. Flowers are perfumed and long lasting.

Splash of Pink. *(C.japonica)*, SCCS., 1978, *Camellia Nomenclature*, p.146: White with splash of pink. Medium peony form. Medium, upright growth. Blooms mid-season. Originated in USA by Kramer Bros. Nursery, Upland, California.

Splash-o-White. *(C.japonica),* SCCS., 1984, *Camellia Nomenclature,* p.98: Red splotched white on several petals. Small to medium semi-double. Slow growth. Blooms early to late. Originated by E. Pieri, San Gabriel, California, USA.

Splendens. Chandler & Booth, 1831, *Illustrations and Descriptions of Plants..*, No.35. Jacob Makoy, 1828, Catalogue, p.5. No description. Synonym for **Coccinea.** Also used as a synonym for **Allnuttii** and 'Rosaeflora' (**Middlemist's Red**) according to Makoy. 1836, p.17.

Splendens. *(C.japonica),* SCCS, 1954, *The Camellia. Its Culture and Nomenclature,* p.81. Red, large semidouble. Late blooming. Originated by McIlhenny in USA.

Splendens Alba. Berlèse, 1840, *Monographie,* ed.2, p.86, 226: Leaves 7 cm x 6 cm, round-oval, sometimes cordiform, strongly veined, deep green; buds round, obtuse, scales blackish; flower 8 cm across, off-white; exterior petals oblong, deeply veined, those following, numerous, bunched, erect and mixed with stamens. The flower resembles **Welbankiana.** Originated in France. Synonyms: 'Splendidissima Alba', 'Belle Nannette', 'Belle Nanette', 'Nannettiana Alba'. See pl.89, Berlèse, 1841, *Iconographie,* and p. facing. A synonym for **Belle Nanette,** Cels, 1836.

Splendens Carlyon. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Rose-pink. Large, semi-double to incomplete double. Leaves broad, habit upright. Originated in England. Very similar to, if not the same, as **Conspicua.** Orthographic error: 'Splendens Caroline'.

Splendens Caroline. Van der Broek Wholesale Catalogue, 1978-1979, p.18. Orthographic error for **Splendens Carlyon.**

Splendens Chandler. Baxter & Wooster, 1850, Supplement to Loudon's *Hortus Britannicus*, p.508 as 'Slendens Chandl.'. Synonym for 'Splendens', synonym for **Coccinea.**

Splendens Halnuts. Hovey & Co. Catalogue, 1834-1835, p.26. Orthographic variant for 'Splendens', synonym for **Coccinea.**

Splendens (Magniflora). Rousseau, Angers Catalogue, 1842-1843, p.4. Synonym for **Magniflora.**

Splendens Novissima. *(C.japonica),* Auguste van Geert Nursery Catalogue, 1848, p.22. No description. (Believed extinct.)

Splendens Vera. *(C.japonica),* Berlèse, 1837, *Monographie*, ed.1, pp.103, 129: We possess two varieties of 'Splendens': the first a single flower and is not remarkable; the second, whose leaves much resemble those of 'Magnolia Plena' has a superb appearance; its flowers are very full, regular, deep cherry-red; petals rounded, imbricated, some of those in the centre are contorted, and formed into two separate hearts. Originated in England.

Splendentissima. Trillon, Le Mans Nursery Catalogue, 1845, p.7. Orthographic error for **Splendidissima.**

Splendid. Baumann & Baumann, 1832, *Collection de camellias élevés à Bollweiler.* Synonym for **Insignis.**

Splendid Flowered. Prince, 1828, *Camellia Japonica or Japan Rose...*,p.168. Synonym for **Insignis.**

Splendida. *(C.japonica),* Paxton, 1831-1832, *Horticultural Register*, vol.1, p.688, No.31. Synonym 'Gray's Eclipse'. No description. Paxton, 1834, *Magazine of Botany and Register...*, vol.1, p.38: White ground, spotted or striped red. Berlèse, 1837, *Monographie,* ed.1, pp.116, 117, 131 as 'Punctata Plena': Leaves oval, almost round, 8 cm x 6 cm, prominent venation, coarsely serrate, deep green; flower 8 cm across, soft rose ground marked with cherry-red lines; circumferential petals broad, crenate, convex; those at the centre small, elongate, erect,

of the floral form of 'Imperalis' (**Gray's Invincible**). Sport of **Press's Eclipse.** Originated in England. Synonyms: 'Gray's Eclipse', 'Punctata Plena.

Splendida Borghese. *(C.japonica),* Stefano Pagliai Catalogue, 1867: Carmine rose with some marks of white. Flower very full, formal double. Originated by Borghese, Rome, Italy.

Splendidissima. *(C.japonica),* Anonymous, 1835, *Revue Horticole*, pp.31, 32; Berlèse, 1835, *Annales de la Société d'Horticulture de Paris*, 16:286-287: Leaves 11 cm x 8 cm, rounded oval, almost cordiform, venation apparent, lightly serrate, glossy deep green; buds large, oval, obtuse, scales greenish: flower 10 cm across, full, white, similar in form to Colvillii; outer petals broad, numerous, reflexed, undulate, irregular, lacinated, of pure white; those of the interior more erect, elongate, numerous, compact, curled and of a less brilliant white. Originated by Berlèse, Paris, France from seed said to have come from the ancient camellia of Caserta. Synonyms: 'Splendidissima Nova', 'Splendidissima Berlèse'. Orthographic errors: 'Splendissima', 'Splendentissiina'. Van Houtte Catalogue, 1841, 7:16 gives **Spendidissima** as synonym for **Pulcherrima Striata**, but from their original descriptions they are considered separate cultivars.

Splendidissima Alba. *(C.japonica),* Berlèse, 1835, *Annales de la Société d'Horticulture de Paris*, 16:417: A white sport of 'Variegata Plena' (**Variegata**) said to have originated by Soulage-Bodin, Fromont, France. See pl.112, Berlèse, 1843, *Iconographie.* Orthographic error: 'Splendissima Alba'. Synonym: 'Splendidissima de Soulange'.

Splendidissima Berlèse. Berlèse, 1937, *Monographie,* ed.1, p.51 as 'Splendidissima Berl.'. Synonym for **Splendidissima.**

Splendidissima de Soulange. Verschaffelt Catalogue, 1844-1845, p.30. Synonym for **Splendidissima Alba.**

Splendidissima Nova. van Houtte Catalogue, 1839, 1:8. Synonym for **Splendidissima.**

Splendissima. Ellis, 1953, *Old Camellia Varieties*, p.335. Orthographic error for **Splendidissima.**

Splendissima Alba. Auguste van Geert Nursery Catalogue, 1848, p.22. Orthographic error for **Splendidissima Alba.**

Splendor. *(C.sasanqua),* Overlook Nursery Catalogue, 1948-1949, p.36: Delicate pink with darker pink edge. Very large, semi-double. Originated by K. Sawada, Mobile, Alabama, USA and first invalidly named 'Rosea Grandiflora' which was later changed to **Splendor** due to the previous use of the first name. For illustration see p.339, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Orthographic variant: 'Splendour'.

Splendour. Wakefield, 1964, *Camellias for Every Garden.* Orthographic variant for **Splendor.**

Spotfordii. Verschaffelt Catalogue, 1849-1850, p.49. Orthographic error for **Spofforthiana.**

Spotlight. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature*, p.97: Light red. Large, semi-double. Originated in USA by J.C. Robinson, La Canada, California.

Spotted Mathotiana. Armstrong Nursery Catalogue, 1948. Synonym for **Julia Drayton Variegated.**

Spotted Red Chrysanthemum Petal. Ikeda, 1976, *American Camellia Yearbook*, p.144. Synonym for **Dianhong Juban.**

Spready Freddy. *(C.sasanqua). New Zealand Camellia Bulletin*, March 1999, Issue No.132, vol.XXI, No.1, p.13, Reg. No.397. Registered by N. Haydon, Takanini, New Zealand. A chance seedling with general *C.sasanqua* characteristics, but with an unusual low and spreading growth habit. Flowers early, and first flowered in 1993. A miniature anemone form, 5 cm diameter x 2 cm deep, with about 14 petals and 65-75 large spreading petaloids. A few stamens are visible among the petaloids, and also cluster in the centre. Colour is a deep cyclamen pink (RHS.CC. 59D). Leaves are dark green, 5 cm long x 2 cm wide.

Sprinfiles. *(C.japonica),* Rousseau, Angers Catalogue, 1842-1843, p.4. White, tinted red.

Spring. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...,* Chen Junzhi and Chen Jinshui, p.47; Pink pendent group. Pink flower, bell to magnolia type corolla.

Spring Announcing Flower. Ikeda, 1976, *American Camellia Yearbook*, p.144. Synonym for **Baochunhua.**

Spring Awakening. *(C.hybrid),* Camellia Forest Nursery Catalogue, North Carolina, 1990, p.2: Small size, double, rose coloured flowers are produced in such profusion that the foliage is hidden at peak of bloom. Small delicate foliage, but vigorous growth rate. Selected for placement where a splash of colour is needed in early spring. Formerly 'CF-19'. Originated in USA. ACS., May 1991, *The Camellia Journal*, vol.46, No.2, No.18, Reg. No.2206. A cross between *C.japonica* **Ville de Nantes** x [*C.saluenensis x C.sasanqua*]. Average flower size is 7.5 cm across x 3.8 cm deep with 5 petals, yellow anthers and cream filaments. Dark green leaves 10 cm long x 5 cm wide. Originated by Dr Clifford Parks, North Carolina, USA.

Spring Beauty. *(C.reticulata),* Ben Rayner, 1973, ACRS., *Camellia Review*, No.50, p.2. No description. Originated by John R. Sobeck, California, USA. No valid listing located,

Spring Call. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* White. Semi-double. Mid-season. SCCS,. 1954, *The Camellia. Its Culture and Nomenclature*, p.81: White. Medium large, cupped semi-double of lily form. Vigorous, open, upright growth. Blooms mid-season. Originated in USA by Harvey Short, Ramona, California.

Spring Cardinal. *(C.hybrid).* ACS, *The Camellia Journal*, Nov. 1999, p.19, Reg. No.2507. Details given incorrect. Originated by Dr William L. Ackerman, Ashton, Md., USA. *American Camellia Yearbook,* colour photo before p.1. A crimson red, formal double seedling of 'Tricolor Red' (**Lady de Saumarez**) x *C.oleifera* (PI 162561). Flowers early to mid-season. The 18 year old seedling first flowered in 1988. Average flower size is 6.5 cm across x 3.2 cm deep with 36 petals. Plant is winter hardy to -10° F. Growth is upright and dense with dark green leaves 10.8 cm long x 5 cm wide.

Spring Circus. *(C.japonica x C.oleifera).* SCCS 1996, *Camellia Nomenclature,* p.166: Bright pink, medium size, anemone form. Average, dense, upright growth. Blooms mid-season. Cold hardy to -10°F. A seedling of **Lady de Saumarez** x *C.oleifera*, by Dr William Ackerman, Ashton, Maryland, USA.

Spring Daze. *(C.x williamsii),* SCCS., 1990, *Camellia Nomenclature*, p.153: Blush pink, edged coral pink, small to medium size, formal to rose form double. Medium, compact, upright growth. Blooms mid-season to late. Originated by Kramers Bros Nursery, Upland, California, USA. Chinese synonym 'Chunmimang'.

Spring Deb. *(C.japonica),* Nuccio's Nurseries Catalogue, 1956: A seedling of **Hikarugenji**. Medium pink. Medium, full peony form, 8 cm across. Vigorous, compact, upright growth. Blooms midseason to late. Originated at Nuccio's Nurseries, Altadena, California, USA. See colour pl. facing p.178, *American Camellia Yearbook*, 1966 and front cover, SCCS., 1966, *The Camellia Review*, vol.27, No.6.

Spring Fanfare. (C.hybrid) ACRS, *Camellia News*, 1997, No.143, p.17, Reg. No.496. Originated by Thomas J. Savige, Wirlinga, NSW, Australia, and registered by Andrew Raper, Rhodo Glen Nursery, Melbourne. A cross between *C.japonica* **Kuro–tsubaki** x (**Tiny Princess,** seed parent x *C.tsaii.)* First flowered 1989. The 5 petal, single pink (RHS.CC.68C) flower is 2.5 cm across x 1.5 cm deep, and flowers freely late in the season on an upright spreading plant of rapid growth. Leaves deep green, glossy, flat, elongated, serrate margins, acuminate apex, 8.8 cm long x 3.6 cm wide. Petals fluted, first petal whiteon reverse. Filaments in a column. A floriferous cluster-flowering hybrid.

Spring Festival. *(C.cuspidata* hyb.), Donnan, 1976, *American Camellia Yearbook*, p.152: A *C.cuspidata* chance seedling originated by Toichi Domoto, Hayward, California that first bloomed 1970. The flower is a medium pink shading to light pink at the centre. Rose form double measuring 5-6 cm across. The plant has a narrow, upright, growth habit. Flowers mid-season to late. See colour photo, front cover, *New Zealand Camellia Bulletin*, vol.XIII, No.3, 1983. Chinese synonym: 'Chunjie'.

Spring Fever. *(C.japonica),* Belle Fontaine Nursery, 1967, ACS, *The Camellia Journal*, vol.22, No.3, p.20. No description. Pitkin, 1968. *American Camellia Yearbook*, p.121: Originated by Nuccio's Nurseries, Altadena, California, USA as a seedling of **Jessie Katz.** A very large, rose-pink. Semidouble to loose, peony form double with wavy petals. Blooms mid-season to late on a bushy, upright, vigorous plant. See colour photo facing p.150, *American Camellia Yearbook.* 1969 and front cover, SCCS., 1967, *The Camellia Review*, vol.29, No.l. Sport: **Spring Fever Variegated.**

Spring Fever Variegated. *(C.japonica),* Cannon, 1968, ACS., *The Camellia Journal*, vol.23, No.4, p.12 as 'Spring Fever Var.': a virus variegated form of **Spring Fever** - rose-pink blotched with white. Originated in USA.

Spring Fling. *(C.japonica),* Nuccio's Nurseries Catalogue, 1991-1992, #8108, p.16: Red, medium size formal double. Medium, bushy, upright growth. Originated by Nuccio's Nurseries, Altadena, California, USA.

Spring Formal. *(C.japonica),* ACS., 1986, *The Camellia Journal*, vol.41, No.3, p.17, Reg. No.2019: A medium sized, deep pink, formal double *C.japonica* chance seedling of **Kumasaka,** originated by Nuccio's Nurseries, Altadena, California, USA. *American Camellia Yearbook*, 1986, p.94: The 15 year old seedling first flowered 1975. Average flower size is 9.5 cm. across. Plant growth is upright, dense and rapid. See colour photo, p.6, *International Camellia Journal*, No.21, 1989. Chinese synonym: 'Chuntian Yelifu'.

Spring Frill. *(C.oleifera x C.vernalis).* ACS 1992, *The Camellia Journal*, vol.48, No.3, p.30, Reg. No.2255: Large size, bright iridescent pink, rose form double *C.oleifera x C.vernalis* **Egao.** (Tetraploid). Late flowering. Originated in USA by Dr William Ackerman, Ashton, Maryland. *American Camellia Yearbook,* 1992, pp.38-39, colour photo between pp.40-41: The 12 year old seedling first flowered 1985. Average flower size is 12 cm across x 6 cm deep with 34 petals, orange-yellow anthers and white filaments. Cold hardy to -10°F. Plant growth upright, average and slow in rate with dark green leaves 8 cm long x 3.2 cm wide. Chinese synonym 'Chunzhou'.

Spring Hill. *(C. japonica),* SCCS., 1981, *Camellia Nomenclature* p.149: Medium pink. Large, semi-double to anemone form. Bushy, upright growth. Blooms mid-season to late. Originated in USA by J.M. Haynie, Theodore, Alabama.

Spring in Autumn. *(C.sasanqua),* Gum & Woodroof, 1974, *American Camellia Yearbook*, vol.II, p.52: Colour peach pink. Large, semi-double. Originated in USA by Kramer Bros. Nursery, Upland, California.

Spring Love. Feng et al., 1986, *Yunnan Camellias of China*, p.165. Synonym for **Chunzhilian.**

Spring Mist. *(C.japonica x C.lutchuensis), American Camellia Yearbook,* 1982, p.178, Reg. No.1844: A miniature, blush pink, semi-double *C.hybrid (C.japonica* **Snow Bell** x *C.lutchuensis*) that blooms early to mid-season, originated by A.E. Longley and C.R. Parks, Los Angeles State and County Arboretum. The 18 year old seedling first bloomed 1965. Average size, 5 cm across x 2.5 cm. deep with 13 petals and 1 petaloid. Anthers yellow, filaments cream. The small, fragrant blooms are produced in profusion. Plant growth is spreading, open and

medium with medium green leaves and coppery new growth. See colour photo, *New Zealand Camellia Bulletin*, vol.XIV, No.2, p.20, 1985. Chinese synonym 'Chunwu'.

Spring Morning. *(C.japonica), Collected Papers*, ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.47; Pink pendent group. Pink flower, bell to magnolia form corolla.

Spring Promise. *(C.japonica),* Camellia Forest Catalogue, 1988, p.5: Single red, vigorous, well shaped. Originated in USA.

Spring Song. (Wabisuke). Camellia Forest Nursery Catalogue, 2008, p.16; Small light pink flowers opening to a trumpet shape. Delicate foliage, early flowering. Cold hardy. A seedling of wabisuke **Sukiya.**

Spring Sonnet. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* A sport of **Colonial Lady,** observed in 1948 and named and introduced by V.0. McCaskill, Pasadena, California, USA. Pale pink with deeper pink margins. Same flower form and plant habit as its parent. Received the 'William Hertrich Award' in 1977 and the 'William E. Woodroof Camellia Hall of Fame Award' in 1982. For colour photo see Macoboy, 1981, *The Colour Dictionary of Camellias*, p.118. Chinese synonym: 'Chunshi'.

Spring Sonnet Variegated. *(C.japonica),* Shao, Taichong, 1992, *The Observations from the Camellia World,* No.424, p.82: A virus variegated form of **Spring Sonnet.** Originated in USA.

Spring Sonnet Peony. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1963-1964, p.14. No description. Originated in USA. No valid listing located.

Spring Surprise. (*C. x williamsii*). *New Zealand Camellia Bulletin,* March 1998, Issue No.129, vol.XX, No.4, p.21, Reg. No.389. Raised by O. Blumhardt, Whangarei, New Zealand. A seedling of *C.saluenensis f. minor,* with the pollen parent uncertain, but probably **Tiffany.** A medium size semi-double, 8 cm diameter x 3.5 cm deep of 20 petals. The outer petals and petal tips are medium to deep pink, shading to blush pink in the petal base and flower centre (RHS.CC. 55B fading to 56D; main appearance 56B. The plant is upright, dense and slow growing and flowers mid-season. The dark green leaves are 5-6 cm long x 3.5 cm wide.

Spring Tide. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.217. Orthographic variant for **Springtide.**

Spring Time. Bob Wines Nursery Catalogue, 1985-1986, p.6. Orthographic variant for **Spring-time**.

Spring Triumph. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Pink. Irregular double. Midseason. SCCS., 1954, *The Camellia*. *Its Culture and Nomenclature,* p.81: Deep coral pink. Large, full peony form. Medium, open growth. Blooms mid-season. Originated by Harvey Short, Ramona, California, USA.

Spring Wind. (*C.japonica* x *C.lutchuensis), American Camellia Yearbook*, 1984, p.181, Reg. No.1922: A miniature, white with pink tinge, single *C.hybrid (C.japonica* P.I.1231695 x *C.lutchenesis* P.I.226756). Flowers mid-season. Originated by Dr. W. Ackerman, Washington, D.C., USA and propagated by Dr. Kaoru Hagiya, Niigata-shi, Japan. The 20 year old seedling first bloomed 1967. Average flower size is 5.5 cm across x 2 cm deep with 5 petals, yellow anthers and white filaments. Very sweet fragrance. Commercially introduced in 1982. Plant growth is spreading, open and medium with light green leaves, 5.5 cm. x 2.5 cm.

Spring Jazz. *(C.japonica), Camellias*, Y.C. Shen, 2009, p.172. Pink semi-double, fading to white. Upright plant habit, other details unknown.

Springfield. *(C.sasanqua),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* p.260: Bright pink with white blotch. Originated in USA.

Springhead Gem. *(C.japonica),* ACS 1995, *The Camellia Journal,* vol.50, No.3, p.37, Reg. No.2353: Small size, light pink with deeper coloured borders, formal double *C.japonica* chance seedling. Blooms mid-season to late. Originated in USA by Frank A. Wilson, Leslie, Georgia. ACS 1995, *American Camellia Yearbook,* p.10 with colour photo: The 25 year old seedling first flowered 1975. Average flower size is 7.5 cm across x 3.2 cm deep with 95 petals. Blooms have swirled petals. Plant growth is spreading and slow with dark green leaves 10.5 cm long x 4.5 cm wide.

Spring's Promise. *(C.japonica),* ACS., 1989, *The Camellia Journal*, vol.44, No.3, p.14: Very winter hardy, red, single. Camellia Forest Nursery Catalogue, 1990, p.2: A seedling of **Berenice Boddy** x **Kumasaka.** Good flower bud and foliage hardiness. The single, red flowers are produced from winter into early spring. An excellent plant that flowers freely in winter. ACS., May 1991, *The Camellia Journal,* vol.46, No.2, p.18, Reg. No.2204. Average flower size is 7.5 cm across x 3.7 cm deep with 5 petals, yellow anthers and cream filaments. Plant growth average, dense and medium in rate with dark green leaves 10 cm long x 5 cm wide. Originated by Dr Clifford Parks, North Carolina, USA.

Springtide. *(C.japonica),* Coolidge Rare Plant Gardens Catalogue, 1941: Soft pink, medium sized, rose form double. Vigorous, compact growth, Blooms mid-season to late. Originated at the Coolidge Gardens, California, USA. See Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I, p.333, black & white photo.

Springtime. *(C.japonica),* Vanderbilt, 1941, *Camellia Research*, II, p.7: Light pink. Pond, Mrs J.D., 1950, *American Camellia Yearbook*, p.166: Pink, incomplete double. Original plant from Vicksburg, Mississippi, USA originating in 1885.

Springtime (Sebire). (*C.reticulata*), ACRS., 1976, *Camellia News*, No.62, p.21, Reg. No.180 invalidly as 'Springtime': Originated in Australia by Edgar Sebire, Wandin North, Victoria. A seedling of Buddha that first flowered 1970. The upright, dense, vigorous plant produces semi-double, pale rose, 14 cm across flowers, early to mid-season. The mid-green, lanceolate leaves, 9 cm x 3.5 cm have a medium acuminate apex.

Sprinkled with Gold. Synonym for Shaijin.

Sprite. *(C.pitardii* var. *pitardii),* ACRS, 1977, *Camellia News*, No.66, p.27, Reg.No.199: Originated by E.R. Sebire, Wandin North, Victoria, Australia as a chance seedling of *C.pitardii* var. *pitardii* that first flowered 1974. The upright, dense plant produces distinctive, 6.5 cm across, light salmon pink, informal double flowers, mid-season to late. Leaves light green, lanceolate, 7.5 cm long x 3.2 cm wide. See color photo, front cover, *New Zealand Camellia Bulletin*, 1984, vol.XIII, No.7 and p.4, ACRS., 1977, *Camellia News*, No.66. Chinese synonym: 'Tiaopique'.

Spurdle Heritage. *(C.x williamsii). New Zealand Camellia Bulletin,* March 1992, Issue No.111, vol.XVII, No.4, p.46, Reg. No.298: Originated by Les Jury, New Plymouth, New Zealand, from the cross *C.x williamsii* **Fantastic** x **Rendezvous**, that first bloomed 1987 at 6 years of age. Upright, neat growth habit with dark green leaves 7 cm long x 3.5 cm wide. Medium to large semi-double, bright scarlet with deeper veining (RHS.CC.45C veined 45A), large wavy petals and central stamen boss. Size 10 cm across x 5 cm deep with 24 petals and 24 petaloids. Blooms mid-season.

Sputnik. *(C.japonica),* Griffin ed., 1958, *Camellian.* SCCS., 1960, *Camellia Nomenclature*, p.104: Dark red. Medium semi-double with large, upright petals and compact growth. Blooms mid-season to late. Originated by Hillcrest Nurseries, Kingston, North Carolina, USA. See colour photo, p.118, Macoboy, 1981, *The Colour Dictionary of Camellias.*

Squadron Leader Astin. *(C.japonica),* ACS 1993, *The Camellia Journal,* vol.48, No.2, p.7: A root sport of **Ô-niji** with one more row of petals and completely white. Very cold resistant. Originated by Phil. C. Astin, Georgia, USA.

Squammosa. Cels, Paris Nursery Catalogue, 1839, p.30. Orthographic error for **Squamosa.**

Squammosa Alba. Cachet Catalogue, 1845-1846, p.2. Orthographic error for **Squamosa Alba.**

Squammosa Rosea. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.15. Orthographic error for 'Squamosa Rosea', synonym for **Squamosa.**

Squammata. Piantaio Comunale Romano, 1859. Orthographic error for **Squamosa.**

Squamosa. *(C.japonica)*, Jacob Makoy Catalogue, 1839, p.18. No description. Berlèse, 1840, *Monographie*, ed.2, pp.196, 233: Leaves 10 cm long x 6 cm wide, oblong-ovate, apex shortly acuminate, recurved, margins entirely serrate, veins apparent, deep green; buds large. flattened at top, scales blackish; flower over 9 cm across, colour cherry-red to dull carmine. The corolla is round, regular, similar to 'Mutabilis Traversii' (**Traversi**); petals broad, rounded, numerous, lightly notched and imbricated symmetrically from the circumference to the centre, imitating the scales of a fish (squamae). Dr Sacco of Milan, Italy originated this cultivar which is sometimes marked with white at the petal margins. Orthographic errors: 'Squammosa, 'Squammata', 'Squarini'. Synonym: 'Squamosa Rosea'.

Squamosa Alba. *(C.japonica)*, Trillon, Le Mans Nursery Catalogue, 1843, p.9. No description. Charles van Geert Nursery Catalogue, 1845. Rovelli, Isola Madre Catalogue, 1845. No description. Verschaffelt, 1848, *Nouvelle Iconographie*, Book V, pl.II: Leaves large, dark green, ovate-oblong, slightly acuminate, prominent venation, finely serrate. The flowers are large, similar to **Duchesse d'Orleans;** the large, numerous petals are rounded, clear white, lightly streaked and tinged with pink, emarginate and symmetrically imbricated like the scales of a fish. Originated by Lechi, Italy. Orthographic error: 'Squammosa Alba'.

Squamosa Red. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.217. Synonym for **Squamosa Rubra.**

Squamosa Rosea. van Houtte Catalogue, 1851, 44:25; de Jonghe, 1851, *Traité de la Culture du Camellia*, p.122. Synonym for **Squamosa.** Orthographic error: 'Squammosa Rosea'.

Squamosa Rubra. *(C.japonica)*, Verschaffelt Catalogue, 1849-1850, p.49. No description. Luzzatti, 1851, *Collezione di Camelie*, p.35: Red lined with white, well imbricated. Originated in Milan by Sacco, Italy. Synonym: 'Squamosa Red'.

Squamosa Vera. *(C.japonica)*, Verschaffelt, 1852, *Nouvelle Iconographie*, Book VIII, pl.I: The epithet refers to the imbrication which is so close as to be likened to the scales of a fish. Its colouring is a deep cherry red, relieved in each petal by a border or stain of a decided violet shade. It has a good sized, full bodied bloom composed of numerous biform petals. Those of the first row are rounded and they become lanceolate as they approach the centre where they are slender and form a compact but open heart. It is of Italian origin and has been grown commercially for a few years. Orthographic errors: 'Squarrosa Vera', 'Squamose Vira', 'Squarose Vira', 'Squamosa Verra'.

Squamoa Verra. Onillon Nursery Catalogue, 1937, p.3. Orthographic error for **Squamosa Vera.**

Squamose Vira. de Bisschop Nursery Catalogue, 1935, p. 13. Orthographic error for **Squamosa Vera.**

Squarini. Trillon, Le Mans Nursery Catalogue, 1843, p.9. Orthographic error for **Squamosa.**

Squarose Vira. de Bisschop Nursery Catalogue, 1937, p.12. Orthographic error for **Squamosa Vera.**

Squarrosa Vera. Leroy, André, Catalogue, 1911, p.48. Orthographic error for **Squamosa Vera.**

St.Adele. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.217. No description. Originated in UK No valid listing located.

St. Andrè. *(C.japonica),* Robert Veitch & Son Nursery Catalogue, 1912: Large flowered, semi-double rosy crimson. McIlhenny imported it from Veitch and listed it in his 1937 Catalogue as: Very large, semi-double with full centre. Bright red. Fendig, 1950, *American Camellia Catalogue:* Large, bright red, semi-double to incomplete double, 10-12 cm across. Colour shades to purple at the petal tips. Stamens pink. Petals 5 cm wide, deeply notched on tips. Inner petals semi-erect. Foliage dark green, broadly oval, 8 cm x 5 cm. Midrib yellow with edges of leaf turned up from it. Serrations angular, shallow. Plant habit vigorous, spreading. Synonyms: 'Rose Hill Rubra', 'McIlhenny'. Originated in Belgium by Sander. It is the name of the Sander Nursery and the original plant was still living in 1970's. For colour photos: see pl. facing p.153, *American Camellia Yearbook,* 1949 and Macoboy, 1981, *The Colour Dictionary of Camellias,* p.118.

St. Disinganno. William Bull Nursery Retail Catalogue, 1867, p.74. No description. Orthographic error for 'Il Disinganno', synonym for **Disinganno.**

St. Elmo. Kiyono Nurseries Catalogue, 1939-1940, p.13. Synonym for **Augusta Wilson**.

St. Eve. Ingwerson Nursery Catalogue, 1972. Orthographic error for **St. Ewe.**

St. Ewe. *(C. x williamsii),* Anonymous, 1947, *Gardeners' Chronicle,* ser.3, 121:133, 149: RHS., Award of Merit, camellia **St. Ewe.** This medium sized, bright pink, single variety is believed to be a cross between a *C.japonica* and a dwarf form of *C.saluenensis.* Shown by C. Williams esq., Caerhays Castle, Cornwall, England. See illustration on p.149. See colour photo, p.111, Fairweather, 1979, *Rhododendrons and Camellias* and pl. facing p.88, *American Camellia Yearbook,* 1951. Received the RHS FCC in 1975. Orthographic error: 'St Eve'. Erroneously stated by Fendig in *American Camellia Catalogue*, 1952 to be a saluenensis x reticulata.

St. George. *(C.japonica),* Shepherd Nursery Catalogue, 1880, p.9: Bright rose. Medium large, formal double. Blooms mid-season to late. See p.337, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I.

St Giofello. William Bull Retail Nursery Catalogue, 1867, p.74. No description. Orthographic error for **Il Gioiello.**

St. Helena Red. *(C.japonica),* William Falla Nursery Catalogue, ca.1827. No description. Originated in China. There is a story that, en route from China, this camellia was saved from a shipwreck on the island of St Helena, and brought to England by a sailor. (Believed extinct.)

St Ives. *(C.japonica),* Eagle Heights Nursery Catalogue, 1962: Large, informal double with large petals, loosely arranged and interspersed with stamens. Whitish blush, peppered with dots and spots of carmine. Originated by E.G. Waterhouse, Gordon, N.S.W., Australia.

Stabler Pink. *(C.japonica,* Fendg, 1951, *American Camellia Catalogue;* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Light rose-pink. Medium large, formal double. Vigorous,

compact, upright growth. Blooms mid-season to late. Originated by Dr. L.V. Stabler, Greenville, Alabama, USA. Registration No.45 with ACS., 1954.

Stacked Deck. *(C.japonica),* *American Camellia Yearbook,* 1982, p.178, Reg. No.1809: A large, rose-red, formal double *C.japonica* chance seedling that blooms mid-season to late. Originated by Ted Alfter, Bakersfield, California. The 8 year old seedling first bloomed 1978. Average flower size, 11 cm across x 5 cm deep with 60-66 petals. Plant growth is upright, dense and rapid with dark green leaves, 7.5 cm x 4.5 cm.

Stacy Susan. *(C.japonica),* SCCS., 1978, *Camellia Nomenclature,* p.147: Blush dashed pink. Miniature, formal double. Medium, upright growth. Blooms mid-season to late. Originated in USA by J.M. Haynie, Theodore, Alabama. Chinese synonym: 'Sushan'.

Stain Pink. *(C.sasanqua),* Kondo, 1978, *International Camellia Journal,* No.10, p.68. No description. Originated in USA. No valid listing located.

Stalin. *(C.japonica),* Waterhouse. 1950, *American Camellia Yearbook,* p.78: A large, showy, deep crimson, semi-double. Originated by Fratelli Bagnasco Nursery, Pieve-Ligure near Nervi, Italy. Illustration, front cover, *International Camellia Journal,* 1988.

Stallsworth. *(C.japonica),* Thomasville Nursery Catalogue, 1942. No description. Sport: **Stallsworth Variegated.** Originated in USA.

Stallsworth Variegated. *(C.japonica),* Thomasville Nursery Catalogue, 1942, p.10. A virus variegated form of **Stallsworth.** Originated in the USA.

Staminea. Loddiges Catalogue, 1826, p.21. Synonym for **Rawesiana.**

Staminea Flore Pleno. Berlèse, 1835, *Annales de la Société d'Horticulture de Paris,* 16:417. Synonym for **Rawesiana.**

Staminea Plena. Berlèse, 1837, *Monographie*, ed.1, pp.103, 128. Synonym for **Rawesiana.**

Staminea Simplex. *(C.japonica),* Berlèse, 1837, *Monographie*, ed.1, pp.88, 128: Leaves large, 11 cm x 8cm, round-oval, stiff, shortly acuminate, prominent venation, pale green; bud very large, oblong, obtuse, scales yellowish; flower 10 cm across, single, 8-9 petals, cherry-red, sometime darker, stamens numerous, anthers large, filaments short. Originated in England. Synonyms: 'Pinckolor', 'Speciosa Simple', 'Roscii Minor'.

Stan Jones. *(C.hiemalis),* ACRS., 1983, *Camellia News*, No.87, p.22, Reg. No.294: Originated by Stan Jones, Mount Ousley, N.S.W., Australia from **Kanjiro** x **Splendor** that first flowered 1979. The 9 cm across, semi-double flowers are pale pink with deep rose-pink edges. The upright, dense plant has dark green, oval, 3.5 cm x 2.5 cm leaves.

Standard. *(C.japonica),* Fruitland Nursery Catalogue, 1931-1932, p.18 as 'No.4 Standard', changed to **Standard** in 1933-1934, p.14 catalogue: Light rose-pink to white in centre, shading out to dark rose-pink near the outer petals. Large formal double. Medium, compact growth. Flowers late. See colour photo, front cover, Fruitland Nursery Catalogue, 1931. See illustr. Hertrich, 1954, *Camellias in the Huntington Gardens* vol.I, p.335. Synonyms: 'Standard Pink', 'Standard Double Pink and White', 'Standard Double Pink', 'Standard Double'. Sport: **Standard Rosy Red.**

Standard Bearer. (*C.rosiflora* hybrid). *New Zealand Camellia Bulletin*, 1993, Issue No.114, vol.XVIII, No.1, p.33, Reg. No.332. Originated by N.G. Haydon, Papakura, New Zealand. A seedling of *C.rosiflora* hybrid **Wirlinga Princess** that first flowered 1987. Spreading dense and rapid growth with dark green leaves 6 cm long x 3 cm wide. Flowers anemone form, 3 cm across x 2 cm deep with 11 petals and 16 petaloids. Colour light pink (RHS.CC.55C-D). Blooms mid-season to late. It develops a strong, upright leader, making it suitable to develop as a standard.

Standard Double. Vanderbilt, 1941, *Camellia Research*, II, p.7. Synonym for **Standard.**

Standard Double Pink. McIlhenny, 1937, *600 Varieties of Camellias*, p.13. Synonym for **Standard.**

Standard Double Pink and White. Vanderbilt, 1940, *Camellia Research*, p.7. Synonym for **Standard.**

Standard Pink. Wilmot, 1943, *Camellia Variety Classification Report*, 1943, p.13. Synonym for **Standard.**

Standard Rosy Red. *(C.japonica)*, Fruitland Nursery Catalogue, 1946: Rosy red sport of **Standard.** Originated in USA.

Standing Ovation. *(C.reticulata), American Camellia Yearbook*, 1984, p.181, Reg.1954, (erroneously as a *C.japonica):* A very large, deep red, semi-double *C.reticulata* chance seedling, that blooms midseason. Originated by the Nuccio's Nurseries, Altadena, California, USA. The 4 year old seedling first bloomed in 1981. Average flower size, 15 cm across. Plant growth is upright and rapid with dark green, medium sized leaves. Species corrected in ACS., 1986, *The Camellia Journal*, vol.41, No.1, p.24. See colour photo, SCCS., 1987, *The Camellia Review*, vol.49, No.1, front cover. Chinese synonym: 'Huanteng'.

Stangate Ruby. *(C.japonica)*, ACRS, *Camellia News*, 1996, No.139, p.9, colour photo p.2, Reg. No.462. Registered by the Adelaide Hills Branch of the ACRS, Aldgate S.A. A chance seedling that first flowered 1990. The dark red (RHS.CC.58B) formal double flower has darker veining and white markings, maturing to informal double, 7.5 cm across. Flowers freely mid-season to late on a vigorous, compact plant. Leaves are light green, glossy, oval, acute apex, shallow serrations. Good texture, filaments scattered. Flower has a distinctive texture. Chinese synonym 'Baoshi'.

Star Above Star. *(C.x vernalis)*, Dekker, 1964, *American Camellia Yearbook*, p.66: McCaskill Gardens, Pasadena, California are introducing their new vernalis seedling, which is a semi-double in the form of one star superimposed on another star. The centre is white shading to lavender rose at the edges. Flowers mid-season. The shrub is vigorous, upright and bushy with foliage similar to **Ginyrû.** Received the Ralph Peer Sasanqua Seedling Award for 1969. See colour photo, p.178, Macoboy, 1981, *The Colour Dictionary of Camellias* and on the back cover, ACRS, 1982, *Camellia News*, No.83. Chinese synonyms: Xingshangxing', 'Fanxing'.

Star Bright. *(C.japonica)*, Fendig, 1953, *American Camellia Yearbook:* Pink. Semi-double. Early. Thompson, 1953, *American Camellia Yearbook*, p.78-79: A seedling of Rainy Sun originated by Harvey Short, Ramona, California, USA. A loose, somewhat spidery, semi-double with 5 out-jutting guard petals, which give the flower its star effect, and other smaller petals arranged loosely in the centre with a few stamens. Size, 9-10 cm across. The foliage is compact and dark green.

Star Burst. *(C.japonica), American Camellia Yearbook*, 1974, vol.II, p.239, Reg. No.1329: An 8 year old chance japonica seedling that first flowered 1971. Originated by Frank Sturch, Fair Oaks, California, USA. Plant growth is spreading and slow with light green leaves, 8 cm x 4.5 cm. The rose form double, 'Purity' (**Shiragiku**) type, bloom is red with 45 petals and 20 petaloids, yellow anthers and white filaments. Average size 11 cm across x 3.8 cm deep. Serrate leaves, star shaped flower with a centre of stamens and petals. Late blooming.

Star Cream. *(C.japonica)*, Lindo Nursery Camellia List, 1944-1945: Creamy white, loose peony. Hertrich, 1959, *Camellias in The Huntington Gardens*, vol.III, p.237: Incomplete double, loose peony form, cream white, yellow overcast at apices and petal bases; 10 cm across x 5 cm deep. Buds globular; petals about 25, outer row, heavily reflexed, undulate, almost rotund; inner petals, double and triple, segments united, apices notched, crimped; centre of flower a

loose arrangement of twisted, incomplete petals, petaloids and stamens, filaments creamy, anthers bright yellow. Leaves elliptic, cupped, curved, semi-glossy, dark green, 7.5 cm long x 3.5 cm wide, shallow, broad serrations, apices medium acuminate. Habit upright, open, vigorous, mid-season flowering. Sourse: Possibly of Japanese origin, distributed by F.M. Uyematsu, Star Nursery, Montebello, California.

Star Cream Peony. *(C.japonica)*, Fruitland Nursery Catalogue, 1948-1949, p.31: A medium sized, cream white, open peony. Originated in USA.

Star Dust. Vanderbilt, 1940, *Camellia Research*, p.7. Orthographic variant for 'Stardust', synonym for **Marguerite Gouillon Rose.**

Star Fire. *(C.japonica)*, Pyron, J., 1960, *American Camellia Yearbook*, p.38: A large, fiery red, semi-double with a brilliant mass of yellow anthers. Originated by Hugh Shackelford, Albany, Georgia, USA. Orthographic variant: 'Starfire'.

Star is Born. *(C.reticulata)*, ACS., 1986, *The Camellia Journal*, vol.41, No.3, p.17, Reg. No.2018: A very large, light pink, semi-double, *C.reticulata* chance seedling that blooms mid-season. Originated by Nuccio's Nurseries, Altadena, California, USA. Growth medium and compact. *American Camellia Yearbook*, 1986, p.94. The 6 year old seedling first bloomed 1980. Average flower size, 15 cm across. Plant growth is dense and medium. See colour photo: front cover, SCCS, 1987, *The Camellia Review*, vol.48, No.3.

Star Light. Rhodelia Nursery Catalogue, (ca,1945). Orthographic variant for 'Starlight', synonym for **Surusumi.**

Star of Bethlehem. *(C.japonica)*, Gerbings Azalea Gardens Catalogue, 1941-1942: Originated as a chance seedling by G.G. Gerbing, Fernandino, Florida, USA. A semi-double, pure white with the star formation of Imura type. Flowers mid-season. Size 7.5 cm across. Low, wide-spreading, bushy growth and long, narrow, dark green foliage.

Star of David. *(C.japonica)*, ACRS., 1980, *Camellia News*, No.74, p.25, Reg. No.256: Originated by T.J. Savige, Wirlinga, N.S.W., Australia. A chance seedling that first flowered 1977. The semi-double, 11 cm bloom has 12 petals and a central column of stamens. Colour is RHS. Red Group, 52A. An upright, spreading habit with mid-green leaves, 11 cm long x 5.5 cm wide, ovate, apex acute, base obtuse, margins serrulate. The petals sometimes form a shape of one triangle over another as in the Star of David. Chinese synonym 'Daiwei Zhi Xing'.

Star of India. *(C.reticulata).* ACRS., 1971, *Camellia News*, No.43, p.36, Reg. No.152: originated by F.S. Tuckfield, Berwick, Victoria, Australia from a seedling of 'Crimson Robe' (**Dataohong**) that first flowered 1968 when 4 years old. An upright grower, it bears flowers 11 cm across of Oriental red, HCC.819/3, with fluted, hose-in-hose petals and a pronounced trifid stigma and few stamens for a semi-double form. The 12.5 cm x 5.5 cm olive-green leaves are elliptic with fine serrations.

Star of Toowoomba. (*C.reticulata* hybrid). ACRS, *Camellia News*, Spring 2003, No.163, p.10, colour photo p.2, Reg. No.550. Originated by Les Rose, Toowoomba, Qld., Australia, registered by John Butler, Cabarlah, Qld. A chance seedling of *C.reticulata* hybrid **Mouchang** that first flowered in 1993. The pink rose form flower has 36 petals with smaller central petals streaked pale pink, 15.5 cm diameter x 7 cm deep. Flowers freely mid-season to late on an upright, open, spreading bush. Leaves dark green, glossy, serrate, rounded at base, apiculate apex, 9 cm long x 5 cm wide. A few stamens. Name approved by Toowoomba City Council.

Star Pink. Vanderbilt, 1941, *Camellia Research*, II, p.7. Orthographic variant for **Pink Star.**

Star Queen. *(C.japonica)*, Mark S. Cannon Scion Catalogue, 1963-1964, p.15. No description. Masons Nursery Catalogue, 1968: Deep rose-pink with rows of petals in star formation. Medium size, 10cm across. Mid-season blooming. Originated in New Zealand.

Star Red. *(C.japonica)*, Magnolia Gardens and Nursery Catalogue, 1947-1948, p.19: An extremely dark red semi-double, even darker than **Mrs Charles Cobb.** Sent to Magnolia Gardens from California some years before.

Star Ruby. *(C.japonica)*, Mark S, Cannon Scion Catalogue, 1963-1964, p.15. No description. SCCS., 1966, *Camellia Nomenclature*, p.124: Blood red. Large formal to rose form double, with 4-6 rows of petals. Medium, upright growth. Mid-season to late. Originated by F. Griffin Sr., Columbia, South Carolina, USA.

Star Shadow. *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue:* Pink. Semi-double. Mid-season. SCCS., 1954, *The Camellia. Its Culture and Nomenclature* p.82: Brilliant rose-pink. Large, full, semi-double. Slow, low, bushy growth. Mid-season blooming. Originated by Harvey Short, Ramona, California, USA.

Star Song. *(C.japonica)*, SCCS, 1976, *Camellia Nomenclature*, p.144: Pink. Medium sized, anemone to loose peony form. Vigorous, upright growth. Mid-season blooming. Originated in USA by Novick.

Star Wheel. Greenbrier Farms Price list, 1940. Synonym for **Hoshiguruma.**

Star White. Malbis Nursery Catalogue, 1939-1940. Synonym for **Candidissima.**

Stardust. Azalea Glen Nursery Catalogue, 1934. Synonym for **Marguerite Gouillon Rose.** Orthographic variant: 'Star Dust'. See Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I.

Starfire. Cannon, 1962, ACS., *The Camellia Journal*, vol.17, No.1, inside cover. Orthographic variant for **Star Fire.**

Starlet. *(C.japonica)*, *American Camellia Yearbook*, 1957, p.303, Reg. No.293: A 8 year old chance seedling, originated by Mrs Frank Eidson, Thomasville, Georgia, USA that first flowered 1952. Plant growth upright and rapid with small, dark green leaves, 4 cm long x 3.2 cm wide. The small, star-like flowers are light rose-pink and average 6 cm across x 2 cm deep with 36 petals and resemble **Candidissiina** in form. Blooms early to mid-season.

Starlight. Fruitland Nursery Catalogue, 1949-1950, p.29. Synonym for **Surusumi.**

Starry. Prince, William, 1828, *Camellia Japonica or Japan rose...*,p.170. Synonym for **Myrtifolia.**

Starry Flowered. William Prince, 1823, Catalogue. Synonym for **Myrtifolia.**

Starry Lights. *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue:* Pink. Semi-double, Early. SCCS., 1954, *The Camellia*. *Its Culture and Nomenclature*, p.82: Coral pink. Medium large, semidouble with wavy petals. Vigorous, compact, upright growth. Blooms early to mid-season. Originated by Harvey Short, Ramona, California, USA.

Starry Night. *(C.japonica)*, River View Nursery Catalogue, 1957-1958, p.11. No description. Originated in USA.

Starry Pillar. *(C.sasanqua).* Nuccio's Nurseries Catalogue, 2007, p.19. Small single white, occasional tint of pink on edge and on bud. Small dark green foliage. Medium growth, columnar habit. Originated by Nuccio's Nurseries, Altadena, Calif., USA., who regard it as likely to be a *C.sasanqua x C.tenuiflora* hybrid.

Stars and Bars. *(C.japonica)*, *American Camellia Yearbook*, 1965, p.247, Reg. No.681: An 11 year old chance seedling that first bloomed 1960, Originated by Mrs J.V. Knapp, Tallahassee, Florda, USA. Plant growth is open, willowy and slow with dark green leaves, 8 cm x 3.8 cm. The formal double, blood red flowers are 5.5 cm across x 2.5 cm deep with 150 or more petals.

Each petal has a creamy white bar down the centre. It is pinched at the top of the petals, showing two tiny white tips, giving a starred and barred effect. Blooms mid-season.

Stars 'N Stripes. *(C.hybrid). American Camellia Yearbook,* 2002, p.131, Reg. No.2569: A single, white striped red flower, unusual colour combination for a sasanqua-type flower. Originated by Nuccio's Nurseries, Altadena, Calif., USA. Introduced in their 1999 catalogue. The seedling first flowered in 1990. Flower is 9 cm across with 7-9 petals. Plant is upright, spreading and average growth rate. Flowers early to mid-season. The dark green leaves are 5 cm long x 1.8 cm wide.

Staryi. Anonymous, 1909, *Gardeners' Chronicle,* ser.3.46:175. Orthographic error for **Storyi.**

State Line Variegated. *(C.japonica),* SCCS, 1951, *The Camellia. Its Culture and Nomenclature as* 'State Line Var.': Dark red and white. Medium large, semi-double. Originated by Flowerwood Nursery, Mobile, Alabama, USA.

Staur. *(C.japonica),* Louis Leroy, 1863, Catalogue, p.124. No description. Originated in France. (Believed extinct).

Stefania di Butera. *(C.japonica),* E.G. Henderson & Son, 1871, Spring Catalogue, p.50 as 'Stephania de Butera'. Anonymous, 1876, *R Società Toscana di Orticultura Bollettino.* Very large flower, perfectly imbricated, bright rose. Rovelli Catalogue, 1896, p.43: Imbricated, bright pink with streaks, sometimes self coloured. Originated in Italy by Franchetti, Florence..

Stella. *(C.japonica),* Halliday, 1880, *Camellia Culture,* p.141: Rosy carmine, striped white. Originated in USA.

Stella Blare. Peer, 1958, *American Camellia Yearbook,* p.56. Orthographic error for 'Stella Polare', synonym for **Etoile Polaire.**

Stella d'Italia. *(C.japonica),* van Houtte Catalogue, 1858, 72:24: Imbricated, light pink banded with white. Verschaffelt, 1860, *Nouvelle Iconographie,* Book X, No.III: Received from Italy, originated by Mariani, Milan, from seed. The blossoms are above average size, admirably imbricated, vivid pink; the numerous petals perfectly rounded, full or rarely bilobate, convex with somewhat upturned edge. The foliage is small.

Stella del Pincio. *(C.japonica),* Medici Spada, 1858, *Delle Nuova Camellie chi si vengono ottenendo dalle Semine Romane,* p.8: Originated in Italy by Delgrande, Rome. A flower of medium fullness with 10 or more rows of oval petals, canalized and acuminated and symmetrically disposed in a spiral star-shape. Colour soft rose with a form somewhat like **Candidissima.**

Stella della Quiete. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.15: More than 60 petals, reflexed and folded to form a large, perfectly imbricated, concave flower of pale vermilion, sometimes self coloured, sometimes spotted with white. Raised at Villa Quiete, Rome, Italy.

Stella di Compito. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.73. Originated in Italy by Franchetti, Florence. Large flower, rose-pink with splashes and streaks of more vivid red. Cattolica, Az. Agr. Camelie Borrini Camellia List, 1995: Medium to large sized double. Soft rose bordered white. Late flowering.

Stella di Pergo. *(C.japonica),* Linden Catalogue, 1875. No description. Real Campanhia Horticolo-Agricola Portuense Catalogue, No.29, 1895-1896, p.55: Imbricated in a spiral. Bright pink. Originated in Italy.

Stella Matutina. *(C.japonica),* Medici Spada, 1858, *Delle Nuova Camelie chi si vengono ottenendo dalle Semine Romane,* p.8: Originated in Italy by Delgrande, Rome. A smooth convex form with 10 rows of petals; those of the periphery, broad, rounded, becoming reflexed and keeled. A flower of medium size, new amongst the whites for unusual petal arrangement.

Stella Polare. Jean Verschaffelt, 1861-1862, Price List, p.23. *R. Società Toscana di Orticultura Bollettino*, Apr.1862. Orthographic variant for **Etoile Polaire.**

Stella Polarie. *Cassell's Popular Gardening*, vol.I, 1883. Orthographic error for 'Stella Polare', synonym for **Etoile Polaire.**

Stella Polaris. Lang & Bunyard Nursery Catalogue, 1933. Orthographic error for 'Stella Polare', synonym for **Etoile Polaire.**

Stella Sewell. *(C.japonica), American Camellia Yearbook*, 1955, p.341, Reg. No.214: A 9 year old seedling of **Duchess of Sutherland;** originated by Julington Nurseries, Jacksonville, Florida. First flowered 1953. Plant growth is compact and average with glossy, light green leaves, medium sized, narrow and pointed. Flower buds are oval, pointed and white. The flower is white with a creamy overcast, 10-15 cm across, incomplete double similar to **Nobilissima,** with golden stamens intermixed with the central petals and petaloids. Mid-season blooming.

Stellan. *(C.japonica),* ACRS, *Camellia News*, 1995, No.135, p.11, Reg. No.443: Originated by Kenneth Brown, Mitcham, Victoria, Australia. A chance seedling of *C.japonica* **San Dimas.** A vivd red (RHS.CC.46B), semi-double of 11-14 petals, 9.5 cm across x 4 cm deep. Flowers freely mid-season to late on an average growing, bushy plant. Leaves olive-green, glossy, flat, ovate with serrate margins and acuminate apices, 9 cm long x 5.6 cm wide. Petals notched, filaments mingled with petaloids. Flowers shed whole.

Stellar Sunrise. *(C.japonica),* Camellia Forest Nursery Catalogue, 2008, p.16; A solid pink sport of **April Dawn**. Deep pink, formal double flowers often have incurving petals. Flowers mid-season to late. Strong upright growth, with large glossy, dark green leaves. Found and released by Camellia Forest Nursery, Chapel Hill, N.C., USA.

Stellari. Sgaravatti Catalogue, 1896. Orthographic error for **Stellaris.**

Stellaris. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie*, pp.35, 36: Perfectly imbricated, often star-like. Red, lighter in the centre with the petals banded with white. Franchetti, 1855, *Collezione di Camelie*, p.58: Salmon red with the petals paler at the centre where they are striped with white. Magnificent imbrication. Originated in Italy by Guicciardini, Florence.

Stellata. *(C.japonica), Jardim Portuense*, 1844, April, No.7, p.104; Semi-double, light pink with white stripes at the centre of each petal. Obtained by seedling by Mr. Thedim. Commonly known as 'Little Star'. Originated in Porto, Portugal.

Stellata. *(C.japonica),* Graulhie, Jun.1844, *Revue Horticole*, p.67 in a list of camellias grown in the nursery of M. Tourres, Machetaux near Tonniens, France. No description. (Believed extinct.) Possibly the same as the previous entry.

Stellata. *(C.sasanqua),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Light pink with a darker pink centre. Single. Originated at McCaskill Gardens, Pasadena, California, USA. See p.339, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III.

Stellata Perfecta. *(C.japonica),* Charles Vuylsteke, 1877-1878, Catalogue, p.17. No description. Originated in France. (Believed extinct).

Stenano. *(C.japonica),* Verschaffelt Catalogue, 1844, p.23. No description; Auguste van Geert Catalogue, 1848, p.22. No description; Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, p.226: Perfectly imbricated formal double, 9-10 cm across, more or less deep orange-red. Petals crimped, cupped, indented, spotted white, some flame coloured, others edged or streaked white. Luzatti, 1851, *Collezione di Camelie*, p.36: Rose, double. Perfectly imbricated. Franchetti, 1855, *Collezione di Camelie*, pp.58, 59: Fully double, rich pink, perfectly imbricated, often with white streaks or paler in the centre. Verschaffelt, 1856, *Nouvelle Iconographie*, Book XII, pl.III: Blossoms over medium size, composed of

numerous, rounded petals, scarsely lobulate, imbricated closely in a spiral, outspread at the circumference, turned up at the centre where they form a rose-like heart; vivid pink colouring, either uniform or with white stripes. Originated in Italy. Orthographic error: 'Stenuno', 'Stenaro'.

Stenaro. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.218. Orthographic error for **Stenano.**

Stenuno. Verschaffelt Catalogue, 1849-1850, p.49. Orthographic error for **Stenano.**

Stephan Allen. Van der Vis, Boskoop Nursery Camellia List, 1964-1965, p.1. Orthographic error for **Stephen Allan.**

Stephania. Cachet Catalogue, 1845-1846, p.2. Orthographic error for **Stéphanii.**

Stephania di Butera. E.G. Henderson & Son, 1871, Spring Catalogue, p.50. Orthographic variant for **Stefania di Butera.**

Stephanie. *(C.japonica)*, SCCS., 1960, *Camellia Nomenclature*, p.104: White with cream centre. Medium sized, formal double. Blooms early to mid-season. Originated by Mrs E.W. Fitzpatrick, San Diego, California, USA.

Stéphanie. Trillon, Le Mans Nursery Catalogue, 1843, p.9; Berlèse, 1845, *Monographie*, ed.3, p.116; Charles van Geert Catalogue, 1845. Orthographic error for **Stéphanii.**

Stephanie Golden. *(C.sasanqua).* ACS, *The Camellia Journal*, Aug. 1998, p.23, Reg. No.2462. A medium size, hot pink, semi-double chance seedling. Flowers early to mid-season. Originated by Tom Dodd Nurseries, Semmes, Ala., USA. *American Camellia Yearbook*, 1998, p.6, colour photo before p.1. The 13 year old seedling first flowered in 1987. Average flower size is 8.2 cm across x 2.5 cm deep, with 18 petals, yellow anthers and yellow filaments. Plant growth is upright, dense and vigorous, with dark green leaves 6.5 cm long x 4 cm wide.

Stephanie Stanley. *(C.japonica)*, SCCS 1996, *Camellia Nomenclature*, p.107: Dark pink with white spots. Large to very large semi-double with ruffled petals. Vigorous, open, spreading growth. Blooms mid-season. Originated by E. Atkins, Shalimar, Florida, USA.

Stéphanii. *(C.japonica)*, van Houtte Catalogue, 1839, 1:8 as 'Stephani': No description. Berlèse, 1840, *Monographie*, ed.23, p.87, 226 as 'Stephany': Flower about 11 cm across, clean white, full; exterior petals in many rows, broad, well displayed, notched and irregularly disposed in a cup-shape; those at the centre forming a compact, convex mass, similar to Nobilissima. Orthographic errors: 'Stéphanie', 'Stéphani', 'Stephania', 'Stephanio'. Synonyms: 'Stephanii Alba', 'Corra Alba'. Van Houtte Catalogue, 1843-1844, 12:xxx gives it as a synonym for **Haylockii,** however this is not accepted as **Haylockii** is given as having occasional pink stripes. However they must be very similar as Berlèse, 1843, *Iconographie*, pl.211 gives a description with a few pink stripes under the name 'Stephany' (which is considered to be **Haylockii**.)

Stephanii Alba. Verschaffelt Catalogue, 1849-1850, p.50. Synonym for **Stéphanii.**

Stephanio. Charles van Geert Nursery Catalogue, 1845, p.14. Orthographic error for **Stéphanii.**

Stephany. Berlèse, 1843, *Iconographie*, vol.3, pl.211. Synonym for **Haylockii.**

Stephen Allan. *(C.sasanqua)*, Griffin ed., 1959, *Camellian*, 1:23. No description. Originated in USA. Orthographic error 'Stephan Allen'.

Stephen Bullock. *(C.reticulata* hybr.), ACRS., 1986, *Camellia News*, No.99, p.22, Reg. No.346, colour photo rear cover: Originated by A.J.S. Bullock, Bentleigh, Victoria, Australia. A chance seedling from 'Janet Clark' that first bloomed 1984. A peony to informal double, 15 cm across x 9 cm deep, of deep red with fluted petals intermingled with stamens. (MHB.118C)

Blooms midseason. Plant growth is fast and bushy with dark green, glossy leaves, elliptic, apex acute with fine serrations, 11 cm x 5.5 cm.

Stephen Foster. *(C.japonica)*, SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.63: Dull red changing to purple plush. Medium sized, irregular, semi-double. Vigorous, compact, upright growth. Blooms mid-season. Originated in USA by Bradford.

Stephen Gordy. *(C.japonica)* ACS *Yearbook*, p.140 with colour photo, Regn No.2909. Originated and registered by C.M. and Lillian Gordy, Ocala, Fla., USA, and propagated by Loch Laurel Nursery, Valdosta, Ga. An 8 year old seedling, parentage unknown. Medium size, 10cm diameter x 5cm deep, flower is semidouble form, deep pink with bright gold anthers and pink filaments. Heavy petal texture, and flower falls whole. Plant is upright with vigorous growth. Mid-green leaves average 8.2cm x 3.8cm. Flowers midseason.

Stephen O'Mara. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.11, colour photo: Medium sized light pink, irregular semi-double with rare upright petals in the centre, breaking stamens into fascicles. A seedling of **Mrs William Thompson,** originated by Richard Dodd, Marshallville, Georgia, USA.

Stephens Garden. *(C.japonica)*, ACS, *The Camellia Journal*, June 2008, p.32 with colour photo, Regn No.2719; A chance seedling, first flowered 1965, originated and propagated by Bobby Green, Fairhope, Ala., USA. A 7 cm diameter x 3.25 cm deep, formal double flower with 100 petals. Light pink shading darker at the edges, which become slightly reflexed. Flowers mid-season to late. Upright, vigorous plant. *American Camellia Yearbook*, 2008, p.128 with colour photo; Dark green leaves 9 cm x 3.8 cm.

Stephe's Red. *(C.japonica)*, Cook, 1952, *American Camellia Yearbook*, p.89: Bought from a nurseryman in Louisiana. Large, oval, dark green leaves with coarse serrations and prominent venation. It has a vigorous, open and spreading growth habit. Flower buds, long and pointed and medium green colour. The blossoms vary from single with a loose stamen cluster to semi-double with stamens and petaloids interspersed. It first opens deep rose-red, becoming paler as the blooms ages. Its size is about 10 cm across and it flowers mid-season.

Sterana. *(C.japonica)*, Trillon, Le Mans Nursery Catalogue, 1843, p.9. No description. Originated in Italy. (Believed extinct.)

Sterilis. *(C.japonica)*, Cachet Catalogue, 1840-1841, p.3. No description. (Believed extinct.)

Steropa. Verschaffelt Catalogue, 1847-48, p.62. Orthographic error for **Sterope.**

Sterope. *(C.japonica)*, Berlèse, 1840, *Monographie*, ed.2, pp.145-146, 230: Leaves round-oval, similar to 'Dorsettii'; buds large, round, scales greenish; flower about 10.8 cm across, full, cherry red to carmine lake, somewhat like the nuances in **Imbricata;** exterior petals in 3 rows, regularly displayed, not numerous, deeply notched; those of the interior are variable from large to small, very irregular, separating the circumference from the centre a little like **Atrorubens.** Originated in Italy by Mariani. Orthographic errors: 'Steropa', 'Sterops'.

Sterops. Verschaffelt, 1844, Catalogue, No.50, p.23. Orthographic error for **Sterope.**

Steve Blount. *(C.japonica). American Camellia Yearbook*, 1974, vol.I, p.239, Reg. No.1334: A 7 year old japonica seedling (**Miriam Stevenson** x **Mark Alan)** that first bloomed 1964. Originated by Dr. W.F. Homeyer Jr., Macon, Georgia, USA. Plant growth is upright, spreading and medium with dark green leaves, 10 cm x 6 cm. The semi-double, **Mark Alan** type, flower is RHS.CC.66A (light red) with 21-26 petals and 12-15 curled petals and white stamens. Average size, 11-12.5 cm across x 6 cm deep. Very long, fluted and twisted petals. Blooms very early. Sport: **Steve Blount Variegated.**

Steve Blount Variegated. *(C.japonica),* Cannon, 1983, ACS., *The Camellia Journal*, vol.38, No.4 as 'Steve Blount Var'. A virus variegated form of **Steve Blount** - Light red blotched white. Originated in USA.

Steve Preston. *(C.japonica),* SCCS., 1984, *Camellia Nomenclature*, p.99: Pink. Large, anemone form. Vigorous, compact growth. Blooms mid-season. Originated by L.C. Preston, Walnut Creek, California.

Stevenii. *(C.japonica),* Hogg, 1838, *Magazine of Horticulture*, 4:155. Crimson and Scarlet. Originated in USA by M. Floy, New York.

Stephens. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Emperor of Russia.**

Stephen's Pink. Fendig, 1953, *American Camellia Yearbook.* Synonym for **Pride of Greenville.**

Stephens Plant. Griffiths & Strothers, 1954, ACS., *Nomenclatural Cross Reference List*, pp.4, 12. Synonym for **Emperor of Russia.**

Stevie Cockrell. *(C.japonica), American Camellia Yearbook,* 1958, p.291, Reg. No.324: A 10 year old chance seedling, originated by the Julington Nurseries, Jacksonville, Florida, USA. Plant growth is compact and average with medium size, dark green leaves, ovate and acuminate. The semi-double flowers are white, heavily flecked and dashed bright red 6-7.5 cm across with 4 alternating rows of petals and a few petaloids and inconspicuous white stamens. Mid-season blooming.

Stewardii. *(C.japonica),* Verschaffelt Catalogue, 1849-1850, p.50. No description. (Believed extinct.)

Stewart's White Supreme. *(C.japonica), American Camellia Yearbook,* 1960, p.207, Reg. No.473: An 8 year old seedling of **Ville de Nantes,** originated by Wilmer Stewart, Savannah, Georgia, USA. First flowered 1955. Plant growth is upright, dense and rapid with dark green leaves, 9.5 cm x 6cm. The white flowers, 12.5 cm across x 10.5 cm deep, have 52 fluted and rabbit eared petals. Blooms early to mid-seaon.

Stewetii Vera. Tourres, Macheteaux Catalogue, 1839, p.22. Orthographic error for 'Sweetii Vera', synonym for **Sweetiana.**

Stile's Perfection. *(C.japonica),* Mackenzie, P., Mar.1843, *Magazine of Horticulture,* 9:148: Originated by J.B. Smith, Philadelphia, USA. It is a vigorus shrub, leaves 10 cm x 6 cm ovate-oblong, dentate, acuminate, clear, shining green; flower 10 cm across, very double, regular, of a deep cherry-red, petals emarginate, imbricated from the centre to the circumference, numerous. Orthographic error: 'Style's Perfecton'.

Stile's Perfection (F.N.). *(C.japonica),* Hume, 1931, *Camellias and Azaleas,* ed.1, p.33: Flowers variegated, white striped with rose, double. Fruitland Nursery Catalogue, 1934-1935, p.15 and SCCS, 1950, *The Camellia. Its Culture and Nomenlature,* p.63 erroneously as a synonym for **Duchesse de Rohan,** invalidly as 'Stile's Perfection': White with pink flecks and stripes, sporting shell pink, rose pink and light lavender pink, edged white. Medium sized, anemone form. Blooms mid-season. Originated in USA. (SCCS., 1958, *Camellia Nomenclature*). Synonym: 'King's Rosea'.

Stile's Perfection Pink. Fruitland Nursery Catalogue, 1937-1938, p.18. Synonym for Duchesse de Rohan according to Fendig, 1953. Synonym for **Rubra Virginalis.**

Stile's Perfection Pink (South). Hertrich. 1955, *Camellias in the Huntington Gardens*, vol.II, p.268. Synonym for **Paeoniiflora** as 'Paeoniaeflora Rosea' (China).

Still Hope. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.98: White with a pink cast. Miniature, semi-double to anemone form. Medium, upright growth. Blooms mid-season to late. Originated in USA by Metcalf, California.

Stillson's Perfection. Vanderbilt, 1941, *Camellia Research*, II, p.8. Orthographic error for 'Stilson's Perfection', synonym for **Stilson's Perfection Pink.**

Storm. *(C.japonica)*, SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Deep flame red with dark purple edge, semi-double, 10 cm across x 3.8 cm deep. Petals stiffly semi-erect, pointed orbicular and deeply notched at the apex. Filaments light yellow, anthers dark yellow. Leaves dark green, elliptic, 8 cm x 4 cm, tapered base, thick, short apex, wide, medium serrations, raised venation. Originated in USA by Camellia Nurseries, Tallahassee, Florida. Sport: **Storm Variegated.**

Storm Variegated. *(C.japonica)*, Mark S. Cannon Scion Catalogue, 1962, p.10. Virus variegated form of **Storm** - Flame red blotched with white. Originated in USA.

Stormy Weather. *(C.japonica)*, SCCS., 1958, *Camellia Nomenclature*, p.81: Dark velvet red. Medium to large, semi-double with swirled and fluted petals. Vigorous, upright growth. Blooms mid-season to late. Originated by Harvey Short, Ramona, California, USA.

Story. Lindenj Nursery Catalogue, 1878-1879, p.11. Orthographic error for **Storyi.**

Storyi. *(C.japonica)*, Anonymous, Apr.1848, *Florist*, 1:101. Description not seen. Van Houtte Catalogue, 1851-1852, 45:41 as 'Storeyi': Imbricated flower. Brilliant pink at the circumference, nearly white at the centre. Rollisson's Plant Catalogue, 1877-1878, as **Storyi.** Outer petals brilliant rose, centre almost white. Verschaffelt, 1859, *Nouvelle Iconographie*, Book V, pl.II as

‘Storeyii’: Obtained from seed a few years ago by Messrs Veitch & Son, Exeter, England ... Its blossoms are large (10 cm at least), and are composed of ample, even petals (those of the centre scarsely smaller), oval-rounded, outspread and perfectly imbricated, of a delicate pink, very pale at the margins (Which makes them seem to be edged with white) and veined with crimson. Orthographic errors: ‘Storeji’, ‘Staryi’, ‘Storey’, ‘Storeyi’, ‘Storeyii’, ‘Story’.

Stowe Number 114. *(C.japonica)*, SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.63 as ‘Stowe No.114’: White marbled rose red. Large, formal double. Originated in USA.

Stradflordii. Jules Menoreau, Nantes Nursery Catalogue, 1862, p.11. Orthographic error for **Stratfordii.**

Straetenii. *(C.reticulata* hybrid*)*, Morren, 1845, *Annales de Gand*, 1:481-482 with colour pl.47 facing p.481. Said to be a seedling from a cross of *C.reticulata* x *C.japonica* **Atrorubens** made by A. van der Straeten, Leige, Belgium. Semi-double flower, 11-13 cm diameter. Outer petals are 4 cm wide at the top, and strongly blunted. Petals mix at the centre with prominent yellow stamens, in groups of about 10. General colour is reticulata pink, with some streaks of darker pink, which establish another analogy with the reticulata. Central petals are washed with white streaks at the base. A few sterile stamens.

Strawberries ‘n Cream. *(C.hybrid)* C. Aust., *Camellia News*, Spring 2011, No187, p.24 with colour photo. A seedling of **Yume** raised by Gene Phillips, Savannah Ga., USA.

Strawberry Betty. Gentry, 1969, ACS., *The Camellia Journal*, vol.24, No.1. Synonym for **Betty Sheffield Blush Supreme** of which it is an unstable form.

Strawberry Blonde. *(C.japonica)*, SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* A sport of **Aspasia Macarthur.** Light salmon pink, lightly speckled deep pink. Medium size. Blooms mid-season. Originated by E.H. Carter, Monterey Park, California, USA. Plant patent No.766. See Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I, p.340. See also ACRS., 1977, *Camellia News*, No.66, p.2 for colour photo. Sport: **Glamour Girl.** Chinese synonym: ‘Jinfa Nülang’.

Strawberry Cream.. *(C.japonica),* ACS, *The Camellia Journal,* Nov 1999, p.19, Reg. No.2512. A light blush pink, semi-double to rose form chance seedling. Heavy petal texture, sometimes crinkled. *American Camellia Yearbook,* 1999, p.6, colour photo before p.1. Originated by Tom Dodd, Semmes, Ala., USA. The 12 year old seedling first flowered 1987. Average flower size is 12 cm across x 2.5 cm deep, with 24 large petals, 4-6 petaloids, yellow anthers and filaments. Flowers mid-season to late. Flowers have darker edges and heavy petal texture with sheen. Plant growth is upright, spreading and vigorous with dark green leaves 9 cm long x 5.7 cm wide.

Strawberry Limeade. *(C.sasanqua),* ACS, *The Camellia Journal,* Dec 2012, p.30 with colour photo; Regn. No.2834. Regd. by Glenn Read Camellia Nursery, Lucedale, Miss. ACS, *Yearbook* 2012, p.183 with colour photo as a *C.japonica*; A 9 year old chance seedling, first flowered 2005. The miniature size, 3.2cm x 1.8cm, formal double flower is strawberry pink with petals tipped lime green, and a lime green centre. 40 petals, photo shows petals in separated layers, with many incurving. Upright, dense, vigorous growth. Dark green leaves average 5cm x 1.8cm. Flowers early to midseason.

Strawberry Parfait. *(C.japonica), New Zealand Camellia Bulletin,* 1992, Issue No.111, vol.XVII, No.4, p.6, Reg. No.291: Originated by Les Jury, New Plymouth, New Zealand from the *C.japonica* cross **Scarlet Buoy** x **Brushfield's Yellow.** The plant, now 13 years old, first bloomed 1987, and the flower is china rose striped with crimson (RHS.CC.58B striped 52A). The flower is 11 cm across x 6 cm deep with 31 petals and 36 petaloids. It is semi-double to loose peony form. The anthers are straw yellow and the filaments aureolin, and it flowers mid-season. The plant is upright, dense and medium in growth rate, with dark green leaves 8 cm long x 4 cm wide.

Strawberry Ripple. *(C.hiemalis).* C. Aust, *Camellia News*, No.182, Autumn 2010, p.6 with colour photo; Regn No.595-N,; A seedling of **Peach Puff,** first flowered in 2001. Medium size, opening formal double, ageing to informal double. Mixture of soft pink and white. Very early flowering. Slightly pendulous growth. Originated by Justin O'Malley Jones, Marian Grove Nursery, Mangrove Mountain, NSW, Australia.

Strawberry Soda. (*C.japonica*), *American Camellia Yearbook,* 1968, p.136, Reg. No.988: An 8 year old chance seedling that first bloomed 1964, originated by Alton Leger, Handsboro, Mississippi, USA. Plant habit is upright and rapid with dark green leaves, 8 cm long x 4.5 cm wide. The anemone form flower is 11 cm across x 5.5 cm deep with many petals and petaloids. Light pink with deep pink stripes and yellow stamens. Early blooming.

Strawberry Swirl. *(C.japonica), New Zealand Camellia Bulletin,* 1989, vol.XVI, No.1, Reg. No.264: Originated by Les Jury, New Plymouth, New Zealand. It is a 14 year old cross of *C.japonica* **Tomorrow** x **Tiffany** and first flowered 1980. The plant has average growth and density with an upright form. Leaves are dark green, 9 cm x 5.5 cm. The peony form flowers are medium to large, 10-11 cm across x 6-6.5 cm deep with 45-50 petals and 20-35 petaloids. Also groups of stamens show throughout the flower with pale filaments and yellow anthers. The colour is a soft pink with white margins on petals and deeper veining with an occasional rose stripe. Flowers early to mid-season. Colour RHS.CC.55B-C.

Streamliner. *(C.japonica),* SCCS., 1960. *Camellia Nomenclature,* p.105: White, finely striped deep pink. Large, semi-double. Vigorous, upright growth. Originated in USA by Harvey Short, Ramona, California.

Striata. Michael Floy Nursery Catalogue, 1823, p.27as 'fl.Striata'. Synonym for **Variegata.**

Striata. *(C.japonica),* McIlhenny, 1937, *600 Varieties of Camellias:* Deep rose pink, shading to crimson at the tips, single. Later in his 1948-1949 catalogue it is described as: Medium sized semi-double, spectrum red, without veining; petals small and loosely arranged, with central

area of some petals upturned and an occasional petal mottled white. Stamens interspersed with petaloids. Early blooming. Originated in USA.

Striata (da Silva). *(C.japonica),* da Silva & Filos Nursery Catalogue, 1988 invalidly as 'Striata': Rose pink, striped with carmine or lilac. Originated in Portugal.

Striata Alba Plena. *(C.japonica),* Villa Pamphili Catalogue, 1856. No description. Originated in Italy. (Believed extinct.)

Stricta Flore Pleno Carneo. Edwards, 1821, *Botanical Register,* pl.547 as 'C.sasanqua B, stricta fl. pl. carneo'. Synonym for *C.rosiflora.*

Strictly Ballroom. *(C.hybrid).* ACRS, *Camellia News,* 1998, No.147, p.12, colour photo p.19, Reg. No.498. Originated by Mr & Mrs G. Waldon, Wodonga, Vic., Australia. Seed parent *C.hybrid*

Wirlinga Belle, pollen parent unknown. First flowered 1990. The pale pink flower of 9-11 petals is 5 cm across x 3.5 cm deep, and is darker pink at the edge of the petals early in the season. A cluster flowering type hybrid, floriferous mid-season to late on an upright, medium growing plant with slightly pendulous branches. Leaves olive green, matt, elliptic, caudate apex, serrate margins, 6 cm long x 3 cm wide. Petals round, slightly notched, filaments columnar. Decorative red seedpods in summer.

Strie de Gaujacq. J & F Thoby, Gaujacq, France, Catalogue, 2009, p.7; No details.

Strike it Rich. *(C.reticulata), American Camellia Yearbook*, 1972, p.136, Reg. No.1211: A 10 year old chance reticulata seedling that first bloomed 1964. Originated by Richard F. Roggia, San Jose, California, USA. Plant growth is rapid with dark green leaves, 11 cm x 7.5 cm. The semi-double, **Frizzle White** type, bloom is clear pink with yellow anthers. It has 60-70 petals and a few petaloids and is 13-15 cm across. Blooms mid-season.

String of Pearls. *(C.hybrid),* Wilkes Nursery Catalogue, 1978: Blush pink, formal double. *American Camellia Yearbook*, 1980, p.174, Reg. No.1621:- A medium to large, very light blush-pink, formal double, (**Snowman** x **Charlean**). Blooms mid-season. Originated by Wilmer Stewart, Savannah, Georgia, USA and first bloomed 1974. Average flower size, 10 cm across x 3.8 cm deep with 78 petals which sometimes incurve. Colour similar to Mrs D.W. Davis. Plant growth is upright and medium with dark green leaves, 8 cm long x 3.8 cm wide.

Striped. Curtis, 1819, *Monography of the Genus Camellia.* Synonym for **Variegata.**

Striped Beauty. *(C.sasanqua),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cuiltivars from Nursery Catalogues,* p.260: White with pink striped. Originated in USA.

Striped Colvillii. Auguste van Geert Nursery Catalogue, 1845. Synonym for 'Colvillii Striata' (**Alba Lineata**).

Striped Double. Miller's Nursery, Bristol, Catalogue, 1838. Synonym for **Variegata.**

Sue Green. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997, p.15, Reg. No.2409. A medium size, white shading to sweetpea pink, anemone form chance seedling. Originated by Dr. James M. Habel, Jr, Suffolk, Va., USA. *American Camellia Yearbook,* 1997, p.7, colour photo before p.1. The 32 year old seedling first flowered in 1965. Average flower size is 10 cm across x 6.5 cm deep, with 20 petals, numerous petaloids, yellow anthers and white filaments. Plant growth is upright and vigorous with dark green leaves 11.5 cm long x 5 cm wide.

Sue Gwathmey. *(C.japonica), American Camellia Yearbook,* p.291, Reg. No.322: A 20 year old chance seedling, originated by E.B. Davis, Mobile, Alabama, USA, which first bloomed about 1950. Plant growth is medium, rapid, bushy and spreading, with light green leaves, 8 cm long x 4.5 cm wide. The flowers are semi-double, irregular in form, light rose-pink with about 30 petals

and 8-10 petaloids and an occasional stamen. Petaloids vary from pink to white. Flowers are 8-12.5 cm across x 3.8 cm deep. Blooms mid-season.

Sue Kendall. *(C.japonica),* ACS, *The Camellia Journal,* Nov. 1998, p.24, Reg. No.2477. A miniature, wine red, formal double chance seedling. Flowers early to late. Originated by Don Kendall, Modesto, Calif., USA. *American Camellia Yearbook,* 1998, p.6, colour photo before p.1. The 20 year old seedling first flowered in 1987. Average flower size is 6.5 cm across x 3.2 cm deep, with 65 petals. Plant growth is upright, open and vigorous, with dark green leaves 10 cm long x 6.5 cm wide.

Sue Laurent. *(C.japonica), New Zealand Camellia Bulletin,* 1994, Issue No.118, vol.XVIII, No.5, p.31, Reg. No.339: Originated by Mr & Mrs J.B. Rivett, Whakatane, New Zealand. A 10 years old chance seedling. Colour salmon pink (RHS.CC.55B), peony form with some yellow stamens. Flower size is 11 cm across x 6 cm deep, with about 22 petals and 60 petaloids. A plant of average growth with 7 cm long x 3.5 cm wide light green leaves. Blooms mid-season to late.

Sue Rhodes. (*C.reticulata*), SCCS., 1981, *Camellia Nomenclature*, p.181: Rich pink. Very large, semi-double to peony form with fluted petals. Upright growth. Blooms early to mid-season. A seedling of *C.reticulata* 'Crimson Robe' (**Dataohong**), originated by Mrs I. Berg, Whakatane, New Zealand.

Sue Seeley. *(C.japonica),* River View Nursery Catalogue, 1957-1958, p.10: Light rose-pink. Large, loose peony form. Upright growth. Blooms mid-season. Originated at River View Nursery, California.

Sue Wilder. *(C.japonica), American Camellia Yearbook,* 1965, p.248, Reg. No.801: A 12 year old chance seedling that first flowered 1959 at 7 years of age; originated by Robert W. Wilder, Fairhope, Alabama, USA. Plant growth is average with dark green leaves, 10.5 cm long x 5 cm wide. The anemone form flower is 11-12.5 cm in diameter x 6 cm deep with 20 petals and 35 petaloids. Large, loose petals, slightly waved and uniformly notched at the apex. Stamens intermingle with centre petaloids surrounded by large petaloids. Bright, rich pink with yellow anthers and light pink filaments. Blooms early to mid-season.

Suehiro. (Expanded Future), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White with small red spots. Stamens like a bamboo whisk, semi-double with 3-4 rows of petals. Originated in Japan. See: JCS., 1969, *Tsubaki,* No.7, p.33. (Believed extinct.)

Sue-michibata-shiro. (Roadside of Su'e), *(C.japonica),* Yokoyama & Kirino. 1989. *Nihon no Chinka*, p.56, colour photo & description: Medium size, white, with 7 broad, overlapping, crinkled and waved petals and a short, broad, central stamen column with white filaments and light yellow anthers. Blooms mid-season. Leaves mid-green, elliptic. Originated in Kushimoto, Wakayama Prefecture, Japan.

Suertan. (Sultan). Gao, Jiyin, 1993, *The Observations from the Camellia World,* No.521, p.66. Chinese synonym for the Belgian *C.japonica* **Grand Sultan.**

Sug Edwards. *(C.japonica), American Camellia Yearbook,* 1979, p.219, Reg. No.1411: A large, medium pink, semi-double. A 6 year old chance seedling of a *C.japonica* that first bloomed 1975. Originated by Sarah Godly Edwards, Savannah, Georgia, USA. The semi-double, **Frizzle White** type, bloom is medium pink with yellow anthers and white filaments, 40 petals and 5 petaloids. Average size 11 cm across x 6 cm deep. Blooms mid-season.

Sugar and Spice. *(C.japonica),* Short, 1955, *American Camellia Yearbook,* p.42. A corsage Camellia. No description. Originated by Harvey Short, Ramona, Califomia, USA.

Sugar'n'Spice. (*C.lutchuensis* hybrid). *New Zealand Camellia Bulletin,* 1993, Issue No.115, vol.XVIII, No.2, p.47, colour plate p.48: A seedling of the *C.x williamsii* **Pink Dahlia** x *C.lutchuensis,* originated by John Lesnie, Manukau City, New Zealand. Medium sized, light pink, semi-

double with lightly notched petals. Fragrant. Note: The name 'Sugar and Spice' under the illustration is invalid.

Sugar Babe. *(C.japonica), American Camellia Yearbook*, 1959, p.281, Reg. No.378: An 11 year old seedling, originated by A.M. Harman, San Fernando, California, USA, which first flowered 1954. Plant growth is average and slow. The dark green leaves are 6 cm x 3.2 cm. The dark pink to red blossom averages 5 cm across x 2 cm deep. Blooms mid-season. Orthographic variant 'Sugarbabe'. Received the John A. Taylor Jr. Miniature Award, 1983. See colour photos: Front cover, *New Zealand Camellia Bulletin*, 1973, vol.VIII, No.2; and pl.137, p.66, *Encyclopedia of Camellias in Colour*, vol.II, 1978. Chinese synonym: 'Tianniu'.

Sugar Daddy. *(C.japonica), American Camellia Yearbook*, 1969, p.166, Reg. No.1032: A 6 year old chance seedling that first bloomed 1965; originated by W.H. Fleetwood, Savannah, Georgia, USA. Plant growth is upright, spreading and vigorous with dark green leaves, 12 cm x 6 cm. The semi-double bloom is 14.5 cm across x 7.5 cm deep with 37 petals and 10 petaloids. Medium pink with yellow anthers and white filaments. Blooms mid-season. Colour photo, inside back cover, ACS., 1968, *The Camellia Journal*, vol.23, No.3. Sport: **Sugar Daddy Variegated.**

Sugar Daddy Variegated. *(C.japonica)*, Gentry, 1969, ACS., *The Camellia Journal*, vol.24, No.4 as 'Sugar Daddy V.': A virus variegated form of **Sugar Daddy** - Medium pink and white. Originated in USA.

Sugar Dream. *(C.hybrid), New Zealand Camellia Bulletin*, 1984, vol.XIII, No.6, p.23, Reg. No.208: A controlled cross of *C.hybrid* **Dream Girl** x *C.oleifera* **Jaune,** originated by O. Blumhardt, Whangarei, New Zealand that first flowered 1980. It has dark green leaves 7-8 cm long x 2-2.5 cm wide. Growth is open, upright and medium. Flowers are medium pink, anemone form, 8 cm across x 3 cm deep with 18 petals and numerous petaloids, cream yellow, some tipped pink. Flowers early and has a sweetish scent. Chinese synonym: 'Tianmeng' later altered to 'Tangmeng'.

Sugaragataki. *(C.japonica)* Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. From Kumamoto Pref. No details.

Sugarbabe. Newmans Nursery Catalogue, 1982-1983. Orthographic variant for **Sugar Babe.**

Sugi-no-to. (Cedar Door), *(C.japonica)*, Himuro, 1982, *Murasuzume:* White with short rose-pink streaks. Formal double. A seedling of **Kyôkarako**. Originated in the Kanagawa Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.140 with colour photo; English translation p.96. Small, pale red to pink stripes on pink ground. Flowers early to mid-season. Leaves narrowly elliptic, large. Upright growth. Originated by Teiji Himuro. Registered to the Ministry of Agriculture & Fishery, #3502.

Sugiura. (Personal Name), *(C.sasanqua)*, Hantei, Kinta, 1827, *Sômoku Kihin Kagami:* No description. Originated in Japan. (Believed extinct.)

Suglio. *(C.japonica)*, Charles van Geert Nursery Catalogue, 1845, p.14: No description. Formal double of vivid clear red. Originated in Italy.

Sugoroku. (Childrens Dice Game), (Higo), Izu-Ohshima, 1980, *Hawaii Botanic Gardens List.* No description. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.285, colour photo & description: Medium size, white with rare pink marking, to deep red, single of 6 to 7 overlapping, crinkled and emarginate petals, opening flat, with a large, spreading burst of numerous stamens with yellow anthers. Flower colours are variegated in several different ways. Its name implys the chances of what flower colour appears, like the chance of a dice game. Leaves dark green, elliptic to broad-elliptic, apices tapering acute, margins serrulate. Blooms mid-season to late.

The original tree is growing with the Shimoda family, Kumamoto City, Japan. Named and released by Tsugio Ôta in 1971.

Suherabeni. (obscure), *(C.sasanqua),* Yashiro, 1841, *Kokon Yôrankô,* vol.344. No description. Originated in Japan. Possible corruption for **Subebebeni** in *Kadan Chikinshô,* 1695. (Believed extinct.)

Sui-Begin. Vanderbilt, 1940, *Camellia Research,* p.5. Corruption of the Japanese name **Suibijin.**

Suibigin. Manning, 1939, *Plant Buyer's Guide,* ed.4. Corruption of the Japanese name **Suibijin.**

Suibijen. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Suibijin.**

Suibijin. (Blushing Maiden), *(C.japonica),* Chûgai Nursery Catalogue, 1934-1935, p.32; Kyôto Engei Kurabu, 1960, *Tsubaki Tokushû,* No.1, p.64; ibid, 1970, No.10, p.163: Pink. Large, single with round petals. A medium sized, pale pink to carmine rose bloom, 6-7.5 cm across (RHS.CC.621/3 and lighter) with 5-6 rounded petals about 5 cm across with a crêpe-like texture, wrinkled edges, slightly notched; flaring central stamens, anthers dark yellow, filaments yellow. Leaves medium to dark green, 8 cm x 5.3 cm, apex blunt pointed, bases round, thick. Habit slow, open growth. Different reading: 'Yoibijin'. Synonyms: 'Blushing Maiden', 'Lady Crutwell'. Corruptions of name: 'Subijin', 'Subiji', 'Suibigen', 'Suibigine', 'Sui-Begin', 'Suibigin' . In the USA the name **Suibijin** was erroneously applied to **Kamo-honnami** as 'Amabilis'. In translation 'Sui' = intoxicated or elated and 'bijin' = beautiful woman, hence the synonym 'Blushing Maiden'. A cultivar from a private family in Iyo City, named and released by Tokihiro Kôno in 1982.

Suibijin Alba. Camellia Grove Nursery Catalogue, 1945. Synonym for **Kamo-honnami.**

Suibijine. Wilmot, 1943, *Camellia Variety Classification Report,* p.13. Corruption of Japanese name **Suibijin.**

Suigan. (Flushed Face), *(C.japonica),* Uesa, 1844, *Sômoku Benran.* Pale pink, large size, double. See: Kyôto Engei Kurabu, 1961, *Kyôto Engei,* No.65, p.S. Originated in Japan. (Believed extinct.)

Suigetsu. (Drunken Moon). (*C.nitidissima* hybrid). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.138 with colour photo; English translation p.94. Medium size, pale yellow, bowl-shaped single, pink petal margins. Flowers mid-season. Leaves narrowly elliptic, medium size, glossy. Upright growth. A cross between *C.hybrid* **Shimotsuki** and *C.nitidissima.* Originated and released by Kazuo Yoshikawa in 1994. From Osaka.

Suihua. (Multicoloured Tassel), *(C.japonica),* Chang & Chang, 1867, *Pen Two Kang Mu.* No description. Originated in China. (Believed extinct.)

Sui-no-hana. (Place name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.139 with colour photo; English translation p.95. Small, pale pink changing to white, tubular single, cylindrical stamen column. Flowers early to late. Leaves narrowly elliptic, medium size, waved. Upright, vigorous growth. An old tree growing at a temple in Sui-no-hana, Aioi Town, Naka District. Named and released by Yasuo Katayama in 1986. From Tokushima Prefecture.

Suiraku. (Happy Drunkenness). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.112. No description. From Kurume City, Japan.

Suiseishi. (Flushed Seishi), *(C.sasanqua),* Yashiro, 1841, *Kokon Yôrankô.* Description not seen. Originated in Japan. (Believed extinct.)

Suisha. Different reading for **Mizuguruma.**

Suishôban. (Crystal Plate), *(C.japonica),* Kasuya Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White, semi-double, cup-form; divided stamens. Originated in Japan. (Believed extinct.)

Suishôhaku. (Crystal White), (Higo), Tamura, 1956, *Higo Tsubaki;* Satomi, 1956, *Camellia Varieties in Japan* as 'Suisho-haku'; Hiratsuka, 1964, *Higo Camellias*, p.9 & back p.11: Pure white, large, 8-9 cm across, 5-6 petals, the three on the outside being larger than those on the inside gives a three cornered appearance, spreading stamen cluster with 120-140 long, white filaments. Late flowering. Leaves long-ovate, medium sized, thick, dark lustrous green. Different readings: 'Suishôjiro', 'Suisyohaku', 'Shuishôhaku'. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.224.; *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.368.

Suishôkyû. (Iris Palace), (Higo) Murayama, 1961, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.2, p.10: White Higo camellia. Originated in Japan.

Suishônowa. Different reading for **Suishôrin.**

Suishôrin. (Crystal Wheel), *(C.japonica)*, Cho, [before 1867], *Chinkafu*, illustrations pp.10, 11. Description not seen. Originated in Japan. (Believed extinct.) Different reading: 'Suishônowa'.

Suishô-tsubaki. (Crystal Camellia), *(C.japonica)*, Aoyama, Kinta, 1827, *Sômoku Kihin Kagami*, according to Watanabe, 1970; Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.157: Virus variegation appears on half of each leaf. Resembles **Kifutamiya-tsubaki.** Originated in Japan. (Believed extinct.) Probable synonym for **Yamanashide-suishô** of *Sômoku Kinyôshû.*

Suisyohaku. Hiratsuka, 1964, *Higo Camellia*, p.11, No.9. Different reading for **Suishôhaku.**

Suitengû-benikarako. (Red Anemone of Suitengû Shrine). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.41 with colour photo; Large vermilion anemone form. Tight compact petaloid centre has some white streaks. Vigorous, upright growth. Leaves medium size, elongated elliptic. Late flowering. A 150 year old tree at the Suitengû Shrine, Senoshita-machi, Kurume, Japan.

Suizenji. (Place Name) *"Sasanquas, The Winter Flowers"* ICS Congress, Kurume 2010, p.63; Synonym for **Shinonome.**

Sujuki. *(C.japonica)*, Salkia Nursery (India) Catalogue, 1920-1921, p.7. Dark red. Origin unknown. (Believed extinct.)

Sukasa. *(C.japonica)*, Donnan, 1981, *American Camellia Yearbook*, p.81: A small picotee *Camellia japonica* imported from Japan by Nuccio's Nurseries in 1980. A small bloom with white petals, picoteed with a fine rose-red line on margins. The bloom has a loose peony form. Possibly a corruption of the Japanese name 'Tsukasa' (Master).

Sukiya. (Tea House), (Wabisuke), Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15: Small, pink single. A few red spots, jar-shaped. Early flowering. Also listed in: Itô, Ihei, (before 1801), *Hyakka Tsubaki Nayose Irotsuki* as large flower. Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Shirai-Bunko, 1812, *Tsubaki Nayosechô* A medium size, bamboo whisk like stamens. Yashiro, 1841, *Kokon Yôrankô*, vol.309; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Bamboo whisk stamens, mid-season blooming. Originated in Japan. (Believed extinct.) See: JCS., 1983, *Tsubaki*, No.22, p.133; ibid, 1969, No.7, p.33; ibid., 1982, No.21, p.110. Note: The early descriptions are slightly different and clear identification is not possible. It is possible that some are the same as the modem cultivar and the others are not.

Sukiya. (Tea House), (Wabisuke), Itô, Ko'emon, 1879, *Chinkashû:* Pale pink, single, small size, blooms early. Tuyama, 1968, *Camellias of Japan*, pl.396, p.201, description, p.207: Leaves lanceolateelliptic to broadly lanceolate, apex acuminate, margins minutely serrulate; leaves resemble **Tarôkaja;** slow, open growth, Flower single, pale pink, (Neyron rose 623/1 to /3) tinged with rose in part on the outer side, half opened, petals channelled, stamens short, anthers dull yellow without pollen, style long. Blooms early to mid-season. Originated in Kantô area, Japan. 'Sukiya' is a small room for the tea ceremony. For botanical drawings, colour photo and description see: pp.29, 30, 32, Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*,

No.11. See colour photos & descriptions: Tuyama, 1966, *Camellia Cultivars of Japan*, p.392; pl.396, Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.27 and pl.461, p.361; *Encyclopedia of Camellias in Colour*, 1972, vol.I, pp.187, 361; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.80, 224; Colour photo, p.84, Yokoyama. & Kirino, 1989, *Nihon no Chinka.* Synonyms: 'Sukiya-wabisuke', 'Momoiro-wabisuke'. Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement*, p.85 gives **Sukiya** as a synonym for 'Uraku', however the true 'Uraku' is a different cultivar with the prior name of **Tarôkaja.**

Sukiya Little Princess. Nuccio's Nurseries Retail Price List, 1993-1994, p.35. Synonym for **Shôwa-wabisuke.**

Sukiya (2). Fendig, 1953, *American Camellia* Catalogue. Pseudonym. for **Hatsukari.**

Sukiyabeni. (Red Sukiya), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Long, narrow petals. Originated in Japan. Different reading: 'Sukiyakô'. (Believed extinct.)

Sukiyakô. Different reading for **Sukiyabeni.**

Sukiya-unryû. ('Unryû' type 'Sukiya'). (Wabisuke). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.229 with colour photo; Small, pale pink, sake cup-shaped single. Flowers early to mid-season. Leaves elliptic, small. Upright growth with zig-zag stems like **Unryû-tsubaki.** A sport of **Sukiya,** found and named by Shunsuke Hisatomi, Fukuoka Pref., Japan, in 2003.

Sukiya-wabisuke. Miyazawa, 1955, *Tsubaki no Samazama Shinkaki*, No.5, p.10. *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.361; Tuyama, 1966, *Camellia Cultivars of Japan*, p.392. local name in the Kansai area for **Sukiya.**

Sulcata. *(C.japonica)*, Cachet Catalogue, 1840-1841, p.2. Striped. Van Houtte Catalogue, 1841, 7:19: Imbricated, white with a yellowish streak extending down each petal from the centre to the circumference. Verschaffelt, 1848, *Nouvelle Iconographie*, Book IX, pl.II: Originated by Mr. Negri, Milan, Italy, this interesting camellia has been found in collections for several years. It is sometimes met under the name of 'Belle-Irene'. The name is derived from the latin sulco = a groove and expresses the greenish line found in the middle of the border. The deep green leaves are oval, oblique, 4-5 cm wide x 7-8 cm long, acuminate with regular serrations. The bud is large, round with greenish scales; the blossoms, 10 cm across, are full, anemone form, with numerous white petals, oval, rounded, emarginate and regularly imbricated from the centre to the circumference. Verschaffelt in 1852 again figured and described this cultivar under name 'Belle Irene', Book IV, pl.III. Van Houtte separately listed both names in 1841 in his No.9 catalogue, but **Sulcata** has priority. Synonyms: 'Alba Viridis', 'Sulcata Alba', 'Bell' Irene', 'Bella Irene', 'Belle Irene'.

Sulcata Alba. Burnier & Grilli Catalogue, 1855-1856: Franchetti, 1855, *Collezione di Camelie*, p.59. Synonym for **Sulcata.**

Sulcata Rosea. *(C.japonica)*, Verschaffelt Catalogue, 1847-1848, p.62. No description. Burdin Maggiore & Co, 1849-1850, Catalogue General: Purplish pink with white stripes at the centre of the petals. Imbricated. Luzzatti, 1851, *Collezione di Camelie*, p.36: Ground of bright purple, petals lined with white to the centre. Imbricated. Franchetti, 1855, *Collezione di Camelie*, p.59: Light purple base with white streaks. Inconstant imbrication. Originated in Italy.

Sulina Louise. Mark S. Cannon Scion List, 1962, p.10. Orthographic error for **Selina Louise.**

Sulferina. *(C.japonica)*, Burdin Maggiore & Co. Catalogue, 1870-1871. No description. Originated in Italy. (Believed extinct.)

Sulphur Island. *(C.japonica)*, Fruitland Nursery Catalogue, 1954-1955, p.30. No description. Originated in USA.

Sulpheurous. Anderson & Co. Catalogue, 1902, p.77. Orthographic error for **Sulphureous.**

Sulphureous. *(C.japonica)*, Sheather Nursery Catalogue, 1877 as 'Sulphureus'; Shepherds & Co. Catalogue, 1880, p.9: Rosy salmon pink, with occasional white stripe. Medium large, formal double. Originated in Australia by Silas Sheather, Parramatta, N.S.W Orthographic errors: 'Suphureus', 'Sulpheurous'.Orthographic variant: 'Sulphurous'.

Sulphureus. Sheather Nursery Catalogue, 1844. Orthographic error for **Sulphureous.**

Sulphurous. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Orthographic variant for **Sulphureous.**

Sultana. *(C.japonica)*, Oudin, Lisieux Nursery Catalogue, 1845-1846, p.48: Beautiful imbricated form, dark red, rayed white. Superior to **Cruciata.** Originated in Italy. (No relationship to American cultivar).

Sultana. *(C.japonica)*, SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.87: Sport of **Julia Drayton** (invalidly as 'Mathotiana'). Scarlet semi-double to peony form. Large to very large. Originated in USA at McCaskill Gardens, Pasadena, California. Sport: **Sultana Variegated.**

Sultana Variegated. *(C.japonica)*, Feray's Fine Flowers Catalogue, 1960: as 'Sultana Varie.': a virus variegated form of **Sultana** - Scarlet blotched white. Originated in USA.

Suma. (Place Name), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Formal double, medium size, white spots on red ground. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.78. Originated in Japan. (Believed extinct.)

Suma-no-ura. (Bay of Suma), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan:* Large size, double, white, red margined. Originated in Japan.

Sumibiki. (obscure), *(C.sasanqua)*, Hantei, Kinta, 1827, *Sômoku Kihin Kagami.* No description. Originated in Japan. (Believed extinct.)

Sumidagawa. (Sumida River), *(C.rusticana)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Yashiro, 1841, *Kokon Yôrankô*, vol.311; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotruki;* Itô, Ko'emon, 1879, *Chinkashû:* Pure red double with white spots, pot shaped, peony form. See: JCS., 1983, *Tsubaki*, No.22, p.132; ibid, 1982, No,21, p.111; 1969, No.7, pp.33, 36; Tuyama, 1966, *Camellia Cultivars of Japan*, p.159 & p.276: Rose coloured, spotted white, large, double with 3-4 rows of long, oval petals, inner ones channelled, reflexed with the central stamens broken into fascicles by small, semi-erect petals. Leaves mid-green, obovate, apex acuminate, base cuneate, margins finely, shallowly serrulate. Originated in Kantô area, Japan. The Sumida River runs 200 kilometers from Kobushiyama to Tokyo Bay, passing through Kumagai. See colour illustrations & descriptions: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.265, pp.122, 330; Shufu-no-Tomo-Sha, 1976, *Tsubaki to Sazanka*, p.36; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.324; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.81, 224. The name of this camellia has been written with different first characters which, however, are synonymous.

Sumidagawa. (Sumida River), *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.288: Medium sized, white, semi-double with veined petals and spreading stamens with reddish-brown anthers. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.122. (Believed extinct.)

Sumikura. Sawada, 1947, *American Camellia Yearbook*, p.48. Different reading for **Suminokura.**

Suminda Gawa. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.219. Corruption of the Japanese name **Sumidagawa.**

Sumi-no-hikari. (Light in a Corner), (Wabisuke), Cited in Seibundô Shinkôsha, 1979, *Senchinshû*, p.233 as the flower with the degenerate stamens; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.180, colour photo & description: Small size, bright red, campanulate single with 5-6 overlapping petals and infertile stamens. Leaves elliptic to lanceolate-elliptic, bright green, apices long acuminate, recurved, margins finely serrulate. Blooms very early to mid-season. Originated in Tottori Prefecture, Japan.

Suminokura. (Famous Merchant Suminokura, Yochi), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû* as 'Sumi-no-kura-tsubaki', described as obtained by Suminokura, Yochi. Shirai-Bunko, 1789. *Shoshiki Hanagatachô:* Red, full double, large, variable. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.103, ibid, 1964, No.5, p.78. Originated in Japan. (Believed extinct.) Synonyms: 'Yoichi-tsubaki', 'Sumi-no-kura'(Tsubaki). Note: Existing **Aka-suminokura** is similar to this.

Suminokura. (Famous Merchant), *(C.japonica)*, Nakayama, 1851, *Senka'ôden,* 1st ser. vol.5: Dark red ground with white spots. Formal double. Blooms mid-season. Originated in Japan. Sumi-nokura was famous for the number of canals and ships he built and he described this variety as the best one. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.79. Synonym: 'Suminokura-tsubaki'. (Believed extinct.)

Sumi-no-kura (Tsubaki). Sakuden, 1630, *Hyakuchinshû;* Nakayama, 1851, *Senka'ô-den.* Synonym for **Suminokura.**

Sumitomo. (Personal Name), *(C.japonica)*, JCS., 1984, *Tsubaki*, No.23, p.36: Flower very large, up to 18 cm across. A pure white, double. Mid-season flowering with thick petals. Originated in Imabari City, Ehime Prefecture, Japan. Named and released by Akinori Tajima in 1981. Note: Fujuwara-no-sumitomo rose in rebellion against the Emperor in the middle of the Heian era.

Sumiya. (Corner Shop), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.329: Medium size, white, single flat flower with 5 irregular and waved petals with stamens in a large ring shape. Originated in Japan. See: Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû*, No.5, p.155. (Believed extinct.)

Sumiya. (Corner Shop), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.611: Medium size, white, single of 5 slightly irregular petals; centre consists of a ring of pointed petaloids about a group of short, green stamens. Originated in Japan. (Believed extinct.)

Sumiya. (Charcoal Shop), *(C.japonica)*, Monk Horin, 1642, *Kakumeiki;* Hirayama's *Tsubaki Byôbu*, (late 17th century). No description. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, pp.47, 48. Originated in Japan. (Believed extinct.)

Sumiyagura. (Corner Tower), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.318: Small semi-double with 2 rows of petals, pale pink, deepening towards the base, red streaks. Centre is a tall column of petaloids. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.138. Originated in Japan. (Believed extinct.)

Sumiyagura. (Corner Tower), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.384: Medium size, anemone form, white, heavily streaked with red. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.161. Originated in Japan. (Believed extinct.)

Sumiya-tsubaki. Sakuden,1630, *Hyakuchinshû.* Synonym for 'Katsura-no-hana'.

Sumiyoshi. (Place Name), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.149: Medium size, single with 6 even, oval, notched, deep crimson petals about a wide circular group of short, yellow stamens. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.105. Originated in Japan. (Believed extinct.)

Sumiyoshi-botan. (Sumiyoshi Peony), (*C.rusticana*), Tuyama, 1968, *Camellias of Japan,* pl.129, p.65, description, p.126: Leaves dark green to green, ovoid-elliptic to broadly elliptic, rounded at the base, shortly acuminate at the apex, depressed crenate at the margins, venation slightly impressed, 4.9-7.4 cm long x 2.5-4.5 cm wide; petioles 3-4.5 mm long and hairy. Flowers pink, (deeper than phlox pink 625/3), normal petals ultimately recurved with a loose mass of inner, small petals and petaloids. Petals 8-13, up to 5.2 cm wide, 12-43 small, inner petals intermixed with petaloids and stamens. Petaloids 34-82 in number, cuneate to fan shaped. Originated in Sumiyoshi, Kanazawa-shi, Ishikawa Prefecture, Japan.

Sumiyoshi-kasuge. (Sumiyoshi Grey Horse), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô; Chinka Zufu*, (before 1700), Watanabe, 1969, pl.347: Medium size, single of 5 deep red petals, irregular anemone form. The centre is a ring of dark red petaloids about a group of short yellow stamens and a few whitish petaloids. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, pp.77, 142. Originated in Japan. (Believed extinct.)

Sumiyoshi-kasuge. (Sumiyoshi Grey Horse), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.614: Large, single of 9 deep red petals, anemone form, large wide centre of white petaloids. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.148. Originated in Japan. (Believed extinct.)

Sumiyoshi-kasumi. (Sumiyoshi Haze), (*C.japonica*), *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.550: Large, single of 5-6 deep vermilion, ragged, twisted petals about a large centre of golden stamens and some petaloids. Thought to be a sport of **Sumiyoshi.** See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.144. Originated in Japan. (Believed extinct.)

Sumiyoshi-no-sato. (Sumiyoshi Village), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.15: Pinkish white with a pink base. Medium, semi-double with long incurved petals. Originated in Japan.

Sumizome. (Black Frock), *(C.japonica),* Itô, Ko'emon, 1879, *Chinkashû;* Usami, Naohachi, (ca.1910), *Nagoya Chinzu'e.* See: Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû*, No.6, p.125: Greyish white. Medium sized full double. Late season flowering. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.46: The dark purplish red sport of **Somekawa**, itself a sport of **Haku-otome.** Medium sized, formal double. Leaves dark green, large, elliptic, reflexed. Originated in Kantô area, Japan. See colour photos: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.396 & p.351; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.81, 224. Resembles **Murasaki-tsubaki** and **Ryômenkô.**

Summer Night. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...,* Chen Junzhi and Chen Jinshui, p.47; Purple cloudy pendent group. Purple flower, cupped corolla.

Summer Pearl. *(C.japonica),* ACS, *The Camellia Journal*, Sept. 2013, p.27 with colour photo; Regn No. 2874; Originated, registered and propagated by James & Elaine Smelley, Moss Point, Miss., USA. ACS, *Yearbook*, 2013, p.140 with colour photo; The small size, 6.5cm diameter x 4.5cm deep, flower is semidouble to rose form to peony form with 40 petals. Very light pink with red or pink stripes. Yellow anthers and white filaments. Flowers fall whole. Plant habit is upright, spreading and vigorous. Mid-green leaves average 9cm x 5cm with low serration. Flowers early to late.

Summer Sunset. *(C.japonica),* Pyron, Joe, 1960, *American Camellia Yearbook*, p.38: A sweet pea pink, large, loose peony to semi-double with rabbit ears. A shade of pink reminescent of summer sunsets. Originated in USA by Dr Gilbert Fisher, Union Springs, Alabama.

Sumozome. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.220. Corruption of the Japanese name **Sumizome.**

Sun and Moon. Yashiroda, 1950, *American Camellia Yearbook*, p.16. Synonym for **Jitsugetsu.**

Sun Burst. Hillcrest Nursery Catalogue, 1958. Orthographic variant for **Sunburst.**

Sun Dial. *(C.japonica),* SCCS, Bulletin, 1950, Vol.11, No.5, p.4. A seedling of unknown parentage. SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Creamy white at base to flesh pink, striped red. Anemone form. Slow, compact growth. Blooms mid-season. Originated in USA by Harvey Short, Ramona, California. Seibu Maizuru Institute, *Pamphlet* Osaka Expo 1990 shows a semi-double flower.

Sun Light. Synonym for **Nikkô.**

Sun Kissed. *(C.japonica), American Camellia Yearbook*, 1969, p.167, Reg. No.1040: A 5 year old chance seedling that first bloomed 1965; originated by Mrs M.M. Hitchcock, Little Rock, Arkansaw, USA. Plant growth is upright and average with light green leaves, 11 cm x 7.5 cm. The anemone form flower is 7.5 cm across and has 40 petals and 15 petaloids. Pink colour with yellow anthers. Blooms late.

Sun Song. *(C.x williamsii), New Zealand Camellia Bulletin*, 1979, vol.XI, No.3, p.20, Reg. No.141: A chance seedling of **Elegant Beauty** that first bloomed in 1976; originated by Neville Haydon, Howick, New Zealand. The plant is average with dark green leaves, 11 cm x 6 cm and flowers early to late. The flowers are formal double with 80-82 petals and some petaloids, the centre rows of which are small and strap shaped. The colour is pink (RHS.CC.52C-D) and on the reverse side deeper pink (RHS.CC.52A-B). Flower size is 11 cm x 4 cm. See colour photo, *New Zealand Camellia Bulletin*, 1987, vol.XV, No.2, p.19 as 'Sunsong'. Chinese synonym: 'Taiyang Ge'.

Sun Storm. *(C.japonica), New Zealand Camellia Bulletin,* March 2005, Issue No.150, vol.XXIV, No.2, p.36, Reg. No.468. Registered by R.J. Macdonald, Waiuku, New Zealand. a 15 year old chance seedling which first flowered in 1995. Flower is a 6 petalled single, 5 cm across x 3 cm deep. Colour is dark red (RHS.CC.59B) with blackish veining. Anthers are rich yellow, and the dark red filaments are fused for two-thirds of their length. Plant growth is average, dense and slow, with dark green leaves 6 cm long x 2.5 cm wide. Flowers early to late. Champion miniature seedling, 2004 NZ National Show.

Sun Worshiper. *(C.hongkongensis x C.rusticana), American Camellia Yearbook*, 1984, p.181, Reg. No.1924: A medium, rose-red, formal double *C.hybrid, C.hongkongensis x C.rusticana* seedling that blooms mid-season. Originated by Dr W. Ackerman, Washington, D.C., USA. The 14 year old seedling first flowered 1975. Average flower size is 8 cm across x 3.5 cm deep with 20 petals and 22 petaloids, yellow anthers and creamy white filaments. Plant growth is upright and rapid with dark green leaves, 11 cm x 2.8 cm. New foliage is dark purple red, changing to green. Orthographic variant: 'Sunworshipper'. Chinese synonym 'Taiyang Chongbaizhe'.

Sunago. (Sand), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.46: Large sized, crimson, anemone form semi-double with a compact centre of small, pointed, red and white petaloids. See: Kyôto Engei Kurubu, 1963, *Tsubaki Tokushû*, No.4, p.92. Originated in Japan. (Believed extinct.)

Sunago. Hakoda, 1974, *Nôdôkai Nôjôhô*, *N*o.6, List of Sazanka, p.53. Synonym for **Sunago-sazanka.**

Sunagohôju. (Sand Gems), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.81, colour photo, p.224 description: Large, rose form double of 4-5 rows of petals, very pale pink marked by a peppering and streaking of red, opening to show a central column of light orange yellow stamens. Leaves mid-green, elliptic, apex acute, margins finely shallowly serrate. Originated in Toyama Prefecture, Japan.

Sunago-kasuri. (Variegated 'Sunago'), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, p137: Large, deep crimson, anemone form, semi-double with 2 rows of indented petals and a centre of variegated petaloids and stamens intermixed. Originated in Japan. (Believed extinct.) Sport of **Sunago** in *Chinka Zufu,* (before 1700).

Sunago-otome. (Dotted 'Otome'), *(C.japonica),* Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki*, in section on variegated leaves. See: ICS., 1969, *Tsubaki,* No.7, p.37. Itô, Ko'emon, 1879, *Chinkashû:* Pink. Medium sized full double. Leaves dotted yellowish white. Vigorous, compact growth. Flowers mid-season. Originated in Japan.

Sunago-sazanka. (Dotted Sasanqua), *(C.sasanqua),* Hantei, Kinta, 1827, *Sômoku Kihin Kagami:* Small spots on the leaves. Synonym: 'Sunago'. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.101. Originated in Japan. (Believed extinct.)

Sunbeam. *(C.japonica),* van Houtte, 1899, Catalogue: Ivory white semi-double, confused centre with yellow stamens. Believed to have been imported from Japan.

Sunbeam. *(C.sasanqua).* SCCS, *The Camellia Review*, Jan-Mar 2010, p.13; Large semi-double rose pink with lighter tones on the petals. Low growing, spreading plant. Leaves develop a fine golden edge when grown in strong sunlight. Originated by Nuccio's Nurseries, Altadena, California, USA.

Sunburst. *(C.japonica),* Griffin Sr. ed., 1957, *Camellian*, 9:19: Red. Medium sized, semi-double with a sunburst of stamens showing through fluffy petals. Vigorous, upright growth. Mid-season blooming. Originated in USA by W.G. Parker, Montgomery, Alabama about 1951.

Sundae. *(C.japonica), New Zealand Camellia Bulletin*, 1989. vol.XVI, No.1, p.27, Reg. No.268: Originated by Les Jury, New Plymouth, New Zealand from a seedling of *C.japonica* 'Fuyajo' x **Zambo.** It is 12 years of age and first flowered in 1980. The plant is upright, of average density and growth rate. The leaves are dark green, 7 cm x 3 cm. The miniature, single flowers have 7 petals and measure 5.5 cm across x 3 cm deep. A mass of about 125 petaloids, creamy white in colour, overlaid with light carmine, fills the centre of the flower and contrasts with the crimson outside petals. (RHS.CC.52C).

Sundance. *(C.japonica),* ACS 1995, *The Camellia Journal,* vol.50, No.3, p.37, Reg. No.2352: Medium size, dark red semi-double *C.japonica* chance seedling that blooms mid-season to late. Originated by Mercer Sherman, Albany, Georgia, USA. ACS 1995, *American Camellia Yearbook,* p.10 with colour photo: The 20 year old seedling first flowered 1980. Average flower size is 10 cm across x 6 cm deep with 10 petals, 10 petaloids, bright yellow anthers and filaments. Blooms have star shaped stamens and notched petals. Plant growth is upright and average in rate with dark green leaves 8 cm long x 3.2 cm wide.

Sunday Morning. *(C.japonica), American Camellia Yearbook*, 1960, p.207, Reg. No.452: An 8 year old chance seedling, originated by Dr R.H. Segrest, Bonifay, Florida, USA. Plant growth is upright and medium with dark green leaves, 10 cm x 3.5 cm. The semi-double, light rose pink flowers, 13 cm across x 6 cm deep, have 25 petals and 3-4 petaloids with yellow stamens. Flowers early. Sport: Sunday Morning Variegated.

Sunday Morning Variegated. *(C.japonica),* Belle Fontaine Nursery Catalogue, 1961, as 'Sunday Morning Var.': A virus variegated form of **Sunday Morning** - Light rose pink and white. Originated in USA. Chinese synonym: 'Fuse Xingqitian Zhichen'.

Sundew. *(C.japonica),* Forrest, 1985, *Trees and Shrubs Cultivated in Ireland* as a cultivar at Mount Congreve, Kilmeadin, County Waterford. No description. No valid listing located,

Sundowner. *(C.japonica),* ACS., Feb.1989, *The Camellia Journal*, vol.44, No.1, p.12, Reg. No.2110: A very large size, deep, wine red, rose form double *C.japonica*. (**Tiffany** x **Mark Alan Variegated**). Blooms mid-season. Originated by Houghton S. Hall, California, USA.

Sunrise. *(C.japonica),* McIlhenny, 1935, *List of Camellias for Sale*, p.15: Clear rose-pink, double blooms opening very flat. Small inner petals incurved at tips. Late flowering.

Sunrise in the Beach. *Camellias,* Y.C. Shen, 2009, p.74 with colour photo; Synonym for **Hama-no-akebono.**

Sunrise Sea. Yashiroda, 1950. *American Camellia Yearbook,* p.16. Synonym for **Asahi-no-umi.**

Sunrise Serenade. *(C.sasanqua). New Zealand Camellia Bulletin*, March 1999, Issue No.132, vol.XXI, No.1, p.13, Reg. No.396. Registered by N. Haydon, Takanini, New Zealand. A chance seedling with typical *C.sasanqua* characteristics. Flower is a loose anemone form, 8.5 cm diameter x 4 cm deep, with 10-12 petals in a flat outer ring, and about 20 petaloids, which are quite wide, form a loose column in the centre. Colour is light pink (RHS.CC. 68B) shading from RHS.CC68A at the rim to near-white at the flower centre. It has quite a heavy scent. Plant growth is upright, medium and of average density, with dark green leaves 5 cm long x 2.5 cm wide. Flowers freely early season.

Sunrise Sky. Yashiroda, 1950, *American Camellia Yearbook,* p.16. Synonym for **Asahi-no-sora.**

Sunrise (Wada). Wada, 1941, *Japanese Garden Treasures*, p.31. Due to the instability of virus induced variegation this is reduced to a synonym for **Iwane-shibori.**

Sunset. *(C.reticulata), American Camellia Yearbook*, 1972, p.136, Reg. No.1202: A 9 year old chance reticulata seedling that first bloomed in 1964; originated by Frank Maitland, Sylmar, California, USA. Plant growth is upright and rapid with dark green leaves, 7.5 cm long x 2.5 cm wide. The semi-double, orange-red blooms measure 13-15 cm across and open mid-season to late. Sport: **Sunset Variegated.**

Sunset Clouds. *(C.sasanqua), Camellias*, Y.C. Shen, 2009, p.330 with colour photo; Rose red single with wrinkled petals, 5-6 cm diameter. Leaves elliptic, dark green. Understood to have originated in China, and been released in 1989.

Sunset Glory. *(C.japonica),* Short, 1951, *American Camellia Yearbook*, p.287: An **Elegans** seedling, originated by Harvey Short, Ramona, California. A 12.5 cm across bloom with long, trough-like guard petals and a small, compact crown of petaloids. Colour a glowing, coral pink. See colour photo: front cover, *New Zealand Camellia Bulletin*, 1970, vol.VI, No.7. See also: Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.239. Sports: **Sunset Glory Variegated, Owen Henry.** Chinese synonym 'Luori Yuhui'.

Sunset Glory. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Synonym for **Fendan.**

Sunset Glory Variegated. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.105 as 'Sunset Glory Var.': A virus variegated form of **Sunset Glory** - Coral pink blotched white. Originated in USA.

Sunset Oaks. *(C.japonica), American Camellia Yearbook*, 1966, p.100, Reg. No.822: A sport of **Finlandia Variegated** first observed in 1961; originated by Kramer Bros. Nursery, Upland, California. Flowers are pale pink with a deeper pink margin; semi-double, 10-11 cm across and bloom early to mid-season. See colour photo facing p.148, *American Camellia Yearbook.*

1969 and on front cover, *New Zealand Camellia Bulletin*, 1978, vol.X, No.4. Chinese synonym 'Xiyangli'.

Sunset Sea. Yashiroda, 1950, *American Camellia Yearbook*, p.16. Synonym for **Irihi-no-ume.**

Sunset Variegated. *(C.reticulata x C.japonica)*, Gentry, 1971, ACS., *The Camellia Journal*, vol.26, No.4, p.21 as 'Sunset Var.': A virus variegated form of **Sunset** - Orange-red variegated white. Originated in USA.

Sunshine. *(C.sasanqua)*, Wylam, 1956, *American Camellia Yearbook*, p.25: Cream coloured single. Originated at the McCaskill Gardens, Pasadena, California, USA. For illustration see Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.340.

Sunsong. Camellia Haven, 1978, *New Zealand Camellia Bulletin*, vol.XV, No.2, p.19. Orthographic variant for **Sun Song.**

Sun-Up. *(C.japonica)*, Thompson, 1953, *American Camellia Yearbook*, p.79: Coral pink, Large semi-double with centre of intermingled petaloids and stamens. Vigorous, low. bushy growth. Blooms early. Originated in USA by Harvey Short, Ramona, California. Sport: **Sun-Up Variegated.**

Sun-Up Variegated. *(C.japonica)*, SCCS., 1960, *Camellia Nomenclature*, p.105 as 'Sun-Up Var.': A virus variegated form of **Sun-Up** - Coral pink blotched white. Originated in USA.

Sûrin. (obscure), *(C.reticulata* hybr.), Hagiya, 1986, *Studies in Interspecific Hybridization of Camellias*, No.2, p.11, colour photo 21, p.10: A seedling of *C.hiemalis* **Shishito** x *C.reticulata* **William Hertrich** that first flowered 1982. Originated by Dr Kaoru Hagiya, Niigata University, Japan. Flower is purple-red of irregular, open peony form, 13-14 cm across, petals large, wavy, upright with stamens divided into fascicles amongst the petals, anthers yellow-brown, pistil regressive. Early blooming. Fragrant. Leaves medium sized, oval, pronounced venation, margins serrulate, mid-green.

Surlina Louise. *(C.japonica)*, Mark S. Cannon Scion Catalogue, 1963-1964, p. 14. No description. Originated in USA. No valid listing located.

Surmanii. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Surmannii.**

Surmannii. *(C.japonica)*, Verschaffelt Catalogue, 1849-1850, p.50. No description. *Nouvelle Iconographie*, 1852, Book X, pl.IV: This variety bloomed for the first time in 1851. It was received about 4 years ago from Milan, Italy. A flower of medium size, perfect form, clear pink with a few white stripes at the centre, rounded, imbricated, petals outspread; slender, upright growth. Orthographic error: 'Surmanii'.

Surpasse Nobilissima. *(C.japonica)*, Menoreau Catalogue, 1886, p.11: Originated and named by Haas, France, about 1879. Peony form, very beautiful, white. Flowers early. Synonym; 'Monsieur Paugam'. In American lists the name has been variously corrupted to: 'Supresse Nobilissima', 'Supresse Nobelissima', 'Supresse Nobilisima', 'Supreme Nobilissima', 'Supreme Noblissima', 'Suppresse Nobilissima', 'Suppress Noblissima'.

Surpreza de J. Marques Loureiro. (*C.japonica*), Companhia Horticolo-Agricola Portuense Catalogo, No.27, 1892, p.68: Perfectly imbricated formal double, white with some rose spots, the base of the petals shaded chamois-yellow. Originated in Portugal.

Surubumi. Roper, 1955, RHS., *The Rhododendron & Camellia* Yearbook, No.9, p.96. Corruption of the Japanese name **Surusumi.**

Suruga. (Suruga Province), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.605: Medium size, white, single with 5 large, crenate petals and a central stamen column, golden anthers, yellow filaments. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.145. Originated in Japan. (Believed extinct.)

Suruga-fukurin. (Bordered Suruga), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû*, vol.5: In section on margined leaves - 'Suruga' with white margined leaves. Originated by Heisaki, in Japan. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p. 167. (Believed extinct.) Different reading: 'Suruga-hukurin'.

Suruga-genji. (Genji of Suruga), *(C.japonica)*, Kasuya, Kamegorô, 1859 *Tsubaki Irohanayose Irotsuki:* Very large size, single, red with white blotches. See: JCS., 1969, *Tsubaki*, No.7, p.33. Originated in Japan. (Believed extinct.)

Suruga-hukurin. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.164. Different reading for **Suruga-fukurin.**

Suruga-kaori. (Suruga Perfume), *(C.japonica)*, JCS., 1988, *Japan Camellia*, No.28, p.13: Medium size, red, campanulate single, 6-7 petals, emarginate. Central stamen column of slightly irregular length, yellow anthers, pinkish filaments. Fragrant. Leaves mid-green, long-elliptic, apex acuminate. Originated in Shimizu City, Shizuoka Prefecture, Japan. See: JCS., Apr.1990, *Japanese Camellia Cultivar List*, p.22.

Suruga-shibori. (Suruga Variegated), *(C.japonica)*, ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.22, erroneously as 'Suraga-shibori': Very small size, pink ground, variegated with red, tubular to trumpet-shaped single. Blooms mid-season. Originated in Shizu'oka Prefecture, Japan. Released by Shizuo Suzuki in 1986.

Surusumi. (Rubbing Black Ink Stick), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* In a section on changeable camellias. Colour blackish red, five petalled single. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.113. Originated in Japan. (Believed extinct.) Note: "Surusumi" was the name of a black horse owned by Minamoto, Yoritomo in the 12th century.

Surusumi. (Rubbing Black Ink Stick), *(C.japonica)*, Yoshida, Shigekurô, (Aichi Prefecture). Hôka'en, 1931, *Tsubaki Meikan;* Minagawa, 1933, *Chinkashû.* Description not seen. Tuyama, 1968, *Camellias of Japan*, pl.28, p.14, description, p.93: Leaves large, very broadly elliptic, coarsely serrate, deep blackish green. Flower silvery white, large, bowl shaped single, 5-6 petals, emarginate. Stamens arranged in a circle, anthers gold, filaments thick and cream coloured. Flowers midseason to late. See: Tuyama, 1966, *Camellia Cultivars of Japan*, p.94; Katei Gahô, ed., 1984, *Chabana Koyami vol.1*, *Tsubaki*, p.45; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.94 & p.305; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.62, p.23; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.81, 224. Yokoyama & Kirino, 1989, *Nihon no*

Chinka, p.48. Originated by the nurseryman, Itô, Shichibei, Inazawa City at the beginning of the 19th century, in Chûbu area, Japan. Similar to **Daihakuhan.** Note: "Surisumi" was the name of a black horse owned by Minamoto, Yoritomo in the 12th century.

Surusumi-benten. (Surusumi Goddess), Ohoka, [before 1980], *Chinkaen.* 'Surusumi' with leaves with yellow variegated margins. Synonym for **Benten-surusumi.**

Survivor. *(C.japonica),* ACS., 1986, *The Camellia Journal*, vol.41, No.2, p.24, Reg. No.2004: A medium sized, medium pink, peony form *C.japonica* chance seedling that blooms mid-season; propagated by John B. McFerrin, Gainesville, Florida, USA. *American Camellia Yearbook*, 1986, p.94: The 8 year old seedling first bloomed 1983. Average flower size is 8 cm across x 5.5 cm deep with 55 petals, 200 petaloids, yellow anthers and white filaments. Cold hardy. Plant growth is spreading, open and medium with dark green leaves, 11.2 cm long x 6.6 cm wide.

Survivor (Parks). *(C.sasanqua x C.oleifera),* Camellia Forest Nursery Catalogue, 1988, p.5, invalidly as 'Survivor': Large size, white, single with pink edges. Strong grower. Originated by Dr. Clifford Parks, North Carolina, USA. Ibid., 1995, p.7: A seedling of *C.sasanqua* **Narumigata** x *C.oleifera.* Cold hardy to -10°F. Vigorous, well formed and free flowering with an abundance of single, white flowers. Early blooming.

Susan. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Clear pink. Small to medium size, single with yellow stamens. Willowy, pendulous growth. Blooms mid-season. Originated by Charles Grischow, Portland, Oregon, USA.

Susan Brown. Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.127. Synonym for 'Lady Eddinger Solid Sport'.

Susan Carter. Azalea Glen Nursery Price List, 1945-1946. Synonym for **Frizzle White.**

Susan Elsom. *(C.japonica),* ACRS., 1963, *Camellia Annual*, No.12, p.25, Reg. No.58: A chance seedling of **Berenice Boddy**, that first bloomed 1961, Vigorous, upright plant, blooms early and long. Semi to incomplete double, 12.5-13 cm across; colour bright scarlet. Leaves dark green, 12.5 cm long x 6-7.5 cm wide, lanceolate, with 9-10 serrations to the inch. Originated by A.W. Jessep, Malvern, Victoria, Australia.

Susan Golombiewski. *(C.reticulata* hyb.), SCCS., 1990, *Camellia Nomenclature*, p.135: Deep glowing red, very large size, semi-double. Vigorous, spreading, upright growth. Blooms mid-season. A seedling of *C.reticulata*, 'Crimson Robe' (**Dataohong**) seedling x **Jean Pursel;** originated by Walter Homeyer, Macon, Georgia, USA. ACS., Nov.1989, *The Camellia Journal*, vol.44, No.4, p.17, Reg. No.2176. *American Camellia Yearbook*, 1989, p.128: The 11 year old seedling first bloomed 1979. Average flower size, 17 cm across x 8 cm deep with 45-57 petals and white anthers and filaments. The plant growth is upright, spreading, open and rapid with light green leaves, 10.5 cm long x 6 cm wide.

Susan Jane Ledbetter. *(C.japonica),* Flanders 1969, *American Camellia Yearbook*, p.108: A semi-double white seedling of **Selma Shelander.** Originated by A. Fendig, St Simon's Island, Georgia.

Susan Johnson. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature*, p.146: White. Large, semi-double. Bushy, upright growth. Blooms mid-season. Originated in USA by Dr G.R. Johnson, Carthage, Texas.

Susan Jones. *(C.japonica), American Camellia Yearbook*, 1984, p.181, Reg. No.1941: A large, rose-red, semi-double, seedling *C.japonica* (**Lady in Red** x **All American**) that blooms early to mid-season. Originated by Ted Alfter, Bakersfield, California, USA. The 10 year old seedling first flowered 1978. Average flower size, 12.5 cm across x 7.5 cm deep with 26-28 petals. Plant growth is upright, spreading and rapid with dark green leaves, 10 cm x 6 cm.

Susan Lyman Wearn. *(C.japonica), American Camellia Yearbook*, 1967, p.232, Reg. No.922: An 8 year old chance seedling of **Queen Bessie,** originated by E.J. Prevatt, Bonneau, South Carolina, USA. Plant growth is upright, open and rapid with dark green leaves, 11 cm x 5 cm. The formal double flower is 8 cm across x 3.8 cm deep with 95-100 petals. Colour is blush pink, flecked deeper pink. Mid-season flowering.

Susan Page Skinner. *(C.japonica), American Camellia Yearbook*, 1966, p.100, Reg. No.853: A semi-double flower, 8 cm across x 3.8 cm deep with 15-20 petals and an occasional petaloid. White to light blush pink with rose markings. Anthers light yellow, filaments white. Petals round with stamens symmetrically grouped. Blooms mid-season. Plant growth is upright, dense and rapid with dark green leaves, 6 cm x 5 cm. Originated by Julington Nurseries, Inc., Jacksonville, Florida. First bloomed 1956 at 11 years.

Susan Pilgrim. *(C.japonica),* ACS 1995, *The Camellia Journal*, vol.50, No.3, p.37, Reg. No.2349: Small size, deep rose with white stripes, anemone form, *C.japonica* chance seedling. Late blooming. Originated by Dr Charles F. Minarik, West Harwich, Maryland, USA. ACS 1995, *American Camellia Yearbook*, p.10 with colour photo: The 8 year old seedling first flowered 1991. Average flower size is 7.5 cm across x 3.2 cm deep with 24 petals and 4 petaloids. Very cold hardy. Plant growth is upright, dense and vigorous with dark, serrated leaves 11 cm long x 5.5 cm wide.

Susan Shackelford. *(C.japonica),* ACS., 1967, *The Camellia Journal*, vol.22, No.5, p.2 and front cover illustration; *American Camellia Yearbook*, 1981, p.106, Reg. No.1757: A large, medium to deep pink, rose form double to semi-double, *C.japonica* chance seedling that blooms mid-season to late; originated by Hugh Shackelford, Albany, Georgia, USA. The 12 year old seedling first bloomed 1965. Average flower size is 11 cm across x 7.5 cm deep. Plant growth is spreading and medium with dark green leaves, 11 cm long x 7.5 cm wide. Sport: **Susan Shackelford Variegated.**

Susan Shackelford Variegated. *(C.japonica),* Cannon, 1969, ACS., *The Camellia Journal*, vol.24, No.4 as 'Susan Shackelford Var.': a virus variegated form of **Susan Shackelford** - Deep pink blotched white. Originated in USA.

Susan Smith. *(C.japonica),* ACS., May, 1987, *The Camellia Journal*, vol.42, No.2, p.8, Reg. No.2039: Medium size, light pink, formal double, *C.japonica* chance seedling. Early blooming. Originated by Walter L. Smith, Tylertown, Mississippi, USA. *American Camellia Yearbook*, 1987, p.85, with colour photo between pp.60-61: The 15 year old seedling first flowered 1979. Average flower size, 8 cm across x 4 cm deep with 68 petals. Plant growth is upright, average and medium in rate with dark green leaves, 11 cm long x 5.5 cm wide.

Susan Stacey. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature*, p.82: Red margined purple. Large semi-double of cupped form. Originated by J.H. Stacey, Bay Minnette, Alabama, USA.

Susan Stone. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Pink. Complete double. mid-season. *American Camellia Yearbook*, 1954, p.334, Reg. No. 143: An 8 year old seedling of **Martha Wright,** originated by Mrs W.T. Roughten, Thomasville, Georgia, USA that first flowered 1952. Plant growth is average and compact with slender, pointed leaves. The flower is a complete double, imbricated, similar to **Alba Plena,** 9-10 cm across with 60 petals. Colour is pink, similar to **Incarnata.** Blooms mid-season. Chinese synonym 'Fensushan'.

Susan Stowe. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.220. No description. Originated in USA. No valid listing located.

Susan Terzian. *(C.japonica), American Camellia Yearbook*, 1966, p.100, Reg. No.879: A 7 year old chance seedling that first bloomed 1963, originated by L.H. Terzian, Fresno, California, USA. Plant growth is upright, dense and medium in rate with dark green leaves 10 cm long x 5 cm

wide. It is coral rose with darker veining, yellow anthers and white filaments. Size is 12.5 cm across x 6 cm deep with 38 petals and 51 petaloids. Orthographic error: 'Suzanne Terran'. Sport: **Susan Terzian Variegated.**

Susan Terzian Variegated. *(C.japonica),* Gentry, 1969, ACS., *The Camellia Journal*, vol.24, No.4 as 'Susan Terzian V.'. A virus variegated form of **Susan Terzian** - Coral rose and white. Originated in USA.

Susan Yelton. *(C.sasanqua),* ACS., 1988, *The Camellia Journal*, vol.43, No.2, p.9, Reg. No.2082: Small, frosty pink, semi-double, chance *C.sasanqua* seedling. Early flowering. Originated in USA by D.P. Hardison, Tallahassee, Florida. *American Camellia Yearbook,* 1988, p.190 with colour photo between pp. 186-187: The 8 year old seedling first bloomed in 1983. Average flower size is 6 cm across x 2 cm deep with 13 petals, yellow anthers and white filaments. Extremely fragrant as a wild rose, cold resistant, prolific bloomer. Plant growth is upright, average and medium in rate with dark green leaves, 4 cm x 2.5 cm.

Susann. *(C.japonica),* SCCS., 1964, *Camellia Nomenclature*, p.118: Light pink to deep pink, shading lighter. Miniature rose form double with 3 rows of tiny petals. Originated by F. Griffith Sr., Columbia, South Carolina, USA.

Susanna. *(C.japonica),* Loudon, 1835, *The Gardeners' Magazine*, vol.11, p.294: Three varieties of *C.japonica* were raised from seed in Thompson's Nursery, Mile End, grown from seed sown in 1828 from the variety **Expansa - Susanna,** named after Thompson's daughter. Flowers similar to **Sweetiana.** The petals have a white ground with pink stripes like a carnation but fainter. The centre is pretty well filled with petals. Originated in England. Synonyms: 'Miss Susanne Thompson', 'Susanna di Thompson'. Orthographic errors: 'Suzianna', 'Susseana', 'Susiana'.

Susanna Beard. *(C.japonica),* ACS, The Camellia Journal, Feb. 1997, p.15. Reg. No.2391. A large pink edged, peony form flower, fading to white in the centre. A cross of 'Donckelarii' (**Masayoshi**) x **Pirates Gold**. Flowers early to mid-season. Originated by Marvin Jernigan, Warner Robins, Ga., USA. *American Camellia Yearbook,* 1997, p.7, Colour photo before p.1. The 14 year old seedling first flowered in 1985. Average flower size is 12.7 cm across x 7.5 cm deep with 46 petals, 6 petaloids, white anthers and white filaments. Plant growth is upright, dense and vigorous, with dark green fimbriated leaves 10 cm long x 3.2 cm wide.

Susanna di Thompson. Burdin Catalogue, 1855-1856. Synonym for **Susanna.**

Susannah. *(C.japonica),* Cachet Catalogue, 1840-1841, p.2: Blotched white. Van Houtte Catalogue, 1841, 7:19: Imbricated, well rounded petals, bright red, tinted with salmon and speckled white. Originated in Italy. See colour pl.160, Berlèse, *Iconographie*, vol.II. as 'Suzannah'. Van Houtte, 1844-1845, 18:19, gives **Nicholsonii** and **Pictorum Striata** as synonyms, but from early descriptions and illustrations they would seem to be separate cultivars, although somewhat similar. Orthographic errors: 'Sussannah', 'Suzannah', 'Susunnah'.

Sushanna. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.415; Chinese synonym for the Australian *C.reticulata* **Suzanne Withers.**

Sushanna Xiaojie. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.313, p.75. Chinese synonym for USA *C.japonica* **Stacy Susan.** Note: The same synonym has been used invalidly for **Suzanne Withers.**

Susiana. Burdin Maggiore & Co. Catalogue, 1845, p.43. Orthographic error for **Susanna.**

Susie. Rogers, 1974, ACS., *The Camellia Journal*, vol.29, No.4. Abbreviation for **Little Susie.**

Susie B. (*C.reticulata* hybr.), ACRS., 1982, *Camellia News*, No.83, p.22, Reg. No.290: Originated by T.E. Pierson, Hurstville, N.S.W, Australia. A chance seedling of *C.reticulata* hybrid **Carl**

Tourje, that first flowered 1979. The lavender pink, 9 cm across x 5.5 cm deep flowers bloom mid-season to late. The open, upright plant has 12 cm x 5 cm, dark green leaves with acuminate apices, distinct venation and fine serration.

Susie Bentley. *(C.japonica), American Camellia Yearbook,* 1954, p.334, Reg. No.168: A 4 year old seedling of unknown parentage, originated by Mrs G.H. Bentley, Columbus, Georgia, USA that first bloomed 1953. Plant growth is upright and rapid with mid-green leaves with prominent venation. Flower incomplete double with mixed petaloids, 11 cm across, rose-pink with long yellow stamens mixed with petaloids. Early blooming.

Susie Fortson. *(C.japonica),* SCCS., 1968, *Camellia Nomenclature,* p.132: Blood red. Medium, semi-double. Vigorous, slender, upright growth. Blooms early to mid-season. Originated in USA by C.D. Cothran, Upland, California.

Susie O'Neill. (*C.reticulata* hybrid). ACRS, *Camellia News,* Autumn 2002, No.158, p.8, colour photo front cover, Reg. No.536. Originated by Dr R.M. Withers, Donvale, Vic., Australia. A cross between *C.reticulata* hybrid **Suzanne Withers,** seed parent, x *C.reticulata* hybrid **Jean Pursel.** First flowered 1994. An anemone to loose peony flower, pale to medium pink (RHS.CC.68D to 69A), with 18-24 petals, variable petaloids and stamens, and 17 cm diameter x 9 cm deep. Flowers freely mid-season to late on an upright, open, rapid growing plant. Leaves dark green (RHS.CC.139A), flat and glossy, elliptic, 13 cm long x 8 cm wide. Named in honour of the Australian swimming champion.

Susie Q. *(C.japonica), American Camellia Yearbook,* 1960, p.207, Reg. No.474: A 10 year old chance seedling, originated by W.M. Quattlebaum, North Charleston, South Carolina, USA, that first bloomed 1955. Plant growth is average and rapid in rate with dark green, serrated leaves, 8 cm x 5 cm. The deep pink, peony form flower, 11 cm across x 6 cm deep, has 30 petals and an occasional petaloid with numerous, yellow stamens. Blooms early to mid-season. Sport: **Susie Q Variegated.**

Susie Q Variegated. *(C.japonica),* SCCS., 1968 *Camellia Nomenclature,* p.132 as 'Susie Q Var.': A virus variegated form of **Susie Q** - Deep pink blotched white. Originated in USA.

Sussannah. Maupoil & Figlio Catalogue, 1847. Orthographic error for **Susannah.**

Susugi-kinkô. Saduken, 1630, *Hyakuchinshû. Different* reading: Takukinkô. Synonym for **Tsuruga** as 'Tsuruga-tsubaki'.

Susuki. (Japanese Pampas Grass), *(C.japonica),* Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* Medium sized, pink, with white spots, double, with 8 rows of petals, cylindrical stamen cluster. See: JCS., 1969, *Tsubaki,* No.7, p.35 & ibid, 1982, No.22, p.111. Originated in Japan. (Believed extinct.)

Susy Dirr. *(C.sasanqua).* Originated by Robert Green, Green Nurseries, Fairhope, Ala., Usa. Large, bright pink formal double. Rapid, bushy growth. Introduced 1999.

Sutcliffe's Sunset. *(C.japonica), New Zealand Camellia Bulletin,* 1963, vol.III, No.4, p.5, Reg. No.17: A chance seedling of **Odoratissima,** originated by Mrs Irene Sutcliffe, Whakatane, New Zealand. The flowers are 12-14 cm across x 4-6 cm deep, semi-double to peony with 10-12 guard petals and 20 or more petals of varying size and shape. The colour is camellia rose (HCC.622), stamens old gold with cream filaments. Petals are heavily waved. Leaves are light green with coarse, sharp serrations. 12 cm long x 6 cm wide.

Sutherland. Carolina Floral Nursery Catalogue, 1939. Abbreviation for **Duchess of Sutherland.**

Sutherland Rotary. *(C.reticulata)*, ACRS., 1982, *Camellia News*, No.83, p.22, Reg. No.288: Originated by T.E. Pierson, Hurstville, N.S.W., Australia from the cross **Buddha** x 'Cornelian' (**Damanao**) which first flowered 1980. The spreading, open plant has 13.5 cm x 5.5 cm lanceolate, dark green leaves with acuminate apex and tapered base, margins serrulate and distinct veining. The semi-double to very loose peony, 13 cm across x 9 cm deep, heavily ruffled flower of deep salmon rose with paler edges, blooms mid-season to late.

Suttor's Gold. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.221. No description. Originated in USA. No valid listing located.

Suzaku. (God Controlling the South). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.140 with colour photo; English translation p.95. Small, red, sake cup-shaped to tubular single. Flowers early to late. Leaves narrowly elliptic, small, recurved apices. Selected from wild japonicas growing in Nagasaki. Named and released by Tetsurô Shikage in 1985. From Nagasaki Prefecture to Kurume.

Suzaku-aka-yabu. (Red Wild Camellia from Suzaku). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.112. No description. From Kurume City, Japan.

Suzakumon. (Gateway of Emperor's Palace, Kyôto), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.258, p.115, description, p.237: Medium size, scarlet, occasionally with deep red stripes, single of 5 petals, opening vase shaped with large central stamen cluster. Leaves lanceolate, mid-green, apex long acuminate, margins serrated. Early blooming. Originated in Chûbu area, Japan. Different reading: 'Shujakumon'. See colour pl. Seibundô Shinkôsha, 1979, *Senchinshû*, p.80.

Suzakumon. (Gate Suzaku). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.141 with colour photo; English translation p.96. Medium size, deep red, single, cupped petals, cylindrical stamen column. Flowers early to mid-season. Leaves broadly elliptic, medium size, flat. Upright, vigorous growth. A seedling of unknown parentage. Originated by Haruichi Sakuragi in 1975. Named and released by Hiroshige Hayakwa. From Aichi Prefecture.

Suzie. *(C.japonica),* SCCS., 1964, *Camellia Nomenclature*, p.118: White. Miniature semi-double of cupped form with white petaloids in the centre. Medium, upright growth. Blooms mid-season to late. Originated by J. Andrey, San Fernando, California, USA.

Suzu. (Bell), *(C.japonica),* Kan Yoshiroda Ltd Kagawaken Nursery Catalogue, 1931-1932, p.8: White, anemone flowered. Originated in Japan.

Suzuchû-hosoba. (Narrow Leaved Camellia of Suzuchû), *(C.sasanqua).* Hantei, Kinta, 1827, *Sômoku Kihin Kagami.* No description. Originated in Japan. (Believed extinct.)

Suzugamine. (Mount Suzugamine), *(C.sasanqua):* Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.15 as 'Suzu-ga-mine': Pure pink. Large single with long petals. Originated in Japan.

Suzugao. (Place Name), (Wabisuke), *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.328, p.137, description, p.246: Small, single, white, campanulate flower, 6-7 cm across with 5-6 irregular, ovate petals and a centre stamen column with brownish-yellow anthers and creamy filaments. Early flowering. Ovary minutely hairy. This variety is fertile, a rare quality in a Wabisuke. Leaves glossy deep green, elliptic, apex acute, margins finely serrulate. Originated in Ishikawa Prefecture, Japan. See also: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.80, 224. Different reading: 'Suzusu-o'. Named and released by Ishikawa Camellia Enthusiasts Club in 1976.

Suzuhime. (Bell Maiden), *(C.japonica),* JCS., 1984, *Tsubaki*, No.23, p.37 with illustration: The flowers are a transparent wisteria pink colour, small, campanulate shape with closed stamen column; 5 long petals. See colour photo, p.136, Yokoyama & Kirino. 1989, *Nihon no Chinka.* Originated in Ôzu district, Ehime Prefecture, Japan. Named and released by Ôzu Camellia Enthusiasts Club in 1980.

Suzuhime (Niigata). (Bell Princess). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.141 with colour photo; English translation p.97. Miniature, pale pink single, cupped petals, cylindrical stamens, profuse. Flowers early to mid-season. Leaves narrowly elliptic, small. Spreading growth, weeping branches. A cross between *C.saluenensis* and *C.hybrid* **Wirlinga Belle**. Named and released by Kaoru Hagiya in 1986.

Suzukago. (Bell Cage), *(C.japonica),* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.64. No description. Originated in Japan.

Suzukake. (Plane Tree), *(C.japonica),* Iwasaki, 1829, *Honzô Zufu:* Large, double. Large petals on outside, small petals on inside, light purple mottled white. JCS., 1981, *Tsubaki*, No.20, p.104. Originated in Japan. (Believed extinct.)

Suzukake. (Hanging Bells), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.140, colour photo & description: Small size, pink, with very narrow, white rims, wide vase-shaped single of 5 emarginated, wide, embracing petals and a central pinched-in stamen column with white anthers, joined for their lower third, and yellow anthers. Blooms early to mid-season. Leaves dark green, broad-lanceolate, apices long acuminate, margins serrate. Originated in the Chûbu area, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.141 with colour photo; English translation p.96. A cross between **Yobukodor**i and **Shima-musume.** Named and released by Minoru Satô in 1975.

Suzuka-no-seki. (The Barrier of Suzuka, a check point in ancient times), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* Cardinal red, mottled white. Tuyama, 1968, *Camellias of Japan*, pl.291, p.147, description, p.178: Cardinal red mottled white, virus variagated form of **Suzukayama.** Leaves broadly oblong to obovate-elliptic, base rounded, apex acuminate. Flowers semidouble, rosy red (Rose opal 022), mottled white, petals in 4 rows, emarginate, channelled, a little wavy. Stamens in central

cylinder. Blooms mid-season to late. Originated in Kantô area, Japan. Different readings: 'Sudzuka-no-seki', 'Suzukazeki', 'Suzukaseki'. Corruption: 'Suzuku-noseki'. See coloured illustrations: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.145, p.252; Satô,1975, *Chûbu no Tsubaki*, p.68; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.257, p.329; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.80, 224. Very difficult to distinguish from **Monjusu.** Similar to 'Shibori-shusu', **Rasenzome.** Possible sport: **Rasenzome.** Chinese synonym 'Linglu Zhi Guan'.

Suzukayama. (Suzuka Mountain), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.311; Itô, Ko'emon, 1879, *Chinkashû:* Cardinal red, double. Tuyama, 1968, *Camellias of Japan*, pl.192, p.97, description, p.146: Leaves broadly oblong to obovate-elliptic, bases rounded, apex acuminate. Flowers regular double, rosy red (Rose opal 022), stamens in a central tube. Blooms mid-season to late; petals channelled. Sport: **Suzuka-no-seki.** Corruption: 'Suzukuyama'. See: Tuyama, 1966, *Camellia Cultivars of Japan*, p.252. Satô,1975, *Chûbu no Tsubaki*, p.89; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.160, p.315. Originated in Kantô area, Japan. Chinese synonym 'Linglushan'.

Sweet Afton. *(C.japonica)*, *American Camellia Yearbook*, 1966, p.100, Reg. No.895: An 8 year old chance seedling that first bloomed 1961; originated by Harry Novick, Woodland Hills, California, USA. Plant growth is spreading, open and medium in rate, with dark green leaves, 8 cm x 4.5 cm. The semi-double to loose, peony form flower is rose-red with yellow stamens. Size is 10-11 cm across x 3.8 cm deep. Petaloids and rabbit ears mixed with the stamens give the effect of lace. Blooms mid-season. Sport: **Sweet Afton Variegated.**

Sweet Afton Variegated. *(C.japonica)*, Cannon, 1967, ACS., *The Camellia Journal*, vol.22, No.1. A virus variegated form of **Sweet Afton** - Rose-red variegated with white. Originated in USA.

Sweet and Low. *(C.japonica)*, Short, 1951, *American Camellia Yearbook*, 286: One seedling with a very prostrate or pendulous habit, from its Elegans parent, is effective for tubs or hanging baskets.

It has a clear pink, tulip shaped flower and will be released under the name of **Sweet And Low.** Originated by Harvey Short, Ramona, Calfornia, USA.

Sweet Auburn. *(C.japonica).* ACS *Journal,* June 2014, p.30 with colour photo; Regn No.2922; Registered by Auburn-Opelika Men's Camellia Club, Auburn, Ala., USA.

Sweet Bess. *(C.sasanqua),* ACRS., 1980, *Camellia News*, No.74, p.24, Reg. No.237: Originated by Alice Spragg, Sutherland, N.S.W., Australia. A chance seedling that first flowered 1973. The upright plant has small, 2.8 cm x 2 cm leaves. The flowers open early to mid-season and are 7.5 cm across, with several petaloids and petals intermingled with the stamens.

Sweet Bon Air. Camellia Forest Nursery Catalogue, 1988, p.4. Orthographic variant for **Sweet Bonair.**

Sweet Bonair. *(C.japonica),* SCCS, 1951, *The Camellia. Its Culture and Nomenclature:* Creamy white. Medium sized, semi-double. Fragrant. Long, narrow, dark green leaves. Originated by Barney Goletto, Oregon, USA. Blooms mid-season. Orthographic variant: 'Sweet Bon Air'.

Sweet Cecile. *(C.japonica),* Hillcrest Nursery Catalogue, 1958: Pink. Medium, semi-double with veined petals. Medium, willowy growth. Blooms early to mid-season. Originated in USA at the Hillcrest Nursery. Sport: **Sweet Cecile Variegated.**

Sweet Cecile Variegated. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.10. as 'Sweet Cecile Var.': A virus variegated form of **Sweet Cecile** - Pink and white. Originated in USA.

Sweet Deborah Jane. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 2002, Issue No.141, vol.XXII, No.5, p.11, Re. No.434. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between C.hybrid **Fragrant One** x *C.japonica* **Kramer's Supreme,** which is scented, and first flowered in 1997. Flower is 11 cm diameter x 5 cm deep, with about 40 petals and 8 petaloids. The flower was offered for registration as rose form double, but the samples seen verged on peony form (little overlapping of petals). The outer petals are mid-pink at the edge, shading to light pink at the centre (RHS.CC.55C to 56A), while the innermost petals are pale creamy pink (RHS.CC.56D). The plant is upright, and of average density and growth rate with dark green leaves 10 cm long x 6 cm wide. Flowers mid-season to late.

Sweet Delight. *(C.japonica),* SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* Rose-pink. Large, semi-double to peony form. Vigorous, loose, upright growth. Fragrant. Blooms mid-season. Originated in USA by Reeves. For illustration see p.341, Hertrich 1954, *Camellias in the Huntington Gardens,* vol.I. Sport: **Sweet Delight Variegated.**

Sweet Delight Variegated. (*C.japonica*), Mark S. Cannon Scion Catalogue, 1962, p.10, as 'Sweet Delight Var.': A virus variegated form of **Sweet Delight** – Rose pink blotched white. Originated in USA.

Sweet Dreams. *(C.japonica),* Nuccio's Nurseries Catalogue, 1984-1985; *American Camellia Yearbook,* 1984, p.181, Reg. No.1959: A large, pale, orchid pink, semi-double *C.japonica,* chance seedling, that blooms mid-season to late; originated at Nuccio's Nurseries, Altadena, California. The 6 year old seedling first bloomed 1978. Average flower size is 10-11 cm across. Plant growth is upright and medium with dark green, medium sized leaves. Chinese synonym 'Meimeng'.

Sweet Emily Kate. *(C.japonica x C.lutchuensis),* ACRS., 1987, *Camellia News,* No.103, p.22, Reg. No.353: Originated by Ray Garnett, Beaumaris, Victoria, Australia. A controlled cross *C.japonica* **Tiffany** x (**The Czar** x *C.lutchuensis)* that first flowered 1983. An informal, tight, peony form flower, 7 cm across x 2.5 cm deep. light pink shading to pale pink at the centre. (RHS.CC.56AD). Blooms mid-season to late on a slow growing, pendulous plant. Leaves, elliptic, glossy green, margins serrate, apex acuminate, 6 cm long x 2.5 cm wide. Fluted petals, a few stamens, flowers fall complete. A slow growing, scented hybrid. Chinese

synonym ‘Tiankaite’. *La Camelia .....Diputación Provincial de Pontevedra,* 2004, p.231. Data under this name is incorrect .

Sweet Emma. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 1997, Issue No. 126, vol.XX, No.1, p.19, Reg. No. 375. Raised by J.R. Finlay, Whangarei, New Zealand. A cross of ([*C.japonica* **Mrs Bertha A. Harms** x *C.hybrid* **Salab**] x *C.japonica* **Tama-ikari**) x *C.japonica* **Tama-ikari** (a flower of Higo type though not a true Higo). The flowers are white with the outer petals flushed with pink (RHS.CC. 62C – 19D). It is a medium to large anemone form, 9 cm in diameter with about 13 petals and 90 petaloids, and has a firm texture and a spicy fragrance. The bush is of medium size, shape and density. Leaves are 8 cm long x 3 cm wide, the plant is free flowering with its peak relatively early in the season.

Sweet Fern. *(C.japonica),* Gentry, 1970, ACS., *The Camellia Journal*, vol.25, No.4. No description. Originated in USA. No valid listing located.

Sweet Gem. *(C.hybrid).* ACS, *The Camellia Journal,* Dec. 2009, p.29, Regn No. 2769; Originated by Yong-hong Hu, Jian-Guo Fei and Ya-li Zhang, Shanghai Botanical Garden, China. *American Camellia Yearbook,* 2009, p.117 with colour photo; A cross of **Kuro-tsubaki** x a species from the Section *theopsis,* first flowered in 1992. The tiny sized 5 petal single flower is 3.2 cm diameter x 2.5 cm deep. Lavender pink with yellow anthers and light yellow filaments. Cluster flowering. Vigorous upright growth. Dark green leaves average 7 cm x 3.2 cm. New growth is shiny red for the first month. Flowers early to mid-season. Plant is sterile.

Sweet Gum Camellia. Synonym for ‘Fengxiang Cha’.

Sweet Heart. Hume, 1946, *Camellias of America,* p.339. Orthographic variant for **Sweetheart.**

Sweet Jane. (*C.transnokoensis* hybrid). ACRS, *Camellia News,* 1992, No.123, p.5, Reg. No.416: A seedling of *C.japonica* **Edith Linton** x *C.transnokoensis*, originated by Ray Garnett, Beaumaris, Victoria, Australia. First flowered 1987. Informal double to peony, bi-colour, with a pale pink centre (RHS.CC.56D), shading to deeper pink (RHS.CC.55B) on the outer petals. Size 6 cm across. Often forms a formal double flower of 26 petals and 12 small inner petals. Blooms mid-season. Leaves matt green, narrowly ovate, keeled, margins serrate, base rounded, apex mucronate, 6.5 cm long x 3.5 cm wide. New growth deep copper bronze. Flowers freely, long lasting and weather proof. Flowers shed whole. Chinese synonym ‘Tianzhenni’.

Sweet Lara. *(C.japonica),* SCCS *Camellia Nomenclature* 2009, p.118; Medium size, red formal double. Average, open, spreading growth. Cold hardy. Originated in 2000 by Vi Stone, Baton Rouge, La., USA.

Sweet October. *(C.hybrid). American Camellia Yearbook*, 2009, p.117 with colour photo; Regn No.2760; A cross of *C.oleifera* **Lu Shan Snow** x *C.sasanqua* **White Queen**, first flowered in 1992. Originated by Dr William L. Ackerman, Ashton, Maryland, USA. A small to medium size single of 8 petals. 7.5 cm diameter x 1.8 cm deep. White, with golden anthers and cream filaments. Pleasant fragrance. Vigorous, upright growth. Cold hardy – grown outdoors for 25 years in Ashton, Maryland.. Introduced commercially in England in 2005. Dark green leaves average 6.5 cm x 2.5 cm.

Sweet Olive. *(C.japonica),* ACRS., Dec. 1990, *Camellia News*, No.115, p.11, Reg. No.392: Originated by T.J. Savige, Wirlinga, NSW., Australia. A chance seedling that first flowered 1985. Formal double, pink flowers of 70-90 petals, RHS.CC.62A, 6.5 cm across x 3.5 cm deep. Blooms mid-season to late on a medium growing, erect, open plant. Flower has 8-10 rows of petals, outer 4 rows, pink, inner rows becoming blush to white as flower ages. Outer petals cupped, rounded, concave with deeper veining. Leaves glossy mid-green, elliptic, apices acute, base

cuneate, serrations vary from sharply serrate at apex to obscure at base. Flower opens as a cupped or incurved, formal double.

Sweet Pea. *(C.japonica)*, Hillcrest Nurseries Catalogue, 1958. No description. Originated in USA by Hillcrest Nurseries.

Sweet Rosemary. *(C.japonica)*, Short, 1955, *American Camellia Yearbook*, p.42: One of five nice blooms of the corsage type with perfume. Originated by Harvey Short, Ramona, California, USA.

Sweet Scented. (C.hybrid). *New Zealand Camellia Bulletin*, March 2002, Issue No.141, vol.XXII, No.5, p.12, Reg. No.440. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between C.Higo **Mikuni-no-homare** x C.hybrid **High Fragrance.** Flower is a bright pink (RHS.CC.55B) semidouble, 10 cm diameter x 5 cm deep, composed of about 14 petals and 3-5 petaloids. There is a central group of stamens (white filaments and bright yellow pollen) interspersed with the petaloids. The scent is rather weak, reminiscent of tea. The plant is upright, and of average density and growth rate with dark green leaves 10 cm long x 6 cm wide. Flowers mid-season to late.

Sweet Sheree. *(C.sasanqua)* ACRS., 1980. *Camellia News*, No.74, p.24, Reg. No.234: Originated by Alice Spragg, Sutherland, NSW, Australia. A chance seedling that first flowered 1972. A spreading, open plant suitable for espaliering. The dark green, 5.5 cm x 2.5 cm lanceolate leaves are prominently serrated. The semi-double, 8 cm across, magenta rose flowers have about 17 petals and flower early.

Sweet Sixteen. *(C.japonica)*, Nuccio's Nurseries Catalogue, 1949-1950, p.10: Light pink. Medium large, semi-double with medium, bushy growth.. Stamens tipped with green anthers. Blooms mid-season. Originated by Domoto, California, USA. Orthographic variant: 'Sweet 16'. See illustation p.314, Hertrich, 1966, *Camellias in the Huntington Gardens*, vol.II.

Sweet 16. Good, 1955, *American Camellia Yearbook*, p.278. Orthographic variant for **Sweet Sixteen.**

Sweet Sue. *(C.japonica)*, *American Camellia Yearbook*, 1956, p.66, Reg. No.265: An 11 year old seedling of **Princess Baciocchi;** originated by Earl D. Hudson, Sun Valley, California, USA that first flowered 1950. Plant growth upright and compact. Leaves wide with shallow serrations. Flowers currant red RHS CC.821; form varies from incomplete double to full peony; petals 18. Flowers are 11-13 cm across and open mid-season. Fragrant.

Sweet Surprise. *(C.japonica)*, River View Nursery Catalogue, 1957-1958, p.10. Description not seen. Originated in USA.

Sweet Vera. Vanderbilt, 1941, *Camellia Research*, II, p.7. Orthographic error for **Sweetii Vera.**

Sweet Young Thing. *(C.japonica)*, McCaskill Gardens Newest Camellias. 1957; Wylam. 1957, *American Camellia Yearbook*, p.30: Pale pink with lavender cast, overlaid with deep rose. Medium, semi-double. Vigorous, bushy plant. Blooms mid-season. Originated in McCaskill Gardens, Pasadena, California, USA.

Sweet Vera Sport. Mark S. Cannon Scion Catalogue, 1962, p.10. Synonym for **Lewellyn Red.**

Sweetbird of Youth. *(C.x williamsii)*, SCCS., 1964, *Camellia Nomenclature*, p.143: Lavender pink. Large semi-double with golden stamens and petaloids intermixed. Vigorous, compact growth. A seedling of **J.C. Williams**, originated by T.R. Carr, Tulare, California, USA.

Sweetheart. *(C.japonica)*, Swiss Floral Co. Catalogue, 1940. White, loosely formed flower, veined pink. Originated in USA. (Believed extinct.)

Sweetheart. *(C.japonica).* Griffiths, 1958, *American Camellia Yearbook*, pp.9,10: A sixth sport of 'Huntington', (**Otome-shibori**), has been scheduled for release in Sept. 1959. This variety is **Sweetheart,** winner of the All-American Camellia Selection for 1958-1959. The sport was first noticed in 1943 by Edward B. Arnesen, Valley Garden Supply Co., North Hollywood, California. It is a self pink sport, described as Rhodamine-pink 527/2 with outer petals camellia-rose 622/1-2. It is reported that this light-pink, almost blush, variation of 'Huntington' (**Otome-shibori**) is quite distinct and should not be confused with the rose-pink sport, 'Huntington Pink' (**Casablanca**) which can also sport to **Sweetheart.** *Popular Gardening*, Sept. 1958, p.15 carries an illustration and describes the cultivar as an apricot-pink formal double with flowers 9-11 cm across. At maturity a cluster of short golden-tipped stamens may appear, and occasionally a semi-double flower with fluted petals shows up. The colouring is unique as it does not have the bluish cast that other pinks often show. The veining is occasionally a deep pink, and infrequently a flower may appear softly marbled with white. See colour photos: Front cover SCCS., 1960. *The Camellia Review*, vol.21, No.6; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.140, p.67.

Sweethiana Nova. Tagliabue, 1840, *Nomenclatore Camelliae.* Synonym for **Sweetiana.**

Sweethii. Cels, Paris Nursery Catalogue, 1836-1837, p.10. Orthographic error for **Sweetiana.**

Sweethii Vera de Colv. Cels, Paris Nursery Catalogue, 1839, p.30. Synonym for **Sweetiana.**

Sweeti Vera Variegated. Magnolia Gardens and Nursery Catalogue, 1944-1945. Orthographic error for 'Sweetii Vera Variegated', synonym for **Sweetii Vera.**

Sweetia Ancien. Berlèse, 1840, *Monographie*, ed.2, p.219. Synonym for **Sweetiana.**

Sweetia Colvillii. *Horticulture Belge*, 1838 as 'Sweetia Covilli'. Synonym for **Sweetiana.**

Sweetia Vera. Buist, 1839, *Camellias*, p.11. Synonym for **Sweetiana.**

Sweetia Vera Ancien. Berlèse, 1840, *Monographie*, 1840, ed.2, Index p.237. Synonym for **Sweetiana.**

Sweetiana. *(C.japonica)*, Paxton, 1831-1832, *Horticultural Register*, vol.I, p.462: *Camellia japonica* var. **Sweetiana** or 'Sweets painted flowered Camellia': The flowers are variegated with white, blush and deep rosy red. It was raised from seed at Mr Colvill's by Mr Sweet some years ago from the cross 'Pomponia' (**Pompone**) x **Variegata.** Sweet, 1833, *British Flower Garden*, ser.II, Vol.II, No. 133 with colour painting: Flower bearing a strong resemblance to a variegated rose, generally very double. The illustration depicts a pink, rather than a blush background, with darker pink streaks and spots and faint white edge to the petals which are ruffled and faintly imbricated in 5 outer rows with 9-10 petals to the outside row. This type of camellia is most variable in its depth of background colour, and, from the different descriptions, appears variable in form also. Berlèse, 1841, *Iconographie*, vol.1, pl.91: The petals of the circumference are in three rows, of average size, long-oblong, somewhat imbricated, of a very pale flesh-orange with touches of yellowish rose and longitudinal veins or mottles of deep orange red with nuances of softer colour, edges margined with white, sometimes double notches at the apex. Those at the centre are small, more or less numerous, erect, narrow and strap-like, of the same colour as the others and with sterile stamens. See

also Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl.41 as 'Sweetii'. There are considerable misspellings and the use of synonyms in literature over the ensuing years. It would seem that the cultivar in America is a different clone which has been separated out under the name **Sweetii Vera.** Following are some names which have been used: 'Sveziana de Colvill', 'Sveetia Antica', 'Sweet Vera, 'Sweeti', 'Sweeti Colvilli', 'Sweetii de Colvill', 'Sweeti Vera', 'Sweetia Ancien', 'Sweetia Colvillii', 'Sweetii Vera de Colvill', 'Sweets', 'Sweetii Vera', 'Sweetia Vera Ancien', 'Sweetia Vera', 'Sweetiana'(Buist), 'Sweetiana de Colvill', 'Sweetina Nova', 'Sweetii', 'Sweetiana Vera de Colvill', 'Swetia Vera', 'Swetiana', 'Swetii Vera', 'Swetiana de Colwil', 'Sweti Verleuven', 'Swetii', 'Swethii Vera di Colwill', 'Swetii de Colvill', 'Switsiana', 'Swetii Vera di Colvill', 'Swetti de Colvill', 'Swellena Nova'. 'Sweetii Bruick', 'Sweethii', 'Sweetana'(Colvill's), 'Sweetiana Nova de Colvill', 'Sweethii Vera de Colv.', 'Sweediana', 'Sweetii Buik', 'Sweetii Colvil', 'Sweite'. Synonyms: 'Bunii', 'Walter Scott', 'Sir Walter Scott', 'Walter Scott Nova'.

Sweetii Vera. *(C.japonica),* Fruitland Nursery Catalogue, 1936-1937 as 'Sweeti Vera': White and pale pink, peony form. Fendig, 1949, *American Camellia Catalogue:* Loose, peony form, flesh pink streaked and dotted rose, 11 cm across x 5.5 cm deep. There are about 11 outer petals, 5 cm long and numerous, large inner petals, irregular in size, shape and formation. Stamens

numerous, some central and some in fascicles. Leaves dull-green, slightly twisted at tips, tapered both end, blunt point. Shallow indentations, 8 cm x 5 cm. Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I, pp.342, 343: Large peony form, Carmine rose 621/1 and /3, the darker tone applying to the flecking and slender striping, 9-10 cm across x 5 cm deep. Petals variable shapes, near orbicular, smooth margins, brief notching, tendency to recurve. Centre of the flower; slightly smaller petals and large petaloids, erect and undulate, intermingled with white filamented. stamens. Leaves elliptic, tending to curve and cup, 9-10.5 cm long x 5-6 cm wide, dark glossy green, thickly leathery, coarse serrations, apices abrupt, well defined venation. Synonym: 'Lewellyn Variegated'. Sport: **Lewellyn Red.** For colour photo see, Hume, 1946, *Camellias in America*, facing p.288.

Sweetii Vera di Colvill. Berlèse, 1845, *Monographie*, ed.3. Synonym for **Sweetiana.**

Sydney Woodroffe. *(C.reticulata), New Zealand Camellia Bulletin*, 1981, vol.XII, No.2, p.5, Reg. No.163: A chance seedling of **Buddha,** originated by Mrs A.B. Durrant, Rotorua, New Zealand, that first flowered 1976. Growth is upright and rapid in rate. The reticulate, dark green leaves are 16cm x 6.8 cm. The semi-double flower has 12-14 petals and is 17 cm across x 6 cm deep. The colour is deep pink (RHS.CC.58B). Anthers are brown-gold. Flowers have a large burst of stamens and rabbit ears, petals are creped and notched. Blooms early to mid-season.

Sylla. Charles van Geert Nursery Catalogue, 1846, p.76. Orthographic error for **Scylla.**

Sylph. *(C.japonica)*, van Houtte Catalogue, 1842, 9:20: A large, soft pink double, speckled with carmine red. Originated in Italy. Orthographic variant: 'Sylphe'.

Sylphe. Trillon, 1843, Catalogue, p.9. Large, Speckled pink. Orthographic variant for **Sylph.**

Sylphide. *(C.japonica)*, Outteridge, 1962, *1000 Camellias in Australia*, p.16; Eagle Heights Nursery Catalogue, 1962: Pink, informal, peony form double, medium large. Blooms mid-season. Originated in Australia by E.G. Waterhouse, Gordon, N.S.W. and grown by Gordon Waterhouse. Kurrajong Heights. NSW. See: *Camellia News*, No.21, Mar.1966, p.10.

Sylva. *(C.japonica)*, Robinson W. ed., 1903, *Flora and Sylva*, vol.I, colour pl. facing p.66: Perfectly shaped flowers with a ring of golden anthers. Campanulate single red. Not to be confused with **Sylvia,** a name often erroneously used for it. It has also been confused in England with **Jupiter**, with which it is similar. Imported from Japan and renamed by Sander of St. Albans. Geo. Jackman & Sons (Woking Nurseries Ltd) Catalogue, 1958-1959, p. 19: A shrub of vigorous, upright habit which produces large, single, chalice-like flowers in abundance. The central boss of stamens, with bright yellow anthers, is very striking. G. Reuthe Ltd Nursery Catalogue, 1935, p.84: Single, brilliant scarlet. A glorious thing. Note: Jackman says: Very similar to **Jupiter.** However an examination of the plate in *Flora and Sylva* shows a difference in petal formation, and when placed side by side **Sylva** and **Jupiter** are easily distinguishable. However plants of the true **Sylva** are rare due to Sanders distribution of **Jupiter** under this name.

Sylvatica. Berlèse, 1841, *Iconographie*, pl.1. Dr Siebold discovered this tree on a trip to China (correctly Japan) as *Camellia sylvatica.* Synonym for **Sylvestris.**

Sylvestris. *(C.japonica)*, Berlèse, 1840, *Monographie*, ed.2, p.172. Given as the wild form of the species *C.japonica*, brought to Europe by Siebold and grown by Donckelaer.

Sylvia. *(C.japonica),* van Houtte Catalogue, 1841, 7:20; ibid, 1842, 9:20: Very dark blood red. Colla, 1843, *Camelliografia*, pl.134 as 'Silvia': Corolla of 9-12 petals disposed alternatively in 3-4 rows, regular, rounded, opening nearly flat, slightly emarginate. Colour dark red. Similar to 'Waratah Rubra Vera' (**Anemoniflora**) in form and colour of flower, the leaves a little smaller, a larger number of petals externally with a smaller centre and totally sterile. Originated in Italy. Synonym: 'Sylvia d'Italie'.

Sylvia. Mount Usher Camellias, 1955, erroneously for **Sylva.**

Sylvia (USA). *(C.japonica),* McIlhenny Catalogue, 1941 as 'Sylvia'. In the McIlhenny Catalogue of 1935 and 1937 his description matched Van Houtte's **Sylvia;** then in the 1941 Catalogue he has: 'Large single. Same as **Kimberley** with white variegation on carmine.' SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.64: Variegated form of **Kimberley** - Carmine red flecked white. Originated in USA. This is considered erroneous and that it is a variegated form of **Sylvia.**

Sylvia d'Italie. van Houtte Catalogue, 1843-1844, 12:eee. Synonym for **Sylvia.**

Sylvia Mae. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.268. Orthographic error for **Sylvia May.**

Sylvia May. (Caerhays Hybrid), Fendig, 1951, *American Camellia Catalogue:* Small, orchid-pink, single, 5cm across. The bloom has an orchid-like texture. The petals are 2.5 cm x 0.9 cm. The filaments and anthers are golden. Bud is tapered and small. Leaves light green, elliptic, 5 cm x 2.3 cm. Unusually thick and stiff. Veins coarse and raised, serrations unusually fine. Habit tall, spreading and bushy. Originated by Dr. Walker Wells, Oakland, California, USA from hybrid seed (*saluenensis* x *cuspidata*) imported from England, First bloomed 1948. Sport: **Sylvia May Variegated.** Orthographic error 'Sylvia Mae'

Sylvia May Variegated. (Caerhays hybrid), Levi, 1967, *American Camellia Yearbook*, p.42 as 'Sylvia May Var.': A virus variegated form of **Sylvia May** - Orchid pink blotched white. Originated in USA by David Feathers, Lafayette.

Sylvia May Wells. *(C.hybrid), American Camellia Yearbook*, 1967, p.233, Reg. No.960: A 7 year old chance seedling of **Sylvia May** that first bloomed 1963; originated by Harold L. Paige, Lafayette, California, USA. Plant growth is upright and medium with leaves, 8 cm long x 4.5 cm wide. The loose, peony form flower is 12.5 cm across x 7 cm deep with about 20 petals and 15 petaloids. Colour is pale blush, shaded to light lavender pink. Blooms mid-season to late. See colour photo: Front cover, SCCS., 1967, *The Camellia Review*, vol.28, No.6. Chinese synonym: 'Ximeiwei'.

Sylvia McGilvary. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.221. No description. Originated in USA. No valid listing located.

Sylvie d'Italie. M'Intosh, 1855, *Book of the Garden.* Orthographic variant for 'Sylvia d'Italie', synonym for **Sylvia.**

Sylvio Venanzio. *(C.japonica),* Auguste van Geert, 1863-1864, Catalogue, No.54, p.48: Blush, dusted with carmine, with a clear centre. van Houtte Catalogue, 1858, 72:25: Bright red with the centre petals streaked with white. Originated in Italy.

Symboldii. Trillon, Le Mans Nursery Catalogue, 1843, p.9. Orthographic error for 'Sieboldii', synonym for **Tricolor.**

Symetrica. *(C.japonica),* van Houtte Catalogue, 1844-1845, 18:20: Pink, imbricated in model form. Isola Madre Catalogue, 1845. No description. Franchetti, 1855, *Collezione di Camelie*, p.57: Imbricated, bright pink with white blotches. A model flower. Orthographic errors: 'Simetrica', 'Simmetrica', 'Symmetrica'. Originated by Negri, Italy.

Symetry. Auguste van Geert, 1855, Catalogue, No.38, p.28. Linden Nursery Catalogue, 1875. Orthographic error for **Symmetry.**

Symmetrica. W. Rollisson & Son, 1846, Catalogue, No.1, p.8. Orthographic error for **Symetrica.**

Symmetry. *(C.japonica),* Verschaffelt, 1854, *Nouvelle Iconographie,* Book IX, pl.II: Purchased 3 years ago from England. The petals have a double arrangement; the exterior rows are imbricated in a rose-like form; the following ones are regularly imbricated for a divergent and oblique series. The central petals are full, sub-lanceolate, concave and smaller. Colouring is a bright rose with white stripes intersecting the petals at the centre. Orthographic error: 'Symetry'.

Symphonette. *(C.japonica),* Fruitland Nursery Catalogue, 1944-1945: Bright red. large semi-double to formal double. Vigorous, upright growth. Blooms mid-season. Originated in USA at the Fruitland Nurseries, Augusta, Georgia. First flowered 1943. Sport: **Symphonette Variegated.** Chinese synonym 'Jiaoxiangyue'.

Symphonette Variegated. *(C.japonica),* Mark S. Cannon, Scion Catalogue, 1963-1964, p.1 as 'Symphonette Var.': A virus variegated form of **Symphonette** - Bright red, blotched white. Originated in USA.

T.K. Variegated. *(C.japonica)* Kiyono Overlook Nursery Catalogue, 1934, p.14: Semi-double. Light pink edged dark pink. Gerbing's Azalea Gardens Catalogue, 1938-1939: Semi-double, white flowers striped pink, rose and lavender, some flowers solid colour, purple and pink. This variety is very unusual with its many colour shadings. A large plant in full bloom reminds one of Japanese art. Mid-season bloomer with tall, fast growth, leaves dull green. Blooms about 10 cm across x 3.2cm deep, petals in 3 rows and a large cluster of yellow central stamens. Originated in USA by T. Kiyono, Crichton, Alabama. Sports: **T.K. Blush, T.K. Variegated Red**. Synonyms: 'T.K. Variegata', 'T.K. Number 4'. See p. facing p.168, *American Camellia Yearbook*, 1949 for colour photo.

T.K. Variegated Red. *(C.japonica)* Vanderbilt, 1940, *Camellia Research*, p.7 as 'T.K. Varie. Red': Solid red form of **T.K. Variegated.** Originated in USA. Synonym: 'T.K. Red'.

T.P. Bowen. *(C.japonica)* SCCS., 1981, *Camellia Nomenclature*, p.153: White with blush pink iridescent undertone. Miniature, formal double. Bushy growth. Blooms mid-season. Originated by J.M. Haynie, Theodore, Alabama, USA.

T.S. Clower. *(C.japonica)* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Pink with blue tints. Medium size, rose form double. Originated in USA by T.S. Clower, Gulfport, Mississippi.

T.S.Clower Jr. *(C.japonica)* SCCS, 1950, *The Camellia. Its Culture and Nomenclature*, p.65: White and pink. Medium to large, formal double, slender, open growth. Fendig, 1951, *American Camellia Catalogue:* Medium to large, white with narrow, magenta streaks or stripes, completely double, imbricated formal, 9-11 cm across with approximately 86 petals, obovate and about 3.3 cm long. Some are notched and scalloped, some tend to curl and fold. When fully opened, stamens show. Buds are light grey and round. Leaves, medium dull green,

narrow elliptic to lanceolate, 10.5 cm x 4 cm. Tip curls and is long and narrow, base tapers. Serrations medium fine averaging about 2.5mm pitch. Plant habit, open, slow growth. Originated in USA by T.S. Clower, Gulfport, Mississippi. First flowered 1944. Register No.51 with the ACS., See *American Camellia Catalogue*, 1954, p.334.

T.S. White. *(C.sasanqua).* Nuccio's Nurseries Catalogue, 2007, p.19. Medium size, white semi-double to peony. Slow to medium growth is very upright, compact and bushy. Originated in the USA.

T.W. Shepherd. *(C.japonica)* Nairn & Sons Nursery Catalogue, 1904-1905. p.85. No description. Originated in New Zealand.

Ta Cha Hua. Chinese name for *C.reticulata.* Different reading for 'Dachahua'. Synonyms: 'Tien Cha Hua', 'Ko-tsubaki', 'Kara-tsubaki'

Ta de Belleza. Companhia Horticole-Agricolo Portuense Catalogue No 40 [ca.1904], p.71. Orthographic variant for **Cup of Beauty.**

Ta Hung Chu Pan. Waterhouse, 1970. ACRS., *Camellia News*, No.40, p.7. Different reading for **Dahong Juban.**

Ta Yeh Yin Hung. Waterhouse, 1970, ACRS., *Camellia News*, No.40, p.8. Different reading for 'Daye Yinhong', synonym for **Dayinhong.**

Tabaruzaka. (Famous Battlefield), (Higo), Izu Ôshima, 1980, Hawaii Botanical Garden List, p.13. No description. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.288, colour photo & description: Large size, soft pink with deeper pink and red streaks and splashes, single with 7 broad, overlapping, waved petals, opening flat and a central, spreading burst of numerous, yellow stamens. Leaves deep green, elliptic, apices tapering acuminate, margins serrulate. Blooms mid-season to late. Originated in Kumamoto Prefecture, Japan. A sport of **Mikuni-no-homare** or its sport parent, **Higo-kyô-nishiki.** Collected near Tabaruzaka, Kumamoto. Named and released by Tsugio Ôta in 1985.

Tabbs. *(C.japonica)* Guilfoyle's Exotic Nursery Catalogue, 1866: A sport of **Helenor**. Crimson, marbled and blotched white. Medium sized, formal double. Originated by M. Guilfoyle, Double Bay, Sydney, N.SW, Australia. Orthographic errors: 'Tabba', 'Tabes'. See colour photo, p.119, Macoboy, 1981, *The Colour Dictionary of Camellias*. Chinese synonym ''Tabosi'.

Tabba. Taylor & Sangster Nursery Catalogue, 1877. Orthographic error for **Tabbs.**

Tabes. Brunning & Sons Nursery Catalogue, 1882, p.76. Orthographic error for **Tabbs.**

Tabitha. *(C.japonica) American Camellia Yearbook*, 1965, p.248, Reg. No.746: 12 year old chance seedling that first bloomed 1959; originated by Mrs Tabitha M. McEachern, Wilmington, North Carolina, USA. Plant growth is upright and spreading with dark green leaves, 10 cm x 5 cm, some fish-tailed and some round. The semi-double flower is 12.5 cm. across x 8 cm deep with 7 large petals, light pink with yellow anthers and white filaments, and each flower is flushed rose on a petal. It sports to white flowers with deep rose streaks; solid fuchsia and fuchsia with one white petal. Late blooming.

Tabosi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.427; Chinese synonym for the Australia *C.japonica* **Tabbs.**

Taça de Belleza. *(C.japonica) List of Portuguese Camellias* 2010, Gsuedes & Oliveirs, pp.45 & 81; No description. Probably originated in the Azores. Included in the Manuscript *Camellia Register of Companhia Horticola*, ref 1078.

Tacherii. *(C.japonica)*, Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.15. No description. Originated in Italy. (Believed extinct.)

Tachi-jishi. Takii Shubyô, 1954, *Engei Shinchishiki.* Synonym for **Kanjirô.**

Tachikan-tsubaki. Wada Nursery Catalogue, 1939. Now given as a synonym for **Kanjirô.** See pl.535, p.214 & p.387, *Encyclopedia of Camellias in Colour*, vol.I, 1972. Nakamura, Seibundô Shinkôsha, 1965, *Tsubaki to Sazanka*, p.134. Synonym for **Utamakura.**

Ta-chin-sui. Yü & Bartholomew, 1980. *American Camellia Yearbook*, p.23. Different reading for **Dajinsui.**

Tachimaze. (obscure), *(C.japonica)* Hamamatsu, 1825, *Setsuyô Kikan.* No description. Originated in Japan. (Believed extinct.)

Tachiyama. (Name of a Mountain), *(C.rusticana)*, *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.167, p.91, description, p.315: Dark crimson with fine purplish veining, pine cone form with 3-4 rows of petals; outer broad, rounded, reflexed; inner semi-erect, some laciniated, mostly reflexed; centre small and irregular group of golden anthered stamens. Late flowering. Leaves midgreen, broad oval to elliptic, blunt acute apex, recurved, bluntly, shallowly serrate. Originated in Toyama Prefecture, Japan. Named and released by Minoru Takeuchi in 1959. See colour pl.: Seibundô Shinkôsha, 1979, *Senchinshû*, p.88. Named by Takeuchi, Minoru in 1965.

Tada. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the USA *C.japonica* **Tata.**

Tada Meibi. *(C.japonica)* ACS., 1986, *The Camellia Journal*, vol.41, No.3, p.17, Reg. No.2008: Miniature, rose with salmon overcast, formal double *C.japonica* chance seedling that blooms early to midseason. Originated by Mrs H.S. Stone, Baton Rouge, Louisiana, USA. *American Camellia Yearbook*, 1986, p.94: The 17 year old seedling first bloomed 1970. Average flower size, 5 cm across x 2.2 cm deep.

Taddolini. *(C.japonica)* de Jonghe, 1851, *Traité de la Culture du Camellia*, p.122 as 'Tadolini'. No description. Originated in Italy. (Believed extinct.)

Tadolini. de Jonghe, 1851, *Traité de la Culture du Camellia*, p.122. Orthographic error for **Taddolini.**

Tado-no-hiodoshi. (Tado's Red Armour). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.158 with colour photo; English translation p.108. Medium size, dark red, tubular single, cylindrical stamen column. Flowers mid-season to late. Leaves broadly elliptic, medium size. Upright, vigorous growth. The original tree is growing at a private garden near Tado Shrine in Mi'e Prefecture. Named and released by Minoru Satô in 1984. From Aichi Prefecture.

Tafe. Chinese synonym for Australian *C.japonica*, **Tamie Fraser.** Also as 'Tafo'.

Taffeta Tutu. *(C.japonica)* SCCS., 1960, *Camellia Nomenclature*, p.106: Apricot pink with pink edges blending to lemon yellow at centre. Large semi-double to peony form with 4-6 upright petals mingled with petaloids and stamens. Vigorous, upright growth. Fragrant. Mid-season flowering. Originated in USA by Dr L.W. Fawns, Fresno, California. See colour photo, p.116, Macoboy, 1981, *The Colour Directory of Camellias.*

Tafuku-benten. (Happy Goddess, White Edged Leaves), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in the section of variegated leaves: White, margined with streaks, small flower. See: JCS., 1969, *Tsubaki*, No.7, p.37; Ko'emon, 1879, *Chinkashû:* Pink blotched and edged white. Leaves variegated. Tuyama, 1968, *Camellias of Japan*, pl.324, p.164, description, p.187: Leaf blades rather small, broadly elliptic, acuminate apex in the normal green leaves, but deformed in the variegated leaves. In the latter case, leaves variegated most strongly halfway between the midrib and the margin in various shades from white to pale green. Flowers single, red, (Carmine 21), very broadly margined with white. Staminal cylinder widely opened, stamens in a circle. Flowers mid-season to late. For other colour plates see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.218; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.445, p.183, description, p.359. According to this, 'Tafuku-benten' in Itô, 1879 is different to the modern 'Tafuku-benten', which, however is believed to be the same as the **Otafuku-benten** in Mizumo, 1829, *Sômoku-kinyôshû.* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.120, p.41; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.89, 227. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.269 as 'Tahuku-benten'. Different reading: 'Tahuku-benten'. 'Otafuku-benten'. Sport: **Mikasa-no-tsuki.** Satomi, 1956, gives 'Benten-tsubaki' also as a synonym but Itô, 1879 lists them separately and the flower is not bordered with white.

Tagasode. (Whose Sleeve), *(C.japonica)* Iwasaki, 1828, *Honzô Zufu*, p.20: This flower is a pinkish white double. See: JCS., 1981, *Tsubaki*, No.20, p.120. Originated in Japan. (Believed extinct.)

Tagasode. (Whose Sleeve), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.18, colour photo and p.19, description: Small sze, white, vase-shaped single of 5-6 rounded, overlapping petals about a central stamen column with white filaments, joined for the lower third and golden anthers. Flowers mid-season to late. Leaves mid-green, elliptic, apices acuminate, margins serrate. Selected from wild japonicas growing in Hirado City, Nagasaki Prefecture, Japan. Discovered and named by Hisashi Morishita in 1982.

Taglioni. *(C.japonica)* Trillon, 1843, Catalogue, p.9. No description. Cachet Catalogue, 1845-1846, p.7. No description. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, vol.40, p.312: Flowers 9-10 cm across, regular, rose form, of a deep cherry red, sometimes rose with touches of the colour of **Elegans**. Petals are in 5-6 rows, oblong-ovate, not very numerous, deeply notched, veined blood red, channelled and loosely imbricated. Originated in Italy by Mariani, Milan.

Tagode-no-tsuki. (Moon Rise on Tago), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Snow white, large size, double with bamboo whisk-like stamens. See: JCS., 1969, *Tsubaki*, No.7, p.27; ibid, 1982, No.21, p.103. Originated in Japan. (Believed extinct.)

Tago-no-tsuki. (Tago Moon), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Nihon Shubyô Co. Catalogue, 1910, p.46: Pink bud to white in open flower. Large, white, semi-double, with inner petals small and irregular. Originated in Japan. See colour pl.513, p.210, *Encyclopedia of Camellias in Colour*, vol.I, 1972, description, p.382. Resembles 'Setsuzan' (**Sessan**) and **Kenkyô.**

Tago-no-ura. (Tago-no-ura Bay), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan:* White, large size, cup-shaped. Originated in Japan.

Tago-no-ura. (Tago-no-ura Bay), *(C.japonica)* Kasuya Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* This cultivar is thought to be synonymous with the above **Tagode-no-tsuki.** See: JCS., 1969, *Tsubaki*, No.7, p.27. Originated in Japan. (Believed extinct.)

Tagoto-no-tsuki. (Moon Reflections in the Puddles), *(C.oleifera),* Tokio Nursery Catalogue, 1897, p.13: Leaves broad-oblong to broad-elliptic, apex shortly acuminate, thick, dull, roughly crenate, shortly and densely hairy on midrib. Flowers white, small; petals narrow, deeply emarginate and deciduous. Different reading: 'Takoto-no-tsuki'. Corruption of name: 'Tagoto-no-tsuri'. For colour photos & descriptions see: Tuyama, 1968, *Camellias of Japan*, pl.411, description, p.394; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.565 & p.394. Dr Nakai, Takenoshin wrote in 1940 that 'Tago-no-tsuki' was a new variety *of C.oleifera* with a chromosome count of 2n = 105. Originated in the Saitama Prefecture, Japan.

Tagoto-no-tsuri. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* Corruption of Japanese name **Tagoto-no-tsuki.**

Tahai Raku. Cannon, 1975, ACS., *The Camellia Journal*, vol.30, No.4, rear cover. Corruption of the Japanese name **Taiheiraku.**

Tahaku-benten. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Tafuku-benten.**

Taharabeni. (Red from Tahara), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.92, colour photo, p.227, description: Small, cup-shaped single, light red, finely veined deeper red; petals 5-6, rounded, lightly emarginate, concave; stamens in compact central cluster, anthers pale yellow, filaments whitish creamy, joined for lower third; early blooming. Leaves medium green, elliptic-lanceolate, apex acuminate, finely, shallowly serrate. Originated in Chûbu area, Japan.

Tahara-murasaki. (Takara Purple). *(C.japonica),* JCS, 1997, *Japan Camellia,* No.54, p.11, colour illustration No.17: Medium sized, bell-shaped, purple coloured single of 5 petals, with central stamen column of light mauve filaments and yellow anthers. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.159 with colour photo; English translation p.109. Dark purplish red, cylindrical stamen column. Upright growth. Selected from wild japonicas growing in Tahara Town, Atsumi Peninsula. Discovered by Fusui in 1990, named and released by Sachiko Ôtomo. From Aichi Prefecture.

Tahei-no-sato. (Peaceful Village). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.326 with black and white photo; English translation p.234. Medium size, red peony form, rusticana-like flared to split stamens. Very early to mid-season. Leaves ovate, large, thick. Multi-stemmed, vigorous growth. A natural seedling, parentage unknown. Named and released by Nonoichi Town Camellia Lovers' Club in 1990. From Ishikawa Prefecture.

Tahei-tsubaki. (Camellia of Peace), *(C.japonica) Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.230, p.110, description, pp.324, 325: Very large size, pinkish white, rose form semi-double with irregular, reflexed petals, 13-17 in three rows, opening to show a small, centre group of stamens with small, yellow anthers. Leaves light green, oval, short, acute apices, finely, shallowly serrate. Synonym: 'Heiwa-tsubaki'. See colour photo p.89, and description, p.227, Seibundô Shinkôsha, 1979, *Senchinshû*, under the transliteration error 'Taiheitsubaki'. *Nippon Tsubaki – Sasanqua Meikan*, 1998, p.154, English translation p.106.; Originated in Osaka. Considered to have been released by Katayama Juraku'en Nursery in the 1960's.

Tahiti. *(C.japonica)* Eagle Heights Nursery Catalogue, 1965: Bright red. Medium sized single with spreading stamens. Vigorous, upright growth. Blooms early. Originated by E.G. Waterhouse, Gordon, N.SW, Australia.

Tahôji. (Place Name). *(C.rusticana),* Tuyama, 1968, *Camellias of Japan*, pl.143, p.72, description, p.130: Leaves rather large, elliptic to rhombeo-elliptic, apex acuminate, flat, 8.1-12 cm, long x

4.2-5.7 cm wide; petioles 2-4 mm long, hairy. Flowers pink (Rose opal 012/1), single; petals 5-6, unequal in length, largest 4.3 cm long x 2.7 cm wide, narrowly incised at apex. Stamens cluster, small and short, anthers yellow, filaments yellowish orange. Blooms mid-season. Originated in Mr. Adachi's private garden, Tahôji, Niigata Prefecture, Japan.

Medium size, single, 5 petals. Originated in Japan. See illustration, p.341, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Corruption of name: 'Taimei-nisjiki'.

Taimô. (Aspirations), *(C.rusticana)*, Seibundô Shinkôsha, 1989, *Senchinshû*, p.85, colour photo, description, p.226: Cherry red, peony form, medium sized with large outer petals and small, twisted, fluted, inner petals. Leaves broad-ovate, dark to mid-green, apex acuminate, margins finely serrate; petioles hirsute. Blooms mid-season. Originated in Jô'etsu City, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1973.

Taimu. (Wishing Dream). *(C.japonica), Nagoya Camellia Society Bulletin,* 1992, No.25, p.11, colour plate No.37: Originated by Kôji Funakoshi, Nagoya, Japan. A chance seedling of **Maifubuki.** Small size, 7 cm across, single, of 5 soft pink, ruffled petals. Tea-whisk stamens with yellow filaments. No fragrance. Blooms mid-season.

Taini-shibori. (Variegated 'Tiny'). *(C.hybrid). "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.126. No description. From Kurume City, Japan.

Tai Pai. Yang, 1965, A *Study of the Camellia Varieties in Taiwan.* A different reading for **Daibai.**

Tairaman'e. (Taira's Formal Double), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.535, as 'Taira-man-e': Medium size, pinkish white, single, spreading vase shaped, pink towards petal base with a fountain of white petaloids. Originated in Japan. (Believed extinct.) See next.

Tairaman'e. (Taira's Formal Double), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.465 as 'Taira-man-e': Ivory white, single of 8 petals with an erect fountain of white petaloids and a few stamens. Originated in Japan. (Believed extinct.) See next.

Tairaman'e. (Taira's Formal Double), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.562 as 'Taira-man-e': Medium size, single, white with creamy cast on inside; petals 7-8, large, rounded, with centre consisting of a large, compact column of filaments, some with anthers some with petaloids. Originated in Japan. (Believed extinct.) All these 'Tairaman'e' are thought to be the same cultivar. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, pp, 141, 149, 153.

Tairan. Ishi'i, 1932, *Genshoku Engei Shokubutsu Zufu*. Different reading for **Ômidare.** See: Tuyama, 1966, *Camellia Cultivars of Japan.*

Tairin. (Large Flower), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.109; Hamamatsu, 1825, *Setsuyô Kikan:* Large, dark crimson, rose form double, opning to show divided stamens and a few moires on inner petals. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.101. Originated in Japan. (Believed extinct.)

Tairin. (Large Flower), *(C.japonica)* Yashiro, 1841, *Kokon Yôrankô* vol.309, described as painted on *Hyakuchinzu*, owned by Katô, Isenokami: Large, semi-double, red, with cylindrical stamen cluster. Originated in Japan. (Believed extinct.)

Tairleya. Costa, 1846, *Catalogue de la collection de camellias présentée à sa majesté L'Imperatrice de toutes les Russies et Reine de Pologne*, p.5. Orthographic error for **Fairleya.**

Taisanboku. (Magnolia Trees), *(C.japonica)* Itô, Ihei, 1695, *Kadan Chikinshô*, No.210; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pink flowers, variegated with red or variegated with red on a white background with a splashed pattern. Double form. (Believed extinct.) Different readings: 'Taizanboku', 'Taizanmoku'. See: JCS., 1969, *Tsubaki*, No.6, pp.27, 34; ibid, 1982, No.21, p.103.

Taisanboku. (Magnolia Trees), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.137: Medium large, peony form, red with white spots. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.104; ibid, 1962, No.3, p.163. (Believed extinct.)

Taisan-fukun. (Obscure), *(C.japonica)* Okumura, [ca.1810]. *Chinka Hin'i.* Yashiro, 1841, *Kokon Yôrankô.* Palest pink, semi-double. Different reading: 'Taizan-fukun'. Originated in Japan. (Believed extinct.)

Taisanhaku. Fendig, 1951, *American Camellia Catalogue* as 'Taisanhaku'. Different reading for 'Daisenshiro'.

Taisanhaku. (Great White Mountain), *(C.sasanqua),* Kajitsu-en, 1905, *Chabaika Meikan:* Medium size, semi-double, white slightly tinted at petals edge. Originated in Japan. Different readings: 'Ohyama-jiro', 'Ohyama-haku', 'Ôyamajiro', 'Ôyamashiro', Ôyamahaku', 'Taizanhaku'.

Taishakuro. (Black Camellia from Izumotaisha), *(C.japonica)* ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.22 as 'Taisyakuro'. No description. Different reading: 'Taisya-kuro'. Originated in the Shimane Prefecture, Japan.

Taisha-murasaki. (Purple Camellia of Izumo Taisha Shrine). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.92 with colour photo; Medium to large, purple, single flower, tubular to trumpet form. Tubular stamens. Flowers mid-season to late. Leaves elliptic, medium size. Upright, vigorous growth. Original growing in the garden of Nagasako family, Shimane Pref., Japan.. Girth 60cm. Found by Ihara and Houri in 1973.

Taishenle. (Great Laughing God). Gao & Zhuang, 1989, *The Camellia in China*, p.54, No.353, colour photo No.211. Chinese synonym for the Japanese *C.japonica* **Daikagura.**

Taishin-kingyoba-tsubaki. (Goldfish Leaved Camellia with Large Stamens), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.85, colour photo, p.226: Small, deep pink, campanulate single; petals 5-6 with ragged edges; large column of stamens. Leaves mid-green, lanceolate with multi-apices, serrulate. Originated in Kantô area, Japan.

Taishin-kingyoba-tsubaki. (Goldfish Camellia with a Large Stamen Cylinder). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.152 with colour photo; English translation p.104. Medium size, deep red, tubular single, wide circle of stamens. Flowers mid-season to late. A goldfish camellia with leaves split to 3 to 5 tips. Upright, vigorous growth. Considered to be a seedling of 'Goldfish Camellia' (**Kingyoba-tsubaki**), origin details unknown. From Aichi Prefecture.

Taisho Brocade. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.178. Synonym for **Taishônishiki.**

Taishôkan. (General's Crown), *(C.japonica)* Uesa, 1844, *Sômoku Benran:* White, streaked rose pink, medium sized single, sometimes with petaloids; mid-season blooming. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Kyôto Engei*, No.65, p.6. (Believed extinct.)

Taishô-nishiki. (Brocade in Taishô Era), *(C.sasanqua),* Ishi'i, 1932, *Genshoku Engei Shokubutsu Zufu*, vol.4: Large, single, 5-6 petals, of a deep raspberry pink, shading deeper at petals edges with a moire pattern in waves of rippled white across the petals. Originated by Minagawa, Jisuke in Kantô area, Japan. Synonyms: 'Taishô-nishiki'(Kantô), 'Taishô's Brocade'. A sport of **Ôsakazuki**. For colour photo. see pl.541 & p.388, *Encyclopedia of Camellias in Colour*, vol.I, 1972.

Taisho-nishiki (Kantô). Hakoda, JCS., 1987, *Tsubaki*, No.26, p.47. Synonym for **Taishô-nishiki.**

Taisho-nishiki (Kumamoto). ('Taisho-nishiki' from Kumamoto), *(C.sasanqua),* Kurume Tsutsuji Seisan Kumiai, 1970, *Tsutsuji no Furusato;* Hakoda, JCS., 1987, *Tsubaki*, No.26, p.47: Medium size, single, white ground, graduating to red. Originated in the Kumamoto Prefecture, Japan.

Taishuhai. (Large Vermilion Wine Cup), *(C.sasanqua),* Seibundô Shinkôsha, 1972, *Garden Life*, Dec. p.45 as **Daishuhai;** Nuccio's Nurseries Catalogue, 1980-1981, p.190: A very large single, white shading to deep red on edge. Blooms early to mid-season. Synonym for

Daishuhai. Originated in Kurume, Fuku'oka Prefecture, Japan. Chinese synonym: 'Dazhengjin'.

Taishû-haku. (White Camellia from Taishû). *(C.japonica), Kurume Camellia,* 1997, English translation, p.10; White, medium tubular single with tubular stamen cluster. Flowers mid-season. Named by K. Inoue, Kurume, Japan.

Taisya-kuro. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.22. Different reading for **Taishakuro.**

Taitôka. Ichijima, *Kokon Yôrankô,* 1841, vol.344. Japanese group name for *C.sasanqua*. Chinese synonyms: 'Wai Tung Hua', 'Hai Hung Hua', 'Yu Ming Hua', 'Cha Mei'.

Tait's Big Red. *(C.japonica)* Griffin Sr. ed., 1958, *Camellian,* 11:2. No description. Originated by Charles S. Tait Sr., Brunswick, Georgia, USA. Orthographic error: 'Tate's Big Red'. (Believed extinct.)

Tait's Late Double. *(C.japonica)* Fendig, 1956, *American Camellia Yearbook*, p.31: Originated by Charles S. Tait Sr., Brunswick, Georgia, USA of unknown parents. The medium large, shell pink, complete double flower is 10-10.5 cm across. The small petals stand erect, forming a cup-shaped mass. Colour varies from shell pink to pale dawn pink in the centre. Late blooming.

Tait's Masterpiece. Fendig, 1950, *American Camellia Catalogue.* Name changed to **Charles S. Tait Sr.** because of existing camellia **Masterpiece.**

Taiwan Jiuqu. (Nine Bends in Taiwan), *(C.japonica),* Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.167 with colour photo; Widely cultivated in Taiwan, but assumed to have originated in Mainland China. Previously known as 'Jiuqu', and renamed by Professor Gao to distinguish it from the *C.edithae* hybrid 'Jiuqu', now renamed **Dalu Jiuqu.** Flowers pink to deep pink, formal double, small to medium size, imbricated. Leaves dark green, elliptic, shiny and glabrous, strongly serrated. Spreading, vigorous growth. Flowers early to mid-season.

Taiwan-hime-sazanka. Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.6. Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.21: Japanese common name for *C.transarisanensis* Hayata.

Taiwan-hime-tsubaki. Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.6. Japanese common name for *C.caudata* Wallich.

Taiwan-sazanka. Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.14. Japanese common name for *C.tenuiflora.*

Taiwan-tsubaki. Tuyama, 1968, *Camellias of Japan,* pl.420. Yokoyama, 1975, *Gendai T*subaki *Meikan,* p.25. Japanese common name for *Gordonia axillaris.*

Taiyang Chongbaizhe. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the USA *C.hongkongensis* hybrid **Sun Worshipper.**

Taiyang Ge. Chinese synonym for New Zealand *C.hybrid* **Sun Song.**

Taiyangshen. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for USA *C.japonica* **Que Sera Sera.**

Taiyô. (The Sun), (*C.rusticana*), Minagawa, 1956, *Chinkashû;* Tuyama, 1968, *Camellias of Japan,* pl.138, p.69, description, p.129: Snow camellia of variegated leaves. Leaves elliptic or narrowly elliptic, flat on the upper surface, acutely denticulate on the margin; petioles hairy. Deep green, variegated light yellow along the midrib and also along the lateral veins. Flowers rose (Claret rose 021/1), single, with 5 petals incurved on the lateral sides. Stamens normal, yellow, in a loose group. Flowers mid-season to late. Originated in the Niigata Prefecture, Japan. There is another **Taiyô** from the Nagoya district that is similar to **Akashigata.** [See **Taiyô (Chûbu)**]. For colour photo and description see: Seibundô Shinkôsha, 1979,

Senchinshû, pp.86, 226, as 'Taiyô' (Niigata). Synonym: 'Taiyô' (Niigata). Different reading: 'Taiyow'.

Taiyô (Chûbu). (The Sun; Chûbu), *(C.japonica)* Tuyama, 1966, *Camellia Cultivars of Japan*, pl.12, p.14; Satô, 1975, *Chûbu* no *Tsubaki*, p.69, colour photo and description: Large, 12-14 cm across, bright scarlet, semi-double with broad, overlapping petals, emarginate and slightly crêped, with a compact stamen column, anthers yellow, filaments creamy. Leaves elliptic to broad-elliptic, medium green, margins serrulate, apex short acuminate. Originated in the Nagoya District, Japan. For colour photo see: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.86, 226. Resembles **Akashigata.** Sport: **Taiyô-nishiki.**

Taiyô (Niigata). Seibundô Shinkôsha, 1979, *Senchinshû*, p 86. Synonym for **Taiyô.**

Taiyô-nishiki. (Brocade of the Sun), (Higo), Adachi. 1960, *Camellia. Its Appreciation and Artistic Arrangement*, p.66, colour photo: Large, white, single higo with crimson streaks and a few soft pink marks. Large, circular stamen group; anthers yellow. Originated in Kumamoto Prefecture, Japan. Synonym: 'Taiyo-nishiki'(Higo).

Taiyô-nishiki. (Brocade of the Sun), *(C.japonica)* Tuyama, 1966, *Camellia Cultivars of Japan*, p.14; Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.40; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.322, colour photo and description: Large size, deep red with white patches, semi-double with 3 rows of large, emarginate, waved petals and a compact, central stamen column with yellow anthers. Leaves dull dark green, broad-elliptic, apices abrupt acuminate, margins serrulate, prominent venation. Late blooming. See colour photo, p.86, Seibundô Shinkôsha, 1979, *Senchinshû.* Originated in Chûbu area, Japan. Sport of **Taiyô (Chûbu).**

Taiyo-nishiki (Higo). Stone, Vi., 1983, SCCS., *The Camellia Review*, vol.45, No.2, p.20. Synonym for **Taiyô-nishiki.**

Taiyoh. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* Different reading for **Taiyô.**

Taiyômori. Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.45. Different reading for **Taiyôzakari.**

Taiyôzakari. (Ocean Zenith), *(C.rusticana)*, Seibundô Shinkôsha, 1966, *Garden Life*, No.17, p.36 black and white illustration and description: Medium size, 8 cm across, deep red, single with darker fine veining on 7-8 large, rounded, emarginate petals and centre stamens in a spreading group, filaments dark yellow. Blooms mid-season. See description, p.226, Seibundô Shinkôsha, 1979, *Senchinshû.* Originated in Higashi-kanbara-gun, Niigata Prefecture, Japan. Different reading: 'Taiyômori'.

Taizanboku. Different reading for **Taisanboku.**

Taizanfukun. Different reading for **Taisanfukun.**

Taizanhaku. Doty & Doerner Price List, 1944. Different reading for **Daisenhaku.** Daisen is a famous mountain in the Tottori Prefecture.

Taizôji. (Taizô Temple), *(C.x vernalis)*, Tanaka et al., 1986, *Journal of Japanese Horticultural Science*, 55(2):208 as a tetraploid cultivar: Small size, clear red, single, with spreading stamens. Leaves green, 4.6 cm long x 1.7 cm wide. Originated in Japan. Synonym: 'Gaizen'.

Taizôkai. (Taizô World), *(C.sasanqua)*, Uetsuma, Hiroyuki, 1956, *Higohan no Bussan to Engeika Nihon Dangi*, No.68, p.31; Hakoda, 1974, *Nôkôdai Nôjôhô*, No.6, p.54. No description. Originated in Japan.

Tajimahime. (Tajima Princess), *(C.japonica x C.lutchuensis)*, Hagiya 1986, *Studies on Interspecific Hybridization of Camellias*, No.1, p.5, colour pl.1: A seedling of *C.japonica* **Eiraku** x *C.lutchuensis.* Flower red, 7-8 petals, single, cup-like, 5 cm across; petals round; stamens

tubular, filaments yellow. Fragrant. Mid-season flowering. Leaves small. oval, veins and serrations obscure. Habit upright, branches slender. Originated by Dr Kaoru Hagiya, Niigata University, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.158 with colour photo; English translation p.108.

Takachiho. (Place Name in Miyazaki Prefecture), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.80, colour photo, p.227, description: Medium sized, soft pink with occasional broad red stripe, campanulate single, 8-9 petals, cordate, overlapping, with central stamen column; yellow anthers, white filaments. Leaves dark green, elliptic, apex long acuminate, recurved, margins wavy, serrulate. Originated in Chûbu, Japan. Nippon Tsubaki - Sasanqua Meikan, 1998, p.156 with colour photo; English translation p.107. A chance seedling of **Aki-no-yama.** Named and released by Minoru Satô in 1965.

Takagi. Uekiya Bunsuke Hikki, 1830. Synonym for **Watayashiro.**

Takagura. Different reading for **Takakura.**

Takai-shidare. Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details.

Takakura. (Place Name), *(C.japonica)* Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15; Yashiro, 1841, *Kokon Yôrankô:* Large semi-double, pink ground with red streaks and central cylindrical stamen cluster. Originated in Japan. Different reading: 'Takagura'. See: JCS., 1969, *Tsubaki*, No.7, p.26; ibid, 1983, No.22, p.124. (Believed extinct.)

Takakura-beni. (Takakura Red), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.212, colour photo and description: Medium to large size, deep red, single, opening saucer-shaped, with large, crinkled, overlapping petals with irregular margins and a tall stamen cylinder with pinkish filaments, joined for the lower third, and bright yellow anthers. Blooms mid-season to late. Leaves dark green, flat, elliptic, apices acuminate, margins shallowly serrate. Originated in Chûbu area, Japan. Note: Named after Kôzôji, the place where the nursery had a branch. Kôzôji can be read as Takakuradera. Named and released by Minoru Satô in 1977.

Takakurayama. (Mount Takakura), *(C.japonica)* Uekiya, Seijirô, 1874, *Tsubaki Hyakuro no Zu*, vol.2: Medium sized, semi-double to open peony form, white with red streaking towards the petals edges. Originated in Japan. Described as a synonym for **Tamatsushima.**

Takamo-no-yuki. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* Corruption of the Japanese name: **Takane-no-yuki.**

Takane. (Place Name), *(C.japonica)* Itô, Toku'emon. 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Semi-double, light red with deep red stripes and speckles, white margins, sake-cup shape. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77; JCS., 1969, *Tsubaki*, No.7, p.34. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* describes this as a single. Originated in Japan. (Believed extinct.)

Takane-musume. Inazawa Nursery Co. Ltd. Catalogue, 1986-1987, p.7, Mistransliteration for **Takara-no-musume.**

Takane-no-yuki. (Snow on the High Peak), (*C.rusticana*), Seibundô Shinkôsha, 1966, *Garden Life*, No. 17, p.37, illustration and description: Pure white, semi-double, 8 cm across; petals about 18 in 3 rows, oval, slightly emarginate, channelled. Stamens in a small, short group. Leaves olive green, long-oval; petioles hirsute. Originated in Nakatsu Town, Niigata Prefecture, Japan. Named and released by Yaichi Kawamura in 1965. See colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.87, 227 as 'Takane-no-yuki' (Niigata). Orthographic error: 'Tamama-no-yuki'.

Takane-no-yuki. (Snow on the High Peaks), *(C.japonica)* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.59, p.21, description, p.211: Medium size, single, soft pink petals, veined deeper

pink with wide, white edges, 5-6 in number, emarginate and crinkled edges; large stamen cluster with golden anthers, slightly fragrant. Leaves medium to dark green, glossy, elliptic, apex acuminate, recurved; margins reflexed, shallowly crenate. Originated near the Kiso River, Chûbu, Japan. Named and released by Tôbei Yoshida in 1931. For colour photos and description see: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.150, p.313; Satô, 1975, *Chûbu no Tsubaki*, p.46. Seibundô Shinkôsha, 1979 *Senchinshû,* p.86 as 'Takane-no-yuki' (Chûbu), and p.265, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Resembles **Nihon-no-homare.**

Takane-no-yuki (Chûbu). Seibundô Shinkôsha, 1979, *Senchinshû*, p.86. Synonym for the *C.japonica* **Takane-no-yuki.**

Takane-no-yuki (Niigata). Seibundô Shinkôsha, 1979, *Senchinshû*, p.87. Synonym for the *C.rusticana* **Takane-no-yuki.**

Takanini. *(C.japonica)* Valdosta Camellias, 1987, ACS., *The Camellia Journal*, vol.42, No.4, p.19. No description. *New Zealand Camellia Bulletin*, 1989, vol.XVI, No.1, p.26: Originated by Neville Haydon, Auckland, New Zealand. It is 8 years old and first flowered 1984. Upright in habit and a quick grower, it has dark green leaves averaging 9 cm x 4 cm. The flowers are small to medium, of a deep plum red colour, 8-9 cm. across x 3.5 cm. deep with 15 petals and 140-200 petaloids with an occasional anther. It flowers from early to late season and the bright sheen on the flowers is characteristic. Colour RHS.CC.46A.

Takano-miya. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.156 with colour photo; English translation p.107. Small to medium size, trumpet shaped single with pinched stamen column. Small and large red stipes on pale pink ground, irregular white border. Flowers early to late. Leaves narrowly elliptic, small to medium size. A mutation from an unknown cultivar. Named and released by Hiroshi Ihara in 1988. From Shimane Prefecture.

Taka-no-tsume. (Claw of the Hawk), *(C.x vernalis)*, Sakuden, 1630, *Hyakuchinshû:* Red mottled white, small, single; stamens pinkish white; leaves small, sasanqua-like so that a synonym is 'Sasanqua-tsubaki'. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.110. (Believed extinct.)

Taka'o. (Place Name), *(C.japonica)* Mizuno, 1681, *Kadan Kômoku*, Double. White with pink streaks. Originated in Japan. See: JCS., 1965, *Tsubaki*, No.5, p.29. (Believed extinct.)

Taka'o. (Place Name), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pls.356 & 462: Medium small size, white with pink markings, rose form double, opening to show a weak group of stamens. 'Taka'o' is a place name in Kyôto Prefecture and also the name of a famous Japanese prostitute of ancient times. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p. 143. (Believed extinct.)

Takao. (Place Name). *(C.japonica),* Yamaguchi Tsubaki-en, Kyoto, 1993-1994, Mail Order List: Dark red to purple red, small, campanulate single with white filaments. Outer petals are tinted purplish in the cold. Originated by Yamaguchi Tsubaki-en. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.155 with colour photo; English translation p.106. Leaves somewhat narrowly elliptic, small to medium size. Upright, vigorous growth. Selected from wild japonicas growing in Sôraku District, Kyoto.

Takao-no-kaori. (Fragrant Camellia from Takao). (*C.lutchuensis* hybrid). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.274 with colour photo; Miniature single, white ground with red at petal tips, fragrant, profuse, tubular to trumpet form. Flowers early to mid-season. Leaves elliptic, small. Upright, vigorous growth. A cross of **Kon-wabisuke** x *C.lutchuensis*, made by Shuho Kirino, Tokyo, Japan around 1960.

Takara-awase. (Treasure Trove), (*C.rusticana*), Kasuya. Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in section on double flowers; Itô, Ko'emon, 1879, *Chinkashû:* White streaked red. Large,

double. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.92, p.33, description, p.211: Medium sized, semi-double with a variable colour pattern; ground white with red streaks to pinkish white with red streaks to red, spotted or blotched white. Petals in 3 rows, wide-oval, lightly scalloped at apex; stamens in small central cluster. Leaves broad oval to broad elliptic, strong, shining green, acute apex, recurved, margins serrate, turned down, venation impressed; petioles hirsute. Many types of moired and blotches appear. Blooms mid-season. Originated in Kantô area, Japan. See colour photos and descriptions: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.346, pp.150, 342; Shufu-no-Tomo-Sha, 1976, *Tsubaki to Sazanka*, p.37. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.87, 227. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.339. Chinese synonym 'Baohe'.

Takara-awase. (Treasure Trove), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Chûgai Nursery Catalogue, 1935-1936, p.26: Large size, semi-double, pink shaded white and bordered pink. Early blooming. Originated in Japan.

Takara-awase (Ômoku). (Moired 'Takara-awase'), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû,* p.87, colour photo: Medium sized semi-double, red moired and blotched white; petals 12-15, irregular in length and shape; centre stamen cluster, yellow anthers, 2-4 petaloids, white flaments. Many different types of moires and blotched appear. 'Ômoku' means transversed mottle. Leaves elliptic, apex short acuminate, recurved, margins finely, shallowly serrate. Originated in Kantô area, Japan. This is one of the variegated forms of the *C.rusticana* **Takara-awase.**

Takarabune. (Treasure Boat), *(C.sasanqua)*, Kajitsu-en, 1905, *Nisshô-en Chabaika Meikan;* Shimada, Yaichi, 1957, *Kai*, p.100 on 'Sazanka in Kumamoto'. No description except large. Originated in Japan.

Takarabune. (Treasure Boat). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.157 with colour photo; English translation p.108. Medium size, pale pink, bowl-shaped single, cylindrical stamen cluster. Flowers early to late. Leaves elliptic, small, flat, slightly recurved. Upright, fast growing. A chance seedling, originated by Kôji Yamada, Inazawa City in 1959, named by Minoru Satô. From Aichi Prefecture.

Takara-fubuki. (Snowstorm of Treasures), *(C.japonica)* ICS, Apr. 1990, *Japanese Camellia Cultivar List*, p.23: Medium size, white ground with red variegation; cup-shaped single. Blooms mid-season. Originated in Okayama Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.157 with colour photo; English translation p.108. Red splashes on pale pink ground, tubular single, round petals, cylindrical stamen cluster. Flowers mid-season to late. Leaves elliptic, medium size. Upright, vigorous growth. A chance seedling, originated by Yoshihiko Mishima, named and released by Nobuo Sasai in 1980.

Takaragawa. (Takara River), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.182, colour photo, p.183, description: Small size, deep red, vase-shaped single of 5 rounded, overlapping petals and a central stamen cylinder with red filaments, the lower half joined, and bright yellow anthers. Blooms mid-season to late. Leaves glossy mid-green, small, narrow-elliptic to elliptic, recurved apices, tapering acuminate, margins shallowly serrate. Selected from wild japonicas growing in a suburb of Matsuyama City, Ehime Prefecture, Japan. Named and released by Harumi Tachibana.

Takara-kurenai. (Treasured Red). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.157 with colour photo; English translation p.107. Small, dark red, tubular to trumpet shaped single, cylindrical stamen column. Flowers mid-season to late. Leaves narrowly elliptic, medium size, flat. Upright, vigorous growth. A chance seedling of **Bokuhan,** originated and named by Masaru Kimura in 1985. From Hyôgo Prefecture.

Takara-nishiki. (Treasure Brocade), *(C.japonica)* Miyazawa, 1954, *Kanshô Jumoku*, p.357: Large double with long petals. White with red spots. Originated in Japan.

Takara-nishiki. (Treasure Brocade), *(C.sasanqua)*, Ishi, Yûgi, 1932, *Chabai no Hinshu Kaistsu*, *Jissei Engei*, No.15, p.16: Large size, double, white, pink towards the petal edges. Originated in Japan.

Takara-no-hana. (Treasure of Flowers), *(C.japonica)* Satô, 1975, *Chûbu no Tsubaki*, p.51, colour photo & description: Soft, pale pink, white base, campanulate single, turning greenish-yellow at the base of the petals, 5-6, opening through spherical shape; medium size, overlapping, crinkled edges; stamens in central column, large, yellow anthers, filaments greenish-yellow, joined for lower third. Leaves round, shining mid-green, apex blunt, margins coarsely serrate, venation prominent. Originated in Chûbu, Japan. Named by Kozaki, Toshiaki, Inazawa City, Aichi Prefecture, Japan. Resembles 'Kantô-hatsugeshô'. See colour photo & description: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.87, 227 and Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.92, 93. A chance seedling, named and released by Toshiaki Kosaki in 1975.

Takara-no-kagayaki. (Shining of Treasure), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.88, colour photo and description: Medium size, pale pink, campanulate single with 5 rounded, overlapping petals and a central cylinder of stamens with white filaments, joined for lower third, and light yellow anthers. Blooms mid-season to late. Leaves glossy light green, lanceolate-elliptic, apices tapering acuminate, margins serrate. Originated in Chûbu area, Japan. A natural seedling, parentage unknown, originated and released by Toshiaki Kosaki in 1980.

Takara-no-musume. (Maiden of Takara), *(C.japonica)* Inazawa Nursery Catalogue, 1986-1987, A-325, p.7: Peach pink, trumpet shape, with tubular stamen cluster. Late blooming. Originated in Japan. Corruption: 'Takane-musume'.

Takarazuka. (Place Name), *(C.x vernalis)*, Uetsuma, Hiroyuki, 1956, *Higohan no Bussan to Engeika*, *Nihon Dangi*, No.68, p.31; Hakoda, JCS., 1989, *Tsubaki*, vol.26, p.51; ICS., Apr.1990. *Japanese Camellia Cultivar List*, p.36: Large size, 8-10 cm across, white ground with light red graduations, semi-double with 20-25 petals. Mid-season blooming. Originated in Takarazuka City, Hyogô Prefecture, Japan. Chinese synonym: 'Baozhong'.

Takasago. (Title of Noh Drama), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.58: Large, deep crimson double with 6 rows of petals and a small group of divided stamens when fully open. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.94. (Believed extinct.)

Takasago. (Title of Noh Drama), *(C.japonica)* Itô, Ihei, 1695, *Kadan Chikinshô*, No.203: Medium large, peony, double form, white flower with red margins like **Kinmizuhiki.** Convex in shape. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.34. (Believed extinct.)

Takasago. (Title of Noh Drama), *(C.japonica)* Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* lists two 'Takasago's'; this and the one above: Medium sized, semi-double with tubular stamens cluster. White to pale pink ground with a few red spots. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.27; ibid, 1982, No.21, p.103. (Believed extinct.)

Takasago. (Title of Noh Drama), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Very large, 9-11 cm across, faint pink with 5-6 petals and a large spreading, circular cluster of 150-180 yellow stamens. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.369 & vol.II, 1978, pl.294, p.126; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.86, 227 and Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.117. Originated in Kumamoto Prefecture, Japan. Corruption of name 'Tasasago'. Note: The more recent bibliographies describe a medium to large size.

Takasago. (Title of Noh Drama), *(C.sasanqua)*, Hakoda, 1974, *Nôkôdai Nôjôhô*, No.6, p.54; JCS., 1987, *Tsubaki*, No.26, p.47; ICS., Apr.1990. *Japanese Camellia Cultivar List*, p.36: Medium size, white ground with purplish red graduations, single. Early blooming. Originated in Kumamoto Prefecture, Japan. Chinese synonym 'Gaosha'.

Takasagun. (obscure), *(C.japonica)* Hamamatsu, 1825, *Setsuyô Kikan.* Description not seen. Originated in Japan. (Believed extinct.)

Takatsuki. (Place Name where Collected), *(C.japonica)* Tuyama, 1968, *Camellias of Japan*, pl.348, p.176, description, p.193: Leaves elliptic to narrowly elliptic, gradually acuminate, venation slightly impressed, obscurely crenate margins, 7.5-8.6 cm long x 3.5-3.9 cm wide. Flowers semi-double, white, or white with a few streaks of pale pink, or pure pink (Crimson 22/2-/3). Petals incurved, 18-25 in number, regularly obovate, slightly emarginate. Stamens few, anthers lemon-yellow, filaments white and thin. Blooms mid-season. Originated in a private garden Takatsuki-shi, Osaka Prefecture, Japan.

Takayama. (High Mountain), *(C.japonica)* Nicholson, 1900, *Supplement to The Illustrated Dictionary of Gardening:* Red. Medium sized single of 5 petals with pronounced stamens. B.S. William's Nursery Catalogue, 1891, p.43: A very interesting, small flowered variety, flowers about 4 cm across, only one row of petals, crimson-scarlet with a full row of anthers. Originated in Japan, imported by van Houtte and passed to the Caledonia Nursery, Guernsey in 1899. Different reading: 'Kôzan'. Corruption of name: 'Takayana', 'Tokayana', 'Tokayama', 'Talayama', 'Tokyama'. Note: The names 'Takayama' and 'Tokayama' have erroneously been used interchangeably in the UK. Synonym: 'Takayama'(1).

Takayama (1). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Takayama.**

Takayama (2). Fendig, 1953, *American Camellia Catalogue.* Erroneous synonym for **Margherita Coleoni.**

Takayana. Haskins Nursery Catalogue, 1954. Corruption of Japanese name **Takayama.**

Takayasu. (Personal Name of ancient person of Nô plays), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.73: Medium size, semi-double, crimson marbled with white. Weak stamen cluster. Originated in Japan. Resembles **Kasugano.** See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.159. (Believed extinct.)

Takeba. Phillips & Rix, 1989, *Shrubs*, The Pan Garden Series, p.56 colour illustration; p.57 text. Corruption of the Chinese name 'Talicha', different reading for **Dali Cha.**

Takeda-beni. (Takeda Red), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.192, colour photo and description: Small size, deep red, wide vase-shaped single with 5 rounded, overlapping petals and a central column of stamens with red filaments, joined for lower third, and bright yellow anthers. Blooms early to late season. Leaves glossy mid-green, elliptic, apices long acuminate, margins serrate. Originated in Mr Takeda's garden, Taka'oka City, Toyama Prefecture, Japan. Named and released by Mitsuroku Makino in 1980s. Resembles **Kon-wabisuke.**

Takeda-shiroyabu. (Wild White Camellia from Takeda). *(C.japonica), Kurume Camellia*, 1997, English translation, p.10; White, medium size tubular single with tubular stamen cluster. Flowers mid-season. Named by T. Kunitake, Kurume, Japan..

Takei-no-haru. (Takei Spring), *(C.japonica) Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.298, p.127, description, p.242: Soft pink. Small, campanulate single; petals 5-6 in number, emarginate, overlapping; stamens large central cluster, anthers golden, filaments a light yellow. Leaves mid-green, lanceolate, tapering acuminate apex, margins serrulate. Originated in Japan.

Takeiyeh. Yü, 1950, RHS., Magnolia and Camellia Conference Report, p.130. Corruption of the Chinese name 'Takueiyeh', different reading for **Daguiye.**

Takeyeh. Fendig, 1951, *American Camellia Catalogue.* Corruption of Chinese name 'Takueiyeh', different reading for **Daguiye.**

Takieyeh. Durrant, 1960, *New Zealand Camellia Bulletin*, vol.I, No.6. Corruption of the Chinese name 'Takueiyeh', different reading for **Daguiye.**

Takiyeh. Fendig, 1953, *American Camellia Catalogue.* Corruption of Chinese name 'Takueiyeh', different reading for **Daguiye.**

Takekurabe. (Comparing Heights), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.88, colour photo, p.227, description: Medium, size, deep fuchsia pink, double, petals cordate or long-oval, apices cleft on inner rows. Four rows with a centre of a few weak stamens mixed with 2-3 small, erect centre petals. Leaves mid-green, elliptic, small & thin, somewhat keeled, not strongly serrate, apices tapering acuminate; petioles hirsute. Originated in Jo'etsu. City, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1972. Note: The literary translation of 'Takekurabe' is 'Comparing Heights' and refers to Higuchi Ichiyô's (1872-1896) famous novelette, written in the Meiji era and translated by Edward Seidensticker under the title 'Growing Up'.

Takenohiro-unryu. *(C.japonica),* Camellia Forest *Catalogue* 2013 with colour photo; Contorted growth, but without the sharp bends of others of this type. Rose red single flower.

Take-no-uchi. Seibundô Shinkôsha, ed., 1979, *Senchinshû*, *p.*249. Synonym for **Manyô.**

Takeshima-kasuri. (Bamboo Island Variegated), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.281: Medium size, open peony form, white with soft pink at petal bases and splashes of crimson. Some petaloids in the centre. Originated in Japan. Different reading: 'Takeshima-tobi'iri'. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p. 105. (Believed extinct.)

Takeshima-kasuri. (Bamboo Island Variegated), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.399: Medium sized, peony form, irregular double; pinkish white with soft pink patches on the petals. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.140. (Believed extinct.)

Takeshima-kasuri. (Bamboo Island Variegated), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.585: Medium sized, semi-double, white with red stripes. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.161. (Believed extinct.)

Takeshima-tobi'iri. Different reading for **Takeshima-kasuri.**

Takieyeh. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.222. Corruption of 'Takueiyeh', different reading for **Daguiye.**

Takigi-nô. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, p.64. Different reading; 'Takigi-no-nô'.

Takigi-no-nô. (Noh Performance in Light of Bonfires), *(C.japonica)* Sakuden, 1630, *Hyakuchinshû:* Various four forms appear. Single self red, or red anemone form, or small flowers, or pure white. Colour self red or red with white markings. Originated in Japan. Different reading: 'Takigi-nô'. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.109. (Believed extinct.) Synonym: 'Ashihara-tsubaki'.

Takimae. (Waterfall Front), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pure red, large size, double, striped, divided stamens. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.34. (Believed extinct.)

Takinami. (Waterfall Waves), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.134: Small, pinkish white, semi-double with divided central stamen column, rare petaloids, white fila-

ments, yellow anthers. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.103. (Believed extinct)

Taki-no-hagasane. Steffek, 1949, *Plant Buyer's Guide*, ed.5, p.51. Corruption of Japanese name **Toki-no-hagasane.**

Taki-no-shiraito. (White Streaks from Waterfall), *(C.japonica)* Sakuden, 1630, *Hyakuchinshû:* White. Greenish at petal base. Medium size, single, cup-shaped. Petaloids, long, slender and white. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.7, p.96. (Believed extinct.)

Taki-no-shiraito. (White Streaks from Waterfall), *(C.japonica)*, Seibundô Shinkôsha, 1979 *Senchinshû*, p.87, colour photo, p.227, description: Medium size, pale pink buds, white campanulate to cupshaped single; petals 5-6, large, overlapping, frilly margins and emarginate; stamens in a strong central column, anthers yellow, filaments light yellow. Originated in Kanazawa City, Ishikawa Prefecture, Japan. Named and released by Seizô Matsui in 1975.

Taki-no-shiraito. (White Streaks from Waterfall), *(C.sasanqua)*, Murayama, Seibundô Shinkôsha, Dec.1971, *Garden Life*, p.16. No description. Originated in Kumamoto Prefecture, Japan.

Takitsuse. (Rapid Stream), *(C.japonica)* Usami, Na'ohachi, (before 1912), *Nagoya Chin Zu'e:* Pure white, large size, single, large petals, early blooming. See: Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû*, No.6, p.127. Originated in Japan. (Believed extinct.)

Takoto-no-tsuki. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.64 as 'Takotono-tsuki'. Different reading for **Tagoto-no-tsuki.**

Takueiyeh. Yü, 1964, *Camellian*, p.7, 'The Garden Camellias of Yunnan'. Different reading for Daguiye. Corruptions of name: 'Takeiyeh', 'Takieyeh', 'Takeyeh', 'Takiyeh'.

Takukinkô. (Washed Crimson Brocade), *(C.japonica)* Sakuden, 1630, *Hyakuchinshû:* Medium size, single, white ground with red streaks. Originated in Japan. (Believed extinct.) Synonyms: 'Tsuruga-tsubaki', 'Tsuruga'. Different reading: 'Susugi-kinkô'. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.105..

Takuku-Benten. A.J.Mackie Nursery Catalogue, 1963, p.18. Corruption of the Japanese name **Tafuku-benten.**

Takumi. (Man's Personal Name). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.86 with colour photo; A seedling of 'Sodekakushi' (**Gauntlettii**) named by Mikio Akashi, Kurume, Japan in 2004. Peach pink bordered white, medium size. Semi-double, with separated layers of incurving petals. Split stamen cluster. Vigorous, upright growth. Leaves large, narrowly oblong, and somewhat undulate. Late flowering.

Takushima. (Takushima Island), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.627: Dark crimson, semi-double with white markings, flat flower. Originated in Japan. Sec Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.147. (Believed extinct.)

Takushima-surusumi. (Surusumi from Takushima), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.87, colour photo, p.227, description: Medium size, dark crimson, single; petals 5 in number, opening flat, large, overlapping, somewhat crinkled, emarginate, with a central stamen column; anthers yellow, filaments white. Leaves oblong-elliptic, glossy green, apex acute, margins serrate. Originated in Nagasaki Prefecture, Japan.

Talayama. Charles Smith & Son, Caledonia Nursery Catalogue, 1971, p.8. Orthographic eror for **Takayama.**
