H.A. Downing. *(C.japonica),* Bailey & Miller, 1900, *Cyclopedia of American Horticulture,* ed.1, vol.1, p.225 with black and white illustration: Blood red semi-double, 10 cm across. Central stamens, showy yellow filaments tipped with brown anthers. Petals 4 cm x 3.5 cm, notched, curled and twisted. Leaves, long pointed, medium size, lanceolate,10 cm x 4 cm, shallowly, widely serrate on a slow growing, low, bushy, spreading plant. Originated in USA. Synonyms: 'Helen of Troy', 'Lady Mulberry', 'Lauren Bacall', 'Long's Chandleri Rubra'. Sport **H.A. Downing Variegated.** See colour plate, p.101, Gerbing, G.G., 1945, *Camellias.*

H.A. Downing Variegated. *(C.japonica),* Valley Garden Centre Catalogue, 1946-1947: Rose red, marked white. Large semi-double with 3 rows of very broad petals and long, yellow stamens in the centre. A new, variegated sport of **H.A. Downing** with the same form and habit as its parent. Mid-season blooming. Synonyms: 'Mardi Gras', 'Helen of Troy Variegated'. See p.163, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I.

H.B. Sheather. Nairn & Son Catalogue, 1892. Abbreviation for **Harriet Beecher Sheather.**

H. Beecher Sheather. Anderson & Son Nursery Catalogue, ca.1927. Abbreviation for **Harriet Beecher Sheather.**

H.C. Anderson. *(C.japonica),* Greenbrier Nursery Catalogue, 1948: Scarlet red. Medium large, loose, rose form double with loosely arranged petals. Originated in USA by Greenbrier Nursery, Norfolk, Virginia.

H.C. Blanks. *(C.japonica),* McIlhenny Catalogue, 1941, p.7. "Seedling not bloomed". No description. Originated in USA. (Believed extinct.)

H.C. Rambath. (*C.reticulata* hybrid). ACS, 1992, *American Camellia Yearbook,* p.34, Reg. No.2244: Originated by Jack Mandarich, California, USA. Very large, bright deep red, semi-double to loose peony form. A 10 year old seedling of **Nuccio's Ruby** x 'Crimson Robe' (**Dataohong**) that first bloomed 1989. Average flower size is 13 cm across x 6 cm deep with 16 petals and golden anthers/ Plant growth is upright, open and vigorous with dark green leaves 12.5 cm long x 7.5 cm wide. See colour photo pp.40-41.

H.C. Scott. *(C.japonica), American Camellia Yearbook,* 1986, p.90, Reg. No.2030: A medium sized, deep pink with red stripes, formal double, *C.japonica* chance seedling. Late flowering. Originated by Elizabeth R. Scott, Aiken, South Carolina, USA. The 16 years old seedling first flowered 1975. Average flower size is 8 cm across x 3.7 cm deep with 69 petals. Very cold hardy. Plant growth is spreading, dense and medium in rate with dark green leaves, 10.5 cm x 5.3 cm.

H.G. McCord. *(C.japonica),* SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* White marked and striped red. Large, flat semi-double. Vigorous growth. Originated in USA by Magnolia Gardens, Charleston, South Carolina. Synonym: 'Grady McCord'.

H. Guichard. Torsanlorenzo Catalogue, 1984-1985. Abbreviation for 'Souvenir de Henri Guichard', synonym for **Hikarugenji.**

H.M. Stanley. *(C.japonica),* Williams Nursery Catalogue, 1891, p.42: Flower, medium in size, about 7.5 cm across, rosy carmine in colour, semi-double showing yellow anthers in the centre, some petals veined with rose. A new Camellia introduced from Japan by Gerald Waller.

H.S. Number 101. Wylam, 1957, *American Camellia Yearbook,* p.27 as 'HS #101'. Early identification for **Florence Hudson.**

H.T. Shasta. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Mount Shasta.**

Habana. *American Camellia Yearbook,* 1950, Index p.427. Orthographic error for 'Hibana', synonym for **Hirenge**.

Habeier. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.73, No.281. Chinese synonym for the USA C.japonica **Allie Habel.**

Habel 13. *(C.japonica),* Shackelford, 1972, ACS., *The Camellia Journal,* vol.27, No.1. No description. Originated in USA. No valid listing located.

Hachihaluro. (White Heron's Feather). *(C.japonica),* JCS, 1997, *Japan Camellia,* No.54, p.11, colour illustration No.15: Small white spherical single with compact stamen group and yellow anthers. Leaves dark green. Originated in Okinawa Prefecture, Japan.

Hachiman. *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.230, 410, 632; Hirayama's *Tsubaki Byôbu,* (17th century). See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.48. Synonym for **Hachiman-tsubaki.**

Hachiman-tsubaki. (Camellia from Hachiman), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Deep red, very large double, stamens partly divided. Synonyms: 'Hachiman', 'Yawata', 'Yawata-tsubaki', 'Botan-tsubaki'. Originated in Japan. For colour plates see *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.230, 416, 632. (Believed extinct.)

Hachimangû. (Hachiman Shrine), (Higo), Yoshimura, 1961, *Higo Tsubaki Meikan,* No.5: Light pink, very large, slightly tinted white at base. Leaves medium size. Originated in Japan. Synonym: 'Fujisakigû'.

Hachiman-kasuri. (Hachiman Variegated), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku; Chinka Zufu,* (before 1700) Watanabe, 1969, pl.176: A variegated form of 'Hachiman'. Large red double, with white splashes. 'Kasuri' or its different reading 'Tobi'iri' means patches of colour, particularly in plants. Different readings: 'Hachiman-tobi'iri', 'Yawata-tobi'iri', 'Yawata-kasuri'. (Believed extinct.)

Hachiman-shibori. (Hachiman dappled), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku:* Large red double. See JCS., 1965, *Tsubaki* No.5, p.28. Originated in Japan. Different reading: 'Yawata-shibori'. (Believed extinct.)

Hachiman-tobi'iri. Different reading for Hachiman-kasuri.

Hachinomiya-tsubaki. (Hachino-miya Shrine Camellia), *(C.japonica),* Hino, Sukekatsu, 1632, *Sukekatsukyôki.* No description. Originated in Japan. Synonym for 'Hachinomiya' or **Yatsunomiya** in *Chinka Zufu.* Different reading: 'Yatsunomiya-tsubaki'. (Believed extinct.)

Hack's Favorite. *(C.japonica),* Verschaffelt Catalogue, 1863-1864, p.38. Perfect form. White streaked with red. Originated in USA.

Hack's Favourite. Jean Verschaffelt, 1867-1868, Catalogue No.11. Orthographic variant for **Hack's Favorite.**

Hadesugata. (Obscure), *(C.japonica),* Wada, 1941, *Japanese Garden Treasures,* p.28: Single, funnel-campanulated pale pink with red stripes. Originated in Japan.

Hadu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.420; Chinese synonym for the New Zealand *C.hybrid* **Harriet Durrant.**

Haemanthus. (C.*japonica)*, McIlhenny Catalogue, 1935, p.6: Deep red, heavily veined with reddish purple giving the whole bloom a purplish cast. There are small, white blotches on most of its petals. Blossoms are of a large, loose peony type with heavy petals; centre petals interspersed with stamens. Originated in USA by McIlhenny, Jungle Gardens, Avery Island, Louisiana.

Haematodes. *(C.sasanqua)*, Wada, 1941, *Carden Treasures of Japan*, p.27. An unknown species according to Wada as *Camellia haematodes.* Leaves small, oblong, acute, both ends like *C.sasanqua.* Flower 5 cm across, 5-6 petals, intense blood red, waxy and transparent. Originated in Japan.

Haematodes Flore Plena. *(C.sasanqua)*, Wada, 1941, *Japanese Garden Treasures*, p.27. Leaves small, oblong, acute at both ends like a *C.sasanqua.* The flowers are 5 cm across. Colour intense blood red. Semi-double. An unknown species from China according to Wada.

Hafilda. Verschaffelt Catalogue, No.50, 1844, p.20. Orthographic error for 'Halfilda', synonym for **Sacco Nova.**

Hagakure. (Flowers hidden by Leaves), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.142, p.71, description, p.130 as 'Ha-gakure': Branches horizontally spreading or pendulous, flowers mostly facing downwards under the leaves. Leaves large, elliptical, shiny, remotely serrate, suddenly acuminate, 8.5 cm x 3.5 cm; petioles 6-7 mm long, very hairy. Flowers dark currant red 821 /3, single, 5-6 petals, largest 4.5 cm x 2.5 cm. oblong, deeply emarginate. Filaments cadmium yellow with a pink shade. Style 2.6 cm long, rosy with 3 sub-erect arms. Flowers late. Originated in the Toyama Prefecture, Japan. "Hagakure" is also the title of the ancient textbook for warriors of the Nabeshima Clan in the Saga Prefecture.

Hageitô. (Leaf Cockscomb). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.324. English translation p.237. Medium size, red graduation on pink ground, lotus-form semi-double, scattered stamens. Flowers early. Leaves broadly elliptic, small. Upright, fast growing. A cross between *C.hiemalis* and *C.yuhsienensis*. Named and released by Kaoru Hagiya in 1982. From Niigata Prefecture.

Hageman. Gao, Jiyin, Ltr, 22nd August, 1994. Chinese synonym for USA *C.reticulata* hybrid **Ruta Hagmann.**

Haggerty Old Rose. *(C.japonica)*, Cannon, 1967, ACS., *The Camellia Journal*, vol.22, No.1. No description. Originated in USA. No valid listing located.

Hagi-komachi. (Hagi Beauty). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.191 with colour photo; English translation p.133. Small, peach red, tubular single, tapered stamen cylinder. Flowers early to late. Leaves elliptic, medium size. Upright growth. Selected from a wild japonica community at Toragasaki in Hagi City. Discovered by Jûro Saneyasu, named by a public application in 1984. From Yamaguchi Prefecture.

Hagi-no-sato. (Home Town, Hagi). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.191 with colour photo; English translation p.132. Medium size, vermilion, tubular single, tapered stamen cylinder. Flowers early to late. Leaves elliptic to broadly elliptic, medium to large. Upright, dense growth. One of the wild camellias growing on Mt Kasayama in Hagi City. Displayed at the Hagi Camellia show since 1970. From Yamaguchi Prefecture.

Hagi-no-tsuyu. (Dewdrops on Bush Clover). *(C.hybrid), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.191 with colour photo; English translation p.132. Medium size, deep pink graduation on pink ground, cup-shaped single, petals shatter, apricot stamens, fragrant. Flowers early. Leaves elliptic, small, recurved. Spreading, dense growth. A cross between *C.hiemalis* and *C.saluenensis*. Named and released by Kaoru Hagiya in 1979. From Niigata Prefecture.

Hagler. *(C.japonica),* Gerbing Camellia Nursery, 1963, ACS., *The Camellia Journal,* vol. 18, No.4, inside rear cover; SCCS, 1966, *Camellia Nomenclature,* p.62: Deep red and white. Large anemone of variable form. Originated in USA by Mrs Hagler, Augusta, Georgia.

Hagorome. SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.40. Corruption of the Japanese name **Hagoromo.**

Hagoromo. (Angel's Robe), *(C.japonica).* The name 'Hagoromo' has been used for about 9 cultivars, some now extinct, including Itô, Ihei, 1695, *Kadan Chikinshô:* Persimmon pink, pointed petals, double. Iwasaki, 1821, *Honzô:* Cherry pink, formal double. Both different to the modern **Hagoromo.** Yashiro Kôken, 1841, *Kokon Yôrankô,* vol.311. No description; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* lists three **Hagoromo.** One a single cherry pink, sake cup shape; the second one is a persimon pink, double, small; thought to be the same as Itôs; and finally the third as 'New Hagoromo': Large size, palest pink, double lotus form, which appears to be the same as the modern cultivar. A classical hose-in-hose semi-double of blush pink. Medium sized. Petals are curved gradually outwards. Slender stamen column. Leaves narrowly-elliptic to narrowly ovate-elliptic, undulate, veins slightly impressed; crenate-serrulate margins. A Japanese camellia of antiquity, it was imported to Italy in 1886 and renamed 'Magnoliaeflora' ('Magnoliiflora'), by which synonym it is generally known in the Western World. It was given an "Award of Merit" in 1953 by the RHS. Its red sport in Portugal was named **Magnolia** and appeared later, in California where it was named 'Rudy's Magnoliaeflora'. Synonyms: 'Magnoliiflora', 'Rose of Dawn', 'Angel's Robe', 'Feather Robe', 'Hagoromo-Tokyo'. 'Magnoliaeflora'(Southern). 'Magnoliaeflora'(Kiyono's), 'Southern Magnoliaeflora', 'Magnoliaefolia', 'Magnoliaeflora Rosea'. Orthographic errors: 'Hagorome', 'Magnoliaeflora'. Pseudonym: 'Cho-no-hagasane'. Originated in Kantô, Japan. See Tuyama, 1966, *Camellia Cultivars of Japan,* pl.95, p.160; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.29, pl.82; Tuyama, 1968, *Camellias in Japan,* pl.91, p.46 as 'Hagoromo-Tokyo'; Seibundô Shinkôsha, 1979, *Senchinshû,* p.114; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.306; Katei Gahô, ed., 1984, *Chabana Koyomi, vol 1, Tsubaki,* p.52. Chinese synonym 'Yuyi'.

Hagoromo. Taniguchi, 1912, *Chinka Kyôkan.* Synonym, for **Higo-hagoromo.**

Hagoromo. (Angel's Robe), *(C.sasanqua),* Yashiroda, 1950, *American Camellia Yearbook,* p.22; Shimada, Yaichi, 1957, *Dantairin, Kumamoto no Sazanka ni Tsuite:* Medium white, thoroughly flushed with rose; slightly creped, small, thick petals form a lovely, small bloom. Upright, stout branched, good grower. Early flowering. Originated in the Kumamoto Prefecture, Japan.

Hagoromo. (Angel's Robe), *(C.sasanqua),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Pale pink, single with white dapples and streaks. Originated in Japan. (Believed extinct.)

Hagoromo. (Angel's Robe), *(C.japonica),* Iwasaki, 1821, *Honzô Zufu,:* Formal double, pale cherry red. Originated in Japan. (believed extinct.)

Hagoromo. (Angel's Robe), *(C.japonica).* Yasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Single, soft cherry pink, sake-cup shape, stamens in a cylindrical cluster. Originated in Japan. (Believed extinct.)

Hagoromo. (Angel's Robe), *(C.sasanqua),* Ashizawa, 1898, *Chabaika Taishû:* White ground, pale pink graduations, large size, semi-double. Originated in Japan.

Hagoromo. (Robe of Leaves), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Small, persimmon coloured double. Note: First character is "Ha" for leaf instead of feather. Originated in Japan. (Believed extinct.)

Hagoromo (Higo). Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1. Orthographic variant for **Higo-hagoromo.**

Hagoromo-Kansai. ('Hagoromo from Kansai), *(C.japonica),* Tuyama, 1968, *Camellias in Japan,* pl.90, p.45, description, p.113: Bush Camellia. Leaves elliptic, gradually acuminate, petioles glabrous. Flowers hold in the half opened condition for a considerable period. Palest pink with deeper shade of pink on outside, petals 15 with the innermost 2-3 longer than the outer ones, the largest 4.4 cm long x 4.5 cm wide, shallowly emarginate. Stamen column short and stout. Synonyms: 'Haru-no-akebono', 'Maruben-hagoromo', 'Kansai-hagoromo'. Originated in Katayama Juraku-en, Ikeda City, Ôsaka Prefecture, Japan. See colour photo: pl.215, p.106, p.215, *Encyclopedia of Camellias in Colour,* vol.I, 1972 as 'Kansai-hagoromo'; Katei Gahô, ed., 1984, *Chabana Koyomi vol. 1, Tsubaki,* p.52. See Seibundô Shinkôsha, 1979, *Senchinshû,* p.121 & 240, and Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.305, both as 'Haru-no-akebono'.

Hagoromo-no-kyoku. (Angel's Music), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.9: White with pink bottom. Large semi-double with petals long and incurved at the edge. Leaves variegated. Originated in Japan.

Hagoromo-no-musume. (Hagoromo's Daughter). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.196 with colour photo; English translation p.136. Medium size, white, lotus to peony form double, petals thick and falling in pieces at the end of blooming, tubular to split stamens. Flowers mid-season to late. Leaves ovate to oblong, medium size, pale green. Spreading growth. Believed to be a natural seedling of **Hagoromo**. Originated by Matsuhiko Ishida. From Aichi Prefecture.

Hagoromo-Tokyo. Tuyama, 1968, *Camellias in Japan,* No.91.Synonym for **Hagoromo.**

Hahasono. Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.105. Orthographic error for **Hahasonomori.**

Hahasonomori. (Oak Forest), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Five petals; one is red, another is half red and half pink, another is pink, the others mostly pink or red. Originated in Japan. See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.105, as 'Hahasono'. (Believed extinct.) Synonym: 'Tôan', 'Tôan-Tsubaki'

Hahi-tsubaki. Yanagida, Yoshizô, 1936, see Seibundô Shinkôsha, 1979, *Senchinshû,* p.165. A local name for *C.rusticana*

Hahn Supreme. *(C.japonica),* SCCS., 1974, *Camellia Nomenclature,* p.69: Bright veined pink. Very large semi-double with irregular petals and interspersed petaloids and anthers. Vigorous, upright growth. Mid-season blooming. Originated in USA by Nuccio's Nurseries, Altadena, California.

Haibei. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.424; Chinese synonym for the France *C.japonica* **Sea Shell.**

Haidao Zhijin. Gao, Jiyin, Ltr 30 July 1990. Chinese synonym for **Pirates Gold.**

Haidun. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.77, No.348. Chinese synonym for the NZ *C.pitardii* hybr. **Nonie Haydon.**

Haiermian. (Child's Face). *(C.japonica),* Gao, Jiyin, Ltr, 21st Jan. 1993: White with some blush, especially in early unfolding, formal double; medium size. Vigorous compact growth. Blooms early to late. Originated in Sichuan Province, China.

Haiersidun. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.77, No.411. Chinese synonym for the USA *C.japonica* **Louise Hairston.**

Haihong. (Crab Apple Red), *(C.sasanqua),* Chen, Jingyi, 1253, *Quan Fang Bei Zu*. Fang, 1930, *Diannan Chahua Xiaozhi:* The colour is light red. Originated in China. Different reading: 'Hai-hung'.

Hai-hung. Watanabe & Andoh, 1974, *Tsubaki - Hana to Kino Bunka,* p.156. Different reading for **Haihong.**

Hai Hung Hua. Chinese Group name for *C.sasanqua.* Different reading: 'Haihonghua'. Japanese reading: 'Kaikoha'.

Hai Liu Cha. Chinese group name for wabisuke. Japanese reading: 'Kairyu Cha'. Different reading: 'Hailiuhua'.

Hailiu Cha. (Dwarf Pomegranate Camellia), *(C.japonica),* Li, Shishen, 1590, *Bencao Gangmu*. Fang, 1930, *Diannan Chahua Xiaozhi:* The calyx is green, the flowers pomegranate red and the petals fragmented. Originated in China.

Hailunnuo. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.424; Chinese synonym for the Australia *C.japonica* **Helenor.**

Hailunnuo Meigui. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.424; Chinese synonym for the Australia *C.japonica* **Redgrove**, as 'Helenor Rosea'.

Hailstone Double. Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III, p.346. Synonym for **Yae-arare.**

Hainan Baozhu. *Camellias*, Y.C. Shen, 2009, p. 319 with colour photo; Synonym for **Jaune.**

Hainanshan Cha. Chinese group name for *C.paucipunctata.* Different reading: 'Hai Nan Shan Cha'.

Haipao. Chinese synonym for USA *(C.japonica)* **Sea Foam.**

Haiseyama. Watanabe, Kyôto Engei Kurabu, 1960, *Tsubaki Tokushû,* No.1, p.53 as 'Haise-yama'. Orthographic error for **Hatsuseyama.**

Haite. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.424; Chinese synonym for the USA *C.japonica* **Willie Hite.**

Hai-tsubaki. Satomi & Peer, 1956, SCCS, *The Camellia Review*, vol.17, No.8, p.34. This is one of the old names in Japan for the 'Snow Camellia' or *C.rusticana* and translates as "Creeping Camellia".

Haiyô. Japanese name for *C.japonica* var *concava* 'Makino'.

Haiyunxia. (Glow on the Sea), *(C.japonica),* Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.61, colour photo [p.146]; Gao & Zhuang, 1989, *The Camellia in China,* No.189, p.38, colour photo No.100: Medium size, 8 cm across, purplish red, rose form to formal double with 30-40 petals in 3-5 rows; finally fully opening to show about 50 stamen in the centre. Blooms mid-season. Leaves broad-ovate, apices acuminate, coarsely serrate. Originated in China. Chang reports it as synonymous with **Dahonglian**.

Haiyunhong. (Red Clouds on the Sea), *(C.japonica).* Wang & Yü, 1981, *Shan Cha Hua: A* red, rose form double. Originated in China.

Haizi. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.134. Chinese synonym for **Anne Hazelwood.**

Hajikano-de-benten. (Benten from Hajika), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû,* vol.5 in the section of camellias with different coloured margins to their leaves. White margined leaves, red, single flowers. Synonym: 'Bakurô-tsubaki'. Different reading: 'Hakano-de-benten'. (Believed extinct.)

Hajikano-de-nihon'ichi. (Japan's Best from Hajika), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû* in section on variegated leaves. Big, broad, flat leaves. Resembles 'Nihon'ichi-tsubaki' in

Sômoku Kihin Kagami, 1827. Different reading 'Hakano-de-nihon'ichi'. Originated in Japan. (Believed extinct.)

Hajime-tânakai. Yanagita, 1936, *Camellia japonica* var *hajimetâka* var. *nov.* Forestry Society of Japan, 18:629. Botanical synonym for *C.rusticana.*

Hajirai. (Shyness), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.114, colour photo, p.237, description: Medium sized, deep pink (RHS.CC. Red Group 50C) with deeper veining, petals 5-6, large, broad with creped margins. Stamen cluster, stout columnar, pinched in at top. Slightly fragrant. Leaves, glossy, dark green, prominent venation on upper surface. Originated in Izu Ôshima Isle, Japan. A sport of **Tôkai.**

Hajuro-nishiki. *(C.japonica)*, Williams & Thompson, 1950, *American Camellia Yearbook*, p.40. No description. Imported from Japan by the Star Nursery, California, USA in 1930.

Hakaku. Camellia Forest Nursery Catalogue, 1990, p.3. Corruption of the Japanese name **Hakkaku.**

Hakano-de-benten. Watanbe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû-*, No.10, p.120. Different reading for **Hajikano-de-benten.**

Hakano-de-nihon'ichi. Different reading **Hajikano-de-nihon'ichi.**

Hakata-murasaki. **(**Purplish Camellia from Hakata). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.113 & 127. No description. From Kurume City, Japan.

Hakata-yuritsubaki. (Lily Camellia from Hakata), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.718 as 'Hakata-yuri-tsubaki': Medium sized, white single of 8 erect and undulated petals and a long stamen column. Originated in Fukuoka Prefecture, Japan. (Believed extinct.)

Hakete. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.420; Chinese synonym for the USA *C.japonica* **Melinda Hackett.** Previous synonym 'Mailinda'.

Hakeyi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.420; Chinese synonym for the USA *C.reticulata* hybrid **Paul Harkey.**

Hakikake. (Splashed), *(C.japonica)*, Hirayama, Tokuo, (Latter 17th Century), *Tsubaki Byôbu;* Asai, 1961, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.2, p.47, 48. No description. Originated in Japan. (Believed extinct.)

Hakikomufu. (Mixed Markings), *(C.japonica)*, Kaoru, Hagiya, 1979, *Tsubaki no Sazanka*, p.27, No.4: Green elliptic leaves with pewter green and creamy streaks. Serrulate margins. Originated in Japan.

Haki-no. *(C.japonica), Collected Papers*, ICS Congress, Locarno 2005, Kamelien an Küsten des Schwarzen Meeres, Nakhutsrishvili, G; A Japanese cultivar imported to the coast of Adshariens at the end of the 19th century. Peony form.

Haki-Raku-Ten. Woodroof, 1947, SCCS., *Bulletin* 8(6):5. Corruption of the Japanese name **Hakurakuten.**

Hakkaku. (White Crane), *(C.japonica)*, Yoshida, Shigekurô, 1933, *Tsubaki Meikan;* Tuyama, 1966, *Camellia Cultivars of Japan*, colour pl.53, p.99 and Tuyama, 1968, *Camellias of Japan*, pl.16, p.8, description p.89: Bush camellia of open, vigorous growth. Leaves, often large, rhombo-elliptic gradually tapering to apex, somewhat concave on upper surface, laxly undulate, evolute at margins. Flowers widely campanulate, strongly wavy at margins, reflexed half above in full blossom, pure white with one or two short, thick or thin pink streaks. Similar to **Kamohonnami** except for the red streaks. Similarly the tip of the style is exposed before the bloom opens. Originated in Aichi Prefecture, Japan and first described by Shigekurô Yoshida in 1933. 'Haku' is white and 'Kaku' is the common name for the red crowned Japanese crane, so the name alludes to the short, red streaks on the big white petals.

See Satô, 1975, *Chûbu no Tsubaki,* p.22 as 'Hakutsuru'; Seibundô Shinkôsha, 1979, *Senchinshû,* p.112 & 237 as 'Hakutsuru-Chûbu'. Different readings: 'Hakuzuru', 'Hakutsuru', 'Hakukaku'. Synonym: 'Hakutsuru-Chûbu'. Note: The orthography 'Hakutsuru' is retained for the Higo camellia of the same characters.

Hakkaku-higo. Synonym for **Hakutsuru.** (Higo).

Hakkan. (Chinese Pheasant), *(C.rusticana),* Itô, Ihei, 1719, *Koeki Chikinshô,* as 'Hakkan-tsubaki'; Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Iwasaki, 1829, *Honzô Zufu,* as 'Hakukan'; Yashiro, 1841, *Kokon Yôrankô* as 'Hakkan-tsubaki'; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* as 'Hakukan'; *Tsubai Hachiboku Sanbokutsuki Meisai* (before 1868); Itô, Ko'emon, 1879, *Chinkashû;* Tuyama, 1968, *Camellias of Japan,* pl.282, p.176; Seibundô Shinkôsha, 1979, *Senchinshû,* p.115; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.103: Leaves elliptic to narrowly obovate-elliptic, acuminate, manifestly serrate, venation impressed, petioles very hairy. Flowers single, very large, petals spreading horizontally, red (Currant Red 821/3) marbled white in varying degrees. Late flowering. Originated in Kantô, Japan. Believed to be the same variety as **Norikoboshi.** Resembles **Maizuru.** Different reading 'Hakukan'. Synonyms: 'Haku-hakkan', 'Hakkan-tsubaki'.

Hakkan-tsubaki. Itô, Ihei, 1719, *Koeki Chikinchô,* Yashiro, 1841, *Kokon Yôrankô:* Synonym for **Hakkan.**

Hakkan. Different reading for **Hakugan** in *Zôho Chikinshô.*

Hakkenya. (Place Name), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.7. No description. Originated in the Fuku'oka Prefecture, Japan.

Hakone-wabisuke. (Wabisuke from Hakone). (Wabisuke). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.259 with colour photo; Small red single with short stamen column. Flowers mid-season to late. Leaves elliptic, medium size. Upright growth. Found by Ryuichi Tsuchiya in the precincts of Hakone Shrine in 1993. Can also throw pink flowers. From Kanagawa Pref., Japan.

Hakubai. (White Apricot), *(C.japonica),* Chûgai, 1934-1935, Catalogue, p.32 as 'Haku-bai': Snow white, round petalled single. Originated in Japan

Hakubaishin. (White Plum stamens), *(C.japonica),* Hagiya, 1982, "Interspecific Hybridization of Camellias using *C.chrysantha* Pollen", p.3. JCS., 1982, *Tsubaki,* No,21, p.4. No description. Originated in Japan.

Hakubi. (White Eyebrows, or Masterpiece), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.26, colour photo and description: Small size, white, compact, cup-shaped single, 4-5 cm across, with a central column of stamens, with white filaments, joined for the lower half, and yellow anthers. Late blooming. Leaves waved, mid-green, broad-elliptic, apices recurved, acuminate, margins rolled, serrate. Originated in Matsuyama City, Ehime Prefecture, Japan. Named and released by Tokihiro Kôno in 1981. Note: 'Hakubi', "White Eyebrows" means a person or thing of exceptional merit.

Hakubishi. Uekiya Seigoro, 1874, *Tsubaki Hyakuro no Zu,* vol.I. Different reading for **Shirobishi.**

Hakubokuhan. Satô, 1975, *Chûbu no Tsubaki,* p.6. Different reading for **Shirobokuhan.**

Hakubotan. (White Peony), *(C.japonica),* Itô, Ko'emon, 1879, *Chinkashû:* Large white, peony form; Tuyama, 1966, *Camellia Cultivars of Japan,* p.112, pl.63 as 'Haku-botan'; Tuyama, 1968, *Camellias of Japan,* pl.24, p.14, description, p.95 as 'Haku-botan-Tokyô': White, peony flowered, bush camellia cultivar, of very stout growth. Leaves broadly-elliptic and somewhat wavy, with long, glabrous, rarely a little hairy, petiole, glossy, dark green, abrupt acuminate, finely serrate. Petals 10-15 or more, wavy or irregularly wavy. Stamens irregular, often grouped into 5 bundles, or intermingled with irregularly curved petaloids. Late flowering.

Vigorous, spreading, upright growth. Different reading: 'Shirobotan'. Originated in the Kantô District, Japan. Note: K. Sawada, Overlook Nurseries, Alabama, USA named one of his seedlings 'Shiro-botan' in his 1949 Catalogue. Synonyms: 'White Peony', 'Hakubotan-Tokyô', 'Hakubotan-Kantô'. See Seibundô Shinkôsha, 1979, *Senchinshû,* p.113 Colour photo and *Encyclopedia of Camellias in Colour,* vol.I, 1973, pl.245, p.116. There is a similar 'Hakubotan' from the Kansai District, Japan. Resembles **Yukibotan.**

Hakubotan-Chûbu. (White Peony from Chûbu), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.103 as 'Hakubotan'. To prevent confusion the name was changed to **Hakubotan-Chûbu.** Seibundô Shinkôsha, 1979, *Senchinshû,* p.113, colour photo, p.237 description: Medium size, pure white double, 4-5 rows of rounded, concave petals forming a cupped bloom with a sparse, irregular stamen group in the centre. Leaves strong, shining green, obovate-elliptic; apex acute, margins finely serrate, slightly recurved. Originated in the Chûbu District, Japan.

Hakubotan-Kantô. Seibundô Shinkôsha, 1979, *Senchinshû,* p.113, Synonym for **Hakubotan.**

Hakubotan-Kyôto. Tuyama, 1966, *Camellia Cultivars of Japan,* p.112. Synonym for **Hakubotan-Reikanji.**

Hakubotan-Reikanji. (White Peony from Reikan Temple), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.42, p.21, description. p.97: Bush camellia cultivar of stout growth with leaves thick and dark green. Leaves broadly-elliptic to narrowly elliptic, shortly acute, shallowly crenate-dentate and manifestly evolute at the margins. Petioles glabrous. Flowers pure white, large, petals thick texture, rather narrow, suberect, gracefully recurved in upper parts. Stamens few in number, filaments white. Flowers mid-season to late. Originated at the Buddhist Reikan Temple, Kyôto, Japan. Synonym: 'Hakubotan-Kyôto'.

Hakubotan-Tokyô. Tuyama, 1968, *Camellias of Japan,* pl.34, p.17, description, p.95. Tuyama added "Tokyô" to the name of the original **Hakubotan.** However as the original name always has priority, this is regarded as a synonym for **Hakubotan.**

Hakubyôshi. Tuyama, 1966, *Camellia Cultivars of Japan,* p.114. Different reading for **Shirabyôshi.**

Hakuchinka. (Rare White Flower), *(C.japonica),* Itô, Ihei, 1710, *Zôho Chikinshô,* vol.II; Itô, Jukyû, 1739, *Honzô Hanamaki'e,* as 'Hakuchinkwa'; Yashiro, 1841, *Kokon Yôrankô,* vol.306 & 311; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White, medium size double. (eightfold), Autumn blooming, very early. (Believed extinct.) Different readings: 'Hakuchinkwa', 'Shirochinka'. Synonym: 'Hakuchinka-tsubaki'. Originated in Japan.

Hakuchinkwa. Itô, Jukyû, 1739, *Honzô Hanamaki'e.* Different reading for **Hakuchinka.**

Hakuchinka-tsubaki. *American Camellia Yearbook,* 1969, p.89. Synonym for **Hakuchinka.**

Hakuchô. (Swan), *(C.japonica),* Cho, (before 1867), *Chinkafu,* p.27-27: Pink and white, single flower. Originated in Japan. Different reading: 'Shiratori'. (Believed extinct.)

Hakuchô. (Swan), *(C.japonica),* Chugai Nursery Catalogue, 1934-1935, p.32: A medium sized, white, rose form double with the outer 3-4 rows of petals imbricated, with some irregular centre petals which can be mixed with a few white filamented stamens when fully open. The characters for 'Hakuchô' can be read 'Shiratori' but this romanization has been restricted to another cultivar.

Hakuchô. (Swan), *(C.rusticana),* Hagiya, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.8, p.15: Double, pure white, 6 cm across x 4 cm deep, with over 40 petals; when fully open, petaloids and stamens to the extent of 30 are visible. Late flowering. Leaves are small, 7 cm long, ovate. A cross between japonica and rusticana. Collected in Mishima-gun, Niigata Prefecture, Japan by Susumu Ishizawa, named and released by Kaoru Hagiya in 1967. See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.112, 237 and Yokoyama & Kirino, 1989. *Nihon no Chinka,* p.388.

Hakuchô. (White Butterfly), *(C.japonica),* SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.40 as 'Haku-cho': White, medium semi-double. Believed to have originally been imported from Japan by the Star Nursery, California in 1930. However it is incorrectly identified and not the original Japanese **Hakuchô.** Synonyms: 'White Butterfly', 'Mrs Albert Dekker'.

Hakuchô-no-mizu'umi. (Swan Lake), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.112, colour photo, p.237 description: Medium sized, (8-9 cm) white single to semi-double with one or two erect petals dividing the spreading stamen cluster. Leaves elliptic, apex blunt acute, shallowly, finely serrate, glossy, dark green. The original old tree survives at Jôritsuji Temple, Fuoi District, Japan. Named and released by Takuo Iwazumi. Synonym: 'Shi-rochasen-kagura' .

Hakudaikagura. Ishii, 1932, *Genshoku Engei Shokabutsu Zufu,* vol.4. Different reading for **Shiro-daikagura.**

Haku-Fuki. Inazawa Nurseries Catalogue Wholesale, 1986-1987.Orthographic error for **Hanafûki.**

Hakugan. (White Wild Goose), *(C.japonica),* Itô, Ihei, 1710, *Zôho Chikinshô:* White, very large, semi-double with 3-4 petal rows and cylindrical stamen cluster. Itô, Jukyû, 1739, *Honzô Hanamaki'e:* White, very large semi-double with 2 rows of petals, bamboo whisk stamen cluster. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Description same as Itô, 1710, however in the third part of *Tsubaki Irohanayose Irotsuki* it is described as pinkish white, peony form flower. Itô, Ko'emon, 1879, *Chinkashû* with first modern description. See Tuyama, 1966, *Camellia Culture of Japan,* pl.88, p.146; Tuyama, 1968, *Camellias of Japan,* pl.68, p.34, colour photo, p.105, description: Leaves broadly elliptic to oblong, slightly folded along the midrib, venation impressed; petioles glabrous. Flower, petals rather few, outer ones large and widely opened, inner ones loosely incurved with poor stamens. White, faintly blushed pink. Flowers mid-season to late. Different readings: 'Shirokari', 'Shirogan', 'Hakkan'. Originated in Kantô area, Japan. Synonym: 'Shirokari'. See, Seibundô Shinkôsha, 1979, *Senchinshû,* p.111; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.222, p.108.

Hakugasane. Incorrectly listed in Kyôto Engei Kurabu, *Tsubaki Tokushû,* 1960, No.l, p.53 and 1970, No.10, p.121, as included in the *Kadan Kômoku.*

Hakagura. Vanderbilt, 1940, *Camellia Research,* p.4. Different reading 'Shirogura', synonym for **Shiro-suminokura.**

Haku Gyoku. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.96. Synonym for **Shiratama-bana.**

Hakugyoku. (White Jewel), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large size, white, semi-double with petals in 3-4 rows, stamens dispersed. Originated in Japan. (Believed extinct.)

Hakugyokuka. Different reading for **Shiratama-bana.**

Hakuhai. (White Cup), *(C.japonica), Encyclopedia Of Camellias in Colour,* vol.I, 1972, pl.65, p.59, description, p.300: White, cup-shaped single of 7-8 petals and a large, central column of stamens with yellow anthers and cream filaments. Small size, 7-8 cm across. Leaves small, elliptical, midgreen, bluntly acuminate, shallowly, coarsely serrate. Originated in Kanaoka Chinka-en, Kansai District, Japan. Synonym: 'Hakuhai-Kansai'. There is another cultivar of the same name from Kagawa, Japan.

Hakuhai. (White Cup), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.237, description: Pure white, large single with "chasen" (tea whisk) stamens, filaments deep yellow. Early season blooming. Leaves long-oval, medium sized, acuminate apex, glossy green. Plant habit erect and vigorous. Originated in Mure Town, Kagawa Prefecture, Japan. Named by Saneichi Koyama in 1976. Synonym: 'Hakuhai-Kagawa'.

Hakuhai-Kansai. Synonym for the **Hakuhai** from Kansai district.

Hakuhai-Kagawa. Synonym for the **Hakuhai** from Kagawa Prefecture.

Haku-hakkan. Tuyama, 1966, *Camellia Cultivars of Japan,* p.242.Cited from *Kôeki Chikinshô,* 1719 and described as an error for **Hakkan**

Hakuhan-kujaku. (White Spotted Peacock), *(C.japonica),* Tuyama, 1966, *Camellia Cultivars of Japan*, p.372; and 1968, *Camellias of Japan,* pl.300, p.152, description, p.180 as 'Haku-han-kujaku': A white blotched or marbled form of 'Kujaku'. Branches erect to weeping, leaves linear, curved, thick, margins obscurely crenate. Flowers red (Carmine 21) spotted white with 12-22 petals, linear. Stamens long, irregular, few. Flowers mid-season. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.90, p.33 and Seibundô Shinkôsha, 1979, *Senchinshû,* pp.46, 211, lists this cultivar as 'Kujaku-tsubaki'. See colour photo: p.332, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Synonym: 'Kujaku-tsubaki'. Originated in Mikawa, Aichi Prefecture, Japan. Corruption of Japanese name: 'Haku-Han-Ka-Jaku'. Chinese synonym 'Kongquechun'.

Haku-Han-Ka-Jaku. Cannon, 1973, ACS., *The Camellia Journal,* vol.28. Corruption of Japanese name **Hakuhan-kujaku.**

Hakuhassaku. Different reading for **Shirohassaku.**

Hakuhô. (White Phoenix), *(C.japonica),* Chûgai Nursery Catalogue, 1936-1937, p.27 as 'Haku-how': White, with the palest pink cast, medium large peony form with frilled petals. Early to mid-season blooming. Medium spreading growth. See colour photos: Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.55, p.20; Seibundô Shinkôsha, 1979, *Senchinshû,* p.113; *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.428; Satô, 1975, *Chûbu no Tsubaki*, p.21. Originated in Aichi Prefecture, Japan. A seedling of **Tarô'an** x **Daikagura.** Resembles **Owari-otome.** Different readings: 'Hakuhoh', 'Haku-how'. According to SCCS., *Camellia Nomenclature:* "Very similar to, if not the same as 'Yohei-haku'."

Hakuhô. (White Peak), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Large size, white, formal double, lotus shape with long petals. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.77. Originated in Japan. (Believed extinct.)

Hakuhô.(White Phoenix), (Higo), *Higgo Rokka,* 1989, p.31: Large size, 11-12 cm across, snow white with 6-8 petals. A sport of **Yamato-nishiki.** Originated in the Kumamoto Prefecture, Japan. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan*), 2010, p.232 with colour photo; Flowers mid-season to late. Leaves elliptic, medium size. Filaments yellow, ume-jin (apricot type).

Hakuhoh. Andoh, 1971, *Tsubaki, Meika, no Shôkai to Saikai,* pl.55, p.20. Different reading for **Hakuhô.**

Hakuhôtô. Synonym for **Baibaota** of Chinese origin.

Haku-how. Chûgai Nursery Catalogue, 193~1937, p.27. Different reading for **Hakuhô.**

Hakuhôju. Synonym for **Hôshu.**

Hakuhôshu. (White Gem), Izu-Ohshima Hawaii Botanic Gardens, 1980, *List of Plants,* p.15. Synonym for **Baibaozhu** of Chinese origin.

Hakui. (Place Name), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.200, colour photo and description: Small size, dark red, campanulate single with 5 rounded, embracing, reflexed petals and central stamen column with pinkish filaments, joined for the lower third and bright yellow anthers. Blooms late. Leaves deep green, elliptic, apices acuminate, recurved, margins serrate. Selected from wild japonicas in Hakui City, Ishikawa Prefecture, Japan. Named and released by Tsuyoshi Ishigame in 1983.

Hakui-no-sode. (Sleeve of White Gown). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.191 with colour photo; English translation p.133. Semi-double white, with a single red stripe on one petal, thick petals, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size, flat. Upright, vigorous growth. A natural seedling of unknown parentage. Selected by Fumio Naitô in 1997. From Aichi Prefecture.

Hakujishi. (White Lion), *(C.japonica),* Itô Jukyû, 1739, *Honzô Hanamaki'e,* vol.15; Iwasaki, 1829, *Honzô Zuku;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Tuyama, 1966, *Camellia Cultivars of Japan,* pl.68, p.119: Medium sized, white, open peony type with 2-3 outer rows of large, ruffled petals, enclosing a centre of mixed, erect, small petals and petaloids and scattered stamens with golden anthers. Originated in Japan. Different readings: 'Hakushishi', 'Shirojishi', 'Shirajishi'. Colour photo, Seibundô Shinkôsha, 1979, *Senchinshû,* p.76, description, p.222 as 'Shiro-jishi'.

Hakuju. (White Age = 99 years old), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.323, description, p.246: A small, campanulate, single white of 6-7 petals with a short, slightly irregular column of stamens with light yellow anthers and white filaments. Leaves, obovate, mid-green; apex tapering acuminate; margins shallowly serrate. Blooms mid-season to late. A wild japonica from the Kono'e family, Gosho, Kyôto City, Japan. Selected by Motoharu Miyazawa in 1963, named by Zenkei Shibayama in 1978. See, Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.29. Seibundô Shinkôsha, 1979, *Senchinshû,* p.111 colour photo. This birthday is specially celebrated in Japan.

Hakujuka. Different reading for **Shiratama-bana.**

Hakukaku. (White Crane), (Higo), Tamura, 1956, *Higotsubaki Shinkaki.* Different reading for **Hakutsuru.**

Hakukan. (White Pheasant), Satomi, 1956, *Camellia Varieties of Japan,* p.6 as 'Haku-kan': White blushed pink. Large double, peony form. Midseason blooming. Satomi's description is thought to be an error for **Hakugan,** ie. confusion between **Hakkan** and **Hakugan.**

Hakukan. (White Leisure), Iwasaki, 1829, *Honzô Zufu.* Synonym for **Hakkan,** See JCS., 1981, *Tsubaki,* No.20, p.108.

Hakukei. (White Fowl), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.9: Pure white. Large single. Originated in Japan.

Hakuko. (White Child), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in the section "Ha": White, semi-double with 2-3 rows of petals, stamens dispersed, petaloids erect in centre of flower. Originated in Japan. (Believed extinct.) See JCS., 1969, *Tsubaki,* No.7, p.23.

Hakumanyô. (White Myriad Petals), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki; Tsubaki Hachiboku Sanboku Tsuki Nayose Hanagata Tsuki Meisai,* [before 1968]: Formal double white, with 4-5 petal rows, average size. Lotus shape with cylindrical stamen cluster. Originated in Japan.

Hakumyôrenji. (White 'Myôrenji'), *(C.japonica),* Minagawa, 1933, *Chinkashû.* Tuyama, 1966, *Camellia Cultivars of Japan,* p.184 as 'Haku-myôrenji': White, cup-shaped single, medium size, 7-8 large outer petals, somewhat crêped on the edge, with a bold, central column of stamens with golden anthers. Leaves broad-ovate; apex blunt acute, shallow, medium serrations, definite venation. Blooms very early to mid-season. Resembles **Meigetsu.** See colour photos, Seibundô Shinkôsha, 1979, *Senchinshû,* pp.113, 237; p.41, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Katei, Gahô, ed., 1984, *Chabana Koyomi vol.1, Tsubaki,* p.43. Different reading: 'Shiromyôrenji'. Synonym: 'Sakigaki'. Myôrenji is the lotus sutra shrine. Originated in Chûbu District, Japan.

Haku No Yuki. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.96. Different reading for **Shirayuki.**

Haku-ô. (Whitish Yellow), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1: White, double, large size petals piled up. Originated in Japan. (Believed extinct.) Corruptions of Japanese name: 'Hakou', 'Haku-ow'.

Haku-ô. (White King), *(C,japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.44, colour photo and description: Medium size, white, tulip-shaped single, with 5 obovate, emarginate petals and a central stamen column, with yellow anthers. Blooms early to mid-season. Leaves dark green, elliptic, apices long acuminate. Originated in Kurume, Fukuoka Prefecture, Japan. A seedling of **Seiôbo.** Named and released by Shunsuke Hisatomi in 1980.

Hakuo. SCCS., 1946, *Camellias*, p.13. Abbreviation for **Haku-otome.**

Haku-osaraku. Different reading for **Shiro-osaraku.**

Haku-otome. (White Maiden), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White, medium size. New variety. Itô, Ko'emon, 1879, *Chinkashû* in the section on formal doubles: White, medium. Tuyama, 1966, *Camellia Cultivars of Japan,* pl.44, p.82; Tuyama, 1968, *Camellias of Japan,* pl.60, p.30, description, p.103: Leaves elliptic to oblong-elliptic, a little folded along the midrib, veinlets impressed, petioles hairy. Petals deciduous. Flowers mid-season to late. Formal double with no stamens. Originated in Kantô District, Japan. See colour photos: Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.386; *Encyclopedia of Camellias in Colour,* 1972, vol.I, pl.408, p.171; Seibundô Shinkôsha, 1979, *Senchinshû*, p.386. Synonyms: 'Virgin White', 'Shiro-otome', 'White Bleichroeder', 'Bleichroeder White', 'White Otome', 'Mrs Helen Reynolds'. Sports: **Somekawa, Sumizome.** Corruption of name: 'Kurozome'. Resembles: 'Shiragiku', 'Furansujiro', 'Hasumi-jiro'. Different reading: 'Shiro-otome'. Abbreviation 'Hakuo'.

Haku-otome. (White Maiden), Synonym for *C.sasanqua* **Fuji-no-mine.**

Haku Rakutan. Thomasville Nursery Catalogue, 1947.Corruption of the Japanese name **Haku-rakuten.**

Hakurakuten. (Name of T'ang Dynasty Poet), (Higo), *Higo Rokka.* ca. l989, p.31: Large size, 12-13 cm across, with 6-7 snow white petals. Originated in the Kumamoto Prefecture, Japan. Latest *Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.233 with colour photo; Filaments ume-jin (apricot type). Flowers mid-season to late. Leaves obovate, medium size. Vigorous upright growth. A sport of **Shintsukasa,** recognised by the Higo Camellia Society in the 1980s.

Hakurakuten. (Name of T'ang Dynasty Chinese poet), *(C.japonica),* Chûgai Nursery Catalogue,1934-1935, p.32: White double, large, curved petals. Fendig, 1949, *American Camellia Catalogue,* with colour plate: A large white flower with broad petals and stamens in the centre, 8.5 cm across x 5 cm deep. Petals are long, narrow, overlapping, fluted and satin texture. Central stamens, about 90, mixed with petaloids in the form of a cylinder. Leaves, medium-green, tapered at ends, acuminate, margins shallowly indented. Vigorous, upright growth. Flowers mid-season. Synonyms: 'Refugee', 'Wisley White', 'White Crane'. Corruptions of the Japanese name: 'Haku Rakutan', 'Haki-Raku-Ten', 'Haku-rotaten'. Different readings: 'Haku-rakuten', 'Haku Rakuten'. Received the RHS., "Award of Merit", 1977. See Tuyama, 1968, *Camellias in Japan,* pl.57, p.29, description, p.102.

Hakurakuten. (Name of T'ang Dynasty Chinese Poet), *(C.sasanqua),* Ishizawa & Hagiya, Kyôto Engei Kurabu, 1967, *Tsubaki Tokushû,* No.8; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.584, p.223: Medium sized, white single of 7 petals, about 8.8 cm across. Petals irregular, crimped and waved. Blooms early to mid-season. See also Tuyama, 1968, *Camellias in Japan,* pl.407, p.207 as 'Haku-rakuten'. Selected from seedlings at Yoshimura Meika'en

Nursery, Kumamoto Prefecture, Japan. Designated and registered by the Higo Sasanqua Society in 1977.

Hakurakuten. (Name of T'ang Dynasty Chinese poet). *(C.japonica),* Yamaguchi, Tsubaki-en Catalogue, 1991-1992, No.571: Large, white, hose in hose flower. Seedling of **Hagoromo** x **Betty Sheffield Supreme.** Seibu Maizuru Institute of Botany, 1993-1994, *Seibu no Tsubaki*, No.114: Pure white double with distinctive rows of petals. Large size. This is the fourth Japanese cultivar of this name. First bloomed in 1988. Originated by Misoji Yamaguchi, Tsubaki-en, Kyôto, Japan.

Hakurei. (White Peak). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.195 with colour photo; English translation p.135. Medium size, white, tubular single, cylindrical stamen column. Flowers early to mid-season. Leaves elliptic, medium size, flat, recurved. Upright, vigorous growth. A cultivar raised by a private family in Kanazawa City. Discovered by Taku Shiota, named by Ishikawa Camellia Enthusiasts' Club in 1970. From Ishikawa Prefecture.

Hakuren. (White Lotus), *(C.japonica),* Shirai, Bunko, 1789, *Shoshiki Hanagatachô;* Watanabe, 1964, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.5, p.78: Pure white, formal double, lotus shape, large flower. (Believed extinct.) Originated in Japan.

Hakurenge. (White Lotus Flower), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Iwasaki, 1829, *Honzô Zufu* as a small flower; Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki; Chinka Zufu*, (before 1700), Watanabe, 1969, pl.79 as 'Haku-renge': A large size, white semi-double to rose form double with pointed petals. Originated in Japan. (Believed extinct.) Different readings: 'Hakurenkwa', 'Hakurenga'. Synonym: 'Hakurengyoku'. Note: All descriptions except Iwasaki's are similar.

Hakurenge. (White Lotus Flower), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.352: White rose form double with incurved petals. Originated in Japan. (Believed extinct.) Last character different to above but with a similar meaning. Possibly the same as the cultivar above.

Hakurenge. (White Lotus Flower), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.519: Large, white semi-double flower formed like one flower growing out of another. Originated in Japan. (Believed extinct.)

Hakurengyoku. (White Lotus Jewel), *Tsubaki Hachiboku Sanbokutsuki Meisai*, (before 1868). White with 4 rows of petals. Large flower. Originated in Japan. Synonym for **Hakurenge.**

Hakurenka. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.45, p.53 as 'Hakurenkwa'. Different reading for **Hakurenge.**

Hakuro. Different reading for **Shiratsuyu.**

Hakurô. (White Candle), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.337, p.140, description, p.247: Large white, cup-shaped, semi-double with 11-12 large outer petals in 2-3 rows and a central column of stamens. Selected from cultivars grown by a private family in Utsumi Town, Shôdo Island, Kagawa Prefecture, Japan. Named and released by Hasechika Imoto. See Seibundô Shinkôsha, 1979, *Senchinshû,* p.237:- White semi-double, at first the stamens are closed but, in early spring, they become separated. Medium sized, early to mid-season flowering. Leaves small ovate with shallow serrations.

Hakurôgetsu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* p.121. Different reading for 'Shirorôgetsu'.

Hakuro-kaku. (White Dew Tower), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.7. No description.. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.195 with colour photo; English translation p.136. Medium size, white semi-double, somewhat lotus-formed, cylindrical

stamen column. Flowers mid-season to late. Leaves narrowly elliptic, medium size, flat. Upright growth. A cultivar raised by a private family in Komatsu Town. Named and released by Tokihiro Kôno in 1985. From Ehime Prefecture. Translated as (Egret Castle).

Hakuro-nishiki. (Early Autumn Brocade), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô Ko'emon, 1879, *Chinkashû:* Light pink, streaked and dotted deeper pink. Large. Nihon Shubyô Co. Catalogue, 1910: Pale ground, double, large. Early blooming. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.195, p.342; Tuyama, 1968, *Camellias of Japan*, pl.357, p.181, description, p.196: Leaves ovate-elliptic to elliptic, long acuminate at the apex, slightly folded at midrib, margins manifestly serrate, petioles glabrous. Flowers double, pale pink (Neyron Rose 623/2), densely spotted or lined rose (Neyron Rose 623). Petals all incurved, embracing each other. Flowers early to mid-season. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.342. Originated in Kantô District, Japan. Different reading: 'Shirotsuyu-nishiki'. See, Seibundô Shinkôsha, 1979, *Senchinshû,* p.113; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.352.

Haku-rotaten. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name: **Hakurakuten.**

Hakuryô. (White Dragon), *(C.japonica),* Chûgai Nursery Catalogue, 1935-1936, p.25: White, full double. Originated in Shikoku, Japan. Different readings: 'Hakuryû', 'Hakuryoh'.

Hakuryoh. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.216. Different reading for Hakuryô.

Hakuryû. (White Dragon), *(C.japonica),* Minagawa, 1964, *Chinkaen Chinkashû:* White double. *Encyclopedia of Camellias in Colour,* vol.I, 1972, p.365 & vol.II, 1978, pl.451, p.177 as 'Haku-ryû'; Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.184: A white, double anemome blossom, medium size with wide, wavy, outside petals in 2-3 rows. Filaments short and cream coloured, outer petaloids white, inner cream. Flowers mid-season. Leaves ovate; apex acuminate; margins shallowly serrate, venation conspicuous. See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.113, 237. Originated in Kantô District, Japan. There is a camellia of the same name, but a different variety in the Shikoku area for which the variant reading **Hakuryô** is recommended.

Hakuryuh. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars fron Nursery Catalogues,* p.96. Different reading for **Hakuryû.**

Hakusen. (White Fan), (Higo), Hiratsuka, 1964, *Higo Camellia,* p.10, 11; Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.121 as 'Haku-sen'. No description. Seibundô Shinkôsha, 1979, *Senchinshû,* p.111*:* Large white Higo with 5 broad outer petals, crimped and waved with a burst of pale yellow stamens in the centre. Originated with the Shinohara family in Kumamoto City, Japan. Resembles **Shiro-osaraku.**

Hakusen. (White Fan), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.55, colour photo and description: Large size, white, single with 5 obovate petals in a trumpet shape, and a central stamen column, with lemon coloured filaments, joined for the lower third, and yellow anthers. Late blooming. Leaves mid-green, elliptic, apices acuminate. Originated in the Chûbu area, Japan. A natural seedling, parentage unknown. Originated and released by Fumio Naitô in 1988.

Hakusenshi. (White, Chosen Child), *(C.japonica),* Katayama, 1960, *Tsubaki to Ochabana:* White, large, single. Flowers early to midseason. Seibundô Shinkôsha, 1979, *Senchinshû,* pp.112, 236: Large white, single, opening bowl-shape to open cup-shape. Flowers early to late. Leaves mid-green, glossy, broad-elliptic; apex short acute; margins shallowly crenate. Originated in Kansai District, Japan.

Hakusha. (White Building). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.324. English translation p.237. Medium size, white, flat single, thick petals, cylindrical stamen cluster. Flowers mid-season. Leaves elliptic, medium size, flat. Upright, vigorous growth. Selected by Kazuko Igase from wild japonicas in Sotonoura Town, Shimane Prefecture, Japan. Named and released by Kôsaku Matsuda in 1982.

Hakushi. (White Paper), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe,1969, pl.145: Ivory white semi-double, 16-18 petals in 3-4 rows; centre row semi-erect about a small stamen cluster. Originated in Japan. (Believed extinct.)

Hakushi. (White Master), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.565: Ash white semi-double, 14-16 petals, veined, rounded; irregular stamen cluster. Originated in Japan. Note: The second character is different to that in the cultivar name above and means "Teacher" or "Master". (Believed extinct.)

Hakushin-bokuhan. (White Stamens Bokuhan), Tuyama, 1966, *Camellia Cultivars of Japan,* p.224. Described as a synonym for **Bokuhan.** A local name in the Chûbu District for **Bokuhan.**

Hakushishi. Different reading for **Hakujishi.**

Hakushû. (Old Name for Shimane Prefecture), *(C.japonica),* Izu-Ohshima Hawaii Botanic Gardens, 1980, *List of Plants.* No description. Seibundô Shinkôsha, 1979, *Senchinshû,* pp.111, 236 as 'Hakusyû': Campanulate white single, 5-6 small, rounded petals, slightly emarginate. Leaves malt green, ovate; apex long acuminate; serrate. Compact stamen cluster with yellow anthers. Blooms mid-season to late. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.29. Originated in Shimane Prefecture, Japan. A natural seedling of **Meigetsu,** named and released by San-in Camellian Club in 1973. Different reading: 'Hakusyû'.

Hakushû. (White Autumn), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.111, colour photo, p.236 as 'Hakusyû': Medium sized, white single, 7-8 petals, edges crinkled and reflexed. Compact stamen cluster. Early flowering. Leaves dark green, elliptic; apex abruptly acuminate, flat except recurved tip. Originated in Ishikawa Prefecture, Japan. A natural seedling of **Kaga-hassaku,** named and released by Takshi Shioda in 1975. Characters different to that in the above cultivar and translate as "White Autumn". Different reading: 'Hakusyû'.

Hakushuden. (Palace of White Jewels), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.9 as 'Hakushu-den': Pure white. Large single with incurved petals. Originated in Japan.

Hakushû-hyakka. (Hakuhû's Many Flowers), *(C.japonica),* Izu-Ohshima Hawaii Botanic Gardens, 1980, *Lists of Plants* as 'Hakushûhyakka'. No description. Seibundô Shinkôsha, 1979, *Senchinshû,* p.111, colour photo, p.236, description as 'Hakusyû-hyakka': Very large to large, semidouble, 12-14 round, reflexed petals in 3 rows; central column of stamens, a little irregular, yellow anthers, pale cream filaments. Different reading: 'Hakusyû-hyakka'. Selected by Takashi Sumi from cultivars raised by a private family in Yonago City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1970.

Hakushun. (White Spring). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.192 with colour photo; English translation p.134. Small, white, tubular to trumpet shaped single, red shading on outer petals, wrinkled petals, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size, somewhat curved outwards. Upright, vigorous growth. Considered to be a seedling of **Kôki.** Named by Saneichi Ogawa, released by the Kagawa Branch of the JCS in 1997. From Kagawa Prefecture.

Hakusyû. Seibundô Shinkôsha, 1979, *Senchinshû,* p.111. Different reading for **Hakushû.**

Hakusyû-hyakka. Seibundô Shinkôsha, 1979, *Senchinshû,* p.111. Different reading for **Hakushû-hyakka.**

Hakutaka. (White Hawk), (Higo), Cho, ca.1800, *Chinkafu,* illustr. [p.12-13]: Large leaves; snow white. Yoshimura, 1963, *Higo Tsubaki Meikan;* Hiratsaka, 1964, *Higo Camellia,* p.8, 11: White, 10 cm across with 6 petals with irregular crimped margins. Stamens 120 or more, whitish filaments, fully open, yellowish anthers. Leaves large, ovate to broad-elliptic, heavy venation. See colour photos: *Encyclopedia of Camellias in Colour,* vol. I, 1972, pl.78, p.62, as 'Higo-hakutaka'; Seibundô Shinkôsha, 1979, *Senchinshû,* p.112, description, p.237, lower corner, as 'Hakutaka'(Higo). Different reading: 'Shirataka'. Synonyms: 'Higo-hakutaka', 'Hakutaka'(Higo). Originated in the Kumamoto Prefecture, Japan.

Hakutaka(Higo). Seibundô Shinkôsha, 1979, *Senchinshû,* p.112, lower corner. Synonym for **Hakutaka.**

Hakutama. Different reading for **Hakugyoku.**

Hakutei. (White Emperor), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.42, colour photo and description: Medium size, white, saucer-shaped single, with 6 broad, rounded, overlapping petals, and a wide central stamen column with ivory filaments, joined for the lower third, and yellow anthers. Blooms early to mid-season. Leaves deep green, broad-ovate, apices recurved acuminate, margins serrate. Originated in Okayama Prefecture, Japan. A seedling of **Seiôbo** x **Hatsu-arashi-Saga.** Named and released by Nobuo Sasai in 1982.

Hakuteijô. (White Palace), (Higo), Yoshimura, 1961, *Higo Tsubaki Meikan:* Snowy white single. Leaves medium size, late flowering. For colour photo see Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.156, p.53 as 'Hakuteijoh'. Originated in Japan. Note: This is the name of an ancient Chinese castle where a third century Chinese hero dies in a popular historic novel.

Hakuteijoh. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.53. Different reading for **Hakuteijô.**

Hakutori. Different reading for **Hakuchô.**

Hakutôsan. (Mt. Hakutô). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.194 with colour photo; English translation p.135. Medium size, white, formal double, long petals. Flowers early. Leaves elliptic, large. Spreading growth. A natural seedling of **Hakuro-nishiki.** Originated by Teiji Himuro, registered to the Ministry of Agriculture and Fishery in 1993. Former name 'Shirota'e'. From Kanagawa Prefecture.

Haku-Tsura. Dodd Nursery Catalogue, 1946-1947, p.5. Corruption of Japanese name **Hakutsuru**.

Hakutsuru. (White Crane), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Pure white. Very large. Tuyama, 1968, *Camellias of Japan,* pl.18, p.9, description, p.90: Higo camellia bearing pure white flowers. Leaves small and flat. Petals spreading horizontally from the base, stamens widely opened and arranged in a ring. Leaves elliptic; apex cuspidately acute; petioles glabrous. Petals 7-9, undulate. Style a little shorter than the stamens, divided into 3-4 arms. Flowers late. The characters of the name of this cultivar are the same as **Hakkaku,** but to avoid confusion the Higo Camellia Society of Japan officially changed the reading to **Hakutsuru** for the Higo cultivar. Originated in Kumamoto, Japan. See, Seibundô Shinkôsha, 1979, *Senchinshû,* p.112 colour photo as 'Hakukaku'. Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement,* pp.63, 70 as 'Haku-kaku'. Other readings: 'Shirazuru', 'Hakukaku-higo', 'Hakkaku-higo'. Synonyms: 'White Crane', 'White Stork'. Received an RHS., "Award of Merit" in 1968.

Hakutsuru. (White Crane), *(C.japonica),* Fruitland Nursery 1938, p.17. See black & white plates, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I, p.164; Sharp, 1948, *Camellias Illustrated,* p.145 colour plate. These show a self white incomplete, informal double, 11 cm across x 5 cm deep with about 10 large petals, about 5 cm long x 4.5 cm wide, irregularly

cleft, somewhat ruffled. The centre of the flower has some irregular, small petals, erect, intermingled with stamens, anthers yellow, filaments white. Leaves tending elliptic, cupped, coriaceous, averging 10.5 cm x 5.5 cm, serrations broad and shallow; apex short pointed. It is stated to have been imported from Japan by Domoto as 'Grandiflora Alba'. However all Japanese catalogues and illustrations show a simple single, for which the reading **Hakkaku** has been accepted as the valid name. There appears to have been a confusion in the USA as the early lists describe the variety as a single white. Synonyms given include 'White Crane', 'Haku-bai', 'White Stork', and 'Japanese White' and in the South of America, **Hakurakuten** has erroneously been equated with **Hakutsuru.**

Hakutsuru-Chûbu. Seibundô Shinkôsha, 1979, *Senchinshû*, p.112. Synonym for **Hakkaku.**

Hakutsuru-no-mai. (White Crane's Dance). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.193 with colour photo; English translation p.134. Large, white, semi-double, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size, apices recurved. Upright, vigorous growth. A natural seedling of 'Miyakojima'. Selected and released by Fumio Naitô in 1997. From Aichi Prefecture.

Haku-un. (White Cloud), *(C.japonica), Chinka Zufu,* (Before 1700), Watanabe, 1969, pl.92: A simple 5 petalled single white with very dark crimson streaks. Originated in Japan. (Believed extinct.) Different reading 'Shirogumo'.

Haku-un. (White Cloud), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.478: A single white with a pink flush at petal base and red streaks, 7-8 petals with irregularly notched edges. Stamens in a central cylinder. Originated in Japan. (Believed extinct.)

Haku-un. (White Cloud), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* colour pl.23, p.9: Simple campanulate white of 5-6 petals, small with stout stamen column with deep yellow anthers. Blooms very early. Synonyms: 'Chôfuku-ji', 'Haku-un'(Tsubaki), 'Haku-un-chôfukuji. Originated in Kyôto, Japan.

Haku-un-higashiyama. (White Cloud - Eastern Mountain), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.224: Ivory white semi-double to open incomplete double of about 20 petals, some red spots and an occasional dash of colour. An urn-shaped stamen cluster. Originated in Japan. (Believed extinct.)

Haku-un-tsubaki. (White Cloud Camellia), *(C.japonica),* Monk Horin, 1640, *Kakameiki.* No description. Originated in Japan. (Believed extinct.) See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.47.

Haku-un (Tsubaki). Izu-Ohshima Hawaii Botanic Gardens, 1980. p.14. Synonym for **Haku-un.**

Haku-wabisuke. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.122. Different reading for **Shiro-wabisuke.**

Hakuzenryu. (Virtuous White Dragon), *(C.japonica),* JCS., 1988, *Japan Camellia,* No.27, p.4, colour photo and description: Small size, white, vase-shaped single, with central stamen column, with white filaments, joined for the lower third, and light yellow anthers. Originated in Shirahama City, Wakayama Prefecture, Japan.

Hakuzuru. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.121. Different reading for **Hakkaku.**

Halcon. Cannon, 1963, ACS., *The Camellia Journal,* vol.18, No.5, p.28. Orthographic error for 'Halcyon', synonym for **Nellie McGrath.**

Halcyon. SCCS., 1966, *Camellia Nomenclature,* p.63. Synonym for **Nellie McGrath.**

Halesia. *(C.japonica),* Jacob Makoy et Cie Nursery Catalogue, 1830; Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:316. No description. Berlèse, 1837, *Monographie,* ed.1, p.77 as 'Hallesia':

Leaves large, oblong, much toothed, of a beautiful green; bud small, elongate; flower large, double, rose coloured; the first rows of petals recurved, imbricated; those at the centre small, twisted and striped with white. A few abortive stamens. Originated in England as a seedling of the red single (**Rubra**). As the camellia is named for Mr Hale, the orthography is **Halesia.** Orthographic errors: 'Halesii', 'Haleysia', 'Hallesia', 'Halleana', 'Hallesii'.

Halesia Vera. *(C.japonica),* Berlèse, 1840, *Monographie* ed,2, p.94, 95, as 'Hallesia Vera': Leaves average size, oblong, thick, prominent venation, of a dull green; flower, 8 cm across, double, rose coloured. The outer rows of petals is recurved, pointed, imbricated; the centre petals, small, erect with stripes of greyish white, A few abortive stamens. Originated in England as a seedling of **Expansa.** Orthographic error: 'Hallesia Vera'.

Halesii. Loddiges Catalogue, 1836, p.25. Orthographic variant for **Halesia.**

Haleysia. Makoy Nursery Catalogue, 1838. Orthographic error for **Halesia.**

Haley's Monarch. *Magazine of Horticulture,* 1848. Orthographic error for 'Hally's Monarch', synonym for **The Monarch.** In the USA the name has been confused with **Enrico Bettoni.** Synonyms: 'Lateriatus', 'Macey Taylor', 'West Coast Sarah Frost', 'Venus', 'Hite Pink', 'Maurice Hurst', 'Red Walker', 'Elata'.

Half Pint. *(C.japonica),* Mark S. Cannon Scion list, 1962, p.5. No description. Originated in USA. No valid listing located.

Halfida. *Catalogue General des plantes la Société d'Horticulture de Belgique,* 1842, p.22. Orthographic errors: 'Halfilda', 'Halphida', 'Halfila', 'Hafilda', 'Alphida'. Synonym for **Sacco Nova.**

Halfida Vera. Cachet Catalogue, 1845-1846, p.7. Synonym for **Sacco Vera.**

Halfila. Trillon, Le Mans Nursery Catalogue, 1843, p.6. Orthographic error for 'Halfida', synonym for **Sacco Nova.**

Halfilda. van Houtte Catalogue, 1848-1849, 35:44. Orthographic error for 'Halfida', synonym for **Sacco Nova.**

Halleyi. *Magazine of Horticulture,* 1843. Orthographic error for **Hallyi.**

Halley's Monarch. Anonymous, 1843, *The Floricultural Cabinet,* p.55. Synonym for **The Monarch.**

Hallie. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature,* p.71: Light orchid pink, shading lighter at the edge. Medium to large semi-double with mixed petaloids in the centre, to anemone form. Medium, compact growth. Mid-season blooming. Originated by W.E. Woodroof, Sherman Oaks, California, USA. Chinese synonym 'Halier'.

Hallie Bland. *(C.japonica), American Camellia Yearbook,* 1967, p.227, Reg. No.928: A 16 years old chance seedling that first bloomed 1951. Originated by H.C. Bland, Sumter, South Carolina, USA. Plant growth is pyramidal, rapid with dark green leaves, 11-12 cm long x 5.8 cm wide. The peony form flower is 13 cm across x 7.5 cm deep with 17 petals and 15 petaloids. Colour is light rose-pink with light yellow stamens. Fragrant. Flowers early to mid-season.

Hallifolia. Vanderbilt, 1940, *Camellia Research,* p.4 as 'Hallefolia'. Orthographic error for **Hollifolia.**

Hallmark. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.59: White. Very large semi-double with crinkled petals. Vigorous, upright growth. Early to mid-season blooming. Originated in USA by Ashby.

Halloween. *(C.japonica),* Steffek, 1949, *Plant Buyer's Guide* ed.5, p.49. No description. Originated in USA by Clark & Son.

Hall's Pride. *(C.reticulata),* ACS., 1985, *The Camellia Journal,* vol.40, No.4, p.47, Reg. No.1980: A very large, radiant, salmon pink, semi-double *C.reticulata* chance seedling of 'Cornelian',

(**Damanao**), blooms mid-season to late. Originated by Houghton S. Hall, San Anselmo, California, USA. The 9 years old seedling first bloomed 1981. An average flower size is 20 cm across x 11 cm deep with 20 petals, golden anthers and yellowish white filaments. Plant growth is upright, open and rapid with dark green leaves, 12.5 cm x 6 cm.

Hall's Pride Variegated. *(C.reticulata).* ACS, 1992, *The Camellia Journal*, vol.47, No.4, p.13: Valdosta Camellia Scions. A virus variegated, white blotched form of **Hall's Pride.** Chinese synonym 'Fuse Jiaoao'.

Hall's Townes. SCCS, 1996 *Camellia Nomenclature,* p.19. Orthographic error for 'Hall Townes' [**Regina dei Giganti (US)**].

Hallstone. Shao, Taichong, 1992, *The Observations from the Camellia World*, No.260. pp.6, 72. Synonym for **Halisidun**.

Hallstone Spicy. *(C.hybrid).* Camellia Forest Nursery Catalogue, 2008, p.21; Regarded as a seedling raised by Ken Hallstone, Calif., USA, but not named by him. Small, bright pink, peony form. Spicy fragrance. Flowers mid-season.

Hallstone's Seedling. Gao, Jiyin, 1993, *The Observations from the Camellia World*, No.502, p.65. Synonym for **Jiazhoulaike**.

Hallstone's Yellow. Gao, Jiyin, 1993, *The Observations from the Camellia World,* No.503, p.65. Synonym for **Jiazhouhuang.**

Hallyi. *(C.japonica),* Anonymous, 1843, *The Floricultural Cabinet,* p.47 erroneously as 'Halleyi': Produced from seed by Mr Hally of Blackheath, England. *The Florist's Journal,* 1844, p.137, colour pl. p.137, as 'Halleii'. Verschaffelt, 1849, *Nouvelle Iconographie,* Book V, pl.IV as 'Halleii': It is of English origin, and was obtained from seed by Mr Hally, Blackheath. This variety has oblong-ovate leaves, tapered at both ends, 8-9 cm long x 6-7 cm wide with large coarse serrations. The blossom is regularly imbricated and made up of numerous large, rounded, slightly emarginate petals arranged in 8 or 9 rows, diminishing gradually in size towards the centre; they are of a deep blood-red colour, irregularly striped with white in the middle, giving a star-like appearance. Franchetti, 1855, *Collezione di Camelie,* p.25 as 'Halleii': Fully imbricated flower, formed of numerous, blood red petals, becoming violet, divided, for the main part, by a narrow, white stripe, paler central petals. Orthographic errors: 'Halleii', 'Halleyi', 'Halleye', 'Hallerii', 'Halley', 'Halteii''Hallegi', 'John Halley'. According to his own advertisement in the "Gardeners' Chronicle", he spelt his name Hally. Note: The name of the originator has been spelt variously as "Hally" and "Halley" in the literature of the time. Also, in that period, names ending in "y" which were to have been latinised by adding an "i" were changed by deleting the "y" and ending with a "ii".

Halnuts. Hovey & Co. Nursery Catalogue, 1834-1835, p.26. Orthographic error for **Allnuttii.**

Halnut's Splendens. Paxton, 1831-1832, *Horticultural Register*. Orthographic error for 'Mr Allnutt's Splendid', synonym for **Coccinea.**

Halphida. Dauvesse Nursery Catalogue, 1855-1856. Orthographic error for 'Halfida', synonym for **Sacco Nova.**

Haltesii. *(C.japonica),* Tagliabue, 1840, *Nomenclatore Camelliae.* No description. Originated in Italy. (Believed extinct.)

Haluode. Gao, Jiyin, Ltr 30 July 1990. Chinese synonym for USA *reticulata* hybrid **Harold L. Paige.**

Hamachidori. (Plover on a Beach), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan*, pl.4, p.2, description, p.85 as 'Hama-chidori': Leaves olive green, elliptic to oblong, shiny, impressed venation, margins slightly revolute. Petiole, yellowish green, hairy. Leaves 6.5-7.6 cm long x 2.9-4.4 cm wide. Hairy petals 1-2, normal petals white, 6-8, broadly orbicular, 3.5-3.8 cm

long x 3.1-3.6 cm broad, wavy and bilobate at the apex, wavy and wrinkled on the margins. Stamen cluster 2.2-2.5 cm high and 1.4-1.8 cm in diameter, cadmium yellow, becoming paler to the base, joined lower third, simple in structure, often with a few small, fan or funnel-shaped petaloids. Flowers mid-season to late. Originated in Togashi-Shinbô village, Kanazawa-shi, Ishikawa Prefecture, Japan. 'Hamachidori': Hamma = beach; chidori = Japanese plover. The name is used by poets for pretty little birds inhabiting coastal regions.

Hamachidori. (Plover on Beach), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.119 & 239: Light pink single, with long petals; tubular form flower. Large to medium size. Late flowering. Long elliptic leaves, apices acuminate, wavy. Originated in the Chûbu District, Japan.

Hamada. (Personal name), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.316, p.160, description, p.185: Leaves elliptic to narrowly-elliptic, acuminate at the apex, venation slightly impressed, margins grossly crenate, 6.2-7.7 cm long x 2.4-3.3 cm wide, petiole 7 mm long, glabrous. Flowers single, cup-shaped, white, partly striped or minutely punctate with pink in various degrees (Spinel red 0625 -0625/3). - Hairy petals 2, normal petals 3, the largest 3.8 cm long x 4.2 cm wide, emarginate or lobulate. Stamen cluster 3.2-3.7 cm high, simple, anthers often partly changed to small, fan-shaped petaloids. Flowers late season. Originated by the famous painter, Mr Hamada, Tôjiin, Kyôto-shi, Japan.

Hamadayama. (Place name in Tokyo), *(C.japonica),* Seibundô Shinko, 1979, *Senchinshû,* p.119 colour photo, p.239, description: Small, soft pink, compact, campanulate single of 6-7 petals and a short stamen column with cadmium yellow anthers. Petals do not open widely. Leaves dark green, strongly waved. Originated in Hamadayama, Suginami-ku, Tokyo, Japan. Named and released by Yasukuni Matsudaira in 1970. Resembles **Kantô-yûzuki.** See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.110.

Hama-gasuri. (Beach Splashed Pattern Kimono). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.203 with colour photo; English translation p.141. Medium size, trumpet shape to flat single, small red stripes and splashes on pale pink ground, cylindrical stamen column. Flowers early to mid-season. Leaves elliptic, medium size. Spreading growth. A natural seedling of **Meigetsu.** Named and released by Takashi Sumi in 1983. From Shimane Prefecture.

Hamakaze. (Windy Beach), *(C.x vernalis),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.50; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.40: Small size, rose-pink, single. Blooms early to mid-season. Originated in Shizu'oka Prefecture, Japan.

Hamakita-ômi. (obscure), *(C.x vernalis),* Tanaka et al., Sept.1986, 'Cytogenetic Studies on the origin of *C.x vernalis'; Journal of the Japanese Society for Horticultural Science,* vol.55, No.2, p.208. No description. A triploid camellia from Japan.

Hama-no-akebono. (Dawn on the Beach). (*C.japonica x C.nitidissima*). Funaki-en Camellia Catalogue, 1993-1994, p.11: Originated by Mr. Murata, Yokohama, Japan. **Hatsuarashi** x *C.nitidissima.* Very pale pink shading to light yellow at base. Small sized, cup-shaped single with slightly recurved petals.

Hama-tsubaki. (Seashore Camellia), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô,* vol.307. No description. Originated in Japan. (Believed extinct.)

Hambertii. *(C.japonica),* Seidel, 1846, Pflanzen Catalog, p.8. Originated in Germany. No description. (Believed extinct).

Hamilton Bland. *(C.japonica),* SCCS., 1966, *Camellia Nomenclature,* p.63: Light rose-pink. Very large, peony form. Vigorous, open, upright growth. Blooms early to mid-season. Originated in the USA by H.C. Bland, Sumter, South Carolina.

Hamiltoiana. Auguste van Geert Nursery Catalogue, 1848, p.18. Orthographic error for **Hamiltoniana.**

Hamiltoniana. *(C.japonica),* Auguste van Geert Nursery Catalogue, 1848, p.18. Originated in England. (Believed extinct.)

Hamilton's Choice. *(C.japonica),* Rogers, 1974, ACS., *The Camellia Journal*, vol.29, No.3. No description. Originated in USA. No valid listing located.

Hamite. Chinese synonym for USA *C.x williamsii*, **Julia Hamiter.**

Hamochi-wabisuke. (Wabisuke from Hamochi). (Wabisuke). *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.127. No description. From Niigata pref., Japan.

Hamon. (Ring of Ripples), *(C.rusticana),* Hagiya & Ishizawa, Mar.1968, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.9, p.56, black and white photo. Seibundô Shinkôsha, 1979, *Senchinshû,* p.119 colour photo, p.239 description: Deep pink with fine veins of deeper pink, rose form double to formal double, 9-10 cm across. Inner petals inverted and folded, a few stamens remaning with yellow filaments when fully open. Petals about 64. Late flowering. Leaves obovate, 8-9 cm long. Collected in Mitsuke City, Niigata Prefecture, Japan in 1960.

Hampestadi. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. Orthographic error for **Hampsteadii.**

Hampsteadii. *(C.japonica),* Hovey, C.M., 1841, *Magazine of Horticulture,* 7:257 as 'Hempsteadii': A shrub of vigorous growth, leaves 10 cm x 6 m. oval, somewhat acuminate, dentated, distinctly veined, deep green; petioles short; flowers large, 11 cm in diameter, full, a clear cherry red, veined a deeper cherry red, entire, cupped form on opening, recurved when fully expanded, regularly imbricated. Originated in the USA by Ritchie & Dick. Orthographic errors: 'Heamsteadii', 'Hampsteadi', 'Hampestadi', 'Hamsteadii', 'Hamsteadi'. Synonym: 'Hampsteadii Perfection', 'Hampsteadii d'Amerique'.

Hampsteadi Perfecta. Burdin Maggiore & Co. Catalogue, 1856-1857. Orthographic error for 'Hampsteadii Perfection'; synonym for **Hampsteadii.**

Hampsteadii Perfection. Burdin Maggiore & Co., 1849-1850, Catalogue General. Lichtenthal, 1852, *Manuale botanico enciclopedica popolare.* Synonym for **Hampsteadii.** Orthographic error: 'Hampsteadi Perfecta'.

Hampsteadii Amerique. Auguste van Geert Nursery Catalogue, 1848, p.18. Synonym for **Hampsteadii.**

Hamsteadi. Rovelli Catalogue, 1874, p.31. Orthographic error for **Hampsteadii.**

Hamsteadii. de Jonghe, 1851, *Traitè de la Culture du Camellia*, p.109. Orthographic error for **Hampsteadii.**

Hamusi Furen. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.420; Chinese synonym for the USA *C.japonica* **Mrs Bertha A. Harms.**

Hana-akari. (Light of Flowers), *(C.rusticana),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.7: Small size, pale rose-pink, single with embracing petals. Late blooming. Originated in the Niigata Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.199 with colour photo; English translation p.138. Leaves elliptic, small, flat. Spreading, vigorous growth. Named and released by Taki Ishii in 1983.

Hana-arare. (Flower Hail). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.324. English translation p.237. Medium size, peach red, peony form. Flowers mid-season. Leaves broadly elliptic, medium size. Upright, vigorous growth. Selected from cultivars raised by a private family in Matsu'e City. Named and released by San-in Camellian Club in 1973. From Shimane Prefecture.

Hanabojyô. (Mother's Love for Flowers). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.203 with colour photo; English translation p.141 as 'Hanabojô'. Medium to large, vermilion cupped single. Flowers mid-season to late. Leaves elliptic, medium size. Upright, vigorous growth, dense branches. A cross between **Shûfûraku** and **Iwane-shibori.** Named and released by Minoru Satô in 1984. From Aichi Prefecture.

Hanachiginu. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.201 with colour photo; English translation p.139. Large, changing to white, peony form showing central stamens. Flowers early to mid-season. Leaves elliptic, medium size. Upright, vigorous growth. A natural seedling of unknown parentage. Named and released by Totsurô Nakamura in 1994. From Tokyo.

Hanachirusato. *(C.x vernalis),* JCS., 1984, *Japan Camellia,* No.23, p.13: White streaked and splashed rose, semi-double, waterlily form. A seedling from the cross *C.x vernalis* **Asahi** x **Umegaka.** The flower has red spattered spots on a pale pink background with petals in 2-3 rows. Medium size. Flowers early. Originated in the Shizu'oka Prefecture, Japan. The name is that of a heroine in 11th chapter of *Genji Monogatari.*

Hana-daigin. Vanderbilt, 1940, *Camellia Research,* p.4. Corruption of the Japanese name **Hanadaijin.**

Hana-daijen. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Hanadaijin.**

Hanadaijin. *(C.sasanqua),* Gao & Zhuang, Apr.1989, *The Camellia in China,* p.78, No.596: Medium size, red, single with central stamen cluster with gold anthers. The different Chinese characters of the name are the Chinese synonym for the Japanese **Hanadaijin.**

Hanadaijin. (Minister of Flowers), *(C.sasanqua),* Kaitsu-en, 1905, *Chabaika Meikan:* Peach pink, very large, petals edges curved inwards. Originated in Japan.

Hanadaijin. (Minister of Flowers), *(C.sasanqua),* Seibundô, Ishii, Kûgi, 1932, *Genshoku Engei Shokubutsu Zufu;* Chûgai Nursery Catalogue, 1935-1936, p.26 as 'Hana-daijin': Deep pink semidouble. Very large flower. Wada, 1941, *Garden Treasures of Japan,* p.32: Deep pink, gigantic, single. Yashiroda, 1950, *American Camellia Yearbook,* p.20: Attains up to 15 cm (sic) diameter, deep rose, flat bloom; largest leaves amongst the sasanquas with light green, coarsely serrated leaves like a *C.japonica.* Originated in the Kantô District, Japan by Minagawa as a seedling of **Shinonome.** Flowers early. Different reading: 'Hana-otodo', 'Hana-daijin'. Corruptions of the Japanese name: 'Hana-daigin', 'Hana-daijen'. 'Hana-daizin'. See black and white photo, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III, p.299. Resembles **Shichifukujin.** Chinese synonym: 'Hana Daijin'.

Hanadaijin. (Minister of Flowers), *(C.japonica),* Andoh, 1971 , *Tsubaki, Meika no Shôkai to Saibai,* pl.57, p.31. see also Seibundô Shinkôsha, 1979, *Senchinshû,* p.118 colour photo as 'Hana-daijin': Medium sized, light red single, 7-8 petals with large, rounded edges, crêped and wrinkled. Stamens spread like a Higo. Leaves broad-oval, abruptly acuminate, sharply serrate, venation impressed. See colour photo, Satô, 1975, *Chûbu no Tsubaki,* p.83 as 'Sakura-daijin'. Same characters and meaning as the sasanqua of the same name. Its old name was 'Sakura-daijin' and it resembles **Benimyôrenji.** A seedling of **Usumyôrenji** according to Andoh. See colour photo, Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.206. Originated in Chûbu District, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.200 with colour photo; English translation p.139. Stated to be a seedling of **Benimyôrenji.** Originated by Harutarô Sakuragi in 1967, named by Eimei Nagata.

Hanadaizin. *American Camellia Yearbook,* 1949, p.379. Corruption of the Japanese name **Hanadaijin.**

Hanadaijin-benten. *(C.sasanqua),* Nuccio's Nurseries Catalogue, 1983-1984 as 'Hana-daijin-benten'. A foliage sport of **Hanadaijin** raised by Domoto, California, USA. Variegated leaves with occasional grey-green stripe and light yellow margins. Large deep rose-pink single. Upright but very slow. Early flowering.

Hana-daijin Special. *(C.sasanqua).* Nuccio's Nurseries Retail Price List, 1993-1994, p.35. Sport of **Hanadaijin-benten.** Foliage grey-green, lightly bordered yellow. Single pink flower. Medium upright growth. Blooms early to mid-season. Originated in USA.

Hanadaijin Variegated. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.97: A virus variegated form of **Hanadaijin.** Red with white blotches. Originated in USA.

Hanadate. (Flower Mansion), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.186, p.94, description, p.144 as 'Hana-date': Leaves rather large, narrowly ovate-oblong to oblong, apex gradually acuminate, a little folded at the midrib, venation impressed, petioles very hairy. Flowers semi-double, rosy red (Claret Rose 021/1), petals flat, narrowly obovate, manifestly emarginate, ultimately widely opened. Hairy petals 1-3, normal petals about 10, the largest 5.3 cm long x 3.8 cm broad. Filaments about 3 cm high, rather thin, filaments pale yellow, fused part pinkish. Flowers mid-season to late. Originated in Mr Adachi's Garden, Tahôji, Kanosemachi, Niigata Prefecture, Japan.

Hanafubuki. (Blizzard of Flowers), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.239: Large and small, red, vertical marks on a white ground. Speckled, single campanulate form. Medium size. Cylindrical stamen cluster. Early flowering. Leaves long-oval, dull green, prominent venation. Petioles hairy. Plant habit vigorous and upright. Originated in the Chûbu District, Japan. Synonym: 'Hanafubuki-Chûbu'.

Hanafubuki-Chûbu. Synonym for **Hanafubuki.**

Hanafabuki (Niigata). (Blizzard of Flowers from Niigata), *(C.rusticana),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.189, black and white photo as 'Hanafubuki'; Seibundô Shinkôsha, 1979, *Senchinshû,* p.119 colour photo, description, p.239: Medium sized, formal double to rose form double, pale pink with crimson streaks and peppering. Shows stamens when fully open. Leaves obovate with long tapering apex and fine, sharp serrations, petioles hirsute. Originated in the Kashiwazaki City, Niigata Prefecture, Japan. Named and released by Tokuji Ôoka.

Hanafûki. (Flower of Wealth and Honour), *(C.japonica.),* Ishii, 1932, *Genshoku Engei, Shokubutsu Zufu.* Colour plates and descriptions in Tuyama, 1966, *Camellia Cultivars of Japan,* pl.104, p.178; Tuyama, 1968, *Camellias of Japan,* pl.119, p.60, description, p.122 as 'Hana-fû-ki' and Seibundô Shinkôsha, 1979, *Senchinshû,* pp.118, 239, as well as *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.203, pp.102, 320. First listing in English - Chûgai Nursery Catalogue, 1935-1936. Leaves very dark green, oblong to oblong-elliptic, 8 cm x 4 cm; apex acute, venation strongly impressed, sharply serrate. Flowers semi-double, cup-shaped, pink (Spinel Pink 0625/1), petals up to 15, broad and incurved. Stamens in a complete cylinder or in fascicles, white filaments, yellow anthers. Plant habit upright, compact, slender, slow growing. Reported to have been raised from seed at Sakura-shi, Chiba Prefecture, Japan about 1882. There is also a variegated form. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.309. Received an RHS., "Award of Merit" in 1956. Synonyms: 'Mrs Howard Asper', 'Chalice', 'Waterlily'. Different readings: 'Hana-fû-ki', 'Hana Fuki', 'Hana-fukki', 'Hana-huki'. Orthographic error 'Hayer'.

Hanafûki. (Flower of Wealth and Honour). *(C.hiemalis). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.310 with colour photo; English translation p.218. Medium to large, pinkish red, double to peony. Petal colour stays true to the end of blooming. Very early to early. Leaves elliptic, small, flat. Upright, vigorous growth, dense branches. A new natural seedling of **Asakura** from Kurume, Fukuoka Prefecture.

Hanafuki Variegated. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue* as 'Hana-fuki Var.'. A virus variegated form of **Hanafûki**- Soft pink blotched white. Originated in USA.

Hana-fukki. Wada, 1941, *Garden Camellias of Japan,* p.29. Different reading for **Hanafûki.**

Hana-fuuki. (Wealthy and Noble Flower). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.202 with colour photo; English translation p.140 as 'Hanafûki'. Large, pink semi-double, cupped petals, cylindrical stamen column. Flowers late. Leaves elliptic to obovate, medium size. Spreading, vigorous growth. A natural seedling, originated in Narita, Chiba Prefecture in around 1982. Introduced for the first time in Minagawa's *Chinkashû* in 1993. From Chiba to Saitama.

Hana-fuyô. (Flower Cotton Rose). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.226 with colour photo; Strong pink border, shading to white at the centre. Medium to large, peony form with stamens dispersed among the petals. Flowers mid-season to late. Leaves fishtailed, medium size. Somewhat spreading growth. A cross of **Bontenjiro** with an unnamed peony cultivar. Originated by Shinichi Noguchi, Tokyo, Japan, released in 2009.

Hanagarô. (Chief Retainer in Charge of Flowers), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.7: Medium size, pink ground with white base. Single, opening flat. Blooms early to late. Originated in the Shimane Prefecture, Japan. Different reading 'Hanakarô'. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.199 with colour photo; English translation p.139. Leaves elliptic, medium size. Spreading growth. A natural seedling growing near Shinkon Shrine in Matsu'e City. Named and released by San-in Camellian Club in 1977.

Hanagasa. (Flower Hat), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16: Semi-double with occasional petaloides, white with pink graduations. Originated in Japan. (Believed extinct.)

Hanagasa. (Flower Hat), *(C.sasanqua),* Hakoda, JCS., 1987, *Tsubaki,* No. 26, p.44; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Large size, rose-pink double. Early blooming. Originated in the Saitama Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.309 with colour photo; English translation p.217. Selected by Jisuke Minagawa from seedlings of **Hanadaijin.**

Hanagasa. (Flower Hat), *(C.japonica),* Colour photo, *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.283, p.129 and Seibundô Shinkôsha, 1979, *Senchinshû,* p.117, description, p.238: A large semidouble with about 18 petals in 3 rows and a small, central stamen cluster. Colour is light red with deeper coloured fine veining and white variegation variable from an odd, small spot to heavy blotching. Leaves elliptic, waved margins. Late flowering. There is a large tree in the grounds of the Hônen Temple, Shishigaten, Kyôto, over 500 years old. It is one of the three camellias at the temple with **Goshikichiri-tsubaki** and **Ate-tsubaki.** These three camellias are used in a ceremony for Buddha at the Temple, every year. Originated in Japan.

Hanagasa-matsuri. (Flower Parasol Festival), *(C.japonica),* Himuro, 1982, *Murasuzume,* No.34: Deep pink semi-double with a peony centre, prevailing white. Originated by Himuro, Japan. A seedling from **Kyôkarako.**

Hanagasane. (Pile of Flowers), *(C.japonica),* Himuro. 1982, *Murasuzume,* No.35: White striped rose, incomplete peony form in two layers. Originated by Himuro, Japan. A seedling from **Hanamiguruma.**

Hanagasa-shibori. (Dappled Bamboo Hat), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.215: Dark red ground with white spots. Medium sized semi-double. A white blotched form of **Hanagasa.** Originated in Japan.

Hanagasumi. (Haze of blossoms), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.128, p.64, description, p.125: Leaves ovate-elliptic to broadly lanceolate-elliptic, 7-7.5 cm long x 4-4.4 cm wide, venation subimpressed, petioles, 6 mm long, glabrous. Flowers, peony type, pale

pink (Neyron Rose 623/2), with a large mass of inner petals and petaloids, concealing the stamens. Hairy petals 2-3, normal petals 6-15, with 2-6 folded, irregularly shaped petals inside, and variously shaped petaloids, from several up to 79 in number. Filaments 2.3-2.8 cm high, divided into concentric fascicles, filaments pale creamy. Pistil, 2-2.3 cm long with 3-5 irregular arms split to the base. Flowers from early to late season. Originated at Mr Matsui's garden, Kami-sasahara, Yatsuo-machi, Toyama Prefecture, Japan. Different reading: 'Hanakasumi'. The name alludes to the mountain cherry blossoms displayed like a haze.

Hanagasumi (Shimane). (Haze of Blossoms). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.324 with black and white photo; English translation p.237. White, flat single, thick petals, cylindrical stamen cluster. Flowers mid-season. Leaves broadly elliptic, medium size, flat. Spreading, vigorous growth. Selected from wild japonicas on Mt. Yahata, Hamada City, Shimane Prefecture, Japan. Discovered by Hisao Matsumoto, named and released by Kôsaku Masuda in 1981.

Hanagawari-hagoromo. (Different flower 'Hagoromo'), *(C.japonica),* Izu-Oshima Hawaii Botanic Gardens, 1980, *List of Plants,* p.15 as 'Hanagawarihagoromo'. No description. Originated in Japan.

Hanagôri. (Ice Flower), *(C.japonica),* Seibundô Shinkôsha,1979, *Senchinshû,* p.117, colour photo, p.238, description: Medium sized semi-double, somewhat saucer-shaped, white with rose-pink streaks, petals 15-18 in 2-3 rows, somewhat hose-in-hose. Stamen cluster short and spreading, anthers yellow, filaments pale yellow. Leaves broad-oval, apex tapering acuminate, serrate, waved margins, mid-green. Early to mid-season flowering. Originated in Yonezawa Ciy, Yamagata Prefecture, Japan.

Hanagoromo. (Flower Clothes) (*C.hybrid*) from Tokyo, *Japan Camellia* No.67, February 2002: A cross of the *C.hybrids* **Pop Corn** × **Wirlinga Belle.** Bright pink, semi-double, small, blooms early to mid-season. Tree upright growth. Originated by Yaichirô Fujimoto.

Hanagumori. (Cherry Blossom on a Cloudy Day), (*C.rusticana*), Tuyama, 1968, *Camellias of Japan,* Colour pl.67, p.34, description, p.105: A small leaved, snow camellia cultivar. Leaves a little undulate and recurved, slightly folded along the midrib, venation impressed, ovate-elliptic to broadly-elliptic, 4.4-5 cm long x 2.6-2.8 cm wide with petioles 9 mm long, hairy. Flowers opening flat, palest pink (Rose pink 427/3). Hairy petals 3, normal petals 16-17, orbicular with several small, petal-like or fan-shaped and filamently stalked petaloids in the centre, often erect. Stamens 12 or more, thick and irregular, 2.5-3 cm high. Flowers late season. Originated in Mr Tazawa's garden, Yokkaichi, Murakami-shi, Niigata-ken, Japan.

Hana-Garuma. Vanderbilt, 1940, *Camellia Research,* p.4. Corruption of Japanese name **Hanaguruma**.

Hanaguruma. (Flower Carriage), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô:* Medium size, light red, peony form. Originated in Japan. (Believed extinct.)

Hanaguruma. (Flower Carriage), *(C.japonica),* Itô Jukyû, 1739, *Honzô Hanamaki'e,* vol.15; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô Ko'emon, 1879, *Chinkashû:* White striped crimson, Large pagoda form in peony group. First listing in English, Chûgai Nursery Catalogue, 1935-1936, p.25 as 'Hana-guruma'. See colour photos: Tuyama, 1966, *Camellia Cultivars of Japan,* pl.19, p.40; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.344, p.149; Tuyama, 1968, *Camellias of Japan,* pl.384, p.195; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.117, 238: A variegated form of **Genji-guruma.** Flowers large semi-double to open, informal double. Petals somewhat hose-in-hose, white striped carmine (Carmine 21/1). Irregular stamen cluster, often divided by small, trumpet shaped petaloids or petals. Flowers mid-season to late. Solid colour form: **Genji-guruma.** See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.363. Different reading: 'Hanakuruma'. Corruption of Japanese name: 'Hana-Garuma'. Originated in Kantô District, Japan.

Hanaguruma. (Flower Carriage), *(C.sasanqua),* Murayama, Seibundô Shinkôsha, 1971, *Garden Life.* No description. Originated in the Kumamoto Prefecture, Japan.

Hana Hachibana. RHS.,1975, *Rhododendrons with Camellias and Magnolia,* p.107. Corruption of Japanese name **Hanatachibana.**

Hana-hakushaku. (Earl Flower). *(C.x williamsii). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.202 with colour photo; English translation p.141. Medium size, white, lotus-formed semi-double, petals plicate, cylindrical stamen column. Flowers early to mid-season. Leaves oblong, medium size, somewhat curved outwards. Somewhat upright. A hybrid between **Chôchidori** and **Tulip Time.** Originated by Nobuo Sasai in 1985, released in 1997. From Okayama Prefecture.

Hanahan. (Flower Part), *(C.japonica),* Hamamatsu, Utakuni, *Setsuyô Kikan,* 1825. No description. Originated in Japan. (Believed extinct.)

Hana-Imon. Vanderbilt, 1940, *Camellia Research,* p.4. Corruption of Japanese name **Hanajiman.**

Hana-ishô. (Flower Costume). *(C.hiemalis). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.309 with colour photo; English translation p.217. Medium size, deep pink, single of 5 to 6 petals, each petal curved inward forming a sake-cup shape, apricot stamens. Flowers early. Leaves narrowly elliptic, medium size. Upright, vigorous growth. A new natural seedling of **Sakura-fubuki.** Originated and named by Minoru Satô. From Niigata Prefecture.

Hanajiman. (Flower to Boast of), *(C.sasanqua).* Kaitsu-en, 1905, *Chabaika Meikan;* Nihon Shubyô Co. Catalogue, 1910, p.46: White stripes on red. First listing in English, Wada, 1941, *Japanese Garden Treasures,* p.32: Semi-double, red striped with white, very large. Satomi, 1958, *Nomenclature List of Sasanqua of Japan:* Pink slightly shaded white with margins a deeper pink. Large semidouble. For colour photos see: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.550, p.216; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.174. Chinese synonym: 'Huaziman'. Different reading: 'Hana Jiman'. A seedling of **Eikyû-shibori,** originated by Sôjiro Saitô, raised at Minagawa Chinka'en Nursery, Saitama Prefecture, Japan. Corruption of Japanese name: 'Hana-Imon'.

Hanakagami. (Flower Mirror), *(C.japonica),* Wada, 1937, Catalogue, p.27: Of Chinese origin. The flowers are very large, fully double, white, sometimes bright red, sometimes white striped red according to the branch. Originated in Japan.

Hanakagami. (Flower Mirror), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.112: A medium size, single of 5-6 large, orbicular petals, red with large white patches. Short, irregular stamen cluster. A different cultivar from the above. A sport of **Aya-nishiki.** Originated in the Chûbu District, Japan. Named and released by Minoru Satô.

Hanakago. (Flower Basket), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.252, p.127, description, p.167: Leaves ovate-elliptic to broadly elliptic, venation slightly impressed, manifestly serrate, 7.2 cm x 3.5 cm; petioles 7-9 mm long somewhat hairy. Flowers anemome type, forming a loose mass of smaller petals and stamens in the centre, deep rose (Rose Opal 022/1). Petals 8-11, wavy and wrinkled on the edges, largest 5.3 cm x 4.2 cm wide. Smaller central petals 14-103, various from oblanceolate to stalked, small, roundish ones. Flowers mid-season to late. Originated in Momoyama, Fushimi-ku, Kyôto, Japan.

Hanakago. (Flower Basket) (*C.hybrid*) from Tokyo, *Japan Camellia* No.67, February 2002: A cross of the *C.hybrids* **Pop Corn** x **Wirlinga Belle.** Soft pink, semi-double, small, petals wrinkled, blooms in early to mid-season. Petals easily damaged by coldness outdoors. Tree compact with short nodes. Originated by Yaichirô Fujimoto

Hanakago-genji. (Flower Basket - Striped), *(C.japonica),* Tokyô Ono-en Catalogue 1928, p.37: Red spots and streaks on pink, formal double, large. Originated in Japan.

Hanakanmuri. (Flower Coronet), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.20, colour photo. For other colour photos see *Encyclopedia of Camellias in Colour,* vol.II, 1978. pl.345, p.143; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.117, 238 as 'Hana-kanmuri': Medium sized, open, campanulate single with 5 large, orbicular petals with a ground of white to pale pink, with broad and narrow crimson streaks. Early flowering. Leaves dark green, glossy, long-elliptic; apex acuminate, margins shallowly, sharply serrate. Originated in the Chûbu District, Japan. A seedling of **Bokuhan.** Originated and released by Kiraku Sakuragi in 1965.

Hanakanzashi. (Ornamental Flower Hairpin), *(C.rusticana), Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.183, p.96, description, p.318 as 'Hana-kanzashi': Large semi-double to informal double,10-12 cm across x 3.5 cm deep with 18-20 petals, narrow-oblong in 2-3 rows, pink (RHS.CC. Red Group, 55C veined 55A). Stamens are wide, open and scattered, anthers deep yellow. Leaves light green, broad oval; apex acute; margins sharply serrate, petioles hirsute. See Seibundô Shinkôsha, 1979, *Senchinshû,* p.117, colour photo, p.238, description; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.310. Originated with a private family in Jô'etsu City, Niigata Prefecture,Japan. Named and released by Kaoru Hagiya in 1970.

Hanakarako. (Anemone Flower), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.8: No description. Originated in Shimane Prefecture, Japan.

Hanakarô. (Chief Vassal of Flower), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.232: A seedling of **Tsumagome.** Early flowering. Spreading stamens. Originated in Japan. Different reading for 'Hanagarô'.

Hana-kasumi. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.122. Different reading for **Hanagasumi.**

Hanakazura. (Flower Creeper), *(C.sasanqua),* JCS., 1987, *Tsubaki,* No.26,, p.44; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33; Peach pink, medium size, single. Flowers early to mid-season. Originated in the Shizu'oka Prefecture, Japan.

Hanakemuri. (Flower Smoke), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large white single, with large and small red lines. Cylindrical stamen cluster. Originated in Japan. (Believed extinct.)

Hanakohime. (Princess Hanako) *(C.sasanqua). "Sasanquas, The Winter Flowers"* ICS Congress, Kurume 2010, English translation p.61; White base, petal edges tinged red, semi-double, medium size, early. From Aichi (Inazawa). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.317 with colour photo; Leaves elliptic, medium size. Upright, vigorous growth. First sold by Kosaki Chinjuen in the 1980s.

Hana-koshimino. (Flowered Straw Raincoat), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.120: Large flower of unusual form, one flower growing from another - white with large crimson markings. Originated in Japan. (Believed extinct). Probably the same as the one below.

Hana-koshimino. (Flowered Straw Raincoat), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.251: White semi-double to incomplete double with an erruption of stamens and petaloids, with some rose coloured dots and streaks. Originated in Japan (Believed extinct.) Probably the same as the one above.

Hanakotoba. (Flower Language), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.66, colour photo: Deep crimson single of 5 petals with large, white spots and a central stamen column with golden anthers Tubular to cup-shaped flowers. Leaves elliptic, dark green, twisted, recurved, tapering acuminate, sharply serrate. Mid-season to late flowering. Originated in Japan. A seedling of **Iwane-shibori.** Named and released by Minoru Satô in 1954. See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.117, 238, as 'Hana-kotoba'.

Hanakuruma. Different reading for **Hanaguruma.**

Hanamidô. (Flower Temple). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.203 with colour photo; English translation p.141. Small to medium single, varied flowers – white to pale pink bordered white, striped red etc, fat stamen cylinder. Flowers mid-season. Leaves ovate to broadly elliptic, medium size. Upright to spreading growth. Selected from natural seedlings growing in Niihama City. Named and released by Tokihiro Kôno in 1985. From Ehime Prefecture.

Hanamidô. (Flower Temple). *(C.hiemalis). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.310 with colour photo; English translation p.218. Medium size, semi-double, large white mottles and stripes on deep pink ground, petals curved inwards. Flowers early. Leaves narrowly elliptic, medium size, closely resembling leaves of **Shishigashira.** Upright, vigorous growth. A new seedling of **Shishigashira**. Originated and released by Minoru Satô. From Aichi Prefecture.

Hanamigasa. (Flower Viewing Bamboo Hat), *(C.rusticana), Yuki Tsubaki no Kai,* 1967; black & white photo, p.23, Seibundô Shinkôsha, 1966, *Garden Life,* No.17; Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.189, Rose form to formal double with 5-7 rows of petals, medium size, with blush white ground having soft pink patches and crimson streaks. Petals about 25, notched at the apex. Leaves, glossy, dark green, long-ovate, bluntly acuminate, shallow sharp serrations, petioles hairy. See, Seibundô Shinkôsha, 1979, *Senchinshû,* p.119, colour photo. Synonym: 'Kubikino-sato'. Resembles **Kikusarasa.** See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.400. Originated in Kubiki-gun, Niigata Prefecture, Japan. Collected, named and released by Tokuji Ôoka in 1970. Chinese synonym 'Huajianli'.

Hanamiguruma. (Cherry Viewing Carriage), *(C.japonica),* Itô, Ihei, (before 1801), *Hyakka Tsubaki Nayose Irotsuki,* pl.45; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki,* 1st section: Large size, white, semi-double with 3-4 rows of petals; red, streaked and spotted white. Originated in Japan. (Believed extinct.)

Hanamiguruma. (Cherry Viewing Carriage), *(C.japonica),* Yashiro, Kôken, 1841, *Kokon Yôrankô;* Itô, Ko'emon, 1879, *Chinkashû:* Pink spotted deeper pink, medium single. First listing in English -Tokio Nurseries Catalogue, 1896, p.13. For colour photos and descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan,* pl.173, p.300; Tuyama, 1968, *Camellias of Japan,* pl.332, p.168, descriptiom, p.198 as 'Hanamiguruma'-Tokyô; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.115, p.74; Leaves elliptic to broad-elliptic, margins depressed crenate-serrate, petioles glabrous. Flowers medium sized, single, widely opened, pale pink (Camellia rose 622/3), densely long and shortly striped with red in various degrees of shading. Late flowering. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* lists **Hanamiguruma** as one of three spouses with **Yukimiguruma** and **Beniguruma,** while Itô Ko'emon, 1979 lists it with **Yukimiguruma** and **Tsukimi-guruma.** Synonym: 'Hanamiguruma'-Tokyô. Originated in Japan.

Hanamiguruma. Synonym for **Hanamiguruma-Nagoya.**

Hanamiguruma-Nagoya. (Cherry Viewing Carriage from Nagoya), *(C.japonica),* Yoshida, Shigekurô, 1933, *Chinkashû:* Very large, variegated flower. Tuyama, 1966, *Camellia Cultivars of Japan,* colour pl.173, p.300: Leaves ovate to ovate-elliptic; shortly acuminate, coarsely serrate. Flowers single, 5 petalled - palest pink, roughly striped red. Flowers mid-season to late. See *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.116, p.74 & 308 as 'Chûbu-hanamiguruma' and Satô. 1975, *Chûbu no Tsubaki,* p.27 as 'Hanamiguruma'. Originated Chûbu District, in Japan.

Hanamiguruma-Tokyô. Tuyama, 1968, *Camellias of Japan,* pl.173, p.300. Synonym for **Hanamiguruma.**

Hanamikoshi. (Flower Portable Shrine). (*C.reticulata* hybrid). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.203 with colour photo; English translation p.141. Large, peach red to red, peony form mixed with large petaloids, slightly fragrant. Flowers mid-season. Leaves narrowly elliptic,

large. Spreading growth. A cross between *C.hiemalis* and **Brilliant Butterfly**. Named and released by Kaoru Hagiya in 1978. From Niigata Prefecture.

Hanamizuki. (Flowering Dogwood) (*C,japonica*) from Ibaragi Pref., *Japan Camellia* No. 67, February 2002: A natural seedling of **Lily Pons.** Pink shading off towards white base, single, trumpet shape, tubular stamen cluster, medium size, blooms in spring. Leaves elliptic, medium, somewhat twisted. Originated by Kunimitsu Suzuki in 1997.

Hana-mizuki. (Dogwood). (*C.reticulata* hybrid). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.279 with colour photo; Petal tips deep pink, shading to pale pink at centre. Medium size anemone form, tight centre of small curled petaloids. Flowers early. Leaves elliptic, medium size. A cross of **Shirokoshimino** x **China Lady,** named and released by Kazuo Yoshikawa, Osaka, Japan, in the 1990s.

Hanamushiro. (Flower Carpet), *(C.japonica),* Tuyuma, 1968, *Camellias of Japan,* pl.265, p.134, colour photo, p.171, description: Leaves light green, thin, elliptic to narrowly elliptic, acuminate, 6.3 cm x 3 cm, petioles, 9 mm long, glabrous. Flowers complete, formal doubles, deep red (Currant red 821 /1), petals 42-48 recurving, diminishing in size to the centre; Late flowering. Originated in the Fukushima Prefecture, Japan.

Hana-nana. *(C.sasanqua)* SCCS, *Supplementary List*, 2014. Originated by Bobby Green, Green Nurseries, Fairhope, Ala., USA. A seedling of **Hanajiman**, pollen parent unknown. Single white, bordered intense deep pink. Compact growth.

Hana-no-ame. (Rain of Flowers), *(C.rusticana), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.348: A single with 5-6 petals, soft pink with an occasional red stripe, petals a little notched, cup shaped. Occasional some flowers are margined with white. Stamens in a short, central cylinder, anthers pale yellow, filaments light cream. Leaves dark green, obovate, acuminate, finely serrate, twisted. See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.118, 239, and Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.278. Originated in Kashiwazaki City, Niigata Prefecture, Japan. Named and released by Tokuji Ôoka.

Hananobori. (Flower Flag). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.202 with colour photo; English translation p.140. Large, semi-double, large and small vertical red stripes on white ground, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, large. Upright, vigorous growth. A mutation of **Kei-un.** Discovered by Kimura Shikishima'en Nursery in 1975. Named and released by Kiyoshi Enomoto. From Hyôgo Prefecture.

Hana-no-chô. (Flower Butterflies). *(C.x williamsii). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.201 with colour photo; English translation p.140. Medium size, pink semi-double, lotus-like flower with slender, plicate petals, cylindrical stamen column. Flowers early to mid-season. Leaves elliptic, medium size, flat. Upright growth. A cross between *C.japonica* **Miyakodori** and *C.x williamsii* **Tulip Time.** Originated and released by Nobuo Sasai in 1997. From Okayama Prefecture.

Hana-no-kaino. (obscure), *(C.sasanqua),* Sandhurst Nursery Catalogue, 1957: Large size, single white. Originated in Japan.

Hana-no-ko. (Child of Flower). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.133 with colour photo; Large, deep red, formal double. Flowers mid-season to late. Leaves ovate, flat. Upright, vigorous growth. A cross of **Bokuhan** x **Ezo-nishiki,** originated by Takashi Shiota, Ishikawa Pref., Japan in 1977, named and released in 2002.

Hana-no-miyako. (Capital of Flowers), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.118, colour photo, p.239, description: Medium red semi-double, 10-11 petals, broad, overlapping with crimped margins, short, compact, centre stamen column, anthers light yellow, filaments

light pink. Mid-season to late flowering. Leaves obovate, shining, deep green, serrate. Originated in Nara Prefecture, Japan.

Hana-no-musume. (Sweet Sixteen). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.202 with colour photo; English translation p.140. Small, pink, tubular single, cylindrical stamen column. Flowers mid-season to late. Leaves somewhat oblong, medium size, flat. Somewhat upright growth, vigorous. A natural seedling of unknown parentage. Originated and released by Toshiaki Kosaki in 1980. From Aichi Prefecture.

Hana-noren. (Flower Curtain). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.202 with colour photo; English translation p.140. Medium size, tubular to trumpet shaped single, large and small vertical stripes and splashes of deep red on pale pink ground. Flowers early to late. Leaves elliptic, medium size. Upright growth. A hybrid between **Setsugekka** and wild japonica, named and released in 1976. From Aichi Prefecture.

Hana-no-sakari. (Flower in Full Bloom), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû.* One of the "polypetalla" camellias. Red, very large formal double. Satomi believed that this variety was probably the same as that existing in the Denko Temple, Nara referring to 'Denkôji-chiri-tsubaki', synonym 'Mononota-tsubaki'. Synonyms: 'Aka-owari', 'Aka-owari-no-chiri-tsubaki'. See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.100.

Hana-no-sasayaki. (Flower's Whisper) *(C.japonica), Latest Illustrated Book of Japanese Camellias,* (Camellias of Japan), 2010, p.149 with colour photo; Cloud-like and grainy red blotches on white ground. Large semi-double, with central stamen column. Flowers mid-season to late. Leaves elliptic, medium size. Spreading growth. Originated in a private garden in Agano City, Niigata Pref., Japan.

Hana-no-sato. (Flower Village), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.215. *Encyclopedia of Camellias in Colour,* vol.II. 1978, pl.369. Seibundô Shinkôsha, 1979, *Senchinshû,* pp.118, 239: Large double of deep crimson with 34 rows of petals with fluted and ruffled margins, standing apart and a centre cylinder of about 50 stamens with gold anthers and red filaments. Blooms mid-season. Leaves broad-lanceolate, apex rounded to acute, glossy, dark green, crenate; young growth reddish. There are several old trees in Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1975. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.315.

Hana-no-tobira. (Title Page of Flowers), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.11, colour photo as 'Hananotobira': Medium size, single of 7 petals, white to blush pink with specks and marks of crimson, cup-shaped with broad, overlapping petals and a bold, centre column of stamens with gold anthers and pale yellow filaments. Blooms early. Leaves broad-ovate, glossy, dark green; apex acute, slightly reflexed. A seedling of **Shûfûraku** x **Jurô'an.** Named and released by Minoru Satô in 1973. For colour photos see *Encyclopedia of Camelias in Colour,* vol.II, 1978, pl.355, p.145. Originated in Chûbu area, Japan.

Hana-no-yuki. (Flowers Strewn like Snow), *(C.sasanqua),* Ashizawa, 1898, *Chabaika Taishû;* Wada, 1941, *Japanese Garden Treasures,* p.32: Semi-double, very pale pink, with deeper pink margins, large size. Originated in Japan. Chinese synonym: 'Hua'ao'.

Hana-no-yuki. (Flowers Strewn like Snow), *(C.sasanqua).* Hakoda, 1987, JCS., *Tsubaki,* No.26, p.44; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Medium size, white ground, shading to pale red, single. Early to mid-season blooming. Originated in the Tokyo Prefecture, Japan.

Hana-otodo. Fendig, 1953, *American Camellia Catalogue.* Different reading for **Hanadaijin.**

Hanashirabe. (Flower Tune). *(C.hybrid). Nagoya Camellia Society Bulletin,* 1992, No.25, p.5 and colour plate p.9: Originated by Kôji Funakoshi, Nagoya, Japan. A chance seedling of **Barbara Clark.** Small size, 7 cm across, single of 7 petals with a fine colour graduation, pink at edge,

shading to white at centre; yellow filaments. Mid-season flowering. Its name refers to its melodious colour graduations.

Hanashirube. (Flower Signpost), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.96: A medium size, 5 petalled single of campanulate form. Petals deep pink at their base, washing out almost to white at the petal edges, with an occasional streak of red. Leaves broad oval, dark green, blunt acute, fine, sharp serrations. Originated in Inazawa City, Aichi Prefecture, Chûbu, Japan by Shigeru Itô. Named and released by Minoru Satô in 1971.

Hana-shizuku. (Flower Rain Drops). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.200 with colour photo; English translation p.139. Medium size, tubular single, a few red splashes and stripes on pale pink ground, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size,. Upright growth, branches weeping. The original tree is growing at an old family home in Inazawa City. Named and released by Tatsumi Satô in 1972. From Aichi Prefecture.

Hanasome. (Dyed by Flowers), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e:* Medium size, light pink flower. Originated in Japan. (Believed extinct.)

Hanasoro'e. (Arranging Flowers), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô,* vol.344 as 'Hana-zoro'e': Large white with red spots. Originated in Japan. (Believed extinct.)

Ha-Na-Tachi-Bawa. Sandhurst Nurseries Catalogue, 1957. Corruption of Japanese name **Hanatachibana.**

Hanatachibana. (Flowering Mandarin), *(C.japonica),* Iwasaki, 1828, *Honzô Zufu:* Double, white petals with pink lines and small dots. Different reading 'Kakitsu'. Originated in Japan. (Believed extinct.)

Hanatachibana. (Flowering Mandarin), Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large double, peach pink with white speckles. Tuyama, 1966, *Camellia Cultivars of Japan,* pl.22, pp.46, 47; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.291, p.132; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.109, p.38; Seibundô Shinkôsha, 1979, *Senchinshû,* p.118 & 238: This is a white blotched form of **Kumasaka;** an open, peony form to rose form double of deep pink with white variegation in various degrees, stamens sometimes in central cluster, sometimes in fascicules. Blooms mid-season to late. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.322. Different readings: 'Kakitsu', 'Hanatachibawa'. Synonyms: 'Gay Boy', 'Deacon Dodd', 'Lady Marion Variegated', 'Kumasaka Variegated'. In England **Hanatachibana** has sometimes been erroneously applied to **Kumasaka.** Corruptions of the name: 'Nana-Tachijant', 'Ha-Na-Tachi-Bawa', 'Hana-tashiwan Ban', 'Hanatachi-Bawa', 'Hana Taki Bawa'. Originated in Kantô, Japan.

Hanatachi-Bawa. Van der Vis, Boskoop, Camellia List, 1964-1965, p.1. Orthographic error for **Hanatachibana.**

Hana-tachi-bawa. Exbury Gardens Ltd. Catalogue, 1962, p.1. A corruption of the Japanese name **Hanatachibana,** although, from the description, the cultivar is **Kumasaka,** the unvariegated form.

Hana-tashiwan Bana. Eastwood Hill Arboretum, 1982, *List of Trees, Shrubs and Climbers,* p.3. Corruption of the Japanese name **Hanatachibana.**

Hana Tachi Bawa. Russell Ltd. L.R., Nursery Catalogue, 1964-1965. Different reading for **Hanatachibana.**

Hana Taki Bawa. Hyden Nurseries, Surrey Catalogue, 1969, p.16. Corruption of the Japanese name **Hanatachibana.**

Hanatakara. (Flower Treasure), *(C.hiemalis),* Satô, 1975, *Chûbu no Tsubaki,* p.115: Soft pink peony form with irregular petals. Leaves small, obovate, mid-green. Originated in Chûbu area, Japan. Different reading: 'Kahô'.

Hanayama. *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.13. Shirai, 1926, *Tsubaki Kai:* Different reading for **Kazan.**

Hanayuki. Hume, 1952, *Camellias, Kinds and Culture.* Based on the same characters as **Hana-no-yuki.**

Hanazaki-bokuhan. Seibundô Shinkôsha, 1979, *Senchinshû,* p.119, Orthographic error for **Hayazaki-bokuhan.**

Hanazakura. (Flower Creeper). *(C.sasanqua). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.320; English translation p.242. Medium size, peach red single. Flowers early. Leaves oblanceolate, medium size, somewhat yellowish green. Upright, vigorous, branches slender and weeping. The original tree is growing in Izu Peninsula, Shizuoka Prefecture, Japan. Named by Fusako Yamasaki.

Hana-zone-nishiki. Fendig, 1953, *American Camellia* Catalogue. Corruption of the Japanese name **Hanazono-nishiki.**

Hanazono. (Flower Garden), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.118, colour photo, p.238, description: Large sized peony form, red with about 15 large, outer guard petals, the centre filled with small petals, twisted and folded, some with white variegation, and petaloids with stamens dispersed throughout. Flowers mid-season. Leaves mid-green, broad, elliptical, acuminate, finely serrate. Originated in Takada City, Niigata Prefecture, Japan.

Hanazono-nishiki. (Flower Garden Brocade), *(C.sasanqua), Kajitsuen Meikan;* Wada, 1941, *Japanese Garden Treasures,* p.31: Palest pink, finely striped with red, medium size single. Originated in Saitama Prefecture, Japan. For colour photo: *Encyclopedia of Camellias in Colour,* vol.1, 1972, pl.543, p.215. Corruption of name: 'Hana-zone-nishiki'.

Hanazome. Different reading for **Hanasome.**

Hanazoroe. Yashiro Kôken 1841, *Kokon Yôrankô.* Synonym for **Hanasoro'e.**

Hanazuri. (Flower Dyed), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka.* p.314, colour photo and description: Large size, dark crimson, semi-double with 12-14 petals in 2-3 rows, lateral margins incurved and a central stamen cluster with red filamenst and gold anthers. Early to late blooming. Leaves mid-green, elliptic to broad-elliptic, apices acute, margins serrulate. Originated in the Niigata Prefecture, Japan. Named and released by Seiji Kabuto in 1982.

Handaresei-kujaku. (Half Weeping form of 'Kujaku'), *(C.japonica),* Craig, 1972, *American Camellia Yearbook,* p.52, with black and white photo: The 'Kujaku', or "Peacock" camellias are double forms of **Yuriba** or "Lily Leaf". Their origin is obscure, and all those presently grown can be traced back to the city of Mikawa in the Aichi Prefecture, Japan. The largest specimen in Mikawa is over 80 years old and seedlings exhibit all forms from the single **Yuriba** to the double **Kujaku.** This cultivar is the semi-weeping form of **Kujaku** and carries lily shaped, red, semi-double flowers with long strap-like petals; the leaves being linear or very narrowly-elliptic.

Handelii. Camellia Haven Nursery Catalogue, New Zealand, 1997, p.11. Tiny white single, dwarf growth, fine foliage. Originated in China. A form of the species *C.handelii* (Sealy). See ICS Register, p.8.

Handersonii. Anonymous, 1839, *Revue Horticole,* p.203-204. Orthographic error for **Hendersonii.**

Haneji-shirasagi. (White Heron from Haneji). *(C.japonica),* JCS, 1994, *Tsubaki,* No.33, p.35, Illust. p.33: Originated by Hiroshi Matsuda, Okinawa, Japan. Small, white single flower, campanulate to spherical. Blooms early. Leaves medium size, elliptic. Plant spreading and sturdy. Originated in Haneji, Nago City; a large rice growing area, inhabited by many white herons.

Hangongfen. (Cold Pink Palace), *(C.japonica),* Wang, Xiangjin, 1621, *Qunfangpu.* No description. Originated in China. (Believed extinct).

Hangzhou Yihao. 'Hangzhou No.l', Chang, Shao Yun, 1987, *Camellias fron Zhejiang,* p.76. Synonym for **Chiguan.**

Hanhong Juban. (Blond Pink Chrysanthemum Petal), (*C.reticulata*), Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.20. Synonym for **Hentiangao.** Different readings: 'Hanhungchupan', 'Hanhungtsueban', 'Han-hung Chü-pan'.

Han Hung Chü Pan. Different reading for 'Hanhong Juban'. Synonym for **Hentiangao.**

Hanhungchupan. Durrant, 1972, *New Zealand Camellia Bulletin,* p.10, 15. Different reading for 'Hanhong Juban', a synonym for **Hentiangao**.

Han-hung Chü-pan. Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.20. Different reading for 'Hanhong Juban' a synonym for **Hentiangao**.

Hanhungtsueban. Ikeda, 1974, *American Camellia Yearbook,* vol.II, p.107. Synonym for **Hentiangao.**

Haniori-otome. Macpenny's Nursery Catalogue, 1981. Synonym for **Otome.**

Haniri Otome. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.97. Corruption of the Japanese name 'Haniori-otome', synonym for **Otome.**

Hank Stone. *(C.reticulata), American Camellia Yearbook,* 1986, p.90, 91, Reg. No.2017: A large, rose to pale pink, rose form double *C.reticulata* ('Crimson Robe' [**Dataohong**] x **Arch of Triumph**), flowering mid-season to late. Originated by Frank Pursel, Oakland, California, USA. The 10 years old seedling first bloomed 1983. Average flower size is 11 cm wide x 7 cm deep with 32 petals, yellow anthers, white filaments. Plant growth is erect and medium with dark green leaves.

Hank's Choice. *(C.japonica),* SCCS *Camellia Nomenclature* 2009, p.57; Pale blush pink with prominent red splotches and stripes. Large semi-double. Vigorous, open, spreading growth. Flowers mid-season. Raised by Vi Stone, Baton Rouge, La, USA. Published in 2007.

Han-Ling Raspberry. *(C.japonica), American Camellia Yearbook,* 1977, p.211, Reg. No.1433: A very large, raspberry on white, early, formal double to peony form to semi-double. A *C.japonica* mutant of **Carter's Sunburst** first observed in 1972. Originated by Dr Leland E. Chow, Bakersfield, California, USA. The bloom is raspberry on white, 42 petals, 26-28 petaloids, yellow anthers and yellowish filaments. Average size, 12.5 cm across x 8.5 cm deep. Blooms early to late. Plant growth is upright, spreading, open and rapid in rate with dark green leaves, 8.5 cm x 5.5 cm.

Han-Ling Snow. *(C.japonica), American Camellia Yearbook,* 1977, p.212, Reg. No.1432: A very large, pure white, an early formal double as well as a semi-double and peony form in mid-season. A *C.japonica* mutant of **Chow's Han-Ling,** which was first observed in 1973. Originated by Dr. Leland E. Chow, Bakersfield, California, USA. The bloom is pure white with 42 petals, 26-28 petaloids, yellow anthers and yellowish filaments. Average size is 12.7 cm across x 8.5 cm deep. Blooms early to late.

Hanna Moor. Trillon, Le Mans Nursery Catalogue, 1843, p.6. Orthographic error for **Hannah Moore.**

Hannah C. Blue. *(C.japonica),* SCCS., 1955, *The Camellia Review,* No.4. p.13. No description. Originated in USA.

Hannah Moor. Seidel, 1870, Pflanzen Catalog, p.6. Orthographic error for **Hannah Moore**.

Hannahmoori. Dauvesse Nursery Catalogue, 1855-1856. Orthographic error for **Hannah Moore.**

Hannah Moore. *(C.japonica),* van Houtte Catalogue, 1842-1843. 9:53: Wide white spots, distinct on a bright crimson background, in the style of 'Donckelaeri', (**Masayoshi**) petals spread out, centre irregular. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.8: Outspread petals with full, irregular centre, deep crimson with broad, white blotches.Orthographic errors: 'Hannach Moore', 'Hannahmoori', 'Henna Moor', 'Hannah Moor'. Originated in England.

Hannam's Dream. *(C.japonica), New Zealand Camellia Bulletin*, 1995, Issue No.120, vol.XIX, No.1, p.46, Reg. No.355: Originated by A. & R. Hannam, Putaruru, New Zealand. Glowing red (RHS.CC.52A-D), semi-double with yellow anthers and filaments, 14 petals. Flowers 9 cm wide x 3-4 cm deep. Growth upright and medium. Leaves 8-9 cm long x 4 cm wide, dark green. A chance seedling that blooms mid-season to late.

Hannibal. *(C.japonica),* Paul, Nursery Catalogue, 1867, p.17. No description. (Believed extinct.)

Hannü. (Chinese Maiden), Gao & Zhuang, 1989, *The Camellia in China,* p.71, No.514: Chinese synonym for **China Lady.**

Hanoi-no-yoake. (Dawn in Hanoi.) (*C.flava* hybrid). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.292 with colour photo; Bright yellow, semi-double with upstanding layers of petals, tubular stamen ring, medium size. Late flowering. Leaves broad-ovate, medium size, cherry leaf shape. Upright, vigorous, cold resistant growth. A cross of *C.flava* x (**Goshiki-chiritsubaki** x **Ôtani-tô-tsubaki**) originated and released by Misoji Yamaguchi, Kyoto, Japan, in 2006.

Ha-no-mai. (Dance of the Second Part), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.27: Large size, white, double. A seedling of *C.yuhsienensis x C.x vernalis* **Umegaka.** Originated in the Niigata Prefecture, Japan. Named and released by Kaoru Hagiya in 1986. Note: Traditional Japanese dances are composed of three parts, that is, Jo, Ha and Kyû.

Hanshôjo. (Court Lady Variegated), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Deep red, 6 petalled, anemone form, large, with light pink and white petaloids. Stamens pink, anthers yellow. Different reading: 'Funoshôjo', 'Hunoshôo', 'Hansyôjo', 'Hunosyôjo', 'Hunoshozyo'. Originated in Japan. (Believed extinct.) See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.108.

Hansyôjo. Different reading for **Hanshôjo.**

Hansogakochi. (Hanso's Mouth), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Deep red, small, campanulate single; white filaments. Resembles: **Ichiko-wabisuke.** Originated in Japan. (Believed extinct.) See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.102.

Hanxiu. (Cherish Beauty). *(C.hiemalis).* China Regn No.2. *China Flowers & Horticulture*, Jan 2006, No.2, p.49, with colour photo; A cross of *C.hiemalis* 'Dahong Mudan' **(Shishigashira)** and *C.sasanqua* 'Bai Shizitou' **(Fuji-no-mine),** Originated by Luo Shihua, Luodian No.3 Middle School, Jinhua, Zhejiang, China. Vigorous plant, dark green leaves reflexed and with prominent midrib. Rose red to deep red with all stamens as petaloids. Flowers mid-season. Slight fragrance.

Hanzhi Boshi. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.320, p.76: Chinese synonym for the USA *C.japonica* **Dr Lilyan Hanchey.**

Haosi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.429; Chinese synonym for the USA *C.reticulata* hybrid **Frank Houser.**

Haosidun Xiaojie. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.429; Chinese synonym for the USA *C.reticulata* hybrid **Miss Houston.**

Haoyue. (Bright Moon), *(C.reticulata),* CSC., June 1989, *Report on the Camellias of China:* Rose form, white, outer petals pink shaded, inner spoon-like, seldom butterfly wings, 10-12 cm across with 18-24 petals. Stamens many, clustered into a single whorl, basally adnate with the inner petals, seldom mingled with petals. Flowers mid-season. Leaves ovate-elliptic, incurved length-wise in a broad Vee, 7-9 cm long x 3.2-4.5 cm wide. Originated in Yunnan, China.

Happ.200. Thomasville Nursery Catalogue, 1957. Abbreviation for 'Happiness', a synonym for **Gauntlettii.**

Happiness. SCCS., 1954, *The Camellia Review,* vol.15. Synonym for **Gauntlettii** as 'Lotus'.

Happiness. *(C.pitardii x C.reticulata), New Zealand Camellia Bulletin,* 1976, vol.IX, No.6, p.27, Reg. No . 126: A seedling of *C.pitardii* var. *yunnanensis x C. reticulata* 'Willow Wand' (**Liuye Yinhong**). First flowered 1973. Originated by Mrs T. Durrant, Rotorua, New Zealand. Growth habit is upright with pendulous branches; leaves dark green with fine serrations, 11 cm x 4.5 cm. The flower is semi-double with an exceptionally high central boss of stamens with cream filaments and golden anthers. The 12-14 petals are heavily waved, deeply notched and folded. Its colour is RHS.CC Red Group 55C fading to 55D. and size is 11 cm across x 4.5 cm deep. Early flowering.

Happy. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...,* Chen Junzhi and Chen Jinshui, p.47; Purple cloudy pendent group; Purple flower, cupped corolla.

Happy Amy Fenska. *(C.japonica),* SCCS., 1986, *The Camellia Review,* vol.48, No.2, p.7: Formal double, 6-7.5 cm across, some tight spirals, some are normal formals, some with a bud centre in various stages of pink. Originated in USA by Meyer Piet and Lee Gaeta, California.

Happy Birthday. *(C.japonica), American Camellia Yearbook,* 1979, p.107, Reg. No.1562: A large, light pink, striped deep pink, peony form *C.japonica* chance seedling, blooming early to mid-season. Originated by L.G. MacDowell, Lakeland, Florida, USA. This 9 years old seedling first bloomed 1973. The flower has 60 petals, 12 petaloids, yellow anthers and white filaments. Its size is 12-12.5 cm across x 7.5 cm deep with fluted, ruffled petals. Plant growth is upright and rapid with mid-green leaves, 10 cm x 3.8 cm.

Happy Days. *(C.reticulata* hybr.), *American Camellia Yearbook,* 1980, p.166, Reg. No.1593: A very large, rose-pink, rose form double *C.reticulata* hybrid ([*C.reticulata* 'Cornelian' x *C.hybrid* **Brigadoon**] *x C.reticulata* 'Crimson Robe'), mid-season flowering. Originated by Frank Pursel, Oakland, California, USA. The 5 years old seedling first flowered 1978. Average flower size is 16 cm wide x 6 cm deep. The flower has yellow anthers. Plant growth is upright, dense and rapid in rate with dark green leaves.

Happy Ever After. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.136. Synonym for **Chôjuraku.**

Happy Goddess of Good Luck. *Camellias,* Y.C. Shen, 2009, p.178 with colour photo; Synonym for **Tafuku Benten.**

Happy Harlequin. *(C.japonica),* Nuccio's Nurseries Catalogue, 2007, p.7; Medium to large semi-double, veined strawberry pink with rose red stripes, toning deper at centre and bordered with an irregular, narrow white margin. Vigorous, upright, somewhat open growth. Flowers early to mid-season. Introduced 2006 under the name 'Harlequin'. Raised by Nuccio's Nurseries, Altadena, Calif., USA.

Happy Higo. *(C.japonica)* SCCS., 1990, *Camellia Nomenclature,* p.50: Red, very large, single to semi-double, with flared, yellow stamens. Nuccios N#8811. Strong, vigorous, upright growth. Mid-season blooming. Colour photo *International Camellia Journal,* 1993, No.25, between pp.36-37. Originated in USA by Nuccio's Nurseries, Altadena, California. Chinese synonym 'Xingfu Chun'. Note; Form is close to, but does not fully reach the Higo requirement of the stamens reaching to two thirds of the flower diameter.

Happy Holidays. *(C.japonica),* ACS., 1984, *The Camellia Journal,* vol.39, No.4, p.43, Reg. No.1956: A large, light pink formal double, *C.japonica* chance seedling that flowers early to mid-season. Originated at Nuccio's Nurseries, Altadena, California, USA. The 12 years old seedling first flowered 1972. Average flower size 10 cm wide. Plant growth is upright, dense and medium in rate with dark green leaves, medium sized. Chinese synonym 'Xingfu Jiari'.

Happy Memories. *(C.japonica), American Camellia Yearbook,* 1981, p.99, Reg. No.1725: A large, soft pink edged white anemone form *C.japonica* mutant of **Elegans Supreme;** mid-season flowering. Originated by Henry S. Stone, Baton Rouge, Louisiana, USA. The 12 year old mutant first flowered 1974. Flower size 10 cm wide x 5 cm deep with 48 petals and 480-520 petaloids. The outer petal layer always has a red streak. Petaloids vary from ivory to blush. Plant growth is average in rate with mid-green leaves, 7.5 cm x 4 cm. Chinese synonym: 'Xingfu Huiyi'.

Happy Spring. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Xiyingchun.**

Happy Talk. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2013, p.29 with colour photo; Regn No.2902; Originated and registered by C.M. & Lillian Gordy, Ocala, Fla., USA. ACS, *Yearbook,* 2013, p.116 with colour photo; Propagated by Loch Laurel Nursery, Valdosta, Ga. A 10 year old seedling of **Happy Times**, pollen parent unknown, first flowered 2008. Medium size, 10cm diameter x 5cm deep flower is semidouble to rose form double, soft coral red. Gold anthers, cream filaments, falls whole. Upright growth at average rate. Mid-green leaves average 10cm x 4.5cm with medium serration. Flowers mid-season.

Happy Times. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2005, p.28 with colour photo p.29, Reg. No. 2662. A chance seedling that first flowered 1999. Originated by C.M. and Lillian Gordy, Ocala, Fla., USA. The 7.5 cm diameter, semi-double flower is variegated in soft red and white, with a central tube of bright yellow anthers and creamy filaments. Long lasting flowers fall whole. *American Camellia Yearbook,* 2005, p.42 with colour photo p.c5. Plant is upright and open with average growth rate. Dark green leaves are 9.5 cm x 3.8 cm. Flowers profusely mid-season to late.

Haraifude. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name 'Nudefude'.

Harakara-mikiwa. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Mikawa-no-tsuki.**

Harbinger. *(C.reticulata),* ACRS., 1971, *Camellia News,* No.43, p.34, Reg. No.134: Originated by Edgar Sebire, Wandin North, Victoria, Australia from an open pollinated seedling of *C.reticulata* 'Crimson Robe', (**Dataohong**) that first flowered in 1969. The 12.5-13 cm flowers are dark red and early flowering. Habit of growth is upright, dense and vigorous. The dark green leaves average 11 cm x 5.5 cm with an obtuse base, acuminate apex and fine serrations. Sport: **Harbinger Variegated.**

Harbinger Variegated. *(C.reticulata),* Cannon, 1975, ACS., *The Camellia Journal,* vol.30, No.1, as 'Harbinger Var.': A virus variegated form of **Harbinger-** Dark red marbled white. Originated in USA.

Harbor Light. Tammia Nursery Catalogue, 1965-1966, p.5. Orthographic variant for **Harbor Lights.**

Harbor Lights. *(C,japonica),* Cannon, 1962, ACS, *The Camellia Journal*, vol.17, No.1, back cover. No description. Originated in USA. SCCS, *Nomenclature Supplement,* 2014. Red with white frosting on petaloids. Medium to large anemone form. Average, upright growth. Very cold hardy. Flowers early to midseason.

Harbour in Spring. *(C.hybrid). Camellias,* Y.C. Shen, 2009, p.83 with colour photo as 'Harbour at Dawn'; Pink to deep pink, small sake-cup shaped single, thick petals, rusticana type stamens, fragrant. Flowers mid-season to late. Leaves small and thin, branches weeping. A cross between **Kon-wabisuke** and *C.lutchuensis* originated by Mesami Murata, Japan and released in 1980. Note; this cultivar may have a prior Japanese name which would take precedence as the valid name.

Hardy Beauty. *(C.japonica),* Mahaux, 1958, *American Camellia Yearbook,* p.50-52. An ancient camellia in Belgium of unknown origin with a semi-double bloom of 18 petals arranged in 2 rows. Its colour is a bright, pinkish red with golden anthers. The leaves are of average size, light green and daintily serrate. Plant growth is pyramidal and it is very cold hardy.

Harem. *(C.hybrid),* ACRS., 1971, *Camellia News,* No.43, P.35, Reg. No.145: Originated by F.S. Tuckfield, Berwick, Victoria, Australia. A chance seedling of *C.williamsii* **Lady Gowrie** which first bloomed 1966. The semi-double, hose-in-hose, 10 cm flowers are dawn pink, shading lighter at the centre. (RHS.CC.523/ 1 /3).- It has a spreading habit of growth and blooms midseason. The leaves measure from 7-8 cm long x 2.5-3.5 cm wide and are dark green.

Harema. (A Lull in the Rain). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.207 with colour photo; English translation p.144. Medium size, peony form, a few red stripes on pale pink ground. Flowers mid-season. Leaves elliptic, medium size. Upright growth. Selected from cultivars raised by a private family in Matsu'e City. Named and released by San-in Camellian Club in 1973. From Shimane Prefecture.

Haresugata. (Beautiful Figure of a Bride), *(C.rusticana),* JCS., 1973, *Tsubaki,* No.12, illustration No.5, p.2. For colour photo see Seibundô Shinkôsha, 1979, *Senchinshû,* p.122: A medium size, (9 cm across) soft pink, rose form double, imbricated with little regularity, about 40 petals; petals orbicular, a little emarginate; disordered central petaloids with degenerate stamens and pistil. Flowers mid-season to late. Leaves oval, serrations obscure, 7 cm long, petioles hirsute. Resembles **Otome.** Originated in Iwaki, Jô'etsu City, Niigata-ken, Japan. Collected in 1962 and named by Hagiya and Ishizawa in 1971.

Haresugata. (Beautiful Figure of a Bride), (Higo), Aikokai, 1977, *Higo Tsubaki:* Pink, becoming white as the flower ages, 10 cm across. Regularly spread stamens. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.69, color photo, as 'Higo-haresugata'. Originated in Kumamoto Prefecture, Japan. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan*), 2010, p.237 with colour photo; Flowers mid-season to late. Leaves dark green, elliptic. Spreading growth. Recognised by the Higo Camellia Society in 1977.

Haresugata. (Beautiful Figure of a Bride), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.102, colour photo: A large size, white, semi-double with red speckling and streaking, irregular stamen cluster, mixed with small, erect petals, giving the base of the petals a creamy cast. Originated in Chûbu, Japan. Note: This is now considered identical with **Miyako-no-nishiki,** sport of **Ezo-nishiki.** Its sparsely freckled pattern is unstable.

Haresugata. (Beautiful Figure of a Bride), *(C.hiemalis),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.48: Medium size, semi-double, white with petals tipped pale red. Originated in Shimizu City, Shizu'oka Prefecture, Japan.

Haresugata (Chûbu). (Beautiful Figure of a Bride). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.206 with colour photo; English translation p.144. Large semi-double, small stripes of deep red on white ground. Flowers mid-season. Leaves narrowly elliptic, large. Upright, vigorous growth. A natural seedling of **Esugata.** Named and released by Minoru Satô in 1969. From Aichi Prefecture.

Haresugata (Niigata). (Beautiful Figure of a Bride). *(C.rusticana). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.206 with colour photo; English translation p.144. Medium size, pale pink, formal double. Flowers mid-season. Leaves elliptic, medium size. Somewhat upright growth, vigorous, of *C.rusticana* parentage. A cultivar being raised by a private family in Jo'etsu City. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1973. From Niigata Prefecture.

Hari Withers. *(C.x williamsii),* ACRS., 1985, *Camellia News,* No.95, p.20, Reg. No.330 with colour photo on rear cover: Originated by Dr R.M. Withers, Hawthorn, Victoria, Australia. A hybrid *C.saluenensis* seedling that first bloomed 1975. The medium sized 9 cm formal double flowers have a deep pink centre, fading to pale pink towards the periphery. Flowers mid-season. The upright, spreading, vigorous plant has midgreen leaves, 9.5 cm x 3.5 cm, lanceolate, finely serrated.

Harkara-mikawa. SCCS., 1950. *The Camellia. Its Culture and Nomenclature,* p.93. Synonym for **Sanga-no-tsu.**

Harkaway. *(C.reticulata),* ACRS., 1971, *Camellia News,* No.43, p.35, Reg. No.146: Originated by F.S. Tuckfield, Berwick, Victoria, Australia as an open pollinated seedling of *C.reticulata* 'Crimson Robe', (**Dataohong**) that first bloomed 1965. It has an upright, open growth habit and produces a 10 cm, currant red (HCC.821/3) flower with petals compact, crimped and some slightly rabbit eared. The dark green, reticulate leaves, 8 cm x 4 cm, are broadly elliptic with apex acuminate, medium serrations.

Harkon. Vanderbilt, 1941, *Camellia Research, II,* p.3. Orthographic error for 'Horkan', synonym for 'Variabilis', itself a synonym for **Pompone.**

Harkon Alba. *Camellia Digest,* 1(1),1942. Orthographic error for 'Horkan Alba', synonym for **Paeoniiflora Alba.**

Harlequin. *(C.japonica),* van Houtte Catalogue, 1852-1853, 48:40: Flower medium, very full and globular, colour lake and rose on a backgound of clear yellow. Colours all new. Originated by Borghi, Italy.

Harlequin. *(C.japonica),* Hume, 1931, *Azaleas and Camellias,* p.32: Variegated white and pink with full double, peony-like flowers. Fruitland Nursery Catalogue, 1933-1934: White and clear pink to solid pink. Medium sized variform of full peony to formal double. Vigorous, upright, open growth. Late flowering. There has been some confusion in America with this variety. Rubel listed this name as early as 1929 in his "Fall Wholesale Trade List" and in following lists but these turned out to be **Mrs Anne Marie Hovey.** Synonyms: 'Sponge', 'Conglomerate'(Rust) and 'Rast's Conglomerate'. See Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I, p.167 for black and white illustration, and the pl. facing p.146, in *American Camellia Yearbook,* 1954. Sports: **Harlequin Pink, Harlequin Blush Pink, Harlequin White.** Synonyms: 'Harlequin Flore Pleno', 'Harlequin Variabilis'.

Harlequin Blush Pink. *(C.japonica),* Vanderbilt, 1940, *Camellia Research,* p.4 as 'Harlequin Bl. Pk.' A blush pink form of **Harlequin.** Originated in USA.

Harlequin Flore Pleno. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.97. Synonym for **Harlequin.**

Harlequin Pink. *(C.japonica),* Vanderbilt, 1941, *Camellia Research, II,* p.3. A pink form of **Harlequin.** Originated in USA.

Harlequin Variabilis. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.98. Synonym for **Harlequin.**

Harlequin White. *(C.japonica),* Vanderbilt, 1941, *Camellia Research, II,* p.3. A white form of **Harlequin.** Originated in USA.

Harlekin. *(C.japonica), Kamelien, 75 Years of Camellia*, catalogue 2008, p.30 with colour photo. A seedling of **Dixie Knight Supreme**, first flowered 2007. Originated by Peter Fischer, Wingst, Germany. A mid-size, 7cm x 3.5cm, peony form flower, red (RHSCC 45B) base with considerable, mostly thin, white radial striping. Only a few yellow stamens visible. Dark green, glossy leaves, 7.5cm x 4cm, with slight serration. Compact upright growth.

Harmonious. McIlhenny, 1941, *700 Varieties of Camellias,* p.7 as 'Harmonius'. Synonym for **Benibotan.**

Harmony. Gill & Searles Nursery Catalogue, 1955, p.5. Synonym for **Triumphans.**

Harnosiana. *(C.japonica),* Rousseau, Angers Nursery Catalogue, 1842-1843, p.2. Pale red.. Originated in France. (Believed extinct.)

Harold Austin. *(C.reticulata), New Zealand Camellia Bulletin,* 1983, vol.XIII, No.2, p.11, Reg. No.192: A chance seedling of *C.reticulata* 'Crimson Robe', (**Dataohong**), originated by H.G. Austin, New Plymouth, New Zealand that first flowered 1979 on a spreading. open plant of medium growth, with dark green leaves, 12 cm x 5 cm. The very large, semi-double form, measures up to 20 cm across x 8 cm deep with 25 petals and an occasional petaloid. Anthers are golden and it flowers mid-season. Its texture is firm and its colour an intense Rose Madder.

Harold L. Page. ACS, *The Camellia Journal*, Dec. 2012, inside front cover with colour photo; Orthographic error for **Harold L. Paige.**

Harold L. Paige. *(C.japonica x C.reticulata), American Camellia Yearbook,* 1974, p.170, Reg. No.1266: An 8 years old hybrid seedling that first bloomed 1969. **Adolphe Audusson** x 'Crimson Robe' (**Dataohong**), originated by Jack Osegueda, Oakland, California, USA. Plant growth is upright and rapid in rate with dark green leaves, 12.5 cm x 7.5 cm. The rose form double flowers are bright red (RHS.44A) and measure 13.5 cm across x 8 cm deep with 24 petals. Anthers are gold with reddish filaments. Flowers have heavy texture. Late blooming. Received the "Aubrey Harris Hybrid Award" and the "Frank L. Stormont Reticulata Award" in 1980. Abbreviation: 'Harold Paige'. Sport: **Harold L. Paige Variegated.** Chinese synonym: 'Haluode'.

Harold L. Paige Variegated. *(C.japonica x C.reticulata),* Gentry, 1986, ACS., *The Camellia Journal*, vol.41, No.4, p.23 as 'Harold L. Paige Var'. A virus variegated form of **Harold L. Paige**- Bright red blotched with white. Originated in USA. Chinese synonym 'Fuse Haluode'.

Harold L. Smith. *(C.japonica), American Camellia Yearbook,* 1966, p.90, Reg. No.865: A 12 years old seedling that first bloomed 1957. Originated by Smith's Nursery, Theodore, Alabama, USA. Plant habit is dense and medium in rate with dark green leaves, 9.5 cm x 5 cm. The peony form flowers are 10-11 cm across and 5 cm deep and have 15 petals and 40-60 petaloids. Colour is pink to lavender. Blooms early to mid-season.

Harold Murphy. (*C.reticulata* hybrid) SCCS, *Supplementary List* 2011. Glowing coral pink. Medium size peony form. Strong, upright, well-branched growth. {[(*C.pitardii* var *yunnanica* x **Zipao** 'Purple Gown') x **Buddha** x **Tiny Princess**)] x **Harold L. Paige**}. Flowers midseason to late. Originated in 2008 by Daniel Charvet, Fort Bragg, Calif., USA.

Harold Paige. *Beautiful Camellias of Descanso Gardens,* 1976. Abbreviation for **Harold L. Paige.**

Harret Bisbee. Cannon, 1967, ACS., *The Camellia Journal,* vol.22, No.4, p.16. Orthograhic error for **Harriet Bisbee.**

Harriet. *(C.japonica),* Berlèse, 1849, *Annales de la Société Centrale d'Horticulture de France,* vol.40. Similar in shade to Melinda Rubra Originated in England..

Harriet Beecher. Giles & Son Nursery Catalogue, 1881, p.91. Abbreviation for **Harriet Beecher Sheather.**

Harriet Beecher Sheather. *(C.japonica),* Shepherd & Co. Nursery Catalogue, 1875: "Rosy salmon, perfect shape, one of the best". Lighter centre. Medium large formal double. Vigorous, spreading growth. A chance seedling originated by Silas Sheather, Parramatta, N.S.W., Australia. See black and white photo, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III, p.100. Synonym: 'Mrs H.B. Sheather'. Abbreviations: 'Harriet Beecher', 'H.B. Sheather', 'H. Beecher Sheather'. Orthographic errors: 'Harriot Beecher Sheather', 'Mrs H.B. Streeter', 'Harriett Beecher Sheather'. See colour photo ACRS., 1977, *Camellia News,* No.66, p.21. Sport: **Harriet Beecher Sheather Variegated.**

Harriet Beecher Sheather Variegated. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.59 as 'Harriet Beecher Sheather Var.'. A virus variegated form of **Harriet Beecher Sheather** - Rosy salmon blotched with white. Originated in USA.

Harriet Bisbee. *(C.japonica), American Camellia Yearbook,* 1967, p.227, Reg. No.948: A 9 years old chance seedling that first bloomed 1962; originated by Frank D. Bisbee, Jacksonville, Florida, USA. Plant growth is upright, open and rapid in rate with light green leaves, 8.5 cm x 3.8 cm. The formal double flower is 10 cm across x 5 cm deep and has 75-85 petals. Colour is blush pink. Petals curve up like a water lily. Blooms early to mid-season. Orthographic error: 'Harret Bisbee'. See colour plate, front cover, ACS, 1967, *The Camellia Journal,* vol.22, No.4 and pl.77, p.45, *Encyclopedia of Camellias in Colour,* vol.II, 1978.

Harriet Durrant. *(C.hybrid), New Zealand Camellia Bulletin,* 1963, vol.III, No.4, p.5, Reg. No.18: A chance seedling of *C.japonica* **Waiwhetu Beauty;** originated by Dr Jane Crisp, Tirau, New Zealand. The plant is of slow, spreading growth and flowers freely. The flowers are semi-double to peony, 12-14 cm across x 8 cm deep. Petals number up to 25 with 12-20 petaloids. Inner petals waved and erect. Chinese synonym 'Hadu'.

Harriet I Laub. McIlhenny, 1941, *700 Varieties of Camellias,* p.7. Synonym for **Shiragiku** as 'Purity'.

Harriet Knapp. *(C.japonica), American Camellia Yearbook,* 1968, p.131, Reg. No.1013: A 10 years old chance seedling that first bloomed 1962; originated by A.D. Albritton, Tallahassee, Florida, USA. Plant growth is slow and upright with dark green leaves, 7.5 cm x 5 cm. The peony form flower is 12.5 cm across x 7.5 cm deep and has 30 petals and 8 petaloids. Rose variegated, with yellow anthers and white filaments. Blooms early to mid-season.

Harriet Salmon. *(C.reticulata* hyb.), *American Camellia Yearbook,* 1981, p.100, Reg. No.1738: A very large, rose-red to dark red semi-double *C.reticulata* hybrid *(C.reticulata* **Buddha** x *C.japonica* **All American**), mid-season blooming. Originated by Ted Alfter, Bakersfield, California, USA. The 10 years old seedling first bloomed 1976. Average flower size 15.5 cm across x 10 cm deep with 17-20 petals and 1-2 petaloids. Plant growth is upright, open and rapid in rate with dark green leaves, 12 cm x 7 cm.

Harriett Moughon. *(C.japonica),* Gerbings Camellia Nursery, 1968, ACS., *The Camellia Journal,* vol.23, No.4. No description. *American Camellia Yearbook,* 1969, p.161, Reg. No.1066: A 10 years old chance seedling that first bloomed 1960. Originated by G.W. Moughon, Birmingham, Alabama, USA. Plant growth is spreading and dense with dark green leaves

averaging 8.5 cm x 5 cm. The formal double blooms are 10 cm across x 4-5 cm deep with over 36 petals. It is red, variegated white. Mid-season to late blooming.

Harriette Ruster. *(C.sasanqua), American Camellia Yearbook,* 1959, p.274, Reg. No.365: A chance sasanqua seedling originated by Marvin Ruster, Pasadena, California, USA. Plant growth is spreading and medium with dark green leaves averaging 5 cm x 2.5 cm. First bloomed 1957. The flower, 8 cm across x 5 cm deep, is anemone form with white, undulating petals, tipped pink and has 12 petals and 18-20 petaloids. Flowers early. Received the Ralph Peer Sasanqua Award for 1959.

Harrison Jones. *(C.japonica),* Harris' Longview Nursery Retail Price List, 1955-1956, p.12. No description. SCCS, 1956, *The Camellia. Its Culture and Nomenclature:* Light salmon pink, unusually variegated with white pin stripes and white sometimes suffused with pink. Very large, anemone form with very large outer petals and crinkled and folded inner petals, mixed with stamens. Vigorous, upright growth. Sport: **Harrison Jones Pink**. Originated in USA at the Longview Nursery.

Harrison Jones Pink. *(C.japonica),* SCCS., 1960. *Camellia Nomenclature,* p.60: A solid, salmon pink sport of **Harrison Jones.** Originated in the USA.

Harrisonii. *(C.japonica),* Hovey ed., 1836, *Magazine of Horticulture.* No description. Berlèse, 1840 *Monographie,* ed.2, p.81: Originated by Harrison. Flower very pure white, 5.4 cm across, sometimes more, most graciously modelled. Petals small, regularly imbricated from centre to circumference. Orthographic errors: 'Harrisoni', 'Harrissonii'. Synonyms: 'Harrissoni d'Amerique', 'Harrissonii Nova'.

Harrison's Rose. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.98. No description. Originated in USA. No valid listing located.

Harry Bettes. *(C.japonica), American Camellia Yearbook,* 1977, p.212, Reg. No.1457: A large, pure white semi-double to anemone form to rose form double, to formal double, to peony form *C.japonica* that flowers mid-season. This 12 years old chance seedling first bloomed 1970. Originated by Ferol Zerkowsky, Slidell, Louisiana, USA. It has 50 petals, 100 petaloids, yellow anthers and white filaments. Average size 12 cm across x 6 cm deep. Mid-season blooming. Plant growth is upright and medium with dark green leaves, 8.5 cm long x 3.8 cm wide. See colour photo, inside back cover, ACS., 1977, *The Camellia Journal,* vol.32, No.1 and pl.78, p.46, *Encyclopedia of Camellias in Colour*, vol.II, 1978.

Harry Cave. *(C.japonica), New Zealand Camellia Bulletin,* 1990, Vol.XVI, No.5, p.42, Reg. No.274, with colour photo on front cover: A chance seedling of *C.japonica* **Bob Hope.** Grown by H.B. Cave, Wanganui, New Zealand from seed planted 1982. First flowered 1987. Plant growth is slow and compact and dark green foliage with leaves 10 cm x 4 cm. The flowers are deep scarlet red, semi-double with 15-17 petals and bright yellow pollen. Average flower size is 8.5 cm across x 4cm deep. Filaments are red and fused at the base and become cream higher up, where they spread wide open. Blooms early to mid-season on a floriferous, compact plant and last well. Colour RHS.CC.46A. Chinese synonym 'Hali'.

Harry D. Wilson. *(C.japonica), American Camellia Yearbook,* 1954, p.315, Reg. No.157: A 10 years old chance seedling of Lady Vansittart, originated by Mrs Bolivar Kemp Jr., Amite, Louisiana, USA. First bloomed 1951. Plant growth is upright and rapid in rate. Buds long and deep rose.

Flowers incomplete double, anemone form similar to **Elegans**, coloured a purplish rose. Size of flower 12.5-13 cm across with 19-21 petals. Flowers midseason.

Harry Jobson. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1964-1965, p.7. No description. Originated in USA. No valid listing located.

Harry M. Bloom. *(C.hybrid), American Camellia Yearbook,* 1982, p.172, Reg. No.1833: A large, salmon red semi-double *C.reticulata* hybrid *([C.saluenensis x C.japonica* **Apple Blossom**] x *C. reticulata* '(Crimson Robe'), early to late flowering. Originated by David L. Feathers, Lafayette, California, USA. The 10 years old seedling first bloomed 1979. Average flower size is 11 cm across with 12 petals, gold anthers and white filaments. Flower depth varies up to 7.5 cm with rabbit ears. Fragrant.

Harry Sinclair. Fruitland Nursery Catalogue, 1949-1950, p.29. Abbreviation for **Mrs Harry Sinclair.**

Harry Swan. *(C.x williamsii), New Zealand Camellia Bulletin,* 1964, Vol.IV, No.1, p.11, Reg. No.23: A chance seeding of *C.saluenensis* raised by R.H. Swan, Putaruru, New Zealand. The plant is upright and open; the leaves are mid-green, keeled, apices twisted; petioles long. The flower is open, semi-double with an occasional petaloid; the petals deeply notched, crêped, the colour shading to silver in the centre; size 11-12.5 cm across with 14-16 petals, gold anthers, silver filaments, fascicled; colour Fuchsine pink. (HCC.627/2-/3).

Harry Swinburn. *(C.x williamsii), New Zealand Camellia Bulletin,* 1981, vol.XII, No.2, p.6, Reg. No.162: A chance seedling of *C.saluenensis;* originated by A.P. Gamlin, Manaia, New Zealand. First flowered 1977. Growth habit is upright, open and medium in rate. The 9 cm x 4 cm leaves are dark green. The flower is peony form, clear rose-pink with golden anthers and cream filaments. Size is 12 cm x 6 cm, averaging 50 petals with 180-200 petaloids. It has large outer petals with a central mass of small, upright ones intermingled with petaloids and stamens. Early blooming with slight perfume.

Hartigan Double Red. *(C.japonica),* Greenbrier Farms Nursery Catalogue, ca.1945: Bright red. Medium large, rose form double to peony form. Originated in USA.

Haru-akari. *(C.japonica), Book of Manuscripts*, ICS Congress, Miyazaki, 1999; White and Red Camellia at Nara's Todaiji Temple; Hagiya, Kaoru, p.43. No details.

Haru-akari (Okado). (Spring Light [Okado]) *(C.hybrid), Japan Camellia* 101, May 2014, p4 with colour photo; JCR Regn No 2014-3, (ser. No.16). A chance seedling of **Yume,** pollen parent unknown, sown 2004, first flowered 2012. Bright red single, columnar group of over 100 stamens, vivid yellow anthers contrasting well with petals. Cup-shaped, diameter 10-12 cm. Early flowering. Originated by Hiroshi Okado.

Harugasumi. (Spring Haze), *(C.japonica),* Okumura, ca. 1810, *Chinka Hini'i:* No description. Originated in Japan. (Believed extinct.)

Harugasumi. (Spring Haze), *(C.japonica),* Tuyama, 1968, *Camellias of Japan*, pl.73, p.37, description, p.107 as 'Haru-gasumi': Leaves large, oblong-elliptic to broad-elliptic, apex acute. Flowers whitish to pale pink (Paler than Rose-pink 427/3) taking the form of a rose with an unfolded mass of petals in the centre. Flowers mid-season to late. Originated in Takarazuki City, Hyôgo Prefecture, Japan.

Harugasumi. (Spring Haze), (Higo), Yoshimura, 1961, *Higo Tsubaki Meikan* lists as best flower; Hiratsuka, 1964, *Higo Camellia*, pp.14, 40; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.272,

colour photo and description: Medium size, pink veined deeper with fine white edge, flat single of 6-8 broad emarginate petals and a central burst of about 180 stamens in a ring formation. Blooms mid-season to late. Leaves medium size, elliptic, deep green, apices acuminate, margins serrulate. See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.120, 239. Originated in Kumamoto Prefecture, Japan. Different reading: 'Haru-no-kasumi'.

Harugasumi. (Spring Haze), *(C.hybrid), American Camellia Yearbook,* 1982, p.173, Reg. No.1782: A miniature, rose-pink semi-double *C.hybrid (C.japonica* **Snow Bell** x *C.lutchuensis),* early to midseason flowering. Originated in USA by Longley and Parks. The 18 years old seedling first bloomed 1965. Average flower size is 5 cm across x 2.5 cm deep with 13 petals and an odd petaloid, yellow anthers and cream filaments. Plant growth is spreading and open with medium to light green leaves. Synonym: **Spring Mist.**

Harugasumi. Hakoda, JCS., 1987, *Tsubaki,* No.26, p.44. Synonym for the *C.sasanqua* **Harusame-nishiki.**

Harugokoro. (Feeling of Spring). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.204 with colour photo; English translation p.142. Small, pale pink, tubular to trumpet shaped single, cylindrical stamen cluster. Flowers mid-season. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Selected from a wild japonica community at Funaki Shrine, Hajima City. Named by Nagaharu Niwa in 1989, released by Gifu Camellia Club.

Haruhikage. (Spring Sunlight), *(C.japonica),* Himuro, 1982, *Murasuzume:* Soft pink streaked pink, semi-double, opens flat. Originated in Kanagawa Prefecture, Japan. A seedling of **Tarô'an.**

Haru-ichiban. (First South Wind of Spring), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.342, p.173, description, p.192: Leaves ovate to narrowly-ovate, gradually acuminate, strongly wavy, venation flat, depressed crenate margins, 8.5 cm x 4.2 cm; petioles 10-12 mm, glabrous. Flowers semi-double, widely cup-shaped, pink (Spinel Red 0023/2) spotted red (Currant 821/3) in various amounts. Petals 11-13, incised at apex, largest petal 5.5 cm long x 5 cm wide. Stamens up to 4 cm high, irregular, often accompanied by smaller petals and petaloids, filaments pale pinkish yellow. Late flowering. Originated in Nagaoka City, Niigata Prefecture, Japan.

Haru-ichiban. (First South Wind of Spring), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.119, colour photo, p.239, description: Small size, white single with 6 petals, saucer shaped with crimped petal margins. Central stamen cylinder, white filaments, yellow anthers. Blooms mid-season. Leaves, small, elliptic, waved, glossy green; apex acuminate, margins finely serrate. Originated in Chûbu area, Japan. Synonym: 'Jômanjishiro-wabisuke'. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.204 with colour photo; English translation p.142. Colour is given as palest pink. Originated and released by Shinichi Asai in 1973.

Harakagura. (Springtime Shinto Dance), *(C.japonica),* Yûsuke Sakata & Kenich Arisumi, 1983, *International Camellia Journal,* No.15, p.20 as 'Haru-Kagura'. No description. Originated in Kanagawa Prefecture, Japan. '

Harukasane. (Spring Layer), *(C.japonica),* Himuro.1982, *Murasuzume,* No.37: Rose-pink with lighter pink centre petals, double with slender petals. Medium size. Originated in Japan.

Harukasumi. Different reading for **Harugasumi.**

Harukaze. (Spring Wind), *(C.japonica),* Iwasaki, 1828, *Honzô Zufu,* p.9: Single, white petals with red dapples. Originated in Japan. Synonym for 'Ichinenkô'. See JCS., 1981, *Tsubaki,* No.20, p.105. (Believed extinct.)

Harukaze. (Spring Wind), *(C.rusticana),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.8: Medium size, dark red, double. Mid-season blooming. Originated in the Chûbu District, Japan.

Harukoma. (Spring Pony), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.414, p.166, description, p.258: Large, soft pink single with deeper coloured veinings, white margined, 8-9 petals, cleft at the apex, opening flat. Stamens in an irregular cluster, anthers and filaments yellow, with an odd petaloid. Leaves broad-elliptic; apex short acuminate, dark, glossy green; fine, sharp serrations, petioles hirsute. Originated with a private family on Sado Isle, Niigata Prefecture, Japan. Named and released by Tokuji Ôoka in 1974. See also Seibundô Shinkôsha, 1979, *Senchinshû,* p.120 for colour photo and p.239, description.

Harumi. (Personal Name). *(C.x williamsii). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.206 with colour photo; English translation p.143. Medium size, peach red, lotus-formed semi-double, cylindrical stamen column. Flowers early to mid-season. Leaves somewhat oblong, medium size. Upright growth. A cross between **Chôchidori** and **Tulip Time.** Originated by Nobuo Sasai in 1985 and released in 1997. From Okayama Prefecture.

Haruno. (Spring Fields), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.120, colour photo, p.240, description: Large to very large, lotus shape, white with the faintest trace of pink, semi-double, 23 petals in 2-3 rows, outer long-oblong, emarginate; centre, small stamen cluster, lemon coloured anthers, cream filaments, sometimes with white flagged petaloids intermixed. Leaves glossy green, elliptic, long acuminate, recurved. Originated in Matsu'e City,Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1984.

Haru-no-akebono. Seibundô Shinkôsha, 1965, *Tsubaki to Sazanka.* Synonym for the *C.sasanqua* **Kôgyoku.**

Haru-no-akebono. (Dawn of Spring), Williams and Thompson, 1950, *American Camellia Yearbook,* p.39. Imported to USA by the Star Nurseries, 1930. Name changed by Tuyama in 1968 to **Hagoromo-Kansai.**

Haru-no-akebono. (Dawn of Spring), Seibundô Shinkôsha, 1979, *Senchinshû,* pp.121, 240; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.305. Synonym for **Hagoromo-Kansai.** Synonyms: 'Maruben-hagoromo'.

Haru-no-akebonobeni. Fendig, 1953, *American Camellia Catalogue.* Different reading for 'Shushokkô'.

Haru-no-dai. Wada, 1941, *Japanese Garden Treasures,* p.29. Different reading for **Haru-no-utena.**

Haru-no-hibiki. (Sound of Spring) (*C.hybrid*) from Tokyo, *Japan Camellia* No.60 August 1999: A natural seedling of *C.rosiflora.* Looks like **Wirlinga Belle**. Peach pink, 5 to 6 cm across, petals pleated, projecting pistil, blooms in mid-season, bears fruits. Leaves elliptic, small. Tree upright growth. Found by Yaichirô Fujimoto.

Haru-no-koromo. (Spring Garments), *(C.rusticana),* JCS., 1982, *Tsubaki,* No.21, black and white photo, p.72: A 5 petalled, medium to large size, red, single with broad-elliptic to rotund leaves, blunt apices, sharply serrate. Originated in Japan.

Haru-no-iro. (Spring Colours), *(C.japonica),* Sakuden.1630, *Hyakuschinshû:* Very light azure pink, single. Originated in Japan. (Believed extinct.) See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.114.

Haru-no-kaori. (Fragrance of Spring), *(C.japonica),* Inazawa Nursery Co. Ltd. Catalogue, 1986-1987, p.11, A-524: Medium sized, pale peach pink, campanulate single with cylindrical stamen column. Originated in Japan.

Haru-no-kasumi. Yoshimura, 1963, *Higo Tsubaki Meikan.* Different reading for **Harugasumi.**

Haru-no-kizashi. (Signs of Spring), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.81, colour photo and description: Medium size, pale, blush pink, with white blotches, wide campanulate single, with 6 broad, rounded, emarginate petals with crinkled margins and a central

stamen cylinder, with white filament, joined for the lower third, and yellow anthers. Blooms mid-season to late. Leaves deep green, elliptic, flat, apices acuminate. Originated in the Chûbu District, Japan. A chance seedling, originated and released by Tsunehiro Miyazaki in 1980.

Haru-no-koromo. (Spring Garments). *(C.rusticana).* JCS, 1982 *Tsubaki,* No.21, black and white photo, p.72: A 5 petalled, medium to large size, red single with broad-elliptic to rotund leaves, blunt apices, sharply serrate. Originated in Japan.

Haru-no-mai. (Dance of Spring), *(C.rusticana),* Tuyama, 1966, *Camellia Cultivars of Japan,* p.344; Tuyama, 1968, *Camellias of Japan,* pl.356, p.180, description, p.196: Leaves ovate to oblong-ovate, acuminate, serrulate; petioles more or less hairy. Flowers semi-double, pale pink dotted or lined a deeper pink. Mid-season to late flowering. For colour photos see: Seibundô, Shinkôsha, 1979, *Senchinshû,* p.121 and *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.318. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.336. Originated in the Aichi Prefecture, Japan. A seedling of **Haru-no-umi** x **Tamatebako**.

Haru-no-minato. (Harbour in Spring), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.9: Pure white. Large semi-double with round petals. Originated in Japan.

Haru-no-minato. (Harbour in Spring). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.206 with colour photo; English translation p.143. Medium to large, pale pink, cup to bowl shaped single, cylindrical stamen column. Flowers mid-season. Leaves ovate, medium size, thick. Upright growth. Selected from wild japonicas growing in Saitama Prefecture. Named and released by Hirai in 1990.

Haru-no-shokkô. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.53, as 'Haru-no-syokko'. Different reading for **Shunshokô.**

Haru-no-tomoshibi. (Light of Spring), *(C.rusticana),* Satomi, 1966, *Tsubaki,* p.63; Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.191 black and white photo and description: A deep red, 5 petalled single of medium size with notched and crêped petals and a short, irregular stamen cluster. Late blooming. Originated in Japan.

Haru-no-tsuki. (Spring Moon), *(C.japonica),* Usami, Naohachi, (ca.1910), *Nagoya Chinzu'e;* Kyoto Engei Kurabu, *Tsubaki Tokushû,* No.6, p.127: Small white, sake cup shape. Originated in Japan.

Haru-no-tsuzumi. (Spring Drum), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.8: Medium size, red to deep red, double lotus form flower. Blooms mid-season to late. Originated in the Tottori Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.205 with colour photo; English translation p.143. An old tree grows in the garden of the Sahashi family in Tottori City. Discovered and released by Yoshio Yamada in 1979.

Haru-no-umi. (Spring on the Sea), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.240: Peach pink with spherical, white variegation on exterior petals, numbering 15; petaloids intermingled with interior petals, semi-double; filaments yellow. Medium sized, early flowering. Leaves, medium sized, long-oval, keeled at midrib, inconspicuous serrations; hirsute petioles. Originated in Gosen City, Niigata Prefecture, Japan.

Haru-no-umi. (Spring on the Sea), (Higo), *Higo Rokka* ca.1989, p.32: Large size,10-11 cm across with 6-7 petals. Pink ground with red and white variegation. Originated in the Kumamoto Prefecture, Japan. A mutation of **Sakuragari,** designated by the Higo Camellia Society in 1984.

Haru-no-ushio. (Spring Tide), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.121, colour photo, p.240, description: Soft pink with white spots, semi-double with 20 petals in 3-4 rows; centre stamen cluster irregular, yellow filaments and anthers. Leaves oblong, flat; petioles glabrous. Originated in Sado Isles, Niigata Prefecture, Japan.

Haru-no-uta. (Spring Song). (*C.hiemalis* x *C.granthamiana*). *New Zealand Camellia Bulletin,* Issue 127, 1997, vol.XX, No.2, p.9, colour plate: A C.*hiemalis* x C.*granthamiana* seedling. Very large, pink informal double with 17-18 emarginate, fluted petals. Originated in Japan.

Haru-no-utage. (Spring Banquet). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.205 with colour photo; English translation p.143. Medium size, red, single, cupped petals. Flowers mid-season to late. Leaves broadly elliptic, medium size. A natural seedling of **Shirohassaku.** Named and released by Minoru Satô in 1979.

Haru-no-utage. (Spring Banquet), *(C.japonica),* JCS., 1987, *Japan Camellia,* No.23, p.4, colour photo: A seedling of **Berenice Boddy,** clear, wisteria pink, single, petals widely cup-shaped, medium size; flowering early to mid-season. Stamens in a short, central column. The tree is rather spreading. Originated by Itô, Atsushi, Chiba Prefecture, Japan.

Haru-no-utena. (Tower in Spring), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô,* vol.311; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* as one of 5 trees; Itô, Ko'emon, 1879, *Chinkashû:* Light pink streaked and blotched a deeper pink, large, double, lotus form. Tuyama, 1966, *Camellia Cultivars of Japan,* pl.196, p.344; Tuyama, 1968, *Camellias of Japan,* pl.358, p.181, description, p.196: Leaves rhombeo-elliptic, broadly-elliptic to elliptic, acuminate, slightly folded at the midrib, impressed venation, minutely serrulate at the margins. Flowers semi-double, pale pink (Spinel Pink 0625/3), shortly striped red in varying degrees of shade; petals a little channelled at first, spreading straightly and apart from each other. Flowers late. For other colour photos and descriptions see: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.353, p.152; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.342; and Seibundô Shinkôsha, 1979, *Senchinshû,* pp.121, 240. The latter shows three different forms with varying depths of colour in their background, from white through blush to pink. Different readings: 'Haru-no-dai', 'Harunoutena'. Resembles: **Sazanami, Tori-no-ko.** Originated in Kantô, Japan. Note: The name of the next cultivar suggests that this existed before 1827. Chinese synonym 'Chunzhitai'.

Haru-no-utena. *(C.japonica),* Nuccios Nursery Retail Price List, 1990. Small to medium tubular single. Light pink with deep pink and red stripes. Blooms mid-season. Originated in Japan. Note: This is a variable cultivar and is probably the same as the modern Japanese variety of the same name.

Haru-no-utena-no-mishôyamataka-tsubaki. (Seedling of 'Haru-no-utena' from Yamataka), *(C.japonica),* Aoyama, Kinta, 1827, *Sômoku Kihin Kagami.* Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.122 listed it: 'Haru-no-utenano-misyô-yamatakatsubaki'. No description. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.158. Originated in Japan. (Believed extinct.)

Haru-no-yoi. Satô, 1975, *Chûbu no Tsubaki,* p.76. Different reading for **Shunshô.**

Haru-no-yoso'oi. (Spring Adornment), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû,* p.240: Peach pink, lotus form double. Petals number 20, narrowly outside reflexing; stamens spreading, filaments dark yellow. Medium to large size. Mid-season flowering. Leaves medium sizes, long-oval, acuminate, curved, keeled; petioles hirsute. Plant habit bushy and vigorous. Of Yuki-tsubaki lineage, originated in Takada City, Toyama Prefecture, Japan. Named and released around 1962.

Haru-no-yuki. (Spring Snow), (Higo), Taniguchi.1912, *Chinka Kyôkan:* Greenish white. Large. Based on same characters as **Shunsetsu.** Originated in Kumamoto Prefecture, Japan.

Haru-no-yuki. (Spring Snow), *(C.rusticana), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.316, p.133, description, p.245: A very soft, light pink, semi-double with 8-12 petals, 7 cm across and an open stamen cluster with light yellow anthers and cream filaments. Leaves mid-green, glossy, lanceolate, apex acute, shallowly serrate and undulate margins and hirsute petioles.

Originated in Toyama Prefecture, Japan. Named and released by Yotaya Snow Camellia Lovers Club in 1980s. Same characters as the "Higo" above. See also Seibundô Shinkôsha, 1979, *Senchinshû,* pp.121, 240.

Haru-no-yume. Hagiya & Ishizawa, 1968, Kyôto Engei Kurabu, *Tusbaki Tokushû,* No.9, p.53. Renamed **Beniyakko** as 'Haru-no-yume' already in use for another cultivar. See Seibundô Shinkôsha, 1979, *Senchinshû.* p.246.

Haru-no-yume. (Spring Dream), *(C.japonica),* Tuyama, 1966, *Camellia Cultivars of Japan,* p.344: Soft pink semi-double with light red spots and streaks and fluted petals. Medium size, Mid-season flowering. Originated in Kanagawa Prefecture, Japan.

Haruranman. (Spring in full bloom), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.240: Dark red large and small lines on white ground and sprayed spots. Flowers may vary from large tubular to large bowl shapes. Stamens from cylindrical to spreading. Mid-season blooming. Leaves wide-ovate, acuminate, even, thick, dark green. Plant habit wide-spreading, vigorous. Originated in Chûbu, Japan.

Harusame. (Spring Rain), *(C.japonica),* Itô, Ihei, (before 1801), *Tsubaki Hyakka Nayose Irotsuki,* pl.34: Cherry pink, large size, double. Originated in Japan. (Believed extinct.)

Harusame. (Spring Rain), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.120, colour photo, p.239, description as 'Harusame' (Niigata): Large semi-double with finely dotted, pale pink background and densely streaked, splashed and finely dotted with crimson. Spreading stamen cluster, yellow anthers, greenish cream filaments. Leaves light green, elliptic, shallowly serrate, petioles hirsute. Synonym: 'Harusame'(Niigata). Originated in Takada City, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1975.

Harusame (Chûbu). (Spring Rain Chûbu), *(C.japonica).* Seibundô Shinkôsha, 1979, *Senchinshû,* p.120, colour photo, p.239, description: Medium sized single, campanulate, 7-9 petals; white with crimson streaks to self crimson. Stamens in a spreading ring. Leaves light green, obovate, acuminate, sharply serrate. Originated in Chûbu, Japan. Resembles **Kyô-nishiki.**

Harusame (Niigata). Synonym for **Harusame.**

Harusame-nishiki. (Spring Rain Brocade), *(C.sasanqua),* Sakata et al., Mar.1981, "Studies in the Flower Colours of Camellis, II"; *Memoirs of the Faculty of Agriculture,* vol.XVII, p.92; Sakata & Arizumi, 1983, *International Camellia Journal,* p.22: ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Medium sized, single, red fading to white towards the centre. Early blooming. Originated in Kumamoto Prefecture, Japan. Synonym: 'Harugasumi'. Designated by the Higo Sasanqua Society in 1977.. Chinese synonym 'Chunyujin'.

Haru-sazanka. Griffith, 1953, ACS, *Quarterly,* 8(1):4, 5. Japanese name for *Camellia x vernalis.*

Harushokkô. *Tsubaki no Saibai,* 1968. Different reading for **Shunshokô.**

Haru-shoko. Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement,* pp.94, 179, 213 with colour plate. Different reading for **Shunshokô.**

Harusugata. (Figure in the Spring), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû* p.240: Dark peach pink, single. Stamens in a cylindrical cluster. Medium sized. Mid-season flowering. Leaves, medium sized, long-ovate, undulate. Plant habit upright and vigorous. Originated in Kagawa Prefecture, Japan as a wild japonica collected in Mure Town. Named and released by Saneichi Ogawa in 1979..

Haru-wabisuke. Seibundô Shinkôsha, 1979, *Senchinshû,* p.217. The synonym for **Satsukijiro** used in the Mikawa District, Japan.

Haruyoi. (Spring Evening), Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.122. Different reading for **Shunshô.**

Haru-urara. (Spring Serenity), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki*, p.104: Soft, pale pink, open anemone form, medium size with 8-12 large, frilled and wavy outer petals and the centre a variable mixture of small, erect, folded petals, petaloids and stamens. Leaves medium size, elliptic, undulate, apex acute, sharply serrate, mid-green. Blooms mid-season to late. Leaves and plant resembles **Hagoromo**, of which it is believed to be a seedling. For colour photos see: Seibundô Shinkôsha, 1979, *Senchinshû,* p.120, and Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.366. Originated in the Kantô District, Japan. A natural seedling, parentage unknown. Originated and released by Shinichi Asai in 1970.

Haru-wabisuke. (Spring Wabisuke), (Wabisuke), ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.8. No description. Originated in the Toyama Prefecture, Japan.

Haruyokonami. (Spring Cross Waves), *(C.japonica),* Uesa, 1844, *Sômoku Benran:* Cardinal red, moired white. Medium sized single form. Originated in Japan. (Believed extinct.)

Haruzaki-amagashita. Tuyama, 1968, *Camellias of Japan,* pl.278, p.175 as 'Haru-zaki-ama-ga-shita'. This is a renaming of the old **Amagashita** as "Spring Flowering Amagashita" to distinguish it from another cultivar named **Akizaki-amagashita** or "Autumn Flowering Amagashita". However it must be regarded as a synonym as **Amagashita** has priority.

Harvest Moon. *(C.japonica).* SCCS., 1964, *Camellia Nomenclature,* p.60, Red. Large (11 cm across), semidouble with 12 notched outer petals and interspersed pale red stamens and petaloids in the centre. Vigorous, upright growth. Flowers mid-season to late. First bloomed 1958; originated by R.W. Ragland, Orange, California, USA. *American Camellia Yearbook,* 1965, p.235, Reg. No. 740.

Harvest Time. *(C.japonica),* Marshall's Camellia Nursery Catalogue,1962, *American Camellia Yearbook,* 1965, p.236, Reg. No.720: [SCCS.No.43-13] A chance *C.japonica* seedling that first bloomed 1957. Originated by Marshall's Nursery, San Gabriel, California, USA. Vigorous, upright growth habit. Anemone form, blush white flower, 10 cm or more across x 7.5 cm deep with a few stamens, mostly petaloids. Blooms early to mid-season.

Harvey Short's Finale. *(C.japonica), American Camellia Yearbook,* 1981, p.100, Reg. No.1692: A very large, pure white semi-double *C.japonica* chance seedling, blooms mid-season to later. Originated by Harvey Short, La Mesa, California, USA. First bloomed 1979. Average flower size 16 cm across x 6 cm deep with 20 petals, deep yellow anthers and filaments. Plant growth is upright and rapid in rate with dark green leaves, 12.5 cm x 7.5 cm. See colour photo: Front cover, SCCS., 1983, *The Camellia Review,* vol.45, No.1.

Harvey Taylor. *(C.japonica), American Camellia Yearbook,* 1982, p.173, Reg. No.1836: A large, brilliant red, anemone form *C.japonica* chance seedling; early to mid-season blooming. Originated by Harvey Taylor, Louisiana, USA. First bloomed 1979. Average flower size,11 cm across x 5.5 cm deep with many petals and petaloids and bright yellow anthers on red filaments. The flower has two rows of guard petals, interspersed with petaloids. Plant growth is spreading, medium in rate with dark green leaves, 12.5 cm x 6 cm.

Hasaku. Hayworth, 1987-1988, RHS., *Rhododendrons with Magnolias and Camellias,* p.92. Corruption of the Japanese name **Hassaku.**

Hasama. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.196 with colour photo; English translation p.136. Medium size, semi-double, vermilion, thick petals, tubular to split stamens. Flowers mid-season. Leaves broadly elliptic, medium size, curved outwards. Upright growth. An old cultivar raised by a private family in Mure Town. Discovered and named by Shirô Imayuki, released by the Kagawa Branch of the JCS in 1997. From Kagawa Prefecture.

Hasawaca. *(C.japonica), American Camellia Yearbook,* 1978, p.130, Reg. No.1486: A very large, rose--pink, anemone form *C.japonica* chance seedling. mid-season flowering. Originated by Walter

R. Morris, Vidalia, Georgia, USA. The 21 years old seedling first flowered 1960. The flower has 13 petals, 28 petaloids, yellow, pink-based filaments, yellow anthers. Average size 12.8 cm across x 7.5 cm deep with crêped petals. Plant growth is upright and medium in rate with dark green leaves, 11 cm long x 5 cm wide.

Hasegawa-de-kifu. (Hasagawa's Yellow Variegated), *(C.japonica),* Mizuno,1829, *Sômoku Kinyôshû,* vol.5 under the section on leaves with yellow variegation where it is described as having long leaves with yellow variegation. Originated in Japan. (Believed extinct.) Different reading: 'Hasegawa-de-kihu'. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.175. Synonym: 'Hasegawa-tsubaki'.

Hasegawa-de-kihu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.122. Different reading for **Hasegawa-de-kifu.**

Hasegawa-tsubaki. ('Hasegawa's Camellia'), *(C.japonica),* Hantei, Kinta, 1827, *Sômoku Kihin Kagami,* pl.24: Yellow variegated leaves, serrated. Yellow colour is excellent. Originated in Japan. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.157. Thought to be a synonym for **Hasegawa-de-kifu**. (Believed extinct.)

Hashi Chiban. (Hallstone's Fimbriated). *(C.japonica),* Gao, Jiyin, Ltr, 22nd August 1994. Originated by Ken Hallstone, California, USA, and taken to China where it was named. Light purple flowers with fimbriated petals. Peony to rose form double. Leaves elliptic to rose form, apices acuminate, veins elevated.

Hashi Weixiao. (Hallstone's Smile). *(C.hybrid).* Gao, Jiyin, Ltr, 22nd August 1994. Originated by Ken Hallstone, California, USA, and taken to China where it was named. No description. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.141. Flowers coral pink, slightly darker at edges, fragrant, semi-double to peony, medium size to large. Flat leaves. Sturdy spreading growth. Flowers mid-season to late.

Hashidate. (Place Name), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû;* McIlhenny, 1941, *700 Varieties of Camellias,* p.16: Single, white to pink on the edges. Fendig, 1952, *American Camellia Catalogue:* Medium, bright pink, semi-double about 7.5 cm across. A round bloom opening cup-shaped. The margins of the petals are dark pink, shading lighter in the centre of the petals and darker at the apex. Stamen centre flares out but the whitish filaments are short, anthers pinkish yellow. Leaves medium green, elliptic, 5 cm x 2 cm; apex cuspidate, tapered base, serrations obscure. Hakoda, JCS., 1989, *Tsubaki,* No,26, p.44: Medium size, white fading to red at the margins, single. Originated in Tokyo, Japan. Synonym: 'Hashidate(1)', 'Sasanqua Flesh Pink'. Orthographic error: 'Hoshidate'. Hashidate is an abbreviation for Amano-hashidate, a place in the Kyôto Prefecture noted for its beautiful scenery.

Hashidate (1). Fendig, 1953, *American Camellia Catalogue:* Synonym for **Hashidate.**

Hashidate (2). (*C.sasanqua*), Fendig, 1953, *American Camellia Catalogue.* White variegated pink, single, early blooming. Origin unknown.

Hashihime. (Princess Hashi). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.196 with colour photo; English translation p.136. Small, pale pink graduating to pink at the centre, flat single occasionally anemone, fragrant, profuse. Flowers early. Leaves elliptic, small. Spreading growth. A cross between *C.hiemalis* and *C.fraterna.* Named and released by Kaoru Hagiya in 1980. From Niigata Prefecture.

Hashimoto. (A Place Name), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.20: A medium to large sized, deep crimson double of 7-8 rows of petals with short stamens in the centre. Originated in Japan. (Believed extinct.)

Hasley. *(C.japonica),* Nantes. *Services des Espaces, Collections,* 1980. No description. No valid listing located.

Haspor. Mostra della Camellia in Campania, 1982, *Napoli Castel dell'Ovo,* p.8. Orthographic error for **Hanafûki.**

Hassai. (Higo), RHS., 1953, *The Rhododendron and Camellia Yearbook,* No.7, p.153: Large single to semidouble pink. A scented Higo camellia similar to 'Hatsusakura', (**Dewatairin**). Originated in Japan. Imported from Wada. Synonym: 'Hassai Wada'.

Hassai Wada. Lanning Roper, 1954, RHS., *The Rhododendron and Camellia Yearbook,* No.8, p.139. Synonym for **Hassai.**

Hassaku. (First of August), *(C.sasanqua),* Itô, Ihei, 1710, *Zôho Chikinshû:* White single flower. Blooms in early spring. Originated in Japan. (Believed extinct.)

Hassaku. (First of August), *(C.sasanqua),* Ito, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16: White, large size, petals curved inwards. May be same as above. Early blooming. Originated in Japan. Corruption of name: 'Hasaku'. (Believed extinct.)

Hassaku. Avenue Nurseries, 1958, Catalogue, p.19. Abbreviation for **Benihassaku.**

Hassaku-shibori. (1st August Brocade), *(C.japonica),* Katayama Juraku-en Botan-en Nursery Catalogue, No.237, 1957. Tuyama, 1966, *Camellia Cultivars of Japan,* pl.169, p.294: Medium size, single, 5-7 petals, emarginate and fluted, opening cup-shaped, white to faint blush pink with a peppering and streaking of light red. Short, wide, irregular stamen cluster with yellow anthers. Blooms early to mid-season. Leaves dark to mid-green, glossy, elliptic, apex acuminate, margins serrulate, twisted. Originated in the Chûbu District, Japan. See: Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.261; Seibundô Shinkôsha, 1989, *Senchinshû,* p.69 as 'Shibori-hassaku'. Different reading 'Shibori-hassaku', synonym for **Tatsuta-nishiki** in Kansai, Japan. Sport: **Benihassaku.** It is not certain that this cultivar in Chûbu is different from one of the same name in Kansai, or not.

Hassaku-tsubaki. (First of August Camellia), *(C.japonica),* Chûgai Nursery Catalogue, 1935-1936, p.25: Pink with vermilion red variegation, single. Early flowering. Originated in Japan. Synonym: 'Golden Door'.

Hasumi-haku. SCCS, 1958, *Camellia Nomenclature,* p.43. Different reading for **Hasumijiro.**

Hasumijiro. (Hasumi's White), *(C.japonica),* Minagawa, 1933, *Chinkashû;* Tuyama, 1966, *Camellia Cultivars of Japan,* pl.78, p.134; Tuyama, 1968, *Camellias of Japan,* pl.55, p.28, description, p.101 as 'Hasumi-jiro': Leaves narrowly obovate elliptic, very shortly acuminate, a little folded along the midrib, venation impressed. Petioles glabrous. Flowers large size, white, formal double, petals broad, rounded and slightly notched at the apex, inner ones narrower, forming a cylindrical mass. Flowers mid-season to late. For colour plates see *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.412, p.173 and Seibundô Shinkôsha, 1979, *Senchinshû,* p.114. Originated in Kantô, Japan. Resembles **Shiragiku.** The name has been published under different readings: 'Hasumishiro' and 'Hasumihaku'.

Hasumishiro. Satomi, 1956, *Camellia Varieties in Japan.* It is now considered that **Hasumijiro** is the correct reading.

Hasunami. (Wave of Lotus), *(C.japonica),* Miyazawa, 1954, *Kanshô Jumoku:* Pale red with slender, dark red stripes, large. Originated in Japan.

Hasunami-utsushi. (Drifting Wave of Lotus), *(C.japonica),* Tateyama Nursery Catalogue, 1957. Large size, double flowers with large and small streaks on a white ground. Originated in Japan.

Hatagumo. (Cloud Banners), (*C.rusticana*), Hagiya & Ishizawa, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.7, p.54; Seibundô, Shinkôsha, 1979, *Senchinshû,* p.114, colour photo, p.237, description: Large, 8-9 cm x 4 cm, crimson semi-double; petals, about 26, irregular, from large outer petals, waved and notched to small, strap-like, inner petals around a compact stamen column. Filaments yellow. Some white, linear marks on inner petals. A wild variety

collected in Takada City, Niigata, Japan by Susumu Ishizawa, named and released by Kaoru Hagiya in 1968.

Hatano. (Name of Owner of the Plant), (*C.rusticana*), Satomi, 1956, *Camellia Varieties of Japan* p.17: Deep red. Medium (9-10 cm across) full, double with about 30 petals. Vigorous, upright growth. Mid-season blooming. Leaves, round, glossy green with obscure venation. Note: It was first named 'Kirin-no-homare' but as Mr Kawamura already had a different cultivar of the same name, it was renamed **Hatano.** See colour plates: Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.176, p.59; Seibundô Shinkôsha, 1979, Senchinshû, p.114 and description, p.237. Originated in Higashi-kanbara-gun, Niigata Prefecture, Japan.

Hatchett. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Pink and white. Medium large, loose peony form. Originated in USA by Pfingstl.

Hatsagura. Russell, L.R., Special Catalogue List, 1956. Corruption of the name 'Hatsusakura', synonym for **Dewatairin.**

Hatsu Waraii. Fischer, 1986, *Kamelien,* p.79, colour pl. p.57. Corruption of the Japanese name **Hatsuwarai.**

Hatsu Warei. *Collins Complete Book of Houseplants,* 1991, p.98. Corruption of the Japanese name **Hatsuwarai.**

Hatsu-akari. (First Light), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.8. No description. Originated in Toyama Prefecture, Japan.

Hatsu-arashi. (First Autumn Storm), *(C.japonica),* Uesa, 1844, *Sômoku Benran:* Pure white, single, sake-cup shape. Blooms in winter. Nakayama, 1851, *Sendaôden.* It is not certain that these old 'Hatsuarashi' are the same as the modern one. Minagawa, 1933, *Chinkashû;* Tuyama, 1966, *Camellia Cultivars of Japan,* pl.48, p.88; Tuyama, 1968, *Camellias of Japan,* pl.8, p.4, colour photo, p.86: Early flowering cultivar. Leaves dark green, ovate-elliptic, somewhat wavy and revolute at margins. Petiole, long, glabrous, greenish. Flower pure white, 5 petals, campanulate; petals waved and crimped on edge. Stamen column compact, yellow anthers, creamy filaments. See: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.70, p.60 & 301; Katei Gahô, ed., 1984, *Chabana Koyomi vol.1, Tsubaki,* p.42, 43; Sport: **Pink-hatsu-arashi.** Originated in Kansai District, Japan. Often called 'Shiratama' in Japan. Considered by some to be synonymous with **Hatsu-arashi (Shiratama).**

Hatsu-arahi A. Seibundô Shinkôsha, 1976, *Garden Life,* p.43. Synonym for **Hatsu-arashi-Saga.**

Hatsu-arashi B. Seibundô Shinkôsha, 1976, *Garden Life,* p.43. Synonym for **Hatsuarashi-shiratama.**

Hatsu-arashi-Kansai. Tuyama, 1966, *Camellias Cultivars of Japan,* p.88; Seibundô Shinkôsha, 1979, *Senchinshû,* p.115, colour photo as **Hatsu-arashi (Shiratama).**

Hatsu-arashi-Saga. (First Autumn Storm from Saga), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.114; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.17, as 'Hatsuarashi'(Saga): Medium size, white, campanulate single, with 7 rounded, embracing petals and a central stamen cylinder, with creamy filaments, joined for the lower third, and dark yellow anthers. Blooms early to mid-season. Leaves dark green, elliptic to lanceolate, apices tapering acuminate, margins shallowly serrulate, venation impressed. Originated in the Kansai District, Japan. Synonyms: 'Saga-hatsuarashi', 'Hatsu-arashi A'. There has been confusion between this cultivar and the ones above and below.

Hatsuarashi-shiratama. (First Autumn Storm, Shiratama), *(C.japonica), Seibundô* Shinkôsha, 1979, *Senchinshû,* p.115, description, p.237; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.16, colour photo, p.17, description: Small size, white, single, opening through spherical shape to campanulate, with 5-6 broad, emarginate, overlapping petals and a central stamen cylinder, with creamy filaments, joined at the lower third, and deep golden anthers. Blooms early to

mid-season. Leaves bright, shining green, elliptic to obovate, with apices from abrupt acute to acuminate, margins serrate, undulate. Originated in Kansai District, Japan. Synonyms: 'Hatsu-arashi-Kansai', 'Hatsu-arashi B'. Thought by some to be a synonym for **Hatsu-arashi.**

Hatsubana. Different reading for **Hatsuhana.**

Hatsufubuki. (First Storm). *(C.japonica), Kurume Camellia,* 1997, English translation, p.7; White peppered with crimson dots. Medium size, campanulate single. Early season flowering. Originated by T. Kunitake.

Hatsugama. (First Tea Ceremony), *(C.hybrid),* ICS, Apr.1990, *Japanese Camellia Cultivar List,* p.27 as 'Hatsu-gama': A cross of *C.japonica* var. *rusticana* **Shirokoshimino** *x C.irrawadiensis.* Medium size, white, incurved semi-double. Originated in Ôsaka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.197 with colour photo; English translation p.137. Parentage stated to be *C.rusticana* **Matsunami** x *C.irrawadiensis*. Named and released by Kazuo Yoshikawa.

Hatsugan. Different reading for **Hatsukari.**

Hatsugari. (Spring Prune), *(C.rusticana),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.8: Small to medium size, pale pink, tubular single. Blooms early to late. Originated in the Niigata Prefecture, Japan.

Hatsugasumi. (Early Mist), *(C.japonica),* Inazawa Co. Ltd. Nursery Catalogue, 1986-1987, p.7, A-324; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.23, colour photo and description: Small to medium size, white, single, opening through spherical form, with central stamen cylinder with creamy white filaments, joined for the lower third, and yellow anthers. Blooms early to late. Leaves dark green, elliptic, apices acuminate, margins coarsely serrate. Originated in Izu Ohshima, Japan. A seedling of 'Gokokuji-chiritsubaki'. Originated and named by Takeo Ogawa in 1960s.

Hatsugasumi (Chûbu). (Early Mist). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.197 with colour photo; English translation p.137. Medium to large, pale pink, tubular to cup-shaped single. Flowers early to late. Leaves elliptic, medium size, flat. Upright, vigorous, dense branches. A cross between **Shûfûraku** and **Tarô'an.** Originated and named by Minoru Satô in 1989.

Hatsugeshô. (First Make-up), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.301: Large blush white with a pink flush on petal reverse. Petals, large, rounded, waved and crimped on edge. Compact stamen column, golden anthers, white filaments. Leaves broad-ovate, apex blunt acute, shiny, dark green, prominent venation, finely, shallowly serrate. For colour photo see: Seibundô Shinkôsha, 1979, *Senchinshû,* p.116 as 'Hatsu-geshô'. Yokoyama & Kirino, 1989, *Nihon no Chinka* p.102 as 'Hatsukeshô'. A seedling of 'Kakuba-shiratama', synonym for **Rôgetsu.** Resembles **Jôren-no-haru.** Different readings: 'Hatsukeshô', 'Hatsu-geshoh', 'Hatsu-Gesyoh'. Originated in Angyô, Kawaguchi City, Saitama Prefecture, Japan. Named and released by Yoshizawa Camellia Nursery around 1970.

Hatsugeshô (Chûbu). (First Make-up). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.197 with colour photo; English translation p.137. Medium size, pink ageing to white, single. Flowers mid-season to late. Leaves elliptic, medium size, somewhat waved. Spreading, vigorous growth. A natural seedling of **Takane-no-yuki.** Named and released by Minoru Satô in 1980.

Hatsu-geshoh. Inazawa Nurseries Wholesale Catalogue, 1985-1986. Different reading for **Hatsugeshô.**

Hatsuhana. (First Flower), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16: Large size, pale pink, cup-shaped. Originated in Japan. (Believed extinct.)

Hatsuhana. (First Flower), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô:* Eight-fold to formal double, medium size, white flower mixed with red in a splashed pattern. Yashiro, 1841, *Kokon Yôrankô,* vol.306. Originated in Japan. (Believed extinct.) Different reading: 'Hatsubana'.

Hatsuhana. (First Flower), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White with red streaks, single, stamens dispersed like an anemone form. See JCS., 1969, *Tsubaki,* No.7, p.22. Originated in Japan.

Hatsuhanazome. (Dyed with First Flower), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Deep pink. Petals narrow and long. (Satomi believed this to be a form of *C.japonica* f. *polypetala).* Originated in Japan. (Believed extinct.) See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.102.

Hatsuhi. (Sunrise, New Years Day), *(C.japonica),* Katayama, 1960, *Tsubaki Ochabana,* p.5: Blush pink, large single. Early to mid-season flowering. Originated in Japan.

Hatsuhi. (Sunrise, New Years Day), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.147, pp.74, 131, 132 as 'Hatsu-hi'; Seibundô Shinkôsha 1979, *Senchinshû,* p.116, colour photo, p.238, description. A medium sized, deep pink (Cherry 722/1) single with compact central stamen column. Leaves narrowly elliptic, gradually acuminate, loosely crenate at the margin, petioles long, glabrous. Flowers early to mid-season. Originated in Takarazuka City, Hyôgo Prefecture, Japan. Sport of 'Miyuki-nishiki', which is a synonym for **Tatsuta-nishiki.** This was formerly called 'Hatsu-hinode' but renamed because of the existence of the same name for another cultivar.

Hatsuhi. (Sunrise on NewYear's Day). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.198 with an incorrect accompanying photograph; English translation p.138. Medium size, red, sake cup-shaped single. Flowers early. Leaves broadly elliptic, large, waved. Upright, vigorous growth. Released by Katayama Juraku'en Nursery. From Osaka.

Hatsuhikage. (First Shadow), *(C.sasanqua),* Ashizawa, 1898, *Chabaika Taishû:* Medium size, vermilion red, cup-shaped. Originated in Japan.

Hatsuhikari. (First Brilliance), *(C.hiemalis),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.48; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.38 as 'Hatsu-hikari': Medium size, white ground shaded pale red towards petal tips, double. Blooms early to mid-season. Originated in Kôchi Prefecture, Japan.

Hatsuhikari. (First Light), *(C.japonica),* Ishizawa, Seibundô Shinkôsha, 1966, *Garden Life,* No.17, p.22, as 'Hatuhikari': Medium sized, red, formal double with a slightly irregular centre of small, crinkled, erect petals with a little white streaking. Leaves elliptic, abrupt acute, sharply serrate, prominent, raised venation. Originated in Kurume, Japan. Considered to be a seedling of **Asakura.**

Hatsuhinode. (First Appearance of the Sun), Kanaoka Chinju'en, 1960, *Tsubaki no Nashi.* Synonym for **Hatsuhi.**

Hatsuhinode. (New Year's First Sunrise), *(C.sasanqua),* Sôsei-en Catalogue, 1959: Vermilion red, large size. Originated in Japan.

Hatsukagami. (First Glance at the Mirror on New Years Day), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.115, colour photo, p.238, description: Medium to small single, palest pink, 6-7, rounded petals, compact, central cylinder of stamens, yellow anthers, white filaments. Leaves long-elliptic, mid-green. Blooms early to mid-season. See colour photo: Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.76. Selected from wild japonicas in Hirado City, Nagasaki Prefecture, Japan. Discovered and named by Haruo Yoshida in 1975.

Hatsukagami. (First Glance at the Mirror on New Years Day), *(C.sasanqua),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.44; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Medium size, white

ground colouring to red at petal margins and reverse, single, early blooming. Originated in Angyô, Saitama Prefecture, Japan in 1950s. Named by Naotoshi Hakoda.

Hatsukari. (First Wild Goose), (C.wabisuke), Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in the section on early flowering: Small size, pink streaks on white ground. Itô, Ko'emon, 1879, *Chinkashû:* "White shaded pink, small, early blooming, single, scented." For colour plates see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.464, p.188. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.220, p.387. Tuyama, 1968, *Camellias of Japan*, pl.398, p.202. Seibundô Shinkôsha, 1979, *Senchinshû*, p.115, colour photo, p.238; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.248, as 'Hatsukari'(Kantô): Leaves narrowly elliptic to oblong elliptic, obscurely crenate-serrulate at the margin, petioles glabrous; flower single, widely opening, palest pink with shadings of deeper pink on the outer petals. Flowers mid-season. Slightly fragrant. Originated in Kantô District, Japan. Different reading: 'Hatsugan'. Synonyms: 'Hatsukari'(Kantô), 'Camellia reticulata alba-rosea', 'Shôwa-wabisuke', 'Yanagiba-wabisuke', 'Secchûka', 'Setchûka' in Japan. In USA 'Apple Blossom' is a pseudonym. Sports: **Fukurin-wabisuke, Momoiro-shôwa-wabisuke. Sukiya** and **Tarôkaja** are different cultivars which are similar to, and have been confused with **Hatsukari**. Orthographic error: 'Hatsu-kiri'. Note: Tuyama described this as a different form to **Shôwa-wabisuke**, but they are now recognised as the same. Originated in Kantô, Japan.

Hatsukari (Chûbu). ('Hatsukari' from Chûbu), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki*, p.12 colour photo and description, as 'Hatsukari': A white single *C.japonica* with 7 large, rounded, overlapping petals and a dense stamen column with dull yellow anthers and white filaments. Opens wide campanulate. Leaves broad-ovate to ovate, abrupt acuminate, twisted, recurved, coarsely, sharply serrate. Originated in Chûbu District, Japan. See Seibundô Shinkôsha, 1979, *Senchinshû*, p.115 colour photo as 'Hatsukari'(Chûbu). Synonym: 'Chûbu-hatsukari'.

Hatsukari (Kantô). Seibundô Shinkôsha, 1979, *Senchinshû*, p.115. Synonym for **Hatsukari.**

Hatsukari-tsubaki. Synonym for **Hatsukari.**

Hatsukaze. (First Wind), *(C.sasanqua),* Yashiro, 1841, *Kokon Yôrankô,* vol.344. No description. Originated in Japan. (Believed extinct.)

Hatsukeshô. Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.4, A-190 and colour photo; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.102. Different reading for **Hatsugeshô.**

Hatsukiri. Griffith, 1954, *American Camellia Yearbook,* p.6. Corruption of Japanese name **Hatsukari.**

Hatsuko-sazanka. Different reading for **Hatsumukashi-sazanka.**

Hatsukoi. (First Love), *(C.rusticana), Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.209, p.104, description. p.321: Medium sized (9 cm across), open, peony form, soft fuchsine pink, with 2 rows of large, rounded, outer petals, surrounding an erect centre of small, twisted petals and stamens, anthers golden. Leaves mid-green, small, elliptic, acute apex, shallowly serrate, petiole hirsute. Originated in Yatsuo-chô, Toyama Prefecture, Japan. Named and released by Hideo Hori in 1965. See Seibundô Shinkôsha, 1979, *Senchinshû*, p. 116, colour photo.

Hatsukuni. (First Country), *(C.japonica),* Okumura, ca.1810, *Chinka Hin'i.* No description. Originated in Japan. (Believed extinct.)

Hatsukura. (First Storehouse), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.8: Small size, white single, tubular to campanulate form flower. Blooms mid-season. Originated in Shizu'oka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.197 with colour photo; English translation p.137. Leaves oblong, small, thick, flat. Upright, vigorous growth, dense branches. The original tree is thriving at the Iketani family home, Shimada City. Named and released by Toshihiro Iketani in 1980.

Hatsumago. (First Grandchild), (Higo), Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.287, colour photo and description: Small size, white with dark crimson stripes, single of 6-7 broad, overlapping petals, and a central burst of yellow stamens. Blooms mid-season to late. Leaves bright green, ovate, apices acute, margins coarsely serrate. Originated in the Kumamoto Prefecture, Japan.

Hatsumomiji. (First Red Maple Leaves), *(C.sasanqua),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Pure white, large size flower, opens flat, pink petal edge. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.81. Originated in Japan. (Believed extinct.)

Hatsumukashi. Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16. Abbreviation for **Hatsumukashi-sazanka.**

Hatsumukashi-sazanka. (First Antiquity), *(C.sasanqua),* Itô Ihei, 1719, *Kôeki Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16 as 'Hatsumukashi'; Yashiro, 1841, *Kokon Yôrankô:* Large size, white, semidouble, with 2 row of petals, compact form, thick, broad petals. Different readings: 'Hatsuko-sazanka', 'Hatsumukashi'. Originated in Japan. (Believed extinct.)

Hatsune. (First Song), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.460: Medium sized single of 7 petals, notched, veined crimson at the base fading to white at margins. Resembles **Sanpei-tsubaki**. Originated in Japan. (Believed extinct.)

Hatsune (Chûbu). (First Song - Chûbu), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.116, colour photo, p.238, description: Medium large, deep pink single with 5 large rounded, overlapping petals and a compact stamen column with yellow anthers. Leaves broad-obovate, dark green, apex acute, shallowly serrate. Originated in Chûbu, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.199 with colour photo; English translation p.138. A cross between **Shûfûraku** and **Benimyôrenji.** Named and released by Minoru Satô in 1971.

Hatsune. (First Chirp of the Year). *(C.sasanqua). "Sasanquas, The Winter Flowers"* ICS Congress, Kurume 2010, English translation, p.64; White tinged with red, medium size single, very early. From Saitama (Angyô).

Hatsune-higo. (First Song of a Bird - Higo), (Higo), *Higo Camellia Society, 1965, Higo List* as 'Hatsune': Pink, 10 cm across, single. Stamens spreading, filaments yellowish white. Flowers mid-season. Originated in the Kumamoto Prefecture, Japan. For description see: Seibundô Shinkôsha, 1979, *Senchinshû,* p.238.

Hatsu-nishiki. (Brocade for Firstborn), *(C.sasanqua),* Ashizawa, 1898, *Chabaika Taishû;* Chûgai Nursery Co. Catalogue, 1939-1940, p.19; Nobelius Nursery Catalogue, 1939, p.36: White flushed pink on the edge. Medium semi-double with notched petal tips. Originated in Japan.

Hatsu-nishiki. (Brocade for Firstborn), *(C.sasanqua),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Large size, white ground with red scratches, single. Originated in Tokyo Prefecture, Japan.

Hatsu-no-miyamagi. (First Wild Tree), *(C.japonica),* Mizuno, 1681, *Kakan Kômoku:* White spotted pink, double. Originated in Japan. (Believed extinct), See JCS., 1965, *Tsubaki,* No.5, P.29.

Hatsureyuki. (Dappled Snow), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Semi-double with 2 rows of petals, white with red stripes, cup-shaped. Yashiro, 1841, *Kokon Yôrankô,* vol.310; Okumura, ca.1810, *Chinka Hini'i.* Originated in Japan. Different reading: 'Hazureyuki'. (Believed extinct.)

Hatsusakura. McIlhenny, 1937, *600 Varieties of Camellias,* as 'Hatsu-sakura'. Synonym for **Dewatairin** as 'Daitairin'.

Hatsuse. (First Rapids), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô:* Eight-fold, large and variegated flower. Yasiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki*

Irohanayose Irotsuki: White, large size, double with small red speckles. Originated in Japan. (Believed extinct.)

Hatsusegawa. (Hatsuse River), *(C.japonica),* Okumura, ca.1810, *Chinka Hin'i.* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki,* in section on double flowers: Pale pink ground with small red stripes, large flower. Originated in Japan. (Believed extinct.)

Hatsusey Yama. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.99. Corruption of the Japanese name 'Hatsuseyama'.

Hatsuseyama. (Mount Hatsuse), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.647: Large double with 6-7 rows of imbricated petals and a small centre of small, erect petals and stamens. Petals, soft pink fading to edge to white. Originated in Japan. (Believed extinct.) Mount Hatsue is in the Nara Prefecture and often cited by ancient poets.

Hatsuseyama. (Mount Hatsuse), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô:* Red, double form with large, white spots. Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Resembles **Shikason.** Originated in Japan. (Believed extinct.)

Hatsuseyama. (Mount Hatsuse), *(C.japonica),* Itô, Ko'emon, 1879, *Chinkashû:* Double, pinkish white marked deeper pink. Large. This is the modern cultivar. See colour photos and description: Tuyama.1966, *Camellia Cultivars of Japan,* pl.175; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.355, pp.135, 344; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.85, p.31; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.343. Seibundô Shinkôsha, 1979, *Senchinshû,* pp.116, 238: Large semi-double with 2-3 rows of large, rounded, overlapping petals, having a ground colour from white to pink with a white edge and heavily streaked and spotted with crimson. A small diameter, compact stamen column. Originated in Japan. Resembles: **Fukiage-shibori, Tanushimaru** and 'Oki-no-maru'. Corruption of name: 'Hatsusey Yama'.

Hatsu-shibori. (First Dapple), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.226: Large white single with one crimson mark. Compact stamen cluster. Originated in Japan. (Believed extinct.)

Hatsushigure. (First Winter Rain), *(C.japonica),* Okumura, ca. 1810, *Chinka Hin'i:* Pale pink, spotted with deeper pink and margined with white. Yashiro, 1841, *Kokon Yôrankô,* vol.310; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large double with 4-5 rows of petals. Pale pink with pink streaks and spots. Bamboo whisk form stamens. Originated in Japan. (Believed extinct.) Note: These ancient culhvars are distinct from the modern ones.

Hatsushigure. (First Winter Rain), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.374; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.381; Seibundô Shinkôsha, 1979, *Senchinshû,* p.116, description, p.238: A medium sized, deep pink anemone form with an outer row of wide, notched petals and a centre of erect, folded, small petals with petaloids and stamens. Leaves glossy, mid-green, elliptic, acute apex, finely, shallowly serrate margins. Early to mid-season flowering. Originated in Toyama Prefecture, Japan. Collected in 1962 and named by Ishizawa. Locally erroneously known as 'Kantsubaki'

Hatsushimo. (First Frost), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.564: Small to medium size, open peony form, pinkish white with small, scarlet marks and a centre of long stamens and petals intermixed. Originated in Japan. (Believed extinct.) Resembles **Hakuro--nishiki.**

Hatsushimo. (First Frost), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large size, single flower; white with red peppering. Originated in Japan. (Believed extinct.)

Hatsushimo. (First Frost), *(C.japonica), Chinka Zufu,* (Before 1700), Watanabe, 1969, pl.672: Medium sized semi-double with erect petals cupping a stamen column with brownish anthers. Colour,

light pink with dense, fine crimson streaking and an occasional white blotch. Originated in Japan. (Believed extinct.)

Hatsushimo. (First Frost), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Early flowering, true red, formal double, lotus shape. Chûgai Nursery Co. Catalogue, 1936-1937, p.25 as 'Hatsusimo'. See colour photos: Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.392; Seibundô Shinkôsha, 1979, *Senchinshû,* p.116, description, p.238: A formal double deep pink with 6-7 rows of petals and a bud centre. Medium size. Mid-season to late flowering. Originated in Kansai District, Japan. Orthographic errors: 'Hatsu-simo', 'Hatsu-sime'. Chinese synonym 'Chushuang'.

Hatsushimo-kasuri. (First Frost Bordered), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Formal double, red, with white spots, lotus-shaped. Early flowering. A sport of **Hatsushimo** above. Different reading 'Hatsushimo-tobi'iri'. Originated in Japan. (Believed extinct.)

Hatsushimo-tobi'iri. Different reading for **Hatsushimo-kasuri.**

Hatsushirakumo. (First White Cloud), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.395 as 'Hatsu-shirakumo': Small, campanulate single, pink fading to white on petals edge. Originated in Japan. (Believed extinct.)

Hatsushishiro. (Meaning obscure), *(C.japonica),* Yashiro Kôken, 1841, *Kokon Yôrankô,* vol.310. No description. Originated in Japan. (Believed extinct.) Different reading: 'Hatsushijiro'.

Hatsushijiro. Different reading for **Hatsushishiro.**

Hatsu-sime. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Hatsushimo.**

Hatsu-simo. Chûgai Nursery Co. Catalogue, 1936-1937. Corruption of the Japanese name **Hatsushimo.**

Hatsutsubame. (First Swallow), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki,* in section on single flowers; Itô, Ko'emon, 1879, *Chinkashû:* White spotted pink. Small. Originated in Japan. (Believed extinct.)

Hatsu-tsubaki. (First Camellia to Flower), *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Red mottled pink. Medium, single. Early flowering. Originated in Japan.

Hatsuwarai. (Babies First Smile), (Higo), Satomi, 1956, *Camellia Varieties of Japan,* p.16 as 'Hatsu--warai': Light pink with deeper pink base. Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement,* p.71: Flower pink becoming deeper to base, 10 cm across, 6-7 petals. Stamens, circular, white, yellow at base, late flowering. Leaves, medium size, ovate-elliptic, venation impressed. Originated in Kumamoto Prefecture, Japan. See colour photo, *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.51, p.54 as 'Higo-hatsuwarai' and Seibundô Shinkôsha, 1979, *Senchinshû,* pp.117, 238. Synonyms: 'Higo-hatsuwarai', 'New Years Greetings'. Corruption of Japanese name: 'Hatsuwaraii', 'Hatsu Waraii'.

Hatsuwaraii. Torsanlorenzo Catalogue, 1984-1985. Corruption of Japanese name **Hatsuwarai.**

Hatsuyaki. (First Snow). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.199 with colour photo; English translation p.138. Medium size, white, tubular to sake cup-shaped single. Flowers early to late. Leaves broadly elliptic, medium size, thick. Somewhat spreading, vigorous growth. A cross between **Shûfûraku** and **Rôgetsu.** Named and released by Minoru Satô in 1983. From Aichi Prefecture.

Hatsuyo-no-hadashiro. Different reading for **Shoya-no-hadashiro.**

Hatsuyuki. (First Snow), *(C.japonica),* Iwasaki, 1828, *Honzô Zufu*: Double, blush pink petals with a reddish cast, small size. Originated in Japan (Believed extinct). See: JCS., 1981, *Tsubaki,* No.20, p.118, 119.

Hatsuyuki. (First Snow), *(C.sasanqua),* Chûgai Nursery Co. Catalogue, 1936-1937, p.26 as 'Hatsuyuki': Pure white, giant flower. McIlhenny 1937, *600 Varieties of Camellias:* Single. White tipped rose pink. Originated in Japan. Synonym: 'Hatsuyuki(2)'.

Hatsuyuki(1). *(C.sasanqua),* Fendig, 1953, *American Camellia Catalogue:* White, single, early. Originated in Japan.

Hatsuyuki (2). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Hatsuyuki.**

Hatsuyuki-sazanka. (First Snow Sasanqua), *(C.sasanqua),* Hantei, Kinta, 1827, *Sômoku Kihin Kagami*, Jin-no-maki. Spotted variegation on the leaves. Originated in Japan. (Believed extinct.)

Hatsuyume. (First Dream of the New Year), *(C. reticulata* hybrid*),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.74, colour photo and description: Small size, pale pink, wide tubular to campanulate single of 5-6 broad, rounded, overlapping petals, margins a little crinkled, and a central stamen cylinder, with yellow anthers. Blooms early to mid-season. Leaves mid-green, elliptic, apices acuminate, margins serrulate. Originated in the Saitama Prefecture, Japan. A seedling of **Barbara Clark.** Named and released by Yoshizawa Camellia Nursery around 1980.

Hatsuzakara. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.99. Orthographic error for 'Hatsusakura', synonym for **Dewatairin.**

Hawai. Catalogue Descriptif des Pépinières de Kerisnel, 1994, p.29. Orthographic error for **Hawaii.**

Hawaii. *(C.japonica), American Camellia Yearbook,* 1961, p.224, Reg. No.541: A sport of **C.M. Wilson,** originated in 1954 by Hamilton & Clark Nursery, Upland, California, USA. Growth habit is medium, upright and average in rate with dark green leaves, 11 cm x 6 cm. The pale pink, peony form flower is 12.5 cm across x 7.5 cm deep with many petals fimbriated. Flowers early to mid-season. Colour plate: *American Camellia Yearbook,* 1962-1963 facing p.84. *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.79, p.46. Sports: **Kona, Hawaiian Bride.** Chinese synonym: 'Xiaweiyi'.

Hawaiian Bride. *(C.japonica), New Zealand Camellia Bulletin,* March 1993, Issue No.114, vol.XVIII, No.1, p.32, Reg. No.324: A mutant of *C.japonica* **Hawaii,** fixed by N.T. Armstrong, Christchurch, New Zealand, which first appeared in 1984. Growth habit is upright and medium, foliage dark green and very serrated. Leaves 13 cm long x 5.5 cm wide. Flower peony form, white with heavily textured, fimbriated petals. Average flower size 14 cm across x 7 cm deep with 26 petals and about 100 petaloids. A few golden anthers sometimes show. Blooms mid-season to late.

Hawanei. *(C.sasanqua),* McIlhenny, 1941, *700 Varieties of Camellias,* p.16 as (Japan). Not yet bloomed. No further data. (Believed extinct.)

Hawei. Gao, Jiyin, Ltr 30 July 1990. Chinese synonym for **C.M. Hovey.** Now amended to 'Huowei'.

Hawei. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.420; Chinese synonym for the New Zealand *C.japonica* **Mona Harvey.**

Hawkin's Red. *(C.japonica),* Wilmot, 1944, *Camellia Variety Classification Report*, p.5. No description. Originated in USA.

Hayabusa. (Peregrine Falcon), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.65: Small white, bell-shaped single with reflexed leaves and a cylinder of stamens with white filaments. Originated in Japan. (Believed extinct.)

Hayadôri. (Early Passing), *(C.rusticana),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.8: Medium size, dark red, bell-shaped single. Blooms mid-season to late. Originated in the Niigata Prefecture, Japan.

Hayafune. (Fast Boat), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô* No.130: Formal double. The corolla is red with white spots. The apex of the corolla is sharp. Small. Yashiro, 1841, *Kokon Yôrankô,* vol.306. Originated in Japan. See Nakamura, 1982, JCS., *Tsubaki,* No.21, p.86. Different reading: 'Hayahune'. (Believed extinct.)

Hayahune. Watanabe, 1970. Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.123. Different reading for **Hayafune.**

Hayakawa. (Swift River), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.238, 499: Medium size, tubular, single white, densely flecked and finely striped carmine. Originated in Japan. (Believed extinct.)

Hayamichi. (Short Cut), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.487: Medium sized, bell-shaped flower with irregular white single with veined petals. Originated in Japan. (Believed extinct.)

Hayamichi. (Short Cut), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.571: Medium sized, white, irregular semi-double. Petals notched and indented, flushed with pink on the reverse. Originated in Japan. (Believed extinct.)

Haya-oi. (Early maturity), *(C.japonica),* Kondô, "Chromosome Numbers in the Genus Camellia", 1977, *Biotropica,* vol.9, No.2, pp.86-94. No description. Originated in Japan.

Hayatojiro. (Hayato's White), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.22, p.11, colour photo, p.91 description: Leaves oblong-elliptic, rounded base, tapered apex, 8.8 cm long x 5 cm wide, side venation raised, mid-rib depressed. Petioles 9 mm long, hairy. Flowers pure white, or rarely, palest pink, irregular semi-double with 17-19 petals, rather small, obovate, laxly wavy, emarginate. Stamens sometimes in a cylinder, sometimes divided into 5 or more fascicles, filaments yellow. Occasional fan-shaped petaloid. Flowers mid-season. Originated in Yatsuomachi, Toyama Prefecture, Japan.

Hayato-no-mai. (Dance of Hayato), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.377, colour photo and description: Large size, pale pink with pink and crimson speckles and streaks, paler eyes, open peony form with 4 rows of waved petals and clusters of deep yellow stamens amongst the centre petals. Blooms mid-season to late. Leaves deep green, elliptic, apices acute, margins serrate. The original tree is growing in the Botanical Garden of Tropical Plants, Kagoshima City, Japan. Named and released by Kagoshima Camellia Society in 1980. Note: Hayato is the name of the ancient people of great bravery who once lived in the Kagoshima Prefecture.

Hayato-no-tate. (Shield of Hayato), *(C.japonica),* Yokoyama & Kirino, 1989. *Nihon no Chinka,* p.277, colour photo and description: Large size, white, heavily striped crimson, single with 7 broad, fluted petals and a broad central cylinder of yellow stamens. Opens flat; fragrant. Blooms midseason to late. Leaves strong green, broad-elliptic, margins serrate. The original tree is

growing at a private family in Kagoshima City, Japan. Named and released by Kagoshima Camellia City in 1980.

Hayazaki-beni-goromo. (Early Blooming Red Robe). *(C.hiemalis). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.310 with colour photo; English translation p.218. Small to medium, red, rose-form double. Very early to early. Leaves narrowly elliptic, small. Upright, vigorous growth. Sold at nurseries in Hamamatsu City, origin unknown. Considered to be of *C.hiemalis* parentage. From Shizuoka Prefecture.

Hayazaki-bokuhan. (Early Blooming Bokuhan), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.119 colour photo, p.239, description: Typical **Bokuhan** anemone form of 5 outer, red, guard petals cupping a compact, cushion of white flagged petaloids. Leaves dark green, elliptic, acuminate apex with depressed venation and shallow serrations. Early blooming. Resembles: **Akizaki-bokuhan.** Originated in Kantô, Japan. Synonym: 'Hayazaki-bokuhan-Kantô'.

Hayazaki-bokuhan-Ise. (Early blooming Bokuhan from Ise), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.180, as 'Hayazaki-bokuhan' but later changed to **Hayazaki-bokuhan-Ise** to prevent confusion with that above. Seibundô Shinkôsha, 1979, *Senchinshû,* p.119, colour photo, p.239, description: Typical **Bokuhan** anemone form of 5-6 irregular, red, outer petals surrounding a compact cushion of red, variegated white, petaloids, intermixed with a few stamens. Leaves lanceolate, apex long acuminate, margins finely serrate. Resembles **Shikibu,** but flowers are larger than it though smaller than **Bokuhan.** Originated in Chûbu District, Japan.

Hayazaki-bokuhan-Kantô. Synonym for **Hayazaki-bokuhan.**

Hayazaki-honnami. Seibundô Shinkôsha, 1979, *Senchinshû,* p.225. This was a former name for **Zuigyoku.**

Hayazaki-kasuri. (Early blooming variegated), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.367: Medium sized, single white with many crimson flecks and stripes. Compact stamen column, pinched in at top. Opens flat. Different reading: 'Hayazaki-tobi'iri'. Originated in Japan. (Believed extinct.)

Hayazaki-tobi'iri. Different reading for **Hayazaki-kasuri.**

Haydon's Compact. *(C.saluenensis). New Zealand Camellia Bulletin,* March 2005, Issue No.150, vol.XXIV, No.2, p.36, Reg. No.471. Registered by N. Haydon, Takanini, New Zealand. A form of *C.saluenensis* collected from a wild population between Kunming and Dali in 1991. It has proved to be a genetic dwarf form, and is imparting that characteristic to most of its hybrid seedlings. Flower is a 6 petalled single, 5.5 cm across x 3 cm deep, with light pink (RHS.CC.56A) petals whitening towards the base and yellow anthers on pale cream filaments. Plant growth is very dense, spreading, vigorous and low-growing, with mid-green leaves 3 cm long x 1.5 cm wide. Flowers mid-season to late. See *International Camellia Journal,* 1998, for further information: colour photo p.63; text p.65.

Hayez. *(C.japonica),* Burdin Maggiore & Co. Catalogue, 1856-1857. No description. Originated in Italy. (Believed extinct.)

Head Table. *(C.japonica),* Little Red Barn, 1967, ACS., *The Camellia. Journal,* vol.22, No.4, p.23. *American Camellia Yearbook,* 1986, p.131, Reg. No.996: A 10 years old chance seedling that first bloomed 1962, originated by Neal Cox, Georgetown, South Carolina, USA. Was exhibited as "Cox Seedling #420". Plant habit is upright and medium in rate with light green leaves, 8.5 cm x 5 cm. The anemone form flower is up to 14 cm across x 5 cm deep with 25-30 petals and numerous petaloids, some variegated. Strawberry red. Blooms early to mid-season. Sport: **Head Table Variegated.** See colour photo facing p.86, *American Camellia Yearbook,* 1969.

Head Table Variegated. *(C.japonica),* Gentry, 1969, ACS., *The Camellia Journal,* vol.24, No.4, as 'Head Table V.': A virus variegated form of **Head Table** - Strawberry red, blotched white. Originated in USA.

Hearnanthus. *(C.japonica),* McIlhenny, 1937, *600 Varieties of Camellias* p.3: Peony type, deep red veined purple. Originated in USA.

Heampsteadii. Cachet Catalogue, 1845-1846, p.2. Orthographic error for **Hampsteadii.**

Hearn's Dawn. *(C.japonica), Camellia Digest,* 1(3),1943. No descripion. Fendig, 1953, *American Camellia Catalogue:* A medium sized, pink, complete double, 8 cm across. The colour is clear, medium pink. The bloom is imbricated to its rose-bud centre from which recurved petals unfold. No stamens are shown. Leaves medium to dark green. 8 cm x 4 cm. Recurves to a short tip, with a tapered base. Venation depressed, serrations fine. Originated by Clarence S. Hearn, Arcadia, California, USA from seed of **Cheerful** x **Daikagura** planted 1927. First flowered 1934. Synonym: 'Dawn'(Hearn), but not related to Hearn's **Pink Dawn.**

Hearn's Ecstacy. The Pacific Camellia Society, 1946, *Camellia Nomenclature,* p.17. Synonym for **Nassiniana.**

Hearn's Egret. Griffiths & Strother, 1954, ACS., *Nomenclatural Cross-reference List.* Synonym for **Shiratama.**

Hearn's Pink Dawn. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Pink Dawn.**

Heart O'Gold. *(C.japonica),* SCCS *Bulletin,* vol.11, No.6, p.4, June 1950. SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Orange red. Large single. Medium, open growth. Mass of golden stamens, mid-season to late blooming. Orthographic variant: 'Heart of Gold'. Originated by Harvey Short, Ramona, California, USA.

Heart of Gold. Mark S. Cannon Scion Catalogue, 1962, p.5. Orthographic variant for **Heart O'Gold.**

Heart's Desire. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Synonym for **Cho-no-hanagata.**

Heartwood Bolero. *(C.reticulata* hybrid), Heartwood Nursery, Seedling List 2009 as 'Bolero'; An 11.5 cm diameter, formal double to peony form. Medium pink, flowers mid-season. Strong, upright and open growth. A cross of *C.pitardii* var *yunnanica* x 'Purple Gown' (**Zipao**). Originated by Heartwood Nursery, Fort Bragg, Calif., USA (HW74).

Heartwood Fandango. (*C.reticulata* hybrid) SCCS, *Supplementary List* 2011, as 'Fandango'; Bright pink, medium size, semi-double to irregular double, with very wavy petal margins. Strong, upright, open growth. {(*C.pitardii* var *yunnanica* x **Zipao** 'Purple Gown') x [(*C.pitardii* var *yunnanica* x (**Zipao** 'Purple Gown' x *C.forrestii*)]}. Flowers early. Originated in 2011 by Daniel Charvet, Fort Bragg, Calif., USA.

Heartwood Salute. *(C.hybrid).* Heartwood Nursery, Seedling List 2009 as 'Salute'; Miniature to small, white to blush pink flowers opening from bright red buds. Small, rich glossy green leaves. Strong, upright open habit. Flowers early to midseason. A cross of *C.saluenensis* x *C.lutchuensis.* Originated by Daniel Charvet, Fort Bragg, Calif., USA (HW77). Note; Name changed as being too close to **Salut,** which also has the same breeding.

Heather Green. *(C.japonica),* ACS, 1992, *The Camellia Journal*, vol.47, No.4, p.13. Valdosta Camellia Scions advert. No description. Originated by Dr Habel, USA. Not validly listed.

Heaven Scent. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Rose red. Medium peony form. Vigorous, compact growth. Blooms early to mid-season. Originated by Mrs M. Verfurth, Southgate, California, USA.

Heavenly. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* White, irregular double. Mid-season. *American Camellia Yearbook*, 1955, p.337, Reg. No.218: A 7 year old chance seedling, originated by Mrs Elizabeth Councilman, El Monte, California, USA that first flowered 1951. Plant habit is average and compact with dark green, oval leaves with abrupt bases, acuminate tips and crenate margins. The flowers, 10-11 cm across, are incompletely imbricated, similar to 'Mathotiana' (**Julia Drayton**) with 42 petals. Colour, very pale blush with yellow centre. Flowers mid-season to late.

Heavenly Daze. *(C.japonica),* SCCS., 1968, *Camellia Nomenclature,* p.66: Pale pink with blush white tones. Large anemone form with crinkled, centre petaloids, varying from pale pink to blush in the centre. Medium, open growth. Blooms early to late. Originated by C.W. Lattin, Lauderdale, Mississippi, USA.

Heavenly Fragrance. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.43: Pale pink. Medium, peony form. Medium, upright growth. Fragrant. Mid-season flowering. Originated in USA.

Hébé. *(C.japonica),* Herbert, 1837, *Amaryllidaceae & Suppl.,* p.368: Flower nearly regular, of a delicate, purplish pink. A seedling from 'Waratah' x 'Iduna'. Synonym: 'Modesta'. Originated in England. Orthographic error: 'Hebee'.

Hebe. Gao, Jiyin, Ltr 30 July 1990. Chinese synonym for **Bob Hope.** Later changed to 'Huobo'.

Hebe. Coolidge Gardens Catalogue. 1945-1956. Pseudonym for **Hugh Evans.**

Hebee. Alex. Verschaffelt, 1846 Catalogue, p.54. Orthographic error for **Hébé.**

Hebra. *(C.japonica),* van Houtte Catalogue, 1839, 1:4: Flowers full peony form, round, of a dark rose. Originated in Belgium.

Hecai. Gao, Jiyin, 1993, *The Observations from the Camellia World,* No.531, p.67. Chinese synonym for the USA *C.reticulata* hybrid **Applause.**

Hécla. *(C.japonica),* van Houtte Catalogue, 1842, 9:53: Bright vermilion, beautifully shaped. Originated in Belgium. Orthographic variants: 'Heckla', 'Hekla'.

Heckla. G. Reuthe Ltd. Kent Nursery Catalogue, 1935, p.84. Synonym for **Arajishi.** Orthographic error: 'Hecklar'.

Hecklar. West End Nurseries Stock list, Jan.1989, p.1. Orthographic error for 'Heckla', synonym for **Arajishi.**

Hector MacDonald. *(C.japonica),* G. Reuthe Ltd. Kent Nursery Catalogue, 1935, p.84: Large size, well shaped, semi-double, pink. Originated in the UK.

Hecropetala Alba. Warren's Descriptive Catalogue, 1845, p.51. Orthographic error for **Heteropetala Alba.**

Hectotiana. *(C.japonica),* Phélippeau Catalogue, 1843: White. Medium large semi-double. Originated by Mr Hectot, Nantes, France. Orthographic errors: 'Ectotiana', 'Hectoriana', 'Hecotiana'.

Hecuba. *(C.japonica),* Dodd, 1968, *Adventures in Camellia Seedlings,* p.5, colour photo: White, incomplete double with faint pink blush. Seedling of **Elizabeth Boardman,** originated in USA by Richard Dodd, Marshallville, Georgia.

Hedda Hopper. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.99: No description. Originated in USA. No valid listing located.

Heding. (Crane's Crest), *(C.japonica),* Ono, 1803, *Honzô Kômoku Keimo.* Fang, 1930, *Diannan Chahua Xiaozhu* describes **Heding** as: "It is as big as a waterlily and the colour is blood red. The centre is full like the top of a crane's head". This refers to the Chinese crane with the red crest so often illustrated in Chinese and Japanese paintings. Liu, 1959, *Several Famous Ornamental Plants of China* gives the same description for **Hedinghong** and also says: "There are 6 large, outer petals in the outer whorl. In the centre the petals are broken or divided. This variety is suitable for breeding as it sets seed easily." However the name **Hedinghong** was also used for a *C.reticulata* (Feng & Shi, 1966) and is included in Feng et al, 1981, *Yunnan Shanchahua,* plate, p.121 with the synonym 'Hedingcha'. Because of the confusion it is proposed that **Heding Cha** be the valid name for the *C.reticulata* cultivar and **Heding** for the *C.japonica* while **Hedinghong** applies to a variegated form. Originated in China. Different readings: 'Ho Ting', 'He-ting'. Japanese reading: 'Kakuchô'. Yashiro, 1841, *Kokon Yôrankô,* vol.306 lists 'Kakuchôcha'.

Heding Cha. (Crane's Crest Camellia), *(C.reticulata).* Wang, 1621, *Qunfangpu.* Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.19: "(Crane Crest Camellia). Turkey red. Midseason to late. Dali;" with 'Hedinghong' as a synonym. The identity of Wang's Camellia is unknown. Yü & Bartholomew propose re-using the name for the *C.reticulata* in place of 'Hedinghong' to prevent duplication. Different readings: 'Ho-ting Ch'a', 'Hotingcha'. For colour plate see p.87, Feng et al. 1986, *Yunnan Camellias of China* as 'Hedinghong': Leaves thick, broad-ovate to broad-elliptic, apices short-pointed or acute, bases broad-cuneate to orbicular, 5.5-7 cm long x 3.5-5.3 cm wide. Flowers purple (RHS.CC.53B), diameter 12-13 cm. Petals about 33 in 6-7 whorls, regularly imbricated, slightly reclinate, recurved when fully open, becoming smaller from outer to inner whorls, inner petals with pinkish white stripes, others with short, silvery white hairs. Stamens mostly petaloid, some rudimentary. The petals of this cultivar are purplish-red with white hairs. It originated in Dali, Yunnan, China, Flowers mid-season. Western synonym: 'Crane Crest'. Other synonyms: 'Crane Crest Red', 'Stork Crest Red'.

Hedinghong. *(C.japonica),* (Crane Crest Red), Liu, 1959, *Several Famous Ornamental Plants of China.* Synonym for the *C.japonica* cultivar **Heding.** Feng & Shi, 1966, *Yunnan Shanchahua Zhiwaxue....* Pseudonym for the *C.reticulata* cultivar **Heding Cha.** Different readings: 'Ho Ting Hung', 'Hotinghung', 'Heh Ta Hung'. 'He-ting-hung'. Chang Shao Yun, 1987, *Camellias from Zhejiang,* pp.59, 60, give this name as a synonym for both **Jinpan Lizhi** and 'Zihonglou'. On p.78 and colour photo [p.144] is shown the typical red anemone form.

'Wannianhong' is given as a synonym. Gao & Zhuang, 1989, *The Camellia in China*, p.42, No.225, colour photo No.122: A full peony to anemone form, 8-9 cm across with 16-20 outer petals and the centre a mass of approximately 250 petaloids; colour deep red with some white variegation. Leaves mid-green, ovate. Originated in China.

Hedinghong. (Crane Crest Red), *(C.japonica),* Chen, Jingyi, 1253, *Quan Fang Bei Zu:* Flower white, cold hardy. Can withstand snow. Originated in China. (Believed extinct).

Heer. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.299, p.74. Chinese synonym for the Australian *C.japonica* **Roger Hall.**

Hehua. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.422; Chinese synonym for the Japan *C.japonica* **Gauntlettii,** as 'Lotus'.

Hehuaxianzi. *(C.reticulata). Chinese Camellia Culture,* 2003, p.246 with colour photo; Silvery red semi-double, diameter 11-13 cm. Flowers early to mid-season.

Hei Erhong. (Dark Red), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China,* p.38, No.196, colour photo, No.105: Medium size, 10 cm across, purplish red, open, peony form with 7 large, outer petals and a centre with fascicles of stamens intermixed among a few erect centre petals. Blooms mid-season to late. Leaves dark green, broad-ovate, apices acute. Originated in China.

Hei Erpian. (Blackish Sepals), *(C.japonica),* Shanghai Botanical Gardens List, 1985: A medium sized, dark red, irregular open peony form. See colour photo, [p.143], Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.64. Originated in Zhejiang Province, China. Alternative orthography 'Heierpian'.

Hei Ta Hung. Yü & Feng, 1958, *Yunnan Shanchahua Tuzhi.* Different reading for **Heidahong.**

Heian. (Peace), *(C.japonica x C.reticulata),* Yoshikawa, 1966, Kyôto Engei Kurabu, *Tsubaki Tokushû,* special edition No.7. Andoh, 1982, *International Camellia Journal,* No.14, p.55: A hybrid originated by Kazuo Yoshikawa from 'Goshiki-yaye-chiritsubaki' x *C.reticulata* **Shizitou.** The flowers are various in form and colour. They are white, rose-pink and light pink, sometimes streaked a deeper pink. They are keeled, broad and sometimes serrated and form a medium sized semidouble. Late blooming. A distinctive feature is its heavily serrated foliage, close to **Sakuraba-tsubaki.** Originated in Kyôto Prefecture, Japan.

Heibaoshi. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.105. Chinese synonym for **Dark Jewel.**

Heichun. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.428; Chinese synonym for the Japan *C.japonica* **Kuro-tsubaki.**

Heidahong. (Dark red Lion's Head), *(C.reticulata),* Yü & Feng, 1958, *Yunnan Shanchahua Tuzhi.* No description. Different readings: 'Heitahung', 'Hei-ta-hung', 'Hei Ta Hung'. Originated in China.

Heidanshi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.428; Chinese synonym for the New Zealand *C.hybrid* **Black Opal.** Previous spelling 'Heise Danshi'.

Heigorô-nanabake. (Heigorô's Changeable Leaf), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû,* vol.5. In section on unusual leaves. Thick leaves, long leaves and so on, appears on this tree. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.169. Originated in Japan. (Believed extinct.) Different reading: 'Heigorô-shichihenge'.

Heigorô-shichihenge. Different reading for **Heigorô-nanabake.**

Heiguangjing. (Mirror of Black Light), *(C.japonica), Shanghai Botanical Gardens List,* 1985: Dark red, formal double. Originated in China.

Heihuo. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.427; Chinese synonym for the England *C.japonica* **Blackburnia.**

Heijimi. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.10. Chinese synonym for the USA *C.japonica* **Dark Secret.**

Heijin. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.428; Chinese synonym for the USA *C.japonica* **Black Gold.**

Heikichi. (Personal name), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.211; Itô, Ihei, 1695, *Kadan Chikinshô,* No.92; Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Yashiro, 1841, *Kokon Yôrankô,* vol.310; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Single, large white flower with red splashes. Very early blooming. Originated by Heikichi, Japan. (Believed extinct.) Different reading: 'Hirayoshi'.

Heilingdai. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.19. Chinese synonym for **Black Tie.**

Heimofa. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the USA *C.japonica* **Black Magic.**

Heimosa. (Black Mosa), *(C.japonica),* Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.45; Introduced in 1999 to China from Japan, original name lost. Flowers dark red, occasionally with some white patches, semi-double to peony form, medium size to large, petals broad-rounded, waved and slightly wrinkled, darker red veins visible, centre petals erect. Some small clusters of stamens in the centre, anthers golden, filaments red. Leaves dark green, long-elliptic, shiny, apices slightly downcurved. Compact, vigorous plant. Flowers mid-season to late.

Heimudan. (Dark Peony), *(C.edithae* var. *plena),* Gao & Zhuang, 1989, *The Camellia in China,* p.35, No.161, colour photo, No.79A,B: Medium size, 9-11 cm across, peony form with about 4-5 outer rows, irregularly imbricated, of innumerable small crimson to purplish crimson petals. Blooms midseason. Leaves mid-green, ovate to broad ovate, apices acute. *Collected papers* – International Symposium on *C.chrysantha,* 1994, 8-11 January, pp.112-114. About 8 cm across with 40 petals and a few central stamens.Calyx brown and tomatoes, young shoots hairy. Leaves elliptic to wide-lanceolate, green, tomentose on veins and mid-ribs, lateral veins impressed, serrate margins. Synonym 'Momudan'. Originated in Fujian Province, China.

Heinrich Seidel. *(C.japonica),* Seidel Catalogue, 1897: Large flower, irregular. Pure white. Originated in Germany. Sport **Emma Seidel.**

Heiqishi. (Rider in the Dark). Shao, Taichong, 1992, *The Observations from the Camellia World,* p.62. No.264. Chinese synonym for the NZ *C.hybrid* **Night Rider.**

Heirinji. (Heirin Temple), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.96, description only; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.8, (Nihon no Camellia Hinshuhyô): Medium size, single, pink, cup-shaped flowers. Early to mid-season blooming. Originated in the Saitama Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.228 with colour photo; English translation p.160. Discovered by Katsusuke Ôta at a plant producing firm in Angyô, Kawaguchi City. Named and released by Yoshizawa Chinju'en Nursery around 1975.

Heirinji-nigô. (Heirin Temple No.2), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.96, colour photo and description: Small size, pale peach pink, open campanulate single, with 5 broad, overlapping petals and a wide, central stamen cylinder with white filaments, joined for the lower half, and yellow anthers. Leaves narrow-ovate, apices acute, margins obscurely ser-rate. Orignated in the Saitama Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.229 with colour photo; English translation p.160. Discovered by Katsusuke Ôta at a plant producing firm in Angyô, Kawaguchi City. Named and released by Yoshizawa Chinju'en Nursery around 1975.

Heirongdai. Chinese synonym for USA *c. hybrid* **Black Lace.**

Heirongdai Mudan. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.428; Chinese synonym for the USA *C.reticulata* hybrid **Black Lace Peony.**

Heise Danshi. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.75, No.315. Chinese synonym for the NZ *C.hybrid* **Black Opal.** Later changed to 'Heidanshi'.

Heisei-beni. (Red Camellia of Heisei Era). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.228 with colour photo; English translation p.160. Small, deep red single, thick and cupped petals, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic. Upright, vigorous growth. A natural seedling of unknown parentage. Originated and released by Toshiaki Kosaki in 1992. From Aichi Prefecture.

Heisei-no-kagayaki. (Radiance of Heisei Era). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.228 with colour photo; English translation p.160. Small, scarlet, trumpet shaped single, cylindrical stamen column. Flowers mid-season. Leaves narrowly elliptic, medium size. Upright, vigorous growth. An old camellia raised by a private family in Hajima City, history unknown. Named and released by Nagaharu Niwa in 1989, released by Gifu Camellia Club. From Gifu Prefecture.

Heisei-tenzen ('Tenzen' in Heisie era) (*C.japonica*) from Kodaira, Tokyo, *Japan Camellia* No.84, August 2007: Red, single, slender & split petals, cylindrical stamens, medium size, blooming in April. Leaves lanceolate, medium. Tree spreading and weeping. A descendant of a crossing between **Kujaku** and **Yuri-tsubaki**. Produced by Shinichi Noguchi and named in 2007.

Heisei-wabisuke. (Wabisuke). *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.; A sport of **Shiro-wabisuke**, selected and named by Mikio Akashi, Kurume, Japan in 1991. A soft pink, small, trumpet shaped single. Sterile stamen column. Plant upright, growth a little weak. Leaves medium size, oblong, and recurved at both extremities. Flowers early to mid-season.

Helangfen. (Helang's Pink), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:* A red peony to anemone form. Gao & Zhuang, 1989, *The Camellia in China,* p.37, No.178, colour photo, No.92: Medium size, 6-8, cm across, red, open peony form with 25-30 petals, including 2 rows of guard petals, incurved, and a centre of smaller, erect petals, petaloids and stamens. Leaves light green, elliptic, apices acuminate, margins serrulate. Originated in China.

Helanhong. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.422; Chinese synonym for the Japan *C.japonica* **Orandakô.**

Heleanor. Duncan & Davies Nursery Catalogue, 1924, p.31. Orthographic error for **Helenor.**

Helen. *(C.japonica),* Halliday, 1880, *Practical Camellia Culture,* p.139: "Rosy Red" and starred as a good variety. Originated in USA.

Helen. Used variously as an abbreviation for **Helena** - Shepherd, 1891-1892 and for **Helenor** - *Giles and Son Catalogue,* 1881.

Helen B. *(C.lutchuensis x C.japonica), American Camellia Yearbook,* 1985, p.184, Reg. No.1975: A miniature, medium bright pink, formal double, *C.hybrid (C.lutchuensis x C.japonica),* flowering midseason to late, originated by Marvin Jernigan, Warner Robins, Georgia, USA. Average flower size is 6 cm across x 2.8 cm deep with 50-55 petals, yellow anthers and light yellow filaments. Blooms fall complete; floriferous plant. Plant growth is upright, open and rapid in rate with light green, elliptic, serrated leaves measuring 3.8 cm long x 2 cm wide.

Helen Beach Variegated. *(C.japonica),* ACS, *The Camellia Journal,* Sept. 2004, p.29 as 'Helen Beach Var'. and colour photo as 'Helen Beach'. Registration No. 2625. A sport of **Mary Edna Curlee,** first observed in 1998. Originated and propagated by Miles A. Beach, Mt. Pleasant, S.C., USA. The pink, loose peony to rose form double flower has rose-red splotches and white moiré, 36 petals, heavy texture, yellow anthers and white filaments. *American Camellia Yearbook,* 2004, p.92, colour photo p.c2. Flower size is 9 – 10 cm across. Flowers mid-season

to late. Plant growth is open and of average rate. Dark green leaves are 12 cm long x 7.5 cm wide.

Helen Boehm. *(C.japonica), American Camellia Yearbook,* 1977, p.212, Reg. No.1415: A very large, blush pink, anemone to peony form. An 11 year old *C.japonica* **Elizabeth Boardman** x **Don Mac,** seedling that first bloomed 1972, originated by Dr W.F. Homeyer Jr, Macon, Georgia, USA. The flower has 10-11 petals and 16-18 petaloids with white anthers and filaments. Size 10.5-12.5 cm across x 5 cm deep. It is a glowing, blush pink and blooms mid-season. See colour photo, pl.80, p.47, *Encyclopedia of Camellias in Colour,* vol.II, 1978.

Helen Bower. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1963-1964, p.7. No description. *American Camellia Yearbook,* 1965, p.236, Reg. No.777: A chimera sport of **Dr J.V. Knapp** grafted onto 'Mathotiana Variegated' (**Julia Drayton Variegated**), first observed 1959. Originated by T.W. Bower, Mobile, Alabama, USA. Plant growth is upright and dense with light green leaves, 7.5 cm x 5 cm, distinctly serrated. The rose form double flower similar to 'Mathotiana' (**Julia Drayton**), is 12.5-13 cm across x 7.5 cm deep. Colour is rose-red with purple shading. Anthers and filaments yellow. Blooms mid-season to late. Received the Sewell Mutant Award for 1971. See colour plate facing p.116, *American Camellia Yearbook,* 1965. Also front cover, ACS, 1964, *The Camellia Journal,* vol.19, No.3. Sport: **Helen Bower Variegated.** Chinese synonym: 'Dahailun'.

Helen Bower Variegated. *(C.japonica),* Cannon, 1970, ACS., *The Camellia Journal,* vol.25, No.1 as 'Helen Bower V.'. A virus variegated form of **Helen Bower** - Rose-red, blotched white. Originated in USA. Chinese synonym: 'Fuse Dahailun'.

Helen Briggs. *(C.japonica), American Camellia Yearbook,* 1961, p.224, Reg. No.552: A 10 years old chance seedling that first bloomed 1957; originated by R.F. Dickson, Pasadena, California, USA. Plant growth is average and open with dark green leaves, 8 cm x 4 cm, elliptic with short, pointed apices, recurved, venation prominent. The irregular, semi-double flower is light pink, heavily speckled with rose-pink, yellow stamens interspersed with inner petals and petaloids. Flowers 10 cm across x 7 cm deep with 14 petals and 14 petaloids. Blooms early to mid-season.

Helen Butler. *(C.japonica),* SCCS., 1978, *Camellia Nomenclature,* p.74: White to pink on edge. Medium semi-double. Medium, compact, upright growth. Mid-season to late blooming. Originated in USA by Haynie, Theodore, Alabama.

Helen Buzard. *(C.japonica),* McCaskill Gardens Catalogue 1957; Wylam, 1957, *American Camellia Yearbook,* p.29: Amongst recent McCaskill seedlings is **Helen Buzard** which has blooms averaging 12 cm across. The single blooms shade from blush to soft pink. The large, flat flower has just enough ruffling to keep it from being stiff. Blooms mid-season on a tall, upright plant. Originated in USA by Vern McCaskill, Pasadena, California.

Helen Calcutt. *(C.japonica),* ACRS., 1960, *Camellia News,* No.7, p.23, Reg. No.42: Originated by Keith Brushfield, Kewita, Somersby, NSW, Australia and first flowered 1952. The flowers are single to semi-double, 12 cm across with 8-10 petals, the centre consisting of a column of stamens with an occasional petaloid. Color: white with pink and carmine stripes. Habit is upright and open. It has produced 2 sports, a self carmine and a pink with white border. Colour photo, front cover ACRS., 1976, *Camellia News,* No.62. Sport: **Helen Calcutt Deep Pink.**

Helen Calcutt Deep Pink. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.99: Deep pink sport of **Helen Calcutt**. Originated in Australia.

Helen Christian. *(C.japonica), American Camellia Yearbook,* 1960, p.198, Reg. No.492: A 15 year old seedling of 'Magnoliaeflora', (**Hagoromo**) that first bloomed 1950; originated by T.W. Christian, Columbia, Georgia, USA. Plant growth habit is upright, dense and rapid in rate. The

medium green leaves average 11 cm x 5.5 cm. The delicate pink, rose form double flowers are up to 11 cm across x 5 cm deep and have 43 wavy petals in 5-7 rows. Flowers mid-season.

Helen Covington. *(C.japonica), American Camellia Yearbook,* 1965, p.236, Reg. No.774: A 10 years old chance seedling that first bloomed 1958; originated by Dr Arthur Mazyck, Dothan, Alabama, USA. Plant growth is upright and medium in rate with light green leaves, 10 cm x 3.8 cm. The semi-double flowers, similar to 'Donckelaeri', (**Masayoshi**) are pink with yellow anthers and filaments, measure up to 15 cm across x 5 cm deep and have 12-15 petals, Unusually hardy. Flowers early.

Helen D. Frederick. *(C.japonica),* River View Nursery Catalogue, 1957-1958, p.9: A fairly late blooming variety that is attractive only in good weather. Originated in USA by S. Katz.

Helen Diamond. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.50: Blush pink. Large semi-double with 3 rows of large, evenly formed petals and an irregular cluster of stamens. Vigorous, upright growth. Mid-season blooming. Originated in USA by Braewood.

Helen Dogget. *(C.reticulata),* SCCS., 1984, *Camellia Nomenclature,* p.118: Deep pink. Very large semi-double with upright petals. Vigorous, upright growth. Flowers mid-season to late. Originated in USA by B. Butler, Modesto, California.

Helen Dorn. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.43: White. Medium semi-double. Vigorous, upright growth. Mid-season blooming. Originated in USA.

Helen Flynt. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.5., p.7. No description. Originated in USA. No valid listing located.

Helen Forbes. *(C.japonica),* ACRS., 1969, *Camellia News,* No.39, p.14, Reg. No.106: Originated by H.J. Henty, Balwyn, Victoria, Australia. Seed parent **Esther Henty,** pollen parent unknown. First flowered 1963. Plant habit is upright, dense and vigorous. The 11 cm, incomplete double flower is rose-pink (RHS.CC.427/2) and blooms early to mid-season. The bright green leaves are 10 cm x 5cm.

Helen Fredrick. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.5. No description. Originated in USA. No valid listing located.

Helen G. *(C.japonica), American Camellia Yearbook,* 1982, p.173, Reg. No.1830: A large, medium pink, anemone form *C.japonica* chance seedling; originated by Paul Gilley, Grand Ridge, Florida, USA. The 6 years old seedling first bloomed 1980. Average flower size is 12 cm across x 6 cm deep with 20-30 petals, 25 petaloids and a few yellow stamens. Plant growth is upright and medium in rate with dark green leaves, 10 cm x 5 cm.

Helen Glenn. *(C.japonica), American Camellia Yearbook,* 1971, p.46, Reg. No.1151: A 7 year old chance *C.japonica* seedling that first bloomed 1965; was originated by Helen Hinterminster, Gainsville, Florida, USA. Plant growth is spreading, medium in rate with dark green leaves measuring 8 cm in length x 3.8 cm in width. The semi-double red bloom measures 10 cm across x 3.2 cm deep with 15 petals, 1 or 2 petaloids, yellow anthers and deep pink filaments. Prolific bloomer with good lasting qualities. Blooms early. Sport: **Helen Glenn Variegated.**

Helen Plenn. *(C.japonica),* SCCS., 1970, *Camellia Nomenclature,* p.68: Fluorescent red. Medium sized semi-double with long, slender petals. Medium, spreading growth. Blooms early to mid-season. Originated by Mrs J.H. Hinterminster IV, Gainesville, Florida, USA.

Helen Rainer. *(C.japonica), American Camellia Yearbook,* 1968, p.131, Reg. No.962: A chance seedling that first bloomed 1959; originated by Joel P. Rainer, Tifton, Georgia, USA. Plant growth is upright and dense with dark green leaves, 7.5 cm x 7 cm. The anemone to peony form flowers are up to 13 cm across x 7.5 cm deep. Colour is rose-pink to coral. There are 3 rows of 18 notched guard petals, next to a collarette of 5 bunches of petaloids, some variegated, with intermingled stamens, surrounding a centre of wavy petals, petaloids and stamens. Blooms early to mid-season.

Helen Sharp. *(C.japonica),* Griffin ed., 1958, *Camellian,* vol.IX: Deep red. Medium sized semi-double. Blooms mid-season to late. Originated in Portugal.

Helen Sharpe. *(C.japonica), American Camellia Yearbook,* 1984, p.178, Reg. No.1961: A very large, medium pink with white high lights, anemone to peony form *C.japonica* chance seedling; originated by Ferol & Sam Zerkowsky, Slidell, Louisiana, USA. The 10 year old seedling first flowered 1982. Average size 13 cm wide x 10 cm deep with 80-85 petals, 10-12 petaloids, yellow anthers and filaments. Plant growth is upright, dense and medium in rate with dark green leaves, 7.5 cm x 3.8 cm.

Helen Sherman. (*C.japonica), American Camellia Yearbook,* 1966, p.90, Reg. No.851: A bright rose-pink, anemone form flower, 10 cm across x 5 cm deep with 30 petals and 12 petaloids. It has 6 rows of small petals, slightly ruffled, with an anemone centre of short, twisted petals. Dark green, heavily textured leaves average 6 cm x 3.8 cm. A chance seedling that first bloomed 1962 aged 5 years. Originated by Julington Nurseries, Jacksonville, Florida, USA.

Helen van Aken. *(C.japonica), American Camellia Yearbook,* 1970, p.164, Reg. No.1104: A 9 year old chance seedling that first bloomed 1966; originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is upright, spreading, open and medium in rate with 10 cm x 5 cm, dark green leaves. The open, peony form flower is 12.5 cm across x 8 cm deep with 26 petals and 3 or more petaloids. Colour is light pink enriching to lavender as the blooms ages. Yellow anthers and blush filaments. Blooms mid-season tp late. There is also a variegated form.

Helen van Aken Variegated. *(C.japonica),* ACS., 1974, *The Camellia Journal,* vol.29, No.1 as 'Helen Aken Var.'. A virus variegated form of **Helen van Aken.** Light pink blotched with white. Originated in USA.

Helena. *(C.japonica), Australian Botanical & Horticultural Society Report,* 1849 Camden park seedling -28/50. Pale crimson, smallish size, very regular, double petals and flower quite perfect. Originated in Australia by William Macarthur, Camden Park, N.S.W. Abbreviation: 'Helen'. (Believed extinct.)

Helena. van Houtte Catalogue, 1842, 9:53. Given as a synonym for **Douglasii** in his 1846-1847, 27:23 Catalogue.

Helena. *(C.japonica),* Trillon, 1843, Catalogue, p.6: Deep scarlet, streaked with crimson. Verschaffelt, 1844, Catalogue, No.50, p.20. No description. Charles van Geert Nursery Catalogue, 1845, p.9: Globular, deep vermilion, veined reddish purple. Originated in Belgium.

Helena. *(C.japonica),* Vanderbilt, 1940, *Camellia Research,* p.4. SCCS., 1954, *The Camellia. Its Culture and Nomenclature:* White. Medium large, irregular semi-double. In later issues of *Camellia Nomenclature* the note (Macarthur 1850) has been added. This is incorrect as Macarthur's 'Helena' has not been identified and its description is "pale crimson".

Henri Favre. *(C.japonica),* Buist, 1839, *Camellias,* p.8; Berlèse, 1840, *Monographie,* ed.2, p.125: This Camellia has oval-lanceolate leaves with acuminate apices, 13 cm x 6 cm, deep green, thick, deeply, regularly serrated. The flowers, 10 cm across, are full ranunculata form, of a salmon rose tinged bright pink, with long, numerous, lightly veined petals, regularly imbricated, concave on opening, becoming flat and reflexed. See colour plates Berlèse, 1841, *Iconographie,* pl.98; Verschaffelt, 1848, *Nouvelle Iconographie,* Book VIII, pl.IV. The camellia was obtained from seed by Mr Favre, Nantes, France, who gave it his own name. In 1839, Mr Cachet, horticulturalist at Angers, purchased the entire stock. It bloomed for the first time in 1840 according to Verschaffelt, however Berlèse described the flower in 1840 and it probably first flowered in 1839 when Cachet purchased the variety. Henry Turnbull. *(C.japonica),* Merrillees, 1950, *Shere Camellia List:* Semi-double, snow white, enormous flowers. A selfed seedling of **Spencer's Pink,** raised by Mrs Hume-Turnbull, Melbourne, Australia. ACRS., Reg. No.9, 1955. See black and white photo, p.101, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III. The cultivar is usually a single of 6-7 petals.

Henryoides. Tirocco, 1928, *Le Camelie,* p.3. Orthographic error for **Euryoides.**

Henry's Surprise. *(C.reticulata). New Zealand Camellia Bulletin,* March 1999, Issue No.132, vol.XXI, No.1, p.17, Reg. No.413. Registered by H.B. McConnel, Waikanae, New Zealand, grown from seed supplied by J. Hansen Waikanae, first flowering 1994. Seed parent is 'Chang's

Temple' (**Zhangzia Cha**), pollen parent unknown. Plant, leaf and flower form are all reticulata type. Flowers are large and semi-double, 12-13 cm diameter x 4 cm deep, having about 24 waved petals. Colour is a deep cerise (RHS.CC.46A). The plant is upright and open in structure, and rapid in growth, with dark green leaves 10 cm long x 6 cm wide. Flowers mid-season to late.

Henshôji. Different reading for **Henjôji.**

Hentiangao. (Jealous of Height of the Sky), *(C.reticulata),* Fang, 1930, *Diannan Chahua Xiaozhi:* **Hentiangao** has a dwarf growth habit. The pink flowered form has large flowers and many petals. The red form has smaller flowers and fewer petals. This latter form is now lost. Feng et al., 1986, *Yunnan Camellias of China,* p.86, colour plate and description: Leaves large, broad, thin and brittle, broad-elliptic to elliptic-ovate, apices short-pointed, bases rounded to broad-cuneate, 6.5-11 cm long x 4.5-6.5 cm wide. Flowers pink with white along the margins (RHS.CC.52B-C), diameter, 9-11 cm. Petals about 41 in 7-8 whorls, oblong-ovate, apices emarginate or slightly lobed or hamulate, inner petals smaller than outer ones. Stamens mostly form small, narrow petaloids, a few being rudimentary and joined to the inner petals. Pistils rudimentary. Because of its slow growing and dwarf habit, this cultivar is called **Hentiangao** meaning jealous of the sky's height. It is valued owing to its fully double flowers, beautiful colour and dwarf habit. It is difficult to cultivate. Flowers mid-season. This cultivar originated in Dali, Kunmimg, China where it is called 'Hanhong Juban'. Western synonyms: 'The Dwarf'; Peer, 1949; 'Dwarf Rose'; Yü & Feng, 1958; 'Regret Sky High'; Bartholomew and Tse, 1980; Jealous of the Height of the Sky'; Yü, 1964; 'Envying Sky's Height'; Yü & Bartholomew. 1980. Chinese synomym: 'Hanhong Juban'. Different readings: 'Hentienko', 'Hent'ienkao', 'Hen Tien Kao'. Sport: **Liujiao Hentiangao.** See colour photo facing p.152, *American Camellia Yearbook,* 1982.

Hermie. McIlhenny, 1934, *List of Camellias for Sale.* Orthographic error for 'Herme', synonym for **Hikarugenji.**

Hermie Red. McIlhenny, 1941, *700 Varieties of Camellias.* Orthographic error for 'Herme Red'. Synonym for **Benibotan.**

Hermione. *(C.japonica), Australian Botanical and Horticultural Society Report,* 1849. Macarthur's seedling 14/50. Listed by John J Rule Nursery in 1862 without description. Originated by William Macarthur, Camden Park, NSW, Australia. (Believed extinct.)

Hermosa. (C.*japonica),* Ambroise Verschaffelt, 1854, Catalogue, p.21. No description. Verschaffelt, 1856, *Nouvelle Iconographie,* Book VII, pl.II: This variety justifies its Spanish name (Beautiful) by the perfect regularity and vivid carmine colouring, broadly banded with white, of its blossoms, large, and formed of rounded, perfectly imbricated petals. Of Spanish origin.

Hermosa (J.G.). *(C.japonica),* McIlhenny, 1937, *600 Varieties of Camellias,* invalidly as 'Hermosa'. A single, pure white, sometimes striped pink and red. Originated in the USA at Jungle Gardens. Synonym: 'Hermosa'(United States).

Hermosa (United States). Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.101. Synonym for **Hermosa (J.G.).**

Hero. *(C.japonica),* Waterhouse, 1947, *Camellia Quest,* p.16. Macarthur Camden Park Seedling No. 42/51. No description. Originated by William Macarthur, Camden Park, NSW, Australia. (Believed extinct.)

Hero in a Kabuki Drama. *Camellias,* Y.C. Shen, 2009, p.137 with colour photo; This is a description of the valid personal name **Kumagai,** and does not become a synonym.

Heroise. *(C.japonica),* Waterhouse, 1947, *Camellia Quest,* p.16. Seedling No.56/52 by William Macarthur, Camden Park, NSW, Australia. No description. (Believed extinct.)

Heroki. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.101. Synonym for **Hikarugenji.**

Heron. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.101: Bluish violet, veined cerise, single. Originated in USA.

Herorepetala. Alba. Henri Galiotti, 1849, Catalogue Botanque. Orthographic error for **Heteropetala Alba.**

Heryo. Portland Camellia Nursery Catalogue, 1946-1947. Corruption of the Japanese name **Hiryû.**

Herzilia. Griffin, ed., 1967, *Camellian.* Abbreviation for **Dona Herzilia de Freitas Magalhaes.**

Herzilia II. *(C.japonica),* Alfredo Moreira da Silva, Catalogue No.105, 1970-1971, p.27, Ref.142: Lilac red, sometimes bluish purple. Colour photo back cover, Catalogue No.107, 1972-1973. Ferreira & Celina, 2000, *O Mundo da Camélia*, p.87 with colour photo; Anemone form, vermilion tinted lilac, turning azure, medium size, blooms mid-season. It is believed among the Portuguese camellia community that the writer of the description in Catalogue 105 confused it with **Dona Herzilia de Freitas Magalhaes. Herzilia II** also ranges through various shades of violet-red to purple, but in addition shows consistent and prominent white blotches. Originated in Portugal.

Heshang. (Buddhist Monk), Gao & Zhuang, 1989, *The Camellia in China,* p.71, No.512: Chinese synonym for **Buddha.**

Heshun. (Heshun Town) *(C.reticulata).* China Regn No.32. *China Flowers & Horticulture,* July 2008, No.14, p.41, with colour photo; An open pollinated *C.reticulata* seedling selected by Liu Zhongtai, Heshun Town, Tenchong County, China. Flowers deep peach red, 10-15 cm diameter. Petals 30-38, outer petals waved, inner distinctly incurved to form a central ball. Numerous stamens in several bundles divided among the inner .petals. Pistil degenerate. Leaves elliptic, 6-12 cm long and 2.7-5.7 cm wide, apices acuminate, bases cuneate, deep green, incurved in V shape. Flowers mid-season.

Hesias. *(C.japonica),* SCCS., 1954, *The Camellia Review*, No.4, p.15. No description. Originated in USA.

Hesite. Shao, Taichong, 1992, *The Observations from the Camellia World*, No.534, p.67. Chinese synonym for the USA *C.reticulata* hybrid **K.O. Hester.**

Heteroclita Coccinea. *(C.japonica),* Loureiro Catalogue No.1, 1865, p.32, & No.9, 1872-1873: Peony form, bright scarlet. Orthographic error; 'Heteroclita Coccinia'. Originated in Portugal.

Heteropetala. *(C.japonica),* van Houtte Catalogue, 1841, 7:9. No description, Originated in England. (Believed extinct.)

Heteropetala Alba. *(C.japonica),* Harrison, ed., 1835, *The Floricultural Cabinet,* vol.III, p.118: "A description of eight hybrid Camellias raised in the gardens of Walter Frederick Campbell esq., M.P., Woodhall, Lanarkshire, Scotland. No.2, C.j. var. **Heteropetala Alba.** A seedling from 'Middlemist's Blush'. ('Carnea') A very large, pure white flower, the form of its parent but nearly double the size." Orthographic errors: 'Hetre Petre Alba', 'Hecropetala Alba', 'Hetropetta Alba', 'Herorepetala Alba'. Synonym: 'Merope'. van Houtte Catalogue, 1844-1845, 18:3 gives 'British Queen' as a synonym but this is not correct as it is a separate cultivar raised by Young, Epsom, England about 1840. For colour illustration see pl.227, Berlèse, 1843, *Iconographie.*

Heteropetala Rubra. *(C.japonica),* Harrison, ed., 1835, *The Floricultural Cabinet,* vol.III, No.118: "A description of eight hybrid Camellias raised in the gardens of Walter Frederick Campbell esq. M.P., Woodhall, Lanackshire, Scotland. No.7. C.j. var. **Heteropetala Rubra.** A seedling from the 'Red Warattah'. (**Anemoniflora**) A very handsome flower, being far superior to its parent kind. It bloomed this season for the first time". Oudin, Lisieux Nursery Catalogue, 1844, p.11: Bright cerise, sometimes streaked with white. Beautiful form. Orthographic error: 'Hetropetta Rubra'.

Heterophylla. Sweet, 1830, *Hortus Britannicus,* ed.2, p.74. Synonym for **Dahliiflora.** Heterophylla was also used for the species *Camellia heterophylla* Hu (1937) which has since been reduced to a synonym for *C.reticulata* by Chang Hung Ta. (1984).

Heterophylla Alba. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues-,* p.101. No description. (Believed extinct.)

Heterophylla Barbara Hillier. Hillier & Sons Supplementary List, 10A.,1960-1961, p.8. Synonym for **Barbara Hillier.**

Heterophylla Nova. *(C.japonica),* Berlèse, 1840, *Monographie,* ed.2, p.126-127: Leaves are nearly 6 cm wide x 10 cm long, oblong, lanceolate, a little twisted, large, regular serrations, of a dark green. The flower is over 10 cm across, double and of a clear cherry-red; the petals at the circumference are not numerous, more or less 5 cm broad, oval, sometimes round, veined, a little reflexed, well imbricated; the others are of average size, ovoid, long, very narrow at the apex; those of the middle are similarly imbricated, while the centre is anemone form similar to 'Pulcherrima' (**Elegans**). The flower is large, round and of the form of **Cliveana**. Originated in France.

Heterophylla Punctata. Baumann & Baumann, 1835, *Collection de camellias élevés à Bollwieler* as 'Hla. Punctata'. Synonym for **Punctata.**

Heterophylla Rubra. Arnaud Catalogue, 1839-1849 as 'Heterophilla Rubra'. Synonym for **Dahliiflora.**

Heterophylla Vera. *(C.japonica),* Berlèse, 1837, *Monographie,* ed.1, p.60-61: Foliage like that of **Paeoniiflora;** flower, medium size, regular, flat, double, rose coloured, elevated in the centre; petals of the circumference in 2 rows, broad, imbricate, elongate oval, a little crenate; those of the interior, narrow, short, few, whitish, showing indications of stamens. Originated in England.

He-ting. Watanabe & Andoh, 1980, *Tsubaki Hana to Kinta Bunko-,* p.155. Different reading for **Heding.**

He-ting-hung. Watanabe & Andoh, 1980, *Tsubaki* Hana to Kinta Bunko-, p.147. Different reading for **Hedinghong**.

Hetre Petre Alba. Warrens Descriptive Catalogue, 1844, p.37. Orthographic error for **Heteropetala Alba.**

Hetropetta Alba. *The Floricultural Cabinet,* 1837, p.267. Orthographic error for **Heteropetala Alba.**

Hetropetta Rubra. *The Floricultural Cabinet,* 1837, p.267. Orthographic error for **Heteropetala Rubra.**

Hettie Love Wine. *(C.japonica), American Camellia Yearbook,* 1981, p.100, Reg. No.1719: A large, light pink semi-double *C.japonica* chance seedling, that blooms mid-season. Originated by Dr M.B. Wine, Thomasville, Georgia, USA. The 8 year old seedling first bloomed 1977. Average flower size 11 cm across x 5.5 cm deep with 40-45 petals, 4-8 petaloids, yellow anthers and white filaments. Petal edges ruffled. Plant growth, upright, spreading and rapid in rate with dark green leaves, 5 cm x 2.5 cm.

Heugmaniana. *(C.japonica),* Berlèse, 1837, *Monographie,* ed.1, p.95, No.172: Leaves somewhat large, smooth, 5.5 cm wide x 7.8 cm long, oblong, very acuminate, prominent venation, sharply, strongly dentate, reflexed, undulated, of a dull green. Flower, 7.5 cm across, double, cherry--red. spherical, well formed, petals imbricated, regularly elevated; those at the centre, small, a little distorted, a few stamens. Originated in England. Orthographic error: 'Henchmannii'.

Hexagona. Vanderbilt, 1940, *Camellia Research,* p.4. Synonym for **Myrtifolia.**

Hexagona Rubra. Thomasville Nursery Catalogue, 1942, p.10. Synonym for **Aunt Jetty.**

Hexagonal Crimson. Savige, 1985, *International Camellia Journal.* Synonym for **Liujiao Taohong.**

Hexagonal Pagoda. Synonym for **Liujiao Baota.**

Hexagonal Pink. Synonym for 'Liujiao Fenhong' (**Fenxia**).

Hexagonal Scarlet. Synonym for **Liuiao Dahong.**

Hexagonal Spinel Pink. Synonym for **Liujiao Yinhong.**

Hexagonal White. Savige, 1986, *International Camellia Journal,* No.18, p.110. Synonym for 'Liujiaobai'.

Hexangular Dwarf Rose. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Liujiao Hentiangao.**

Hexangular Red. Edward's *Botanical Register,* 1922. Synonym for **Myrtifolia.**

Hexangulare. Curtis, Saml., 1820, *Monograph on the Genus Camellia,* p.2. Loddiges Nursery Catalogue, 1823, p.21. Orthographic error for 'Hexangularis', synonym for **Myrtifolia.**

Hexangularia. Curtis, Saml., 1820, *Monograph on the Genus Camellia,* p.2. Orthographic variant for 'Hexangulare', synonym for **Myrtifolia.**

Hexangularis. Curtis, 1819, *A Monograph on the Genus Camellia* as 'Hexangulare'. Loudon, 1825, *The Greenhouse Companion,* p.75. Synonym for **Myrtifolia.**

Hexangularis (Buff). *Catalogus Plantarum Horto Aksakoviana Coluntur,* 1860, p.26. Synonym for **Incarnata.**

Hexangularis Coccinea. *(C.japonica),* Franco Agostoni, 1844, *Catalogo Plantarum....* No description. Originated in Italy. (Believed extinct.)

Hexangularis Menstruosa. Berlèse, 1841, *Iconographie,* on pl.41. Orthographic error for 'Hexangularis Monstruosa'. Synonym for **Monstruosa.**

Hexangularis Monstrosa. Berlèse, 1837, *Monographie,* ed.1, index. Orthographic error for 'Hexangularis Monstruosa'; synonym for **Monstruosa.**

Hexangularis Monstruosa. Berlèse, 1837, *Monographie,* ed.1, p.96 with 'Hexangularis Monstrosa' in the index. Synonym for **Monstruosa.** See pl.41, Berlèse, 1841, *Iconographie* in which **Monstruosa** is given as a synonym and also lists the errors: 'Hexangulis Monstruosa' and 'Hexangularis Menstruosa'. Originated in England.

Hexangularis Rosea. *(C.japonica),* Berlèse, 1840, *Monographie,* ed.2, p.95: Leaves, 2.7 cm wide x 5.4 cm long, lanceolate, recurved apex, fine serrations, prominent venation, the green of 'Pomponia' (**Pompone**). Flower 8-10 cm across, full, of a soft rose-pink. The exterior petals are in many rows and are of different forms. The first are broad, obtuse, horizontal, very notched, some marked with a dirty white, the others rumpled, twisted, separated from those of the circumference; those of the centre are long-oval, numerous, serried and fasciculate, erect, entire and of a paler rose than the outer petals. Originated in Italy.

Hexangularis Rubra. van Houtte Catalogue, 1858, 72:15. Synonyms: 'Esangularis', 'Exangularis', Synonym for **Myrtifolia.**

Hexangulis Monstruosa. Berlèse, 1841, *Iconographie,* page facing pl.41. Orthographic error for 'Hexangularis Monstruosa', synonym for **Monstruosa.**

Hexiangu. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.570. No description. From Sichuan Province, China.

Heylandiana. Padova, 1855, *Catalogi Plantarum Caesarei Regii Horti.* Orthographic variant for **Heylandii.**

Heylandii. *(C.japonica),* Tagliabue, 1840, *Nornenclatore Camelliae.* No description. Burnier & Grilli Catalogue, 1846-1847. No description. Originated in Italy. Orthogrpahic variant 'Heylandiana'. (Believed extinct.)

Heyman's Pink. Overlook Nursery Catalogue, 1956-1957. Synonym for **Cotton Candy.**

Heyu. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.286, p.73: Chinese synonym for the New Zealand *C.japonica* **Crane's Feather.**

Hezmannii. Joseph Baumann, 1849, Prix Courant, p.5. Orthographic error for **Haymannii.**

Hichirimen-tsubaki. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.124. Different reading for 'Hijirimen-tsubaki' (**Hijimiren**).

Hidakagawa. (Hidaka River), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.270, p.136, description, p.172 as 'Hidaka-gawa': Leaves dark green, elliptic, long acuminate, midrib elevated, venation slightly impressed, 9.5-10 cm long x 3.5-4.7 cm wide, petiole 7-9 mm long, glabrous. Flowers complete double, red (Crimson 22), petals 22-37, wavy and emarginate, largest 4.5 cm long x 4.4 cm wide. Androecium concentric, stamens mostly changed to petaloids, filaments pinkish. Late flowering. Originated in Japan in Kanazawa City, Ishikawa Prefecture.

Hidakarako. (Anemone from Northern Gifu), *(C.japonica),* Himuro, 1982, *Murasuzume:* Deep rose, anemone form. Originated in Japan. A seedling of **Bokuhan.**

Hida-tsubaki. (Hida is the ancient name for North Gifu), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.364: Double, Medium to large size, white with dark crimson streaks. Long petals with waved and notched edges. Originated in Japan. (Believed extinct.)

Hidden Beach. *Camellias,* Y.C. Shen, 2009, p.135 with colour photo; Synonym for **Kakure-iso.**

Hidden Beauty. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1963-1964, p.7. No description. Originated in USA. No valid listing located.

Hidden Treasure. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.51: White with an occasional rose streak. Small, anemone form. Slow, spreading growth. Blooms mid-season to late. Originated in USA by W. Wylam, California.

Hideko. (Personal Name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.214 with colour photo; English translation p.149. Pink changing to white, small tubular single, cylindrical stamens, yellow anthers changing to grey in a short period. Flowers mid-season to late. Leaves narrowly elliptic, medium size, plicate. Upright growth. Selected from cultivars grown by a private family in Mure Town. Discovered and released by Osamu Mure in 1997. From Kagawa Prefecture.

Hide'n'Seek. *(C.fraterna* hybrid*)* ACRS, *Camellia News,* 1994, No.131, p.7, Reg. No.433, colour pl. p.19: Originated by Marjorie Baker, Macleod, Victoria, Australia. A chance seedling of *C.fraterna* that first flowered 1991. A single mauve pink flower (RHS.CC.75D), of 5-6 petals, 4.2 cm across x 2 cm deep. Early to mid-season blooming on a weeping, dense, slow growing plant. Leaves mid-green, matt, elliptic, flat; apices acuminate, margins serrate, 6 cm long x 2.5 cm wide. Petals creped and notched, stamens columnar.

Hidoshi. Mark S. Cannon Scion Catalogue, 1963-1964, p.7. Corruption of the Japanese name **Hiodoshi.**

Hiei-no-yuki. (Snow on Mount Hiei), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.8: Medium size, white, single tubular shaped flowers. Late blooming. Originated in the Kyôto Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.207 with colour photo; English translation p.144. Leaves somewhat oblong, medium size, flat. Upright, vigorous growth. A natural seedling of **Goshiki-chiritsubaki.** Originated and named by Katsuyoshi Yoshikawa and Naoyoshi Adachi in 1982.

Hieizan. (Mount Hiei), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* No.204: Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Solid white, large size, double flower, many stamens, tubular. Originated in Japan. (Believed extinct.)

Hiemalis. Nakai, 1940, *Journal of Japanese Botany,* 16(12):5 as *Camellia hiemalis.* A group name for a collection of hybrids and back crosses involving *C.sasanqua* and, probably, primary hybrids between *C.sasanqua* and *C.japonica.*

Hierathlyn. Glendoick Gardens Ltd. Catalogue, 1972-1973. Orthographic error for **Hiraethlyn.**

Higara. (Coal Tit). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.208 with colour photo; English translation p.145. Miniature tubular to trumpet shaped single, vertical stripes of red on white ground, cylindrical stamen column. Flowers mid-season to late. Leaves somewhat elliptic, small, recurved. Upright growth. A natural seedling of **Awayuki.** Named and released by Tadao Yamaguchi in 1985. From Ishikawa Prefecture.

Higashigumo. Different reading for **Shinonome.**

High Fever. (*C.reticulata* hybrid). ACS, Aug. 1996, *The Camellia Journal,* vol.51, No.2, p.31, Reg. No.2383. A very large, deep rose, loose peony form hybrid of 'Cornelian' (**Damanao**), which flowers mid-season. Originated by Houghton S. Hall, San Anselmo, Calif., USA. *American Camellia Yearbook,* 1996, p.3, colour photo before p.1. The 20 year old seedling first flowered in 1982. Flower size is 15 cm across x 10 cm deep, with 18 petals, 4-5 petaloids, golden anthers and yellow-white filaments. Blooms have very heavy texture and unique colour. Plant growth is upright, open and vigorous, with dull dark green leaves 11.5 cm long x 5.7 cm wide.

High Fragrance. *(C.hybrid), New Zealand Camellia Bulletin,* vol.XIV, No.8, p.14, Reg No.246: Originated by J.R. Finlay, Whangarei, New Zealand as a seedling of **Bertha Harms** x (**Salab** x **Scentuous**). It is 6 years old and flowered 1985. The plant is a rapid grower with open growth and dark green leaves, 7.5 cm x 4.5 cm. The peony form flowers have 30 petals, about 10 petaloids and some stamens with white filaments and yellow anthers. Flower size is 9-10 cm across x 6.5 cm deep and colour is very pale, ivory pink with deeper pink shading on the edge of the petals. (RHS.CC.36D) It has a strong *C.lutchuensis* fragrance. Flowers mid-season to late.

High Hat. *(C.japonica),* Coolidge Rare Plant Garden Catalogue, 1945-1946: A pale pink sport of the Japanese cultivar Daikagura. Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I, p.173; Fendig, 1953, *American Camellia Catalogue:* A large, light pink, incomplete double to loose, irregular double, 10 cm wide x 6 cm deep. The colour is a soft, shell pink, shadowed with white. Outer petals are notched. Inner section of bloom consists of a high centre of frilled petaloids mixed with fascicles of stamens. Leaves dull green with creamy-yellow variegation, elliptic-oval, 7.5 cm x 3.8 cm, acuminate apex, prominent venation, average serrations. Growth is slow, compact and upright. Synonyms: 'Daikagura Shell Pink', 'Pink Daikagura', 'Pink Kagura', and 'Daikagura Pink'. Orthographic error: 'Hi-Hat'. Sports: 'White High Hat', 'Conrad Hilton' (Both apparently synonyms for **Shiro-daikagura**). Originated by Coolidge Rare Plant Gardens, East Pasadena, California, USA. Chinese synonym: 'Gaomaozi'.

High Hills. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Large white. Full peony form with medium, compact growth. Mid-season blooming. Originated in USA by Harvey Short, Ramona, Calfornia.

Hi-Hat. Blackwell Nursery Catalogue, 1954-1955, p.8. Orthographic error for **High Hat.**

High Jinks. *(C.japonica),* Camellia Grove Nursery Catalogue, 1956-1957, p.18: Medium sized, formal double pink, striped and blotched white. A white blotched form of **Roma Risorta**. A different cultivar from the validly published **Hi-Jinx.** Note: Alternatively it is thought to be a virus induced form of what is known in Australia as **Redgrove.** Chinese synonym 'Youxinao'.

High Noon. *(C.japonica),* Tammia Nursery, 1966, ACS., *The Camellia Journal,* vol.21, No.5, rear cover; *American Camellia Yearbook,* 1967, p.227, Reg. No.907: An 8 year old chance seedling that first bloomed 1960. Originated by L.B. Wilson Jr., Gulfport, Mississippi, USA. Plant growth is upright and dense, medium in rate with dark green leaves, 8 cm x 5 cm. The semi-double flower has 17 petals and is 13 cm across. Its colour is red with bright yellow anthers and red filaments. The large, crinkled petals divide the stamens into 5 groups. Scented with rose-type aroma. Blooms mid-season. There is a variegated form.

High Noon Variegated. *(C.japonica),* Tammia Nursery 1966, ACS., *The Camellia Journal,* vol.21, No.5, back cover. No description. *American Camellia Yearbook,* 1986, colour plate facing p.86, description, p.126: A virus variegated form of **High Noon** - Red moired with white. Originated by L.B. Wilson Jr., Gulfport, Mississippi, USA.

High Roller. *(C.hybrid), American Camellia Yearbook,* 1980, p.166, Reg. No.1675: A very large, rose-pink semi-double *C.reticulata* hybrid ('Crimson Robe' [**Dataohong**] x **Jean Pursel**), early to late flowering. Originated by Frank Pursel, Oakland, California, USA. The 6 year old seedling first flowered 1979. Average flower size is 15 cm wide x 6 cm deep with yellow anthers and filaments. Its large petals are red veined. Plant growth is upright and rapid in rate with dark green leaves, 12.5 cm x 8 cm.

High Sierra. (*C.reticulata* hybrid). ACS, Aug. 1996, *The Camellia Journal,* vol.51, No.2, p.31, Reg. No.2379. A very large spiraea pink, loose peony form seedling of **Lilette Witman**. Flowers mid-season to late. Originated by Houghton S. Hall, San Anselmo, Calif., USA. *American Camellia Yearbook,* 1996, p.3, colour photo before p.1. The 14 year old seedling first flowered in 1990. Average flower size is 15 cm across x 6.5 cm deep, with 25 petals, yellow anthers and white filaments. Plant growth is upright, spreading and rapid, with dull dark green leaves 15 cm long x 5.7 cm wide.

High Sky. *(C.reticulata* hybr.), ACS, Feb.1989, *The Camellia Journal,* vol.44, No.1, p.12, Reg. No.2109: Very large size, American Beauty pink, loose, peony form *C.reticulata* chance seedling of **Mouchang.** Blooms mid-season. Originated by Houghton S. Hall, San Anselmo, California, USA. *American Camellia Yearbook,* 1989, p.123: The 9 year old seedling first bloomed in 1984. Average flower size is 15 cm across x 8 cm deep with 20 petals, golden anthers and cream white filaments. Plant growth is open and rapid with dark green leaves, sharply serrated, 15 cm long x 7.5 cm wide.

High Sky Variegated. (*C.reticulata* hybr.) ACS, 1992, *The Camellia Journal,* vol.47, No.4, p.13 as 'High Sky V.': Valdosta Camellia Scions. A virus variegated, white blotched form of **High Sky.**

High Society. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.61: Clear pink. Large, peony form with high centre. Vigorous growth. Blooms mid-season. Originated in USA by H. Shackelford. Sport: **High Society Variegated.**

High Society Variegated. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.61 as 'High Society Var.':A virus variegated form of **High Society** - Clear pink blotched white. Originated in USA.

High Tide. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.176. Synonym for **Mochi-no-shiô.**

High Tim. ACS, 1993, *The Camellia Journal,* vol.48, No.4, p.32. Valdosta Camellia Scions. Orthographic error for **High Time**.

High Time. *(C.japonica),* ACS., 1988, *The Camellia Journal,* vol.43, No.1, p.6, Reg. No.2073: Very large size, carmine rose, loose, peony form *C.japonica* (**Reg Ragland** x **Kramer's Supreme**). Blooms mid-season to late. Originated in USA by Houghton S. Hall, San Anselmo, California. *American Camellia Yearbook,* 1987, p.81 with colour pl. between p.60-61: The 20 year old seedling first bloomed 1971. Average flower size, 13 cm across x 10 cm deep with 20 petals. 25-30 petaloids, golden anthers and creamy white filaments. Plant growth is upright, average and rapid in rate with dark green leaves, 8 cm long x 5.5 cm wide.

High Voltage. (*C.reticulata* hybrid). NZCS, *Camellia Bulletin*, No.171, March 2012, p.14; Regn No.495. Raised by John Lesnie, Manukau City, NZ, and registered by Carol Anderton, Lennard Camellias, Te Puke. Parentage unknown. A plant of average spread, density and growth rate. First flowering predates 1995. Dark green leaves are of typical reticulata form, 14 cm x 6.5 cm. Very large flower is 16 cm diameter by 9 cm deep, with about 30 petals and 0-5 petaloids. Colour is a glowing crimson (RHSCC 47B). Stamens have pink filaments and yellow anthers. Flowers midseason to late.

High Wide'n Handsome. *(C.japonica),* McCaskill, 1960, *American Camellia Yearbook,* colour photo facing p.112: Chance seedling developed by McCaskill Gardens, California, USA. Very large semi-double, luminous pink with finely pencilled markings of smoky pewter on the edges of the large, fluted petals. Chinese synonym 'Meinanzi'.

Highland Gem. (*C.reticulata* hybrid). ACRS, *Camellia News,* Autumn 2003, No.161, p.7, Reg. No.541. Originated by Dr John Arnold, Wentworth Falls, NSW, Australia. Registered by John Paddison, Burradoo, NSW. A chance seedling that first flowered 1992. A large deep pink (RHS.CC.58C) peony form flower with stamens loosely mixed among the wavy petals. Diameter 16 cm x 9 cm deep. Flowers freely mid-season to late on an upright, open plant of medium growth. Leaves green, ovoid, 11 cm long x 5.5 cm wide.

Highlight. *(C.reticulata* hybrid), *American Camellia Yearbook,* 1970, Colour photo facing p.212: Brilliant red. Large semi-double with wavy petals. Vigorous, open growth. Mid-season flowering. A seedling from *C.reticulata* 'Purple Gown' (**Zipao**) x *C.saluenensis.* raised in New Zealand by Les Jury. See colour photo, front cover, SCCS, 1970, *The Camellia Review,* vol.31, No.6. Chinese synonym 'Jingying', later changed to 'Liangdian'.

Higo. Hamamatsu, 1818-1825, *Setsuyô Kikan.* The group name for a special form of *C.japonica* developed in the old province of "Higo", now Kumamoto. They are mostly flat or saucer shaped singles with large circular or flared stamen clusters.

Higo-akebono. Hakoda, JCS., 1987, *Tsubaki,* No.26, p.44. Synonym for **Akebono (Higo),** a *C.sasanqua* from Kumamoto.

Higo-asahi-no-umi. (Morning Sun over Sea Higo), *(C.hiemalis),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.38: Medium size, red, semi-double from the Kumamoto Prefecture, Japan. Blooms early to mid-season. Corruption: 'Trihinoumi'. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.314 with colour photo; Flat form. Leaves ovate, medium size.. Vigorous, somewhat spreading growth.

Higo-baishin. (Higo Form Stamens), (Higo), Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* p.54. 'Baishin' means stamens like those in the plum flower. No description. Originated in Kumamoto Prefecture, Japan.

Higo-beni. (Red Higo), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.425: A small, deep red, complete double. Not a member of the "Higo" group. (Believed extinct.) Different reading: 'Higo-kurenai'. Originated in Japan.

Higo-botan. (Peony of Higo Province), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.276 & 525: Dark red, anemone to peony form, very large, double with petals piled up and petaloids in both the upper and lower parts. Shirai, 1926 *Tsubaki Kai* from a copy of an older anonymous work. Not a member of the "Higo" group. (Believed extinct.)

Higo-botan. (Peony of Higo Province), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1968, pl.64: Large red single with 8 long, strap-like petals and a centre of short petaloids and stamens. Originated in Japan. Not a member of the "Higo" group.(Believed extinct.)

Higo Cherry. *Camellias*, Y.C. Shen, 2009, p.334 with colour photo; Synonym for **Higo-zakura.**

Higo-chôjuraku. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.125. Synonym for **Chôjuraku.**

Higo-ezo-nishiki. Andoh, 1971, *Meika no Shôkai to Saibai,* p.216. Synonym for the Higo Camellia **Ezo-nishiki.**

Higo-fuji-no-yuki. Yokoyama & Kirino, 1989. *Nihon no Chinka*, p.588. Synonym for the Higo camellia **Fuji-no-yuki.**

Higo-hagoromo. (Angels Robe from Higo), (Higo sasanqua), Shimada, 1957, *Kumamoto no suzanka ni tsuite. Dantairin:* Red coloured, with a purplish cast, being darker on the outside than the inside. 12 cm across with 8 petals. Originated in Kumamoto, Japan.

Higo-hagoromo. (Hagoromo from Kumamoto), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Deep red, very large, single. Thick petals, occasionally with petaloids. Originated in the Kumamoto Prefecture, Japan. Synonym: 'Hagoromo'(Higo).

Higo-hakama. Camellia Forest Nursery Catalogue, 1990, p.3. Corruption of the Japanese name **Hi-no-hakama.**

Higo-hakkaku. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.210 with colour photo; English translation p.146. Name changed by the Higo Society from 'Hakkaku' to **Hakutsuru.**

Higo-hakuhô. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.210 with colour photo; English translation p.146. Synonym for **Hakuhô** (Higo).

Higo-hakurakuten. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.210 with colour photo; English translation p.146. Synonym for **Hakurakuten** (Higo).

Higo-hakutaka. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.78, p.62. Synonym for the Higo camellia **Hakutaka.**

Higo-haku-un. (White Cloud Higo), (Higo), Chûbu Tsubaki Kyôkai; *Shin Hinshu Happyô Kaisetsu*, 1969, Kyôto Engei; according to Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.125. No description. Originated in Japan.

Higo-haresugata. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.69. Synonym for the Higo camellia **Haresugata.**

Higo-hatsuwarai. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.51, p.54. Synonym for the Higo camellia **Hatsuwarai.**

Higo-hino-tsukasa. (Higo's Scarlet Lord), *(C.sasanqua),* ICS, Apr.1990, *Japanese Camellia Cultivar List*, p.33: Large size, deep red marked with white stripes, single. Early to mid-season blooming. Originated in the Kumamoto Prefecture, Japan.

Higo-irihi-no-umi. (Sunset Sea Higo), (Higo sasanqua), Shimada, 1957, *Kumamoto no saszanka ni tsuite. Dantairin,* 12(44):103. A 7 petalled red, single, 11 cm across, petals becoming deep

purplish red and reflexed as flower opens fully. Originated in Kumamoto Prefecture, Japan. Selected by Shigeru Sugiyama. See colour photo, pl.577, p.222, *Encyclopedia of Camellias in Colour,* vol.I, 1972, description: p.396.

Higo-jikkô. Andoh, 1971, *Meika no Shôkai to Saibai*, p.214 as 'Higojikkoh': Synonym for **Higo--nikkô.**

Higo-jikkoh. Andoh, 1971, *Meika no Shôkai to Saibai*, p.214. Different reading for **Higo-nikkô.**

Higo-kôbai. Izu Ohshima, 1980, Hawaii Botanical Gardens Catalogue as 'Higokobai'. Synonym for the Higo camellia **Kôbai.**

Higo-kôryû. (Higo) Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. From Kumamoto Pref.

Higo-kumagai. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.125. Synonym for the Higo camellia **Kumagai.**

Higo-kurenai. *Chinka Zufu,* (before 1700), Watanabe, 1969. Different reading for **Higo-beni.**

Higo-kyô-nishiki. (Brocade of the Metropolis *Higo),* (Higo), Tanigachi, 1912, *Chinka Kyôkan* as 'Kyô-nishiki'; Hiratsuka, 1964, *Higo Camellia*, p.35 & 13 (English); *Encyclopedia of Camellias in Colour,* vol.I, pl.137, p.81, description, p.311: Flower white, striped and splashed crimson, 9-10 cm across, 6 petals; stamens, 130-150, yellowish; leaves medium size, ovate with short acuminate apex. See Seibundô Shinkôsha, 1979, *Senchinshû*, p.124, colour photo, Tuyama, 1968, *Camellias of Japan,* pl.335, p.169; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.287. As 'Kyô-nishiki' was a name already given to an earlier *C.japonica* and also a *C.x vernalis,* in this case the name has been prefixed with "Higo" to distinguish the Higo cultivar. **Higo-kyô-nishiki** is now considered the valid name. Mutations: 'Asahi-no-minato', 'Mikuni-no-homare', 'Jitsugetsusei'. Originated in Kumamoto Prefecture, Japan.

Higo-maizuru. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.125. Synonym for the Higo camellia **Maizuru.**

Higo-manazuru. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.211 with colour photo; English translation p.147. Synonym for the Higo camellia **Manazuru.**

Higo-mangetsu. Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.196. Synonym for the Higo camellia **Mangetsu**.

Higo-manyô (Myriad Petalled Camellia from Higo), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.21: Large, crimson semi-double to anemone with most stamens converted to flagged petaloids. Not a Higo type camellia. Originated in Kumamoto Prefecture, Japan. (Believed extinct.)

Higo-miatsu. (Miatsu of Higo), *(C.japonica), Chinka Zutu,* (before 1700), Watanabe, 1969, pl.68: Average size red peony form with colour darkening towards the petal base. Petals frilly with 3 or 4 standing above the main ones. Not a Higo type camellia. Originated in Kumamoto Prefecture, Japan. (Believed extinct.) The meaning of "Miatsu" is obscure, probably an ancient personal or place name.

Higo-mikuni-no-homare. Izu Ohshima, 1980, *Hawaii Botanical Gardens Catalogue* as 'Higomikuninohomare'. Synonym for the Higo camellia **Mikuni-no-homare.**

Higo-mine-no-yuki. (Higo Snow on the Peak), (Higo), Taniguchi, 1912, *Chinka Kyôkan* as 'Mine-no--yuki': Pink, some light spots appear, with deeper pink spots and stripes, margined white, 10 cm across, 7-9 petals, 120 light pink stamens. See Hiratsuka, 1964, *Higo Camellia,* pp.38, 14 (English); Seibundô Shinkôsha, 1979, *Senchinshû,* p.125, description, p.241. As the name 'Mine-no-yuki' has been used for earlier cultivars of *C.japonica* and *C.sasanqua,* for the Higo camellia the name has been prefixed with "Higo" to distinguish the cultivar. Thus

Higo-mine-no-yuki is accepted as the valid name. Originated in Kumamoto Prefecture, Japan.

Higo-momijigari. (Higo View of Maples), (Higo), Satomi, 1956, *Camellian,* vol.VII, No.2, pp.18, 19, "Nomenclature of Higo camellias" as 'Momiji-gari': Vermilion red, large; 10 cm across, 7 petals, 140 pale red stamens, dispersed conically. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.224; Seibundô Shinkôsha, 1979, *Senchinshû,* p.125, description, p.241. To distinguish this Camellia from an earlier *C.japonica* of the same name, the prefix "Higo" was added. Thus **Higo-momijigari** is the accepted valid name. Originated in Kumamoto Prefecture, Japan.

Higo-myôjô. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.211 with colour photo; English translation p.147. Synonym for the Higo camellia **Myôjô.**

Higo-nikkô. (Higo Sunlight), (Higo), Higo Camellia Society, 1966, *Higo Tsubaki,* No.4: Large, crimson of purplish cast, single, Higo form with 7-9 petals, 180-200 stamens in a circular formation with pinkish filaments. Flowers midseason. Leaves are wide-oval to oval, tree habit upright. A seedling of **Hi-no-maru** originated in Kumamoto Prefecture, Japan by Fujimoto, Tatsuo. Orthographic variant: 'Nikkô'(Higo). Different reading: 'Higo-jikkô', 'Higo-jikkoh'. See Seibundô Shinkôsha, 1979, *Senchinshû,* p.124 colour photo; *Encyclopedia of Camellias in Colour,* vol.I, 1972, p.369 & vol.II, 1978, pl.266, p.117.

Higo-Nioi-Fubuki. Forrest, 1985, *Trees and Shrubs Cultivated in Ireland.* Synonym for **Nioi-fubuki.**

Higo-no-homare. (Pride of Higo), (Higo), Stone, 1983, SCCS., *The Camellia Review,* vol.45, No.2, p.19: White striped rose-pink, 11 cm across. A sport of **Taikanhô.** Originated in Japan.

Higo-ohzora. Nantes, *Services des Espaces, Collections,* 1980. Synonym for **Ô-zora.**

Higo-ôsakazuki. (Large Cup from Higo), *(C.sasanqua),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Medium size, deep red, single. Blooms early to mid-season. Originated in the Kumamoto Prefecture, Japan.

Higo-ôzeki. (2nd Grade Sumo Wrestler – Higo), (Higo), Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.212 as 'Higo-ohzeki': Very large size, 12 cm across, crimson Higo, 5 petals with spreading stamen burst. See Seibundô Shinkôsha, 1979, *Senchinshû,* p.124 colour photo; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.223; *Encyclopedia of Camellias in Colour,* vol.I, pl.16, p.44 and facing p.153, *American Camellia Yearbook,* 1982 as 'Oozeki'. Synonyms include 'Ôzeki'(Higo). The prefix "Higo" has been added to distinguish it from an earlier *C.japonica* cultivar. Originated in Kumamoto Prefecture, Japan.

Higo-sakura-tsukasa. Izu Ohshima, 1980, *Hawaii Botanical Gardens Catalogue* as 'Higosakuratsukasa'. Synonym for **Sakura-tsukasa**.

Higo-sangai. (Three piled Camellias of Higo), *(C.japonica),* Hino, Sakekatsu, 1637, *Sukekatsukyôki;* Shirai, 1926, *Tsubaki Kai;* Deep red double, peony form. Not a Higo type camellia. Originated in Japan. (Believed extinct).

Higo-setsuzan. (Sasanqua 'Setsuzan' from Higo), *(C.sasanqua),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Medium size, white, single. Blooms early to mid-season. Originated in Kumamoto Prefecture, Japan. Selected and named by Kiyofusa Saitô. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.297 with colour photo; White, buds tinged with pink before opening, cupped petals. Leaves elliptic, medium size. Upright, vigorous growth.

Higo-shinkumagai. Izu Ohshima, 1980, *Hawaii Botanical Gardens Catalogue* as 'Higoshinkumagai'. Synonym for Shinkumagai.

Higo-shirayuki. (White Snow Higo), (Higo), Tamura, 1956, *Higo - Tsubaki Shinkoki* as 'Shirayuki'; Hiratsuka, 1964, *Higo Camellia,* p.7 & 11(English): A snow white single of Higo form with 8 petals, 8 cm across with about 100 stamens with white filaments. Seibundô Shinkôsha, 1979, *Senchinshû,* pp.124, 241; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.59; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.89, p.65 as **Higo-shirayuki.** As the name 'Shirayuki' has already been used for a *C.japonica* cultivar, **Higo-shirayuki** is considered valid for the Higo cultivar. Originated in Kumamoto Prefecture, Japan.

Higo-shokkô-nishiki. (Higo), Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.125. Satô, 1970, *Chûbu Tsubaki Kyôkai.* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.194. Synonym for **Shokkô-nishiki** (Higo).

Higo-taishô-nishiki. (Brocade of Taishô Era *Higo), (C.sasanqua),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.34: Medium size, white ground, becoming red towards the petal margins and reverse. Blooms early to mid-season. Originated in the Kumamoto Prefecture, Japan.

Higo-tamafuyô. (Beautiful Lotus form *Higo), (C.sasanqua),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.34 as 'Higo-tama-fuyô': Medium size, white ground with red graduations, single. Blooms early to mid-season. Originated in Kumamoto Prefecture, Japan.

Higo-tsubaki. (Camellia from Kumamoto), *(C.japonica),* Hirayama, (Late 17th Century), *Tsubaki Byôbu.* No description. See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.48. (Believed extinct.)

Higo-tsubaki. The Japanese group name for the Higo form camellia from the old Higo Province, now the Kumamoto Prefecture.

Higo-yamato-nishiki. *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.138, p.81. There are three camellias bearing the name **Yamato-nishiki,** but the Higo form has the priority of first listing. Therefore 'Higo-yamato-nishiki' becomes a synonym.

Higo-zakura. (Higo Cherry Blossom), *(C.sasanqua),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.44; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Medium size, pale rose-pink, single. Blooms early to midseason. Originated in Kumamoto Prefecture, Japan.

Higo-zansetsu. (Higo *Lingering Snow), (C.sasanqua),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Medium size, white, single sasanqua. Blooms early to mid-season. Originated in Kumamoto Prefecture, Japan.

Higrasi. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.102. Corruption of the Japanese name **Higurashi.**

Higuchi. (Personal Name), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.62: A medium sized single to semi-double white with red streaks and compact, central column of stamens. Originated in Japan. (Believed extinct.)

Higurashi. (All Day Long), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* as one of the three trees, with **Moshio** and **Wakanoura**; Itô, Ko'emon, 1879, *Chinka Shû:* White striped pink, medium double. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.339; Tuyama, 1968, *Camellias of Japan,* pl.347, p.176. *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.356. Seibundô Shinkôsha, 1979, *Senchinshû,* p.124: Leaves elliptical, suddenly acuminate, margins crenate serrulate, reflexed and undulate. Flowers semi-double, palest pink, sometimes suffused soft pink, narrowly striped rosy carmine, white margined (carmine 21). Petals recurving at apex and a little wrinkled. Flowers mid-season. Different reading: 'Higure'. Originated in Kantô District, Japan. Chinese synonym 'Rimu'.

Higurashi. (All Day Long), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Large to medium size, single, red flower. Originated in Japan. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.79. (Believed extinct.)

Higurashi (Izu). (Nightfall). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.209 with colour photo; English translation p.145. Large, semi-double, vertical stripes of red on white ground, cylindrical stamens, occasionally solid red flowers. Flowers mid-season to late. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Released as 'Izu-no-higurashi' in the 3rd record of the Yokohama Tsubaki Enthusiasts Club in 1973, later renamed.

Higure. Cho [before 1867] *Chinkafu*, p.24, 25. Different reading for **Higurashi.**

Higure. (Twilight). *(C.japonica),* JCS, 1997, *Japan Camellia,* No.52, enclosed card from Seibu: Large semi-double with 9-11 broad, emarginate petals and a centre of yellow stamens. Basic colour blush pink, with fine reticulate of deeper pink and streaks of red. Leaves deep green, elliptic. Originated in Japan.

Higuruma. (Scarlet Carriage), *(C.japonica),* Itô Ihei, 1695, *Kadan Chikinshô,* vol.I: Middle large and red flower, double and tidy in shape. Shirai-bunko, 1812, *Tsubaki Nayosechô:* Red formal double, occasionally with white streaks. Yashiro, 1841, *Kokon Yôrankô,* vol.306 as synonym for 'Chibakô'. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* lists two different Higuruma. One is the true red formal double, the other is as below. Tuyama, 1968, *Camellias of Japan,* pl.266, p.134, description, p.171 as 'Hi-guruma; Densely branched, rounded form. Leaves erect, lanceolate, venation impressed, petiole hairy, which suggests contamination with *C.rusticana.* See Tuyama, 1966, *Camellia Cultivars of Japan,* p.78. Flowers, complete double, rosy red (Spinel red 0023) with a bud centre. Originated in Japan. Different readings: 'Hisha', 'Hikuruma'. Sport: **Hoshiguruma.** See *Encyclopedia of Camellias in Colour,* Vol.I, 1972, pl.394, p.167.

Higuruma. (Scarlet Carriage), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Formal double, red with rare white streak, chrysanthemum shape. May be synonymous with **Hoshiguruma.** Originated in Japan.

Higuruma-jô-kifu. (Scarlet Waggon, Excellent Yellow Variegated), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû:* Yellow variegated **Higuruma** under section with yellow, variegated leaves, long, thick, twisted, pointed at apex. Different readings: 'Higuruma-kami-kifu', 'Higurumaue-kifu'. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.165. Originated in Japan. (Believed extinct.)

Higuruma-kami-kifu. Different reading for **Higuruma-jô-kifu.**

Higuruma-tsuginofu. (Scarlet Waggon, second coloured variegated), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû.* The same as **Higuruma-jô-kifu** but pattern of leaf variegation is more bluish. (Believed extinct.) Originated in Japan.

Higuruma-ue-kihu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.124. Different reading for **Higuruma-jô-kifu.**

Hihôkan. (Scarlet Crown), *(C.japonica),* Usami, Naohachi, ca.1910, *Nagoya Chinzu'e.* See 1965, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.6, p.127. A sport of **Kagirihôkan:** Very small size, single with pure white flowers. (Believed extinct.) Originated in Japan.

Hi-inkô. (Scarlet Toned Red), *(C.hiemalis),* Shimada, 1957, *Kumamoto no sazanka ni Tsuite. Dandairin,* 12(4):103: Dark pink double, about 8 cm across. Originated in Kumamoto Prefecture, Japan. Selected and named by Sadatsugu Yamasaki. *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.581, p.222 & 396. Different readings: 'Hi-onkô', 'Hioto-beni'.

Hiiragi. (Holly), *(C.japonica),* Hamamatsu, 1825, *Setsuyô Kikan.* No description. Synonym 'Tosa-tsubaki'. Originated in Japan. (Believed extinct.)

Hiiragiba. Itô, Ko'emon, 1879, *Chinkashû* (Holly Leaf). Synonym for **Hiiragi-tsubaki.**

Hiiragiba-tsubaki. Seibundô Shinkôsha, 1979, *Senchinshû.* Synonym for **Hiiragi-tsubaki.**

Hiiragi-tsubaki. (Holly Leaf Camellia), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.716; Itô, Ihei, 1710, *Zôhô Chikinshô.* No description. Itô, Jukyû, 1739, *Honzô Hanamaki'e.* Small size, true red, leaves like holly leaves, long, narrow, sharply serrate. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Satomi, 1956, *Camellia Cultivars of Japan:* Leaves narrowly lanceolate, deep green, apices tapering acuminate, margins coarsely serrate, almost like holly. Flowers small size, red, tubular to campanulate with a central stamen column. Synonyms: 'Hiiragi', 'Hiiragiba-tsubaki'. Also 'Ihei-hiiragi-tsubaki' in Mizuno, 1829, *Sômoku Kinyôshû is* thought to be a synonym. Originated in Kantô District, Japan. See *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.437, p.181; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.122, 240 as 'Hiiragiba-tsubaki'. Yokoyama & Kirino, 1989. *Nihon no Chinka,* p.171.

Hiiragi-tsubaki. (Holly Camellia), *(C.japonica), Chinka Zufu* (before 1700), Watanabe, 1969, pl.716 as 'Hiragi-tsubaki': Leaves narrow serrated, deep and wide. Petals narrow; flower small, red, single. Originated in Japan.

Hiiragiba-tsubaki. *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.127. Synonym for **Hiiragi-tsubaki.**

Hiiro-oki-no-ishi. (Scarlet 'Oki-no-ishi'), *(C.japonica),* Katayama, 1960, *Tsubaki Ochabana,* p.6: Red coloured varieties. Medium sized, full double. Late blooming. Originated in Kansai, Japan. See colour photo, pl.159, p.89, description, p.314, *Encyclopedia of Camellias In Colour,* vol.I, 1972, and Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.316; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.122, 240. Different reading: 'Hino-oki-no-ishi'. It is not known if this is a sport of **Oki-no-ishi** or not, in spite of its name.

Hiiro-sasanqua. (Scarlet coloured Sasanqua), *(C.sasanqua), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.512: Small, red, 5 petalled sasanqua with notched petals. Originated in Japan. (Believed extinct.)

Hijikawa-kurenai. (Hijikawa Red), *(C.japonica),* JCS., 1984, *Tsubaki,* No.23, p.36, with illustration: The flower has small, star-like white variegation on a blackish red background, campanulate to sake-cup blossom with 5-6 smooth, rounded petals. Stamens in a compact centre column, the filaments have red bands, anthers brilliant yellow. Leaves, long-oval, acuminate, shallowly serrate. Originated near the Hijikawa River, Ehime Prefecture, Japan. Named and released by Ôzu Camellia Enthusiasts Club in 1975.

Hi-Jinx. Mark S. Cannon Scion Catalogue, 1962, p.5. Orthographic variant for **High Jinks.**

Hi-Jinx. (C.*japonica), American Camellia Yearbook,* 1955, p.337, Reg. No.238: A 10 year old chance seedling, originated by Mrs J.W. Anderson, Rock Hill, South Carolina, USA, that first flowered 1951. Plant growth is open and rapid in rate with large, dark green leaves, 12 cm long. The pink flowers, 11-15 cm across, are incomplete double, with large petaloids, similar to **Gloire de Nantes,** with 17-23 petals. Flowers mid-season to late. Sport: **Hi-Jinx Variegated.** Orthographic error: 'Hi Jinks'.

Hi-Jinx Variegated. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1964-1965, p.8 as 'Hi-Jinx Var.'; SCCS., 1966, *Camellia Nomenclature,* p.65: A virus variegated form of **Hi-Jinx** - Pink blotched with white. Originated in USA.

Hijiri. (Holy), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.38, colour photo and description: Small size, white, wide campanulate single, with 5 broad, rounded, emarginate petals, slightly reflexed, and a central stamen cylinder with white filaments, joined for the lower third, and yellow anthers. Blooms from very early to late season. Leaves mid-green, elliptic to broadelliptic, apices long acuminate, margins serrulate. Originated in the Kyôto District, Japan. A seedling of the *C.japonica,* **Hiryû.** Named and released by Misoji Yamaguchi in 1982.

Hijirimen. (Crimson Silk Crêpe), *(C.japonica),* Kaempfer, 1712, *Amoenitatum Exoticarum* as 'Fidsjir-imin': See Kyôto Engei Kurabu, 1989, *Tsubaki,* No.28, p.10. Itô, Ihei, 1719, *Kôeki Chikinshô,* as 'Hijirimen-tsubaki'; Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* as one of 7 trees. Note: Kasuya lists two different **Hijirimen.** For the 2nd see below. Tuyama, 1968, *Camellias of Japan,* pl.194, p.98, description, p.147 as 'Hi-jirimen': Leaves rather large, broadly elliptic to broadly oblong, acuminate at the apex, coarsely crenate at the margin, folded along the midrib at its base; petiole glabrous. Flowers double, cup-shaped. The colour of the flower is brilliant red or vermilion. Stamen cluster cylindrical or a little irregular. Flowers mid-season to late. See *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.156; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.315; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.126, 241. Different reading 'Hichirimen'. Synonym: 'Hijirimen-tsubaki'. Originated in Kantô, Japan. Resembles **Hiiro-oki-no-ishi.**

Hijirimen. (Crimson Silk Crêpe), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Cardinal red, medium size, single with cylindrical stamen cluster. Originated in Japan. See JCS., 1969, *Tsubaki,* No,7, p.32. (Believed extinct.)

Hijirimen. (Crimson Silk Crêpe), *(C.sasanqua),* Tachibana, Yoshishige, 1957, Shinkaki, No.16, *Sazanka no Hinshu to Saibai:* Red semi-double, medium size flowers. Originated in Japan.

Hijirimen-tsubaki. Tuyama, 1966, *Camellia Cultivars of Japan,* p.230, Synonym for **Hijirimen.**

Hijusu. Hume, 1946, *American Camellia Yearbook,* p.86. Synonym for **Shusugasane.**

Hikara Gengi. Waterhouse, 1948, *American Camellia Yearbook,* p.6. Corruption of the Japanese name **Hikarugenji.**

Hikara Genji. Hume, 1946, *Camellias in America,* p.217. Corruption of the Japanese name **Hikarugenji.**

Hikari. (Radiance), *(C.japonica),* JCS., 1973, *Tsubaki,* No.12, p.7, colour photo: Single with 8 petals, white with crimson streaks and flecks and an almost Higo-like stamen cluster, filaments white. Blooms early to mid-season. Leaves obovate, small, 6.5 cm x 3.5 cm, margins shallowly serrated. A seedling of 'Yukimiguruma' and the flower formation and leaf are very like its female parent. Originated in Kantô District, Japan by Nakamura, Totsurô.

Hikari-gengi. Fruitland Nursery Catalogue, 1937-1938. Corruption of the Japanese name **Hikarugenji.**

Hikari Genji. McIlhenny, 1941, *700 Varieties of Camellias,* p.7. Different reading of **Hikarugenji.**

Hikarigenzi. Gerbings Azalea Garden Catalogue, 1938-1939. Corruption of the Japanese name **Hikarugenji.**

Hikari-akeru. Hertrich, !959, *Camellias in the Huntington Gardens,* vol.III, p.103. Different reading for **Kômyô.**

Hikari-no-sakae. (Glory from Hikari), *(C.japonica), Japan Camellia* 99, May 2013, p.3 with colour photo, JCR Regn No. 2013-13, (ser. No.13); Seedling of **Kikuzuki**, pollen parent unknown. Semi-double pink, medium size, petals cupped to trumpet shaped. Early blooming. Originated by Yoshiharu Yanao.

Hikari Variegated. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.102. Orthographic error for 'Hikarugenji Variegated', synonym for **Hikarugenji-yokomoku.**

Hikarugeni. RHS., 1957, *The Rhododendron and Camellia Yearbook,* No.11, p.141, Index. Corruption of **Hikarugenji.**

Hikarugenji. (Brilliant Genji), *(C.japonica),* Kusuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Cho [before 1867], *Chinkafu,* Illustration p.21; Itô, Ko'emon, 1879, *Chinkashû:* "Pink, edges white, Large". Tuyama, 1966, *Camellia Cultivars of Japan,* pl.25, p.52; Tuyama, 1968, *Camellias of Japan,* pl.379, p.193, description, p.202: Leaves narrowly lanceolate to elliptic, cuneated at the base, long acuminate apex, obscurely crenate on margins. Petioles glabrous. Flowers of peony type, dark rosy (Crimson 22/1), broadly margined white, with a few streaks of deeper crimson reaching to petal edge and a veining of deeper crimson in the coloured area of the petals. Petals often numerous, exposing irregularly scattered stamens. Flowers mid-season to late. Synonyms: 'Herme', 'Souvenir de Henri Guichard', Jordan's Pride', 'Longview Number 56'. Corruption of the Japanese name: 'Hikara-genji', 'Hikari-gengi', 'Hikarigenzi', 'Hikarugeni', 'Hikaru-genzi', 'Hikarigenji'. The cultivars **Genji, Yaegenji** and **Genji-awase,** which have sometimes been regarded as equivalent to **Hikarugenji,** are each separate and distinct cultivars. The transliteration **Hikarugenji** was first published in the 1891 catalogue of the Yohohama's Gardeners Association. For other forms of this cultivar see: **Benibotan, Lookaway, Hikarugenji-yokomoku, Colonial Lady, Orchid Pink, Egret, Quaintance, Spring Sonnet, The Mikado, Genji-shibori, White Surprise.** Originated in the Kantô area, Japan. Colour photos and descriptions see: Seibundô Shinkôsha, 1979, *Senchinshû,* pp.123, 242; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.358, p.345. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.126; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.56. Chinese synonyms: 'Huahemu' & 'Guangyuangshi'.

Hikarugenji. (Brilliant Genji), *(C.sasanqua),* Shimada, Yaichi, 1957, *Kumamoto no Sazanka ni tsuite. Dantairin;* Satomi, 1958, *Nomenclature of the Sasanqua of Japan,* p.10: White in the centre, shaded a deep pink on the edge. Large semi-double. Originated in Kumamoto Prefecture, Japan. A Higo sasanqua selected and named by Sadatsugu Yamasaki.

Hikarugenji-aka. Satomi, 1956, *Camellias of Japan* as 'Hikaru-Genji-Aka'. Synonym for 'Kôbotan' (**Benibotan**).

Hikarugenji Pink. SCCS., 1951, *The Camellia. Its Culture and Nomenclature* as 'Hikaru-genji Pink'. Synonym for 'Kôbotan'.

Hikaru Genji Red. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.102. Synonym for 'Kôbotan'.

Hikarugenji Rosea. Camellia Grove Nursery Catalogue, 1954, p.19, as 'Hikaru-Genji Rosea'. Synonym for 'Kôbotan'.

Hikarugenji Sport. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.102. Synonym for **Hikarugenji-yokomoko.**

Hikarugenji Variant. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.102. Synonym for **Hikarugenji-yokomoko.**

Hikarugenji Variegated. Satomi, 1956, *Camellias of Japan,* as 'Hikarugenji Var.'. Synonym for **Hikarugenji-yokomoko.**

Hikarugenji-yokomoku. (Hikarugenji Variegated), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in the peony form section; Itô, Ko'emon, 1879, *Chinkashû:* Rose-pink, spotted and blotched white. A virus variegated form of 'Kôbotan' (**Benibotan**). Synonyms: 'Beauty of Holland', 'C.P. Morgan', 'Doris Madalia', 'Herme-Sport', 'Herme Sport Number 2', 'Princess Lucille', 'Herme Variegated', 'Hikarugenji Variegated', 'Herme Variant'. Originated in the Kantô District, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû,* pp.123, 241; *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.430 for colour photos.

Hikarugenji White. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Synonym for **Egret** as 'Herme White'.

Hikaru-genzi. Fendig, 1953, *American Camellia Yearbook.* Corruption of the Japanese name **Hikarugenji.**

Hikarukao. (Radiant Face), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.123, colour photo, p.241, description: Large, soft pink semi-double, finely veined, white margined, speckled and streaked deeper pink, irregular stamens. Named as it is midway between **Hikarugenji** and **Kaoyodori.** Originated in Chûbu District, Japan.

Hikaru-nishiki. (Radiant Brocade), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.241: Medium size, single, white with red stripes, cup-shaped with stamens in a ring form. Leaves recurved. Blooms mid-season. Originated in the Chûbu District, Japan.

Hikaru Pink. Fendig, 1953, *American Camellia Catalogue.* Synonym for 'Kôbotan' (**Benibotan**).

Hikaru Rose. Fendig, 1953, *American Camellia Catalogue.* Synonym for 'Kôbotan'.

Hikishio. (Ebb Tide), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.124, colour photo, p.241, description: Medium sized lotus shaped, semi-double, with ground white to pale pink with fine veining and an occasional splash of deeper pink colour; petals, 18-20, notched at apex. Leaves lanceolate, apex from abrupt acute to acuminate, light green, irregularly serrate. Petioles hirsute. Originated in Kashiwazaki City, Niigata Prefecture, Japan.

Hiku. Forrest, 1985, *Trees and Shrubs Cultivated in Ireland.* Corruption of the Japanese name **Hikari.**

Hikuma-otome. (Hikuma Maiden), *(C.hiemalis),* JCS., 1987, *Japan Camellia,* No.23, p.4, colour photo: Discovered by Tsuyoshi Matsumura, in an old garden in Hamamatsu City, Shizuoka Prefecture, Japan. A Kan-tsubaki with red coloured flowers with fine veining in the centre of the outer petals and with white stripes in the centre of the outer petals. Blooms are double, medium sized and flowers early. The plant is wide spreading. "Hikuma" is the old name for a suburb of Hamamatsu City. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.310 with colour photo; Formal double. Found by Tsuyoshi Muramatsu in a private hedge in 1977, named by Fusako Yamasaki.

Hikuruma. Different reading for **Higuruma.**

Hilari Rosea Nova. Seidel, 1870, Pflanzen Catalog, p.8. Orthographic error for **Hilaria Rosea Nova.**

Hilaria. *(C.japonica),* Mariotti Catalogue, 1924, p.15. Abbreviation for **Hilaria Rosea Nova.**

Hilaria Rosea Nova. *(C.japonica),* Seidel, 1870, Pflanzen Catalog, p.8, as 'Hilari Rosea Nova'. Seidel, 1897, Pflanzen Catalog, p.12. Resembles **Colombo** but more beautiful. Originated in Italy. Orthographic error 'Hilari Rosea Nova'; Abbreviation 'Hilaria'.

Hilaris. *(C.japonica),* Verschaffelt, 1844, Catalogue, No.50, p.20. Originated in Italy. No description. (Believed extinct).

Hilary Tramonte. (*C.reticulata* hybrid). ACRS, *Camellia News,* Autumn 2003, No.161, p.8, Reg. No. 545. Originated by Thomas J. Savige, Wirlinga, NSW, Australia, and registered by Mrs Hilary Tramonte, Kew, Victoria. A chance seedling that first flowered 2000. A large dark pink peony form flower of 25 petals shading deeper at the edge (RHS.CC.58C-58B), with a loose arrangement of stamens among the petals. Diameter is 15 cm x 7.5 cm deep. Flowers freely mid-season on an upright, open plant of medium growth. Leaves dark green, keeled, matt, elliptic, 10 cm long x 5.5 cm wide.

Hilda Jaggs. (*C.pitardii* var. *pitardii*). *New Zealand Camellia Bulletin,* March 1996, Issue No.123, vol.XIX, No.4, p.47, Reg. No.367: Originated by N.G. Haydon, Papakura, New Zealand. Soft pink, paler at centre (62C and 158D). The flower is semi-double, 11 cm across x 5 cm deep with 11 petals, gold anthers and pale yellow filaments. Plant growth is dense, upright and

rapid, with dark green leaves 6.5 cm long x 3.5 cm wide. Blooms mid-season to late. A chance seedling from *C.pitardii* var. *pitardii.*

Hilda Jamieson. *(C.japonica),* ACRS., 1977, *Camellia News,* 1977, No.66, p.27, 28, Reg. No.203: Originated by Hilda B. Jamieson, Wahroonga, N.S.W., Australia. A chance seedling that first flowered 1976. The vigorous, upright plant produces 12-13 cm, deep pink, shading to white at petal base, ruffled flowers. Mid-season to late blooming. The dark green, lanceolate, 7.5 cm x 3.2 cm leaves are sharply pointed, varying to blunt with coarse serrations. Chinee synonym: 'Xierda'.

Hildred Veitch. Nantes, *Services des Espaces. Collections,* 1980. Orthographic error for **Mildred Veitch**.

Hill. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* White, spotted pink to solid pink. Medium sized semi-double. Synonym: 'Lady Hill'. Originated in USA. Sport: **Hill Rosea.**

Hill Rosea. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.102: The solid pink sport of **Hill.** Originated in the USA.

Hillarii Nova. *(C.japonica),* Verschaffelt Catalogue, 1846, p.54. No description. Originated in England. (Believed extinct.)

Hillarii Rosea. *(C.japonica),* Verschaffelt Catalogue, 1847-1848, p.58. No description. Originated in England. (Believed extinct.)

Hillaris. Verschaffelt Catalogue, 1846, p.54. Orthographic error for **Hilaris.**

Hilo. Trewithin Estate Catalogue, 1986. No description. Originated in England. No valid listing located. Believed to be a synonym for the New Zealand *C.reticulata* hybrid **Highlight.**

Himatsuri. (Festival of Fire), *(C.rusticana),* Nuccio's Nurseries Catalogue, 1960: Rose-red, blotched white. Small size, loose, peony form. Bushy, upright growth. Mid-season blooming. See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.42, 209 as 'Kita-no-nada'. Originated in Jô'etsu City, Niigata Prefecture, Japan. Synonym: 'Kita-no-nada'.

Hime. Valley Garden Centre Catalogue, 1946-1947. Synonym for 'Duchesse Decazes', itself a synonym for **Adonidea.**

Hime-akari. (Tiny Light), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.8: Very small, red, single, sake-cup form flower with aborted stamens. Blooms mid-season. Originated in the Shimane Prefecture, Japan. A sport from a wild japonica on Kitsunejima Island. Discovered and named by Kiyokuma Oka in 1982.

Himebotan. (Tiny Peony), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan.* pl.210, p.106, description, p.152: Leaves obovate-oblong to broad elliptic, suddenly acuminate, rounded base, finely serrate. 7 cm long x 3.8 cm wide; petioles very hairy. Flowers of peony type, deep red (Currant red 821 /3). Petals, 30-40, inner smaller and irregular, intermingled with the stamens. The largest petal, 3.9 cm long x 2.8 cm broad, oblong, incised. Filaments pale rose, reddish downwards. Originated by Iwata, Yatsuo-machi, Toyama Prefecture, Japan.

Himegaki. (Pretty Hedge), *(C.sasanqua),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.44; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Small size, white, single form flower. Blooms early to midseason. Originated in Saitama Prefecture, Japan.

Himegoto. (Secrecy), *(C.rusticana),* SCCS., 1972, *Camellia Nomenclature,* p.161: White. Medium sized, rose form double. Originated in Japan.

Himegozen. (Princess), *(C.haematoides),* Wada, 1941, *Japanese Garden Treasures,* p.27: The flowers are an intense, transparent, blood red, filled with a disk of white petaloid anthers. Its specific name was given by Wada to identify a species he believed came from China. Its correct

specific ranking has not been identified. Its Kanji characters are not certain as it was listed in English only.

Hime-hagoromo. (Miniature 'Hagoromo') (*C.hybrid*) from Chiba Pref., *Japan Camellia* No. 59, May 1999: A cross between *C,japonica* **Tsuki-no-fue** and *C.hybrid* **Tiny Princess**. Pale pink bordered pink, lotus-formed semi-double, small to large, blooms mid-season to late. Leaves elliptic, small. Tree somewhat spreading. Bloomed first, and named, in 1990. Originated by Atsushi Itoh.

Himejishi. Seibundô Shinkôsha, 1979, *Senchinshû,* p.48. A transliteration error for **Kurojishi.**

Himejishi. (Princess Lion). *(C.rusticana) Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.126 with colour photo; Small, dark red peony form, stamens dispersed among petals. Flowers mid-season to late. Leaves elliptic, medium size, somewhat waved. Upright, vigorous growth. Originated in Japan, details unknown. Synonym for **Kurojishi.**

Hime-kantsubaki. (Miniature Winter Camellia) (*C.hybrid*) from Tokyo, *Japan Camellia* No.60, August 1999: Thought to be a natural crossing between **Wirlinga Belle** and *C.hiemalis*. Peach red, 5 to 6 cm across, flat, having pedicels like the **Wirlinga Belle** family, blooms early. First flower seen in 1997. Leaves small, thin. Branches flexible. Found by Yaichirô Fujimoto.

Himekarako. (Hime Amenone), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.128 colour photo, p.242, description: Medium size, white anemone form with 7-8 large outer petals around a white petaloid central cushion. Leaves lanceolate to elliptic with long, acuminate apex, prominent venation, shallowly serrate. Originated with a private family in Tsurugi Town, Ishikawa Prefecture, Japan. Named and released by Taku Shiota in 1975.

Himekarako. (Tiny Anemone), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.8. No description. Originated in Kurume, Fuku'oka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.323; English translation p.238. Small, white anemone form. Flowers early to mid-season. Leaves elliptic, small. Upright, slender and dense branches, slow growing. An old tree, estimated age 150 years, is growing at Satô Camellia Nursery. Named and released by Minoru Satô in 1956.

Himekatashi. Group name in Japanese for *C.sasanqua* in the Kumamoto District.

Himekobushi. (Small *Magnolia kobus), (C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.187, p.95, description, p.144: Pure snow Camellia. Leaves narrowly obovate-oblong to elliptic, rounded base, gradually tapered apex, remotely denticulate, 7.3 cm long x 3.5 cm wide, petioles very hairy, 6-7 mm long. Petals, 13-18, subequal, oblong, rounded, incised at apex; largest petal, 4.7 cm x 2.6 cm; the colour of the flower is deep pink (Carmine Rose 621/1) with deeper colour (Carmine 621) in the venation. Stamens 2.5 cm high, a little irregular with 1-10, thin, fan-shaped petaloids. Originated in the wild at Yatsuo-machi, Toyama Prefecture, Japan.

Himekôki. (Princess Kôki), *(C.x vernalis),* Tanaka et al., 1986, "Cytogenetic Studies on the origin of *C.x vernalis"; Journal of the Japanese Society for Horticultural Science,* vol.55, No.2, p.210; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.40: Medium size, deep pink double. Blooms midseason. A triploid *C.x vernalis.* Originated in the Shimane Prefecture, Japan. Discovered by Tsuyoshi Muramatsu in 1974. Chinese synonym 'Jixiangqi'.

Himekomachi. (Beautiful Princess), *(C.japonica),* Ken'ichi Suzuki, 1968, *Tsubaki Saibai no Shikata :* Pale pink, semi-double flowers. Originated in Japan.

Hime-musume. Watanabe, 1970. Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.125. Transliteration error for **Hinamusume.**

Hime-nishiki. (Doll's Brocade), Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.125. Transliteration error for **Hinamusume.**

Himenoka. (Fragrant Prinesss). (*C.japonica* hybrid). *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.127. No description. From Tokyo Pref., Japan.

Hime-no-mai. (Pretty Dance), *(C.rusticana),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.200, black and white photo and description: Medium sized, red, semi-double, lotus shape, 14-15 petals with an irregular stamen cluster. Leaves, elliptic, long acuminate apex, prominent, raised venation. fine serration, mid-green. Originated in Minami Kanbara Sub-prefecture, Niigata, Japan. Collected and named by Taichi Kawamura in 1966. See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.128, 242. Resembles **Seppôzan, Kimimachi.**

Hime-no-mai (Ishikawa). (Hime Dance). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.218 with colour photo; English translation p.152. Small, palest pink semi-double, rusticana-like stamens, occasionally with petaloids. Flowers mid-season to late. Leaves elliptic, medium size, recurved. Upright growth. Selected from wild camellias in Tsurugi Town, Ishikawa Prefecture. An old camellia from the district, named and released by Hishakichi Kimura in 1985.

Hime-no-yodo. (uncertain), *(C.japonica),* W.C. Slowcock Ltd Nursery Catalogue, 1960, p.56 as 'Hime No Yodo': Shell pink, large size, fragrant, double. Blooms mid-season. Originated in Japan.

Hime-odori. (Dancing Princess), *(C.japonica),* Minagawa, 1960, *Shinsen Chinkashû:* New variety, single anemone form. Medium size. Mid-season flowering. Originated in Japan.

Hime-otome. (Pretty Maiden), *(C.japonica),* Toynbee N. Catalogue, 1957-1958 as 'Shimeo Tome': Blush pink with occasional stripe. Full double. Originated in Japan. Corruptions of name: 'Shimeo Tome', 'Shimeo Tonil', 'Shimio Tonil', 'Shimeo-tome'.

Hime-sazanka. (Dwarf Sasanqua). (*C.lutchuensis* hybrid). *Kurume Camellia,* 1997, English translation, p.56. White miniature single. Shortly pedicellate. Fragrant. Flowers early to mid-season. Native variety.

Hime-seiôbo. (Lovely 'Seiôbo'). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, Pink, deeper on reverse of petals, and paler at petal tips. Small, tubular form, tubular stamens, flowers early to mid-season. Leaves elliptic, small to medium size. A sport of **Seiôbo** with smaller flowers and leaves, and denser colour. Named and released by Shinichi Noguchi, Tokyo, Japan, in 2006.

Hime-shiragiku. (Princess White Chrysanthemum). *(C.hiemalis). "Sasanquas, The Winter Flowers"* ICS Congress, Kurume 2010, English translation p.65; White, double, small size, early. New cultivar from Kurume. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.299 with colour photo; Peony form, with twisted, fluted petals. Leaves elliptic, small. Dense, spreading, vigorous growth.

Hime Shira Yuki. Nuccio's Nurseries Catalogue, 1986-1987. Different reading for **Hime-shirayuki.**

Hime-shirayuki. (Snow White Princess), *(C.rusticana),* Hagiya and Ishizawa, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.9, p.56, black and white photo (D), description, p.8: White, miniature semi-double, 6 cm across, petals, long fluted, about 19; stamens few, dark yellow. Flowers mid-season to late. Leaves small, 5-7 cm long x 3-4 cm wide, dark green. Collected in Higashi, Kubiki Sub-prefecture, Niigata Prefecture, Japan. Named and released by Kaoru Hagiya in 1968. See colour photo, p.290, Yokoyama & Kirino. 1989, *Nihon no Chinka;* Seibundô Shinkôsha, 1979, *Senchinshû,* pp.128, 242. Different reading: 'Hime Shira Yuki'.

Hime-tsubaki. Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.6. Japanese group name for *C.sasanqua.*

Hime-wabisuke. (Small Wabisuke), (Wabisuke), Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.200, black and white photo; *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.349, p.144; Seibundô

Shinkôsha, 1979, *Senchinshû*, p.128 colour photo, p.243, description: Small single, 6-7 petals, wabisuke type flower, soft pink with streaks of deeper pink. Three outer petals, notched at the apex and a compact, central column of stamens with white degenerate anthers. Leaves small, elliptic, coriaceous, long acuminate, dark green, finely serrate. See colour photo, p.277, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Discovered at Ama-gun, Aichi Prefecture. Discovered by Shinichi Asai, named and released in 1974. For botanical drawing, colour photo and description see pp.51, 52, 54; Kyôto Engei Kurabu, 1971, *Tsubaki Tokushû*`, No.11. Chinese synonym 'Jituozhu'.

Himeyabu-tsubaki. (Small Thicket Camellia), *(C.japonica),* Takii & Co. Ltd.1955, *Engeishin Chishiki*, p.34: Dark red single form. Originated in Japan.

Himezakura. (Hime Cherry), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.115; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.8: Medium size, pale pink ground, shading off to rose-pink, bowl shape, opening flat. Blooms early to late. Originated in Ishikawa Prefecture, Japan. A seedling of **Seiôbo.** Named and released by Tadao Yamaguchi in 1985.

Himiko. (Splashed, Beautiful Child), *(C.rusticana),* Himuro, 1982, *Murasuzume:* Scarlet, semi-double to double with high centre; Seibundô Shinkôsha, 1979, *Senchinshû*, p.242: Large semi-double crimson bespattered white, cylindrical stamens. Mid-season flowering. Leaves large, ovate, apex blunt acute, even, petioles hirsute. Plant habit upright, vigorous. Originated in the Kantô District, Japan as a natural seedling of **Hijirimen.** Originated by Teiji Himuro. Registered to the Ministry of Agriculture and Fishery in 1993, No.3486. Himiko was also the name of an ancient Queen.

Himuro-setsugekka. (Himuro's 'Setsugekka'), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan*, Black and white photo; *Encyclopedia of Camellias in Colour*, Vol.II, 1978, pl.360, p.147; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.128, 242: Small, campanulate single of 6-7 uneven petals, white to soft blush pink, speckled and dashed red. Short stamen cluster with yellow anthers. Leaves lanceolate, long caudate, mid-green, finely serrate, strongly reflexed. 'Setsugekka' usually referred to the three elegant friends of nature, the sun, moon and flowers. Originated in Kanagawa Prefecture, Japan. The original tree was in Teiji Himuro's garden. See colour photo, p.280, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Resembles 'Chûbu-setsugekka'.

Hinamatsuri. (Girl's Doll Festival), *(C.japonica),* Andoh, 1974, *Tsubaki Nyûmon*, p.67, pl.87, black and white photo: A small, peony form, light red camellia with stamens and petals intermixed in the centre. Originated in Japan. Corruption of the name: 'Himatsuri'.

Hinamusume. (Country Girl), *(C.japonica),* Tuyama, 1968, *Camellias of Japan*, pl.206, p.104, description, p.150: Leaves narrowly elliptic to elliptic, shortly acuminate, grossly serrate, 8.2 cm long x 3.5 cm wide. Flowers semi-double, widely cup-shaped, dark rosy (Spinel Pink 0023), petals 18-22 with some inner, small, irregular petals; the largest 4.4 cm x 3.7 cm, concave, slightly emarginate. Anthers irregular and often divided, 3.3 cm long, filaments pale creamy to pinkish. Flowers mid-season to late. Originated by Tamura, Fuku'oka Prefecture, Japan.

Hinamusume. (Doll Girl), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, pp.127, 242: Small size, cup-shaped, red, single with cylindrical stamen cluster. Blooms early. Petiole hirsute. Originated in the Toyama Prefecture, Japan.

Hinamusume (Toyama). (Country Girl). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.215 with colour photo, as 'Hinamusume'; English translation p.150. Small, red blotched white, tubular single. Flowers early to late. Leaves elliptic, small, waved. Upright, vigorous growth. Raised by a private family in Toyama City, named and released by Minoru Takeuchi in 1980s.

Hina-nishiki. (Doll's Brocade), *(C.japonica),* Owari Tsubaki Dôkôkai, 1931, *Tsubaki Meikan;* Satô, 1960, *Chûbu Tsubaki Kyokai* and *Chûbu no Tsubaki,* 1975, p.48, colour photo as

‘Hinanishiki’: Medium sized, single white with deep rose streaks, sometimes producing a soft rose ground fading to white at petal edge. The bloom has 5 large, rounded, overlapping petals which open to saucer shape, and a compact, central stamen column with some variability in length and golden anthers. Leaves undulate, small, broad-elliptic, acuminate apex, mid-green. Originated in the Chûbu District, Japan. See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.126, 242.

Hina-otome. (Country Maiden), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.268, p.135, description, p.172: Leaves broadly-elliptic, suddenly acuminate, sharply serrate, upper surface flat, 6.3-7.7 cm long x 2.8-4.3 cm wide; petioles 4 mm long, hairy. Flowers deep pink, complete formal double, petals erect, apart from each other, 70-77 or more, completely imbricated, concave on inner surface. Flowers mid-season to late. Originated at Hosono, Toyama Prefecture, Japan.

Hinasakura. *Kurume Camellia*, 1997, English translation, p.7; Different reading for **Hinazakura.**

Hina-tsubaki. (Doll Camellia), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.126, colour photo, p.242: Very small, tubular, deep rose single of 5 petals and central stamen column. Leaves ovate, apex tapered acute, sharply serrate, glossy, deep green, venation slightly depressed. Originated in Kagawa Prefecture, Japan.

Hinatsuru. Different reading for **Hinazuru.**

Hina-wabisuke. (Doll Wabisuke), (Wabisuke), Tuyama, 1968, *Camellias of Japan,* pl.400, p.203, description, p.208: A sport of the cultivar **Shiro-wabisuke.** Leaves elliptic to oblong elliptic, long acuminate apex, flat upper surface, impressed venation, obscurely crenate serrulate. Flowers very small, pink, (Phlox Pink 625/1-/2), half opened, petals incurved, strongly recurved at the lateral margin. Stamenal tube small, with vestigal anthers. Flowers early to late season. Originated by Sadayuki Katayama, Ôsaka Prefecture, Japan and formerly named by him ‘Akizaki-pinku-wabisuke’, that is “Autumn flowering pink Wabisuke”. Synonyms: ‘Akizaki-aka-wabisuke’, ‘Akebono-wabisuke’ ‘Pinku-wabisuke’. See colour photos: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.463, pp.187, 362 description; and Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.124. Seibundô Shinkôsha, 1979, *Senchinshû* , pp.127, 242. Sport: **Fukurin-hina-wabisuke.**

Hina-wabisuke (Fukurin). Seibundô Shinkôsha, 1979, *Senchinshû,* p.127: Synonym for **Fukurin-hina-wabisuke.**

Hinazakura. (Baby Cherry). *(C.x williamsii).* JCS, 1996, *Japan Camellia,* No.51, p.10 with colour plate: Deep purplish pink, single flowers, tubular like a lily with 5-6 petals, emarginated. Stamens columnar with gold anthers. Small to medium size. Blooms early spring. A seedling of *C.saluenensis* ‘Kinden’. Originated and released by Tomita Kunitake in 1994. From Kurume, Fukuoka Prefecture. Different reading ‘Hinasakura’.

Hinazuru. (Crane Nestling), *(C.japonica),* Iwasaki, 1829, *Honzô Zufu;* Formal double, white with red spots on a few petals. Originated in Japan. See JCS., 1981, *Tsubaki*, No.20, p.110. (Believed extinct.)

Hinazuru. (Crane Nestling), *(C.japonica),* Shufu no Tomosha, 1976, Kirino, *Nihon no Tsubaki,* p.132 & 230; *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.317: A small size, single white campanulate form with the faintest apricot tone, 5-6 petals and a central column of stamens with yellow anthers. Blooms early. Leaves, broad-elliptic, abrupt acuminate apex, prominent venation, sharply serrate, mid-green. Different reading: ‘Hinatsuru’. Originated in Kanazawa City, Ishikawa Prefecture, Japan. A cultivar raised by a private family, named and released by the chief priest of Rinyûji Temple in 1945. See: Seibundô Shinkôsha,1979, *Senchinshû*, p.126.

Hinazuru (Chubu). (Crane Nestling). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.215 with colour photo; English translation p.150. Small, pale pink (feather colour of Japanese crested ibis), trumpet shaped single, cylindrical stamen cluster. Flowers early to late. Leaves broadly elliptic, medium size. Upright, vigorous growth. A cross between **Kôjo-no-haru** and **Tarôkaja.** Originated and released by Minoru Satô in 1973.

Hind Moru. Watkins, 1973, RHS., *The Rhododendron and Camellia Yearbook,* No.27, p.9. Corruption of the Japanese name 'Hinomaru', synonym for **Dewatairin** in the UK.

Hinemaru. Harrison Nursery Catalogue, 1959, p.70. Corruption of the Japanese name 'Hinomaru'. Synonym for **Dewatairin** in the UK.

Hinko. *(C.sasanqua),* Camellia Forest Nursery Catalogue, 1988, p.2: Small size, rose-red, double, Higo sasanqua. Originated in the Kumamoto Prefecture, Japan.

Hinnamaru. Anderson's Nursery Catalogue, 1958. Orthographic error for 'Hinomaru', synonym for **Dewatairin** in the UK.

Hino. (Personal Name), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe,1969, pls.119, 263, 383. Shirai, 1926, *Tsubaki Kai:* Light pink with white graduations. Single, large with deeply serrated leaves. The 3 plates in the *Chinka Zufu* are all pink singles, although apparently different clones. Originated in Japan. (All are now extinct.) Synonym: 'Hino-hayazaki'. This is believed to be a synonym for **Hinodono** of Sakuden, 1630.

Hino-azuma. (Eastern Hino), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.198, black and white photo: Soft pink, cup-shaped single of 5-6 petals, the pink fading to white on petal base. A compact, central column of stamens, joined at the lower third length. Blooms early to late. Leaves small, dark green, finely serrate. Originated in Kantô District, Japan as a seedling of **Yukimiguruma.** See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.127, 242.

Hi-no-botan. (Crimson Peony), *(C.japonica),* Kaempfer, 1712, *Amoenitatum Exoticarum.* A crimson peony form. Originated in Japan. Different reading: 'Hibotan'. (Believed extinct.) See JCS., 1989, *Tsubaki,* No.28, p.12.

Hinode. (Rising Sun), *(C.rusticana)* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.190. SCCS, 1947, *The Camellia. Its Culture and Nomenclature* as 'Hirode': Dark red. Large rose form double. Vigorous, upright, spreading growth. Originated in Japan. May be a synonym for **Hinode-tsubaki.** Different readings: 'Hi-no-de', 'Hi-No-De'.

Hinode. (Rising Sun), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.8: Small size, dark red, tubular to campanulate single. Blooms early to late. Originated in the Naka-shinkawa District, Toyama Prefecture, Japan. Named and released by Mitsuroku Makino in 1980s.

Hinode. (Rising Sun), *(C.sasanqua),* JCS., 1987, *Tsubaki,* No.26, p.44: White with pink petal edge. Medium size. Blooms early to mid-season. Originated in the Kumamoto Prefecture, Japan.

Hinode-fuji. (Fuji Sunrise), *(C.hiemalis),* Hakoda, 1974, *Nôkôdai Nôjôhô,* No.6, p.43; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.38: Medium size, white ground, petals tipped with pink, double. Blooms early. Originated in the Shizu'oka Prefecture, Japan. Chinese synonym: 'Fushi'.

Hinodegiri. (Fog at Dawn), *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1951-1952. No description. Originated in Japan.

Hinodeguma. Nuccio's Nurseries Catalogue, 1950-1951, p.15. Corruption of Japanese name **Hinode-gumo.**

Hinode-gumo. (Sunrise Cloud), *(C.sasanqua),* Chûgai Nursery Co Catalogue, 1936-1937, p.26: White shaded deep scarlet or spotted, single, large. Fendig, 1950, *American Camellia Catalogue:*

Large single white with blush edges, 9 cm across x 3.5 cm deep with 8 petals. Central stamens pale yellow with brown tips. Leaves dark green coriaceous, 6 cm x 2.5 cm. Originated in Japan. Pseudonym: 'Shichifukujin'. See Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III, p.300. Different readings: 'Hinodegumo', 'Hinode Gumo', 'Hino-De-Gumo'. Corruption of the Japanese name: 'Hinodeguma', 'Horode-Gumo'.

Hinode-no-umi. (Sunrise on the sea), *(C.sasanqua),* Nuccio's Nurseries Catalogue, 1954, p.4: Deep crimson. Large flat single. See: Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III, p.301, black and white photo. Originated in Japan. Chinese synonym 'Richuhai' (previously 'Richu').

Hinode-no-yuki. (Sunrise on the Snow), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Nihon Shubyo Co. Catalogue, 1910, p.46: Red rim, large. Wada, 1941, *Garden Treasures of Japan,* p.32: Semi-double, autumn flowering variety. White with intense red stripes, large. Originated in Japan. Different reading: 'Hinode-yuki'.

Hinode-shibori. (Sunrise Brocade). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.216 with colour photo; English translation p.151. Red stripes on white ground, small tubular to sake cup-shaped single, cylindrical stamen column. Flowers mid-season. Leaves ovate, medium size, thick, flat. Somewhat upright growth. Selected from wild japonicas growing in Hirado City. Discovered and named by Yasuo Yoshinaga in 1991.

Hinode-tsubaki. (Sunrise Camellia), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.24: Large, white, peony form with red splashed and stamens interspersed with smaller centre petals. Originated in Japan. (Believed extinct.) Thought to be synonymous with the *C.japonica,* **Hinode.** Synonym: 'Aya-tsubaki'.

Hinoden. Different reading for **Hinodono.**

Hinode-yuki. Fendig, 1953, *American Camellia Catalogue.* Based on the same characters as **Hinodeno-yuki.**

Hinodono. (Mr. Hino), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû,* p.8. under classification of "different sporting colours on same branch; striped, splashed and mottled. Face of petals white, rear face red, very large." (Believed extinct.) Synonyms: 'Hinodono-tsubaki', 'Hino-tsubaki', 'Hino-hayazaki'. Originated in Japan. Different reading: 'Hinoden'. "Hino" indicated Lord Hino Sukekatsu, author of *Sukekatsu Kyôki,* (1627-1637), who loved camellias.

Hinodono-tsubaki. Sakuden, 1630, *Hyakuchinshû,* p.8. Synonym for **Hinodono.**

Hino-hagoromo. ('Hagoromo' from Hino). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.216 with colour photo; English translation p.151. Large, lotus-form semi-double, outer petals deep pink and inner petals light pink, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size, plicate. Upright, vigorous growth. A natural seedling of **Hagoromo**. Named and released by Totsurô Nakamura in 1994. From Tokyo.

Hi-no-hakama. (Scarlet Skirt), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* "Scarlet. Very large." About 9 cm across, 6-8 petals, 120 white stamens in a spreading burst. Originated in Kumamoto Prefecture, Japan. Different readings: 'Hinohakama', 'Hino-Hakama'. See *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.493; Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement,* p.56; Hiratsuka, 1964, *Higo Camellias,* p.10, description, p.30 & 13; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.137. Seibundô Shinkôsha, 1979, *Senchinshû,* p.127 for colour plates.

Hi-no-hakama. (Scarlet Skirt), *(C.sasanqua),* Ashizawa, Yagorô, *1898, Chabaika Taishû;* Chûgai Nursery Catalogue, 1934: Bright pink, medium sized single. Wada, 1941, *Garden Treasures of Japan,* p.31: Vermilion, medium size, single. Originated in Japan. Synonym: 'Scarlet Hakama'.

Hino-hayazaki. (Hino Early Blooming), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.526: Soft pink single, fading to white on edge of ruffled petals. Originated in Japan. (Believed extinct.) Thought to be a synonym for **Hino** and **Hinodono.**

Hinoji-benji. (Hinoji's Red). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.216 with colour photo; English translation p.150. Small, deep red, tubular to trumpet shaped single, tapered, long, stamen cylinder. Flowers mid-season to late. Leaves elliptic, small, flat. Upright, vigorous growth. Selected from wild japonicas growing in Ôzu City. Discovered and released by Hiroe Fujieda in 1990. From Ehime Prefecture.

Hi-no-karaito. (Scarlet Chinese thread), *(C.japonica),* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû* No.1, p.54 as 'Hino-kara-ito'. No description. Originated in Japan.

Hi-no-kata. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.124 as orthographic error for 'Hi-no-onkata'.

Hinokiba. Tateyama Nursery Catalogue, 1957 under 'Hagawari-tsubaki': Single red small. This is a leaf parasite on camellias, *Psudixus japonicus* with the synonyms 'Hinoki-tsubaki', 'Hinokiba-tsubaki', 'Aya-tsubaki'.

Hinokiba-tsubaki. Itô, Ko'emon, *1879, Chinkashû.* The leaf parasite *Psudixus japonicus.* Synonym for 'Hinokiba', 'Hinoki-tsubaki'.

Hinoki-tsubaki. (Japanese Cypress Camellia), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô,* vol.307; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Leaves like that of the Japanese cypress. Originated in Ise, Japan. Synonyms: 'Hinokiba-tsubaki', 'Hinokiba', 'Aya-tsubaki'.

Hi-no-koromo. (Scarlet Robe), *(C.rusticana), Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.178, p.95, description, p.317: Large, red, semi-double, 10-11 cm across with 16-20 petals with deeper coloured veining, notched at apex. Small central stamens with yellow anthers and pinkish yellow filaments. Mid-season to late flowering. Leaves yellowish green with raised venation. Petiole hairy. Snow camellia lineage. Originated in Japan in Jo'etsu City, Niigata Prefecture. Discovered by Susumu Ishizawa, named and released by Kaoru Hagiya in 1975. See Seibundô Shinkôsha, 1979, *Senshinchû,* p.242.

Hi-no-koromo. (Scarlet Robe), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu:* Red, very large flower. Originated in Japan.

Hi-no-koromo. (Scarlet Robe), *(C.sasanqua),* Hakoda, 1974, *Nôkôdai Nôjôhô;* Sakata & Arisumi, 1983, *International Camellia Journal,* p.22. Red, large size, semi-double flower. JCS., 1989, *Tsubaki,* No.26, p.44 cites this as a synonym for **Fuji-goromo**.

Hi-no-kuchi. (Red Lips), *(C.japonica),* Hamamatsu, 1825, *Setsuyô Kikan.* No description. Originated in Japan. (Believed extinct.)

Hi-no-kuni. (County of Fire), (Higo), Izu Ohshima Hawaii Botanical Gardens, 1980 as 'Hinokuni'. No description. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.207, colour photo and description: Large size, dark red, higo form single of 5-6 irregular petals with frilled margins and a central burst of stamens with pinkish filiments and golden anthers. Late blooming. Leaves olive to mid-green, ovate, apices tapering acute, margins serrulate. Originated in the Kumamoto Prefecture, Japan. Probably the same variety as **Imakumagai.**

Hi-no-mai. (Dance in Scarlet), *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.102. No description. Originated in Japan.

Hi-no-maru. Hillier Nursery Catalogue, 1952. Pseudonym for **Dewatairin** as 'Hatsusakura'. Corruption of name: 'Hinnamaru'. Note: **Hi-no-maru** and **Dewatairin** are two different cultivars, but in the UK **Hi-no-maru** has erroneously been used for **Dewatairin.**

Hinomaru. (Round of the Sun), *(C.japonica),* Wada, Nursery Catalogue, 1935, p.27 & 1937, p.36: Rose form regular, deep rose red, medium flower. Late flowering. McIlhenny purchased it from Domoto in 1936 who had imported it from Japan. Satomi, 1956, *Camellias Varieties in Japan:* Deep rose red. Small formal double. Slow, upright growth.

Hinomaru. (Round of the Sun - National Flag of Japan), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Deep pink. Large. Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement,* p.59 colour photo, p.71, description as **Hinomaru;** Hiratsuka, 1964, *Higo Camellia*, p.27 & 12 & Tuyama, 1968, *Camellias of Japan,* pl.173, description, p.140 as 'Hi-no-maru': Flower cinnabar red, 7-10 cm across, single, 6 petal, a little wavy. Stamens, pale red filaments, 120-150 in number; pistil protruding above the stamens. Flowers late. Leaves medium size, flat, ovate to broadly elliptic, thick, rounded at the base, apex acute, on an erect, spreading and vigorous tree. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.206, colour photo. Originated in Kumamoto Prefecture, Japan. Different reading: 'Hi-no-maru'. Corruption of name: 'Hinemaru'. Synonym: 'Crimson Cup' in Australia. See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.127, 242. Chinese synonym 'Rizhiwan'.

Hi-no-maru. *(C.japonica),* Wicks, C.W., Nursery Catalogue, 1963, p.6: Flesh pink single with a pronounced boss of ivory coloured stamen. Originated in Japan.

Hi-no-mihata. (Flag of the Sun), *(C.japonica),* Usami, Naohachi, ca.1910, *Nagoya Chinzu'e:* Small size, single with the colour like the sun (red). Originated in Japan. See Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû,* No.6, p.127. (Believed extinct.)

Hi-no-misaki. (Sunshine Cape), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.9. Chinka-en Niigata, 1994-1995, Retail List: Colour photo; Small white campanulate single. Originated in Nagasaki Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.217 with colour photo; English translation p.151. Palest pink to white, cylindrical stamen cluster. Flowers mid-season to late. Leaves elliptic, small, somewhat waved. Selected from wild japonicas in Nomozaki Town, discovered by a staff member of the Town Office. Named and released by Nagasaki Prefectural Camellia Society.

Hi-no-miya. (Scarlet Shrine), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.236, p.119, description, p.161: Leaves broadly elliptic, recurved, wavy, flat on the upper surface, margin denticulate. 5.5-7.1 cm long x 2.3-4.3 cm wide, petioles 3-6 mm long, hairy. Flowers rosy red (Claret Rose 021-021/1), peony type, with prominent stamens. Hairy petals 24, normal petals 14-21, the largest 5.3 cm long x 3.5 cm broad. Stamens 2.4-2.8 cm long in 4-5 groups with a few accessory, small petals and a few petaloids. Originated in the Toyama Prefecture, Japan.

Hinomoto. (Land of the Rising Sun), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.542: Small, red, semi-double with white petal edges and divided stamen cluster. Originated in Japan. (Believed extinct.)

Hi-no-oki-no-ishi. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.54. Different reading for **Hiiro-oki-no-ishi.**

Hi-no-onkata. Watanabe,1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* p.124 as 'Hi-no-kata'. Error for **Katsugi-no-onkata.**

Hi-no-renge. (Scarlet Lotus Flower), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e* as 'Hirenge'; Itô, Ihei, (before 1810), *Hyakka Tsubaki Nayose Irotsuki;* Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in section on double flowers. The kanji characters in the original manuscripts vary somewhat, but all are thought to be the same as the moderm cultivar: Slender in shape and two fold flower, The corolla is light coloured and the margin a little darker red than the rest. Resembles the lotus flower. Itô, Ko'emon, 1879, *Chinkashû;* Tuyama. 1966, *Camellia Cultivars of Japan,* pl.13, p.20; Tuyama, 1968, *Camellias of Japan,* pl.180, p.91, description, p.142: Leaves narrowly elliptic to lanceolate-elliptic, apex long acuminate, remotely crenate.

Flowers semi-double, rosy (Spinel red 0023), slightly streaked or blotched with paler rose colour, petals opening widely and gradually recurving outwards. Flowers mid-season to late. Originated in Japan. Sport: **Sazanami.** Seibundô Shinkôsha, 1979, *Senchinshû*, pp.124, 243 as the different reading: 'Hirenge'. Resembles **Benitorinoko.** Note; This cultivar is now most commonly known in Japan as 'Hirenge'.

Hino-renge. (Lotus Flower from Hino), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Large size, deep red, formal double, resembles a lotus flower. Originated in Japan. (Believed extinct.)

Hi-no-sekai. (Scarlet World), *(C.japonica),* Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, p.124. No description. *Encyclopedia of Camellias in Colour,* vol.I, 1973, pl.6, p.41, description, p.292: Small, tubular, red single with cylindrical stamen cluster, anthers yellow, filaments pinkish. Leaves oval, abrupt acute, folded, recurved, mid-green with depressed venation. Originated in the Chûbu District, Japan. A natural seedling, parentage unknown. Originated and released by Yoshiharu Yamada in 1968. See Seibundô Shinkôsha, 1979, *Senchinshû,* p.127 and Satô, 1975, *Chûbu no Tsubaki*, p.39.

Hi-no-sekai. (Scarlet World), (Higo), Ishii, 1932, *Genshoku Engei Shokobutsu Zufu:* Large red. Originated in Japan.

Hi-no-seki. (Scarlet Gate), (Higo), Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.124. No description. Originated in Japan.

Hi-no-shita. (Under the Sun), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku,* vol.3: White, large, double. Originated in Japan. (Believed extinct.) See JCS., 1965, *Tsubaki*, No.5, p.28.

Hi-no-tamagaki. (Scarlet Shrine Fence), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Deep red, large double, anemone to peony form; there appear different flower forms on the same plant, some with divided stamens, some with no stamens or having white petaloids. Originated in Japan. (Believed extinct.) See Kyôto Engei Kurabu, 1961, *Tsubaki,* No.2, p.98.

Hi-no-toboso. (Door to the Sun), (*C.sasanqua*), Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.10: Very deep pink. Large, semi-double with long petals. Originated in Japan.

Hi-no-tori. (Firebird), (*C.rusticana*), Tateishi et al., 1970, Histological differences of Leaves; *Journal of Japanese Botany,* vol.45, No.2. No description. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.9: Small size, red, anemone double, Blooms mid-season. Originated in Chiba Prefecture, Japan.

Hi-no-tori. (Fire Bird) (*C.japonica*) from Ehime Pref., *Japan Camellia* No.63, August 2000: A variety growing in a private garden in Ônishi Town. Brilliant red, single, medium size, lotus-formed, tubular stamen cluster, blooms in mid-season. Tree upright growth. Found by Kyûshi Fujiwara in 1987. Named after a famous Japanese comic book.

Hinotsukama. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.102. Corruption of Japanese name **Hi-no-tsukasa.**

Hino-tsubaki. (Hino Camellia), *(C.japonica),* Hino, Sukekatsu, 1628, *Sukekatsu Kyôki.* No description. Originated in Japan. (Believed exinct). See JCS., 1986, *Tsubaki,* No.25, p.14.

Hi-no-tsukasa. (Scarlet Lord), *(C.japonica),* Usami, Naohachi, ca.1910, *Nagoya Chinzu'e:* Small size, double, scarlet. Synonymous with 'Hibakama'. See Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû,* No.6, p.126. (Believed extinct.)

Hi-no-tsukasa. (Scarlet Lord), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Large, red single. Seibundô Shinkôsha, 1979, *Senchinshû,* p.127, colour photo, description, p.242: Red single, Higo form with large, creped and crinkled petals, 8-9 cm across with 8 petals. Originated in Kumamoto Prefecture, Japan as a sport of **Azuma-nishiki.** Synonym: 'Benifuyô'.

Hi-no-tsukasa. (Scarlet Lord), *(C.sasanqua),* Kajitsu'en, 1905, *Chabaika Meikan:* Medium size, red, cupshaped. Originated in Japan.

Hi-no-tsukasa. (Scarlet Lord), *(C.hiemalis),* Wada, Catalogue 1937, p.37: Enormous full double crimson, flowers in winter. Hinomaru Shokubutsu-en, 1968, *Ryokka:* Peony form. Originated in Kurume City, Fuku'oka Prefecture, Japan. Synonyms: 'Hi-no-tsukasa'(Kurume), 'Kurume-hino-tsukasa'.

Hi-no-tsukasa. (Scarlet Lord), *(C.sasanqua),* Wada, 1941, *Garden Treasures of Japan,* p.31; Shimada, Yaichi, 1959, *Kumamoto no Sazanka ni tsuite. Dantairin:* Deepest red, single, broadly thick petalled, showy stamens. Blooms early to mid-season. Looks like a *C.japonica.* See: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.576, p.221 *for* colour photo. Originated in the Kumamoto Prefecture, Japan. Synonym: 'Hi-no-tsukasa'(Higo) . An old variety, selected and named by Sadatsugu Yamasaki.

Hi-no-tsukasa (Higo). Hakoda, JCS., 1987, *Tsubaki,* No,26, p.44. Synonym *for* the *C.sasanqua,* **Hino-tsukasa** from Kumamoto.

Hi-no-tsukasa (Kurume). Hakoda, JCS., 1987, *Tsubaki,* No.26, p.44. Synonym *for C.hiemalis,* **Hi-notsukasa** from Kurume.

Hinoyama-tarô. (See Note). *(C.japonica),* Noboru, Nagahama, 1979, "Yabu-tsubaki no Sekai" (The World of Wild Camellias); Garden Life, p.89, Seibundô Shinkô-sha, Tokyo: A wild camellia found beside an active volcano on Miyakejima Island. Incurved red petals and massive cylindrical stamen tube like **Tarô-an**. Projecting pistil. Synonym: 'Gozen-no-kaori'. Note: Hinoyama means an active volcano.

Hi-no-yoso'oi. (Look of Scarlet). *(C.japonica), Kurume Camellia,* 1997, English translation, p.7; Deep crimson, small campanulate single. Strong growth with weeping branches. Named by K. Inoue.

Hinshi. The Japanese equivalent of the Chinese **Binsi.**

Hinson Red. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.102. No description. originated in USA. No valid listing located.

Hinuma-no-sato (Hometown Hinuma) (*C.japonica*) from Ibaragi Pref, *Japan Camellia* No.81, August 2006: Peach red bordered white, single, cylindrical stamens, small to medium, blooming in winter to spring. A crossing between **Tama-no-ura** and **Ôkan.** First flower seen in 2001. Originated and named by Kunimitsu Suzuki.

Hiodashi. John Waterer Sons & Crisp Catalogue, 1965-1966. Corruption *of* the Japanese name **Hiodoshi.**

Hiodoshi. (Armor Bound in Scarlet), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Scarlet single. Seibundô Shinkôsha, 1979, *Senchinshû,* p.123, colour photo, p.240: Scarlet, Higo form, 10 cm across, 6-9 petals; stamens about 120 in an open, spreading burst, white filaments. Different reading: 'Hiodoshi'. Originated in Kumamoto Prefecture, Japan. Chinese synonym 'Feiwei'.

Hiodoshi. (Armor Bound in Scarlet), *(C.sasanqua),* McIlhenny Catalogue, 1937, *600 Varieties of Camellias:* Medium to large magenta with irregular, white variegation, single, 8-8.5 cm across with 8 wedge-shaped petals about 3.8 cm long, creped and notched. Stamens widely separated in a burst. Filaments pale yellow, anthers brown. Leaves glossy, dark green, 5.5 cm long x 2 cm wide, edges curved upwards, texture leathery, serrations coarse. Of Japanese origin, imported from Chûgai Nursery, Kôbe, Japan about 1932. (Fendig, 1951). Orthographic error: 'Hidoshi'.

Hiodoshi. (Armor Bound in Scarlet), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.232: Large, single, deep crimson with 8, irregular, long petals with notched and lacinated edges

and central stamen column with gold anthers and yellow filaments. Originated in Japan. (Believed extinct.)

Hiodoshi. (Armor Bound in Scarlet), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.482: Medium sized, deep crimson single with 6 irregular petals, scalloped and incised edges. Large stamen column, yellow anthers and white filaments. (Believed extinct.) Originated in Japan.

Hi-odoshi. Different reading for **Hiodoshi.**

Hiôgi. (Scarlet Fan). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.208 with colour photo; English translation p.144. Medium size, red, tubular single, cylindrical stamen cluster. Flowers early to mid-season. Leaves narrowly elliptic, medium size, somewhat waved. Upright, vigorous growth. A natural seedling of **Kikuzuki**. Originated and released by Eimei Nagata in 1973.

Hionkô. ISC., Apr.1990, *Japanese Camellia Cultivar List,* p.38: Different reading for **Hi-inkô.**

Hi-ori. (Scarlet Weave), *(C.japonica),* Izu Ohshima, 1980, *Hawaii Botanical Gardens Catalogue.* No description. Originated in Japan.

Hi-ôshô. (Scarlet King), *(C.japonica),* Chûgai Nursery Catalogue, 1935-1936 as 'Hiow-sho'. Seibundô Shinkôsha, 1979, *Senchinshû,* pp.123, 240: Medium size, deep red, tubular shape with cylindrical stamen cluster. Blooms early to mid-season. Originated in Chûbu District, Japan. Different readings: 'Hiow-sho', 'Hi-ohshoh', 'Hi-osho', 'Hioshio', 'Hioshyo', 'Hi-ôsyô'.

Hi-ohshoh. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai.* Different reading for **Hi-ôshô,** incorrectly given as a synonym for **Kôkirin.**

Hioshyo. Wada, 1941, *Japanese Garden Treasures.* Different reading for **Hi-ôshô.**

Hi-ôsyô. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû.* Different reading for **Hi-ôshô.**

Hioto-beni. Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.10. Synonym for **Hi-inkô.**

Hi-otome. Chûgai Nursery Catalogue, 1934-1935. Different reading for **Kô-otome.**

Hi-otome. Synonym for **Hi-otome-sazanka.**

Hi-otome-sazanka. (Scarlet Maiden sasanqua), *(C.hiemalis),* Ken Yashiroda, Kagawaken Nursery Catalogue, 1931-1932, p.8 as 'Hi-otome'; Nagao, Sôsei-en, 1959, *Shokubutsu Sômokuroku;* Nakamura, Tsuneo, 1965, *Tsubaki no Sazanka; Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.538, p.214 colour photo, p.387, description as 'Hiotome-sazanka': A small, red, formal double, 5-7 cm across with 20-30 petals. Originated in Kansai District, Japan. Synonyms 'Otome-sazanka', 'Shôwa-no-homare', 'Kô-otome', 'Miyuki', 'Hi-otome'. Chinese synonym: 'Feiyü'.

Hi-owsho. McIlhenny, 1937, *600 Varieties of Camellias.* Corruption of **Hi-ôshô.**

Hippoden. (Obscure), *(C.sasanqua),* Wada, 1941, *Garden Treasures of Japan,* p.32: A semi-double, autumn flowering variety of sasanqua. Large size, peach pink. Originated in Japan.

Hippolyta. *(C.japonica),* Waterhouse, 1947, *Camellia Quest,* p.16. A Camden Park seedling No.54/52 raised by William Macarthur, Camden Park, NSW, Australia. No description. Extinct.

Hippolyte de la Foltiere. *(C.japonica),* Originated and propagated by Alain Jouno. Registered by Parc Botanique de Haute Bretagne, Le Chatellier, France. A 4 year old plant, parentage unknown, first flowered 2013. To be further propagated by a nursery. Flower is semidouble with raised petals, 8.5cm diameter x 6cm deep, colour pink. Anthers yellow, filaments white. Flowers early and flowers fall whole. Plant is upright with average growth rate. Dark green leaves, flat, 9cm x 4.5cm.

Hippolyte Thoby. *(C.japonica),* Guichard Nursery Catalogue, 1971: Flowers imbricated. A glowing red. This plant is excellent for pot culture. Sports frequently. Mid-season to late flowering.

Originated in Nantes, France by Guichard. Orthographic variant 'Hippolite Thoby'. Named in honor of the father of Claude Thoby - "Society Nantais d'Horticulture Lecture", Mar.21 1958.

Hippolyte de Combles. *(C.japonica),* Plantiveau, 1977, *Variété obtenue par des Horticultuers,* Nantes. Originated in France by de Combles, Nantes about 1849. No description. (Believed extinct.)

Hirado. (Place Name in Nagasaki), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.88: A deep crimson, large size, semi-double with a cushion of petaloids and stamens. Anemone form. Originated in Japan. (Believed extinct.)

Hirado. (Place Name), *(C.x vernalis),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Large size, cardinal red, sake-cup shape. Resembles a *C.japonica* in flower. Originated in Japan. (Believed extinct.)

Hirado-ôyabu. (Large Yabu-tsubaki from Hirado), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.129, colour photo, p.243, description: Large, deep red, campanulate single, 6-7 large, overlapping petals with a large, central stamen cluster having bright yellow anthers and pinkish filaments. Leaves, elliptic, mid-green, long acuminate apex, medium serrations. Originated in Hirado, Nagasaki Prefecture, Japan. Discovered and named by Mamoru Oda in 1975.

Hirado-sazanka. (Sasanqua from Hirado), *(C.sasanqua), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.625:- Very small white sasanqua with 6 petals, scalloped at apex. Originated in Japan. (Believed extinct.) Resembles **Shiro-wabisuke.**

Hirado-shiro-yabu. (Wild White Japonica from Hirado). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.114. No details. From Nagasaki Pref.

Hirado-wabishin. (Camellia with Infertile Stamens from Hirado). *(C.japonica), Nippon Tsubaki - Sasanqua* **Meikan,** 1998, p.219 with colour photo; English translation p.153. Miniature, deep red, small sake cup-shaped single, infertile stamen cylinder. Flowers early to mid-season. Leaves narrowly elliptic to elliptic, small to medium. Upright growth. Selected from wild japonicas in Hirado City. Discovered by Shôin Kamogawa in 1985, named and released by Hirado Camellia Club. From Nagasaki Prefecture.

Hiraetheyn. *American Camellia Yearbook,* 1950, p.427, index. Orthographic error for **Hiraethlyn.**

Hiraethlyn. *(C.x williamsii),* Arnold-Forster, 1950, *American Camellia Yearbook,* p.105: Already in England, Lord Aberconway has crossed *C.saluenensis* with *C.japonica* 'Flora'. This hybrid is called **Hiraethlyn.** Vigorous, erect, compact habit. Leaves, 9 cm x 3 cm, fairly dark green. Flowers 9 cm in diameter, single, very pale pink fading to white at the base. Blooms mid-season to late. Orthographic errors: 'Hierathlyn', 'Hiraetheyn'. Originated in UK.

Hiragi Ba. Jutta Fischer, 1994, "Success with Camellias", p.12 with illustration of leaf. Error for 'Hiiragiba', synonym for **Hiiragi-tsubaki.** See ICS Register p.811.

Hiragiba-tsubaki. Mainichi Shinbunsha, JCS., 1971, *Tsubaki.* p.124. Different reading for 'Hiiragiba-tsubaki'**.**

Hiragi-tsubaki. *Chinka Zufu,* (before 1700), Watanabe, 1968, pl.716. Different reading for **Hiiragi-tsubaki.**

Hiraguri. Orthographic error for **Heraguri.**

Hiraizumi. (Place Name), *(C.rusticana), Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.182, p.96, colour photo, p.317, description: Full double, rosy red with 6-7 petal rows, 10-12 cm across, peony form with a central stamen group, petals waved, incurved, cleft at the apex. Late blooming. Leaves elliptic, slightly yellowish-green; venation yellow; apex acuminate, edges shallowly but finely serrate. Petiole hairy. See: Seibundô Shinkôsha, 1979, *Senchinshû,* p.129

and Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.367 for colour photos. Originated in Niigata Prefecture, Japan. Collected, named and released by Susumu Ishizawa in 1970.

Hiramatsu-shiroyabu. (White Wild Camellia from Hiramatsu). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.219 with colour photo; English translation p.153. Miniature, white, tubular single, cylindrical stamen column. Flowers early to mid-season. Leaves narrowly elliptic, small to medium, recurved. Upright growth, somewhat weak. Selected from a wild camellia community in Hiramatsu, Anan City. Named and released by Hideyuki Kinomoto in 1986. From Tokushima Prefecture.

Hiramori. (Personal Name), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.9. No description. Originated in the Tokyo Prefecture, Japan.

Hiran. (Flying Phoenix), *(C.x vernalis),* Sakata et al., Mar.1981, "Studies on the Flower Colour of Camellia, II"; *Memoirs of the Faculty of Agriculture,* vol.XVII, p.2, Kagoshima University; Sakata & Arizumi, 1983, *International Camellia Journal,* p.22. No description. JCS., 1988, *Tsubaki,* No.26, p.50: Small size, single, peach pink. Originated in Nagasaki Prefecture, Japan.

Hiraoka. (obscure), *(C.x vernalis),* Tanaka, Sept.1986, "Cytogenetic Studies of the Origin of *C.x vernalis"; Journal of the Japanese Society for Horticultural Science,* vol.55, No2, p.208. A tetraploid cultivar of *C.x vernalis.* Small size, red, single with spreading stamens and deep green leaves, 4.6 cm x 2.7cm. Originated in Japan.

Hirarugenji. Fruitland Nursery Catalogue, 1936-1937, p.16. Corruption of the Japanese name **Hikarugenji.**

Hiren. Itô, Jukyû. 1739, *Honzô Hanarnaki'e.* Different reading for 'Hirenge' as a synonym for **Hi-no-renge.**

Hirenge. Itô, Ihei, 1695, *Kadan Chikinshô,* vol.1. Synonym for **Hi-no-renge,** and now more commonly used in Japan than the valid name**.**

Hirenge. Seibundô Shinkôsha, 1979, *Senchinshû,* p.129 colour photo, p.243, description. Different reading for **Hi-no-renge.**

Hirenk. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name 'Hirenge', different reading for **Hi-no-renge.**

Hirenka. SCCS., 1958, *Camellia Nomenclature.* Corruption of the name 'Hirenge', different reading for **Hi-no-renge.**

Hiro. Threlkeld, 1962, *The Camellia Book,* p.186. Corruption of the Japanese name **Hiryû**.

Hirode. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Corruption of Japanese name **Hinode.**

Hiroguransamu. (Hiro's Granthamiana) (*C.hybrid*) from Ehime Pref,. *Tsubaki* No.38, published by the Japan Camellia Society in 1999. Seed parent *C.japonica* 'Unryû' (**Unryu-tsubaki**), pollen parent *C.granthamiana.* Pink to light red, flat single to semi-double, large, early blooming. Leaves resembling but smaller than those of *C.granthamiana*. Tree upright growth, vigorous. Originated by Hiroyasu Watanabe in 1997. Flower shape resembles that of *C.granthamiana* so that it is ideal to display white and red flowers of the same appearance and the same flowering period.

Hirosehaku. (Hirose's White), (Higo), Hiratsuka, 1964, *Higo Camellia,* p.10 & 11, with black and white photo, p.19: A white Higo flower, selected by Daigorô Hirose. Recognised by the Higo Camellia Society in 1962. 10 cm across, 5-7 petals, about 140 stamens with white filaments. Late blooming. Leaves long-ovate, lustrous, dark green, sometimes with yellow variegation.

Seibundô Shinkôsha, 1979, *Senchinshû,* p.243. Different readings: 'Hiroseshiro', 'Hirose-haku'. Originated in Kumamoto Prefecture, Japan.

Hirose-koyabu. (Hirose's Small Yabu-tsubaki), *(C.rusticana),* JCS., 1986, *Japanese Camellia,* No.22, p.4: Originated in Aichi Prefecture, Japan. Dark red, small size, single, tubular blossoms with cylindrical stamen cluster, filaments white. Mid-season to late blooming. Buds are black like **Kuro-wabisuke.** Leaves small and flat. Selected from wild camellias in Niihama City, Ehime Prefecture, Japan. Discovered around 1970, named and released by Iyo Camellia Club. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.185, colour photo.

Hiroshima. (Place name), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.44: A medium sized, single white, variegated with patches of speckled, deep pink, 6-7 petals, central stamen column. Originated in Japan. (Believed extinct.)

Hiroshima. (Place name), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.66: A medium sized, white single with soft pink towards the base of the 5 petals. Central ring of stamens. Originated in Japan. (Believed extinct.)

Hiroshima F.N.. *(C.japonica),* Woodroof, 1949, SCCS., *Bulletin* 8(6):5: Pink, large semi-double, resembling an atom mushroom cloud with a group of petaloids in the centre. Early to mid-season flowering. Originated in USA by Fruitland Nursery, Augusta, Georgia.

Hiroshima-monogurui. (Hiroshima Insanity), *(C.japonica),* Hirayama, Tokuo, (Late 17th Century), *Tsubaki Byôbu.* See 1961, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.2, p.48. No description. Originated in Japan. (Believed extinct).

Hiroshima-nakashiro. (White Centered Hiroshima), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.159, pl.669: Small, red single of 5-6 petals with a centre of white petaloids and anthers. Originated in Japan. There is a possibility that this is the same as **Bokuhan**.

Hiroshima-ô-usubeni. (Large Light Pink from Hiroshima), *(C.japonica),* Shirai, 1926, *Tsubaki Kai.* Copied from a book of the Edo period. Light pink with whitish margin to petals, single, magnolia form, large. Originated in Japan. (Believed extinct.)

Hiroshima-ô-usuiro. Hino, Sukekatsu, 1632. *Sukekatsukyoki.* Synonym for **Ô-usuiro.**

Hiroshima-shibori. (Dappled Hiroshima), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.412; Shirai, 1926, *Tsubaki Kai.* Copied from a book of the Edo period. White striped purplish red, single. Originated in Japan. (Believed extinct.)

Hiroshima-shimeri. (Sprinkled Hiroshima), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.200, pl.707: Small, white single of 5 petals, sprinkled and dotted with red. Central column of stamens with white filaments. Originated in Japan. (Believed extinct.)

Hiroshima-sôzen-usuiro. (Hiroshima's Light Coloured), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.253: Large size, campanulate single, coloured violet-red fading at the petal edges; short, compact stamen column with white filaments. Originated in Japan. (Believed extinct.)

Hirotaya Crimson. (Hirotaya's Crimson). *(C.hybrid), Japan Camellia* 101, May 2014, p.4 with colour photo; JCR Regn No. 2014-4, (ser. No.17); A seedling of **Bokuhan** x **Night Rider,** sown 2005, first flowered 2010. Vivid crimson, profuse, early blooming. Originated by Masao Takatori.

Hirta. *(C.japonica), Catalogue Generale des Plantes la Société Royale d'Horticulture de Belgique,* 1842, p.22. No description. Originated in Belgium. (Believed extinct.)

Hiru-nishiki. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.54. Different reading for **Hiru-no-nishiki.**

Hiru-no-nishiki. (Daytime Brocade), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.117 as 'Hirunonishiki': Medium to large size, anemone form with large, central cushion of red petaloids mixed with some white petaloids and stamens. Originated in Japan. Different readings: 'Hiru-nishiki','Hirunonishiki'. Synonym: 'Chûkin'. (Believed extinct.)

Hiryi. Hillier Nursery Catalogue, 1949, p.18. Corruption of the Japanese name **Hiryû.**

Hiryii. RHS., 1953, *The Rhododendron and Camellia Yearbook,* 1954, No.8, p.154, index. Corruption of the Japanese name **Hiryû.**

Hiryo. McIlhenny, 1937, *600 Varieties of Camellias.* Different reading for **Hiryû.**

Hiryoh. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai.* Different reading for **Hiryû.**

Hiryo-nishiki. Chûgai Nursery Catalogue, 1935-1936. Different reading for **Hiryû-nishiki.**

Hiryû. (Flying Dragon), *(C.x vernalis),* Nakayama, 1847, *Senka'ôden,* vol.5: Double, deep red with white spots, early flowering. Nihon Shokubutsu Kaisha, 1912-1913: Deep crimson red. Small rose form double, opening into flaring, open blooms with waved and twisted petals. Cold hardy. Originally imported from Japan to USA in 1906 by E. Fenerosa. Mobile, Alabama. Corruptions of Japanese name: 'Hiryi', 'Hiryii', 'Herya', 'Hiro', 'Hyryu', 'Hiryx', 'Hiryn'. Synonyms: 'Flying Dragon', 'Red Bird', 'Scarlet Bird', 'Scarlet Dragon'. Different readings: 'Hiryô', 'Hiryoh'. There are 3 different kanji characters for this name. See *Encyclopedia of Camellias in Colour,* vol.I, 1972, p.392. The name was invalidly used in Australia for the cultivar Kanjiro. Sports: **Hiryû-nishiki, Hoshihiryû.** See Macoboy, 1981, *The Colour Dictionary of Camellias,* p.174 and Tuyama ,1968, *Camellias of Japan,* pl.409, p.208 for colour photos.

Hiryû. (Flying Dragon), *(C.japonica),* Watanabe, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.8, p.36. No description. *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.104, p.70: Large, open single, light red with white blotches, 5-6 petals with a tall, stamen cylinder, yellow anthers, pale cream to white filaments. Leaves lanceolate, leathery, prominent venation, sharply serrate. Petioles hirsute. Seibundô Shinkôsha, 1979, *Senchinshû,* p.129 colour pl., p.243, description; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.235, colour photo. Originated in Japan. A seedling of **Daikagura** originated and released by Katayama Juraku'en Nursery around 1970.**.**

Hiryû. (Scarlet Dragon), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.10: Pure pink, small size, double with waved petals. Winter blooming. Different reading: 'Hiryoh'. Synonyms: 'Scarlet Bird', 'Scarlet Dragon', 'Yae-hiryû'. Originated in Japan.

Hiryu (Australia). SCCS., 1964, *Camellia Nomenclature,* p.130. Synonym for **Kanjiro.**

Hiryû-boshi. Minagawa, Iza'emon, 1885, Nisshôen Chabaifu. Different reading for **Hoshihiryû.**

Hiryû-nishiki. (Flying Dragon Brocade), *(C.x vernalis),* Chûgai Nursery Catalogue, 1935-1936 as 'Hiryo-nishiki': Crimson splashed white, rose form double. A variegated form of **Hiryû.** Different readings: 'Hiryô-nishiki', 'Nishiki-hiryô'. Originated in Japan.

Hiryuh. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.103. Corruption of the Japanese name of **Hiryû.**

Hiryx. van der Vis, Boskoop, Special Camellia List, 1964-1965, p.1. Corruption of the Japanese name **Hiryû.**

His Majesty. *(C.japonica),* Gerbings Azalea Gardens Catalogue, 1941-1942: An immense, loose, peony-like flower of deep rosy red. Large, dull green foliage. Mid-season blooming. See Hertrich,1954, *Camellias in the Huntington Gardens,* vol.I, p.175. Originated at Magnolia Gardens, either as a seedling of Rev. J.G. Drayton, of Johns Island, South Carolina or a lost label plant from Europe.

Hisadomi. Sakata et al., 1981, "Studies of the flower Colours in Camellia, II"; *Memoirs of the Faculty of Agriculture,* vol.XVII, p.93; Kagoshima University. Different reading for **Hisatomi.**

Hisagi. Uekiya Seijiro, ca,1874, *Tsubaki Hyakuro no Zu.* This is an error for **Shizaki.** See Kyôto Engei Kurabu, 1975, *Tsubaki Tokushû,* No.73, p.20.

Hisaka-ichigô. (Hisaka's No. 1.). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.114. No description. From Nagasaki Pref., Japan.

Hisakaki-sazanka. Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.6. Japanese name for *C.virgata* (Koidz.) Makino & Nemoto.

Hisakashiro. (Hisaka White), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.25, colour photo and description: Small size, white, campanulate single of 5 pure white, rounded, emarginate, slightly reflexed petals and a central stamen cylinder with white filaments, joined for the lower third, and yellow anthers. Blooms mid-season to late. Leaves deep green, narrowly lanceolate, with long, tapering apices and obscure serration. Originated in Gotô Isle, Nagasaki Prefecture, Japan. Named and released by Tomokazu Fujita around 1983.

Hisakata. (Long Lasting), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.204, pl.537: Medium sized, peony form white with a pink flush at the base of the petals, red stripes and flecks. Originated in Japan. (Believed extinct.)

Hisakata-no-mori. (Long Lasting and Prosperous), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.125, colour photo, p.241, description: Semi-double to open peony form, blush pink, finely peppered and flecked crimson, waved petals. Leaves elliptic, apex acuminate, heavily veined, shallowly serrate, light green. Originated in Kantô District, Japan. Local name: 'Nerima-tsubaki'.

Hisamatsu-shiro. (Hisamatsu White), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.38, colour photo and description: Small size, white, wide campanulate single of 5 broad, emarginate, overlapping, slightly reflexed petals and a short, central stamen column with white filaments, joined for the lower half, and yellow ethers. Blooms early to mid-season. Leaves mid-green, broad elliptic, apices acuminate, margins sharply serrate. Originated in Tottori Prefecture, Japan. Discovered at Hisamatsu Mountain. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.212 with colour photo; English translation p.148.. Selected by Mii Itô from wild japonicas growing on Mt Hisamatsu in Tottori City, released by Yoshio Yamada in 1981.

Hisami. (Female Name). *(C.japonica), Nagoya Camellia Society Bulletin,* 1993, No.26, p.38 with colour photo and leaf: A seedling of **Seiôbo** x **Tama-ikari.** Fragrant. White, delicately striped lavender pink, 8-9 cm across, semi-double to loose peony form with ruffled petals. White tea-whisk stamens or occasionally divided stamen tube. Blooms early to mid-season. Originated by Dr Kunakoshi, Nagoya, Japan.

Hisatomi. (Family Name), *(C.x vernalis),* JCS., 1972, *Tsubaki,* No.11; Sakata et al., 1981, "Studies of the Flower colour in Camellia, II"; *Memoirs of the Faculty of Agriculture,* vol.XVII, p.93, Kagoshima University; Hakoda, JCS., 1987, *Tsubaki,* No.26, p.50: Small size, red, single with united stamens. Blooms early to mid-season. Leaves 4.7 cm x 2.7 cm. Originated in Fuku'oka Prefecture, Japan. Discovered and propagated by Shunsuke Hisatomi in 1971, named by Shûhô Kirino. Different reading: 'Hisadomi'

Hisayo. (Woman's Personal Name). *(C.japonica), Kurume Camellia,* 1997, English translation, p.7; Light pink, medium size, trumpet shaped single. Flowers mid-season. Originated by H. Satô, Japan.

Hisayo-shibori. (Dappled Hisayo), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.240, colour photo and description: Medium size, dark red, with white patches, occasionally with

white moire, campanulate single with 5 rounded, embracing petals and a central stamen cylinder with pinkish filaments, joined for the lower third, and yellow anthers. Late flowering. Leaves strong, bright green, broad lanceolate, apices tapering acute, margins shallowly serrate. Originated in Kurume, Fuku'oka Prefecture, Japan. Resembles: **Shokkô, Kurume-shokkô.**

Hishibeni. (Red Diamond Shape), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.125, colour photo, p.241 description: Medium size, crimson, incomplete double, 4-5 rows of imbricated and channelled petals and a confused centre of stamens, petaloids and small, erect petals. Leaves, thick, long-lanceolate with tapered apex, prominent, yellowish venation on midgreen, shallowly serrate. Originated in the Kansai District, Japan. The name refers to the diamond shape of the petals and it is thought to be a seedling of **Hishikaraito.** Originated and released by Katayama Juraku'en Nursery around 1978.

Hishigara. (Husks of Water Chestnut), *(C.japonica),* Tateyama Nursery Catalogue, 1957: Pink, double, rhombic shape, medium size. see: Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.126. Originated in Japan. Corrupt form of **Hishi-karaito.**

Hishi Gashira. Thoby et al., 1988, *Tsubaki. A Propos de Camellia,* p.46. Corruption of the Japanese name **Shishigashira.**

Hishikara. Minagawa Catalogue, 1956. Different reading for 'Hishigara'. Synonym for **Hishikaraito.**

Hishikaraito. (Hishi Diamond or Rhombic Chinese Silk Thread), *(C.japonica),* Minamoto, Yoshihiro, 1844, *Sômoku Benran:* Cardinal red, medium size, double, channelled petals. See: Kyôto Engei Kurabu, 1971, *Tsubaki Tokushû,* No.65, p.8. Nihon Shokubutsu Kaisha, 1912-1913, with colour plates and descriptions in the following publications: Tuyama, 1966, *Camellia Cultivars of Japan,* pl.106, p.180; Tuyama, 1968, *Camellias in Japan,* pl.200, p.101. *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.369, p.157. Satô, 1975, *Chûbu no Tsubaki,* p.80. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.94. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.359; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.125, 241 and front cover, *New Zealand Camellia Bulletin,* vol.VI, No.3: Leaves narrowly elliptic to narrowly oblong, gradually acuminate, dark green, veins yellowish; petiole glabrous. Flowers small, double, deep rose (Rose Madder 23/1), petals channelled, imbricated. Stamens mostly changed to small, white petaloids giving a cushion in the deep centre of the flower. Late blooming. An old Edo variety from the Kansai District, Japan. Synonyms: 'Emily Brown', 'Pink Lace', 'Kyôkaraito'. Different readings: 'Hishi-kara-ito', 'Hishi-Karaito'. Kara is an old name for China and "ito" = thread. The petals look diamond shaped and the petaloids like Chinese thread. Corrupted names: 'Hishi-kartito', 'Hishi Karoito', Hishigara'. Chinese synonyms: 'Fenlinglong' and 'Fendong Yangcha'. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.425; New Chinese synonym 'Lingtangxi'.

Hishi Karoito. Mark S. Cannon Scion Catalogue, 1962, p.5. Corruption of the Japanese name **Hishikaraito.**

Hishi-kartito. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Hishikaraito.**

Hishima. (Place Name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.212 with colour photo; English translation p.148. Small, purplish red, tubular single, thick and long petals. Flowers mid-season to late. Leaves somewhat elliptic, medium size, flat. Upright, vigorous growth. Selected from wild japonicas growing in Okayama Prefecture. Collected and released by Nobuo Sasai in 1980.

Hisha. Aoyama, Kinta, 1827, *Sômoku Kihin Kagami.* See: Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû,* No.10, p.126. Different reading for 'Hisya'. Synonym for **Higuruma-jô-kifu.**

Hishutsukasa. Camellia Grove Nursry Catalogue, 1944. Corruption of the Japanese name **Kishû-tsukasa.**

Hisikaraito. Kurume Shibu colour poster illustration, 1997. Error for **Hishikaraito.** See ICS Register, p.825.

Hisya. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.126. Different reading for 'Hisha'. Synonym for **Higuruma-jô-kifu.**

Hit Parade. *(C.japonica),* Nuccio's Nurseries catalogue, 1961: Deep red semi-double. *American Camellia Yearbook,* 1965, p.236, Reg. No.699: 3SCCS. No.62-344. This 12 year old chance seedling first bloomed 1955. Originated at Nuccio's Nurseries, Altadena, California, USA. It is a deep red semi-double with blooms up to 15 cm across, blooming in mid-season on an open, upright, vigorous plant. **Hitachi-otome** ('Otome from Hitachi) (*C.reticulata* hybrid) from Ibaragi Pref, *Japan Camellia* No.81, August 2006: Cattleya pink, formal double, diameter around 10 cm, blooming February to April, profuse, hates strong sunlight, good in half shade. Tree upright. Leaves flat and thick. A natural seedling of **Barbara Clark**. First flower seen in 1995. Originated and named by Kumimitsu Suzuki.

Hitachi-otome ('Otome from Hitachi) (*C.reticulata* hybrid) from Ibaragi Pref, *Japan Camellia* No.81, August 2006: Cattleya pink, formal double, diameter around 10 cm, blooming February to April, profuse, hates strong sunlight, good in half shade. Tree upright. Leaves flat and thick. A natural seedling of **Barbara Clark**. First flower seen in 1995. Originated and named by Kumimitsu Suzuki.

Hite Pink. McIlhenny Catalogue, 1945-1946. Synonym for **Enrico Bettoni.**

Hiten. (Flying Buddhism Guardian Angel), *(C.reticulata* hybrid), JCS., 1989, *Japan Camellia,* No.30, p.4, colour photo: Medium size, semi-double with 9-10 long ovate and/or emarginate petals, pale pink peppered red with some short stripes, Small, irregular, centre group of stamens with small yellow anthers. Late flowering. A seedling of **Diamond Head.** Originated in Nishinomiya City, Hyôgo Prefecture, Japan. Named and released by Yoshihiko Mishima in 1980.

Hitoe-aka-shibori. (Single Row Red Dapple), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl. 413: Medium sized single with white ground, suffused with pink and striped and splashed carmine. Originated in Japan. (Believed extinct.)

Hitoe-amagashita. (Single Amagashita), *(C.japonica),* Nakayama, 1851, *Senka'oden,* 1st ser. vol.5: Large size, single, with white spots on red ground, cylindrical stamen cluster. Thought to be a synonym for **Amagashita.** Originated in Japan. (Believed extinct)

Hitoeboshi. (Single Spotted Flower), *(C.japonica),* Hôrin's Diary, *Kakumeiki,* 1645. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.47 and Andoh, 1984, *International Camellia Journal,* No.16, p.47. No description. Originated in Japan. (Believed extinct.)

Hitoehiryô. Griffiths, 1953, *American Camellia Quarterly,* 8(1):9. Different reading for **Hitoehiryû.**

Hitoehiryû. (Single Hiryû), *(C.x vernalis),* Griffiths, 1953, *American Camellia Quarterly,* 8(1):7 as 'Hitoehiryô'. Imported by McIlhenny from Chûgai. Originated in Japan. Different reading: 'Hitoehiryô'.

Hitoejishi. (Single Lion's Head), *(C.japonica),* Hôrin's Diary, *Kakameiki,* 1645 according to Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.47 and Andoh, 1984, *International Camellia Journal,* No.16, p.45. Originated in Japan. (Believed extinct.)

Hitoe-kurotsubaki. (Single Black Camellia). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.214 with colour photo; English translation p.149. Small to medium, deep red, tubular single, slender stamen cylinder. Flowers mid-season to late. Leaves narrowly elliptic, small.

Somewhat spreading and weak growth. A natural seedling of **Kuro-tsubaki.** Named and released by Shinichi Noguchi in 1989. From Tokyo.

Hitoematsukaze. (Single Matsukaze), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* No.118; Yashiro, 1841, *Kokon Yôrankô,* vol.306: Single, medium large, white flowers variegated red. Originated in Japan. (Believed extinct.)

Hitohiryo. *Standardized Plant Names,* 1942. Corruption of the Japanese name **Hitoehiryû.**

Hitofushi. (A Portion of Melody), *(C.japonica),* Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.126 as 'Hitohushi'. No description. Originated in Japan. Different reading: 'Hitohushi'.

Hitohushi. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.126. Different reading for **Hitofushi.**

Hitomaro. (Ancient Personal Name), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô,* vol.310; Okumura, [about 1810], *Chinka Hin'i.* Colour picture shows white, double flower. Originated in Japan. (Believed extinct.)

Hitomaro. (Ancient Personal Name), *(C.japonica),* Yoshida, Shigekuro, Hôka'en, 1931, *Tsubaki Meikan;* Satô, 1975, *Chûbu no Tsubaki,* p.106 colour photo: A large, 10 cm across, white single with 5-6 large, rounded petals, creped and wrinkled at the apex. A compact, central stamen column with brownish yellow anthers and white filaments, united in lower third of length. Mid-season to very late blooming. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.47, colour photo. Originated in the Chûbu District, Japan.

Hitomaro. (Ancient Personal Name), *(C.sasanqua),* Ashizawa, Yagorô, 1898 *Chabaika Taishû;* Chûgai Nursery Co. Catalogue, 1935-1936, p.26: Deep crimson, shading off variegation; large. Wada, 1941, *Garden Treasures of Japan,* p.32: Semi-double, autumn flowering; intense red, white stripes, distorted, large. Synonyms: 'Hitomaru', 'Tsumaori-gasa-shibori'. Originated in Japan.

Hitomaru. (Name of Famous Poet), *(C.japonica),* Mizuno, 1664, *Kadan Kômoku:* Large size, double white. Originated in Japan. See: JCS., 1965, *Tsubaki,* No.5, p.28. (Believed extinct.) Note: Kakinomoto-no-Hitomaro 7th century Japanese poet of great fame. **Hitomaru** is considered to be a corrupted form of 'Hitamaro'.

Hitomaru. (Name of Famous Poet), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large white formal double. Originated in Japan. Thought may be the same as the above. (Believed extinct.) Note: Kakinomoto-no-Hitomaro 7th century Japanese poet of great fame. **Hitomaru** is considered to be a corrupted form of 'Hitomaro'.

Hitomaru. (Name of Famous Poet), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.300: Extremely large, peony to double, white flower. Originated in Japan. (Believed extinct.) Kakinomoto, Hitomaru was one of the 6 celebrated Japanese poets of the 7th century AD. He was deified as the god of poetry with a temple at Akashi in the province of Harima. Note: Kakinomoto-no-Hitomaro 7th century Japanese poet of great fame. **Hitomaru** is considered to be a corrupted form of 'Hitomaro'.

Hitomaru. Vanderbilt, 1940, *Camellia Research,* p.4. Synonym for for the sasanqua **Hitomaro.**

Hitomoto-no-shigure. (Shower on a Tree), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Pale pink, single. Begins to bloom in Autumn, petals serrated. Orignated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.100. (Believed extinct.) Different reading: 'Ippon-no-shigure'.

Hitomure. (Single Cluster), *(C.japonica).* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.54. No description. Originated in Japan.

Hitori-musume. (Single Daughter), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.242: White, single, 5 petalled, bowl-shaped bloom with cylindrical stamens with yellow filaments, fragrant. Medium size. Flowers mid-season. Leaves ovate, medium sized, keeled, curved, serrations prominent, sometimes variegated. Petiole hirsute. Plant habit, upright with pendant branches. Yuki-tsubaki lineage from South Uonuma Sub-prefecture, Niigata, Prefecture, Japan. Collected and released by Yaichi Kawamura in 1970.

Hitori-shizuka. (Solitude), *(C.sasanqua),* Sakata et al., 1981, "Studies in the flower Colours of Camellia II"; *Memoirs of the Faculty of Agriculture,* vol. XVII, p.92, Kagoshima University; Sakata & Arisumi, 1983, *International Camellia Journal,* No.15, p.21; JCS, 1987 *Tsubaki,* No.26, p.44: Small size, double, pink graduations on a white ground. Blooms early to mid-season. The original tree is growing in Hirado City, Nagasaki Prefecture, Japan. Discovered and named by Saburô Kumagai in 1977.

Hitosugi. McIlhenny 1937, *600 Varieties of Camellias.* Corruption of the Japanese name **Hitosuji.**

Hito Sui. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.103. Corruption of the Japanese name **Hitosuji.**

Hitosuji. (Single Line), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Small red flower with white spashes. Itô, Ko'emon, 1879, *Chinkashû* lists it in the peony group but with similar discription. Probably the first listing of the modern cultivar was by the Yokohama Nurseries Catalogue, 1891: Double, peculiar white stripes on a carmine ground of each petal. Seibundô Shinkôsha, 1979, *Senchinshû,* description, pp.242, 126, colour photo shows a small, formal double, light red with an occasional line of white on some petals. Leaves oval, dark green, 9.5 cm long x 3.8 cm wide, margins undulate. See also pl.73, Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai* and Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.402. Synonyms: 'Arai-in', 'Aranin', 'Araiin-beni'. Different reading: 'Hito-suji'. Corruption of name: 'Hitosugi'. Resembles **Orandakô, Momijigari, Chitosegiku.**

Hitoyokiri. (Only One Night), *(C.japonica),* Okumura, [about 1810], *Chinka Hin'i.* Pink single with red stripe. Yashiro, 1841, *Kokon Yôrankô,* vol.310 as 'Hitoyokiri'. Originated in Japan. (Believed extinct.)

Hiya-asobi. *(C.sasanqua),* Creech, 1957, *American Camellia Yearbook,* amongst plants purchased from Nakada Nursery, Angyo, Kawaguchi, Saitamaken. There is not a Japanese word like "Hiya--asobi". A similar word "Hi-asobi" means "playing with fire" but a camellia cultivar of this name has not been confirmed.

Hiyoriyama. (Place Name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.219 with colour photo; English translation p.153. Medium size, vermilion, tubular single, thick cylindrical stamen column. Flowers mid-season to late. Leaves somewhat narrowly elliptic, medium size, flat. Upright, vigorous growth. Selected from wild japonicas growing in Kinosaki Town. Named and released by Minoru Satô in 1976. From Hyôgo to Aichi Prefecture.

Hiyoshigiku. (Hiyoshi Chrysanthemum), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.243: Red double, very large, overlapping petals, bowl shaped. Stamens imperfect, small cylindrical group. Mid-season flowering. Leaves ovate to obovate, drooping, acuminate apex, flat, thick, green. Plant habit, medium vigor, wide spreading. Close resemblance to **Aka-sodekakushi** and 'Kyogei'. Thought to be a seedling of 'Sodekakushi', (**Gauntlettii**). Originated in the Aichi Prefecture, Japan.

Hizakari. (Sun at Peak), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.125, colour photo, p.241, description: Large white semi-double with faintest blush, large fluted and crinkled petals and a large burst of stamens with gold anthers and pale cream to white filaments. Long

glabrous petioles. Originated in Arai City, Niigata Prefecture, Japan. Named and released by Kaoru Hagiya in 1969.

Hizen-hakubi. (Hizen's White Eyebrow), *(C.japonica),* JCS., 1989, *Japan Camellia,* No.30, p.13, colour photo: Small size, compact, single with 5 smooth, rounded, entire petals, opening cup-shaped, with stamens in a compact, central cylinder, anthers yellow, filaments white, joined for the lower half. Flowers mid-season. Leaves mid-green, boad-elliptic, margins shallowly serrate. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.26, colour photo. Selected from wild japonicas growing in Tabira Town, Nagasaki Prefecture, Japan. Discovered by Tabira Camellia Club in 1980, named and released by Tadaichirô Ogawa. Hizen is the old name for part of Nagasaki and Saga Prefectures.

Hizen-hototogisu. (Hizen Cuckoo), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.144, description, p.145, colour photo: Small size, deep red, vase-shaped single of 5 ovate, overlapping petals and a central stamen column with pinkish filaments, joined for the lower half. Blooms mid-season to late. Leaves small and narrow, bright green, broad-elliptic, apices acute, margins serrate. Plant habit dwarf and compact. Selected from wild japonicas in Tabira Town, Nagasaki Prefecture, Japan. Discovered by Keizaburô Matsushita in 1981, named by Kichinosuke Aburatani.

Hizen-komachi. (Hizen Beauty), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.108. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.10, as 'Hizen Komachi': Medium size, pale pink to rose-pink, tubular form, single. Selected from wild japonicas growing in Hirado Town, Nagasaki Prefecture. Discovered and named by Manabu Ayukawa in 1985.

Hizen-sumizome. (Hizen Black Robe), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.242: Purple dark red, campanulate single, filaments purple red, cylindrical stamen cluster, anthers yellow and full. Medium sized. Blooms mid-season. Leaves medium sized, long-oval, recurved, dark green, with a black tinge. Plant habit somewhat pendant but vigorous. A natural Yabu-tsubaki from Tabira Town, Nagasaki, Japan. Discovered by Yoshimatsu Kusano in 1976, named by Zaiki Kajikawa. Resembles **Eiraku.**

Hizen-usugumo. (Hizen Light Cloud), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.242: White whorls on a peach pink background, vertical streaks, variable with graduations of white markings, medium size, campanulate single with 5 broad, emarginate petals; filaments white, cylindrical stamen column. Early to mid-season flowering. Plant habit wide spreading and pendant. Leaves medium sized, long-oval, apex acuminate, even, sharply serrate. Resembles **Usugumo** from the *Chinka Zufu.* A mutation of an 'Aizen-tsubaki', raised in Tabira Town, Nagasaki Prefecture, Japan. Discovered by Kôhei Oka in 1980, named and released by Kichi Okada. Orthographic error: 'Hizen-usngumo'

Hôbeni. (Rouge on Cheek), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô:* Single, white, medium size, with pink spots on both sides of petals. Yashiro Kôken, 1841, *Kokon Yôrankô.* Originated in Japan. Different readings: 'Hoobeni', 'Houbeni'. (Believed extinct.)

Hôbeni. Different reading for **Hohobeni.**

Hobbs' Choice. *(C.sasanqua).* ACRS, *Camellia News,* 1998, No.147, p.12, Reg. No.504. Originated by L.Hobbs, Docaster East, Vic., Australia, and registered by T.J. Savige, Wirlinga. A chance seedling that first flowered in 1992. A pale to light pink (RHS.CC.55C to 56B) flower of 8-10 petals, 10 cm across x 2 cm deep. Flowers early in the season on an open, bushy, fast-growing plant. Leaves dark green, matt, elliptic, fine serrations, apex blunt acute to acuminate, base cuneate, 5 cm long x 2.5 cm wide. Petals wide emarginated. Very large, flat flowers opening bright pink, fading to pale pink.

Hochi-iri-bokuhan. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Hoshi-iri-bokuhan.**

Hôchin (Muraosa). (Rare Treasure - Village Mayor), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.138, colour photo, p.246 description: Very small, single, light red, 5-6 petals, oblong, channelled with the centre a compact cluster of light pink filaments and degenerate anthers. Leaves light green, ovate, apex acuminate, recurved, shallowly serrate. Originated in Ôno City, Fukui Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.238 with colour photo; English translation p.166.

Hockerii. Berlèse, 1841, *Iconographie,* pl.56. Orthographic error for **Hookeri.**

Hodagan. (Imaginary Place in Buddhism), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.10: Deep pink. Large, single with round petals. Originated in Japan.

Hôden. (Place Name), *(C.hybrid),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.305, colour photo and description: Small size, peach pink, semi-double with 3 rows of rounded, emarginate petals, hose-in-hose with a small, irregular stamen cluster, including 2 or 3 petaloids. Blooms mid-season. Leaves mid-green, narrowly lanceolate to lanceolate, apices long, tapering acuminate, margins serrulate. Plant habit, dwarf. A seedling of *C.japonica* **Berenice Boddy** x *C.fraterna.* Originated in Okayama Prefecture, Japan. Named and released by Nobuo Sasai in 1981.

Hodgesii. *(C.japonica),* van Houtte Catalogue,1842, 9:53, as 'Hodgesi'. No description. Originated in England. (Believed extinct.)

Hodgin's Pink. Parramore, 1957, ANZCRS., *Camellia Annual,* No.4, p.27. Synonym for **Fukuzutsumi.**

Hody Wilson. *(C.reticulata),* Nuccio's Nurseries Catalogue, 1979: *American Camellia Yearbook,* 1980, p.166, Reg. No.1608: A very large, red, semi-double to rose form double *C.reticulata* hybrid ('Crimson Robe' [**Dataohong**] x **Kohinor**). Blooms mid-season to late; originated by Meyer Piet, Arcadia, California, USA. This 5 year old seedling first flowered 1976. Average flower size 15 cm. Plant growth is upright, dense and rapid in rate with dark green leaves, 11 cm x 5 cm. Sport: **Hody Wilson Variegated**. See colour plate front cover, SCCS, 1979, *The Camellia Review,* vol.41, No.2.

Hody Wilson Variegated. *(C.reticulata),* Bob Wines Nursery Catalogue, 1985-1986, p.6, as 'Hody Wilson Var.': A virus variegated form of **Hody Wilson** - Red blotched with white. Originated in USA.

Hoffheim's Red. Harris' Longview Nursery Retail Price List, 1955-1956. Abbreviation for **Hofheim's Red Peony.**

Hoffheim's Variegated. SCCS., 1951, *The Camellia. Its Culture and Nomeclature.* Orthographic error for **Mrs Hoffein's Variegata.**

Hoffman. Hume, 1946, *Camellias in America,* index. Abbreviation for **Hoffman's Crimson.**

Hoffmanii. *(C.japonica),* Michael Floy & Sons Nursery Catalogue, 1832, p.55. Crimson camellia, raised by Hoffman in USA. Synonym: 'Hoffman's Crimson'

Hoffman's Crimson. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Hoffmanii.**

Hoffmeyer Pink. *(C.japonica), American Camellia Yearbook,* 1950, p.159-160: A pink canopy of light rose coloured, 5 petalled, single blooms of medium size. Its origin is a 130 year old plant, growing in the home of H.F.L. Hoffmeyer, Darlington, South Carolina, USA.

Hoffheim's Red Peony. *(C.japonica),* Wilmot, 1943, *Camellia Variety Classification Report,* p.11: A medium sized, red peony form. Originated in USA. Synonym: 'Hoffheim's Red'.

Hofheim's Variegata. Wilmot, 1943, *Camellia Variety Classification Report,* p.11. Synonyn for **Mrs Hoffein's Variegata.**

Hôga-beni. **(**Fragrant, Elegant Red). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.64 with colour photo; Light red single, rounded petals, tubular to trumpet shape, small. Very prominent, tubular stamen ring. Flowers very early to early. Leaves ovate, medium size, edges recurved. Upright, vigorous growth. A sport of **Katayayma-sôtan,** found 1993, named by Yoshiharu Yano, Yamaguchi Pref., Japan.

Hôgetsu. (Personal Name), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.60 with colour photo: A small, soft, palest, apricot pink, tubular single with a central, compact stamen column, yellow anthers, light cream filaments. Leaves, lanceolate, gradually tapered acuminate, medium serrate margins. Blooms mid-season. Originated in the Chûbu District, Japan. Named and released by Minoru Satô in 1961. Different readings: 'Howgetsu', 'Hohgetsu', 'Hougetsu'. See: Seibundô Shinkôsha, 1979, *Senchinshû,* p.137 colour photo, p.246, description. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.89. Hôgetsu, Shimamura (1817-1918) was a famous critic and author in Japan.

Hogg's Spectabilis. *Magazine of Horticulture,* 1837 as 'Hogg's Spectabile'. Orthographic error 'Hoog's Spectabilis'. Synonym for **Spectabile.**

Hôgô. Different reading for **Takara-awase.**

Hôgyoku. (Jewel), *(C japonica),* Tateyama Nursery Catalogue, 1957, under "variegated leaved camellias". Yellow spots on dark green leaves. Flower small, red, single. Originated in Japan.

Hôhaku. (White Cheek), *(C.japonica),* Williams & Thompson, 1950, *American Camellia Yearbook,* p.39 as 'Ho-haku': Pink streaked with dark, red lines. Large peony form. Taken from a list of 113 camellias imported in 1930 from Japan by F.M. Uyematsu, Star Nursery, California, USA. A different reading of the characters is "Hôjiro" but the present **Hôjiro** in Japan is a light pink single. The translation "white cheek" depends on the first character which is not certain for the imported camellia.

Hohbeni. Different reading for **Hôbeni.**

Hohobeni. (Rouge), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.42 with colour photo: A single form camellia, opening to saucer-shape with 5-6 white petals with light red on the apex and reverse. Leaves, thick, broad-ovate, even, abrupt acuminate, edges obscurely crenate. Originated in Chûbu, Japan. Named and released by Minoru Satô in 1962. Different reading 'Hôbeni'.

Hohoemi. (Smiling Cheek), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.140, colour plate, p.247, description: Small. bright red single, opening cup-shaped with compact, yellow stamen cluster. Flowers mid-season. Leaves broad-ovate, blunt acute apex, margins finely serrate. Collected in Kariba-gun, Niigata Prefecture, Japan by Susumu Ishizawa, named and released by Kaoru Hagiya in 1969.

Hoh-ô-nishiki. Yashiroda, 1950, *American Camellia Yearbook.* Different reading for **Hô-ô-nishiki.**

Hôjiro. (Bird's Name), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.138, colour photo, p.247, description: Light red single, with 6-7 petals, the colour fading in the centre. Leaves elliptic,

tapering, blunt acute apex, margins obscurely crenate. Selected from wild japonicas in Sagami District, Kantô area. The different reading of the character, "Hôhaku" is reserved for the Star Nursery cultivar above. Resembles **Juraku.** Different reading: 'Hohojiro'.

Hôju. Seibundô Shinkôsha, 1979, *Senchinshû,* p.137. Different reading for **Hôshu.**

Hôju-cha. Shimada & Ono, 1759, *Kai,* vol.6. Yashiro, 1841, *Kokon Yôrankô,* vol.306. The Japanese reading for the Chinese *C.reticulata* **Baozhu Cha.** Different reading 'Hôshu-cha'.

Hôjusunago. Seibundô Shinkôsha, 1979, *Senchinshû,* p.137. Different reading for **Hôshusunago.**

Hôjuhai. (Treasured Cup), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.220: Medium size, vermilion, vase shaped single of 5 petals and a central stamen column with red filaments, shading to white, joined lower half, yellow anthers. Blooms mid-season to late. leaves bright, deep green, elliptic. Originated in the Chûbu District, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.237 with colour photo; English translation p.166. A cross between **Usumyôrenji** and a wild japonica. Named and released by Minoru Satô in 1976.

Hôju-sunago. (Gem Speckled), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.137 colour photo: Medium size, white to blush pink ground, finely speckled and dashed light red, formal double with 7-8 rows of rounded, reflexed petals, opening from a round bud centre. Leaves light green, elliptic, apices acuminate, bases cuneate, margins serrulate. Originated in Japan.

Hôka. (Treasured Flower), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku,* vol.3; *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.249: White, spotted pink. Double. Originated in Japan. Different readings: 'Hôkwa', 'Houka'. (Believed extinct.)

Hôka. *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.577. Different reading for **Noroshi.**

Hôkaiji-wabisuke. (Wabisuke from Hôkai Temple), (Wabisuke), Kyôto Engei Kurabu, 1982, No.11, pp.73, 74, 75: Small size, single with 6 oblong petals, apices notched, purple, merging to rose-pink, small compact, short stamen column, filaments joined for the lower half. Leaves lanceo-late, long, tapering apices, margins finely serrulate. Originated in Japan.

Hôkan. (Diadem), *(C.rusticana),* Hagiya, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.8, p.16: Large size, 11 cm wide x 5 cm peach pink, open peony form with 10 outer petals and a centre a mixture of 40-80 stamens with deep yellow filaments and erect, twisted petals. Leaves, 8-9 cm long x 4.5 cm wide, ovate, blunt acute apex, inconspicuous serrations; petiole hirsute. Of Yuki-tsubaki lineage from Mishima Sub-prefecture, Niigata Prefecture, Japan. Collected in 1954 by Susumu Ishizawa, named by Kaoru Hagiya. See Seibundô Shinkôsha, 1979, *Senchinshû,* p.246.

Hôkidori. (Another name for Cuckoo), *(C.japonica),* Seibu Nursery Catalogue, 1987-1988: Small to medium size, palest pink to white, single with long petals. Originated in the San'in District, Japan.

Hôkiguruma. (Hôki's Carriage), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.9: No description. Originated in the Shimane Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.236 with colour photo; English translation p.165. A renaming of **Miura-kazaguruma.**

Hôkihaku. (Hôki's White), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.25, colour photo and description as 'Hôki-haku': Medium size, white, single, opening through a spherical shape with 5 rounded, convex petals and a broad, central stamen column with ivory filaments, joined for the lower third and large, yellow anthers. Blooms mid-season to late. Leaves midgreen, elliptic with serrate margins. A seedling of **Meigetsu.** Originated in Yumigahama, Yonago City, Tottori Prefecture, Japan. Named and released by Takashi Sumi in 1973. Hôki is the old name for Tottori.

Hôki-shirosuzume. (White Sparrow from Hôki), *(C.japonica),* Yokoyama and Kirino, 1989, *Nihon no Chinka,* p.28 description, p.28 colour photo: Small size, white, cup-shaped single with 6-7 broad, rounded, overlapping petals with central stamen cylinder, with white filaments, joined for the lower third, and yellow anthers. Blooms mid-season to late. Leaves dark matt green, broad-ovate to elliptic, margins serrate. Originated in the Tottori Prefecture, Japan.

Hôkizakura. (Hôki Cherry), *(C.japonica),* Shimane, Kaji Shubyô-en Catalogue, 1980-1981 as a new cultivar; JSC., 1988, *Japan Camellia,* No.29, p.13. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.94, colour photo and description: Medium size, pale pink, saucer shaped single with 5 obovate, emarginate petals and a central stamen cylinder with white filaments, joined for lower half, and yellow anthers. Late blooming. Leaves mid-green, long, narrow-lanceolate, apices tapering acuminate, margins serrate. Collected from cultivars at a private family in Yonago City. Named and released by Takashi Sumi in 1977.

Hokkeji. (Hokkeji Temple). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.240 with colour photo; English translation p.168. Medium size, red mottled white, bowl-shaped single, cylindrical stamens in brilliant yellow. Flowers early to late. Leaves narrowly elliptic, medium size. Upright growth. A natural seedling originated in Okada Enjurin Forest. Named by Kôshô Kuga, head priest of Hokkeji Temple, released by Taneo Okada in 1993. From Nara Prefecture.

Hokuhan. (Wood Plank), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Deep red, single with erect centre petaloids. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.80 has this as **Hokuhan**, but it is usually read as 'Bokuhan' or 'Mokuhan'. (Believed extinct.)

Hokuto. (The Big Dipper), *(C.japonica), Chinka Zufu,* (Before 1700), Watanabe, 1969, pl.162; Yashiro Kôken, 1841, *Kokon Yôrankô:* Medium sized, white, open, peony form with 3 rows of large, imbricated petals surrounding a circle of mixed, small petals and stamens. Originated in Japan. (Believed extinct.)

Hokuto-jirin. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Hokutojûrin.**

Hokutojûrin. (Ten Flowers of Hokuto), *(C.japonica),* Itô, Tokuemon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Itohanayose Irotsuki:* Semi-double, 3 rows of pink petals, splashed with white stars, sometimes divided stamens, sometimes cylindrical. Medium size. Cho, [before 1867], *Chinkafu,* p.12-13, illustration; Itô, Ko'emon, 1879, *Chinkashû:* Pink dotted white. Small. Mid-season blooming. (Believed extinct.) Corruption of name "Hokuto-jirin". Originated in Japan.

Hôkwa. Different reading for **Hôka.**

Hôkwa. Different reading for **Noroshi.**

Hold de Larche. *(C.japonica),* Greenbrier Nursery Catalogue, 1948: Pink, variegated deeper tone and white. Medium large, loose, rose form double. Mid-season to late blooming. Originated in USA. Sport: **Hold de Larche Variegated.**

Hold de Larche Variegated. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Virus variegated form of **Hold de Larche** - Pink blotched with white. Originated in USA.

Holdfordiana. *(C.japonica),* Rollisson & Son, 1846, Catalogue No.1, p.7. Originated in England. No description. (Believed extinct).

Holdfordiana Anemone. *(C.japonica),* Chapman, 1899, *Gardeners' Chronicle,* ser.3., 25:262: Flowered pink. Originated in England.

Holei. *(C.japonica),* Cachet Catalogue, 1840-1841, p.3. No description. (Believed extinct.)

Holiday. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.45: Pink streaked deeper pink. Medium sized formal double. Originated in USA by David Feathers, Lafayette, California.

Holland Orchid. *(C.x williamsii),* SCCS., 1964, *Camellia Nomenclature,* p.142: Orchid pink. Medium single of trumpet form. Compact, low to upright growth. Mid-season flowering. A *C.saluenensis x C.japonica* hybrid originating in USA.

Holland Red. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.108. Synonym for **Orandakô.**

Holland-kô. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.207 with colour photo; Synonym for **Orandokô.**

Hollesia. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Halesia.**

Hollifolia. *(C.japonica),* Wilmot, 1943, *Camellia Classification Report,* p.11. No descriptions. *Standard-ized Plant Names,* 1942: Deep pink. Medium sized semi-double. Vigorous growth. Blooms midseason. Orthographic error 'Hallifolia', 'Halifolia', 'Hallefolia'. Originated in USA.

Hollis C. Boardman. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Pink. Large semi-double. Late flowering. Originated in USA by H.C. Boardman.

Holly Blades. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature,* p.76: Shell pink. Medium sized, formal double. Vigorous, upright growth. Mid-season blooming. Originated in USA by Dr G.R. Johnson, Carthage, Texas.

Holly Bright. *(C.japonica),* Nuccio's Nurseries Catalogue, 1985-1986, p.8: Large semi-double. Glossy salmon red. Petals creped. Plant compact, upright and bushy with unique, crinkled, holly-like foliage. Originated in USA by Nuccio's Nurseries, Altadena, California. The 5 year old seedling first bloomed 1981. Average flower size is 11 cm wide. Growth is dense and medium in rate. *American Camellia Yearbook,* 1986, Reg. No.2025. Chinese synonym: 'Zhouye Qihua'.

Holly Buff's Pride. *(C.japonica), American Camellia Yearbook,* 1959, p.274, Reg. No.373: A 5 year old chance seedling, originated by Holly Buff Gardens, Louise, Mississippi, USA which first flowered 1958. Plant growth is spreading, open and rapid with leaves 8 cm x 5 cm. The peony form flowers, deep pink with yellow anthers, are 10-12 cm wide x 5-7 cm deep with 18 petals and 4-5 petaloids mixed with the stamens. Flowers early.

Holly Leaf. *(C.japonica), American Camellia Yearbook,* 1954, p.315-314, Reg. No.188: A 5 year old chance seedling originated by David L. Feathers, Lafayette, California, USA that first flowered 1953. The edges and tips of the leaves are greatly twisted and undulated along their 11 cm length with 3 folds each side separated by two upward curves tending to a holly-like point. Flowers are cardinal red, single, similar to **Kimberley**, with 5 petals, 10 cm across. Early blooming. Flower has fragrance. Synonym: 'Holly Leaf (2)'

Holly Mac. *(C.japonica),* Griffin, ed., 1958, *Camellian,* vol.11, p.31: Red. Medium sized semi-double with loose petals. Vigorous, upright growth. Mid-season blooming. Originated in USA by Mayo's Nursery, Augusta, Georgia.

Holly Queen. *(C.japonica),* Hertrich, 1959, RHS., *The Rhododendron and Camellia Yearbook,* No.13, p.114. No description. Originated in USA. No valid listing located.

Hollyhock. Lindo Nursery Price List,1940-1941. Synonym for **Kumasaka.**

Hon. Susan Greenhall. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings,* p.11, colour photo: White, irregular semi-double, usually with 3-4 petaloids in a short, stamen cluster and marked with the odd, pink stripe. A seedling of **Mrs William Thompson** originated by Richard Dodd, Marshallville, Georgia, USA.

Hônai. (Place Name), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.211, p.107, description, p.152: Leaves large, thick, broadly oblong to broadly elliptic, apex cuspidate-acuminate, flat, venation slightly impressed, margins obscurely crenate, 8.4-10.6 cm long x 4.6-5.3 cm wide, petioles rubescens, 6-10 mm long, smooth. Flowers semi-double, widely opened, petals 10-16, often with unfolded, smaller petals; largest petal 4.7 cm x 3.7 cm, crenate at apical margin. Anthers yellow, filaments irregular, creamy to pinkish. Late flowering. Collected at Hônai, Niigata Prefecture, Japan.

Honaka. (Centre of Fire), *(C.japonica),* JCS., 1973, *Tsubaki* No.12, p.7, pl.26, description, p.14: Medium sized, irregular semi-double to open, peony form, crimson with 12-15 outer petals, waved and fluted, centre an open cluster of short stamens, in the form of a pentagon, anthers golden, filaments pinkish. Mid-season to late flowering. Leaves medium size, 8 cm x 4 cm, lanceolate,

tapering acuminate, dull, yellowish green, shallowly crenate. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.314, colour photo. A seedling of **Shûhô-karako**. Originated in Kantô, Japan by Nakamura Totsurô. See: Seibundô Shinkôsha, 1979, *Senchinshû,* pp.139, 247.

Hon'ami. Different reading for **Honnami.**

Honbôji. *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.33, p.49. Different reading for Honpôji. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.151.

Honey Bee. *(C.japonica),* SCCS., 1981, *Camellia Nomenclature,* p.77: Medium red to red and white. Medium sized, formal double to loose peony form. Medium, compact growth. Blooms mid-season to late. Originated by T. Alfter, Bakersfield, California, USA.

Honey Bunch. *(C.japonica),* SCCS., 1968, *Camellia Nomenclature,* p.70: Blush pink. Medium formal double. Medium, upright growth. Blooms mid-season. Originated by W. Stewart, Savannah, Georgia, USA

Honey Chile. *(C.japonica),* Pyron, 1957, *Camellian,* vol.VIII, No.2, p.6: A seedling of unknown parentage named **Honey Chile** by Doxey, a former N.B.C. radio star. It is a large, brilliant red to deep red, with several, narrow, twisted petaloids interspersed with a crown of stamens. Around the stamens and mixed with the rabbit eared petals are 5 white, peculiarly shaped petaloids. Originated in USA by W.D. Pleasant, Beaumont. Texas. Orthographic error: 'Honey Child'.

Honey Child. Pyron, 1957, *Camellian,* vol.VIII, No.2, p.6. Orthographic error for **Honey Chile.**

Honey Comb. Hume, 1946, *Camellias in America,* p.332. Orthographic variant for 'Honeycomb', synonym for Anemoniflora.

Honeya. (Meaning obscure), *(C.japonica),* Hino, Sukekatsu, 1632, *Sukekatsukyôki; Chinka Zufu,* (before 1700), Watanabe, 1969, pl.610: Medium sized, flat, white single with some rare, soft pink patches and 5 petals, surrounding a central stamen cluster with gold anthers and white filaments. Originated in Japan. (Believed extinct.)

Honeycomb. Vanderbilt, 1941, *Camellia Research, II,* p.3. Synonym for **Anemoniflora.**

Honeyglow. *(C.japonica), American Camellia Yearbook,* 1974, vol.II, p.233, Reg. No.1345: An 8 year old chance seedling that first bloomed 1969. Originated by Mr & Mrs Henry Stone, Baton Rouge, Louisiana, USA. Plant growth is average, upright, open and rapid in rate with mid-green leaves, 11 cm x 5 cm. The formal double, **Alba Plena** type, bloom is bicolour, with 144 petals, 10 cm across x 2 cm deep. The ivory white petals seem to form a 6 pointed star with an outer row of 38 very flat petals with the slightest blush. The central 100 petals are incurved and a deep honey to ivory colour. Blooms mid-season to late. See colour photo, front cover New Zealand Camellia Bulletin, vol.XVI, No.4, 1989.

Honeymoon. (*C.nitidissima* hybrid). Nuccio's Nurseries Retail Price List, 1991-1992. A seedling of [**Guilio Nuccio** x *C.pitardii*] x *C.nitidissima*. Nuccio's first *C.nitidissima* hybrid. A coral pink bud opening to creamy white. Petals yellow at base. Medium to large semi-double. Vigorous, open, upright growth. Late blooming. Nuccio's number NXO-8727. Originated by Nuccio's Nurseries, Altadena, California, USA. Chinese synonym 'Miyue'.

Hongdiemi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.413; Chinese synonym for the *C.japonica* 'Humilis Red'.

Hongdonyang. (Red Foreign Camellia), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:* Large red, rose form double. Originated in Japan Synonym: 'Hongdongyang Cha'.

Hongdongyang Cha. Wang & Yu, 1989, *Camellias,* p.39. Synonym for **Hongdongyang.**

Hongfei. (Red Blush). Gao, Jiyin, Ltr 22nd August 1994. Chinese synonym for the Japanese Higo **Hi-no-maru.**

Hongfengwei. (Red Phoenix Tail), *(C.japonica),* Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.192; Originated in the Chengdu area, Sichuan, China, and cultivated at Nanjiao Park, Chengdu. A sister cultivar of **Huafengwei.** Flowers red, semi-double to peony, medium to large. Petals long-rounded, waved, small petals and stamens mixed in the centre. Leaves dark green, small-elliptic, waved edges, shiny. Upright, vigorous growth. Flowers mid-season to late.

Hongfoding. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.566. Plant robust and strong. Leaf ovate, 8.5-10 cm x 4.5-5 cm. Flower deep red, 7-11 cm diameter, flat petals in 2-3 rows, petaloid stamens in several bundles among the large and wide petals. Flowers mid-season. From Jinhua, Zheijiang, China.

Hongfurong. (Red Hibiscus), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:* Large red, anemone form. See colour photo, [p.151], Chang, Shao Yun, 1987, *Camellias in Zhejiang,* p.66. Originated in China.

Hongfurong. (Red Hibiscus), *(C.reticulata),* Gao & Zhuang, 1989, *The Camellia in China,* p.56, No.371, colour photo No.229: Medium size, campanulate single to semi-double, spinel red, with 15-17 petals. Originated in Tengchong, Yunnan Province, China.

Hongguan. (Red Crown), *(C.japonica),* Wang & Yu, 1989, *Camellias,* No.35, p.34, colour photo p.128: Red open peony form with 2 rows of large, rounded, emarginate petals and a centre of small petals and petaloids. Originated in China.

Honghailuo. (Red Conch), *(C.japonica),* Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.189 with colour photo; Originated in the Chengdu – Dujiangyan areas, Sichuan, China. Flowers red to deep red, formal double, medium size, petals shell-like, imbricated in spiral form. Leaves dark green, elliptic, shiny; Slow, compact growth. Flowers mid-season.

Honghainan Baozhu. (Red Hainan Jewellery), *(C.japonica),* Huang Nursery Catalogue, 1949. No description. Originated in China. *Chinese Camellia Culture*, 2003, p.210 with colour photo; Stated to be a sport of **Hedinghong,** photo appears very similar. Synonym 'Shanhai Hedinghong'.

Honghe. (Red Lotus), *(C.japonica),* Shanghai Botanical Garden List, 1985; Savige. 1986, *International Camellia Journal,* No,18, p.109: Medium size, 7-8 cm across, bright scarlet semi-double, with large, rounded, emarginate, overlapping petals, opening wide, cup-shaped. Central, compact stamen column with gold anthers and pinkish filaments. Leaves dark, olive green, broad--lanceolate, acuminate, finely serrate. Originated in China.

Honghehua. (Red Lotus Flower), *(C.japonica),* Chang, Shao Yun, 1987, *Camellias of Zhejiang,* p.54, colour photo, [p.137]: A medium size, 8-9 cm across, semi-double to open peony form with 2 rows of 15-20 large, rounded, emarginate outer petals and a centre of small, erect, distorted

petals mixed with stamens. Blooms mid-season to late. Leaves smooth, glossy green, elliptic to ovate, 7.5-9 cm long x 4.7-5.2 cm wide, shallow, wide serrations, apex acuminate, recurved, base rounded, young leaves greenish purple, midribs elevated, side veins indistinct. Buds elliptic to ovate, yellowish brown. Originated in Wenzhou, China. Synonym: 'Shijin Hehua'. See Gao & Zhuang, 1989, *The Camellia in China,* p.36, No.175, colour photo No.90.

Honghuanghou. (Red Empress), Gao & Zhuang, 1989, *The Camellia in China,* p.81, No.639. Synonym for the *C.saluenensis* **Red Queen.**

Honghudie. (Red Butterfly), *(C.japonica),* Shanghai Botanical Garden List, 1985; Savige, 1986, *International Camellia Journal,* No.18, p.106:- A medium size, 8-9 cm across, red, open, informal double of about 20 petals in 2-3 rows, with stamens broken into fascicles by large, erect, centre petals. Leaves dark green, elliptic with long, acuminate apices. Blooms mid-season. See colour photos, Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.69, [p.122, 123] and Gao & Zhuang, 1989, *The Camellia in China,* p.35, No.166, photo No.82. Originated in Zhejiang Province, China.

Hongjiaweisi Xinzhong. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.194, p.67. Chinese synonym for the USA *C.japonica* **Fantasia** as its synonym 'Jarvis Bay Variegated'.

Hongjinling. (Red Gold Plume), *(C.reticulata),* Yü & Bartholomew, 1980. *American Camellia Yearbook,* p.23:- (reddish gold wing) crimson, mid-season, Kunming. Feng et al, 1986, *Yunnan Camellias of China,* p.102: Leaves oblong to elliptic-ovate, apices long acuminate and recurved, bases cuneate or rounded, 7.5-12.5 cm long x 3.5-6 cm wide. Flowers pink (RHS.CC.58B), diameter 11-12 cm. Petals 23-30 in 5-6 whorls, outer whorls flat, inner whorls small, folded or connate in the middle. Stamens divided into 7-8 groups among inner petals, 2-3 of these groups forming small petaloids but with filaments still evident. This is a new cultivar selected from seedlings of open pollinated seeds of **Zaotaohong** by researchers at the Kunming Botanical Garden. Its arrangement of stamens is rare among Yunnan Camellias. Different reading: 'Hung-chin-ling'. Synonyms: 'Crimson Petaloid', 'Reddish Gold Plume'.

Hongsan Xueshi. (Red Three Scholars), *(C.japonica),* Wang & Yü,1981, *Shanchahua:* Medium sized, 8-10 cm across with 50-60 petals in 6-8 rows, red, formal double. Sport of **Sanxueshi.** See colour photo No.165, Gao & Zhuang, Apr.1989, *The Camellia in China,* p.48, No.285; and Chang, Shao Yun, 1987, *Camellias from Zhejiang,* colour photo, [p.118]. Originated in China.

Hongse Chang'e Cai. (Dark Red Moon Goddess Splendour), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:*- Medium sized, dark red formal double. Synonym for **Hongchang'e Cai.**

Hongse Zhongguo. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.126. Chinese synonym for **Red China.**

Hongshiba Xueshi. (Red Eighteen Scholars), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:* This is the light red form of the ancient formal double Chinese Camellia **Shiba Xueshi** (Eighteen Scholars) which has many mutations on one branch. See Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.84, colour photo, [p.143] and Gao & Zhuang, Apr.1989, *The Camellia in China,* p.44, No.244, colour photo, No.132. Originated in China.

Hongshiyang-jin. (Red Shiyang Brocade), *(C.japonica),* Gao & Zhuang, Apr.1989, *The Camellia in China,* p.37, No.180: A sport of **Fenshi Yangjin.** Large size, red, semi-double to open peony form with 3-4 rows of rounded, waved outer petals and small irregular centre of stunted stamens and erect petals. Originated in China.

Hongshizhu. Chinese synonym for USA *C. japonica* **Ville de Nantes Red.**

Hongshouyi. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.567. A red sport of the Japanese cultivar **Kariginu.** From Hangzhou, Zheijiang, China.

Hongshuijing. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.70, No.242. Chinese synonym for the New Zealand *C.reticulata* hybrid **Red Crystal.**

Hongtaige. (Red Pavilion), *(C.japonica),* Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.80, colour photo, [p.147]: Red, peony form double, 7-8 cm across, with 100-200 petals and petaloids, including two rows of large, outer petals. Leaves mid-green, elliptic, 5.3-7.6 cm long x 2.2-3.9 cm wide, apices acute, margins serrate. Late blooming. Synonyms: 'Zhongta', 'Qixinghong', See: Gao & Zhuang, 1989, *The Camellia in China,* pp.42, 43, No.231, colour photo No.125. Originated in China.

Hongtao. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the USA *C.japonica* **Ace O'Hearts.**

Hongûzan. (Mount Hongû), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.250, description, p.251, colour photo: Medium size, white with crimson speckles and short dashes, campanulate single with 5 broad petals, margins a little undulate, and a central stamen cylinder with creamy filaments, joined for the lower half, and bronze anthers. Blooms very early to midseason. Leaves dark green, apices acuminate. Originated in Matsu'e City, Shimane Prefecture, Japan. Resembles **Shibori-hatsu'arashi.**

Hongwan Cha. (Crimson Bowl), (*C.reticulata*), Ikeda, 1974, *American Camellia Yearbook,* p.114 as 'Hungwancha' (Crimson Bowl). Name taken from a list entitled *Chungkuo Shantung Moutan, Yunnan Chahua Chanlan* at an exhibitor of Chinese Camellias in Hong Kong. Feng et al., 1986, *Yunnan Camellias of China,* p.29, with coloured plate: Leaves broad-ovate, flat, apices short pointed or acuminate, bases bluntly rounded or broad-cuneate, 6.3-8.6 cm long x 5-5.6 cm wide. Flower pink (RHS.CC.53C-D), single, diameter 9.5-12.5 cm. Petals 6-7 in 2 whorls. Stamens numerous, united at the base to form a tube, pistils fertile. Early flowering. This is a new cultivar selected from seedlings from open pollinated seeds by researchers at the Kunming Botanical Garden. The flowers are simple and the petal apices are bent outwards in a bowl shape. Synonyms: 'Red Bowl', 'Crimson Bowl', 'Red Bowl Camellia'. Different reading: 'Hungwan Ch'a'.

Hongweilian. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.132. Chinese synonym for **William Hertrich.**

Hongwen Beiti. Gao, Jiyin Ltr, 30 July 1990. Chinese synonym for **Betty Foy Sanders.**

Hongwoke. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.412 Chinese synonym for the USA *C.japonica* **Laura Walker.**

Hongwubao. (Red Five Treasures), *(C.japonica),* Shanghai Botanical Gardens List, 1985: No description. Originated in China.

Hongwuse Furong. (Red, Five Coloured Hibiscus), *(C.japonica),* Gao & Zhuang, Apr.1989, *The Camellia in China,* p.40, No.210, colour photo, No.113A & B: Medium size, light red, open peony form, with 2-4 rows of incurved, outer petals and a centre of small petals, petaloids and stamens. Leaves mid-green, elliptic. Sport of 'Huawuse Furong'. Originated in China.

Hongwuxin. (Crimson Five Hearts), *(C.reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.17: (red-five-hearts) crimson, mid-season, Tengchong. Feng et al., 1986, *Yunnan Camellias of China,* p.73 colour photo: Leaves elliptic, apices acuminate, bases cuneate, margins revolute, surfaces reclinate, 6.5-7.5 cm long x 3-4 cm wide. Flowers pink (RHS.CC.52B), diameter about 10 cm. Petals more than 17, folded and divided into 5 groups. Pistils sometimes rudimentary. Flowers early to mid-season. This cultivar was selected from an open pollinated plant of the wild form reticulata in Tengchong. Different reading: 'Hung-wan-hsin'. Synonyms: 'Crimson Five-Heart', 'Red Five Heart'.

Hongwuzhi. (Red Five Branches), *(C.japonica),* Shanghai Botanical Garden List, 1985; Savige, 1986, *International Camellia Journal,* No.18, p.109: Medium sized, light red, open peony form with large outer petals and fascicles of stamens mixed with the centre petals. Originated in China.

Hongxia. (Red Clouds), *(C.reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.15: (red-cloud) deep crimson mid-season. Kunming. Feng et al., 1986, *Yunnan Camellias of China,* p.65, colour illustration: Leaves elliptic to ovate, flat, hard, apices acuminate, bases broad-cuneate or obtusely rounded, 9-10 cm long x 5.5-6 cm wide. Flowers deep pink (RHS.CC.58BC), diameter 14-15 cm. Petals 16-18 in 4 whorls, margins of outer 2 whorls undulate, inner whorls curved or connate at the midribs. Stamens numerous, divided into several groups placed among the curved petals. Pistils rudimentary. This is a new cultivar selected from seedlings of open pollinated seed by researchers at the Kunming Botanical Garden. Flowers early to mid-season. Different reading: 'Hung-hsia'. Synonym: 'Red Clouds'.

Hongxia Yingchun. (Red Cloud Greeting Spring). *(C.reticulata).* China Regn No.24. *China Flowers & Horticulture,* Feb 2008, No.4, p.48, with colour photo; An open pollinated seedling of **Zaotaohong** (Early Crimson). Originated by the Kunming Institute of Botany, Yunnan, China, and named by Xia Lifang. Flowers loose peony form, deep red, (RHS.CC. 61C) 12-13 cm diameter. Petals ca. 24 in 4-5 whorls, outer two almost flat, inner petals incurved. Some stamens as petaloids, balance of stamens dispersed in bundles among the petals. Leaves long elliptic, bases cuneate, leaf surface inflexed, 9.5-14 cm long, 4-7 cm wide. Flowers mid-season.

Hongxiang. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.p.77. Chinese synonym for **Red Elephant.**

Hongxin Baiban. (Red Heart White Petals), *(C.japonica),* Fang, 1930, *Diannan Chahua Xiaozhi:* The petals are snow white and the centre is blood red. Originated in China. Different reading: 'Hung-hsin Pai-pan'.

Hongxiuqiu. (Red Embroidered Ball), *(C.japonica),* Liu, 1959, *Chungkuo Chuming Tichi Chung Hua Hui:* A medium sized, full peony red. Originated in China. The name refers to an old Chinese game played with an embroidered ball and refers to the shape of the flower.

Hongxiyue. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the Australian *C.reticulata* hybrid **Parkes Red Glow.**

Hongyang. (Red Sun), *(C.japonica),* Watanabe & Andoh, 1980, *Tsubaki, Hana to Kino Bunka,* p.147 as 'Hung Yang': Medium sized, peach pink, formal double. Originated in China.

Hongyi Dahuangguan. Gao, Jiyin, Ltr, 25 June 1990. Chinese synonym for **Betty Sheffield Blush Supreme.**

Hongye Beila. *(C.japonica),* Chinese translation of *ICS Journal,* 2005; A bud and leaf mutation of **Nuccio's Bella Rossa.** Petals have multiple thin purplish radial lines, altering the colour of the flower. Young leaves are purplish. Found in Feng's Camellia Garden, Jinhua City, China. in 2004. Synonyms: 'Jinhua Meinü', 'Red Leaf Bella'.

Hongye Huabeila. (C.japonica), ACS, *The Camellia Journal,* Dec 2009, p.19 with colour photo; A variegated form of **Hongye Beila,** with numerous white patches on the petals. Western synonym 'Red Leaf Bella Variegated'.

Hongyingduo. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.569; Variant through bud mutation. From Jiangsu, China. No further details.

Hongyijin. (One Red Vein), *(C.japonica),* Huang Nursery Catalogue, 1949: A white double with one streak of red. Originated in China. Different reading: 'Hung-ih-chin'.

Hongyilanjiao. *(C.japonica), Chinese Camellia Culture,* 2003, p.234 with colour photo; A solid red sport of **Yilanjiao.** Formal double, 7-8 cm diameter. Late flowering.

Hongyu. (Red Rain), Gao & Zhuang, Apr.1989, *The Camellia in China,* p.79, No.605: Chinese synonym for the *C.sasanqua* **Rosy Mist.**

Hongyuyi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.412; Chinese synonym for the Japan *C.japonica* **Benihagoromo**.

Hongzhangnü. Gao & Zhuang, 1989, *The Camellia In China,* p.57, No.380 as 'hong zhang nü'. Orthographic error for **Hongzhuangnü.**

Hongzhenzhu. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.78 and Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.218 with colour photos. Chinese synonym for **Tom Knudsen.**

Hongzhong. (Red Heart), *(C.japonica),* Shanghai Botanical Garden List, 1985: Complete, informal double, red. Originated in China.

Hongzhuang Furen. Chinese synonym for USA *C. japonica* **Lady in Red.**

Hongzhuangnü. (Girl in Red), *(C.reticulata),* Gao & Zhuang, Apr.1989, *The Camellia in China,* p.57, No.380, colour photo, No.238 as 'Hong Zhangyü': Large size, 10-11 cm across, open peony form with 28-30, large, incurved, fluted petals and central stamen fascicles mixed with erect, centre petals. Leaves light to mid-green, 7-7.5 cm long x 3.8-4 cm wide. Blooms mid-season. Originated in Tengchong, Yunnan Province, China. Orthographic error: 'Hongzhangnü'.

Hongzhuqiu. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.568. Strong, dense plant, juvenile twigs pale brown. Leaf deep green, elliptic, margins densely serrate, slightly waved, 5-7 cm x 3.5-4.5 cm. Flower peach red, 7-8 cm diameter. Outer petals flat in several rows, regularly arranged, Centre petals do not fully open, remaining in ball shape. Flowers mid-season to late. Synonym 'Putaohong'. From Fujian Province, China.

Hon'inbô. (Principal Head Family's Name of the Igo Game), *(C.japonica)* Mizuno, 1681, *Kadan Kômoku:* Large size, red, formal double. Originated in Japan. (Believed extinct.)

Hon'inbô. (Principal Head Family's Name of the Igo Game), *(C.japonica),* Sakuden, 1630, *Hyakuchin-shû:* Large size, pale pink, formal double. *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.2 as 'Honin-bô': Irregular, complete double, more or less imbricated with petals crimson at the centre washing out to soft pink at outer edge. Originated in Japan. (Believed extinct.) Synonym: 'Honinbô-tsubaki'. Listed also by Yashiro, 1841, *Kokon Yôrankô,* vol.310 and Hamamatsu, 1825, *Setsuyô Kikan* with the characters for 'Hon'inbo' translating to "Principal Priest's Residence".

Hon'inbô. (See above), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.626: Medium sized, formal double with crimson, fading out to mauve pink on petal edge. The last character is different to above. Originated in Japan. (Believed extinct.)

Hon'itten. (One True Heaven), *(C.japonica),* Uekiya Seijirô, 1874, *Tsubaki Hyakuro no Zu,* vol.2. No description. Originated in Japan. Different reading: 'Moto-itten'. See Kyôto Engei Kurabu, 1975, *Kyôto Engei,* No.73, p.22. (Believed extinct.)

Honjobaku. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.104. Corruption of the Japanese name 'Honjohaku', different reading for **Honjojiro.**

Honjohaku. Minagawa Catalogue, 1949. Different reading for **Honjojiro.**

Honjo-hatsuyuki. (First Snowfall in Honjo), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû* under the section "Dotted leaved Camellia". Round leaves, red leaf buds. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.167. Originated in Japan. (Believed extinct.)

Honjojiro. (Honjo White), *(C.japonica),* Minagawa, 1933, *Chinkashû.* See following colour pls and descriptions: Tuyama, 1966, *Camellia Cultivars of Japan,* pl.77, p.132; Tuyama, 1968, *Camellias of Japan,* p.52, p.26, p.101; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.415, pp.174, 353, 354; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.140, 247: Bush camellia cultivar with spreading habit. Leaves elliptic to broad-elliptic with side margins evolute, apex acute, shallowly crenate. Flowers pure white, rose form double, with few stamens when fully open. Different readings: 'Honjohaku', 'Honjoshiro', 'Honjyoshiro', 'Honzyô-shiro'. Corruption: 'Honjobaku'. Originated by Minagawa, Saitama Prefecture, Japan. Resembles: **Kagiri, Shiragiku, Hasumijiro.** The original tree was in the precincts of the Kongô Temple.

Honjoshiro. Chûgai Nursery Catalogue, 1935-1936 p.25. Different reading for **Honjojiro.**

Honjyoshiro. Wada, 1941, *Garden Treasures of Japan,* p.30. Different reading for **Honjojiro.**

Honkon-no-hoshi. (Star of Hong Kong). *(C.hybrid).* Kairyô-en Catalogue Kawaguchi, 1993, p.1, colour photo: Small, single, deep pink with 8-9 long, pointed, channelled petals. Fragrant. A seedling of *C.hongkongensis* x *C.japonica* **Kôshi.** Originated by Mr Murata, Yokohama, Japan.

Honkon-tsubaki. Murata, 1966, Kyôto Engei Kurabu; *Tsubaki Tokushû,* No.7, p.39, and Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.127. A different reading of the Japanese name for *C.hongkongensis.*

Honlugu. *Encyclopedia of Camellias in Colour,* vol.II, 1978 pl.158. Different reading for 'Hongliujiao', synonym for **Myrtifolia.**

Honma-sarasa. (Honma's Printed Cotton), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Large size, double, deep red with white speckles and dashes. Thought to be synonymous with **Honma-shibori.** (Believed extinct.) See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.77. Originated in Japan.

Honma-shibori. (Honma Dappled), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Yashiro, 1841, *Kokon Yorankô,* vol.311: Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* A double, white, striped and speckled with red. Sometimes produces white flowers, or flowers with half red and half white petals. Cylindrical stamens and pistil. Originated in Japan. Different reading: 'Homma-shibori'. (Believed extinct.)

Honmondan. Waterhouse, 1965, *International Camellia Journal,* p.25. Taiwanese for **Hongmudan.**

Honmurajiro. (White Camellia from Honmura), *(C,japonica),* Tuyama, 1966, *Camellia Cultivars of Japan,* p.122; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.26 & 215 as 'Hommurajiro'; Seibundô Shinkôsha, 1979, *Senchinshû,* p.140, colour photo, p.247, description: Large sized, rose form white, with dull green, lanceolate leaves, with recurved, tapered acuminate apex and shallow serrations, venation conspicuous. Branches slender with pendant blooms. Blooms late. Originated in the Kantô District, Japan. Resemble **Ama-no-gawa.** Different reading: 'Hommurajiro'. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.243 with colour photo; English translation p.171.

Honnami. (Personal Name), *(C.japonica),* Satô, 1969, Chûbu Tsubaki Kyôkai; *Tsubaki Meikan; Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.80, p.63, description, p.303; Satô, 1975, *Chûbu no Tsubaki,* p.47: White, campanulate single of 5-6 petals with apices rounded, small to medium size. Stamens spreading cylindrical, 110-120, filaments white. Medium size. Blooms early to mid-season. Leaves medium size, wide-oval to round, thick, becoming concave, dark green on a plant with an upright, dense habit. Said to be like **Shûfûraku** but leaves different. Originated in the Chûbu District, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû,* p.247. The Kansai **Kamohonnami** is sometimes confused with this variety but is a different cultivar. Different reading 'Hon'ami'. *Nippon Tsubaki - Sasanqua Meikan,* 1998,

p.242 with colour photo; English translation p.170. An old tree, estimated at 270 years of age survives in Komono Town, Mi'e Prefecture, and appeared in *Owari Tsubaki Banzuke* in 1941.

Honneur d'Amerique. *(C.japonica),* Verschaffelt Catalogue, 1847-1848, p.58. Verschaffelt, 1851, *Nouvelle Iconographie*, Book VI, pl.III: This blossom of medium size is both regular and irregular, that is, the first 3-4 rows of petals are regularly imbricated, rounded, emarginate; the following ones are small, compact, ruffled to form a heart. Its colouring is a delicate pink, stippled and intersected with a few stripes of vivid pink. Originated in USA by Dunlap. Orthographic errors and variants: 'Honneur d'America', 'Honeur d'Amerique', 'Honor of America', 'Honor de America', 'Honeur de Amerique', 'Honneur de Amerique'. Pseudonyms: 'Monarch', 'Gunnellae', 'Red Ball'.

Honninbô. Different reading for **Hon'inbô.**

Honô. Hagiya, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû.* Different reading for **Hono-o.**

Honobono. (Dawn), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16: Large, pink flower. Different reading: 'Tenmei'. Originated in Japan. (Believed extinct.)

Ho-no-hara. (Place name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.241 with colour photo; English translation p.169. Small, dark red, semi-double, split stamens. Late flowering. Leaves narrowly elliptic, small, recurved. Upright, vigorous growth. A cultivar raised by a private family in Noguchi (former name Honohara), Toyokawa City. Discovered and released by Sachiko Ôtomo in 1980. From Aichi Prefecture.

Honoho. Different reading for **Hono-o**.

Honoka. (Faint Colour), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô,* Double, pale pink, large flowers. Blooms early. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.81. Originated in Japan. (Believed extinct.)

Honô-no-mai. (Fire Dance), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.226, colour photo and description: Very small size, dark red, campanulate single with 5 petals and small, scanty stamens. Late blooming. Leaves light to mid-green, broad-ovate, apices recurved, acute, margins serrulate. Plant habit dwarf type. Different reading: 'Honoo-no-mai'.Originated in the Niigata Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.241 with colour photo; English translation p.169.

Hono-o. (Flame), *(C,rusticana),* Seibundô Shinkôsha, *Garden Life,* 1966, p.32, No.17, black and white photo: Flower is dark red peony to irregular, open peony of 8-9 cm across x 5 cm deep. Outer petals, 12-25, long and slender. The inner petals, 10-20, sometimes mingle with the petaloids and 200 stamens with dark yellow filaments. Leaves are long and slender and reflexed. Petiole hirsute. The plant habit is low growing. Different readings: 'Honoho', 'Honô'. Collected in Kochitani City, Niigata Prefecture, Japan in 1959 by Susumu Ishizawa. Named and released by Kaoru Hagiya. See: Seibundô Shinkôsha, 1979, *Senchinshû,* pp.140, 247, colour photo and description.

Honoo-no-mai. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.9. Different reading for **Honô-nomai**.

Honor de America. SCCS., 1942, *Classification of Camellias,* p.3. Orthographic variant for **Honneur d'Amerique.**

Honor del Monte Santo. *(C.japonica),* Escuela di Agricultura Catalogue, 1882. No description. Originated in Spain. (Believed extinct.)

Honor John Cummings. *(C.japonica),* Hovey, 1883. *The Garden*, 24:250: Rather below medium size and of a peculiar, dark, ruby scarlet. Foliage small; flower buds quite pointed. Foliage small. First flowered 1859. Originated in USA. Orthographic error 'Honourable John Cummings'.

Honor Mason. *(C.japonica),* Mason's Nursery Catalogue, 1968: Large, rose-pink peony. Mid-season flowering. See black and white photo on p.9. Originated in New Zealand. Orthographic error: 'Honour Mason'.

Hono-tsubaki. (Faint Camellia), *(C.japonica),* Mizuno, 1681, *Kadan Kômokû:* White spotted with pink. Double. Originated in Japan. (Believed extinct.)

Honour Mason. Thermal Nurseries (Rotorua) Ltd Catalogue,1986, p.8. Orthographic error for **Honor Mason.**

Honourable John Cummings. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.104. Orthographic error for **Honor John Cummings.**

Honourable Mrs Hope. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.104. Synonym for **Mrs Hope.**

Honpôji. (Honpô Temple), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.176, p.88, description, p.140 as 'Honpô-jo': Loosely branched, large leaved cultivar. Leaves pale green, elliptic, base cuneate, venation impressed, 8.7-11.5 cm long x 3.6-5.5 cm wide; petioles 7-10 mm long, very hairy. Flowers deep, rosy, red (Crimson 22/1) single, widely cup-shaped, petals strongly wavy, 6-8, the largest 5.8 cm long x 6.3 cm wide; cylindrical stamen cluster, 2.7 cm high, filaments creamy, reddish at the base. Flowers mid-season to late. Different readings:- 'Hompôji', 'Honbôji'. Originated in the garden of the Honpô Temple, Yatsuo-machi, Toyama Prefecture, Japan. Discovered and named by Shûhô Kirino in 1958. See: *Encyclopedia of Camellia in Colour,* vol.I, 1972, pl.33, pp.49, 296 and Yokoyama & Kirino, 1979, *Nihon no Chinka,* p.151, as 'Honbôji'. See: Seibundô Shinkôsha, 1979, *Senchinshû,* p.140 colour photo.

Honpôji-atsuba. (Thick Leaved Camellia of Honpôji), *(C.hybrid),* Fukushima & Iwasa, 1966, *Cytological Studies of Camellias,* p.34. The cultivar is a pentaploid, but no description. Tuyuma, 1968, *Camellias of Japan,* p.41 and *Encyclopedia of Camellias in Colour,* vol.I, 1972, p.296. A seedling of **Honpôji.** Different reading: 'Honbôji-atsuba'. Originated in the Toyama Prefecture, Japan.

Honshiratama. (Principal White Jewel), *(C.japonica),* Saitama Botanic Gardens, 1960; Tuyama, 1966, *Camellia Cultivars of Japan,* pl.47: Medium sized, wide campanulate, white single, 5-6 petals, large, wide, creped at apex; compact, stamen column, small, yellow anthers, light, creamy filaments, joined into a tube for half their length. Early flowering. Leaves lanceolate, medium sized to small, tapering to long, acuminate apex, thick, dark green and wavy, depressed venation, sharply but obscurely serrate. Named in Japan by Jisaku Minagawa to distinguish it from other Camellias named 'Shiratama'. See *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.67 and p.301; Seibundô Shinkôsha, 1979, *Senchinshû,* p.140 colour photo, p.247, description. This is thought by some to be a synonym for **Shiratama** from Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* and Minagawa, 1933, *Chinkashû.*

Hon-wabisuke. (Principal Wabisuke), Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.55. Originated in Japan. Synonyms: 'Daitokuji-wabisuke', 'Kochô-wabisuke', 'Wabisuke'.

Honzyô-shiro. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.55. Different reading for **Honjojiro**.

Hô-ô. Different reading for the *C.x vernalis* **Karagoromo.**

Hô-ô. (Mythical Phoenix), *(C.sasanqua),* Sôsei-en Nursery, 1959, *Shokubutsu Sômokuroku:* Large size, pale pink, double. Originated in Japan.

Hô'ô. (Phoenix) (*C.hybrid*) from Hukaya, Saitama Pref.. Published as the front cover of *Japan Camellia*, No. 82, February 2007: Orchid pink, lotus form semi-double, large, 10 to 12 cm diameter and 5cm in depth, stamens small tubular and sometimes split, blooming in March to April. Tree weeping, vigorous. Leaves lanceolate and twisted. A crossing of *C.japonica* **Hagoromo** and *C.saluenensis hybrid* **Tulip Time.** First flower seen in 2003. Originated in 1998, and named by Sôshin Hirai.

Hoobeni. Different reading for **Hôbeni.**

Hoocheri. *(C.japonica),* Isola Madre Catalogue, 1845. Fratelli Rovelli, 1852, Catalogue, p.19 as 'Hoocherii': Pure white. Originated in Italy.

Hô-ôdai. (Pedestal for Mythical Phoenix), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.100 as 'Hoo-dai': Pure pink. Large, cupped semi-double with petaloids. Originated in Japan.

Hoodii. *(C.japonica),* Masters, 1841, *Gardeners' Chronicle,* (1):66. No description. Originated in England. (Believed extinct.)

Hooemi. (Smile), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.96, p.48, description, p.114: Leaves large, broadly elliptic to ovate elliptic, acuate, deep green, impressed venation, 7.2-8.5 cm long x 3-4.7 cm wide; petioles hairy. Flowers soft pink, (Neyron rose 623/3) semi-double with 17-20 slightly emarginate, truncate petals, a few small petals mixed with stamens with whitish or pale cream filaments. Stamens 2.6-3 cm high, slightly irregular, often divided into several fascicles. Flowers mid-season. Different readings: 'Hohoemi', 'Hôemi', 'Bishô'. Originated in Toyama Prefecture, Japan.

Hoog's Spectabilis. Seidel, 1846, Pflanzen Catalog, p.8. Orthographic error for 'Hogg's Spectabilis', synonym for **Spectabile.**

Hooker. *(C.hybrid),* Tregrehan Camellia Nursery Catalogue, 1973: Unusual, open form single; pale pink. Late flowering. A hybrid of 'Juno' [**Jupiter (Paul)**] x **Salutation** raised by G. Carlyon, Parr, Cornwall, England.

Hookeri. *(C.japonica),* van Houtte Catalogue, 1839, 1:4 as 'Hookerii': Colour of flower, vivid red with splashes of white, very fine form; the leaves are wide and long and bullate. A formal double of fuchsine red, about 9 cm across. Originated in Scotland.

Hookeri (Low). *(C.japonica),* van Houtte Catalogue,1841, 7:9, 10 as 'Hookerii', a second camellia of this name: Pale pink with rounded leaves. In van Houtte Catalogue, 1844-1845, 18:13 it is listed as 'Hookeri'(Low). Originated in England.

Hô-oku. (House with Mugwort Roof), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.241, 471 as 'Hôoku' in index: A small, white, formal double. Originated in Japan.

Hô'o-kujaku (Phoenix 'Peacock') (*C.japonica*) from Kodaira, Tokyo, *Japan Camellia* No.81, August 2006: Red lotus form semi-double, irregular stamens, blooming in March to April, large. Tree spreading and weeping. Leaves inversely lanceolate, medium. A crossing between **Kujaku** and **Yuri-shibori.** Originated by Shinichi Noguchi and named in 2002 .

Hô-ô-nishiki. (Phoenix Brocade), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Nihon Shûbyo, 1910 as 'Howo-nishiki': White flushed pink, darkening towards the edge and striped white on lower half. Large semi-double. Different readings: 'Hoo-nishiki', 'Howo-nishiki', 'Hoh-o-nishiki'. Originated in Tokyo, Japan.

Hoo-nishiki. Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.10. Different reading for **Hô-onishiki**.

Hooper Connell. This name was originally published in the ACS., *Quarterly,* Oct.1950, as Reg. No.54 with the ACS. However it was the desire of the originator that it should be named for his wife and he distributed it from the date of its Plant Patent 1078, in 1952 as **Mrs Hooper Connell.** This is now regarded as its valid name under the requirement that the name should be approved by the originator.

Hoosakia. Prince & Co. Catalogue, 1844, p.104. Orthographic error for **Hosackii.**

Hope. *(C.x williamsii),* Trehane Nursery Catalogue, 1986: (Feathers 1005) A sister seedling to **Bridal Gown** with broader leaves than most *C.x williamsii,* 12.5 cm x 5 cm, on a strong, dense bush, taller than wide. Full, peony flowers, 10 cm across, resmbling its parent **Debutante** with a light honey colour fading to white or flesh pink. Broad, rounded, outer petals, surrounding smaller petals and petaloids. Mid-season to late flowering. Originated by David L. Feathers, Lafayette, California, USA.

Hope Griffin. *(C.japonica),* ACS, *The Camellia Journal,* Nov. 1998, p.25, Reg. No.2484. A large to very large, ivory white, semi-double to anemone sport of **Nuccio's Pink Lace.** Originated by George and Jane Griffin, Nashville, Tenn., USA. *American Camellia Yearbook,* 1998, p.3, colour photo before p.1. The sport was first observed in 1992, and has flowered true on propogation for 5 years. Average flower size is 12.7-14 cm across x 7.5-9 cm deep, with 18-20 petals, 2-4 petaloids, golden anthers and yellow-green filaments. Plant growth is upright and average, with dark green leaves 6.5-12.7 cm long x 5-5.7 cm wide.

Hopfer. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.104. Abbreviation for **Otto Hopfer.**

Hopfer No.270. SCCS., 1946, *Camellias,* p.16. Synonym for **Adolphe Audusson.**

Hopkin's Light Pink. *(C.japonica),* Lindo Nurseries Price List, 1941-1942. No description. Originated in USA.

Hopkin's Pink. *(C.japonica),* Hume, 1946, *Camellias in America,* p.332. No description. Lindo Nurseries Price List, 1947, p.9: Soft pink with an occasional streak, spot or petal of red. Miniature, peony form. Vigorous, compact growth. Blooms mid-season to late. Colour photo, *New Zealand Camellia Bulletin,* 1988, vol.XV, No.7, p.19. Originated by Hopkins, Anderson, California, USA. Sports: **Hopkin's Pink Coral, Hopkin's Pink Dawn, Hopkin's Red, Hopkin's Rose Pink.**

Hopkin's Pink Coral. *(C.japonica),* Gentry, 1977, ACS., *The Camellia Journal,* vol.32, No.4: Coral pink sport of **Hopkin's Pink.** Originated in USA.

Hopkin's Pink Dawn. *(C.japonica),* SCCS., 1970, *Camellia Nomenclature,* p.70: Sport of **Hopkin's Pink.** Soft pink to light pink, shading to white at edge. Originated by McCaskill Gardens, Pasadena, California, USA.

Hopkin's Red. *(C.japonica),* SCCS., 1970, *Camellia Nomenclature,* p.70: Red sport of **Hopkin's Pink.** Originated by C.A. Boynton, Lodi, California, USA.

Hopkin's Rose Pink. *(C.japonica),* SCCS., 1970, *Camellia Nomenclature,* p.70: Rose pink sport of **Hopkin's Pink.** Originated by McCaskill Gardens, Pasadena, California, USA.

Hopkin's Variegated. Lindo Nurseries Price Lists, 1941-1942. Synonym for **Lady MacKinnon.**

Hopkin's White. *(C.japonica),* Lindo Nurseries Price List, 1941-1942: Medium sized, white single. Originated by Lindo Nurseries, Chico, California, USA.

Hopsonii. *(C.japonica),* Floy Catalogue, 1832 as 'Hopsoni'. No description. Hogg, 1838, *Magazine of Horticulture:* Fine, double, scarlet. Originated by Floy, USA.

Horace Hinds. *(C.japonica),* Harris' Longview Nursery Catalogue, 1955-1956, p.7. No description. Originated by Clower, USA.

Hôraihaku. (White from Hôrai). *(C.x williamsii). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.238 with colour photo; English translation p.167. Large, white, sake cup-shaped to trumpet shaped single, thick petals, cylindrical stamen column. Flowers early. Leaves narrowly elliptic, medium size, thick. Somewhat spreading growth, vigorous. A cross between *C.x williamsii* **Asahi** and *C.japonica* **Shiratama.** Originated by Sigeichi Hirano, named and released in 1986. Registration to the Ministry of Agriculture and Fishery pending. 'Hôrai has many meanings; In China a legendary mountain where immortals lived in the eastern sea; In Japan it was considered to be Mt Fuji, and also considered to be Taiwan. From Kanagawa Prefecture.

Hôrai-kô. (Camellia from Hôrai), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.169, colour photo and description: Medium size, red, single with 5 broad, rounded, overlapping petals, opening saucer-shaped, with a central stamen cylinder, with filaments pink at the base to yellow at the top, joined for the lower third, and yellow anthers. Cold hardy with thick petals. Blooms mid-season. Leaves mid-green, narrow-elliptic, apices acute, margins serrate. Originated in Hôrai-gorge, in the Hyôgo Prefecture, Japan.

Hôraikô. (Fragrance of Hôrai). *(C.japonica), Nagoya Camellia Society Bulletin,* 1992, No.25, p.13, colour plate p.42: Originated by Kôji, Funakoshi, Nagoya, Japan. A chance seedling of **Engei-tarô'an.** Small size, 7 cm across, single of 7 petals, light pink, deeper at edge, petals incurved. Infertile. Hôrai is a mythological island in the Eastern Sea, the abode of a hermit with magical powers.

Hôraizan. (Mount Hôrai), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki; Tsubaki Hachiboku Sanboku Tsuki Meisai,* (before 1868) as 'Hôraisan', different kanji, same pronunciation: Snowy white. Triple row. Protruding flower centre. Originated in Japan. (Believed extinct.)

Hôraku. (Abundant Delight), *(C.reticulata), International Camellia Journal,* 1984, No.16, p.77, Reg. No.8: Originated by Dr Akito Noguchi, Beppu, Japan from seed supplied by Col. T. Durrant, New Zealand in 1969. Putative seed parent: 'Willow Wand'. (**Liuye Yinhong**). First bloomed 1975. Flowers, large, semi-double with 3 rows of heavy textured, waved and fluted petals of rose-pink about a group of yellowish filaments with golden anthers. Size is up to 13 cm across x 12 cm deep. Its form is somewhat like **Lasca Beauty**. Blooms mid-season to late. Leaves, 9.5 cm x 6 cm, dark green. Plant habit compact, upright and medium in rate.

Hôraku. (Treasures and Pleasures). *(C.rusticana). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.238 with colour photo; English translation p.167. Small, white, tubular single, cylindrical stamen column. Flowers early to mid-season. Leaves somewhat narrowly elliptic, medium size, flat. Somewhat upright growing, vigorous. A natural seedling of *C.rusticana* **Ichiraku.** Originated and released by Mamoru Naitô in 1992.

Horenge. (Lotus of Flame). *(C.rusticana). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.242 with colour photo; English translation p.170. Medium size, red, lotus-form, split stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size. Upright, vigorous growth. A natural rusticana seedling. Named and released by Totsurô Nakamura in 1994. From Tokyo.

Hordes Vera. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p. 11. No description. Originated in Italy.

Hôrei. (Chubby Beauty), *(C.sasanqua),* 1974, *Nôkôdai Nôjôhô,* No.6, p.43; JCS., 1987, *Tsubaki,* No.26, p.44; Sakata & Arisumi, 1983, *International Camellia Journal,* No.15, p.21: Medium size, single, pink graduations on white ground. Originated in Kumamoto Prefecture, Japan.

Hori. (Moat), *(C.japonica),* Itô, Ihei, 1695. *Kadan Chikinshô;* Kasuya, Kamegorô, 1859, *Tsubaki Iro-hanayose Irotsuki:* (eight fold), medium large, red flower, sometimes with white spots. Originated in Japan. (Believed extinct).

Horikawa-shibori. (Horikawa's Variegated), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.140, colour photo, p.247, description: Large single to semi-double with large, rounded petals, 9-11 in number, some cleft at the apex, pale pink, with deep pink stripes and a large, stamen cluster. Leaves broad-ovate, mid-green, obscurely serrate, venation conspicuous. Originated in Toyama Prefecture, Japan. Named and released by Mitsuroku Makino in 1960.

Hori-no-uchi. (Inside the Moat), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.194, 195, colour photo and description: Small size, dark red, vase shaped single, with 5 broad, embracing petals which do not open flat, and a central stamen cylinder with white filaments, joined for the lower third, and large, yellow anthers, Blooms mid-season to late. Leaves bright green, thick and flat, elliptic. A wild japonica found in a plant market in Matsuyama City, Ehime Prefecture, Japan. Named and released by Tokihiro Kôno in 1977.

Horkan. Glen Saint Mary Nurseries Co. Catalogue, ca.1934, p.20, as 'Horken'. Gerbing's Azalea Gardens Catalogue, 1938-1939; Fruitland Nursery Catalogue. 1938-1939, p.18. Synonym for 'Variabilis' (**Pompone**). Orthographic errors: 'Harkan', 'Horken'. Other synonyms: 'Rena Campbell', 'Mille Beaux', 'Missima', 'Pearl Marginata', 'Dan McCarthy', 'Horkan Variegated'.

Horkan Variegated. Lindo Nurseries Price List. 1941-1942, p.5 as 'Horkan Var.'. Synonym for 'Variabilis' (**Pompone**).

Horkan Alba. *Camellia Digest,* 1(1),1940 as 'Harkon Alba'. Synonym for **Paeoniiflora Alba.**

Horken. Glen Saint Mary Nurseries Co. Catalogue, ca.1934, p.20. Synonym for 'Variabilis' (**Pompone**).

Hornsby Pink. Exbury Garden Ltd. Catalogue, 1967-1968. Synonym for **Begonia.**

Horode-Gumo. RHS., 1954, *The Rhododendron and Camellia Yearbook,* No.8, p.96, black and white photo, p.48. Corruption of the Japanese name **Hinode-gumo.**

Horrida. *(C.japonica),* Loudon, 1839, *The Gardeners' Magazine,* vol.15, p.198: Hovey, 1839, *Magazine of Horticulture.* No description. Originated in the UK by Young. Synonym: 'Horrida de Young'.

Horrida de Young. van Houtte Catalogue, 1839, 1:4. Synonym for **Horrida.**

Horrora. van Houtte Catalogue,1841, 7:2. Synonym for **Aurora.**

Horry Frost. *(C.japonica),* Fruitland Nursery Catalogue, 1940-1941, p.22: Red and white. Small formal double. Early to mid-season blooming. Originated in USA at Magnolia Gardens, Charleton, South Carolina. Pseudonym: 'La Sorella'. See Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.165, black and white photo. Orthographic variant: 'Hoary Frost'.

Horsfallia. Charles van Geert Nursery Catalogue, No.105, 1848, p.12. Orthographic error for **Horsphallii.**

Hosackii. *(C.japonica),* Anonymous, 1831, *Annales de la Société Horticulture de Paris* 8:188-189 as 'Hosackia': From seeds of the old Double Red, (**Rubra Plena**), planted 1823, flowered 1827 and presented by Floy of the New York Horticultural Society, Jan.17, 1830. Michael Floy & Sons, 1832, Catalogue, p.55: Fine, double scarlet. Hosacks. Berlèse, 1835, *Annales de la Société Horticulture de Paris,* 16:212: Originated by Floy. This flower is more than 10 cm across, very double and a dazzling scarlet colour. It opens with regularity and when entirely open is quite flat; it lasts a long time without fading. The outer petals are broad, those of the centre are small, short and united in fasciciles, sometimes with tints of white stripes. Orthographic errors: 'Hosakiae', 'Hosackia', 'Hoosakia', 'Hosachii', 'Hosakii', 'Hosakiana', 'Hosackii', 'Hosachii'.

Hosakiae. John Miller Nursery Catalogue, 1838. Orthographic error for **Hosackii.**

Hosakii. Verschaffelt, 1844, Catalogue, No.50, p.20. Orthographic error for **Hosackii.**

Hôseki. Seibundô Shinkôsha, 1979, *Senchinshû,* p.244. Different reading for 'Hôshaku', synonym for **Fukurin-edo-nishiki.**

Hôsen. (Temples Name), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.140, colour photo and description: Medium size, pink with the colour fading towards the centre, wide campanulate single, with 6 broad, emarginate petals, slightly crinkled, and a central column of stamens with white filaments, joined for the lower third, and yellow anthers, blooms mid-season to late. Leaves mid-green, elliptic, apices acuminate, recurved, margins serrulate. Originated in Izu Isle, Japan. A seedling of **Hôsenji.** Originated by Keizô Takahashi, named and released by Masaomi Murata.

Hôsenji. (Hôsen Temple), *(C.japonica),* Seibundô Shinkôsha, 1979, 1979, *Senchinshû,* p.138, colour photo, p.246, description:- Small, tubular single pink with short, compact, stamen column. Leaves elliptic, shining mid-green, impressed venation, medium serrate, apex acute, base cuneate. Originated at the Hôsenji Temple, in Ito City, Izu Isle, Kantô, Japan. Synonym: 'Hôsenji-tsubaki'.

Hôsenji-tsubaki. Izu Ohshima, 1980. Hawaii Botanical Gardens Catalogue. Synonym for **Hôsenji.**

Hôshaku. Synonym for **Fukurin-edo-nishiki.**

Hôshi. (Priest), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.246: White, cup-shaped single, medium to large size, spreading stamens. Early flowering. Leaves medium size, ovate, apex acuminate, recurved. Plant habit upright and variable. Originated in Chûbu, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.237. Note – The colour photo accompanying that entry is incorrect. English translation p.166.

Hoshi-akashi. (Spotted Akashi), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* White spotted variegation of **Akashiren** in *Shishiki Hanagatachô.* See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.80. Originated in Japan. (Believed extinct.)

Hoshi-asahi. (Spotted Asahi), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* No description but thought to be a white spotted variegation of Asahi from *Shoshiki Hanagatachô.* Originated in Japan. (Believed extinct).

Hoshibotan. (Spotted Peony), *(C.japonica),* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.15; Yashiro, 1841, *Kokon Yôrankô,* vol.311; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Rose-pink, spotted white. Large semi-double with 3 rows of petals. Resembles 'Kahei-tsubaki'. Tuyama, 1966, *Camellia Cultivars of Japan,* pl.142, p.246: Large, irregular semi-double to peony form, red with white markings. Leaves lanceolate, apex acuminate, margins serrate, mid-green. Late blooming. Flower shape and leaves resemble **Mikenjaku.** Originated in the Kantô District, Japan. See: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.298 & p.335; Seibundô Shinkôsha, 1979, *Senchinshû,* p.139, colour photo, p.247 description; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.323. Synonym: 'Hoshi-iri-botan'.

Hoshi-date. Vanderbilt, 1940, *Camellia Research,* p.4. Corruption of the Japanese name **Hashidate.**

Hoshi Garuma. Orton Nursery Price List, 1947-1948. Corruption of Japanese name **Hoshiguruma.**

Hoshiguruma. (Star Carriage), *(C.japonica),* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.15; Yashiro, 1841, *Kokon Yôrankô,* vol.311; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Variegated form of **Higuruma.** Cardinal red, spotted white, or occasionally moired with white. Small formal double. Originated in Kantô, Japan. Based on the same characters and probably synonymous with **Hoshihiguruma** in the *Kadan Chikinshô.* Synonyms: 'Star Carriage', 'Star Wheel'. See: Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangements,* colour photos, p.161, 166, 175, 185, 182, 197, 211; Tuyama 1966, *Camellia Cultivars of Japan,* p.80, pl.43; Tuyama, 1968, *Camellias of Japan,* pl.313, p.158; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.425; Satô, 1975, *Chûbu no Tsubaki,* p.90, colour photo; Seibundô Shinkôsha, 1979, *Senchinshû,* p.138, colour photo, p.247, description; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.397. A study of the above illustrations shows a small formal double to rose form double, petals emarginate, red with clear white spots in various degrees. Sport: **Higuruma.** Leaves lanceolate, blunt acute to acuminate, finely serrate, glossy mid-green. This appears quite different to the peony form illustrated by Hertrich, 1954, *Camellias in the Huntington Gardens,* p.177 under the name **Hoshiguruma.**

Hoshiguruma. (Star Carriage), *(C.japonica),* Gerbing's Azalea Gardens Catalogue, 1938-1939: (Star Wheel). Peony form flowers, shaped much like a wheel, deep rose, very slow growth. Midseason blooming. See: Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I, p.177 with black and white photo shows a typical peony form and gives the colour as Cherry 722/1 but has no white variegation. The variety was purchased from Domoto by McIlhenny in 1936 and presumably Domoto imported it from Japan.

Hoshihiguruma. (Starred Fire Carriage), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* vol.I, No.218; Yashiro, 1841, *Kokon Yôrankô,* vol.306: Red flower, mixed with many white spots. The tone of the colour is more beautiful than **Higuruma**. Originated in Japan. "Hoshi" refers to the white stars or spots, a variegated form of **Higuruma** and it is probable that the variety is synonymous with **Hoshiguruma.** Different reading: 'Hoshihikuruma'.

Hoshihiguruma. (Spotted Higuruma), *(C.japonica),* Shirai-Bunko, 1812, *Tsubaki Nayosecho:* Flower shape is like **Higuruma,** red double with white spots. Thought that it may be synonymous with the above **Hoshihiguruma.** Different reading: 'Sashimaze-higuruma'. Originated in Japan. (Believed extinct.)

Hoshihime. Hakoda, JCS., 1987, *Tsubaki,* No.26, p.50. Synonym for the *C.x vernalis* **Gaisen**.

Hoshihime. (Star Princess), *(C.rusticana), Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.105, p.70, description, p.306: Small, red single with sparse white spots, 7-9 petals cleft at the apex and a large, central, spreading stamen cluster with yellow anthers. Occasionally blooms occur with white moiring or white margins. Early blooming. Leaves elliptic, shallowly serrate, apex acute, mid-green, petioles hirsute. Originated in Toyama Prefecture, Japan. Named and released by Minoru Takeuchi in 1959. This cultivar was first named 'Hoshimusume', but was changed to **Hoshihime** to prevent confusion with an existing 'Hoshimusume'. See: Seibundo Shinkôsha, 1979, *Senchinshû,* p.139, colour photo; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.238.

Hoshi-hiryô. Chûgai Nursery Catalogue, 1935-1936, p.26. Different reading for **Hoshihiryû.**

Hoshihiryû. (Spotted Hiryû), *(C.x vernalis),* Nakayama, 1851, *Senkaôden,* vol.5: Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu; Nihon Shubyô,* 1910: A white variegated form of **Hiryû.** Originated in Japan. Different readings: 'Hoshihiryô', 'Hoshi-hiryu'. Synonyms: 'Hiryû-nishiki', 'Spotted Hiryu', 'Shibori-hiryû', 'Hiryû-boshi'. Corruption of Japanese name: 'Hoshi-Hiro'. **Hoshihiryû** was first brought to USA by Professor E. Fenerosa in 1906 and planted in Spring Hill, Mobile, Alabama. See *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.561, p.219 & 392. Hakoda, JCS., 1987, *Tsubaki,* No.26, p.50 has **Hiryû** and **Hoshihiryû** as synonymous, but in Japan and the West, **Hoshihiryû** is used to designate the white variegated form of **Hiryû.** Chinese synonym: 'Xingfeilong'.

Hoshihitotsu. (One Star), *(C.japonica),* Sakuden.1630, *Hyakuchinshû:* White, very small, 5 petalled single. See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.97. Originated in Japan. (Believed extinct.)

Hoshi-iri-bokuban. Different reading for **Hoshi-iri-bokuhan.**

Hoshi-iri-bokuhan. (Spotted Bokuhan), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* See JCS., 1967, *Tsubaki,* No.7, p.36; Itô, Ko'emon, 1879, *Chinkashû:* Deep red with white petaloids, small size with anemone centre. A sport of Bokuhan. Originated in Japan. Synonym 'Tinsie Variegated'.

Hoshi-iri-botan. (Spotted Peony), Ishii, 1932, *Genshoku Engei, Shokubutsu Zufu.* Different reading for **Hoshibotan.**

Hoshikage. (Starlight), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.387, colour photo and description: Small size, white with the faintest tones of pink, formal double with 6-8 petal rows. Late blooming. Leaves mid-green, elliptic, apices tapering acuminate, margins serrate. The colour of the flowers changes from pink to white as the temperature rises in the spring. Originated in Kurobe City, Toyama Prefecture, Japan. Named and released by Minoru Takeuchi in 1970.

Hoshikaraito. (Spotted Karaito), *(C.japonica),* Shirai-Bunko, 1789, *Shoshihi Hanagatachô.* Semi-double, large size, red with erect petaloids in the centre and spotted with white. The

variegated form of **Kara-ito.** See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.79. Thought to be synonymous with **Goshoguruma.** Originated in Japan.

Hoshikeibu. (Meaning obscure), *(C japonica),* Yashiro, 1841, *Kokon Yôrankô,* vol.309. No description. Originated in Japan. (Believed exinct).

Hoshikurenai. Kyôto Engei Kurabu, 1960, *Tsubaki Tokushû,* No.1, p.55 & 1970, No.10, p.127. A transliteration error for **Fuji-kurenai** in Iwasaki, 1829, *Honzô Zufu.*

Hoshimusume. (Star Maiden), *(C.rusticana),* Yokoyama, 1975, *Gendai Tsubaki, Meikan,* p.212, black and white photo; Seibundô Shinkôsha, 1979, *Senchinshû,* p.139, colour photo, p.247 description: Medium sized, crimson, peony to anemone form, of large size, lightly veined petals, cleft at the apex, with a centre of intermixed stamens and petaloids. Leaves broad-ovate, mid-green, slightly depressed venation, shallowly serrate. Petioles hirsute. Originated in Kitakanbara-gun, Niigata Prefecture, Japan. Collected, named and released by Susumu Ishizawa in 1959.

Hoshimusume. The old name for **Hoshihime.**

Hoshinakashiro. (Spotted Mid-white), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô,* vol.306; Itô, 1695, *Kadan Chikinshô:* Single, small white flower variegated with red spots. Originated in Japan. Different reading: 'Hoshi-naka-shiro', (Believed extinct.)

Hoshi-no-hikari. (Star Glitter), *(C.japonica),* SCCS., 1947, *The Camellia, Its Culture and Nomenclature* as 'Goshi-no-hikari': Bright red, large, semidouble. Originated in Japan.

Hoshi-no-hitomi. (Stars in the Eyes), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.28: Small corolla, vivid red, semi-double with overlapping petals, opening flat. A seedling of *C.japonica* var. *rusticana* **Senbazuru** x *(C.japonica x C.lutchuensis).* Originated in the Niigata Prefecture, Japan.

Hoshi-no-ko. (Son of Star). *(C.x williamsii). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.272 with colour photo; White, or pale pink shading to white, small single, trumpet shape with channelled petals. Flowers mid-season to late. Leaves elliptic, small to medium size. Upright, vigorous growth. A cross of **Tsuki-no-fui** x **Our Betty.** Originated by Misoji Yamaguchi, Kyoto, Japan.

Hoshi-no-negai. (Wishing a Star). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.239 with colour photo; English translation p.168. Small to medium size, white with pink graduation, lion-form double. Flowers early. Leaves elliptic, small. Spreading growth, branches weeping. A cross between *C.japonica* 'Gyokuro' and *C.vernalis* **Gaisen.** Named and released by Kaoru Hagiya in 1983. From Niigata Prefecture.

Hoshi-no-yuki. (Starlit Snow), *(C,japonica),* McIlhenny, 1941, *700 Varieties of Camellias* as 'Hosho-no-yuki'. No description. Originated in Japan.

Hoshi-otome. (Starred Maiden), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.314, p.159, description, p.184: Leaves light green, lanceolate to lanceolate-elliptic, base cuneate, apex gradually acuminate, manifestly serrate margins, 6.2-8.5 cm long x 2.5-3.5 cm wide. Flowers complete formal double, flat when fully open. Rose (deeper than Rose opal 022), blotched white on outer petals. Originated in Toyama Prefecture, Japan.

Hoshiryômen. (Spotted Both Sides), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16; Yashiro, 1841, *Kokon Yôrankô.* vol.344. Red, double, a white spotted variation of **Ryômen.** Early flowering. Originated in Japan.

Hoshisekai. (Star World), *(C.rusticana),* Tatayama Catalogue, 1957; Seibundô Shinkôsha, 1979, *Senchinshû,* p.138, colour photo, p.247, description: Small, light red single, tubular form. Leaves green, variegated light yellow, irregularly round the margin. obovate, acuminate, obscurely serrate. Petiole hirsute. Originated in Niigata Prefecture, Japan.

Hoshisokoshiro. (White Base with Spots), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* No.46; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large, eight-fold, convex, red flower with some white spots. Originated in Japan. (Believed extinct.) Different readings: 'Hoshi-soko-shiro', 'Hoshizokoshiro'.

Hoshitobi. Minagawa Catalogue, 1956. Different reading for 'Seihi', synonym for **Daikagura.**

Hoshi-unryû. (Starred Cloud Dragon), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.247: Irregular white variegation on a red background. Flowers double. Stamens sometimes cylindrical, sometimes dispersed. Medium size. Midseason flowering. Leaves small, ovate, thick, dark green. An old camellia from a private family in Mure Town, Kagawa, Japan. Named and released by Saneichi Ogawa in 1979.

Hoshiyadori. (Sleeping under the Stars). *(C.rusticana). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.240 with colour photo; English translation p.168. Small, palest pink striped deep red, lotus-form semi-double. Flowers mid-season to late. Leaves narrowly elliptic, small to medium size. Upright, vigorous growth. A natural seedling of **Fukurin-ikkyû.** Originated by Kimura Shikishima'en Nursery around 1978. Named and released by Kiyoshi Tarumoto. From Hyôgo Prefecture.

Hôshô. (Rich Adornment), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.292, colour photo and description: Medium to large size, white, semi-double with 11-13 broad petals, somewht undulate margins, and a central stamen cluster with pale lemon filaments and deep yellow anthers. Late blooming. Leaves deep green, small, elliptic, apices acute to tapering acute, margins serrulate. Originated in the Toyama Prefecture, Japan. Named and released by Mitsuroku Makino.

Hôshôki. (Recording Just Laws), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.193, colour photo and description: Medium size, deep red, vase-shaped single, with 5 broad, emarginate, overlapping petals, with a large, central stamen cluster, filaments pinkish to white, joined for the lower third. Blooms mid-season to late. Leaves bright green, broad-elliptic, apices blunt acute, margins serrate. Originated in the Chûbu District, Japan.

Hôshu. (Treasured Gem), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.78, p.39, description, p.108: Leaves broadly elliptic, a little wavy, shining dark green, impressed venation, 7.3-7.9 cm long x 2.6-3.8 cm wide; petiole green, 4-6 mm long, densely hairy. Flowers hang downwards, palest pink (paler than Rose-pink 427/3), petals 42-50, opening to a prominent, round bud-centre. Stamens never exposed. Flowers mid-season to late. Different reading 'Hôju'. Old name 'Hakuhôju'. Originated in Yatsuo-chô, Toyama, Japan. Named and released by Toyama Rusticana Lovers Club in 1965. See: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.406. Seibundô Shinkôsha, 1979, *Senchinshû,* p.137 as 'Hôju'.

Hôshu-cha. Different reading for 'Hôju-cha'. Synonym for the Chinese **Baozhu Cha.**

Hôshûka. (Yoshiharu's Autumn Flower) *C.rusticana), Japan Camellia* 99, May 2013, p.3 with colour photo; JCR Regn No. 2013-12, (ser. No.12). A seedling of **Momosuzume**. Single, medium size, pink, petal chips at back pointed and bent outwards. Early blooming. Originated by Yoshiharu Yano.

Hôshusunago. (Dotted Hôshu), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.394, p.200, description, p.206: Leaves broadly elliptic, shortly acuminate, green to dark green, crenate, 6.1-8.9 cm long x 3.5-5.1 cm wide; petioles 4-8 mm long, smooth. Flowers complete, formal double of palest pink (Rose-pink 427/2), minutely striped and dotted rosy red (Rose Opal 022/1), petals 62- 78, the inner ones remaining in a tight, spherical, bud centre, rarely unfolding; stamens 30-40, filaments white. Flowers early to mid-season. Originated in Ishikawa Prefecture, Japan. Translation: 'Hôshu' is an abbreviation for "Gibôshu', a traditional ovoid

shape used in Japanese architecture while "Sunago" refers to sand. The first refers to the bud centre, the second to the finely spotted petals. Different reading: Hôjusunago'.

Hosobahiiragi-tsubaki. Shibata, 1949. Japanese name for *C.japonica* var *ilicifolia.* Synonym *C.ilicifolia.*

Hosobamomo. (Pink Narrow Leaves), *(C.sasanqua),* JCS., 1987, *Tsubaki,* No.26, p.44: Medium size, deep pink, single. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.314 with colour photo; English translation p.221. Slender petals. Leaves lanceolate and very long. Flowers early. Upright, vigorous growth. Raised at Kosaki Chinju'en Nursery, Inazawa City, Japan in 1970s. Named by Shûhô Kirino. Resembles **Hosobashiro** very closely except for the petal colour.

Hosobashidare-shiroyabu. (Tapered Leaf, Weeping White), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.320, p.135, description, p.245: Small, campanulate, white single. Leaves lanceolate with gradually tapering, acuminate apex, mid-green, obscurely serrate. Originated in Japan.

Hosobashiro. (Narrow Leaf White), *(C.sasanqua),* JCS., 1987, *Tsubaki,* No.26, p.44: Medium size, white, single. Originated in the Aichi Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.314 with colour photo; English translation p.221. Slender petals. Flowers early. Leaves lanceolate and very long. Upright, tending to be weeping. Raised at Kosaki Chinju'en Nursery, Inazawa City, Japan in 1970s. Named by Shûhô Kirino.

Hoso-e-ômi. (Uncertain), *(C.x vernalis),* Tanaka et al., Sept.1986, "Cytogenetic Studies of the Origin of *C.x vernalis"; Journal of the Japanese Society for Horticultural Science,* vol.55, No.2, p.208. A triploid cultivar of the *C.x vernalis* group.

Hoso-e-yabu. (Slender Branched Bush Camellia), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.145, p.73, description, p.131: A bush Camellia of elongated, slender, erect branches. Leaves very dark green, shiny, venation slightly impressed, crenate, 6.5-8.6 cm long x 2.9-4.1 cm wide. Flowers single, campanulate, red (Cardinal Red 822/3),5 petals, the largest 5.5 cm long x 4.3 cm wide, slightly recurved. Stamens 3.8-4.5 cm long, white with a nuance of pink. Flowers late. Originated in Japan by Hamada, Tôji-in, Kyôto-shi.

Hoso-Goryô. (Personal Name, a famous beauty) *(C.japonica)* An historic plant of yabu-tsubaki on Goto Island, Japan. Age not recorded.

Hosshinhaku. (Hosshin's White), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.139, colour photo, p.247, description: Small, campanulate, white single with pinched in stamen cluster, yellow anthers, white filaments, Mid-season flowering. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.26, 27. Selected from wild japonicas in Kurume, Fukuoka Prefecture, Japan. Named and released by Shunsuke Hisatomi in 1970. "Hosshin" alludes to the Buddhist Temple 'Hosshinji".

Hosshin-shibori. (Dappled Hosshin), *(C.japonica),* Inazawa Nurseries Co, Ltd. Catalogue, 1986-1987, p.3, A-140: White blotched on a red ground, single, small with overlapping petals, twisted stamens. Originated in Fuku'oka Prefecture, Japan. Nippon Tsubaki - Sasanqua Meikan, 1998, p.241 with colour photo; English translation p.168. Flowers mid-season to late. Leaves narrowly elliptic, medium size. Spreading growth. Parentage unknown, named and released by Shunsuke Hisatomi in 1980. The word 'Hosshin' means a religious awakening or Buddha's Mind. Alternative reading 'Hottshin-shibori'.

Hosshin-shiro. *(C.japonica), Kurume Camellia,* 1997, English translation, p.7 as 'Hottshin-shiro'; Pure white, small tubular single. upright plant. Flowers mid-season. Named by Shu. Hisatomi, Japan.

Hosshin-wabisuke. (Hosshin's Wabisuke). (Wabisuke). *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.88 with colour photo; ; A sport of **Tarôkaja**, named by S. Hisatomi, Kurume, Japan

in 1992. Small, peach pink, trumpet shaped single.. Sterile stamen column. Upright growth. Leaves medium size, oblong, and revolute at margins. Flowers mid-season.

Hosshin-zakura. (Hosshin's Cherry), *(C.hiemalis),* Kairyô-en, 1965, *Engei An'nai;* JCS., 1987, *Tsubaki*, No.26, p.48: Peach pink, double, large size. Blooms early to mid-season. Originated in the Fuku'oka Prefecture, Japan.

Hossukasuri. (See below), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.249: Small, white, peony form with frilly petals and soft pink stripes. Originated in Japan. "Hossu" is a whisk of white bears hair used in Buddhist ceremonies to brush away the worldly worries and evils, and "kasuri" = colour patch. Different reading: 'Hossutobi'iri'.

Hossutobi'iri. Different reading for **Hossukasuri.**

Host of Heaven. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.138. Synonym for **Jitsugetsusei.**

Hot Lips. *(C.japonica),* ACS, *The Camellia Journal,* June 2004, p.28, colour photo p.29, Reg. No.2621. First bloomed in 2001. A chance seedling originated by Dr James Habel and propagated by Capt. Doug Simon, Norfolk, Va., USA. The dark red semi-double bloom has 20 long, channelled petals with yellow anthers and white filaments. Flower size is 10 cm across. *American Camellia Yearbook,* 2004, p.92, colour photo p.c2. Flowers mid-season. Plant is upright with average growth rate.

Hot Pants. *(C.japonica),* Cannon, 1977, ACS., *The Camellia Journal,* vol.32, No.4. No description. Originated in USA. No valid listing located.

Hot Pink. *(C.hybrid),* ACS., 1988, *The Camellia Journal,* vol.43, No.1, p.6, Reg. No.2076: Large size, hot pink, semi-double. Originated by Robert E. Ehrhart, Walnut Creek, California, USA. *American Camellia Yearbook,* 1987, p.81, with a colour photo between p.60, 61: The seedling first bloomed 1983. Average flower size, 11 cm across. Flower stands up like a tulip when open. Plant growth is upright, spreading, open and rapid with medium to dark green leaves, 8 cm x 4 cm.

Hot Stuff. *(C.x williamsii). Camellia Nomenclature* 2006, p.178. Very bluish, deep pink. Medium size, semi-double. Average, open, upright growth. Flowers mid-season to late. (N#9213).

Hot Whiskey Bayou. *(C.japonica),* Dodd, 1968, *Adventures in Camellia Seedlings,* p.4, colour photo: Medium sized, deep pink, formal double. A seedling of 'Donckelaeri' (**Masayoshi**), originated by Richard Dodd, Marshallville, Georgia, USA.

Hotarubukuro. (Campanulata), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.215: Very small, white, single. Originated in Kyôto Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.322; English translation p.239. Flowers early to mid-season. Leaves narrowly elliptic, medium size. Spreading, vigorous growth. Selected by Yoshiaki Andoh from cultivars at a Kyoto temple. Named and released by Takeo Ogawa in 1971.

Hotei-asobi. (Playing of Hotei), *(C.sasanqua),* Kajitsu-en, 1905, *Chabaika Meikan;* McIlhenny, 1942, *700 Varieties of Camellias,* p.16: Cup-shaped, white, tipped and marbled Amaranth purple. Originated in Japan. "Hotei" is the name of an ancient Buddhist priest who symbolizes happiness.

Ho-ting-ch'a. Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.26. Different reading for **Heding Cha.**

Ho Ting Hung. Liu, 1959, *Chungkuo Chuming Tichi Chung Hua Hui.* Different reading for **Hedinghong.**

Hotoke. (Buddha), *(C.japonica),* Williams Catalogue, 1891, p.24: A new Japanese camellia introduced by Mr Gerald Waller. This is a very chaste, single flower, about 7.5 cm across. The stamens

are primrose with golden anthers surrounded by a single row of pure white guard petals. (Believed extinct.) Corrupted name is 'Hotoko'.

Hotoko. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.104. Corruption of the Japanese name **Hotoke.**

Hotori. (Vicinity), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pink double, small sized with narrow, short, round tipped petals. Originated in Japan. (Believed extinct.)

Hototogisu. (Cuckoo), *(C.japonica),* Mizuno, 1681, *Kakan Kômoku:* White spotted red, large size. Double. Originated in Japan. Note: There appear to be at least three different cultivars with different characters which can translate as "Cuckoo". They each have different readings. The one used for this cultivar has the different reading of 'Kakkô'. (Believed extinct.)

Hototogisu-tsubaki. (Cuckoo Camellia), *(C.japonica),* Itô, Ihei, 1719, *Kôeki Chikinshô,* vol.I; Itô, Jukyû, 1739, *Honzô Hanamaki'e,* as 'Hototogisu'; Yashiro, 1841, *Kokon Yôrankô,* vol.306 as 'Hototogisutsubaki'; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* as 'Hototogisu': Red with 3-4 rows of petals. Snowy spots. Cylindrical stamen cluster. Sometime produces different coloured sports. Different reading: 'Hotogisu'. Originated in Japan. (Believed extinct.)

Hototogisu. (Cuckoo), *(C.japonica),* Minagawa, 1949, *Chinkashû.* This is the modern cultivar with this name. Colour photos and descriptions are in: Tuyama, 1966, *Camellia Cultivars of Japan,* pl. 100, p.170; Tuyama, 1968, *Camellias of Japan,* pl.123, pp.62, 123; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.89, p.32; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.204, pp.102, 321; Satô, 1975, *Chûbu no Tsubaki,* p.72; Seibundô Shinkôsha, 1979, *Senchinshû,* p.138; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.308. Taking Tuyuma's description: Leaves elliptical to narrowly elliptic, undulated, venation elevated. Flowers semi-double, pink, (Neyron Rose 623/1) petals many, embracing each other, inclined to recurve at the apex on fully opening, indented at apex. Staminal tube narrow and a little irregular. Believed to be a seedling of **Kayoidori.** Different reading of characters 'Funyoki'.

Hotshot. *(C.japonica),* ACS, *The Camellia Journal*, May 1997, p.21, Reg. No.2399. A miniature, deep dark red, formal double chance seedling. Flowers mid-season to late. Originated by Toichi Domoto, Hayward, Calif., USA. *American Camellia Yearbook,* 1997, p.3, colour photo before p.1. The seedling is over 15 years old. Average flower size is 5 cm across x 2.5 cm deep, with 30+ petals. Plant growth is upright, average and medium, with dark green leaves. Previously called 'Domoto's Red Formal'.

Hottshin-shibori. *(C.japonica), Kurume Camellia*, 1997, English translation, p.7; Alternative spelling for **Hosshin-shibori.**

Hottshin-shiro. *(C.japonica), Kurume Camellia,* 1997, English translation, p.7; Alternative spelling for **Hosshin-shiro.**

Hottshin-zakura. *(C.japonica), Kurume Camellia,* 1997, English translation, p.7; Bright pink, medium size, spherical single. A seedling of **Goshozakura**. Flowers mid-season. Originated by Shu. Hisatomi, Japan.

Howard Asper Pink. Cannon, 1970, ACS., *The Camellia Journal,* vol.25, No.1. Synonym for **Howard Asper.**

Howard Asper Variegated. *(C.reticulata x C.japonica),* Tammia, 1965, ACS., *The Camellia Journal,* vol.20, No.4 as 'Howard Asper Var.': A virus variegated form of **Howard Asper** - Medium pink, blotched white. Originated in USA. See colour photo facing p.149, *American Camellia Yearbook,* 1979.

Howard Burnette. *(C.reticulata).* ACS, *The Camellia Journal,* Aug. 1997, p.17, Reg. No.2433. A very large, currant red, semidouble cross of 'Crimson Robe' (**Dataohong**) x **Nuccio's Ruby.** Originated by Jack L. Mandarich, Grants Pass, Ore., USA. *American Camellia Yearbook,* 1997, p.3, colour photo before p.1. The 12 year old seedling first flowered first bloomed in 1990. Average flower size is 14 cm across x 6.5 cm deep, with 18 petals and golden anthers. Plant growth is upright, spreading, dense and average with dark green leaves 12 cm long x 7 cm wide.

Howard Caple. *(C.reticulata), New Zealand Camellia Bulletin,* 1972, vol.VII, No.6, p.33, Reg. No.63: A seedling of *C.reticulata* 'Wild Form', the pollen parent, *C.reticulata* 'Shot Silk', (**Liuye Yin-hong**), originated by Dr Jane Crisp, Tirau, New Zealand. It first flowered 1967 and plants have tall, pyramidal habit and flower freely over a long period. The bloom is semi-double with 15-16 fluted petals, showing stamens in the centre and measure 14 cm across x 6 cm deep on the average. Colour is RHS Red Group, 52A-B. The foliage is mid-green, reticulate, keeled with fine serrations. Leaves 8-10 cm long x 3-4 cm wide. See colour photo, front cover, *New Zealand Camellia Bulletin,* 1974, vol.VIII, No.5.

Howard Dumas. *(C.reticulata* hybr.*), American Camellia Yearbook,* 1983, p.158, Reg. No.1876: A very large, currant red, semi-double to peony form *C.japonica* **Elizabeth Boardman** x *reticulata*, mid-season flowering; originated by Dr W.F. Homeyer, Jr., Macon, Georgia, USA. First bloomed 1977. Average flower size, 15 cm across x 7 cm deep with 21-24 petals, including 6-7 large rabbit ears and 2-7 petaloids, white anthers and filaments. Plant growth is upright,

open and medium in rate with dark green leaves, 10-15 cm long x 6-10 cm wide. Sport: **Howard Dumas Variegated.** Chinese synonym 'Duma'.

Howard Dumas Variegated. *(C.reticulata* hybr.), Valdosta Camellias, ACS., Nov.1990, *The Camellia Journal,* vol.46, No.4, p.22 as 'Howard Dumas V.': A virus variegated form of **Howard Dumas** - Currant red, blotched white. Originated in USA,

Howard Oliver. (*C.reticulata* hybrid). *Camellias*, Y.C. Shen, 2009, p.234 with colour photo; A rose red, formal double chance seedling, originated by Mr Howard Oliver, Menlo Park, Calif., USA. Diameter 10 cm. Leaves elliptic, plant upright.

Howard Rhodes. *(C.reticulata* hybrid*)* ACS, *The Camellia Journal,* Dec. 2010, p.29 with colour photo, Regn No 2799. ACS, *Yearbook* 2010, p.76 with colour photo. Originated by E. Hulyn Smith, Valdosta, Ga., USA. A 20 year old cross of **Buddy Bills** x **Jean Pursel**, first flowered in 2000. Upright, vigorous growth. Dark green leaves average 11.5 cm x 6.5 cm. Large flower is 12.7 cm diameter x 10 cm height, dark red peony form. Yellow anthers and yellow filaments. Heavy petal texture, blooms midseason.

(Variegated Peach), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China,* p.51, No.316, colour photo, No.183: Medium size, 8-10 cm across, deep pink, semi-double to open peony form with 3 rows of ruffled petals, and a centre of stamens and occasional small, erect petals. Leaves mid-green, elliptic. Blooms mid-season to late. Originated in China.

Huachang'e Cai. (Variegated Moon Goddess Spendour), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:* Formal double pink with deeper pink with some white patches. Inner petals pointed at apex, bud centre. A variegated form of **Hongchang'e Cai.** See colour photos: Chang Shao Yun, 1987, *Camellias from Zhejiang* p.94, photo [p.131] and Gao & Zhuang, 1989, *The Camellia in China,* p.46, No.268, photo No.152. See colour photo, p.44C, *International Camellia Journal,* 1984, No.16. Originated in China. Different reading 'Huachangocai'.

Huachangocai. Wang & Yu, 1989, *Camellias,* p.48. Different reading for **Huachang'e Cai.**

Huadu Jinian. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.414; Chinese synonym for the USA *C.japonica* **ACS Jubilee.**

Huafeicui. (Variegated Jadite). Wang & Yu, 1989, *Camellias,* No.56, p.35, colour pl. p.131. Chinese synonym for the USA *C.japonica* **Betty Sheffield Blush Supreme.**

Huafeizhuafurong. *(C.japonica), Chinese Camellia Culture*, 2003, p.257 with colour photo; Flower colour a mixture of white and bright red. 3 layers of petals, the top layer raised and interspersed with stamens. Diameter 10-12 cm. Late flowering. Originated by Lin Zhaohong, Chengnan Hongwu Tree & Flower Garden, Jinhua, China.

Huafengwei. (Variegated Phoenix Tail), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China*, p.49, No.300, colour photo No.173,A,B: Medium size, loose, informal peony type, soft pink, sometimes with red stripes, outer petals waved and fluted, and a centre of small, erect, folded petals, petaloids and stamens. Leaves deep green, elliptic. Originated in Sechuan Province, China.

Huafoding. ('Foding' Variegated). *(C.japonica),* Wang & Yu, 1989, *Camellia,* p.23, No.18: Small tree or shrub, strong growing. Flower buds spherical, flowers anemone form, outer petals in 1-2 rows, deep red variegated with white spots. Petaloids in centre forming a hemisphere, white and red with some intermixed stamens. Flower size 8-10 cm across. Blooms mid-season to late. Flowers long lasting to 20 days. Originated in Jinhua City, China.

Huafuding. (Variegated Buddha's Cauldron), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China,* p.42, No.228, colour photo No.124: Medium size, full, spherical, peony form, bright red with white variegation. Leaves ovate, mid-green, apices acute. Originated in China. "Fuding" is a round cooking pot with 4 legs.

Huafuling. (Variegated Incense Burner), *(C.japonica),* Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.79, colour photo, [p.138]: Complete double peony, red with white markings, hemispherical form. Originated in China.

Huafurong. (Variegated Hibiscus), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:* Medium sized, deep pink, rose form double with white variegation. Gao & Zhuang, 1989, *The Camellia in China*, p.40, No.203, colour photo, No.108,A,B: Rose form double, from white to white variegated pink, and pink striped red, with 2-4 rows of roughly imbricated, large, round, outer petals. Leaves olive to dark green, broad-ovate, apices acuminate. Originated in China.

Huaheding. (Variegated Crane's Head), *(C.japonica),* Shanghai Botanic Garden's List, 1985. Medium sized, red, formal double with white variegation. Originated in China.

Huaheling. (Variegated Crane's Feather), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:* Medium sized, deep pink, formal double with white variegation. of 60-70 small petals. See Chang, Shao Yun, 1987, *Camellia from Zhejiang,* p.96, colour photo [p.135]: Flowers bright red, 9-10 cm across, petals 60-70 in 10-11 rows, ovate, notched at apex, stamens and pistil degenerate. Buds, heart shaped, yellowish green. Flowers mid-season to late. Originated in Wenzhou, China.

Huahemu. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the Japanese **Hikarugenji** as 'Herme'.

Huahezhe. (Variegated Partridge), *(C.japonica),* Huang Nursery Catalogue, 1949. No description. Originated in China. Different reading: 'Hue Ho Che'.

Hua Ho Che. Savige, 1983, *International Camellia Journal,* No.15, p.47. Different reading for **Huahezhe.**

Huahudie. (Variegated Butterfly), *(C.japonica),* Liu, 1959, *Chungkuo Chuming Tichi Chung Hua Hui.* Medium sized peony form with large red and white stripes; petals loosely arranged, spoon shaped, mixed with large stamens. Leaves light green, ovate, yellowish veining. See Gao & Zhuang, 1989, *The Camellia in China,* p.36, No.168, colour photo No.84. Different reading 'Hua Hu Tieh'. Originated in China.

Hua Hu Tieh. Savige, 1983, *International Camellia Journal,* No.15, p.46. Different reading for **Huahudie.**

Huahun. (Soul of Flower). *(C.reticulata) Collected Papers,* p.170, International Symposium on *C.chrysantha*; 8-11th January, 1994. "Selecting and Breeding New Varieties of *C.reticulata*": Peony type, osmanthus golden orange colour, 28-36 petals in 5-7 rows, 11-13 cm across. Stamens are few, divided into several groups, or, rarely, cylindrical, forming several flower hearts. Pistil degenerate, style divided to ovary. Blooms mid-season. Leaves are ovate, 9-11 cm long x 4.3-5 cm wide and form a "V" shape. Originated in Yunnan, China.

Huaji. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.428; Chinese synonym for the USA *C.japonica* **Clown.**

Huaji Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.101. Chinese synonym for **Blossom Time.**

Huajianli. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.413; Chinese synonym for the Japan *C.japonica* **Hanamigasa.**

Huali. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.153. Chinese synonym for the Japanese *C.sasanqua* **Hanagasa.**

Hualian. (Variegated Face*), (C.japonica),* Wang & Yu, 1989, *Camellias,* No.27, p.26: Flower bud peach shaped. Flower very large, over 10 cm across. Petals in 2-3 rows; petaloids deep pink, variegated with white spots. Stamens divided into groups mixed with petaloids. Styles divided into 5. Flowers mid-season. Originated in China.

Hualigelan. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.79. Chinese synonym for **Reg Ragland Variegated.**

Hualuzhen. (Variegated Precious Dew), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China,* p.54, No.349, colour photo, No.207: Large size, semi-double to open peony, red with white blotches, 2-3 rows of large, emarginate, outer petals and the centre a mixture of small, erect petals, petaloids and stamens. Leaves mid-green, ovate, apices acute, margins serrate. Originated in China.

Huameihong. *(C.japonica), Chinese Camellia Culture,* 2003, p.257 with colour photo; Formal double, dark red with white spots. Diameter 13-14 cm. Thick petals, notched at the edges. Flowers mid-season. Originated by Lin Zhaohong, Chengnan Hongwu Tree & Flower Garden, Jinhua, China.

Huamudan. (Variegated Peony), Wang & Yü, 1981, *Shanchahua,* p.74. No description. Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.74, colour photo, [p.117]: Medium size, open peony, red blotched white, with large, reflexed outer petals and some small, erect, centre petals mixed with stamens. Leaves ovate, dark green, apices acuminate, margins serrulate. Chinese synonym for the Japanese *C.japonica* **Daikagura.** A virus variegated form of **Qiumudan.**

Huanao. (Variegated Agate), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China,* p.52, No.330, colour photo No.189: Large size, red with white blotches, semi-double with 12-14 petals and a centre of yellow stamens, broken by a few small, erect, centre petals. Leaves light green, ovate with apices tapering acute, margins serrate. Originated in China.

Huanao. Gao & Zhuang, 1989, *The Camellia in China,* p.71, No.509. Synonym for the New Zealand hybrid: **Brian Doak Variegated.**

Huan-chu-cha. Watanabe & Andoh, 1980, *Hana to Kino Bunka, Tsubaki.* Different reading for 'Huanzhu Cha'.

Huangbai Shancha. (Yellow & White Camellia), *(C.japonica),* Zang, Chou, (Ming Dynasty, 1368-1644), *Ping Hua Pu* (Vase Flower Register). No description. Originated in China. (Believed extinct).

Huangda. (Attaining Yellow). Gao, Jiyin, Ltr. 25 June 1990. Chinese synonym for the American *C.japonica* **Dahlohnega.**

Huangdiaozhong. (Yellow Fuschia). *(C.tunghinensis). Collected Papers,* International Symposium on *C.chrysantha,* 8-11th January 1994; "A Sum-up Report on Research in Breeding of Yellow Camellias" by Cheng Jinshui et al. A special clone of *C.tunghinensis* used for breeding and designated a "super tree". Originated in China.

Huangguan. (Imperial Crown), *(C.japonica),* Shanghai Botanic Garden's List, 1985. Medium sized, full peony with crinkled, waved and fluted petals, red with white blotches and some yellow stamens scattered through the centre. Leaves mid-green, broad-lanceolate, long acuminate apex, shallow crenate-serrate margins, prominent venation. See Gao & Zhuang, 1989, *The Camellia in China,* p.41, No.220, colour photo, No.118. Originated in China.

Huangguan Baoshi Mingtian. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.14. Chinese synonym for the USA *C.japonica* **Tomorrow Crown Jewel.**

Huangguan Chamei. (Imperial Crown Sasanqua). *(C.sasanqua*). Gao Jiyin, 1996, *The Observations from the Camellia World,* back page.: This sasanqua was first seen in China about 1988. Deep red, blotched white, peony form. Small to medium size. Early blooming.

Huang Hai Nan Pao Chu. Savige, 1983, *International Camellia Journal,* No.15, p.47. Different reading for **Huanghainan Baozhu.**

Huang-chia-tsao-tao-hung. Watanabe, & Andoh, 1980, *Hana to Kino Bunko, Tsubaki,* p.156. Different reading for 'Huangjia Zaotaohong', synonym for **Zaotaohong.**

Huanghainan Baozhu. (Yellow Hainan Jewellery), *(C.hybrid),* Huang Nursery Catalogue, 1949. No description. Originated in China. Different reading: 'Huang Hai Nan Pao Chu'. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.155, and Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.297 with colour photos; A crossing of *C.sasanqua* and *C.oleifera.* The first yellowish hybrid successfully bred in China. Flowers white with yellowish centre, occasionally with pink tips to petals. Anemone form, miniature to small, outside petals 7-10, small petals and petaloids in a ball-shaped centre. Leaves mid-green, small and narrow. Upright, average groawth. Flowers early.

Huang-hsiang. Watanabe & Andoh, 1980, *Hana to Kino Bunko, Tsubaki,* p.156, No.33. Different reading for **Huangxiang.**

Huangji Jiushiyi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.425; Chinese synonym for the Japan *C.hybrid* **Kinomoto Ninety One**

Huangjia Tian'erong. Gao, Jiyin, Ltr, 25 June 1990. Chinese synonyn for Nuccio's **Royal Velvet.**

Huangjia Zaotaohong. Fang, 1930, *Diannan Chahua Xinozhi.* Synonym for **Zaotaohong.** Different reading: 'Huang-chia-tsao-tao-hung'. Translation: Huang Family Early Peach Red.

Huangjiayuedai. Gao, Jiyin, 1993, *The Observations from the Camellia World,* No.561, p.69. Chinese synonym for the USA *C.reticulata* hybrid **Roy Stringfellow.**

Huangjin Shijian. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.p.125. Chinese synonym for **Prime Time.**

Huangjingxi. (Astonished Yellow), (*C.nitidissima* hybrid). Gao, Jiyin, 2007, *The Identification.. ..Outstanding Camellias,* p.283 with colour photo; Originated by John Wang, San Francisco, USA, and introduced into China in 2002. Flowers light yellow, semi-double, medium size, petals broad-round, waved at edges, dense and prominent yellow stamen centre. Leaves dark green, lance shaped, rough surface. Strong spreading growth. Not cold hardy. Flowers mid-season to late.

Huanglindang. (Gold Jingle). *(C.tunghinensis). Collected Papers,* International Symposium on *C.chrysantha,* 8-11th January 1994; pp.138-143, "Research on Breeding Yellow Camellias. A Sum-up Report" by Cheng, Jinshui et al: A special clone of *C.tunghinensis* selected for breeding yellow flowered camellias and designated a "super tree".

Huangmudan. (Yellow Peony). *(C.nitidissima* var. *longistyla). Collected Papers,* International Symposium on *C.chrysantha*, 8-11th January 1994; pp.138-143, "Research on Breeding Yellow Camellias. A Sum-up Report" by Cheng, Jinshui et al: A special clone of *C.nitidissima* var. *longistyla,* erroneously as *C.petelotii* var. *longistyla,* selected for breeding yellow flowered camellias and designated a "super tree".

Huangshancha. (Yellow Camellia), *(C.japonica),* Wang, Shimao, 1587, *Xue Pu Za Shu.* Blooms early. Large yellow flowers, precious and rare. Originated in China. (Believed extinct).

Huangshizi. (Wild Lion), Gao & Zhuang, 1989, *The Camellia in China,* p.54, No.356, colour photo, No.214. Chinese synonym for the Japanese **Arajishi.**

Huangxiang. (Yellow Fragrance), *(C.japonica),* Chen, Jingyi, 1253, *Quan Fang Bei Zu.* Fang, 1930, *Diannan Chahua Xiaozhi:* It blooms early with the chrysanthemums. Originated in China. Different reading: 'Huang-hsing'.

Huangxin Baiban. (Yellow Heart. White Petals), *(C.japonica),* Fang, 1930, *Diannan Chahua Xiaozhi:* The petals are snow white but the centre is waxy yellow. Originated in China.

Huangxiuqiu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.425; Chinese synonym for the Australia *C.japonica* **Brushfield's Yellow.**

Huangyu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.421; Chinese synonym for the Japan *C.sasanqua* **Kôgyoku.**

Huaqibian. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.24. Chinese synonym for **Chameleon.**

Huasajin. (Variegated Spreading Gold), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China*, p.49, No.303, colour photo No.176: Medium size, 8-9 cm across, blush pink with a peppering and ticks of crimson. Formal double with 6-7 rows of rounded petals, reducing in size to the centre. Blooms mid-season. Leaves dark green, broad ovate. Originated in China.

Huashan Mingtian. Gao, Jiyin, Ltr,30 July, 1990. Chinese synonym for the Californian **Tomorrow Park Hill.**

Huashanhule. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.136. Chinese synonym for **Coral Delight Variegated**.

Huashiba Xueshi. (Variegated 18 Scholars), *(C.japonica),* Chang, Shao Yun, 1987, *Camellias from Zhe-jiang,* p.84, colour photo [p.134]: Light pink with some red streaks, formal double of 60-80 petals, medium size. A sport of **Baishiba Xueshi.** See Gao & Zhuang, 1989, *The Camellia in China*, p.44, No.245, colour photo No.133. This cultivar usually shows all the sports, self red, self pink, pink striped red, white striped red and pink. These include the sports: **Fenshiba Xueshi, Hongshiba Xueshi,** and **Baishiba Xueshi.** Originated in China.

Huatong. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.111. Chinese synonym for **Flower Boy.**

Huawubao. (Variegated Five Treasures), *(C.japonica),* Liu, 1959, *Chungkuo Chuming Tichi Chung Hua Hui*. Variegated soft pink informal double with some red marks. Originated in China. Different reading: 'Hua Wu Pao'.

Huawucai. (Spotted Multicolour). *(C.japonica),* Gao, Jiyin, Ltr, January 21st, 1993: Colours red or white or various colours in a flower or different flowers on a plant. Medium size, peony form, blooms early to late. Plant with vigorous, spreading growth. Originated in the Fujian Province, China.

Hua Wu Pao. Savige, 1983, *International Camellia Journal,* No.15, p.46. Different reading for **Huawubao.**

Huawuriding. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.168. Chinese synonym for **Itsukamachi Variegated.**

Huawuzhi. (Variegated Five Branch), *(C.japonica),* Shanghai Botanic Gardens List, 1985: A medium sized, blush white, formal double with pink flecks and streaks. Centre sometimes breaking, when fully open, to show rare stamens. Leaves, dark green, elliptic, apex acuminate, base tapered; finely, shallowly serrate. Originated in China.

Huaxianzi. Shao, Taichong, 1992, *The Observations from the Camellia World*, p.68, No.213. Chinese synonym for the USA *C.japonica* **Flowerwood.**

Huayanghong. (Variegated Bright Red), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China*, p.55, No.365: Medium size, red and white, semi-double. Originated in China.

Huaye Baozhu. (Variegated Leaf Jewellery), *(C.reticulata),* Yü & Feng, 1985, *Yunnan Shanchahua.* Feng et al., 1986, *Yunnan Camellias of China,* p.94, colour photo: Leaves large, thick, with many yellow spots, oblong, broad in the mid-region, apices acuminate and slightly recurved, bases rounded to broad-cuneate, 8.5-10 cm long x 3-5 cm wide. Flowers dark red (RHS.CC.53D), diameter 12-14 cm. Petals about 29 in 3-5 whorls, outer whorls flat, inner whorls folded, curved, erect, forming a raised flower centre. Stamens numerous, divided into 5 groups by curved petals. Pistil rudimentary. This cultivar is similar to **Baozhucha,** but the

flowers are larger and colour is brighter with a tinge of blue. Flowers mid-season. Different readings: 'Huayehpaochu', 'Huayeh Pao-chu', 'Huayebaozhu'. Western synonyms: 'Variegated Leaf Jewellery', 'Variegated Leaf Precious Pearl'. Originated in Yunnan, China.

Huaye Mudan. (Variegated Leaf Peony), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China*, p.35, No.163: Medium size, peony form, red with variegated leaves. Blooms mid-season. Originated in China.

Huaye Xueta. (Variegated Leaf, Snow Tower), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China,* p.55, No.364 as 'Hue yie xue ta': Medium size, peony form, light pink. Originated in China.

Huaye Yianzhi Mudan. (Variegated Leaf Carmine Peony). *(C.japonica),* Gao, Jiyin, Ltr, January 21st 1993: A sport of **Shentao Mudan.** Large size, carmine blotched white, peony form flower with yellow variegated leaves. Originated in China.

Hua-yeh Pao-chu. Durrant, 1967, *New Zealand Camellia Bulletin,* vol.V, No.4, p.27. Different reading for **Huaye Baozhu.**

Huayilanjiao. *(C.japonica), Chinese Camellia Culture,* 2003, p.234 with colour photo; A sport of **Yilanjiao.** Formal double, 7-8 cm diameter. Pink with deep red spots and lines. Synonym 'Daqiao'.

Huazao Cha. Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.74. Synonym for **Qiumudan.**

Huazaochun (Variegated Early Spring). *(C.japonica),* China Regn No.20. *China Flowers & Horticulture,* Feb 2008, No.4, p.46, with colour photo; A sport of **Zaochun Dahongqiu**, found in 1998 by Sun Shenghua, Taizhou, Zhejiang, China. Has flowered stable since 2000. Deep red with white dots, spots and stripes. Long flowering, early to mid-season.

Huazhan Shijie. Gao, Jiyin; Ltr, 25 June 1990. (Flowering season). Chinese synonym for Nuccio's **Showtime.**

Huazhaohe Zirong. Gao & Zhuang, 1989, *The Camellia in China,* p.75, No.547. Chinese synonym for the Japanese *C.hiemalis* **Showa-no-sakae.** Later amended to 'Zhaohe Zhi Rong'.

Huazhouqi. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.47. Chinese synonym for **Holly Bright Variegated.**

Huaziman. Gao & Zhuang, 1989, *The Camellia in China,* p.79, No.604. Chinese reading for the Japanese *C.sasanqua* **Hanajiman**.

Hubert Dodd. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings,* p.6, colour photo: A crimson semi-double to open peony form. Seeding of Imura, originated by Richard Dodd, Marshal-lville, Georgia, USA.

Hubert Osteen. *(C.japonica),* Fendig, 1951, *American Camellia Catalogue,:* Large, dark red (shading to purple as flower ages) semi-double to incomplete double (anemone form), 10-13 cm across x 5 cm or more deep. There are 13 petals, also large and small petaloids. Central stamen formation flares out. Filaments are purple, anthers golden. Buds long, pointed and purple. Leaves light, dull, olive green; long, narrow and lanceolate, recurved, prominent venation, apex acuminate on a plant, vigorous, upright, bushy and rapid in rate. Originated by H.G. Osteen, Sumter, South Carolina, USA. Parents said to be a large unnamed single and 'Mathotiana'. (**Julia Drayton**). First flowered 1936. Reg. No. 68, *American Camellia Yearbook,* 1954. Orthographic error: 'Hurbert O'steen'.

Hubert O'steen. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Orthographic error for **Hubert Osteen.**

Hubertina. *(C.japonica),* Caledonia Nursery Catalogue, 1874, p.5. No description. Originated in the Channel Isles. (Believed extinct.)

Huby Cooper. *(C.japonica), American Camellia Yearbook,* 1974, vol.II, p.233, Reg. No.1314: An 11 year old chance *C.japonica* seedling that first bloomed 1967. Originated by Hubert Cooper, Springfield, South Carolina, USA. Plant growth is spreading and medium with dark green leaves, 11 cm x 6 cm. The peony form, **Daikagura** type bloom is bright red and clear white, 11 cm wide x 6 cm deep with yellow anthers. Blooms mid-season to late. Similar to **Dixie Knight Variegated.**

Hudiecha. Feng et al., 1981, *Yunnan Shanchahua,* p.86. Synonym for **Dali Diechi.**

Hudseyoni. *(C.japonica),* L.L. Liebig, 1839 *Verzeichnis von Warmen und Kalten Hauspflanzen…,* p.10. Originated in Germany. No description. (Believed extinct).

Hudsonii. *(C.japonica),* Henrincq, Apr.1849, *Revue Horticole,* p.150 as 'Hudsoni': 8-9 cm in diameter, imbricated, cerise red, the internal petals bordered with white. Originated in England.

Hugh Evans. *(C.sasanqua),* Wilmot, 1943, *Camellia Variety Classification Report*, p.14. No description. SCCS., 1947, *The Camellia. Its Culture and Nomenclature* as 'Hugh Evans'(Hebe): Single of 6 petals, deep rose-pink, about 7 cm across. Vigorous growth; upright and spreading. Leaves dark, glossy green, 4 cm x 2.5 cm, blunt apex, base cuneate, margins coarsely crenate. Originated by Coolidge Rare Plant Gardens, East Pasadena, California, USA from seed imported from Japan and originally invalidly named 'Hebe' about 1935.

Hugh Evans Blush. *(C.sasanqua). Camellia Nomenclature* 2006, p.164. Sport of **Hugh Evans.** Very light blush pink, almost white. Medium, upright, somewhat lacy growth habit.

Hugh Kennedy. *(C.japonica),* ACRS., 1959, *Camellia Annual,* No.6, p.21, Reg. No.36: Originated by Miss E.G. Kennedy, St. Kilda, Victoria, Australia. It is a mutant of **The Czar** first observed 1953. Its blooms are three-quarters the size of **The Czar** and the petals thickened and crimped. The leaves are also smaller and leathery-rugose. See colour photo: p.25, ACRS, 1966, *Camellia News,* No.24.

Hugo Jahnz. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.54 erroneously as 'Hugo Johnz': Dark rose-red. Medium to large single. Vigorous, upright growth. Mid-season blooming. Originated by Mrs W. Salisbury, Summerville, South Carolina, USA. Orthographic error: 'Hugo Johnz'.

Hugo Johnz. SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.54. Orthographic error for **Hugo Jahnz.**

Hugoni. *(C.japonica),* Tagliabue, 1840, *Nomenclatore Camelliae.* No description. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.14 as 'Ugonii': Beautiful broad form, vivid red. As "Ugoni" is considered to be the correct orthography of a persons name, 'Hugoni' is reduced to an orthographic variant and validity transferred to **Ugoni.** Van Houtte Catalogue, 1854-1855, 53:47, as 'Ugoni d'Italia': White lined with carmine pink. Imbricated. Originated in Italy. Synonym: 'Ugoni d'Italie'. Orthographic errors: 'Ugomi', 'Ugonii', 'Uggerii'.

Huia. *(C.reticulata). New Zealand Camellia Bulletin,* 1984, Vol.XIII, No.8, p.12, Reg. No.220: An 18 year old chance seedling, originated by H.J. Clark, Auckland, New Zealand. The plant has rapid, upright, dense growth with dark green leaves, 12 cm x 5.5 cm and first flowered 1970. The semidouble flowers appear in mid-season and measure up to 16 cm across x 10 cm deep. They are deep rose-pink with 16 petals, 4-5 petaloids and the stamens have cream filaments and yellow anthers. Colour is RHS.CC. Red Group 54A. See front cover 1985, *New Zealand Camellia Bulletin,* vol.XIV, No.3 for colour photo.

HW0203. *(C.reticulata* hybrid). Heartwood Nursery, Seedling List 2009; A 6.5 cm diameter, bright neon rose, flattish semi-double to loose peony. Heavy budset, some buds groom by complete abscission of all flowering parts. Flowers early. A hybrid incorporating *C.pitardii*, *C.fraterna*,

Forty-Niner, and **Tom Knudsen.** Originated by Heartwood Nursery, Fort Bragg, Calif., USA.

HW0213. (*C.reticulata* hybrid), Heartwood Nursery, Seedling List 2009; 7.5 cm diameter, blush pink, darker at the edges. Flowers mid-season. A hybrid incorporating *C.pitardii, C.fraterna,* **Tom Knudsen** and **Forty-Niner.** Originated by Heartwood Nursery, Fort Bragg, Calif., USA.

HW0216. (*C.reticulata* hybrid). Heartwood Nursery, Seedling List 2009; A 7.5 cm diameter, milky white with a pink blush, peony form. Flowers mid-season. A hybrid incorporating *C.transnokoensis*, *C.pitardii*, **Forty-Niner** and 'Purple Gown' (**Zipao**). Originated by Heartwood Nursery, Fort Bragg, Calif., USA.

HW0217. (*C.reticulata* hybrid) Heartwood Nursery, Seedling List 2009; A 10 cm diameter, light pink, semi-double to peony form. Flowers mid-season. A hybrid incorporating *C.pitardii*, **Forty-Niner** and 'Crimson Robe' (**Dataohong**). Originated by Heartwood Nursery, Fort Bragg, Calif., USA. Aka 'No Regrets'.

HW0219. (*C.reticulata* hybrid) Heartwood Nursery, Seedling List 2009; Flowers 5 cm diameter, irregular double, sweetpea pink, lighter at petal bases. A hybrid incorporating *C.pitardii, C.fraterna,* 'Purple Gown' (**Zipao**), and **Tom Knudsen.** Originated by Heartwood Nursery, Fort Bragg, Calif., USA

HW0223. (*C.reticulata* hybrid), Heartwood Nursery, Seedling List 2009; Flowers 7.5 cm diameter, mid-pink, irregular double. Flowers mid-season. A hybrid incorporating *C.pitardii,* **Tiny Princess, Buddha,** 'Purple Gown' (**Zipao**), **Elegant Beauty** and **Forty-Niner.** Originated by Heartwood Nursery, Fort Bragg, Calif., USA

HW0241. (*C.reticulata* hybrid), Heartwood Nursery, Seedling List 2009; A 7.5 cm diameter blush pink, darker at the edges. Compact plant. A hybrid incorporating *C.pitardii,* **Tiny Princess, Buddha**, 'Purple Gown' (**Zipao**), **Elegant Beauty** and **Forty-Niner.** Originated by Heartwood Nursery, Fort Bragg, Calif., USA

HW0242. (*C.reticulata* hybrid), Heartwood Nursery, Seedling List 2009; 10 cm diameter, frilly, rose red flower, irregular double to peony form. A hybrid incorporating *C.pitardii, C.fraterna,* 'Purple Gown' (**Zipao**), and 'Crimson Robe' (**Dataohong**). Originated by Heartwood Nursery, Fort Bragg, Calif., USA

HW0318. (*C.reticulata* hybrid). Heartwood Nursery, Seedling List 2009; 7.5 cm diameter, deep pink, irregular double to peony form. A hybrid incorporating *C.pitardii, C.saluenensis, C.transnokoensis,* 'Purple Gown' (**Zipao**), and **Forty-Niner.** Originated by Heartwood Nursery, Fort Bragg, Calif., USA. Aka 'Cheap Frills'.

HW0321. (*C.reticulata* hybrid). Heartwood Nursery, Seedling List 2009; 6.5 cm diameter, star shaped, rose pink bouble. Compact habit. A hybrid incorporating *C.pitardii*, **Forty-Niner**, and **Tom Knudsen.** Originated by Heartwood Nursery, Fort Bragg, Calif., USA.

HW0343. (*C.reticulata* hybrid). Heartwood Nursery, Seedling List 2009; Soft pink, peony form flowers. Strong, open growth. A hybrid incorporating *C.pitardii,* **Forty-Niner,** and **Tom Knudsen.** Originated by Heartwood Nursery, Fort Bragg, Calif., USA

HW0348. (*C.reticulata* hybrid). Heartwood Nursery, Seedling List 2009; 7.5 cm diameter, trumpet shaped with petals tapering to a point. Long narrow leaves, open growth habit. A hybrid incorporating *C.pitardii, C.fraterna,* **Forty-Niner,** and 'Crimson Robe' (**Dataohong**). Originated by Heartwood Nursery, Fort Bragg, Calif., USA. Aka 'Wicked Witch'.

HW0351. (*C.reticulata* hybrid). Heartwood Nursery, Seedling List 2009; A cross of *C.reticulata* with **Elegans.** Exhibition quality flowers. Originated by Heartwood Nursery, Fort Bragg, Calif., USA. Aka 'Elegant Gown'.

HW0389. (*C.reticulata* hybrid). Heartwood Nursery, Seedling List 2009; Miniature, light pink ageing to white. Dark green, narrow leaves. A hybrid incorporating *C.pitardii, C.fraterna*, **Forty-Niner,** and **Tom Knudsen.** Originated by Heartwood Nursery, Fort Bragg, Calif., USA

HW0429. (*C.reticulata* hybrid). 5 cm diameter, soft pink, semi-double to rose form flowers. Seed parent *C.pitardii* x 'Purple Gown' (**Zipao**). Originated by Heartwood Nursery, Fort Bragg, Calif., USA. Originated by Heartwood Nursery, Fort Bragg, Calif., USA.

HW0441. (*C.reticulata* hybrid). Heartwood Nursery, Seedling List 2009; Large, vibrant rose pink peony form flowers. Few and usually terminal buds when young, budset down the stems greater as plant matures. A hybrid incorporating *C.pitardii,* 'Purple Gown' (**Zipao**), **Buddha,** and **Harold L. Paige.** Originated by Heartwood Nursery, Fort Bragg, Calif., USA. Aka 'Harold Murphy'.

Hyacinth B. Thurman. *(C.japonica), American Camellia Yearbook,* 1969, p.162, Reg. No.1021: A 7 year old chance seedling that first bloomed 1965. Originated by John E. Thurman, Covington, Louisiana, USA. Plant growth is vigorous, open and medium in density with dark green leaves, 11 cm x 7 cm. and acuminate apex. The semi-double flower, similar to **Tomorrow,** is 12.5-13 cm across and 8.5 cm deep, with 37 large, wavy petals, 12 fluted petals and numerous petaloids, occasionally fimbriated. Vibrant pink with yellow anthers and white filaments. Blooms midseason.

Hyakkenbori. (Place Name near Kanazawa Castle), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.106, p.53, description, p.118: A pink single with cup-shaped flowers. Leaves ovate, base rounded, apex gradually acuminate, wavy. Petals 5-7, oblong, 4.3 cm long x 3.8 cm wide, slightly emarginate, recurved, pale pink (Neyron Rose 623/3). Stamens 1.7 cm long, filaments palest pink. Flowers late. Originated in the wild at Hyakkenbori, Kanazawa City, Ishikawa Prefecture, Japan.

Hyakuju-no-tsukasa. (Lord's Long Life), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.203, colour photo and description: Medium size, dark red, wide campanulate single, of 5 broad-ovate petals and a central stamen cylinder with white filaments, joined for the lower half, and yellow anthers. Blooms mid-season to late. Leaves mid-green, long-elliptic, apices long tapering acuminate, margins serrate. Originated in the Okayama Prefecture, Japan. A natural seedling of **Shirayuri.** Named and released by Nobuo Sasai in 1982.

Hyakuman. (Million), *(C.japonica),* Hino, Sukekatsu, 1632; *Sukekatsukyô-ki; Chinka Zufu,* (before 1700), Watanabe, 1969, pl.36: A deep vermillion, 5 petalled single with wavy petals surrounding a compact petaloid centre. Originated in Japan. (Believed extinct.)

Hyakumangoku. (Million Rights), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.10. No description. Originated in the Aichi Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.218 with colour photo; English translation p.152. Medium size, deep red, tubular to trumpet shaped single, round petals, cylindrical stamen cluster. Leaves narrowly elliptic, large, somewhat waved. Upright, vigorous growth. Parentage unknown, selected and released by Fumio Naitô in 1976.

Hy-ball. *(C.hybrid), American Camellia Yearbook,* 1961, colour photo facing p.242: Soft pink with deeper shades, peony form with fluted and notched petals. Stamens intermixed with centre petals. Originated by David L. Feathers, Lafayette, California, USA.

Hy-ball Podmate. *(C.hybrid), American Camellia Yearbook,* 1967, p.41. No description. Originated by David L. Feathers, Lafayette, California, USA. No valid listing located.

Hybrid L. *(C.hybrid),* Threkeld & Anthony, 1957, *American Camellia Yearbook,* p.160. Dr Walter Lammerts, while with Descanso Gardens, created 'Hybrid L', a cross between *C.cuspidata* and *C.japonica,* which is vigorous, growing to 8 feet in 6 years. Foliage and flower resemble *C.cuspidata* except larger and on a more lush scale.

Hybrid Z. *(C.hybrid),* Hilsman, 1966, *American Camellia Yearbook,* 1966, p.123. A hybrid raised by John Sobeck, California, USA of a cross between *C.saluenensis* and *C.reticulata* **Captain Rawes.**

Hybrid Number 203. SCCS., 1958, *The Camellia Review.* Synonym for **Creation**.

Hybrida Colorata. *(C.japonica),* Jacob Makoy et Cie Nursery Catalogue, 1833. No description. Courtois,1833, *Magazin d'Horticulture,* 1[pt.D]:316; Berlèse, 1837, *Monographie,* ed.1, p.78: Branches blackish, leaves 7.3 cm long x 5 cm wide, ovate, edges rolled, recurved, venation prominent; buds large, scales green; flower medium size, cherry-red, often spotted with white, semi-double, petals erect, rounded, mixed with stamens. Originated in Holland.

Hybrida Rubra. *(C.japonica),* Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. Originated in Italy. No description. (Believed extinct).

Hyde Porter. Sewell & Parks, 1981, *American Camellia Yearbook,* p.127. Abbreviation for **James Hyde Porter.**

Hydrangea. Real Companhia Horticolo-Agricola Portuense, Catalogue, No.29, 1895-1896, p.49. Orthographic variant for **Hydranja.**

Hydranja. *(C.japonica),* José Marques Loureiro Catalogue, No.9, 1872-1873. Scarlet, anemone form. Mentioned in *Jornal da Sociedade Agricola do Porto,* 1857, Vol.II No.8, p.238, as 'Idranja', as present at the 1857 Porto Agricultural Exhibition. Originated in Portugal. Orthographic variants 'Hydrangea', 'Idranja'..

Hylas. *(C.japonica),* Herbert, 1837, *Amaryllidaceae & Suppl.,* p.367: White striped pink; flowers in 4 uniform compartments. Originated by Rev. Herbert from the common red ('Rubra Simplex' [**Rubra**] x **Variegata**) x **Pompone.** Originated in England. Synonym: 'Ulantha'.

Hyman's Retic. (*C.reticulata* hybrid). ACS, *The Camellia Journal,* Feb 1999, p.22, Reg. No.2489. A very large, orchid pink, loose peony to semi-double cross of **Pop Gee** x **Mrs D.W. Davis Special.** Flowers mid-season to late. Originated by Hyman R. Norsworthy, Beaumont, Tex., USA. *American Camellia Yearbook,* 1999, p.1, colour photo before p.1. The 8 year old seedling first flowered in 1993. Average flower size is 16.5 cm across x 10 cm deep, with 30-35 petals showing heavy texture, no petaloids, yellow anthers and white filaments. Plant growth is upright and vigorous with dark green leaves 10 cm long x 6.5 cm wide.

Hyman's Seedling. U.S. National Arboretum List, 1959. Synonym for **Cotton Candy.**

Hyman's Semi-double Pink. SCCS., 1956, *The Camellia. Its Culture and Nomenclature.* Synonym for **Cotton Candy.**

Hyôgo. (Place Name), *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.94: Very small, very deep crimson, anemone form with 5 outer petals and a short, white petaloid centre. Originated in Japan. Thought to be a synonym for **Bokuhan.**

Hyperscent. *(C.hybrid). New Zealand Camellia Bulletin,* 1994, Issue No.118, vol.XVIII, No.5, p.32, Reg. No.344: Originated by J.R. Finlay, Whangarei, New Zealand. A fragrant seedling from the cross **Mrs Bertha A. Harms** x (**Salab** x **Scentuous**). A rose form double of bright scarlet, 10 cm across x 5 cm deep with 34 petals and 8 petaloids, with yellow anthers on white filaments, tending pink at the base. Growth habit is dense and slow, with foliage 9 cm long x 4 cm wide; dark green. Blooms early to late.

Hyperscent. *New Zealand Camellia Bulletin,* 1993, Issue No.115, vol.XVIII, No.2, p.47, colour pl. p.48. A provisional name. A seedling of *C.rosiflora* x *C.lutchuensis* raised by John Lesnie. Later renamed **Magnificent.**

Hypolite Thobie. Catalogue Descriptif des Pépinières de Kerisnel, 1994, p.29. Orthographic error for **Hippolyte Thoby.**

Hyryu. Ghisleni, Pier Luigi, 1982, *Le Camelie,* p.77. Corruption of the Japanese name **Hiryû.**

Hyûga. (Old name for Miyazaji Prefecture), *(C. japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.67: A small, flat anemone form of deep crimson with short, compact stamen cluster. Originated in Japan. (Believed extinct.)

Hyûga-tsubaki. (Camellia from Hyûga), *(C.japonica),* Mainichi Shinbun, 1971, JCS., ed., *Tsubaki,* p.13: Large size, carmine red single. The original tree is in the Aoshima Camellia garden, Miyazaki Prefecture, Japan and was named by Mr.Iwakiri.

I.

I Believe. (C. *japonica),* Belle Fontaine, ACS., 1961, *The Camellia Journal, vol.* 16, No.2 p.32; SCCS., 1962, *Camellia Nomenclature,* p.53: Frosted watermellon red. Very large semi-double to peony form with wavy, fluted petals and yellow stamens. Upright growth. Mid-season blooming. Originated by K.C. Ellsworth, Myrtle Beach, South Carolina, USA.

I Nien Hung. Waterhouse, 1970, ACRS., *Camellia News,* No.40. p.5. Different reading for **Yinie-hong.**

I-p'in-hung. Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.26. Different reading for **Yipinhong.**

I Yeh Shan Cha. Chinese name for *C.heterophylla* Hu. Different reading for 'Yiye Shancha'.

Iago. *(C.japonica),* Giles & Son Nursery Catalogue, 1881, p.91. No description. Originated in Australia. (Believed extinct.)

Iam Fragrant. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 2002, Issue No.141, vol.XXII, No.5, p.9, Reg. No.427. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between C.hybrid **Fragrant One** x *C.japonica* **Kramer's Supreme,** which first flowered in 1992. The flower is a large anemone form, 11 cm diameter x 4 cm deep, with about 16 pale pink petals (RHS.CC.56D) of a heavy texture. There are also about 100 curled deeper pink petaloids (RHS.CC.55D) forming a mass of about 6-7 cm in the centre. The flower has a light fragrance. The plant is upright, and of average density and growth rate, with mid-green leaves 7 cm long x 4 cm wide. Flowers early to mid-season.

Iannetta Bianchi. *(C.japonica),* Scarlatti Catalogue, 1888: Pure white, of beautiful form; magnificently imbricated. Originated in Italy.

Ianthe. *(C.japonica), Australian Botanical & Horticultural Society Report,* 1849. A seedling originated in Australia by Sir William Macarthur, Camden Park, NSW; Baptiste & Son Nursery Catalogue, 1861, p.9: Deep scarlet. (Believed extinct.)

Iarba. *(C.japonica),* van Houtte Catalogue, 1841, 7:10. No description. Gheldorf, Const., 1844, Catalogue of Plants and Price List, as 'Jarba': Fully imbricated, beautiful carmine pink, more or less orangy. Originated in Italy by Mariana. Burnier & Grilli Catalogue, 1846-1847: Imbricated rose form double. Bright cerise red. Charles van Geert Nursery Catalogue, 1845, p.7: Imbricated, full double, beautiful rose. Orthographic variants: 'Jarba', 'Jarbo'.

Ibis Plumage. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.106. Synonym for **Toki-no-hagasane.**

Ibuki. (Place Name), *(C.japonica),* Okumara, ca.1810, *Chinka Hin'i;* Yashiro, 1841, *Kokon Yôrankô,* vol.306. No description. Originated in Japan. (Believed extinct.)

Ibuki-no-kaori. (Ibuki Fragrance). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.33 with colour photo; English translation p.20. Small, purplish pink, bellflower shaped single with cylindrical stamens. Flowers mid-season to late. Fragrant. Leaves elliptic, medium size. Spreading, vigorous growth. A cross between **Ôtahaku** and *C.x williamsii* **Tulip Time,** originated and released by Atsushi Itô in 1988. From Chiba Prefecture.

Icaro. *(C.japonica),* van Houtte Catalogue, 1841, 7:10. No description. Synonym: 'Icaro d'Italie'. Originated in Italy. (Believed extinct.)

Icaro d'Italie. Alexis Dalliere, 1852, Price List, p.18. Synonym for **Icaro.**

Ice Follies. (*C.x williamsii* x *C.oleifera*). *American Camellia Yearbook*, 1992, p.34, Reg. No.2254: Medium to large size, bright pink, semi-double seedling of *C.x williamsii* **November Pink** x *C.oleifera.* Late blooming. Originated by William L. Ackerman, Ashton, Maryland, USA. The 12 year old seedling first flowered 1984. Average size bloom, 10 cm across x 5 cm deep with 18 petals, yellow anthers and white filaments. Plant cold hardy to -101/4º F. Plant growth upright, dense and medium in rate with dark green leaves 9.5 cm long x 3.2 cm wide. See colour pl. between pp.40-41.

Ice Follies (Mildorrie). *(C.japonica),* SCCS, *Camellia Nomenclature*, 1993, p.55, invalidly as 'Ice Follies': Originated by Mildorrie Camellias, Jasper's Brush, NSW, Australia. White, large semi-double to peony form flower. Slow, dense, upright growth. Fragrant.

Ice Melted. *(C.hybrid). New Zealand Camellia Bulletin*, 1992, Issue No.112, vol.XVII, No.5, p.37, Reg. No.315: A cross of an unnamed *C.japonica* seedling x **Scentuous,** raised by J.R. Finlay, Whangarei, New Zealand. It first bloomed 1988 at 9 years old. It has a rapid growth rate with dark green leaves 6 cm long x 4 cm wide. Flowers are semi-double, 10 cm across x 2 cm deep and have 9 petals and 3 petaloids, and yellow anthers on white filaments. The flowers are light pink (RHS.CC.55B-D), shading to lighter in the centre and are borne mid-season. Fragrant.

Ice Queen. *(C.japonica),* Eagle Heights Nursery Catalogue, 1965, p.10: A pure white seedling, raised from seed of 'Gigantea Alba' (**General Washington**) received from USA. Semi-double with with bright yellow stamens. Compact, bushy growth. Blooms mid-season. Originated in Australia.

Iceberg. *(C.japonica),* Pyron, 1971, *American Camellia Yearbook*, p.41: A pure white semi-double, 11-12 cm across. Originated by Dr William Ackerman, Glen Dale, Maryland, USA.

Icecream Smoothie. (*C.pitardii* hybrid). *New Zealand Camellia Bulletin*, March 2004, Issue No.147, vol.XXIII, No.5, p.10, Reg. No.463. Registered by N. Haydon, Takanini, New Zealand. A chance *C.pitardii* var. *pitardii* seedling that first flowered in 1996. The flower is 9 cm diameter x 4 cm deep, peony form, with 28-33 petals and a variable (0-15) number of petaloids. The stamens have gold anthers and cream filaments. The main petals are obcordate with a distinct shallow notch at the end that is delineated by a deep pink colour (RHS.CC.62A). The body of the flower shades from a near-white centre through pale pink (RHS.CC.62D) to 62C. The plant is spreading, dense and of slow growth rate, with dark green leaves 6 cm long x 3 cm wide. Flowers mid-season to late. Joint champion seedling, NZ National Show 2003.

Iced Fragrance. *(C.japonica),* ACRS., Dec.1990. *Camellia News*, No.115, p.10, Reg. No.387: Originated by Mildorrie Camellias, Strongs Road, Jaspers Brush, NSW, Australia. A chance seedling of **Furô-an** that first flowered 1982. Flowers are semi-double to peony form, informal double, white, fragrant, 11.5 cm across x 7 cm deep. Leaves matt, olive green, ovate, keeled. serrations obscure, veining prominent, apices acuminate, 10 cm long x 4.3 cm wide. Long flowering on a slow growing, upright, dense plant.

Iced Ginger. Camellias Victoria, Australia, *Newsletter*, Nov. 2008, p.16; No description.

Iceland. *(C.japonica), American Camellia Yearbook*, 1966, p.91. Reg. No.855: This white, semi-double flower has 18-20, long, oval, sweetpea shaped petals in 3 rows, that stand apart with a centre group of stamens. Size 10 cm across x 5 cm deep. Blooms mid-season to late. Plant growth is dense and medium in rate with dark green serrated leaves, 7.5 cm long x 3.8 cm wide. A chance seedling that first bloomed 1959 at 8 years. Originated by Julington Nurseries, Inc., Jacksonville, Florida, USA.

Ichibanhoshi. (The First Star), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.201: White variegations on red background; single, tubular blossom with cylindrical stamen cluster. Medium size. Mid-season flowering. Leaves ovate, medium sized, acuminate apex, surface even. Habit erect and vigorous. Originated in the Chûbu District, Japan. The original name was 'Misono'.

Ichichi Fucujin. Tammia Nursery Catalogue, 1961. Corruption of the Japanese name **Shichifuku-jin.**

Ichifuji. (Fuji the First), *(C.japonica),* Seibundô Shinkôsha, 1989, *Senchinshû,* p.18, colour photo, p.201, description: Medium to large white single, with 7-9 somewhat crinkled, emarginate petals and a large stamen cluster with light yellow anthers, cream filaments. Leaves glossy, mid-green, broad-ovate, apex blunt acute, venation impressed, finely, shallowly serrate. Originated in the Kansai District, Japan. Different reading: 'Ichifuzi'. Note: This name is part of a popular saying; "Ichi-fuji, Ni-take, San-nasubi", meaning "Fuji the first, Hawk the second, Eggplant the third". This is the order of auspicious symbols in the first dream of the new year.

Ichifukaya. (Legendary Princess from Kago Drama), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.399, colour photo and description: Large size, deep pink, fading to white at petal margins with red streaks and veining, opening to peony form with 3 rows of emarginate guard petals. Blooms mid-season to late. Leaves oblong-ovate, apices abrupt-acute, margins serrate, dark green. Originated in Kagoshima Prefecture, Japan. A sport of **Ômiyahime.** *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.31 with colour photo; English translation p.20. The original tree survives in a private garden in Taramizu City. Named and released by Kagoshima Camellia Society in 1985.

Ichifuku. (A Fortune), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.20, colour photo and description: Small size, white, wide campanulate single, with broad, overlapping, emarginate petals and central stamen column with white, pinched filaments, joined for lower half, and yellow anthers. Blooms mid-season to late. Leaves bright mid-green, lanceolate to elliptic, apices tapering acuminate, margins serrulate. Originated in Nagasaki Prefecture, Japan at a private family in Matsuura City. Discovered and named by Masatake Kumazawa in 1979.

Ichifusa. (Place Name). (Higo). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.247 with colour photo; Medium size flat single, with slender, ribbon-like, white stripes on red ground. Filaments pale pink, ume-jin (apricot) type. Flowers mid-season. Leaves broad-ovate, medium size, dark green. Upright, vigorous growth. A sport of **Yamato-nishiki**, selected and registered by Tomoya Nishimura in 1999. From Kumamoto, Japan.

Ichifuzi. Different reading for **Ichifuji.**

Ichijôji. (Ichijôji Temple). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.31 with colour photo; English translation p.19. Medium size, deep red, tubular single with cylindrical stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Selected from wild japonicas at Ichijôji Temple in Kyoto City, named and released by Minoru Satô in 1981. From Kyoto to Aichi Prefecture.

Ichike-renge-murasaki. (Ichi Family's Purple Lotus). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.111 with colour photo; Purplish red, large semi-double, lotus form. Slender, tubular stamen column. Late flowering. Leaves narrowly elliptic, medium size, smooth surface, deep green. Fast, upright growth. Branches weep, due to the weight of flowers. A chance seedling from a garden in Kyoto, Japan, considered to be a natural cross between **Moshio** and **Yuri-tsubaki.**

Ichiki-kantsubaki. (Next Fair - Winter Camellia), *(C.hiemalis),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.48; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.38: Medium size, double, deep pink.

Blooms mid-season. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.321; English translation p.242. Spreading, vigorous, dense branching. The original tree, estimated age 70 to 80 years, is growing in Higashi-ichiki Town, Kagoshima Prefecture, Japan. Characteristics, except flower colour, similar to **Shishigashira.**

Ichiko-wabisuke. (Mrs Ichiko's Wabisuke), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.I, 1972, p.365; Yokoyama et al., 1975, *Gendai Tsubaki Meikan,* p.71; Satô, 1975, *Chûbu no Tsubaki,* p.111, colour photo; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.181; Seibundô Shinkôsha, 1979, *Senchinshû,* p.18: Small red campanulate, 5-6 petalled single with a small cylinder of infertile, white stamens. Leaves small, lanceolate-elliptic, dark, glossy green, tapered acuminate apex, margins serrate. Early flowering to mid-season. This cultivar does not show full "wabisuke" characteristics with no tomentosum on the ovary, and is of unknown origin. The original tree, about 80 years old, is in the garden of Ueda Toshirô, Kôda-chô, Nukada-gun, Aichi-ken, Japan. Named and released by Toshiaki Ueda in 1970s. Resembles **Sado-wabisuke, Tenrinji-gakkô.** For botanical drawing, colour photo and description, see Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû,* No.11, p.102,103,105.

Ichimai-gawari. (Interleaved Petals) (*C.japonica*), from Kanazawa Pref., front cover of *Tsubaki* by Japan Camellia Society, No.43, in 2004: **Seiôbo** × **Sekido-tarô'an.** Single, tubular stamens, red and white petals alternatively interleaved, blooming very early to mid-season. Leaves lanceolate, medium. Tree upright growth, vigorous. Originated by Seizô Matsui in 1981, named and released in November, 2003. Named after paper craft camellias called 'Ichimai-gawari' which are traditionally used in a vernal ritual at Todaiji Temple in Nara.

Ichimai-kawari. (One by One), *(C.japonica),* Momoyama, (Latter 17th Century), Hirayama Tokuo's *Chinzu Byôbu:* Tubular to flat single, red and white petals in turn, one by one. (Believed extinct.) Originated in Japan. Note: This legendary camellia is said to be the form of the ancient, famous artifical camellia flower, which has been used at the Omizutori Festival (which celebrates the arrival of spring on March 13th, at Tôdaiji, Nara Prefecture) for over 1200 years. This fact indicates that this camellia existed over 1200 years ago. See Takeshi, Watanabe, Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.49, 50 for more details. Originated in Japan.

Ichimonji. (Single Line), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.619: Small, formal double, pink with the colour fading to petal edge. Originated in Japan. (Believed extinct.)

Ichinenbeni-harukaze. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki, Tokushû,* No.10, p.129. Different reading for **Ichinenkô- harukaze.**

Ichinenkô. Yashiro, 1841, *Kokon Yôrankô,* vol.306. A popular name for this was 'Amagashita--tobi'iri'. Japanese reading for the Chinese cultivar **Yiniehong.** Different from the next **Ichinenkô-harukaze.**

Ichinenkô-harukaze. (One twist red - Spring Breeze), *(C.japonica),* Iwasaki, 1829, *Honzô Zufu.* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.55 as 'Ichinen-ko-harukaze'. Single, white with sparse red stripes. Originated in Japan. Different reading: 'Ichinenbeni-harukaze'. (Believed extinct.) See JCS., 1981, *Tsubaki,* No.20, p.105.

Ichini. (One, two), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô.* No description. Originated in Japan. (Believed extinct.)

Ichi-no-seki. (First Check Point), *(C.sasanqua),* Itô Jukyû, 1739, *Honzô Hanamaki'e,* vol.16: Very large, white with red graduations towards the margins. Originated in Japan. (Believed extinct.)

Ichiraku. (One Pleasure), *(C.rusticana),* Ishizawa, 1966, Seibundô Shinkôsha, *Garden Life,* p.23, black & white photo; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.62, p.58, description,

p.300; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.18, 201: Small white to faint pink, campanulate single of 6-7, long, slender petals and short stamen cluster. Late blooming. Leaves small, deep green, long-elliptic, apex acuminate, sharply, finely serrate. Originated in Higashi-kanbara-gun, Niigata Prefecture, Japan. Collected, named and released by Yaichi Kawamura in 1966.

Ichirin. (One Flower), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* vol.1; Yashiro, 1841, *Kokon Yôrankô,* vol.306: Very large, double with red splashes on a faint pink ground. The corolla is thick. Originated in Japan. (Believed extinct.)

Ichirin. (One Flower), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.500 as 'Ichi-rin': A white semi-double with 3-4 rows of petals and flecks of crimson and a centre of 5-6 fascicles of tea whisk form golden anthered stamens with white filaments. Originated in Japan. (Believed extinct.)

Ichirobê. Kyôto Engei Kurabu, 1970, *Tokushû,* No.10, p.130. Different reading for **Ichirobei.**

Ichirobei. (Personal Name), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû.* From the section with marble-like, variegated leaves. Originated in Japan. (Believed extinct.)

Ichisatsui. Platt, 1969, RHS., *The Rhododendron and Camellia Yearbook,* p.99, as 'Ichi Satsui'. Corruption of the Japanese name **Ichisetsu,** different reading 'Issetsu'.

Ichiseki. Different reading for **Isseki.**

Ichise-shibori. (Ichise Variegated). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.31 with colour photo; English translation p.20. Small size, white lightly streaked with red, tubular single with cylindrical stamens. Flowers early to mid-season. Leaves somewhat narrowly elliptic, medium size, slightly plicate at centre ribs. Bushy growth. Selected from wild japonicas in Hirado City, discovered and named by Hideyoshi Kamogawa in 1982. From Nagasaki Prefecture.

Ichisetsu. (First Snow), *(C.japonica),* Synge, 1957, RHS., *Rhododendron and Camellia Yearbook,* No.11, p.121 as 'Ichi Setsu'. The cultivar in England is different to the valid Japanese cultivar, which is a white, while the English one is a medium sized, pale pink semi-double to double. L.J. Russell Ltd Nursery Catalogue, 1965-1966, p.23: Formal double, medium size, pale pink. It is believed to be the Japanese cultivar **Jitsugetsu,** originally sent by Wada to Horlick in 1937. Different reading for 'Issetsu'.

Ichiu. Tateyama Nursery Catalogue, 1957. Different reading for **Ichû.**

Ichô. (Ginko Tree), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.91: Medium sized, deep crimson, ball shaped peony form with a few stamens and petaloids mixed with the centre petals. Originated in Japan. (Believed extinct.)

Ichû. (Band of Court Rank), (Higo), Taniguchi, 1912, *Chinka Kyôkan.* JCS., 1958, *Nomenclature List of Higo Camellias Varieties;* Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement,* p.72; Hiratsuka, 1964, *Higo Camellia,* p.1 & 31; *Encyclopedia of Camellias in Colour,* Vol. I, 1972, p.269: Large size, scarlet, single, tea whisk form stamens. Late blooming. Synonym: 'Kurai-no-himo'. Originated in the Kumamoto Prefecture, Japan. Designated as a Higo at the inaugural meeting of the Higo Camellia Society in 1958.

Ida. *(C.japonica),* Siebold & Co. Nursery Catalogue, 1844. No description. This was given as one of the four camellias introduced by Siebold from Japan in 1829. (Believed extinct.)

Ida Berg. *(C.reticulata), New Zealand Camellia Bulletin,* 1973, vol.VIII, No.3, p.24, Reg. No.80: This is a 6 year old reticulata seedling raised by Mr. L. Berg, Whakatane, New Zealand. The female parent is an unnamed reticulata seedling and the male parent *C.reticulata* 'Purple Gown'

(**Zipao**). The plant has an upright habit, grows quickly and first flowered 1970. The leaves are dark green, reticulate and have sharp serrations and measure up to 12 cm x 6.5 cm. The flower is semi-double with up to 14 petals and some petaloids. The colour is RHS. Red Group 53C with darker veining. Anthers are gold and filaments cream and the average flower size is 14 cm across x 4 cm deep.

Ida Bonafedi. *(C.japonica),* Scarlatti Catalogue, 1888: Flower large, cup shaped, flesh white, outer petals all finely dotted with clear rose, central petals milk white. Originated in Italy by Santarelli.

Ida Borrini. *(C.japonica),* Leguay, Jan.1853, *Revue Horticole,* p.30: Dark coral with spots of white; petals lightly bordered with white. Medium size double, imbricated. Originated in Italy by Borrini, Florence.

Ida Cossom. *(C.reticulata* hybr.*).* ACRS., 1984, *Camellia News,* No.81, p.22, Reg. No.323: Originated in Australia by Edgar R. Sebire, Wandin North, Victoria. A chance seedling from *C.reticulata* **Lasca Beauty.** First flowered 1982. The 15cm, semi-double to open, informal double, rose-pink flowers open mid-season. The upright, open plant has 12.5cm x 6 cm mid-green leaves, apex pointed, base tapered, fine serrations and prominent venation.

Ida Green. *(C.saluenensis x C.reticulata), New Zealand Camellia Bulletin,* 1983, vol.XIII, No.2, p.11, Reg. No.189: Originated by Mrs Ida Berg, Whakatane, New Zealand. A seedling from *C.saluenensis* x *C.reticulata* Crimson Robe (**Dataohong**). First bloomed 1975. Leaves are dark green, 13 cm x 6 cm. The large, rose form double flowers are rose-pink with an orange shading, 11 cm across x 5 cm deep. Early flowering.

Ida Kathleen. *(C.japonica),* Dodd, 1968, *Adventure with Camellia Seedlings,* p.10, colour photo: A very pale pink, medium sized, formal double with fimbriated petal edges. A seedling of 'Magnoliiflora' (**Hagoromo**), originated by Richard Dodd, Marshallville, Georgia, USA.

Ida King. *(C.japonica), American Camellia Yearbook,* 1971, p.47, Reg. No.1134: A 10 year old chance seedling *C.japonica* that first bloomed 1963. Originated by E.J. Prevatt, Bonneau, South Carolina, USA. Plant growth is spreading and rapid in rate with 7.5 cm x 5.5 cm, light green leaves. The semi-double flower is blush colour, 13-15 cm across x 7.5 cm deep with 21-23 petals and several petaloids and white anthers. Blooms mid-season. There is a large mass of stamens intermingled with the petaloids.

Ida Laurence. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.70: Carmine red, vivid. Imbricated. A sport of 'Principessa William'(**Princess Frederick William**). Originated in Italy.

Ida May Johnston. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.53: White striped pink. Large semi-double to peony form with loose petals. Mid-season blooming. Originated in USA by J.W. Bradford, San Diego, California.

Ida Rosazza. *(C.japonica),* Burdin Maggiore et Cie Catalogue, 1870-1871, as a new introduction. No description. van Houtte Catalogue, 1877-1878, 174:246: Perfectly imbricated formal double, broad, rounded, white petals, sometimes embellished with a streak of pink. Mercatelli Catalogue,1881: Complete double form, perfectly imbricated; petals broad, round and white, sometimes crossed by a streak of rose. Originated in Italy by Cesare Franchetti, Florence.

Ida Weisner. *(C.japonica), American Camellia Yearbook,* 1955, p.338, Reg. No.239: A 6 year old seedling of Imura, originated by John T. Weisner, Fernando Beach, Florida, USA. First flowered 1953. Plant growth is open, pendulous and upright. The white flower, 11-15 cm across, is semi-double, similar to 'Donckelaeri' (**Masayoshi**) with 16-22 petals. The stamens form a tight cluster with bright yellow anthers. Flowers early. Sport: **Ida Weisner Variegated.** Chinese synonym 'Weisier'.

Ida Weisner Variegated. *(C.japonica).* SCCS., 1956, *The Camellia. Its Culture and Nomenclature.* p.54: A virus variegated form of **Ida Weisner.** Originated in USA by John T. Weisner, Fernando Beach, Florida.

Idalia. *(C.japonica), American Camellia Yearbook,* 1973, p.191, Reg. No.1226: A 15 years old chance seedling that first bloomed 1964, originated by James Moon, Lake Charles, Louisiana, USA. Plant growth is upright and medium in rate with mid-green leaves, 7.5 cm x 5 cm. The rose form double, 'Mathotiana' (**Julia Drayton**) type, bloom is white with a pale pink halo through the centre of each petal. Size is 12 cm across x 7 cm deep with 32 petals and early flowering. Heavy texture.

Ida's Blush. *(C.japonica), Camellia Nomenclature* 2006, p.59. Small rose form double. Soft pink at edges, shading to cream at centre. Average upright growth. Introduced 1997 by E. & B. Achterberg, Citrus Heights, Calif., USA.

Ida's Joy. *(C.reticulata). NewZealand Camellia Bulletin,* 1989, vol.XVI, No.1, p.26, Reg. No.251: Originated by Mrs Ida Berg, Whakatane, New Zealand. It is a reticulata seedling and first flowered 1987. Its habit is upright with mid-green foliage with medium growth rate. Leaves average 13 cm long x 5.6 cm wide. The peony form flowers average 12 cm across x 6 cm deep with 30 petals and yellow anthers. Colour is a glowing red and the flower has heavy texture and blooms midseason to late.

Idaten. (Buddhist Deity), *(C.japonica),* Mizuno, 1681, *Kadan Komoku:* Large single, sake cup form. Petal tips do not reflex. Round and white with a cylindrical stamen cluster. Very early blooms. What appears to be the same cultivar is listed by Itô, Ihei, 1695, *Kadan Chikinshô;* Itô Jukyû, 1739, *Honzô Hanamaki'e,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Yashiro, 1841, *Kokon Yôrankô.* All descriptions are similar. See JCS., 1965, *Tsubaki,* No.5, p.29 & 1983, No.22, p.130. Different reading: 'Edaten'. See JCS., 1967, *Tsubaki,* No.7, p.21,106. Orginated in Japan. (Believed extinct.) Note: Idaten is the Buddhist deity who controls Buddhist law and runs very fast. An allusion to the very early blooming of this variety.

Idaten. (Buddhist Deity), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.18, colour photo, p.200, description: Large single, wide opening cup-shaped, 7-9 petals, white with red flecks and small streaks, heavy, compact, central stamen cluster with yellow anthers and creamy white filaments. Early to mid-season blooming. Slightly fragrant. Leaves matt, mid-green, narrow-elliptic to elliptic, apex acuminate, shallowly, bluntly serrate. Originated in the Kansai District, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.31 with colour photo; English translation p.19. Colour is given as white.

Idaten-shibori. (Variegated Idaten), *(C.japonica),* Ito, Ko'emon, 1879, *Chinkashû;* Minagawa, 1949, *Chinkashû;* White dotted pink. Medium sized single. Early blooming. Originated in Japan.

Idaten-tsubaki. (Idaten Camellia), *(C.japonica),* Aoyama, Kinta, 1827, *Sômoku Kihin Kagami:* White variegated, long, narrow leaves, white flowers. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.160. Possibly synonymous with 'Mizunode-idaten' in *Sômoku Kinyôshû,* 1829.

Iddebiana. *(C.japonica),* Berlèse, 1837, *Monographie,* ed.1, p.79,128,110: Leaves nearly resembling 'Rubra Simplex' (Rubra) flower, vase-form, large, double, regularly formed of a deep orange-red; petals, not numerous, broad, elevated, intermixed with short stamens. Originated in Belgium. Orthographic error: 'Iddebiena'.

Iddebiena. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Iddebiana.**

Ideyu-komachi. (Hotspring Beauty), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.l96, colour photo, p.197, description: Small size, dark red, campanulate single, with 6 rounded, oval petals of irregular size and a tall, central stamen column with pinkish filaments, joined for the lower third, and yellow anthers. Blooms mid-season to late. Leaves small, mid to dark green, elliptic, apices acuminate, margins shallowly serrate. Originated in Ishikawa Prefecture, Japan. A seedling of **Chôchidori.** Originated by Tadao Yamaguchi, named and released in 1978.

Iduna. Herbert, 1837, *Amaryllidaceae & Suppl.*, p.368. Synonym for **Spofforthiana Rosea.**

Ieffersoni. Contini and Nava of Intra Catalogue, 1900. Orthographic error for **Jeffersonii.**

Iemoto. (Main Representative of Flower Arrangement School), (Higo), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.118, colour photo and description: Large size. pale pink, flat, higo-like single with 7 broad, rounded, overlapping petals, wide-spreading, fragrant, with an irregular, yellow stamen cluster. Blooms mid-season to late. Leaves dark green, broad-ovate, apices acute, margins serrate. A seedling of **Nioi-fubuki.** Different reading: 'Iyemoto'. The name alludes to Adachi, Chôka. Originated in Kumamoto Prefecture, Japan, named and released by Tsugio Ôta around 1970.

Ifuku. *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.108; No description.

Igino Ittar. *(C.japonica), R. Società Toscana, d'Orticulture Bollettino,* 1876: New variety from the garden of Franchetti, Italy. Large, imbricated flower, bright scarlet, with large stripes of white in half the petals.

Igirisu. (England), *(C.japonica),* Uekiya Seigorô, 1874, *Tsubaki Hyakuro no Zu*, vol.1, No 23: White semidouble, with 7-9 broad, slightly emarginate, rounded petals and a short, compact, central stamen group, yellow anthers, white filaments. Originated in Japan.

Igloo. *(C.japonica), American Camellia Yearbook,* 1966, p.91, Reg. No.899: A 9 year old chance seedling of **Elizabeth Boardman** that first bloomed 1961. Originated by C. Breschini, San Jose, California, USA. Plant growth is upright and average with dark green leaves, 10 cm x 5.5 cm. The peony form flower, similar to **Debutante**, is white with yellow anthers and white filaments. Size 12 cm across x 8 cm deep with 48 petals and 9 petaloids. Heavy texture. Blooms mid-season.

Ienny Luix. C. Mariotti, Nervi Nursery Catalogue, 1924, p.15. Orthographic error for **Jenny Lind.**

Ignacio Pinto Vieira. *(C.japonica),* Horto Dias Ferreira, Catalogue No.25, 1940-1941. Pink and white.

Ignaea. John Miller, Bristol Nursery Catalogue, 1838. Orthographic error for **Ignea.**

Ignea. *(C.japonica),* Poiteau, 1835, *Annals Société d'Horticulture de Paris,* 16:350, no description; Berlèse, 1841, *Iconographie,* vol.I, pl.51 :- The flower is broad, concave, double and a beautiful deep red, a carmine lacquer mixed with vermilion, more or less intense. The corolla is irregular. The exterior petals are numerous, but broad; the others erect and spoon shaped, slightly emarginate and veined with vivid red. Originated in France by M. Noisette, Paris. Synonym: 'Ignivoma'. Orthographic error: 'Ignaea'.

Ignea Maxima. *(C.japonica),* Charles van Geert Nursery Catalogue, 1845, p.7. Imbricated form. Bright cerise red. Originated in Belgium. (Believed extinct.)

Ignescens. *(C.japonica),* Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:316. No description. Berlèse, 1837, *Monographie,* ed.I, p.110,130: Leaves rather large with small, well delineated veining, sprinkled with spots of clear green on a more sombre ground; flower, medium size, semi-double, deep orange-red, petals flat, imbricated in 3 rows with many stamens. Synonyms: 'Fire-

ball', 'Boule de Feu', 'Dahliaeflora Ignea'. Pseudonym: 'Dahliiflora'. Orthographic errors: 'Dahliaflora Ignea', 'Dahliaflora Igna'. Originated in Germany. Illustrated pl.180, Berlèse, 1842, *Iconographie.*

Ignivoma. Berlèse, 1841, *Iconographie*, pl.51. Synonym for **Ignea.**

Ihei-hiiragi-tsubaki. (Ihei's Holly Leaf Camellia), *(C.japonica),* Mizuno, Tada'aki, 1829, *Sômoku Kinyôshû* in the section for unusual leaves. Long, narrow leaves. Flower, red, sake-cup shape, with white blotches. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû.* No.7, p.169. Originated in Japan. (Believed extinct.)

Iijima-sunago. Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details

Iinomomo. (Obscure), *(C.x vernalis),* Tanaka et al., 1986, *Journal of Japanese Society for Horticultural Science*, 55(2):208. A pentaploid *C.x vernalis* cultivar from Japan.

Ijimino-shidare. (Weeping Tree of Ijimino), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.16, colour photo, p.200, description: A small, red, 5 petalled, campanulate single with long, channelled petals with tips recurved, emarginate, a short central stamen cluster, yellow anthers, creamy filaments. Leaves elliptic, glossy mid-green, finely serrate, apex acute. Originated in Shibata City, Niigata Prefecture, Japan. Collected, named and released by Tokuji Ôoka in 1967.

Ikako. *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.717: Small, deep red semi-double, with 3 rows of imbricated petals and compact, central stamen cluster. (Believed extinct.) Originated in Japan.

Ikari-shibori. (Ikari Variegated), *(C.japonica),* Andoh, 1974, *Tsubaki Nyûmon,* p.42; *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.405; Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.338,339; Seibundô Shinkôsha, 1979, *Senchinshû,* p.15, colour photo, p.200, description: Large semi-double white with crimson streaks, petals 13-15, oblong, channelled or fluted; spreading, central stamen cluster, anthers pale yellow, filaments lighter. Blooms mid-season to late. Originated in Kansai District, Japan. Cultivated from a seed brought from the UK by the then President of the Ikari Sauce Co. Ltd. Japan. Named and released by Takuzo Hashimoto in 1973.

Ikazuchi. (Thunder), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.155, p.78, description, p.134: Leaves rather large, oblong to oblong-elliptic, base rounded, apex bluntly acute, impressed venation, 6.1-8.4 cm long x 3.3-4.5 cm wide. Flowers single, deep red (Currant Red 821/2), not widely opening, petals 5-7, incurved; stamens 2.9 cm long, widely cylindrical, filaments dark rose. Flowers mid-season to late. Nippon Tsubaki - Sasanqua Meikan, 1998, p.26 with colour photo; English translation p.16. A cross between **Iwane-shibori** and **Benimyôrenji.** Named and released by Minoru Satô. From Aichi Prefecture. Named for the God of Thunder who has red skin.

Ikebukuro (Place name) (*C.japonica*) from Ibaragi Pref, *Japan Camellia*, No.81, August 2006: Crimson, single, tubular to the end of petals, cylindrical stamens. Tree upright. Leaves small to medium, flat and untwisted. A seedling of unknown parents. First flower seen in 2003. Originated and named by Kunimitsu Suzuki.

Ikegami-beni. (Red Flower from Ikegami). *(C.sasanqua).* Niigata Chinka-en Retail Price List, 1994, colour pl. front page, description p.11: Medium sized, red informal double with folded and fluted petals. A centre of stamens mixed with petaloids. Originated in Japan.

Ikegamikou. *(C.sasanqua). Collected Papers*, ICS Congress, Kurume 2010, p.60, "Preliminary report on heat tolerance of Camellia sasanqua; Biyu Xu, Tianfei Li and Tian Li". No description.

Iki-hayazaki-akayabu. (Early Blooming Red Wild Japonica from Iki). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.124. No description. From Iki, Nagasaki Pref., Japan.

Ikin. *(C.japonica),* Nagoya Camellia Society Bulletin, *Tsubaki,* 1994, No.27, colour pl. p.6, No.16: Chance seedling of **Matoba-nishiki.** A few red stripes on one or two petals with a blush background. Spherical to cup-shaped single, tea whisk-like stamens. Mid-season flowering. Mildly fragrant. Originated by Dr. Funakoshi, Nagoya, Japan.

Ikkyû (Japanese Poet), *(C.japonica),* Itô Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô,* vol.306; *Tsubaki Hachiboku Sanbokutsuki,* (before 1868): Double, medium large, red flower with white spots. Originated in Japan. (Believed extinct.) While the characters given for **Ikkyû** mean "A rest", this meaning usually carries the reading 'Yitoyasumi'. As the reading **Ikkyû,** it refers to the famous Japanese poet, Ikkyû Sôjun, (1394-1481). He was a Zen priest. His childhood name was "Shûden".

Ikkyû. (Japanese Poet), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.338, p.140; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.22; Seibundô Shinkôsha, 1979, *Senchinshû,* p.18, colour photo, p.201, description: A small, campanulate, pure white single of 5 petals, with a central column of stamens with pale yellow anthers and white filaments. Leaves small, dark green, lanceolate, tapering acuminate apices, serrate. Blooms mid-season to late. Originated in Kurume, Fuku'oka Prefecture, Japan. Resembles **Sasameyuki.** Rarely sets seed. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.32 with colour photo; English translation p.20 Upright, vigorous but slow growth. Discovered by Yasuhiko Yamada, named and released by Yoshiyuki Toyofuku in 1970.

Ikoku. (Foreign Country), *(C.japonica),* Yashiro, 1841, Ichijima, 1906, *Kokon Yôrankô,* vol.309. Reprint. No description. Originated in Japan. (Believed extinct.)

Ikoma. (Mountain's name), *(C.japonica), Chinka Zufu,* (Before 1700), Watanabe, 1969, pl.99 & 674: Small, dark crimson, anemone form of 5 reflexed petals and a central cushion of white petaloids. Originated in Japan. Synonym: 'Ikoma-nakashiro'. (Believed extinct.)

Ikoma-de-kifu. (Ikoma's Yellow Variegated), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû:* Listed in the section of yellow variegated leaves. Round, flat leaves. Resembles 'Kamakichi-tsubaki'. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.165. Originated in Japan. (Believed extinct.)

Ikoma-nakashiro. (Ikoma's White Centered), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.681: Small, deep red single with 5 reflexed petals around a centre of white petaloids and stamens. Originated in Japan. Synonym: 'Ikoma'. Different reading: 'Ikoma-nakjiro'. (Believed extinct.)

Ikoma-nakajiro. Different reading for **Ikoma-nakashiro.**

Ikune-chô. (Ikune Butterfly). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.27 with colour photo; English translation p.17. A white, medium size, trumpet shaped single with cylindrical stamens. Flowers mid-season. Leaves large, narrowly elliptic. A chance seedling of **Chôchidori,** named and released by Totsurô Nakamura in 1982. 'Ikune' is the name of the nursery where a series of these varieties have been originated. From Tokyo.

Ikune-fuji. (Mt. Fuji of Ikune). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.28 with colour photo; English translation p.17. White mottles on red ground. A medium size, flat single with cylindrical stamens. Flowers mid-season. Leaves obovate, medium size. Upright, vigorous growth. A virus variegated form of a chance seedling, parentage unknown, named and released by Totsurô Nakamura in 1994. From Tokyo.

Ikune-haru. (Spring in Ikune). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.27 with colour photo; English translation p.17. A medium size pink semi-double with cylindrical stamens. Flowers mid-season. Leaves narrowly elliptic, large. Upright, vigorous growth. A chance seedling of unknown parentage, named and released by Totsurô Nakamura in 1994. From Tokyo.

Ikune-hino. ('Hino' from Ikune). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.28 with colour photo; English translation p.17. Pale pink shading to white at the centre. A medium size, tubular single with cylindrical stamens. Leaves elliptic to narrow-elliptic, medium size. Upright growth with long nodes. A chance seedling of unknown parentage, named and released by Totsurô Nakamura in 1994. From Tokyo.

Ikune-kawari. (Variegated Ikune). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.27 with colour photo; English translation p.17. Pure white to pure pink including variegated flowers in deep pink. A medium size single with embracing (incurving) petals and upright, circular ring of stamens. A chance seedling of a cultivar, named and released by Totsurô Nakamura in 1990. From Tokyo.

Ikune-komachi. (Beauty from Ikune). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.27 with colour photo; English translation p.17. White mottles on red ground. A medium size single with cupped petals and cylindrical stamens. Flowers mid-season. Leaves medium size, broadly elliptic. Upright, weeping branches. A virus variegated form of a chance seedling, named and released by Totsurô Nakamura in 1994. From Tokyo.

Ikune-manyô. (Ikune myriad petals). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.28 with colour photo; English translation p.17. Red stripes and splashes on pale pink ground. A medium size semi-double with cupped petals. Flowers mid-season. Leaves narrowly elliptic, medium size. Spreading, vigorous growth. A chance seedling of unknown parentage named and released by Totsurô Nakamura in 1994. From Tokyo.

Ikune-mura. (Village of Ikune). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.28 with colour photo; English translation p.18. White mottles on red ground. A medium size tubular single with cylindrical stamens. Flowers mid-season. Leaves narrowly elliptic. Upright, vigorous growth. A virus variegated form of a chance seedling named and released by Totsurô Nakamura in 1994. From Tokyo.

Ikune-musume. (Maiden of Ikune). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.28 with colour photo; English translation p.17. White mottles on deep pink ground. A medium size, tubular to sake cup-shaped single with cylindrical stamens. Flowers mid-season. Leaves elliptic to narrow-elliptic. Upright but weak growth. A virus variegated form of a seedling of **Yukimiguruma**, named and released by Totsurô Nakamura in 1994. From Tokyo.

Ikune-shimeri. (Rain in Ikune). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.27 with colour photo; English translation p.17. Red stripes and splashes on pink ground. A medium size, tubular single with cylindrical stamens. Flowers mid-season. Leaves medium size, ovate. Upright, vigorous growth. A chance seedling of 'Shûraku' named and released by Totsurô Nakamura in 1994. From Tokyo.

Ikune-ume-bôshi. (Apricot Priest of Ikune). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.27 with colour photo; English translation p.17. Red stripes on pink ground, pale pink bordered apices. A small semi-double with cupped petals and split stamens. Flowers mid-season. Leaves small, elliptic. A chance seedling from Wakayama Prefecture, named and released by Totsurô Nakamura in 1994. 'Ikune' is the name of the nursery where a series of these varieties have been originated. From Tokyo.

Ikune-yama. (Mt. Ikune). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.28 with colour photo; English translation p.18. A medium size, vermilion, tubular single with cylindrical stamens. Flowers mid-season. Leaves ovate to elliptic, flat, medium size. Upright, vigorous growth. A chance seedling of **Ama-obune,** named and released by Totsurô Nakamura in 1980. From Tokyo.

Ikuno. (Place Name), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.170: Medium sized, deep crimson, peony form with scalloped petals and golden stamens intermingled with the centre petals. Originated in Japan. (Believed extinct.)

Ikutoshitsuki. (Many Months and Years), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.367, p.150, description, p.251: Small, campanulate, sparsely red striped, pink single of 6 petals with the pink fading towards the petal edge, finely bordered with white, 5-6 cm across; short, compact stamen cluster. Blooms mid-season to late. Leaves, ovate; apex acuminate, midgreen, finely serrate. Fragrant. See also Seibundô Shinkôsha, 1979, *Senchinshû,* p.15, and Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.266, colour photo. A cultivar raised at Jôritsuji Temple in Yatsuo Town. Named and released by Isao Iwazumi.

Ikui-no-shimo. Watanabe, 1960. Kyôto Engei Kurabu, *Tsubaki Tokushû,* p.55. Corruption of **Ikuyo-no-shimo.**

Ikuyo-no-shimo. (Nightly Frosts), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* White, small, full double. Originated in Japan. Corruption: 'Ikui-no-shimo'. (Believed extinct.)

Il 17 Marzo. *(C.japonica),* van Houtte Catalogue, 1857, 67:45. From Lechi. No description. van Houtte Catalogue, 1858, 72:15: Beautiful formal double, concave, very broad, rounded petals. Rose scarlet with wide, greyish stripes. Originated in Italy.

Il 18 Marzo. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. No description. Originated in Italy. (Believed extinct.)

Il 22 Marzo. van Houtte Catalogue,1851, 44:14. Synonym for **Il 22 Marzo, 1848.**

Il 22 Marzo, 1848. *(C.japonica),* Verschaffelt, 1850, *Nouvelle Iconographie,* Book II, pl.I as 'Il 22 Marzo': Received from Burdin of Milan, Italy - A rose-like arrangement of its petals, cherry-red, relieved with white which borders the petals and appears as parallel streaks in the centre. Franchetti, 1855 as 'Il 22 Marzo, 1848'. Rovelli, 1852 gives **Mantica** as a synonym. van Houtte Catalogue, 1858, 72:15: This camellia is similar in type to **Emilia Campione** which, itself at first, was named 'Il 22 Marzio'. Orthographic errors: 'Il 22 Marzio', 'Il 22 Margo', 'Il 22 Mazro', 'Il Cigno Marzo', 'Il 22 Marzo,1849', 'Il Q2 Marzo'. Synonym: 'Il 22 Marzo'.

Il 22 Marzo 1849. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.109. Orthographic error for **Il 22 Marzo, 1848.**

Il 22 Mazro. McIlhenny, 1935, *List of Camellias.* Orthographic error for **Il 22 Marzo, 1848.**

Il Q2 Marzo. Nairn & Sons Nursery Catalogue, 1906. Orthographic error for **Il 22 Marzo, 1848.**

II Beduino. Verschaffelt Catalogue, 1860-1861, p.13. Synonym for **Beduino.**

Il Bucintoro. *(C.japonica), R. Società Toscana d'Orticultura Bollettino,* 1862. Raised by Santarelli, Italy. No description. (Believed extinct.)

Il Cigno. *(C.japonica),* Isola Madre Catalogue, 1845. No description. van Houtte Catalogue, 1849-1850, 38:34 as 'Alba Insignis' syn 'II Cygno': Pure white, petals well rounded, imbricated ranunculiform. **Alba Insignis** is considered a separate cultivar and this synonymity is erroneous. Verschaffelt, 1850, *Nouvelle Iconographie,* Book V. pl.III: "This Camellia, of Italian origin, owes its name to the perfect whiteness of its blossoms. It must not be confused with **Alba Insignis** given in some catalogues as a synonym for it, but has nothing in common with it except the colouring and imbricated form of the blossoms. It is a perfection in every sense of the word, for the imbrication and geometric regularity of its petals, which are rounded, slightly emarginate and form a compact heart at the centre. Convex shape, medium size blossom. Mid-season blooming." Rovelli, 1852, gives its origin as Dr Sacco, Milan, but lists it as a peony form white. Sport: **Comtesse du Hainaut.** Orthographic errors: 'Il Cygno', Il Signo', Il Cygo', 'Il Signa' ,'Il Signora', 'Il Cogno'. Orthographic variant 'Le Cygne'.

Il Cigno Marzo. Anderson & Co. Nursery Catalogue, 1887, p.70. Orthographic error for **Il 22 Marzo, 1848.**

Il Cogno. Charles Vuylsteke, 1867-1868, Price List, p.20. Orthographic error for **Il Cigno.**

Il Commendatore Betti. Paul, 1889, *Gardeners' Chronicle,* p.427. Synonym for **Commendatore Betti.**

Il Commudatibile. Charles Vuylsheke Catalogue, 1867-1868, p.20. Orthographic error for **Commendatore Betti.**

Il Cygno. van Houtte Catalogue, 1849-1850, 38:34 as a pseudonym for **Alba Insignis.** Note: The name "The Swan" is "Il Cigno" in Italian and "Le Cygne" in French. The orthography "Il Cygno" is an apparent attempt in the listings (van Houtte and Verschaffelt) to spell it in Italian and is thus regarded as an orthographic error for **Il Cigno.**

Il Cygno (Hearn). SCCS., 1946, *Camellias,* p.l3. Synonym for **Alba Plena.**

Il Cygno (South). *(C.japonica),* SCCS., 1945, *Camellias,* p.13: Large white double, sometimes peony form. Originated in USA.

Il Cygno (Local Seedling). *(C.japonica),* SCCS., 1945, *Camellias,* p.13: Large semi-double white. Originated in USA.

Il Cygo. J. Scott & son Nursery Catalogue, 1868. Orthographic error for **Il Cigno.**

Il Tramonteo. da Silva, Catalogue, 1959-1960. Orthographic error for **Il Tramonto.**

Il Tramonto. *(C.japonica),* van Houtte Catalogue, 1858, 72:15, as 'Tramonto', (See 'Tramonto', v.H.72:25): Brilliant red, paler at centre, imbricated, under 'Tramonto'. After this date van Houtte dropped this variety from his list until 1868 when he reinstated it under **Il Tramonto** (The Setting Sun) with what appears to be a variegated form, and continued the name for several years with no further reference to 'Tramonto'. The description in his 1868 catalogue is: - Magnificent large flowers of most beautiful rose, perfectly and regularly imbricated and embellished with a white stripe on each petal; when petals are not half white and half rose, or with large white blotches similar to those of 'Donckelaeri' (**Masayoshi**) from which **Il Tramonto** derives. From the exceptional imbrication, one does not suggest this origin, its foliage is more handsome and larger them 'Donckelaeri'. **Il Tramonto,** imbricated almost as far as the centre, has 14-15 rows of petals. In America the name was erroneously used for **Lalla Rookh** ('Lallarook'), and **L'Avvenire** ('Laurel Leaf') and **Brassenie.** It was originated in Italy by Lechi, Brescia. Orthographic errors: 'Il Tramanto', 'I1 Tramento', 'Il Tramont', 'Il Tramonte', 'Il Tramonteo', 'Il Trementi', 'Il Tremento', 'Il Tremonto', 'Il Tremendo', 'Il Tromenta', 'Il Tramonta', 'Il Tromonto', 'Il Tromoto', 'Tramonteo', 'Tramento'. Abbreviation: 'Tramonto'. Chinese synonym 'Tamangtou', as 'Tramonto'.

Il Vessillo di Flora. *Il Giardiniere,* 1852. Orthographic variant for **Vessillo di Flora.**

Il Vesuvio. *(C.japonica),* van Houtte Catalogue, 1841, 7:10. No description. Burnier & Grilli Catalogue, 1846-1847: Large flower, fire red with the centre clear red. Note: About 1844 van Houtte dropped the "Il" from several names that could stand without it such as 'Vesuvio', 'Zeffiro' etc and, while this is more acceptable orthography, **Il Vesuvio** is let stand for the van Houtte cultivar as the Berlèse 'Vesuvio' is a different camellia. Originated in Italy.

Il Voto. *(C.japonica),* Rovelli Catalogue, 1886. No description. Rovelli Catalogue, 1896, p.41: Most beautifully variegated and striped. Originated in Italy.

Il Vulcano. *(C.japonica), R. Società Toscana d'Orticultura Bollettino,* 1862. No description. Originated in Italy**.** (Believed extinct.)

Il Zeffiro. *(C.japonica),* van Houtte Catalogue, 1841, 7:10. No description; 1842, 9:53: Imbricated, carmine red. Bèrlese, 1849, *Annales Société Centrale d'Horticulture de France:* Formal double, of a clear, carmine red with shadings of pink. Large, rounded petals in 7-8 rows; imbricated and serried. Abbreviation: 'Zeffiro'. (Zephyr). Synonym: 'Zeffiro d'Italia'. Orthographic error: 'Zefiro d'Italia'. Rovelli,1852, says from Sacco.

Ila Rester. *(C.japonica), American Camellia Yearbook,* 1969, p.162, Reg. No.1046: A chance seedling that first bloomed 1959. Originated by C. Rester, Poplarville, Mississippi, USA. Plant growth is medium and dense with 6 cm x 1.8 cm leaves. The semi-double blooms, resembling are 13 cm across x 10 cm deep, light pink with yellow anthers. Flowers early to mid-season.

Ilam Cherry. *(C.reticulata), New Zealand Camellia Bulletin,* 1977, vol.X, No.3, p.15, Reg. No.130: Originated by Mrs A.M. Coker, Christchurch, New Zealand from seed supplied by John Sobeck, California, USA. The flowers are semi-double, 15 cm x 9 cm, with 12 petals and a number of petaloids around bright yellow stamens. The colour is bright cherry-red (RHS.CC. Red Group 54A). Strong, upright plant with dark green foliage, 13 cm x 4.5 cm. First flowered 1967.

Ilam Mist. *(C.reticulata), New Zealand Camellia Bulletin,* 1973, vol.VIII, No.2, p.36, Reg. No.79: A seedling of an unknown *C.reticulata* supplied to Mrs A.M. Coker, Christchurch, New Zealand. by John Sobeck, California, USA. The plant has an upright, dense growth habit with leaves dark green, reticulate, 12 cm x 5 cm. The flower is semi-double, 12 petals and occasional petaloids. They measure up to 15 cm across x 6.5 cm deep. The colour is pink with darker veining, (RHS.CC.62B-63C) anthers yellow, filaments cream. Flowers early to mid-season.

Ilam Satin. *(C.japonica), New Zealand Camellia Bulletin,* 1975, vol.IX, No.3, p.4, Reg. No.113: A chance seedling from *C.japonica* seed obtained from John Sobeck, California, USA by Mrs A.M. Coker, Christchurch, New Zealand. It first flowered 1972. Growth is slow and dense with dark green leaves that measure 9 cm x 6 cm. The flower is anemone to peony form with 12 petals, about 50 petaloids, golden anthers and cream filaments. The colour is RHS.CC. Red Group 51A-B; size 13 cm across x 5 cm deep. The blooms have an unusual open centre.

Its Culture and Nomenclature:* Brilliant rose-pink. Large semi-double. Slow, compact growth. Originated by Harvey Short, California, USA. Orthographic error: 'Illustrieus'.

Illustris. *(C.japonica),* Verschaffelt, 1844-1845, Catalogue, p.25. van Houtte Catalogue, 1846-1847, 27:25. No description. Burnier & Grilli Catalogue, 1846-1847: Perfectly imbricated, bright rose, faintly streaked with white. Originated in Italy by Ridolfi, Florence. Synonym: 'Illustris Ridolfi'. Orthographic errors: 'Ilustri', 'Illustriss', 'Illustris Bidolfi'.

Illustris Bidolfi. *Notiziaro della Società Italiana della Camelia,* Mar.1990, vol.XXVI, No.1, p.l8: Orthographic error for 'Illustris Ridolfi', synonym for **Illustris.**

Illustris di Brescia. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. No description. Originated in Italy. (Believed extinct.)

Illustris Nobilis. *(C.japonica),* Verschaffelt, 1844-1845, Catalogue, p.25. Cachet Catalogue, 1845-1846, p.7. No description. Originated in France. (Believed extinct.) Orthographic error: 'Illustris Nobis'.

Illustris Nobis. Verschaffelt Catalogue, 1847-1848, p.58. Orthographic error for **Illustris Nobilis.**

Illustris Nova. *(C.japonica),* Franchetti, 1855, *Collezione di Camelia,* p.35-36, invalidly as 'Illustris': Imbricated, often in a spiral, brick red. Rollisson Nursery Catalogue, 1871: Bright brick red of fine form, often with spiral imbrication. An improvement of **Illustris.** Originated in Italy.

Illustris Ridolfi. Burdin Maggiore & Co., 1849-1850, Catalogue General. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. Synonym for **Illustris.**

Illustriss. Luzzatti, 1851, *Collezione di Camelie,* p.20. Orthographic error for **Illustris**.

Illustri. Roda Catalogue, 1885. Orthographic error for **Illustris.**

Ilristori. George Carter & Co., South Africa Catalogue, 1962-1963, Orthographic error for 'Il Ristori', synonym for **Ristori.**

Imadegawa. (Place Name), *(C.japonica),* Iwasaki, Kan'en, 1828, *Honzô Zufu:* Petals are single and white and have red stripes with small dots. Narrow, lemon-yellow petals are on the inside. Originated in Japan. See JCS., 1981, *Tsubaki,* No.20, p.108. (Believed extinct.)

Imagawa-shibori. (Imagawa Dappled), *(C.sasanqua),* JCS., 1988, *Japan Camellia,* No.29, p.4, colour photo: Small size, peony form, red with white blotches and spots, petals wrinkled. Leaves mid-green, lanceolate, apices tapering acuminate. Originated in Imagawa, Suginami, Tokyo, Japan by Noda, Uchirô.

Imagination. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2005, p.28 with colour photo p.29, Reg. No. 2663. A chance seedling that first flowered 1994. Originated by C.M. and Lillian Gordy, Ocala, Fla., USA. The 10 cm diameter, pure white, semi-double flower has gold anthers and

creamy filaments. Heavy petal texture with a waxy sheen. *American Camellia Yearbook*, 2005, p.42 with colour photo p.c5, Plant growth is upright, dense and vigorous. Dark green leaves are 10 cm x 4.5 cm. Flowers mid-season to late.

Imai. (Personal Name), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* vol.1; Yashiro, 1841, *Kokon Yôrankô,* vol.306: Very large double, red. Originated in Japan. (Believed extinct.)

Ima-isseki. (One more Evening), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Formal double, red, white spotted form of **Isseki.** Stamens intermingled with the centre petals. Originated in Japan. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.79. (Believed extinct.)

Imajô-akizaki. (Imajô's Autumn Flowering), *(C.rusticana),* JCS., 1982, *Tsubaki,* No.21, p.4; Hagiya, Kaoru, 1984, ACS., *The Camellia Journal,* vol.39, No.2, p.18. No description. Originated in Japan.

Imakumagai. (Modern Kumagai), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Large, deep pink single, 10 cm across, 6-7 petals. Stamens circularly opened, light pink, about 180. Leaves large, ovate, thick, rough, lustrous light green. See black and white photo, p.24, description, p.13, 29. Hiratsuka, 1964, *Higo Camellia.* Satô, 1975, *Chûbu no Tsubaki,* p.101, colour photo; Andoh. 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.39, p.14; Seibundô Shinkôsha, 1979, *Senchinshû,* p.201, description. Different reading: 'Ima-kumagaya'. Corruption: 'Ima-kumamai'. Originated in Kumamoto Prefecture, Japan. Said to be a natural seedling of **Kumagai.** Probably the same variety as **Hi-no-kuni.**

Ima-kumagaya. Satomi, 1956, *Camellia Varieties of Japan,* p.16. Different reading for **Imakumagai.**

Ima-kumamai. Satomi, 1956, *Camellia Varieties of Japan,* p.16. Corruption for **Imakumagai.**

Imamiya. (Place Name), *(C.japonica),* Mizuno, Motokatsu, 1681, *Kadan Komoku:* White spotted deep pink, double. Originated in Japan. See JCS., 1965, *Tsubaki,* No.5, p.28. (Believed extinct.)

Imamiya. (Place Name), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.151, 445, 551 & 568: Medium to large size, white peony form with dark crimson streaks and golden anthers, stamens scattered amongst the petals. Originated in Japan. (Believed extinct).

Imashizuka. (Reincarnation of Shizuka), *(C.japonica),* Seibundô Shinkôsha, 1979, 1979, *Senchinshû,* p.201: Small, white single, tubular form, stamens cylindrical. Mid-season blooming. Leaves ovate, medium size, apex acuminate, margins undulate. Plant habit upright and vigorous. Originated in Ishikawa Prefecture, Japan. Note: Shizuka Gozen was a beautiful dancer of the Kamakura Era noted for her tragic love affair with Minamoto Yoshitsune.

Ima-Suma. J & F Thoby, Gaujacq, France, Catalogue, 2009, p.3; Bright rose single.

Imbircaria. Burdin Maggiore & Co. Catalogue, 1845. Orthographic error for **Imbricata.**

Imbricata. *(C.japonica),* Sweet, 1830, *Hortus Britannicus,* ed.2, p.74; Loddiges Catalogue, 1830, p.22; Booth, 1830, *Transactions of the Horticultural Society of London,* 7:555: Formal double, 8-9.5 cm across with outer petals 4.5 cm wide and 4.5 cm long, tips apiculate, perfectly imbricated, about 70 in number, colour HCC Carmine rose 621, often with central petals streaked white. Leaves deep green, glossy, flat with long, acuminate decurved apex; broadly elliptic or elliptic-ovate; margins shallowly serrate, 12 cm x 6.5 cm. Compact, upright habit. Description taken from Puddle & Hanger, RHS, *Rhododendron and Camellia Yearbook,* 1960, No.14, p.150. Imported from China by John Dampier Parks for the Royal Horticultural Society of London in 1824 and first flowered in England in 1827. Synonyms: 'Imbricata Rubra', 'Crimson Shell', 'Imbricata Booth', 'Imbricata a Stella Vermiglia', ‘Imbricate Petalled’. Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 17 as ‘Imbricata Rubra’, which is assumed to be **Imbricata.**

Imbricata a Stella Vermiglia. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* 9.11. Synonym for **Imbricata.**

Imbricata Alba. *(C.japonica), L'Horticultuer Belge*, 1834; Anonymous, Oct.1834, *Revue Horticole*, p.508, 509. No description. Berlèse, 1837, *Monographie,* ed.1, p.113: Leaves 7.5 cm wide x 10-12.5 cm long, oval, elliptic, tapered at the two extremities, well veined, apex recurved; flower 8 cm across, spheroidal, very full and forming a regular rose, the petals of which gradually diminish in size towards the centre and are mutually imbricated from the centre to the circumference; they are white with distinct red or white stripes. See Berlèse, 1841, *Iconographie,* vol.1, pl.40 and Mertens & Fontaine, *Collection de cent espèces.....camellia*, 1845, pl. 15. Originated By Hugh Low, England about 1833 as a seedling of **Alba Simplex.** Synonyms: 'Alba Imbricata', 'Picta Alba', 'Triumphans Alba', 'Picta Alba Nova', 'Triumphans Alba Nova', 'Triumphans Alba Venusta', 'Triumphant Alba'. Note: Bransford Nurseries Catalogue, 1976-1977, p.13, erroneously equates this with 'Purity', (**Shiragiku**). Received a RHS Award of Merit, 1960.

Imbricata Alba Plena. Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.14. Synonym for **Imbricata Alba.**

Imbricata Alba Plena. Hillier Catalogue, 1928-1929. Synonym for **Shiragiku.**

Imbricata Aurea. *(C.japonica),* Burdin Maggiore & Co., 1849-1850, Catalogue Général. No description. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. No description. Originated in Italy. (Believed extinct.)

Imbricata Fastuosa. van Houtte Catalogue, 1849-1850, 38:43. Synonym for **Princesse Marie de Saxe.**

Imbricata Guicciardini. *(C.japonica),* Burnier & Grilli Catalogue, 1855-1856. No description. Franchetti, 1851, *Collezione di Camelie,* p.36: Rose satin with the centre petals much paler, lines of white. Imbricated. Verschaffelt, 1859, *Nouvelle Iconographie,* Book IV, pl.VI gives it as 10 cm across, of a delicate pink colour with broad, longitudinal stripes of paler pink. Originated in Ialy by Franchetti, Florence.

Imbricata Macrophilla. Franchetti, 1855, *Collezione di Camelie,* p.36. Orthographic variant for **Imbricata Macrophylla.**

Imbricata Macrophylla. *(C.japonica),* Verschaffelt, 1853, *Nouvelle Iconographie,* Book I, pl.II: This variety, of Italian origin, has been grown commercially for 3-4 years. The petals decreasing suddenly from the circumference to the centre, are arranged in imbricated, star shaped serries. The exterior petals are large, rounded, becoming oblong, lanceolate, obtuse or sub-lobulate to the centre where they are small and form a narrow, open heart. The colouring is cherry carmine at the edges, pink in the middle with a few white blotches.

Imbricata Magna. *(C.japonica),* Verschaffelt, 1844-1`845, Catalogue, p.25. van Houtte Catalogue, 1845-1846, 23:6: Imbricated, very full, rose. Verschaffelt, 1856, *Nouvelle Iconographie,* Book,VII, pl.IV: We have been growing this camellia for several years. We received it from Italy. It is peculiar because of its enormous petals, which are not numerous, well imbricated, of a vivid rose colour, with a broad, pure white median stripe. The petals of the centre are close together and hooded. Orthographic errors: 'Imbricated Maha', ‘Imbricata Magno’. Synonym: 'Emilia Scotti'.

Imbricata Magno. Ambroise Verschaffelt, 1852-1853, Catalogue, p.19. Orthographic error for **Imbricata Magna.**

Impératrice de France. *(C.japonica),* Rafarin, May.1867, *Revue Horticole,* p.175: A new variety presented by Verschaffelt at the Paris exhibition of 1867, said to resemble camellia **Roi Leopold** as exhibited by Chantin. One sees from this how far off is the time when the camellia will rival the rose. Originated in Belgium.

Impératrice de Russie. *(C.japonica),* Verschaffelt Catalogue, 1847-1848, p.58. No description. Franchetti, 1855, *Collezione di Camelie,* p.36 as 'Imperatrice di Russia': Bright rose-pink, the central petals paler, and all striped white; imbricated. Orthographic variants: 'Imperator di Russia', 'Imperatrice di Russia'. Originated in France.

Imperatrice di Russia. Franchetti, 1855, *Collezione di Camelie,* p.36. Orthographic variant for **Impératrice de Russie.**

Impératrice du Brésil. *(C.japonica),* Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:316. No description. Berlèse, 1840, *Monographie,* ed.2, p.162: Flower large, single, cerise-red. Originated in Belgium. Orthographic error: 'Imperatrice de Bresil'. Note:- The orthographic variant **Imperatriz do Brazil** is a different cultivar.

Impératrice Eugenia. Volonte Catalogue, 1888, p.112. Orthographic variant for **Impératrice Eugènie.**

Impératrice Eugènie. *(C.japonica),* Verschaffelt, 1854, *Nouvelle Iconographie,* Book I, pl.I: It was obtained from seed in Belgium. The arrangement of the petals is like a peony, all rounded, slightly emarginated, concave, hooded, regularly inserted in an imbricated spiral, of a delicate pink colour with pure white margins and fine, carmine veining. Named for the Empress of France, born in Spain, married in 1853 to Napoleon III. Orthographic variants: 'Impératrice Eugenia', 'Empress Eygenie'.

Impératrice Joséphine. Jacob Makoy, et Cie Nursery Catalogue, 1839, p.17. van Houtte Catalogue, 1839,1:7 as a synonym for **Pulcherrima Striata.**

Impératrice Maria Theresa. Giles & Son Nursery Catalogue, 1881. Orthographic variant for **Impératrice Marie Therese.**

Imperatrice Marie Theresa. Law Somner & Co. Nursery Catalogue, 1884, p.46. Orthographic variant for **Impératrice Marie Therese.**

Impératrice Marie Therese. *(C.japonica),* van Houtte Catalogue, 1860-1861, 83:46: Large flower, well imbricated, petals clear rose, flaked white. van Houtte Catalogue, 1864-1865, 104:82: Imbricated. Derived from the beautiful **Maria Teresa.** Large, velvet, deep, tiered flower, 8-9 rows of petals, pale pink variegated with pure white. Originated in Belgium by J. van Eckhaute, Ghent as a sport of **Maria Teresa.** Orthographic variants: 'Impératrice Maria Theresa', 'Imperatrice Maria Therese'. Orthographic error: 'Imperatice Marie-Therese'.

Imperatrix. van Houtte Catalogue, 1839, 1:5. Synonym for 'Beck's Conspicua', synonym for **Conspicua de Loddiges.**

Imperatrix Amelia. Real Companhia Horticolo-Agricola Portuense, Catalogue, No.29, 1895-1896, p.50. Orthographic variant for **Imperatriz Amelia.**

Imperatix (Beck's). van Houtte Catalogue, 1844-1845, 18:13, as 'Imperatrix (Buyk's). Synonym for **Beck's Conspicua.**

Imperatrix (Buyk's). van Houtte Catalogue, 1844-1845, 18:13. Orthographic error for 'Imperatrix'(Beck's), synonym for **Beck's Conspicua.**

Imperatrix del Brasil. Escuela de Agricultura de Pontevedra, 1882, Catalogo, p.30. Orthographic variant for **Impèratriz do Brazil.**

Imperatrix Josephine. Berlese, 1845, *Monographie,* ed.3, p.316. Synonym for **Pulcherrima Striata.**

Imperatriz Amelia. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.34, & No.9, !872-1873, p.44: An irregular rose form, pale pink, striped carmine. Real Companhia Horticolo-Agricola Portuense, Catalogue No.36, 1902, p.53; Peony form, light pink striped carmine, petals bordered with white. Originated in Portugal.

Imperatriz do Brazil. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.35, & No.9, 1872-1873, p.44: Formal double, soft rose with deeper veining, striped white. Originated in Portugal. Orthographic variants (Spanish translations): 'Imperatrix del Brasil', 'Imperatriz do Brasil'. Note: The orthographic variant 'Impératrice du Brésil' is the name of another cultivar.

Imperatriz D. Leopoldina. Companhia-Horticolo Portuense Catalogue No.40, p.69, ca.1904. Abbreviation for **Imperatriz Dona Leopoldina.**

Imperatriz Dona Leopoldina. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.33, & No.9, 1872-1873, p.44: Formal double, white, striped and spotted carmine. Originated in Portugal. Abbreviation: 'Imperatriz D. Leopoldina'. Orthographic variant (Spanish translation); Emperatriz Doña Leopoldina'.

Imperial. *(C.japonica),* Gerbing's Azalea Gardens Catalogue, 1941-1942: New camellia from Middleton Place, Charleston, South Carolina, USA. (Middleton No.20). A peony form with rosy red colouring and exquisite form. The stamens are pleasingly intermingled with the petaloids. Its deep green foliage is very large and the plant is noted for its spreading growth. Late flowering.

Imperial Jewel. *Camellias*, Y.C. Shen, 2009, p.320 with colour photo; Synonym for **Kôgyoku.**

Imperial Lusitana. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.35, & No.9, 1872-1873, p.44: Formal double, soft pink, veined deeper and bordered with white. Originated in Portugal.

Imperial Splendour. *(C.japonica),* ACRS., 1980, *Camellia News,* No.75, p.25, Reg. No.258: Originated by T.J. Savige, Wirlinga, N.S.W., Australia. It first bloomed 1976. The spreading, bushy plant has 10 cm x 7 cm, rotund, deep green leaves; apex apiculate, base rounded, margins serrate. Blooms mid-season to late. The 12 cm semi-double to incomplete, informal double flowers, shade between RHS.CC. Red Group 46A and 45A, anthers bright, golden yellow. Colour photo, p.5, ACRS., 1981, *Camellia News,* No.79. Chinese synonym: 'Diguo Zhihui'.

Imperialis. Anonymous, 1832, *Annales Société d'Horticulture de Paris,* 11:32: Brought to Paris from London in 1828. Courtois, 1833, *Magazin d'Horticulture,* 1 [pt.E]:60. No description. van Houtte Catalogue, 1841, 7:16 gives 'Imperalis', **Splendida** and **Gray's Invincible** as synonyms for 'Punctata', while the *Gardener's Chronicle* of 1841 adds **Adonidea**, 'Preston's Eclipse' and 'Gallicarum Pressii' to the list of synonyms and, later, Burnier & Grilli Catalogue, 1846-1847 adds 'Punctata Major'. In this case the listing of **Gray's Invincible** by London in 1827 takes priority. Orthographic errors: 'Imperaliste', 'Imperalis'.

Imperialis Alba. *(C.japonica),* Vanderbilt, 1940, *Camellia Research,* p.5. No description. (Believed extinct.)

Impéraliste. Victor de Bisschop Nursery Catalogue, 1935, p.9. Orthographic error for 'Imperialis', synonym for **Gray's Invincible.**

Imprévu. *(C.hybrid). Jardins de France*, No.2, March 1995, p.31, colour plate: Originated by J.C. Rosmann, Boucou, France. A seedling of *C.x williamsii* **Sallour** (*C.saluenensis* x *C.japonica* **Madame Lourmand**) x *C.pitardii* var. *yunnanica.* An irregular semi-double with 11-13 wavy petals, white with pink stripes. An irregular centre of stamens broken by small, erect petals.

Improved Alba Plena. McIlhenny, 1934, *List of Camellia Japonica for Sale,* p.6. Synonym for **Alba Plena.**

Improved Dawn. Hearn Catalogue, ca.1945, according to Hume, 1946, *Camellias in America*, p.333. Synonym for **Pink Dawn.**

Improved Sarah Frost. McIlhenny, 1937, *600 Varieties of Camellias,* p.7. Synonym for **Sarah Frost.**

Imura. *(C.japonica),* Gerbing's Azalea Gardens Catalogue, 1938-1939 as 'Imura White': Semi-double, snow-white waterlily type, long, narrow petals of porcelain texture with yellow stamens, mid-season blooming. Fendig, 1949, *American Camellia Catalogue:* Very large, white semi-double. When half open the flower is said to resemble the half-furled wings of a swan. Texture of petals is like porcelain. Size 12-15 cm across with 10-15 petals. Showy stamens. Anthers very large, arrow shaped. Leaves glossy, dark green, long and narrow, smooth, apex recurved, fine serrations, 7.5 cm x 2.5 cm. Plant habit, vigorous, upright, open growth with somewhat pendulous branches. Developed from seed imported from Japan in 1925 by K. Sawada, Mobile, Alabama, USA. First bloomed 1929. Overlook Seedling No.12. Synonyms: 'Imura White', 'Diana', 'Dr Allen Ames', 'S. Imura'. For black and white photo see p.167, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II. Seedlings include: **Fragrant Star, Ida Weisner, Tyler Nation.** Chinese synonym ‘Yimula’.

Imura White. Gerbing's Azalea Gardens Catalogue, 1938-1939. Synonym for **Imura.**

In Ceneris Viget. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings*, p.2, colour photo: Irregular, red, semi-double with twisted and fluted petals. Seedling of **Bessie McArthur** originated by Richard Dodd, Marshallville, Georgia, USA.

In Loving Memory. *(C.reticulata* hybrid). *New Zealand Camellia Bulletin,* March 2008 No.159, p.3, Reg. No. 479. Bred by Neville Haydon, Takanini, New Zealand, and registered by Andrew Tills, Camellia Haven Nursery. A cross between *C.reticulata* hybrid **Gael’s Dream** and an unknown pollen parent. First flowered in 2000. Plant is rapid growing, of average form and density. Dark green leaves are 11 cm x 6 cm. Flower is semi-double to loose peony, 13 cm wide x 6 cm deep, with about 18 petals having a soft, slightly crushed texture. Filaments are white and anthers bright yellow. The flowers open a delicate pink (RHS.CC. 65D), fading to a palest pink in the mature flower. Such pale colours are still unusual in *reticulata* hybrids. Flowers mid-season to late.

In Memoriam. *(C.japonica),* Fruitland Nursery Catalogue, 1948: Red, large semi-double with large petals. Originated in USA by Fruitland Nursery, Augusta, Georgia.

In the Pink. *(C.japonica),* Kramer Nursery Catalogue,1971: Rose-pink formal double. *American Camellia Yearbook,* 1979, p.107, Reg. No.1541: A medium size, rose-pink formal to rose form double chance seedling *C.japonica* that flowers mid-season to late. Originated by Kramer Bros. Nursery, Upland. California, USA. See colour photo facing p.20, *American Camellia Yearbook,* 1978 and facing p.101, 1974 yearbook, also p.95, Macoboy, 1981, *The Colour Dictionary of Camellias* and front cover SCCS, 1974, *The Camellia Review,* vol.35, No.6. Sports: **In the Pink Variegated, In the Red.**

In the Pink Variegated. *(C.japonica),* Kramer Bros Nursery Catalogue, 1977. *American Camellia Yearbook,* 1979, p.107, Reg. No.1542: as 'In the Pink Var.': A medium sized, white, striped pink, formal to rose form double *C.japonica* mutant of **In the Pink.** Blooms mid-season to late.. Originated by Kramer Bros. Nursery, Upland, California, USA.

In the Purple. *(C.japonica), New Zealand Camellia Bulletin,* 1982, vol.XII, No.5, P.7, Reg. No.175: A chance seedling of *C.japonica* 'Fuyajo' (**Kon-wabisuke**), originated by Miss J. Farmer, Palmerston North, New Zealand, that first flowered in 1975. Growth is medium in rate and of average habit. The peony form flower is dark to purplish red with darker veining, 10 cm x 7 cm, with 20 petals and an average of 15 petaloids. Anthers are yellow with red filaments. Flowers mid-season to late.

In the Red. *(C.japonica),* Kramer Bros. Nursery Catalogue, 1975: A red sport of **In the Pink.** *American Camellia Yearbook,* 1979, p.107, Reg. No.1543: A medium sized, rose-red formal to rose form double *C.japonica* mutant of 'In the Pink'. Mid-season to late flowering. Originated by Kramer Bros. Nursery, Upland, California, USA.

Inaba. (Ancient Place name for Tottori), *(C.japonica),* Itô Ihei, 1710, *Zohô Chikinshô,* vol.2; Itô *Jukyû,* 1739, *Honzô Hanamaki'e,* vol.l5; Yashiro, 1841,*Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859,*Tsubaki Irohanayose Irotsuki:* Large double, 3 rows of petals, convex flower, coloured red with white variegation. Originated in Japan. (Believed extinct.)

Inabachiyo-no-haru. (Spring in Chiyo, Inaba), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.297, colour pl. and description: Very large size, faint pink, semi-double with 3 rows of rounded, reflexed, emarginate petals and a central stamen column, with white filaments, joined for their lower third, and yellow anthers. Blooms mid-season to late. Leaves medium size, dark green, elliptic, apices acute, margins serrulate. Originated in the Tottori Prefecture, Japan. "Chiyo" is a river in Tottori. Released by Yoshio Takata in 1979.

Inabadô. (Inaba Temple), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Uyesa, 1844, *Sômoku Benran:* Deep red double with substantial petals. Elegant. Sake-cup shape, early flowering. Originated in Japan. (Believed extinct.)

Inaba-hime. (Inaba Princess), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.10: Large size, deep pink, rose form double with scattered stamens. Late blooming. Nippon Tsubaki - Sasanqua Meikan, 1998, p.32 with colour photo; English translation p.20. Peach red, bud-centred to semi-double, large, petals shatter. An old tree survives with the Sahashi family in Tottori City. The family was a chief retainer of the feudal clan the Ikeda-*han*. Named and released by Yoshio Yamda in 1979. From Tottori Prefecture.

Inaba-yabukuro. (Black Wild Camellia from Inaba). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.33 with colour photo; English translation p.20. Small, dark red, cup to bowl shaped single with thick petals and cylindrical stamens. Flowers early to mid-season. Leaves elliptic, medium size, somewhat flat. Upright, vigorous growth. Selected from wild camellias in Tottori Prefecture, named and released by Nobuo Sasai in 1979. From Tottori to Okayama.

Inaba-yuri. (Inaba Lily), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.161, colour pl. and description: Small to medium size, red, single of 6-7 petals rolled, lateral margins, giving a pointed apex, and a short, yellow stamen cluster. Blooms early to late. A seedling of **Kikuzuki,** originated in the Tottori Prefecture, Japan. Originated and released by Morimoto in 1981.

Inada-hime. (Name of Goddess), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.10: No description. Originated in the Shimane Prefecture, Japan. Note: A synonym for Kushinada-hime, the name of a maiden goddess in Japanese myths.

Inamorata. (Borde Hill Hybrid), Johnston, 1948, *Journal of the RHS,* 72:283, fig.121 :- Originated by Mr Hanger, Exbury, England by pollenating *C.saluenensis* with pollen from *C.reticulata.* Medium, rose-pink single, 8-10 cm across, 6-8 petals, rounded and notched at the apex. A trumpet shaped stamen centre has yellow anthers and pink filaments. Leaves are dark green, broad-ovate, 9.5 cm x 5.5 cm, apex cuspidate, base cuneate, very fine, sharp serrations. Leaf characteristics follow the saluenensis parent. Received an Award of Merit from the RHS. See colour plate facing p.72, *American Camellia Yearbook,* 1951. Orthographic error: 'Inamorta'.

Inamorta. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Orthographic error for **Inamorata.**

Inanogawa. (Inano River), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.55, colour pl. and description: Large size, white, wide campanulate single, with 7 broad, ruffled, reflexed petals and a broad, yellow stamen cylinder. Blooms mid-season. Leaves bright green, impressed venation, elliptic, margins serrate. Originated in Ôsaka Prefecture, Japan. Resembles **Kamo-honnami.**

Inaoi-dori. (Japanese Migratory Sparrow), *(C.japonica),* Itô, Ko'emon, 1879, *Chinkashû;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Red, large size, early flowering. One of three bird names with **Miyakodori** and **Yobukodori.** For colour photos and descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan,* pl.161 and p.280; *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.399, p.18-62; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.18, 201; Yokohama & Kirino, 1989, *Nihon no Chinka,* pp.324, 325: Medium sized, deep pink, with some white spots, double with 5-6 layers of more or less imbricated petals and a centre, often with small, irregular petals amongst the stamens. Blooms mid-season to late. Leaves dark green, elliptic, acuminate with fine, sharp serrations, venation impressed. Originated in the Kantô District, Japan. Note: This description is a little different to the ancient camellia.

Inaspettata. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.21: A magnificent flower of the same sort as 'Iride' (**Dryade**). Originated in Italy by Sloane. Franchetti, 1855, *Collezione di Camelie,* p.41: Very large, perfectly imbricated flower, cherry red, with margins shaded white, some white stripes and softly tinted and streaked a deeper red. Orthographic errors: 'Innaspettata', 'L'Maspettata', 'L'Innaspettata', 'Inna Spettata'. See pl.IV, pl.I, Verschaffelt, 1857, *Nouvelle Iconographie* as 'L'Innaspettata'.

Inazuma. (Lightning), *(C.japonica),* Itô Tokuemon, 1788, *Tsubaki Hanagata Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Red single with white flashes and a spreading stamen cluster. Originated in Japan.

Inazuma. (Lightning), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu;* Yashiroda, 1950, *American Camellia Yearbook,* p.22: Pink shaded and striped with white and pink outside; large, some 12 broad, thick petals; upright, stout branched but a slow grower. Leaves concave, cup-shaped. Early blooming. Orthographic error: 'Iazuma'. Chinese synonym: 'Shandian'. Synonym: 'Goshoguruma'. Originated in Tokyo, Japan.

Incarnata. *(C.japonica),* Andrew, 1812, *Botanical Repository,* vol.10, pl.660 as 'flore pleno Incarnato'. In 1816 it was listed as 'The Blush Camellia' in *The Botanical Register* and finally given the cultivar name **Incarnata** in Loddige's *Botanical Cabinet,* 1818 with a colour plate. A formal double, 7-9 cm across, outer petals obovate, 4 cm long x 3.3 cm wide,, slightly notched; central petals obcordate with short, pointed apex. Imbricated to give tiered or hexagonal form. Pale dawn pink (RHS.CC. 523/3) or paler, depth of colour depending on protection of the flowers. Leaves narrowly obovate, 9 cm x 4 cm, apex acuminate, margins serrate, light mid-green, upper surface with pale veining. Habit slow, upright, spreading growth. Imported from China for Lady Amelia Hume of Wormleybury, England in 1806. The synonym 'Lady Hume's Blush' is in common use for this cultivar. Synonyms: 'Buff', 'Buff Pink', 'Blush',

'Double Blush', 'Double Buff', 'Flavescens', 'Hume's Blush', 'Lady Hume's Blush', 'Lady Hume's Double blush', 'Maiden's Blush', 'Pudeur de Madamoiselle Hume', 'Mahdenblush', 'Maidenblusch', 'Camurca', 'Incarnata Plena', 'Incarnata Flavescens', 'Incarnata Stella', 'Incarnata Myrtifolia', 'Incarnata Pallida', 'Incarnata Pink', 'Precocissima', 'Flesh Coloured', 'Kewblush', 'Incarnate', Japonica Flore Plena Incarnata', 'Magnifica Maiden Blush', 'Roseaflavescens Hume's Blush'. Pseudonym: 'Carnea'. Colour plates: Berlèse, 1843, *Iconographie,* pl.118. Urquhart, 1956, *The Camellia.* Waterhouse, 1952, *Camellia Trail,* pl.VI. Baumann & Baumann, 1831, *Collection de Camellias élèves à Bollweiler,* p.11, pl.24.

Incarnata Alba. Shepherd & Co. Nursery Catalogue, 1872, p.22. Synonym for **Leda.**

Incarnata Alba Plena. *Magazine of Horticulture, 1835*. Synonym for **Incarnata.**

Incarnata (Buff). Parmentier, 1818, *Catalogue des Arbres et Plantes Cultiveés...,* p.15. Synonym for **Incarnata**.

Incarnata Flavescens. J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Cactus, Camelien..*, p.180. Prince & Co. Nursery Catalogue 1844, p.104. Synonym for **Incarnata.**

Incarnata Flore Pleno. Martin Burdin Aine & Co. Catalogue, 1822, p.56 as 'Incarnata Fl. Pl.'. Synonym for **Incarnata.**

Incarnata Myrtifolia. Shneiderff, Enrico, ed.,1841, *Catalogo delle piante che si Trovano nel Giardino del Sig. Enrico Sheiderff,* p.8. Synonym for **Incarnata.**

Incarnata Pallida. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.12. Synonym for **Incarnata.**

Incarnata Pink. Vanderbilt, 1941, *Camellia Research, II,* p.3. Synonym for **Incarnata.**

Incarnata Plena. Loddige's Nursery Catalogue, 1814, p.25 as 'Incarnata pl. (blush)'. Synonym for **Incarnata.**

Incarnata Pleno. Cels, Paris Nursery Catalogue, 1817, p.9. Synonym for **Incarnata.**

Incarnata Stellata. Costa, 1846, *Catalogue de la collection de Camellias présentée à sa majestè L'Impératrice de toutes les Russies et Reine de Pologne,* p.16. Synonym for **Incarnata.**

Incarnate. Buist.1839, *Camellias,* p.7. Orthographic error for **Incarnata.**

Incarnato. Tirocco, 1928, *La Camelia,* p.44. Orthographic error for **Incarnata.**

Inchmay. RHS., 1977, *Rhododendrons with Magnolias and Camellias*, p.98. Orthographic error for **Inchmery.**

Inchmery. *(C.japonica),* RHS., 1950, *Camellia and Magnolia Conference Report,* Index, p.130. Given in the parentage of a hybrid. Exhibited by de Rothschild of Exbury. A seedling raised by Francis Hanger from **Gloire de Nantes** x **Alba Simplex**. A pink single to semi-double. Originated in England. Orthographic error: 'Inchmay'.

Incomparabile. *(C.japonica*), *Le Camelie*, Del Lungo-Girardi, 1928, photo p.104, as from the collection of Guido Mariotti of Genoa-Nervi. Reference supplied by Hillebrand, *Antiche Camelie del Lago Maggiore*, 2003, p.225 with colour photo; Medium size formal double bloom, sometimes in a spiral form, delicate pink. Leaves medium, rounded, light green; restrained growth. Mid-season.

Incomparabile. Franchetti, 1855, *Collezione di Camelie,* p.36. Jean Vervaene fils, 1864, Price List, No.1, p.6. Orthographic variant for **Incomparabilis.**

Incomparabilis. *(C.japonica),* Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:316. No description. Berlèse, 1837, *Monographie,* ed.1, p.109, 130: Leaves 10 cm x 7 cm, round-ovate, lanceolate,

apex acuminate, prominent venation, brilliant green. Flower large, 11 cm across, single, deep orange red, 8 broad petals, crenate at apex; stamens erect, compact. Originated in Germany. Orthographic variants: 'Incomparable', 'Incomparabile'.

Incomparabilis. *(C.japonica),* Berlese, 1837, *Monographie* ed.1, p.109. There exists another camellia under this name whose flower is large, full and like **Conspicua.** Originated in France by Cachet of Anjou about 1831 according to Le Texnier,1911. (Believed extinct.)

Incomparabilis de Nantes. van Houtte Catalogue, 1843, 12:yy. Synonym for **Incomparabilis Vera.**

Incomparabilis di Nantes. Fratelli Rovelli Catalogue, 1852, p.19. Synonym for **Incomparabilis Vera.**

Incomparabilis Nova. Berlèse, 1843, *Iconographie* pl.213. Synonym for **Incomparabilis Vera.**

Incomparabilis Vera. *(C.japonica),* van Houtte Catalogue, 1841, 7:4, erroneously as a synonym for **Coquettii,** then his 1842-1843 Catalogue, 9:53 described it as: Red formed like the double white; white band longitudinally down each petal from the centre to the circumference. Berlèse, 1843, *Iconographie,* pl.254: The flower, about 9 cm or more across when fully open, is double, round, of carmine red with rays of white. The petals are not numerous, about as wide as long, rounded at the apex, indented, channelled and tranversed lengthways by a white band. The centre is composed of a few unequal petals and small, incompletely developed ones with marks of white. This variety originated as a seedling in France by Madame Veuve Mouton, Nantes. Synonyms: 'Incomparabilis de Nantes', 'Incomparabilis Nova', 'Incomparabilis Vera de Nantes'.

Incomparabilis Vera de Nantes. Jacob Makoy et Cie Nursery Catalogue, 1849, p.9. Synonym for **Incomparabilis Vera.**

Incomparable. Henderson, E.G. Nursery Catalogue, 1867. Orthographic variant for **Incomparabilis.**

Inconstant Beauty. McIlhenny, 1934, *List of Camellia Japonica for Sale,* p.2; Barron, Mar.1934, *Country Life,* p.53 with coloured flower painting. Synonym for **Mathotiana Alba.**

Independence. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.109. No description. Originated in USA. No valid listing located.

Independencia de Portugal. *(C.japonica), Jornal de Horticultura Practica,* 1891, Vol.XXII, p.93 by Eduardo Segueira: Very vivid pink, formal double, large petals Obtained by seed by José Marques Loureiro from **Regina dei Giganti.** No description in Loureiro catalogues. Originated in Portugal.

India. *(C.japonica),* Fendig, 1956, *American Camellia Yearbook,* p.30, Originated by B.L. Kersey, Golden Isles Nursery, Blythe Island, Georgia, USA from seed of unknown parents. The flower is large, loosely formed, semi-double, dawn pink in colour, 11 cm across x 4 cm deep. There are 3 tiers of semi-erect petals which lean back and curve up from the edges. Central stamens are in a regular cylinder, anthers yellow, filaments cream.

India Kuger. The Pacific Camellia Society, 1946, *Camellia Nomenclature,* p.18. Orthographic error for 'India Kruger', synonym for **Lady MacKinnon.**

India Kruger. Griffiths & Strothers, 1954, ACS, *Nomenclatural Cross Reference List,* p.6,7. Synonym for 'Lady MacKinnon', erroneously as **Lady de Saumarez.**

Indian Chief. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.63: Very Large peony form. Red. Vigorous, upright growth. Early to midseason blooming. Originated in USA by H. Shackelford. Sport: **Indian Chief Variegated.**

Indian Chief Variegated. *(C.japonica),* SCCS, 1960, *Camellia Nomenclature,* p.63 as 'Indian Chief Var.': Virus variegated form of **Indian Chief** - Red blotched white. Originated in USA.

Indian Summer. *(C.japonica),* Tourje, 1955, *American Camellia Yearbook,* p.33: Originated by McCaskill Gardens, Pasadena, California, USA. It is a large, full, peony form. The colours range from bright carmine rose splashed on pure white to white splashed on carmine rose. The numerous, high, wavy petals are deeply notched and ruffled. The centre is a compact cluster of petals and petaloids. A seedling of **Daikagura** with similar appearance and habits, except that **Indian Summer** is more vigorous and substantial. For black and white photo see p.105, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III. Sport: **Indian Summer Variegated.** Chinese synonym 'Yindu Zhi Xia'.

Indian Summer Variegated. *(C.japonica),* McCaskill Gardens Newest Camellias, 1957: Carmine rose blotched white. Originated at the McCaskill Gardens, Pasadena, California, USA. For black and white photo see, p.107, Hertrich, *Camellias in the Huntington Gardens,* vol.III.

Indiscreet. *(C.japonica),* ACS., 1949, *News Letter,* vol.4, No.3, Reg. No.9: White pencilled with red and red petaloids to creamy white, pencilled pink with pink petaloids to solid red. Medium sized (8.5 cm x 2 cm) peony form. First flowered 1947. Slow, compact, upright growth. Early to midseason flowering. A seedling originated by Stanley W. Miller, El Cajon, California, USA from seed of **Nobilissima.** For black and white photo see, p.108, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III.

Inexpleta. *(C.japonica),* Loddige's Nursery Catalogue, 1849, p.34. No description. Originated in England. (Believed extinct.)

Inez H. *(C.japonica),* McIlhenny Catalogue, 1949-1950, p.7: Deep rose-pink, veined rose with white stamens. Small, cupped semi-double. Originated in USA.

Inez Moll. *(C.japonica), American Camellia Yearbook,* 1958, p.288, Reg. No.326: A 9 year old chance seedling, originated by Julington Nurseries, Jacksonville, Florida, USA. The large, dark green leaves are of heavy texture, ovate, acuminate and serrate. The incomplete double flowers are clear, deep salmon with a rose undertone and have 3 rows of large, rounded, wax-like petals of heavy texture, with small, curved petals standing amongst low, light, golden stamens. Flowers average 12 cm across and appear early to mid-season.

Inokuchi-kaori. (Inokuchi Fragrance). (Wabisuke). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.33 with colour photo; English translation p.21. Medium size, wisteria purple, trumpet shaped single. Fragrant. Flowers early to mid-season. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Selected from seedlings of **Uraku 64** by Takeo Ogawa, applied to the registration of the Ministry of Agriculture and Fishery in 1996. From Izu-ôshima, Tokyo.

Inopinata della Valcosa. *(C.japonica),* ICS *Journal,* 2002, p.86, Reg. No.31: An open pollinated seedling of **Hagoromo**. Originated by Gaetano de Persiis, Altari, Italy. First flowered in 2000 at circa 7 years. An upright shrub of slow growth rate. Flowers floriferously early season. A

white (light pink) with variable red and pink speckling (RHS.CC. 53C, 62A, 56B). A semi-double with 29-41 stamens, 10 cm across x 4.5 cm deep.

Insignia. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Insignis.**

Insignis. *(C.japonica),* Buckingham & Chandler, 1825, *Camellia Britannica,* p.15, pl.6: This approaches somewhat to a camellia lately raised by Mr Knight, Kings Road, called 'Carnation Warratah'. The guard petals of our plant are bright red while his are a soft rose colour. See also pl.31, Chandler & Booth, 1831, *Illustrations and description of Camellias...:* Raised by Chandler at the Vauxhall Nursery about 11 years ago. The flowers are at first bell shaped like the single red (‘Rubra Simplex’), but unfold the large, outer petals, 6-8 in number, to exhibit a dense, globular mass of small wedge shaped petals, more or less variegated with white like a carnation, and incurved towards the style, prominent in the centre. The flower measures 7.5 cm across fully opened. The large petals exceed 2.5 cm, indented at the apex, flat and round, of a deep rose colour with darker veins. The inner petals are small and ranged over one another. In the centre it is common for many to be partly transformed, one half of the anther being dilated and coloured the other half perfect and yellow. Synonyms: 'Insignis Spendid', 'Splendid', 'Splendid Flowered', 'Insignis Colvill's'. Orthographic error: 'Insignia'.

Insignis Alba. *(C.japonica),* Jacob Makoy, 1828, Catalogue, p.5. No description. Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:316. No description. Berlèse, 1837, *Monographie,* ed.1, p.79: Leaves oval, a little lanceolate,10 cm x 4.5 cm, smooth, reclined, rolled up on sides, yellowish green. Flower, 9.5 cm across, single, of a cherry red spotted white, 6 petals; petaloid stamens, whitish, slightly striped, pale red. Originated in England. Synonym: 'Insignis Flore Alba'.

Insignis Colvills. Baumann & Baumann, 1832, *Collection de Camellias,* pl.33. Synonym for **Insignis.**

Insignis de Tat. *(C.japonica),* Berlèse, 1837, *Monographie,* ed.1, p.79: Leaves 8 cm x 5 cm, oblong, very acuminate, almost flat, finely and regularly serrate, of an obscure green. Flower, semi-double, 6.5 cm across, cherry-red; petals imbricated, those at the centre small and mixed with stamens. Originated in England.

Insignis Flore Alba. Anon. 1830, "Ueber die Cultur der Kamellien" in *Der Blumen Gaertner,* 1830, p.52. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.109. Synonym for **Insignis Alba.**

Interlude. *(C.hiemalis), American Camellia Yearbook,* 1958, p.288, Reg. No.319: A seedling of **Shishi-gashira**, originated by Marjorie Washburne, Port Arthur, Texas, USA. Plant growth, slow, dwarf, compact and symmetrical with glossy, deep green leaves, 6 cm x 2.5 cm, that twist slightly at the tips. The flowers are light pink and vary from formal double to rose form double, 7.5 cm across x 2.5 cm deep with 45-50 petals. Early blooming.

Intermedia. *(C.japonica),* Buist, 1832, *American Flower Garden Directory,* p.80. A very large flower, shape of 'Pomponia' (**Pompone**), outside petals striated at their extremities with a rich blush, ground cover pure white, and it is in high estimation. Grows and flowers freely. It is in very few collections in Europe. Buist, 1845, p.221 says: "Sport of **Paeoniiflora**". It is very large size, blush suffused with rose." Synonym: 'New Blush'. Originated in USA.

Interval. *(C.reticulata* hybrid), Trehane Nursery Catalogue, 1972-1973: First named 'Interlude' but changed to **Interval** in 1970 due to conflict with *C.hiemalis* above with prior claim to the name. This is a new break in reticulata hybrids raised by David Feathers, Lafayette, California, USA. It is a compact, bushy shrub with good reticulata foliage which flowers from the word go, with flat, semi-double, rich pink flowers with carmine veining, opening to 12.5 cm across and widening to as much as 17 cm with a central mass of butter yellow stamens. Chinese synonym 'Xiaohan'.

Intoscent. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 2002, Issue No.141, vol.XXII, No.5, p.12, Reg. No.438. Registered by J.R. Finlay, Whangarei, New Zealand. A cross of C.hybrid **Fragrant One** x *C.japonica* **Scentasia** which first flowered in 1997. The flower is peony form, 11 cm diameter x 5.5 cm deep, with 22-25 petals and a loose central mass of about 25 large petaloids mixed with many stamens bearing anthers with bright golden pollen. Colour is pink, shading from bright pink tips (RHS.CC.58D) to a much lighter pink (RHS.CC.55D) at the flower centre. The flower weathers well and is moderately strongly scented. The bush is upright, of average density and fast growing, with light green leaves 10 cm long x 4 cm wide. Blooms mid-season to late.

Intoxicatingly Beautiful Red. Dryden, 1982, SCCS., *The Camellia Review,* vol.44, No.1, p.17. Synonym for **Zuijiaohong.**

Intoxicatingly Charming Red. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.147. Synonym for **Zuijiaohong.**

Intrigue. *(C.japonica), American Camellia Yearbook.* 1965, p.237, Reg. No.800: A *5* year old chance seedling that first bloomed 1963. Originated by Gary Chittie LeCroy, Moncks Corner, South Carolina, USA. The flower is 12.5 cm across x 10 cm deep with 18 petals, 44 petaloids, 3 flutes, 239 stamens. It is extremely variable in form. The flower is deep red with petals of full form, forming an outer guard for the stamens, petaloids and flutes intermixed; which form a collar around full form petals which surround the central stamens. Filaments are pink fading to white with bright yellow anthers. Blooms mid-season to late.

Intus Rubra. *(C.japonica),* Verschaffelt Catalogue, No.50, 1844, p.20. No description. Originated in Italy. (Believed extinct.)

Inuhariko. (Papier Mache Dog), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Nihon Shubyô Co. Catalogue, 1910: Pale pink, tinted white with deeper pink shades and stripes. Large semi-double. Blooms early to mid-season. Originated in Tokyo, Japan. See pl.548, p.216 & 389, *Encyclopedia of Camellias in Colour,* vol.II, 1978, which shows a single white with pink tones, sasanqua.

Invictus. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Dull red. Medium sized, full peony form. Blooms mid-season. Originated in USA by Fruitland Nursery, Augusta, Georgia.

Invincible. Hubbert & Buist, 1832, *The American Flower Garden Directory,* p.356. Wilder, 1835, *Magazine of Horticulture,* 1(1):15. Abbreviation for **Gray's Invincible.**

Involutus. *(C.japonica),* McIlhenny Catalogue, 1935, p.7*:* Light rose-pink, flecked with white. Medium sized semi-double. Originated in USA.

Inzen. (Command of ex-Emperor), *(C.japonica),* Inazawa Nursery Co. Ltd. Catalogue, 1986-1987, p.14. No description. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.241, colour photo and description: Small size, deep red blotched white, campanulate single of 5 broad, emarginate, overlapping petals, with a central column of stamens with pinkish to white filaments, joined for the lower third, and yellow anthers: Blooms mid-season to late. Leaves deep green, elliptic, apices long acuminate, recurved, margins serrulate and a little twisted. Originated in Japan. A chance seedling of a cultivar, originated and named by Tôhei Takahashi, released by Minoru Satô in 1981. Chinese synonym ‘Yuanxuan’.

Io. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.17; Red, imbricated.

Iodina. Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* as *C.iodina* for **Kuro-tsubaki.** Not acceptable by current botanical classification.

Ioginashiji. (Iogi's Gold Lacquer Painting), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.69, black and white photo. For colour photos see pl.359, *Encyclopedia of Camellias in Colour,* vol.II 1978*;* Seibundô Shinkôsha, 1979, *Senchinshû,* pp.15,199: An irregular, campanulate single of frosty pink, finely peppered a deeper pink, 5-6 petals, somewhat crinkled round the edges and with a central stamen column. Leaves elliptic, apex acuminate, shallowly serrate, impressed venation. Discovered in 1960s by Kazutoshi Ôhara at Iogi, Suginami Ward, Tokyo. Named and released by Takashi Tsuyama in 1974. "Nashiji" was an ancient method of painting with gold lacquer.

Iôji. (Iô Temple), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki*, p.38*;* see also Seibundô Shinkôsha, 1979, *Senchinshû,* p.15, colour photo: A trumpet shaped red single with white markings, 6-7 large petals, emarginate and somewhat wrinkled on the edges. Leaves mid-green, elliptic, apex acuminate, recurved, keeled, fine, sharp serrations. Flowers mid-season to late. The original tree is in the Iô Temple Precincts, Nansei Town, Mi'e Prefecture. Originated in Chûbu District, Japan. Resembles **Shokkô** from Kantô. Named and released by Eimei Nagata in 1950.

Iona Isobel. (*C.reticulata* hybrid) NZCS, *Camellia Bulletin*, No.169, July 2011, p.12 with colour photo; Regn No.487. First flowered 2006, from a *C.reticulata* seed, parents not known. Plant is upright, dense and of medium growth rate. Large, dark green leaves are 11 cm x 6 cm. Flower is formal double, 12 cm diameter x 5 cm deep, with about 55 cupped, orbicular petals. Colour is pink-red (RHSCC 58C). There are no stamens. Flowers midseason, and blooms shatter after about 3 days. Originated by Neil W.J. Ingram, New Plymouth, NZ.

Iori-no-mado. (Hermitage Window), *(C.japonica),* Satomi, 1962, *Supplement to Camellia Varieties of Japan:* White, cup-shaped single, large. Originated in Japan.

Iori-no-tsuki. (Moon View from Hermitage), *(C.japonica),* Tateyama Nursery Catalogue, 1957*:* White single. Large. Originated in Japan.

Iori-no-tsuyu. (Dewdrops of Hermitage). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.336 with black and white photo; English translation p.226. Medium size, palest pink, bowl shaped single, broadening cluster of cylindrical stamens. Flowers mid-season. Leaves elliptic, medium size, thick. Upright growth, weak. A natural seedling of **Nono-ichi.** Named and released by Nonoichi Town Camellia Lovers Club in 1990.

Iôzen. (Mount Iô), *(C.rusticana),* JCS., Jan.1989, *Japan Camellia,* No.30, p.4, colour photo; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.215, colour photo and description: Very small size, bright red, single with 6 entire, rounded petals of different sizes and a short, compact, stamen cluster with yellow anthers and pale yellow filaments. Blooms early to mid-season. Leaves light green, broad-elliptic, margins serrate. Different reading: 'Iôzan'. Originated in Fukimi'tsu-chô, Toyama Prefecture, Japan. Named and released by Takeo Ogawa around 1975.

Ipocrifo Vera. Franchetti, 1855, *Collezione di Camelie,* p.36. Orthographic error for **L'Ippogriffo.**

Ippogriffo. Luzzatti Catalogue, 1853. Abbreviation for **L'Ippogriffo.**

Ippon-no-shigure. Different reading for **Hitomoto-no-shigure.**

Iraka-no-nami. (Waves like Imbricate Roofs), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.28: Very small, deep rose-pink, cup-shaped single. Blooms early to mid-season. Originated in the Niigata Prefecture, Japan of a cross of *C.japonica* **Tôkai** x *C.sinensis,* Z.1. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.34 with colour photo; English translation p.21. Stated to be a cross of *C.x williamsii* **Elegant Beauty** x *C.japonica* **Onetia Holland.** Colour photo supports this parentage. Deep pink at petal margins graduating to pink at the centre,

formal double, spiral, medium to large size. Flowers mid-season to late. Leaves elliptic medium size. Spreading growth. Named and released by Kaoru Hagiya in 1979.

Irama Girl. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Drama Girl.**

Iras. *(C.japonica), Australian Botanical and Horticultural Society Report,* 1849: A Camden Park seedling raised by Sir William Macarthur, N.S.W., Australia: Crimson with a few lighter splashes.

Iratsume. (Young Lady in Ancient Times). *(C.japonica),* ICS. Apr. 1990, *Japanese Camellia Cultivar List,* p.10, as 'Itsurame'. Originated in Hamada San'in District, Japan. No description. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.335; English translation p.226. White, sake cup-shaped single. Slender petals, cylindrical stamen column. Flowers mid-season. Leaves broadly elliptic, medium size. Spreading growth. Selected from wild japonicas growing on Mt Kagami in Hamada City. Named and released by Hisashi Shizuma in 1986. From Shimane Prefecture

Ireko. (Nest of Boxes), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.261: A small, deep crimson, formal double with a few white marks on some outer petals. Originated in Japan. Different reading: 'Iriko'. (Believed extinct.)

Irene. *(C.japonica), American Camellia Yearbook,* 1984, p.178, Reg. No.1928: A small, white and pink with red stripes, formal double *C.japonica* chance seedling, mid-season to late flowering. Originated by Art Gonos, Fresno, California, USA. The 13 year old seedling first bloomed 1977. Average flower size, 7 cm across x 1.5 cm deep with 80-88 petals. Plant growth, spreading and medium in rate with dark green leaves, 7.5 cm x 1.8 cm.

Irene Batelli. *(C.japonica),* Stefano Pagliai Catalogue, 1867: Carmine rose formal double. Originated in Italy by Cesare Franchetti, Florence.

Irene Coker. *(C.japonica), American Camellia Yearbook,* 1955, p.338, Reg. No.246: A 10 year old seedling, originated by B.F. Coker, Pensacola, Florida, USA. First flowered 1951. Plant growth average and compact. The 8.5 cm x 3.8 cm, dark green leaves are elliptical, cuspidate and slightly serrate. The complete double, incompletely imbricated flowers are similar to 'Mathotiana' (**Julia Drayton**) and vary from 10-13 cm wide with 40-50 petals. The flowers are white, lightly striped medium pink with an occasional solid pink flower. Blooms early to mid-season. Orthographic error: 'Irene Cooker'. Sport: **Irene Coker Pink.**

Irene Coker Blush. Cannon, 1966, ACS, *The Camellia Journal,* vol.21. Synonym for **Irene Coker Pink.**

Irene Coker Pink. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.5. No description. SCCS., 1962, *Camellia Nomenclature,* p.54. A medium pink sport of **Irene Coker.** Synonym: 'Irene Coker Blush'.

Irene Cooker. Ferays Fine Flowers Catalogue, 1960. Orthographic error for **Irene Coker.**

Irene Delgrande. *(C.japonica),* Medici Spada, 1858, *Delle Nuova Camelie...Dalle Semine Romane,* p.6: Medium size formal double, centre concave, numerous petals, perfectly imbricated. Colour lilac white at apex of petals, the basal half covered with interlacing, thin veins of the colour of purple lacquer, very intense, such as on some varieties of petunias and pelargoniums. All petals are densely veined like a carnation. Originated in Italy by Delgrande, Rome.

Irene Mazant. Contini & Nava of Intra Catalogue, 1900. Orthographic error for **Irene Mazzanti.**

Irene Mazanti. van Houtte Catalogue, 1887-1888, 224:252. Orthographic error for **Irene Mazzanti.**

Irene Mazzanti. *(C.japonica),* Auguste van Geert Nursery Catalogue, No.76, 1878-1879, p.76: White with a yellowish tint, similar to **Ochroleuca** with rare pink streaks. Grilli, 1881, *R. Societá*

Toscana, di Orticultura Bulletin, 6:297-300: Flower a large, cup-shape with petals round, transparent, white with the centre straw coloured, streaked vivid rose, sometimes a petal coloured a soft rose. van Houtte Catalogue, 1887-1888, 224:252 as 'Irene Mazanti': Very large, rounded and imbricated flowers, one of the most beautiful of the white forms, of stocky growth and free flowering. Originated in Italy by Santarelli, Florence.Orthographic errors: 'Irene Mazant', 'Irene Mazanti'.

Irene Rester. *(C.japonica), American Camellia Yearbook,* 1957, p.301, Reg. No.287: A 9 year old seedling of **Lindsay Neill,** originated by A. Rester, Bogalusa, Louisiana, USA. First bloomed 1953. Plant growth upright, of average density and rapid in rate. Leaves average 10 cm long x 6 cm wide. The currant red (RHS.CC) flowers are very heavy, variable in form, resembling all the forms of **Mattie O'Reilly** and average 12 cm across x 7 cm deep with 10 outer guard petals and 175 petaloids. Blooms early. For black and white photo see p.43, Sharp, 1957, *Camellias Illustrated.* Sport: **Irene Rester Variegated.**

Irene Rester Variegated. *(C.japonica),* SCCS., 1964, *Camellia Nomenclature,* p.64 as 'Irene Rester Var.': A virus variegated form of **Irene Rester** - Currant red, blotched white. Originated in USA.

Irenea. *(C.japonica),* Hogg, 1838, *Magazine of Horticulture,* 4:155: Originated by Floy, New York, USA. No description. (Believed extinct.)

Irene's Pride. *(C.japonica), American Camellia Yearbook,* 1977, p.213, Reg. No.1423: A very large, three shades of pink, peony form. A 5 year old chance seedling *C.japonica* that first bloomed 1975. Originated by Gordon R. Blanten, Summerville, South Carolina, USA. The peony form bloom has 36 petals, yellow anthers and scattered yellow filments. Average size, 13 cm wide x 6 cm deep. Blooms mid-season. Plant growth is upright, average and rapid in rate with dark green leaves, 9-10 cm long x 1.8 cm wide.

Iride. Burnier & Grilli Catalogue, 1846-1847. Synonym for **Dryade.**

Iride di Bibbiano. *(C.japonica),* Franchetti, 1855, *Collezione di Camelie,* p.37, as 'Iride di Bibbiani': Vivid red at the centre and circumference, with intermediate petals paler. Imbricated. Orthographic errors: 'Iride di Bibiani', 'Iride di Bibbiani'. Originated in Italy. Appears to be the same cultivar as **Iride Nuova.**

Iride di Bibbiani. Auguste van Geert, 1863-1864, Catalogue, No.54, p.40. Orthographic error for **Iride di Bibbiano**. Hillebrand, *Antiche Camelie del Lago Maggiore,* 2003, p.227, states that this is the correct orthography.

Iride di Bibiani. Auguste van Geert, 1859, Catalogue, No.47, p.33. Orthographic error for **Iride di Bibbiano.**

Iride Maculata. Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete,* p.6. Synonym for **Iride Variegated.**

Iride Negri. *(C.japonica),* Burdin Maggiore et Cie Catalogue, 1856-1857. No description. Originated in Italy. (Believed extinct.)

Iride Nova. Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete,* p.6. Orthographic variant for **Iride Nuova.**

Iride Nuova. *(C.japonica),* van Houtte Catalogue, 1858, 72:15: Bright red with paler centre, imbricated formal double. Originated in Italy. Orthographic variant: 'Iride Nova'. Sport: **Iride Variegated.**

Iride Variegata. Auguste van Geert, 1863-1864, Catalogue, No.56, p.41. Orthographic variant for **Iride Variegated.**

Iride Variegated. *(C.japonica),* van Houtte Catalogue, 1858, 72:15: Imbricated, vivid rose-pink blotched white. A variegated form of **Iride Nuova.** Synonym: 'Iride Maculata'. Orthographic variant: 'Iride Variegata'.

Irihikage. Different reading for **Irihi-no-kage.**

Irihi-no-kage. (Sunset Shadows), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Red, very small with white petaloids. Synonym: 'Tsutsuji-tsubaki'. (Believed extinct.) Different reading: 'Irihikage'. Originated in Japan.

Irihi-no-umi. (Sunset Sea), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Ishii, 1932, *Genshoku Engei Shokubutsu Zufu,* vol.4: Deep pink. Medium to large single to semi-double. For colour photos see pl.533, *Encyclopedia Of Camellias in Colour,* Vol.I, 1972, p.213 & 386; and p.174, Macoboy, 1981, *The Colour Dictionary of Camellias.* Originated in Japan.

Irihi-no-umi. Synonym for **Higo-irihi-no-umi.**

Iriko. *Chinka Zufu,* (before 1700), Watanabe, 1969. Different reading for **Ireko.**

Iris. *(C.japonica), Botanical Society of Sydney Report,* 1848. No description. Baptiste & Son Nursery Catalogue,1861, p.9: White with a faint pink stripe, formal double, medium size. Originated in Australia.

Iris Laughead. *(C.reticulata* hybr.), Kramer Bros. Nursery Catalogue, 1974: Orchid pink, shaded lavender. Large to very large semi-double. Medium, spreading growth. Midseason flowering. Originated by Kramer Bros. Nursery, Uplands, California, USA.

Irisayama. (Irisa Mountain), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Formal double, faint pink, large size, lotus form flower. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.78. Originated in Japan. (Believed extinct.)

Irokasane. (Added Colour), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16: Small size, red, semi-double flowers. Originated in Japan. (Believed extinct.) Different reading: 'Irogasane'.

Irish Mist. *(C.japonica), American Camellia Yearbook,* 1982, p.173, Reg. No.1856: A large to very large, cherry-red, anemone form *C.japonica* chance seedling, late flowering, originated by Marjorie O'Malley, Woodside, California, USA. The 7 year old seedling first flowered 1980. Average flower size, 14 cm wide x 7 cm deep with 9-10 petals and many petaloids. The flower is fragrant with star shaped, elliptic petals and elliptical petaloids incurved to the centre. Plant growth is upright and rapid in rate with medium green leaves, 10 cm x 6 cm. Sport: **Irish Mist Variegated.**

Irish Mist Variegated. *(C.japonica),* ACS, 1993, *The Camellia Journal,* vol.48, No.4, p.32: Valdosta Camellia Scions as 'Irish Mist V.': A white blotched, virus variegated form of **Irish Mist.**

Irma Judice. *(C.japonica), American Camellia Yearbook,* 1956, p.62, Reg. No.254: A 6 year old chance seedling, originated by Ernest E. Judice, New Orleans, Louisiana, USA that first flowered 1954. Plant growth is open, upright and slow with medium sized, bright, dark green leaves. Flowers, light pink, incomplete double with large petaloids, 28 petals in three rows. Two rows inclined to be flat, the third row has rabbit ears with a pompon of stamens and petaloids 6 cm high in the centre. The flowers are 11-12.5 cm across with 23 petaloids. Early flowering.

Irma Seidel. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.17. No description.

Irohahime. (Princess Iroha). *(C.japonica x C.sinensis).* Kaora Hagiya, 1992, 'Bulletin of the Seibu Maizuru Botanical Institute'', No.7; Takii's Catalogue *Engei Shin-Chishiki – Hana no Gaido,* Autumn issue, June 1994: Colour dark pink. It has plum blossom type, flared stamens. Flower is larger than **Chachahime** or **Robiraki**. Early blooming. See colour photo. Originated by Dr Kaoru Hagiya, Niigata Prefecture, Japan. Note: I-RO-HA are the first 3 of the 48 kanas. This

an ancient poem to help memorise the 48 kana characters and translates as “Youth and Beauty are as fleeting as the Cherry Blossom”.

Iromasari. (Excellent Colour), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.10 as 'Iro-masari': Deep pink, splashed white on outer petals. Large semi-double with round and incurved petals. Originated in Japan.

Iromo-kamo. (Excellent Fragrance & Colour), *(C.sasanqua),* Shimada, 1957, *Regarding the sasanqua in Kumamoto. Dantairin:* Fragrant. Blooms from end of October to November (very early), large size, diameter 10 cm, petals 8-10, pale red, semi-double. Originated in Kumamoto, Japan. Selected and named by Sadatsugu Yamasaki. A typical Higo sasanqua. Different reading: 'Iro'mo-ka'mo'.

Iro'mo-ka'mo. Satomi, 1958, *Nomenclature List of Sasanqua in Japan*, p.10. Different reading for **Iromo-kamo.**

Iron Blood. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings*, p.4, colour photo: Crimson, irregular, peony form double with large, outer, twisted and fluted petals surrounding a mass of intermixed stamens, petaloids and small petals. A seedling of 'Donckelaeri' (**Masayoshi**) raised by Richard Dodd, Marshallville, Georgia, USA.

Iroribi. (Fire in a Sunken Hearth), *(C.rusticana),* Seibundô Shinkôsha, 1973, *Garden Life*, No.5, p.29 & 201, colour photo; Seibundô, Shinkôsha, 1979, *Senchinshû*, p.19, colour photo, p.201, description: Medium sized, 8-9 cm across, deep red, open peony form, with large outer petals and a centre of erect, rabbit eared petals, dividing the deep yellow stamens into fascicles. Mid to late season flowering. Leaves yellowish green, long and slender with fine, sharp serrations. Petiole hirsute. Plant habit densely erect. Originated in Kita-kanbara-gun, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1968.

Iroteruyama. (Mount Iroteru), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Bright red double, large pink stamens amongst outer petals, inner petals of same size. (Believed extinct.) Synonym: ‘Yamatosangai'. Originated in Japan.

Irresistible. Lindo Nursery Price List, 1949, p.7,9. Synonym for **Lady Nancy Adare.**

Irrawadiensis. Barna, 1956, *Camellian,* 7:18 with black and white illustration. The Camellia species *Camellia irrawadiensis.*

Irving Corbett. *(C.japonica), American Camellia Yearbook,* 1965, p.237, Reg. No.770: A 9 year old chance seedling that first bloomed 1960, originated by S.L. Marbury, Wilmington, North Carolina, USA. Plant growth is upright and open, medium in rate with dark green leaves averaging 7.5 cm x 5 cm. The semi-double flowers, similar to 'Herme' (**Hikarugenji**), measure 10.5 cm wide x 6 cm deep and have 30 petals and 2 petaloids. Petals stand up and twist and curl like ‘Ville de Nantes'. Colour is light pink with yellow stamens. Blooms mid-season.

Isabel. *(C.japonica),* Macarthur Notebook, 1857: Pure white, smallish size, perfectly double and regular to the centre, petals well shaped, moderate substance, incurved, makes smaller buds of better shape than the old 'Double White' (Alba Plena). Late flowering. Seedling No.32/51 raised at Camden Park by Sir William Macarthur, N.S.W., Australia. Baptist & Son Nursery Catalogue, 1861. No description. First valid listing. This camellia was known both as “Isabel” and “Isabella”. As the first listing of “Isabella” was by Guilfoyle, 1866 and also that orthography had been published for another cultivar by Costa in 1846, **Isabel** is considered the prior valid name. Synonyms: 'Isabella'. Sport: **Yirgella.**

Isabel Cordelia. *(C.hybrid).* C. Aust., *Camellia News*, Spring 2011, No.187, p.24 with colour photo. A seedling of **Yume** raised by Gene Phillips, Savannah Ga., USA.

Isabel Hermann. *(C.japonica), American Camellia Yearbook,* 1959, p.274, Reg. No.416: A 10 year old chance seedling, originated by B.J. Hermann, Mobile, Alabama, USA that first flowered 1956. Plant growth is upright, dense and rapid in rate. The dark green leaves are 12 cm long x 7.5 cm wide. The dark, antique-red, peony form flowers are 10 cm across x 7.5 cm deep with yellow stamens. Flowers mid-season to late.

Isabel Soares de Albergaria. *(C.hybrid).* Cattolica, G., *Le mie Camelie, My Camellias*, 2005, p.108 with colour photo; Medium size, anemone form, purple pink (RHS.CC.67B and 74B). Sometimes petals have central white shading. A seedling of *C.x williamsii* **Debbie** x 'Rosa Simplex' **(Aitonia).** Originated by Dott. Guido Cattolica, Livorno, Italy.

Isabella. Guilfoyle Nursery Catalogue, 1866, p.18. Synonym for **Isabel**.

Isabella. Verschaffelt, 1844, Catalogue, No.50, p.20. Costa, 1846, *Catalogue de la collection de Camellias présentée à sa majesté 'L'Imperatrice de toutes les Russies et Reine de Pologne*, p.10. Orthographic variant for **Isabelle.**

Isabella II. Burdin Maggiore & Co., 1849-1850, Catalogue General. Fratelli Rovelli Catalogue, 1852, p.19. Orthographic variant for **Isabella Seconda.**

Isabella de Bardi. Stefano Pagliai Catalogue, 1867, p.66. Orthographic variant for **Isabella di Bardi.**

Isabella di Bardi. *(C.japonica),* Verschaffelt, 1857, *Nouvelle Iconographie*, Book VIII, pl.IV: Imported from Italy in 1856, this Camellia, with its large blossoms of Rose-des-Peintres Pink...is composed of numerous, ovate, rounded petals, emarginate at the apex, regularly imbricated, of a uniform pink colour. van Houtte Catalogue, 1858, 72:15: Brilliant red, striped and spotted with white, very large, imbricated. Orthographic variant: 'Isabella de Bardi'. Orthographic error: 'Isabella di Bassi'.

Isabella di Bassi. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Isabella di Bardi.**

Isabella Galetti. Peer, 1956, *American Camellia Yearbook,* p.56. Orthographic error for **Isabella Galletti.**

Isabella Galletti. *(C.japonica),* Jean Verschaffelt, 1876-1877, Catalogue, No.19, as 'Isabelle Galetti': Beautiful novelty. Pure white, perfect imbrication. From Rovelli. Roda Catalogue, 1885, p.42: (Rovelli). Large flowers of very good, full form, imbricated, pure white. Rovelli Catalogue, 1893-1894: Beautiful pure white, double, imbricated with a perfect form. Originated by Fratelli Rovelli, Pallanza, Italy. Orthographic error: 'Isabella Galetti'. Note: The originator's orthography is accepted as valid for the cultivar.

Isabella Hoam. *(C.japonica),* Sgaravatti Catalogue, 1889. No description. Originated in Ialy. (Believed extinct.)

Isabella Nova. *(C.japonica),* Verschaffelt Catalogue, 1847-1848, p.58. No description. Originated in Italy. (Believed extinct.)

Isabella Orsini. *(C.japonica),* Lemaire, 1864, *L'Illustration Horticole,* vol.XI, pl.418: An elegance, a perfection, a colour fresh but delicate, are qualities that distinguish this camellia. Colour pink. Roda Catalogue, 1885, p.50: Large, regular flower, globular imbrication, reflexed petals, pale pink softly edged white. Originated by Cesar Franchetti, Florence, Italy. Orthographic variants: 'Izabella Orsini', 'Isabelle Orsini', 'Izabelle Orsini'.

Isabella Seconda. *(C.japonica),* Burdin Maggiore & Co., 1849-1850, Catalogue General as 'Isabella II': White with straw coloured centre, petals round and imbricated. Luzzatti. 1851, *Collezione di Camelie,* p.22: White with a tendency to flesh colour, centre a clear straw colour; petals round, perfectly imbricated, regular, in the form of a star. Originated in Italy. Synonym: 'Principessa Pietra Santa'. Orthographic variants: 'Isabella II', 'Isabelle II'.

Isabella Sloan. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Isabella Sloane.**

Isabella Sloane. *(C.japonica),* Luzzatti.1851, *Collezione di Camelie,* p.22: Very large, imbricated flower of deep rose for the first row, then partly softer coloured, becoming deeper in the centre. Originated in Florence, Italy. Orthographic error: 'Isabella Sloan', 'Isabelle Sloan'.

Isabella Spinola. *(C.japonica),* Alex Verschaffelt, 1849-1850, Catalogue, p.49 as 'Isabella Spinosa'. No description. Luzzatti, 1851, *Collezione di Camelie,* p.22: Red striped with white; beautiful, large flower, imbricated. Verschaffelt, 1856, *Nouvelle Iconographie,* Book XI, pl.IV: Received from Italy from Fr. Mariani, 3 or 4 years ago. It has a blossom, larger than medium, formed of ample, rounded petals, slightly hooded and imbricated somewhat like those of a Rose des Peintres. The colouring, rather similar to camellia **Valerio,** is of a more vivid pink, and with more numerous streaks than the latter, having a resemblance with certain Flemish pinks. Orthographic error: 'Isabella Spinosa'.

Isabella Spinosa. Verschaffelt Catalogue, 1849-1850, p.47. Orthographic error for **Isabella Spinola.**

Isabella Zerbini. *(C.japonica),* Burdin Maggiore & Co. Catalogue, 1862. No description. Originated in Italy. (Believed extinct.)

Isabelle. *(C.japonica),* van Houtte Catalogue, 1845-1846, 23:6. No description. van Houtte Catalogue, 1846-1847, 27:26: From Moens. Verschaffelt, 1853, *Nouvelle Iconographie,* Book III, pl.IV: This variety came from Italy. It belongs to the class of perfections but is above average in size, petals slightly oblong, rounded, convex, full, a very bright pink, each petal having a white band down the centre, the centre petals often having two or three white bands. Orthographic variant: 'Isabella'.

Isabelle de Boiard. *(C.japonica),* Anonymous, Mar.1887, *Gardeners' Chronicle,* ser.3,1:415: Camellias at the Royal Nursery, Slough. No description. (Believed extinct.)

Isabelle Baronne de St-Genois. *(C.japonica),* van Houtte Catalogue,1874-1875,157EE:31. No description. However the 1877-1878 Catalogue, 174:246, describes it: A very large flower, very double, imbricated, red stripes, variegated and bordered with white. Orthographic variants: 'Baronne Isabelle de St-Genois', 'Isabella Baronne de St Genois'. Originated in Belgium.

Isabelle II. van Houtte Catalogue, 1858, 72:15. Orthographic variant for **Isabella Seconda.**

Isabel's Surprise. *(C.hybrid). New Zealand Camellia Bulletin,* 1993, Issue No.114, vol.XVIII, No.1, p.33, Reg. No.330: Originated by J.R. White, New Zealand. A chance seedling planted 1981. Growth habit upright, spreading and open. Medium rate of growth with dark green leaves 6 cm long x 3 cm wide. Flower single, bell-shaped, 6 cm across x 7 cm deep with 8 petals. Anthers yellow, filaments white. The flowers have a white to light pink background with

suffused blush pink and streaks of darker pink. Blooms early to mid-season. Colour is RHS.CC.55B-56A.

Isahaya. (A place name in Nagasaka Prefecture), *(C.japonica),* Jikeikyôki, 1632; Monk Hôrin, 1642, *Kakamyôki;* Okumura, ca.1810, *Chinka Hin'i;* Yashiro, 1841, *Kokon Yôrankô,* vol.310: Small single, campanulate, dark red with white splashes and a central stamen column. Originated in Japan. Resembles **Shokkô**. (Believed extinct.)

Isahaya. (A Place name in Nagasaka Prefecture), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.319: Single, medium size, campanulate, dark red with white spots. Originated in Japan. (Believed extinct.)

Isahaya. (Place Name as above), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.70, black and white photo and description; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.297, pp.134, 335; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.325; Seibundô Shinkôsha, 1979, *Senchinshû,* p.15, colour photo, p.200 description: Although the name character are the same, the modern cultivar is obviously different to the ancient one. It is a large size, cherry-red, rose form double with white blotching, opening to show a few deformed anthers. The leaves are broad oval, blunt acute apex, rounded base, prominent venation, broad, shallow, blunt serrations. Blooms midseason to late. Different reading: 'Izahaya'. Resembles **Arukawa.** The original tree is in the Ishii Tsubaki-en, Fushimi-ku, Kyôto. Originated in the Kansai area, Japan.

Isahaya-koshimino. (Isahaya Straw Rain Cape), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.54 & 620: A large two tiered bloom of dark crimson with white spots, with stamens exposed on both tiers. Originated in Japan. (Believed extinct.) The "Koshimino" is a hip length, straw raincoat and alludes to the two tiered flower with the inner tier similar to this ancient form of peasant garment.

Isaniwa-akayabu. (Red Wild Japonica of Isaniwa Shrine). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.29 with colour photo; English translation p.18. A small to medium, deep red, tubular single with cylindrical stamens. Flowers mid-season. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Selected from wild camellias growing around Isaniwa Shrine, and named and released by Tokihiro Kôno in 1985. From Ehime Prefecture.

Isaribi. (Fire carried in the prow of boat to attract fish), *(C.hybrid), Engeishin Chishiki,* 1982; *American Camellia Yearbook,* 1982, p.173, Reg. No.1777: A miniature, rose coloured, semi-double *C.hybrid* chance seedling, originated by Dr Clifford Parks, Chapel Hill, North Carolina, USA and propagated by Yoshiaki Andoh, Kobe, Japan. The 14 year old seedling first bloomed 1970. Average flower size is 4-5 cm across x 2.5 cm deep with 12 petals and up to two petaloids, yellow anthers and cream filaments. Plant growth is upright, dense and rapid in rate with dark green leaves.

Isaribi. (Fishing Fire). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.29 with colour photo; English translation p.18. A tubular single, motlled white on crimson ground. Flowers mid-season. Leaves elliptic, somewhat small. Upright, vigorous, slow growth. Collected around Sofu'e Town, named and released by Minoru Satô in 1976. From Aichi Prefecture.

Ise. (Place of the Grand Shrine), *(C.japonica),* Hirayama, (latter 17th Century), *Tsubaki Byôbu.* No description. See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.48; Itô, Tokuemon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô 1859, *Tsubaki Irohanayse Irotsuki:* Medium sized, red double, chrysanthemum form. Originated in Japan. (Believed extinct.)

Ise. (Place of the Grand Shrine), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.32: Deep crimson single of 5 petals with a compact cushion of petaloids of the same deep crimson. (Believed extinct.) Originated in Japan.

Isebanri. Different reading for **Isemari**

Ise-karako. (Ise Anemone), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.17, colour photo, description, p.200: A cherry-red, anemone form with 5 large outer petals, scallopped at the apex, surrounding a centre of petaloids, some white, some cherry-red and some half anther. Originated in Chûbu District, Japan.

Ise-komachi. (Beauty of Ise), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.71: A medium sized, 8-9 cm across, formal double pink like **Otome,** with whitish mottling; outer petals rounded, becoming pointed at the apex, towards the centre. Leaves, flat, broad-ovate, apex abrupt acute, bases rounded, dull dark green. A sport of 'Kyakômachi'. Originated in Chûbu District, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.30 with colour photo; English translation p.19. White mottles on pale red ground, formal double. Collected in Ise City, Mi'e Prefecture. Named and released by Minoru Satô in 1963.

Isemanri. Different reading for **Isemari.**

Isemari. (Ise Thousands of Miles), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Cardinal red, single, large size flower with some erect petals in the centre. Different readings: 'Isebanri', 'Isemanri'. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.79. Originated in Japan. (Believed extinct.)

Ise-ôjiro. Different reading for **Ise-taihaku.**

Ise-no-umi. (Sea of Ise), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû:* Large size, red flower. (Believed extinct.)

Ise-shirotae. (Pure White of Ise), *(C.japonica),* Himuro, Shoji, 1982, *Murasuzume:* White, large, double. Originated in Japan. A seedling of **Daijôkan.**

Ise-taihaku. (Large White from Ise), *(C.japonica),* Chubû Tsubaki Kyôkai, 1957-1969, *Tsubaki Meikan;* Satô, 1975, *Chûbu no Tsubaki,* p.80 colour photo and description: Large, 10 cm across, white semi-double to rose form double, 17-18 petals, large, rounded, edges crimped; small, divided stamen cluster. Late blooms take on a pinkish colour. Leaves ovate, apex acuminate, base cuneate, stiff, coriaceous, channelled, recurved and waved, sharply, strongly serrate, mid to dark green. Originated in Suzuka, Mi'e Prefecture, Japan by Minoru Satô. Different reading: 'Ise-ôjiro'.

Ise-tsubaki. (Ise Camellia), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.278; Sakuden, 1630, *Hyakuchinshû,* together with 'Yamato-sangai', as popular names for his 'Iroteruyama'. However in the *Chinka Zufu* illustrations, 'Ise-tsubaki' and 'Yamato-sangai' are completely different and neither resemble the modern **Ise-tsubaki**. If the *Chinka Zufu* illustration is taken as the type, it is an anemone form with 5 outer petals of dark crimson surrounding a compact, petaloid centre of the same colour with some stamens intermixed. Originated in Japan. Chen's *Hiden Kakyo,* date unknown (1672-1900) gives 'Renge-tsubaki' as a synonym for 'Ise-tsubaki' which has the Chinese name of 'Shiliu Cha'. Synonym: 'Sekiryu-cha', according to the *Honzô Kômoku Keimô.* For this see Yashiro, 1841, *Kokon Yôrankô,* vol.306 and JCS., 1981, *Tsubaki,* No.20, p.l03. All are now believed to be extinct.

Ise-tsubaki. (Ise Camellia), *(C.rusticana),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.71, black and white photo and description; Seibundô Shinkôsha, 1979, *Senchinshû,* p.17, colour photo, p.200, description: Medium sized, imbricated, light red, formal double, a little irregular. Large outer petals, reducing in size to small petals with pointed apices towards the centre. Rare

abortive stamens exposed when fully open. Leaves, deep green, elliptic-obovate to narrowly-obovate, base narrowly cuneate, apex tapering acuminate, recurved. Originated in Japan with the same name characters as the ancient **Ise-tsubaki.** Original tree is in Niu Shrine, Mie Prefecture. Resembles 'Beni-otome'.

Ise-tsubaki-kawarimono. (Transformed Ise Camellia), *(C.japonica),* Hino, Sukekatsu, 1632, *Sukekat-sukyôki*. No description. Originated in Japan. (Believed extinct.)

Iseya. (Ancient Family Name), *(C.japonica), Chinka Zufu,* (Before 1700), Watanabe, 1969, pl.332: A medium sized, dark red, anemone type with 8-9 large, rounded, outer guard petals, surrounding a large centre of fan shaped petaloids, red at the apex, fading to white at the haft. Originated in Japan. (Believed extinct.)

Ishibashi. (Personal Name), *(C.japonica),* Mizuno, Katsuhiko, 1981, *Kyô no Tsubaki to Tera,* p.103, illustration: Red, heavily blotched white, peony form with irregular petals and fascicles of stamens intermixed with small, erect centre petals. Originated in Kyôto, Japan.

Ishibiya. (Stone Bow), *(C.japonica),* Itô, Jukyû,1739, *Honzô Hanarnaki'e;* Kasuya, Kamegorô, 1859, *Iro-hanayose Irotsuki:* Cardinal red, large size, stamens in cylindrical cluster, closed in at top. Originated in Japan. (Believed extinct.)

Ishinuki. (Obscure), *(C.japonica),* Okumura, ca.1810, *Chinka Hin'i.* No description. Originated in Japan. (Believed extinct.)

Ishi-yabi. (Burning arrow of Stone). *(C.x williamsii). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.29 with colour photo; English translation p.18. A small size, vermilion, tubular to trumpet shaped single with thick petals. Flowers early to mid-season. Leaves elliptic, medium size, somewhat flat. Upright, vigorous growth. An interspecific cross of **Eiraku** and **Tulip Time,** named and released by Nobuo Sasai in 1981. From Okayama Prefecture.

Ishiyama. (Place Name), *(C.japonica),* Uesa, 1844, *Sômoku Benran:* Large, snow white single, flat. Originated in Japan. (Believed extinct.)

Ishiyama. (Place Name), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.520: Medium sized, garnet red, open, double peony form. Originated in Japan. (Believed extinct.)

Ishiyamadera. (Ishiyama Temple), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû; Chinka Zufu,* (before 1700), Watanabe, 1969, pl.630 as 'Ishiyama-dera': Purple-red, medium sized double with large petaloids on rare occasions. Originated in Japan. Ishiyamadera is a Buddhist temple in Ômi, built by Emperor Shômu, burnt down in 1078 and rebuilt. Belongs to the Shingon Sect and dedicated to Kwannon. (Believed extinct.)

Ishizuchi. (Mt. Ishizuchi). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.29 with colour photo; English translation p.18. A large size, peach red semi-double with cupped petals and cylindrical stamens. Flowers mid-season. Leaves elliptic, large, recurved. Upright growth. The original tree is 80 years old in a private garden in Matsuyama City. Named by Shigeichi Yagi about 1975. From Ehime Prefecture.

Ishu-Tsukasa. Overlook Nursery Catalogue, 1953-1954, p.17. Corruption of the Japanese name **Kishû-tsukasa.**

Island Echo. McDonald Nursery Catalogue, 1952. Synonym for **Red Wonder.**

Island Echo Variegated. Abbot's Nursery Catalogue, 1958, p.6 as 'Island Echo Var.'; synonym for **Red Wonder Variegated.**

Island of Fire. *(C.japonica), American Camellia Yearbook,* 1960, p.91, 92, Reg. No.897: An 8 year old chance seedling that first bloomed 1962. Originated by Harry Novick, Woodland Hills, California, USA. Plant growth is upright, open and medium in rate with dark green leaves

with a heavy texture, slightly twisted, averaging 9.5 cm long. The semi-double flower, similar to **Flame**, measures 12 cm across x 7.5 cm deep with 20 petals. Colour is the reddest red with gold stamens. Blooms mid-season. See colour photo, facing p.16, *New Zealand Camellia Bulletin,* 1978, vol.X, No.5.

Island Sunset. *(C.x williamsii). Camellia Nomenclature* 2006, p.178. Rich coral pink, lighter at centre. Medium size, semi-double. Average, bushy, upright growth. Flowers mid-season to late. (N#9007T). Raised by Nuccio's Nurseries, Altadena, California, USA.

Isle of Capri. *(C.japonica),* Griffin, ed., Sept. 1958, *Camellian,* p.29. Camellia renamed from invalid 'Romance'. Huge pink buds that open to very large, light pink, peony form flowers 15 cm across. Flowers mid-season. Originated in USA.

Isle of Skye. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings*, p.6, colour photo: A white with the faintest blush, semi-double to open, incomplete peony form, with large, fluted, outer petals and small, irregular stamen cluster. A seedling of **Imura** raised by Richard Dodd, Marshallville, Georgia, USA.

Iso-arashi. (Stormy Shore), *(C.japonica),* Iwasaki, 1828, *Honzo Zufû:* This flower has large, pink petals with white dapples. Double. Originated in Japan. (Believed extinct.)

Isobe-otome. (Sea Shore Maiden), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.17, colour photo, p.200, description: Pink, whitish at centre, cup-shaped semi-double with short, irregular stamen cluster with gold anthers. Petals in 4 rows, concave, outer rounded, inner coming to a point. Leaves mid-green, elliptic, depressed venation, blunt-acute apex, cuneate base, bluntly, shallowly serrate. Originated in Kantô area, Japan. Resembles **Shunshokô.** Original tree is in the Izu Hôsenji, Shizu'oka Prefecture.

Iso-chidori. (Beach Plover), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.198, colour photo and description: Small size, dark red, campanulate single, with 5 rounded, ovate petals of irregular size, reflexed at the apices, and a central stamen cylinder with red filaments, joined for the lower third, and golden anthers. Blooms early to late. Leaves mid-green, broad-elliptic, apices acuminate, recurved, margins serrate. Originated in Chûbu District, Japan. Named and released by Fumio Naitô.

Iso-chidori. (Beach Plover), *(C.sasanqua),* Kurume Tsutsuji Seisan Kumiai, 1970, *Tsutsuji no Furusato;* Inazawa Nursey Co. Ltd. Catalogue.1980-1981, p.11, B-6: Pale peach pink, medium sized semidouble. Originated in Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.292 with colour photo; English translation p.204. Medium size, pink, one to two rows of flat petals. Flowers early. Leaves narrowly elliptic, medium size. Upright, vigorous growth, dense branches. From Kumamoto Prefecture.

Iso-komachi. (Beach Beauty), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.17, colour photo, p.200, description: Small, deep red, with a purple cast, trumpet shaped single with a compact, stamen colum, sulphur yellow anthers, filaments reddish, becoming cream coloured at the base. Leaves large, elliptic, bright green, coriaceous, apex acute, regularly serrate. Blooms midseason to late. See p.225, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Original tree is in Iso-teien, Kagoshima Prefecture, Japan.

Isolina. *(C.japonica),* Franchetti, 1855, *Collezione di Camelie,* p.37: Bright red with large and small splashes of white. Imbricated. Orthographic error: 'Isolene'. Originated in Florence, Italy.

Isolina Berti. *(C.japonica),* Mercatelli Nursery Catalogue,1881: Most beautiful imbricated flower. Brilliant red, spotted white. Originated in Italy.

Isolina Ceruti. *(C.japonica),* Linden Catalogue, 1871-1872, p.17. No description. Originated in Italy. (Believed extinct.)

Isolina Corsi. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* 21: Originated in Italy by Carlo Luzzatti, Florence. Superb flower, rose with small white spots, imbricated, cup shaped. Originated from seed by Sig. V. Corsi, Italy. See also Verschaffelt, 1855, *Nouvelle Iconographie,* Book III, Pl.IV as 'Madame Corsi': A pretty miniature, rose shaped formal double of vivid cherry-red with some white markings and a thin, white margin on central petals.

Isoline. Stefano Pagliai Catalogue, 1867, p.66. Orthographic error for **Isolina.**

Isomakura. (Camping on Beach), *(C.japonica),* Itô Jukyû, 1739, *Honzô Hanamakie,* vol.15; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki,* in single flower section; Itô, Ko'emon, 1879, *Chinkashû:* Light pink with large and small streaks of white, large sized single. Cylindrical stamen column. Originated in Japan. (Believed extinct.)

Isomatsu. (Coast Pines), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Corruption for **Isomakura.** See JCS., 1969, *Tsubaki,* No.7, p.22, and JCS., 1983, *Tsubaki,* No.22, p.117.

Isonami. (Waves on a Beach), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.262 & 548: White, open, peony form double with pink flecks and thin streaks. Stamens and erect petals intermixed in centre. Originated in Japan. (Believed extinct.)

Isonami. (Waves on a Beach), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.434, p.172, description, p.261; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.17, 200: Medium sized, incomplete double, open peony form with soft pink ground, liberally peppered, dotted and streaked light red. Leaves lanceolate-elliptic, apex acuminate, bluntly serrate, large. While this cultivar has different name characters but the same pronunciation as the Chinka Zufu one above, it is a different camellia. Synonym: 'Isonami' (Daini-sazanami). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.30 with colour photo; English translation p.19. A cultivar from a private family in Moritani District, Ibaragi Prefecture. Named by the staff of the JCS in 1960s.

Isonami (Daini-sazanami). Synonym for **Isonami.**

Isono. (Seaside Field), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.643: Small, dark crimson, anemone form with 5 outer petals around a compact cushion of heart-shaped petaloids, red with a white filament. Originated in Japan. (Believed extinct.)

Iso-no-haru. (Spring on the seashore), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.215: Medium sized flower, deep pink streaks on a lighter pink ground. Originated in Japan.

Iso-no-umi. (Seashore) (*C,japonica*) from Ibaragi Pref., *Japan Camellia* No. 67, February 2002: Dark red, single, tubular, tubular stamen cluster, small to medium. Tree spreading. Leaves long elliptic, small to large. A seedling of **Lily Pons,** male parent unknown. First flower seen in 1995. Originated by Kunimitsu Suzuki.

Isseki. (One Mark), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.355 & 492: Very large, full peony form, red spotted white. Originated in Japan. Different reading: 'Ichiseki'. (Believed extinct.)

Isseki. (One Evening), *(C.japonica),* Mizuno, 1664, *Kadan Kômoku;* Shirai-Bunko, 1789, *Shoshiki Hana-gatachô:* Double with white patches on red ground. Originated in Japan. (Believed extinct.)

Issetsu. Kyôto Engei Kurabu, 1960, *Tsubaki Tokushû,* No.1, p.56. Different reading for **Ichisetsu.**

Issubria. von Biedenfeld, 1856, *Practische Grundlehren der Cultur von Camellien,* p.44. Orthographic error for **L'Insubria.**

Istituta Italiano. Auguste van Geert, 1864, Catalogue, No.54, p.41. Orthographic error for **Istituto Italiana.**

Istituto Italiano. *(C.japonica),* van Houtte Catalogue, 1859, 77:60. From Borzone. No description. Jean Verschaffelt, 1867-1868, Catalogue, No.117, p.42, as 'Institute Italiano': Imbricated cherry red with deeper veining. Orthographic errors: 'Instituto Italiano', 'Istituta Italiano'. Originated in Italy.

Isuke-aofukurin. (Isuke's Light Green Margin), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôchô:* In section on margined leaves. Single, white, slightly coloured faintest pink, cup-shaped. Originated in Japan. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.168. (Believed extinct.) Different reading: 'Isuke-aohukurin'.

Isuke-aofukurin. Synonym for 'Aofukurin'.

Isuke-aohukurin. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10. Different reading for **Isuke-aofukurin**.

Isurugi. (A Place Name), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.288, p.146, description, p.177: Leaves broadly elliptic to oblong, venation impressed, 8.5 cm long x 4 cm wide on an average; petioles 9-10 mm long, hairy. Flowers, semi-double, rosy pink (Crimson 22/1) blotched white, petals fall after flowering. Petals, 24-30, largest 5.2 cm wide x 4.3 cm long with 1-6 small, inner petals. Stamen cluster 2.5 cm long, creamy to pale pink on fused part. Late flowering. Originated in Kanazawa City, Ishikawa Prefecture, Japan.

Isuzugawa. (Isuzu River), *(C.japonica),* Katayama, 1960, Juraku-en Nursery Catalogue: White coloured, single, medium size. Originated in Japan.

Italia. *(C.japonica),* Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete,* p.6. No description. Originated in Italy. (Believed extinct.)

Italia Novissima. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.12. No description. Originated in Italy. (Believed extinct.) Synonym: 'Italiana Novissima'.

Italia Unita. *(C.japonica),* André ed.,1871, *L'lllustration Horticole,* vol.XVIII, p.195, pl.81: Flowers of the largest size, very full, perfectly imbricated, with large petals, recurved, obtuse, very perfectly mucronate or slightly emarginate, of a uniform cherry red, lighter on the back, with a regular reticulation of fine veins of a deeper colour on the upper surface. An Italian seedling raised by Mariotti..

Italian. P.H. Davis Nursery Catalogue, 1984. Abbreviation for **Italiana Vera Rosea.**

Italiana. *(C.japonica),* Franchetti, 1855, *Collezione de Camelie,* p.37: Large, double, vivid red outer row of petals, the others to the centre are paler. Imbricated. Originated in Florence, Italy. Synonym: 'L'Italiana'.

Italiana Novissima. Companhia Horticolo Catalogue No.40, ca,1904, p.69. Synonym for **Italia Novissima.**

Italiana Number 8. *(C.japonica),* Treseder Special Camellia Catalogue, 1964-1965 as 'Italiana No.8': Very large, pale pink with deeper veins like **Donation.** Formal double. Originated from a plant at Caerhays, stemming from an import of camellias from Italy in the 1920's and the names lost.

Italiana Vera. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.22: Magnificently imbricated flower. The first row of petals a vivid rose, the remaining becoming paler, finishing almost white. See Verschaffelt, 1858, *Nouvelle Iconographie,* Book III, pl.IV.Originated in Italy by Benucci, Florence.

Italiana Vera Rosea. *(C.japonica),* van den Boek Nursery Catalogue, 1977-1978, p.8: Formal double pink. Probably a self pink sport of **Italiana Vera.** Originated in England. Abbreviations: 'Italian', 'Italiano'.

Italiano. Blackburn Nursery Catalogue, 1986-1987. Abbreviation for **Italiana Vera Rosea.**

Italica. Luzzatti, 1851, *Collezione di Camelie,* p.22: Synonym for **Regina Italica.**

Italicum. *(C.japonica),* Anonymous, 1846, *Gardeners' Chronicle,* (13):206. Foreign Correspondence. No description. Originated in Italy. (Believed extinct.)

Itch. *(C.japonica), American Camellia Yearbook,* 2009, p.112 with colour photo; Regn No.2763; A 15 year old chance seedling, first flowered 2004. Originated and propagated by William Brierly, Mobile, Ala, USA. The white, semi-double flower is 12 cm diameter x 7.5 cm deep, with 21 narrow, reticulate and mainly reflexed petals, 6 petaloids and 5 central rabbit ears. Yellow anthers and white filaments. Upright growth at average rate. Dark green leaves average 6.5 cm x 3.2 cm. Flowers early to mid-season.

Itikowabisuke. Kurume Shibu colour poster illustration, 1997. Corruption of **Itsuko-wabisuke.**

Ito. (Thread), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.55: Large, deep crimson, semi-double with central stamen column with gold anthers and white filaments. Originated in Japan. (Believed extinct.)

Itokuri. (Reel), *(C.japonica),* Kaempher, 1712, *Amoenotatum Exoticarum* as 'Jtokuri'. No description. Originated in Japan. (Believed extinct.)

Ito-nishiki. (Brocade Thread), (Higo), Taniguchi, 1912, *Chinka Kyôkan.* No description. Originated in Kumamoto Prefecture, Japan.

Itsukachô. Different reading for **Itsukamachi.**

Itsumackii. Forrest, 1985, *Trees and Shrubs Cultivated in Ireland.* Corruption of the Japanese name **Itsukamachi.**

Itsuka Town. *Camellias,* Y.C. Shen, 2009, p.212 with colour photo; Translation of the valid name **Itsukamachi.**

Itsukamachi. (Place Name), *(C.rusticana),* Nuccio's Nursery Catalogue, 1974-1975: Brilliant red semi-double. *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.370, p.153, description, p.252; Seibundô Shinkôsha, 1979, *Senchinshû,* p.201: Bright red semi-double, 11-12 petals, edges incurved to form a point at the apex, resembling a star. Short, compact stamen column with yellow anthers and pinkish filaments. Leaves medium sized, elliptic to long ovate, apex acute, sharp, shallow, regular serrations, dull green. Petiole hairy. Medium, bushy rounded growth. Mid-season blooming. Originated in Nagaoka City, Niigata Prefecture, Japan. Different reading: 'Itsukachô'. Sport: **Itsukamachi Variegated.** Corruption of name: 'Itsumackii'.

Itsukamachi Variegated. *(C.rusticana),* Nuccio's Nurseries Catalogue, 1986-1987, p.26 as 'Itsukamachi Var.': Brilliant red blotched white. Very showy. Midseason blooming. A virus variegated form of **Itsukamachi.** Originated by Nuccio's Nurseries, Altadena, California, USA. Chinese synonym: ‘Baiban Xueshancha’.

Itsuko-wabisuke. (Only Child Wabisuke). (Wabisuke). Kurume Shibu colour poster illustration, 1997. Erroneously as ‘Itikowabisuke’. Small red single of 5 petals, trumpet-shaped. Compact, stubby stamen cluster. Pale yellow anthers. Originated in Japn.

Itsukushima. (Itsuku Island), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Deep red with white stripes. Large size, semi-double with 2 rows of petals. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.80. Originated in Japan. (Believed extinct.)

Itsumo-tsubaki. (Camellia of Izumo), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku:* Double, red patches on white ground. Originated in Japan. (Believed extinct.) "Izumo" is old name for Shimane Prefecture, which, in ancient times was written "Itsumo". Different reading: 'Izumo-tsubaki'.

Itsu-no-yume. (Itsu's Dream), *(C.hybrid),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* pp.110, 111. ICS., Apr.1990. *Japanese Camellia Cultivar List,* p.28: Medium size, white ground becoming pale pink towards the petal margins, single like a Chinese Bell Flower. Blooms mid-season to late. A seedling of **Tulip Time,** originated in Ishikawa Prefecture, Japan, by Tadao Yamaguchi in 1983, and named for his wife.

Itsurame. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.10. Orthographic error for **Iratsume.**

Itsutsujima. (Five Islands), *(C.rusticana),* Seibundô Shinkôsha, 1966, *Garden Life,* no.17, p.23 as 'Itutushima': Red on light peach colour, vertically spotted red, peony form flower with 12 petals. Medium sized. Anthers yellow, filaments white. Mid-season flowering. Leaves undulate. Short hairs on petiole. Habit, bushy, medium growth rate. This camellia is midway between the bush and snow Camellia. Originated in Takada City, Niigata Prefecture, Japan. Different reading: 'Itutushima'.

Itten. (One Heaven), *(C.japonica),* Uekiya Bunsuke, 1830, *Uekiya Bunsuke Hikki.* Single with 5 petals, red with white spots and streaks. Originated in Japan. (Believed extinct.)

Itten-shikai. (One Heaven and Four Seas), *(C.sasanqua),* Kajitsu-en, 1905, *Chabaika Meikan:* Medium size, white with red markings. Originated in Japan.

Itty Bit. *(C.hybrid), New Zealand Camellia Bulletin,* 1984, vol.XIII, No.6, p.22, Reg. No.202: *C.saluenensis x C.hybrid* **Tiny Princess** seedling that first flowered 1981. Originated by Felix Jury, Taranaki, New Zealand. The plant has a slow, spreading growth habit with dark green, 5 cm x 2.4 cm leaves. The anemone form flowers are 6 cm across x 3 cm deep with 8-10 petals and 20-23 petaloids and the colour is soft pink. See colour photo, p.20, *New Zealand Camellia Bulletin,* 1985, vol.XIV, No.2.

Itumoyume. Kurume Shibu colour poster illustration, 1997. Corruption of **Itsu-no-yume.** See ICS Register, p.893.

Itutushima. Seibundô Shinkôsha, 1966, *Garden Life,* No.17, p.23. Different reading for the name **Itsutsushima.**

Iubilee. Bergami Catalogue, 1858. Orthographic variant for **Jubilee.**

Iunonia. Colla, 1843, *Camelliografia,* (illustr.), pp.l29, 148. Orthographic variant for **Giunone.**

Ivan Mitchell. *(C.reticulata), American Camellia Yearbook,* 1986, p.91, Reg No.2027: A large, dark red, rose form double to formal double, *C.reticulata* chance seedling, flowering mid-season to late; originated by Frank Pursel, Oakland, California, USA. The 10 year old seedling first flowered 1984. Average flower size, 11 cm across. Plant growth is upright and medium in rate, with dark green leaves.

Ivenii Striata. *(C.japonica),* Verschaffelt Catalogue, No.50, 1844, p.20. No description. Originated in Italy. (Believed extinct.)

Ivey Mae. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.46: Light pink. Large peony form. Medium, compact growth. Mid-season blooming. Originated in USA.

Ivory Tower. *(C.japonica),* SCCS., 1968, *Camellia Nomenclature,* p.71: White. Large, formal double with high centre. Medium, compact growth. Mid-season flowering. Originated in USA by Shackelford, Albany, Georgia. See pl.83, p.48, *Encyclopedia of Camellias in Colour,* vol.II, 1978.

Ivy Westbrook. *(C.japonica),* Hillcrest Nursery Catalogue, 1958. No description. Originated in USA.

Iwai-no-sakazuki. (Cup of Celebration), *(C.rusticana),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.72, black and white photo and description; Colour photos, pl.341, p.l42, *Encyclopedia of Camellias in Colour,* vol.II, 1978; Yokoyama & Kirino, 1989, *Nihon no Chinka,* pp.238, 239; Seibundô Shinkôsha, 1979, *Senchinshû,* p.18, colour photo, p.200, description: A scarlet single, 7 cm across, with white markings, 6-7 petals, yellow filaments. Fragrant. Blooms mid-season to late. Leaves, glossy, dark green, elliptic-lanceolate, apex tapered acuminate, recurved, regularly serrate, edges somewhat rolled. Originated in Kita-kanbara-gun, Niigata Prefecture, Japan. Named and released by Tokuji Ôoka in 1966.

Iwai-yagura. (Tower of Celebration), *(C.japonica), Japan Camellia* 99, May 2013, p.3 with colour photo; JCR Regn No. 2013-11, (ser. No.11). A seedling of **Izumo-taisha-tsubaki,** pollen parent unknown. Double decked flower, large, deep red, inner petals raised and cupped, outer petals slightly reflexed. Early blooming. Originated by Hiroshi Okado.

Iwaizuru. (Crane Festival), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.111. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.10: Medium size, pale rose-pink ground, fading to white at the petal margin, tubular single. Blooms midseason to late. Originated in the Chûbu District, Japan. A chance seedling of unknown parentage. Originated, named and released by Mamoru Naitô in 1993.

Iwa Jama. Hazlewood & Jessep,1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.110. Corruption of the Japanese name **Iwôjima** .

Iwakagami. (Stone Mirror), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Nihon Shubyô Catalogue, 1910: Large size, semi-double, white with light red markings. Originated in Japan.

Iwamigata. (Iwami Bay), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.10: Pure pink, irregularly streaked deeper pink. Large single with round petals. Originated in Japan.

Iwami-shibori. (Iwami Variegated), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.215: Medium sized semi-double, light red, blotched white. Originated in Japan.

Iwami-shiroyuri. (Iwami's White Lily), *(C.japonica),* Yokoyama & Kirino, 1989. *Nihon no Chinka,* p.21, colour photo and description: Small size, white, wide campanulate single of 5 ovate petals and a central stamen column with ivory filaments, joined for the lower half, and yellow anthers. Late blooming. Leaves mid-green, broad elliptic, apices acuminate, margins serrulate. Originated in the Shimane Prefecture, Japan.

Iwami-yurikago. (Cradle from Iwame). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.35 with colour photo; English translation p.22. Medium size, pink, cup-shaped single with thick petals and cylindrical stamen cluster. Flowers early to mid-season. Leaves broadly elliptic, medium size, thick. Spreading, vigorous growth. Selected from wild camellias growing at Kagamiyama, Hamada City, named and released by Kôsaku Masuda in 1988. From Shimane Prefecture. The former name is ‘Yurikago’.

Iwana-shibori. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Iwane-shibori.**

Iwane. (Base of the Rock), *(C.japonica),* Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Finest red single, cup shaped, with small snow-white spots across the petals and a central stamen column. Originated in Japan. (Believed extinct.)

Iwane. Fendig, 1950, *American Camellia Catalogue.* This variegated form has incorrectly been listed as 'Iwane'. Its valid name is **Iwane-shibori.**

Iwane-matsushima. (‘Iwane’ from Matsushima), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki; Tsubaki Hachiboku Sanbokutsuki Meisai,* (before 1868); Itô. Ko'emon. 1879, *Chinkashû:* Cardinal red, double, sake cup single, horizontal stripes. Medium size. Originated in Japan. (Believed extinct.) See JCS., 1969, *Tsubaki,* No.7, p.36 and 1982, No.21, p.98.

Iwane-shibori. (Variegated 'Iwane'), *(C.japonica), Tsubaki Hachiboku Sanbokutsuki Meisai,* (before 1868): Deep red, with white markings, single. Originated in Japan. (Believed extinct.) See JCS., 1982, *Tsubaki,* No.21, p.98.

Iwane-shibori. (Variegated 'Iwane'), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Deep red with variegation, large size, double.; Itô, Ko'emon, 1879, *Chinkashû:* Rose-red, mottled white. Medium sized semi-double. Slow, compact growth. Mid-season blooming. See Tuyama.1966, *Camellia Cultivars of Japan,* pl.143, p.248; Tuyama, 1968, *Camellias of Japan,* pl.289, p.178; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.267, p.330; Satô, 1975, *Chûbu no Tsubaki,* p.79. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.79. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.327. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.95. Seibundô Shinkôsha, 1979, *Senchinshû,* pp.20, 201. Orthographic abbreviation: 'Iwane', invalidly. Synonyms: 'F.G.2', 'Denny D'. Sport: 'Sunrise'. Corruptions of name: 'Yuwane-shibori', 'Iwana-shibori', 'Iwani-shibori'. Originated in the Kantô area, Japan. One of the most popular camellia in Japan. Chinese synonym: 'Yangenjiao'.

Iwani-shibori. Nuccio's Nurseries Catalogue, 1949-1950, p.5. Orthographic error for **Iwane-shibori.**

Iwa-no-hime. (Princess of Rock), *(C.hybrid),* Hagiya, 1986, *Studies on Interspecific Hybridization of Camellias,* No.2, pl.2, p.4, description, p.5: Cultivar # H.1391 *C.rusticana* **Asazakura** x *C.lutchuensis.* Originated by Hagiya, Niigata University, Japan.

Iwashibori-tsubaki. Joshua Condor, 1893, *Landscape Gardening in Japan,* p.117. Orthographic error for **Iwane-shibori.**

Iwashimizu. (Spring Water in Rocks), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.248 & 396: White, medium size, open, incomplete double peony form, with a centre of petals and fascicles of stamens. (Believed extinct.)

Iwashimizu. (Spring Water in Rocks), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* vol.I: Variegated with red on light pink ground with white petal edges. Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Purplish light pink, in 3-4 rows with white splashes and white edges. Originated in Japan. (Believed extinct.)

Iwata. *(C.japonica),* Mizuno, 1664, *Kadan Komoku:* White, large double. Originated in Japan. (Believed extinct.)

Iwataki. (Rocky Cascade), *(C.japonica),* Itô, Ihei, 1695, *Zadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô.* vol.306; *Tsubaki Hachiboku Sanbokutsuki Meisai,* (before 1868): Small, single, white flower with splashes of red in small circles. Originated in Japan. (Believed extinct.)

Iwato-no-hikari. (Light in a Grotto), (Higo), Yoshimura Nursery, 1961, *Higotsubaki Meikan* No.5. See pl.170, p.57, Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai:* Large, cherry-red Higo camellia of 5 petals with emarginate and fluted apices. A burst of stamens with yellow anthers and white filaments. Round leaves. Originated in Kumamoto Prefecture, Japan by Yoshimura. Note: This name is based on the episode in Japanese myths when Amaterasuômikami, the sun goddess, concealed herself in a cave.

Iwato-no-seki. (Gateway to Grotto), *(C.sasanqua),* Satomi, *Nomenclature List of Sasanqua of Japan,* p.10: Bright, deep pink. Medium sized semi-double with incurved petals. Originated in Japan.

Iwatsuki. (Appearance of Rock), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.426: White, medium sized, open peony form with a pink flesh at the base of the petals and a few crimson streaks. Originated in Japan. (Believed extinct.)

Iwaya-ôtsubaki. (Large Camellia of Iwaya Shrine), (Higo), *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.12, p.42, description, p.293: A large, red, Higo camellia, 5-6 petals with a spreading burst of stamens with yellow anthers and pinkish red filaments. Original tree is in the Iwaya Shrine, Fukuoka Prefecture, Japan, and is designated a natural monument of Fukuoka Prefecture. Resembles the Higo **Kumagai.**

Iwazumi. (Name of owner of original tree), *(C.rusticana), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.441, p.174 as 'Iwa-zumi': Small, 5-6 cm across, soft pink, incomplete, informal double with a row of outer guard petals, then a ring of petaloids and stamens about a row of large, upright petals containing an irregular, central, stamen cluster. Originated in Toyama, Japan. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.362; Seibundô Shinkôsha, 1979, *Senchinshû,* p.19 colour photo. Originally named 'Jôritsuji' or ‘Jôyûji’, the name was changed to avoid duplication.

Iwôjima. (Iwo Island), *(C.japonica),* Fruitland Nurseries Catalogue, 1948-1949, as 'Iwo-jima': Crimson red. Large semi-double with heavy crown of golden stamens. Upright growth. Mid-season blooming. Originated by Fruitlands Nurseries, Augusta, Georgia, USA from seed of unknown parents. Although Satomi lists it in *Camellia Varieties of Japan* it is of American origin. Fendig, 1953, *American Camellia Catalogue:* A large, crimson red, semi-double, 10 cm across. The long stemmed petals are large, round and crinkled with occasional petaloids. Stamen centre flares, filaments pink, anthers yellow. Leaves rich green, elliptic, 8 cm x 3.8 cm, tapered apex and base, raised venation, shallow, broad serrations. Corruption of name: 'Iwa Jama'.

Iyemoto. Ôya, 1979, *Chinju'en, Higo Camellia.* Different reading for **Iemoto.**

Iyodairin. *Nippon Tsubaki - Sasanqua Meikan,* 1998, English translation p.34. Orthographic variant for **Iyotairin.**

Iyo-egao. (Iyo Smiling Face), *(C.x vernalis),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.40: Large to medium size, crimson, semi-double, lotus form. Blooms mid-season to late. Originated in Kagashima Prefecture, Japan. A seedling of *C.x vernalis* **Egao.** Originated and named by Ikunosube Tanabe, released by Kagoshima Camellia Society in 1989.

Iyo-fukumusume. (Happy Maiden from Iyo). *(C.japonica),* Don Ellison, 1997, "Camellias - A Photo Dictionary", p.47 with colour photo: A large to medium size, soft pink, semi-double of 15 large, rounded petals. Blooms mid-season on an upright plant. Originated in the Ehime Prefecture, Japan.

Iyogasumi. (Hazy day in Iyo), *(C.rusticana),* Tuyama, 1968, *Camellias in Japan,* pl.69, p.35, description, p.105: Leaves large, broadly elliptic to ovate-elliptic, rounded at base, short acuminated, green to shining, dark green, flat venation, 9.5 cm x 4.5 cm; petioles hairy, 8 mm long. Flower medium size, palest pink, semi-double to incomplete, open peony form, petals 15-18, inner irregular petals 2-7 with occasional small, thick petaloid; large petals obovoid, emarginate, wrinkled, concave but slightly recurved at margin. Stamens mingled with inner petals. Flowers mid-season to late. Colour faint pink. Originated in Ehime Prefecture, Japan. The Japanese allusion to 'haze', pertaining to colour, is the palest pink.

Iyo-iwane. Seibundô Shinkôsha, 1979, *Senchinshû,* p.232. Abbreviation of **Iyo-iwane-shibori.** Probable synonym for **Tsuzure-nishiki.**

Iyo-iwane-shibori. (Variegated Rock fron Iyo), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.205, p.65, description, p.215: Scarlet semi-double with large, white spots and central stamen column. Originated in Ehime Prefecture, Japan. Thought to be a synonym for **Tsuzure-nishiki.**

Iyo-komachi. (Iyo Beauty), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.289, colour photo and description: Very small size, red, finely peppered with white, tubular single, with central, yellow stamen column. Blooms mid-season to late. Blooms 2.5 cm across. Leaves mid to deep green, broad-elliptic, apices acuminate, margins widely serrate. Originated in the Ehime Prefecture, Japan. Named and released by Tokihiro Kôno in 1983.

Iyonokogiriba-tsubaki. (Saw Leaved Camellia from Iyo), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.19, colour photo, p.201, description: Small, irregular, crimson single with 5 very irregular petals in size and shape and a compact, central column of stamens. Leaves glossy, dark green, narrow-elliptic, with deep, irregular serrations and long, acuminate apex. Originated in the Ehime Prefecture, Japan.

Iyo-no-yume. (Dream in Iyo) (*C.hybrid*) from Ehime Pref,. *Tsubaki* No.38, Japan Camellia Society, 1999. Seed parent *C.japonica* **Sakura-tsukasa**, pollen parent *C.granthamiana*. Pale red, single, flat, small, anthers spathulate, early blooming. Leaves resembling but smaller than those of *C.granthamiana*. Tree upright growth, vigorous. Originated by Hiroyasu Watanabe in 1998. 'Iyo' is an old name for now Ehime Prefecture.

Iyo-sasayaki. (Whisper of Iyo). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.33, with colour photo; English translation p.21. Small, pale pink, tubular single with tubular stamen column. Flowers mid-season. Leaves elliptic, medium size. Upright to spreading growth, somewhat weak. History unknown, named and released by Tokihiro Kôno around 1985. From Ehime prefecture.

Iyo-sôshunfu. (Early Spring Song from Iyo). *(C.japonica),* Chinka-en Niigata Retail Price List, 1994-1995 with colour photo: Small white single, striped red; 6 petals. Originated in the Ehime Prefecture, Japan. Iyo is the ancient name for the Ehime Prefecture.

Iyotairin. (Large flower from Iyo), *(C.japonica),* Asai, Keitarô, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû;* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.204, p.65 as 'Iyo-tairin': Very large crimson semi-double, 3-4 rows of large, emarginate petals around central stamen column, yellow anthers, creamy filaments. Leaves mid-green, elliptic, acuminate apices, fine, shallow serrations. See also: Seibundô Shinkôsha, 1979, *Senchinshû,* p.19. Originated in the Ehime Prefecture, Japan.

Iyoseiôbo. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.131. Synonym for **Mishô.**

Iyo-sôshunfu. (Early Spring Song from Iyo). *(C.japonica),* Chinka-en Niigata Retail Price List, 1994-1995 with colour photo: Small white single, striped red; 6 petals. Originated in the Ehime Prefecture, Japan. Iyo is the ancient name for the Ehime Prefecture.

Iyo-unkai. (Iyo Sea of Cloud), *(C.japonica),* Yokoyama & Kirino. 1989, *Nihon no Chinka,* p.34, colour photo and description: Small size, white, wide campanulate single, with 5 broad, overlapping, irregular petals and a wide, central stamen column with white filaments, joined for the lower half, and pale yellow anthers. Late blooming. Leaves deep green, elliptic. Selected from wild japonicas in Yawatahama City, Ehime Prefecture, Japan. Named and released by Ôzu Camellia Enthusiasts Club in 1980.

Iyo-wabishin. (Iyo Scraped Stamens), (Wabisuke), Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.156, colour photo, p.157, description: Small size, red, tubular single with infertile stamens. Leaves mid-green, broad-elliptic, apices acuminate, margins shallowly or obscurely serrate. Blooms

early to mid-season. For botanical drawings, colour photo and description, see p.102,104,106, Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû,* No.11. Originated in Ehime Prefecture, Japan. Selected from wild japonicas growing in the Ishizuchi mountain range. Named and released by Masaru Inaba around 1980.

Iyo-yobukodori. (Iyo Cuckoo), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.19, colour photo, p.201, description: Small, trumpet shaped, fuchsine pink single of 6-7 emarginate petals. Leaves light green, ovate, with prominent, yellow venation, acute, recurved apex and blunt, shallow serration. Originated in Ehime Prefecture, Japan.

Iza Houser. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.46: White. Large semi-double. Vigorous, compact growth. Mid-season blooming. Originated in USA by M.R. Murray, Fort Valley, Georgia.

Izabella Orsini. da Silva, 1880, *Forcing Varieties of Camellias in Oporto,* p.12. Orthographic variant for **Isabella Orsini.**

Izabelle Orsini. Real Companhia Horticolo-Agricola Portuense, Catalogue, No.29, 1895-1896, p.50. Orthographic variant for **Isabella Orsini.**

Izahaya. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.5, p.3. Different reading for **Isahaya.**

Izawa. *(C.japonica),* Himuro, 1982, *Murasuzume.* White, semi-double. peony form. A seedling of **Seibô**. Originated in Japan.

Izayoi. (see below), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.98, p.49, description, p.115: Leaves elliptic to broad elliptic, abrupt acuminate, impressed venation, finely serrate, olivaceous green, 6.5 cm x 3.6 cm. Petioles copiously hairy, 6-7 mm long, light green. Flowers pink (Carmine Rose 621 /2), peony form, petals irregularly undulate and upper half recurved, 12-15, inner, smaller and more irregular petals, 8-15, with stamens intermingled, filaments creamy yellow. Flowers mid-season. Originated in Totama Prefecture, Japan. 'Izayoi' is the moon of the 16th day of the lunar calendar. In this case an abbreviation of 'Izayoi-zakura', the cherry that flowers on the 16th January, and alludes to the colour of the cherry blossom.

Izma. *(C.sasanqua), American Camellia Yearbook,* 1960, p.198: A 7 year old chance seedling, originated by Robbin's Nursery, Willard, North Carolina, USA, that first flowered 1956. The dark green leaves average 6 cm x 1.8 cm. The white, with pink on the reverse side, flowers, 9-10 cm across x 2 cm deep have 50 notched and ruffled petals with yellow stamens. Early flowering.

Izu-higurashi. (Izu Sunset), Izu-Ohshima Hawaii Botanical Gardens, 1980, *List of Plants.* Different reading for **Izu-no-higurashi.**

Izumi. (Fountain) *(C.rusticana).* Nuccio's Nurseries Catalogue, 2007, p.32. Coral pink, medium semi-double. Bushy, round growth. Flowers mid-season to late. Originated in Japan.

Izumigawa. (Izuma River), *(C.japonica),* Itô Tokuemon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Dark red, double, 3 rows of petals with snowy spots and cylindrical stamen cluster. Originated in Japan. (Believed extinct.)

Izumi-iri. (Obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.29 with colour photo; English translation p.18. Palest pink to pink stripes on white ground. Tubular single with cylindrical stamens. Flowers mid-season. Leaves elliptic, medium size. Upright, vigorous growth. A cultivar found by the upper stream of the Shinkawa River, Shimofusa District, Chiba Prefecture, named and released by Kan Utsugi in 1985.

Izumo. (Place Name), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.433: Medium sized, white semi-double with red streaks and flecks, 3 rows of petals and stamen cluster in 3-4 fascicles. Originated in Japan. (Believed extinct.)

Izumo-anju. (Anju of Izumo – see note.), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.78, colour photo, p.79, description: Medium size, pale pink, wide, cup-shaped single with 6 broad, crinkled and overlapping petals, and a central stamen column, with ivory filaments, joined for the lower half, and yellow anthers. Blooms very early to mid-season. Leaves mid-green, elliptic to broad-elliptic, margins finely serrate. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellia Club. Note: 'Anju' was the legendary princess in the Japanese story *Sanshôdayû.* 'Anjuhime' is the name of another cultivar.

Izumo-isahaya. ('Isahaya' from Izumo), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.346, p.143, description, p.249: Large size, white single, opening flat, 7-8 cm across, 6-7 petals, large, fluted, twisted, sparsely streaked and dashed with light red. Large, central column of stamens, anthers light yellow, filaments pale cream. Blooms early to late. See p.260, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Leaves, dull, mid-green, elliptic to narrow-elliptic, apex tapering acuminate, slightly recurved. See: Seibundô Shinkôsha, 1979, *Senchinshû,* p.16, colour photo, p.200, description. Originated in Matsu'e City, Shimane Prefecture, Japan. This was previously known as 'Isahaya' but, to avoid confusion with another cultivar, the name was changed to **Izumo-isahaya.** Originated in Japan from an old tree about 260 years in age. This cultivar is considered to be the parent of **Karasade**. The Great Shrine of Izumo is the oldest in Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.30 with colour photo; English translation p.19. Selected from cultivars at a private family in Matsu'e City. Named and released by Hiroshi Ibara in 1975.

Izumo-isshiki-wabisuke. (Wabisuke from Isshiki, Izumo), (Wabisuke), JCS., 1988, *Japan Camellias*, No.27, p.13, and No.29, p.4, colour photo: Small size, 3.5 cm across, pure white, single, campanulate flower with one row of embracing petals and a central cluster of abortive, pale lemon stamens. Leaves dark, glossy green, elliptic, apices acute, margins obscurely serrate. Originated in Matsu'e City, Shimane Prefecture, Japan. Corruption of name: 'Izumo-tsushiki-wabisuke'.

Izumo-karako. (Izumo Anemone), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.11. No description. Originated in the Shimane Prefecture, Japan.

Izumo-kaori. (*C.lutchuensis* hybrid). *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.99 with colour photo; A cross of **Izumotaisha-yabu-tsubaki** x *C.lutchuensis,* originated by T. Kage, Fukuoka, and released by S. Hisatomi, Kurume, Japan, named in 2002. Soft pink, miniature size, tubular single. Sterile tubular stamen cluster. Fragrant. Growth upright, heavily branched. Leaves small, elliptic, recurved at both extremities. Flowers mid-season.

Izumo-kasuri. (Variegated Izumo), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.129: A small, irregular, single pink with the colour fading to a white border at the petal edge and a large, stamen column. Different reading: 'Izumo-tobi'iri', Originated in Japan. (Believed extinct.)

Izumo-kicchô. (Lucky Omen from Izumo). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.336 with black and white photo; English translation p.226. Medium size, vermilion peony form. Flowers mid-season. Leaves elliptic, medium size, somewhat plicate. Upright growth. Selected from cultivars raised by a private family in Shinji Town, Yatsuka District. Named and released by San-in Camellian Club in 1973. From Shimane Prefecture.

Izumo-momo-chidori. (Pink Seagull from Izumo), *(C.japonica),* ICS., Apr.1990. *Japanese Camellia Cultivar List,* p.10: Small size, pink, campanulate single. Originated in the Shimane Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.336 with black and white photo; English translation p.226. Medium size, pale pink to pink, trumpet shape to flat single, cylindrical stamen column. Flowers mid-season. Leaves elliptic, medium size. Upright, vigorous growth. Selected from a wild japonica community in Matsu'e City. Named and released by San-in Camellian Club in 1987.

Izumo-okuni. (Okuni, a Kabuki Dancer from Izumo), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.288, p.124, description, p.241: Small single with 5 emarginate petals of soft fuchsine pink and a tall stamen cylinder with light yellow anthers and white filaments, joined for the lower half. Leaves obovate, apex tapered acuminate, fine, sharp serrations. Blooms mid-season. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club around 1977. See: Seibundô Shinkôsha, 1979, *Senchinshû,* p.16, colour photo, p.200, description; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.149. Note: 'Izumo-no-Okuni' is a female dancer believed to be the founder of Kabuki.

Izumotaisha-yabu-tsubaki. (Wild Camellia from the Izumo Shrine), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.173, colour photo and description: Small size, deep red, tubular single with a central stamen column with red filaments and yellow anthers. Blooms mid-season to late. Leaves mid-green, lanceolate to elliptic, apices long acuminate, margins serrulate. Originated in Matsu'e City, Shimane Prefecture, Japan. Released by Naruto Kaji in 1982. The Inazawa Nurseries Co. Ltd Catalogue,1988-1989, p.1, A-44 lists this cultivar under a synonym 'Izumotaisha-akayabu-tsubaki'.

Izumo-shûnshô. (Spring evening in Izumo). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.336 with black and white photo; English translation p.226. Pale pink bordered white, cup-shaped single, cylindrical stamen column. Flowers mid-season. Leaves elliptic, medium size, somewhat curved outwards. Upright growth. Selected from cultivars raised by a private family in Matsu'e City. Formerly named 'Kuroko' by the San-in Camellian Club, renamed to the present name in 1995. From Shimane Prefecture.

Izumotaisyaakayabu. Kurume Shibu colour poster illustration, 1997. Different reading for 'Izumotaishaakayabu', synonym for **Izumotaisha-yabu-tsubaki.** See ICS Register, p.898.

Izumo-tobi'iri. Different reading for **Izumo-kasuri.**

Izumo-tsubaki. *(C.japonica),* Mizuno, Motokatsu, 1681, *Kadan Kômoku;* White double with red splashes. See JCS., 1965, *Tsubaki,* No.5, p.28. There is a possibility that this cultivar is the same as **Izumo.** Originated in Japan. (Believed extinct.)

Izumo-tsushiki-wabisuke. Corruption for **Izumo-isshiki-wabisuke.**

Izumusume. (Daughter of Izu), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.16, colour photo, p.200, description: Small, deep crimson single with 5 large, overlapping, emarginate petals and a prominent stamen column, a little pinched in at the top. Leaves glossy mid-green, lanceolate with recurved, acute apex. Originated in Izu, Shiku'oka Prefecture, Japan.

Izu-no-higurashi. ('Higurashi' from Izu), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.70, black and white photo and description; *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.402; Seibundô Shinkôsha, 1979, *Senchinshû* p.16, colour photo: Large, white semi-double with crimson streaks and splashes, 3-4 rows of large petals around a slender, irregular column of stamens. Leaves glossy mid-green, long-ovate to lanceolate, apex long acuminate, recurved, twisted, wavy, fine, sharp serrations. Originated in Izu, Shiku'oka Prefecture, Japan. Resembles **Ezo-nishiki.** Formerly called 'Higurashi' or 'Ito-no-higurashi', but the name was changed to avoid confusion with existing cultivars.

Izu-no-tennin-matsushima. ('Tennin-matsushima' from Izu), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.16, colour photo, p.200, description: Small to medium sized, single white with deep scarlet streaks and splashes, 7-8 large, frilly petals, surrounding a stamen column with yellow anthers and light cream filaments, joined for half their length. Leaves glossy green, elliptic, recurved at the apex, finely serrate. Originated in Izu, Shizu'oka Prefecture, Japan.

Izu-setsugekka. ('Setsugekka' from Izu), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.16, colour photo, p.200, description: Small single of 5 overlapping petals, emarginate, blush pink ground, profusely marked with pink streaks and peppering. Originated in Izu, Shizu'oka Prefecture, Japan. Resembles **Chûbu-setsugekka, Himuro-setsugekka, Sanyasô,** 'Sanya-shibori'. The Izu peninsula is noted for fishing and hot springs. William Adams was wrecked here. He was the pilot (1564-1620) who entered the service of the Shogun Tokugawa Ieyama.

Izu-tachikan. ('Kanjiro' from Izu), *(C.hiemalis),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.48; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.38: Medium size, red, double. Blooms mid-season. 'Tachikan-tsubaki' is a synonym for **Kanjiro**. Originated in the Kanagawa Prefecture, Japan

J.

J.B. Vasstol. *(C.sasanqua).* Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, 1997, p.1: Medium size, shell pink, semi-double flower. Tall, vigorous, bushy growth. Fragrant. Originated in Australia.

J Bird Variegated. *(C.japonica).* ACS, *The Camellia Journal,* 1998, Nov. 1998, p.25, Reg. No.2480. A large, dark red variegated white, chance seedling. Flowers early to late. Originated by Jay Ellis, Sr, Keystone Heights, Fla. USA, and registered by Jay Ellis, Jr. *American Camellia Yearbook,* 1998, p.3, colour photo before p.1. The 26 year old seedling first flowered in 1976. Average flower size is 11.5 cm across x 5 cm deep, with yellow anthers and white filaments. Plant growth is upright, open and vigorous, with dark green leaves 7.5 cm long x 5 cm wide.

J. Bishop Alexander II. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Rose-pink. Large, loose peony form. Vigorous, upright growth. Mid-season blooming. Originated in USA by Mealing.

J.C.W. Lanarth. Exbury Gardens Lid Catalogue, 1965, p.9. A seedling of **J.C. Williams** sent to Exbury by Lanarth. It was finally given the name **Exbury**, due the previous use of the name **Lanarth.**

J.C. Williams. *(C.x williamsii),* Lord Aberconway, 1940, *Journal of RHS,* 65(7):217, fig.62: In 1942 the plant was awarded a First Class certificate. A report of this with an accompanying description and a black and white photo were published in RHS., Journal, 67(6):210, fig.67, 1942. The parents of this hybrid, which was raised by the late Mr. J.C. Williams, Caerhays Castle, Cornwall, England, were pale coloured forms of *C.saluenensis* and *C.japonica.* The flower is 10 cm across with 6-8 spreading, somewhat recurved petals of phlox-pink, shading to fuchsine-pink and a central cluster of golden stamens. The plant is remarkable for the freedom with which it produces flowers, the buds opening in succession over a long period. Following the release of this cultivar a number of similar plants were distributed under this name, mostly sister seedlings of the same cross. These were given appelations such as 'Exbury form', 'Wisley form', 'Early form' but the name **J.C. Williams** must be restricted to the original F.C.C. clone described in the original references cited above. One of the similar forms was named **Philippa Forwood**. A colour illustration of **J.C. Williams** is on the front cover of *Camellias. A Wisley Handbook,* 1959 and facing p.216, *American Camellia Yearbook,* 1951. In 1977 it received an Award of Merit from the RHS. Chinese synonym ‘Weilianmusi Shancha’.

J.C. Williams Lanarth. Reginald Kaye Nursery Catalogue, 1965. A companion seedling to **J.C. Williams.** Its name is invalid. It has no relationship with 'Kimberley', renamed **Lanarth.**

J.C. William's hybrid x Alba Simplex. *(C.x williamsii),* Sunningdale Nursery Catalogue, 1954: A fine hybrid raised at Exbury, England, covered with a mass of single pink flowers. This same cross under the listing: 'J.C. Williams Special' x 'Alba Simplex' was included in the G. Reuthe Ltd. Kent, Nursery Catalogue, 1954, p.9, as a superb pink.

J.D. Dean *(C.reticulata).* ACS, 1992, *The Camellia Journal,* vol.47, No.1, p.25, Reg. No.2226: Originated by Frank Pursel, Oakland, California, USA. A very large, pink, rose form double seedling of **Buddy Bills** x **Dr Emil Carroll.** Blooms mid-season. First bloomed 1985. Average flower size 13 cm across x 7 cm deep with golden anthers and pink filaments. Plant growth is upright and rapid with leaves 13 cm long x 7.5 cm wide. See colour photo between pp.40-41.

No.2197: Very large size, dark rich red, semi-double, *C.japonica* chance seedling of **Lady in Red.** Blooms mid-season. Originated by Charles M. Nugent, New Orleans, Louisiana, USA. *American Camellia Yearbook,* 1990, p.89, colour photo between p.90, 91. The 7 year old seedling first bloomed 1987. Average size of flower, 13 cm across x 6 cm deep with 20-22 petals, golden anthers and yellow filaments. Plant growth is upright and average with dark green leaves 10 cm x 6 cm.

Jackpot. *(C.x williamsii). Camellia Nomenclature* 2006, p.178. Coral pink. Miniature to small, flat round shaped semi-double. Average, bushy, compact and upright growth. (N#9136T).

Jacks. *(C.japonica),* Cannon, 1963, ACS., *The Camellia Journal,* vol.18, No.5, p.28. No description. SCCS., 1966, *Camellia Nomenclature,* p.69: Rose-pink. Medium sized formal to rose form double. Medium, compact growth. Blooms mid-season to late. Originated in USA.

Jack's Surprise. *(C.sasanqua).* SCCS, 1993, *Camellia Nomenclature,* p.144. Red, medium size, loose peony form to rose form double. Originated in USA.

Jacksonia. Anonymous, 1832, *Floral Magazine and Botanists Repository,* 1:75, pl.1832, as a synonym for **Landrethii.**

Jacksonii. *(C.japonica),* Hogg, 1838, *Magazine of Horticulture,* 4:155: Fine rose, centre white and very double. Originated in USA by M. Floy, New York. (Believed extinct.)

Jacksonii. *(C.japonica),* Verschaffelt, 1849, *Nouvelle Iconographie,* Book II, pl.I: Mr Jackson, horticulturalist of Kensington, London, England found it amongst seedlings he bought some time ago in Scotland. The camellia has very vigorous growth, large leaves, 9-10 cm long x 7-8 cm wide. Its blossom has a most regular imbrication with profuse, rounded petals of bright carmine red, with a wide stripe of white in the middle. *The Garden World Illustrated,* 1884, vol.1, p.650: Growing in the open in Chudleigh Knighton, South Devon [it] showed varied coloured flowers; blush pink with carmine stripes; china white with lighter stripes; pure cerise; pure crimson and striped (half and half). Orthographic errors: 'Jaksonii', 'Jacsoni', 'Jacksoni'.

Jacksonii. Berlèse, 1840, *Monographie,* ed.2, pp.95, 227. Orthographic variant for 'Jacksonia', synonym for **Landrethii.**

Jacksonii. McIlhenny, 1937, *600 Varieties of Camellias,* p.8 as Jacksoni'. McIlhenny is recorded as having imported 'Jacksoni' from Guichard Souers, France. However from a study of the Guichard Catalogues, the camellia they list is the Verschaffelt listed cultivar. The McIlhenny release: "A large semi-double, crimson, occasionally flecked light pink" would seem to be the original error of releasing the solid red form of **Gigantea** under this pseudonym. Due to the nomenclature confusion surrounding the name, it is rejected as applying to the solid red form of **Gigantea** and is thus regarded as a pseudonym for **Gigantea Red.**

Jaco. van Houtte Catalogue, 1849-1850, 38:51. Orthographic error for 'Jacco Prime', synonym for **Sacco.**

Jacob Gaeta. (*C.nitidissima* hybrid). SCCS, 1996, *Camellia Nomenclature*, p.160: Light pink speckled white, with light streaks of yellow in centre of petals. Medium sized semi-double. Blooms early to late. A seedling of *C.hybrids* (**Gay Time** x **Angel Wings**) x *C.nitidissima* **Olympic Gold**. Originated in USA by Piet and Gaeta, California.

Jacob's Holly. *(C.japonica),* SCCS *Camellia Nomenclature* 2009, p.63; A sport of **Francis Eugene Phillips.** White with occasional red stripes. Large to very large peony form. Unusual holly-

like foliage with heavy serrations. Flowers mid-season to late. Originated by CamelliaShop, Savannah, Ga., USA in 2008.

Jacoy Prima Dona. Charles Vuylsteke Nursery Catalogue, 1891, p.12. Orthographic errr for Jacco Prime', synonym for **Sacco.**

Jacoy Prima Nova. Charles Vuylsteke, 1876-1877, Price List, p.20. Synonym for **Sacco Nova.**

Jacqueline. *(C.japonica), American Camellia Yearbook,* 1966, p.92, Reg. No.845: A 9 year old chance seedling of 'Emperor Wilhelm', (Gigantea) that first bloomed in 1959. Originated by A. Vasquez, San Gabriel, California, USA. Growth habit is upright, compact and medium in rate with dark green leaves averaging 10 cm x 5.5 cm. The anemone to peony formed bloom, similar to Professor Sargent, except with petaloids, is dark red with golden yellow stamens. The bloom measures 10 cm across x 5 cm deep and has many petals and 30-40 petaloids mixed with stamens. Flowers early.

Jacqueline van Houtte. *(C.japonica),* Roger de Bisschop Catalogue, 1975, as 'Jacq. van Houtte': Semi-double red striped white. Mid-season flowering. Originated in Belgium.

Jacques Cassard. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.17; No description.

Jacques et Barthélémy. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.17; Red, semi-double to anemone form.

Jane Moon. *(C.japonica),* Belle Fontaine Nursery Catalogue, 1961, p.5. No description. SCCS., 1962, *Camellia Nomenclature,* p.55: Iridescent pink, semi-double with crepe-like petals. Vigorous, compact, upright growth. Mid-season flowering. Originated in USA by Dr, Gilbert Fisher. Sport: **Jane Moon Variegated.**

Jane Moon Variegated. *(C.japonica),* Belle Fontaine Nursery Catalogue, 1961, p.6 as 'Jane Moon V.': A virus variegated form of **Jane Moon** - Iridescent pink blotched white. Originated in USA.

Jane Morgan. *(C.sasanqua),* ACRS., 1967**,** *Camellia News,* No.28, p.4, Reg. No.79: Originated by Mr C.E. Morgan, Lindfield, N.S.W., Australia from seed supplied by Mrs Manamey, Killara. The plant has an upright, dense habit of growth, producing early, 7.5 cm diameter flowers, white with rose-pink edged petals. The leaves are dark green, narrow, 6 cm long. See Macoboy, 1981, *The Colour Dictionary of Camellias,* p.175. Chinese synonym: 'Zhenni Mogen'.

Jane Murtagh. *(C.japonica), New Zealand Camellia Bulletin,* 1981; vol.XI, No.3, p.21, Reg. No.149: A chance seedling of *C.japonica,* raised by A.P. Gamlin, New Zealand, that first flowered 1974. The plant habit is upright, of medium density with dark green leaves, 12 cm x 6.5 cm. The blooms are peony formed with up to 50 petals, inner petals fluted, upright and intermingled with stamens in fascicles, anthers golden, filaments cream. Flower colour is mauve-pink, size, 15 cm across x 8 cm deep. Flowers mid-season.

Jane Polizzi. *(C.japonica), American Camellia Yearbook,* 1979, p.107, Reg. No.1575: A small, dark pink, formal double *C.japonica* chance seedling; late blooming. Originated by Sam & Ferol Zerkowsky, Slidell, Louisiana, USA. The 9 year old seeding first bloomed in 1970. Its flower has 150 petals. Average size, 7.5 cm across x 7.5 cm deep. Plant growth is upright, average in rate and open with dark green leaves, 7.5 cm x 3.1 cm. Colour photo: front cover, ACS, 1979, *The Camellia Journal,* vol.34, No.3.

Jane Starks. *(C.japonica), American Camellia Yearbook,* 1965, p.237, Reg. No.682: A 5 year old chance seedling of unknown parents that first bloomed 1963. Originated by R.E. Higgenbotham, Texarkana, Arkansaw, USA. Plant growth is upright and average in rate with medium green leaves 8 cm x 4.5 cm. The formal double flower, true pink in colour, is 7.5 cm across x 3.8 cm deep with 65 petals, which curve and cup up, and 12 rows of petaloids. Blooms mid-season.

Jane Steptoe. *(C.hybrid), New Zealand Camellia Bulletin,* Mar.1991, Vol.XVII, No.l, p.47, Reg. No.284: A 10 year old chance seedling that first bloomed 1985. Originated by W.J.M. Rolston, Levin, NZ. Plant of dense habit and medium growth rate. Leaves dark green, 8-9 cm long x 4 cm wide. The flowers are semi-double, bright pink, 8-9 cm across x 4 cm deep, with about 22 petals. Filaments joined for the lower half, anthers golden. Flowers from early to late. Colour RHS.CC.62A with 58D veining.

Jane Struby. *(C.japonica), American Camellia Yearbook,* 1965, p.237, Reg. No.795: A 7 year old chance seedling that first bloomed 1961. Originated by Bert Struby, Macon, Georgia, USA. Growth habit is upright, of average density, rapid in rate with dark green leaves, slightly serrate, 11 cm x 5.5 cm. The flower is anemone form, deep pink, with white filaments and yellow anthers. It is 9-11 cm cross x 5 cm deep with 25 petals and numerous petaloids. It has a light rose or honeysuckle fragrance. Blooms mid-season.

Jane Whitney. *(C.japonica), American Camellia Yearbook,* 1974, vol.II, p.234, Reg. No.1310: A 12 year old chance *C.japonica* seedling that first bloomed 1966. Originated by Ferol Zerkowsky, Slidell, Louisiana, USA. Plant growth is upright, open and medium in rate with dark green leaves, 9.5 cm x 3.8 cm. The peony form bloom is old rose colour. Average size, 11.5 cm

across x 6 cm deep with 45 petals and yellow anthers. Many tiers of petals, firm texture. Blooms early to mid-season.

Janeen Elizabeth. *(C.japonica),* ACS, *The Camellia Journal,* Sept. 2008, p.30 with colour photo, Regn No. 2740; White to blush pink, with irregular red stripes and flecks. Small formal to rose form double, 5.7 cm diameter with 29 petals. A seedling of **Tinkerbell.** Average upright growth. Flowers mid-season to late. Originated in 2005 by Don Bergamini, Martinez, Calif., USA. *American Camellia Yearbook,* 2008, p.114 with colour photo; Dark green leaves are 7.5 cm x 6.5 cm.

Janeli. Belle Fontaine Nursery, 1963, ACS., *The Camellia Journal,* vol.18, No.3, inside front cover. Orthographic error for **Jeneli.**

Janet. (*C.reticulata* x *C.japonica*). ACS, Sept. 1995, *The Camellia Journal,* vol.50, No.4, p.28, Reg. No. 2358: Originated in USA by Frank Pursel, Oakland, California. Very large size, pink, semi-double to peony form, *C.reticulata* hybrid, ([*C.reticulata* 'Cornelian' (**Damanao**) x *C.japonica* **Mrs D.W. Davis**] x 'Cornelian'). Blooms mid-season. ACS 1995, *American Camellia Yearbook,* p.6 with colour photo: The 16 year old seedling first flowered 1985. Average flower size is 17 cm across x 10 cm deep. Plant growth is upright and vigorous with dark green leaves 12 cm long x 5.5 cm wide.

Janet. Treseder & Hyman, 1975, *Growing Camellias,* p.132 as a seedling of 'Cornelian' (**Damanao**). Abbreviation for **Janet Clark.**

Janet Clark. *(C.reticulata), New Zealand Camellia Bulletin,* 1967, vol.V, No.3, p.10, Reg. No.36: A chance seedling of **Damanao** that first flowered 1965. Originated in New Zealand by H.J. Clark, New Lynn. The plant has an upright, rapid growth with dark green, reticulate leaves, 13 cm x 5 cm. The flower is crimson HCC.22/1, up to 15 cm across, semi-double with 12 petals. Orthographic error: 'Janeth Clark'. Abbreviation: 'Janet'. Chinese synonym 'Jianaite'.

Janet Cowan. *(C.saluenensis. x C.reticulata), New Zealand Camellia Bulletin,* 1975, vol.IX, No.3, p.4, Reg. No.116: A putative hybrid of *C.saluenensis* and *C.reticulata* raised by Mrs Ida Berg, Whakatane, New Zealand. It first flowered 1970. Plant habit is open and spreading, foliage mid-green with fine serrations, 10 cm x 5 cm. Flowers are semi-double to open peony form with 12-14 petals and some petaloids, yellow anthers and cream filaments. The colour is RHS.CC. Red Group 55A and size, 11 cm across x 6 cm deep.

Janet K. *(C.japonica), American Camellia Yearbook,* 1978, p.130, Reg. No.1473: Small, rose-pink, variegated white, formal double *C.japonica* chance seedling that blooms mid-season. Originated by T.E. Lundy, Pensacola, Florida, USA. The 12 year old seedling first bloomed 1972. The Alba Plena type bloom has 16-18 petals arranged in 6 tiers. Average size 6 cm wide x 3.8 cm deep. Petals are waxy. Plant growth is upright and rapid in rate with dark green leaves, 10 cm x 4.5 cm.

Janet Smith. *(C.reticulata x C.japonica), American Camellia Yearbook,* 1980, p.167, Reg. No.1591: A very large, rich pink, semi-double *C.reticulata* hybrid *(C.reticulata* 'Crimson Robe' x [*C.reticulata* 'Cornelian' *x C.japonica* **Mrs D.W. Davis**]) that flowers mid-season. Originated by Frank Pursel, Oakland, California, USA. Average flower size, 16 cm across x 7.5 cm deep. Flower has yellow anthers and semi-crinkled petals. Leaves extra large and heavy.

Janet Waterhouse. *(C.japonica),* Waterhouse, 1952, *Camellia Trail,* p.30: Semi-double, pure white, 10 cm across, 5-6 rows of petals with a compact cylinder of stamens and golden anthers. In its first stages the flower shows a large, central cone that opens later and the petals fold back and overlap. Dark green foliage and sturdy habit. Raised by E.G. Waterhouse, Gordon, N.S.W., Australia. For colour illustrations see front cover, ACRS., 1968, *Camellia News,* No.32 and Macoboy, 1981, *The Colour Dictionary of Camellias,* p.95.

Janette Habas. *(C.japonica), American Camellia Yearbook,* 1976, p.161, Reg. No.1382: An 11 year old chance *C.japonica* seedling that first bloomed 1970; originated by Ferol & Sam Zerkowsky, Slidell, Louisiana, USA. Plant growth is upright, dense and medium in rate with dark green leaves, 10 cm x 5 cm. The anemone to peony form bloom is white with 90 petals and 40 petaloids with yellow anthers and filaments. Average size, 12 cm across x 7.5 cm deep. Blooms mid-season. See colour photo front cover, ACS, 1976, *The Camellia Journal,* vol.31, No.3.

Janey Dover. SCCS, 1990, *Camellia Nomenclature,* p.56. Orthographic error for **Janie Dover.**

Janey Mayer. *(C.japonica), American Camellia Yearbook,* 1960, p.199, Reg. No.505: A 20 year old chance seedling originated by Arthur W. Solomon, Savannah, Georgia, USA, which first flowered 1950. Plant growth upright, strong and dense with dark green leaves, 10.5 cm x 5 cm. The formal double white, imbricated flowers, similar to **C.M. Hovey**, are 9-10 cm across x 5.5 cm deep with 65-85 petals, on 5-6 of which, at the point, is a pink pencil stripe. Blooms mid-season.

Janice. *(C.japonica),* Vanderbilt, 1943, *Trade Available Camellia Stocks.* No description. Originated in USA. (Believed extinct.)

Janie Anderson. *(C.x williamsii),* Cobley Camellias Catalogue, 1977: Medium sized, pink, semi-double. Originated in England.

Janie Dover. *(C.japonica),* ACS., *The Camellia Journal,* vol.44, No.3, p.9, Reg. No.2137: Small size, rose shading to pink in the centre, formal double chance *C.japonica* seedling. Blooms mid-season. Originated by Mrs Henry S. Stone, Baton Rouge, Mississippi, USA. *American Camellia Yearbook,* 1989, p.123: The 18 year old seedling first flowered 1977. Average flower size is 6 cm across x 3 cm deep with 82 petals. All blooms are complete spirals. Plant growth is upright and dense, medium in rate, with dark green leaves, 10 cm long x 6 cm wide. Orthographic error: 'Janey Dover'.

Janie Lee Ott. *(C.japonica), American Camellia Yearbook,* 1957, p.301, Reg. No.309: A 10 year old chance seedling originated by E.C. Wolfe, Branchville, South Carolina, USA that first bloomed 1952. Plant growth is upright, compact and rapid in rate. Leaves similar to **Mrs Charles Cobb**, except colour is a softer green. The clear crimson flowers, somewhat lighter in colour then **Mrs Charles Cobb**, are incomplete double with mixed petaloids, similar to **Nobilissima** and are 8-10 cm across with 11-12 outer petals and 20 or more petaloids. The petals are wavy and fluted. Mid-season flowering.

Janie Lewis. *(C.japonica),* ACS, Nov. 1993, *The Camellia Journal,* vol.48, No.4, p.3: Valdosta Camellia Scions. No description. A *C.japonica* with frosted petals usually only seen in *C.reticulata.* Originated by Roscoe Dean, USA.

Janie Pearl. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature,* p.80: Blush to white centre. Small formal double. Vigorous, compact, upright growth. Blooms mid-seaon to late. Originated in USA by Haynie.

Janie Sans. *(C.japonica),* SCCS., 1964, *Camellia Nomenclature,* p.66: Light pink sport of **Mama Sans.** Small. Originated in USA by Howard Metcalf, California.

Janie Wood. *(C.japonica), American Camellia Yearbook,* 1971, p.47, Reg. No.1147: A 6 year old chance seedling that first bloomed 1968. Originated by J.B. Wood, Florence, South Carolina, USA. Plant growth is spreading, open and medium in rate with light green leaves, 10 cm x 3.8 cm. The semi-double, **Frizzle White** type flower is rose-red with deeper veining, yellow anthers and pink filaments; 17 petals and 14 intermingled petaloids. Blooms mid-season.

Janis Smith. *(C.japonica), American Camellia Yearbook,* 1972, p.131, Reg. No.1191: A 10 year old chance seedling of **Reverend John G. Drayton,** that first bloomed 1966. Originated by the Twin Pines Nursery, Theodore, Alabama, USA. Plant growth is upright, dense and medium in rate with dark green leaves, 7.5 cm x 3.8 cm. The semi-double to rose form double bloom is rose-pink with yellow anthers and white filaments; 20-60 petals and 3-10 petaloids; measures 10.5 cm across x 6 cm deep. Blooms mid-season to late.

Jannali. *(C.sasanqua),* ACRS., 1980, *Camellia News,* No.74, p.24, Reg. No.243: Originated by Alice Spragg, Sutherland, NSW, Australia. A chance seedling that first bloomed 1970. The upright, spreading plant has 6 cm x 2.5 cm lanceolate leaves with distinct serrations. The 10 cm, single, white flowers have occasional pink on the outside of crinkled petals. Blooms early to late.

Jannine Powell. *(C.hybrid).* ACRS, *Camellia News,* 1995, No.135, p.12, colour photo p.19, Reg. No.449: Originated by Jim Powell, Helensburgh, NSW, Australia. A seedling of *C.sasanqua* **Pure Silk** x *C.hybrid* **Alpen Glo**. First flowered 1991. Two toned, semi-double flower of 12-16 petals, pale pink at centre, shading to deep pink at margins, 5 cm across x 2.5 cm deep. Plant growth is dense, bushy and quick growing. Leaves deep green, matt, ovate to elliptic, serrulate, apices acute, 4 cm long x 2 cm wide. Flowers prolifically, early to mid-season. Petals cup-shaped. Filaments in a central boss. Flowers have general *C.sasanqua* characteristics, but like a large **Alpen Glo.** Flowers shed whole.

Janome. (Bullseye), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* A true red, large size, single flower, tea whisk form stamens. See JCS., 1969, *Tsubaki*, pp.7, 31. Originated in Japan. (Believed extinct.)

Janomegasa. (Broad Bordered Umbrella), *(C.sasanqua),* Kajitsu-en 1905, *Chabaika Meikan;* Ishii, Yûgi, 1950, *Engeijiten,* vol.2; Yashiroda, 1950, *American Camellia Yearbook,* p.21 as 'Jyanome-gasa': Medium sized, deep pink, bordered pink, with white stripes and white bottom, semi-double. Originated in Japan. Different reading: Jyanome-gasa'.

Jan's Chance. *(C.japonica),* ACRS, 1991. Camellia News No.119, p.11, Reg. No.400. Originated by Ray Garling, Victoria. Large informal double to peony form, bright pink, (RHS.CC 54A), and is composed of many large and small petals and petaloids, size 13.5 cm across x 7 cm deep. Slow growing, bushy plant. Leaves glossy green, flat, elliptical, fine serrations, 7.5 cm x 3.8 cm. Valdosta Camellias. Nov.1987, ACS., *The Camellia Journal,* vol.42, No.4, p.19. Chinese synonym: 'Zhansi'.

January Red. *(C.japonica),* Lanhydrock Catalogue, 1981: A early flowering red with a faint white stripe, double. From Killiow Gardens. Originated in England.

Janus. *(C.reticulata),* SCRS., 1968, *Camellia News,* No.32, pl.18, Reg. No.98: Originated by F.S. Tuck-field, Berwick, Victoria, Australia. Seed parent 'Crimson Robe' (**Dataohong**), pollen parent unknown, first flowered 1965. Flowers vary considerably in shape and colour and leaves in size and shape, hence the name of the two faced deity. The opening stage of the flowers shows very deep red in the form of an unopened rose. The fully open flower reveals central, white petals with stamens and the remainder becomes a lighter red. The flower reaches 13 cm across. Flowers mid-season. Leaves are broad-ovate, 13 cm x 9.5 cm, bluntly pointed or, alternatively, 9.5 cm x 3.8 cm, sharply pointed. See colour photo, p.19. ACRS, 1977, *Camellia News,* No.66.

Jaspeada. *(C.japonica), La Camelia .....Diputación Provincial de Pontevedra,* 2004, p.133, Register No.116. Peony to rose form double, 9 cm diameter, pale pink or white dotted pink, striped with dark rose (RHSCC 54B). 80 to 100 petals of irregular shape and size. Leaf dark green, 10-11.5 cm x 5-6 cm, elliptic, apex acuminate. Flowers mid-season. Average, dense, shrubby growth. Originated by Maciñeira Nursery, Galicia, Spain.

Jastil. *(C.japonica),* ACRS, *Camellia News,* Autumn 2002, No.158, p.8, colour photo front cover, Reg. No.539. Originated by Mrs Helen Simon, Wahroonga, NSW, Australia. A chance seedling that first flowered in 1995. The deep rose pink (RHS.CC.63C-64D) flower usually opens with a bud centre, then develops into a loose peony form, centre somewhat raised, with 12-14 petals and a few petaloids. Outer petals smooth, rounded, slightly notched, and edged with a slight touch of purple (RHS.CC.63B-64C). Diameter 10.5 cm x 4.5 cm deep. Flowers freely mid-season to late on an upright, medium growing plant. Leaves dark green (RHS.CC.147A), flat, glossy, ovate, bluntly acuminate with raised veining, edges finely and sharply serrated, 9.5 cm long x 4.8 cm wide, 11-13 mm petiole.

Jaune. *(C.oleifera),* Naudin, Jul.1850, *Revue Horticole,* p.273: "The famous yellow flowered camellia brought from China by Mr Fortune and newly arrived in France". Verschaffelt, 1853, *Nouvelle Iconographie,* Book X, pl.II as 'Jaune' (De Fortune): We owe its introduction to Europe to the plant hunter Fortune, who discovered it in 1848 near Shanghai and sent it to Standish & Noble of Bagshot who put it out for sale. The form recalls that of the 'Waratah' or anemone form class. The exterior petals are large, sub-biserate, of a rather pure white; the central ones are quite numerous, very small, very compact, ruffled, distinctly yellow and resemble those of an anemone. The leaves are narrow, quite small, thick, lanceolate, oblong, acuminate, very delicately notched. For some time it was classified as a *C.sasanqua* under the name 'Anemonaeflora Sasanqua'. Other synonyms indude: 'Jaune de Fortune', 'Juane de Chine', 'Fortune's Yellow', 'Gialla', 'Gialla della China', 'Jaune de la Chine', 'Jaune' (Fortune), 'Fortune'. 'Sasanqua var. Anemoniflora Lutea', 'Camellia à fleurs Jaune'. See black and white photo, p.57, *American Camellia Yearbook,* 1958 and a colour plate, front cover, SCCS, 1955, *The Camellia Review,* vol.16, No.8. Chinese synonym 'Jiaoen'.

Jaune (De Fortune). Verschaffelt, 1853, *Nouvelle Iconographie,* Book X, pl.II. Synonym for **Jaune.**

Jaune (Fortune). Linden Catalogue, 1875. Synonym for **Jaune.**

Jay Ellis. *(C.japonica),* ACS, *The Camellia Journal,* Nov. 1998, p.24, Reg. No.2479. A large, dark red, semi-double chance seedling. Flowers early to late. Originated by Jay Ellis, Sr, Keystone Heights, Fla., USA, and registered by Jay Ellis, Jr. *American Camellia Yearbook,* 1998, p.3, colour photo before p.1. The 28 year old seedling first flowered in 1974. Average flower size is 12.7 cm across x 5 cm deep, with 50 petals, yellow anthers and white filaments. Plant growth is spreading, dense and vigorous, with light green leaves 9 cm long x 5 cm wide.

Jaylyle. *(C.japonica), American Camellia Yearbook,* 1960, p.l99, Reg. No.491: A 7 year old chance seedling, originated by Dr R.F. Wills, Panama City, Florida, USA. Plant growth habit is spreading, dense and medium in rate with dark green leaves, 8 cm x 3.8 cm. The rose-pink, anemone form flowers, 11 cm across x 3.8 cm deep, have 25-30 petals, 100-150 petaloids and white stamens, yellow tipped. Flowers early.

Jazz. *(C.japonica),* C. Aust, *Camellia News,* No.182, Autumn 2010, p.6 with colour photo; Regn No.593-N.; Medium to large, anemone form flowers, rich red. Long flowering season, late autumn through winter. A chance seedling found growing by Pam O'Malley at Marion Grove Nursery, Mangrove Mountain, NSW, Australia. in the ealry 1990s, and assumed to be from **Pink Gold.** Narrowish leaves.

Jean Anderson. *(C.reticulata), New Zealand Camellia Bulletin,* 1984, vol.VIII, No.6, p.23, Reg. No.201: A chance seedling with *C.reticulata* characteristics raised by T. Lennard, Te Puke, New Zealand and first flowered 1979. The plant has an open, spreading habit, rapid growth and dark green leaves, l l cm x 7 cm. The 7cm, single, crimson flowers are borne in bunches, terminal, and have 8 petals, white filaments, pink anthers and open mid-season to late.

Jean B. Saxby. *(C.reticulata x C.japonica), American Camellia Yearbook,* 1980, p.167, Reg. No.1649: A very large, rose-red, peony form hybrid *C.reticulata* ('Crimson Robe' (**Dataohong**) x *C.japonica),* flowering mid-season to late. Originated by Jack Osegueda, Oakland, California, USA. The 12 year old seedling bloomed for the first time 1976. Average flower size, 12.5 cm across x 8.5 cm deep with 28 petals, white anthers and brown filaments, heavily veined. Plant growth is upright, open and rapid in rate with light green leaves 15 cm x 7 cm. Orthographic error: 'Joan Saxby'.

Jean Baptiste Pierre. *(C.hybrid). International Camellia Journal,* 1993, pp.41-44: colour plate back cover. Originated by J.C. Rosmann, Boucou, France. A seedling of *C.oleifera* **Jaune** x *C.hiemalis* **Kanjiro.** Light red, small single to semi-double with 8-11 petals, a central bunch of stamens and a few red petaloids.

Jean Bardow. *(C.japonica),* SCCS., 1964, *Camellia Nomenclature,* p.66: Rose-pink. Miniature, anemone form. Medium, upright growth. Blooms mid-season to late. Originated in USA by Elisabeth Councilman.

Jean Clare. Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. Orthographic error for **Jean Clere.**

Jean Claris. *(C.x williamsii),* Koromiko Nursery Catalogue, 1982; *New Zealand Camellia Bulletin,* 1984, vol.XIII, No.6, p.24, Reg. No.211: A 10 year old seedling that first flowered as a 2 year old in 1975. Raised by O. Blumhardt, Whangarei, New Zealand. A controlled cross *C.saluenensis x C.japonica* **K. Sawada**. Average growth rate with 8 cm x 4 cm dark green leaves. The formal double flowers are bright, deep pink in colour with 65 petals and measure 11 cm across x 4 cm deep. The petals are slightly incurved and the outer petals notched.

Jean Clark. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.112. No description. Originated in USA. No valid listing located.

Jean Clere. *(C.japonica), New Zealand Camellia Bulletin,* 1969, vol.VI, No.2, p.8, Reg. No.41: A sport of *C.japonica* **Aspasia Macarthur** from Camden Park. It was found on an old tree at

Taranaki, New Zealand and propagated by R.H. Clere, Hawera, New Zealand. The flower is identical with its parent except for the colour which is Red Group 53D. The petals have a narrow, white band around the edge, the width being variable up to 6 mm. See colour photo, pp.24-25, *New Zealand Camellia Bulletin*, 1974, vol.VIII, No.6. Chinese synonym 'Qiong Kelaier'.

Jean Clere Special. *(C.japonica), Camellias,* Y.C. Shen, 2009, p.131 with colour photo; A sport of **Jean Clere** originated by Nuccio's Nurseries, Altadena, California, USA. Flower is 6-7 cm diameter, colour and other characteristics as for the parent.

Jean Comber. *(C.reticulata), American Camellia Yearbook,* 1983, p.159, Reg. No.1910: A large to very large, clear pink semi-double *C.reticulata* ('Crimson Robe' x '5X Damanao'), mid-season to late flowering. Originated by Frank Pursel, Oakland, California, USA. The 10 year old seedling first bloomed 1979. Average flower size, 12.5 cm across x 3.8 cm deep. Plant growth is upright, dense and medium in rate with light green leaves, 10 cm x 5 cm.

Jean Evans. *(C.japonica),* ACRS, *Camellia News,* 1996, No.139, p.10, colour photo p.2, Reg. No.471. Originated by Charles A. Newman, and registered by Jean Evans, Roleystone, West Australia. A cross between **Moshio** as seed parent x **Maroon and Gold**, that first flowered 1989. A semi-double pink (RHS.CC.62B) flower of 14 petals, 9 cm diameter x 4 cm deep. Flowers prolifically mid-season to late on an upright, spreading, medium growing plant. Leaves mid-green, smooth surface, elliptic, fine serrations, 9 cm long x 4.5 cm wide. Filaments, about 50, are arranged in tea whisk form. Similar in form to **Moshio**. Heavily veined, with some hint of whitening near centre of bloom. ACRS, *Camellia News,* 2000, No.154, p.18. Description altered to: A semi-double deep red flower of 14 petals, (RHS.CC.59B to RHS.CC185B).

Jean Feathers. *(C.japonica), American Camellia Yearbook,* 1982, p.173, Reg. No.1831: A medium blush, shading vivid magenta, loose peony form *C.japonica* (**Dr Tinsley** x **Debutante**), early to late flowering. Originated by David L. Feathers, Lafayette, California, USA. First bloomed 1971. Average flower size 8 cm across x 5 cm deep with 30 petals, gold anthers and white filaments. Plant growth is average in rate with medium green leaves 8 cm long x 5 cm. wide.

Jean Foster. Shackelford, 1973, ACS., *The Camellia Journal,* vol.28, No.1. No description. Originated in USA. No valid listing located.

Jean Galbraith. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.112: White, with some petals striped pink. Medium size, single. Originated in Australia. Sport: **Jean Galbraith Rosea.**

Jean Galbraith Rosea. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.112: Rose pink sport of **Jean Galbraith.** Originated in Australia. Note: The use of the latin "rosea" is illegal for names given from 1958 according to the Horticultural code.

Jean Hayes. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* No description. Originated in USA.

Jean Keer. Sharp, 1948, *Camellias Illustrated,* p.121. Orthographic error for 'Jeanne Kerr', synonym for **Kumasaka.**

Jean Kernaghan. *(C.japonica), American Camellia Yearbook,* 1981, p.100, Reg. No.1694: A medium sized white, interspersed with medium pink, loose peony form *C.japonica* chance seedling, flowering mid-season to late. Originated by Grover C. Chester, Augusta, Georgia, USA. The 15 year old seedling first bloomed 1971. Average flower size, 8.5 cm across x 6 cm deep with 20 petals, 4 petaloids, yellow anthers and filaments. Three of the 20 petals are usually pink, while the remaining exhibit pink blotches. Plant growth is upright, dense and medium in rate with dark green leaves. 8.5 cm long x 6 cm wide.

Jean Laborey. *(C.japonica), International Camellia Journal,* 1995, No.27, p.32, and colour photo p.33: Bred from the *C.japonicas* **Berenice Boddy** x **Kramer's Supreme** by Dr Clifford Parks, University of North Carolina, USA, for Claude Thoby, France and given the number 60N(60). A single of medium size with a central group of stamens. Slightly fragrant. Petals are coloured between red and pink, with veins of darker red. Flower is luminous, almost fluorescent. Leaves resemble its parent **Kramer's Supreme.** Blooms slightly early to mid-season.

Jean Livingstone. *(C.japonica), New Zealand Camellia Bulletin,* 1963, vol.III, No.3, p.5, Reg. No.20: A chance *C.japonica* seedling, believed to be from **Waiwhetu Beauty** and raised by Mrs N.J. McFarland, Frankton Junction, New Zealand. The plant is upright and open. The flowers are semi-double with 15-16 petals and an occasional petaloid. Colour is China Rose (HCC.24/1-2), the size 15 cm across and the stamens in fascicles, are gold with cream anthers. See p.9 of above Bulletin for black and white photo.

Jean Lyne. *(C.japonica),* Hazlewood Nurseries Catalogue, 1941: Raised at Camellia Grove, Ashfield, N.S.W. and transplanted to the garden of G.C. Linton, Somersby, N.S.W., Australia. Semi-double white with pink stripes and flecks. For other forms see: **Edith Linton** and **Nancy Bird.** For colour plate see Waterhouse, 1952, *Camellia Trail,* pl.XI or Macoboy, 1981, *The Colour Dictionary of Camellias,* pp.49, 96. Jianye Jinxin. (Pointed Leaf Gold Heart), *(C.japonica),* Wang & Yü, 1981, *Shancha Hua.* Red semi-double with central stamens with golden anthers. Originated in China.

Jianye Taohong. (Pointed leaf Crimson), *(C.reticulata),* Feng et al., 1981, *Yunnan Shanshahua,* p.67 and *Yunnan Camellias of China,* p.53 colour: Leaves narrow-lanceolate, apices long pointed and

recurved, bases cuneate, 8-12.5 cm long x 2.5-5 cm wide. Flowers spinel pink (RHS.CC.61D), diameter 11-12 cm. Petals about 24-30 in 6-7 whorls, regularly arranged, reclinate in a V-shape. Stamens numerous, divided into several fascicles placed in the flower centre, partly petaloid. Pistils mostly rudimentary but a few well developed. This is a new cultivar selected from seedlings of open pollinated seeds by researchers at the Kunming Botanical Garden. It has thin branches. Flowers mid-season. Different reading: 'Chien-yeh T'ao-hung'. Note this cultivar had previously been listed by Yü & Bartholomew, 1980 as 'Jianye Yinhong'. However it was considered that 'Yinhong' (Spinel pink) gave an incorrect assessment of the colour and it was ammended to 'Taohong'. (Crimson).

Jill Barwick. *(C.japonica), Camellias,* Y.C. Shen, 2009, p.132 with colour photo; Light purple with red veining, petals have an irregular white border. Anemone form, diameter 8 cm. Leaves elliptic, dark green.

Jill Rivett. *(C.reticulata). New Zealand Camellia Bulletin,* 1994, Issue No.118, vol.XVIII, No.5, p.32, Reg. No.352: Originated by Mr & Mrs J.B. Rivett, Whakatane, New Zealand. Lavender pink (RHS.CC.64C), peony form flower, 14 cm across x 7 cm deep with 15 petals. Anthers bright gold on cream filaments. A plant of spreading, medium growth. Leaves 11 cm long x 4.5 cm wide, dark green. Blooms early to late.

Jill Totty. *(C.x williamsii),* Trehane Nursery Catalogue, 1986: (Feathers 3347). Another **Debutante** seedling (Originated by David L. Feathers, Lafayette, California, USA). A full, white peony. A deep flower weathering well, with a few contrasting, dark stamens. Flowers 8 cm across, leaves 8 cm x 3.8 cm on arching growths from a bush taller than wide.

Jill Tuckfield. *(C.reticulata),* Savige, 1976, *American Camellia Yearbook,* p.127: A large pink semi-double, open pollinated seedling of **Damanao,** originated by F.S. Tuckfield, Berwick, Victoria, Australia.

Jillian Varga. *(C.japonica),* ACRS, *Camellia News,* 1999, No.151, p.10, colour photo p.2, Reg. No.529. Originated by Augustin Varga, Daw Park, South Australia. A controlled cross, seed parent **Wildfire**, pollen parent **Bob Hope,** which first flowered 1985. A dark red, semi-double to anemone form flower of 25 petals, consisting of 10 guard petals and an anemone centre. Flowers over a long season on an upright plant of medium growth. Leaves dark green, glossy, flat, elongated, serrated margins, acute apex, veins slightly quilted. Petals open flat, glossy finish, heavy texture. Can produce four different forms of flower.

Jim Alfter. *(C.japonica), American Camellia Yearbook,* 1981, p.100, Reg. No.1736: A large to very large, bright red, variegated white, semi-double to rose form double *C.japonica* chance seedling, blooms mid-season to late. Originated by Ted Alfter, Bakersfield, California, USA. The 10 year old seedling first bloomed 1973. Average flower size is 12.5 cm across x 7.5 cm deep with 30-40 petals. Plant growth is upright, average and rapid in rate with dark green leaves 11 cm x 6 cm.

Jim Berg. *(C.reticulata), New Zealand Camellia Bulletin,* 1975, vol.IX, No.3, p.5, Reg. No.117: A chance seedling of *C.reticulata* 'Cornelian' (**Damanao**) raised by Mrs Ida Berg, Whakatane, New Zealand that first flowered 1974 and has an open, upright habit, with mid-green foliage, 11 cm x 4.5 cm. The flower is semi-double to loose peony form with 17-20 petals, 6-8 petaloids and measures 13 cm across x 6 cm deep. The colour is RHS.CC. Red Group 51A.

Jim Finlay's Fragrant. *(C.japonica), New Zealand Camellia Bulletin,* 1995, Issue No.120, vol.XIX, No.1, p.47, Reg. No.363: Originated by J.R. Finlay, Whangarei, New Zealand. Light red (RHS.CC.52B), peony form. Yellow anthers on white filaments, 10 petals, 20 petaloids; blooms 10 cm across x 5 cm deep. Growth habit is average and of medium rate, leaves dark green 9 cm long x 5.5 cm wide. Blooms early to late. Flowers are fragrant, of good texture and self-grooming. A seedling of **Nioi-fubuki** x **Kramer's Supreme.**

Jim Gilley Variegated. Cannon, 1984, ACS., *The Camellia Journal,* vol.39, No.4, p.19 as 'Jimmy Gilley Var.'. Synonym for **Jimmy Gilley.**

Jim Goldman. *(C.japonica),* Fruitland Nursery Catalogue, 1943-1944, p.22: Light pink, large semi-double, upright growth. Blooms mid-season. Originated in the USA by Harper.

Jim Habel. *(C.japonica),* ACS, *The Camellia Journal,* June 2003, p.24 with colour photo, Reg. No.2594. A rose and white, anemone to loose peony form chance seedling. Originated by Dr James Habel, and propagated by Douglas Simon, Norfollk, Va., USA. *American Camellia Yearbook,* 2003, p.63, colour photo p.c3. The 6 year old seedling first flowered in 1996. Flower has 12-14 outer petals, with mixed stamens and 54 petaloids in the centre. Yellow anthers and pink

filaments. Flowers mid-season to late. Plant is upright with average growth and dark green leaves 9 cm long x 3.8 cm wide.

Jim Hansen. *(C.reticulata). New Zealand Camellia Bulletin,* March 1997, Issue No.126, vol.XX, No.1, p.20, Reg. No. 380. Registered by Dorothy Hansen, Waikanae, New Zealand. A chance seedling of *C.reticulata* which first flowered in 1990. The flower is a very large loose to full peony form, 16 cm diameter x 8 cm deep, and has about 15 petals and 20 petaloids, also heavy yellow stamens mostly concealed by the petals. Colour is a bold pillar-box red (RHS.CC. 52A). Flowers last well and the plant is reasonably upright, of medium size and open structure. Flowers mid-season to late.

Jim Harper. *(C.japonica),* Fruitland Nursery Catalogue, 1945-1946, p.20: Light pink, medium large semi-double. Blooms mid-season. Originated in the USA by Harper.

Jim McCormack. *(C.japonica),* ACS, *The Camellia Journal*, Mar. 2009, p.29, Regn No. 2759.. *American Camellia Yearbook*, 2008, p.114 with colour photo; A 30 year old seedling, first bloomed 1986. Originated by Mrs James E. McCormack, Alexandria, Va, USA, and propagated by Dr William Ackerman, Ashton, Md. The 9.2 cm x 3.8 cm semi-double blooms are pink (RHS.CC. 62A) at the margins, fading to pale pink (RHS.CC. 62D) in the centre, with 14 petals and no petaloids. Anthers are yellow and filaments creamy-white. Flowers early to mid-season. Proved to be very cold hardy, growing without protection. Plant growth is upright and vigorous. Dark green leaves are 9.8 cm x 5 cm.

Jim McHenry. *(C.japonica), American Camellia Yearbook,* 1959, p.275, Reg No.432: An 8 year old chance seedling, originated by R.W. Ragland, Orange, California, USA that first bloomed 1956. Plant habit is upright, open and rapid in rate with dark green leaves, 10 cm x 7.5 cm. The semi-double, dark red flowers, 10 cm across x 7.5 cm deep have 20 fluted petals and yellow stamens. Flowers mid-season.

Jim Millar. *(C.pitardii x C.reticulata), New Zealand Camellia Bulletin,* 1979, vol.XI, No.3, p.21, Reg. No.145: A hybrid seedling raised by Mrs A.B. Durrant, Rotorua, New Zealand, the parentage being *C.pitardii* var. *yunnanensis x C.reticulata* 'Willow Wand', (**Liuye Yinhong**), which first flowered 1975. The plant has an open, upright habit, leaves are mid-green, 10 cm x 4.5 cm, and have waved margins. The flowers are semi-double to open peony form, 14 cm across x 5.5 cm deep, 19-20 petals of a soft, even pink, (RHS.CC. Red-Purple Group 62A) with cream filaments and golden anthers. Flowers freely in mid-season.

Jim Morgan. *(C.japonica),* Mark S. Cannon. 1963, ACS., *The Camellia Journal,* vol.18, No.1, back cover. No description. Originated in USA. No valid listing located.

Jim Pinkerton. (*C.reticulata* hybrid). ACS, *The Camellia Journal,* Nov.1998, p.24, Reg. No.2478. A very large, rose red, peony form cross of **Buddha** x ('Crimson Robe' [**Damanao**] x *C.lutchuensis* #3). Flowers mid-season to late. Originated by Frank Pursel, Oakland, Calif., USA. *American Camellia Yearbook,* 1998, p.4, colour photo before p.1. The 18 year old seedling first flowered in 1987. Average flower size is 17.5 cm across x 11.5 cm deep, with 28 petals, golden anthers and pink filaments. Plant growth is upright and vigorous, with dark green leaves 14 cm long x 7.5 cm wide. Chinese synonym 'Jimu'.

Jim Rivett. *(C.saluenensis x C.reticulata), New Zealand Camellia Bulletin,* 1979, vol.XI, No.3, p.20, Reg. No.142: A seedling of *C.saluenensis x C.reticulata* 'Crimson Robe' (**Dataohong**) raised by Mrs Ida Berg, Whakatane, New Zealand. The plant has an open, upright habit of growth with midgreen leaves, 10 cm x 5 cm, fine serrations. Flowers mid-season to late. The blooms are fprmal to rose-form double, with 29-30 petals and 10-11 petaloids, fused at base and streaked with white. Few stamens and a deformed pistil. Size 12.5 cm across x 5.5 cm deep. Colour clear pink (RHS.CC. Red-Purple Group 58C), darker veins and paler margin (58D). Petals have shallow, multiple notching.

Jim Smelley. *(C.reticulata),* ACS, *The Camellia Journal,* Dec. 2013, p.27 with colour photo; Regn No.2883; Originated, propagated and registered by James & Elaine Smelley, Moss Point, Miss., USA. ACS, *Yearbook,* 2013, p.117 with colour photo; A 20 year old seedling of **Curtain Call** x **Pleasant Memories**, first flowered in 1992. The very large, 16.5cm diameter x 10cm deep flower is semidouble with 12 raised petals. Central boss of stamens with bright yellow anthers and white filaments. Heavy petal texture, and flowers fall whole. Upright, open plant with vigorous growth. Dark green leaves average 14.5cm x 4.5cm with medium serration. Flowers mid-season to late.

Jim Taylor. *(C.x williamsii), New Zealand Camellia Bulletin,* 1975, vol.IX, No.1, p.30, Reg. No.111: A putative hybrid of *C.saluenensis* which first flowered 1969. Plant habit is upright, bushy, foliage dark green, 8cm x 5cm. flowers rose form double to formal double with 48 deeply notched petals, light rose with deeper overcast, sometimes showing stamens. Size 9.5 cm across x 4.5 cm deep.

Jim Tharpe. *(C.japonica),* Shackelford, 1966, ACS., *The Camellia Journal,* vol.21, No.5, p.18. No description. Originated in USA. No valid listing located. Orthographic error 'Jim Thorpe'. Sport: 'Jim Tharpe Variegated'.

Jimbo. *(C.japonica),* ACS, *The Camellia Journal,* May. 2002, p.12 with colour photo, Reg. No. 2563. A formal double chance seedling, with 85 white petals shading to yellow towards the centre. Flowers mid-season to late.. ACS, *The Camellia Journal,* Aug. 2002, p.12 with colour photo. Details repeated with incorrect originator. *American Camellia Yearbook,* 2002, p.128, colour photo p.c9. Originated by Eleanor Grant, Dothan, Ala., USA. The 20 year old seedling first flowered in 1986. Plant is upright and vigorous, with average growth. The dark green leaves are 7.5 cm long x 3.8 cm wide.

Jimi Furen. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.79, No.382. Chinese synonym for the USA *C.japonica* **Mrs Jimmy Davis.**

Jimmie James. Mark S. Cannon Scion Catalogue, 1962, p.5. Orthographic variant for **Jimmy James.**

Jimmy Gilley. *(C.japonica), American Camellia Yearbook,* 1980, p.167, Reg. No.1578: A large, deep rose red, variegated white semi-double, *C.japonica* chance seedling, blooms mid-season. Originated by Paul Gilley, Grandridge, Florida, USA. The 6 year old seedling first bloomed 1977. The flower has approximately 20 petals and 4-6 petaloids. It was variegated by grafting. Average flower size 11 cm across x 6 cm deep. Plant growth is medium, upright and average with dark green leaves 8.5 cm long x 5.5 cm wide. Synonym: 'Jim Gilley Variegated'.

Jimmy James. *(C.hybrid), American Camellia Yearbook,* 1962, p.219, Reg. No.651:- A 9 year old hybrid seedling of **Robbie** x **Charlotte Bradford** that first bloomed 1957. Originated by V.R, James, Aptos, California, USA. Plant growth is upright and spreading with dark green leaves, 8.5 cm x 3.8 cm. The light blush flowers 12.5 cm across x 6 cm deep, are a loose peony form to semi-double. The flowers have 18-20 petals, inner petals are ruffled and interspersed amongst the gold stamens. Blooms early to late. Orthographic variant: 'Jimmie James'.

Jimmy Smart. *(C.japonica), International Camellia Journal,* 2005, p.127 with colour photo; Reg. No. 50. A cross of *C.japonicas* **Clarise Carleton** x **My Darling.** First flowered 1998,

commercially introduced 2003. A spreading bushy growth habit with slow growth rate. Flowers early to mid-season. A red (RHS.CC.45C) single with a loose central arrangement of yellow stamens. Medium size flower. Flowers are scented, fall whole, and have an unusual conical shape. Raised by and named for the former owner of Marwood Hill Gardens, Barnstaple, Devon, England.

Jimmy Street. *(C.japonica),* SCCS., 1968, *Camellia Nomenclature,* p.73: Red. Large semi-double. Slow, upright growth. Mid-season blooming. Originated in USA by W.P. Richardson, Chapel Hill, North Carolina.

Jingying. (Choice Flower), Gao & Zhuang, Apr.1989, *The Camellia in China*, p.72, No.523. Chinese synonym for the Jury reticulata **Highlight.** Later changed to 'Liangdian'.

Jinhau Jade Plate. ICS Journal 2013, p.93; colour photo.

Jinhua Meinü. (Jinhua's Cutie). *(C.japonica),* China Regn No. 4. *China Flowers & Horticulture*, Sept 2006, No.18, p.49, with colour photo; A bud mutation of 'Bella Rose' (**Nuccio's Bella Rossa**) found by Fu Bingzhong, Jinhua, Zhejiang, China. The flower has deep purple lines on the petals, and the juvenile leaves are a shiny red. Other details as for the parent form. Note; Priority is given to the name **Hongye Beila** given and published when the sport was being devloped by Gao Jiyin and Feng Yunfa, Feng's Camellia Garden, Jinhua. Western synonym: 'Red Leaf Bella'.

Jinhuan. (Golden Ring). *(C.reticulata). Collected Papers*, International Symposium on *C.chrysantha*, 8-11th January 1994; p.172. "Selecting and Breeding new Camellia Varieties of *C.reticulata*.". Crimson, peony form of 25-28 petals; outer petals flat, inner petals wavy; 9-10 cm across. Many stamens arranged in circular rows, divided into several groups among the petals, becoming several flower centres. Pistil is degenerate and divided to the base. Blooms mid-season to late. Leaves are broad-ovate, 8.5-10 cm long x 4.3-5.3 cm wide.

Jinhuan Hongman. (Gold Ring over Red Silk), *(C.reticulata),* CSC, 12th June 1989, *Report on the Camellias of China*: Pink, peony type,; outer petals rather flat; inner wavy; flowers 9-11 cm across, 25-28 petals in 5-6 whorls. Stamens many in several groups, arranged in a circle outside inner petals. Pistil degenerate, thin, twisted. Blooms mid-season to late. Leaves flat, broad ovate, 8.5-10.5 cm long and 4.3-5.3 cm wide. Originated in Yunnan, China.

Jinhui. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.141. Chinese synonym for **Golden Glow.**

Jini. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.410. Chinese synonym for the USA *C.japonica* **Ginny Anderson.**

Jinjiang Mudan. (Golden Prize Peony), *(C.japonica),* Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.51, colour photo, [p.148]: Large size, semi-double to open peony, light red with fine red veining, 5-6 rows of large, emarginate petals, loosely imbricated, standing apart. Centre stamens are in fascicles with yellow anthers. Leaves mid-green, ovate, apices long acuminate, margins finely serrulate. Originated in Zhejiang Province, China.

Jinjiangyi. (Garment for River), Gao & Zhuang, Apr.1989, *The Camellia in China,* pp.76, 77, No.575. Synonym for the Japanese sasanqua **Omigoromo.**

Jinjô. (Ordinary), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Yashiro, 1841, *Kokon Yôrankô*, vol.306; *Tsubaki Hachiboku Sanbokutsuki Meisai*, (before 1868). See: JCS., 1982, *Tsubaki*, No.21, p.100: Pink, double, medium size with long, narrow, pointed petals. Different reading: 'Jindeu'. Originated in Japan. (Believed extinct.)

Jinlouchun. (Pavilon Brocade Springtime*), (C.japonica).* Fang, 1930, *Diannan Chahua Xiaozhi:* The petals are double and it is very pretty. Originated in China. Different reading: 'Chin-lou-chun'.

Jinniang. Shao, Taichong, 1992, *The Observations from the Camellia World*, p.76, No.332. Synonym for 'Myrtifolia Chinensis', synonym for 'Myrtifolia' believed to be a synonym for the Chinese *C.japonica* **Liujiao Dahong.**

Jinoko-no-kuro. (Jinoko's Black Camellia). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.121 with colour photo; English translation p.82. Small, dark red, tubular single, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size. Upright, vigorous growth. A chance seedling of **Hinomaru.** Named and released by Totsurô Nakamura in 1994. From Tokyo.

Jinoshima-sen-e. (Double-formed Camellia from Jinoshima). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.111. No description. From Fukuoka Pref.,

Jinpan Lizhi. (Gold Tray Lichi), *(C.japonica),* Wang & Yü, 1981, *Shancha Hua.* No description. Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.59, colour photo [p.129]: Red, anemone form double with 6 oblong, outer petals and a compact, hemispherical cushion of erect, folded petaloids, with a few stamens interspersed near the centre. See colour photo, No.97, Gao & Zhuang, 1989, *The Camellia in China.* Synonyms 'Dahong Baozhu', 'Longchuan Zaobao', 'Hedinghong'. Similar to **Anemoniflora** but lighter coloured. Originated in China.

Jinpaohong. (Brocade Gown Red), *(C.reticulata),* Bartholomew & Tsu, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.20. Feng et al., 1986, *Yunnan Camellias of China*, p.91, colour plate: Leaves elliptic, apices acuminate and recurved, base cuneate to broad-cuneate, 5-10 cm long x 3-5 cm wide. Flowers deep pink (RHS.CC.61D), diameter 12-14 cm. Petals 26-33 in 4-5 whorls, flat, deeply lobed at apex, outer whorls large, inner whorls small and white striped. Stamens mostly united at base, apically divided into 4-5 groups. Pistils rudimentary. This is a new cultivar selected from seedlings of open pollinated seeds by researchers at the Kunming Botanical Gardens. It is a well branched, vigorous grower. Flowers early. Different reading: 'Chin-p'aohung'. Synonyms: 'Brocade Gown', 'Brocade Gown Red', 'Crimson Gown'.

Jinpusai Meigui. Shao, Taichong, 1992, *The Observations from the Camellia World*, p.78, No.359. Chinese synonym for the Australian *C.japonica* **Gypsy Rose.**

Jinrui Furong. (Golden Stamen Hibiscus), *(C.reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.11: Semi-double, spinel pink. Originated at Kunming Botanical Garden. Feng et al., 1986, *Yunnan Camellias of China*, p.38 with colour plate: Leaves elliptical to ovate, apices short pointed, bases cuneate, rough above, veins conspicuous, 5-8 cm long x 2-3 cm wide. Flowers spinel pink, (RHS.CC.62A) semi-double, diameter 10-12 cm. Petals about 10 in 2-3 whorls, broad-ovate, slightly undulate with narrow corrugations. Stamens numerous, filaments united with petals at the base to form a ring. Pistils light green, styles broad and flat. This is a new cultivar selected from the seedlings of open pollinated seeds by the researchers of the Kunming Botanical Garden. The flowering season is early. Different reading: 'Chinjuifujung'. Synonyms: 'Golden-Stamen Hibiscus', 'Golden Stamened Hibiscus'.

Jinshanghua. (Gold Cup Flower), *(C.japonica)* Liu, 1959, *Chungkuo Chuming Tichi Chunghua Hui.* No description. Originated in China.

Jinshaolan. (Golden Lady's Slipper). *(C.nitidissima var. longistyla). Collected Papers*, International Symposium on *C.chrysantha*, 8-11th January 1994; pp.139, 143. "Research on Breeding Yellow Camellia – A Sum-up Report" by Cheng Jinshui, Chen Junyu and Zhao Shiwei. A specially selected clone of *C.nitidissima var. longistyla* from the wild for breeding and designated a "super tree".

Jinsi Hudie. (Gold Silk Butterfly), *(C.japonica),* Wang & Yü 1981, *Shanchahua:* Pink, peony form. Gao & Zhuang, Apr.1989, *The Camellia in China*, p.36, No.169, colour photo, No.85: Medium

size, pink, full peony form, petals a mass of small, curled and twisted petals. Late blooming. Leaves deep green, lanceolate, apices acuminate. Originated in China.

Jinsi Suxiu. (Suzhou Embroidery) *Proceedings of the ICS Congress,* Chuxiong 2012, p.168. No details. Originated by John Wang, Calif.,USA. ICS Journal 2012, p.95, colour photo.

Jinsiyu. (High Renown), Gao & Zhuang, Apr.1989, *The Camellia in China*, p.53, No.346, colour photo No.204. The Chinese synonym for the Japanese **Kakure-iso**. Later changed to 'Yinji'.

Jinsi Yudie. (Gold Silk Jade Butterfly), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:* Large, white, semidouble with the faintest blush, petal margins somewhat waved; central, compact stamen cluster; anthers dull, brownish yellow, filaments whitish. Wang & Yu, 1989, *Camellias*, No.59, p.36: Flowers white with 15-20 petals in 3-4 rows and forming a trumpet shape. Stamens in 3-5 groups forming a tube. Anthers yellow, ovary yellow, styles tough; fertile. Originated in China. See Chang Shao Yun, 1986, *Camellias from Zhejiang,* p.128, colour photo, p.53, description and Gao & Zhuang, 1989, *The Camellia in China,* colour photo, No.89. Synonym: 'Baidongyang Cha'

Jintanhua. (Gold Cactus). *(C.nitidissima). Collected Papers,* International Symposium on *C.chrysantha*, 8-11th January 1994; pp.139, 143. "Research on Breeding Yellow Camellia – A Sum-up Report" by Cheng Jinshui, Chen Junyu and Zhao Shiwei. A specially selected clone of *C.nitidissima* from the wild for breeding and designated a "super tree".

Jinx. *(C.japonica),* Cannon, 1973, ACS., *The Camellia Journal,* vol.28, No.1. No description. Originated in USA. No valid listing located.

Jinxin. *Chinese Camellia Culture,* 2003, pp.180 & 188, with colour photos of the plant only; Old trees in Huacheng Cave, Daluo Mountain, Wenzhou City, and in Yi Garden, Suzhou City, China. No further details.

Jinxin Baiyu. (Gold Heart - White Jade), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China*, p.53, No.342, colour photo No.200: Medium size, white with blush pink reverse, formal to rose form double, opening first with a cone-shaped bud centre, later showing golden stamens. Leaves mid-green, elliptic, apices acuminate. Blooms mid-season. Originated in China.

Jinxin Baozhu. (Gold Heart Precious Pearl), *(C.reticulata),* Savige, 1980, *International Camellia Journal,* No.12, p.71: A large, semi-double red with fluted and undulating petals and a golden, central stamen cluster. Feng et al., 1986, *Yunnan Camellias of China,* p.44 with colour plate: Leaves oblong-ovate, apices acuminate or acute and recurved, base cuneate, margins undulate, 9-10.5 cm long x 3.5-5 cm wide. Flowers large, deep pink (RHS.CC.57C), semi-double, diameter 13-15 cm. Petals large, 9-16 in 3 whorls, margins undulate. Stamens mostly united at the base to form a tube. Pistils well developed, fertile. Early flowering. This is a new cultivar selected from seedlings of open pollinated seed by researchers at the Kunming Botanical Gardens. Western synonym: 'Golden Heart Pearl'. Different reading: 'Chinhsinpaochu', 'Chin-hsin Pao-chu'.

Jinxin Dahong. (Golden Heart Scarlet), *(C.reticulata),* Savige, 1980, *International Camellia Journal*, No.12, p.71: A scarlet cupped semi-double with central, golden stamen cluster. Feng et al., 1986, *Yunnan Camellias of China*, p.35 with colour photo: Leaves elliptic, thick, apices short-pointed, bases cuneate to rounded, veins conspicuously sunken, 7.5-11 cm long x 5.5-6.5 cm wide. Flowers deep red (RHS.CC.53C), diameter 14-15 cm. Petals 12-15, slightly curved. Stamens numerous, clustered round the pistil to form a ring. Flowers mid-season. The cultivar was selected from an open pollinated plant of the wild form reticulate in Tengchong, Yunnan. Synonyms: 'Golden Heart Bright Red', 'Golden Heart Scarlet', 'Beijia Cha'. Orthographic variant: 'Dahong Jinxin'. Different readings: 'Chin-hsin Ta-hung', 'Chinhsintahung'.

Jinxin Dahong. (Goldheart Scarlet), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China,* p.33, No.144, colour photo No.68: Medium size, 7-9 cm across, light red, single of 5-6 large,

rounded, emarginate, slightly channelled petals, with a central stamen cylinder, creamy filaments and small, golden anthers. Blooms mid-season. Leaves light green, wide obovate, apices acuminate, margins obscurely serrulate. Originated in China.

Jinxin Manao. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.570 as 'Jinxinmanao'; Branches slender, leaves sparse, yellowish green, long elliptic, margins slightly waved, 7-9 cm x 3-4 cm. Flower deep red with some white stripes, 8-9 cm diameter. Petals flat, in 4-5 rows, regular arrangement, numerous and well developed stamens. Flowers mid-season. From Sichuan Province, China.

Jinxin Mudan. (Gold Heart Peony), *(C.japonica), Shanghai Botanical Garden's List,* 1985: A large, red, open peony form with white flecking and a centre of irregular, gold anthered stamens, broken by a few erect petals. Originated in China.

Jinya-no-tsubaki. (Camellia in the Encampment), *(C.japonica),* Yokoyama and Kirino, 1989, *Nihon no Chinka,* p.217, colour photo and description: Medium size, bright scarlet, saucer-shaped single with 5 broad, rounded, slightly emarginate, overlapping petals and a central column with reddish filaments, joined for the lower half, and yellow anthers. Blooms mid-season to late. Leaves deep green, elliptic. Originated in the Chûbu District, Japan, as a wild japonica collected in an encampment ruin of an ancient war in Sekigahara. Named and released by Minoru Satô in 1973. .

Jinye Baige. (Golden White Doves). Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the USA *C.sasanqua* **White Doves Benten.**

Jinye Dahong Jiuxin. (Gold Leaf Crimson Nine Hearts), *(C.reticulata),* Chuang, 1959, *Yunnan Shan-chahua.* No description. Different reading: 'Chin-yeh Ta-hung Chiu-hsin'. Originated in China.

Jinye Feidie. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.418; Chinese synonym for the England *C. x williamsii* **Golden Spangles.**

Jinyindan. (Gold and Silver Ball) *(C.japonica),* China Regn No.38. *China Flowers & Horticulture*, July 2008, No.14, p.44, with colour photo; A sport of **Fendan,** found by Sun Shenghua, Taizhou, Zhejiang, China. Flower rose form, 10-11 cm diameter, 4 cm high. Petals broad obovate, 70-100, white with a yellowish centre. Leaves light green, flat, 8-11 cm long x 4-5 cm wide. Flowers mid-season to late.

Jinyuye Chun. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.429; Chinese synonym for the Japan *C.japonica* **Kingyo-tsubaki.**

Jinzhong. (Gold Bell). *(C.nitidissima var. longistyla). Collected Papers,* International Symposium on *C.chrysantha,* 8-11th January 1994; pp.139, 143. "Research on Breeding Yellow Camellias – A Sum-up Report" by Chen Jinshui, Chen Junyu and Zhao Shiwei. A specially selected clone of *C.nitidissima var. longistyla* from the wild for breeding and designated a "super tree".

Jinziang Mudan. Wang & Yu, 1989, *Camellias,* No.81, p.43, Colour photo p.139. Orthographic error for **Jinjiang Mudan.**

Jinzûgawa. (Jinzû River), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.217, p.110, description, p.154 as 'Jinzû-gawa': Leaves elliptic to oblong, green to dark green, minutely serrate, 7.5-8.5 cm long x 4-4.5 cm wide. Flowers mostly peony form, rarely semi-double, red (Cardinal Red 822/3), petals 10-20, the largest 5 cm long x 4.5 cm broad. Stamens divided into 3-5 fascicles, filaments palest pink, deeper below, with small, irregular petals, inside 1-3 more. Flowers midseason. Originated in the Toyama Prefecture, Japan and named for the famous Jinzû River in that Prefecture.

Jipusai Nüshi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.411; Chinese synonym for the unrecorded cultivar 'Gypsy Girl'.

Jipusai Meigui. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.411; Chinese synonym for the Australia *C.japonica* **Gypsy Rose.**

Jiraku-tsubaki. JCS., 1965, *Tsubaki,* No.5, p.29. Different reading for **Shiraku-tsubaki.**

Jirochô-yabu. (Jirochôs Wild Camellia). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.135 with colour photo; English translation p.92. Medium size, dark red, tubular single, cylindrical stamen column. Flowers mid-season to late. Leaves broadly elliptic, medium size, flat. Upright growth. Selected from wild japonicas growing on the mountain in Shimizu City. Named and released by Toshikazu Iwamoto in 1980. From Shizuoka Prefecture.

Jisai. (Obscure), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.719: Small, dark red, irregular semi-double. Originated in Japan. (Believed extinct.)

Jishi. (Foundation Stone), *(C.japonica),* Gao & Zhuang, Apr.1989, *The Camellia in China,* p.54, No.354, colour photo No.212: Large size, rose form double, red with deeper coloured veining and white spots, with 16-20 large, emarginate petals in 2-3 rows, sometimes with a small bud centre. Leaves dark green, elliptic. Originated in Japan.

Jishi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.425; Chinese synonym for the Japan *C.japonica* **Goishi**.

Jishibeni. Nobelius Nursery Catalogue, 1941, erroneously as 'Gishibeni'. Same characters as **Beni-jishi.**

Jitsa-getsu. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Jitsugetsu.**

Jitsugetsu. (Sun & Moon), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Pink, marbled white with rich stamen cluster; large, 8-9 cm across, 6-8 petals. Stamens spreading, fully open, light pink. Originated in Kumamoto Prefecture, Japan. A sport of **Higo-kyô-nishiki**. May be synonymous with **Jitsugetsusei.**

Jitsugetsu. (Sun & Moon), *(C.sasanqua),* Ashizawa, 1898, *Chabaika, Taishû;* Wada,1941, *Japanese Garden Treasures,* p.31: Produces red flowers and white ones, according to shoots. Small size, single. Yashiroda, 1950, *American Camellia Yearbook,* p.16: The flower resembles 'Shôyo-no-mai' with 4 or 5 petals, but this variety bears white and pink blooms on the same tree. The white blooms are rarely produced on a young tree. Dark green leaves are variegated; slender, slow grower. Originated in Japan.

Jitsugetsu. (Sun & Moon), *(C.japonica),* Minagawa, 1933, *Chinkashû.* For colour photos and descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan,* p.324, pl.185; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.312; Seibundô Shinkôsha, 1979, *Senchinshû,* p.79, description, p.223; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.334; Tuyama, 1968, *Camellias of Japan,* pl.364, p.185, description, p.198 as 'Jitsu-getsu': Leaves elliptic to narrowly ovate-elliptic, venation slightly impressed, manifestly serrate. Flowers semi-double, pure white or red (Currant Red 821/3), with intermediate colour of stripes, or rarely, two colours in two halves of the flower. Inner petals sometimes wavy and intermingled with stamens. Flowers late. Originated in the Kantô area, Japan. Resembles: **Shikainami, Kariginu.** Said to be a seedling of **Kan'yôtai.** Different reading: 'Nichigetsu'. Known as 'Ichi-Setsu' in the UK. Satomi, 1956 gives 'Tôyô-nishiki' as a synonym but this name has since been used by Katayama for another cultivar.

Jitsugetsukô. (Sun & Moon Red), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.11: Deep pink. Large single with long petals. Originated in Japan.

Jitsugetsusan. (Mount Jitsugetsu), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.107. ICS., Apr. 1990, *Japanese Camellia Cultivar List,* p.11: Medium size, light rose-pink, tubular single with embracing petals. Blooms early to late. Originated in the Chûbu District, Japan.

Nippon Tsubaki - Sasanqua Meikan, 1998, p.120 with colour photo; English translation p.82. A chance seedling of **Sekido-tarô'an.** Named and released by Minoru Satô in 1979.

Jitsugetsuse. The Sunningdale Nurseries, Surrey Catalogue, 1955, p.7. Corruption of the Japanese name **Jitsugetsusei.**

Jitsugetsusei. (Host of Heaven), (Higo), *Higo Camellia Society Journal,* No.2, 1955, colour photo on cover. For other colour photos and descriptions see: Hiratsuka, 1964, *Higo Camellia,* p.36 & 13; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.109; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.137; Adachi, 1960, *Camellia, Its Appreciation and Artistic...,* p.55; Yokoyama & Kirino. 1989, *Nihon no Chinka,* p.246; Seibundô Shinkôsha, 1979 *Senchinshû,* p.80, description, p.224: White blotches on crimson, Higo single, 9 cm across, 5-8 petals, 150 stamens, pale yellow anthers on pinkish filaments. Sport: **Asahi-no-minato**. Originated in Kumamoto Prefecture, Japan as a sport of **Higo-kyô-nishiki.**

Jiujin. (Gold in Wine), *(C.sasanqua),* Gao & Zhuang, Apr. 1989, *The Camellia in China,* p. 76, No .564: Flower white with red margins, small, 5-6 cm across with 6-7 petals. Blooms very early. Originated in China.

Jiun. (Name of Poet of Edo Era), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, p.146, colour photo, p.250, description: Medium sized single of 5 petals of blush white background, peppered and dotted carmine on rounded, emarginated petals. Orange yellow anthers and white filaments form a compact, stamen cylinder. Leaves dark green, elliptic, apex acuminate, recurved, margins crenate-serrulate. Late flowering. Originated in a temple in Matsu'e City, Shimane Prefecture, Japan. Named and released by Tomohisa Arikawa in 1975. See also, Seibundô Shinkôsha, 1979, *Senchinshû,* p.79 colour photo; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.253.

Jiuqu. (Nine Bends), *(C.japonica),* Liu.1959, *Chungkuo Chuming, Tichi Chung Hua Hui* as 'Chih Ch'u': Medium to large, formal double red with numerous petals imbricated from the periphery to the centre. Originated in China. Synonym: 'Nine Bends'. Different readings: 'Jutre', 'Juttre', 'Chih-ch'u'. See *Encyclopedia of Camellias in Colour,* vol.II, 1978, p.75 as 'Jutre'. Japanese synonym: 'Kyûkyoku'.

Jiusebo. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.405; Chinese synonym for the Italy *C.japonica* **Giuseppe Traverso.**

Jiutaihong. (Place Name) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong,* p.65 with colour photos. The maternal tree is located at Jiutaishan Village, Daguokou Township, Chuxiong, China. Flowers loose peony form, deep red, about 21 petals, diameter 14-15 cm. Outer petals flat, inner petals folded and erect. Stamens divided into 4-5 groups among the folded petals, pistils rudimentary. Leaves broad-elliptic, thick, 7-11 cm x 6-7 cm. Apices obtuse to acuminate, serration obvious, bases round.

Jiutian Tongzi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.424; Chinese synonym for the Japan *C.japonica* **Shutendôji.**

Jiuxin Guiye. Ikeda, 1974, *American Camellia Yearbook,* vol.II, p.114 as 'Chiuhsinkueiyeh' a form of **Daguiye**. (Large Osmanthus Leaf). Synonym: 'Nine Hearts Osmanthus Leaf'.

Jiuxinqiu. (Nine Star Ball), Gao & Zhuang, 1989, *The Camellia in China,* p.43, No.236, colour photo No.129. Error for 'Jiuxingqiu', synonym for **Jiuxing Cha.**

Jiuxin Shibaban. Fang, 1930, *Diannan Chahua Xiaozhi.* An alternative name for **Shizitou** ('Lion-head'). Different reading: 'Chiu Hsin Shih Pa Pan' or 'Chiu-hsin Shih-pa-pan'. Translation: "Nine Hearts, Eighteen Petals".

Jiuxin Zipao. (Nine Hearts Purple Gown), *(C.reticulata),* Ikeda, 1974, *American Camellia Yearbook*, vol.II, p.113 as 'Chiuhsintzepao'. For colour photo and description see Feng et al.1986, *Yunnan Camellias of China,* p.101: Leaves large, thick, flat, broad-ovate to broad-elliptic, apices short pointed or acuminate, bases rounded or obtusely rounded, veins sunken, 7-10 cm long x 4.5-6 cm wide. Flowers deep purple (RHS.CC.46A), diameter 13-14 cm. Petals about 30 in 4-5 whorls, outer whorls folded, inner whorls folded and rolled to form a tube, erect, forming a raised flower centre. Stamens numerous, about 48, placed among the folded petals. Pistils rudimentary. The leaves of this cultivar are large, thick, broadly rounded and very similar to those of **Zhusha Zipao**. However it differs by the leaves being especially wide in the middle and irregularly elevated above and by the flower colour being deep purple. The stamens of this cultivar are divided into 7-9 groups placed among the curved petals, which is the meaning for 'Juixin'. It originated in Dali, Yunnan, China. Flowers mid-season. Different reading: 'Chiu-hsin Tzup'ao'.

Jiuxing Cha. (Nine Star Camellia), *(C.japonica),* Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.82: Leaves glossy, oily green, thick, smooth, elliptic-ovate, margins recurved to rear, midrib elevated, lateral veins prominent and systematic. Flowers anemone form, velvety scarlet, 8-12 cm across. Petals irregularly crimped, petals and petaloids, 80-90 altogether, basally connate, forming 9 groups. Normal stamens, 250 in 9-10 fascicles, distributed among the petaloids. Style deformed, thread-like. Originated in Hangzhou, China. See Gao & Zhuang, 1989, *The Camellia in China*, p.43, no.236, colour photo No.129, as 'Jiuxinqiu'.

Jiuyue Zhichen. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for 'Yoheihaku' as 'September Morn'.

Jiuzhonghua. Gao & Zhuang, 1989, *The Camellia in China*, p.54, No.351, colour photo No.209. Chinese reading for the Japanese *C.japonica* cultivar **Shuchûka.**

Jiuzhonghua. Gao & Zhuang, 1989, *The Camellia in China*, p.78, No.589, Colour photo No.311. Chinese reading for the Japanese *C.sasanqua* cultivar **Shuchûka.**

Jiwei. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.116. Chinese synonym for **Kiwi Triumph.**

Jixin Cha. *(C.japonica), Chinese Camellia Culture*, 2003, Appendix, p.569 as 'Jixincha; Leaf wide-elliptic, almost round, middle vein almost protuberant, margin obtuse serrate, 6-8 cm x 3.5-5.5 cm. Flower bud remains semi-closed and erect. Colour deep red, 7-8 cm diameter. Flowers mid-season. From Sichuan Province, China.

Jiyo. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* No description. (Believed extinct.)

Jixianghong. (Lucky Red), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:* Brilliant crimson. Full peony form. Medium size. Gao & Zhuang, 1989, *The Camellia in China*, p.37, No.315, colour photo, No.182: Medium size, 8.5-9 cm across, crimson, anemone to peony form with 6 large, rounded guard petals and an irregular hemispherical centre of small, erect petals, petaloids and stamens. Late blooming. Leaves strong green, broad-elliptic, apices acute, margins serrulate. Used as synonym for **Qixinhong** and **Shiliuhong** according to Chang, Shao Yun, 1987, *Camellias from Zhejiang,* pp.62, 82. Originated in Zhejiang Province, China.

Jixianghong Beidi. Shao, Taichong, 1992, *The Observations from the Camellia World*, p.10. Chinese synonym for the USA *C.japonica* **Lucky Seven.**

Jixiangqi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.425; Chinese synonym for the Japan *C.x vernalis* **Himekôki.**

Jizôhaku. (White Camellia of Guardian Deity of Children). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.120 with colour photo; English translation p.81. Small, white, tubular single, cylindrical stamen column. Flowers early to mid-season. Leaves narrowly elliptic, medium size, margins curved outwards. Upright growth. Considered to be a seedling of a white wild japonica at a private family in Mure Town. Discovered and released by Katsuomi Inoue. From Kagawa Prefecture.

Jo Ann Wilson. *(C.japonica),* ACS., 1988, *The Camellia Journal,* vol.43, No.3, p.34, Reg. No.2090: Miniature, bright scarlet red, rose form double *C.japonica* chance seedling. Originated by John T. Williams, Shreveport, Louisiana, USA. The 15 year old seedling first bloomed 1979. Average flower size 6 cm across x 2 cm deep with 28 petals, 92 petaloids, bright yellow anthers and short, white filaments. Petals are irregular and ruffled. Plant is very cold hardy. Plant growth is average and rapid in rate with dark green leaves, 8 cm long x 5.5 cm wide.

Jo Beth. *(C.japonica),* Thomasville Nursery Catalogue, 1957. No description. Originated in USA.

Jo Cinda. *(C.japonica),* ACS., 1988, *The Camellia Journal,* vol.43, No.2, p.9, Reg. No.2083: Miniature size, rose pink, formal double, *C.japonica* chance seedling of **Berenice Boddy**. Blooms mid-season to late. Originated by Ivan J. Mitchell, Melrose, Florida, USA. *American Camellia Yearbook,* 1988, p.188 colour photo between pp.186,187, erroneously as 'Jo Cirida'. The 17 year old seedling first bloomed 1974. Average flower size, 5.5 cm across x 3.2 cm deep with 80 petals. An incurved formal double flower bloom with several variations; star shaped; high stacked and tiered; many with full or partial swirled formation, 5-7 swirls right or left. Plant growth is upright and medium with dark green leaves, 7 cm long x 3.2 cm wide.

Jo Leigh Lewis. *(C.japonica),* ACS., May 1987, *The Camellia Journal,* vol.42, No.2, p.8, Reg. No.2043: A very large, soft pink, rose form double, *C.japonica* chance seedling. Early to mid-season flowering. Originated by Dr O.V. Lewis, Picayune, Mississippi, USA. *American Camellia Yearbook,* 1987, p.81: The 14 year old seedling first bloomed 1978. Average flower size, 15 cm across x 6 cm deep with 17 large petals, 18 rabbit eared petals, 12 petaloids, yellow anthers, cream filaments. Plant growth is spreading and medium with dark green leaves 7.5 cm long x 4 cm wide.

Jo Lynn Rester. *(C.japonica),* Gentry, 1979, ACS., *The Camellia Journal,* Book 25, No.4. No description. Originated in USA. No valid listing located.

Jo Vincent. *(C.japonica),* SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.43: White marked pink to solid pink. Large, full, peony form. Medium, compact growth. Mid-season blooming. Originated in the USA at the Tea Gardens, South Carolina. See p.182, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II.

Joan. *(C.sasanqua). What Camellia Is That?,* Macoboy, Stirling, 1997, p.37 with colour photo; Of unknown origin, grown in Australia. Snowy white semi-double, wavy petals tipped raspberry pink and opened flat, sprayed stamens. Flowers early. May be the same as **Something Special.**

Joan d'Arc. SCCS., 1949, *The Camellia. Its Culture and Nomenclature.* Orthographic variant for **Joan of Arc.**

Joan of Arc. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Originated in USA at Magnolia Gardens, John's Island, South Carolina. A vivid red semi-double, splotched with white, medium size. Dark green foliage; a compact grower. Orthographic variants: 'Joan d'Arc', 'Jeanne d'Arc'.

Joan Holden. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2008, p.34 with colour photo, Regn No. 2734; Blush rose pink with deeper rose striping and speckles. Large hose-in-hose semi-double, with yellow anthers and creamy yellow filaments. Heavy petal texture. Average, upright, open growth. Flowers early to mid-season. Originated by Alfred M. Holden, Baton Rouge, La., USA in 2002 as a chance seedling. *American Camellia Yearbook,* 2008, p.115 with colour photo; Blooms are 11.5 cm diameter x 5 cm deep. Dark green leaves are 9.5 cm x 3.8 cm

Joan Saxby. Cannon, 1986, ACS., *The Camellia* Journal, vol.41, No.4, p.27. Orthographic error for **Jean B. Saxby.**

Joan Trehane. *(C.x williamsii), New Zealand Camellia Bulletin,* 1979, vol.XI, No.3, p.22, Reg. No.153: A hybrid seedling *C.saluenensis x C.japonica* **Hikarugenji,** raised in New Zealand by L.E. Jury. It first flowered in 1965. The plant has a spreading, medium, dense habit, the foliage is dark green, 8.5 cm long x 5.5 cm wide. Flowering season - late. Flowers are rose form double to formal double with 35 petals and some petaloids. Its size is 10-12 cm across and colour clear rose-pink.

Joan Watson. *(C.japonica), American Camellia Yearbook,* 1966, p.92, Reg. No.844: A 7 year old chance seedling that first bloomed 1962, originated by Monticello Nursery, Monticello, Florida, USA. Plant growth is upright and dense with dark green leaves. The deep pink bloom is peony form and has yellow anthers and white filaments. Size is 8.5 cm across x 3.8 cm deep with 24 petals and 79 petaloids. Flowers mid-season.

Joanne Dibble. *(C.reticulata* hybrid*), American Camellia Yearbook,* 1972, p.131, Reg. No.1177: A 6 year old hybrid cross between **Elizabeth Boardman** x **Trewithen Pink** that first bloomed 1966. Originated by Mrs M.J. Witman, Macon, Georgia, USA. Plant growth is upright and medium with dark green leaves, 12.5 cm x 7.5 cm. The semi-double bloom is rose opal with gold anthers and white filaments, 12.5 cm across x 7 cm deep with 14 petals. Blooms early and has unusually, thick, wide petals up to 7 cm and curling upwards - the stamens form a tight tube, 5 cm long, sometimes with a few petaloids.

Joanne Gaeta. *(C.x williamsii),* SCCS., 1990, *Camellia Nomenclature,* p.149: Medium pink, large size, full, peony form. Medium, open, spreading growth. Blooms early to late. *(C.japonica* **Charlie Bettes** x *C.x williamsii* **Elsie Jury**). Originated in California, USA by Piet & Gaeta. Chinese synonym 'Qiaoan'.

Joanne's Own. (*C.reticulata* hybrid). ACRS, *Camellia News,* 1994, No.135, p.11, colour photo p.2, Reg. No.444: Originated by Kenneth Brown, Mitcham, Victoria, Australia. A chance seedling of the *C.reticulata* 'Butterfly Wings' (**Houye Diechi**). Flower colour deep pink (RHS.CC.68A-B), informal double of 45 petals, shading to pink at petal margins, 12.5 cm across x 7.5 cm deep. Flowers freely mid-season to late, on a rapid growing, upright plant. Leaves olive-green, matt, lanceolate, flat with serrate margins and acuminate apices, 9.5 cm long x 3.8 cm wide. Petals notched, folded and fluted.

João Ferreira da Silva. *(C.japonica),* Real Companhia Horticolo-Agricola Portuense Catalogue, No.27, 1892, p.63: Formal double, perfect imbrication, satiny bright scarlet with some white stripes on central petals. Originated in Portugal.

Jovey Carlyon. *(C.japonica),* Tregrehan Camellia Nursery Catalogue, 1987, p.2, colour photo: (**Apple Blossom** x **Tomorrow**). Named for the ancestor who built the Tregrehan Camellia Collection in the 1880's. The nearly luminous, double white flowers are occasionally flushed blush pink. The leaves are strong and round like its seed parent. Originated by Gillian Carlyon, Tregrehan, Par, Cornwall, England.

Joy. *(C.reticulata* hybrid), *American Camellia Yearbook,* vol.II, 1974, p.235, Reg. No.1340: A 5 year old hybrid seedling of **Carl Tourje** x **Damanao** that first bloomed 1970. Originated by Truman Pearce, Shreveport, Louisiana, USA. Plant growth is upright and rapid in rate with dark green leaves, 8-10 cm long x 5-6 cm wide. The semi-double 'Herme' (**Hikarugenji**) type, bloom is irridescent red, bordered with light centered petals (Similar to 'Blush Betty Supreme') with light yellow anthers, 20-22 petals and a few petaloids. Blooms mid-season to late. Average size, 10 cm x 8 cm. See colour photo, front cover ACS, 1975, *The Camellia Journal,* vol.30, No.1.

Joy Kendrick. *(C.japonica),* ACS., 1985, *The Camellia Journal,* vol.40, No.4, p.47, Reg. No.1976: A large, white to blush pink with light pink stripes, formal double, *C.japonica* chance seedling, mid-season blooming. Originated by Ferol & Sam Zerkowsky, Slidell, Louisiana, USA. The 9 year old seedling first bloomed 1979. Average flower size is 15 cm across x 5.5 cm deep with 60 petals and 8 petaloids. Plant growth is upright, spreading and medium in rate with dark green leaves, 8 cm x 4.5 cm. See colour photo, front cover, ACS., 1985, *The Camellia Journal,* vol.40, No.3. Chinese synonym 'Qiaoyi'.

Joy Mooney. *(C.japonica), New Zealand Camellia Bulletin,* 1990, vol.XVI, No.5, p.42, Reg. No.271: Mrs J.M. Mooney, New Zealand, originated this seedling of 'Sodekakushi' (**Gauntlettii**) which first bloomed 1979 when 7 years old. It has upright growth of average density and a rapid growth rate. Leaves are 10 cm long x 5 cm wide, dark green. The shell pink bloom of peony form, has gold anthers and white filaments and flowers for 3 months at mid-season. The flower is 10 cm across x 5 cm deep with 22 petals and 20-40 petaloids. Flowers last up to 10 days when picked, becoming lighter coloured with age. Colour RHS.CC.55D.

Joy Sander. Robert Veitch Catalogue, 1937-1938, p.22. Hillier Supplementary List, 1937-1938, p.7; van Houtte Catalogue, 1937-1938, p.5 with black & white illustration. Synonym for **Apple Blossom.**

Joy Still. Mark S. Cannon Scion Catalogue, 1962, p.6. Abbreviation for **Joyce Still.**

Joyce Adele Brooks. *(C.reticulata),* ACRS., 1979, *Camellia News,* No. 72, Reg. No.224: Originated by Mrs Muriel Tuckfield, Victoria, Australia. In 1971 a chance reticulata seedling, remaining from those previously originated by F.S. Tuckfield, first flowered. The upright, open plant has lanceolate, acuminate, dark green leaves, 11 cm x 4 cm. The semi-double to formal double, 16 cm, flowers of medium, orchid pink with deeper pink veinings, open in mid-season. See colour pl, p.40, ACRS., 1981, *Camellia News,* No.79.

Joyce Andrew. *(C.japonica),* Hume, 1946, *Camellias in America,* p.333. No description. Originated in USA. (Believed extinct.)

Joyce Butler. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.48: Rose-red. Medium, loose, peony form with irregular and upright petals. Upright growth. Flowers mid-season..

Juanita Hutcheson. *(C.japonica), American Camellia Yearbook,* 1973, p.192, Reg. No.1245: A 16 year old chance japonica seedling that first bloomed 1962. Originated by W.F. Hutcheson, Texarkana, Texas, USA. Plant growth is upright with dark green leaves, 10 cm long x 6 cm wide. The anemone to peony form, variegated rose-pink and white, bloom has pink and white anthers and yellow filaments. It measures 15 cm across with 3-5 feathered petals around the centre. Blooms early to mid-season.

Juanita Smith. *(C.japonica), American Camellia Yearbook,* 1959, p.257, Reg. No.406: A seedling of **Dr Tinsley,** originated by Mrs Juanita Smith, Franklinton, Louisiana, USA. The glossy, dark green leaves are 10 cm long x 5 cm wide. The semi-double flowers, 10-12 cm across x 5 cm deep, are white shading to blush rose, with narrow edging. The large petals, 20-25, are centre notched. The stamens are white tipped with yellow. Blooms early to mid-season.

Juanita Walker. *(C.reticulata* hybrid), *American Camellia Yearbook,* 1980, p.167, Reg. No.1670: A very large, pink, semi-double *C.reticulata* hybrid ([**Damanao** x **Brigadoon**] x 'Crimson

Robe') that blooms mid-season to late. Originated by Frank Pursel, Oakland, California, USA. The 7 year old hybrid first bloomed 1979. Average flower size 14.5 cm across x 6 cm deep. Petals have a darker pink veining. Plant growth is upright and medium in rate with dark green leaves, 11 cm long x 7.5 cm wide.

Juanju. (Rolled Chrysanthemum), *(C.japonica),* Chang & Chang, 1867, *Pen Tsao Keng Mu.* No description. Originated in China. (Believed extinct.)

Juban. (Chrysanthemum Petal), *(C.reticulata),* Fang, 1930, *Diannan Chahua Xiaozhi:* Rose form to formal double. Pink. Early. Feng et al., 1986, *Yunnan Camellias in China,* p.84, colour plate and description: Leaves elliptic to elliptic-ovate, reclinate in a V-shape, apices obtusely rounded, bases obtusely rounded to broad-cuneate, 5-7 cm long x 3-3.5 cm wide. Flowers pink (RHS.CC.52C), diameter 7-10 cm. Petals about 37 in 7-8 whorls, outer whorls larger, inner whorls smaller, regulary imbricate. Stamens are few and not developed. Pistils are rudimentary. The flowers of this cultivar are regular in shape, small and exquisite. Another name is 'Tongcaopian'. It is a vigorous grower and flowers abundantly. It is a common cultivar in Kunming. It flowers from early to mid-season. Different Readings: 'Chü-pan', 'Tsueban'. Western Synonyms: 'Chrysanthemum Petal', 'Rose Flower', 'Rose Flowered'; The variegated form is called **Manao Juban.** For other colour illustrations see: *American Camellia Yearbook,* 1956, facing p.50; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.158; *New Zealand Camellia Bulletin,* 1969, vol.VI, No.4, front cover.

Jubilaire. *(C.japonica),* Morren, Ch., 1834, *L'Horticulteur Belge, Journal Jardiniers Amateur,* 2:192: Reported by Mr Jean Hove of Caigny, on a collection of camellias at the Exposition of March, 1834 in Ghent, Belgium. The flower is soft pink, single, with petals waved, emarginate petals with sometimes rare, white stripes and veined a little deeper colour. A centre of stamens and petaloids.

Jubilation. *(C.x williamsii), New Zealand Camellia Bulletin,* 1978, vol.X, No.4, p.24, Reg. No.134: The female parent is known as 'Will's hybrid 324', crossed with **Betty Sheffield Supreme**. A seedling originated by L.E. Jury, New Plymouth, New Zealand. The plant has an upright habit, medium density, light green foliage, 9 cm x 4 cm, and flowers are rose form with 25-30 petals and occasional petaloids. The colour is pink with an occasional deeper pink fleck, yellow stamens and white anthers. The blooms measure 12-14 cm across and the plant flowers from mid-season to late. Chinese synonym 'Huanle'.

Jubilation Variegated. *(C.x williamsii).* SCCS, 1997, *The Camellia Review,* vol.58, No.4, p.22: Large size, rose form double, pink blotched white. A virus-variegated form of **Jubilation**. Originated in California, USA.

Jubilé. *(C.japonica),* van Houtte Pere Catalogue, 1891, 244:234: Originated by Van Houtte, Louis-Aimé, Belgium. Medium size, rose variegated with white. Central petals very pointed and those of the outer rows very rounded. Beautiful form and remarkable variegation.

Jubilé. Spae, D., 1847, *Annales de Gand,* 3:131, pl. 124. Orthographic variant for **Jubilee.**

Jubilé de Fournai. von Biedenfeld, 1856, *Practische Grundelhren der Cultur von Camellien,* p.44. Orthographic error for **Jubilé de Tournai.**

Jubilé de Tournai. *(C.japonica),* Scheidweiler, M., 1845, *Journal d'Horticulture Pratique ou Guide des Amateurs et Jardiniers,* vol.2, p.50. Exhibited by Baron de Hulst at Tournai, 19th March, 1844. Verschaffelt, 1850, *Nouvelle Iconographie,* Book VI, pl.III: Obtained from seed by the Baron de Hulst, Tournai, Belgium. Its rather large blooms are a brilliant cherry-red, composed of numerous, wide, rounded and emarginate petals; spread out at the periphery, but folded, rumpled and compact towards the centre. Orthographic error: 'Jubilé de Fournai'. Orthographic variants: 'Jubile de Tournay', 'Jubilee de Tournay'.

Jubilé de Tournay. Verschaffelt, 1850, *Nouvelle Iconographie,* Book VI, under pl.III. Orthographic variant for **Jubilé de Tournai.**

Jubilé (Low). Jean Verschaffelt, 1860-1861, Price List, p.12. Linden Catalogue, 1875. Synonym for **Jubilee.**

Jubilee. *(C.japonica),* van Houtte Catalogue, 1845-1846, 23:6: Very full, well imbricated, white lightly tinged with pink, veined and streaked with rose, beautiful, clear yellow centre. (from Hugh Low). Harrison ed., June. 1845, *Floricultural Cabinet,* p.139, as 'Low's Jubilee': Flower near 15 cm in diameter...nearly double, seven tiers of petals...centre stamens bright yellow...fine form, peach rose colour. For colour plate see Verschaffelt, 1848, *Nouvelle Iconographie,* Book VII, pl.II as 'Jubilé'. Orthographic variants: 'Jubilé', 'Jubile'. Synonyns: 'Jubilé'(Low), 'Queen Victoria's Blush', 'Jubilee'(Low)'. Sport: **Jubilee Rosea.** Originated by Hugh Low, Clapton, England. Chinese synonym ‘Zhubili’.

Jubilee de Tournay. Companhia Horticolo-Agricolo Portuense Catalogo No.40, ca., 1904, p.70. Orthographic variant for **Jubilé de Tournai.**

Jubilee Gem. *(C.japonica),* Exbury Gardens Catalogue, 1965: Peony. White, splashed red, cream centre. Mid-season blooming. Killiow Gardens Catalogue, 1965-1966, p.3: Pink on wavy white, peony. Originated in England. Orthographic variant: 'Jubilee Jem'.

Jubilee Jem. Hewton Nurseries Catalogue, 1973-1974, p.4. Orthographic variant for **Jubilee Gem.**

Jubilee (Low). Verschaffelt Catalogue, 1847-1848, p.58. Synonym for **Jubilee.**

Jubilee Rosea. *(C.japonica),* Anonymous, 1864, *Gardeners' Chronicle,* 3244:26,27; Dombain, 1864, *Floral Magazine* 3: see text following pl.147: Exhibited by Messrs Lee of Hammersmith. A flat, but showy imbricated sport of **Jubilee** with rosy pink flowers. Originated in England. Synonyms: 'Mrs Moore's Speckled', 'Mrs Skottowe'. Chinese synonym ‘Zhubili Meigui’.

Juchi. (Sawtooth), *(C.japonica),* Chen Jingyi, 1253, *Quan Fang Bei Zu:* Leaves very serrate. Originated in China. (Believed extinct).

Jude Talbot. Feray's Fine Flowers, 1959-1960. Orthographic error for **Judge Talbot.**

Judge Barrett. *(C.japonica),* Fruitland Nursery Catalogue, 1943-1944, p.22: Extra large flower of loose, peony form. Red sometimes variegated with white. Compact growth. Originated in USA by Harper.

Judge Bushrod Washington. *(C.japonica),* Gunnell, J.S., 1840, *Magazine of Horticulture,* 6:337: Originated by Frobel. (Raised by Gunnell). "This variety was sold to me by my friend Mr John J. Frobel, Fairfax County, Virginia, USA, who raised it from seed. The flower is a light rose or dark pink colour, and is very much like 'Floyi' as to colour, shape and size; the petals are rose-edged and imbricated (with some times a few small petals, and a few anthers in the centre like **Floyi**) the pericarp is green; the foliage is rather roundish, like 'Speciosa', but not so flat." Abbreviation: 'Judge Washington'.

Judge Henry C. Hammond *(C.japonica),* Fruitland Nursery Catalogue, 1944-1945, p.26: White, large, semi-double. Originated in USA by Fruitland Nursery, Augusta, Georgia.

Judge Horn. Mark S. Cannon Scion Catalogue, 1963-1964, p.8. No description. Originated in USA. No valid listing located.

Judge Jackson. *(C.reticulata* hybrid.), *American Camellia Yearbook,* 1980, p.168, Reg. No.1666: A very large, deep pink to red, semi-double *C.reticulata* hybrid ('Crimson Robe' x [**Damanao** x *C.lutchuensis]),* that flowers mid-season to late. Originated by Frank Pursel, Oakland, California, USA. This 7 year old hybrid first flowered 1979. Average flower size 14.5 cm across x 7.5 cm deep with yellow anthers. Plant growth is upright, dense and medium in rate with dark green leaves, 10 cm long x 7.5 cm wide.

Judge Marvin Mann. *(C.japonica),* ACS, *Quarterly* 14(4):33: The Varietal Registration and Nomenclature Committee have authorised a change in the name of Mr. H.E. Ashby's seedling (Reg. No.341) 'Marvin Mann' to **Judge Marvin Mann:** Rose-pink. Large, loose, peony form with turned and twisted petals. Medium, open, upright growth. Mid-season flowering. Synonyms: 'Riptide', 'Marvin Mann'. Sport: **Judge Marvin Mann Variegated.**

Judge Marvin Mann Variegated. *(C.japonica),* Cannon, 1962, ACS., *The Camellia Journal,* vol.17, No.1 as Judge Marvin Mann Var.'. A virus variegated form of **Judge Marvin Mann** - Rose-pink blotched white. Originated in USA.

Judge Richard Hill. *(C.japonica),* Tammia Nursery Catalogue, 1975: Rose red. Large variform (formal, rose form, peony, semi-double). Vigorous, upright growth. Mid-season blooming. Originated by Tammia Nursery, Slidell, Louisiana, USA. See colour photo, ACS, 1975, *The Camellia Journal,* vol.30, No.l, inside front cover. Sport: **Judge Richard Hill Variegated**.

Judge Richard Hill Variegated. *(C.japonica),* Tammia Nursery Catalogue, 1975 as Judge Richard Hill Var.': A virus variegated form of **Judge Richard Hill.** Rose-red blotched white.. Originated by Tammia Nursery, Slidell, Louisiana, USA.

Judge Smith. *(C.japonica),* Gerbing's Azalea Garden's Catalogue, 1941-1942: New Camellia from Middleton Place, (Middleton No.24). Blood red in colour, the semi-double flowers have 4 rows of petals which are set apart. The stamens and petaloids are intermingled in the centre. Foliage, round, deep green; growth, wide spreading. Mid-season flowering. Originated in USA at Middleton Place, South Carolina.

Judge Solomon. *(C.japonica),* Nuccio's Nurseries Catalogue, 1957: Wylam, 1957, *American Camellia Yearbook,* p.28: A showy, red seedling of **Elegans,** raised by Reg Ragland, California, USA. The large, full, peony form flower of deep, rose-pink to red, blooms mid-season to late on a bushy, upright plant.

Judge Stout. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997, p.15. A medium to large, very light pink inner petals, with outer petals edged dark pink, semi-double chance seedling. Originated by William C. Stout, Pensacola, Fla., USA. *American Camellia Yearbook,* 1997, p.4, colour photo before p.1. The 20 year old seedling first flowered in 1981. Average flower size is 9.5 – 10.8 cm across x 3.2 – 3.8 cm deep with 16 petals, yellow anthers and cream white filaments. Plant growth is upright, dense and vigorous, with dark green leaves 9.5 – 10 cm long x 3.8 – 4.5 cm wide.

Judge Talbot. *(C.japonica), American Camellia Yearbook,* 1959, p.275, Reg. No.404: A 7 year old seedling of 'Eugene Bolen', originated by W.F. Wilson Jr., Hammond, Louisiana, USA. Plant growth is upright and rapid in rate with glossy, dark green, elliptic leaves, virtually flat with a slight down-fold at edges, 15 cm long x 6 cm wide. The formal double, clear, light to medium red, (Maerz & Paul 127J3) flowers,10-11 cm across x 2 cm deep, have 70-80 petals. Very early blooming. Orthographic error: 'Jude Talbot'.

Judge Thomas Porter. *(C.japonica), American Camellia Yearbook,* 1961, p.225, Reg. No.560: An 8 year old chance seedling that first bloomed 1960. Originated by Mrs Jane Moon, Lake Charles, Louisiana, USA. Plant growth is spreading and medium in rate with dark green leaves, 8.5 cm x 6 cm. The semi-double flower, 13-13.5 cm across x 7.5-8.5 cm deep, is rose-pink with white filaments, yellow anthers and has 18-24 petals and 8-12 petaloids intermixed with stamens which are divided into 3 fascicles. Blooms early to mid-season. Synonym: 'Judge W.T. Porter'.

Judge W.T. Porter. Mark S. Cannon Scion Catalogue, 1964-1965, p.8. Synonym for **Judge Thomas Porter.**

Judge W.T. Ragland. *(C.japonica),* SCCS., 1964, *Camellia Nomenclature,* p.68: Rich red. Large, semi-double with undulant, upright petals and white filaments tipped with golden anthers. Medium,

upright growth. Mid-season flowering. Originated in USA by R. Ragland. Sport: **Judge W.T. Ragland Variegated.**

Judge W.T. Ragland Variegated. *(C.japonica),* Gentry, 1972, ACS., *The Camellia* Journal, vol.27, No.4 as 'Judge W.T. Ragland Var.': A virus variegated form of **Judge W.T. Ragland** - Rich red blotched with white. Originated in USA.

Judge Washington. Magazine of Horticulture, 1842. Abbreviation for **Judge Bushrod Washington.**

Judinghong. (Red Chrysanthemun Head), *(C.japonica),* Chen, 1955, *Kuan Shang Shumu Hsueh.* No description. Originated in China.

Judith. McIlhenny, 1937, *600 Varieties of Camellias.* Synonym for **Tarôkaja.**

Judith Anderson. *(C.x williamsii),* Cobley Camellia Catalogue, 1977: Rose form white. Medium size. Originated in England.

Judith Sproule. *(C.japonica), American Camellia Yearbook,* 1959, p.276, Reg. No.377: A 6 year old seedling from 'Herme', (**Hikarugenji**) originated by J.F. Delage, Beaumont, Texas, USA which first flowered 1957. Plant growth is average, open and slow. The dark green leaves are 9.5 cm long x 5 cm wide. The flower colour is predominantly white, with small to large, red markings. The flowers are 8 cm across x 3.8 cm deep with 7 petals and 4 petaloids. Blooms mid-season.

Judith Toomajian. *(C.reticulata* hybrid), *American Camellia Yearbook,* 1982, p.174, Reg. No.1840: A very large, pink, semi-double to rose form double *C.reticulata* hybrid ('Crimson Robe' (**Dataohong**) x **Jean Pursel**) that flowers mid-season to late. Originated by Frank Pursel, Oakland, California, USA. The 7 year old seedling first flowered 1981. Average flower size 15 cm across x 6 cm deep. Excellent petal texture, good bloomer, rose-bud centre opens out to full bloom. Plant growth is upright, spreading and average with dark green leaves, 14.5 cm long x 8.5 cm wide.

Judy Ann Morris. *(C.x williamsii),* ACRS., 1986, *Camellia News,* No.99, p.22, Reg. No.345: Originated by J. Morris, Croydon, Victoria, Australia that first bloomed 1971. A chance seedling of **Donation**. Flowers are informal double to rose form; rose pink fading to greyish white on outer edge (MHC.12AC), 6.5 cm across x 4 cm deep. An upright, dense plant with glossy, deep green leaves, 7.5 cm x 3.5 cm, fine serrations, apex acute. Flowers mid-season to late.

Judy Camblin. *(C.japonica), American Camellia Yearbook,* 1956, p.62, Reg. No.278: A 9 year old chance seedling, originated by the Julington Nurseries Inc., Jacksonville, Florida, USA which first bloomed 1953. Plant growth is rapid in rate and compact with large, dark green leaves. The frosted pink flowers, 7.5-8.5 cm across, are complete double with rows of larger petals, slightly cupped around a bud centre. Late flowering.

Judy M. Straus. *(C.japonica), American Camellia Yearbook,* 1983, p.160, Reg. No.1861: A miniature, bright pink, semi-double *C.japonica* chance seedling; originated by Temple S. Cleive, Sacramento, California, USA. The 8 year old seedling first bloomed 1979. Average flower size, 6 cm across x 2.5 cm deep with 12 petals and yellow anthers and filaments. Plant growth is upright, spreading and rapid in rate with dark green leaves, 7.5 cm x 3.2 cm. Erroneously listed as a sasanqua on p.140, SCCS., *Camellia Nomenclature,* 1990.

Judy Matthews. *(C.japonica), American Camellia Yearbook,* 1961, p.225, Reg. No.570: An 8 year old chance seedling that first bloomed 1958, originated by G.M. Wheeler, Birmingham, Alabama, USA. Plant growth is upright and average with medium, green leaves, 10 cm long x 5 cm wide. The true blush flowers, 11-13 cm across x 5-7 cm deep, are loose peony to incomplete double form, with white stamens and 35-45 petals. The centre petals stand up amongst the stamens and are twisted. Mid-season flowering.

Judy Nordan. *(C.reticulata),* Belle Fontaine Nursery, 1967, ACS., *The Camellia Journal,* vol.22, No.3, p.20. No description. *American Camellia Yearbook,* 1969, p.163, Reg. No.1071: A 7 year old chance reticulata seedling of 'Shot Silk' (**Dayinhong**) that first bloomed 1963; originated by Majors Nordan, Hueytown, Alabama, USA. Plant growth is upright and dense with dark green leaves, averaging 12.5 cm x 6 cm. The semi-double flower is 13 cm across x 10 cm deep. Medium pink with yellow anthers and white filaments. Petals are large with 10 or more rabbit ears. Early blooming.

Judy O'Grady. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.56: White, delicately striped rose-pink. Very large, semi-double. Vigorous, compact, upright growth. Flowers mid-season. Originated in USA by McCaskill Gardens, Pasadena, California from open pollinated seed.

Jue shifa. Chinese synonym for USA *C. japonica* **Frizzle White.**

Jûgoya. (Full Moon Night), *(C.japonica),* Yashiro, 1841, Ichijima, 1906, *Kokon Yôrankô,* reprint. No description. Originated in Japan. (Believed extinct.)

Juhai. (Award Cup), Chûbu Tsubaki Kyôkai, 1957-1969, *Tsubaki Meikan.* For colour photo see p.104, Satô, 1975, *Chûbu no Tsubaki* as 'Jyuhai': A large, turkey red, open, cup-shaped, single of 7 petals, large, fluted and twisted with a large bunch of yellow stamens. Leaves mid-green, broad-oval, concave, like sake cups, abrupt acuminate apices and fine, shallow serrations. Synonym for **Sakazukiba.**

Juhaku. (Assembly of White), *(C.rusticana),* JCS., 1973, *Tsubaki* No,12, pl.27, p.7, description, p.15: Large, white, single, 5-8 petals with frilled and creped outer edges around a compact centre of a stamen cylinder, about 120 stamens with yellow anthers and white filaments. Early flowering. Leaves, large, 9.5 cm x 5 cm, mid-green, ovate, recurved, finely, deeply serrate, wavy on a slow growing plant. A seedling of **Juraku** that first flowered 1971. Resembles **Ô-shiratama**. Originated in Kantô District, Japan by Nakamura Totsurô. See colour photo, p.80, Seibundô Shinkôsha, 1979, *Senchinshû,* p.224 description.

Juhong Huahua Gongzi. Gao, Jiyin, Ltr,30 July 1990. Chinese synonym for **Red Dandy.**

Juhong Liujiao. (Huge Red Hexagonal), *(C.japonica), Shanghai Botanic Gardens List,* 1985: Large, formal double with pointed petals. Some flowers take a hexagonal, tiered formation. Leaves mid-green, ovate, apex acute, recurved, tapered base, obscure serrations. Originated in China.

Juhonji-yabu. (Red Wild Camellia of Juhonji Temple), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.11. No description. Originated in Kurume, Fukuoka Prefecture, Japan.

Juhonji-akayabu. (Red Wild Camellia of Juhonji Temple). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.29 with colour photo; Vermilion, medium size cup-shaped single with broad petals. Tubular stamen cluster. Leaves medium size, elliptic. Vigorous, upright growth. Flowers mid-season to late. A 300 year old tree at the Juhonji Temple, Kusano-machi, Japan..

Juil. *(C.sasanqua),* ACRS., 1978, *Camellia News,* No.70, p.16, Reg. No. 207: Originated by Alice Spragg, Sutherland, N.S.W., Australia. A chance seedling that first flowered 1971. A vigorous, dense, upright plant which flowers profusely. Early to mid-season blooming with glossy, dark green leaves, 5.3 cm x 2.5 cm. The 9 cm across, soft, mauve pink to delicate pink, large petals with occasional petaloids makes it an attractive garden plant.

Jûjisei. (The Cross). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.163 with colour photo; Pale pink, sprayed with red, and with an irregular white border. Medium size single, cupped to trumpet shaped petals. Thick tube of stamens. Leaves ovate, medium size. Upright growth. A sport of **Fubuki-shiratama** collected in 1998.

Jûjô-hosoba. (Double Stripes), *(C.japonica),* Hantei, Kinta, *1827, Sômoku Kihin Kagami:* Long, slender leaves. Originated in Japan. (Believed extinct.)

Juki-Haki. Southdown Nursery Catalogue, 1978. Corruption of the Japanese name 'Yukihaku', different reading for **Yukishiro.**

Jukô. (Radiance of Longevity), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki*, p.25 as 'Jyukô': A large, turkey red, bell-shaped, 5 petalled single with reflexed petals. Stamen cluster with yellow anthers and red filaments. Leaves broad-ovate, glossy mid-green, blunt acute apex, rounded base, blunt, shallow serrations. Originated in Chûbu area, Japan. A seedling of **Benimyôrenji.**

Jukon. (Golden Anniversary), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.190, colour photo and description: Medium size, bright red, wide campanulate single, with 5 broad, rounded, overlapping petals, and a central stamen cylinder with white filaments, joined for the lower half, and yellow anthers. Blooms very early to mid-season. Leaves deep green, lanceolate to broad elliptic, apices tapering acuminate to acuminate, margins serrate. Originated in the Gifu Prefecture, Japan. The original tree is in Minokamo City. Named by Nagaharu Niwa in 1984, released by Gifu Camellia Club.

Jûku-no-haru. (Sweet Nineteen). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.125 with colour photo; English translation p.85. Large, pale pink at the margins, graduating to white at the centre, flat single with thick petals, brown calyces. Early flowering. Leaves narrowly elliptic, medium to large. Difficult to grow from cuttings, grafts easily. A cross between *C.japonica* **Hatsu-arashi** and *C.granthamiana.* Originated and released by Tomita Kunnitake in 1990. From Kurume.

Jules Verne. *(C.japonica),* Jean Crézé, 1989, *American Camellia Yearbook,* p.33, "The Botanical Garden at Nantes": Very strong, large semi-double of bright orange red. Claude Thoby, 1993, *Camélias,* Single to semi-double, vivid red, 9-14 petals and central stamen column with yellow anthers. Leaves mid-green, broad-lanceolate, apices acute. See also colour plate, rear cover, *International Camellia Journal,* 1994. Originated in France by Claude Thoby, Nantes.

Julia. *(C.japonica),* Waterhouse, 1947, *Camellia Quest,* p.16. Camden Park seedling No.44/51. No description or record of distribution. Originated in Australia by Sir William Macarthur in 1851. (Believed extinct.)

Julia. *(C.hybrid),* SCCS., 1984, *Camellia Nomenclature,* p.140: Lavender pink and white, semi-double to rose form double. Medium, upright growth. Blooms mid-season. Originated by E.L. Atkins Theodore, Alabama, USA. As the Macarthur **Julia** is obsolete this name stands for the hybrid.

Julia B. *(C.japonica),* Anonymous, 1978, ACS., *The Camellia Journal,* vol.33, No.4, p.26. A seedling originated by Walter Wheeler, and exhibited at Boston, USA at the 149th Camellia Exhibition, March, 1978. Name not validly published.

Julia Brock. *(C.japonica),* Truett, 1952, *American Camellia Yearbook,* p.23: A semi-double with stamens. Clear rose-pink with a slightly lavender cast. It is a medium sized flower and an early bloomer. It is similar to 'Reverend John Bennett' but earlier and a brighter pink. It blooms over a long period. Originated in USA by Paul Brock, Florida.

Julia C. Taylor. *(C.japonica),* ACS, *The Camellia Journal*, June 2008, p.31 with colour photo, Regn No.2716; A chance seedling, first flowered in 1956. Originated by James P. Taylor, Quitman, Ga., USA, propagated by Mark Crawford, Loch Laurel Nursery, Valdosta. An 11.5 cm diameter, stark white rose form double with 54 petals, showing yellow anthers when fully open. Pointed petals. Flowers mid-season to late. Upright plant with average growth rate. *American Camellia Yearbook*, 2008, p.116 with colour photo; Dark green leaves are 11.5 cm x 6.5 cm.

Julia Dial. *(C.japonica),* Fruitland Nursery Catalogue, 1945-1946 as 'Julia Dyal': White. Large, flat, semi-double. Medium, compact, upright growth. Mid-season blooming. Originated by R.V. Dial, Madison, Florida, USA. Orthographic error: 'Julia Dyal'. See Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I, p.187, black and white photo,.

Julia Drayton. *(C.japonica),* Berckmans, P.J., 1908, *Country Life in America* - "Camellias for Outdoor Culture", photo, p.498: A very large flower, beautifully imbricated; the centre dark crimson, the outer petals a bluish, slate colour. An unusual combination. Overlook Catalogue, 1939--1940: Very large flower, rose type, resembles 'Purple Emperor'. In America this cultivar is erroneously known by the pseudonym 'Mathotiana', under which name its description in SCCS., *Camellia Nomenclature,* 1958, p.59: Crimson, sometimes with a purple cast. Large rose form to formal double. Vigorous, compact, upright growth. Flowers mid-season to late. Because of its popularity it received many synonyms: 'Purple Dawn', 'Purple Emperor', 'Purple Prince', 'Purple King', 'Purple Empress', 'Mathotiana Purple King', 'Princess Louise', 'William S. Hastie', and, erroneously, 'Mathotiana Rubra' and 'Mathotiana'. Sports include: 'Flowerwood', 'Sultana', 'Red Wonder', 'Red Wonder Variegated', 'Rosea Superba', 'Julia Drayton Variegated', 'Mathotiana Supreme', 'Mathotiana Supreme Variegated'. For colour photos see Nuccio's Nurseries Catalogue, 1951-1952 back cover as 'Mathotiana'; *American Camellia Yearbook,* 1947, facing p.98 as 'Mathotiana'. In 1978 it received the ACS., "National Camellia Hall of Fame Award" as 'Mathotiana'. This cultivar stemmed from a plant in the Magnolia Gardens, John's Island, South Carolina and, while it is thought to have originally been imported from Europe, no similar camellia is known among the European ones. Orthographic errors: 'J.G. Drayton', 'J.C. Drayton'. Chinese synonym: 'Masetiana'

Julia Drayton Variegated. *(C.japonica),* The Pacific Camellia Society, 1946, *Camellia Nomenclature,* p.19 as Julia Drayton Var.'. This was given as a synonym for 'Mathotiana Variegated', but, as this name must be considered invalid, **Julia Drayton Variegated** has priority: A virus variegated form of 'Julia Drayton' - Crimson with a purplish cast, blotched white. Originated in USA. Synonyms: 'Pauline', 'Purple Dawn Variegated'. Pseudonyms: 'Mathotiana Variegated', 'Mathotiana Special'. Sport: **Eugenia Howell.** Chinese synonym 'Hua Deleidun'.

Julia Dyal. Fruitland Nursery Catalogue, 1945-1946. Orthographic error for **Julia Dial.**

Julia Falix. Cannon, 1985, ACS., *The Camellia Journal,* vol.40, No.4, p.13. Orthographic error for **Julie Felix.**

Julia France. *(C.japonica), American Camellia Quarterly,* 13(4), 1958: An 8 year old seedling that first flowered 1957; originated by Mr & Mrs H.E. Ashby, Charleston, South Carolina, USA. The light pink flowers, 12.5-13 cm across x 2.5 cm deep, resemble **Elizabeth Boardman** in form and have 15-18 petals of good substance. This seedling was awarded 2 Highly Commended Seedling Certificates in 1957 when exhibited under the name 'Mrs Joseph France' for whom it was named. Flowers early to mid-season. It also received the John Illges Award in 1972 and is Reg. No.342 with the ACS. For colour photos see: p.96, Macoboy, 1981, *The Colour Dictionary of Camellias; Encyclopedia of Camellias in Colour,* Vol.II, 1978, pl.87, p.50. Chinese synonym: 'Diban Zhuliya'.

Julia Hamiter. *(C.x williamsii), American Camellia Yearbook,* 1964, colour photo facing p.180: A hybrid seedling of **Donation** and an unknown pollen parent. Originated by Fred Hamiter, Shreveport, Louisiana, USA. Registration published 1968, *American Camellia Yearbook,* p.132, Reg. No.964: A 6 year old chance hybrid seedling of **Donation.** Plant growth is upright, open and medium in rate with dark green leaves, 8.5 cm x 6 cm. The flowers are mostly rose form double or, occasionally, semi-double, anemone form and formal double. Size of bloom 9 cm across x 3 cm deep. It has 55 petals and a few petaloids. Colour is a delicate blush pink blending to white to greenish white at the base of the petals, yellow stamens. Blooms mid-season. See colour pl. front cover, ACS, 1974, *The Camellia Journal,*

vol.19, No.1. Received the Aubrey Harris Hybrid Award of the ACS in 1968. Sport: **Julia Hamiter Variegated**. Synonym: 'Julia Hamiter Blush'. Chinese synonym: 'Hamite'.

Julia Hamiter Blush. Gentry, 1980, ACS., *The Camellia Journal,* vol.35, No.4. Not considered sufficiently different to warrant status as a mutant. Synonym for **Julia Hamiter.**

Julia Hamiter Variegated. *(C.x williamsii),* Cannon, 1968, ACS., *The Camellia Journal,* vol.23, No.1: A virus variegated form of **Julia Hamiter** - Pale pink blotched with white. Originated in USA. Abbreviation: 'Julia Variegated'.

Julia J. Johnz. *(C.japonica),* Fruitland Nursery Catalogue, 1937-1938, p.17. No description. Originated in USA. (Believed extinct.)

Julia Nafe. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1945-1946: Mint-candy pink. Large, loose, peony form. Vigorous growth. Blooms mid-season. A variety from Magnolia Gardens, John's Island, South Carolina, USA, said to have been imported from Europe in the last century.

Julia Palix. Cannon, 1987, ACS., *The Camellia Journal*, vol.42, No.4, p.23. Orthographic error for **Julie Felix.**

Julia Stafford. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* White. Complete double. Midseason. *American Camellia Yearbook,* 1954, p.317, Reg. No.189: A 9 year old **Debutante** x 'Waterloo' seedling, originated by David L. Feathers, Lafayette, California, USA that flowered for the first time 1953. The leaves are a glossy, dark green, 6-10 cm long. The flower buds are white with blush at the base. The flowers are white, complete double, imbricated, similar to **Alba Plena** with 84-86 petals, 9-11 cm across and open in mid-season. The flowers open with a creamy centre, petals erect with exceptional substance.

Julia Variegated. Cannon, 1970. ACS., *The Camellia Journal,* vol.25, No.1 as 'Julia Var.'. Abbreviation for **Julia Hamiter Variegated.**

Julia Wilson. *(C.japonica),* ACRS., 1968, *Camellia Nomenclature,* p.75: Soft pink. Medium to large semidouble with loose petals. Originated in USA by W.A. Wilson, Augusta, Georgia. Chinese synonym ‘Fenbai Zhuliya’.

Juliana. *(C.japonica),* Harrison, ed., 1835, *Floricultural Cabinet,* 118, illustration, p.145, as 'Julianii': 'Miss Julia Campbell's Hybrid'. A seedling from 'Middlemists Blush' ('Carnea'). A finely formed and very beautiful flower; the flowers are white, sometimes having a delicate, red stripe up the centre of each petal. One of 8 Camellias raised in the gardens of Walter Frederick Campbell, Woodhall, Lanarkshire, Scotland. Orthographic error: 'Julianii'. Synonyms: 'Miss Julia Campbell's Hybrid', 'Tweediana Superba', 'Tweediana'.

Juliana. *(C.japonica),* José Marques Loureiro, Catalogue No.1, 1865, p.33; Rose form, white, striped and splashed with carmine. Only reference, possibly the same as previous entry.

Juliana Regina. *(C.japonica), New Zealand Camellia Bulletin,* 1983, vol.XIII, No.2, p.12, Reg. No.196: A seedling of **Onetia Holland** x **Pensacola Red,** originated by O.F. Over de Linden, Takapuna, New Zealand. It first flowered 1981 on a plant of average growth with dark green leaves, 11 cm x 7 cm. The anemone formed flower is very large, 13 cm across x 6 cm deep, white with 10 petals and 135-145 petaloids. It is distinguished by its large, high, petaloid centre. Flowers mid-season.

Julianii. *Floricultural Cabinet,* 1835, p.118. Orthographic error for **Juliana.**

Julianne Agee. *(C.japonica),* ACS, 1988, Yearbook, p.188, Reg. No. 2081 with illustration: Large size, pure white, anemone form, *C.japonica* chance seedling. Blooms early to mid-season. Originated by Kermit E. Agee, Nacogdaches, Texas, USA. The 8 year old seedling first flowered 1985. Average flower size is 12 cm across x 7 cm deep with 30 petals, 58 petaloids

and light yellow anthers. Flower is pure white with ruffed edges on petals and petaloids. Plant growth is upright, open and slow with dark green leaves 7.2 cm long x 4 cm wide.

Julia's Favorite. *(C.japonica),* Tourje, 1955, *American Camellia Yearbook,* p.34: One of Harvey Short's 'Mathotiana' (**Julia Drayton**) seedlings - a creamy white with deep rose streaks. The flower blushes to a lavender pink. The peony form flowers are medium to large and appear midseason. Released by Coolidge Gardens, Harvey Short's "Camellias of Tomorrow", 1955-1956. Sport: **Julia's Favorite Pink**

Julia's Favorite Pink. *(C.japonica),* Cannon, 1963, ACS., *The Camellia Journal,* vol.18, No.1, back cover: A solid pink sport of **Julia's Favorite.** Originated in USA.

Julia's Wish. *(C.japonica),* ACRS., 1964, *Camellia News,* No.16, p.28, Reg. No.66: Originated by J.C. Scott Waine, Warrawee, N.S.W., Australia. Grown from seeds picked near **Gauntlettii** and **Shiragiku** in 1956. It first bloomed 1963 with informal double flowers, 10 cm across. Colour is white with occasional pink fleck. Blooms mid-season to late. Plant habit, dense growth with large, oval, dark green leaves.

Julie. *(C.hybrid), American Camellia Yearbook,* 1962-1963, p.219,220, Reg No.655: A 6 year old camellia hybrid seedling, **Robbie** x **Dr Tinsley,** that first bloomed 1958; originated by V.R. James, Aptos, California, USA. Plant growth is upright, dense and medium in rate with dark green leaves averaging 8.5 cm x 3.8 cm. The peony form flowers are 9 cm across x 6 cm deep with 20 petals and 20 petaloids. The flowers are salmon pink to peach pink with yellow anthers and filaments. Blooms mid-season to late. Sport: **Julie Variegated.** Chinese synonym: 'Zhuliye'.

Julie Anne. *(C.sasanqua),* ACRS., 1963, *Camellia News,* No.12, p.25, Reg. No.56: Originated by Mrs A.S. McCloy, Wahroonga, N.S.W., Australia. A chance seedling from the garden of Dr A.L. Ducker, Lindfield, N.S.W. that first flowered 1959. The flower is an incomplete double, 9-10 cm across. The colour is a deep, rosy red with a silvery streak down each petal. It is a vigorous, upright grower and blooms early to mid-season.

Julie Ballard. *(C.reticulata* hybr.), ACRS,.1989, *Camellia News,* No.111, p.12, Reg. No.373: Originated by Keith Ballard, Mount Waverley, Victoria, Australia. A chance seedling of **Show Girl** that first flowered in 1984. Informal double to peony form flowers are deep pink (RHS.CC.68B) with 40 fluted and folded petals and petaloids, 10 cm across x 4.5 cm deep. Plant growth is rapid and upright. Flowers early to mid-season. Leaves elliptic, keeled, glossy green, moderately serrate, 7 cm long x 3 cm wide.

Julie Blush. *(C.japonica), American Camellia Yearbook,* 1979, p.108, Reg. No.1545: A large, soft pink, anemone form *C.japonica* mutant of **Julie (Kramer).** Early to late flowering. Originated by Kramer Bros. Nursery, Upland, California, USA.

Julie Felix. *(C.x williamsii), New Zealand Camellia Bulletin,* 1983, vol.XIII, No.2, p.12, Reg. No.194: An 8 year old seedling of *C.saluenensis x C.japonica* **Joshua E. Youtz,** originated by Felix Jury, Waitara, New Zealand. It has an open, spreading habit and slow growth rate. The leaves are dark green and average, 8.5 cm long x 4 cm wide. The rose form double flower has 55 petals and is soft rose suffused to very pale rose in the centre, The large flowers, 13 cm across x 4 cm deep, bloom mid-season to late and have a characteristic waviness in their conformation. Orthographic errors: 'Julia Felix', 'Julia Falix', 'Julia Palix'.

Julie Kate. *(C.reticulata), New Zealand Camellia Bulletin,* Mar.1991, vol.XVII, No.1, p.46, Reg. No.287: A 6 year old chance seedling, originated by J.A. Hansen, Waikanae, NZ that first bloomed 1988. Upright, open growth of a medium rate. Leaves dark green, 11 cm long x 6 cm wide. Flowers rose form double to loose, peony double, 12 cm across x 6 cm deep with 32 petals and an occasional petaloid. Colour is deep, salmon pink, with cream filaments and gold anthers. Blooms mid-season to late. Flower tends to be cup-shaped. RHS. Colour chart: 52A.

Julie (Kramer). *(C.japonica),* Kramer Bros. Nursery Catalogue 1974, invalidly as 'Julie'. A sport of **Pat Nixon.** *American Camellia Yearbook,* 1979, p.108, Reg. No.1544: A large, white anemone form *C.japonica* mutant of **Pat Nixon,** early to late. All other characteristics similar to **Pat Nixon** Reg. No.1265. Originated by Kramer Bros. Nursery, Upland, California, USA. Sport: **Julie Blush.** Note: ACS had already registered a camellia with the name **Julie,** Reg. No.655, 1962-1963, *American Camellia Yearbook.*

Julie Marie. *(C.japonica), American Camellia Yearbook,* 1966, p.92, Reg. No.885: A 9 year old chance seedling of **Joshua E. Youtz,** originated by Louis W. Strohmeyer, San Gabriel, California, USA. Plant growth is dense and medium in rate with dark green leaves, 7.5 cm long x 5.5 cm wide. The pure white flowers are peony form with yellow anthers and measue 10 cm across x 5.5 cm deep. The petals are high in the centre, folded. Early to mid-season flowering.

Julie Nixon. *(C.japonica),* SCCS, 1993, *Camellia Nomenclature*, p.60: Renaming of 'Julie', ACS Reg. No.1544, 1979, due to the existence of a previous registration of the same name (Reg. No.655, 1962). See **Julie (Kramer).**

Julie Robinson. *(C.japonica), Camellias,* Y.C. Shen, 2009, p.27 with colour photo; Large, white, semi-double to loose peony form. Leaves medium size, narrow-elliptic. Bushy, upright shrub. Raised by Barry Robinson, South Africa.

Julie Variegated. *(C.hybrid), American Camellia Yearbook,* 1984, p.178, Reg. No.1913: A medium pink and white, semi-double to rose form double *C.hybrid* form of **Julie** (Reg. No.655), mid-season flowering. Originated by Edwin L. Atkins, Shalimar, Florida, USA. Average flower size, 10 cm across x 7 cm deep with 26 petals, white filaments and yellow anthers. Note: The Registration No.1913 was re-allocated from the duplicate registration of 'Jean Feathers'.

Julienne David. J & F Thoby, Gaujacq, France, Catalogue, 2009, p.4; Pink single.

Julie's Own. *(C.hybrid).* ACRS, *Camellia News,* 1993, No.127, p.8, Reg No.423: Originated by K.P. Brown, Mitcham, Victoria, Australia. Chance seedling of **Wirlinga Princess.** First flowered 1989. A miniature, semi-double, light pink flower, (RHS.CC.62C), of 11-14 petals, white tipped, 4.5 cm across x 2.5 cm deep. Flowers early to mid-season on a medium spreading, slightly pendulous plant. Leaves mid-green, flat, ovate, acuminate apices, matt surface, serrulate margins, 4.2 cm long x 2.6 cm wide. Petals notched and folded. Filaments bunched with an occasional petaloid. Flowers prolifically along stems and terminals. A miniature, cluster flowering hybrid. Scented.

Juliet. *(C.japonica),* Waterhouse, 1947, *Camellia Quest*, p.16. Camden Park seedling 65/52, originated in Australia by Sir Willaim Macarthur, 1852. No description. Never distributed. (Believed extinct.)

Juliet Spencer. (*C.*x *williamsii), New Zealand Camellia Bulletin,* 1975, vol.IX, No.1, p.28, Reg. No.98: hybrid *C.saluenesis x C.japonica* Daikagura, which first flowered 1957. Spreading, open growth with light green foliage, 9 cm x 4.5 cm. The flowers are semi-double to peony form, an outer row of waved petals and numerous rabbit eared petaloids; colour deep pink, size 12 cm across x 9 cm deep, anthers yellow, filaments white. Flowers mid-season to late.

Julietta. van Houtte Catalogue, 1857, 67:45. Orthographic error for **Juliette.**

Juliette. *(C.japonica),* van Houtte Catalogue, 1848, 33:15: A striking, very double flower; pure white, striped with carmine. (from Boll). Originated by Boll, USA. Orthographic error: 'Julietta'.

Juliette Low. Pyron, 1967, *American Camellia Yearbook,* p.72. Abbreviation for **Juliette Gordon Low.**

Juliette Gordon Low. *(C.japonica), American Camellia Yearbook,* 1969, p.163, Reg. No.1022: A 15 year old chance seedling that first flowered 1960, originated by W.H. Fleetwood, Savannah,

Georgia, USA. Plant growth is upright and medium in rate with dark green leaves, 13 cm long x 7.8 cm wide. The semi-double flower, similar in colour to **Julia France**, is 14.5 cm across and has 23 petals. Pale, blush pink with bright yellow anthers and filament. The petals are troughed with a few rabbit ears interspersed with stamens. Mid-season blooming. Abbreviation: 'Juliette Low'.

Julyn Smith. Bob Wines Nursery Catalogue, 1985-1986, p.5. Orthographic error for **Hulyn Smith.**

Jûmonji. (Sign of the Cross), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.268: Medium sized, incomplete double, with 2-3 rows of large, imbricated petals around a cluster of small petals, petaloids and stamens. White with blush pink at petal base and a few carmine stripes. Originated in Japan. (Believed extinct.)

June. Lindo Nursery Price List, 1946. Synonym for **Enrico Bettoni.**

June Atkins. *(C.japonica), American Camellia Yearbook,* 1983, p.160, Reg. No.1907: A small to medium, pink and white, formal double *C.japonica* chance seedling, mid-season blooming. Originated by Edwin & June Atkins, Shalimar, Florida, USA. The 5 year old seedling first bloomed in 1981. Average flower size 7.5 cm across x 3.8 cm deep with 68 petals. Cold hardy.

June Buchanan. *(C.japonica), New Zealand Camellia Bulletin,* Mar.1991, Vol.XVII, No.1, p.45, Reg. No.278: A 12 year old seedling of *C.japonica,* **Tiffany,** originated by H. Buchanan, Palmerston North, New Zealand. First bloomed 1984. Growth habit, upright and medium in rate with dark green leaves, 10 cm long x 5.5 cm wide. The flower is a pink peony, 10 cm across x 5 cm deep with about 30 petals and 160 petaloids. Flowers from early to late. Flowers of good texture, self grooming. See RHS. Colour Chart 55D-B.

June Curry. *(C.reticulata* hybrid*),* ACS, *The Camellia Journal,* p.26 with colour photo; Regn No.2854; Originated by Hulyn Smith, Valdosta, Ga., USA. ACS, *Yearbook,* 2013, p.119 with colour photo. Registered and propagated by Randolph Maphis, Tallahassee, Fla. Medium sized, 7.5-9.5cm diameter x 6.5cm deep flower is semi-double to loose peony, light pink. Central spray of stamens with yellow anthers and white filaments. Heavy petal texture, and flowers fall in one piece. Plant is upright and open with vigorous growth. Dark green leaves average 10cm x 5cm with medium serration. Flowers late.

June Girl. SCCS, 1987, *Camellia Nomenclature,* p.146: Orthographic error for **Junie Girl.**

June Holdship. *(C.japonica), Don Ellison, Camellias, A Photo Dictionary,* 1997, p.49 with colour photo; Large semi-double, flowers mid-season, broad columnar stamen cluster, medium upright growth.

June McCaskill. *(C.japonica),* SCCS., 1954, *The Camellia. Its Culture and Nomenclature,* p.55: Clear pink. Large semi-double with trumpet centre. Vigorous, compact, upright growth. Originated in USA at McCaskill Gardens, Pasadena, California. See black and white photo, p.115, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III.

June Mackaye. *(C.japonica), American Camellia Yearbook,* 1983, p.160, Reg. No.1859: A medium to large, white, formal double *C.japonica* (**Elizabeth Boardman** x **Tom Cat**) seedling, mid-season blooming. Originated by Dr W.F. Homeyer Jr., Macon, Georgia, USA. The 12 year old seedling first bloomed 1979. Average flower size 10 cm across x 3.8 cm deep with 70-100 petals. Plant growth is upright and medium in rate with dark green leaves, 10 cm long x 5 cm wide.

June Norman. *(C.reticulata* hybr.), ACS., 1989, *The Camellia Journal,* vol.44, No.3, p.9, Reg. No.2165: a medium to large size, dark rose pink to rose red, formal double *C.reticulata* hybrid seedling of **Diamond Head.** Blooms mid-season to late. Originated by James Norman, Keystone Heights, Florida, USA. *American Camellia Yearbook,* 1989, p.123: The 7 year old seedling

first bloomed 1984. Average flower size, 10 cm across x 3.2 cm deep with 110 petals. Plant growth is average and medium in rate with dark green leaves, 11 cm long x 5 cm wide.

June Stewart. *(C.japonica), American Camellia Yearbook,* 1965, p.237, Reg. No.782: A 15 year old chance seedling of 'Donckelaeri' (**Masayoshi**) that first flowered 1955. Originated by Caesar Breschini, San Jose, California, USA. Plant growth is dense and medium in rate with 10 cm x 5 cm leaves. Flowers are peony form and measure 10-12 cm across x 6 cm deep with 17 petals and 17 petaloids. Colour orange rose-red with yellow stamens. Blooms mid-season to late. Sport: **June Stewart Supreme.**

June Stewart Supreme. *(C.japonica), American Camellia Yearbook,* 1965, p.283, Reg. No.783: A sport of **June Stewart** obtained by grafting onto virus affected stock. Characteristics the same as for **June Stewart** except the flowers are highly variegated with white. Originated by Caesar Breschini, San Jose, California, USA. Synonym: June Stewart Variegated'.

June Stewart Variegated. Gentry, 1984, ACS., *The Camellia Journal,* vol.39, No.4, p.17 as 'June Stewart Var.'. Synonym for **June Stewart Supreme.**

Junella Hardison. *(C.japonica),* ACS 1992, *The Camellia Journal,* vol.47, No.4, p.13. Valdosta Scions. No description. ACS 1994, *American Camellia Yearbook,* p.61, Reg. No.2297: Originated by Dick P. Hardison, Tallahassee, Florida, USA. A very large, deep pink semi-double to anemone form double to peony form, chance seedling. The 7 year old seedling first flowered 1987. Average flower size is 13 cm across x 7.5 cm deep with 14 petals, 3-4 rabbit ears, yellow anthers and white filaments. Growth is upright, dense and rapid in rate. Leaves dark green, 9.5 cm long x 3.7 cm wide. Colour photo pp.64-65.

Jungfrau. Cannon, 1983, ACS., *The Camellia Journal,* vol.38, No.4 as 'Jung Frau' No description. Originated in USA. Not validly listed.

Jungle Gardens Imperator. Rhodellia Nursery Catalogue, ca.1945. Synonym for **Imperator (American).**

Junie Girl. *(C.x williamsii), New Zealand Camellia Bulletin,* 1986, vol.XIV, No.5, p.10, Reg. No.237: Hybrid of *C.saluenensis x C.japonica* **Betty Sheffield Supreme**, raised by Colin Spicer, Feilding, New Zealand. The plant is 16 years old and first bloomed 1973. A rapid grower with an upright habit and pale green leaves, 7-9 cm long x 3-4.5 cm wide. The large, loose, peony form flowers are 10-14 cm across x 6-7 cm deep. The colour is white in the centre, shading out to very pale pink. Long flowering season from early to late. Orthographic error: 'June Girl'.

Junie Lancaster. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997, p.15, Reg. No.2407. A medium size, light red, anemone form chance seedling. Flowers early. Originated by Dr. J.M. Habel, Suffolk, Va., USA. *American Camellia Yearbook,* 1997, p.4, colour photo before p.1. The 29 year old seedling first flowered in 1968. Average flower size is 10 cm across x 5 cm deep, with 12 petals, numerous petaloids, yellow anthers and pink filaments. Plant growth is upright and vigorous with dark green leaves 11.5 cm long x 5.7 cm wide.

Junior Miss. *(C.japonica), American Camellia Yearbook,* 1971, p.131, Reg. No.1215: A 12 year old chance japonica seedling that first bloomed 1964. Originated by C.C. Crutcher, Mobile, Alabama, USA. Plant growth is upright, dense and rapid in rate with dark green leaves averaging 11 cm long x 6 cm wide. The semi-double bloom is blush pink on edges with yellow anthers and gold filaments. It measure 8-10 cm across, is fragrant and blooms mid-season. Chinese synonym: 'Shaonü'.

Jûnihitoe. (Female Ceremonial Court Dress), *(C.rusticana),* JCS., 1973, *Tsubaki,* No.12, p.8, pl.30, description, p.15. See also colour photos: *Encyclopedua of Camellias in Colour,* vol.II, 1978, pl.456, p.179 and Seibundô Shinkôsha, 1979, *Senchinshû,* p.80: Formal double, crimson, 8-10 rows of about 25 concave petals and a round bud centre of about 30 petals, half of which are

peach pink, which is a distinguishing feature of this cultivar, 7 cm across. Leaves, 8 cm x 4 cm, obovate, glossy green, acuminate apex, hirsute, concave, finely, shallowly serrate. Originated in Imizu Sub-Prefecture, Toyama Prefecture, Japan by Kirino, Akitoyo. Resembles **Kinkô.**

Juno. *(C.japonica),* Waterhouse, 1947, *Camellia Quest,* p.16. Camden Park seedling 41/51, raised by Sir William Macarthur, N.S.W., Australia in 1851. No description. Never distributed. (Believed extinct.)

Juno. Geo. Jackman & Son, 1954-1955, *Planter's Handbook,* No,16, p.18: A large, single red, whose central boss of stamens is shaped like a shaving brush. Hillier Catalogue, 1956-1957. A large, single, red with a large central boss of stamens like a brush. This is the *Flora & Sylva,* 1904, **Jupiter,** renamed, as it was invalid due to a different cultivar having previously been listed as **Jupiter** by both Berlèse and Verschaffelt in 1849 and van Houtte in 1843. In England in paricular, 'Juno' and 'Jupiter' are used as altemative names for the same cultivar. Synonym for **Jupiter (Paul).**

Junone. Verschaffelt Catalogue, 1844-1845, p.26. Orthographic variant for **Junonia.**

Junonia. *(C.japonica),* Colla, 1843, *Camelliografia,* p.129: Complete informal double, 8-9 cm across, of a lacquered red with rare red streaks. Similar to **Pallade Maculata** but fuller and of a more intense red. Originated in Italy by Negri from seed. Orthographic variant: 'Junone'.

Juntren. Waterhouse, 1965, *International Camellia Journal,* No.3, p.25. Taiwanese name for **Zaochun,** (Early Spring).

Jupiter. *(C.japonica),* van Houtte Catalogue 1843-1844, 12:yy: Bright, salmon flesh red, imbricated flower, pure white band down the centre of each petal (from Smith). Berlèse, 1849, *Annales de la Société Central Horticulture de France,* 42:31: 10-11 cm across, formal double, blood red, colour lining flesh, shading to salmon rose, regularly crossed by white lines. Petals in 7-8 tiers, large, cupped, rounded, some notched, some entire. Closely imbricated, all marked from top to bottom with a narrow, white band. See colour pl.III, Book III, Verschaffelt, 1849, *Nouvelle Iconographie.* Verschaffelt says he received his plants from Italy, however the original listing by van Houtte says "from Smith". This would be James B. Smith, Philadelphia, USA.

Jupiter (Paul). *(C.japonica),* Paul, 1904, *Flora & Sylva* as 'Jupiter'. with illustration. Hillier & Sons Nursery Camellia List, No.7, 1957-1958, p.15: Large size, single flowers, with broad, overlapping petals; geranium-lake with darker veins. A vigorous, erect grower. Previous to 1903 this name ('Jupiter') was used for a double variety. Puddle & Hanger, 1960, RHS., *The Rhododendron and Camellia Yearbook,* No.14, pp.150,151 as 'Jupiter': Single of 8-9 petals, 4.5 cm long, wide and broadly obovate, some emarginate, colour carmine rose 621; size 8.5-9 cm across with a prominent central cylinder of stamens with white filaments. Foliage glossy, dark green, ovate-elliptic or elliptic, margins shallowly, sharply serrate, apex short acuminate, 5.5-6 cm wide x 9 cm long on a compact, upright plant. A first class single red variety, free flowering, fairly frost resistant, with good foliage. Sets seed freely. It has been confused with other single red varieties and is represented on the Continent by an inferior form. It gained an Award of Merit in 1953 from the RHS, when shown erroneously as 'Apollo'. Pseudonyms: 'Juno', 'Apollo', ' Jupiter'. Synonym: 'Paul's Jupiter'.

Seibundô Shinkôsha, 1979, *Senchinshû,* p.80, colour photo, p.224: Leaves ovate to ovate-elliptic, deep green, strongly wavy, coarsely serrate, petioles more or less hairy. Flowers large size, pale pink, 6-7 petals margined rosy pink,

widely opened, lobulated and undulate. Late flowering. Raised from seed by S. Katayama, Juraka-en, Ikedu-shi, Ôsaka Prefecture, Japan. See Tuyama, 1968, *Camellias of Japan*, pl.340. Sport: **Juraku-benifukurin.** The name “Juraku” means "to collect everlasting pleasures" and is derived from "Juraku-en", S. Katayama's Nursery.

Juraku-benifukurin. (Red Bordered 'Juraku'), *(C.japonica),* Andoh, 1969, ACRS, *Camellia News*, No.36, p.22 as 'Juraku-beni-furakin': A sport of **Juraku.** Pale pink with a red border. Originated by S. Katayama, Japan.

Juraku-beni-furakin. Andoh, 1969, ACRS., *Camellia News,* No.26, p.22. Orthographic error for **Juraku-benifukurin.**

Juraku-hachigô. Synonym for **Atsumori.**

Juraku-nigo. (Juraku Number 2), *(C.japonica),* Katayama, 1960, *Tsubaki Ochabana:* Large, pink, single, near to magnolia form. Mid-season flowering. Originated in Japan by Katayama. See Kyôto Engei Kurabu, 1967, *Tsubaki Tokushû,* No.8.

Juraku-tsubaki. (Juraku Camellia), Mizuno, 1681, *Kadan Kômoku,* vol.3: Different reading for **Shiraku-tsubaki.**

Jûrin. (Ten Layers), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Itô, Ihei, (before 1801), *Hyakka Tsubaki Nayose Irotsuki,* pl.24; Yashiro, 1841, *Kokon Yôrankô,* vol.306: Medium sized double flowers, variegated with red and white in various designs. Looks like a cluster of clouds. Originated in Japan. (Believed extinct.) This is the camellia listed by Kaempfer in his *Amoenitatum Exoticarum* 1712 as 'Dsjurin'. Noted: In these listings, different kanji are used, with the same pronunciation.

Jûrinji. (Name of Temple). *(C.japonica),* Kinji Ohara, Tateyama, Chiba, 1993-1994, *List of Camellias:* Red to Purplish red single. Medium size. Originated in Japan.

Jurô-an. (Hermitage of Longevity), *(C.japonica),* Tateyama Nursery Catalogue, 1957: Pure white, double, medium size. Originated in Japan.

Jurô-an. (Hermitage of Longevity), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.137, black and white photo and description; Colour photos: Satô, 1975, *Chûbu no Tsubaki,* p.10 as ‘Jyurôan'; *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.282, p.122; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.133; Seibundô Shinkôsha, 1979, *Senchinshû,* p.80, description, p.224: Medium small, cup-shaped, deep pink single, 5-6 petals and a large cluster of stamens with bright yellow anthers and light yellow filaments. Blooms early to mid-season. Leaves deep, glossy green, elliptic, venation prominent, apex acuminate, shallowly, sharply serrate. Originated in Chûbu District, Japan. Different readings: 'Jurohan', 'Jyurôan'. Resembles **Tarô'an.** Said to be a seedling of 'Tarô'an'(Engei).

Jurohan. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.214. Different reading for **Jurô-an.**

Jûroppôan. (Obscure) *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.175 with colour photo; White base sprayed with deep red spots and patterns. Small tubular single. Flowers early to late. Leaves small, elliptic. Upright, somewhat weak growth. A natural seedling of **Kasenzan**, released by Yasushi Ihara, Shimane Pref., Japan, in 2001.

Jurui Huang. Gao, Jiyin, Ltr.30 July 1990. Chinese synonym for the NZ. *C. williamsii* **Jury's Yellow.** Later changed to ‘Zhuruihuang’.

Jury 216. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.186. Renamed **Eryldene Excelsis.**

Jury Yellow. Thoby et al., 1988, *Tsubaki. A Propos de Camellia,* p.48. Orthographic error for **Jury's Yellow.**

Jury's Apple Blossom Sun. (*C.pitardii* hybrid). *New Zealand Camellia Bulletin,* March 2003, Issue No.144, vol.XXIII, No.2, p.13, Reg. No.444. Registered by Mark Jury, Tikorangi, New Zealand. A chance seedling of *C.pitardii* var. *pitardii* that first flowered 1990. Flower is 8 cm diameter x 5 cm deep, semidouble, with about 18 spatulate petals, the outer ones notched at the tips. Petal colour shades from mid-pink (RHS.CC.73C) tips to a light pink (RHS.CC.69B) base. The stamen mass is compact with bright clear yellow anthers on yellow filaments. The flower is of delicate appearance and quite flat in form. Plant is of average height and form and slow growth rate, with dark green leaves 6 cm long x 3 cm wide. Flowers early to mid-season.

Jury's Charity. SCCS., 1990, *Camellia Nomenclature,* p.149. Synonym for **Charity.**

Jury's Joy. *(C.sasanqua), New Zealand Camellia Bulletin,* 1986, No.8, p.14, Reg. No.244: Originated by L. Jury, New Plymouth, New Zealand. Parentage and age unknown. The plant has a spreading habit and average growth rate with dark green, sharply serrated, 7-8 cm long x 3-3.5 cm wide leaves. The flower varies between semi-double and peony, 7 cm across x 4 cm wide with 22-28 petals and 5-10 petaloids and a few pale yellow stamens. The colour is creamy white at the base deepening to medium pink at the outer edge. (RHS.CC. Red Group 62D, C, B & A).

Jury's Moon Moth. (*C.pitardii* hybrid). *New Zealand Camellia Bulletin,* March 2003, Issue No.144, vol.XXIII, No.2, p.14, Reg. No.447. Registered by Mark Jury, Tikorangi, New Zealand. A cross between *C.pitardii* var. *pitardii* x *C.japonica* **K. Sawada.** The flower is a large semi-double, 12 cm diameter x 5 cm deep, with about 13 long and narrow notched petals. Colour is pale pink, shading somewhat lighter to the flower centre, giving an overall effect of RHS.CC.69A. The clump of stamens is rather lax, with interspersed yellow stamens and 20-30 white petaloids. The flowers are large for the size of the plant, saucer-like and rather floppy. The plant is upright, and of average density and growth rate with dark green leaves 7 cm long x 3.5 cm wide. Flowers mid-season.

Jury's Pearl. (*C.pitardii* hybrid). *New Zealand Camellia Bulletin,* March 2003, Issue No.144, vol.XXIII, No.2, p.13, Reg. No.446. Registered by Mark Jury, Tikorangi, New Zealand. A cross between *C.pitardii* var. *pitardii* x *C.japonica* **Tomorrow**, which first flowered in 1992. The flower is a rose form double, about 12 cm diameter x 6 cm deep, with 40-50 near-circular, strongly waved petals that are pale pink (RHS.CC.62D) at the outside, shading to a creamy pink (RHS.CC.11D) at the centre. The stamen mass has no petaloids but is split into about 5 segments by the innermost 5 small petals. The most notable features are the waving of the petals and the cream flower centre. The plant is upright, dense and medium growth rate, with dark green leaves 6 cm long x 4 cm wide. Flowers mid-season.

Jury's Sunglow. *(C.x williamsii), New Zealand Camellia Bulletin,* 1989, vol.XVI, No.1, p.27, Reg. No.266: Originated by Les Jury, New Plymouth, New Zealand from the cross **Kimberley** x *C.x williamsii* **Dark Nite.** The 12 year old plant first flowered 1980 grows at an average rate with a dense, upright habit. The dark green leaves are almost round, measuring 6.5-7 cm long x 5 cm wide. The small to medium size flowers are anemone to peony form with 45 petals and are 7.5-8 cm across x 5 cm deep. Masses of petaloids fill the centre with a few stamens which have carmine filaments and creamy anthers. The colour is close to crimson lake. (RHS.CC.52A). The flowers have multi-centres and open mid-season.

Jury's Yellow. *(C.x williamsii), New Zealand Camellia Bulletin,* 1976, vol.XI, No.5, p.11, Reg. No.121: A seedling from the cross *([C.saluenensis x C.japonica* **Edith Linton**] x *C.japonica* **Gwenneth Morey**), raised by L. Jury, New Plymouth, New Zealand and first flowered 1971. The plant has an upright, dense growth habit with light green foliage and measures 7 cm long x 4 cm wide. The flower is anemone form with 9 white petals and about 50 cream coloured petaloids. Its size is up to 8 cm across and it blooms early to late. See colour photo, p.43 Fischer,1986, *Kamellien.* Orthographic error: 'Jury Yellow'. Chinese synonym: 'Jurui Huang', later changed to ‘Zhuruihuang’.

Jûsanya. (Night of 13th day of the 9th Lunar Month), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.80, colour photo, p.224, description: Very small, irregular single with 5-6 long, emarginate petals of light red with a violet cast and a brush-like cluster of light, yellow stamens. Leaves narrow-elliptic, apex long-acuminate, base narrow-cuneate, light green with yellowish venation and coarse, sharp serration. Petiole hirsute. Originated in Kashiwazaki City, Niigata Prefecture, Japan.

Jushoku. (Light of Longevity), *(C.japonica),* Yokoyama & Kirino.1989, *Nihon no Chinka,* p.243, colour photo and description: Medium size, deep red with white patches, open, star-shaped single with 5 long, ovate petals and central stamen column with white filaments, joined for the lower half, and yellow anthers. Blooms mid-season to late. Leaves dark green, elliptic to lanceolate, apices long, tapering acuminate, margins serrulate. Originated in the Okayama Prefecture, Japan. A seedling of **Hagoromo.**

Just Darling. *(C.japonica), American Camellia Yearbook,* 1976, p.161, Reg. No.1391: A 7 year old chance *C.japonica* seedling of 'Mathotiana' (**Julia Drayton**) that first bloomed in 1974. Originated by Dr W.F. Mathis, Moultrie, Georgia, USA. Plant growth is upright and rapid with dark green leaves averaging 7.5 cm long x 3.8 cm wide. The formal double Alba Plena type, bloom is pink like 'Pink Perfection', (Otome), with 60 petals. Average size is 3.8 cm across x 3.8 cm deep. Blooms mid-season. See colour photo, p.26, *New Zealand Camellia Bulletin,* vol.XVI, No.7, Nov.1990.

Just Hazel. *(C.japonica), ICS Journal,* 2008, p.122 with colour photo; An open pollinated seedling of **Yours Truly,** originated by Mr J. Benson, Devon, UK. First flowered 2008 at circa 7 years. A bushy shrub of dwarf habit and slow growth. Flowers late season. Semi-double white, with variable red (RHSCC 55B) markings, cream stamens, and elongated petals typical of the **Lady Vansittart** group. Diameter 5-6 cm x 3-4 cm deep. Spent blooms shatter.

Just Peachy. *(C.hybrid).* ACS, *The Camellia Journal,* Sept. 2008, p.30 with colour photo, Regn No. 2742; A 9 cm diameter x 5 cm deep, peach pink, loose anemone to peony form with yellow anthers and white filaments. Fragrant. Flowers early to late. A seedling of *C.hybrid* **Salab.** Originated in 1998 by Don Bergamini, Martinez, Calif., USA. *American Camellia Yearbook,* 2008, p.117 with colour photo; Growth is dense and at average rate. Light green leaves are 6.5 cm x 3.8 cm.

Just Sue. *(C.japonica),* ACRS., 1971, *Camellia News,* No.43, p.34, Reg. No.138: Originated by Roger H. Hall, Tea Tree Gulley, South Australia. A mutant of *C.japonica* **Margaret Davis.** It is similar to the parent, except for the colour of the blooms, which are a light cyclamen pink with the petal margins edged bright rose. See colour photo, front cover, 1972, ACRS., *Camellia News,* No.47. Sport: **Just Sue Variegated**. Chinese synonym: 'Qingqiu'.

Just Sue Variegated. *(C.japonica),* Cannon, 1980, ACS., *The Camellia Journal,* vol.35, No.4 as 'Just Sue Var.': A virus variegated form of **Just Sue** - Light, cyclamen pink margined bright rose and blotched white. Originated in USA.

Justabilis. *(C.japonica),* Verschaffelt Catalogue, 1844-1845, p.26. No description. Originated in Belgium. (Believed extinct.)

K. Sawada. *(C.japonica),* Overlook Nursery Catalogue, 1940-1941, pl.19: (US Patent No.431). This new Camellia was created by Overlook Nursery, Mobile, Alabama, USA. The flowers are pure white, very double and fully imbricated. It is usually 10-12 cm across, but often larger. It has 50-70 petals, the edges roll inwards and symmetrically overlap each other. When fully open it sometimes shows a few petaloids or yellow stamens in the centre. It blooms mid-season. The leaves are medium in size and thickness, elliptic to lanceolate, serrated, leathery and dark green. Synonym: 'Silver Moon'. Originated from seed imported from Japan. First flowered 1933. For black and white photo see p.188, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol. I. Chinese synonym 'Sawada'.

Kabai. ACS., 1974, *The Camellia Journal*, vol.29, No.1. Corruption of the Japanese name **Kôbai.**

Kabinkakushi. (Concealing the Vase), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* A large, single, red with one row of petals. Different reading: 'Kaheikakushi'. Originated in Japan. (Believed extinct.)

Kabo. Shao, Taichong, 1992, *The Observations from the Camellia World*, p.76, No.321. Chinese synonym for the New Zealand *C.hybrid* **Grace Caple.**

Kabuki. (Kabuki). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan*), 2010, p.155 with colour photo; Medium size semi-double, red blothed with white. Flowers early to mid-season. Leaves ovate, medium size. Upright growth. A natural seedling of **Tamagasumi**, released by Yasushi Ihara in 2001. From Niigata Pref., Japan.

Kabutoyama. (Mount Kabuto), *(C.japonica),* ICS., Apr. 1990, *Japanese Camellia Cultivar List, as* 'Kabuto-yama': Small to medium size, deep red, tubular single from Okayama Prefecture, Japan. Blooms mid-season.

Kachô. (Flowers and Birds), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.11: Medium size, red, rose form double to formal double. Late blooming. Originated in the Tottori Prefecture, Japan. Note: This name came from "Kachô-fûgetsu" meaning flowers, birds, wind and the moon; symbolising the beauty of nature. Named and released by Yoshio Yamada in 1983.

Kachô. (Flowers and Birds), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Large size, white, semidouble with two rows of petals; very early flowering. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.81. Originated in Japan. (Believed extinct.) Note: This name came from "Kachô-fûgetsu" meaning flowers, birds, wind and the moon; symbolising the beauty of nature.

Kaen-no-taki. (Fall of Flame). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.53 with colour photo; English translation p.35. Small, red, bowl shaped single with tubular stamen cluster. Leaves elliptic, medium size, flat. Upright, somewhat vigorous. A seedling of unknown parentage, originated and released by Mamoru Naitô in 1997. From Niigata Prefecture.

Kaerimi. (Looking back on Something). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.53 with colour photo; English translation p.34. Medium size, pink, flat single with circular stamens. Flowers mid-season. Leaves ovate, medium size, flat. Upright, vigorous growth. A natural seedling of **Yukimiguruma**, names and released by Totsurô Nakamura in 1975. From Tokyo.

Kaeruyamabito. (Returned Hermit), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:*- Red, marbled and splashed white, large, double, petals thick, stamens cylindrical. Originated in Japan. Different readings: 'Kisanjin', 'Kisan-no-hito', 'Kizanjin'. (Believed extinct.)

Kaeshitamazusa. (Returned Love Letter), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* White. Medium size single, long petals, magnolia form. Different readings: 'Hengyokusyo', 'Kaesutamazusa'. Originated in Japan. (Believed extinct.)

Kaesutamazusa. Different reading for **Kaeshitamazusa.**

Kafeibei. Gao, Jiyin, Ltr, 5th August, 1992. Chinese synonym for the USA *C.japonica* **Demi-Tasse.**

Kaga aka hassaku. *(C.japonica), Camellia Photo Collection,* 1997 Japan, p.24 with colour photo; small red single, almost closed form with overlapping petals.

Kagabeni-hassaku. (Kaga - Red Hassaku), *(C.japonica),* Andoh, 1974, *International Camellia Journal*, No.6, p.15 as 'Kaga-beni-hassaku': Rose-pink. Medium sized single. Early blooming. Originated in the Ishikawa Prefecture, Japan.

Kaga-beni-shidare. (Kaga's Red Weeper), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.188, colour photo and description: Medium size, deep red, wide campanulate single with 5 broad, emarginate, overlapping petals, and a central stamen cylinder with pink filaments, joined for the lower third, and golden anthers. Leaves mid-green, elliptic, apices acuminate, recurved, margins serrate. Blooms mid-season to late. Plant habit willowy and weeping. Originated in Ishikawa Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.55 with colour photo; English translation p.36. Named and released by Tokuji Ôoku in 1975.

Kagabotan. (Kaga's Peony), *(C.japonica),* Hino, Sukekatsu, 1637, *Sukekatsukyôki; Chinka Zufu*, (before 1700), Watanabe, 1969, pl.388, 638: Medium sized, incomplete double, pink flowers with paler edges. Originated in Japan. (Believed extinct.)

Kaga-chiyozuru. (Kaga Thousand Year Crane), *(C.japonica),* Seibundô, Shinkôsha, 1979, *Senchinshû*, p.31, colour photo, p.206, description: Small, companulate single of 5-6 petals, pale pink and blush pink, streaked, splashed and freckled with carmine. Flowers early to mid-season. Leaves small, elliptic, long acuminate, mid-green, serrulate. Originated in Ishikawa Prefecture, Japan.

Kaga-dono. (Lord of Kaga). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.55 with colour photo; English translation p.36. Medium size, pink fading to white in the centre, bowl shaped single, thick petals, cylindrical stamens. Flowers mid-season to late. Leaves elliptic, medium

sized, recurved. A chance seedling of **Seiôbo,** originated and released by Tadao Yamaguchi in 1988. From Ishikawa Prefecture.

Kaga-hassaku. (Kaga's 'Hassaku'), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.I, 1972, p.371; Satô, 1975, *Chûbu no Tsubaki*, p.10, colour photo; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.329; Seibundô Shinkôsha, 1979, *Senchinshû*, p.32, colour photo, p.206, description: Small, white, cup-shaped single of 5 petals, 5-6 cm across with a fat, central cylinder of stamens, light, brownish yellow anthers, cream filaments. Blooms early to mid-season. Leaves mid-green, elliptic to long-ovate, apex long-acuminate, margins coarsely serrate, thick, venation prominent. See p.49, Yokoyama & Kirino, 1989, *Nihon no Chinka.* "Kaga" is an old name for the Ishikawa Prefecture and 'Hassaku' is the first day of the 8th lunar month and, in this case, indicates early flowering. In the Edo era this variety was developed by "Kaga" retainers and prized for "Chabana" (Tea Ceremony). In the Chûbu district there a variety with same name of 'Hassaku' but it is a different camellia. In recent years the name was changed to **Kaga-hassaku** but in Kanazawa it is called 'Hassaku-tsubaki'. Synonym: 'Kaga-shirohassaku'.

Kagahyôgo. (Personal Name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.87: Medium sized, deep crimson, anemone form with pointed guard petals and a compact, petaloid centre. Originated in Japan. (Believed extinct.)

Kaga-jishi. (Kaga Lion), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.375, colour photo and description: Large size, white to pale pink with deeper pink and red stripes, peony form double with a row of large, rounded guard petals and a centre of small, erect petals, petaloids and stamens. Blooms early through mid-season. Leaves dark green, lanceolate, apices tapering acuminate, margins serrulate. Originated in Ishikawa Prefecture, Japan. A seedling of **Kaga-hassaku.** Originated, named and released by Tadao Yamaguchi in 1984.

Kaga-koshibori. (Kaga Small Spotted), *(C.japonica), Encyclopedia of Camellias in Colour*, 1978, vol.II, pl.354, p.145, description, p.249, 250: A medium sized, cup-shaped single with large, round, overlapping petals of white, lightly peppered, dotted and dashed with crimson, about 9 cm across and having a central, compact cylinder of stamens with yellow anthers and pale, cream filaments. Blooms early to mid-season. Leaves dark green, large, broad-ovate, apex abrupt acuminate, mid-green, margins serrated. See p.251, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Seibundô Shinkôsha, 1979, *Senchinshû*, p.31, colour photo. Originated in the Ishikawa Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.54 with colour photo; English translation p.35. A natural seedling of **Kaga-hassaku** from a private family in Kanazawa City. Originated by Torao Kaneko, named and released by Ryôji Nakamura in 1967.

Kaga-koshimino. ('Koshimino' from Kaga), *(C.rusticana),* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.86, black and white photo and description. Seibundô Shinkôsha, 1979, *Senchinshû,* p.31, colour photo, p.206: A soft, apricot pink, open, peony form with two rows of imbricated petals surrounding a centre of intermingled stamens and erect, fluted and folded petals. Leaves lanceolate, apex long-tapering acuminate, dark green, margins serrate. Early flowering. Originated with an old family in Unoki-chô, Ishikawa Prefecture, Japan. Named and released by Ryôji Nakamura in 1972.

Kagami. (Place Name), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.129, colour photo and description: Medium size, soft pink, fading to white at the centre, cup-shaped to ballon flower shaped, single, with 5 petals with rolled-in margins, broad, central stamen column with creamy filaments, joined for the lower half and yellow anthers. Blooms early to mid-season. Leaves dark green, elliptic-lanceolate to broad-lanceolate, apices acuminate, margins sharply serrate. Originated in Hiroshima City. Named and released by Nobuo Sasai in 1981.

Kagami-yama. (Place Name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.480: Ihei Itô, 1695, *Kadan Chikinshô:* Light coloured, large flower. Resembles a chrysanthemun in form. Petals pink with broad, white edge. Originated in Japan. (Believed extinct.)

Kagamontana. Kitamura, 1950, as *C.rusticana* var. *kagamontana* Masam., *Hokuriku Journal of Botany*, 1954, 3(1): inside front cover.

Kaga-nishiki. (Ishikawa Brocade), *(C.japonica)*, Tuyama, 1968, *Camellias in Japan*, pl.385, p.196, description, p.204: Leaves dark green, thin, oblong to oblong-elliptic, gradually acuminate, impressed venation, margins dentate-serrulate, 7.4-8.4 cm long x 3.4-3.7 cm wide. Flowers semi-double, palest pink, striped with rose in various shades (Rose Madder 23/2, Spinel Red 0023 - 0023/2). Petals arranged in two concentric circles; outer, widely spreading, inner erect. Outer petals 7-11, inner 3-6; largest petal 5.2 cm wide x 3.7 long, shallowly emarginate. Stamens in two circles, mostly accompanied by a few petaloids. Late flowering. Originated in Ishikawa Prefecture, Japan.

Kaga-no-shira-ume. (White Plum from Ishikawa), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.32, colour photo, p.206, description: Medium size, white, single with 5, widely opening petals and a small, scattered cluster of yellow stamens, like those of a plum flower. Blooms late. Leaves ovate to wide-ovate, apex abrupt acute, finely, sharply serrate. See p.60, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated with a private family in Tsuruki Town, Ishikawa Prefecture, Japan. Selected by Tamon Fukuoka, named and released by Ryôji Nakamura in 1950. Different reading: 'Kaga-shiro-ume'.

Kaga-no-ume. (Plum Blossom from Ishikawa), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.163, p.82,-description, p.137: Leaves large, ovate-elliptic to broad-elliptic, shortly cuspidate-acuminate, shiny, dark green, 9.5-11 cm long x 6.5-7 cm wide; petiole 10 mm long, very hairy. Flowers widely opened, single, 7-9 deep red (Cardinal Red 822/2). Stamen cluster, wide, scattered, 3 cm high, filaments yellowish. Mid-season flowering. Originated in the Ishikawa Prefecture, Japan. The name alludes to the form of the stamens like those in plum blossom.

Kaga-no-yûbae. (Ishikawa's Sunset Glow), *(C.rusticana)*, Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû* No.7, p.103. Introduced by Suzuka. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.400, p.168, description, p.351; Seibundô Shinkôsha, 1979, *Senchinshû*, p.32, colour photo, p.206, description: Small, deep pink, formal double, 6-7 cm across, finely veined a deeper colour, 6-7 rows of oval petals becoming more cleft towards the outside rows. Large, shiny, dark green leaves, elliptic, apex tapering acuminate, margins coarsely, sharply serrate. Late blooming. See p.394, Yokayama & Kirino, 1989, *Nihon no Chinka.* Originated in Unoki-chô, Kahoku-gun, Ishizawa Prefecture, Japan. Original tree was in the garden of Nakamura, Ryôichi. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.55 with colour photo; English translation p.36.

Kagari. Yokahama Nursery Co. Ltd Catalogue, 1895, p.12. Orthographic error for **Kagiri.**

Kagariba. SCCS., 1954, *The Camellia. Its Culture and Nomenclature*, p.55. Corruption of Japanese name **Kagaribi.**

Kagaribi. (Bonfire), *(C.japonica)*, Vanderbilt, 1940, *Camellia Research*, p.5. No description. SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* Flame red. Large semi-double to rose form double. Originated in Japan. See Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II, p.185, black and white photo. Corruption of name: 'Kagariba'

Kagaribi. (Bonfire), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.240, p.121, description, p.163: Leaves narrowly elliptic to oblanceolate, thin, finely denticulate, 6.2-8.6 cm long x 4.2-4.5 cm wide; petioles 3-6 mm long, copiously hairy. Flowers peony form with narrow petals, deep red (Currant Red 821/3). Outer petals, 8-16, oblong, emarginate, recurved; inner petals 22-70,

narrow, wrinkled, intermingled with the stamens. Flowers late. Originated in Japan by Mr Kobayashi, Yatsu-chô, Toyama Prefecture.

Kaga-shiro-shidare. (White Weeping from Kaga). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.54 with colour photo; English translation p.36. Medium size, white, trumpet shaped single, cylindrical stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size, plicate at centre ribs. Weeping branches. A cultivar at a private family in Kanazawa City, selected by Baizan Nakamura, named and released by Ishikawa Camellia Enthusiasts Club in 1976. From Ishikawa Prefecture.

Kagashidare. *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.332, p.138. Synonym for **Shiroshidare-tsubaki.**

Kaga-shirohassaku. (Kaga's White Hassaku), Andoh, 1974, *International Camellia Journal*, No.6, p.15 as 'Kaga-shiro-hassaku': Synonym for **Kaga-hassaku.**

Kaga-shira-ume. Inazawa Nursery Co. Ltd. Catalogue, 1986-1987, p.1, A-23. Different reading for **Kaga-no-shira-ume.**

Kaga-tsubaki. Tuyama, 1966, *Camellia Cultivars of Japan*, p.142. Synonym for **Shirokarako.**

Kaga-wabisuke. (Wabisuke from Ishikawa), (Wabisuke), *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.299, p.127: Small, pink, tubular form of 5-6 petals, 3 large, complete petals and 2-3 smaller, incomplete petals with a small central bunch of stamens. Early flowering. Leaves elliptic with long acuminate apex, mid-green, shallowly serrate. Originated in Kanzawa City, Ishikawa Prefecture Japan. Named and released by Ishikawa Camellia Enthusiasts Club in 1976. Synonym: 'Niza'emon-wabisuke'. See also: Seibundô Shinkôsha, 1979, *Senchinshû*, p.32. For botanical drawings, colour photo and description see pp.18-20: Kyôto Engei Kurabu, 1982, *Tsubaku Tokushû* No: 11.

Kaga-yagura. (Ishikawa Turret), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.208, p.105, description, p.151: Leaves broadly elliptic, olive green, wavy, lateral veins impressed, 5.8-8.5 cm long x 2.8-4.6 cm wide; petioles 3-4 mm long, copiously hairy. Flower hose-in-hose type, rosy carmine (Carmine 21/1), petals strongly recurved at the apex, larger outer petals, 7-13; inner 4-10. In between the outer and inner petals and the centre are stamens with 3-10 petaloids. Flowers mid-season to late. Originated by Mr Iwata, Toyama Prefecture, Japan. "Kaga" is the old provincial name for Ishikawa while "Yagura" is a turret or piled up structure, alluding to the hose-in-hose flower.

Kaga-yûzen. (Ishikawa Muslin), *(C.rusticana), Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.264, p.122, description, p.330: Medium sized, red, spotted white, single, 5-7 petals, emarginate, slightly twisted, central stamen cluster, pale yellow anthers, creamy filaments. Leaves obovate-elliptic, mid-green, finely, shallowly serrate, apex acuminate. Mid-season blooming. See p.329, Yokoyama & Kirino, 1989, *Nihon no Chinka;* Seibundô Shinkôsha, 1979, *Senchinshû*, colour photo, p.32, description, p.206. Originated in Noda-chô, Kanazawa City, Ishikawa Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.55 with colour photo; English translation p.36. Dwarf growth. Named and released by Ryôji Nakamura in 1970.

Kagazome. (Ishikawa Colour), *(C.japonica)*, Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.132. No description. Originated in Ishikawa Prefecture, Japan.

Kagekiyo. (Hero of a Yôkyoku Drama), *(C.rusticana)*, Tuyama, 1968, *Camellias* of *Japan*, pl.190, p.96, description, p.154: Strongly, wavy, magnolia type of snow camellia. Leaves obovate-elliptic to elliptic, suddenly acuminate, light green, minutely denticulate, impressed venation, 6.4-7.6 cm long x 3.1-3.9 cm wide; petiole 6 mm long, very hairy. Flowers, deep red, (currant red 821/2) petals 15-18 with 1-4 smaller, folded petals inside; oblong, emarginate, wavy. Flowers mid-season. Originated by Mr Sekijirô, Toyama Prefecture, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.33, colour photo.

Kage-nishiki. (Shadow Brocade), *(C.japonica)*, Iwasaki, 1828, *Honzô Zufu*: This flower has many pink petals with red dapples. See JCS., 1981, *Tsubaki*, No.20, p.111. Originated in Japan. (Believed extinct.)

Kageori-nishiki. (Fawn Coloured Brocade), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List* of *Sasanqua* of *Japan*, p.11: White with blush base at start of blooming, changing to pure white on which appears a pink wave pattern. Medium size double with round petals. Originated in Japan. Different reading: 'Kanoke-ori-nishiki'.

Kagetsu. (Flower Moon), *(C.sasanqua)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* White, semi-double with 2 rows of petals; early flowering. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.81. Originated in Japan. (Believed extinct.)

Kagetsu. (Excellent Moon). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.57 with colour photo; English translation p.38. Small, pale pink, tubular to bowl shaped single, rounded petals, cylindrical stamen column. Flowers early to mid-season. Leaves elliptic, somewhat plicate in the centre. Somewhat upright. A chance seedling of **Shiratama,** originated by Nobuo Sasai in 1980, released in 1997. From Okayama Prefecture.

Kagetsu. (Hazy Moon), Watanabe, 1960, Kyôto Engei, Kurabu, *Tsubaki Tokushû*, No.1, p.56. Different reading for **Kasumeru-tsuki** in *Hyakuchinshû*, Sakuden, 1630.

Kageuemon. Shirai, Mitsutarô, 1926, *Tsubaki Kai*. Synonym for **Kageyuza'emon.**

Kageyuza'emon. (Discerning Yuza'emon), *(C.japonica)*, Hino, Sukekatsu, 1637, *Sukekatsukyôki; Chinka Zufu*, (before 1700), Watanabe, 1969, pl.15: A large, light pink, formal double with colour fading to almost white at petal margins. Originated in Japan. Different reading: 'Kange-yusa'emon'. (Believed extinct.) Synonyms: 'Kageuemon', 'Kakezaemon'.

Kagikagira. (Old Bonfire), *(C.japonica)*, SCCS, 1954, *The Camellia. Its Culture and Nomenclature:* Red lined with white. Large, cupped semi-double. Variant Japanese transliteration of unknown origin.

Kagiku. *(C.japonica)*, Santa Rosa Nursery Catalogue, 1949-1950. No description.

Kagira. SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.43. Corruption of Japanese name **Kagiri.**

Kagiri. (Limit), *(C.japonica)*, Itô, Ihei, 1710, *Zoho Chikinshô*, vol.1; Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Iwasaki, 1829, *Honzô Zufu*; Yashiro, 1841, *Kokon Yôrankô;* Kasuya, Kamegorô. 1859, *Tsubaki Irohanayose Irotsuki.* See colour photos: Tuyama, 1966, *Camellia* Cultivars of Japan, pl.81. Tuyama. 1968, *Camellias* of *Japan*, pl.64. Andoh, 1971, *Tsubaki*, *Meika no Shôkai* to *Saibai*, pl.94. *Encyclopedia* of *Camellias in Colour*, vol.I, 1972, pl.416. Seibundô Shinkôsha, 1979, *Senchinshû*, p.32, colour photo, p.206, description: Medium size, formal double, white, 8-9 cm across, imbricated, with many, small, pointed petals, high centre. Leaves broadly elliptic, a little undulate, dull, dark green. Slow, bushy growth. Late blooming. Originated in Kantô, Japan. Synonyms: 'Pine Cone White', 'Matsukasa Alba', 'Matsukasa White', 'White Matsukasa', 'Gloria', 'Kagiri-tsubaki'. Corruption of Japanese name: 'Kagari', 'Kagira'. Pseudonyms: 'Dante', 'White Kagura'. Resembles: **Furansujiro,** 'Nankinjiro', **Hasumijiro** and **Alba Plena**. The name means "limits", perhaps the limit of beauty.

Kagirihôkan. (Limits Crown), *(C.japonica)*, Usami, Naohachi, Ca.1910, *Nagoya Chinzu'e:* Purplish white, small size, single, anemone centre. See: Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû*, No.6, p.127. Originated in Japan.

Kagiri-tsubaki. *Nagoya Chinzu'e* (ca.1910). See Kyôto Engei Kurabu, 1985, *Tsubaki Tokushû*, No.6, p.127; Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.132. Synonym for **Kagiri.**

Kagirobi. ACS, *Yearbook* 2011, p.86. Orthographic error for **Kagirohi.**

Kagiro'i. (Morning Glow). *(C.japonica),* Yamaguchi Tsubaki-en Mail Order List, 1995-1996, No.617: Originated in Japan by Yamaguchi Tsubaki-en. Medium size anemone form with 8-9 guard petals, light red with a wide white border. Rare colour. A chance seedling of **Helen Boehm** that first flowered 1993.

Kagirohi. (First Light of Dawn). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.56 with colour photo; English translation p.37. Medium size, light yellow, formal double with ball-like buds. Flowers late. Leaves narrowly elliptic, veins obscure. Upright growth. A cross between *C.nitidissima* and *C.japonica* **Silver Chalice.** Under application to the registration of the Ministry of Agriculture and Fishery, Japan. Named and released by Kazuo Yoshikawa in 1996. From Osaka.

Kagoshima. (Place Name), *(C.japonica),* Itô, Ihei, 1733, *Chikinshô Furoku*, vol.3, as 'Kagoshima-tsubaki'; Itô Jukyû, 1739, *Honzô Hanamaki'e;* Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Red ground with white spots. Medium, formal double. See colour photos: Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.3. Tuyama, 1968, *Camellias of Japan*, pl.295; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.284; Satô, 1975, *Chûbu no Tsubaki*, p.97; Yokoyama & Kirino, 1989. *Nihon no Chinka*, p.329. Seibundô Shinkôsha, 1979, *Senchinshû*, p.33, description, p.206: A red, marbled and spotted with white, sport of **Matsukasa.** Base colour rosy red, (Claret Rose 021), A medium large, rose form double with the petals arranged like the scales of a pine cone. Gynoecium poor. Flowers mid-season to late. Synonyms: 'Pine Cone', 'Kagoshima-tsubaki', 'Matsukasa-shibori'. Originated in Kantô area, Japan. Chinese synonym: 'Luerdao'

Kagoshima. (Place Name), *(C.japonica),* Iwasaki, 1828, *Honzô Zufu:* This flower has narrow, white petals with crimson dapples. The ends of the petals are round. Originated in Japan. (Believed extinct.)

Kagoshimabeni. Inazawa Nursery Co. Ltd. Catalogue, 1980-1981. Synonym for **Matsukasa.**

Kagoshima-benten. (Kagoshima Goddess), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.317, colour photo and description: Medium size, deep red, formal double, occasionally showing an abortive stamen or petaloid in the centre when fully opened, with 9-10 rows of imbricated, rounded petals, pine cone form. Blooms late. Leaves dark green, with genetic variegation of pale, yellowish green, oblanceolate, apices acute, margins serrulate. Originated in the Niigata Prefecture, Japan. A sport of **Kagoshima.** Named and released by Tokuji Ôoka in 1980.

Kagoshima-tsubaki. Itô, Ihei, 1733, *Chikinshô Furoku* and Yashiro, 1841, *Kokon Yôrankô*, vol.306. Synonym for **Kagoshima.**

Kagotsurube. (Well Bucket), (Higo), *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.267, p.117; Seibundô Shinkôsha, 1979, *Senchinshû*, p.34, colour photo, p.206, description: Crimson sometimes splashed with white, large, Higo form with 6-7 petals, 8-11 cm across and a spreading burst of 150-180 stamens, petals large, emarginate to multiple notched, edges sometimes fluted. Leaves, glossy, deep green, elliptic, apices acuminate, margins serrulate. Mid-season blooming. See p.170, Yohoyama & Kirino, 1989, *Nihon no Chinka.* Originated in Kumamoto Prefecture, Japan. Designated as a Higo by the Higo Society in 1970.

Kagura. Vanderbilt, 1940, *Camellia Research*, p.5. Abbreviation for **Daikagura.**

Kagura Gishi. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.121. Corruption of the Japanese name **Kagura-jishi.**

Kagura-jishi. (Sacred Lion Dance), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in section on peony form as large size, pink; Itô, Ko'emon, 1879, *Chinkashû:* Light pink. Large peony form. See colour photos: Tuyama, 1966, *Camellia Cultivars of Japan*,

pl.105; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.324; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.380; Seibundô Shinkôsha, 1979, *Senchinshû*, p.33, colour photo, p.206, description: Light pink, occasionally with rare crimson streaks, medium size, anemone form, with two row of guard petals, some crinkles, and a centre of small, folded, erect petals mixed with stamens. Leaves deep green, elliptic, apices acute, margins finely serrulate. Corruption: 'Kagura Gishi'. Originated in Kantô District, Japan. Synonyms: 'Kagura Pink', 'Pink Kagura'. Resembles **Shishigashira.**

Kaguraga-oka. (Place Name), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Very large size, double, red, with white streaks and splashes, divided stamen cluster. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.76. Originated in Japan. (Believed extinct.)

Kaguramai. (Sacred Lion Dance), *(C.japonica)*, Yokoyama & Kirino. 1989, *Nihon no Chinka*, p.247, colour photo and description: Small size, dark crimson, with a white moire, campanulate single with a central stamen column having red filaments, joined for the lower third, and bright yellow anthers. Blooms mid-season to late. Leaves bright, mid-green, elliptic to narrow-elliptic, apices long tapering acuminate, margins shallowly serrate. Originated in the Chûbu area, Japan. A variegated sport of **Kon-wabisuke.**

Kagura Pink. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Kagura-jishi.**

Kaguya-hime (Chûbu). (Dazzling Princess – Chûbu). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.56 with colour photo; English translation p.37. Small and large stripes of red on pale pink ground, single, thick petals, tubular stamen cylinder. Flowers early to late. Leaves broadly elliptic, medium size, flat. Somewhat upright and vigorous. A chance seedling of **Tatsuta-nishiki.** Originated, named and released by Toshiaki Kosaki in 1980.

Kaguyahime (Kantô). (Dazzling Princess-Kantô), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.32, colour photo, p.206, description: Small, deep pink, single, 6-7 rounded over-lapping petals, opening widely campanulate with a compact, central stamen column, golden anthers, pale cream filaments. Leaves ovate, dark green, acuminate, finely serrate. Early flowering. Originated in Kantô District, Japan. Kaguyahime is the heroine of a famous Japanese fable, the "Moon-child" of the Bamboo Cutter's Tale also known as Teruko (Child of Light). Parentage unknown, named and released by Yoshizawa Camellia Nursery in 1970s. From Saitama Prefecture.

Kaguyahime (Niigata). (Dazzling Princess - Niigata), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.33 colour photo, p.206, description: Small, single, red with white blotches. Petals 5, somewhat irregular, overlapping, cup-shaped. Short, compact stamen column with protruding stigma. Leaves dull, dark green, lanceolate, sharply serrate. Originated in Shibata City, Niigata Prefecture, Japan. Named and released by Tokuji Ôoka in 1974.

Kaguyama. (Kagu Mountains), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.368: Medium sized, white, incomplete double, 4-5 rows of ragged petals. Originated in Japan. (Believed extinct.)

Kahê. Different reading for **Kahei.**

Kahei. (Personal Name), *(C.japonica)*, Itô Ihei, 1695, *Kadan Chikinshô*, vol.I; Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Iwasaki, 1829, *Honzô Zufu,;* Yashiro, 1841, *Kokon Yôrankô*, vol.306; Kasuya, Kamegorô, 1841, 1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* Large flower, pure red with snow-white spots, peony form. Mid-season flowering. Different reading: 'Kahê'. Sport: **Kahei-shibori.** Originated in Japan. (Believed extinct.)

Kahei-shibori. (Kahei's Variegated), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* A distict variegated form of **Kahei.** Originated in Japan. (Believed extinct.)

Kahô. (Flower Jewel), *(C.japonica x C.sasanqua)* JCS., Japan *Camellia*, 1962, No.25, p.10, pl.5, black and white photo: Pale, peach pink with vertical red marks, campanulate single, medium to

large; cylindrical stamen cluster, bucket shape, petals thick. The young branches and the main veins on the back of the leaves have luxuriant, minute hair. Blooms mid-season. A seedling from the cross *C.japonica* **Takara-no-hana** x *C.sasanqua* **Omoi-no-mama.** Originated in the Okayama Prefecture, Japan. Originated, named and released by Nobuo Sasai in 1982.

Kahô (Brilliant Phoenix) (*C.japonica*) from Ibaragi Pref, *Japan Camellia* No.81, August 2006: Soft pink, peony form double, very large, blooming in March to April. Tree spreading. Leaves somewhat large. Parents unknown. First flower seen in 2003. Found and named by Kunimitsu Suzuki.

Kahô. Different reading for **Hanatakara** from Chûbu.

Kahong. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.409; Chinese synonym for the Italy *C.japonica* **Alessandro Carmine.**

Kai Mei's Choice. *(C.sasanqua x C.reticulata).* Camellia Forest Nursery Catalogue, 1995, p.6, (CP.7): Large, three dimensional, rose form flowers which open to a clear rose red in autumn and early winter. The flowers are striking in colour and form with the delicateness of *C.sasanqua.* Originated by Dr Clifford R. Parks, Chapel Hill N.C., USA and named for his wife.

Kaia-nichiki. (Chinese Brocade), Tokio Nursery Catalogue, 1896, p.13. Orthographic error for **Kara-nishiki.**

Kaiboshi. (Star in Kai), *(C.japonica), Chinka Zufu* (before 1700), Watanabe, 1969, pl.451: Small, crimson, semi-double with inner row of petals standing erect. Originated in Japan. (Believed extinct.) Kai is the old name for the Yamanashi Prefecture.

Kaidamo. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.417; Chinese synonym for the Japan *C.japonica* **Keizaemon.**

Kaidi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.418; Chinese synonym for the USA *C.japonica* **Katie.**

Kaidô. (Quince Flower), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô*, vol.310. Single, tubular stamens, peach pink with red base. Originated in Japan. (Believed extinct.)

Kaidô. (Quince Flower), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Okumura, ca.1810, *Chinka Hini'i.* See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.82. *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.657: Large size, 5 petalled single, white with blush pink in centre petals, gold stamens, white filaments. Originated in Japan. Synonym: 'Kaidô-tsubaki'. (Believed extinct.)

Kaidô. Chûgai Nursery Catalogue, 1939-1940, p.20. Abbreviation for **Kaidômaru.**

Kaidômaru. (Name of a Boy in old Literature), *(C.sasanqua)*, Ashizawa 1898, *Chabaika Taishû:* Large size, cardinal red. Originated in Japan.

Kaidômaru. (Name of a Boy in old Literature), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan;* Nihon Shubyo Co. Catalogue, 1910: Red, large. See colour plates: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.549, p.216; *Ishii's Selected Japanese Camellias*, 1970, pl.22, p.102, 103: White flushed red towards the petal edge. Large semi-double with curled edges. Originated in Japan. Different reading: 'Kwaidômaru'.

Kaidômaru. Synonym for 'Higo-kaidômaru'.

Kaidomaru. Hakoda, JCS., 1987, *Tsubaki*, No.26, p.47. Synonym for **Versicolor (Sawada).**

Kaidô-sazanka. (Quince Flower Sasanqua), *(C.sasanqua), Chinka Zufu*, (before 1700), Watanabe, 1968, pl.510: A single sasanqua with 5 white, twisted and notched petals, with a touch of rose-pink at their apex, bronwnish anthers, white filaments. Originated in Japan. (Believed extinct.)

Kaidô-tsubaki. Shirai, Mitsutarô, 1926, *Tsubaki Kai.* Synonym for **Kaidô.**

Kaifuren. Gao, Jiyin, Ltr, 25 May 1990. Chinese synonym for **Lady Kay.**

Kaigirobi. ACS *Yearbook* 2011, p.86, caption to photo. Orthographic error for **Kagirohi.**

Kaigo. Different reading for **Tamasaka.**

Kaikeizan. (Mount Kaikei), *(C.sasanqua),* Itô Jukyû, 1739, *Honzô Hanamaki'e:* Very large size, white. Originated in Japan. (Believed extinct.)

Kaikôka. Yashiro, 1841, *Kokon Yôrankô:* Japanese name for *C.sasanqua.* Chinese reading: 'Hai-honghua'. Synonyms: 'Senko-sancha', 'Cha-ume'.

Kairaki. (obscure), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô,* in section on sasanqua. No description. Originated in Japan. (Believed extinct.)

Kairanbô. (Obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.53 with colour photo; English translation p.35. A large, changing to white, flat single, thick petals, long tubular stamen cluster. Flowers mid-season. Leaves narrowly elliptic, medium size, curved outwards. Upright, vigorous growth, branches somewhat weeping. Believed to be a seedling of **Miyakodori.** Named and released by Kan Utsugi in 1985. From Chiba Prefecture.

Kairyu-cha. Japanese group name for Wabisuke. Ono, 1803, *Honzô Kômoka Keimô;* Yashiro, 1841, *Kokon Yôrankô.* Chinese reading: 'Hailiu Cha'.

Kaisai. Gao, Jiyin, Ltr 5th August, 1990. Chinese synonym for the USA *C.japonica* **Kick-Off.**

Kaiselin. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.51. Chinese synonym for **Katherine Nuccio.**

K'ai Shih-san Sheng. Yang, 1965, *Camellia Varieties of Taiwan.* Different reading for **Kaishisan Sheng.**

Kaishisan Sheng. (The Champion of 13 Provinces), *(C.japonica),* Yang, 1965, *Camellia Varieties of Taiwan,* p.5 as 'K'ai Shihsan Sheng:' Flower large, pink, formal double. Leaves large, 7.2-11.5 cm long x 2.8-5.3 cm wide, elliptic, acute apex, margins serrated. Originated in China.

Kaixuan. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.417; Chinese synonym for the Japan *C.vernalis* **Gaisen.**

Kaixuanmen. (Triumphant Entry), Gao & Zhuang, 1989, *The Camellia in China,* p.71, No.508. Chinese synonym for Feather's **Arch of Triumph.**

Kaiyier. Chinese synonym for Australian *C. japonica* **Kayel.**

Kaizan. (Founder of the Temple), *(C.japonica),* Kaempfer, 1712, *Amoenicarum Exoticarum; Chinka Zufu,* (before 1700), Watanabe, 1969, pl.316, 404, 491; Shirai-Bunko, 1789, *Shoshiki Hanagatachô,* The three plates show a somewhat similar camellia, a large size, semi-double white with various red stripes and splashes. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.79. Originated in Japan. (Believed extinct.)

Kajaku-tsubaki. Valdosta Camellias, ACS., Nov.1990, *The Camellia Journal,* vol.46, No.4, p.22. Corruption of the Japanese name 'Kujaku-tsubaki', (**Hakuhan-kujaku**).

Kajigasaku. (Personal Name), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.11: Very small size, deep red, sake cup form, single. Late blooming. Originated in the Chiba Prefecture, Japan.

Kajigawa. (Kaji River), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.34, colour photo, p.207, description: Small, blush pink, of 5 irregular sized petals, cup shaped, and a butter yellow, compact stamen cluster. Leaves broad-lanceolate, apex abrupt acuminate, finely serrate, glossy, mid-green. An old camellia in the Kansai district, origin obscure.

Kajun. (obscure), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.709: Medium size, dark crimson, single. Originated in Japan. (Believed extinct.)

Kakawaji-tsubaki. (obscure), *(C.japonica),* Hamamatsu, Utakuni, 1825, *Setsuyô Kikan*, vol.23. No description. Originated in Japan. (Believed extinct.)

Kakehashi. (Suspension Bridge), *(C.japonica)*, Iwasaki, 1828, *Honzô Zufu:* Petals are single and white and have red dapples. Originated in Japan. (Believed extinct.)

Kakehashi. (Suspension Bridge), (Higo), Uekiya, Bunsuke, 1830, *Uekiya Bunsuke Hikki*. Hiratsuka, 1964, *Higo Camellia*, p.14, 41: Medium size, 8 cm across single Higo form, white with red and pink streaking and about 100 stamens in an open burst, gold anthers, yellow filaments. Originated in the Kumamoto Prefecture, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.33, colour photo.

Kakehi. (Raised Conduit), *(C.japonica),* Shirai, Mitsutarô, 1926, *Tsubaki Kai:* Bright red, single, large. Originated in Japan.

Kakezaemon. Hino, Sukekatsu, 1637, *Sukekatsukyôki.* Synonym for **Kageyuza'emon.**

Kaki. *(C.japonica),* Williams and Thompson, 1950, *American Camellia Yearbook*, p.40. No description. In a list of Japanese Camellias imported by Mr Uyematsu, Star Nursery, Montebello, California. The name is probably a corruption of its Japanese name as it is unknown in Japan. "Kaki" can mean either a hedge or a persimmon.

Kaki. *(C.japonica),* Roguson's Garden Nursery Catalogue, 1961: Light pink. Medium, formal double, erect growth. Mid-season blooming. Originated at Roguson's Garden Nursery, Florence, South Carolina, USA.

Kaki-ha-shiratama. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name 'Kakuba-shiratama', synonym for **Rôgetsu.**

Kakinomoto. (Personal Name), *(C.sasanqua),* Itô, Jukyô.1739, *Honzô Hanamaki'e:* Large size, deep pink flower. Originated in Japan. (Believed extinct.) Kakinomoto is the famous poet who compiled *Manyôshû.*

Kaki-no-uchi. (Growing within a Hedge), *(C.rusticana),* Tuyama, 1968, *Camellia of Japan,* pl.319, p.161, description, p.185: Leaves narrowly ovate-elliptic to elliptic, apex long acuminate, undulate, venation slightly impressed, about 6.2 cm long x 2.2 cm wide; petiole 5-6 mm long, hairy. Flowers, single, white with slightest nuance of pink, striped pink (Rose Madder 12/3) in various degrees. Petals 5, thin texture, irregularly lobulated. Staminal tube, 3.5 cm high, narrow, filaments white with brownish-black anthers. Flowers mid-season to late. Originated in the Shirahata-machi, Toyama Prefecture, Japan.

Kaki-no-uchi. (Inside a hedge). (Wabisuke). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.261 with colour photo; Small red single, tubular form and tubular stamens. Flowers early to mid-season. Leaves ovate, flat, medium size. Upright growth. A seedling of **Tarôkaja,** named by Sanae Taniguchi, Tokyo, Japan in the 1980s.

Kakirenge. (Persimmon Lotus Flower), *(C.japonica),* Shirai-bunko, 1789, *Shoshiki Hanagatachô;* Iwasaki, 1828, *Honzô Zufu:* This flower has many pink petals which resemble cherry blosson. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.78. Originated in Japan. (Believed extinct.)

Kakitsu. Sakata Catalogue, 1939; Chûgai Catalogue, 1939-1940. Different reading for **Hanat-achibana.**

Kakôden. (Temple of Flower Fragrance). *(C.japonica),* Chinka-en Niigata Retail Price List, 1994-1995 with colour photo: small red single with central bunch of stamens. Originated in Japan.

Kakubanzan-kurenai. (Kakuban Mountain Red), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.11: Small to medium size, deep red, campanulate single. Blooms early to mid-season. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.56 with colour photo; English translation p.37. Small to medium size, deep red, tubular to trumpet shaped single with thick petals, plicate in the centre, cylindrical stamen cluster. Flowers early to mid-season. Leaves elliptic, medium size, flat. Upright, vigorous growth. Selected from wild japonicas in Tottori Prefecture, named and released by Nobuo Sasai in 1981. From Tottori to Okayama Prefecture.

Kakuba-shiratama. Minagawa, 1933, *Chinkashô.* Different reading 'Kakuha-shiratama'. Corruption: 'Kaki-ha-shiratama'. Synonym for **Rôgetsu.**

Kakuchôcha. Yashiro, 1841, *Kokon Yôrankô,* vol.306. Different reading for the Chinese **Heding.**

Kakuha-shiratama. Satomi, 1956, *Camellia Varieties in Japan*, p.8. Different reading for 'Kakuba-shiratama', synonym for **Rôgetsu.**

Kakugan. Fendig, 1953, *American Camellia Catalogue* as a synonym for 'Shiro-kiji' a corruption for **Shiragiku.**

Kakuju. (Felicitations on long life), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.260, p.115, description, p.237: Large, campanulate, crimson single, 8 cm across with golden anthers and pinkish filaments in a compact stamen cylinder. Early flowering. Leaves, elliptic, 11 cm long, mid-green, serrate, apex acuminate. See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.32, 206; Yokoyama & Kirino, 1989, *Nihon no Chinka* p.211, colour photo and description. Originated in Toyama, Japan. Different reading: 'Kakujyu'. Local synonym: 'Daifukkô'. Nippon Tsubaki - Sasanqua Meikan, 1998, p.56 with colour photo; English translation p.37. A natural seedling of **Seiôbo.** Found by Hideo Hori in 1980s, named and released by Zenji Kamo.

Kakujyu. Seibundô Shinkôsha, 1979, *Senchinshû*, p.32. Different reading for **Kakuju.**

Kakumôi. Sakata & Co. Nursery Catalogue, 1939. Different reading for **Tsuru-no-kegoromo.**

Kakure-iso. (Hidden Beach), *(C.japonica),* Andoh, 1974, *Tsubaki Nyûmon*, black and white photo No.65, p.51. Colour photo, p.27, Satô, 1975, *Chûbu no Tsubaki. Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.366. Tsutomu, Suzuki, 1984, *Chabana Koyomi, vol.1, Tsubaki*, p.63.. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.273. Seibundô Shinkôsha, 1979, *Senchinshû*, p.33, colour photo, p.206: Medium size, single, 8-9 cm across, 6-7 petals, purplish scarlet at haft, becoming closely veined and having a definite, white edge, flat with some fluting at apex. Compact stamen cylinder with golden anthers and creamy filaments. Early to mid-season flowering. Medium, compact, upright growth, a little weak. Early to mid-season flowering. Originated in Kansai, Japan. A sport of **Nihon-no-homare.** Synonym: 'Kyô-no-homare'. Chinese synonym: 'Jinsiyu', later changed to 'Yinji'.

Kakure-mino. (Straw Raincoat of Invisibility), *(C.japonica), Tsubaki Meikan*, 1968, Chûbu Tsubaki Kyôkai. No description. Originated in the Chûbu District, Japan.

Kakuresato. (Hidden Village), *(C.sasanqua),* Hakoda, JCS., 1987, *Tsubaki*, No.26, p.45; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.34, as 'Kakure-sato': Medium size, rose-pink, single. Early blooming. Originated in Tokyo Prefecture, Japan.

Kakusei. (Crane's Call). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.56 with colour photo; English translation p.37. Small, white, tubular to trumpet shape single, slender petals, plicate in the centre, cylindrical stamens. Flowers early to mid-season. Leaves elliptic, medium size, flat. A chance seedling of **Hatsu-arashi,** originated by Nobuo Sasai in 1983, released in 1997. From Okayama Prefecture.

Kalaidun. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.409; Chinese synonym for the USA *C.japonica* **Clarise Carleton.**

Kalaien. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.139. Chinese synonym for **E.T.R. Carlyon.**

Kalanchoe. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.19. Synonym for **Kingyo-tsubaki.**

Kalarena. *(C.japonica), American Camellia Yearbook*, 1954, p.317, Reg. No.177: A chance 20 year old seedling originated by J. Hertz Brown, Spartanburg, South Carolina, USA, that flowered for the first time 1950. Plant growth is upright and slow with oval, dark green leaves, deeply serrated. Flowers are formal double, similar to **Alba Plena,** watermelon red, 30-50 incurved petals, tipped with purple, similar to 'Mathotiana' (**Julia Drayton**), 10-12 cm across. Flowers mid-season.

Kalgoorlie Storm. *(C.japonica),* ACRS, *Camellia News,* 1992, No.123, p.4, Reg. No.405: Originated by Keith Abbott, Rossmoyne, Western Australia. A chance seedling that first flowered 1985. A formal double red (RHS.CC.72D) flower of 66 petals, 9 cm across x 5 cm deep. Early flowering on a dense, upright, rapid growing bush. Leaves matt green, oval and curled, acute apices, serrulate, 12 cm long x 7 cm wide. Folded petals, free flowering. Flowers shed whole.

Kalimna. *(C.reticulata),* ACRS., 1970, *Camellia News*, No.40, p.26, Reg. No.123: Originated by E.R. Sebire, Wandin North, Victoria, Australia. A chance seedling of 'Crimson Robe' (**Dataohong**) that first bloomed 1967. Plant habit is open, upright and vigorous. It produces 15 cm, bright red, incomplete double flowers with 16 upright, wavy petals in mid-season. The deep green leaf is 11 cm x 5 cm, reticulate with pronounced serration.

Kallista. Waterhouse, 1952, *Camellia Trail*, pp.18, 27. Synonym for **Contessa Paolina Maggi Rosea.**

Kaloer. Gao, Jiyin, 1993, *The Observations from the Camellia World,* p.68, No.542. Chinese synonym for the Australian *C.pitardii* hybrid **Annette Carol.**

Kaluoer Boshi. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.76, No.333. Chinese synonym for the USA *C.reticulata* hybr. **Dr Emil Carroll.**

Kaluolin. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.409; Chinese synonym for the USA *C.japonica* **Caroline Browne.**

Kalvisi. van Geert Nursery Catalogue, 1845. Orthographic error for **Calvi.**

Kalvisii. Catalogue des plantes cultiveés la Société d'Horticulture de Belgique, 1842, p.22. Orthographic error for **Calvi.**

Kamakichi. (Personal Name), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû*- in the section for yellow variegated leaves. Kamakichi is the name of a nurseryman. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.166. Synonym: 'Kama-tsubaki'. Originated in Japan. (Believed extinct)

Kamakichi-kifu. (Kamakichi's Yellow Variegated), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû.* Listed in the section for yellow variegated leaves. The pattern of variegation is different to the former camellia. Flower, small size, white. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.166. Originated in Japan. (Believed extinct.) Different readings: 'Kamakichi-kihu', 'Kamakichi-kimadara'.

Kamakichi-kifu. (Kamakichi's Yellow Variegated), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in section on variegated leaves: Small size, single, red flower. Originated in Japan. (Believed extinct.) See JCS., 1969, *Tsubaki*, No.7, p.37.

Kamakichi-kihu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.133. Different reading for **Kamakichi-kifu.**

Kamakichi-kimadara. Fendig, 1953, *American Camellia Catalogue.* Different reading for **Kamakichi-kifu.**

Kamakura. Nihon Shokobutsu Kaisha Ltd. Catalogue, 1912-1913. Synonym for **Kamakura--sazanka.**

Kamakura. (Place Name), *(C.japonica)*, Hino, Sukekatsu, 1637, *Sukekatsu Kyôki*, as 'Kamakura-tsubaki'; *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.698: Small, red, rose form double with 4-5 rows of imbricated petals. Originated in Japan. (Believed extinct.)

Kamakura. (Place Name), *(C.x vernalis)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.664; Shirai-Bunko,1789, *Shoshiki Hanagatachô:* deep red with white spots, large, long petals, opens widely. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.81. (Believed extinct.)

Kamakura-kifu. (Kamakura with variegated margin), *(C.japonica)*, Itô Ko'emon, 1879, *Chinkashû:* Small, red, single. Leaf with yellow margin variegation. Originated in Japan. Different reading: 'Kamakura-kihu'. (Believed extinct.)

Kamakura-kihu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.133. Different reading for **Kamakura-kifu.**

Kamakura-sazanka. (Kamakura sasanqua), *(C.sasanqua)*, Kaempfer, 1712, *Amoenatatum Exoticarum* as 'Commakura Sasanka': Red with white blotches. Single. Originated in Japan. Abbreviation: 'Kamakura'. (Believed extinct.) Note: This may be the same as the *C.x vernalis* **Kamakura** above.

Kamakura-shibori. (Kamakura Dappled), *(C.x vernalis)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.11: Red dotted white and flashed deeper pink. See colour photos: p.115, Satô, 1975, *Chûbu no Tsubaki; Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.563, p.219: Small sized, open, campanulate single with 6-7 petals, oblong, emarginate, red with white blotches; compact, central stamen column, anthers golden, filaments yellow. Leaves medium, mid-green, broad-ovate to elliptic, apex acuminate, recurved. A triploid cultivar of the "vernalis" group. Abbreviation: 'Kamakura'. Originated in Japan.

Kamakura-shibori. Synonym for the *C. x vernalis* **Shokkô-nishiki.**

Kamakura-tsubaki. Hino, Sukekatsu, 1637, *Sukekatsukyôki*. Synonym for **Kamakura.**

Kamanshi. (See Note). *(C.japonica), Nagoya Camellia Society Bulletin*, No.25, 1992, p.5, colour plate No.16: Originated by Kôji Funakoshi, Nagoya, Japan. A chance seedling of 'Saga-hatsuarashi' (**Hatsuarashi-saga**). Flower shape resembles **Tôkasen.** Medium single of 8 petals; dark pink, finely peppered red. Slightly fragrant. Blooms mid-season to late. Note: 'Kamanshi' was an ancient Chinese court singer, famous for her exotic beauty.

Kamasyaw. Forrest, 1985, *Trees and Shrubs Cultivated in Ireland*, from camellia cultivars grown at the Mt. Congreve Gardens. The name is thought to be a corruption of an unknown Japanese name. Probably the same as **Kamesyama.**

Kamata-kasuri. (Striped Flower from Kamata), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.505: Small single with irregular petals, red marked with white and greenish pink. Originated in Japan. (Believed extinct.) Different reading 'Kamata-tobi'iri'.

Kama-tsubaki. Hantei, Kinta, 1827, *Sômoku Kihin Kagami*. Synonym for **Kamakichi.** See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.159.

Kameda-kozakura. (Kameda Small Cherry), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.11. No description. Originated in the Shimane Prefecture, Japan.

Kameda-no-shiraume. (White Plum Blossom of Kameda), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.11. No description. Originated in the Shimane Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.333 as 'Kameda-Shiraume', with black and white photo; English translation p.228. Medium size, white, flat single, widespread stamens, very early to mid-season. Leaves elliptic, medium size. Upright, vigorous growth. Selected at a private family in Matsu'e City, named and released by San-in Camellian Club in 1983.

Kamegawa. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.119. Corruption of the Japanese name **Kamogawa.**

Kamegorô-hazamanofu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.133 as 'Kamegorô-hazamanohu'. Different reading for **Kamegorô-ainofu.**

Kamegorô-ainofu. (Kamegorô's Marble Variegation), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû* in the section of marble-like, variegated leaves. Originated in Japan. (Believed extinct.) Different reading: 'Kamegorô-hazamanofu'.

Kamei. (obscure). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.63 with colour photo; English translation p.42. Miniature, deep red single, cupped petals, tubular stamen cylinder. Flowers early to late. Leaves elliptic, medium size. Upright, vigorous growth. Selected from wild camellia community growing in Shiroyama, named and released by Shiroyama Camellia Lovers Club in 1996. From Miyazaki Prefecture.

Kamesawi. Forrest, 1985, *Trees and Shrubs Cultivated in Ireland. A* corrupt Japanese name, probably the same as **Kamesyama.**

Kamesyama. *(C.japonica)*, RHS., 1968, *The Rhododendron and Camellia Yearbook*, No.22, p.19: *Camellias at Windsor.* A corruption of an unknown Japanese name. Mount Congreve Garden Catalogue, 1967-1968, p.1: Double white.

Kameyama-no-yuki. (Snow on Kameyama), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.52, colour photo and description: Medium size, white, saucer-shaped, opening flat, single with 6-7 broad, over-lapping, emarginate petals, and a central stamen column with cream filaments, joined for the lower third, and yellow anthers. Blooms mid-season to late. Leaves dark green, elliptic. Selected from wild japonicas growing in Hamada City, Shimane Prefecture. Named and released by Kôsaku Masuda in 1980.

Kami-asobi. (Gods Playing), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan:* Large size, deep red with twisted petals. Originated in Japan.

Kamikaze. (Wind of the Gods), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Flower medium size, white, gradually becoming reddish towards the periphery. Originated in Japan. (Believed extinct.)

Kamila. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.409; Chinese synonym for the Italy *C.japonica* **Camilla Hebert.**

Kamimura. (Name of Town), *(C.japonica)*, Nagoya Camellia Society Bulletin, *Tsubaki*, 1977, No.10: Originated by Sadashi, Tateno, Kamimura, Japan. A chance seedling, single, lily-shaped, 8 cm across with 5 petals, each 8 cm long, with tea-whisk type stamen tube. White to very pale pink with greenish tint at base. Late blooming. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.62 with colour photo; English translation p.42. Flowers mid-season to late. Leaves somewhat narrowly elliptic, medium size, flat. Upright growth.

Kaminarimon-tsubone. (Thunder Gate - Court Lady), *(C.japonica)*, Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.133. May be a corrupted name for **Yoinimonsasu.** Listed p.36, Takeda, 1908, *Engei Burui.* See Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû*, No.6, p.139.

Kami-tsubaki. (God's Camellia), *(C.japonica)*, Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.56. No description. Originated in Japan.

Kamitsubame. (God's Swallow), *(C.japonica)*, Minagawa, 1949, *Chinkashû:* Small, white with red spots. Originated in Japan. Corruption of name: 'Kami-tsubani'.

Kami-tsubani. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Kamitsubame.**

Kamitsuma. (Principal Spouse), *(C.japonica)*, Iwasaki, 1828, *Honzô Zufu:* Small size, deep rose-pink, single, with round petals. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Yashiro, 1841, *Kokon Yôrankô* as: Pink, single, small. Said to be synonymous with 'Tsukimi-guruma-Nagoya'. Originated in Japan.

Kamiyama-nishiki. (Kamiyama's Brocade), *(C.rusticana)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.11: Very large size, pale rose-pink ground with small red dapples, double. Originated in Niigata Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.63 with colour photo; English translation p.42. Flowers mid-season to late. Leaves broadly elliptic, large, wavy. A chance seedling of **Ezo-nishiki,** collected in Niigata City, named and released by Jirô Kamiyama in 1969.

Kamiyo-tsubaki. Katayama, 1960, *Tsubaki Ochabana.* Different reading: 'Jindai-tsubaki'. Synonym for **Aki-no-yama-Kansai.**

Kamiyotsubaki. *(C.japonica), Kyoto's Camellias*, 1996, Mizuno Katsuhiko, No.19 with colour photo; Semi-double light red with separated layers of petals. Growing at the Reikan-ji Temple, Kyoto, Japan.

Kamo. (Place Name), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.108: Medium size, dark vermilion, incomplete, three tiered double with a double row of outer guard petals, a ring of stamens, a crown of vertical petals with stamens in the centre. Originated in Japan. (Believed extinct.)

Kamo-fukurin. (Kamo's Bordered Flower), *(C.rusticana)*, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, 1967, p.30, black and white photo. For colour photos see: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.367; Seibundô Shinkôsha, 1980, *Senchinshû*, p.37, colour photo, p.207; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.274, colour photo and description: Small, 6-8 cm across, pale pink single with dark pink petal margins, globe shaped, Stamens irregularly cylindrical, Early blooming. Leaves large, wide-ovate, petioles hirsute. Said to be a sport of **Rôgetsu,** named by Takeshi Watanabe in 1966. Originated in Toyama Prefecture, Japan by Kamo Yoshiharu.

Kamogawa. (The River through Kyôto), *(C.japonica)*, Minagawa, 1933, *Chinkashû.* For colour photos see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.73, p.61; Tuyama, 1968, *Camellias of Japan*, pl.27, p.14, description, p.93; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.39; Seibundô Shinkôsha, 1979, *Senchinshû*, p.36, colour photo, p.207: Leaves small, ovate-elliptic, light green. Flower, white, saucer shaped, single 6-7 petals; stamens in a ring, broad and short, anthers scattered, filaments pale yellow. Flowers midseason to late. Originated in Chûbu, Japan. Corruption of name: 'Kamegawa'. Not the same as the ancient cultivar **Kamogawa**, following.

Kamogawa. (The River through Kyôto), *(C.japonica)*, Iwasaki, 1828, *Honzô Zufu: A* pink semi-double with small, red dots. Originated in Japan. (Believed extinct.)

Kamohonaja. Wada, 1941, *Japanese Garden Treasures.* Orthographic error for **Kamo-honnami.**

Kamohonami. Different reading for **Kamo-honnami.**

Kamo-honnami. (Personal Name), *(C.japonica)*, Chûgai Nursery Catalogue, 1934-1935, p.32: White, large, single. For colour photos see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.52;

Tuyama, 1968, *Camellias of Japan*, pl.19, p.10, description, p.90; Satô, 1975, *Chûbu no Tsubaki*, p.36; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.60; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.48; Seibundô Shinkôsha, 1979, *Senchinshû*, p.37, colour photo, p.208, as 'Kamohonami': This variety is a famous old bush camellia from the Kansai District, Japan. Leaves broadly-elliptic, apex shortly acuminate, flat, deep green with glabrous petioles. Flower widely cup-shaped, 10-12 cm across, white with a rare red tick; petals broad, rounded at apex, reflexing upwards; stamens in a compact, simple tube. Flowers early to late. "Kamo-honnami" refers to Honnami, Kôetsu, the name of a famous sword connoisseur and tea virtuoso, 1558-1637. Synonymous with **Mado-no-tsuki** of Chûbu. Different readings: 'Kamo-no-hon'ami', 'Kamohonami', 'Kamo-hon-ami'. Orthographic error: 'Kamohonaji'. Synonyms: 'Sotan', 'White Swan', 'Yoibijin Alba', 'Amabilis' (United States). In America it has been erroneously equated with **Amabilis** and **Yukimiguruma,** both of which are different and distinct cultivars. Sports: **Saga-honnami** and **Chûbu-manazuru.** *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.64 with colour photo; English translation p.43. Also said to be the same as **Hakkan.** Triploid.

Kamo-honnami Pink. ACRS. N.S.W. Foundation Branch Newsletter, Aug. 1987, No .7, p.6: A pink sport of **Kamo-Honnami.** Now reduced to a synonym for **Saga-honnami.**

Kamo-no-honami. Based on same characters as **Kamo-honnami.**

Kamo-hukurin. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.133. Different reading for **Kamo-fukurin.**

Kamo-nishiki. (Kamo Brocade), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.11. No description. Originated in the Ôsaka Prefecture, Japan.

Kamo-no-hana. (Flowers of Kamo), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.12. No description. Originated in the Ôsaka Prefecture, Japan.

Kamo-no-tsuki. (Moon of Kamo), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.36, description, p.207: Small size, very pale pink, campanulate single with a short, compact stamen cluster. Leaves ovate, mid-green, apex abrupt acute, shallowly serrate, Strongly recurved. Originated in Toyama Prefecture, Japan. Named and released by Zenji Kamo in 1980s.

Kamotsuru. (Kamo Crane), *(C.japonica)*, Satô, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.80; Satô, 1975, *Chûbu no Tsubaki*, p.49, colour photo and description: Medium to large size, white, open cup shaped single, 9 cm across, 5-6 large white petals with fluted edges and a large stamen circle with brownish yellow anthers and light cream filaments. Blooms early to midseason. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.51 as 'Kamozuru'. Originated in Chûbu, Japan. Different reading: 'Kamo-zuru'. A seedling of **Kamo-honnami** x **Hatsukari (Chubu).** Named and released by Minoru Satô in 1973.

Kamo-zuru. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.134. Different reading for **Kamotsuru.**

Kamuden Gongyuan. Shao, Taichong, 1992, *The Observations from the Camellia World*, p.80, No.389. Chinese synonym for the Australian *C.japonica* **Camden Park.**

Kamura-tairin. (Large Flower from Kamura), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Single, cardinal red with white dots and large, inner curved petals. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.79. Different reading: 'Shikamura-tairin'. Originated in Japan. (Believed extinct.)

Kanaikari. *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, white with red spots. Originated in Japan.

Kanaoka-otome. (Kanaoka Maiden), *(C.x vernalis),* Hakoda, JCS., 1987, *Tsubaki*, No.26, p.48; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.38: Medium size, crimson, formal double. Blooms mid-season. Originated in the Hyôgo Prefecture, Japan.

Kanade. (Playing Music). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.62 with colour photo; English translation p.41. Small, palest pink, tubular to trumpet shaped single, plicate at the petals centres, cylindrical stamens. Flowers early to mid-season. Leaves elliptic, medium size, flat. Somewhat upright. A chance seedling of **Tulip Time,** originated by Nobuo Sasai in 1984, released in 1997. From Okayama Prefecture.

Kanagi-hôgetsu. ('Hôgetsu' from Kanagi). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.333 with black and white photo; English translation p.228. Small to medium size, pink anemone. Flowers mid-season. Leaves elliptic, medium size, thick. Upright growth. Selected from a private garden in Kanagi Town, Shimane Prefecture. Named and released by San-in Camellian Club in 1993.

Kanasugi. (Personal Name), *(C.japonica),* Mizuno Motokatsu, 1664, *Kadan Kômoku:* White spotted red, double. Originated in Japan. (Believed extinct.)

Kanasugi-sangai. (Three Layer Kanasugi), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.459; Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Shirai-Bunko, 1812, *Tsubaki Nayosechô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.15; pale persimmon colour to white with red streaks, 4-5 rows of petals. Large size, peony form with red streaks on pink ground. Originated in Japan. (Believed extinct.)

Kanayama. (Personal Name), *(C.japonica),* Yashiro, 1841, Ichijima, 1906, *Kokon Yôrankô*, reprint. No description. Originated in Japan. Different reading: 'Kinzan'. (Believed extinct.)

Kanbe. (Personal name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.68 with colour photo; English translation p.46. Medium size, vermilion, bud-centred formal double, split stamens. Late flowering. Leaves narrowly elliptic, medium size. Upright, vigorous growth. One of the beloved camellias by Shôichi Kanbe, ex-assistant professor at Tokyo University, who died in World War II. Named and released by Totsurô Nakamura in 1994. From Tokyo.

Kanbe-shibori. (Kanbe's Brocade). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.68 with colour photo; English translation p.46. Medium size, white mottles on vermilion ground. Other details as for **Kanbe.** A virus-variegated form of **Kanbe,** named and released by Totsurô Nakamura in 1994. From Tokyo.

Kanbotan. (Winter Peony), *(C.hiemalis),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.38: Small size, deep red to crimson, lotus form double. Blooms early to mid-season. Chinese synonym: 'Xiaomeigui'. Originated in the Niigata Prefecture, Japan.

Kancilang. Gao & Zhuang, 1989, *The Camellia in China*, p.74, No.544. Chinese synonym for **Kanjiro.** Previous spelling 'Kanchilang'.

Kanda-an. (Kanda's Hermitage). *(C.japonica), Kurume Camellia*, 1997, English translation, p.23; Bright pink, medium size tubular single. Flowers mid-season. Originated in Japan.

Kandachi-no-kurenai. (Kandachi Red), *(C.japonica),* ICS., Apr.1990, *Japanese Cultivar List*, p.11: No description. Originated in the Shiane Prefecture, Japan.

Kandakasuri. (Kanda Variegated), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.376: Small, white, single with dashes of violet pink and a short stamen cylinder with white anthers. Different reading: 'Kanda-tobi'iri'. Originated in Japan. (Believed extinct.)

Kanda-kôtokuji. (Kôtoku Temple in Kanda), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.175: Small, crimson, formal double with the colour fading towards the petal margin. Originated in Japan. (Believed extinct.)

Kanda-tobi'iri. Different reading for **Kandakasuri.**

Kânei-shyon-tsubaki. (Carnation Camellia), *(C.japonica),* Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, A-213. Different reading for **Kânêshon-tsubaki.**

Kânêshon-tsubaki. (Carnation Camellia), (*C.rusticana*), *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.168, p.92, description, p.315: Crimson, full peony form, 8-9 cm across with 13-16 waved and twisted petals like the flower of a carnation. Leaves obovate-elliptic, apex tapered acuminate, olive green, venation lightly impressed, margins sharply serrate. An old tree of about 200 years survives in Kurume City, Fukuoka Prefecture, Japan. Released in 1967 by Kurume Camellia Research Group. Different readings: 'Kâneishyon-tsubaki', 'Carnation-tsubaki'.

Kangahaha. (Tough Mother), *(C.japonica),* Sakuden, 1630, *Hyakuchin Shû:* Small, single, red with cylindrical stamen column. Different reading: 'Tsuyo-shigahaha'. Originated in Japan. (Believed extinct.)

Kangen. (Wind & String Musical Instrument), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan*, pl.226, p.114, description, p.158 as 'Kan-gen': Leaves broadly-elliptic to broadly-oblong, apex shortly acuminate, depressed, serrulate margins, 6.6-9.2 cm long x 3.3-4.5 cm wide. Flower peony type, red, (Rose Opal 022) petals strongly wrinkled. Exterior petals, 12-15, widely emarginate and shallowly crenate. Stamens 2.9-3.5 cm high, irregular, spiralled or in a double circle, filaments pinkish yellow, becoming deep pink at the base, intermingled with petaloids and 7-10, small inner petals. Late flowering. Originated in Kamanaka Spa, Ishikawa Prefecture, Japan.

Kanglade Xierdun. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for **Shiro-daikagura** as 'Conrad Hilton'.

Kangmubo. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.81, No.419. Chinese synonym for the USA *C.reticulata* hybrid **Jean Comber.**

Kangte. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.426; Chinese synonym for the Italy *C.japonica* 'Conte Cavour' **(Conte di Cavour).**

Kani-obune. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Ama-obune.**

Kanjirô. (Personal Name), *(C.hiemalis),* Takii & Co. Ltd., 1954, *Engei Shinchishiki:* Deep rose shading to red at the petal margins. Large, semi-double. Originated in Japan. Synonyms: 'Utamakura', 'Tachikan-tsubaki', 'Hiryu'(Australia), 'Australian Hiryo', 'Australian Hiryu', 'Kankobai', 'Nagoya-sazanka', 'Beni-sazanka'. Chinese synonym: 'Kancilang'. For colour plates see: p.175, Macoboy, 1981, *The Colour Directory of Camellias* and pl.535, *Encyclopedia of Camellias in Colour*, vol.1, 1972, p.214. Very widely propagated in Japan and other countries.

Kanjirô-sazanka. Kondô, 1976, *American Camellia Yearbook*, p.111. Local Japanese name for *C.hiemalis.*

Kanjitsu. (Leisure Day), *(C.rusticana),* Tuyama, 1968, *Camellias in Japan*, pl.238, p.120, description, p.162 as 'Kan-jitsu': Leaves oblanceolate-elliptic, base cuneate, apex shortly acuminate, venation slightly impressed, margins minutely and densely serrulate., 7.7-8.6 cm long x 3.0-3.9 cm wide. Flowers peony type, dark pink, (Spinel Red 0023) but paler pink (Crimson 22/2) in the centre with a long, thin staminal group. Petals 12-18, central ones irregular and loosely wavy, deeply emarginate. Stamens divided, filaments creamy. Flowers mid-season to late. Originated in Japan by Mr Yasui, Yatsuo-chô, Toyama Prefecture, Japan.

Kanka. (Flower Festival), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Yashiro, 1841, *Kokon Yôrankô:* The corolla is wide and

variegated with a splashed pattern of red spots and a white ground. Large double. Originated in Japan. (Believed extinct.)

Kankai-yusaemon. Different reading for **Kageyuza'emon.**

Kanka-kagiri. (Flower Festival Limits), *(C.japonica)*, Usami, Naohachi, (ca.1910), *Nagoya Chinzu'e:* Large size, double, white. Resembles Kanka but no variegation. (Believed extinct.) See: Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû*, No.6, p.127. Originated in Japan.

Kanka-shibori. (Kanka Brocade), *(C.rusticana)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* White, streaked and blotched pink. Large, peony form. For colour plates see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.198; Tuyama, 1968, *Camellias of Japan*, pl.382, p.203, descrip., p.203; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.331, p.340; Shufu-no-Tomo-Sha, 1976, *Tsubaki to Sazanka*, p.29; Seibundô Shinkôsha, 1979, *Senchinshû*, p.39, description, p.208: Leaves elliptic to ovoid-oblong, apex long acuminate, margins finely serrulate; petioles copiously hairy. Flowers of peony form, white, sparsely striped with rose. (Spinel 0625/1) Flowers mid-season. Originated in Japan. "Kanka" is an abbreviation of "Kanka-en", a Camellia Garden of the Edo period. Sport: **Fuiri-kanka-shibori.**

Kanki. (Ecstacy), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.39, colour photo, p.208, description: Medium size, red, semi-double with 2-3 rows of large, cordate petals. The centre consists of a few, short stamens and an occasional, erect, small petal. Leaves ovate, dull, mid-green, margins serrulate, apex blunt acute. Originated in Jo'etsu City, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1970.

Kanki. (Bright Circle). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.67 with colour photo; English translation p.44. Small, crimson with white border, tubular to trumpet shaped single, slender petals and tubular stamen cylinder. Flowers mid-season to late. Leaves somewhat narrowly elliptic, medium size. Upright growth. A chance seedling of **Tama-no-ura,** originated by Seiichiro Sasai in 1985, named and released by Nobuo Sasai in 1997. From Okayama Prefecture.

Kankô. (Winter Sun), Satomi, 1956, *Camellia Varieties of Japan:* Synonym for **Karabenten.**

Kankô. (Famous Poet), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.361, p.183, description, p.197: Leaves large, thick, ovate to ovate-elliptic, apex suddenly acuminate, venation impressed, manifestly serrate at margin, 6.8-7.5 cm long x 4.1-5.4 cm wide. Flowers large, rosy pink with some deep, rosy red stripes, (Rhodonite Red 0022) semi-double, sometimes with petal edges white, petals loosely wavy, 8-12 large petals with 1-4 smaller, accessory petals. Stamens 3.5 high, a little irregular, often divided, filaments pale cream, and a few small, fan shaped petaloids. Flowers mid-season. Produces a number of sports of white, white with red streaks, or red flowers. For other colour plates see: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.401; Seibundô Shinkôsha, 1980, *Senchinshû*, p.39. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.351.; Originated in Japan in Kurume, Fukuoka Prefecture. Named and released by Takashi Tsuyama in 1960. "Kankô" was the "nom de plume" of the famous poet Sugawara, Michizane, from Dazaifu.

Kankôbai. (Winter Red Plum), (Higo), Tamura, Teruo, 1956, *Higo Tsubaki*, *Shinkaki*, No.9: Red, single, with spreading stamens. Early flowering. Originated in Kumamoto Prefecture, Japan.

Kankôbai. (Winter Red Plum). (*C.reticulata* x *C.sasanqua*). *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.67 with colour photo; English translation p.45. A medium to large, red single with apricot stamens like a Higo. Flowers mid-season. Leaves elliptic, medium size, dull. A cross between 'Crimson Robe' (**Dataohong**) and **Crimson King,** named and released by Kazuo Yoshikawa in 1996. From Osaka.

Kankobai. Hakoda, JCS., 1987, *Tsubaki*, No.26, p.48. Synonym for the *C.hiemalis* **Kanjirô.**

Kankodori. Different reading for **Yobukodori.**

Kanko-nishiki. Vanderbilt, 1940, *Camellia Research*, p.3, as 'Danko-nishiki'. Probably intended for **Kanka-shibori.**

Kannon-cha. Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details.

Kannong. Gao, Jiyin, 1993, *The Observations from the Camellia World*, p.63, No.450. Chinese synonym for the USA *C.japonica* **Marguerite Cannon.**

Kannonji. (Kannon Temple), *(C.x vernalis)*, Tanaka et al., 1986, *Journal of Japanese Society of Horticultural Science*, 55(c):208. JCS., 1987, *Tsubaki*, No.26, p.50. A triploid cultivar of *C.x vernalis* from Japan. Medium size, semi-double, red, petaloid centre. Leaves 5.1 cm x 2.8 cm. Originated in Fuku'oka Prefecture, Japan.

Kannonji. (Kannon Temple), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.618: A small, dark crimson, anemone with a central cushion of white petaloids. (Believed extinct.) Originated in Japan.

Kannonji-tsubaki. (Kannon Temple Camellia), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* A red semi-double with white petaloids similar to **Bokuhan.** It is possible that this is the same as **Bokuhan.** The original tree was planted in the Kannonji, Shiga Prefecture.

Kanoke-ori-nishiki. Different reading for **Kageori-nishiki.**

Kanoko. (Fawn), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan:* Dark red, medium size. Originated in Japan.

Kanoko-shibori. (Dappled Fawn), *(C.japonica)*, Uekiya, Seijirô, 1874, *Tsubaki Hyakuro no Zu*, vol.2, No.36: Single with 5 large, rounded, emarginate petals of pink with red markings towards their apex. A short, stamens cluster of large diameter in the centre. Leaves elliptic, acuminate, serrate. Originated in Japan.

Kanose. (Village Name), *(C.japonica)*, Satomi, 1956, *Camellia Varieties of Japan*, p.17: Soft pink. Large semi-double to double. Vigorous, upright growth. Mid-season blooming. A place famous for its wild *C.rusticana.* Originated in Japan.

Kanose. (Village Name), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.207, p.105, description, p.151: Leaves ovate-elliptic to broadly elliptic, rounded at the base, acute at the apex, minutely serrulate at the margin, 6.7-7.5 cm long x 3.4-4.1 cm wide; petioles 7-8 mm long, very hairy. Flowers widely opened, irregular semi-double. Hairy petals 3, normal petals 13-16, the largest 6.5 cm long x 5 cm broad, often with additional, small petals erect among the stamens. Stamens 3.2-3.7 cm high, a little irregular, filaments deep creamy, palest pink downwards. Flowers midseason to late. Originated in a private garden, Kanose, Niigata Prefecture, Japan. Named by Mr Kawamura in 1964. See Seibundô Shinkôsha, 1979, *Senchinshû*, p.36, colour photo, p.207, description.

Kanro. *(C.japonica)*, Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.134 as 'Kan-ro'. No description. Originated in Japan.

Kansai-aki-no-yama. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.196, p.100. Different reading for **Aki-no-yama-Kansai.** Synonym: 'Kamiyo-tsubaki'.

Kansai-hagoromo. *Encyclopedua of Camellias in Colour*, vol.I, 1972, pl.215, p.106. Synonym for 'Haruno-akebono'. Different reading: 'Hagoromo-Kansai'.

Kansai-hô-ô-nishiki. Hakoda, JCS., 1987, *Tsubaki*, No.26, p.45. Synonym for **Momoyama.**

Kansai-kokuryû. (Black Dragon of Kansai), *(C.japonica)*, *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.363, p.156, description, p.346: Deep dark crimson, rose form double to anemone form with 34 rows of imbricated, outer petals and a centre, mostly of petaloids with a few

anthers visible. Blooms late. Leaves dark green, lanceolate, apex tapering acuminate, margins serrulate. See also colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, p.39, and p.383, Yokoyama & Kirino, 1989, *Nihon no Chinka.* A different cultivar from the **Kokuryû** from Kantô, which has a formal double form. Originated in the Kansai area, Japan.

Kansai-murui-shibori. Seibundô Shinkôsha, 1979, *Senchinshû*, p.40. Synonym for **Murui-shibori-Kansai.**

Kansai-negishikô. (Negishikô from Kansai), *(C.sasanqua)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.34: Medium size, crimson, single. Early blooming. Originated in Ôsaka Prefecture, Japan.

Kansetsu. (Crown of Snow), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.325, p.137, description, p.246: A medium size, white, campanulate single, 6-7 cm across, 5-6 thick petals, short, pale yellow, stamen cylinder. Blooms early to late. Leaves ovate, apex blunt acute, fine, shallowly serrulate margins, whitish mid-green. Originated in Yamagata Prefecture, Japan. A cultivar from a private family in Yonezawa City, named and released by Tokuji Ôoka in 1972. See also colour plate: Seibundô Shinkôsha, 1979, *Senchinshû*, p.40. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.31.

Kansitori. Fendig, 1953, *American Camellia Catalogue* as 'Kansi-tori'. Corruption for the Japanese name 'Kankodori', different reading for **Yobukodori.**

Kantan. (Ancient Chinese Place Name), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.379, 540: Large, white, peony form flower with yellow stamens and white filaments. (Believed extinct.) Originated in Japan.

Kantan. (Meaning not certain), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô:* Large, semi-double, white with red streaks. Yashiro, 1841, *Kokon Yôrankô* and Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Descriptions similar to that of the *Kadan Chikinshô.* Originated in Japan. (Believed extinct.)

Kantani. ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.13. Orthographic error for **Kontani.**

Kantanka. (Winter Red Flower). *(C.japonica)*, Yamaguchi Tsubaki-en, 1995-1996, No.618, Mail Order List: Originated by Yamaguchi Tsubaki-en as a chance seedling of **Shiro-tarô'an.** Bright red, cup-shaped, medium sized single with cylindrical stamen column. Flowers mid-season to late. Petals heavy texture and keep shape well. Originated in Japan.

Kantebolei. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.413; Chinese synonym for the New Zealand *C.japonica* **Canterbury.**

Kantô-hanamiguruma. (Kantô Flower Viewing Carriage), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.40, colour photo, p.209, description: Large, single with 6-7, large, rounded petals, soft pink background, finely peppered and streaked carmine. Stamens in a large diameter, central cluster, like a Higo form. Leaves dark green, elliptic, recurved, margins serrulate. See p.280, 281, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated in Kantô, Japan.

Kantô-kyônishiki. (Kantô Capital Brocade), *(C.japonica)*, Shufu-no-Tomo-sha, 1976, *Tsubaki to Sazanka*, p.29, colour photo: Medium size, single, 6-7 large petals, white to pale blush pink, peppered and streaked with red. Central stamen cylinder with golden anthers, pale, cream filaments, united in the lower half. Leaves rather small, elliptic, lustrous mid-green, apex tapered acuminate, margins serrulate, veins distinct. The variegated camellia from Kantô, Tokyo, Japan. Said to be a seedling of **Kokinran.** Resembles **Kaza-ore.** Synonym: 'Kyônishiki'. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.40, colour photo; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.259, colour photo.

Kantô-shikainami. Synonym for **Shikainami.**

Kantô-sukiya. (Wabisuke) Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. Camellia from the Edo period. Flowers early to midseason.

Kantô-tsukimiguruma. (Kantô Moon Viewing Carriage), *(C.japonica)*, Shufu-no-Tomo-sha, 1976, *Tsubaki to Sazanka*, p.29, colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, p.40, colour photo, p.209, description: Small size, tubular to campanulate, soft pink, single with compact, stamen centre. Blooms mid-season to late. Leaves olive green, elliptic to obovate, base cuneate, apex tapering acuminate, margins serrulate. See colour photos: Katei Gahô, ed., 1984, *Chabana Koyomi*, *vol.1*, *Tsubaki*, p.49; Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.124, 125. Originated in Kantô district, Japan. Synonyms: 'Tsukimiguruma', 'Momo-wabisuke'. See Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, pp.25 & 210. Chinese synonym 'Kantu'.

Kantô-tsubaki. Setoguchi, 1962 as a group name for the camellias from the Kantô area, Japan.

Kantô-yûzuki. (Kantô Evening Moon), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.40, colour photo, p.209: Small, pink, campanulate, single with irregular sized petals and a compact stamen column. Leaves elliptic, dark green, apex acuminate, margins serrate, recurved. Originated in Kantô district, Japan. Synonym: 'Nerima-tsubaki'.

Kan-tsubaki. 'Winter Flowering Camellia'. A Japanese name for *C.hiemalis* Nakai. Also used as a synonym for **Shishigashira.** Reference: *Nihon Engei Kai Zasshi*, 1894. Also listed by Minagawa, 1933, *Chinkashû* as early blooming, true red, small size, double.

Kan-tsubaki. *(C.hiemalis).* Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, 1997, p.1: Medium size bloom, white shading to pink, formal double, on a slow growing, upright plant. Originated in Japan.

Kantu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.426; Chinese synonym for the Japan *C.japonica* **Kantô-tsukimiguruma.**

Kanya-no-tami. Sakuden, 1630, *Hyakuchinshû.* Different reading for **Samuyo-no-tami.**

Kan-yobukodori. (Kan's Cuckoo), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.79, colour photo and description: Medium size, pale pink, urn-shaped single with 5-6 variable petals, some rounded, others pointed due to rolled in lateral margins, central stamen column, ivory filaments, joined for the lower third, anthers light yellow. Blooms mid-season to late. Originated in the Ehime Prefecture, Japan. An old tree survives in Komatsu Town, history obscure. Named and released by Yoshiteru Kan around 1970.

Kanyô-bukuro. Wada, 1941, *Garden Treasures of* Japan as 'Kanyo-bokuro'. Different reading for **Kan'yôtai.** Corruption of the name: 'Kanyôbukuro'.

Kanyohtai. Andoh, 1971, *Tsubaki. Meika no Shôkai to Saibai*, p.214. Different reading for **Kan'yôtai.**

Kan'yôtai. (Imaginary bag of sun's heat kept for winter), *(C.japonica)*, Minagawa, 1933, *Chinkashû.* Wada, 1941, *Garden Treasures of Japan*, p.30, as 'Kanyôbukuro': Large, smooth petalled double, fine red. For colour plates see: Tuyama, 1966, *Camellia Cultivars of* Japan, pl.115; Tuyama, 1968, *Camellias of Japan*, pl.185, p.94, description, p.144; *Encyclopedia of Camellia in Colour*, vol.I, 1972, pl.172; Seibundô Shinkôsha, 1979, *Senchinshû*, p.40, description, p.209: Leaves elliptic to ovate-oblong, flat, venation slightly impressed. Flowers semi-double, rosy red, (Crimson 22/1) petals standing apart, outer petals slightly recurved, inner erect, stamens sometimes divided. Flowers mid-season. Originated in the Hyôgo Prefecture, Japan. Different readings: 'Kanyôtai', 'Kanyohtai', 'Kan Yotai', 'Kanyô Tai', 'Kanyô-bukuro'. Corruption of name: 'Kanytotea'.

Kanyototea. McIlhenny Catalogue, 1946-1947. Corruption of the Japanese name **Kan'yôtai.**

Kanzaki. (Winter Flowering), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:*- Single, winter blooming. There are two types, one white, the other is red. Originated in Japan.

Kanzaki-aka-wabisuke. (Winter Flowering, Red Wabisuke), (Wabisuke), Katayama, 1960, *Tsubaki Ochabana:* Small, single, red. Flowers early. For colour plates see: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.276; Katei Gahô, ed., 1984, *Chabana Koyomi, vol.1 Tsubaki*, p.55; Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.160, 161. Seibundô Shinkôsha, 1979, *Senchinshû*, p.40, description, p.208: Petals of irregular length, 3 long oval petals and 3 short ones around a small, abortive, stamen cluster. Leaves oval, flat, rigid, bright mid-green, cuneate base, tapering acuminate apex, serrulate margins. Originated in Kansai district, Japan. Old trees are found in the Mikawa District, Aichi Prefecture. Sometimes erroneously known as 'Aka-wabisuke'. For botanical drawings, colour photo and description see pp.35, 36, 38, Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No.11. Synonym: 'Aka-wabisuke'(Kanaoka). Resembles **Beni-wabisuke** but flowers and leaves are smaller.

Kanzaki-tsubaki. Tokio Kon-en, 1928. Synonym for **Kanzaki.**

Kanzaki-yabu. (Winter Flowering Bush Camellia), *(C.japonica)*, Hagiya, 1984, ACS., *The Camellia Journal*, vol.39, No.2, p.18. The wild bush camellia, winter flowering. Originated in Japan.

Kanzaki-yatarô. (Winter Flowering Yatarô), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.40, colour photo, p.209, description: Medium size, carmine, formal double with round, concave petals and a bud centre. Leaves broad-lanceolate, apex abrupt acuminate, dark, glossy green, venation slightly impressed, margins shallowly serrate. Originated in Kansai District, Japan. Discovered by Yoshio Nishihata, named after the owner, released in the 1950s.

Kanzakura. (Winter Cherry), *(C.hybrid)*, ICS, Apr.1990, *Japanese Camellia Cultivar List*, p.28: Small size, rose-pink, fragrant, double. A seedling of **Flower Girl** x *C.granthamiana.* Originated in Ôsaka Prefecture, Japan. Named and released by Kazuo Yoshikawa in 1980.

Kaoersong. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.411; Chinese synonym for the USA *C.japonica* **Bill Colsen.**

Kaokesi. Gao, Jiyin, 1993, *The Observations from the Camellia World*, No.573, p.70. Chinese synonym for the USA *C.japonica* 'Frank Cox'.

Kaomise. (Debut), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.31, description, p.205: Medium size, red, peony to anemone form, with large, outer, guard petals surrounding a centre of small, twisted and folded petals. Leaves, obovate, mid-green, apex acuminate, margins finely serrulate. Petiole hirsute. Originated in Arai City, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1970.

Kaomajima. SCCS., 1987, *Camellia Nomenclature*, p.135. Corruption of the name **Kaonajimi.**

Kaonajimi. (Familiar Face), *(C.rusticana)*, Hagiya & Ishizawa, Mar.1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, black and white photo (6); colour photo, Seibundô Shinkôsha, 1979, *Senchinshû*, p.31, description, p.205: Medium size, 8 cm across x 3 cm deep, scarlet, double with 3-4 rows of large, outer petals, totalling 20, mostly cordate, with the centre row erect around a small, divided centre of stamens, 15-30 in number, and the odd petaloid, filaments dark yellow. Blooms mid-season. Leaves narrow-elliptic to ovate, 7-8 cm long, base cuneate, apex tapering acuminate, margins shallowly serrate, dark green. Petiole hirsute. Originated in Nakakanbara-gun, Niigata Prefecture, Japan. Corruption of the Japanese name: 'Kaomajima'.

Kaori. (Fragrance Breaking), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.11. No description. Originated in Nagasaki Prefecture, Japan.

Kaori-botan (Fragrant Peony) (*C.japonica*) from Kodaira, Tokyo, *Japan Camellia* No.84, August 2007: Purplish red, peony form double, medium, occasionally split stamens, fragrant, blooming in

February to April. Leaves elliptic, medium. Tree upright. A crossing between a large flowered double and **Kôshi**. Produced by Shinichi Noguchi and named in 2003.

Kaori-gozen. (Fragrant Lady), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.12: Medium size, pale pink ground, striped light red, sake cup single. Fragrant. Blooms mid-season to late. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.54 with colour photo; English translation p.35. Selected from wild japonicas growing on Miyakejima Island. Released by Takeo Ogawa in 1989. Former name 'Hinoyama Yatô'.

Kaori-hime. (Fragrance Weaving Princess). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.54 with colour photo; English translation p.35. Miniature, peach red, trumpet shaped single, cylindrical stamens. Fragrant. Flowers mid-season. Leaves elliptic, small. Upright, slender branches. An interspecific hybrid between *C.japonica* **Kôshi** and *C.lutchuensis.* Named and released by Kaoru Hagiya, Niigata Prefecture, in 1990.

Kaori-ichigô. (Fragrant No.1), *(C.hybrid),* ICS,. Apr.1990, *Japanese Camellia Cultivar List*, p.28: Very small size, pale rose-pink, single. Fragrant. A seedling of **Bokuhan** x *C.lutchuensis.* Originated in the Ôsaka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.333, as 'Kaori-1gô', with black and white photo; English translation p.228. Leaves elliptic, miniature, dull. Dwarf, spreading growth, weeping branches. Named and released by Kazuo Yoshikawa in 1980.

Kaori-nigô. (Fragrant No.2), *(C.hybrid),* ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.28: Very small size, rose-red, double. A seedling of *C.japonica* 'Kujaku-tsubaki' (**Hakuhan-kujaku**) x *C.lutchuensis.* Originated in Ôsaka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.333, as 'Kaori-2gô', with black and white photo; English translation p.228 incorrectly as 'Karori-nigô'. Miniature, pale pink, semi-double, fragrant. Flowers mid-season. Leaves elliptic, miniature, dull. Dwarf, spreading growth, branches somewhat weeping. Named and released by Kazuo Yoshikawa in 1980s.

Kaori-shibori-kingyo. (Perfumed, Variegated Fishtail), *(C.japonica),* JCS., 1988, *Japan Camellia*, No.29, p.4, colour photo: Small size, white with red streaks, campanulate single, with 6-7 overlapping petals, a short, central stamen cylinder with gold anthers and light yellow filaments. Leaves dark green, multi-apices, fishtail shape. Originated in Suginami, Tokyo, Japan.

Kaoyo. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.118. Abbreviation for **Kaoyodori.**

Kaoyodori. (Beautiful Bird), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pink ground with red stripes; double; Itô, Ko'emon, 1879, *Chinkashû:* Pink striped and spotted deeper pink, semi-double. For colour plates see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.180, p.314; Tuyama, 1968, *Camellia of Japan*, pl.350, p.177, description, p.194. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.323, p.142; Shufu-no-Tomo-sha, 1976, *Tsubaki to Sazanka*, p.31; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.347; Seibundô Shinkôsha, 1979, *Senchinshû*, p.31, description, p.205: Leaves broadly-elliptic to oblong, venation impressed, margins depressed crenate, dark green. Flowers rose form double, widely cup shaped, rosy pink (Spiraea Red 025/2) veined deeper colour, scantily, widely striped deep, rosy red (Spinel red 0023). Stamen cluster exposed when fully open, usually divided. Occasionally a self red flower occurs. Flowers late. Originated in Kantô, Japan. Corruption of name: 'Kayo-nishiki'. Abbreviation: 'Kaoyo'. The flower resembles that of **Kayoidori.** Different reading: 'Gansedori'.

Kapo. Chinese synonym for NZ hybrid **Grace Caple.**

Kappa. (Imaginary little monster who lives in Japanese rivers), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.277: Small, white, peony form with centre of stamens with white filaments mixed with small, erect petals. Originated in Japan. (Believed extinct.)

Kara-ai. (Chinese Indigo), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshû*, vol.1; Kasuya, Kamegorô, 1858, *Tsubaki Irohanayose Irotsuki:* Large, red, double flower resembling **Ryomen-sazanka.** Originated in Japan. (Believed extinct.)

Kara-aya. (Chinese Twill), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô:* White with red stripes, medium size, semi-double with cylindrical stamen group. Originated in Japan. (Believed extinct.)

Karabashi. Different reading for **Karahashi.**

Karabenten. (Chinese Beauty), *(C.japonica)*, Satô, 1963, Chûbu Tsubaki Kyokai, ed. *Tsubaki Meikan:* Red single, variegated leaves. See colour plates: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.449, p.184; Satô, 1975, *Chûbu no Tsubaki*, p.34; Shufu-no-Tomo-sha, 1976, *Tsubaki to Sazanka*, p.48; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.153; Seibundô Shinkôsha, 1979, *Senchinshû*, p.38, description, p.208: Red, campanulate single of 5 large petals, widely opening with prominent, stamens cluster. Foliage mid-green with clear, creamy variegation, irregularly around the margins, distorting the leaf shape. Originated in Chûbu, Japan. Synonym: 'Kankô'.

Karaboshi. (Chinese Star), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.369: Very large, double, dark crimson with white spots. Originated in Japan. (Believed extinct.)

Karabune. Different reading for **Karafune.**

Karafune. (Chinese Boat), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.11: Pure white. Large, single with broad petals. Seed pod is pink. Originated in Japan. Different reading: 'Karabune'.

Karafusa. (Chinese Tassel), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Formal double, large size, deep red, peony form with white spots. Early flowering. Tateyama Nursery Catalogue,1957: Medium size, red with white spots. Originated in Japan.

Karaginu. Chûgai Nursery Catalogue, 1937-1938. Different reading for **Karagoromo.**

Karagoromo. (Chinese Garment), *(C.x vernalis)*, Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu;* Tokio Kono-en Catalogue, 1928: Red, double, large, fragrant. Chûgai Nursery Co. Catalogue, 1937-1938: Red, full double with odour. Leaves variegated. Originated in Japan. Different readings: 'Karaginu', 'Karakoromo', 'Kara-i'. Synonym: Hô-ô'.

Karagoromo-hoshi. (Spotted 'Karagoromo'), *(C.x vernalis)*, Minagawa Iza'emon, 1885, *Nisshôen Chabaifu:* A white variegated form of **Karagoromo.** Originated in Japan.

Karahashi. (Chinese Bridge), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Formal double. light red with white streaks, lotus flower form. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.80. Itô, Ko'emon, 1879, *Chinkashû:* White, striped pink, large, single. Originated in Japan. Different reading: 'Karabashi'. (Believed extinct.)

Karahito. (Chinaman), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Red with white dots, semi-double with 2-3 rows of petals. See: JCS., 1969, *Tsubaki*, No.7, p.25. Originated in Japan. Different readings: 'Tôjin', 'Karabito'.

Karahusa. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.56, as 'Kara-husa'. Different reading for **Karafusa.**

Kara-i. (Wild Boar), *(C.japonica)*, Itô Ihei, 1695, *Kadan Chikinshô*, vol.1: The corolla is red, medium size. Double flower, petal edges pointed. Medium size. Yashiro, 1841, *Kokon Yôrankô.* Different reading: 'To-i'. Originated in Japan. (Believed extinct.)

Kara-ito. (Chinese Thread), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1: The corolla is red, in two tiers, variegated with white, anemone form. **Kara-ito** is listed in the following publicahons and said to be the same as the existing cultivar: Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Shirai-Bunko, 1789, *Kokon Yôrankô*, vol.306; Iwasaki, 1829, *Honzô Zufu;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* See following colour plates: Tuyama,1966, *Camellia Cultivars of Japan*, pl.23; Tuyama, 1968, *Camellias of Japan*, pl.254, p.128, descript. p.16; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.370, p.158; Yokoyama & Kirino, 1989, *Nihon no* Chinka, p.368; Seibundô Shinkôsha, 1979, *Senchinshû*, p.37, description, p.208: Leaves obong-elliptic, lateral venation raised, grossly serrate. Flower of large, anemone form with the centre a mass of small petals and petaloids, loosely arranged, often exposing some stamens. Outer petals are red (Claret Rose 021), inner petals and petaloids variegated white. Flowers late season. **Goshoguruma** is a virus variegated form of **Kara-ito. Kara-ito** was listed by Kaempfer in his *Amoenatatum Exoticarum*, 1712. Originated in Japan.

Karajishi. (Chinese Lions), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.4: Large, dark crimson, peony form with white spots and some stamens visible in the central mass. Originated in Japan. (Believed extinct.)

Karajishi. (Chinese Lions), *(C.japonica),* Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large, deep, rose red, peony with thick petals. See the following colour plates: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.116; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.169, p.92; Seibundô Shinkôsha, 1979, *Senchinshû,* p.38, description, p.208: Large, 12 cm across, deep rose-pink, peony form with 2-3 rows of large, emarginate, guard petals, totalling 20-15, the centre consishng of a mixture of fascicles of stamens among small, erect, folded petals. Leaves broad-ovate, mid-green, apex blunt acute, margins sharply serrate, venation impressed. Originated in the Kantô District, Japan. Resembles **Benibotan**. Different reading: 'Kara-jishi', 'Kara-shishi'. Iwasaki, 1829, *Honzô Zufu* lists the name as a synonym for 'Chiba-kô'.

Karajishi. (Chinese Lions), *(C.sasanqua),* Itô, Ihei 1695, *Kadan Chinkinshô:* Light pink with white spots, large size, single. Originated in Japan.

Karajusu. (Chinese Satin), *(C.japonica),* Watanabe, 1960, Kyôto Engei Tsubaki Kurabu, *Tokushû*, No.1, p.56. No description. Originated in Japan.

Karaka Gem. *(C.williamsii).* NZCS *Camellia Bulletin,* No.171, March 2012, p.13 with colour photo. Regn No.493. A seedling of **Haydon's Compact**, pollen parent unknown, first flowered in 2006. Plant is spreading, dense, and has a slow growth rate. Matt dark green leaves are small, 5 cm x 2 cm. Pink flower is RHSCC 64D, formal double, with about 70 petals, which are lightly cupped and slightly notched, plus about 10 small, folded centre petals. No stamens. Flowers midseason to late. Originated by Neville Haydon, Papakura, NZ.

Karakagami-nishiki. (Chinese Mirror Variegated), *(C.japonica),* Uekiya Seigorô, 1874, *Tsubaki Hyakuro no Zu*, vol.1, No.1: Large, white, single variegated with pink and red stripes and small dashes of colour with a centre cushion of stamens. (Believed extinct.) Originated in Japan.

Karakasa. (Chinese umbrella), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* vol.1; Yashiro, 1841, *Kokon Yôrankô,* vol.306 & 310: Large and convex. The corolla is thick and snow white. Resembles an umbrella in shape. (Believed extinct.) Originated in Japan.

Karakawa. (Chinese River), *(C.japonica),* JCS., 1986, *Japan Camellia*, No.22, p.4, colour photo: Clear red colour. Single, small size, tubular flowers. The stamens, pinched in at apex, and pistil are enclosed, filaments are white making a contrast with the petals colour. Flower looks like a prototype for the wild, bush camellia. The leaves are small and in harmony with the flower.

Originated in Ehime Prefecture, Japan. An old wild camellia designated as a protected plant of Iyo City. Named and released by Tokihiro Kôno in 1980.

Karako. (Anemone), *(C.japonica)*, Itô, Jukyû, 1738, *Honzô Hanamaki'e.* vol.15; Iwasaki, 1829, *Honzô Zufu;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Row of 5-6 medium to large size, exterior petals with a cushion of small, folded petals or petaloids in the centre. The exterior petals are red and the petaloids have some white variegation. Originated in Japan. The translation of the name is "Chinese Child", and indicates the hair style of a Chinese child in ancient times, which resembles an anemone form, but it is commonly applied to similar camellias with a tight, anemone centre. The Japanese call this form of bloom "Karakoi". It has also been called "Koshimino" due to its resemblance in form to the farmers waist length, straw rain-cape. Resembles **Benikarako.**

Karako-benten. (Anemone Benten), *(C.japonica)*, Perkins, 1975, *American Camellia Yearbook*, p.112: This has a two colour green variegation of the leaves and a small, light red, anemone form flower. Mid-season blooming. Originated in Japan.

Karako-gasane. (Double Anemone), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.250, p.126, description, p.167: Leaves broadly oblong to broady elliptic, apex suddenly acuminate, venation impressed, margins minutely serrulate, 5.8-8.2 cm long x 2.8-3.8 cm wide. Flowers medium peony to anemone form, with numerous petals and petaloids in the centre with an inner circle of larger petals among them, rosy red (Crimson 22 to 22/1). Large, outer, guard petals, 5-7, inner large petals 6-9 and smaller petals up to a number of 230 with a few petaloids. Anthers are divided into 2-3 concentric circles, filaments pale yellow to reddish. Flowers midseason. Originated in Japan in the Fukuoka Prefecture.

Karakoromo. Yashiroda, 1950, *American Camellia Yearbook*, p.20. Different reading for **Karagoromo.**

Karakororomo. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name 'Karakoromo', different reading for **Karagoromo.**

Karakurenai. (Chinese Red), *(C.japonica)*, Iwasaki, 1828, *Honzô Zufu:* This flower has double, pink petals with the colour deepening towards the centre. Originated in Japan. (Believed extinct.)

Karamatsu. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*: Synonym for **Tamatebako.**

Kara-nishiki. (Chinese Brocade), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Red, double, blooms like 3 piled flowers called "Yagura" or "Turret" blossoms. Originated in the Shiga Prefecture, Japan. There are a number of cultivars which have carried the name 'Kara-nishiki', but this early one is now unidentifiable and considered extinct.

Kara-nishiki. (Chinese Brocade), *(C japonica)*, Iwasaki, 1828, *Honzô Zufu;* Kasuya, Kamegorô. 1859, *Tsubaki Irohanayose Irotsuki:* This flower has many white petals with red marking. Itô, Ko'emon, 1879, *Chinkashû:* Light pink ground, with red dots and streaks, dotted white. Large double. If these ambiguous descriptions are accepted as applying to the modern culhvar of the name see the following colour plates: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.193; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.80; *Encyclopedia of Camellias in Colour*, vol.1, 1972, pl.307; Shufu-no-Tomo-sha, 1976, *Tsubaki to Sazanka*, p.29; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.343; Seibundô Shinkôsha, 1979, *Senchinshû*, p.38: These all show a large semi-double of 16-18, large, rounded, slightly emarginate petals in 2-3 rows with a background of white to pinkish white, variously, finely and densely marked with carmine with peppering, ticks, thin lines and an occasional splash. Leaves are lanceolate-elliptic, mid-green, apex blunt acute, margins serrulate. Originated in Kantô, Japan. The different reading 'Tô-nishiki' is used as the valid name for a different cultivar from Chûbu. Chinese synonym 'Tangjin'.

Kara-nishiki. (Chinese Brocade), *(C.japonica)*, Tokio Nurseries Catalogue, 1893, p.13 erroneously as 'Kaianichiki': Single, red variegated white. Originated in Japan.

Kara-nishiki. (Chinese Brocade), (Higo), Satomi, 1956, *Camellia Varieties of Japan*, p.16: White, blushed pink. Small. Originated in Japan.

Kara-nishiki. (Chinese Brocade), *(C.sasanqua)*, Kajistu-en, 1905, *Chabaika Meikan:* Medium size, red with white spots and stripes. Originated in Japan.

Kara-nishiki-myôrenji. (Kara-nishiki from the Myôren Temple), *(C.japonica)*, Watanabe, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8. No description. Originated in Japan by Kamo Zenji.

Kara-no-niji. (Rainbow of Tang Dynasty). *(C.rusticana). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.158 with colour photo; Pale pink blotched white, small formal double. Flowers early to late. Leaves small. Shrubby growth. From a private garden in Agano City, Niigata Pref., Japan, released in 1998.

Karasade. (Gods Leaving), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.448, p.117, description, p.238: Light red, single with one row of 5-6 large, outer petals, emarginate and wrinkled at the apex, surrounding a centre of white petaloids with a few, vestigial anthers. Blooms early. Leaves dark green, elliptic, apex acuminate. Seedling of **Izumo-isahaya**. See: Seibundô Shinkôsha, 1979 *Senchinshû*, p.38, colour photo. and p.355, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellia Club in 1973. "Karasade" is a local religious ritual in the Shimane Prefecture, sending the Gods to heaven.

Karasaki. (Chinese Cape), *(C.japonica)*, Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pale red, large size, double. Originated in Japan. (Believed extinct.)

Karasemi. Hosaka, 1937, *Kamoku Zufu.* Different reading for **Utsusemi.**

Karashishi. Different reading for **Karajishi.**

Karasumaru. (Place Name), *(C.japonica)*, Satô, 1975, *Chûbu no Tsubaki*, p.98 colour photo: Small, deep red, campanulate single with 5-6 petals and a central, column of stamens, inclined to be pinched in at the top, pale yellow anthers, white filaments. Leaves lanceolate-elliptic, shining, bright green, apex acuminate, margins shallowly serrate. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.65 with colour photo; English translation p.43. The original tree is growing in the garden of Saichi Miyazaki in Inazawa City, Japan. Named and released by Minoru Satô in 1973.

Kara-tsubaki. (Chinese Camellia), *(C.japonica), Chinka Zufu, (before* 1700), Watanabe, 1969, pl.41: Large red, open, peony form. Different reading 'Tô-tsubaki'. Originated in Japan.

Kara-tsubaki. (Chinese Camellia), *(C.japonica)*, Okumura, ca.1810, *Chinka Hini'i;* Iwasaki, 1829, *Honzô Zufu*, Yashiro, 1841, *Kokon Yôrankô:* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Very large size, pure red, single, corolla convex, like a peony. Leaves large and lustrous. Originated in Japan. (Believed extinct.)

Kara-tsubaki. (Chinese Camellia), *(C.japonica), Kyô no Tsubaki to Tera*, 1981, pp.26, 27: Red, semi-double to open, informal double, 3-4 rows of waved and fluted petals showing a small, central stamen cluster when fully open. Leaves bright green, medium size, oval, apex suddenly acute, margins sharply serrate. Originated in Japan.

Karatsu. Synonym for **Karatsu-kô.**

Karatsu-kô. (Karatsu Red), *(C.x vernalis)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Tanaka et al., 1989, *American Camellia Yearbook*, p.11: Red with white dots and streaks, small size, single. Originated in Japan. Synonym: 'Karatsu'.

Karatsu. (Place Name), *(C.japonica)*, Kyô no Tsubaki to Tera, 1981, p.65: Medium size, red, semi-double, sometimes with petaloids. Leaves, mid-green, elliptic, apex acuminate. Originated in Kyôto, Japan.

Kara-udo. Different reading for **Karahito.**

Karayae-tsubaki. (Chinese Double Camellia), *(C.reticulata)*, Iwasaki, 1828, *Honzô Zufu:* Flower with many, large, crimson petals. Believed to be the same as **Captain Rawes.** See Yokoyama, 1981, JCS., *Tsubaki*, No.20, p.116.

Karaya-koshimino. (Karaya's 'Koshimino'), *(C.japonica)*, Yashiro, 1841, Ichijima, 1906, *Kokon Yôrankô;* reprint. No description. Originated in Japan. (Believed extinct.)

Karazono. (Obscure), *(C.japonica)*, Iwasaki, 1828, *Honzô Zufu:* Flower with many petals, half is red, the other half is white with red spots. Originated in Japan. (Believed extinct.)

Karel Albert. de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias*, p.125. Orthographic variant for **Carlo Alberto.**

Karen Albritton. *(C.japonica)*, ACS, *The Camellia Journal*, Aug. 1998, p.23, Reg. No.2467. A medium size, white with pink and rose streaks and stripes, peony form chance seedling. Flowers mid-season to late. Originated by Charles T. Elliott, Sr, Swainsboro, Ga., USA. *American Camellia Yearbook*, 1998, p.4, colour photo before p.1. The 10 year old seedling first flowered in 1994. Average flower size is 9 cm across x 5.7 cm deep with 25 petals, 3 petaloids, golden anthers and creamy filaments. Plant growth is upright and slow, with leaves 9 cm long x 4.5 cm wide.

Karen Gilley. *(C.japonica)*, *American Camellia Yearbook*, 1983, p.161, Reg. No.1884: A large, dark red, semidouble, *C.japonica* chance seedling of **Ville de Nantes**, mid-season flowering. Originated by Paul Gilley, Grand Ridge, Florida, USA. Average flower size is 12 cm across x 4 cm deep with 10 petals, pink anthers, yellow filaments. Plant growth is upright and average with light green leaves, 7.5 cm x 3.9 cm.

Karen Henson. *(C.japonica)*, *American Camellia Yearbook*, 1980, p.168, Reg. No.1615: A small, vibrant rose, formal double, *C.japonica* chance seedling, mid-season flowering. Originated by Tom Eagleson, Port Arthur, Texas, USA. First bloomed 1975. Average flower size 6-7.5 cm across with 56 petals. The plant is upright and compact with dark green leaves, 6 cm x 3.8 cm. Orthographic error; 'Kaven Henson.'

Karen Piet. *(C.japonica)*, SCCS., 1986, *The Camellia Review*, vol.48, No.2, p.7: A **Billie McCaskill** seedling, very dark red, formal double, 8-10 cm across with incurved petals. Originated by Meyer Piet and Lee Gaeta, California, USA.

Karenza. *(C.japonica)*, E.B.Champernowne Catalogue, 1977-1978, p.3. No description. E.B.Champernowne Nursery Catalogue, 1978: Medium size, pink, single with golden centre. Originated in UK.

Karigane. (Wild Goose's Call). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.65 with colour photo; English translation p.44. Miniature, pink, tubular single, tubular stamen cylinder. Flowers early to mid-season. Leaves elliptic, small, wavy. Upright, weak growth. Selected from cultivars raised in a private family garden in Takamatsu City, named by the Takamatsu Branch, JCS, in 1997. From Kagawa Prefecture.

Karigina. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Kariginu.**

Kariginu. (Hunting Coat), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Wada, 1941, *Japanese Garden Treasures*, p.31: Single, autumn flowering sasanqua. White blotched with red. Medium size. Originated in Japan. Different readings: 'Kari-Ginu', 'Kari-goromo', 'Kari-koromo'.

Kariginu. (Hunting Coat), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû-:* Pink spotted darker pink, large double. Transliterated name first used in Chûgai Nursery Catalogue, 1938-1939, p.19. See: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.201; Tuyama, 1968, *Camellias of Japan*, pl.374, p.190, descript. p.201; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.341, p.149; Shufu-no-Tomo-sha, 1976, *Tsubaki no Sazanka*, p.29; Seibundô Shinkôsha, 1979, *Senchinshû*, p.38, colour photo, p.208: Leaves elliptic to oblong, apex acuminate, venation impressed, margins finely serrulate. Flowers semi-double, palest pink striped with rose (Spinel Red 0023/1), inner, normal petals erect with the odd petaloid in the centre. Flowers mid-season. Originated in Kantô, Japan. Different reading: 'Karigoromo'. Corruptions of name: 'Karigina', 'Kari-hinu'. Resembles: 'Goshiki-ya'echiri-tsubaki'.

Kari-goromo. Yashiroda, 1950, *American Camellia Yearbook*, p.15. Different reading for **Karaginu.**

Karihinu. *American Camellia Yearbook*, 1950, p.428, index. Corruption of the Japanese name **Kariginu.**

Karikuru-tsuki. (Wild Goose-coming Month). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.66 with colour photo; English translation p.44. Medium size, pale pink graduating to pink at the centre, semi-double, fragrant. Flowers early. Leaves elliptic, medium size, recurved. A cross between *C.hiemalis* and *C.yuhsienensis*, named and released by Kaoru Hagiya, Niigata Prefecture, in 1987.

Karisome. (Informally Dyed), *(C.japonica)*, Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Double, light red and white patches, 3-4 rows of petals, irregular, medium size. Different reading 'Karizome'. Originated in Japan. (Believed extinct.)

Karitsu. (obscure). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.66 with colour photo; English translation p.44. Miniature, white with red graduations on outer petals, bowl-shaped single, round petals, circular stamens. Flowers early to mid-season. Leaves elliptic, small. Branches somewhat weeping. A cross between *C.japonica* **Tsurugata** and *C.lutchuensis*, originated by Nobuo Sasai in 1984, released in 1997. From Okayama Prefecture.

Kariyushi. (Happiness). *(C.japonica)*, JCS, *Tsubaki*, No.33, p.35, Hiroshi Matsude, Okinawa. Bright red, small, cup-shaped single blooms. Flowers mid-season. Leaves medium size, elliptic. Bush is upright and sturdy. A chance seedling of **Uminaibi.**

Karizome. Different reading for **Karisome.**

Karl der Grosse. Medici Spada, 1857, *Catologue nel Giardino a Villa Quiete*, p.12 as 'Karl dar Grosse'. Orthographic variant for **Charlemagne.**

Karlwhilhelmina. Vanderbilt, 1943, *Trade Available Camellia Stocks.* Orthographic error for **Carswelliana.**

Karmosina. van Houtte Catalogue, 1839. Orthographic error for **Kermesina.**

Karotôsen. (Useless Things), *(C.rusticana)*, Inazawa Nurseries Co. Lid Catalogue, 1988-1989, p.3, A-142: Very small size, deepest red in the rusticanas, single of 5 petals. Small, central stamen cluster with yellow anthers. Blooms late season. Leaves mid-green, elliptic, apices acuminate, margins serrate. Originated in the Higashi Kanbara-gun, Niigata Prefecture, Japan. Named and released by Hideyo Katô in 1979. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.214.

Karyodonari. Forrest, 1983, *Trees and Shrubs Cultivated in Ireland.* The name of a camellia in the garden of Mt. Congreve. Probably a corruption of **Kayoidori.**

Karswilliana. Bahuaud-LItôu Nursery Catalogue, 1914-1920. Orthographic error for **Carswelliana.**

Karrie Armijo. *(C.reticulata* hybr.), SCCS., 1990, *Camellia Nomenclature*, p.127: Salmon pink with light veining; large to very large size, semi-double to peony form. Vigorous, upright growth. Blooms early to late. A seedling of Mandalay Oueen. Originated in USA by Meyer Piet and Lee Gaeta, California.

Karrisson. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.66. No description. Originated in Italy. (Believed extinct.)

Karu-tsubaki. Short, 1955, *American Camellia Yearbook*, p.44. Corruption of the Japanese name **Kuro-tsubaki.**

Karyôbinga. Miyazawa, Bungo, 1954, *Kanshô Jumoku.* Different reading for **Karyôbin.**

Karyôbinka. Different reading for **Karyôbin.**

Karyôhin. Different reading for **Karyôbin.**

Karyôbin. (Beautiful Singing Bird), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, vol.2: Medium size, red moired white. For colour plates see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.150; Tuyama, 1968, *Camellia of Japan*, pl.297, p.150, descrip., p.180; Andoh, 1981, *Tsubaki, Meika no Shôkai to Saibai*, pl.97; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.259; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.331; Seibundô Shinkôsha, 1979, *Senchinshû*, p.41, description, p.208: Slow growing with small leaves, narrowly ovate-elliptic to oblong, margins serrulate. Flowers semi-double, red, (Currant Red 821/3) variously blotched white, petals narrow, erect, slightly channelled, petaloid centre. Flowers late season. Different readings: 'Karyôhin', 'Karyohhin'. Synonym: 'Karyôbinga'. Resembles: **Oimatsu, Benichidori** and **Kasugano.** This name is an abbreviation of "Karyô-binga" from the Sanscrit "Kalavinka" the beautiful singing bird in the Buddhist ideal world. Karyôbin, sometimes called Karyôhin, Garyô-binga or Bingachô was an associate of Vishnu. A mythical creature, half bird and half woman, a winged and feathered deity, with phoenix-like tail and stork-like legs. Chinese synonym 'Jialingpin'.

Karyohhin. Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, pl.97, p.35. Different reading for **Karyôbin.**

Kasai-shiratama. (Kasai White Jewel), *(C.japonica),* Satomi, 1956, *Camellia Varieties of Japan*, p.8: White, large, single, early. For colour photos see: *Encyclopedia of Camellias in Colour*, vol.I, 1974, pl.69, p.60; Seibundô Shinkôsha, 1979, *Senchinshû*, p.34, description, p.206: White petals, 6-7, notched, compact, short stamen cluster. Leaves olive green, obovate, recurved, venation impressed, apex acuminate to abrupt acuminate. Originated in Kasai, Kôtô-ku, Tokyo, Japan. Resembles **Hatsuarashi-shiratama.**

Kasado Wabishin. Inazawa Nurseries Wholesale Catalogue, 1986-1987. Orthographic error of the name **Kosado-wabishin.**

Kasamai. (Hat Dance), *(C.japonica),* Tuyama, 1968, *Camellias of Japan*, pl.258, p.130, description, p.169 as 'Kasa-mai': Leaves dark green, broadly elliptic, apex shortly acuminate, venation impressed, margins crenate-serrulate, 6.3-6.9 cm long x 2.7-3.7 cm wide. Flowers, red, anemone form with large, compact, central mass. Outer guard petals, 6-7, irregular size, rounded, largest, 5 cm long x 4 cm wide. Central cushion of small, fan-shaped petaloids, variegated pale pink or white, 98-113 in number, stamens lacking. Flowers mid-season. Originated in Kanazawa City, Ishikawa Prefecture, Japan. Named and released by Takeda Pharmaceutical Co. in 1968. See Seibundô Shinkôsha, 1979, *Senchinshû*, p.207.

Kasamatsu. (Personal Name), *(C.japonica),* Minagawa, 1933, *Chinkashû*. Colour plate, Tuyama, 1966, *Camellia Cultivars of Japan*, pl.114: Medium size, scarlet, semi-double, petals in 2-3 rows,

emarginate; irregular stamen column. Leaves mid-green, ovate, coarsely serrate. Wada, 1941, *Garden Treasures of Japan*, p.30 as a semi-double form of 'Red Otome' (**Kô-otome**). Originated in Japan.

Kasane-beni. (Double Red), *(C.sasanqua)*, Itô, Ihei, 1695, *Kakan Chikinshô:* Light red, large size, double. Yashiro, 1841, *Kokon Yôrankô.* Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.11: Light pink dotted deep pink. Large, semi-double, slightly fragrant. Originated in Japan. Note: The ancient variety is slightly different to the modern **Kasane-beni.**

Kasaneginu. (Gathered Silk), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.34, colour photo, p.206, description: Medium size, white, semi-double with 3 rows of petals, emarginate, slightly creped. Leaves elliptic, light green. Originated in Kantô, Japan as a seedling of **Hototogisu.** Named and released by Totsurô Nakamura in 1997.

Kasane-jishi. (Double Lion), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.11: Dark pink. Large, semi-double with rounded petals. Originated in Japan.

Kasane-ôgi. (Overlapped Fans), *(C.hiemalis)*, JCS., 1987, *Tsubaki*, No.26, p.49: White with pink margins, peony form, medium size Blooms early to mid-season. Chinese synonym: 'Chuxiao'. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.295 with colour photo; English translation p.207. Discovered by Naotoshi Hakoda in 1971 in a hedge in Sagano, Kyôto, Japan. Considered to be a seedling of **Shishigashira** or **Shôwa-no-sakae.**

Kasayama-benimurasaki. (Reddish Purple Kasayama), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.12: Small to medium size, tubular to campanulate single, reddish purple colour. Blooms mid-season. Nippon Tsubaki - Sasanqua Meikan, 1998, p.58 with colour photo; English translation p.38. Leaves narrowly elliptic, medium size, flat. Selected from wild japonicas growing in Yamguchi Prefecture. Named and released by Nobuo Sasai in 1981.

Kasayama-guro. *(C.japonica)* Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. From Yamaguchi Pref.

Kasayama-maru-nokokiriba. (Saw Leaf Kasayama), *(C .japonica)*, ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.12 as 'Kasayamamaru-nokoba': Small size, deep red, tubular single. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.58 with colour photo; English translation p.39. Flowers early to mid-season. Leaves elliptic, medium size, flat. Upright, vigorous growth. Selected from wild japonicas growing in Yamaguchi Prefecture. Named and released by Nobuo Sasai in 1981.

Kasayama-sangô. (Kasayama Number 3). *(C.japonica)*, Seibu Maizuru Institute of Botany, 1989-1990, *Seibu no Tsubaki*, No.222: Dark red tubular single. Small size with cylindrical stamens. Originated in Kyûshû, Japan.

Kasayama-wabisuke. (Wabisuke) Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. From Yamaguchi Pref.

Kasen-sunago. (Kasen's Variegated), *(C.japonica)*, Itô, Ko'emon, 1879, *Chinkashû:* Cardinal red spotted white, leaf variegated, large. Satomi, 1956, *Camellia Varieties of Japan:* Red striped and spotted white. Large semi-double. Leaves yellow variegated. Mid-season flowering. The colour photo in Seibundô Shinkôsha, 1980, *Senchinshû*, p.36 shows a red, variegated with white, semidouble with a small, compact stamen centre, but no leaf variegation. Originated in Japan. Orthographic error: 'Kasen-sunako'.

Kasen-sunako. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Kasen-sunago.**

Kasenzan. (Mount Kasen). *(C.japonica)*, *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.313, p.132, description, p.244: Very small size, campanulate, pale pink, single of 5 petals, slightly

emarginate, with short stamen column, white filaments, yellow anthers. Blooms mid-season to late. Leaves small, elliptic to narrowly-elliptic, apex tapering acuminate, margins crenate-serrate, matt, mid-green. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by Tomohisa Arikawa in 1970. Synonym: 'Fumaikô'. See also colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, p.36; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.75, and p.48, Katei Gahô, ed., 1984, *Chabana Koyomi, vol. 1, Tsubaki.* Fumaikô was the name of Matsudaira, the great Japanese master of the tea ceremony.

Kasenzume. RHS., 1968, *Rhododendron and Camellia Yearbook*, p.19. Corruption of Japanese name **Rasenzome.**

Kashima-beni. (Kashima Red), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.186, colour photo and description: Small to medium size, deep red, campanulate single with 5 broad, rounded, overlapping petals and a central column of stamens of uneven length with pink to white filaments, joined for the lower half, and yellow anthers. Leaves glossy, deep green, lanceolate, apices long, tapering acuminate, margins serrate. Blooms mid-season to late. Originated in Matsu'e City, Shimane Prefecture, Japan.

Kashima-kakôden. (Kakôden from Kashima). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.73 with colour photo; Medium size red single. Rare stamen arrangement, with irregular clusters totalling over 1000 stamens. Flowers mid-season to late. Leaves ovate, medium size. Upright growth. Found in a wild camellia forest facing the Kashima Open Sea. Original tree re-discovered in 2005 by Ibaraki Camellia Group. From Ibaraki Pref., Japan. Released by Takeo Ogawa.

Kashima-shiro. (Kashima White), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.46, colour photo and description: Small to medium size, white, wide campanulate single of 5 broad emarginate, overlapping petals and a central column of stamens with pale lemon filaments, joined for the lower half, and yellow anthers. Blooms early to mid-season. Leaves dark green, broad-ovate, apices abrupt, blunt acute, margins serrate. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellia Club in 1978.

Kashoku. (Ornamental Candle Light for Wedding Ceremony), *(C.japonica),* Himuro, 1982, *Murasuzume:* Deep red streaked white. Semi-double. Originated in Hyôgo, Japan. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.323, colour photo and description: Medium size, deep red with white blotching, semi-double with 2-3 rows of oval petals and a small, central stamen column with yellow anthers. Leaves dark green, elliptic, apices acuminate. Blooms early to mid-season. A seedling of **Furômon.** Originated and named by Yoshihiko Mishima, released by Nobuo Sasai in 1982.

Kashû. (Old name for Ishikawa Prefecture), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1, No.184; Yashiro, 1841, *Kokon Yôrankô:* The corolla is white with red spots and convex in shape. Double, large flower. (Believed extinct.) Different reading: 'Kasyû'. Originated in Japan.

Kashûchô. (Kashû Butterflies), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.165, colour photo and description: Small size, red, tubular single with a central, yellow stamen column. Leaves light green, narrow elliptic, apices tapering acuminate, margins crenate. Blooms mid-season. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.59 with colour photo; English translation p.39. Selected from wild japonicas growing in Ikata Town. Named and released by Ôzu Camellia Enthusiasts Club in 1982.

Kashû-karanishiki. ('Kara-nishiki' from Kashû), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.34, colour photo, p.207, description as 'Kasyu-kara-nishiki': Medium size, single with 5-6 large, rounded petals with a base colour, fine veining of pink, wide, crimson streaks and irregular white edges to crinkled petals. A compact, central, stamen cylinder with yellow anthers. Different reading: 'Kasyû-kara-nishiki'. Resembles **Sanpei-tsubaki.** Sport:

'Beni-gara'. See p.269, Yokoyama & Kirino, 1989, *Nihon no Chinka.* An old camellia from Ishikawa, named and released by Ryôji Nakamura in 1965. Similar to, if not the same, as **Koshiji-karanishiki.**

Kastellorizo Rose. *(C.japonica),* ACRS, *Camellia News*, 1997, No.143, p.15, Reg. No.474. Originated by F.K. Abbott, Rossmoyne, Western Australia. A chance seedling that first flowered 1989. The white formal double flower of 93 petals is 7 cm diameter x 3 cm deep, and flowers mid-season to late on a bushy upright plant of medium growth. Leaves are deep green, elliptic, fine serrations, smooth surface, acuminate apex, 8 cm long x 5 cm wide. Petals slightly cupped. Name is illegal according to the Nomenclature Code, which bars using a plant genus name as last word in a cultivar name. Renamed **Rose of Kastellorizo.**

Kasugano. (Spring Field), *(C.rusticana),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohonayose Irotsuki:* Crimson with white markings in various patterns, like **Arukawa** in *Kadan Chinkinshô.* Large, double. Mid-season flowering. Originated in the Kantô District, Japan. For colour plates see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.149; Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, pl.96, p.35; *Encyclopedia of Camellias* in *Colour*, vol. I, 1972, pl.288, p.131; Yokoyama & Kirino, 1989, *Nihon no Chinka.* p.323. Seibundô Shinkôsha, 1979, *Senchinshû*, p.35, description, p.207: Large, semi-double, red, 10-12 petals, beautifully moired with white, emarginate, a few erect around centre cluster of stamens. Leaves broad-elliptic, mid-green, occasionally with yellow variegation, margins serrate. Slow, spreading growth. Corruption of the name: 'Kasagano'.

Kasuga-shibori. (Kasuga Variegated), *(C.japonica),* Vanderbilt, 1940, *Camellia Research*, p.5 as 'Kosuga-shibori'. Variegated formal double, 7.5 cm across. SCCS, 1947, *The Camellia. Its Culture and Nomenclature:* Red blotched with white. Large, formal double. Medium, spreading growth. Originated in Japan. Orthographic error: 'Kasuga-shibori Var.'. Synonyms: 'Red Beauty', 'Dappled Kasuga'. Corruptions of Japanese name: 'Kosuga-shibori', 'Kasugi Shabori'.

Kasuga-shibori Variegated. SCCS, 1950, *The Camellia. Its Culture and Nomenclature* as 'Kasuga- shibori Var.'. Orthographic error for **Kasuga-shibori.**

Kasugayama. (Mount Kasuga), *(C.rusticana),* Ishizawa, 1966, *Garden Life*, No.17, p.36, black and white photo: Large size, semi-double to open, peony form, red blotched white, 12 cm across, broken stamen cluster, yellow anthers, white filaments. Leaves long-obovate to broad-obovate, apex blunt acute, margins sharply serrate, glossy mid-green; petioles hairy. See: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.289; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.328. Seibundô Shinkôsha, 1979, *Senchinshû*, p.35. Different reading: 'Kasuga-yama'. Synonym: 'Meguri-ai'. Originated in Jô-etsu City, Niigata Prefecture, Japan and named by Kawamura, Yaichi. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.60 with colour photo; English translation p.40. Given as lion to peony form, with a note that Dr Kaoru Hagiya says that the flower form 'lion' is a special classification in Japan. It is almost equal to anemone, but with irregular, larger and erect petaloids.

Kasugi-shabori. SCCS., 1942, *Classification of Camellias*, p.4. Corruption of the Japanese name **Kasuga-shibori.**

Kasukoboshi. Inazawa Nursery Catalogue, 1983-1984. Synonym for **Norikoboshi.**

Kasumeru-tsuki. (Hazy Moon), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Large, white to slightly blush pink, formal double. Early flowering. Originated in Japan. (Believed extinct.)

Kasumigaseki. (Place Name), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Yashiro, 1841, *Kokon Yôrankô*, vol.306 & 309; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, double flower, convex shape. Palest pink with red markings. Originated in Japan. Synomym: 'Kasumi-no-seki'. (Believed extinct.)

Kasumigaseki. (Place Name), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16: Large size, light red flower. Originated in Japan. (Believed extinct.)

Kasumino. (Misty Field), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.35, colour photo, p.207, description: Medium size, hose-in-hose semi-double, soft pink with a pattern of fine veining of deeper pink, 11-13 thick petals, inner apiculate, channelled, surrounding a slender column of stamens. Originated in the Kantô District, Japan.

Kasumi-no-sato. (Village in the Mist). (*C.lutchuensis* hybrid). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.284 with colour photo; Miniature red single, tubular to trumpet shape, cluster flowering, slightly fragrant. Flowers early to mid-season. Leaves elliptic, small. Somewhat drooping growth. A cross of **Kon-wabisuke** x *C.lutchuensis,* made and released by Shuho Kirino around 1960.

Kasumi-no-seki. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû.* Synonym for and based on the same characters as **Kasumigaseki.**

Kasumi-no-sode. (Mist Sleeve), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Nihon Shubyo Catalogue, Dec.1910, p.46: Pink edged white with deeper pink on the petal reverse. Large, semi-double. Wada, 1941, *Japanese Garden Treasures,* p.32: White, flushed and striped with red. Large size. Originated in Japan. Chinese synonym: 'Xiuxia'.

Kasumi-no-sode. (Mist Sleeve), *(C.sasanqua),* Kajitsu-en, 1905, *Chabaika Meikan:* Large size, double, purplish red flower. Originated in Japan.

Kasuri. (Patch of Colour), *(C.japonica),* Painted in the *Chinzu Byôbu,* (Latter 17th century). Owner Hirayama, Tokyo. No description. Commented on by Asai, Keitaro 1961, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.2, p.48. Originated in Japan. (Believed extinct.)

Kasuri. (Patch of Colour), *(C.japonica),* Seibundô Shinkôsha, 1979, *Shashinshû,* p.35, colour photo, p.207, description: Small, pink, campanulate single of 5-6 irregular petals with red stripes and whitish edges, and a central cylinder of stamens, anthers golden, filaments white. Leaves obovate, apex tapering acuminate, margins serrate, shining, bright green. Originated in the Kantô District, Japan. Parentage unknown, named and released by Totsurô Nakamura in 1979.

Kasuri-hatsu-arashi. (Kasuri [Kurume Textile] 'Hatsu-arashi'). *(C.japonica), Kurume Camellia,* 1997, English translation, p.8. White with crimson stripes, medium size, sake-cup shaped single. Flowers early to mid-season. Originated by Y. Ueno, Kurume, Japan.

Kasuri-koshimino. (Variegated Koshimino), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.138: White, medium to large size, open peony form with some narrow streaks of crimson. The centre consists of some irregular, erect, narrow petals mixed with fascicles of stamens. Originated in Japan. (Believed extinct.) Different reading: 'Tobi'iri-koshimino'. "Kasuri" is a patch of colour and "Koshimino" a farmer's hip-length straw raincoat.

Kasuri-man-e. (Colour Patch - Many Layers), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.439: Dark crimson, small to medium size, single with lighter coloured streaking. Central stamen column, yellow anthers, white filaments. Originated in Japan. (Believed extinct.)

Kasuri-otome. Urquhart, 1956, *The Camellia.* Different reading for **Tobi'iri-otome.**

Kasuri-wabisuke. Different reading for **Tobi'iri-wabisuke.**

Kasyû. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.57. Different reading for **Kashû.**

Kasyû-karanishiki. Seibundô Shinkôsha, 1979, *Senchinshû,* p.34 as 'Kasyû-kara-nishiki". Different reading for **Kashûkara-nishiki.**

Katamuku-tsuki. (Sinking Moon). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.61 with colour photo; English translation p.41. Medium size, white, sake cup-formed single, tubular stamen cylinder, fragrant. Flowers early. Leaves elliptic, small. Spreading, dense growth. A cross between *C.hiemalis* and *C.oleifera,* named and released by Kaoru Hagiya, Niigata Prefecture, in 1989.

Kataoka-kasuri. (Kataoka Striped), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.127: Medium size, irregular, white, peony with pink and crimson stripes. Originated in Japan. (Believed extinct.) Different reading: 'Kataoka-tobi'iri'.

Kataoka-tobi'iri. Different reading for **Kataoka-kasuri.**

Kataonami. (High Waves), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pale red, medium sized semi-double with 2 rows of petals, with dark red spots. Used as a synonym for 'Kikuzuki' in the *Sômoku Benran.* "Kataonami" is the ancient name of the famous Japanese anthology, *Manyôshû.* Originated in Japan. (Believed extinct.)

Kataonami. (High Waves), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e:* Large size, white with pink becoming gradually deeper towards the petal edges. Originated in Japan. (Believed extinct.)

Katasakiwake. (Divided Blossom), *(C.japonica), Chinka Zufu* (before 1700), Watanabe, 1969, pl.411: Irregular white, small to medium size, tubular single, dark crimson streaks and bands. Originated in Japan. (Believed extinct.)

Katasenami. ((Shoal Waves), (C.hybrid) ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.12 as a *C.rusticana.* No description. Originated in the Niigata Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.61 with an incorrect colour photo. English translation p.40. Medium size, pink, peony to lion form, split stamens, slightly fragrant. Flowers early. Leaves elliptic, smallto medium, thick, plicate at the midrib. Cespitose, vigorous growth. A cross between *C.hiemalis* and *C.pitardii.* Named and released by Kaoru Hagiya in 1978.

Katayama-idaten. (Katayama's 'Idaten'), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.254, colour photo, p.255, description: Medium size, white with red streaks, open, cup-shaped single of 8-9 petals in two rows and a short, broad, central stamen cylinder of stamens with ivory filaments, joined for the lower half and pale yellow anthers. Slightly fragrant. Blooms early to late. Leaves deep green, elliptic, apices acuminate, recurved, margins obscurely serrate. Originated in the Kansai area, Japan. Released by Katayama Juraku-en Nursery many years ago.

Katayama-negishikô. (Katayama's Red Sasanqua). *(C.sasanqua). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.320. English translation p.242. Medium size, peach red single. Flowers early. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Note: Since the word 'Negishikô' is the representative name for red sasanquas, there are many synonyms applied to different varieties. This cultivar is grown in the Kansai area, and is a different cultivar from that in the Kantô area. From Osaka.

Katayama-sôtan. (Katayama's 'Sôtan'), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.28, colour photo and description: Small size, white, saucer-shaped single, with 5 rounded, overlapping petals and a central column with white filaments, joined for the lower third, and yellow anthers. Blooms mid-season to late. Leaves mid-green, broad-ovate, apices acute, margins shallowly serrate. The original tree survives at Daitokuji Temple, Kyoto. Released by Katayama Juraku-en Nursery in 1970. Synonym: 'Sôtan'(Katayama). Resembles **Sôtan.**

Katayama-yae-wabisuke. *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.366. Synonym for **Sakiwake-wabisuke.**

Kate Anderson. *(C.x williamsii),* Cobley Camellias Catalogue, 1977: Soft pink, medium size, semi-double. Upright growth. Mid-season blooming. Originated in England.

Kate Cargill. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.67: Soft pink, medium large, semi-double to open, peony form with irregular petals. Upright growth. Mid-season blooming. Originated in USA by Childs. Orthographic error: 'Katie Cargill'.

Kate Hardie. *(C.japonica),* ACS., Nov.1989, *The Camellia Journal*, vol.44, No.4, p.17, Reg. No.2171: Pearl white to blush pink, medium size, formal double with cupped centre petals, opening occasionally to a six-pointed star centre. Blooms early to mid-season. Originated by Walter Homeyer, Macon, Georgia. *American Camellia Yearbook*, 1989, p.124, colour photo [p.133]: The 14 year old seedling first bloomed in 1981. Average flower size, 8 cm across x 5 cm deep with 29-45 petals and 55-64 petaloids. Plant growth is upright, average and open with light green leaves, 8 cm x 5 cm.

Kate Mallory. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.6. No description. Originated in USA. No valid listing located.

Kate O'Brien. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings*, p.3, colour photo: Lilac pink, peony form double with 3-4 rows of small, outer petals and the centre a mixture of small, erect petals, petaloids and stamens. Originated in USA by Richard Dodd, Marshallville, Georgia.

Kate R. *(C.japonica),* McIlhenny, 1937, *600 Varieties of Camellias*, p.9: Rose-pink, blotched white. Medium size, single. Originated by McIlhenny, Avery Island, Louisiana, USA.

Kate Sheppard. *(C.japonica), New Zealand Camellia Bulletin*, 1992, Issue No. 112, vol.XVII, No.4, p.47, Reg. No.305: Originated by A.P. Gamlin, Manaia, New Zealand. Plant is upright with dark green foliage, 11 cm long x 6.5 cm wide. Flower is 13 cm across x 6 cm deep, white anemone form with 25 outer petals and 70-100 petaloids intermingled with yellow stamens. Blooms early to late. Colour illustration *International Camellia Journal,* 1993, front cover and p.37. Named for the leading early campaigner for womens suffrage in New Zealand.

Kate Smith. Sharp, 1957, *Camellias Illustrated*, p.49, colour pl. This plate is self coloured and shows **Mathotiana Supreme,** not 'Kate Smith' which is variegated. See colour photo facing p.82, *American Camellia Yearbook*, 1966 which shows a beautifully moired form. However such virus variegation is not stable enough to warrant a separate cultivar name and is thus considered a synonym for **Mathotiana Supreme Variegated.**

Kate Smith Variegated. Cannon, 1962, ACS., *The Camellia Journal*, vol.17, No.1, back cover as 'Kate Smith Var.' A synonym for **Mathotiana Supreme Variegated.**

Kate Thrash. *(C.japonica), American Camellia Yearbook*, 1955, p.338, Reg. No.222: An 11 year old seedling of **Martha Wright,** originated by Mrs W.T. Roughton, Thomasville, Georgia, USA. First flowered 1951. The rose-pink flowers, 9-10 cm across, are irregular, double, similar to **Professor Sargent,** with 25 petals and numerous petaloids. Flowers early.

Kate Thrash Variegated. *(C.japonica),* Mark S Cannon Scion Catalogue, 1962, p.6. No description. SCCS., 1964, *Camellia Nomenclature*, p.69: A virus variegated form of **Kate Thrash** - Rose-pink and white. Originated by Mrs. I. H. McCormick, Thomasville, Georgia, USA.

Kate Young. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* No description. Originated in USA.

Katharin Stanton. *(C.japonica),* ACS., *News Letter*, vol.3, No.4, Reg. No.1, Oct.1948 as 'Katherin Stanton': Deep rose-pink, single with 6 petals, 8-10 cm across x 5.5 cm deep. The petals, 5.0 cm x 5.5 cm, are crinkled on the edges. The stamens are in clusters, filaments cream, anthers gold. Fragrant. Leaves dark green, ovate, flat, stiff, glossy, tending to recurve, 10 cm x 6 cm, venation prominent, margins broad shallow serrations. Plant habit tall, willowy and hardy. Originated by Harry B. Stanton, Savannah, Georgia, USA from seed of unknown parents.

First flowered 1939. Orthographic error:, 'Katherine Stanton'. For illustration see Fendig, 1950, *American Camellia Catalogue.* See ACS Yearbook, 1954, p.317.

Katherine Allan. *(C.japonica),* Fendig, 1950, *American Camellia Catalogue,* with illustration: Large, light pink with light lavender undercast, incomplete double, 11-13 cm across x 3.8 cm deep with 15 or more outer petals, about 5 cm x 4 cm. Buds fat, long and pointed. The flower opens flat and shows a mass of petaloids in groups of 2 to 6 connected to a single filament, giving the flower a loose, wavy effect. Stamens concealed. Leaves medium green, glossy, slightly twisted, narrow, 8-12 cm long x 3.8 cm wide. Apex acute, margins shallowly serrate. Plant habit is bushy, spreading and fast in rate. Orthographic error: 'Katherine Allen'. Originated by Walter Allan, Summerville, South Carolina, USA from seed of **Elegans.** First bloomed 1948. See *American Camellia Yearbook,* 1954, p.318, Reg. No.102.

Katherine Allen. Tammia Nursery Catalogue, 1960, p.5. Orthographic error for **Katherine Allan.**

Katherine Chisholm. *(C.japonica), American Camellia Yearbook*, 1978, p.131, Reg. No.1472: A large, medium pink, semi-double, chance seedling of *C.japonica;* mid-season blooming. Originated by Frank A. Chisholm, Savannah, Georgia, USA. The 5 year old seedling first bloomed 1977 and has **Frizzle White** type blooms with 15-20 petals and 7-9 petaloids, white filaments and yellow anthers, 11 cm across x 7 cm deep. Unique, irregular bloom, folded and twisted rabbit ears and scattered stamens. Plant growth upright and average in rate with dark green leaves 11 cm x 5 cm.

Katherine Hall. Hody Wilson, 1970. SCCS., *The Camellia Review*, vol.31, No.6, p.17. Orthographic error for **Kathryn Hall.**

Katherine Hart. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Large, white, peony form. Originated in USA.

Katherine Maryott. *(C.japonica), American Camellia Yearbook*, 1959, p.276, Reg. No.388: A 15 year old chance seedling, originated by Mrs C.H. Maryott, Augusta, Georgia, USA, which first flowered 1948. The broad, light green leaves have short apices and average 7.5 cm x 2 cm. The formal double, clear pink flowers have 65 petals and are 10 cm across x 5.5 cm deep. An occasional flower shows a few yellow stamens. Flowers mid-season. See pl. facing p.80, *American Camellia Yearbook,* 1960.

Katherine Mealing. *(C.japonica), American Camellia Yearbook*, 1965, p.238, Reg. No.794: A chance seedling that first bloomed 1946. Originated by Dr & Mrs H.G. Mealing, North Augusta, South Carolina, USA. Plant growth is upright, medium in rate with thin, light green leaves. Flower is light to deep red, peony, similar to **Buddy Boy** except that it has more short petaloids, making a full, heavy flower. It measures 12.5 cm across x 5 cm deep. Blooms mid-season.

Katherine Nuccio. *(C.japonica),* Nuccio's Nurseries Catalogue, 1949-1950: Rose-red. Medium formal double to rose form double, 8 cm across with 60-65 petals. Vigorous, compact growth. Mid-season blooming. First flowered 1942. Leaves medium green, ovate, 8 cm x 5 cm. slightly twisted, thin texture, serrations shallow. Originated by Nuccio's Nurseries, Altadena, California, USA. See black and white photo, p.119, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III.

Katherine Stanton. SCCS, 1951, *The Camellia. Its Culture and Nomenclature.* Orthographic error for **Katharin Stanton**.

Kathie Brown. *(C.japonica), American Camellia Yearbook*, 1978, p.131, Reg. No.1491: A very large, deep pink, peony to anemone form *C.japonica* chance seedling that flowers mid-season to late. Originated by David K. Walker, Charleston, South Carolina, USA. The 12 year old seedling, that first bloomed 1968, has yellow anthers and light pink filaments. Average size is

13 cm across x 8 cm deep. Very heavy flower. Plant growth is upright and spreading, rapid in rate with dark green leaves, 10 cm x 5.5 cm.

Kathleen. *(C.japonica),* Sharp, 1948, *Camellia Illustrated* flower photo, p.82: Pink, medium large, semi-double. A seedling raised by Mrs Clyde Bradley, Milwaukie, Oregon, USA.

Kathleen Eugenia. *(C.japonica),* Dodd, 1968, *Adventure with Camellia Seedlings*, p.6, colour photo: Pink, semi-double to rose form double. A seedling of **Galilee** raised by Richard Dodd, Marshallville, Georgia, USA.

Kathleen Read. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1944-1945: White striped pink, rose form double to semi-double. Vigorous growth. Mid-season blooming. Originated at Magnolia Gardens, John's Island, South Carolina, USA. Orthographic error: 'Kathleen Reed'.

Kathleen Reed. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Kathleen Read.**

Kathnstu Clark. *(C.japonica),* ACRS, *Camellia News,* Spring 2003, No.163, p.10, colour photo p.2, Reg. No.552. Originated by Alan Truran, Hornsby, NSW, Australia, registered by Patrick Clark, Pymble, NSW. A chance seedling from *C.japonica* **Bokuhan** that first flowered in 1995. A red (RHS.CC.51A) anemone form flower of 6-7 petals, plus 120 pink and cream (RHS.CC.56D/4D) petaloids in the centre, and 20 stamens. Diameter is 7.5 cm x 4.5 cm deep. Flowers freely, early and over a long season on an upright rapid growing plant. Leaves dark green, glossy, broadly elliptic, base broad cuneate, apex apiculate, 8 cm long x 4 cm wide. Stamens mixed with the petaloids.

Kathryn Bevis. *(C.japonica),* ACS, *The Camellia Journal,* May 1998, p.18, Reg. No.2446. A large, clear pink with darker pink to carmine rose outer petals, and light pink centre. A peony form chance seedling that flowers early to mid-season. Originated by Dr Jerome A. Hogsette, Gainesville, Fla., USA. *American Camellia Yearbook,* 1998, p.4, colour photo before p.1. The 14 year old seedling first flowered in 1989. Average flower size is 10 cm across x 5 cm deep, with 42 petals, 9 petaloids, yellow anthers and white filaments. Plant growth is upright and average with light green leaves 10.8 cm long x 5.7 cm wide.

Kathryn Flugge. *(C.japonica),* ACRS, *Camellia News,* 1999, No.151, p.10, colour photo p.2, Reg. No.528. Originated by Keith Abbott, Rossmoyne, West Australia. A chance seedling that first flowered in 1992. The semi-double, pink (RHS.CC.73A) flower of 14 petals is 11 cm across x 4 cm deep. It flowers early to mid-season on a rapid growing, upright bush. Leaves green, matt, curled, elliptic, small serrations, 8 cm long x 3.5 cm wide. Petals open flat, filaments columnar. Free flowering.

Kathryn Funari. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature*, p.86: Deep veined pink. Large formal double. Medium growth. Early blooming. Originated in USA by A. Funari, California. See colour photo, front cover, *New Zealand Camellia Bulletin*, 1978, vol.XV, No.4. Chinese synonym: 'Fonali', later changed to 'Fonaxing'.

Kathryn Hall. *(C.japonica), American Camellia Yearbook*, 1971, p.47, Reg. No.1127: A sport of **Berenice Boddy**, first observed 1964 by Bagby Hall, Jackson, Mississippi, USA. The rose form double is a sweet pea pink, 9-11 cm across x 5 cm deep with 40-50 petals and an indefinite number of petaloids. Each petal is notched with a deeper pink centre and 5 fascicles of stamens surrounded by petaloids. Blooms early. Orthographic error 'Katherine Hall'.

Kathryn Jones. (*C.japonica),* Harris' Longview Nursery Retail Price List, 1955-1956, p.12: White. Small, full peony form with two rows of large, outer petals, surrounding smaller petals, which surround one row of erect, large petals encircling stamens in the centre. Vigorous, compact growth. Mid-season blooming. Originated in USA by Longview Nursery, Crichton, Alabama.

Kathryn Land. *(C.japonica),* ACS, *The Camellia Journal*, June 2008, p.31 with colour photo, Regn No.2728; A chance seedling which first flowered in 1998. Originated and propagated by E.

Hulyn Smith, Valdosta, Ga., USA. the 11.5 cm diameter, red, semidouble to peony form flower has yellow anthers on white filaments, in groups mixed among the petals. Heavy petal texture and flowers mid-season. *American Camellia Yearbook*, 2008, p.117 with colour photo; Vigorous, spreading growth. Dark green leaves are 9 cm x 6.5 cm.

Kathryn Marbury. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1964-1965, p.9. No description. *American Camellia Yearbook*, 1965, p.238, Reg. No.771: A 9 year old chance seedling that first bloomed 1960. Originated by S.L. Marbury, Wilmington, North Carolina, USA. Plant growth is upright and average with dark green leaves averaging 7.5 cm x 5 cm. The formal double flowers, similar to **Alba Plena,** are 8 cm across x 3.8 deep with 55 petals. Blooms are blush pink with a good sheen. Blooms mid-season to late.

Kathryn Snow. *(C.japonica), American Camellia Yearbook*, 1966, pp.92, 93, Reg. No.889: A 7 year old chance seedling that first flowered 1958. Originated by S.L. Marbury, Wilmington, North Carolina, USA. Leaves light green, average 7.5 cm x 3.8 cm. The semi-double flowers are off-white with pink edges. The stamens are yellow. Size is 10-11 cm across x 5 cm deep with 25 petals. Centre petals tend to "rabbit ear". Blooms mid-season to late.

Kathryn Spooner. *(C.japonica),* ACS 1994, *American Camellia Yearbook*, p.61, Reg. No.2302: Originated by R.B. Gramling, Tallahassee, Florida, USA. Large white peony form. The 14 year old seedling first flowered 1980. Average flower size is 9.5 cm across x 7.5 cm deep with 45 petals. Flower is snowball type without guard petals. Commercially introduced 1993. Plant growth is upright, spreading and vigorous with dark green leaves 9.5 cm long x 5 cm wide. Colour photo between pp.64-65.

Kathy Ficus. *(C.japonica), American Camellia Yearbook*, 1960, p.200, Reg. No.483: A 12 year old chance seedling that first bloomed 1953. Originated by Julington Nurseries, Jacksonville, Florida, USA. Plant growth is upright, of average density with dark green leaves 7.5 cm x 3.8 cm. The deep rose-pink, formal double blooms are 8 cm across x 2.5 cm deep and have 40-50 petals. Flowers early to mid-season.

Kathy Mann. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.6. No description. Originated in USA. by Julington Nurseries. SCCS., 1970, *Camellia Nomenclature*, p.78: Deep rose pink. Medium size, formal double. Medium, compact growth. Blooms early to mid-season.

Kathy Pratt. *(C.japonica),* SCCS., 1970, *Camellia Nomenclature*, p.78: Light pink fading to white on outer petals, blotched deeper pink. Large semi-double to loose, peony form. Vigorous, spreading growth. Mid-season blooming. Originated in USA by N. Pratt, Sacramento, California.

Kathy Reid. *(C.saluenensis x C.reticulata), New Zealand Camellia Bulletin*, 1983, vol.XIII, No.2, p.11, Reg. No.190: Originated by Mrs Ida Berg, Whakatane, New Zealand. The female parent is an unnamed *C.saluenensis x C.reticulata* **Dataohong** and the male parent is **Dataohong**. First flowered 1980 on an upright, dense plant of medium growth. Leaves average 7.5 cm x 5 cm. The peony form flowers are a bright cerise pink with 20 petals and average 12.5 cm across x 5 cm deep. Firm texture.

Kathy Smyre. *(C.japonica), American Camellia Yearbook*, 1971, p.48, Reg. No.1138: An 11 year old chance japonica seedling that first bloomed 1965. Originated by Nel and Emory Prevatt, Bonneau, South Carolina, USA. Plant growth is upright, dense and medium in rate, with dark green leaves, 12 cm x 7 cm. The semi-double flower is strong pink with yellow anthers and 6-8 petaloids. It measures 12 cm across x 5 cm deep. Flowers mid-season. Orthographic error: 'Cathy Smyre'.

Katie. *(C.japonica),* Nuccio's Nurseries Catalogue, 1979, #7361; *American Camellia Yearbook*, 1980, p.168, Reg. No.1606: A very large, salmon, rose-pink, semi-double *C.japonica* chance seedling of **Drama Girl;** early to midseason flowering. Originated by Nuccio's Nurseries,

Altadena, California, USA. The 5 year old seedling first flowered 1976. Flower size 13-15 cm across. Plant growth is upright, dense, and rapid in rate with dark green leaves, 10 cm x 5 cm. Received the Margarete Hertrich Award, 1983. See colour photos: front cover, SCCS, 1980, *The Camellia Review*, vol.42, No.2 and inside the front cover ACS., 1980, *The Camellia Journal*, vol.35, No.3. Chinese synonym: 'Kaidi'.

Katie Cargill. Griffin, ed., 1958, *Camellian.* Orthographic error for **Kate Cargill.**

Katie Getzen. *(C.japonica)*, Mealing, 1950, *American Camellia Yearbook*, p.132, black and white photo, p.127: First bloomed 1949 at 6 years old, size medium, 8-9 cm across. Form, complete double, incompletely imbricated. Colour, pink in bud, which fades on opening, leaving a white flower with deep pink on petal edges. Blooms mid-season. When fully open a few yellow anthers are visible. Originator: Look-Away Gardens, North Augusta, South Carolina, USA.

Katie Kelly. *(C.japonica), American Camellia Yearbook*, 1984, p.178, 179, Reg. No.1927: A small pink centre, fading to white, formal double, *C.japonica* chance seedling, late flowering. Originated by Kathleen Kelly, Graham, North Carolina, USA. The 8 year old seedling first flowered 1982. Average flower size, 6 cm across x 3.8 cm deep with 81 petals. A pronounced, spiral form. Plant growth is spreading and medium in rate with dark green leaves, 8 cm long x 5 cm wide.

Katie Lee. *(C.japonica x C.lutchuensis), New Zealand Camellia Bulletin*, 1988, vol.XV, No.5, p.25, Reg. No.254: Originated by J.R. Finlay, Whangarei, New Zealand. A seedling of *C.japonica* **Tiffany** *x C.lutchuensis* that is 20 years old and first flowered 1976. Plant habit is open and slow with pale green leaves, 3.5 cm x 1.5 cm. The small, single flowers are 3 cm across and deep and have 6 petals with white filaments and yellow anthers. The flower colour is light pink, deepening at edges. Flowers mid-season to late. Marked fragrance. Colour RHS.CC. Red Group, 38D-B.

Katie Mandarich. *(C.japonica),* ACS 1992, *The Camellia Journal*, vol.47, No.4, p.13. Valdosta Camellia Scions. No description. Originated by Jack Mandarich, California, USA.

Katie Northcutt Variegated. *(C.japonica)* ACS, *The Camellia Journal*, Dec. 2010, p.29; Regn No.2801. Originated by Ed Northcutt, Tallahassee, Fla., USA, registered by E. Hulyn Smith, Valdosta, Ga., USA. ACS, *Yearbook* 2010, p.77 with colour photo. A 10 year old cross of **Tom Cat** x unknown pollen parent. Plant is upright and vigorous. Dark green leaves are 10 cm x 5 cm. Very large flower is 15 cm diameter x 7.5 cm height, semi-double to peony form, and is light pink variegated with white. Yellow anthers and yellow filaments. Heavy petal texture.

Katie Shipley. (*C.reticulata* hybrid). ACS, *The Camellia Journal,* Aug. 1997, p.16, Reg. No. 2425. A very large, bright red, peony form (**Craig Clark** x **Jean Pursel**). Flowers mid-season to late. Originated by Dr Walter F. Homeyer, Jr, Macon, Ga., USA. *American Camellia Yearbook*, 1997, p.4, colour photo before p.1. Average flower size is 14.5 cm across x 10 cm deep with 19-21 petals including 7-8 rabbit-eared petaloids, yellow anthers and white stamens. Plant growth is upright, open and average, with dark green leaves 9.5 cm long x 6 cm wide.

Katie Variegated. *(C.japonica),* Nuccio's Nurseries Catalogue, 1986-1987, p.8 as 'Katie Var.': A virus variegated form of **Katie** - Salmon rose-pink blotched white. Early to late flowering. Originated by Nuccio's Nurseries, Altadena, California, USA. Chinese synonym: 'Xinkaidi'.

Katie Wootton. *(C.japonica),* ACS, *The Camellia Journal,* Nov. 2000, p.39, colour photo p.38, Reg. No.2536. A semi-double white to blush pink flower with golden anthers and cream filaments. Originated by Harriet Harms, Savannah, Ga., USA. *American Camellia Yearbook,* 2000, p.3, colour photo p.c10. The 39 year old seedling first flowered in 1967. Flowers early. Average flower size is 13.5 cm across x 5.7 cm deep, with 16 petals. Inner petals are crinkled, notched

and folded. Plant growth is upright and average, with dark green leaves 10 cm long x 5 cm wide.

Katsugi-no-onkata. (Mr. Carrier), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Snow white, small, thick, 6 petalled single, outer three petals open flatly, inner three cover stamens until flower fades. Originated in Japan. (Believed extinct.) Different reading: 'Kazuki-no-onkata' in Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.136.

Katsukohime. (Princess Katsuko). *(C.japonica),* Chinka-en Niigata Retail List, 1994-1995, colour plate front back page, description p.6: Medium size, red, magnolia form semi-double. Originated in Niigata Prefecture, Japan.

Katsura. (Cinnamon Tree), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.343: Brilliant crimson, medium size, peony form with a fountain of erect, central petals surrounding stamens. Originated in Japan. Probably named for the Katsura Detached Palace in Kyôto. (Believed extinct.)

Katsuragawa. (Katsura River). *(C.japonica),* Chinka-en Niigata Retail List, 1994-1995, colour photo front page, description p.8: Medium size, white single of 5 petals with rose-red streaks and central stamen cluster. Originated in Niigata Prefecture, Japan.

Katsuragawa (Chûbu). (Katsura River). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.62 with colour photo; English translation p.41. Medium size, deep red tubular single, cylindrical stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size. Spreading, vigorous growth. Selected from cultivars in a private family garden in Kyoto City, named and released by Minoru Satô in 1971. From Kyoto to Aichi Prefecture.

Katsuragawa (Kantô). (Katsura River). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.333 with black and white photo; English translation p.228. Medium size, palest pink striped red, trumpet shaped single, thick petals, cylindrical stamen cluster, fragrant. Flowers early to mid-season. Leaves gold fish-tailed, medium size, somewhat outwards curved. Upright, vigorous growth. Parentage unknown, named and released by Uichirô Noda in 1987.

Katsuragi-shibori. ('Katsuragi' Striped), *(C.japonica)*, Chûbu Tsubaki Kyôkai, 1969, *Tsubaki Meikan.* See colour plates: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.135; Satô, 1975, *Chûbu no Tsubaki*, p.55; Seibundô Shinkôsha, 1979, *Senchinshû*, p.36, description, p.207: Medium size, single, 6-7 petals, white with streaks and broad stripes of brilliant crimson, opens to a saucer shape. Leaves deep green, elliptic, twisted with waved and serrate margins, apex acuminate, recurved. Dark brown dots and streaks appear on young leaves. The original tree survives at the Hôkaji Temple in Inazawa City. Named and released by Chûbu Camellia Society in 1970. Has been confused with **Esugata.**

Katsurahime. (Princess Katsura), *(C.rusticana)*, Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.91, black and white photo. Colour photos see: *Encyclopedia of Camellias in Colour*, vol. II, 1978, pl.271; Seibundô Shinkôsha, 1979 *Senchinshû*, p.36, description, p.207: Very small, red, single with 5 petals of irregular length. Leaves small, narrowly-lanceolate, shiny, olive green, apex tapering acuminate, margins coarsely serrate, recurved. Plant habit dwarfish. Late flowering. Originated in Muika-machi, Niigata Prefecture, Japan. Named and released by Mamoru Kodera in 1960. Princess Katsura was an historical figure in the service of Shintô Shrine.

Katsura-no-hana. (Flower of the Cinnamon Tree). *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* White, large, double with rabbit eared petaloids. Originated in Japan. (Believed extinct.)

Katsura-wabisuke. (Katsura Wabisuke), (Wabisuke), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.113. .ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.12: Very small flowers, light rose-pink, sake-cup single. Blooms mid-season. A seedling of **Funatsu**. Originated in Izu Ôshima, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.63 with colour photo; English

translation p.42. Stated to be a seedling of **Tarôkaja.** Originated by Kanamatsu Funatsu, named and released by Takeo Ogawa in 1960s.

Kaven Henson. Cannon, 1979, ACS., *The Camellia Journal*, vol.34, No.4. Orthographic error for **Karen Henson.**

Kawa. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.75, No.319. Chinese synonym for the USA *C.japonica* **Dorothy Culver.**

Kawae. *(C.sasanqua),* ACRS, 1977, *Camellia News,* No.66, p.26, Reg.186: Originated by Alice Spragg, Sutherland, N.S.W., Australia. First bloomed 1971 with a dense, upright, vigorous growth, producing early, single, small flowers with red buds, opening white with red bordered petals. Foliage has gold tipped leaves, changing to gold then red tones, until reverting to normal gold tips with the new growth. This is the valid name for 'Kawas' according to the originator. The original registration was misprinted.

Kawagiri. (River Mist), *(C.japonica),* Himuro, 1982, *Murasuzume.* A dull, white, early, semi-double. Originated in Japan.

Kawamura. (River Village), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû,* p.39, colour photo, p.209, description: Medium size, deep pink, bowl shaped, single of 6-7 petals with a spreading centre of yellow stamens. Leaves broad-ovate, mid-green, margins sharply serrate, apex blunt acute, venation impressed, petiole hirsute. Originated in Higashi Kanbara-gun, Niigata Prefecture, Japan. Collected and named by Yaichi Kawamura.

Kawari-tatsuta. (Variegated 'Tatsuta'), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Single, opens flat, pinkish white with deep red stripes. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.80. Uekiya, Bunsuke, 1830, *Uekiya Bunsuke Hikki.* Originated in Japan. (Believed extinct.)

Kawari-tokiwa. (Sport of **Tokiwa**), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.335: Small, compact, white, peony form. Originated in Japan. (Believed extinct.)

Kawas. ACRS., 1977, *Camellia News*, No.66, p.26, Reg.186: Orthographic error for **Kawae.**

Kawazoebeni. (Kawazoe's Red). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.66 with colour photo; English translation p.44. Small, deep red single, embracing petals, apricot stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size, twisted. Somewhat spreading, vigorous. A chance seedling of unknown parentage, selected and released by Toshiaki Kosaki in 1997. From Aichi Prefecture.

Kay Acker. *(C.japonica), American Camellia Yearbook*, 1970, p.165, Reg. No.1111: A 13 year old chance seedling that first bloomed 1960. Originated by S.L. Marbury, Wilmington, North Carolina, USA. Plant growth is spreading and medium with dark green leaves, 10 cm long x 5 cm wide. The formal double flower is 8 cm across x 3.8 cm deep with up to 100 petals. The colour is soft, blush pink. Centre petals are long and pointed, forming a star. Blooms mid-season to late.

Kay Berridge. *(C.japonica), American Camellia Yearbook*, 1980, p.168, Reg. No.1579: A small, rose-pink, white and red, formal double, *C.japonica* chance seedling, mid-season flowering. Originated by Paul Gilley, Grand Ridge, Florida, USA. The 4 year old seedling first bloomed 1978. Average flower size 6.5 cm across with 75 petals. Plant growth is upright and average in rate with dark green leaves, 7.5 cm x 3.8 cm.

Kay Berridge Red. *(C.japonica),* ACS, *The Camellia Journal*, Dec. 2013, p.28 with colour photo; Regn No.2886, Originated by Howard & Mary Rhodes, Tallahassee, Fla., USA. ACS, *Yearbook*, 2013, p.119 with colour photo; Registered and propagated by Randolph Maphis, Tallahassee, Fla.

Kay Hallstone. (*C.reticulata* hybrid). ACS 1992, *American Camellia Yearbook*, p.35, Reg. No.2237: Originated by Houghton S. Hall, San Anselmo, California, USA. Seedling of *C.x williamsii* hybrid **Brigadoon** x *C.reticulata* **Mouchang.** Light pink, washed and veined white; very large semi-double. Vigorous, open, spreading, upright and rapid growth. Blooms mid-season to late. The 14 year old seedling first flowered 1985. Average flower size is 13 cm across x 3 cm deep with 20 petals, golden anthers and yellow filaments. Petals swirling mass or wave, convoluting to the centre, deeply veined pink on white. Dark green leaves 8 cm long x 2.5 cm wide. Colour photo between pp.40-41.

Kay Thomerson. *(C.reticulata* hybrid*).* ACS, *The Camellia Journal*, Dec. 2010, p.29 with colour photo; Regn No.2802; Originated by E. Hulyn Smith, Valdosta, Ga., USA. ACS, *Yearbook* 2010, p.77 with colour photo; An 11 year old plant, first flowered 2006. A cross of **Suzanne Withers** x **Annabelle Fetterman**. Plant is upright and vigorous. Dark green leaves are 11.5 cm x 7.5 cm. Large flower is 10.8 cm diameter x 7.5 cm deep, peony to semi-double form, light pink with dark pink picotee edge and some fluorescence. Flowers midseason.

Kay Truesdale. *(C.japonica)*, *American Camellia Yearbook*, 1962-1963, p.220, Reg No.638: A 6 year old chance seedling that first bloomed 1959. Originated by E.V. Truesdale, West Columbia, South Carolina, USA. The plant growth is upright and average in rate with dark green leaves, averaging 10 cm x 5 cm. The rose form double flowers, similar to 'Mathotiana', (**Julia Drayton**) are 12.5 cm across x 6 cm deep. Colour is a light, lavender pink (Nickerson Colour Chart 2.5 RP 8/5) with white stamens and 35-40 petals. The petals are wide and show slight veining. Usually fully imbricated but odd blooms may open semi-double. Flowers early to mid-season.

Kayabukura. Corruption of the Japanese name 'Kan'yô-bukuro'; different reading for **Kan'yôtai.**

Kayai-dori. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Kay-oidori.**

Kaye Fuller. *(C.reticulata)*, SCCS., 1984, *Camellia Nomenclature*, p.120: Rose-pink shaded cyclamen. Large, anemone form. Medium, upright growth. Midseason blooming. *American Camellia Yearbook*, 1986, p.92, Reg. No.1993: The 7 year old seedling first bloomed 1979. Average flower size is 11 cm across x 3.8 cm deep with 6 petals and many petaloids. Plant growth is erect and medium in rate with dark, green leaves, 13 cm long x 7 cm wide. A seedling of 'Chang's Temple'. (**Zhangjia Cha**), originated by J. Hunt, South Croydon, Victoria, Australia.

Kayel. *(C.japonica)*, ACRS., 1970, *Camellia News*, No.40, p.26, Reg.117,: Originated by R. Loughlin, Hawthorndene, South Australia as a sport of *C.japonica* **William Bull.** Except for the colour the characteristics are the same as for **William Bull.** It has a two tone coloured flower, base colour Neyron Rose HCC.623, striated with HCC.623/2. Sport first observed 1963. See colour photo front cover of above *Camellia News.* Chinese synonym: 'Kaiyier'.

Kayobururo. RHS., 1968, *The Rhododendron and Camellia Yearbook*, p.19. Corruption of the Japanese name 'Kan'yô-bukuro', different reading for **Kan'yôtai.**

Kayoichidori. (Migrating Plover), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1: Large, three fold, red flower, variegated with many, white spots in various designs. Also listed in Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Yashiro, 1841, *Kokon Yôrankô*, vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* and Itô, Ko'emon, 1879, *Chinkashû.* Different reading: 'Kayouchidori', the difference between the "i" and "u" ending on "Kayoi" is very slight. The transliteration 'Kayoichidori' has priority, Yashiroda, 1950, *American Camellia Yearbook*.. Various translations have been given: "Flying Sandbird", "Daily Passing Bird", "Daily Passing Plover", "Flying Sawbird", "Migrating Plover". Resembles **Kayoidori.** For colour photo and descriptions, see: Tuyama, 1966, *Camellia Cultivars of Japan*, p.258,

pl.148; *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.364, Seibundô Shinkôsha, 1979, *Senchinshû*, pp.37, 208. Originated in Kantô area, Japan.

Kayoidori. (Daily Passing Bird), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* White, streaked pink. Large, semi-double. Chûgai Nursery Catalogue, 1935; Wada, 1941, *Garden Treasures of Japan*, p.30: Well doubled, smooth petalled flower, clear red broad streaks on a white ground, large; McIlhenny, 1937, *600 Varieties of Camellias;* Satomi, 1956, *Camellia Varieties of Japan* and the SCCS, *Camellia Nomenclture*, all use a similar description. However, in Japan, the form of **Kayoidori** in the trade is apparently a colour sport as it is now pink, streaked red. See any of the following colour pls: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.194; Tuyama, 1968, *Camellias of Japan*, pl.370; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.110; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.322; Satô, 1975, *Chûbu no Tsubaki*, p.91; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.347; Seibundô Shinkôsha, 1979, *Senchinshû*, p.37. These illustrate a variable camellia with a background colour from pale pink to finely veined deep pink, streaked or banded with crimson. It is a rose form double that often opens out to a semi-double. Tuyama's description is: Leaves oblong, oblong-elliptic to obovate elliptic, apex suddenly acuminate, coarsely serrulate-crenate at the margins. Flowers double, often nerved a deeper pink, leaving a loose head of petals in the centre, pale pink, striped with rose (Crimson 22/1 to 22/2), petals incurved. Sometimes producing a flower of pure crimson. In this case, as compared with the former listed camellia, the meaning of the name is "Daily Passing Bird". Fendig in his *American Camellia Catalogue*, 1953, lists 'Kayoidori 1' and 'Kayoidori 2', apparently to cover the two different colour forms. Originated in Kantô, Japan. Resembles **Kaoyodori** and **Kayoichidori** in flower form. Chinese synonym 'Tongniao'.

Kayoiji. (Thoroughfare), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.37, colour photo, p.208, description: Small, soft pink, campanulate single with 6-7 rounded petals and a compact stamen column. Leaves, elliptic, apex acuminate, bright green, margins serrulate, venation remarkably impressed. Originated in the Chûbu area, Japan. Similar to **Owarifuji** but smaller. Originated and released by Toshiaki Kozaki.

Kayoikanoko. (Visiting Fawn), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1, No.124; Yashiro, 1841, *Kokon Yôrankô*, vol.306; *Hashiboku Sanbokutsuki Meisai*, (before 1868): Variegated red and white in various designs like a kind of bandanna. Large, double flower with separated rows of petals. Bloomed in the spring of 1688 for the first time. Originated in Japan. (Believed extinct.)

Kayoikomachi. (Visit to Ono-no-Komachi.), *(C.japonica)*, Okumura, ca. 1810, *Chinka Hin'i.* No description. Originated in Japan. (Believed extinct.). Title of Noh drama. Fukakusa-no-Shosho visited Ono-no-Komachi one hundred times in a vain attempt to make love to her.

Kayoka. *(C.japonica)*, Mark S. Cannon Scion Catalogue, 1963-1964, p.9. No description. Originated in USA. No valid listing located.

Kayouchidori. Satomi, 1956, *Camellia Varieties of Japan.* Different reading for **Kayoichidori.**

Kazabana. Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, Feb.1967, black and white photo, p.6, description, p.16. Different reading for **Kazahana.**

Kazagano. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.119. Corruption of the Japanese word **Kasugano.**

Kazaguruma. (Windmill), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.309; *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.19: Dark scarlet, single with 8 petals like the blades of a fan. Originated in Japan. (Believed extinct.)

Kazaguruma. (Windmill), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.344: A crimson, single of 6 petals with lobes on two of the petals. Originated in Japan. (Believed extinct.)

Kazaguruma. (Clematis), *(C.rusticana),* Tateishi et al., 1970, *Journal of Japanese Botany,* vol.45; Seibundô Shinkôsha, 1979, *Senchinshû,* p.90, colour photo, p.207, description: Medium size, light red, full double to semi-double with long, strap-like petals, becoming pointed towards the centre so that the centre group resembles a star. Originated in the Ehime Prefecture, Japan.

Kazahana. (Snowflakes in the Wind), *(C.rusticana),* Hagiya and Ishizawa, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.8, p.6, black and white photo, p.16, description: Medium size, 8-9 cm across, pure white, single with 5-6, long petals of irregular length, notched apex and 80 irregular, spreading, yellow stamens. Mid-season blooming. Leaves ovate, twisted, 8-9 cm long, glossy green. See colour pls: Tuyama, 1968, *Camellias of Japan,* pl.1, p.1; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.75, p.61; Katei Gahô, 1984, *Chabana Koyomi, vol. 1, Tsubaki,* p.45. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.61; Seibundô Shinkôsha, 1979, *Senchinshû,* p.34. Corruption of name: 'Kaza-hani'. Resembles: **Shiro-yukitsubaki.** Originated among wild rusticanas on Sado Island, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1967. Different reading 'Kazabana'.

Kaza-hani. SCCS., 1972, *Camellia Nomenclature,* p.161. Corruption of the Japanese name **Kaza-hana.**

Kazaha-nishiki. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.34. Orthographic error for **Kazahana-nishiki.**

Kazahana-nishiki. ('Kazahana' Variegated), *(C.sasanqua),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.45. Medium size, white, single. Early flowering. Has an unstable yellow leaf variegation. Originated in Niigata Prefecture, Japan. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.34 as 'Kazaha-nishiki'.

Kazamidori. *(C.japonica), Book of Manuscripts,* ICS Congress, Miyazaki, 1999, White and Red Camellia at Nara's Todaiji Temple; Hagiya, Kaoru, p.43. No details.

Kazan. (Flower Mountain), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.13: Large, dark crimson, incomplete double. A very high flower with many rows of petals. Originated in Japan. (Believed extinct.) Different reading: 'Hanayama', cited in Tomita et al., 1980, *Tsubaki,* p.133.

Kaza-ore. (Broken by Wind), *(C.japonica).* Uesa, 1844, *Sômoku Benran;* Minagawa, 1959, *Chinkashû.* For colour photos see: Tuyama, 1966, *Camellia Cultivars of Japan,* pl.170; Tuyama, 1968, *Camellias of Japan,* pl.323, p.163, description, p.187; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.123, p.77; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.276 as 'Kazaore'; Seibundô Shinkôsha, 1979, *Senchinshû,* p.34, description, p.207: Branches delicate, flowers single, medium size, pale pink with red and deeper pink stripes, branches a little pendulous. Leaves narrowly elliptic to elliptic, apex acuminate, venation impressed. Flowers single, palest pink, (Rose-pink 427/2) delicately striped carmine. (Carmine 21). Late flowering. Originated in the Kansai area, Japan. Different readings 'Kaze-ore', 'Kaza-ori'. Sport: **Kaza-ore-nishiki.** The name means that the branches are so slender that it would seem that they could be broken in the wind.

Kaza-ore-nishiki. ('Kaza-ore' variegated), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Single, pure white with deep red stripes. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.81. Originated in Japan. (Believed extinct.)

Kazaore-zakura. (Wind Broken Cherry). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.58 with colour photo; English translation p.38. Medium size, pale pink, tubular to trumpet

shaped single, pinched stamen cylinder. Late flowering. Leaves elliptic, small. Upright, vigorous, fast growing. A mutation of **Kaza-ore,** named and released by Shinichi Noguchi in 1989. From Tokyo.

Kazaori. SCCS, 1960, *Camellia Nomenclature*, p.67. Different reading of the Japanese name **Kaza-ore.**

Kazashi-no-hime. (Kazashi Princess), *(C.hybrid)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.28: Small size, rose-pink, tubular to campanulate, single. Blooms mid-season. A seedling from *C.japonica* **Hijirimen** x *C.lutchenensis.* Originated in Niigata Prefecture, Japan. Named and released by Kaoru Hagiya in 1982.

Kazemachi. (Waiting for Favourable Wind), *(C.hybrid)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.28: Small size, white ground with rose-pink margins, cup-shaped single. Blooms mid-season. A seedling of *C.japonica* **Kô-un** x (*C.sasanqua* **Shishigashira** x *C.fraterna).* Originated in the Niigata Prefecture, Japan.

Kaze-no-bon. (Bonfire Festival), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.245, p.124, description, p.165: Leaves ovate to broadly elliptic, margins crenate-serrulate, 5.8-7.0 cm long x 3.1-3.5 cm wide; petioles 4-5 mm long, very hairy. Flowers peony type, low in height, rosy pink (Crimson 22/2), outer petals, 18-25, largest 4 cm long x 2.4 cm wide, oblong; inner petals small, 31-74, oblanceolate, rounded, with 3-15 fan shaped petaloids, scanty stamens, filaments yellow to pinkish. Mid-season flowering. Originated in the wild in Toyama Prefecture, Japan. "Kaza-no-bon" is the bon-fire dance festival held early september at the Yatsuo-machi if the rice harvest has escaped typhoon damage.

Kaze-no-sasayaki. (Whispering Wind). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.61 with colour photo; English translation p.40. Miniature, pink graduating to deep pink at the centre, inner petals changing to petaloids, split stamens, profuse. Flowers mid-season. Leaves narrowly elliptic, small. Upright growth. A cross between early blooming wild japonica and *C.hybrid* **Tiny Princess,** named and released by Kaoru Hagiya, Niigata Prefecture, in 1980.

Kaze-no-tsukai. (Messenger of the Wind), *(C.hybrid)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.28: Very small, white ground with rose-pink graduations, cup-shaped single. Late blooming. A seedling of *C.japonica* **Shimachidori** x **Cornish Snow.** Originated in Niigata Prefecture, Japan. Spreading, weeping branches. Named and released by Kaoru Hagiya.

Kaze-ore. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.136. Different reading for **Kaza-ore.**

Kazue-no-tsuki. (Branch against the Moon), (Higo), Higo Tsubaki Aikôkai, 1977, *Higo Tsubaki;* Stone, 1984, SCCS., *The Camellia Review*, vol.45, No.2, p.19: A rose-pink sport of **Tancho,** about 10 cm across, 7-8 petals, 140 widely spread stamens with creamy filaments. Large, broad-ovate leaves; dark green. Blooms mid-season. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.139. Originated in Niigata Prefecture, Japan. Designated as a Higo by the Higo Society in 1980s.

Kazuki-no-onkata. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.136. Different reading for **Katsugi-no-onkata.**

Kazukiyama. (Mount Kazuki), *(C.japonica)*, Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.91, black and white photo. May be synonymous with **Chôju-no-haru** according to the *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.382: Flower, pale pink, double, lotus shape, large size. Flowers mid-season, emarginate petals. Leaves dark green, elliptic, apex acuminate, slightly recurved. Originated in Kawaguchi City, Saitama Prefecture, Japan. See Seibundô Shinkôsha, 1979, *Senchinshû*, pp.35, 207; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.381.

Kazusa-chidori. ('Chidori' of Kazusa) *(C.hybrid*) from Chiba Pref., *Japan Camellia* No.59 May 1999: A hybrid between *C.japonica* **Tsuki-no-fue** and *C.hybrid* **Tiny Princess**. Pale pink bordered

peach pink, single, long tubular, long narrow petals, small, blooms in mid and late season. Leaves lanceolate, small. Tree compact with crowded branches. Bloomed firstly and named in 1990. Originated by Atsushi Itoh. ('Kazusa' is an old name for the central part of the present Chiba Prefecture.). *Japan Camellia* 99, May 2013, p.2 with colour photo, JCR Regn 2013-2. (ser. No.2). Seed parent given as **Tsuki-no-hikari.**

Kazusa-hime. (Chiba Princess), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.28: Very small to small size, pale rose-pink to rose-red, cup-shaped, semi-double to anemone form double. Fragrant. A seedling *of C.japonica* **Tama-no-ura** x **Tiny Princess.** Blooms mid-season. Originated in the Chiba Prefecture, Japan by Atsushi Itô in 1989. Kazusa is the ancient name for Chiba.

Kazusa-no-hoshi. (Star of Kazusa), *(C.japonica), Japan Camellia* 99, May 2013, p.3 with colour photo, JCR Regn 2013-9, (ser. No.9); A seedling of the Higo-type **Myôjô**, pollen parent unknown; Double, with wide open outer petals, and a flared centre of mixed petaloids and stamens. Red variegated with white spots and splashes. Spreading plant. Mid-season to late blooming. Originated by Atsuhi Itô.

Kazusa-no-tsuki. (Moon on Kazusa), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.35, colour photo, p.207, description: Palest, blush pink, single with 5-6 large, emarginate petals, a little fluted at the apex, surrounding a compact, stamen cylinder, yellow anthers, whitish cream filaments. Leaves obovate to narrow obovate, apex tapering acuminate, shining deep green with serrate margins. Originated in Kantô area, Japan.

Kazusa-no-utage. (Banquet of Kazusa). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.60 with colour photo; English translation p.40. Medium to large size, pale pink to peach purple, trumpet to sake cup-shaped single cylindrical stamens. Flowers early to late. Leaves elliptic to narrowly elliptic, medium size. Somewhat spreading. A chance seedling of **Berenice Boddy,** named and released by Atsushi Itô in 1987. From Chiba Prefecture.

Keepsake. *(C.japonica),* SCCS *Bulletin*, vol.11, No.6, p.5, Dec.1959. SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Rose-pink, medium formal double. Medium, compact growth. Flowers mid-season to late. Originated in USA by Harvey Short, California.

Kegon. (See below), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.49, colour photo, p.212, description: A small, campanulate, single white with 5-7 petals with fluted apices; short stamen column, with pale yellow anthers. Leaves shiny, deep green, elliptic, twisted, margins serrulate, apices acuminate. Plant habit willowy and weeping. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.40, 41. Originated in Kantô area, Japan. A place name for the beauty of a high waterfall. It is also sanscrit for "Spiritual Flowers". A chance seedling of **Bokuhan.** Originated by Kamenoi Nursery, Kawasaki City, released in 1970s.

Kegon-no-taki. Nuccio's Nurseries Catalogue, 2007. p.34. Orthographic variant for **Kegon.**

Keibuboshi. Different reading for **Gyôbuboshi.**

Keiko. (Woman's Personal Name). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.110. No description. From Kurume City, Japan.

Keikô-no-mai. (Dance of Fragrance). *(C.japonica), Nagoya Camellia Society Bulletin,* 1993, No.26, p.41, No.4. Camellia photo and text: Seedling of **Tsukimi-guruma.** Fragrant. Bright pink semi-double to loose peony double with large outer petals and irregular inner petals. Yellow stamens are divided and flared. Late flowering. Originated by Kôji Funakoshi, Nagoya, Japan.

Keina. Lemaire, 1869, *L'Illustration Horticole*, 16:sub. pl.582, [p.2]. Synonym for *C.kissii.*

Kei-no-hikari. (Light in the Valley), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.12: Very small size, dark red, tubular single. Blooms early to mid-season. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.84 with colour photo; English translation p.57. Leaves elliptic,

medium size. Upright growth. A chance seedling of a sport of a wild japonica from Yabakei, Kyushu, which bears unusually large fruits. Named and released by Kiichirô Akiyama, Shizuoka Prefecture, in 1964.

Keiran. Different reading for **Toritamago.**

Keisei. (Courtesan), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.49, colour photo, p.212: A medium size, deep pink, open cup-shaped single with 6-7 large, rounded, overlapping petals. Leaves matt, dark green, ovate, margins shallowly serrate, apices acuminate, recurved. Long petioles. Blooms very early to late. A seedling of **Seiôbo.** Originated by Zenji Kamo in 1980s, named and released by Shôzô Kamo. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.266. Originated in Toyama Prefecture, Japan.

Keisetsu. (Snow by the Light of Fireflies), *(C.rusticana)*, *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.312, p.131, description, p.244: Small, single, 7 cm across, white with faint pink tinge at petal apex, 5-6 slightly emarginate petals with edges rolled in, spreading stamen cluster, yellow anthers, light yellow filaments. Flower base is tinged a greenish colour. Leaves elliptic to narrowly elliptic, apex acuminate, margins serrate. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.53 and Seibundô Shinkôsha, 1979, *Senchinshû*, pp. 49, 212. Originated in Kashiwazaki City, Niigata Prefecture, Japan. Note: This name alludes to studying hard to overcome difficulties. According to ancient Chinese literature, reading books by the light of fireflies in summer and by the reflections of the snow in winter. Named and released by Tokuji Ôoka in 1968.

Keith Ballard. (*C.reticulata* hybrid). ACRS, *Camellia News*, 1992, No.123, p.4, Reg. No.406: Originated by Dr R.M. Withers, Donvale, Victoria, Australia. A seedling of *C.japonica* **Mrs Bertha A. Harms** x (*C.reticulata* x *C.x williamsii* **Suzanne Withers**) that first flowered 1986. Plants are upright and open in growth with flowers larger than **Suzanne Withers** and more petals, 24 per flower, incomplete double to rose form. Colour light pink (RHS.CC.56A), 12.5 cm across x 5 cm deep. Flowers mid-season to late. Rapid growth and free flowering. Petals slightly notched and creped. Filaments columnar.

Kei-un. (Personal Name), *(C.sasanqua)*, Chûgai Nursery Catalogue, 1936-1937, p.26 as 'Keiun': Deep scarlet, marbled white. Very large, single. Originated in the Kumamoto Prefecture, Japan. A corruption of the name is 'Kejun'.

Kei-un. (Personal Name), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.332, colour photo and description: Large size, bright crimson with white variegation, semi-double with 2-3 rows of large, round petals and a central stamen cylinder with reddish filaments, joined for the lower third and yellow anthers. Leaves dark green, broad-elliptic, curved, coarsely serrate. Blooms mid-season to late. Originated in the Chûbu area, Japan. A mutation of **Ehigasa**, released by Minoru Satô.

Keiun (Kansai). (Personal Name). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.84 with colour photo; English translation p.56. White mottles on deep red ground, large, lotus form semi-double, tubular stamen column. Flowers mid-season to late. Leaves oblong, large, waved. Upright, fast, dense growth. A sport of **Ehigasa,** discovered at Kimura's Shikishima'en Nursery, named by Kiyoshi Tarumoto in 1975. From Hyôgo Prefecture.

Keiyû-tobi'iri. (Keiyû Variegated), *(C.japonica)*, Hino, Sukekatsu, 1637, *Sukekatsukyôki*. No description. Originated in Japan. Different reading: 'Keiyû-kasuri'. (Believed extinct.)

Keizaemon. (Personal Name), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.417, 518: Formal double, deep pink with light pink band around petal edge. Originated in Japan. Chinese synonym 'Kaidamo'.

Keizen van Rusland. de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias*, p.123. Orthographic variant for **Empereur de Russie.**

Kejun. Fendig, 1953, *American Camellia Catalogue.* Corruption for the Japanese sasanqua name **Kei-un.**

Kelly. Burdin Maggiore & Co. Catalogue, 1886. Abbreviation for **Kellyana.**

Kelly Abbott. *(C.reticulata* hybrid). C.Aust., *Camellia News,* Autumn 2008, No.176, p.13, colour photo front cover, Reg. No. 575. Originated by Keith Abbott, Rossmoyne, Western Australia. A chance seedling of *C.reticulata* hybrid **Mouchang.** First flowered in 1996. The informal double flower has 36 petals, and is a brilliant, bright medium red (RHS.CC. 68A) Size is 14 cm across x 7.5 cm deep. Flowers freely mid-season on a rapid growing, upright plant. Flowers fall whole. Leaves dark green, broad, pointy, down curved, 14 cm x 7 cm. Petals are interspaced with gold stamens, which creates an eye-catching bush.

Kelly Gaye. *(C.reticulata), New Zealand Camellia Bulletin,* 1985, vol.XIV, No.1, p.25, Reg. No.224: A 5 year old, chance seedling, originated by A. Webster, Te Puke, New Zealand. Bright mid-pink, RHS.CC. Red Group, 54A. Large, formal double with 40-45 petals and 10 petaloids. Average, dense, medium in rate, growth with leaves, 9 cm x 4 cm, dark green. Flowers measure up to 11 cm across x 5 cm deep and often show a strong, spiral form. First flowered 1983. Flowers midseason to late.

Kelly McKnight. *(C. hiemalis), American Camellia Yearbook*, 1970, p.165, Reg. No.1087: A 9 year old *C.hiemalis* chance seedling that first flowered 1967. Originated by Mrs T. Kelly McKnight, Baton Rouge, Louisiana, USA. Plant growth is average with medium size, dark green leaves, 4 cm long x 2 cm wide. The rose form double 'Mathotiana' (**Julia Drayton**), type, bloom is clear, brilliant red with no anthers. It measure 4.5 cm across x 3.2 cm deep with 35-40 petals. Blooms midseason.

Kellyana. *(C.japonica),* Harrison, ed.1838, *Floricultural Cabinet*, p.29: Light red with small, white spots. Originated in England. Orthographic errors: 'Killyana', 'Kelliana'. Abbreviation: 'Kelly'.

Kelly's Eye. *(C.sasanqua),* ACRS., Dec.1990, *Camellia News*, No.115, p.11, Reg. No.394: Originated by Keith Abbott, West Riverton Drive, Rossmoyne, West Australia. A chance seedling that first flowered 1984. Informal to rose form double flowers of 20 petals are a light maroon red on the inner sections of the petals, shading to a deep maroon red on the outer edges, RHS.CC.74C-58A, 5 cm across x 3 cm deep. Blooms midseason on an upright, dense, vigorous plant. Leaves deep green, matt, elliptic, keeled, serrulate, pointed apex, 5 cm x 2 cm. Petals fluted and flat with few anthers.

Kelly's Red. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.68: Bright red. Small, semi-double, Sturdy, upright growth. Mid-season blooming. Originated in USA by W. Kelly, Pasadena, California.

Kelmanii. *(C.japonica),* Catalogue des plantes Cultiveés la Société d'Horticulture de Belgique, 1842, p.22. No description. Originated in Belgium. (Believed extinct.)

Keloingtonia. Dauvesse Catalogue, 1855-1856. Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Kelsey Beasley. *(C.sasanqua).* ACS 1994, *American Camellia Yearbook*, p.61, Reg. No.2290: Originated by Marvin Jernigan, Warner Robins, Georgia, USA. A large to very large red semi-double *C.sasanqua* chance seedling that blooms early to mid-season. The 10 year old seedling first flowered 1984. Average flower size is 10 cm across x 3.7 cm deep with 13 petals, white anthers and filaments. Plant growth is upright, dense and vigorous with dark green leaves 6.2 cm long x 2.5 cm wide. See colour photo between pp.64-65.

Kemi-no-sazanka. Satomi, 1958, *Nomenclature List of Sasanqua of Japan.* The Japanese name for *C.gnaphalocarpa* Makino.

Ken Blanchard. *(C.japonica),* ACS., Nov.1989, *The Camellia Journal*, vol.44, No.4, p.17, Reg. No.2180: Brilliant red, turning darker with age. Large, semi-double. Medium, upright growth.

Blooms mid-season to late. *American Camellia Yearbook*, 1989, p.124, colour photo [p.134]: The 11 year old seedling first bloomed 1983. Average flower size 12 cm across x 7 cm deep with 15 petals. Light green leaves 9.5 cm x 5 cm.

Ken Spragg. *(C.reticulata),* ACRS., 1980, *Camellia News*, No.74, p.24, Reg. No.245: Originated by Mrs Alice Spragg, Sutherland, N.S.W., Australia. A chance seedling that first bloomed 1974. The upright, spreading plant has mid-green, 9 cm x 3.2 cm leaves. The semi-double, 13 cm across, pink flower has erect, inner petals, notched and some streaked with white. Blooms mid-season to late.

Kena. Gao, Jiyin Ltr.25-5-90. Chinese synonym for **Kona.**

Kenbaranne. *(C.hybrid),* ACRS., 1989, *Camellia News*, No.111, p.12, Reg.370: Originated by Kenneth P. Brown, Mitcham, Victoria, Australia. A chance seedling from Snowdrop, that first flowered in 1985. Semi-double to loose, peony form with a soft pink edge fading to white at the centre, (RHS.CC.63C), 6 cm across x 4 cm deep. Leaves lanceolate, glossy green, flat, with serrate margins, apex cuspidate, 6 cm long x 2.6 cm wide. Free flowering over a long period on a medium growing plant with a weeping habit.

Kenchiu. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Feastii.**

Kengamine. (Rim of the Ring). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.86 with colour photo; English translation p.57. Small, red, trumpet shaped single, somewhat channelled at the petal centres, tubular stamen cylinder. Flowers mid-season to late. Leaves oblong, medium size. Spreading, vigorous growth. An open pollinated seedling of **Hiiragi-tsubaki,** pollen parent thought to be **Yuri-tsubaki.** Named and released by Sinichi Noguchi in 1993. From Tokyo.

Kenny. *(C.japonica),* Cachet Catalogue, 1840-1841, p.3. No description. van Houtte Catalogue, 1841, 7:11: Very full peony form. Illustrated and described, Fendig, 1949, *American Camellia Catalogue:* Large carmine, (Camellia Rose 622 & 622/1) splashed with white, 11 cm across x 5.5 cm deep. Outer petals, 5.5 cm long in two rows. Inner petals of crepe texture, are erect and undulate with stamens intermixed. Leaves dark green, 8 cm x 5 cm, leathery, serrations fairly coarse, apex broad-pointed, pronounced venation. Plant habit is spreading with medium growth rate. Listed by Guichard Soeurs from 1894 on and was imported to USA by McIlhenny 1934. Although the original scant description does not mention white marks, all the later listing describe white variegation in various proportions from "scant white marbling" to "predominantly white". Evidently the cultivar became virus variegated at an early stage and the variegated form retains the original name. Synonyms: 'Kenny Glen', 'Kenny Variegated'. Pseudonym: 'Leviathan'. Chinese synonym 'Kenni'.

Kerry Ann. *(C.japonica)*, Dodd, 1968, *Adventure* in *Camellia Seedlings*, p.12, colour photo: Soft, blush pink with the colour deepening towards the petal edge. (Sweet pea type) Formal double, medium size seedling of **Nina Avery**. Originated in USA by Richard Dodd, Marshallville, Georgia.

Kerry Anne Fraser. *(C.hybrid)*, *New Zealand Camellia Bulletin*, 1986, vol.XIV, No.7, p.7, Reg. No.240: A 7 year old chance seedling, originated by T. Lennard, Te Puke, New Zealand that first flowered 1983. The plant has a spreading, open habit with medium growth rate and light green leaves 5.5 cm x 3 cm. The flowers are rose form to formal double, with about 20 petals and measure up to 10 cm across x 6.5 cm deep and open about 14 cupped and notched petals and a rose-bud centre. The colour is Post Office red (RHS.CC.45C) shading to claret rose at the petal base, Flowers mid-season to late.

Kerry Elizabeth. (*C.japonica* hybrid). *New Zealand Camellia Bulletin*, March 2002, Issue No.141, vol.XXII, No.5, p.12, Reg. No.437. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between C.hybrid **Scented Sun** x *C.japonica* **Kramer's Supreme**, which first flowered in 1997. The large flower is anemone form, 12 cm diameter x 5.5 cm deep, with 13 petals and a large loose central mass of about 110 petaloids hiding the few stamens. The flower is weakly scented. The plant is of spreading form, average density and slow growth rate, with dark green leaves 10 cm long x 6 cm wide. Blooms mid-season to late.

Kerryland. *(C.japonica)*, *American Camellia Yearbook*, 1969, p.163, Reg. No.1050: A 7 year old chance seedling that first bloomed 1965. Originated by Harry Novick, Woodland Hills, California, USA. Plant growth is upright and average in rate with dark green leaves averaging 9.5 cm long x 5 cm wide. The semi-double flowers, similar to **Frizzle White,** are 13 cm across x 7.5 cm deep. Medium pink with 15 petals, 3-5 petaloids, yellow anthers and filaments. Flowers mid-season. Sport: **Kerryland Varigated.**

Kerryland Variegated. *(C.japonica),* Cannon, 1975, ACS., *The Camellia Journal*, vol.30, No.4 as 'Kerryland Var.'. A virus variegated form of **Kerryland** - Medium pink blotched white. Originated in USA.

Kibasazanka. Based on the same characters as **Kiba-no-sazanka.**

Kibi. (Old Name for Okayama), (Wabisuke), JCS., 1978, *Japan Camellia*, No.25, p.10, #2: Very small, peach colour charged with purple. Single, campanulate, small flower. Blooms early to mid-season. Anthers abortive but occasionally bears fruit. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.137. Originated in the Okayama Prefecture, Japan. A mutation of a wild camellia. Named and released by Nobuo Sasai in 1979.

Kibina. (Place Name). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.73 with colour photo; English translation p.49. Miniature, pink, tubular to trumpet shaped single, thick and lanceolate petals, plicate at the centre vein, cylindrical stamen column. Flowers mid-season to late. Leaves somewhat oblong, small. Somewhat upright. A cross between *C.japonica* **Kon-wabisuke** and *C.saluenensis,* originated by Nobuo Sasai in 1983, released in 1997. From Okayama Prefecture.

Kibune. (Place Name), Mizuno, 1661, *Kadan Kômoku:* White spotted pink. Double. Originated in Japan. (believed extinct.) Different readings: 'Kifune', 'Kihune'.

Kicchô. (Lucky Omen), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.42, colour photo, p.209, description: Medium size, pinkish red, open peony form with the first two rows of petals reflexed, the next two cupped upwards to a small, spreading cluster with a few petaloids, floriferous. Leaves, medium size, lustrous green, elliptic-lanceolate, apex acuminate, margins finely serrulate. Originated in Shimane Prefecture, Japan.

Kichi'emon-kyarabiki. (Kichi'emon's Saw Toothed Leaf), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû:* The flower is a small, blush pink single, cup-shaped. Leaves very small and narrow, brownish green, sharply serrate. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.168. Originated in Japan. (Believed extinct.) Different reading: 'Kichiuemon-kyarabiki'.

Kichiuemon-kyarabiki. Different reading for **Kichi'emon-kyarabiki.**

Kichizô-nishiki. (Cherish Good Luck Brocade), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.101, black and white photo: Large, semi-double white with carmine streaking. Outer petals, large, inclined to be notched, wide spread; inner ones cupped to semi-erect around a short, compact stamen column. Originated in Kanagawa Prefecture, Japan. Resembles **Hat-suseyama** & **Oki-no-nami.**

Kichô. (Yellow Tone), *(C.japonica x C.chrysantha),* JSC, *Japan Camellia*, No.36, Oct.1990, p.4: A seedling of *C.japonica* 'Haku-arashi-saga' x *C.chrysantha.* Flower colour is pale yellow, of the same degree as **Shokô,** pale pink in the bud. Size of flower, 5 cm across, single, cup-shaped. Leaves similar to *C.japonica*, 13 cm long x 5 cm wide. Blooms early. Proved fertile. Originated by Tadao, Yamaguchi, Tsurugi-chô, Ishikawa Prefecture, Japan. Named and released in 1990.

Kichô-de-chafakurin. (Kichô's Light Brown Margin), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû* in margined leaves section: Flower single, purplish red, cup-shaped. (Believed extinct.) Different readings: 'Kichô-de-chahukurin', 'Sachô-chafukurin'. Originated in Japan. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.168.

Kichô-de-chahukurin. Watanabe, 1970, Kyôto Engei Kurabu *Tsubaki*, *Tokushû*, p.136, Different reading for **Kichô-de-chafukurin.**

Kichô-tsubaki. (Kichô's Camellia), *(C.japonica),* Hantei Kinta, 1827, *Sômoku Kihin Kagami.* Very small leaves, rugged surface, thought to be caused by a virus. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No,7, p.158. Originated in Japan. (believed extinct.)

Kick-Off. *(C.japonica),* Nuccio's Nurseries Catalogue, 1962. *American Camellia Yearbook*, 1965, p.238, Reg. No.693: [SCCS No.62-29]. A 10 year old seedling, parentage unknown, that bloomed first in 1957. Originated by Nuccio's Nurseries, Altadena, California, USA. Early to mid-season flowering. Flowers have dark markings on a light pink, are 12.5-13 cm across x 7.5 cm deep. They are peony form on a vigorous, upright and compact bush. For colour photos see: Front cover, SCCS, 1962, *The Camellia Review*, vol.24, No.2 and p.96, Macoboy, 1981, *The Colour Dictionary of Camellias.* Sport: **Touchdown**. Chinese synonyms: 'Yingduo', 'Kaisai'.

Kidômaru. (Name of a Boy in old Literature) *(C.sasanqua). Sasanquas, The Winter Flowers*, 2010, p.9 with colour photo; English translation p.7; White base, petal edges tinged with red, flower buds deep red. Lower sides of petals remain deeper red even after flower opens. Large single, very early flowering. Appears in *Chabaika Taishû* (1898). Old trees remain in Tokyo and Saitama. A representative Edo sasanqua.

Ki'emon. (Personal Name), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Yashiro, 1841, *Kokon Yôrankô*, vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Variegated with red on a light coloured ground, like a splashed pattern. Large size, double flower. Resembles **Kaizan.** Different reading: 'Kiuemon'. Originated in Japan. (Believed extinct.)

Kifujin. (Elegant Woman), *(C.japonica)*, Inazawa Nurseries Wholesale Catalogue, 1986-1987: Soft pink fading to white at petal base. Medium size, single. Vigorous, upright growth. Blooms mid-season. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.127, colour photo and description: Medium size, soft pink, paler towards the petal base, single with strong stamen cylinder with white filaments, joined at the lower third, and gold anthers. Leaves dark green, broad-lanceolate, apices acute. Originated in Kurume, Fuku'oka Prefecture, Japan. A seedling of **Chûbu-tsukimiguruma.** *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.73 with colour photo; English translation p.49. Stated to be a chance seedling of **Yukimiguruma,** named and released by Kôichi Inoue.

Kifuku-benten. Tateyama Nursery List, 1957. Different reading for **Kifukurin-benten.**

Kifukufutae-benten. (Yellow Variegated "Futae-benten"), *(C.japonica)*, Inazawa Nurseries Co. Ltd Catalogue, 1986-1987, p.7, A-320: Medium size red single with yellow variegated leaves. Blooms early. Originated in Japan.

Kifukurasen. Tateyama Nursery List, 1957. Different reading for **Kifukurin-rasen.**

Kifukurin-benikarako. (Yellow Bordered, Red Anemone), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in the section for variegated leaves; Itô, Ko'emon, 1879, *Chinkashû:* Yellowish variegated leaf, anemone form. See colour plates: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.39. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.l22; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.450; Seibundô Shinkôsha, 1979, *Senchinshû*, p.42, description, p.210: Small, red, anemone form, with 5 outer petals and compact cushion of small, folded petaloids. Foliage ovate, apices blunt acute, margins serrulate, variegated yellowish green on mid-green. Originated in Kantô area, Japan. Sport of **Benikarako.** Different reading: 'Kihukurin-benikarako'. Synonym: 'Fukurin-benikarako'.

Kifukurin-benten. (Yellow Bordered 'Benten'), *(C.rusticana)*, Kasuya, Kamegorô, 1859, *Tsubaki Iro-hanayose Irotsuki* in section on variegated leaves; Itô, Ko'emon,1879, *Chinkashû:* Rose-red, small, single with leaves having pale yellow variegation. For colour photos see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.217; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.446; Seibundô Shinkôsha, 1979, *Senchinshû*, p.42; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.154, 155; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.96: Leaves dark green with pale yellow variegation and distorted margins, petiole hirsute. Flower small, single, red. Blooms mid-season to late. Compact and upright plant. Different readings: 'Kifuku-benten', 'Kihuku-benten'. Synonym: 'Benten', 'Lutea Variegata'. Local name in Niigata: 'Hoshi-sekai'. Originated in Kantô area, Japan.

Kifukurin-benten. (Yellow Bordered Benten), *(C.japonica)*, Nuccio's Nursery Catalogue, 1986-1987, p.27: Compact and upright plant with green leaves, bordered light green. Produces an unusual, miniature, anemone form flower with a tight, tufted centre. Orangy red. Blooms mid-season to late. Not the same as Itô's **Kifukurin-benten**. Imported from Japan. Corruption of name: 'Kifukwin-benten'.

Kifukurin-benten. (Yellow Bordered benten), *(C.sasanqua), Engeitechô,* 1960: White, pink towards the margins, medium size, single. Leaves yellow bordered. Originated in Japan. Different reading: 'Fukurin-benten'.

Kifukurin-kuro-tsubaki. ('Kuro-tsubaki' with benten variegated leaves.) *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.216 with colour photo; Small, dark red single, incomplete pistil. Leaves somewhat small and waved, yellowish-green borders in a distinctive pattern, veins at borders prominent. Spreading, somewhat dwarf growth. A sport of **Kuro-tsubaki,** found by Shinichi Noguchi, Tokyo, Japan, named and released in 2004.

Kifukurin-rasen. (Yellow Bordered Rasenzome), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in section of variegated leaves; Itô, Ko'emon, 1879, *Chinkashû:* Cardinal red, mottled white, large semi-double. Leaves, yellow variegated border on mid-green. Different reading: 'Kifurasen', 'Kihukurin-rasen'. Synonym: 'Kifukurin-rasenbeni'. Originated in Japan. (Believed extinct.)

Kifukurin-rasenbeni. Fendig, 1953, *American Camellia Catalogue*, as 'Ki-hurinin-rasen-beni'. Synonym for **Kifukurin-rasen.**

Kifukurin-rasenkarako. (Anemone centred 'Rasenzome' Bordered Leaves), *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* Cardinal red, anemone form. Leaves yellow variegated margins on green. Originated in Japan.

Kifukurin-tama-no-ura. (Yellow Bordered Leaf 'Tama-no-ura'). *(C.japonica), Kurume Camellia*, 1997, English translation, p.8; Red, edged clear white, Small campanulate single. Leaves have a yellow margin. Flowers early to mid-season. Named by N. Konomi, Kurume, Japan.

Kifukurin-toki-no-mai. (Yellow Bordered 'Toki-no-mai'), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.234: Flower, palest pink with red streaks, medium size, anemone form. A sport of 'Toki-no-mai' having leaves with a border of yellow variegation. Originated in Murakami City, Niigata Prefecture, Japan.

Kifukwin-benten. Nuccio's Nurseries Catalogue, 1982-1983, p.26. Corruption of Japanese name **Kifukurin-benten.**

Kifutamiya-tsubaki. (Yellow Variegated Camellia from Tamiya), *(C.japonica),* Aoyama, Kinta, 1827, *Sômoku Kihin Kagami.* Different reading 'Kihu-tamiya-tsubaki'. Large, yellow virus variegated leaves. Originated in Japan. (Believed extinct.)

Kifu-tsubaki. (Yellow Variegated Camellia), *(C.japonica),* Aoyama, Kinta, 1827, *Sômoku Kihin Kagami.* Different reading 'Kihu-tsubaki': Broad, round leaves with a clear, yellow dapple. Originated in Japan. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.160. (Believed extinct.)

Kifayamataka-tsubaki. (Yamataka's Yellow Variegated Camellia), *(C.japonica),* Aoyama, Kinta, 1827, *Sômoku Kihin Kagami.* Different reading 'Kihuyamataka-tsubaki'. Virus variegated leaves. No distinct form. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.158. Originated in Japan. (Believed extinct.)

Kigyoku. (Noble Jewel), *(C.sasanqua),* Satomi, 1958, *Nomenclature of Sasanqua of Japan*, p.11: Pure white. Large, single with round and incurved petals. Originated in Japan.

Kihan. (Returning Voyage). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.73 with colour photo; English translation p.49. Small, changing to white single with embracing petals, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, small to medium size, thick. Upright growth with short nodes. A natural seedling of **Kasenzan,** named and released by San-in Camellian Club in 1993. From Shimane Prefecture.

Kihô. (Yellow Phoenix), *(C.japonica x C.chrysantha),* Tadao, Yamaguchi, Oct.1990, *International Camellia Journal*, No.22, p.59 with colour photo on front cover: A seedling fom *C.japonica* **Hakuhô** x *C.chrysantha.* Colour light yellow, 6 cm across, single, tubular to campanulate, with 6-7 petals. Mid-season blooming. Leaves resemble *C.japonica* in shape, 11 cm long x 4 cm wide. Originated by Tadao Yamaguchi, Ishikawa Prefecture, Japan.

Kihô. (Meaning Uncertain). *(C.japonica), Nagoya Camellia Society Bulletin,* 1992, No.25, p.7, colour plate No.18: Originated by Kôji Funakoshi, Nagoya, Japan. A chance seedling of **Kangen.** Medium to large size, rose-red semi-double with outward curving petals and split cylinder of stamens. It has a long bud of white petals, edged pink, resembling the handle of a Japanese sword artistically bound with red threads on a white background. Fragrant. Blooms mid-season.

Kihôden. (Palace of Princely Treasure), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.102, black and white photo. For colour photo: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.383; Seibundô Shinkôsha, 1979, *Senchinshû*, p.43, description, p.210: Semi-double, medium size, 4-5 rows of petals, emarginate, large, rounded, the faintest, creamy blush, small, sparse stamens, light yellow anthers, white filaments. Leaves elliptic, shining, dark green, apex acuminate, margins serrulate, recurving strongly at the apex. Late flowering. Originated in Angyô, Kawaguchi City, Saitama Prefecture, Japan.

Kihujin. Kurume Shibu colour poster illustration, 1997. Different reading for **Kifujin.** See ICS Register, p.987.

Kihukurin-benten. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No,1, p,57. Different reading for **Kifukurin-benten.**

Ki-kamo-honnami. (Yellow 'Kamo-honnami'). (*C.nitidissima* hybrid). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.292 with colour photo; Pale yellow single,

small to medium size, tubular stamen ring. Flowers mid-season. Leaves ovate, medium size. Upright vigorous growth. A seedling of **Kamo-honnami** x *C.nitidissima*, originated and named by Shinichi Noguchi, Tokyo, Japan, and released in 2007.

Kikanjô. (Auspicious Restored Castle), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.434: White, large size, semi-double, with red stripes and 3-4 rows of petals. Originated in Japan. (Believed extinct.)

Ki-kantsubaki. (Yellow Kantsubaki), *(C.japonica)*, Aoyama Kinta, 1827, *Sômoku Kihan Kagami.* Yellow camellia. Leaves strongly twisted like a cup-shape. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.159. Originated in Japan. (Believed extinct.)

Kikarako. (Yellow Anemone), *(C.japonica)*, Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.167, p.57, description, p.214: Small size, anemone centered single, with one row of white, irregular sized, guard petals around a compact cushion of yellow petaloids. For colour photos see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.389; Seibundô Shinkôsha, 1979, *Senchinshû*, p.41, description, p.209. Originated in Kumamoto Prefecture, Japan as a sport of **Fuji-no-yuki** (Higo). Corruption of name: 'K1 Karata'.

Kikatoga. Harris' Longview Nursery Retail Price List, 1955-1956, p.9. Corruption of Japanese name **Kikutôji.**

Kikenjo. *(C.sasanqua)*, Camellia Forest Nursery Catalogue, 1988, p.2: Large size, light pink, single Camellia. Originated in Kumamoto Prefecture, Japan.

Kiki do Casal. *(C.japonica)*, ICS *Journal*, 2003, p.100 with colour photo, Reg. No.41: An open pollinated seedling of **Bokuhan,** originated by Eng. José Gil, Casa do Casal, Santo Tirso, Portugal. First flowered in 1997 at circa 8 years. The plant forms an open, upright shrub of medium growth rate. Flowers over a long period, mid-season to late. Light red (RHS.CC.51A), anemone form, 7 cm across x 5 cm deep. Leaves light green, elliptic, 7 cm x 2-3 cm, apex acuminate, margins slightly serrate and slightly reflexed.

Kikkacha. Funaki-en Camellia Mail Order List, No.8, 1986-1987, p.15. Japanese synonym for the Chinese *C.grijsii* **Zhenzhucha.**

Kikkôba. Angyô, 1955, *Shokubutsu Shunjû.* Synonym for **Kikkô-tsubaki.**

Kikkôba-tsubaki. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.57. Synonym for **Kikkô-tsubaki.**

Kikkoha. Fendig, 1953, *American Camellia Catalogue.* Different reading for 'Kikkôba', synonym for **Kikkô-tsubaki.**

Kikkô-tsubaki. (Tortoise-shell Camellia), *(C.japonica)*, Mizuno, Tada'aki, 1829, *Sômoku Kinyôshû:* This is in the section for unusual leaves in which the pronounced veining looks like Tortoise Shell. Double, red flower. Resembles **Shusugasane.** See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.169. Originated in Japan. (Believed extinct.) Synonyms: 'Kikkôba', 'Kikkôha', 'Kikkôba-tsubaki'.

Kikôshi. (Young Noble), *(C.rusticana)*, Hagiya & Ishikawa, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.9, p.56, black and white photo, p.1V, (E): White, single, 8 cm across with 5 irregular emarginate petals. Stamens about 130, dark yellow. Leaves long-ovate becoming wavy. Petiole hirsute. For colour photo see: Seibundô Shinkôsha, 1979, *Senchinshû*, p.41. Collected by Susumu Ishizawa from a private family in the Inazawa District, Aichi Prefecture, named and released by Kaoru Hagiya in 1968.

Kikotugi. Vanderbilt, 1940, *Camellia Research*, p.5. Corruption of the Japanese name **Kikutôji.**

Kiku-dzuki. Chûgai Nursery Catalogue, 1936-1937. Different reading for **Kikuzuki.**

Kikugasane. (Chrysanthemum Double), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô;* Kasuya Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium sized, snow white, formal double flower. Convex in shape. Different reading 'Kikukasane'. Originated in Japan. (Believed extinct.)

Kikuhikari. (Shining Chrysanthemum), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.389, colour photo and description: Medium size, palest pink, formal double with 5-6 rows of rounded, slightly emarginate and imbricated petals. Leaves mid-green, broad elliptic, apex tapering, blunt acute, margins shallowly crenate. Blooms mid-season to late. Originated in the Tottori Prefecture, Japan. Named and released by Yoshio Yamada in 1979.

Kiku-itadaki. (Chrysanthemum Crown), *(C.rusticana)*, Tuyama, 1968, *Camellias in Japan*, pl.220, p.111, description, p.155: Leaves large, thin, green to olive green, broadly elliptic, cuspidate, manifestly crenate, venation slightly impressed, 9-11 cm long x 3.6-5.7 cm wide; petioles 7-8 mm long, hairy. Flowers of peony type, deep red, (Cardinal Red 821/2) petals 12-32, diminishing in size to the centre and intermixing with many small, fan-shaped petaloids. Stamens with irregular, pale red filaments. Mid-season to late flowering. Originated in Japan by Mr Yamamoto, Yatsuo-machi, Toyama Prefecture.

Kikujido. (Personal Name) (*C.japonica*) from Ehime Pref., *Japan Camellia* No.63, August 2000: A seedling of **Kikuzuki**: Pink, single, miniature to small, lotus to bellflower shaped, stamens look like those of *C.rusticana*, blooms early. Tree spreading. Originated by Kyûshi Fujiwara in 1994. Named after a historic person in China.

Kikukasane. *American Camellia Yearbook*, 1969, p.93; "Japanese Varieties of 1710". Different reading for **Kikugasane.**

Kikumi. (Kumi's Yellow). (*C.cucphuongensis* hybrid). *"Camellias in Kurume"*, ICS Congress, Kurume 2010, p.100 with colour photo; A cross of *C.cucphuongensis* x *C.nitidissima*, originated by T. Kunitake, Kurume, Japan. First flowered 2004, named 2008. Butter yellow, small to medium size semi-double. Columnar stamens. Leaves very large, oblong, similar to *C.nitidissima*. Flowers mid-season. Weak resistance to frost.

Kiku-no-hai. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.136 as 'Kiku-nohai'. Different reading for **Kiku-no-sakazuki.**

Kiku-no-sakazuki. (Chrysanthemum Sake Cup), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Red, very large double, outer petals open flatly, inner erect. Originated in Japan. (Believed extinct.) Synonym: 'Mokichi-tsubaki'.

Kikurenka. (Chrysanthemum Lotus Flower), *(C.japonica)*, Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, white double with long, slender petals. Originated in Japan. (Believed extinct.)

Kikusarasa. (Dappled Chrysanthemum), *(C.japonica)*, Itô, Jukyû, 1739, *Honzô Hanamakie*, vol.15; Kasuya, Kamegorô, 1859, *Tsubaki Irhanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* Light pink streaked deeper pink, formal double. See colour photos: Adachi, 1960, *Camellia. Its Appreciation & Artistic...*, p.94; Tuyama, 1966, *Camellia Cultivars of Japan*, pl.203; Tuyama, 1968, *Camellias of Japan*, pl.365, p.186, description p.198; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.431, description, p.356. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.397; Seibundô Shinkôsha, 1979, *Senchinshû*, p.41, description, p.209: Leaves broadly oblong to obovate-oblong, acute apex, impressed venation, minutely depressed, crenate-serrulate margins. Flowers white to pale pink, narrowly striped with rose, (Crimson 22/1 to 22/2) sometimes pure rose, formal double. Flowers mid-season. Originated in Kantô District, Japan. Different readings: 'Kiku Sarasa', 'Kikuzarasa'. Sport: **Momogiku.** Corruption of name: 'Kikuzasara'.

Kikushokkô. (Chrysanthemum Sechuan Red), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, No.182; Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Yashiro, 1841, *Kokon Yôrankô*, vol.306: A large flower. The corolla is thick and convex. Red stripes on pink. Different reading: 'Kiku-syokkô'. Originated in Japan. (Believed extinct.)

Kikusui. (A Family Crest). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.69 with colour photo; English translation p.46. Large, white, sake cup-shaped single with thick petals and tubular stamen cylinder. Flowers mid-season to late. Leaves elliptic, medium size, flat. Spreading, vigorous growth. Selected from wild japonicas growing at Shiroyama in Hamada City, named and released by Kôsaku Masuda in 1980. From Aichi Prefecture.

Kiku-syokkô. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.57. Different reading for **Kikushokkô.**

Kikutai. (Chrysanthemun Sack), *(C.hybrid),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.87, colour photo and description: Medium size, soft pink, single with 7 petals with rolled in margins and a central stamen cluster, with white filaments and pale yellow anthers. Occasionally a small, double flower is produced. Blooms mid-season. Leaves mid-green, lanceolate, apices tapering acuminate, recurved, margins serrulate, waved. Originated in Kanagawa Prefecture, Japan by Fumio Yokomizo from the cross, *C.japonica* **Kikuzuki** x **Tiny Princess** = (*C.rusticana x [C.japonica x C.fraterna]).*

Kikutogi. SCCS, 1947, *The Camellia. Its Culture and Nomenclature.* Corruption of the Japanese name **Kikutôji.**

Kikutoji. (Chrysanthemum Knot), *(C.japonica),* Okumura, ca. 1810, *Chinka Hini'i; Chinka Zufu*, (before 1700), Watanabe, 1969, pl.695; Peony form, medium size, red; Hirayama, Tokuo, (latter 17th Century), *Tsubaki Byôbu.* No description. Yashiro, 1841, *Kokon Yôrankô*, vol.309: Peony form, red, divided stamen cluster. Originated in Japan. (Believed extinct.) This name refers to the chrysanthemum shaped knot attached to traditional Japanese garments. Note: **Nanzezare,** *Hyakuchinshû*, 1630, is thought to be a synonym.

Kikutôji. (Chrysanthemum in Winter Solstice), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Iro-hanayose Irotsuki:* Cardinal red with white spots, medium size, formal double. Itô, Ko'emon, 1879, *Chinkashû:* Cardinal red, blotched white, medium size, full formal double. Colour photos: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.160; Tuyama, 1968, *Camellias of Japan*, pl.310, p.157, descrip. p.183; Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, pl.114; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.421; Satô, 1975, *Chûbu no Tsubaki*, p.12; Yokoyama & Kirino, *1989*, *Nihon no Chinka*, p.396: Seibundô Shinkôsha, 1980, *Senchinshû*, p.41, description, p.209: Leaves oblong to broadly elliptic, venation a little impressed, crenate margins. Flowers medium small, formal double, dark pink, (Spinel Pink 0625) clearly spotted white. Petals incurved at margins. Flowers very early to mid-season. Originated in Japan. "Kiku" = chrysanthemum; "Toji" = the winter solstice alluding to its very early flowering. Synonym: 'Chrysanthemum Season', 'Winter Chrysanthemum'. Corruptions of the Japanese name: 'Kikutogi', 'Kikutori', 'Kikatoga', 'Kikotugi', 'Kikutugi', 'Kikutoji'. Note: **Kikutoji** and **Kikutôji** are two different and distinct cultivars. Sport: **Kikutoji Pointed.**

Kikutoji. (Chrysanthemun in Winter Solstice), *(C.x vernalis),* Minagawa, Iza'emon, 1885, *Nisshô'en Chabaifu;* Takana, et al, 1987, *American Camellia Yearbook*, p.11. Medium size, red double. Said to have originated in Japan about 1885.

Kiku-tôji (Kanagawa). *(C.sasanqua). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.296 with colour photo; English translation p.207. Medium size, white graduating to deep red at petal edges, flat single. Flowers early. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Origin unknown, released by Sakata Nursery in 1970s. Strong contrast between the white and red colours.

Kikutôji-shibori. (‘Kikutôji’ Variegated), *(C.x vernalis)*, Minagawa, Iza’emon, 1885, *Nisshô’en Chabaifu:* Variegated form of the *C.x vernalis* **Kikutôji** above. White spots on red, Double. Originated in Japan.

Kikutoji Pointed. *(C.japonica)*, SCCS., 1951, *The Camellia. Its Culture and Nomenclature. A* sport of **Kikutôji** with pointed petals. Originated in USA.

Kikutori. Overlook Nursery Catalogue, 1948-1949. Corruption of the Japanese name **Kikutôji.**

Kikutugi. SCCS., 1942, *Classification of Camellias*, p.4. Corruption of the Japanese name **Kikutôji.**

Kikutsuki. Different reading for **Kikuzuki.**

Kikuyukishiro. (Chrysanthemum Snow White), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Iro-hanayose Irotsuki:* Small double, of the palest pink with red dots. See JCS., 1969, *Tsubaki*, No.7, p.30. Sport: **Kikuyukibeni.** Originated in Japan. (Believed extinct.)

Kikuyukibeni. (Red and White Chrysanthemum), *(C.japonica)*, *Hachiboku Sanbokutsuki Meisai*, (before 1868); Yokoyama, 1982, JCS., *Tsubaki*, No.21, p.107: White, double, small corolla, red markings. A sport of **Kikuyushiro.** Different reading: ‘Kikuyukikurenai’. See JCS., 1982, *Tsubaki*, No.21, p.107. Originated in Japan.

Kikuyukikurenai. Different reading for **Kikuyukibeni.**

Kikuzarasa. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.203. Different reading for **Kikusarasa.**

Kikuzasara. Tokio Nurseries Catalogue, 1896. Orthographic error for **Kikusarasa.**

Kikuzuki. (Chrysanthemum Moon), (*C.rusticana*), Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Early flowering, light red, with white spots, sake cup shape; Uesa, 1844, *Sômoku Benran:* Single, red with white spots. Synonym: ‘Kata’onami’. It is possible that these ancient **Kikuzuki** were different to the modern cultivar, but the descriptions are similar so they are listed here together. See colour photos: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.107; Tuyama, 1968, *Camellias of Japan*, pl.158, p.79, descrip., p.135; Andoh, 1971, *Tsubaki*, *Meika no Shôkai*, *to Saibai*, pl.18; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.31, p.48; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.146; Seibundô Shinkôsha, 1979, *Senchinshû*, p.41: A famous cultivar from the Kansai District, Japan. Leaves narrowly elliptic, round at base, acutate apex, impressed venation; petioles hairy. Flowers single, rose (Rose Madder 23/2), petals 5-6, incurved to cup-shaped, stamens short, anthers golden. Slightly fragrant. Chrysanthemum moon is the 9th lunar month and alludes to the early flowering of the cultivar. Different readings: ‘Kikutsuki’, ‘Kikugetsu’, ‘Kikudzuki’. Synonyms: ‘Akakikuzuki’, ‘Kata-onami’.

Kikuzuki. (Kurume) *(C.hybrid). Kurume Camellia*, 1997, English translation, p.24 as ‘Kikuzuki’. A cross of *C.japonica* x *C.granthamiana*. Soft pink ground with a red border. Large, open, trumpet shaped single. Flowers early to mid-season.

Kikyô. (Chinese Balloon Flower), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.104: Small size, single, white, petal edges pointed. Note: It is possible that this is a synonym for the *Hyakuchinshû* 1630 **Kikyô-tsubaki.** Originated in Japan. (Believed extinct.)

Kikyô. (Chinese Balloon Flower), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Red, single, like a Chinese Balloon flower. Note: It is possible that this cultivar was the same as the *Kadan Chikinshô* **Akakikyô** of 1695. Originated in Japan. (Believed extinct.)

Kikyô-shibori. (Chinese Balloon Flower Variegated), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô:* Single, medium large, white flower with a red, splashed pattern. Originated in Japan. Listed in the Yashiro, 1841, *Kokon Yôrankô*, vol.306. (Believed extinct.)

Kikyô-tsubaki. (Chinese Balloon Flower Camellia), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Small, white, single. Looks like the flower of Kikyô, the Chinese Balloon Flower, *Platycodon grandiflorum*. Originated in Japan. (Believed extinct.) Different reading: 'Kikyoh-tsubaki'. Note: Thought possible to be synonymous with **Shirokikyô** from *Kadan Chikinshô*, 1695 and **Kikyô** from the *Chinka Zufu*, (before 1700).

Kikyoh-tsubaki. Andoh, 1984, *International Camellia Journal*, No.16, p.46. Different reading for **Kikyô-tsubaki.**

Kildare. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.8, colour photo: A medium size, irregular, anemone centered, double seedling of **Lindsay Neill** with a row of large, twisted and fluted petals about a central cushion of small, erect petals and petaloids with a few stamens, Colour light red. Originated by Richard Dodd, Marshallville, Georgia, USA.

Kilingtonia. Pepinieres Minier Catalogue, 1968, p.45. Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Killara. *(C.japonica)*, Outteridge, 1962, *1000 Named Camellias in Australia:* A pink, informal double, medium large, mid-season flowering. Originated by G. Linton, Kewita, Somersby, N.S.W., Australia.

Killarney King. Magnolia Gardens and Nursery Catalogue, 1942-1943. Synonym for **Mikenjaku** as 'Nagasaski'.

Killingtonia. Fratelli Rovelli Catalogue, 1852, p.20. Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Killoingtonia. Verschaffelt Catalogue, 1844-1845, p.26. Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Killwingtonia. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Killwingtoniana. von Biedenfeld, 1856, *Practische der Grundlehren von Camellien.* Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Killyana. van Houtte Catalogue,1839, 1:5. Orthographic error for **Kellyana.**

Kiloingtoni. André Leroy Catalogue, 1868. Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Kiloingtoniana. Desportes, 1847, *Revue Horticole*, ser.3, vol.1, p.216. Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Kilsingtonia. van Houtte Catalogue, 1877-1878, 174:247. Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Kiltoingtonian. Burdin Maggiore & Co. Catalogue, 1856-1857. Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Kilvingtonia. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.121. Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Kilvingtoniana. Cachet Catalogue, 1845-1846 as 'Kiloingtonia'; van Houtte Catalogue, 1878-1879. A Mr Robert Kilvington, Philadelphia, was a member of the Pennsylvania Horticultural Society in the 1840's. As orthographic variations of his name were applied to the variegated form of **Gigantea,** it has not been possible to ascertain if there ever was a separate cultivar of this name. The various orthographic errors for 'Kilvingtoniana' in order of date are: 'Kiloingtonia',1845; 'Killoingtonia',1847; 'Kiloingtoniana',1847; 'Kilwingtoniana',1849; 'Killingtonia',1852; 'Kiltoingtoniana',1856; 'Killwingtoniana',1856; 'Kelwingtonia',1858; 'Kelvingtoniana',1869; 'Kelvingtonii',1879; 'Kiloingtonia',1873; 'Kilsingtonia',1877; 'Kellingtonia',1894; 'Kelvington', 1906; 'Kilwingtonia',1914; 'Kelvingtoniana',1951;

'Killwingtonia',1953; 'Kellingtonia'(France), 1956; 'Kelwingtonia',1958, 'Kilingtonia',1968. At the present stage of information 'Kilvingtoniana' is regarded as the orthographically correct synonym for **Gigantea.**

Kilwingtonia. Bahuauad-Litou Nursery Catalogue, 1914-1920. Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Kilwingtoniana. Jacob Makoy et Cie Nursery Catalogue, 1848, p.20. Orthographic error for 'Kilvingtoniana', synonym for **Gigantea.**

Kim. (*C.reticulata* hybrid). ACRS, *Camellia News,* 1994, No.131, p.9. Dr Bob Withers, "A Mother Superior": A seedling of **Suzanne Withers** x **Arcadia.** It has 5 large, flat outer petals of deep pink, and a large boss of white petaloids in the centre. Originated by Dr R. Withers, Donvale, Victoria, Australia.

Kim McGowan. *(C.japonica), American Camellia Yearbook,* 1981, p.101, Reg. No.1690: A large size, white, rose form to formal double *C.japonica* chance seedling, that blooms mid-season. Originated by Jack L. Mandarich, Menlo Park, California, USA. First bloomed 1968 at 16 years old. Average flower size 12.5 cm across with golden anthers and white filaments. Plant growth is upright, dense and medium and leaves average, 11 cm long x 6 cm wide.

Kimberley. *(C.japonica),* Sander Catalogue, [before 1914]. No description Veitch, 1923, *Gardeners' Chronicle*, p.93: *C.japonica* var. Kimberley, carrying vivid scarlet blooms, with a delightful centre of yellow stamens.; Puddle & Hanger, 1960, RHS., *The Rhododendron and Camellia Yearbook*, No.14, p.152: Form single; petals 5-6 broadly obovate, retuse, 3.5 cm wide and long. Stamens in a central hemispherical cluster, about 2 cm across, conjoined part way from base. Size, 6-7 cm in diameter, colour Currant Red, RHS.CC.821/1. Foliage very deep green, glossy, stiff, flat, tip acuminate, decurved, broadly elliptic, margins shallowly serrate, 8-11 cm long x 4.5-8 cm wide. Habit upright and vigorous. Similar, if not the same, as Tokyo. Introduced by Mssrs Sander, Belgium about 1900, probably from Japan. It has been confused with **Takayama** and **Lanarth** in UK. Synonym 'Crimson Cup'. However this must not be confused with the 'Crimson Cup' in Australia which is a synonym for **Shiranui**. Orthographic error: 'Kimberly'. Sport: **Sylvia (USA).** Received an RHS. "Award of Merit" in 1934. For colour photos see *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.90, p.51, and Fischer, 1986, *Kamelien*, p.60.

Kimberley Christmas. *(C.japonica),* Hansen, 1950, *American Camellia Yearbook*, p.174. No description. Originated in USA.

Kimberley Jr. Mark S. Cannon Scion Catalogue, 1964-1965, p.9. Orthographic error for **Kimberly Junior.**

Kimberley Junior. Hazlewood & Jessep,1972, *Checklist- Camellia Cultivars from Nursery Catalogues*, p.121. Orthographic error for **Kimberly Junior.**

Kimberly. Kiyono Nurseries Catalogue, 1940-1941, p.23. Orthographic error for **Kimberley.**

Kimberly Junior. *(C.japonica),* Robinson, 1958, *American Camellia Yearbook*, pp.61, 62: A dark red, anemone to full peony form seedling originated by Earl Hudson Nursery, Sun Valley, California, USA. Orthographic errors: 'Kimberley Jr', 'Kimberley Junior.'.

Kimberly Piet. *(C.japonica),* SCCS., 1984, *Camellia Nomenclature*, p.60: Light pink centre petals and dark pink outer petals and rose-bud centre. Small to medium size, formal double, Vigorous growth, mid-season blooming. Originated by Piet & Gaeta, California, USA.

Kimi. (Noble Beauty), *(C.reticulata* hybrid*),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.28: Small size, white with yellowish centre, single, opening cup form to flat. A seedling of **Barbara Clark.** Originated in Ôsaka Prefecture, Japan. Named and released by Kazuo Yoshikawa in 1980.

Kimi Yamamoto. *(C.japonica)*, McCaskill Garden Catalogue, 1965. *American Camellia Yearbook*, p.132, Reg. No.999: Chance seedling of 'Magnoliiflora', (Hagoromo) that first flowered 1955. Originated by McCaskill Gardens, Pasadena, California, USA. Plant growth is compact, upright and medium in rate. The semi-double flower, similar to **Lady Vansittart,** is 10 cm across x 5 cm deep, Very pale pink. Flowers mid-season.

Kimigayo. (Japanese National Anthem), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in the peony form flower section as large size, white. Itô, Ko'emon, 1879, *Chinkashû:* Large, white, peony form. For colour photos see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.64; Tuyama, 1968, *Camellias of Japan*, pl.39, p.20, descript. p.146; *Encyclopedia of Camellias in Colour*, vol.I, 1973, pl.244, p.115; Satô, 1975, *Chûbu no Tsubaki*, p.88; Seibundô Shinkôsha, 1979, *Senchinshû*, p.43, description, p.210: A bush camellia cultivar of stout growth with white, semidouble flowers to rose form to open peony form. Leaves ovate-elliptic, a little undulate, short acuminate apex, shallowly serrate, dark green. Flowers broadly cup-shaped, petals broad, becoming smaller and white shaded yellow to the centre. Stamens few and irregular. Mid-season blooming. Resembles **Hakubotan** and **Ama-no-gawa.** There are two strains of this name in Kantô area, Japan.

Kimigayo (Suginami). ('Kimigayo' from Suginami), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.43, colour photo, Medium size, white, semi-double with 2 rows of broad, rounded petals, a little channelled and creped. Stamens in a solid, central column. Originated in Suginami-ku, Tokyo, Japan.

Kimiko. (Personal Name). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.74 with colour photo; English translation p.50. Small, light yellow, trumpet shaped single, degenerated anthers. Flowers mid-season. Leaves narrowly elliptic, small. Dwarf, slow growing. An interspecific cross between 'Kimi' and *C.nitidissima*, named and released by Kazuo Yoshikawa in 1996. From Osaka.

Kimimachi. (Lady-in-waiting), *(C. rusticana)*, *Encyclopedia of Camellias in Colour*, vol. I, 1972, pl.302, p.135, description, p.336: A small to medium size, irregular peony to anemone form, red blotched white. Outer petals long oblong, fluted, inner small, erect, spatulate, intermixed with a few petaloids and rare stamens. Leaves shiny olive green, ovate, long tapered acuminate apex, finely serrulate. Originated in Sanjô City, Niigata Prefecture, Japan. Collected by Yaichi Kawamura in 1972. Named and released by Tsutomu Ikeda. See also colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, p.43.

Kimi-no-bandai. (Live for Eternity), *(C.sasanqua)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.34: Medium size, white ground with pale red margins, single. Blooms early. Originated in Tokyo Prefecture, Japan.

Kimi-no-banzai. (Long Live the Emperor), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Wada, 1941, *Japanese Garden Treasures*, p.31: Single, autumn flowering sasanqua; white, suffused with pink. Medium size. Yashiroda, 1950. *American Camellia Yearbook*, p.22: Small, white tinted at apex with pink, semi-double, late autumn flowering; upright, bushy, vigorous variety. Originated in Japan.

Kimizakura (Kimi's Cherry) (*C.japonica*) from Ibaragi Pref, *Japan Camellia* No.81, August 2006: Pale pink, lotus form double, medium, petals shatter, blooming in February to April. Tree upright and compact. Named after originator's acquaintance. A chance seedling of **Berenice Boddy**. First flower seen in 1999. Originated and named by Kunimitsu Suzuki.

Kimty. *Calendar,* 2014. Chin Shiang Josme Camellia Nursery, Taichung City, Taiwan. Photo of genetically variegated and slightly contorted leaves. No other information.

Kimura. (Personal Name), *(C.japonica)*, Hôrin's Diary, 1639, *Kakumyôki* according to Andoh, *International Camellia Journal*, 1984, p.47; *Chinka Zufu*, (before 1700), Watanabe, 1969,

pl.45: Medium size, incomplete double to rose form double with numerous, imbricated petals of pale pink bordered white. Originated in Japan. (Believed extinct.)

Kimura. (Personal Name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.340: Red, semidouble with outer petals wide spread, inner erect about an irregular stamen cluster with white filaments. Petal edges fading to pink. Originated in Japan. (Believed extinct.)

Kimura-shiro. *(C.japonica)* Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details.

Kinbikaku. (Beautiful Golden Angel), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû*, p.45, colour photo, p.211: Medium size, campanulate single, red. Leaves ovate, blunt acute apex, finely serrulate, dark green, variegated with feathers of gold along the midrib. Collected at a rusticana community in Niigata Prefecture, Japan. Named and released by Jitarô Nagao.

Kinboshi. (Golden Star) (*C.hybrid*) from Ishikawa Pref, *Japan Camellia* No.56, May 1998. A crossing back (F2) to *C.nitidissima* of *C.hybrid* **Kicho**. Reddish golden yellow, single, cup-shaped, miniature, profuse, blooms for a long term from early to late season. Leaves medium, japonica-like, short nodes. Tree vigorous. Originated by Tadao Yamaguchi and released in 1998.

Kinchô. (*C.nitidissima* hybrid), *"Camellias in Kurume"*, ICS Congress, Kurume 2010, p.99 with colour photo; A cross of **Chôchidori** x *C.nitidissima*, originated and named by S. Hisatomi, Kurume, Japan in 2001. Creamy yellow, small size, trumpet shaped single. Stamen cluster infertile. Upright growth. Leaves large, lanceolate, and revolute at the margins. Flowers mid-season to late.

Kinden. *(C.saluenensis). "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.117. No description. From China.

Kinfukurin. Different reading for **Kinpukurin.**

King. Marnock, 1838, *Floricultural Magazine*, 3(25):4; Makoy Catalogue, 1838. Orthographic variant for **Kingii.**

King Cotton. *(C.japonica), American Camellia Yearbook*, 1954, p.318, Reg. No.159: A 9 year old seedling of unknown parentage, originated by Hugh Shackelford, Albany, Georgia, USA that flowered for the first time in 1949. Plant growth is average and compact with small to medium size leaves, dark green. Flowers incomplete double with small petaloids, three rows of petals with a powder puff of very compact petaloids; colour, white. Size 11-15 cm across. Number of petals 25. Early flowering.

King des Camelias. Cels, Paris Nursery Catalogue, 1839, p.29. Synonym for **Kingii.**

King Emmanuel. Vanderbilt, 1941, *Camellia Research, II*, p.4. Synonym for **Blood of China.**

King Emmanuel I. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.121. Synonym for **Blood of China.**

King Emmanuel II. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.121. Synonym for **Vittorio Emmanuele II.**

King Leaf. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **King Lear.**

King Lear. *(C.japonica)*, Rhodellia Nursery, [before 1945]. A sport of **Finlandia Red.** Fendig, 1952, *American Camellia Catalogue* with colour pl: Large, cherry red marbled white, semi-double, 10 cm across x 5 cm deep. Has a beard-like mass of irregular stamens in the centre surrounded by large petals. There are 3 rows of petals, 3.8 cm wide. Stamens central, white with large yellow anthers. Leaves medium size, dull mid-green, elliptic, 7.5 cm x 3.8 cm. Veins obscure, turns up from midrib, apex short acute, serrulate. Growth habit bushy, compact and vigorous. A sport of **Finlandia Red** discovered about 1929 by Otto Schwabe,

Rhodellia Nursery, West Linn, Oregon, USA. Synonyms: 'Finlandia Rosea Variegated', 'Oregon Donklaari'.

King of Camelia. Frères Noisette, Nantes Nursery Catalogue, 1857, p.36. Orthographic error for 'King of the Camellias', synonym for **Kingii.**

King of Camellias. Prince & Co. Catalogue, 1844, p.105. Synonym for **Kingii.**

King of Hearts. *(C.japonica)*, SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Orange red. Large, full peony form. Compact growth. Early to mid-season flowering. Originated in USA by Hugh Shackelford, Albany, Georgia, USA. For illustration see: Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II, p.187.

King of the Camellia. van Houtte Catalogue, 1839-1840. Synonym for **Kingii.**

King of the Camellias. Jacob Makoy et Cie Catalogue, 1839, p.17. Synonym for **Kingii.**

King of the Isles. *(C.japonica)*, CachetCatalogue,1845-1846, p.2. No description. (Believed extinct.)

King of the Netherlands. *(C.japonica)*, *Magazine of Horticulture*, 1837. No description. (Believed extinct.)

King Rosea. *(C.japonica)*, van Houtte Catalogue,1847-1848, 31:31. No description. Verschaffelt, 1849, *Nouvelle Iconographie*, Book III, pl.IV: By their wrinkled, uneven, serried petals forming a large, full-bodied heart with those at the circumference, larger and spread out, this variety resembles a peony. They are delicate pink edged with white. Mr Albin Pathe, Ghent, Belgium noticed it on a branch of **Kingii** and grafted it immediately. Sport of **Kingii.** Orthographic variant: 'King's Rosea'. Synonyms: 'Pink Rosea', 'Altheaflora Shell Pink'.

King Royal. Lemaire, 1844, *Des Genres Camellia...*, p.155. Synonym for **Kingii.**

King Rubra. *(C.japonica)*, Verschaffelt Catalogue, 1847-1848, p.58. No descriptiion. van Houtte Catalogue,1849-1850, 38:40: Entirely pink, save the centre which is sometimes white. Originated in Belgium. Sport of **Kingii.** Orthographic variant: 'King's Rubra'.

King Size. *(C.japonica)*, *American Camellia Yearbook*, 1954, p.318, Reg. No.181: A 7 year old seedling of unknown parentage, originated by Hugh Shackelford, Albany, Georgia, USA. Bloomed for the first time in 1952. The medium size leaves are smooth and without veining. The flowers are dark red, complete double irregular, similiar to 'Professor Charles S. Sargent', (**Professor Sargent**) with 35 petals and ranges from 12-15 cm across. Flowers mid-season. Sport: King Size Variegated. Synonym: 'King Size Solid'. SCCS, *Camellia Nomenclature* lists **Red Elephant** as a synonym.

King Size Heavy. Shackelford, 1973, ACS., *The Camellia Journal*, vol.28, No.1. Synonym for **King Size Variegated.**

King Size Solid. Shackleford, 1973, ACS., *The Camellia Journal*, vol.28, No.1. Synonym for **King Size**.

King Size Variegated. *(C.japonica)*, Hillcrest Nursery Catalogue, 1958, as 'King Size Var.': A virus variegated form of **King Size** - Dark red, blotched with white. Originated in USA.

King Solomon. *(C.japonica)*, SCCS., 1968, *Camellia Nomenclature*, p.78: Pink. Large, formal double. Vigorous, compact, upright growth. Mid-season blooming. Originated in USA by Hugh Shackelford, Albany, Georgia.

King Tut. Cannon, 1977, ACS., *The Camellia Journal*, vol.32, No.1. No description. Originated in USA. Not validly listed.

King Victor Emmanuel. Vanderbilt, 1941, *Camellia Research, II*, p.4. Synonym for **Blood of China.**

King Victor Emmanuel II. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.122. Synonym for **Vittorio Emmanuele II.**

King Yew. Sewell & Parks, 1981, *American Camellia Yearbook*, p.128. No description. Originated in USA. Not validly listed.

Kingii. *(C.japonica),* Harrison ed., 1837, *Floricultural Cabinet*, vol.V, p.172, as a variegated flower. Rousseau, Angers Nursery Catalogue, 1842-1843, p.2: Sulphury white, spotted and streaked with pink. Berlèse, *Iconographie,* ed.1, 1841, pl.13, as 'King's Royal'. Originated in Britain. Berlèse, 1845, *Monographie*, ed.3, p.285 as 'King's': Full peony form, soft white with some occasional, pale red streaks, one or two rings of outer petals, very wide, thick, inverted, irregularly notched; the inner petals disordered, amassed, short, wide, numerous, unequal, one huddled against the other forming a centre 7 cm or more wide. Sometimes it is a uniform, pale red colour. Sports: **King Rosea, King Rubra.** Synonyms: 'Rex', 'King of Camellias', 'King's Royal', 'Spectabilis Maculata', 'Linkii', 'Clusii', 'Clusiana', 'Spectabilis Maculata de Belges', 'Regalis-Royal', 'Spectabilis Maculata Vera', 'King des Camelias', 'King's Royale', 'The King', 'Kingii Variegated', 'Clusia', 'King's of the Camellia'. Orthographic errors: 'King', 'Kings'.

Kingii Variegated. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.122 as 'Kingii Var.'. Synonym for **Kingii.**

Kingio-tsubaki. Rhodellia Nursery Catalogue 3 before 1944. Corruption of Japanese name **Kingyo-tsubaki.**

King's Royale. Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.14. Synonym for **Kingii.**

King's Rubra. Joseph Baumann, 1849, Prix Courant, p.6. Orthographic variant for **King Rubra.**

King's Ruby. *(C.japonica),* Alex Verschaffelt, 18456, Catalogue, p.55. No description. (Believed extinct).

King's Ruby. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1964-1965, p.9. No description. SCCS., 1966, *Camellia Nomenclature*, p.76: Ruby red. Large, loose peony form. Vigorous, upright growth. Mid-season blooming. Originated in USA by Armstrong.

Kingston. *(C.japonica),* Berlèse, 1840, *Monographie*, ed.2, p.128: Leaves 8-9 cm long x 5-6 cm wide, rounded, thick, irregular, serrate, of an indistinct green. Flower of soft rose, full, 10-11 cm across. The outside petals are large, not numerous, cup-like, emarginate; the others are

various, unequal, broad, long, upright, in massed serries and groups like the irregular corolla of **Triumphans Rubra.** Originated in UK by Mssrs Jackson. Synonym: 'Kingston Rosea'.

Kingston Rosea. Berlèse, 1840, *Monographie*, ed.2, p.227. The name for **Kingston** in the "Tableau Synaptique".

Kingyo. Hume, 1947, *American Camellia Yearbook*, p.135. An abbreviation for **Kingyo-tsubaki.**

Kingyoba. Ishii & Hozaka, 1954-1959, *Genshoku Engei Shokubutsu Zufu.* Abbreviation for **Kingyotsubaki.**

Kingyoba-genji. (Goldfish-leafed Genji). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.78 with colour photo; English translation p.53. Red stripes with a white border on pink ground, single. Flowers mid-season to late. Leaves divided at the apices, goldfish form. Upright, vigorous growth. A mutation of 'Warai-kingyo', which is a seedling of **Karaginu,** raised by Tetsurô Itô. Named and released by Totsurô Nakamura in 1997. From Tokyo.

Kingyoba-goshiki-yae-chiritsubaki. (Goldfish Leaf, Five Coloured double Falling Camellia), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.12. No description. Originated in Machida, Tokyo, Japan.

Kingyoba-hagoromo. (Fishtailed 'Hagoromo') (*C.japonica*) from Chiba Pref., *Japan Camellia* No.77, May 2005: Seed parent, **Shirokingyoba-tsubaki,** pollen parent **Hagoromo**. White, semi-double, lotus-formed, petals falling scattered, medium to large, blooming mid to late season. Leaves fishtailed, lanceolate. Tree upright, vigorous. Bloomed firstly and named in 1993. Originated by Atsushi Itoh.

Kingyoba-shiratama. (Fishtailed Shiratama) (*C.japonica*) from Chiba Pref., *Japan Camellia* No.77, May 2005: A seedling of **Shirokingyoba-tsubaki**, small white single, cupped petals, prominent golden anther cluster. Blooms mid to late season. Leaves fishtailed, medium. Branches somewhat pendulous. Tree upright growth. Bloomed firstly and named in 1994. Originated by Atsushi Itoh.

Kingyoba-shiro-hagoromo. (Fishtailed Shiro-hagoromo) (*C.japonica*) from Chiba Pref., *Japan Camellia* No 59, May 1999: A seedling of **Shirokingyoba-tsubaki,** white, lotus-formed, semi-double, medium to large, blooming mid-season to late. Leaves fishtailed. Originated by Atsushi Itoh.

Kingyoba-shiro-wabisuke. (White Fishtail Wabisuke), (Wabisuke), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.57, colour photo and description: Small size, white, wide-campanulate single with 5-6 rounded, overlapping petals of irregular size and a central stamen column with white filaments, joined for the lower half, and small, pale yellow pinched anthers. Blooms mid-season to late. Leaves strong, shining green, multi-apices, margins serrate. Originated in the Chûbu area, Japan.

Kingyoba-tsubaki. Adachi, 1960, *The Camellia. Its Appreciation and Artistic Arrangement*, p.180. Synonym for **Kingyo-tsubaki.**

Kingyo-kono-ko. Magnolia Gardens and Nursery Catalogue, 1950-1951. Corruption of the Japanese name **Kiyokanoko.**

Kingyo-tsubaki. (Goldfish Camellia), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Leaves divided to three at the apices, like the tail of a goldfish. (see Kyôto Engei Kurabu, *Tsubaki Tokushû*, 1964, No.5, p.81). Itô, Ko'emon, 1879, *Chinkashû:* Rose red, single. This Camellia has leaves with multi-apices, giving the appearance of a goldfish tail. 'Kingyoba', (Goldfish Leaved) and 'Kingyoba-tsubaki' (Goldfish leaved Camellia) are synonyms that are used in Japan. For colour plates see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.215; Tuyama, 1968, *Camellias of Japan*, pl.108 as 'Kingyoba'; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.118; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.438 and Satô, 1975, *Chûbu no Tsubaki*, p.105 as 'Kingyoba-tsubaki'; Yoyoyama & Kirino, 1989, *Nihon no*

Chinka, p.143, as 'Kingyoba-tsubaki': It is a light red (Spinel pink 0625/1) flowered, single cultivar, of 7 petals and a substantial, central stamen column with pale yellow anthers, and with leaves having 3-5 apices. Leaves are a strong, glossy green, oblong, midrib divided towards the apex. The flower opens wide, with some apical recurving of petals. As the variety sets seed which produce a proportion of plants with leaves having multi-apices, there are a number of seedlings growing under one or other of its many synonyms. Western synonyms include: 'Kalanchoe', 'Apucaeformis', 'Trifida', 'Fishtail', 'Basedon', 'Kingyo-tsubaki'(Australia), 'Quercifolia'. The Chinese name is 'Lieye Chahua'. In the USA the semi-double cultivar **Mermaid** has erroneously usurped the name of the single form. See description in SCCS, *Camellia Nomenclature*, 1981, p.89. Corruption of the Japanese name:, 'Kingyo Toubaki', 'Kinyo-tsubaki', 'Kiugyo-subaki', 'Kino-tsubaki'. In Mizuno, 1829, *Sômoku Kinyôshû*, there are 4 kinds of fishtail camellias listed. These are: **Eiji-kingyo-kifu, Kitazawa-kingyo, Kubota-de-kingyo-aochafu** and **Kyûbei-sarasa- kingyo**. Chinese synonym 'Jinyuye Chun'.

Kingyo-tsubaki (Australia). SCCS., 1954. *The Camellia. Its Culture and Nomenclature.* Synonym for **Kingyo-tsubaki.**

Kinjô-no-akebono. (Sunrise in Kinjô). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.79 with colour photo; English translation p.53. Small, pink, tubular to bowl-shaped, stamen cylinder opening at the tip Flowers mid-season to late. Leaves elliptic, medium size, recurved, thick. Upright, vigorous growth. Selected from wild japonicas growing in Kanazawa City, named and released by Sotokichi Okada in 1950. From Ishikawa Prefecture.

Kinka-Banshô. (Golden Flower of Banshô Garden). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.78 with colour photo; English translation p.51. Medium size, peach red, trumpet shaped single with tubular stamens. Flowers early to mid-season. Leaves elliptic, large, recurved. Upright, vigorous growth. An old tree of Banshôkan Garden in Gifu park, named and released by Nagaharu Niwa in 1988, released by Gifu Camellia Club, Gifu Prefecture.

Kinka-hakubi. (Gold Flower - White Eyebrow), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.65, colour photo and description: Small size, white, tubular to campanulate single, with 5 rounded, overlapping petals and a central stamen cylinder with milk-white filaments, joined for the lower half, and yellow anthers. Blooms mid-season to late. Leaves mid-green, broad-ovate, apices blunt-acute, margins obscurely serrated. Originated in Gifu City, Gifu Prefecture,Japan.

Kinkakô. Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details.

Kinkakuji. (Golden Pavilion), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.194, 234, 552: A medium size, white, semi-double with three rows of petals and a central column of stamens with white filaments. Originated in Japan. Kinkakuji is a famous temple in Kyôto. (Believed extinct.)

Kinka-cha. Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.11, B-23. (Golden Camellia). Japanese name for *C.chrysantha. (C. nitidissima).*

Kinkan. (Gold Crown), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pure red double, with small spots and 3-4 rows of petals. Originated in Japan. (Believed extinct.)

Kinkazan. (Mount Kinka), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshô'en Chabaifu;* Wada, 1941, *Japanese Garden Treasures*, p.32: Single with many central petaloids. Autumn flowering sasanqua. Light pink with long, central petaloids. Medium size. Long leaves. Originated in Japan by Minagawa. Synonym: 'Suzumushi'. Different reading: 'Kinkwazan'. For colour photo see: *Encyclopedia of Camellias in Colour*, vol.II, 1972, pl.526.

Kinkwazan. Takashi Tanahashi, 1949, *American Camellia Yearbook*, p.108. Different reading for Kinkazan.

Kinkei. (Golden Pheasant), *(C.japonica)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Yashiro, 1841, *Kokon Yôrankô*, vol.311; Good red, semidouble with 3 rows of petals with white spots. Originated in Japan. (Believed extinct.)

Kinkeichô. (Golden Pheasant). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.78 with colour photo; English translation p.53. Small, deep red, tubular single, glossy petals, cylindrical stamen cluster. Flowers mid-season to late. Leaves elliptic, medium size, margins recurved. A chance seedling of unknown parentage, originated and released by Fumio Naitô in 1988. From Aichi Prefecture.

Kinkizan. (Kinkizan Temple). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.332 with black and white photo; English translation p.229. Small to medium, dark red, bellflower-shaped single, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, small to medium, thick. Upright, vigorous growth. A natural seedling of a wild japonica with dark red flowers growing at Manganji Temple in Matsu'e City. Named and released by Hiroshi Ihara in 1991. From Shimane Prefecture.

Kinkô. (Clear Gold), *(C.japonica)*, Minagawa, 1956, *Chinkashû:* New variety. Purplish red, with centre of paler pink, formal double. Petals fall separately. Tateyama Nursery Catalogue, 1956. No description. For colour photos and descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.124; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.398; Seibundô Shinkôsha, 1979, *Senchinshû*, p.44, description, p.210: Medium size, crimson, formal double, centre petals somewhat pointed and becoming paler as blossom ages. Leaves broad-ovate, apices blunt acute, deep green, margins serrulate. Originated by Minagawa, Jisuke, in Kantô area, Japan as a seedling of **Murasaki-tsubaki.** Different reading: 'Kinkoh'.

Kinkoh. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.214. Different reading for **Kinkô.**

Kinkô-nishiki. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.11. Synonym for **Sayoshigure.**

Kinkonka. (Golden Wedding Flower). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.79 with colour photo; English translation p.53. Medium size, vermilion, tubular single. Flowers early to late. Leaves elliptic, medium size, slightly waved. Upright, vigorous growth. Good bud-set. A cross between **Iwane-shibori** and **Benimyôrenji,** originated and named by Minoru Satô in 1985. From Aichi Prefecture.

Kinma. Yamazaki, 1972, *Encyclopedia of Camellias in Colour*, vol.I, p.390 as synonym for **Chôjiguruma.**

Kinmizuhiki. (Ceremonial God Cord), *(C.japonica)*, Itô Ihei, 1695, *Kadan Chikinshô*, vol.1, No.202; Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15; Yashiro, 1841, *Kokon Yôrankô*, vol.306; Kasuya, Kamegorô, 1859, *Tusbaki Irohanayose Irotsuki.* All similar descriptions: Medium large, pure red, peony form flower with some white spots. See pl.598, *Chinka Zufu*, (before 1700), Watanabe, 1969. Originated in Japan. (Believed extinct.) Resembles **Karyôbin.**

Kinnikko. (Golden Sunshine), *(C.japonica)*, Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, p.137. No description. Originated in Japan.

Kinnô. Different reading for **Konnô.**

Kin-no-be. (Gold Bureau), *(C.sasanqua)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô*, in the sasanqua section. Red flowers, gradually becoming paler as bloom opens. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.82. Originated in Japan. (Believed extinct.)

Kin-no-ma. Synonym for **Kin-no-zai.**

Kin-no-ma. (Golden Flag), *(C.sasanqua),* Wada, 1941, *Japanese Garden Treasures*, p.32: Single with many central petaloids. Autumn flowering variety of sasanqua. Red with a red central disc. Medium size. Earliest bloomer. Originated in Japan. This cultivar is thought to be the same as the sasanqua 'Kin-no-zai' belong.

Kin-no-sai. Chûgai Nursery Co. Catalogue, 1935-1946, p.26. Different reading for the sasanqua **Kin-no-zai.**

Kinnô-yuriba. Mizuno, 1829, *Sômoku Kinyôshû.* Different reading for **Konnô-yuriba.**

Kin-no-zai. (Golden Talent), *C.sasanqua),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Last character is different to the sasanqua of the same name below. Pale pink, single, anemone form. Tokio Nurseries Catalogue, 1896: Gold Diadem. Pink with a splashed centre. Satomi, 1958, *Nomenclature of Sasanqua of Japan*, (Gold Baton), Pink with petaloids shaded white. Small, single, anemone form. Very early. Occasionally has yellow variegated leaves. For colour plate see: Tuyama, ed. 1979, *Ishii's Selected Garden Camellias*, pl.9 as 'Chôji-guruma'. Different reading: 'Kin-no-sai'. Originated in Japan. Synonyms: 'Chôjiguruma', 'Kin-no-ma'.

Kin-no-zai. (Golden Colour), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshô'en Chakaifu:* Red, single, medium size, anemone form, early flowering. Originated in the Kantô District, Japan. For colour pl. see Tuyama, 1979, *Ishii's Selected Garden Camellias*, pl.10. Synonym: 'Kin-no-ma'. Different reading: 'Kin-no-sai'.

Kinobe-hakuô. (Pale Yellow Camellia from Kinobe), *(C.hybrid), Japan Camellia* 101, May 2014, p.4 with colour photo, JCR Regn No. 2014-5, (ser. No.18). Considered to be an interspecific hybrid between *C.nitidissima* and an unknown *C.japonica*. White when first opening, changing to pale yellow when fully open. Formal double, petals somewhat incurving. Large, diameter about 18cm. Late blooming. Originated by Nobuaki Ono.

Ki-no-chô. (Yellow Butterfly). *(C.japonica x C.nitidissima)* JCS, *Japan Camellia,* 1991, No.39, front cover colour plate, description p.15: **Chôchidori** x *C.nitidissima*. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.72 with colour photo; English translation p.49. An embryo-cultured 7 petalled single of creamy yellow. Leaves oblong, reddish new growth. Upright, cold hardy. Released in Japan by Shûnsuke Hisatomi and Tomita Kunitake in 1982.

Ki-no-gozen. (Yellow Imperial Presence), *(C.japonica x C.chrysantha),* JCS., Oct.1990, *Japan Camellia*, No.36, p.4: A seedling of *C.japonica* **Gozen-no-yuki** pollenated by *C.chrysantha.* Flower colour yellow, paler than *C.chrysantha*, but the deepest of the 4 hybrids raised by Yamaguchi. Flower size, 8-9 cm across, single, opening wide and flat. Leaves resemble *C.japonica*, 9 cm long x 4 cm wide. Blooms early. First flowered Dec.1989. Has proved pollen fertile. Originated by Tadao, Yamaguchi, Tsurgi-chô, Ishigawa Prefecture, Japan.

Ki-no-izumi. (Yellow Fountain). (*C.nitidissima* hybrid). *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.98 with colour photo; A seedling of *C.nitidissima*, selected and named by T. Kunitake, Kurume, Japan in 1995. A creamy yellow, trumpet shaped single. Tubular stamen cluster. Long peduncle. Leaves medium size, thick, oblong. Upright growth. Flowers mid-season. Little resistance to frost.

Ki-no-jômanji. (Yellow 'Jômanji') (*C.japonica* **Jômanji** x *C.nitidissima*) Nuccio's Nurseries Catalogue, 2007, p.29 as 'Ki-no-jôman'; Small single, profuse. Unusual shade of salmon pink. Excellent, bushy, upright plant. Flowers mid-season to late. Originated by Tadao Yamaguchi, Ishikawa, Japan.

Kinomoto 90. (Yellow Base 90). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.72 with colour photo; English translation p.48. Medium size, pale yellow, flat single. Flowers mid-season. Leaves narrowly elliptic, medium size. A cross between *C.reticulata* **Suzanne Withers** and *C.nitidissima*, named and released by Kazuo Yoshikawa in 1990. From Osaka.

Kinomoto 91. (Yellow Foundation '91). (*C.nitidissima* hybrid). JCS, 1992, *Japan Camellias,* No.40, p.11: A seedling of the *C.reticulata* hybrid **Suzanne Withers** x *C.nitidissima.* A medium sized, semi-double creamy yellow, late blooming camellia originated by Kazuo Yoshikawa, Toyonaka City, Osaka Prefecture, Japan. Although its colour is not a true yellow, it is the most yellow of similar hybrids and is about 60% pollen fertile. Chinese synonym 'Huangji Jiushiyi'.

Kinomoto 92. (Yellow Base 92). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.72 with colour photo; English translation p.48. Medium size, light yellow, sake cup-shaped single. Flowers mid-season to late. Leaves narrowly elliptic, medium size, glossy. Somewhat spreading, slow growth. An interspecific hybrid involving three species, *C.japonica, C.nitidissima* and *C.reticulata,* named and released by Kazuo Yoshikawa in 1992. From Osaka.

Kinomoto 93. (Yellow Base 93).*(C.hybrid)* ACS, *The Camellia Journal*, Sept. 2009, p.17. Light yellow semi-double. Produced and named by Kazuo Yoshikawa. From Osaka, Japan.

Kinomoto 94. (Yellow Base 94). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.72 with colour photo; English translation p.48. Medium size, light yellow, sake cup-shaped single. Flowers mid-season to late. Leaves narrowly elliptic, medium size, not so glossy. Upright, relatively vigorous growth. A cross between *C.reticulata* **White Retic** and *C.nitidissima,* named and released by Kazuo Yoshikawa in 1994. From Osaka.

Kinomoto 95. (Yellow Base 95). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.73 with colour photo; English translation p.49. Large, light yellow semi-double. Flowers mid-season to late. Leaves oblong, large, not so glossy. Upright, slow growing. An interspecific hybrid between three species, *C.japonica, C.nitidissima* and *C.reticulata,* named and released by Kazuo Yoshikawa in 1995. From Osaka.

Kinomoto 96. (Yellow Base 96). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.73 with colour photo; English translation p.49. Small, light yellow, trumpet shaped single. Flowers mid-season to late. Leaves oblong, small, not glossy. Dwarf, very slow growing. A polytopic hybrid (**Frost Prince** x **Flower Girl**), named and released by Kazuo Yoshikawa in 1996. From Osaka.

Ki-no-sato. (Yellow Camellia's Home). (*C.nitidissima* hybrid). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.292 with colour photo; Pale yellow, semi-double, medium size, cup-shaped. Flowers mid-season to late. Leaves long-elliptic, medium size. Upright growth. A cross of *C.nitidissima* x (*C.reticulata* x *C.nitidissima*). Named and released by Kazuo Yoshikawa, Osaka, Japan in 1999.

Ki-no-senritsu. (Yellow Melody) (*C.hybrid*) from Ishikawa Pref, *Japan Camellia* No.56, May 1998. An interspecific hybrid between *C.nitidissima* and **Hakuhô.** Light yellow, open peony informal, medium, blooming in mid-season. Leaves medium, japonica-like. Originated by Tadao Yamaguchi and released in 1998.

Ki-no-tamago. (Yellow Egg). (*C.nitidissima* hybrid), *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.98 w; A seedling of *C.nitidissima*, selected and named by T. Kunitake, Kurume, Japan in 1995. Creamy yellow, trumpet-shaped semi-double. Upright growth. Leaves medium size, thick, broadly elliptic. Flowers mid-season. Weak resistance to frost.

Kino-tsubaki. Ballard Nursery Catalogue, 1974. Corruption of the Japanese name **Kingyo-tsubaki.**

Kinpai. (Gold Cup), *(C.rusticana),* Yokoyama, 1975, *Gendai Tsubaki Meikan*, 1975, p.106, black & white photo: Deep peach pink, semi-double with an outer row of 6-7 large, emarginate, rounded petals, opening flat and a centre group of 5-7, smaller, erect petals cupping the spread stamen cluster with golden anthers. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.45, colour photo. Originated in Ojiya City, Niigata Prefecture, Japan.

Kinpaikôban. (Gold Cup - Red bowl), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Five petalled single, red, medium size, stamens rich and fully opened at centre, anthers golden yellow. Originated in Japan. (Believed extinct.) Orthographic error: 'Kinpaikôran'.

Kinpaikôran. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû* No.1, as 'Kinpai-kô-ran', p.57. Orthographic error for **Kinpaikôban.**

Kinpukurin. (Gold Margin), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanquas of Japan*, p.11: Dark pink shaded wave-like with white, occasionally splashed pinkish white. Medium size single with long petals. Originated in Japan. Different reading: 'Kinfukurin".

Kinross Macintosh. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.13, colour photo: Large, open peony form, white with cherry-red stripes. Seedling of **Priscilla Brooks** originated by Richard Dodd, Marshallville, Georgia, USA.

Kinsaburô-otome. Different reading for **Kinzaburô-otome.**

Kinsai. Settsu Raikoyen, 1938-1939. Based on the same characters as **Kin-no-zai.**

Kinsei. (Golden Life), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Cardinal red, single, stamens spread like a bamboo whisk. Originated in Japan. (Believed extinct.)

Kinsekai. (Golden World), *(C.rusticana)*, Satomi, 1956, *Camellia Varieties of Japan*, p.17: Pink and single. For colour plate: Macoboy, 1981, *The Colour Dictionary of Camellias*, p.97; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.208; Seibundô Shinkôsha, 1979, *Senchinshû*, p.45, description, p.210: Irregularly shaped, single flower of 5 petals of glowing carmine in contrast to the glossy, dark green leaves, curiously variegated along the midrib in light green and gold. Originated in Niigata Prefecture, Japan. A mutation of a wild rusticana, named by Nagao.

Kinseki-no-majiwari. (Firm Friendship) (*C.hybrid*) from Ishikawa Pref. *Tsubaki* No.40, Japan Camellia Society, 2001. Seed parent *C.japonica* **Seiobo,** pollen parent *C.nitidissima*. Pale yellow with reddish shading at petal margins, single, small to medium, cupped petals, blooming early to mid-season, bud form excellent and suitable as flowers for tea ceremonies. Leaves resembling those of **Seiobo.** Tree cold-hardy, growing outdoors in Hokuriku Area. Originated by Seizô Matsui and named by Tamotsu Yamade.

Kinshiden. (Gold and Purple Palace), (Higo), Yoshimura, 1963, *Higo Tsubaki Meikan*, No.7: Pink shading deeper pink with white edge, and red streaks, single Higo, 11 cm across. Originated in Japan.

Kinshikô. (Name of Incense), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Large, 9-10 cm across, 7 petals, pink splashed and edged white, 100 white stamens. For colour plates see: Tuyama, 1968, *Camellias of Japan*, pl.284 as 'Nishiki-shikô'; Seibundô Shinkôsha, 1979, *Senchinshû*, p.108, as 'Nishiki-shikô', however **Kinshikô** is the prior valid name in Rômaji being published by Satomi, 1956, *Camellia Varieties of Japan.*

Kinshiro. (White Gold), *(C.japonica)*, Okumura, ca.1810, *Chinka Hin'i.* No description. Originated in Japan. (Believed extinct.)

Kinshôjô. (Orang-outang), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.296, p.150, description, p.179: leaves narrowly-elliptic to elliptic, suddenly-acuminate, margins crenate. Flowers rose form double, deep red, (Crimson 22) often spotted white, petals flat, a little recurved at the apex. Flowers mid-season to late. Originated in Japan in the Hyôgo Prefecture. See colour photo, pl.284, *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.130, pl.287. The "Shôjô" is an apelike, legendary animal, fond of sake, and also the old name for Orang-outang. Different reading: 'Kinsyôjô'.

Kinshokkô. (Name of an Incense). *(C.japonica).* SCCS, 1958, *Camellia Nomenclature*, p.50 as 'Kingsho-Ko'. Pink splashed and edged white, large semi-double. Originated in Japan.

Kinsho-Ko. SCCS, 1958, *Camellia Nomenclature.* Different reading for **Nishiki-shokkô.**

Kinshû. (Autumn's Beautiful Tints). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.87 with colour photo; ; A chance seedling selected and named by S. Hisatomi, Kurume, Japan in 2005. Soft pink ground, dashed and peppered deep red. Medium size, cup-shaped single. Tubular stamens with white filaments. Upright growth. Leaves medium size, oblong and flat. Flowers early to mid-season. Note; The flower pictured shows a pink ground with white streaks and spots.

Kinsuji. (Golden Stripe), *(C.japonica),* Uekiya Seijirô, 1874, *Tsubaki Hyakuro no Zu*, vol.II, No.21: Large, white, incomplete double, peony form. Originated in Japan. (Believed extinct.)

Kinsyôjô. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.137. Different reading for **Kinshôjô.**

Kintai. (Brocade Bag), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Single, mid-season blooming, like **Hakkan** which is a red flower, with horizontal red stripes, stamens like a bamboo whisk. (In a ring form stamens). Note: *Tsubaki Hachiboku Sanboku Tsuki Meisai* (before 1868) described this as a whitish coloured flower. See: JCS., 1969, *Tsubaki*, No.7, p.30 and ibid, 1982, No.21, p.107. Originated in Japan. Different reading: 'Nishiki-bukuro'. (Believed extinct.)

Kintoki. (Fabled Hero in Japan), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.373, colour photo and description: Medium size, light pink, occasionally with darker pink stripes, rose form to peony form double. Flowers mid-season to late. Leaves mid-green, ovate, recurved, margins serrate. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1970.

Kinugasa. (Place Name in Kyôto), *(C.japonica),* Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, p.214; *Encyclopedia of Camellas in Colour*, vol.I, 1972, pl.420, p.175, description, p.354; Seibundô Shinkôsha, 1979, *Senchinshû*, p.209: Medium small, white, formal double. Occasionally a pale pink streak appears on a petal. Leaves broad-ovate, apex blunt acute, base rounded, raised venation, obscure serration. Synonym: 'Kinugasa-Reikanji'. Originated in Kyôto Prefecture, Japan.

Kinugasa-Reikanji. Tuyama, 1968, *Camellias of Japan*, pl.58, p.29, description, p.102: Synonym for **Kinugasa.**

Kinugoromo. (*C.hybrid*) from Tokyo, *Japan Camellia* No.67, February 2002: *C.hybrid* **Pop Corn** × *C.hybrid* **Wirlinga Belle**. Pure white, semi-double, small, blooms mid to late season. Leaves small. Branches weeping. Tree compact, multi-trunk growth. Originated by Yaichirô Fujimoto.

Kinugumo. (Cirrus Clouds), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.42, colour photo, p.210, description: Medium size, single with 5 red petals, with an occasional white blotch. Stamen column pinched in at the top. Leaves dark, shiny green, elliptic, acuminate apex, shallowly serrate. Originated in the Chûbu area, Japan. A seedling of unknown parentage, originated and released by Toshiaki Kosaki in 1970.

Kinukakeyama. (Mount Kinukake), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.183: Large, white, semi-double with 3-4 rows of large, emarginate petals and small, central stamen column. Originated in Japan. (Believed extinct.)

Kinunobe. (Smoothing Silk), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.42, description, p.210: Small, campanulate single, occasionally anemone form or semi-double, of 5 channelled and pointed petals of palest pink. Leaves lanceolate, mid-green, apex acute, margins serrulate, venation distinguished. Originated in Kansai area, Japan. Named and released by Katayama Juraku'en Nursery in 1976.

Kinuzure. (Rustle). *(C.japonica), Nagoya Camellia Society Bulletin,* 1993, No.26, p.39 Colour photo and text, No.3: A seedling of **Kyokkô.** Faintly fragrant. White, finely striped and tinted pink, darker at edge, 8-9 cm across, semi-double to loose peony; divided stamen cluster, creamy white. Late flowering. Originated by Dr Funakoshi, Nagoya, Japan.

Kinyô. (*C,hybrid*) from Ibaragi Pref., *Japan Camellia* No. 67, February 2002: White striped deep red, semi-double, lotus formed, large, blooms in March to April. Tree upright, vigorous. Leaves elliptic, medium size. A natural seedling of **Lily Pons**. Originated by Kunimitsu Suzuki in 1997.

Kinyotsude. (Gold Four Arms), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, p.428, 671 as 'Kin-yotsude': Flat, deep scarlet, anemone form with one row of outer, emarginate petals and a central cushion of short, golden stamens and petaloids with a protruding pistil. Originated in Japan. (Believed extinct.) Corruption of name: 'Kinyutsude'. Different reading: 'Kinyotsute'.

Kin-yutsude. Sharp, 1957, *Camellias Illustrated*, p.45. Corruption of the Japanese name **Kinyot-sude.**

Kinyotsute. Different reading for **Kinyotsude.**

Kira-hayazakibeni. (Early Red Bloom from Kira), *(C.hiemalis)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49: Medium size, dark red, irregular peony from Aichi Prefecture, Japan. Blooms early to mid-season.

Kirahiryû. (Kira's "Hiryû"), *(C.x vernalis)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.50: Small size, deep red, single from Aichi Prefecture, Japan. Blooms early to mid-season. Propagated by Kira Farm in the 1970s. Unusual flower colour.

Kira-no-shô. (Place Name), *(C.x vernalis).* Nagoya Camellia Society Bulletin, 1982, *Tsubak*i, No.15: A seedling of **Shummei**. Originated by Hiroshige, Hayakawa, Nagoya, Japan. Miniature, single wabisuke-like, sake-cup flower. Lavender pink. Growth upright and dense. Blooms mid-season.

Kirara. (Place Name), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.242, p.122, description, p.163: Leaves very narrowly elliptic to narrow-elliptic, undulate, venation more or less impressed, margins crenate, 7.5-8.4 cm long x 2.8-4.3 cm wide. Flower irregular, informal, incomplete double. Outer petals strongly recurved, inner ones erect, intermingled with long tufts of stamens, deep red, (Cardinal Red 822/3) 5-6 outer petals, about 21 inner petals, up to 5 cm long. Stamens in double circle, filaments pinkish, several petaloids. Flowers mid-season to late. Originated as a seedling in the Takeda Gardens, Japan. "Kirara" is the name of a place near the Takeda Gardens.

Kira-shiro-kantsubaki. (Kira's White "Kantsubaki"), *(C.hiemalis)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49: Small size, white, semi-double from Chiba Prefecture, Japan. Flowers early to mid-season. Released in 1960s by Kira Firm, Nishio City.

Kira's White Winter Camellia. *Camellias,* Y.C. Shen, 2009, p.319 with colour photo showing a white flower with pink edging to outer petals; Synonym for **Kira-shirokantsubaki.**

Kirenga (Yellow Lotus) **(***C.hybrid)* from Kodaira, Tokyo, *Japan Camellia* No.84, August 2007: Pale yellow, lotus-formed semi-double, medium to large, cylindrical to split stamens, blooming in March to May. Tree spreading. Leaves ovate, large. An interspecific hybrid between **Miyakodori** and *C.cucphuongensis*. Hybridized by Shinichi Noguchi and named in 2004.

Kiri Zahi. Forrest, 1985, *Trees and Shrubs Cultivated in Ireland.* Corruption of the Japanese name **Kirinzan.**

Kiridani. (Place Name in Toyama), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.213, colour photo and description: Small size, brilliant red, single of 6-7 thick petals, opening almost flat, with a spreading stamen centre, having light yellow filaments and yellow anthers. Blooms mid-season to late. Leaves mid-green, narrowly elliptic, long tapering acuminate apices, margin sharply, finely serrulate. Originated in the Toyama Prefecture, Japan from wild rusticanas growing in Kiridani, Yatsuo Town..

Kiridani. (White Cloud), *(C.rusticana),* JCS, 1987, *Japan Camellia,* No.24, p.4: A white wild snow camellia. Originated in Japan.

Kiridani-shibori. (Variegated 'Kiridani'). *(C.rusticana). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.141 with colour photo; Small, almost flat single, vermilion blotched white, slightly sprayed stamens. Leaves elliptic, small. Vigorous but dwarf growth. Blotches appeared after grafting. Named and released by Mitsuroku Makino, Toyama Pref., Japan.

Kirigayatsu. (obscure), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô,* vol.310. No description. Originated in Japan. (Believed extinct.)

Kirin. (Giraffe), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô,* Vol.309. No description. Originated in Japan. (Believed extinct.)

Kirin. Hellmut Vogel, 1982, *Azaleen, Eriken, Kamelien.* colour pl.8. Abbreviation for **Kirin-no--mine.**

Kirinhô. Different reading for **Kirin-no-mine.**

Kiri-no-aki. (Autumn Paulownia). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.77 with colour photo; English translation p.51. Medium size, pale pink, petaloid semi-double to peony form with degenerated stamens. Slightly fragrant. Flowers early. Leaves elliptic, small. Spreading growth with slender, dense branches. A cross between *C.hiemalis* and *C.japonica* 'Umega'e'.

Kirin-no-homare. (Glory of Mt Kirin), *(C.rusticana),* Minagawa, 1956, *Chinkashû:* Deep red, peony. See colour plates: Seibundô Shinkôsha, 1966, *Garden Life* No.17, front cover, lower L.H.; Tuyama, 1968, *Camellias of Japan*, pl.247, p.125, description, p.166; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.190, p.98; Seibundô Shinkôsha, 1979, *Senchinshû*, p.44, description, p.210: Leaves oblong-elliptic, apex shortly acuminate, flat, strongly serrate at the margin, petioles hairy. Flowers of peony type, deep red. (Cardinal Red 822/2), medium to large size. Inner petals not so small, intermixed with stamens. Flower shape tends to vary, sometimes lotus shape or anemone form. Flowers mid-season. Corruption of name: 'Kirin no Hon'. Originated in Niigata Prefecture, Japan. Collected by Yaichi Kawamura on Mt Kirin, Higashi-kanbara District, named and released in 1966.

Kirin no Hon. Woodward, 1987, *International Camellia Journal*, No.19, p.81. Corruption of the Japanese name **Kirin-no-homare.**

Kirin-no-mine. (Peak of Mount Kirin), *(C.rusticana),* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.57. No description. See Tuyama, 1968, *Camellias of Japan*, pl.202, p.102,

description p.149: Leaves elliptic, shortly acuminate apex, margins sharply serrate, petioles very hairy. Flowers double, rosy red (Claret Rose 021/1), petals incurved, irregularly lobulated at apex. See colour plate: Seibundô Shinkôsha, 1979, *Senchinshû*, p.44, description, p.210. Collected in Higashi Kanbara-gun, Niigata Prefecture, Japan by Yaichi Kawamura, named and released in 1966. Different reading: 'Kirinhô'.

Kiri-no-o. (Personal Names, abbreviated and combined), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.263, colour photo and description: Small size, deep pink with irregular, clear white edges, wide campanulate single with 5-6 broad, overlapping, crinkled petals and a central stamen column with white filaments, joined for lower half, and yellow anthers. Flowers mid-season to late. Leaves mid-green, elliptic, apices long, tapering acute, margins twisted, coarsely serrate. Originated in Izu Ohshima, Japan. Named and released by Takeo Ogawa in 1970s.

Kirino. (Personal Name), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.227, p.115, description, p.158: Leaves olive green, oblong-elliptic, venation impressed, 8.5-9.8 cm long x 3.8-4.9 cm wide; petioles 6-7 mm long, very hairy. Flowers of open peony form, red, (between Currant Red 821/3 and Carmine 21). Petals 20-40, up to 4.2 cm across. Stamen group, either single or divided into 5 fascicles with smaller, inner petals and petaloids. Late flowering. Collected in the Yatsuo-machi, Toyama Prefecture, Japan by Mr Toyoaki Kirino in the wild.

Kirinzan. (Mount Kirin), *(C.rusticana)*, Naga'o, Sôsei-en, 1956, *Tsubaki Mokuroku.* No description. Originated in the Niigata Prefecture, Japan.

Kirishima. (Place Name), *(C.japonica)*, Satô, 1975, *Chûbu no Tsubaki*, p.72: Campanulate single, white, with sparse, fine lines and ticks of red. Petals, 7-8, ruffled and crinkled. Large, central stamen group with golden anthers. Leaves lustrous, dark green, recurved at apex and margins. Originated in Aichi Prefecture, Japan.

Kirisumi. (Broken Ink Stick), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1, No.112; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Double, large flower, coloured pale yellow and slender and convex lotus shape. Originated in Japan. (Believed extinct.)

Kiri Te Kanawa. *(C.pitardii x C.reticulata), New Zealand Camellia Bulletin*, 1972, vol.VII, No.6, p.36, Reg. No.76: A hybrid seedling of *C.pitardii* (Descanso form) x *C.reticulata* hybrid **Buddha** raised by John Sobeck of California and given to Jack Clark, Auckland, New Zealand. The plant has an upright, dense habit and dark green foliage, 10 cm x 4 cm. The flower is semi-double with 15 petals and occasional petaloids. Anthers are reddish brown on cream filaments and colour is Fuchsia RHS.CC.67C. Flowers from early to late. Named for the famous Maori opera singer.

Kiritsubo. (Personal Name), *(C.japonica)*, Okumura, ca.1810, *Chinka Hin'i.* Yashiro, 1841, *Kokon Yôrankô*, vol.310. No description. Originated in Japan. (Believed extinct.) "Kiritsubo" is a personal name from the famous, ancient Japanese literature *The Genji Monogatari.*

Kiron-no-mine. Hillier Nursery Catalogue, 1959. Corruption of the Japanese name **Kirin-no--mine.**

Kirsi. *(C japonica)*, ACRS., 1969, *Camellia News*, No.36, p.15, Reg. No.115: Originated by C.F. Walton, St. Ives, N.S.W., Australia. A chance seedling that first flowered 1967. Flowers are 10-11 cm across, light red, semi-double. Mid-season to late flowering. Leaves dark green, 10 cm x 6 cm, broadly ovate, bluntly acute with apex twisted down, medium serrations on a slow, compact growing plant.

Kirsten. *(C.japonica). New Zealand Camellia Bulletin*, March 1997, Issue No.126, vol.XX, No.1, p.20, Reg. No.381. Registered by R.M. Young, Marton, New Zealand. A seedling of **Nancy Bird,** pollen parent uncertain, but thought to be **Tiffany**. A 16 year old plant which first bloomed in 1989. A large formal double flower, 10 cm in diameter, with 45 petals which are pointed and

of a heavy texture that gives the flower a special character. Colour is soft pink (RHS.CC. 65C), becoming paler towards the centre. Plant is upright and of average size and density. Leaves are 11 cm long x 6.5 cm wide. Flowers mid-season to late.

Kirsti Leigh. *(C.japonica),* ACS, *The Camellia Journal*, Sept. 2005, p.28 and colour photo p.29, Reg. No. 2652. A chance seedling that first flowered in 2000. Originated and propagated by Sally and Steve Erickson, Kiln, Miss., USA. The 12 cm diameter, white, peony form flower has white anthers and yellow filaments. Long lasting flowers. Upright, spreading plant of medium growth rate. Flowers early to mid-season. *American Camellia Yearbook,* 2005, p.43 with colour photo p.c5. Dark green leaves are 12.7 cm x 5.7 cm.

Kirsty Anne. *(C.sasanqua)*, ACRS., Dec.1990, *Camellia News*, No.115, p.10, reg. No.381: Originated by Alexander M. Scott, 60 Broadwater Terrace, Redland Bay, Queensland, from a chance seedling that first flowered 1957. A large size, 7 petalled single, pink blushed white. Early, free flowering on a rapid growing, upright, bushy plant. Petals fluted, with stamens in the Higo form. Leaves glossy green, elongate, flat, apices acute, margins serrulate.

Kirsty Rivett. *(C.reticulata* hybrid), *New Zealand Camellia Bulletin*, 1983, vol.XIII, No.2, p.11, Reg. No.191: Originated by Mrs Ida Berg, Whakatane, New Zealand. *C.saluenensis x C.reticulata* 'Crimson Robe' (**Dataohong**) female parent and male parent a *C.reticulata* hybrid raised in USA and incorrectly distributed as 'Howard Asper'. It first flowered 1979 on a spreading plant with medium growth rate and dark green leaves, 10 cm x 5 cm. The very large, peony form flower has 14 petals and is 15 cm across x 5 cm deep. Its colour is salmon pink, firm texture. Flowers mid-season.

Kisanjin. Different reading for **Kaeruyamabito.**

Kisaragi. (Second Lunar Month), *(C.hybrid)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.28: Medium size, very pale pink, double. Blooms mid-season. A seedling from **Flower Girl** *(C.sasanqua* **Narumigata** x *C.reticulata* **Damanao**) x *C.granthamiana.* Originated in Ôsaka Prefecture, Japan. Named and released by Kazuo Yoshikawa.

Kisayamabeni. (Kisayama's Red). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.70 with colour photo; English translation p.47. Small, vermilion, tubular to trumpet shaped single, tubular stamen cylinder, thick petals. Flowers mid-season to late. Leaves oblong, medium size, flat. Upright, vigorous growth. A natural seedling of a wild japonica in the precincts of Mt. Shôtô, selected by a priest of Konpira Shrine, named and released by the Kagawa Branch of the JCS in 1997. From Kagawa Prefecture.

Kisayamahime. (Princess Kisayama). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.70 with colour photo; English translation p.46. Small, pink semi-double, wrinkled and crinkled petals, tubular stamen cylinder. Flowers mid-season to late. Leaves oblong, small, slightly recurved. Upright, weak growth. Selected from a wild japonica community around the precincts of Shôtôzan by a preist of Konpira Shrine, released by the Kagawa Branch of the JCS in 1997. From Kagawa Prefecture.

Kishibe. (Shore), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.711: Large, white, single with 7 large petals with scallopped edges and a large column of yellow stamens. Originated in Japan. (Believed extinct.)

Kishibe-no-sakuraba. (Cherry Leaves Camellia by the Shore), *(C.japonica)*, Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.100, black and white photo: Scarlet, single, veined deeper with petals twisted and folded. Leaves, medium size, mid-green, obovate, apex long acuminate, recurved, twisted and sharply serrate, resembling cherry leaves. See Yokoyama & Kirino, 1989, *Nihon no Chinka* pp.224, 225; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.41, 209. Originated in the Kantô District, Japan. A chance seedling of unknown parentage, originated by Yoshio Kishi.

Kishitsukasa. ANZCRS., *Camellia Annual*, 1957, p.20. Corruption of Japanese name **Kishû--tsukasa.**

Kishû-nishiki. (Kii Province Brocade), *(C.japonica)*, Saitama Botanic Gardens Plant List, 1960: No description. Originated in the Kansai District, Japan. "Kishû" is the old place name for the Wakayama Prefecture.

Kishû-tsukasa. (Lord of the Kii Province), *(C.japonica)*, Chûgai Nursery Co. Catalogue, 1934-1935, p.32: Light crimson, full double. Late flowering. See colour photos: Adachi, 1960, *Camellia. Its Appreciation and Artistic...*, p.97; Tuyama, 1966, *Camellia Cultivars of Japan*, pl.162; Tuyama, 1968, *Camellias of Japan*, pl.315, p.159, description p.184; *Encyclopedia of Camellias in Colour*, vol.I, 1972 pl.422, p.176; Satô, 1975, *Chûbu no Tsubaki*, p.101 as 'Kisyû-tsukasa'. Seibundô Shinkôsha, 1979, *Senchinshû*, p.41 as Kisyûtsukasa; Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.396, 397: Leaves narrowly elliptic, cuneate at base, apex long acuminate, margins manifestly serrate, green to yellowish green, flat, impressed venation. Vigorous, compact, upright growth. Flowers formal double, flat, rose (Rose Opal 022/1), spotted or marbled white, particularly on the outer petals. Petals broadly emarginate, incurved. Late flowering. This cultivar was originally self coloured but apparently has become virus infected as all colour photos taken since 1960 show white variegation. Different readings: 'Kiskû-tsukasa', 'Kishuh-tsukasa'. Corruption of name: 'Kishitsukasa', 'Kisho-tsukasa', 'Hishutsukasa', 'Kitsutsagas', 'Kitsutsutkasa', 'Kishiu-tsukasa'. Synonyms: 'Admiral Nimitz', 'Admiral Nimitz Variegated', 'Captain John Sutter', 'Silvery Pink', 'Silver Pink'. Originated in Takarazuka City, Hyôgo Prefecture, Japan. A number of large trees of this cultivar are also found in the Wakayama Prefecture.

Kishû-unryû. (Cloud Dragon of Kii), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.41, description, p.209 as 'Kisyû-unryû: Medium size, single, red, widely campanulate, 5-6 petals, spreading stamen cluster, yellow anthers, pinkish, white filaments. Branches and limbs grow in the zig-zag fashion of'Unryû'. There is a difference in the rate of growth in the right and left directions, so that branches tend to be curved. The bending disappears as the tree matures. Originated Wakayama Prefecture, Japan. Different reading: 'Kisyû-unryû'.

Kisii Nepalens. Anon. 1830, "Ueber die Cultur der Kamellien" in *Der Blumen Gaertner*, p.52. Orthographic error for species *Camellia kissi.*

Kisochidori. (Kiso Plover), *(C.rusticana)*, Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.57. No description. Tuyama, 1968, *Camellias of Japan*, pl.11, p.6, description, p.88: Leaves narrowly ovate-elliptic, thick, glaucous green, dull, venation sub-impressed, margins minutely serrulate, 7.6 cm long x 3.3 cm wide. Petiole, 9-15 mm long, hairy. Flowers white, single with a touch of cream at the bottom, widely campanulate, petals 5-6, often unequal, slightly undulate. Stamens somewhat spread, 3.8 cm long, filaments light, lemon yellow. Flowers midseason. Originated in the wild on the slopes of the Kiso Valley, Kanazawa, Ishikawa Prefecture, Japan.

Kisoigoshi. (Competing Pose), *(C.japonica)*, Chûgai Nursery Co. Catalogue, 1938-1939, p.19: White with purplish crimson variegation. Flat, showing stamens. Single. Early flowering. Originated in Japan.

Kisoji. (Kiso Road), *(C.japonica)*, Inazawa Nuseries Co. Ltd Catalogue, 1986-1987, p.10, A-508: Light rose-pink, vase-shaped single, medium size, cylindrical stamen column. Early to mid-season

blooming. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.125. Originated in the Chûbu area, Japan. Nippon Tsubaki - Sasanqua Meikan, 1998, p.71 with colour photo; English translation p.47. A natural seedling of **Shûfûraku.** Named and released by Minoru Sato in 1975.

Kitadani-no-tô-tsubaki. (See below), *(C.reticulata), Encyclopedia of Camellias in Colour*, vol.I, 1972, p.367: From Fuku'oka Prefecture, Dazai-fu Machie, Kitadani; owner Tamura Seishi, but the history is unknown. However the age of the tree is estimated at 500-600 years, height about 8 M, trunk 70 cm girth at 50 cm above ground. It is said to be the largest and oldest Japanese To-tsubaki *(C.reticulata).* The plant is in a Dazai-fu Manor with Chinese connections and was probably, originally an import from China. The present flowers are, at times, variegated with white on red but, in olden times, they were larger and, it is said, not variegated.

Kitaguni. (See below), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan*, pl.66, p.33, description, p.104 as 'Kita-guni': Leaves oblong-elliptic to elliptic, apiculate-cuspidate apex. shining, green to olive green, impressed venation, 6.8-10.3 cm long x 3.5-4.8 cm wide with hairy petioles, 5-9 mm long. Flowers palest pink (Rose Pink 427/3), peony type. Petals 14-19, often with 1-2 small, stalked petals additional with the stamens, a little scattered, about 2.4 cm high, filaments yellow. Flowers mid-season. Originated in Yamanaka Spa, Ishikawa Prefecture, Japan. "Kite" = northern; "guni" = province = Northern Province alluding to Ishikawa Prefecture.

Kitahara. Ichijima, 1906, *Kokon Yôkankô.* reprint Yashiro, 1841. Based on same charcters as **Kita-no-hara.**

Kitajima. (Personal Name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.645: Pink, double, with whitish edges and central, stamen cluster. Originated in Japan. (Believed extinct.)

Kitamura. (Personal Name). *(C.rusticana).* Claude Thoby, 1993, *Camélias,* pp.11, 18, 57: A clear red semi-double that blooms mid-season to late. Collected in Japan, named in France.

Kitano-futae. (Kitano Semi-double), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.85: Semi-double white with wide-spread, outer petals and a tall, erect row of centre petals about a very long stamen cluster. Originated in Japan. (Believed extinct.) Different reading: 'Kitano--hutae'.

Kita-no-hara. (North Plain), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Yashiro, 1841, *Kokon Yôrankô*, vol.306 as 'Kitahara': Large and flat form. The corolla is thick and light coloured; double. Synonym: 'Kitahara'. Originated in Japan. (Believed extinct.)

Kitano-hutae. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.138. Different reading for **Kitano-futae.**

Kitano-mikatsura-kasuri. (Variegated Judas Tree from Kitano), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.285: Small, white, peony form with a flush of pink and a rare red

mark on the petals. Different reading: 'Kitano-mikatsura-tobi'iri'. Originated in Japan. (Believed extinct.)

Kita-no-nada. (Northern Ocean), *(C.rusticana), Yuki Tsubaki no Kai*, No.1, 1967, black and white photo: Small, red and white peony form. See colour photos: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.431; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.369; Seibundô Shinkôsha, 1979, *Senchinshû*, p.42, description, p.209: Small, 7-8 cm across, peony form, rosy red with white markings. Outer petals of various sizes, wide spread, smaller, erect centre petals; fluted and folded and mixed in with fascicles of short stamens. Flowers mid-season to late. Leaves green to olive green, obovate, apex acuminate, margins serrulate, petioles hirsute. Originated in the Jo'etsu City, Niigata Prefecture, Japan. Collected, named and released by Yaichi Kawamura in 1966. Different reading: 'Kitanonada'. Synonym: 'Himatsuri'.

Kitano-ô-botan. (Large peony from Kitano), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl. 303: Large, red, open peony form with ragged petals and having a pale coloured edge. Originated in Japan. (Believed extinct.)

Kitano-shimeri. ('Shimeri' from Kitano), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.291: Small, pink, single, 5-6 wide open petals, thickly streaked, dotted and peppered with dark crimson. Central stamen column with white filaments. Originated in Japan. (Believed extinct.)

Kitano-tokiwa. (Kitano Forever), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.178: Small size, anemone form, crimson, of 6 petals and a compact, central cushion of petaloids streaked with white. Originated in Japan. (Believed extinct.)

Kitazawa-kingyo. (Kitazawa's Fishtail), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû:* Flowers semi-double, purplish-pink, sometimes has light pink sports, spotted white. Originated in Japan. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.168. (Believed extinct.)

Kitchô. (Good Omen). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.71 with colour photo; English translation p.48. Small, pale pink, irregular anemone form, petaloids arranged like a saucer in the centre. Flowers mid-season. Leaves large, elliptic. Upright, somewhat weak growth. A hybrid between *C.japonica* 'Nishiki-koshimino' and *C.irrawadiensis*, named and released by Kazuo Yoshikawa in 1980s. From Osaka.

Ki-tsubaki. (Thicket Camellia), Uesa, 1844, *Sômoku Benran:* Small, red, cupshaped, single. Leaves thick and heavy. Does not bloom until established. Originated in Japan. See: Yashiroda's comments on p.7, 1971, Kyôto Engei Kurabu; *Tsubaki Tokushû*, No.65. (Believed extinct.)

Ki-tsubaki. (Yellow Camellia), *(C.japonica)*, Hirayama, Tokuo, (late 17th century), *Tsubaki Byôbu;* Watanabe, 1961, Kyôto Engei Kurabu, *Tsubaki Tokushû.* No description. Originated in Japan. (Believed extinct.)

Kitsune-no-shûgen. (Fox's Wedding), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Small, deep, bluish red single. Different reading: 'Kitsune-no-syûgen'. (Believed extinct.)

Kitsune-no-syûgen. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.138. Different reading for **Kitsune-no-shûgen.**

Kitsuregawa. (Kitsure River), *(C.japonica)*, Minagawa, 1957, *Chinkashû:* Pale pink, semi-double. See colour photos: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.93; Tuyama, 1968, *Camellias of Japan*, pl.95, p.48, description, p.114 as 'Kitsure-gawa': Leaves lanceolate-elliptic to narrowly elliptic, a little waved, venation impressed. Flowers vase-shaped, semi-double, pale pink (Neyron Rose 633/3) in colour. Petals slightly channelled, with irregular, distorted inner petals and petaloids, intermixed with a few stamens. Flowers mid-season. Originated in the Minagawa Camellia Gardens, Saitama Prefecture, Japan. A seedling of **Miyakodori.** Different reading: 'Kizuregawa', 'Mokuregawa'. See colour photos and descriptions:

Encyclopedia of Camellias in Colour, vol.I, 1972, pl.220, p.323, and Seibundô Shinkôsha, 1979, *Senchinshû*, pp.42 , 209, both as 'Kizuregawa'.

Kitsutsagas. Forrest, 1985, *Trees and Shrubs Cultivated in Ireland.* Corruption of the Japanese name **Kishû-tsukasa.**

Kitsutsutkasa. Mount Congreve Gardens Catalogue, 1980. Corruption of Japanese name **Kishû--tsukasa.**

Kitty. *(C.japonica)*, Azalea Glen Nursery Catalogue, 1955: White with a pink border, small, formal double. Bushy growth. Late blooming. Originated in USA by Azalea Glen Nursery. See colour photo: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.92, p.52. Chinese synonym 'Xiaomaomi'.

Kitty Bawden. *(C.japonica)*, ACRS., 1989, *Camellia News*, No.111, p.13, Reg. No.377: Originated by Keith Abbott, Rossmoyne, West Australia. A chance seedling that first flowered 1984. Large informal to peony form flowers, white with golden anthers; 14 cm across x 8 cm deep. Flowers early to mid-season on a dense, slow growing plant. Leaves elliptic, glossy deep green, flat, margins finely serrate, Apices acute, 12 cm long x 7 cm wide. Large, even flowers; petals fold slightly. Flowers shed whole.

Kitty Berry. *(C.japonica)*, *American Camellia Yearbook*, 1956, p.62, Reg. No.257: A 14 year old chance seedling, originated by the Central Georgia Nurseries, Macon, Georgia, USA. First flowered 1948. Plant growth, medium, strong, upright and dense. Leaves 10 cm x 5 cm, bright green, slightly serrated. Flowers 10 cm across x 5 cm deep, peach pink, loose, peony form, 10 regular petals, 30-130 fluted petaloids. The stamens and petaloids form an irregular centre with two regular rows of outer petals. Flowers early in the season. Sport: **Kitty Berry Variegated.**

Kitty Berry Variegated. *(C.japonica)*, SCCS., 1968, *Camellia Nomenclature*, p.78 as 'Kitty Berry Var.': A virus variegated form of **Kitty Berry**- Peach pink blotched with white. Originated in USA.

Kitty Ellis. *(C.japonica)*, *American Camellia Yearbook*, 1973, p.192, Reg. No.1259: A sport of **Dr Dan Ellis** first observed in 1970. Plant growth is spreading, dense and medium with light green leaves 10 cm x 4 cm. The peony form bloom is white and marbled deep pink, 11 cm across x 5 cm deep with 35 petals. Anthers are yellow and filaments white. Outer petals curve outwards, others crinkle, curl and rabbit ear and intersperse with the stamens.

Kitty MacMahon. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.7, colour photo: Medium size, crimson, semi-double with 3 layers of petals and a small, thin, stamen cluster. A seedling of **La Reine** originated by Richard Dodd, Marshallville, Georgia, USA.

Kitty Nelson. *(C.japonica)*, Vanderbilt, 1943, *Trade Available Camellia Stocks.* No description. Originated in USA. (Believed extinct).

Kitty's Favourite Variegated. (*C.japonica*), ACS, *The Camellia Journal*, Aug. 1997, p.16, Reg. No.2427. A medium size, pink mottled white, formal double seedling of **Frost Queen** x 'Variety Z' (*C.japonica* **Z**). Originated by Dr William L. Ackerman, Ashton, Md., USA. American Camellia Yearbook, 1997, p.4, colour photo before p.1. The 15 year old seedling first flowered in 1987. Average flower size is 9.5 cm across x 2.5 cm deep with 55-65 petals, 5 petaloids, pale yellow anthers and white filaments. Plant growth is upright, average and open with dark green leaves 9 cm long x 5 cm wide.

Kiwi Triumph. *(C.reticulata)*, SCCS., 1972, *Camellia Nomenclature*, p.157: China rose. Very large, heavy petalled, semi-double with irregular inner petals. Vigorous, compact, upright growth. Midseason blooming. A seedling of *C.reticulata* **Damanao** as 'Cornelian', raised by Jack Clark, Auckland, New Zealand.

Kiyô. (Brilliant Sunshine), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Light pink, medium size. See colour photos: Adachi, 1960, *Camellia. Its Appreciation and Artistic*.. p.59; Seibundô Shinkôsha, 1979, *Senchinshû*, p.43, description, p.210: Light pink, 9 cm across, 6 petals, 100 light yellow, spreading stamens. Leaves medium size. Different reading: 'Kiyoh'. Originated in Kumamoto Prefecture, Japan. Similar to 'Asahi-nishiki'.

Kiyobotan. (Pure Peony), *(C.japonica)*, Domoto Nursery Catalogue, 1948 as 'Kiyo Botan': Pink, variegated white, semi-double to peony form. Mid-season flowering. Originated in Japan.

Kiyoh. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.214. Different reading for **Kiyô.**

Kiyoka. (Pure Flower), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.2, No.106: Different reading for **Seika.** Listed in the *Hachiboku Sanbokutsuki Meisai* (before 1868) in section "K" as 'Kiyoka' as red, but description similar to *Kadan Chikinshô.*

Kiyoka. (Pure Fragrance), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.44, colour photo, p.210, description: Small, white, campanulate single of 6 petals. Leaves obovate, apex acute, dark, glossy green, shallowly serrate. Late flowering. Fragrant. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.41. Originated in Kurume, Fuku'oka Prefecture, Japan. Named by Masaaki Kunishige in 1970. Different reading: 'Seikô'.

Kiyo-kanako. Fendig, 1953, *American Camellia Catalogue*. Corruption of Japanese name **Kiyokanoko.**

Kiyo-kanako Variegated. Fendig, 1953, *American Camellia Catalogue*, Orthographic error for 'Kiyokanoko Variegated', synonym for **Kiyokanoko.**

Kiyokanoko. (Spotted Fawn), *(C,japonica)*, Wilmot, 1943, *Camellia Variety Classification Report:* Red. Large semi-double to semi-peony form. Medium, bushy growth. It can also be variegated. Midseason blooming. Imported from Japan by Toichi Domoto, Hayward, California, USA in 1937. The word "kanoko" means dappled or spotted and indicates that this variety is variegated in Japan. Synonym: 'Kiyokanoko Variegated'. Corruption of name: 'Kiyokanako'. Sport: **Kiyokanoko Red.**

Kiyo-Kanoto Variegated. Harris' Longview Nursery Retail Price List, 1955-1956, p.9. Synonym for **Kiyokanoko.**

Kiyokanoko Red. *(C.japonica)*, Wilmot, 1943, *Camellia Variety Classification Report:* Self red form of **Kiyokanoko**. Originated in USA.

Kiyomasa. (Personal Name). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.43; Medium size vermilion, anemone form. Petaloids are widely sprayed and bordered white. Growth somewhat spreading. Leaves medium size, long elliptic. Late flowering. A 100 year old tree in a private garden, Kusano-machi, Japan.

Kiyomizu. (Place Name in Kyôto), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.452: Small, white, peony form with markings of soft, fuchsine pink. Originated in Japan. (Believed extinct.) Different reading 'Shimizu'. Sport: **Kiyomizu-shibori.**

Kiyomizu-shibori. (Dappled Kiyomizu), *(C.japonica)*, Mizuno. 1681, *Kadan Kômoku:* Double. Red crest on white. *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.475: **Kiyomizu** with fine crimson streaks added. Originated in Japan. (Believed extinct.)

Kiyono Semi-double Blush. Vanderbilt, 1940, *Camellia Research*, p.5 as 'Kiyono Sem. Do. Blush'. Synonym for **Semi-double Blush.**

Kobana-hiboke. Different reading for **Kohana-hiboke.**

Kôbotan. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.26. Different reading for **Benibotan.**

Kôbu-wabisuke. (Kôbu Wabisuke), (Wabisuke), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.159, colour photo and description: Small size, red, vase-shaped single, with pale yellow stamen column. Blooms mid-season. Leaves mid-green, broad-ovate, apices acute, margins serrate. Selected from wild camellias in Kôbu, Yatsuka-gun, Matsu-e City, Shimane Prefecture, Japan by Nitoshi Kaji. Named and released in 1979.. Local synonym: 'Hakushin-kashima'.

Kochidori. (Small Plover), *(C.hybrid)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.56, description, p.57, colour photo: Small size, white, single with 6 petals having their lateral margins rolled in to form sharp apices; central stamen cylinder with white filaments, joined for the lower half, and light yellow anthers. Blooms mid-season. Leaves bright, mid-green, elliptic, apices tapering acute, margins serrate. Originated in Okayama Prefecture, Japan. A chance seedling of **Tulip Time.** Named and released by Nobuo Sasai in 1982.

Kochô. Yashiro, 1841, *Kokon Yôrankô*, vol.306. Japanese group name for *C.wabisuke* Makino.

Kochô. (Butterfly), *(C.hybrid)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.28: Very small to small size, single, chance seedling of **Tiny Princess.** Originated in Ôsaka Prefecture, Japan. Named and released by Kazuo Yoshikawa in 1980s.

Kochôbeni-wabisuke. Tateyama Nursery Catalogue, 1957. Synonym for **Beni-wabisuke.**

Kochô-konwabisuke. (Dark Butterfly Wabisuke), (Wabisuke), *Chûbu Tsubaki Meikan*, 1960; Watanabe,1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, p.57. No description. Originated in Japan.

Kochô-no-mai. (Dancing Butterfly), *(C.x vernalis)*, Hakoda, JCS., 1989, *Tsubaki*, No.26, p.54; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.40: Small size, red, single. Blooms early to mid-season. Obtained and named by Hiroshi Yoshino of Kumamoto, from Nagasaki. Camellia Forest Nursery Catalogue, 1990, p.6: Delicate red, single; blooms between the *C.sasanqua* and *C.japonica* blooming seasons.

Kochô-no-mai. (Dancing Butterfly), *(C.japonica)*, Minagawa, 1959, *Chinkashû*, on section on new varieties: Pale pink, semi-double. Medium size. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.91 shows a Camellia almost white. Yokayama 1975, *Gendai Tsubaki Meikan*, p.120 gives the colour as "faint pink" and the bloom illustrated is a medium size semi-double. A seedling of **Chô-no-hanagata.** Resembles 'Toki-no-hagoromo'. There is still another camellia of this name that is a red peony form.

Kochô-no-mai. (Dancing Butterfly), *(C.rusticana)*, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, 1967, p.17: Clear, dark red peony form, medium size, 6-8 cm across. Outer petals, 12-16, inner, 12-15, confused, petaloids 16-20. Stamens about 100. Leaves obovate, shiny, mid-green, apex acuminate, margins deeply serrulate. Petioles hirsute. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.56, 214. Same characters as the Minagawa cultivar above. Originated in Tochio City, Niigata Prefecture, Japan. Named and released by Kaoru Hagiya in 1966.

Kôchôraku. Tateyama Nursery Catalogue, 1957. Different reading for **Beni-osaraku.**

Kochô-shibori-wabisuke. Tateyama Nursery Catalogue, 1957. Synonym for **Kochô-wabisuke.**

Kochoshiro-wabisuke. Savige, 1974, *International Camellia Journal*, No.6, p.29. Synonym for 'Campanulata White' (**Shiro-wabisuke**).

Kochô-shiro-wabisuke. Tateyama Nursery Catalogue, 1957. Synonym for **Shiro-wabisuke.**

Kocho-takai. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Kochô-wabisuke.**

Kochô-usu-wabisuke. *Chûbu Tsubaki Kyôkai*, 1960; Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.57. Synonym for 'Momoiro-wabisuke' (**Tarôkaja**).

Kochô-wabisuke. (Butterfly Wabisuke), (Wabisuke), Yashiro, 1841, *Kokon Yôrankô*, vol.311. (different kanji; same pronunciation); Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Rose-pink spotted white. Small single with poor, infertile stamen cluster and a protruding style. Leaves mid-green, lanceolate, apices long, tapering acuminate, margins serrulate. Originated in the Kansai area, Japan. Different reading: 'Kochoh-wabisuke'. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.235; Katei Gahô, 1984, *Chabana Koyomi, vol. 1, Tsubaki*, p.64. While originally given as a synonym for 'Wabisuke' in Itô, Ihei, 1695, *Kadan Chikinshô* and Tuyama, 1966, *Camellia Cultivars of Japan*, pl.225; now **Kochô-wabisuke** is commonly used for this cultivar to avoid confusion. Synonym: 'Azuma-wabisuke'. Chinese synonym 'Hudie Tuozhu'.

Kochoh-wabisuke. Different reading for **Kochô-wabisuke.**

Kochû-no-yume. (Dream in a Jar). *(C.japonica),* Yamaguchi, Tsubaki-en, Kyoto, Mail Order List, 1993-1994, No.598: Name inspired by an ancient fable of Utopia in an earthenware jar. Bright red, medium sized single, spherical to cup-shaped. White filaments. The short stamen tube is a pointed shape, joined at the top. Blooms early spring. Selected from wild camellias in Japan.

Kôdaiji. (Kôdai Temple), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.142: Small, pink, tubular single. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.90 with colour photo; English translation p.60. Small, peach red, tubular single, cylindrical stamen cluster. Flowers early to mid-season. Leaves oblong, small. Somewhat spreading, compact growth. Selected from wild japonicas raised at a temple in Kyoto, collected by Yoshiaki Andoh in 1971, released by Takeo Ogawa. From Kyoto to Izu Ôshima.

Kôdaikagura. Different reading for **Benidaikagura.**

Kodai-no-fue. (Flute of Ancient Times). *(C.x williamsii). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.100 with colour photo; English translation p.68. Purplish pink, tubular single, occasionally flat. Flowers mid-season to late. Leaves small, oblong, plicate at the centre rib. Upright growth with dense branches. A cross between *C.japonica* **Kon-wabisuke** x *C.saluenensis*, named and released by Shinichi Noguchi in 1989. From Tokyo.

Kodai-no-hana. (Flower of Ancient Times), *(C.japonica),* Inazawa Nursery Co. Ltd Catalogue,1986--1987, p.11, A-543: Very small, dark red, tubular to campanulate single of 6 petals and whitish stamen column. Leaves light green, elliptic, margins coarsely serrate. See, p.181, Yokoyama & Kirino, 1989, *Nihon No Chinka.* Originated in a wild population in Matsue City, Shimane Prefecture, Japan. Named and released by Hiroyoshi Yagashira in 1980.

Kodai-no-iro. (Colour of Ancient Times). *(C.x williamsii). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.100 with colour photo; English translation p.68. Small, purplish deep red, sake cup-shaped single with cylindrical stamen column. Flowers mid-season. Leaves small, narrowly elliptic, slightly wavy. Compact upright growth with dense branches. A cross between *C.japonica* **Kon-wabisuke** x *C.saluenensis*, named and released by Shinichi Noguchi in 1989. From Tokyo.

Kô-ei. (Glory), *(C.rusticana),* Chûgai Nursery Co. Catalogue, 1934-1935 as 'Kowei': White margins and purplish crimson, vertical crimson variegation on light crimson. Double. See plates: Tuyama, 1968, *Camellias of Japan*, pl.305; *Encyclopedia of Camellias in Colour*, vol. I, 1972, pl.296; Seibundô Shinkôsha, 1979, *Senchinshû*, p.51, description, p.213: Leaves narrowly elliptic, apex long acuminate, crenate at margins, petioles very hairy. Flowers semi-double to peony type, deep pink, (Neyron Rose 623/1) blotched white in varying degrees. Flowers mid-season. Satomi gives the meaning as "glory" while Tuyama says "honour". Different reading: 'Kowei', 'Kohei'. Originated in Takarazuka City, Hyôgo Prefecture, Japan.

Kô-ei Red. McIlhenny Catalogue, 1945-1946, p.6 as 'Koei Red'. Synonym for Moshio.

Kôemon-tsubaki. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.138, as 'Kôemon(tsubaki)'. Different reading for **Kôuemon-tsubaki'.**

Kô'etsu. (Place Name), *(C.japonica),* Nakayama, 1847, *Senka'ôden:* Flower, single, white, occasionally with red streaks. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.81.

Kôfu. (Scented Gemstone), *(C.japonica),* JCS., 1987, *Japan Camellia*, No.24, p.4 with colour photo: Originated by Funakoshi Kôji, Aichi Prefecture, Japan as a seedling of **Hatsu-arashi-Saga.** It has detailed, white striping on a red ground. Single, cup-shaped bloom with overlapping petals of medium size. Fragrant. Mid-season blooming. Note: According to the originator, "Fu" is a red gemstone with white stripes. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.92 with colour photo; English translation p.62. A red mottled white single, cupped and somewhat creped petals, fragrant, tubular stamen cylinder. Flowers early. Leaves narrowly elliptic, medium size, flat. Upright growth. Originated and released by Kôji Funakoshi.

Kôfûgyoka. (River, Wind and Fishing Lights). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, *Bulletin of the Seibu Maizuru Botanical Institute*, No.8, June 1994, pp.1-9, colour plate 8 p.7. (H3774: A seedling of *C.japonica* **Ôdaira-kaori** x *C.chekiangoleosa*, originated by Dr Kaoru Hagiya, Niigata, Japan. Deep red (RHS.CC.50A), large to very large, rose form double, mildly scented. Sparse filaments and protruding style. Spring blooming. Habit spreading and sparsely branched. Different reading 'Kôfû-ryôka'. Colour photo, ICS Journal, 1995, p.79.

Kofuji. (Small Fuji), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Very small size, single, red with white spots. Originated in Japan. May be a synonym for **Kochô-wabisuke.**

Kofuji-no-mai. (Dance of Small Fuji). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.104 with colour photo; English translation p.71. Medium size, pale pink striped red, lion (peony) to anemone form. Flowers early. Leaves elliptic to narrowly elliptic, medium size. Upright growth. A natural seedling of a cultivar. Named and released by Jirô Yamagami around 1970. From Ehime Prefecture.

Kofuji-wabisuke. (Small Wisteria Wabisuke), *(C.japonica),* Senka'ô-den, 1874: Very small size, single, red and white stripes. May be synonym for **Kochô-wabisuke.** Originated in Japan.

Kôfukozan. (Mt. Kôfuku). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.92 with colour photo; English translation p.62. Small to medium size, pale pink, trumpet shaped single, tubular stamen cylinder. Flowers mid-season to late. Leaves elliptic, medium size, somewhat wavy. Upright growth. A chance seedling of **Yoru-no-ame.** Named and released by San-in Camellian Club in 1995. From Shimane Prefecture.

Kofuku. (Invoked Happiness), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.205, colour photo and description: Medium size, deep red with 6 petals, separated, the 3 central, long oval with narrow apices, and a central stamen column with pink filaments, joined for the lower third and bright yellow anthers. Chinese bellflower shape, occasionally anemone form. Blooms mid-season. Leaves mid-green, elliptic, margins shallowly serrate. Originated in

Okoyama Prefecture, Japan. A seedling of **Bokuhan.** Named and released by Nobuo Sasai in 1988.

Kôfuyô. Yoshimura, 1963, *Higo Tsubaki Meikan.* Synonym for **Hi-no-tsukasa.**

Kôga. (Yellow River), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.297, colour photo and description: Medium size, faint greenish white, especially in bud, with convex centre of small, pale yellow petals and petaloids intermixed, peony form. Blooms mid-season to late. Leaves broad-ovate, deep green, margins serrate. Originated in the Niigata Prefecture, Japan. A seedling of **Bandai.** *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.88 with colour photo; English translation p.59. Stated to be a chance seedling of **Yukikomachi** discovered at a private family in Nakatsu Town, Higashi-kanbara District**.** Named by Katsumi Ôoka in 1967, released by Tokuji Ôoka.

Kogan. (Wild Gosling), *(C.japonica),* Izu-Ohshima Hawaii Botanic Gardens Catalogue, 1980. No description. Originated in Japan.

Kogane-nishiki. (Golden Brocade). (*C.nitidissima* hybrid). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.94 with colour photo; English translation p.63. Small, trumpet shaped single, slender stripes of red on pale yellow ground. Flowers mid-season to late. Leaves elliptic, medium size. Upright growth. A cross between **Betty Foy Sanders** and *C.nitidissima.* Named and released by Kazuo Yoshikawa in 1993. Previously known as 'Kôki 93'. From Osaka.

Kogane-yuri. (Golden Lily). *(C.nitidissima* hybrid). Atagawa Banana & Crocodile Park, Postcard for 1995 Annual Camellia Show: Pale yellow single of 7 rounded petals, with a slight fold up the centre to apex. Compact cylinder of stamens with deep golden anthers and a three armed stigma protruding. Leaves mid-green, narrowly elliptic, base narrow-cuneate, apex acuminate, margins bluntly serrate. Originated as a seedling of (*C.reticulata* x *C.saluenensis* **Barbara Clark**) x *C.nitidissima* by Kazuo Yoshikawa, Japan.

Koga-no-sato. (Koga Village), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.115, black and white photo: Medium size, campanulate single with a white ground variegated by red streaks; compact, central stamen column. Resembles **Chiyoda-nishiki.** Originated in Atsugi City, Kanagawa Prefecture, Japan.

Kogarashi. (Winter Wind), *(C.japonica),* Sakuden, 1630, *Hyakushinshû:* In the section of different sports on the one branch. Outer petals dark red, middle petals piled up like **Kikutoji,** inner petals tipped white and erect. Small double. Originated in Japan. (Believed extinct.) Painting in Usami Naohachi's *Nagoya Chinzu'e,* ca.1910.

Kogarasu. (Small Raven), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.57, colour photo, p.214, description: Small, blush red, cupped semi-double, 14-16 rounded, imbricated petals in 3 rows. Centre stamens in a slightly irregular column, yellow anthers and white filaments. Leaves lanceolate, apices acuminate, margins finely serrulate, shiny mid-green. Originated in Ishikawa Prefecture, Japan. Named and released by Seizô Matsui in 1977.

Kôgen-no-tsuki. (Plateau on the Moon), (Higo), 1979, *Higo Camellia:* Rose-pink sport of **Taikanhô,** 11 cm across. Originated in Japan.

Kôgetsu. (Greeting the Moon), *(C.japonica),* JCS., 1989, *Japanese Camellia*, No.31, p.13, pl.(c): Small size, open, cup-shaped single of 5-6 white petals, rounded, unequal in size, with a short stamen cluster, pale golden anthers and green, protruding pistil. Slightly fragrant. Originated in Aichi Prefecture, Japan. A seedling of **Kikuzuki.**

Kôgetsu. (Bright Moon). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.89 with colour photo; English translation p.59. Medium size, red, tubular single, cylindrical stamen cluster. Flowers mid-season to late. Leaves somewhat oblong, small to medium size. Somewhat spreading. A chance seedling raised at the garden of Kiyoshi Ishikawa, ex-President of the JCS, named and released in the early 70s. From Tokyo.

Ko-Ghyoku. Ghisleni, Pier Luigi, 1982, *Le Camelie.* p.77. Corruption of Japanese name **Kôgyoku.**

Koginu. (Small Kimono), *(C.hybrid),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.62, description, p.63, colour photo: Small size, white, with a pink cast, single with 6-7 fluted, irregular, emarginate petals and a short, central stamen cylinder with yellow anthers. Blooms early to mid-season. Leaves deep green, elliptic to broad-elliptic, apices acute to acuminate, margins serrate. Originated in Okoyama Prefecture, Japan. A seedling of **Tulip Time.**

Kogioku. Tanahashi, 1949, *American Camellia Yearbook,* p.108. Corruption of Japanese name **Kôgyoku.**

Kogitsune. (Little Fox), *(C.x vernalis),* Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Small size, white with divided stamen cluster. Originated in Japan. (Believed extinct.)

Kogô. (Personal name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.96 with colour photo; English translation p.65. Small white, tubular to bowl shaped single, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size, somewhat sharply recurved at apices. Upright growth. A cultivar at a private family in Kanazawa City. Named and released by Asako Sakuuchi in 1980. From Ishikawa Prefecture.

Kogô-no-iori. (Queens Retreat), *(C.japonica),* Inazawa Nurseries Co. Ltd Catalogue, 1988-1989, p.1, A1 with black and white photo: Dark red, single, cylindrical blossom with central stamen cylinder, yellow anthers, pink filaments, united for the lower third, fertile. Originated in Japan.

Kôgyoku. (Red Gem), *(C.sasanqua),* Minagawa, Jisuke, 1930, *Jissai Engei*, No.9; Chûgai Nursery Catalogue, 1935-1936 as 'Kowgyoku': Pink. Full double. Large flower. A seedling originated by Jisuke Minagawa, Japan. For colour pl. see: Fendig, 1950, *American Camellia Catalogue:* Small, rose form double, 7 cm across x 2.5 cm deep, blush pink deepening to rose-pink with about 30 petals. Leaves olive green, 5 cm x 3.8 cm. Synonyms: 'Little Gem', 'Ruby', 'Kôgyoku Pink'. Different readings: 'Kowgyoku', 'Kohgyoku', 'Benigyoku', 'Ko-Gyoku'. Corruptions of name: 'Ko-Ghyoku', 'Kogioku', 'Kowgoyoku'. Synonyms: 'Sôfuren', 'Haru-no-akebono'. The character for "kô" translates as red in this case, not "little" and 'Kôgyoku' is a red gem or a ruby. Tuyama in *Ishii's Selected Japanese Camellias including Sasanquas,* 1979, pl.93 uses a different character for "ko" meaning Emperor. There is a *C.japonica* with the same name characters and another with the same transliterated name but one character different. Chinese synonym 'Huangyu'.

Kôgyoku. (Rainbow Gem), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.400, p.162, description, p.256: Large, semi-double, red variegated with white blotched with 18-20 large, emarginate petals, inner semi-erect and crinkled; irregular stamen cluster. Leaves mid-green, lanceolate, apices short acuminate, recurved, margins shallowly serrulate. See: Seibundô Shinkôsha, 1979, *Senchinshû,* pp.51, 213. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by Tomohisa Arikawa in 1973. This camellia has a different character for "kô", meaning rainbow.

Kôgyoku. (Ruby), *(rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.52, colour photo, p.213, description: Medium size, crimson, single with simple stamens. Leaves brilliant, glossy mid-green with a feather of yellow and some pale green, along the midrib, elliptic, apices acuminate, bases cuneate, margins sharply serrate. Originated in Niigata Prefecture, Japan.

Kogyoku Pink. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.255. Synonym for **Kôgyoku.**

Ko-hagoromo. (Small 'Hagoromo'). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.104 with colour photo; Medium to large size, pale pink, semi-double to lotus form with long, narrow, fluted petals and tubular stamens. Flowers mid-season. Leaves elliptic, medium size. Upright, vigorous growth. A seedling of **Haru-no-utena,** originated and released by Shinichi Noguchi, Tokyo, Japan, in 2008.

Kohaku. (Amber), *(C.rusticana)*, Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.121, black and white photo: Pale, peach pink, semi-double with crinkled petals and spreading stamen cluster. Originated in Ojiya City, Niigata Prefecture, Japan. Synonym: 'Yurikago' in *Encyclopedia of Camellias in Colour*, pl.228, p.324.

Kôhaku-bijin. (Red and White Beauty). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.82 with colour photo; A chance seedling of a garden cultivar. Selected and named by T. Kunitake, Kurume, Japan in 1996. Deep red with prominent white patches. Small to medium size, tubular single. Tubular stamen cluster. Vigorous, upright growth. Leaves medium size, oblong. Flowers mid-season.

Kohakuchô. (Foreign White Butterfly), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.14, 15, colour photo and description: Very small size, white, wide campanulate single of 5 oval, emarginate, reflexed petals with a centre column of stamens, filaments white, joined for the lower half, anthers gold. Blooms mid-season to late. Leaves deep green, lanceolate, margins crenate. Originated in the Chûbu area, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.104 with colour photo; English translation p.70. A cross between **Shiro-wabisuke** and **Sasameyuki.** Named and released by Minoru Satô in 1963.

Kôhaku-no-iwai. (Red & White Festival), *(C.japonica)*, JCS., 1988, *Japan Camellia*, No.28, p.4, colour photo; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.13: Medium size, tubular to campanulate form single, red and white, dividing the petals. Blooms early to late. Originated in the Chibu Prefecture, Japan.

Kohan-no-aki.. (*C.sasanqua* Higo type) *Collected Papers*, ICS Congress, Kurume 2010, p.33, "Introduction of Higo-sasanqua, Takayuki Tanaka"; Pale pink, rose form double with 22-30 petals and 14-32 stamens, diameter 8.4 cm. Leaves 5.2 cm x 2.5 cm. Originated in Japan.

Kohana-hiboke. (Small Hiboke), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Cardinal red, medium size. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.81. Originated in Japan. (Believed extinct.)

Kohara. (Place Name), *(C.japonica)*, Okumura, [before 1810], *Chinka Hin'i;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large, pale pink, open semidouble. Originated in Japan. (Believed extinct.)

Koharu. (Pretty Spring), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.13. No description. Originated in the Nagasaki Prefecture, Japan. Nippon Tsubaki - Sasanqua Meikan, 1998, p.104 with colour photo; English translation p.70. Small, vermilion, tubular single, cylindrical stamen cluster. Flowers early to mid-season. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Selected from wild japonicas growing in Hirado City. Discovered by Tsukasa Isomoto in 1980, named by Kichinosuke Aburatani.

Koharubi. (Indian Summer) (*C.japonica*) from Hachiôji, Tokyo. *Japan Camellia* No.82, February 2007: Pale pink, tubular to campanulate, medium size single, cylindrical stamens, blooming in October to March. Tree somewhat spreading, vigorous. Leaves somewhat long elliptic, medium. A chance seedling of **Seiôbo.** Originated by Shinichi Noguchi and named by Hiroshi Okado in 2003.

Koharubiyori. (Indian Summer Day), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.95, colour photo and description: Medium size, pale pink, campanulate single with 5 rounded, emarginate, overlapping petals and a short, somewhat irregular, yellow stamen column. Blooms early to late. Leaves, light green, lanceolate, apices tapering, blunt acuminate, recurved, margins serrate. Plant habit bushy and dwarf. Originated in Toyama City, Japan. Named and released by Toyama Rusticana Lovers Club in 1980s.

Koharu-no-akebono. (Sunrise in Koharu). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.104 with colour photo; English translation p.70. Small, peach red, trumpet shaped single.

Cylindrical stamen column opening at the tip. Very early to mid-season flowering. Leaves elliptic, medium size, flat. Upright growth. Discovered in Gifu City, details unknown, named by Nagaharu Niwa in 1984, Released by Gifu Camellia Club. From Gifu Prefecture.

Kohbai. Andoh, 1974, *Tsubaki Nyûmon*, No.73. Different reading for **Kôbai.**

Kohbotan. Andoh, 1971, *Tsubaki, no Shôkai to Saibai*, p.214. Different reading for 'Kôbotan' (**Benibotan**).

Kohei. Satomi, 1956, *Camellia Varieties of Japan*, p.9. Different reading for **Kô-ei.**

Kohei Red. SCCS., 1960, *Camellia Nomenclature.* Synonym for **Moshio.**

Koheita. (Personal Name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.90: Large, full double, pink with paler margins. Divided stamen cluster. Originated in Japan. (Believed extinct.)

Kohgyoku. Yashiroda, 1950, *American Camellia Yearbook*, p.28. Different reading for **Kôgyoku.**

Kôhi. (Fragrant Empress), *(C.hybrid)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.28: Very small to small size, pale pink to crimson, semi-double; fragrant. Blooms mid-season to late. Seedling of *C.japonica* **Hishikaraito** x *C.lutchuensis.* Originated in the Tokyo Prefecture, Japan by Mrs Nagao in 1982. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.91 with colour photo; English translation p.61. Leaves elliptic, small. Spreading, dense branches.

Kohinor. *(C.reticulata), American Camellia Yearbook*, 1970, p.165, Reg. No.1067: A 6 year old chance seedling of **Buddha** that first bloomed 1963. Originated by Monique Peer, Hollywood, California, USA. Plant growth is upright and rapid in rate with dark green leaves, 8-10 cm long x 4-5 cm wide. The semi-double flower, resembling **Frizzle White,** is 13 cm across x 9.5 cm deep with 12 petals and rabbit ears. Flower colour is orchid-pink with yellow anthers and filaments, Blooms mid-season. See colour plate, front cover, SCCS, 1972, *The Camellia Review*, vol.34, No.1. Sport: **Kohinor Variegated.**

Kohinor Variegated. *(C.reticulata)*, Gentry, 1969, ACS., *The Camellia Journal*, vol.24, No.1 as 'Kohinor V.': A virus variegated form of **Kohinor** - Orchid-pink blotched white. Originated in USA.

Ko-hiraguri. (Small 'Hiraguri'). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.71 with colour photo; Small, peach pink single, tubular, almost cupped petals, central stamen column. Flowers mid-season to late. Leaves ovate. Upright growth. From a private garden in Higaguri Town, Kanazawa City, Japan. Found, named and released by Takashi Shiota around 1980.

Kôhisui. (Red Jade), *(C.sasanqua)*, Itô, Jukyû, *Honzô Hanamaki'e*, vol.16: Small size, red, pot shaped. Originated in Japan. (Believed extinct.)

Kohkirin. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.214. Different reading for **Kôkirin.**

Kohmyoh. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.214. Different reading for **Kômyô.**

Kohotome. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.214. Different reading for **Kô-otome.**

Kohrin. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.213. Different reading for **Kôrin.**

Kohuji. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.138. Different reading for **Kofuji.**

Kohun. Hallstone, 1982, *International Camellia Journal*, No.14, p.17. Different reading for **Kô-un.**

Kô-i. (Changing Clothes), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Deep red, lotus shape, lustrous petals. Originated in Japan. (Believed extinct.)

Koi-akabana-no-wabisuke. Savige, 1974, *International Camellia Journal*, No.4, p.30. Synonym for **Aka-wabisuke.**

Koibeni. (Dark Red), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.362: Medium size, red, formal double with notched petals. Originated in Japan. (Believed extinct.) Different reading: 'Koikurenai'.

Koibeni. Different reading for **Koikô.**

Koigokoro. (Loves Awakening), *(C.japonica)*, Seibundô Shinkôsha, 1979, Senchinshû, p.51, colour photo, p.213, description: Medium size, semi-double, red with 14-16 large, emarginate petals and a small, centre column of stamens with yellow anthers and pinkish filaments. Leaves broad-oblong, apices abrupt acute, mid-green, thin. Petioles hirsute. Originated in Yatsuo Town, Toyama Prefecture, Japan. Named and released by Hideo Hori in 1974.

Koi-hime. *(C.japonica), Book of Manuscripts*, ICS Congress, Miyazaki, 1999; 'White and Red Camellia at Nara's Todaiji Temple'; Hagiya, Kaoru, p.43. No details.

Koi-hime (Itô). (Princess Love), *(C.japonica), Japan Camellia* 99, May 2013, p.3 with colour photo; JCR Regn 2013-7 (ser. No.7); A seedling of **Owarifuji,** pollen parent unknown. Single, very pale pink, trumpet shape. Stamens columnar, filaments white, anthers gold. Medium to large size. Mid-season to late blooming. Originated by Atsushi Itô.

Koiji. (Loves Pathway), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.51, colour photo, p.213, description: Medium to large, crimson, peony form with a few stamens scattered in the central area. Leaves elliptic, dark green. Petioles hirsute. Originated in Tochio City, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1971.

Koijo. (Love Story), *(C.japonica)*, Utakuni Hamamatsu, 1825, *Setsuyô Kikan*, vol.23. No description. Originated in Japan. (Believed extinct.)

Koikô. (Dark Red), *(C.japonica)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, red, single with "tea whisk" stamens. Originated in Japan. (Believed extinct.) Different reading: 'Koibeni', 'Koikurenai', 'Koikou'. Similar to **Eiraku.**

Koikô. Different reading for **Koibeni.**

Koikou. Different reading for **Koibeni.**

Koikurenai. *Chinka Zufu*, (before 1700), Watanabe 1969, pl.362. Different reading for **Koibeni.**

Koi-miyakobeni. Different reading for **Koki-rniyakobeni.**

Koin. (Old Tone), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.13: Medium size, deep red ground with white patches, campanulate single. Blooms mid-season. Originated with a private family in Matsu'e City, Shimane Prefecture, Japan. Named and released by the San-in Camellian Club in 1975.

Koi-no-takinobori. (Carp Jumping a Waterfall) *(C.japonica), Japan Camellia* 101, May 2014, p.4 with colour photo; JCR Regn No. 2014-2, (ser. No.15). Chance seedling, parents unknown. Red, double, tubular, about 6cm diameter x 6cm height. Flower always remains partly closed. Originated by Naoyuki Yamamoto.

Koi-otome. (Dark Maiden), *(C.japonica)*, Minagawa, 1954, *Kanshô Jumoku:* Medium size, dark red, formal double. Originated in Japan.

Ko-isahaya. (Small Isahaya), *(C.x vernalis)*, Itô, Ihei, 1695, *Kadan Chikinshô*, as 'Ko-isahai': Flowers, small size, single, red with white spots; leaves variegated; Yashiro, 1841, *Kokon Yôrankô*, vol.344; Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.11: Pink dotted white.

Small, single. Leaves variegated white. Originated in Japan. Different reading: 'Shô-isahaya'. Synonym: 'Ko-isahai'.

Ko-isahai. Synonym for **Ko-isahaya.**

Koishikawa. (Place Name), *(C.japonica)*, Cho, [before 1867], *Chinkafu*, illustr. Originated in Japan. (Believed extinct.)

Koishikawa-sarasa. (Koishikawa Variegated), *(C.japonica)*, Kasuya, Kamegorô,1859, *Tsubaki Iro-hanayose Irotsuki:* White with red stripes, semi-double with 3 rows of petals. (Believed extinct.) Originated in Japan.

Koishi Gosh. Valley Garden Supply Catalogue, 1949. Corruption of Japanese name **Kôshigoshi.**

Koiso. (Place Name), *(C.japonica)*, Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.8, A-386: Very small, dark red, single. Early to mid-season blooming. Originated in Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.87 with colour photo; English translation p.58. Vermilion, tubular single, tubular stamen cylinder, small. Flowers early to mid-season. Leaves oblong, medium size. Upright, vigorous growth. Selected from wild japonicas growing in Tamanoura Town on Fuke Island, Goto Archipelago. Named and released by Tomoichi Fujita in 1975.

Kôjaku. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.12. Different reading for **Benisuzume.**

Kojishi. (Lion Cub), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.312, p.158, description, p.183: Leaves dark green, thin, narrowly elliptic to elliptic, serrulate margins, 7.4-8 cm long x 2.7-3.2 cm wide, petioles 9-11 mm long, hairy. Flowers very small, formal double, rose opal 022; petals 56-65, imbricated, outer petals blotched white near margin; stamens scanty or lacking. Flowers mid-season. Originated in Kanazawa City, Ishikawa Prefecture, Japan. Named and released by Hisakichi Kimura in 1970.

Kôjishi. (Red Lion). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.89 with colour photo; English translation p.60. Medium to large, deep red, anemone, outer petals waved, irregular and dense petaloids. Flowers early to late. Leaves elliptic, medium size, flat recurved. Upright, vigorous growth. Appeared in *Tsubaki Irohanayose Irotsuki* in 1859. From Edo.

Kôjishi. Satomi, 1956, *Camellia Cultivars of Japan*, p.4. Different reading of **Benijishi.**

Kôjiya-kinsunago. (Kôjiya's Golden Sand), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû*, in the section on dotted leaved camellias. Long, narrow leaves, dotted with golden sand. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.167. Originated in Japan. (Believed extinct.)

Kojoh-no-tsuki. Izu-Oshima, Hawaii Botanical Gardens Catalogue, 1980, as 'Kojohnosuki'. Synonym for **Jakkô.**

Kojô-no-haru. (Old Castle in Spring), *(C.japonica)*, Satô 1975, *Chûbu no Tsubaki*, p.7 as 'Kojyônoharu': Medium size, soft pink, single with 6-7 large, rounded, overlapping petals, opening wide cup-shaped, some crêping on petal margins. Large stamen cluster, golden anthers, light, creamy filaments. Leaves lanceolate, dark green, apices acuminate, margins serrulate. A natural seedling of **Tarô'an,** named and released by Minoru Satô in 1961. See colour photos: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.290; Seibundô Shinkôsha, 1979, *Senchinshû*, p.56.

Kojô-no-tsuki. (Moon above Old Castle). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.99, English translation p.67. Pink tubular single, medium size. Flowers early to late. Leaves elliptic, medium size. Upright, vigorous growth. A cross between **Kojô-no-haru** and 'Shûhûraku', named and released by Minoru Satô in 1984. From Aichi Prefecture.

Kojô-no-tsuki. Seibundô Shinkôsha, 1973, *Garden Life*, No.5, colour photo, p.12. Synonym for **Jakkô.**

Kôka. (Red Haze), *(C.hybrid)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.28: Large size, scarlet, peony form flower. Seedling of **Flower Girl.** Originated in Ôsaka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.88 with colour photo; English translation p.59. Flowers mid-season. Leaves elliptic, small, dull. Upright growth, dense branches. Named and released by Kazuo Yoshikawa in 1980.

Kôka. (Fragrant Flower). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.63 with colour photo; Medium size single, pink ground shading to white in the centre. Tight tubular stamen cluster. Slightly fragrant. Flowers mid-season to late. Leaves ovate, thick, medium size. Upright, vigorous growth. A seedling of **Haru-no-minato,** named and released by Soshin Hirai, Saitama Pref., Japan, in 2008.

Kokaji. (Obscure), *(C.x vernalis)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15: Small size, single, red, japonica form with moire. Originated in Japan. (Believed extinct.)

Kôkaku. (Shining Rule), Tuyama, 1966, *Camellia Cultivar of Japan*, p.330. Synonym for **Shuchûka.** The local name for the specific tree of **Shuchûka** in the Kamo-shrine, Kyôto is called 'Kôkaku'.

Kokarasu. Different reading for **Kogarasu.**

Kokasuri. (Pretty Colour Patches), *(C.japonica)*, Watanabe, 1961, Kyôto Engei Kasubu, *Tsubaki Tokushû.* No.2, p.47; Painted in Hirayama, Tokuo, (Late 17th century), *Tsubaki Byôbu.* Different readings: 'Kotobi'iri', 'Shôkasuri', 'Shôtobi'iri'.

Kôkechi. (Tie Dyed), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.122: Small, deep red, formal double. Originated in Japan. (Believed extinct.)

Kokei. (Pen Name of a Haiku Poet), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.13 as 'Ko-kei': Small size, rose-pink, campanulate single. Blooms mid-season to late. Originated in the Shimane Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.331 with black and white photo; English translation p.230. A natural seedling of **Sekitei.** Named in 1988 by Hiroshi Ibara after a distinguished disciple of the Haiku poet, Sekitei.

Koki. (Celebration at Seventy Years of Age) (*C.hybrid*) from Ehime Pref,. *Tsubaki* No.38, Japan Camellia Society, 1999. Seed parent *C.hybrid* **Show Girl,** pollen parent *C.granthamiana*. Peach pink, single, flat, early blooming. Flower shape tends to vary with petals heavily twisted, curved or reflexed as the flower ages. Leaves resembling, but smaller than, those of *C.granthamiana*. Tree upright growth, vigorous. Originated by Hiroyasu Watanabe in 1996.

Kôki (Chûbu). (Glory). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.88 with colour photo; English translation p.59. Small size, red stripes of varying size on pink ground, tubular single, cylindrical stamen column. Flowers early to mid-season. Leaves small, elliptic. Upright, vigorous growth. A cross of **Shiratama** and **Chita-tarô-an.** Named and released by Minoru Satô in 1962. From Aichi Prefecture.

Kôki (Kagawa). (Glory), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinchu*, p.213: Peach pink striped with darker pink, single, large, wide campanulate form with thick petals. Leaves large, elliptic, dark green, thick, tending to concave. Apices acuminate. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.278. Mid-season to late flowering. Originated in Kagawa Prefecture, Japan. Nippon Tsubaki - Sasanqua Meikan, 1998, p.88 with colour photo; English translation p.59. A seedling of 'Sodekakushi' (**Gauntlettii**), raised by a private family in Mure Town. Selected and named by Saneichi Ogawa in 1976.

Kokihiboke. (Dark Hiboke), *(C.sasanqua)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Deep red, slender form, medium size. Different reading: 'Koi-hiboke'. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.81. 'Hiboke' was the name of another variety at the time. Originated in Japan. (Believed extinct.)

Kokii. van Geert Catalogue, 1845. Orthographic error for **Cockii.**

Kôkiku-gasane. (Double Red Chrysanthemum), *(C.japonica),* Itô Ihei, 1695, *Kadan Chikinshô:* Medium size, red, sometimes with white on the petal edges. Double. Originated in Japan. (Believed extinct.) Different readings: 'Benigiku-kasane', 'Beni-kikugasane', 'Beni-kikukasane'.

Koki-miyakobeni. (Dark 'Miyakobeni'), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Deep red, large size, widely open. Different reading: 'Koi-miyakobeni'. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.82. Originated in Japan. (Believed extinct.)

Kokinran. (Ancient Gold Brocade), *(C.x vernalis),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Chûgai Nursery Co. Catalogue, 1935-1936, p.26: White with red and pink, small size, single, rough and brushy variegation. Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.12: Lavender pink with white splash. Large single with round petals. Leaves 5.7 cm long x 2.3 cm wide; a triploid variety. See Tanaka et al., 1986, "Cytogenetic Studies on the origin of *C.x vernalis", Journal of the Japanese Society of Horticultural Science,* vol.55, No.2, pp.208, 210. Originated in Japan. There are also two *C.japonica* of this name. Chinese synonym 'Gujinlan'.

Kokinran. (Ancient Gold Brocade), *(C.japonica),* Iwasaki, 1829, *Honzô Zufu:* Single, white with red streaks. Originated in Japan. (Believed extinct.)

Kokinran. (Ancient Gold Brocade), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki, Irohanayose Irotsuki.* Itô, Ko'emon, 1879, *Chinkashû:* White spotted red. Large peony form. See colour photos: Adachi, 1960, *Camellia. Its Appreciation and Artistic...,* p.93; Tuyama, 1966, *Camellia Cultivars of Japan,* pl.190; Tuyama, 1968, *Camellias of Japan,* pl.363; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.350; Satô, 1975, *Chûbu no Tsubaki,* p.99; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.340.; Seibundô Shinkôsha, 1979, *Senchinshû,* p.53, description, p.214: Leaves elliptic to lanceolate-elliptic, venation slightly impressed, margins minutely crenate-serrulate. Flowers semidouble, loosely wavy, white or pink, striped and dotted deep red (Cardinal red 822/3) with a central, compact mass of big, yellow anthers. Blooms mid-season to late. Originated in Kantô area, Japan. Sport: **Hakubotan.** In England the name is corrupted to 'Ozoran'.

Kokinranjiro. Izu-Ohshima Hawaii Botanical Gardens List of Plants, 1980 as 'Kokinranziro'. Synonym for **Hakubotan.**

Kôkirin. (Red Giraffe), *(C.sasanqua),* Kajitsu-en, 1905, *Chabaika Meikan;* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.12 as 'Ko-kirin'. Bright, deep red. Large semi-double with long, narrow petals. Originated in Japan. There is also a *C.japonica* with this name.

Kôkirin. (Red Giraffe), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Cardinal red, large size, peony form. Itô, Ko'emon, 1879, *Chinkashû:* Cardinal red, large, peony form. See colour photos: Tuyama, 1966, *Camellia Cultivars of Japan,* pl.28; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.161; Yokoyama et al., 1975, *Gendai Tsubaki Meikan,* p.113; Seibundô Shinkôsha, 1979, *Senchinshû,* p.52, description, p.213: Brilliant, deep crimson, medium to large peony form. Leaves broad-ovate to elliptic, apices abruptly acute, Margins serrulate, deep green with prominent venation. Different readings: 'Kohkirin', 'Koukirin'. Originated in the Kantô District, Japan. Sports: **Kôkirin-hoshi'iri, Kyôbotan.**

Kôkirin-hoshi'iri. (Starred Kôkirin), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.113, black and white photo: A variegated form of **Kôkirin** - Cardinal red with spots and stars of white. Originated in Japan. Synonym: 'Fuirikôkirin'.

Kokitsune. Different reading for **Kogitsune.**

Kokka. Seibundô Shinkôsha, 1979, *Senchinshû,* pp.5, 215. Synonym for **Ariake-no-tsuki.**

Kokka. (National Pride), (Higo), *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.342: Large size, 11-12 cm across with 8-9 red petals, spotted white and a large, central burst of golden stamens. Originated in Kumamoto Prefecture, Japan. Designated as a new Higo variety by the Higo Society in 1978.

Kokonoe. (Nine Fold), *(C.sasanqua), Nôkôdai Nôjôhô* ed. No.6, p.46, 1974. No description. Originated in Japan.

Kokonoe. (Nine Fold), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.424, 529: Medium size, rose form double, white with crimson flakes and stripes, inner curved petals. See colour photos: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.330; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.336; Katei Gahô, ed. 1984, *Chabana Komomi*, *vol.1*, *Tsubaki*, p.62. Seibundô Shinkôsha, 1979, *Senchinshû*, p.54, Description, p.214: This variety is most variable in colour and plate on p.86, Satô, 1975, *Chûbu no Tsubaki* shows a full crimson, while pl.55, Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai* shows a crimson blotched white form. Late blooming. Originated in Kansai, Japan. The original tree is in the precincts of the Hôkyô temple, Kamigyôku, Kyôto. Resembles **Goshikichiri-tsubaki.** Appeared in the 1967 catalogue of Kanaoka Camellia Nursery.

Kokonoe-nishiki. ('Kokonoe' Brocade), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.12: White with a blushed edge. Large single with broad, round petals. Originated in Japan.

Kokôsha. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.140 as 'Ko-kôsya' . Synonym: 'Beniguruma'.

Kokôsya. Different reading for 'Kokôsha'.

Kokuchinji. (Camellia Valley Temple), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.53, colour photo, p.214, description: Small, blush pink, campanulate single with 5-6 large, emarginate petals about a central stamen mass with orange-gold anthers. Originated in the Chûbu District, Japan as a chance seedling, by Kiraku Sakuragi in 1975.

Kokuchinji-yuri. (Lily of Kokuchinji). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.95 with colour photo; English translation p.64. Red tubular single, slender petals, cylindrical stamen cluster, small size. Flowers mid-season. Leaves oblong, medium size, slightly plicate along the midrib. Upright, vigorous growth. A chance seedling of **Yuri-tsubaki,** originated and released by Haruichi Sakuragi in 1988. From Aichi Prefecture.

Kokugyoku. (Black Ball). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.94 with colour photo; English translation p.64. Brownish deep red, tubular single, medium size. Flowers early to mid-season. Leaves squarishly round, somewhat large. Fast, spreading growth, sparse branches. A chance seedling of **Eiraku,** named and released by Shinichi Noguchi in 1988. From Tokyo.

Kokuhô. (Black Treasure), *(C.japonica)*, Chinka-en, 1986-1987, *Niigata-no-tsubaki*, p.1 as a seedling of **Konronkoku** x **Kumasaka**. Inazawa Nurseries Co. Ltd Catalogue, 1986-1987, p.6, A-266: Deep, glossy, dark red, medium size, single of good shape. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.230, colour photo and description: Medium size, dark red, campanulate single of 5 irregular petals and a central stamen column with red filaments, joined for the lower third, and bright yellow anthers. Blooms early to mid-season. Leaves deep green, elliptic, margins serrulate. Originated in Niigata Prefecture, Japan. Resembles **Eiraku** but darker and larger. Named and released by Tokuji Ôoka in 1973.

Koku-i. (Black Garment), *(C.japonica)*, Katayama, 1957, *Tsubaki Ochabana:* Large, single, purple black. Mid-season flowering. Originated in Japan.

Kokumoku. (obscure), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.9: Large, double with numerous, small, emarginate, imbricated petals with a few stamens in the centre. The

colour of the outer petals is white becoming more blush pink towards the centre. Originated in Japan. (Believed extinct.)

Kokurenai. Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, 1970, p.139. Different reading for **Koibeni** and 'Koikô'.

Kokuruh. Hazelwood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* Corruption for the Japanese name **Kokuryû.**

Kokuryô. Chûgai Nursery Co. Catalogue, 1939-1940. Different reading for **Kokuryû.**

Kokuryo Variegated. Harris' Longview Nursery Price List, 1955-1956, pp.3,7, as 'Koku-Ryo Variegated'. Synonym for **Kokuryû-shibori.**

Kokuryû. (Black Dragon), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* as a dark red anemeone form, medium size. Itô, Ko'emon, 1879, *Chinkashû:* Dark red, medium size, anemone form. See colour photos: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.136; Tuyama, 1968, *Camellias of Japan.* pl.251, p.127, descrip. p.176; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.362, p.156; Yokoyama & Kirino, 1989. *Nihon no Chinka*, p.360, colour photo and description: Leaves elliptic to narrowly elliptic, gradually tapering acuminate, venation impressed, petioles glabrous. Flowers semi-double with anemone centres, dark red. (Currant Red 821/2) Flowers mid-season. Originated in Kantô, Japan. Synonyms: 'Black Dragon', 'Coral Compton'. Different readings: 'Kokuryuh', 'Kokuryô'. Sport: **Kokuryû-shibori.** Resembles **Konronkoku, Kansai-kokuryû.**

Kokuryû (Kansai). (Black Dragon). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.95 with colour photo; English translation p.64. Large, dark red, anemone to peony form with some white petaloids. Flowers mid-season to late. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Appeared in the 1967 Catalogue of the Kanaoka Camellia Nursery. Synonym for **Kansai-kokuryû.**

Kokuryû-shibori. (Black Dragon Variegated), *(C.japonica),* Itô, Ko'emon, 1879, *Chinkashû: A* variegated form of **Kokuryû.** Dark red blotched white. For colour photo see: Seibundô Shinkôsha, 1979, *Senchinshû*, p.54. Synonyms: 'Kokuryo Variegated', 'Kokuryu Variegated', 'Black Dragon Variegated', 'Kokuryû-mon'. Originated in Japan. Different reading: 'Kokuryô-shibori'.

Kokuryu Variegated. Overlook Nursery Catalogue, 1951-1952, p.20, as 'Kokuryu Var.'. Synonym for **Kokuryû-shibori.**

Koku-tsubaki. Mizuno, 1829, *Sômoku Kinyôshû*, as synonym for **Kuro-tsubaki.** See: Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.139.

Kokuyô. (Obsidian). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.95 with colour photo; English translation p.64. Dark red, sake cup-shaped single, medium size. Flowers mid-season. Leaves elliptic, large, glossy. Spreading growth, branches somewhat weeping. A cross between *C.japonica* **Kuro-tsubaki** and *C.chekiangoleosa.* Named and released by Kazuo Yoshikawa in 1991. From Osaka.

Kokyô. (Meaning obscure), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Yashito, 1841, *Kokon Yôrankô*, vol.306: Large, white flower with the corolla well piled up. Originated in Japan. (Believed extinct.)

Kokyô-nishiki. (Brocade of Home), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshô'en Chabaifu;* Nihon Shubyô Catalogue, 1910: Pink with a white centre and deeper pink under the petals. Medium size, semi-double. Originated in Japan. Based on the same characters as 'Kokyô-no--nishiki'.

Kokyô-no-nishiki. Yashiroda, 1950. *American Camellia Yearbook.* Based on same characters as **Kokyô-nishiki.**

Kolack. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.19. Synonym for **Woodville Red.**

Kollock. Fruitland Nursery Catalogue, 1945-1946, p.25. Synonym for **Woodville Red.**

Komachi. (Personal Name of Beauty), *(C.japonica)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Very large size, single, cardinal red with white spots. Originated in Japan. (Believed extinct.) See JCS, 1983, *Tsubaki*, No.22, p.134.

Komachi. (Personal Name of Beauty), *(C.japonica)*, Uesa, 1844, *Sômoku Benran:* Rose pink mottled with white. Large, formal double. Komachi was one of the famous Rokkosen (six poets) of the 9th century and was a woman of great beauty. Originated in Japan. (Believed extinct.)

Komachi. (Personal Name of Beauty), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.435: Small, white, double. Originated in Japan. (Believed extinct.)

Komachi. (Personal Name of Beauty), *(C.japonica)*, Iwasaki, 1828, *Honzô Zufu:* Flowers are single and pink with crimson stripes in the centre. Stamens in a central cylinder. Large size. Originated in Japan. (Believed extinct.) See JCS., 1981, *Tsubaki*, No.20, p.107.

Komachi. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.8, p.4. Synonym for **Komachi-tsubaki.**

Komachibeni. (Red 'Komachi'), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* True red, large size, early blooming. see: Kyôto Engei Kurabu, 1964, *Tsubaki Irohanayose Irotsuki*, No.5, p.81. Originated in Japan. (Believed extinct.)

Komachihaku. (White 'Komachi'), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.12 as 'Komachi-haku': Pure white. Large, single with broad petals. Based on the same characters as 'Komachi-shiro'. Different readings: 'Komachijiro', 'Komachi-shiro'.

Komachi-higo. (Higo Komachi), (Higo), Yoshimura, 1963, *List of Higo Camellias*, No.8 as 'Komachi': A red sport of **Nanakomachi.** Medium size, 9 cm across, with 5-6 petals and about 150 light yellow, spreading stamens. Originated in Japan.

Komachijiro. Different reading for **Komachihaku.**

Komachi-shibori. (Striped 'Komachi'). *(C.x williamsii). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan)*, 2010, p.288 with colour photo; Large formal double, small red stripes on palest pink ground. Late flowering. Leaves ovate, stiff. Upright growth. A sport from a seedling, *C.williamsii* x *C.japonica.* First flowered 1995, named and released in 1996. From Ishikawa Pref., Japan.

Komachi-shiro. Different reading for **Komachihaku.**

Komachi-tairin. (Beauty Large Flower), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.563: Large, dark red, single with 6-7 large, irregular petals, emarginate, spotted white; large stamen column with white filaments. (Believed extinct.) Originated in Japan.

Komachi-tsubaki. (Beauty Camellia), *(C.japonica)*, Katayama, 1967, Kyôto Engei Kurabu; *Tsubaki Irohanayose Irotsuki*, N.8, p.37; Seibundô Shinkôsha, 1979, *Senchinshû*, p.58, colour photo, p.215, description: Medium size, bright red, cup-shaped single of 7-8 rounded, overlapping, slightly fluted petals and a wide, spreading ring of stamens with red filaments and golden anthers. Late flowering. Leaves light to olive green, elliptic to broad-elliptic, apices acuminate, margins shallowly serrate. See *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.8 as 'Komachi'. Originated in the Kansai area, Japan.

Komahime. (High & Lovely Princess), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.151. colour photo and description: Medium size, dark red to crimson, single of 5 rounded petals, and a central stamen column, with pink filaments, joined for the lower third, large, yellow anthers. Blooms early to mid-season. Leaves mid-green, broad-ovate, apices acute,

margins serrate. Selected from wild japonicas growing in Hirado City, Nagasaki Prefecture, Japan. Discovered and released by Hiroshi Kitagawa in 1978. Different reading: 'Korai-hime'.

Kômai. (Meaning Uncertain). *(C.japonica),* Nagoya Camellia Society Bulletin, 1994, No.27, colour plate p.7, No.23: A chance seedling of **Ezo-nishiki,** originated by Dr Funakoshi, Nagoya, Japan. Large pink single fading to white at bottom of petals. Winter blooming. Moderately fragrant.

Komaiko. (Pretty Dancing Children), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.13: Small size, light rose-pink to rose, tubular single. Blooms early to late. Originated in Kanazawa City, Ishikawa Prefecture, Japan. Named and released by Tadao Yamaguchi in 1977.

Koma-nishiki. (Korean Brocade), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû* in section of different colours on the same branch. Large, red, single with light pink petaloids mixed with yellow anthers, anemone form. Different reading: 'Kôrai-nishiki'. See Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.140. Originated in Japan. (Believed extinct.) Synonyms: 'Koma-tsubaki', 'Kôrai-tsubaki'.

Komatsu. (Small Pine), *(C.japonica),* Kaempfer, 1712, *Amoenatatum Exoticarum* as 'Kommatz'. No description. (Believed extinct.) Originated in Japan.

Koma-tsubaki. Sakuden, 1630, *Hyakuchinshû.* Synonym for **Koma-nishiki**.

Komatsu-hime. (Princess of Komatsu), *(C.rusticana),* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.121, black and white photo: Small, single, deep red, single with 5 large, overlapping petals which sometimes fold over at the side margins, cup shape. Slightly spreading cluster of yellow stamens. Originated in Kanose-chô, Niigata Prefecture, Japan. For colour photo see: Seibundô Shinkôsha, 1979, *Senchinshû*, p.58.

Komatsuhime (Ehime). (Komatsu Princess). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.105 with colour photo; English translation p.71. Small to medium size, pink tubular single with somewhat large-sized stamen cylinder. Flowers early to mid-season. Leaves elliptic, plicate, recurved. Upright to spreading growth. A wild japonica, estimated to be 150 years old, being preserved at a hermitage ruin in Komatsu Town. Named and released by Takamasa Saeki in 1975. From Ehime Prefecture.

Komatsuhime (Niigata). (Komatsu Princess). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.105 with colour photo; English translation p.71. Small, pink, sake cup-shaped single with rusticana-like flared stamens. Flowers mid-season to late. Leaves elliptic, medium size, flat. Cespitose. A cultivar raised by a private family in Higashi-kanbara District. Named and released by Yaichi Kawamura in 1964. From Niigata Prefecture.

Komatsukasa. (Small Pine Cone), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.125: Small, dark red, imbricated, incomplete double with a small, stamen cluster. Originated in Japan. Different reading: 'Komatsugasa'. (Believed extinct.)

Komatsu-kurenai. (Red from Komatsu). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.104 with colour photo; English translation p.71. Medium size, peach red, tubular single with cylindrical stamen column. Flowers mid-season. Leaves elliptic, medium size, flat. Upright growth with dense branches. Selected from natural seedlings found at the garden of Yoshiteru Suge, Komatsu Town. Named and released by Taskeshi Tamaoki in 1990. From Ehime Prefecture.

Komatsu-yuri. (Lily of Komatsu). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.72 with colour photo; Medium size, peach red single, cupped petals, tubular stamens. Flowers mid-season. Leaves elliptic, medium size. Upright, vigorous growth. Chance seedling from Komatsu-machi, Saijo City, Japan. Collected, named and released by Takamasa Saeki in 1970.

Kômei. (Fragrance & Clearance) (*C.hybrid*) from Ehime Pref. *Tsubaki* No.40, Japan Camellia Society, 2001. Seed parent *C.vernalis* **Egao**, pollen parent *C.granthamiana.* White slightly pinkish, semi-double, medium to large, stamens 180 to 210, filaments yellow, pistil split into three tips, early blooming. Leaves medium, thick, glossy, prominent veins, overall appearance intermediate between those of parents. Originated by Hiroyasu Watanabe in 2000.

Komei. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Kômyô.**

Komekô-imasakuraba. (Komekô's Modern Cherry Leaf), *(C.japonica),* Aoyama, Kinta, 1827, *Sômoku Kihin Kagami.* Leaves thin and slender, acuminate at apex. Flower red, single, small size, opens wide. Different reading 'Komekô-sakuraba'. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.169. Originated in Japan. (Believed extinct.)

Komekô-shirafu. (Komekô's White Variegated Leaf), *(C.japonica),* Mizuno, 1828, *Sômoku Kinyôshû* in the section for white variegated leaves. Komekô is a personal name. Resembles **Yamanashide-suishô.** See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.162. Originated in Japan. (Believed extinct.) Different reading: 'Komekô-shirahu'.

Komekô-shirahu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.139. Different reading for **Komekô-shirafu.**

Komekô-tsubaki. (Komeko's Camellia), *(C.japonica),* Aoyama, Kinta, 1827, *Sômoku Kihin Kagami.* Leaves, round with clear, white variegation. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.159. Originated in Japan. (Believed extinct.)

Kominato. (Place Name), *(C.japonica),* Huttleston, 1957, *List of Camellias at Longwood.* Hilsman, 1958, *American Camellia Yearbook,* p.46. A *C.japonica* seedling from Kominato, North Honshu, Japan. Late flowering. Collected by Creech.

Komoe. (Small Bud), *(C.hybrid),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.144, colour photo and description: Small size, dark red with a purple cast, tubular to vase-shaped single of 5 irregularly shaped petals, some margins curved in; central stamen column with red filaments, joined for lower third, golden anthers. Blooms mid-season. A seedling of **Tulip Time** x **Kochô--wabisuke.** Originated in the Okayama Prefecture, Japan.

Komomiji. (Dwarf Maple), *(C.rusticana),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki,* in section on double flowers: Medium size, red streaks on white . See: JCS., 1969, *Tsubaki,* No.7, p.36. Itô, Ko'emon, 1879, *Chinkashû:* Medium size, white streaked pink, double. See colour pl.: Adachi, 1960, *Camellia. Its Appreciation and Artistic...,* p.92; Tuyama, 1966, *Camellia Cultivars of Japan,* pl.6; Tuyama, 1968, *Camellias of Japan,* pl.346, p.175, descrip. p.193; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.340; Seibundô Shinkôsha, 1979, *Senchinshû,* p.58, description, p.215; Leaves elliptic, apices acuminate, venation impressed, margins coarsely serrate; petioles very hairy. Flowers semi-double, white striped rosy red (Carmine 21) or often pink, veined deeper pink and narrowly margined white, or paler pink, or, sometimes self rosy red. Stamens poor and irregular. Blooms mid-season to late. Dense, spreading growth. Different reading: 'Shômomiji'. Sport: **Fukurin-ikkyû**. This is a very variable camellia with all the colour sports appearing on the one plant. Originated in the Kantô area, Japan. Chinese synonym 'Xiaohongye'.

Komorebi. (Sunlight Through Leaves), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.29: Medium to large size, lotus form semi-double, very faint pink, margins and petal reverse red. Blooms mid-season. A seedling of *C.japonica* **Tamatsuyu** x *C.pitardii* var. *yunnanica.* Originated in the Niigata Prefecture, Japan by Kaoru Hagiya. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.105 with colour photo; English translation p.72. Parentage is stated to be *C.rusticana* 'Gyokuro' x *C.pitardii var. yunnanica.*

Komori-uta. (Lullaby), *(C.japonica),* Inazawa Nurseries Co.Ltd Catalogue, 1986-1987, p.3, A-133, colour photo on front cover: Dark red moired white. Small to medium. Single, tubular to cam-

panulate form. Leaves dark green, wide-ovate, coarsely serrate. Vigorous, upright growth. Mid-season blooming. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.241. JCS., 1988, *Japan Camellia*, No.29, p.13, colour photo: Small size, deep red with white blotched, with 5 channelled, slightly emarginate petals; stamens in a central column, pinched in at top, anthers yellow, filaments joined for the lower third, red at base, fading to white at summit. Originated in the Kumamoto Prefecture, Japan. Named and released by Tsugio Ôta in 1988.

Komugisama. (A Princess of Ancient Nagasaki), *(C.japonica)*, Seibundô Shinkôsha, ed., 1979, *Senchinshû*, p.58, colour photo, p.215, description: Small to medium size, fuchsine pink, campanulate single with 5-6 emarginate, overlapping petals. Stamens in a compact, central column with yellow anthers and white filaments. Blooms mid-season. Leaves glossy, bright green, elliptic to lanceolate-elliptic, margins serrate. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.134, colour pl. Selected from wild japonicas in Hirado City, Nagasaki Prefecture, Japan by Kenji Maeda in 1975, released by Kichinosuke Aburatani..

Kômyô. (Bright Hope), *(C.japonica)*, Minagawa Catalogue, 1949: Vermilion red, single, largest. For colour photos see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.111; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.10, p.42; Satô, 1975, *Chûbu no Tsubaki*, p.93: Large, vermilion, single of 6-7 petals, large, fluted, flared with irregular, emarginate margins, around a large, spreading stamen group with a long, exposed pistil. Somewhat Higo-like. Leaves broad-ovate to broad-obovate, apices abruptly acute, semi-glossy mid-green, margins crenate-serrulate. Different readings: 'Kohymoh', 'Komei'. See Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.103. Similar to **Kumagai.**

Kômyôji-murasaki. (Purple of Kômyôji Temple). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.92 with colour photo; English translation p.62. Medium size, dark purplish red, semi-double to rose form double with thick petals and split stamens. Flowers mid-season to late. Leaves elliptic, medium size, flat. Upright growth. A chance seedling of a cultivar in Kankawa Town. Discovered and released by Tetsurô Imayuki in 1977. From Kagawa Prefecture.

Kômyôji-otome. (Otome of Kômyôji Temple). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.92 with colour photo; English translation p.62. Small, pink bordered white with white blotches, formal double. Flowers mid-season to late. Leaves elliptic, small, somewhat channelled in the midrib. Upright growth. An old tree survives at a temple in the castle ruin in Kankawa Town. Named and released by Tetsurô Imayuki in 1997. From Kagawa Prefecture.

Kômyôtai. (obscure), *(C.japonica)*, Ackerman, W.L. 1971, Genetic & Cytological Studies with Camellia and Related Genera. *Technical Bulletin*, 1427, USDA., Gov. Printing Office, Washington, D.C., p.115. No description. Originated in Japan.

Kona. *(C.japonica)*, SCCS., 1962, *The Camellia Review*, vol.23, No.6, p.22: White to unusual greenish white. Sport of **Hawaii** of the same form. Medium to large size. For another form see **Maui.** Originated by Hamilton & Clark, Upland, California, USA. See colour pl.93, p.52, *Encyclopedia of Camellias in Colour*, vol.II, 1978. Chinese synonym: 'Kena'.

Kona Benten. *(C.japonica)*, *New Zealand Camellia Bulletin*, Mar.1991, vol.XVII, No.l, p.47, Reg. No.282: Originated by N.G. Haydon, Papakura, NZ. A foliage and flower sport of **Kona**, first observed and propagated 1985. White flowers tinged green, anemone form, 8 cm across x 3 cm deep with 12 petals and 160 petaloids. Late flowering. Foliage is mid-green, margined and streaked with gold, leaves irregular in shape, 7.5 cm long x 3 cm wide. Growth habit is average and slow growing. Chinese synonym: 'Jinbian Kena'.

Konankin. (Small Nankin), *(C.japonica), Chinka Zufu*, (Before 1700), Watanabe, 1969, pl.279: as 'Konankin': Medium size, deep crimson with pink streaks, single with 8-9 irregular, twisted and flared petals. Different reading: 'Shônankin'. (Believed extinct.) Originated in Japan.

Kônan-no-akebono. (Dawn in Kônan). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute,* No.8, pp.1-9, colour plate 20, p.9, (H3744): A seedling of *C.japonica* **Shikibu** x *C.chekiangoleosa*. Scarlet (RHS.CC.46C), large, cup-shaped single with a heavy group of stamens and petaloids and a protruding style. Early blooming. Habit spreading and sparse. Originated in Japan by Dr Kaoru Hagiya, Niigata. Colour photo, ICS Journal, 1995, p.81.

Kônan-no-asa. (Morning in Kônan), *(C.chekiangoleosa hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.29: Very large, crimson, anemone form. A seedling of *C.japonica* **Hijirimen** x *C.chekiangoleosa.* Blooms mid-season. Originated in Niigata Prefecture, Japan.

Kônan-no-haru. (Spring in Kônan). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute,* No.8, pp.1-9, colour plate 14, p.8, (H3707): A seedling of *C.japonica* **Masayoshi** x *C.chekiangoleosa.* Vermilion (RHS.CC.45B), large to very large, rose form double with white stripes on inner petals. Stamens not dense, protruding style. Spring blooming. Habit spreading and relatively sparse. Originated in Niigata Prefecture by Dr Kaoru Hagiya, named and released in 1982. Note: the ICS, Apr.1990, p.29, *Japanese Camellia Cultivar List,* gave **Edo-nishiki** as the *C.japonica* parent. Colour photo, ICS *Journal*, 1995, p.80.

Kônan-no-higurashi. (Kônan's Evening). (*C.chekiangoleosa* hybrid). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.91 with colour photo; English translation p.61. Large, scarlet, lotus-form semi-double, tubular stamen cylinder, calyses remaining until autumn. Flowers mid-season to late. Leaves elliptic, large, thick, recurved. Cespitose, long nodes. A cross between *C.japonica* **Edo-nishiki** and *C.chekiangoleosa.* Named and released by Kaoru Hagiya, Niigata Prefecture, in 1982.

Kônan-no-higure. (Sunset in Kônan), (*C.chekiangoleosa hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.29: Large size, scarlet, double with folded centre petals. Blooms mid-season. Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute,* No.8, pp.1-9, colour plate 6, p.7 (H3410): A seedling of *C.japonica* **Edo-nishiki** x *C.chekiangoleosa.* Deep red (RHS.CC.51A), semi-double, trumpet shaped. Magnolia-like, pointed petals. Large flowers which tend to hang down. Spring blooming. Habit spreading, pendulous and sparsely branched. Originated in the Niigata Prefecture, Japan by Dr Kaoru Hagiya. Colour photo, p.79, ICS *Journal,* 1995.

Kônan-no-ire. (Inlet of Kônan). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute,* No.8, pp.1-9, Colour plate 4, p.7 (H3345): A seedling of **Ezo-nishiki** x *C.chekiangoleosa* originated by Dr Kaoru Hagiya, Niigata, Japan. Deep red (RHS.CC.51A), large, loose peony form with dense filaments. Spring blooming. Habit spreading and sparsely branched. Colour photo, p.79, ICS *Journal,* 1995.

Kônan-no-kagayaki. (Brilliance of Kônan), *(C.chekiangoleosa hybrid),* ICS., Apr.1990, *Japanese Camllia Cultivar List,* p.29: Large size, cinnibar red, striped white on inner petals. Blooms mid-season. Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute,* No.8, pp.1-9, Colour plate 5, p.7 (H3330): A seedling of *C.japonica* **Kuro-tsubaki** x *C.chekiangoleosa.* Vermilion (RHS.CC.45B), large, rose form double with white stripes on inner petals and sparse filaments. Spring blooming. Habit spreading and pendulous.Originated in the Niigata Prefecture, Japan by Dr Kaoru Hagiya and released in 1983. Colour photo, p.79, ICS *Journal,* 1995.

Kônan-no-maihime. (Kônan Dancer). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute,* No.8, pp.1-9, colour plate 113, p.8 (H3343): A seedling of *C.rusticana* **Hi-no-tori** x *C.chekiangoleosa* originated by Dr Kaoru Hagiya, Niigata, Japan: Red (RHS.CC.50B), large to very large, magnolia-like double with white stripes on inner

petals. Cylindrical stamen tube and protruding style. Spring blooming. Habit moderately spreading. Colour photo, ICS *Journal*, 1995, p.80.

Kônan-no-migawa. (Kônan Beach). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute,* No.8, pp.1-9, colour plate 7, p.7 (H3319): A seedling of *C.rusticana* **Tamatsuyu** x *C.chekiangoleosa.* Vermilion (RHS.CC.51A), large semi-double with sparse red filaments. Spring blooming. Upright habit. Originated by Dr Kaoru Hagiya, Niigata, Japan. Colour photo, p.79, ICS *Journal,* 1995.

Kônan-no-mizube. (Kônan Seashore). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute,* No.8, pp.1-9, Colour plate 10, p.8 (H4375): Scarlet (RHS.CC.36D), large to very large semi-double to rose form double with sparse stamens and protruding style. Spring blooming. Habit moderately spreading and average branching. A seedling of *C.rusticana* **Tamatsuyu** x *C.chekiangoleosa,* originated by Dr Kaora Hagiya, Niigata, Japan. Colour photo, p.79, ICS *Journal*, 1995.

Kônan-no-rakujitsu. (Kônan's Setting Sun), *(C.chekiangoleosa hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.29: Large to very large size, scarlet red with white stripes on inner petals, double. Blooms mid-season to late. A seedling of *C.hybrid* **Virginia W. Cutter** x *C.chekiangoleosa.* Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute*, No.8, pp.1-9, colour plate 15, p.9 (H3222): Vermilion (RHS.CC.45C), large to very large double with white stripes on inner petals. Split stamen clustered and protruding style. Spring blooming. Habit upright. Originated in the Niigata Prefecture, Japan, by Dr Kaoru Hagiya, named and released in 1982. Colour photo, ICS Journal, 1995, p.81.

Kônan-no-sazanami. (Ripples in Kônan). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute*, No.8, pp.1-9, Colour plate 9, p.8 (H3446): A seedling of *C.japonica* **Kaonajimi** x *C.chekiangoleosa* originated in Japan by Dr Kaoru Hagiya, Niigata: Deep re (RHS.CC.50A), large informal double with white stipes on inner petals. Stamens intermingled with flagged anthers and degenerate style. Early spring blooming. Spreading habit.

Kônan-no-soyokaze. (Gentle Breeze in Kônan), *(C.chekiangoleosa hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.29: Large to very large, double, scarlet with white stripes. A seedling of *C.hybrid* **Virginia W. Cutter** x *C.chekiangoleosa.* Blooms mid-season to late. Originated in Niigata Prefecture, Japan.

Kônan-no-yanagi. (Kônan Willow). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute,* No.8, pp.1-9, colour plate 12, (H3688): A seedling of the *C.x williamsii* **Elegant Beauty** x *C.chekiangoleosa* originated in Japan by Dr Kaoru Hagiya, Niigata. Red (RHS.CC.50A), large single trumpet form, with magnolia type pointed petals and massive stamen tube and long, protruding style. Growth habit is spreading, pendulous and sparsely branched. Colour photo, ICS *Journal*, 1995, p.80.

Kônan-no-yûyake. (Evening Glow on Kônan). (*C.chekiangoleosa* hybrid). Kaoru Hagiya, June 1994, *Bulletin of the Seibu Maizuru Botanical Institute,* No.8, pp.1-9, colour plate 11, (H3711): A seedling of the *C.japonica* **Scented Treasure** x *C.chekiangoleosa,* originated by Dr Kaoru Hagiya, Niigata, Japan: Scarlet (RHS.CC.46B), large anemone form with double outer petals. Stamens transformed into petaloids and a degenerate pistil. Growth habit moderately spreading and sparsely branching. Colour photo, ICS *Journal*, 1995, p.80.

Konbô-no-tsuki. (Moon above Konbô). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.106 with colour photo; English translation p.72. Small, pale wisteria coloured, tubular single with tubular stamen cylinder. Flowers mid-season. Leaves elliptic, small, recurved. Upright, vigorous growth. Selected from wild japonicas growing in Kombô, Nagahama Town. Named and released by Ôzu Camellia Enthusiasts Club in 1975.

Kondo Camellia. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.203, p.65. Synonym for **Kondôke-no-tsubaki.**

Kondohke-no-tsubaki. Andoh, 1971, *Tsubaki, Meika no Shôkai to Sabai,* p.214. Different reading for **Kondôke-no-tsubaki.**

Kondôke-no-tsubaki. (Kondô's Camellia), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.202, p.65, description, p.214 as 'Kondohke-no-tsubaki': Medium size, ball shaped, single crimson with some white markings and stamens divided into 5 fascicles, yellow anthers and filaments. Leaves obovate, mid-green, apices acuminate, margins shallowly serrate. Originated in Japan.

Kong Shengren. Gao, Jiyin, Ltr 22nd August 1994. Chinese synonym for the Chinese *C.reticulata* **Confucius.** Previous synonym 'Kongfuzi'.

Kongfuzi. (Mr Kong), *(C.reticulata),* Gao & Zhuang, Apr.1989, *The Camellia in China,* p.71, No.515. Chinese synonym for **Confucius.** Now replaced by the synonym 'Kong Shengren'.

Kongôkai. (Power of Intelligence), *(C.sasanqua),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* White, large size, cup-shaped flower. Nihon Shokubutsu Kaisha Ltd. Catalogue, 1912-1913, p.28. No description. Originated in Japan.

Kongque Kaiping. (Peacock Display). Wang & Yu, 1989, *Camellias,* No.80, p.42, colour photo [p.139], erroneously as 'Kungcyokaiping'. Chinese synonym for the Japanese *C.japonica* **Oniji.**

Kongque Yupu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.408; Chinese synonym for the USA *C.japonica* **Tama Peacock.**

Kongquechun. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.408; Chinese synonym for the Japan *C.japonica* **Hakuhan-kujaku.**

König Johan. *(C.japonica),* Jean Verschaffelt, 1876-1877, Catalogue No.19. No description. Originated in Germany. (Believed extinct).

König von Sachsen. *(C.japonica),* Seidel, 1846, Pflanzen Catalog, p.8. Originated in Germany. No description. (Believed extinct).

Kôninji. (Kôninji Temple). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.91 with colour photo; English translation p.61. Small, red, occasionally blotched white, sake-cup to trumpet-shaped single, tubular stamen cylinder. Flowers mid-season to late. Leaves elliptic, small, flat. Upright growth. An old tree is growing at Kôninji Temple, Takahi Town. Named and released by Ikuo Nishihata in 1970. From Nara Prefecture.

Konnô. (Golden King), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.48: Medium size, white with crimson streaks, single with a dominant, golden stamen column. (Believed extinct.) Originated in Japan.

Konnô. (Golden King), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû:* Leaves small size, waved with white variegation. Flower red, double. Resembles **Nagashima**. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.163. Originated in Japan. (Believed extinct.)

Konnô-yuriba. (Lily Leaved Camellia from Konnô), (*C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû:* Flower is a small single, red, sake-cup shape petals. Leaves like that of a lily, long and lustrous. Originated in Japan. (Believed extinct.) Different readings: 'Konnô-yuriha', 'Kinô-yuriba'. It appears to be similar to the present day **Yuriba.**

Konnô-yuriha. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.139. Different reading for **Konnô-yuriba.**

Konoejiro. (Konoe's White), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.324; Seibundô Shinkôsha, 1979, *Senchinshû*, p.57, colour photo, p.215: Medium size, single, white with 6-7 overlapping, emarginated petals, wide opening. Stamens a compact column, yellow anthers, creamy filaments. Blooms mid-season to late. Leaves lanceolate, semi-glossy mid-green; apices acuminate, recurved; margins shallowly serrate. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.43. Originated in Kansai, Japan. Original tree was found in the late Konoe's garden in the Outer Garden of Kyoto Imperial Palace. Collected and named by Motoharu Miyazawa in 1970s.

Konomijiro. (Desired White), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.58, colour photo, p.215, description: Small, campanulate single, pure white, with 5 petals, irregular, fluted about a central column of stamens narrowly pinched at the apex, with orange anthers. Leaves lanceolate, deep green; apex acute. Blooms very early to mid-season. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.24. Originated in Kurume, Fuku'oka Prefecture, Japan. Resembles **Shirokikuzuki.** Named and released by Masahiro Koine in 1975.

Kô-no-otome. (Red 'Otome'), *(C.japonica)*, Uekiya Seijirô, 1874, *Tsubaki Hyakuro no Zu*, vol.2, No.10: Small to medium size, red, formal double with many small, imbricated petals. Originated in Japan. (Believed extinct.)

Kô-no-suzume. (Red Sparrow), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.409 as 'Kônosuzume': Small, creamy white peony form. Originated in Japan. (Believed extinct.) Different reading: 'Kauno-suzume' in Tomota et al., 1980, *Tsubaki*, p.146.

Konpira-benkei. (See below), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.I, 1972, p.367; and pl.444, vol.II, p.176, description, p.262: Large size, red, anemone centered semi-double, 13 cm across with two rows of large, rounded outer petals, 13-15 in number and a compact centre of red and white petaloids. Leaves broad-ovate to ovate, apices abrupt acute, margins sharply serrate. Originated in Japan at the Konpira Temple, Kagawa Prefecture. Named and released by Saneichi Ogawa in 1972. "Konpira" = the seaman's god; "Benkei" is the name of an ancient warrior of Japan. See also colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, p.58. Resembles **Kokuryû.**

Konronguro. Wada, 1941, *Japanese Garden Treasures*, p.30. Different reading for **Konronkoku.**

Konron Koko. The Fairlight Camellia Nursery Catalogue, 1983. Corruption of **Konronkoku.**

Konron-jura. Burncoose & Southdown Nursery Catalogue, 1987, p.11. Corruption of **Konronkoku.**

Konron Joura. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.123. Corruption of the Japanese name **Konronkoku.**

Konron Koku. Charles Hill Nursery Catalogue, 1980. Different reading for **Konronkoku.**

Konronkoku. (Kunlong Black), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.12: Dark, purplish red. Large to medium double. Originated in Japan.

Konronkoku. (Kunlong Black), *(C.japonica)*, Minagawa, *Chinkashû*, 1925, according to Ishikawa, 1966, *American Camellia Yearbook*, p.74 as 'Konron-Koku'. Ishii, 1932, *Genshoku Shokubutsu Zufu;* Minagawa, 1933, *Chinkashû;* Tuyama, 1968, *Camellias of Japan*, pl.276, p.139, description, p.174: Leaves narrowly ovate-elliptic, long acuminate apex, margins remotely crenate. Flowers rose form double to peony form, 9-10 cm across, dark red. (Cardinal Red 822) Petals round, incurved, 11-25, slightly emarginate. Opens with a large bud centre which, when fully mature, opens into a loose ball-shaped centre with a few short stamens. Flowers mid-season to late. This variety has been known interchangeably as **Konronkoku** and 'Konronkuro' which are different readings of the same characters. However as the first transliteration published was **Konronkoku** in Chûgai Nursery Co. Catalogue, 1935-1936, p.25, this has been accepted as the prior valid name. There is also a *C.sasanqua* of the same

name. Corruptions of the Japanese name include: 'Kouronguro', 'Konrun Koku', 'Kuron-juro', 'Kuron Jura', 'Konron Joura', 'Koron Juro', 'Kouron-Jura', 'Kurun Jura', 'Kunrun Jura'. Synonyms: 'Black Prince', 'Nigra', 'Black Boy'. See colour photos: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.135; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.390; Satô, 1975, *Chûbu no Tsubaki*, p.88, as 'Konronkuro'; Shufu no Tomosha, 1976, *Tsubaki to Sazanka*, p.32; Seibundô Shinkôsha, 1979, *Senchinshû*, p.59. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.395. Sport: **Fuiri-konronkoku**. Resembles: **Kokuryû**. Received an "Award of Merit" from the RHS, 1960 as Konronkoku. Originated in the Kantô area, Japan.

Konronkuro. Different reading of **Konronkoku.**

Konrun-Koku. Torsanlorenzo Catalogue, 1984-1985. Corruption of the Japanese name **Konronkoku.**

Konshû. (Deep Blue Autumn), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.205, colour photo and description: Small medium size, deep red, open, vase-shaped single with 5 wide, overlapping, somewhat crinkled petals and a central stamen cylinder with white filaments, joined for the lower third, and yellow anthers. Flowers very early to mid-season. Leaves mid-green, elliptic to broad elliptic, apices acuminate, recurved, margins coarsely serrate. A seedling of the *C.japonica* **Kon-wabisuke.** Orignated in the Kantô area, Japan by Saburô Yokoyama, released by Nobuo Sasai in 1989..

Kontani. (Place Name), *(C.rusticana)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.194, colour photo and description: Very small, deep red, tubular to campanulate single with small, yellow stamen column. Blooms mid-season to late. Leaves mid-green, elliptic, apices acute, margins bluntly, shallowly serrulate. Originated in Asahi Town, Toyama Prefecture, Japan. Named and released by Mitsuroku Makino in 1980s.

Kon-tsubaki. (Dark Blue Camellia), *(C.japonica)*, Chûbu Tsubaki Kyôkai, 1960, *Tsubaki Meikan:* Small size, blackish red, double flower. The prefix "Kon" is used for a number of camellias of a deep, blackish red colour. Originated in the Chûbu area, Japan.

Kon-wabisuke. (Dark Blue Wabisuke), *(C.japonica)*, McIlhenny, 1937, *600 Varieties of Camellia:* Blackish, dark red, single. A member of the *C.japonica* (Purpurea Group) and very similar to **Kuro-wabisuke,** by which pseudonym it is known in the Kansai District. Listed by Minagawa, 1962, *Chinkashû*, in the section on single flowers. Fully described in Tuyama, 1968, *Camellias of Japan*, pl.272, p.137, description, p.173: Leaves small, lanceolate to lanceolate elliptic, long tapering apex. Petioles glabrous. Buds nigrescent. Flowers dark red (Cardinal red 822 to 822/1), single, not so widely opened, ultimately cup-shaped. Mid-season to late flowering, floriferous. Originated in the Hyôgo Prefecture, Japan. Synonyms: 'Purpurea', 'Shikon-wabisuke', 'Fuyajo'. See: *Encylopedia of Camellias in Colour*, vol.I, 1972, pl.1; Satô, 1975, *Chûbu no Tsubaki*, p.60; Seibundô Shinkôsha, 1979, *Senchinshû*, p.58. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.231. 'Kuro-tsubaki' is given as a synonym in Chûbu Tsubaki Kyôkai, 1973, *Tsubaki Meikan.* Old trees are growing in the Owari District. Considered to be a form of wild japonica.

Konyakomachi. (Konya Beauty). *(C.japonica), Kurume Camellia*, 1997, English translation, p.24. Deep red, small campanulate single. Flowers mid-season.

Konya-wabisuke. (Dyer's Wabisuke), (Wabisuke), Inazawa Nurseries Co. Ltd Catalogue, 1986-1987, p.11, A-533: Small size, dark red, tubular single. Blooms mid-season. Originated in Japan. The first character for "Kon" = deep blue; Konya = Dyer, especially a dyer of deep blue, which was a very popular colour in ancient Japan; ie "Dyer's Wabisuke".

Kon'yô. (Scholar's Name in Edo Era), *(C.japonica)*, Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.58. No description. Originated in Japan. Note: Aoki Kon'yo, a famous confucianist and researcher in Dutch and Western culture of the time, who lived in the middle of the Edo Era.

Kookia. *(C.japonica),* Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.14. No description. (Believed extinct.)

Koonawarra. *(C.williamsii),* Camellias Aust., *Camellia News*, Autumn 2013, p.28 with colour photo; Originated by Caterina Colagiuri, Mount Wilson, NSW. Regn No.667-N; Propagated by Craig Carroll, Mt. Tomah, NSW; Chance seedling which is a second generation *C.williamsii.* Medium size, single blooms, white to palest pink, with random spots, streaks and stripes of light pink through to red. Central column of stamens with cream filaments and golden anthers.

Kô-otome. Synonym for the *C.x hiemalis* **Hi-otome-sazanka.**

Kô-otome. (Red Maiden), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki,* as red flower, medium size, early flowering. Itô, Ko'emon, 1879, *Chinkashû:* Red, medium size, formal double. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.126, p.216; Tuyama, 1968, *Camellias of Japan*, pl.267, p.135, description, p.172: Leaves oblong to narrowly obovate-oblong, venation impressed, apices blunt acute, petioles hairy. Flower formal double, rosy red, (Spinel red 0023) with a bud centre. Petals rounded, incurved margins while opening. Originated in Kantô District, Japan. See colour photos: Seibundô Shinkôsha, 1979, *Senchinshû*, p.51 Orthographic error 213; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.393. Katei Gahô ed., 1984, *Chabana Koyomi, vol.1, Tsubaki*, p.58. Different reading: 'Beni-otome'. Synonyms: 'Hi-otome' in Kansai, 'Akaotome', 'Otome-hi', 'Pink Virgin', 'Cheerful', 'Virgin Red', 'Cheerfulness'. Very similar to, if not the same, as **Kô-no-otome.**

Kôrai. (Ancient Name for Korea), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku*, vol.3: Large size, white. Originated in Japan. (Believed extinct.) See JCS., 1965, *Tsubaki*, No.5, p.5.

Korai-hime. (Korean Princess). Different reading for **Komahime**.

Kôrai-nishiki. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.140. Different reading for **Kôma-nishiki.**

Kôrai-tsubaki. Sakuden, 1630, *Hyakuchinshû.* Synonym for **Kôma-nishiki.**

Kôraku. (See below), *(C.japonica),* Tuyama, 1968, *Camellias of Japan*, pl.189, p.96, description, p.145: Leaves broadly elliptic, flat, margins grossly serrate, 6.5-7.7 cm long x 3.2-3.4 cm wide. Flowers tend to be semi-double, dark rose, (Rose opal 022/1), petals 14-20, thick in texture, often with small, erect petals dividing the stamens into 3 or more fascicles, anthers yellow, filaments white to pinkish. Flowers early to mid-season. Originated in Okayama Prefecture, Japan. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.150. 'Kôraku' is an abbreviation for Kôraku-en Park in Okayama City. A seedling of **Tarôkaja** x **Kon-wabisuke.** Named and released by Nobuo Sasai in 1980.

Kôraku. (Happiness and Pleasure). (Higo). *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.93 with colour photo; English translation p.62. Medium size, broad red stripes on white or pink ground, flat single with outspread, circular stamens, filaments yellowish white. Flowers mid-season to late. Leaves broadly elliptic. Spreading growth. A new variety of Higo, not yet recognised, as of 1998, by the Higo Camellia Society. From Kumamoto Prefecture.

Koranjura. RHS., 1957, *The Rhododendron and Camellia Yearbook*, No.11, p.121. Corruption of the Japanese name **Konronkoku.**

Kôra-no-musume. (Girl from Kôra). *(C.japonica), Kurume Camellia*, 1997, English translation, p.8; Pale rose, medium size, trumpet shaped single. Flowers mid-season. Originated by T. Kunitake, Kurume, Japan, named by Y. Toyofuku.

Kôrataisha-akayabu. (Red Wild Camellia of Kôrataisha Shrine). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.23; Deep rose, small size, single. A 300 year old tree in Mii-machi, Japan.

Korean Camellia. Yang, 1965, *Camellia Varieties of Taiwan.* Synonym for **Chôsen-tsubaki.**

Korean Fire. *(C.japonica),* Camellia Forest Nursery Catalogue, 2008, p.15; Selected from a wild population on islands near the North-South Korea border. Collected by Barry Yinger, Pennsylvania, USA, and named after withstanding temperatures down to -23ºF. Red single flowers early season. Compact with handsome foliage.

Korean Snow. *(C.japonica).* SCCS, *Supplementary List*, 2014. Medium size, single flower, white with yellow anthers and yellowish filaments. Upright, open growth. Flowers mid-season. Named in 2014 by Camellia Forest, Chapel Hill, NC, USA, from seeds collected in Korea.

Kôrei. *(C.x vernalis),* Sakata et al., Mar.1981, *Memoirs of the Faculty of Agriculture* vol.XVII, p.93 as 'Khôrei'. Sakata & Arisumi 1983, *International Camellia Journal*, p.22. Synonym: for **Gaisen.**

Korenge. (Small Lotus Flower), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1: Small, white and glossy flower. Long and slender. Resembles a lotus flower. Yashiro, 1841, *Kokon Yôrankô*, vol.306. No description. Originated in Japan. (Believed extinct.)

Kôri-gasane. (Tiers of Ice), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Large size, white flower, single with wide petals. Originated in Japan. (Believed extinct.)

Kôrin. (Ancient Artist: Ogata Kôrin), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.213 as 'Kohrin': Small, white, cup-shaped single. Originated in Chûbu area, Japan. Different reading: 'Kohrin'. A seedling of **Kamogawa.**

Kôrin. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.93 with colour photo; English translation p.63. Small, deep red single, cupped petals, tubular stamen cluster. Flowers mid-season to late. Leaves broadly elliptic, medium size. Upright, vigorous growth. A wild japonica collected at Sarujima Island in Mikawa Bay. Named and released by Minoru Satô in 1975. From Aichi Prefecture.

Kôrin. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.331 with black and white photo; English translation p.230. Medium size, red single, cup to bowl shaped, cylindrical stamen column. Flowers very early to mid-season.. Leaves elliptic, medium size, curved outwards. Upright growth. A natural seedling of **Shiratama**. Named by Kaoru Nakao, released by Taneo Okada in 1976. From Osaka.

Kôrô. (Red Tower). (*C.chekiangoleosa* hybrid). *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.93 with colour photo; English translation p.63. Medium size, crimson semi-double to rose form double. Flowers mid-season. Leaves somewhat large, glossy. Somewhat spreading and weeping branches. A cross of *C.japonica* **Kuro-tsubaki** x *C.chekiangoleosa*. Named and released by Kazuo Yoshikawa in 1991. From Osaka.

Kôrogibashi. (Kôrogi Bridge), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.214: Faint peach pink, campanulate single, small to medium size. Early to mid-season flowering. Stamens in a central cylinder. Leaves medium size, oval. Plant habit spreading and vigorous. The original tree is near the Kôrogi Bridge, Yamanaka Onsen (Hot Springs) in Ishikawa Prefecture, Japan. Selected by Tomeko Yano, named and released by Seizô Matsui in 1975.

Kôrômu. (Name of a Chinese Novel). (*C.chekiangoleosa* hybrid). *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.93 with colour photo; English translation p.63. Medium to large, scarlet, anemone form flower, calyces remaining till autumn. Flowers mid-season to late. Leaves elliptic, large. Spreading growth, weeping branches. A cross of *C.japonica* **Bokuhan** x *C.chekiangoleosa.* Named and released by Kaoru Hagiya, Niigata Prefecture, in 1983. Colour photo, ICS Journal, 1995, p.81.

Kôryo. (Red Imperial Tomb), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.29: Small to medium size, crimson, tubular to campanulate single. A seedling of **Tulip Time.** Originated in Okayama Prefecture, Japan. Nippon Tsubaki - Sasanqua Meikan, 1998, p.93,

English translation p.62. Parentage is stated to be a cross between 'Kujaku-tsubaki' (**Hakuhan-kujaku**) and **Kuro-tsubaki**. Named and released by Nobuo Sasai in 1983.

Kôryû. (Red Dragon), *(C.hybrid)*, ICS., Apr.1990, *Japanese Camellia Cultivar List.* No description. Originated in the Ôsaka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.93 with colour photo; English translation p.62. Medium size, red, flat single, yellow stamens in a hemisphere, degenerated anthers. Flowers early to mid-season. Leaves narrowly elliptic, medium size, clear veins. Spreading growth. A cross between *C.reticulata* x *C.saluenensis* **Barbara Clark** and *C.granthamiana*. Named and released by Kazuo Yoshikawa in 1980s.

Kosado. (Little Sado), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.133, p.67, colour photo, p.127, description: A very small, wild, snow camellia. Leaves light green, oblong-elliptic, minutely serrulate, venation imressed, 6-10 cm long by 3-6.2 cm wide, petioles 4.5-5.5 mm long, very hairy. Flowers cup-shaped, red, (Claret rose 021) 6 petals. Stamens compact, slightly spreading, anthers yellow, filaments deep cadmium yellow. Flowers mid-season. Origin: Found in the wild on Island of Sado, Niigata Prefecture, Japan.

Kosafdo Wabishun. Inazawa Nurseries Wholesale Catalogue, 1986-1987. Orthographic error for **Kosado-wabishin.**

Kosado-wabishin. (Little Sado Scraped Anthers), *(Wabisuke)*, Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No.11, pp.107, 109, 111, for botanical drawings, colour photo and description. Ôoka Chinka-en, 1983-1984, *Niigata no Tsubaki*, p.7 as a new variety. Inazawa Nurseries Wholesale Catalogue, 1986-1987 as 'Kosafdo Wabishun': Red. Small, tubular form single with white stamens. Mid-season blooming. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.158, colour photo and description: Small size, red, tubular single of 5 petals and a central cluster of pale yellow stamens. Leaves strong green, broad-ovate, apices blunt-acute, margins obscurely serrate. Originated on Sado Island, Niigata Prefecture. Named by Tokuji Ôoka in 1973, released by Keiichirô Murakawa.

Kosagara. (Small Sagara), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.337: Medium size, red, single, with 6 irregular petals and the centre a mixture of small petaloid anthers and normal anthers. Originated in Japan. (Believed extinct.)

Kosagara. (Small Sagara), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.652: Small, single, deep crimson with 5 long, emarginate petals and the centre a cushion of petaloids and stamens, anemone form. Originated in Japan. (Believed extinct.)

Kosakura. Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1. Different reading for **Kozakura.**

Kôsaku-shibori. (Personal Name Variegated), *(C.japonica)*, Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.114, black and white photo: Medium size, deep pink, streaked and veined pinkish white,10-11 cm across, 8-9 petals, large emarginate, crinkled, reflexed around a compact, yellow stamen cluster, early flowering. Leaves elliptic, mid-green apices acuminate, margins serrulate, slightly waved. Originated in Kanazawa City, Ishikawa Prefecture, Japan. See colour photos: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.361; Seibundô Shinkôsha, 1979, *Senchinshû*, p.52, description, p.213. Named and released by Susumu Komura in 1940.

Kosazuke-tsubaki. (obscure), *(C.japonica)*, Izu-Oshima Hawaii Botanical Gardens List, 1980 as 'Kosazukitsubaki'. No description. Originated in Japan.

Kosame-nishiki. (Light Rain Variegated), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* White flower with a pink cast, lotus shape. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77. Originated in Japan. (Believed extinct.)

Kosciusito. Cannon, 1963, ACS., *The Camellia Journal*, vol.18, No.5, p.18. Orthographic error for **Kosciusko**.

Kosciusko. *(C.japonica),* Camellia Grove Nursery Catalogue, 1954, p.20: Variable single to semi-double, white, medium size, often with ski-like petaloids standing above the stamens. Medium, upright growth, light green leaves. Originated in Australia. Its origin is unknown as it was grown from a cutting obtained in a Sydney florists. Named for Australia's highest mountain. Orthographic errors: 'Kosciusito', 'Kosciosko'.

Kôsei-bijin. (Kôsei's Beauty), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.13: Small size, deep red, tubular to campanulate single flower. Blooms mid-seaon to late. Originated in the Nagasaki Prefecture, Japan.

Koseki. (Name of a Nursery). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.100 with colour photo; English translation p.67. Small, vermilion, tubular to trumpet shaped single, cylindrical stamen column. Flowers mid-season-season to late. Leaves oblong, somewhat small and waved. The original tree is growing at Koseki Nursery in Fujieda City. Named and released by Kiichirô Akiyama in 1940. From Shizuoka Prefecture.

Kôsen. (Fountain of Filial Piety), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.102, description, p.103, colour photo: Small size, soft pink, single of 6-7 petals, opening wide, saucer shaped, petals broad, overlapping, emarginate, with a slender stamen column, creamy filaments, joined for the lower third and yellow anthers. Flowers mid-season to late. Leaves, dark green, broad-ovate, apices abruptly acute, margins finely serrulate. Originated in the Niigata Prefecture, Japan.

Kôsen. (Fountain of Filial Piety). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.331; English translation p.230. Small, palest pink, tubular to trumpet shaped single, thick petals, cylindrical stamens. Flowers mid-season. Leaves elliptic, small, flat. Spreading growth. Unknown parentage, discovered in Kajikawa village, Kita-kanbara District, Hyôgo Prefecture. Named by Yoshitaka Fujii, released by Tokuji Ôoka in 1974.

Kôsetsu. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.57. Different reading for **Beniyuki.**

Kôsetsuzan. (Name of Mountain). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.89 with colour photo; English translation p.60. Small, white, cup-shaped single, round petals, cylindrical stamen cluster. Late flowering. Leaves elliptic, medium size, flat. Upright, vigorous growth. A chance seedling originated and released by Fumio Naitô in 1997. From Aichi Prefecture.

Kôsha. (Red Carriage), *(C.japonica),* Itô Ihei, 1695, *Kadan Chikinshô:* Large size, red, single; opens flat; centre petals half erect; Yashiro, 1842, *Kokon Yôrankô* & Kasuya, Kamegorô, 1859 read this as 'Beniguruma'. Originated in Japan. (Believed extinct.)

Kosha. Different reading for **Oguruma.**

Koshamu. (Small Shamuro), *(C.japonica),* Kaempfer, 1712, *Amoenitatum Exoticarum* as 'Kosjam'. No description. Originated in Japan. (Believed extinct.)

Kôshi. (Confucius), *(C.x vernalis).* Synonym for **Chirihime.**

Kôshi. (Fragrant Purple), *(C.japonica),* Saitama Botanical Garden Catalogue, 1960. No description. Seibundô Shinkôsha, 1979, *Senchinshû,* p.52, colour photo, p.213: Medium size, purplish red, campanulate single; deep red with 6 broad, overlapping petals, somewhat irregular. Fragrant. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.168, colour photo and description: Medium size, red, campanulate single. Leaves deep green, elliptic, apices acuminate, margins serrate. Originated in Izu Ohshima, Japan. Named and released by Takeo Ogawa in 1969.

Koshi-bijin. (Niigata Beauty), *(C.rusticana),* Kamo Zenji, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.8, p.29-33. Mutation of 'Rôgetsu' but petals pale red with red ornamental borders. Originated in Niigata Prefecture, Japan. "Koshi" means Niigata Prefecture.

Ko-shibori. (Little Dapple), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Yashiro, 1841, *Kokon Yôrankô*, vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Round and small in shape. Double, white flower with some red spots. Originated in Japan. (Believed extinct.)

Koshigoromo. (Old Purple Clothes), *(C.japonica),* JCS., 1988, *Japan Camellia*, No.27, p.13, colour photo: Small size, with 5 irregular, emarginate, broad petals of rose, veined violet towards the centre with a broad violet band at the margins. Compact, stamen column with pinched in top, white filaments joined for the lower third, yellow anthers. Flowers early to mid-season. See p.232, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by Nitoshi Kaji in 1983.

Koshi Gosh. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Corruption of Japanese name **Kôshigoshi.**

Kôshigoshi. (View Through a Lattice), *(C.japonica),* McIlhenny, 1941, *700 Varieties of Camellias*, p.8: White streaked rose-pink. Large single. Originated in Japan. Corruptions of the Japanese name: 'Koshi Gosh', 'Koishi Gosh'.

Koshihakuruma. (Carriage for Peers), Yashiro, 1841, *Koken Yôrankô*, vol.306. Synonym for **Goshoguruma** from the *Kadan Chikinshô*, 1695. See: Kyôto Engei Kurabu, 1960, *Tsubaki Tokushû*, No.1, p.78.

Koshiji. (Old Name of Niigata Province), (*C.rusticana*), Satomi, 1956, *Camellia Varieties in Japan*, p.17: Red. Medium size, single to semi-double with degenerate stamens. Vigorous, compact growth. Mid-season blooming. Originated in Japan.

Koshiji-karanishiki. (Niigata's Chinese Brocade), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.54, Colour photo, p.217, description: Small, campanulate single, pink with colour fading to white at the petal edge, crimson streaks. Leaves mid-green, lanceolate, apices acuminate, strongly recurved. Originated in Toyama, Japan Parentage unknown, named and released by Zenji Kamo in 1974. Similar if not the same, as **Kashûkara-nishiki.**

Koshiji-yuki. (Niigata Snow), *(C.japonica), Tsubaki Hachiboku Sanbokutsuki Meisai*, (before 1868): Medium size, single flower, white, with broad red stripes, early flowering. Originated in Japan. (Believed extinct.) See: JCS., 1982, *Tsubaki*, No.21, p.106.

Koshiji-no-yuki. (Niigata Snow), *(C.rusticana),* Yokoyama et al., 1975, *Gendai Tsubaki Meikan*, p.117; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.391; Seibundô Shinkôsha, 1979, *Senchinshû*, p.54, colour photo, p.214, description: Medium size, 8-9 cm across, ivory white, semi-double with large, rounded, notched petals, widely open 10-11 in number, about a large, spreading stamen cluster, yellow anthers and filaments. Sometimes develops petaloids which envelop the stamens. Leaves dark green, long-elliptic; apices acuminate, margins serrulate, venation impressed. Plant habit vigorous and spreading. Originated in Jô'etsu City, Niigata Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.97 with colour photo; English translation p.65.. Collected and released by Susumu Ishizawa in 1973.

Koshikibu. (Name of Ancient Female Poet), *(C.japonica),* Hamamatsu, 1825, *Setsuyô Kikan.* No description. It is not certain whether this is a synonym for **Tarôkaja** or not.

Koshikibu. Andoh, 1971, *Tsubaki – Meika no Shôkai to Saibai*, p.9, pl.22. Synonym for **Tarôkaja,** a local name in Chôfukuji, Kyôto, Japan.

Koshimino. (Straw Raincoat), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû;* Monk Hôrin, 1639, *Kakumyôki; Chinka Zufu*, (before 1700), Watanabe, 1969, pl.624: Red, large size, double with petaloids, corolla convex, some with yellow anthers. (Believed extinct.) Originated in Japan.

Koshimino. (Straw Raincoat), *C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.504: Large, white, semi-double with crimson stripes and divided, central stamen cluster. (Believed extinct.) Originated in Japan.

Koshimino. (Straw Raincoat), *(C.japonica)*, Uesa, 1844, *Sômoku Benran;* Nakayama, 1851, *Senda'ôden:* Snow white, medium to large semi-double, opening flat with radiate stamens turned petaloids, Blooms early. Originated in Japan. (Believed extinct.)

Koshimino-aka. (Red Straw Raincoat), (*C.rusticana*), Settsu Raikôyen Co. Catalogue, 1938-1939, p.132: Deep Carmine red, full double to centre. Originated in the Kansai area, Japan. Synonym: 'Aka -koshimino'.

Koshimino-nishiki. (Variegated Straw Raincoat), (*C.rusticana*), Settsu Raikôyen Co Catalogue, 1938-1939, p.13: White with crimson variegation, double to centre. Medium size. Mid-season blooming. Leaves medium size, ovate, margins loosely wavy, curved, green; petioles hirsute. Originated in Kansai, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.215.

Kôshin. (see below), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.539: Medium size, irregular peony form, part deep crimson, part pale pink with white margins. Originated in Japan. Thought to be the present day **Kyôbotan.** "Kôshin" is the 7th and 9th zodiac sign. It is the Shinto "day of the Monkey". (Believed extinct.)

Kôsen-no-ginka. Different reading for **Yomi-no-ginka.**

Kôshin-no-tomo. (Attendant to the Traveller's Guardian Deity), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Its blooms follow 7 patterns as follows: 1. Red with the centre full of rich yellow anthers. 2. Red with the petals each margined with white. 3. White with the petals margined with red. 4. Red with the stamens having red filaments. 5. White with white stamens and petaloids with white flags. 6. Half red and half white flower. 7. Red, very small, all stamens degenerate. Generally the flower is a large single to anemone with deeply incised petals. Originated in Japan. (Believed extinct.)

Koshi-no-akebono. (Dawn in Province Koshi), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.102, p.51, colour photo, p.117, description: Leaves rather large, narrowly oblong-elliptic, apex acute, base cuneate, venation impressed, mid-green, margins shallowly serrate, 7.4-9.1 cm long x 3.7-4.8 cm wide, petioles 1.4 cm long, hairy. Flower double, pale pink, (Neyron rose 623/2) with about 5 rows of imbricated petals, 36-44. sparse, irregular stamens with the occasional petaloid. Blooms late. Originated in Ishikawa Prefecture, Japan.

Koshi-no-akebono. ('Akebono' from Koshi), *(C.japonica)*, Kamo, Zenji, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, 55:31: Medium to large size, single, pink coloured. Stamens spread like a Higo. Originated in Toyama Prefecture, Japan as a seedling by Kamo, Zenji.

Koshi-no-akebono. (Dawn in Koshi District) *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.148, description, p.149, colour photo: Medium to large size, deep pink, single with 6-7 large, wide, overlapping, emarginate petals opening almost flat, with a central, circular stamen cylinder, white filaments, joined for the lower third, and small, golden anthers. Blooms early to mid-season. Leaves mid-green, ovate-oblong, apices abrupt acute, margins serrate. Note: Kanji characters are different from the above. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.97 with colour photo; English translation p.66. Upright, vigorous growth. Named and released by hisako Kamo in 1980s

Koshi-no-benishidare. (Red Pendant from Niigata), *(C.rusticana)*, Yokoyama & Kirino.1989, *Nihon no Chinka*, p.168, colour photo and description: Small size, red, saucer-shaped single of 5 rounded, slightly emarginate, overlapping petals and a yellow, central stamen cylinder. Blooms mid-season to late. Leaves mid-green, elliptic, coarsely serrate. Plant habit willowy and weeping. Selected from wild japonicas in Mitsuke City, Niigata Prefecture, Japan. Named and released by Tokuji Ôoka in 1973.

Koshinobu. (Little Shinobu), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.639 as 'Koshinobu': Miniature, dark crimson small size, single, with white spots and compact, central, golden stamen coloumn. Originated in Japan. (Believed extinct.)

Koshi-no-fubuki. (Blizzard of Niigata), *(C.rusticana),* Satomi, 1956, *Camellia Varieties of Japan.* No description. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.456, p.185: Small, red, tubular to campanulate single. Leaves olive green with a wide, creamy margin, often itself speckled with green and some pale green areas. See p.172, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Seibundô Shinkôsha, 1979, *Senchinshû*, pp.55, 214. Originated in Niigata Prefecture, Japan as a mutation of a wild plant.

Koshi-no-goshikitsubaki. (Niigata Five Coloured Camellia), *(C.japonica),* Kamo, Zenji, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, p.32: A seedling of **Kara-nishiki,** pollen parent **Rôgetsu**, originated by Kamo, Zenji, Niigata, Japan. Flower form is similar to parent, low and wide, petals thick and flat. The various flower colours include: a pale red veined deeper, bordered white, or a self red, or a white with thick red stripes, etc. Early flowering. Synonym: 'Goshiki-karanishiki'.

Koshi-no-haru. (Spring in Niigata), *(C.rusticana),* Minagawa, 1956, *Chinkashû.* No description. See colour photo: Tuyama, 1968, *Camellias of Japan*, pl.205, p.104, description, p.150: Leaves broadly lanceolate-elliptic, apices gradually acuminate, margins strongly serrate; petioles hairy. Flowers widely cup-shaped, semi-double, rosy pink (Neyron rose 623/1), petals narrow, 17-20, inner petals wrinkled. Stamens with orange-yellow filaments dispersed with some small, erect petals and petaloids. Selected from wild snow camellias on Sôgadake Mountains, Unazuki Town, Niigata Prefecture, Japan. Named and released by Shûhô Kirino. "Koshi" is an old name for an area now included in Niigata Prefecture. See also Seibundô Shinkôsha, 1979, *Senchinshû*, p.55, LH top, colour photo and p.214.

Koshi-no-hikari. (Light of Niigata), *(C.rusticana), Encycopedia of Camellias in Colour*, vol.I, 1972, pl.29, p.48, colour photo, p.295, description: Medium size, red, single, 9-10 cm across with 5 large, rounded, overlapping, emarginate petals, opening cup-shaped and a prominent, spreading stamen cluster, small, yellow anthers and yellowish filaments. Late blooming. Leaves light green, broad-elliptic, apices tapering acuminate, margins finely serrulate. Petiole hirsute. Originated in Sogatake, Unazaki, Toyama Prefecture, Japan.

Koshi-no-heme. Glendoick Gardens, Perth, Catalogue, 1962-1963, p.7. Corruption of the Japanese name **Koshi-no-hime.**

Koshi-no-hime. (Niigata Princess), *(C.rusticana),* Minagawa, 1956, *Chinkashû:* White single. See colour photos: Seibundô Shinkôsha, 1973, *Garden Life*, No.24, p.13; Seibundô Shinkôsha, 1979, *Senchinshû*, p.55, description, p.214; Tuyama, 1968, *Camellias of Japan*, pl.97, p.49, description, p.115: Leaves ovate-oblong to broadly elliptic, venation impressed, thick, dark green, acuminate, margins serrulate, 5.8-6.7 cm long x 2.7-3.2 cm wide; petioles hirsute. Flowers semi-double of palest blush pink with up to 20 petals, (paler than rose-pink 427/3), petals oval, cleft; flower about 8 cm across. Stamens in slightly spreading cluster, orange yellow anthers, creamy filaments. Slight fragrance. Flowers mid-season. Corruption of name: 'Koshi-no-heme'. Originated in Mitsuke City, Niigata Prefecture, Japan. Named and released by Jitarô Nagao in 1956.

Koshi-no-hono'o. (Flame of Niigata), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.55, colour photo, p.214, description as 'Koshi-no-honoo': Large size, crimson, tubular single with large, thick petals a little fluted, slender stamen column. Originated in Toyama City, Niigata Prefecture, Japan. Named and released by Toyama Snow Camellia Enthusiasts Club in 1980. Different reading: 'Koshi-no-honoo'.

Koshi-no-honoo. Seibundô Shinkôsha, 1979, *Senchinshû*, p.55. Different reading for **Koshi-no--hono'o**.

Koshi-no-hubuki. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.58. Different reading for **Koshi-no-fubuki.**

Koshi-no-kaori. Seibundô Shinkôsha, 1979, *Senchinshû*, p.55, centre. Orthographic error for **Koshi-no-hikari.**

Koshi-no-kaori. (Niigata Incense), *(C.x vernalis)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.55, colour photo, p.214, description; JCS, 1987, *Japanese Camellia*, No.25, p.13, colour photo: A spring blooming sasanqua. A seedling of **Umegaka.** Base white, campanulate to sake-cup blossoms with a pale, peach pink ground. Small size, 5 slender, separated petals. Like its parent it has a pleasing perfume. Blooms early to mid-season. Leaves elliptic, mid-green, apices acuminate, margins serrulate. Originated in the Toyama Prefecture, Japan as a seedling of **Umegae**. Named and released by Zenji Kamo in 1980s.

Koshi-no-karako. (Niigata Anemone), *(C.rusticana)*, Izu-Ohshima, Hawaii Botanical Gardens List, 1980 as 'Koshinokarako'. No description. Originated in Niigata Prefecture, Japan.

Koshi-no-omoinomama. ('Omoinomama' from Niigata), *(C.rusticana)*, Kamo Zenji, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, p.32: Very early flowering, medium size, pure white, with broad and fine red streaks, single form. Various colours appear, ie. pure red, pure white, etc. Originated by Kamo Zenji, Niigata, Prefecture, Japan.

Koshi-no-otome. (Niigata 'Otome'), *(C.rusticana)*, Hagiya & Ishizawa, Mar.25th, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.9, pp.56, 57, p.IV, (F) black and white photo: Medium size, 7-8 cm across, formal double with pointed, deep pink petals, about 60 in number, imbricated and sometimes spiral. Leaves ovate, 10-11 cm long. Petiole hirsute. Collected at Kita Kanbara Subprefecture, Niigata Prefecture, Japan in 1958 by Susumu Kitazawa. Named and released by Kaoru Hagiya in 1968.. See Seibundô Shinkôsha, 1979, *Senchinshû*, pp.55, 214. Corruption of the Japanese name: 'Kosho-no-otome'. Chinese synonym 'Yue Zhi Yinü.

Koshi-no-otome Variegated. (Niigata 'Otome' variegated). (*C.rusticana*). Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.426. A virus variegated form of **Koshi-no-otome.** Chinese synonym 'Banyue Zhi Yinü'.

Koshi-no-reijin. (Niigata Beauty), *(C.japonica)*, JCS., 1986, *Japan Camellia*, No.21, p.4, colour photo: Originated in the Niigata Prefecture, Japan, as branch mutation of **Jitsugetsu.** Dark, peach coloured whorls on a milk-white background, rose form double blossoms, medium size. Flowers mid-season. Plant habit strong and spreading. See p.398, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Corruption of name: 'Kashi-no-reijin'. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.98 with colour photo; English translation p.66. Stated to be a mutation of **Kokonoe.** Named and released by Hideyo Katô in 1979.

Koshi-no-sato. (Niigata Village), *(C.rusticana)*, Izu-Ohshima Hawaii Botanical Garden List, 1980 as 'Koshinosato'. No description. Originated in Niigata Prefecture, Japan.

Koshi-no-shiratama. (Etsu 'Shiratama"), *(C.japonica)*, Inazawa Nurseries Co. Ltd Catalogue, 1988, 1989, A-33, p.1 with black and white photograph. White tubular shape. A typical 'Shiratama' found in Niigata Prefecture, Japan. Koshi is the old name for Etsu.

Koshi-no-shiroshidare. (Niigata White Weeper), *(C.japonica)*, *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.326, p.137, description, p.246: A small, white, single, 4-5 cm across, bell-shaped, 5-6 petals, irregular in length, stamens pale yellow. Leaves broad-lanceolate, apex acuminate, base rounded, mid-green, margins shallow, obscure, crenate. Originated in Niigata Prefecture, Japan.

Koshi-no-sora. (Niigata Sky), *(C.rusticana)*, Izu-Ohshima Hawaii Botanical Gardens List, 1980, as 'Koshinosora'. No description. Originated in Niigata Prefecture, Japan.

Koshi-no-uta. (Poem of old Aspirations), *(C.japonica)*, ICS, Apr.1990, *Japanese Camellia Cultivar List*, p.14: No description. Originated in the Toyama Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.97 with colour photo; English translation p.66. Small, pink graduating to red at the centre, tubular single cylindrical stamens. Flowers early. Leaves elliptic, medium size.

A seedling of **Keisei,** discovered by Zenji Kamo in 1980s. Named and released by Shôzô Kamo.

Koshi-no-yoso'oi. (Niigata Adornment), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.56, colour photo, p.214, description as 'Koshi-no-yosooi': Medium size, blush orchid-pink, formal double with small, rounded, emarginate petals arranged in tiered or star shape. Leaves elliptic, mid-green, apex recurved, acuminate, raised venation, margins obscurely crenate. Synonym: 'Shimotsuki'. Different reading: 'Koshi-no-yosooi'. Originated in Fuchû Town, Niigata Prefecture, Japan. Named and released by Mitsuroku Makino in 1970.

Koshi-no-yosooi. Seibundô Shinkôsha, 1979, *Senchinshû*, p.56. Different reading for **Koshi-no--yoso'oi.**

Koshi-no-yuki. (Niigata Snow), *(C.rusticana)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Kasuya, Kamegorô. 1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* White, streaked rose-pink. Medium size, opens wide. Early flowering. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77. Originated in Niigata Prefecture, Japan. (Believed extinct.) Corruption of name: 'Kosji-no-yuki'.

Koshio. (Small Salt), *(C.japonica)*, Hamamatsu, 1825, *Setsuyô Kikan*, vol.23, No description. Originated in Japan. (Believed extinct.)

Koshiobi. (Waist Sash), *(C.japonica)*, Hamamatsu, 1825, *Setsuyô Kikan*, vol.23. No description. Originated in Japan. (Believed extinct.) Painted on Hirayama, Tokuo's *Tsubaki Byôbû*, (Latter 17th Century). See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.1, p.48.

Koshiratama. (Small Shiratama), *(C.japonica)*, Minagawa, 1956, *Tsubaki no Hinshu to sono Saibai:* Small, white, single, opening to a rounded shape. Originated in Japan.

Koshizu. (Koshi Harbour), *(C.rusticana)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.225, colour photo and description: Small size, brilliant crimson, wide campanulate single, with rounded, overlapping, reflexed petals and a central column of stamens with red filaments, joined for the lower third, and gold anthers. Blooms early to mid-season. Leaves mid-green with yellow mottles, broad lanceolate, apices tapering, blunt acuminate, margins shallowly serrate. Selected from a wild rusticana population in Toyama Prefecture, Japan. Named and released by Takeo Ogawa in 1979

Koshôgatsu. (Little New Year), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.56, colour photo, p.215, description: Small, white, campanulate single with 5 reflexed, rounded petals and a central column of stamens with yellow anthers and white filaments. Blooms mid-season. Leaves, lanceolate, lustrous, dark green, tapering acuminate, recurved apices, margins serrulate. Originated in the Ishikawa Prefecture, Japan as a seedling of **Yûkanji-meigetsu.** Named and released by Shûhei Niwa in 1973. See p.53, Yokoyama & Kirino, 1989, *Nihon no Chinka* as **Koshôgatsu.** "Little New Year" is the 15th and 16th days of the first lunar month.

Kôshôji. (Kôshô Temple), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.45, colour photo and description: Small size, white, open vase-shaped single with 7 wide, crinkled, overlapping, emarginate petals and a central stamen cylinder with white filaments, joined for the lower half and yellow anthers. Blooms early to mid-season. Leaves dark green, elliptic, apices acuminate, recurved, margins serrate. Original tree is in the precincts of Kôshôji, Fukumitsu-chô, Toyama Prefecture, Japan. Named and released by Hideo Hori in 1980.

Kôshoku. (Red Shoku), *(C.japonica)*, Miyazawa, 1954, *Kanshô Jumoku*, p.350: Medium size, single, dark red with white spots. Originated in Japan. "Shoku" was the ancient name for the Chinese province of Sichuan.

Kosho No Otome. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.123. Corruption of the Japanese name **Koshi-no-otome.**

Koshoro. (Personal Name), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.267, colour photo and description: Medium size, pale pink, fading to palest blush at edge, rare deep pink stripe, wide, campanulate single with 5 broad, rounded, emarginate, reflexed petals and a slender stamen cylinder with white filaments, joined for lower third and yellow anthers. Blooms mid-season to late. Leaves dark green, elliptic, apices acuminate, margins sharply serrate. Originated in a wild population in Hirado City, Nagasaki Prefecture, Japan. Discovered by Tsukasa Isomoto in 1978, named by Kichinosuke Aburatani. "Koshoro" was the name of a legendary heroine from Hirado City.

Koshû. (Koshô in Autumn). (Wabisuke). *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.99 with colour photo; English translation p.67. Small sake cup-shaped single, with large and small stripes of purplish red on white ground. Degenerate stamens. Flowers early to mid-season. Leaves elliptic, small to medium size. Upright, vigorous growth. A chance seedling of **Kochô-wabisuke,** originated by Siichirô Sasai in 1983. From Okayama Prefecture.

Kôshu. (Fragrant Ball) (*C.hybrid*) from Ehime Pref. *Tsubaki* No.38, Japan Camellia Society, 1999. Seed parent *C.japonica* **Tama-ikari,** pollen parent *C.granthamiana*. Pink, pale cloudy specks occasionally seen, medium size, flat, early blooming. Leaves resembling, but smaller than, those of *C.granthamiana*. Tree upright growth, vigorous. Flower shape resembles that of *C.granthamiana*. Originated by Hiroyasu Watanabe in 1996.

Kôshû-aka-yabu. (Wild Red Camellia from Hangzhou). *(C.japonica). "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.117. No description. From China.

Kosji-no-yuki. Vanderbilt, 1940, *Camellia Research*, p.5. Corruption of the Japanese name **Koshi--no-yuki.**

Kosô (Originator's pseudonym) (*C.reticulata* hybrid*)* from Ibaragi Pref. *Japan Camellia* No.81, August: 2006. Peach red, lotus form semi-double, cylindrical stamens, diameter 9 cm and depth 6 cm, blooming in March to April, not good under the strong sunlight. A chance seedling of **Barbara Clark**. First flower seen in 1996. Originated by Kunimitu Suzuki.

Kosodesoga. (Small Sleeve of Soga), *(C.japonica)*, Himuro, 1982, *Murasuzume:* Light pink, semi-double, medium size. Originated in Kanagawa Prefecture, Japan.

Kosouth. Auguste van Geert, 1848, Catalogue, No.36, p.39. Orthographic error for **Kossuth.**

Kossout. Luzzatti Catalogue, 1853. Orthographic error for **Kossuth.**

Kossouth. Monique Peer, 1957, *American Camellia Yearbook*, p.252. Orthographic error for **Kossuth.**

Kossut. Jules Menoreau, Nantes Nursery Catalogue, 1886, p.12. Orthographic error for **Kossuth.**

Kossut Lajos. Catalogo della Stablimento Agrario-Botanico de Castagnola e Casabono, 1867-1868. Orthographic error for **Kossuth.**

Kossuth. *(C.japonica)*, Ambroise Verschaffelt, 1853, Catalogue, p.19. No description. Franchetti, 1855, *Collezione di Camelie*, p.38: Of average size, rounded petals, dark red with wide, white stripes; imbricated. Verschaffelt, 1857, *Nouvelle Iconographie*, Book III, pl.IV: The amplitude of its outer petals is remarkable, they grow smaller towards the centre, where their form is more or less regular. They are of a beautiful pink, edged and striped with white. A peony form originated by Count B. Lechi, Brescia, Italy. Orthographic errors: 'Kossout', 'Kossouth', 'Koussout', 'Generale Hossout', 'Kossut', 'Kosouth', 'Kossut Lajos'. Synonym: 'General Kossuth'.

Kosuga-Shibori. Vanderbilt, 1940, *Camellia Research*, p.5. Corruption of Japanese name **Kasuga-shibori.**

Kosugata. (Pretty Shape), *(C.hybrid)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.153, colour photo and description: Small size, pink with deep pink margins with colour reduced to faint pink at the flower centre, single with 5 broad petals with incurved lateral margins on some petals, and a short, central stamen cluster with yellow anthers. Blooms mid-season. Leaves shining, bright green, obovate, apices acuminate, margins serrate. Originated in the Okayama Prefecture, Japan. A seedling of **Tulip Time.** Named and released by Nobuo Sasai in 1982.

Kosunago-fu. (Old Sanded Cloth), *(C.japonica)*, Aoyama Kinta, 1827, *Sômoku Kihin Kagami.* Speckled, long, narrow leaves. Flowers single, brownish red. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No,7, p.167. Originated in Japan. Different reading 'Ko-sunago-hu'. (Believed extinct.)

Ko-sunago-hu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.140. Different reading for **Kosunago-fu.**

Kosuzume. (Small Sparrow), (*C.rusticana*), Tuyama, 1968, *Camellias of Japan*, pl.136, p.68, colour photo, p.128, description: Leaves light green, thin, oblong-elliptic to broadly elliptic, margins obscurely denticulate, 8.1-11.2 cm long x 2.9-5.2 cm wide; petioles very hairy, 5.5-8 mm long. Flowers small size, single, broadly cup-shaped, single, 3.5-6.4 cm in diameter, rosy pink (Delft rose 020). Petals 5-6, manifestly bilobate, wavy. Stamens short, cadmium yellow. Flowers midseason to late. Collected from the wild in Yatsu'o City, Toyama Prefecture, Japan.

Kô-sya. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.58, as 'Ko-sya'. Orthographic error for 'Kokôsha', synonym for **Beniguruma.**

Kotarô. (Personal Male Name), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.131, colour photo and description: Small to medium size, pink, cup-shaped single with 5 crinkled petals and central stamen column with white filaments joined for the lower half and yellow anthers. Blooms mid-season to late. Leaves darkish green, broad ovate, apices blunt acute, margins sharply, coarsely serrate. A seedling of 'Engei-tarô'an' (**Tarô'an**). Originated in the Chûbu area, Japan. Originated and released by Kazunori Sugimura in 1985.

Kotchajime. Gentry, 1975, ACS., *The Camellia Journal*, vol.30. Corruption of the Japanese name **Kotohajime.**

Kôtei. (Emperor of Fragrance). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.331; English translation p.230. Medium size, purplish red, sake cup-shaped single, fragrant, cylindrical stamen column. Leaves broadly elliptic, medium size. Upright growth, cold hardy. A cross between *C.japonica* **Kôshi** and *C.hongkongensis.* Originated and released by Yoshiomi Murata in 1985. From Kanagawa Prefecture.

Kôten. (Red Sky), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.52, colour photo, p.213, description: Medium size, crimson, single with large, crinkled petals and a large, spreading stamen cluster. Leaves broad-elliptic with a short acute apex, serrulate margins and coloured midgreen. A chance seedling originated and released by Kiraku Sakuragi in 1975.

Kothojimi. Donnan, 1984, SCCS., *The Camellia Review*, vol.46, No.2, p.16. Corruption of the Japanese name **Kotohajime.**

Kotobuki. (Long Life), *(C.japonica)*, Satô, 1973, Chûbu Tsubaki Kyôkai; *Tsubaki Meikan:* Flowers mid-season. Leaves wide-ovate, sharp apex, keeled midrib, dark green, shallow serrations. Flower shape resembles **Tamagasumi.** See colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, p.56, description, p.215: Medium size, campanulate single of 5-6 petals, large, overlapping with tips curved inwards; pink densely peppered, dotted and ticked crimson. Blooms early to mid-seasom. See p.279, Yokoyama & Kirino, 1989, *Nihon no Chinka.* A seedling of **Tarô'an** x (**Mado-no-tsuki** x **Benimyôrenji**). Originated in the Chûbu District, Japan. Named and released by Minoru Satô in 1968.

Kotobuki-hime. (Long Life Princess), *(C.japonica)*, Izu-Ohshima Hawaii Botanical Gardens List, 1980 as 'Kotobukihime'. No description. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.108: Flower, single, soft, blush pink, small size, campanulate form with stamens in compact cylinder. Flowers mid-season to late. Leaves dark green, ovate, recurved. Originated in the Chûbu area, Japan as a chance seedling of unknown parentage, originated and named by Fumio Naitô in 1980.

Kotobuki-wabisuke. (Long Life Wabisuke), (Wabisuke), JCS., 1987, *Japanese Camellia*, No.23, p.4, colour photo. Originated by a chance seed of **Tarôkaja** by Ogawa, Takeo, Izu Ôshima, Tokyo, Japan. The flower has red graduations on a light pink ground; small, single, open campanulate blooms; fragrant. Early flowering. Stamens inclined to be retrogressive. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.112.

Kotogaura. (Harp Bay), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.56, description, p.215: Large, deep pink, single with irregular, lobed and veined petals and a spreading centre of pink and white petaloids mixed with stamens, anemone form. Leaves elliptic, small. Plant habit dwarfish. An old variety, originated in the Kansai District, Japan.

Kotogi. Vanderbilt, 1941, *Camellia Research*, *II*, p.4. Corruption of the Japanese name **Kôtokuji.**

Kotohajime. (see below), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.50, p.25, colour photo, p.100, description as 'Koto-hajime': Leaves small, dark green, broadly elliptic, with the apex recurved, acute; thin, raised venation, margins crenate-denticulate, 6.3-7.3 cm long x 2.8-3.5 cm wide; petioles green and hairy. Flowers white, anemone centered double, with outer petals, 812; inner incurved petals, 34-103 and 14-15 petaloids, shaded pale yellow to pinkish yellow at the base. Stamens few with creamy filaments. Flowers early to mid-season. May be a synonym for **Shirokarako.** Originated in the Ishikawa Prefecture, Japan. Corruptions of the Japanese name: 'Kotchajime', 'Kothojimi'. The name refers to 13th December, the day for beginning customary business for the new year and indicates its early flowering.

Kotohime. (Princess of Japanese Harp), *(C.japonica)*, *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.310, colour photo, p.244, description: Small, cup-shaped single, pale pink with 7-8 over- lapping petals and a compact, central group of stamens of varying lengths. Blooms very early to mid-season. Leaves bright green, abruptly acute, serrulate. See p.92, Yokoyama & Kirino, 1989, *Nihon no Chinka*. See also: Seibundô Shinkôsha, 1979, *Senchinshû*, p.57. Originated in Chûbu District, Japan; its name was changed from 'Shungetsu' in 1975. A chance seedling of unknown parentage, originated and named by Haruichi Sakuragi in 1965.

Kotohirakô. (Kotohira's Red), *(C.x vernalis)*, Takana et al., 1986, *Journal of Japanese Society for Horticultural Science*, 55(2) :208. A tetraploid cultivar of *C.x vernalis* from Japan. Deep red, small size, single. Provisional name for **Gaisen**. Different reading 'Kotohiraben'.

Kotohirabeni. Sakata et al., Mar.1981, "Studies in the flower colour of the Camellia. II." *Memoirs of the Faculty of Agriculture*, vol.XVII, p.93. Different reading 'Kotohirakô'. Synonym for **Gaisen.**

Kotoji. (See note), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.204, colour photo and description: Large size, deep red, saucer-shaped single with 6-7 wide, emarginate, overlap- ping, somewhat crinkled petals and a central stamen cylinder with white filaments, joined for the lower quarter and yellow anthers. Blooms early to mid-season. Leaves deep green, elliptic, apices acuminate, margins serrate. Originated in Kanazawa City, Ishikawa Prefecture, Japan. Note: Its name was taken from the historic garden lantern (Tôrô) in Kenroku Park, Kanazawa City, which was called "Kotoji Tôrô". The original tree grows in this park. Named and released by Hisanao Nishimura in 1982.

Kôtokuji. (Kôtoku Temple), *(C.japonica)*, Mizuno, 1681, *Kadan Kômoku:* Red spotted with white. Full double. Originated in Japan. (Believed extinct.)

Kotomusume. (Girl Harpist), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.57, colour photo, p.215, description: Medium size, red, single of cupped form, 5-6 petals, with central, stamen column, golden anthers, pinkish filaments. Leaves elliptic, green, apex acute, base cuneate, margins shallowly serrulate. Selected from a wild japonica community in the precincts of Konpira Shrine in Kagawa Prefecture, Japan. Named and released by Saneichi Koyama in 1972.

Koto-no-ka. (Fragrance of Harp). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.103 with colour photo; English translation p.70. Medium size, pink, tubular to trumpet shaped single with cylindrical stamen cluster. Flowers mid-season. Leaves narrowly elliptic, medium size, somewhat waved. Upright, vigorous growth. Selected from the wild japonica community in the precincts of Konpirs Shrine. Named and released by Saneichi Koyama in 1972. From Kagawa Prefecture.

Koto-no-kaori. (Perfume of Ancient Capitol). (*C.lutchuensis* hybrid). Chinka-en, Niigata, Mail Order Catalogue, 1990-1991, No.161, p.8: Aki-no-engei Mail Order Catalogue for Autumn; Kairô-en Ltd, Kawaguchi, Saitama Prefecture, 1995, p.29, colour pl.: Small, campanulate single of 6-7 petals. Red with tubular stamens; rich fragrance. A seedling of *C.japonica* **Tôkai** x *C.lutchuensis.* Named by Tokuji Ôoka in 1977, released by Kaoru Hagiya. From Niigata prefecture, Japan.

Koto-no-ura. (Harp Bay), *(C.japonica),* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.58. No description. Originated in Japan.

Kotozute. (Parting Remark), *(C.japonica),* JCS., 1973, *Tsubaki*, No.12, pl.24, p.6, description, p.14: Large, pink, semi-double of 4-5 petal rows, with red streaks, outer petals rounded, emarginate, inner petals semi-erect, crinkled. A somewhat irregular stamen column. Flowers mid-season. Leaves shiny green, broad-ovate, wavy, apex blunt acute, margins shallowly serrate. A seedling of **Juraku,** originated by Nakamura, Totsurô in Tokyo, Japan. See also: Seibundô Shinkôsha, 1979, *Senchinshû*, p.56.

Ko-tsubaki. (Dwarf Camellia), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Also painted in the Hirayama *Tsubaki Byôbu*, (latter 17th Century); see: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.48. Itô, Ko'emon, 1879, *Chinkashû:* White spotted pink, medium size, semi-double. Originated in Japan. (Believed extinct.)

Ko-tsubaki. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.6 as a Japanese group name for *C.sasanqua.*

Ko-tsubaki-sashimaze. (see below), (Wabisuke), *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.287: Miniature, tubular, red, single with white spots. Originated in Japan. "Ko-tsubaki" = small Camellia and "sashimaze" = text written with a finger. This is probably a synonym for **Kochô-wabisuke.** See Heibonsha, Tomita et al., 1980, *Tsubaki*, p.142.

Ko-tsubaki-sen'e. (Small Camellia 1000-fold), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.233: Small, dark crimson, rose form double. Originated in Japan. (Believed extinct.)

Kotsubo. (Small Pot), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.174, colour photo and description: Small size, deep red, campanulate single with 5 irregular, emarginate petals and a central stamen column with reddish filaments, joined for the lower half, yellow anthers with protruding style. Blooms mid-season to late, Leaves dark green, broad-elliptic, apices acute, margins shallowly serrate. Selected from wild japonicas in the Okayama Prefecture, Japan. Named and released by Nobuo Sasai in 1965.

Kotsuzumi. (Small Drum), *(C.x vernalis),* Tanaka et al., 1986, *Journal of the Japanese Society of Horticultural Science*, 55(2):208. A triploid cultivar of *C.x vernalis* from Japan. JCS., 1988, *Tsubaki*, No.26, p.50: Flower single, peach red, small size. Discovered by Tsuyoshi

Matsumura and Yatsuhiro Maeda in Inasa Town, Shizuoka Prefecture in 1977, named by Yamasaki and Hakoda.

Kôuemon-tsubaki. (Kô'emon's Camellia), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû*, vol.5 in the section on white variegated leaves. Originated in Japan. (Believed extinct.) Different reading: 'Kô'emon-tsubaki'. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.163. Kô'emon was a person who lived at Kinobe, Ikeda-shi, Ôsaka.

Koukirin. Different reading for **Kôkirin.**

Kô-un. (Cloud of Perfume), *(C.japonica)*, Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, p.213 as 'Kohun': Medium size, peach pink, single, tubular to bowl-shaped blossoms. Mid-season blooming. Fragrant. Large stamen cylinder with white filaments, joined for the lower third, yellow anthers. Leaves elliptic to broad-elliptic, broad, glabrous, apices blunt acute, margins serrate. see p.83, Yokoyama & Kirino, 1989, *Nihon no Chinka* as 'Kôun'. Originated with a private family in Ôta City, Shimane Prefecture, Japan. Named and released by Yoshiaki Andoh in 1970. Different readings: 'Kohun'.

Kôun (Personal name) (*C.japonica*) from Ibaragi Pref, *Japan Camellia* No.81, August 2006: White peony form double, large to very large, blooming in March to April. Leaves lanceolate, medium. Named for an acquaintance of the originator. Parents unknown. First flower seen in 2004. Found and named by Kumimitsu Suzuki.

Koura-wabishin. (Koura Scraped Stamens), *(C.japonica)*, JCS., 1988, *Japan Camellia*, No.28, p.13 with colour photo: Miniature single, red of 5 irregular petals, long, channelled, notched and a small, compact centre of stamens, white, retrogressive anthers and filaments. Leaves dark green, long-elliptic, widely, shallowly serrate. Originated in Gotô Island, Nagasaki Prefecture, Japan.

Kouron-Jura. RHS., 1961, *The Rhododendron and Camellia Yearbook*, No.15, black and white photo, Fig.49, facing p.121; 124 Award of Merit. Corruption of the Japanese name **Konronkoku.**

Kouron Juro. Charles Hill Nursery Catalogue, 1975-1976. Corruption of the Japanese name **Konronkoku.**

Koussout. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.12. Orthographic error for **Kossuth.**

Kôwakamai. (Dance of Kôwaka). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.93 with colour photo; English translation p.63. Medium size, pale pink changing to white, lotus form with central petaloids, fragrant. Flowers mid-season. Leaves broadly elliptic, medium size. Spreading growth. A cross between *C.rusticana* 'Gyokuro' x *C.vietnamensis*. Named and released by Kaoru Hagiya, Niigata Prefecture, in 1981.

Kowei. Chûgai Nursery Co. Catalogue, 1936-1937. Different reading for **Kô-ei.**

Kowei Red. McIlhenny Catalogue, 1945-1946. Synonym for **Moshio.**

Kowgoyoku. Nuccios Nurseries Catalogue, 1955, p.19. Corruption of Japanese name **Kôgyoku.**

Kowgyoku. McIlhenny, 1937, *600 Varieties of Camellias.* Different reading for **Kôgyoku.**

Kow Oi. Hazlewood & Jessep, 1972, *Checklist - Camellia Culivars from Nursery Catalogues*, p.124. Corruption of the Japanese name **Kô-ei.**

Koyabu. *(C.japonica)* Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. From Yamaguchi Pref.

Kôyakomachi. (Kôya Beauty), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.53, colour photo, p.214, description: Very small size, red, cup-shaped single, with a central, stamen column with large, yellow anthers. Blooms mid-season. Originated in Chûbu area, Japan.

Kôya-komachi. (Dyer's Komachi). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.92 with colour photo; English translation p.62. Miniature, deep red, tubular to trumpet shaped single, tubular stamen cluster. Flowers early to mid-season. Leaves elliptic, small. Upright, vigorous growth. Selected from wild japonicas growing at Kagamihara in Gifu Prefecture, discovered and named by Hiroshige Hayakawa, Aichi Prefecture, in 1971.

Koyanagi. (Little Willow), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô*, vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, white flower, convex in shape. Originated in Japan. (Believed extinct.)

Koya-no-ike. (Cottage by the Pond), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Light pink, large size, semi-double, striped and dotted with white, occasionally with red streaks. Originated in Japan. (Believed extinct.)

Koya-no-tomoshibi. (Dyer's Light), *(C.japonica)*, Yokoyama & Kirino, 1989. *Nihon no Chinka*, p.91, colour photo and description: Medium size, soft pink, wide, vase-shaped single of 6 petals of irregular size and a central stamen cylinder with ivory filaments, joined for the lower half, and yellow anthers. Blooms early to mid-season. Leaves dark green, lanceolate, apices tapering acuminate, margins serrate. A seedling of **Meigetsu.** Originated in Yonago City, Tottori Prefecture, Japan.

Kôyasan. (Mount Kôya), (C.*japonica)*, Sakuden, 1630. *Hyakuchinshû:* Large, white, formal double. Originated in Japan. (Believed extinct.)

Kôyasan. (Mount Kôya), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Flowers red, semi-double, with 3 rows of petals, stamens spread like a tea whisk. (Higo form). Originated in Japan. (Believed extinct.) "Kôyasan" is Buddhism's famous religious mountain in Wakayama Prefecture.

Kôyô. (Facing the Sun), *(C.japonica)*, Shufu no Tomo-sha, 1976, *Tsubaki to Sazanka*, inside back cover, colour photo: Medium size, dark red, single, cup-shaped, with 5 irregular petals and a central, spreading cluster of stamens with golden anthers. Originated in Japan.

Koyoden. (Unknown), *(C.japonica)*, RHS., 1968, *The Rhododendron and Camellia Yearbook*, No.22, p.19 in "Camellias at Windsor" by T.E. Findlay in plants received from the Japanese collection of Sir James Horlick. No description.

Kozaka-no-honoho. ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.14. Different reading for **Kozaka-no-hono'o.**

Kozaka-no-hono'o. (Blaze on a Hill), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.14 as 'Kozaka-no-honoho': Very small size, vivid red, tubular, single, Late blooming. Originated in Shizuoka Prefecture, Japan.

Kozakura. (Small Cherry), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Yashiro, 1841, *Kokon Yôrankô*, vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Small, cherry coloured semi-double. This is a different cultivar to the present one of this name. Originated in Japan. (Believed extinct.)

Kozakura. (Small Cherry), *(C.japonica)*, *Encyclopedia of Camellias in Colour*, vol .I, 1972, pl.325, p.144; Seibundô Shinkôsha, 1979, *Senchinshû*, p.54, description, p.214: Medium to small size, semidouble of pinkish white, variously marked and streaked with rose-pink. The centre consists of a few stamens and 3 or 4 small, erect petals and petaloids. Leaves dark green, elliptic, apex acuminate, margins serrulate. Originated in Japan. Different reading: 'Kosakura'. The original tree has long been cultivated in the precincts of the Buddhist

Temple, Reikanji, Sakyo-ku, Kyôto. Synonyms: 'Reikanji-kozakura' and 'Kozakura-Reikanji'.

Kozakura-Reikanji. (The Reikan Temple Small Cherry), Tuyama, 1968, *Camellias of Japan*, pl.372, p.189, description, p.200: Leaves ovate-elliptic to broadly elliptic with a long, acuminate apex and crenate-serrulate margins. Flowers double, not so widely opened, filled with comparatively large, inner petals, white or pale pink, striped rosy pink (Spinel pink 0625/1). It has long been cultivated in the Buddhist Temple Reikan, Kyôto, Japan. Different reading: 'Reikanji-kozakura'. The name **Kozakura** is now recognised as the valid name and 'Kozakura-Reikanji' is a synonym.

Kôzan. (Mountain's Name), *(C.rusticana)*, Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.59. No description. Originated in Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.89 with colour photo; English translation p.60. White tubular single, tubular stamen cluster. Flowers mid-season to late. Leaves elliptic, medium size. Upright, vigorous growth. A seedling of **Shûfûraku.** Originated and released by Minoru Satô in 1978.

Kozan-no-tsuki. (Moon above Kozan), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.54, colour photo, p.214, description: Small size, white, single, opening cup-shaped, 5-6 large, overlapping, rounded petals, slightly emarginate; bold, centre stamen column, yellow anthers, pale yellow filaments. Occasionally variegated flowers appear. Leaves mid-green, elliptic with acuminate apex, margins shallowly serrate. Originated in Angyo, Saitama Prefecture, Japan.

Kozome. (Dark Dyed), *(C.japonica)*, Himuro, 1982, *Murasuzume:* Deep pink, double. Stamens inter-mingled with the petals. A seedling of **Kariginu.** Originated in Japan.

Kôzu-no-akebono. (Kôzu Akebono). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.90 with colour photo; English translation p.60 Medium size, pink semi-double, thick glossy petals, tubular to split stamens. Flowers mid-season to late. Leaves elliptic, small, thin, recurved. A chance seedling raised by a private family in Shido Town, discovered by Tetsurô Imayuki in 1997, named by Naoyuki Uemura. From Kagawa Prefecture.

Kôzu-no-yuki. (Snow in Kôzu). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.90 with colour photo; English translation p.60. Large, changing to white, semi-double with thick petals, wrinkled and crinkled, tubular to split stamens. Leaves elliptic, small, recurved. Upright growth. An old camellia in Shido Town, discovered by Tetsurô Imayuki, named by Naoyuki Uemura, released by the Kagawa Branch of the JCS in 1997. From Kagawa Prefecture.

Kozuru. (Baby Crane). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.102 with colour photo; English translation p.69. Small, pink shading to white at the centre, tubular to bowl shaped single with tubular stamen column. Flowers mid-season to late. Leaves elliptic, small recurved. A cross between **Sasameyuki** and 'Shûran', originated by Tadao Yamaguchi, named and released by Tokio Hara in 1995. Naming is related to the place of origin, 'Tsurugi, which literally means the place where cranes visit. From Ishikawa Prefecture.

Kôzu-tsubaki. (Kôzu Camellia), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.375, p.159, colour photo, p.347, description: Large size, full peony form, deep pink, sometimes with some white petaloids, 11-12 cm across, 50-60 petals, outer large, reflexed; inner small, erect, twisted. Leaves mid-green, lanceolate, acuminate, margins shallowly serrate. Originated in Japan. "Kôzu" is a place in the Kagawa Prefecture, Shikoku Island. Selected and released by Saneichi Ogawa in 1972 from old camellias raised by a private family in Shido Town.

Kozutsumi. (Small Shoulder Drum). *(C.x vernalis). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan)*, 2010, p.308 with colour photo; Miniature, peach red single. Flowers early to mid-season. Leaves narrowly elliptic, small. Upright somewhat vigorous growth with

dense branching. A Wabisuke type *C.vernalis* found by Takeshi Matsumura and Katsuhiro Maeda in Inasa Town, Shizuoka Pref., Japan in 1977, named by Yamasaki.

Kramer's Beauty. *(C.japonica), American Camellia Yearbook*, 1981, p.101, Reg. No.1699: A medium to large, vibrant red, full peony form, *C.japonica* chance seedling of **Kramer's Supreme,** originated by Kramer Bros. Nursery, Upland, California, USA. Blooms are fragrant and growth is vigorous, compact and upright. Flowers mid-season. Chinese synonym 'Keruimo Nühai'.

Kramer's Blush. Cannon, 1966, ACS., *The Camellia Journal*, vol.21, No.1. (advert). No description. No valid publication located.

Kramer's Delight. *(C.japonica), American Camellia Yearbook*, 1981, p.101, Reg. No.1700 A large size, rose-pink, full peony form *C.japonica* chance seedling of **Kramer's Supreme,** originated by Kramers Bros. Nursery, Upland, California, USA. Blooms are fragrant. Flowers mid-season. Plant growth is vigorous, compact and upright.

Kramer's Fluted Coral. *(C.saluenensis* hybrid), SCCS., 1984, *Camellia Nomenclature*, p.140: Light coral pink to darker coral on margins. Miniature to small semi-double to double with fluted petals. Blooms mid-season to late. Originated in USA by Kramer Bros. Nursery, Upland, California. Sport: **Kramer's Fluted Coral Variegated.** Chinese synonym 'Aoban Shanhu'.

Kramer's Fluted Coral Variegated. *(C.saluenensis*, hybr.), SCCS, 1990, *Camellia Nomenclature*, p.150 as 'Kramer's Fluted Coral Var.': A virus variegated form of **Kramer's Fluted Coral** - Coral and white. Originated at Kramer's Nursery, Upland, California, USA. Chinese synonym 'Caidi Shanhu', later changed to 'Hua Aoban Shanhu'.

Kramer's Picotee. Cannon, 1969, ACS., *The Camellia Journal*, vol.24, No.1, (advert). No description. No valid publication located.

Kramer's Supreme. *(C.japonica),* Wylam, 1957, *American Camellia Yearbook*, p.27: A striking seedling raised by Mr August Kramer of Kramer Bros. Nurseries, Upland, California, USA. This was named **Kramer's Supreme** (Plant Patent #1583). The peony form flowers are large, full and bright red and the strong growing habit produced a well shaped plant, fragrant. Mid-season flowering. This cultivar has received the following awards: 1956. The Frank Williams Award from the SCCS. 1958. The Margarete Hertrich Award from the SCCS. 1978. The William E. Woodroof Camellia Hall of Fame Award, SCCS. For colour photos see: 1957, *American Camellia Yearbook*, facing p.144. 1981, Macoboy, *The Colour Dictionary of Camellias*, p.98. It was registered with the ACS, 1983, Reg. No.1877. Sports: **Cucamonga, Kramer's Supreme Variegated.** Orthographic error: 'Krammer's Supreme'. Chinese synonym: Keruimo Damudan'.

Kramer's Supreme Variegated. *(C.japonica),* SCCS, 1966, *Camellia Nomenclature*, p.76 as 'Kramer's Supreme Var.': A virus variegated form of **Kramer's Supreme** - Bright red, blotched white. Originated by Kramers Bros Nursery, Upland, California, USA. Registration No.1878 with ACS.

Krammer's Supreme. Quaymont Ltd. Nursery Catalogue, 1985-1986. Orthographic error for **Kramer's Supreme.**

Kranenflamme. *(C.japonica).* An 11 year old seedlng of **Uchû-no-hikari,** first flowered 2010, pollen parent unknown. Originated by Dr Karl-Heinze Huebbers, Kranenburg, Germany, registered by Julia Westhoff, Bremen. To be introduced 2015 by W. Eberts, Tangstedt. Plant is upright and bushy, with medium growth rate. Flowers mid-season to late. Leaves are flat, slightly twisted, oval, dark green, 9 cm x 5 cm. Flower is a wide open semidouble with 6-8 petals, 8-10 cm diameter x 3 cm deep. Base colour is white shaded and spotted with pink, and with prominent radial stripes and patches of red. Stamens slightly sprayed, with yellow anthers and white filaments.

Kranenkreation. *(C.hybrid),* A 13 year old seedling of **Mary Phoebe Taylor**, first flowered 2007, pollen parent unknown. Originated by Dr Karl-Heinze Huebbers, Kranenburg, Germany, registered by Julia Westhoff, Bremen. To be introduced 2016 by W. Eberts, Tangstedt. Plant is upright, bushy, with medium growth rate. Flowers midseason to late. Leaves are mid-green, flat, slightly twisted, 10 cm x 4 cm. Flowers semidouble to loose peony with 20 petals and a small number of petaloids. Colour a strong pink, 10-12 cm diameter x 4.5 cm deep. Stamens tubular to sparse among petaloids, anthers yellow, filaments white.

Krazy Kat. *(C.japonica),* Gentry, 1973, ACS., *The Camellia Journal*, vol.28, No.4, p.28. No description. No valid listing located.

Kreena. *(C.japonica), American Camellia Yearbook*, 1952, black and white photo facing p.186: A brilliant single, red, of 7 petals and a prominent cylinder of stamens. Originated in USA by Smythe Nurseries, Ross, California, USA. Orthographic error 'Krena'.

Krena. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Kreena.**

Kristie Wilson. (*C.reticulata* hybrid). ACRS, *Camellia News*, 1998, No.147, p.13, colour photo p.19, Reg. No.507. Originated by J. & P. Wilson, Figtree, NSW, Australia. A chance seedling from *C.reticulata* **Damanao** ('Cornelian'), pollen parent unknown. First flowered 1985. A deep pink (RHS.CC.61B – 58D) informal double of 35 petals, 15 cm diameter x 8 cm deep, which appears mid-season to late on a dense upright plant of medium growth. Leaves green, glossy, flat, lightly veined, fine serrations, apex cuspidate, 10 cm long x 5 cm wide. Petals fluted, some petaloids. Free flowering. Vibrant colour shading to white in centre.

Kristin Woodroof. *(C.japonica),* Nuccio's Nurseries Catalogue, 1966: Large, pink, semi-double. *American Camellia Yearbook*, 1968, p.132, Reg. No.986: A 9 year old chance seedling of 'Reg Ragland' that first bloomed 1962. Originated by W.E. Woodroof, Sherman Oaks, California, USA. Plant growth is upright and dense with light green leaves, 10 cm x 6 cm. The semi-double flower, similar to Frizzle White, is 12.5 cm across. Clear, jewel pink. Blooms mid-season. Sport: **Kristin Woodroof Variegated.**

Kristin Woodroof Variegated. *(C.japonica),* Gentry, 1967, ACS., *The Camellia Journal*, vol.22, No.5, p.28 as 'Kristin Woodroof V.': A virus variegated form of **Kristin Woodroof** - Jewel pink, blotched with white. Originated in USA.

Kristy Piet. *(C.japonica),* SCCS., 1986, *The Camellia Review*, vol.48, No.2, p.7: Chance *C.japonica* seedling, very full, white, formal double, 4-5 cm across, with occasional pink specks and streaks. Originated in USA by Meyer Piet and Lee Gaeta, California.

Kûge. (Flower in the Sky). *(C.x williamsii). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.289 with colour photo; Small to medium semi-double, white with some thin red stripes, lotus form, tubular stamens. Flowers mid-season to late. Leaves elliptic, small to medium size. Upright and densely branched. A cross of **Tsuki-no-fue** x **Our Betty,** originated by Misoji Yamaguchi and released in 2009.

Kuigyo-subaki. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Kingyo-tsubaki.**

Kuihong. (Red Sunflower), Shanghai Botanical Gardens List, 1985. Large, red, anemone form. Originated in China.

Kujaku. (Peacock), *(C.japonica),* Minagawa, 1956, *Chinkashû:* Small, red, single; lily leaf Camellia. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.213, p.372; Tuyama, 1968, *Camellias of Japan*, pl.191, p.97, colour photo, p.146: Leaves linear, thick textured; margins obscurely crenate; petioles glabrous. Flowers red, (Carmine 21) with 12-22 linear petals. Stamens long, irregular, few. Flowers mid-season. The variegated form is called **Hakuhan-kujaku.** Originated in Mikawa, Chûbu District, Japan. Sport of **Mikawa-yuriba.** Synonym: 'Peacock Camellia', 'Benikujaku'. Has been erroneously called 'Yuri-tsubaki', the name of a different cultivar. See Shû'eisha, Nakamura, Tsuneo, 1971, *Genshoku Satsuki Tsubaki*, p.325 for a complete description. See colour photos: p.32-33, *Kyôno Tsubaki to Tera* 1981.

Kujaku-no-mai. (Dance of the Peacock). *(C.japonica),* Chinka-en, Niigata, Catalogue, 1990-1991, p.1. Kinji Ohara, Chiba, 1993-1994, *List of Camellias*: A seedling of **Kujaku.** Deep red, slender petals, semi-double, medium size, lotus shape. Originated in Niigata Prefecture, Japan.

Kujaku-tsubaki. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.441, p.182. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.46, 211; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.332: Synonym for **Hakuhan-kujaku.**

Kûkai-Nisei. (Kûkai II), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.215, colour photo and description: small size, vermilion, wide, campanulate single with a small, central stamen column with white, infertile anthers. Blooms mid-season to late. Leaves light green, broad lanceolate, apices long tapering acuminate, margins serrate. Originated in Gotô Island, Nagasaki Prefecture, Japan. 'Kûkai" was an ancient Buddhist priest.

Kukyoku. Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.12, C-19. The Japanese reading for the Chinese **Jiuqu** (Nine Bends).

Kumabotan. (Bear Peony), *(C.japonica),* Wada, 1941, *Japanese Garden Treasures*, p.28: A paler colour form of **Benidaikagura.** Originated in Japan.

Kumaga'e. (Place Name), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Flowers, cardinal red, single, flat, inner petals curved at edge, large stamen cluster. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77. Originated in Japan. Different reading: 'Kumagai', but it is uncertain that this ancient cultivar is the same as the existing one.

Kumaga'e-shibori. (Kumaga'e Variegated), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Flowers cardinal red, large size, early blooming, may be variegated. A sport of 'Kumaga'e'. Originated in Japan. (Believed extinct.)

Kumagai. (Hero in a Kabuki Drama), *(C.japonica),* Wada, 1941, *Japanese Garden Treasures*, p.29: Magificent single with big, long, drooping leaves and enormous, flat, open flowers, vermilion scarlet, contrasting with golden yellow petaloid anthers in a flat circle. See colour photos:

Tuyama, 1968, *Camellias of Japan*, pl.170, p.85; Satô, 1975, *Chûbu no Tsubaki*, p.112; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.223. Seibundô Shinkôsha, 1979, *Senchinshû*, p.47 as **Kumagai** from the Kansai district. Dark crimson (Currant red 821/3), up to 13 cm across, 5-7 petals, 150 spreading stamens with large. yellow anthers and white filaments. Leaves large, broadly elliptic to ovate-elliptic, shortly acuminate, flat, thick texture, coarsely crenate. A very old cultivar from Kyôto, Japan. Synonym: 'Kômyô'. Sport: 'Kumagai-shibori'. There are many cultivars resembling this in Kansai, Kumamoto or Chûbu in Japan. "Kumagai" is a Daimyô family surname decending from the Taira Clan of the 8th century.

Kumagai. (Hero in a Kabuki Drama). (Higo), Uekiya Bunsuke Hikki,1830. No description. Taniguchi, 1912, *Chinka Kyôkan:* Single, very large, deep red, large stamen cluster. Adachi, 1960, *Camellia. Its Appreciation & Artistic Arrangement*, p.72: Flower, dark red, 13 cm across, 5-7 petals. Stamens fully opened, white. Leaf, very large, ovate elliptic. Occasionally petaloids appear. Hiratsuka, Taizô, 1964, *Higo Camellia*, pp.13, 32: Dark crimson, 13 cm across, 5-7 petals white stamens in a spreading circle. *Encyclopedia of Camellias in Colour*, pl.11, p.42 has **Kumagai** from Kansai and Kumamoto. This and the previous camellia seem somewhat similar. Orthographic error: 'Kumgai'. Different reading: 'Kumagaya'. Synonym: 'Higo-kumagai'. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.124, 240.

Kumagai de Gaujacq. *(C.japonica),* J & F Thoby, Gaujacq, France, Catalogue, 2009, p.4; A special form of **Kumagai.** No further details.

Kumagai (Kansai). (*C.japonica* hybrid). *"Camellias in Kurume"*, ICS Congress, Kurume 2010, p.110 & p.125; No description. From Kyoto Pref., Japan.

Kumagai (Nagoya). (Kumagai from Nagoya), (Higo), Perkins, III, 1979, SCCS., *The Camellia Review*, vol.41, No,2. *American Camellia Yearbook*, 1984, p.179, Reg. No.1930: A large dark crimson, Higo chance seedling, mid-season blooming, originated in Japan. Flower size, 10.5 cm across x 2.5 cm deep, with 6 petals, 3 large and 3 smaller. Plant growth is upright, spreading and open with dark green leaves, 10 cm x 5 cm. Orthographic errors: 'Kumgai'(Nagoya), 'Kumagai'(Nagoyo).

Kumagai. Different reading for **Kumaga'e.**

Kumagai (Nagoya). SCCS., 1987, *Camellia Nomenclature*, p.62. Orthographic error for **Kumagai (Nagoya).**

Kumagai-shibori. (Kumagai Variegated), Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Different reading for **Kumaga'e-shibori.**

Kumagai-tsubaki. (Kumagai Camellia), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.509; Jikeikyôki, 1632:- Small fuchsine pink, single, 6-7 petals, central stamen column with white filaments. Nakayama, 1847, *Senka'oden:* Single, deep red, large stamen cluster. Similar to the 1789 *Shoshiki Hanagatachô* cultivar, if not the same. Originated in Japan. (Believed extinct.)

Kumagaya. (Place Name), *(C.japonica),* Tuyama, 1966, *Camellia Cultivars of Japan*, pl.110, p.187: Medium size, crimson single Higo, with 5-6 uneven petals and large, spreading stamen cluster. According to Tuyama, this resembles **Kumagai** but leaves are more slender and flowers are smaller than **Kumagai** or **Kômyô**. Originated in Angyô, Saitama Prefecture, Japan.

Kumagaye-tsubaki. Joshua Condor, 1893, *Landscape Gardening of Japan*, p.117. Synonym for **Kumagai.**

Kumamoto Castle. *(C.japonica),* ACRS, N.S.W. Foundation Branch, *Newsletter*, Issue No.9, Oct.1984, p.4: A seedling of **Nancy Bird;** an informal double with 5 tiers of red petals. Originated in Australia.

Kuma-no-nada. (Name of Ocean near Wakayama), *(C.japonica)*, Katayama, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8. For colour photo see: Seibundô Shinkôsha, 1979, *Senchinshû*, p.47, description, p.211: Large, dark crimson, single of 6 petals, 3 large and 3 smaller, all with irregular and emarginate edges about a large, spreading stamen cluster, opens flat. Leaves mid-green, matt, elliptic, apex tapering acuminate, margins serrate. Originated in Kansai area, Japan. A seedling of Daikagura. Originated and released by Juraku'en Nursery in 1967.

Kumano-o. (Tail of the Bear), *(C.japonica)*, *Chinka Zufu*, (Before 1700), Watanabe, 1969, pl.689: Small, three teired, dark crimson semi-double. Originated in Japan. (Believed extinct.)

Kumasaka. (Character in a Kabuki Drama who was an infamous Robber), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1: Large size, double, pink flower with red steaks. Corolla is wide and round in shape. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* For the modern cultivar of this name see colour photos: Fendig, 1949, *American Camellia Catalogue*, colour illustration. Tuyama, 1966, *Camellia Cultivars of Japan*, pl. 21; Tuyama, 1968, *Camellias of Japan*, pl.215, p.109. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.197; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.98. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.47, 211. Leaves elliptic, broadly elliptic or narrowly ovate-elliptic, apices sharply acuminate, glossy, dark green, venation slightly impressed, margins serrate. Flowers variable, basically peony form occasionally semi-double and rose form double. Colour deep rose (Crimson 22/1), averaging 10.5 cm across x 4 cm deep; two rows of outer petals, broad and flat, widely emarginate, inner petals suddenly smaller and irregular, dividing stamen groups. Late flowering. Originated in Kantô, Japan. Synonyms: 'Kumasaka-beni', 'Benikumasaka', 'Lady Marion', 'Hollyhock', 'Jean Kerr', 'Sherbrook', 'Zada Headley', 'Lady Marian', 'Maiden'. Corruptions of the Japanese name: 'Kumosaka', 'Kumazaka', 'Kumsata'. Sports: **Kumasaka White, Hanatachibana.** Pseudonyms: 'Mariana Gaete', 'Benikarako'. Chinese synonym 'Xiongban'.

Kumasaka-beni. Satomi, 1956, *Camellia Varieties of Japan*, p.9. Synonym for **Kumasaka.**

Kumasaka Variegated. Kiyono Nursery Catalogue, 1940-1941, p.22. Synonym for **Hanatachibana.**

Kumasaka White. SCCS., 1960, *Camellia Nomenclature*, p.69: A white sport of **Kumasaka**, identical except for colour, originated by Hudsen, USA.

Kumazaka. Yashiroda, 1950, *American Camellia Yearbook*, p.428. Different reading for **Kumasaka.**

Kumekurenai. (Red Camellia from Kume). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.82 with colour photo; English translation p.55. Medium to large size, deep red, rose form to formal double. Flowers early. Leaves broadly elliptic, large, clear veins. Upright, vigorous growth. An old camellia in Okinawa, named by Sitarô Niizato in 1975. From Okinawa Prefecture.

Kumeshi-karahashi. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.141. Synonym for **Giboshi.**

Kumeshiranami. (White Waves of Kume). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.82 with colour photo; English translation p.55. Small to medium size, white sake cup-shaped to trumpet single, pinched stamen cylinder. Flowers early. Leaves obovate to oblong, medium to large. Spreading, vigorous growth. The original tree survives at a private family on Kumejima Island. Named and released by Okinawa Camellia Club in 1991. From Okinawa Prefecture.

Kume-shiratami. (White waves at Kume Island). *(C.japonica)*, Hiroshi Matsuda, Okinawa in JCS Tsubaki, 1994, No.33, p.35, illust. p.33: Small white, cup to trumpet shaped single. Blooms mid-season. Leaves oblong-elliptic, medium size. Bush spreading and sturdy. Originated on Kume Island, Japan.

Kumgai. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.141. Orthographic error for **Kumagai.**

Kumgai (Nagoya). *American Camellia Yearbook*, 1984, p.179. Orthographic error for **Kumagai (Nagoya).**

Kumibe-goshi. (obscure), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Single, deep red, white spotted, large size. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.80. Originated in Japan. (Believed extinct.)

Kumie. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.82 with colour photo; English translation p.55. Medium size, pale pink graduating to whiteat the centre, trumpet shaped single with rounded petals, cylindrical stamens. Flowers early to late. Leaves elliptic, medium size, flat. Upright growth. A chance seedling of **Berenice Boddy,** named and released by Nobuo Sasai in 1986. From Okayama Prefecture.

Kumimi Guruma. Ingwerson Nursery Catalogue, 1957-1958. Corruption of the Japanese name **Yukimiguruma.**

Kum-no-mine. "*Sasanquas, The Winter Flowers*" ICS Congress, Kurume 2010, p.66; Orthographic error for **Kumo-no-mine.**

Kumo-i. (Palace), *(C.japonica),* Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15: Kasuya, Kamegorô. 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, semi-double with three rows, blush pink with white spots. Originated in Japan. (Believed extinct.) Corrupted name: 'Kumoni'.

Kumo-i. (Palace), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Large size flower, double, deep persimmon red, with darker red streaks. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.80. Originated in Japan. (Believed extinct.)

Kumoi-no-sora. (Cloudy Sky), (Higo), Tamura, 1956, *Higo Tsubaki Shinkaki:* Pink with white margins, large. A sport of **Mine-no-kumo.** Originated in Japan.

Kumoka. (Cloudy), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* White, large, blooms single and semi-double on same plant. Stamens irregularly degenerate. Originated in Japan. (Believed extinct.)

Kumoma-no-tsuki. (Moon Between Clouds), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16. Large size, single, white. Originated in Japan. (Believed extinct.)

Kumoni. Hillier's Arboretum, 1987, *Hampshire County Council File*, p.3. Corruption of the Japanese name **Kumo-i.**

Kumo-no-mine. (Cloud Ridge) *(C.hiemalis). "Sasanquas, The Winter Flowers"* ICS Congress, Kurume 2010, English translation p.66 as 'Kum-no-mine'; White, the reverse of outer petals peach red, double, medium size, early. From Kurume, Japan.

Kumo-no-ue. (Over the Clouds), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.12: Purplish pink. Large single with round petals. Originated in Japan.

Kumo-no-yama. (Mountain of Clouds), *(C.sasanqua),* Yashiro, 1841, *Kokon Yôrankô,* vol.344. No description. Originated in Japan. (Believed extinct.)

Kumo-no-yeal. Woodward, 1978, *International Camellia Journal*, No.19, p.81. Corruption of the Japanese name **Kumo-no-ue.**

Kumosaka. Manning, 1934, *Plant Buyers Index.* Corruption of the Japanese name **Kumasaka.**

Kumsata. McIlhenny Catalogue, 1935. Corruption of the Japanese name **Kumasaka.**

Kung Fen. Ono, 1803, *Honzô Komoku Keimô.* Different reading for **Gongfen.**

Kungfen. Feng et al., 1986. *Yunnan Camellias of China*, p.163. Different reading for **Gongfen.**

Kuni-no-hikari. (Glory of the Nation), *(C.sasanqua)*, Ishizawa & Hagiya, Kyôto Engei Kurabu, 1967, *Tsubaki Tokushû*, No.8. Described only as formal double. Originated in Japan.

Kuni-no-hikari. (Glory of the Nation), (Higo), Yoshimura, 1961, *Higo Tsubaki Meikan:* Very large, 10 cm across, red, 6-7 petals with a spreading stamen cluster of about 150, with pale, reddish filaments, Blooms mid-season. Large leaves, broad-ovate, dark green, apices acute, margins serrate. A seedling of 'Higo-yamato-nishiki' Originated in Kumamoto, Japan ca.1910 by Tatsuo Fujimoto, and named **Kuni-no-hikari** in 1960. Synonym: 'Benitaiheiraku'. For colour photos see: Hiratsuka, 1964, *Higo Tsubaki*, pp.28, 12. Tuyama, 1968, *Camellias of Japan*, pl.174; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.22; Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.170, 171; Seibundô Shinkôsha, 1979, *Senchinshû*, p.47.

Kunishirazu. (Unknown Land), *(C.japonica)*, Mizuno, 1681, *Kadan Kômokû:* Red streaks an pink ground, double. *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.453: Light pink ground with pink splashes, white base. Semi-double. Originated in Japan. (Believed extinct.)

Kunizukushi. (All Provinces), *(C.japonica)*, Mizuno, 1681, *Kadan Kômokû:* White, variegated with red. Large double. Originated in Japan. (Believed extinct.)

Kunlunhei. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.53. Chinese synonym for **Konronkoku.**

Kunmingchun. (Kunming Spring), *(C.reticulata)*, Durrant, 1972, ACRS., *Camellia News*, No.45, p.4: Speaking of postcards from a folder entitled "Yunnan Chahua": 'Kunming Spring'. This shows two, bright pink, semi-double flowers. The petals are veined and the centre ones are folded over in a rabbit eared manner...they have a high centre and looks like 'Early Peony', ('Tsaomudan'). Feng et al., 1986, *Yunnan Camellias of China*, p.54, colour photo and description: Leaves long-obovate to oblong, thin, flat, apices short pointed, bases cuneate, 7.5-10.5 cm long x 3.5-4.5 cm wide. Flowers deep pink (RHS.CC.57D), diameter 11-12 cm. Petals 19-22 in 4-5 whorls, outer whorls flat, inner whorls undulate, erect, margins notched. Stamens numerous, divided into several groups, partially petaloid. Pistils well developed. This is a new cultivar selected from seedlings of open pollenated seeds by researchers at the Kunming Botanical Garden. Flowers mid-season. Different reading: 'K'un-ming-ch'un'. Synonyms: 'Kunming Spring', 'Kunming's Spring'.

K'un-ming-ch'un. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.24. A different reading for **Kunmingchun.**

Kunming Spring. Feng et al., 1980, *Yunnan Shan Chahua.* Western synonym for **Kunmingchun.**

Kunming's Spring. Ikeda, 1976, *American Camellia Yearbook*, p.140. Synonym for **Kunmingchun.**

Kunpû. (Balmy Breeze), *(C.saluenensis x C.sasanqua)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.212: White, with a pink cast, single of changing form, tubular to sake-cup, of 5-6 petals with lacinated petal edges, fragrant, extremely small, blooms early; ovaries hirsute. Leaves long-ovate, very small, apices blunt acute, margins shallowly serrulate. Plant habit, vigorous, wide spreading, weeping. Originated in Niigata Prefecture, Japan by Dr Carter from the cross *C.saluenensis x* 'Hime-sazanka'.

Kunrun Jura. Lanning Roper, 1954, RHS., *The Rhododendron & Camellia Yearbook*, No.8, p.139. Corruption of the Japanese name **Konronkoku.**

Kunshilanren. Gao, Jiyin, Ltr 5th August 1992. Chinese synonym for the Australian *C.sasanqua* **Queenslander.**

Kupo. Gao, Jiyin, 1993, *The Observations from the Camellia World*, No.567, p.69. Chinese synonym for the USA *C.reticulata* hybrid **Cameron Cooper.**

Kuragatake. (Name of a Mountain behind Kanazawa City), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.141, p.71, colour photo, p.129, description as 'Kura-ga-take': Leaves broadly elliptic, dark green, convex on upper surface, venation impressed, margins crenate, 6.4-8.7 cm long x 4.2-4.8 cm wide; petioles 6 mm long, very hairy. Flowers single, dark red, (Currant red 821 /3) single with 5-7 petals, oblong, cm x 3 cm. Stamen column 3 cm high, anthers yellow, filaments reddish. Flowers mid-season. Originated in Kanazawa City, Ishikawa Prefecture, Japan.

Kurahashi. (Granary Bridge), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô:* Large, double, purple flower with many white spots. Resembles a lotus flower. Originated in Japan. (Believed extinct.)

Kurahashi. (Place Name), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Large size, red. Originated in Japan. (Believed extinct.)

Kuraihimo. Hiratsuka, 1964, *Higo Camellias*, colour photo, p.32 as 'Ichû'. Same characters as **Kurai-no-himo.**

Kurai-no-himo. (Braid of Court Rank), (Higo), Taniguchi, 1912, *Chinka Kyôkan.* First transliteration, Chûgai Nursery Catalogue, 1934-1935, p.22: Deep crimson, rounded petals, single, large. See color photo, Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement*, p.72: Large, 10 cm across, scarlet of 6-7 petals and 120 spreading stamens with white filaments. Leaves narrow-ovate, large, thick, outer margins a little wavy. Flowers mid-season. Different readings: 'Kurai-himo', 'Ichû', 'Ichiu', 'Kurai-no-shimo'. See: Hiratsuka, 1964, *Higo Camellia*, p.31 & 13, as 'Ichû'. Generally known as **Ichû** in Japan. Originated in Kumamoto, Japan.

Kurai-no-shimo. Settsu Raikôyen Co Catalogue, 1938-1939, p.13. Different reading for **Kurai-no-himo.**

Kureha. (Place Name), *(C.sasanqua)*, Chûgai Nursery Co. Catalogue, 1935-1936, p.26: Rose-pink flowers with darker spots. Medium size, single. Originated in Japan.

Kureha. (Chinese Costume), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.48, colour photo, p.212, description: White, single with 5-6 large petals with crinkled margins and a dominent stamen cylinder with pale yellow anthers and light creamy filaments, early flowering. Leaves a little obovate, mid-green, apices acuminate, margins shallowly serrulate. Originated in the Kansai area, Japan. Last character in name is different to sasanqua above.

Kurenai. (Red), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Flower red, formal double, medium size, white spotted. See JCS., 1969, *Tsubaki*, No.7, p.34. Originated in Japan. (Believed extinct.)

Kurenai. (Red). (*C.reticulata* hybrid). *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.82 with colour photo; English translation p.55. Medium size, deep red semi-double. Flowers mid-season. Leaves elliptic, medium size dull. Upright growth with sparse branches. A cross between *C.reticulata* 'Crimson Robe' (**Dataohong**) and *C.sasanqua* **Crimson King.** Named and released by Kazuo Yoshikawa in 1996. From Osaka.

Kurenai-no-giku. (Red Wild Chrysanthemum), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.14: Small to medium size, deep red, tubular single. Blooms mid-season. Originated in Okayama Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.332 with black and white photo; English translation p.229. Leaves narrowly elliptic, small. Somewhat spreading growth. A seedling of **Kikuzuki.** Originated by Morimoto, released by Yoshio Yamada in 1983.

Kurenai-no-sakazuki. (Red Sake Cup), *(C.japonica)*, JCS., 1987, *Japan Camellia*, No.25, p.4: Seedling of **Amagashita** raised by Funakoshi Kôji, Aichi, Japan. A single, deep red, medium size with tall, domed stamen cluster. Flower opens flat. Blooms mid-season.

Kurenai-sankô. (Red 'Sankô'), *(C.rusticana)*, JCS., 1986, *Japan Camellia*, No.21, p.4, colour photo: A variety selected from the wild at Yahiko Village, Niigata-ken, Japan. A dark red, single, about 3 cm across with very small petal whorls. Flowers mid-season to late. Petals are round and cylindrical, 3 in number; stamens cylindrical. Leaves mid-green, elliptic, margins serrate. Plant habit upright and spreading. Resembles **Sankô.** Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.189. Different reading: 'Benisankô'. Named by Hideyo Katô in 1982, released by Toshio Onozuka.

Kure-otome. (Ancient China's 'Otome'), *(C.japonica)*, Saitama Engei & Co. Catalogue, 1911, p.6: Pink, formal double flower, carmine stripes. Originated in Japan.

Kuretake. (Ancient Chinese Bamboo), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Cardinal red, large size, single flower. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.79. Originated in Japan. (Believed extinct.)

Kuretake. (Ancient Chinese Bamboo), *(C.rusticana)*, Hagiya & Ishizawa, 1966; Tuyama, 1968, *Camellias of Japan*, pl.269, p.137, description, p.172: Leaves olive green, ovate to ovate-oblong, often concave on upper surface, margins finely serrulate; petiole very hairy. Flowers formal double, petals imbricated, strongly concave, rosy red (Rose opal 022-022/1). Flowers mid-season. Originated in Niigata Prefecture, Japan.

Kurikara. (Name of a Pass in Ishikawa), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.301, p.152, colour photo, p.180, description: Leaves olive green, narrowly oblong to elliptic, venation impressed, margins strongly serrate, 7-8.6 cm long x 3.5-4.4 cm wide. Petioles 7-11 mm long, more or less hairy. Flowers of peony form, rose (Rose madder 23/1) blotched or marbled white with a prominent, central stamen group. Petals 9-11, the largest 5.5 cm x 4.3 cm, strongly emarginate with 2-6 additional, inner petals and 48-166 petaloids. Stamens spreading, yellow anthers, filaments pale creamy to rosy red. Flowers late. Originated in the Ishikawa Prefecture, Japan. "Kurikara" is the name of an historic Mountain pass in Ishikawa Prefecture.

Kuriyama-nishiki. (Brocade of Mount Kuri), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.282, colour photo and description: Medium size, pale pink with deep crimson streaks, single with 5 rounded petals with cleft apices and a central stamen cluster with yellow anthers. Blooms mid-season to late. Leaves deep green, elliptic, apices acuminate, margins serrulate. Originated in Toyama Prefecture, Japan.

Kuro Delight. *(C.japonica)*, ACS, *The Camellia Journal*, Nov. 1999, p.19, Reg. No.2506. Semi-double, maroon, with yellow anthers and white filaments. Long blooming season, cold hardy to -15° F. Originated by Dr William L. Ackerman, Ashton, Md., USA. *American Camellia Yearbook*, 1999, p.4, colour photo before p.1. A seedling of **Kuro-tsubaki** x 'Variety Z' (**Z**). The 17 year old seedling first flowered in 1987. Average flower size is 10 cm across x 5 cm deep, with 20 petals. Plant growth is slow and spreading. The dark green leaves are 12.7 cm long x 4.2 cm wide.

Kurobe. (Mountain's Name), *(C.japonica)*, JCS., 1973, *Tsubaki*, No,12, p.16, pl.32, p.8; Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.110, black and white photo: Medium size, 10 cm across, pink spattered with small white spots, peony form with large, undulate, exterior petals and a centre of smaller, erect, folded petals intermixed with the stamens. Petals about 40. Late flowering. Leaves glossy, mid-green, elliptic, apices acuminate, margins sharply serrulate, venation reticulate. Plant habit erect and vigorous. Collected in 1967 in Kurobe City, Toyama Prefecture, Japan from an old tree 7-8 m. tall. Named and released by Toyama Camellia Enthusiasts Club around 1970. See colour photos: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.432; Seibundô Shinkôsha, 1979, *Senchinshû*, p.49; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.376.

Kurobeni-sazanka. (Dark Red Sasanqua), *(C.sasanqua),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.34 as 'Kurobeni-sazanko': Hakoda, JCS., 1987, *Tsubaki*, No.26, p.45: Medium size, dark red single. Early flowering. Originated in the Chiba Prefecture, Japan.

Kurobeni-sazanko. ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.34. Orthographic error for **Kurobeni-sazanka.**

Kurobeni-shirochoji-iri-tsutsuzaki. *(C.japonica),* de Rothschild, 1963, RHS., *The Rhododendron and Camellia Yearbook*, No,17, p.143 as 'Kuro-beni-Shiro-Choji-iri-tsutsu-zaki': This is more a description of the flower. The first two characters mean dark red and the next four "shiro cho ji iri" indicate that it has white spots on the petals, the next character means tube - a red tubular form flower with white spots. Originated in Japan.

Kuroboshi. (Bullseye), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* A 5 petalled single, four white and one dark red. Originated in Japan. (Believed extinct.)

Kuroboshi. (Bullseye), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Yashiro, 1841, *Kokon Yôrankô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Double with 3 rows of petals. White with small spots and splashes of red. Originated in Japan. (Believed extinct.) Different reading 'Kurohoshi'.

Kuroboshi. (Bullseye), *(C,japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.576: Medium size, white, peony form with golden stamens interspersed with small petals in the centre. Originated in Japan. (Believed extinct.)

Kuroda-no-shiro. (White Camellia from Kurado), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon No Chinka*, p.45 colour photo and description: Small size, white, tubular single with central, pale yellow, large stamen cylinder. Blooms mid-season to late. Leaves mid-green, elliptic, apices acute, margins shallowly serrulate. Originated in Toyama Prefecture, Japan. A chance seedling of a cultivar, named and released by Mitsoroku Makino in 1980s.

Kurofune. (Black Ship). *(C.hybrid). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.285 with colour photo; Medium size, dark red single. Flowers mid-season to late. Leaves ovate, medium size. Upright growth. A cross of **Beni-kujaku** x (**Kuro-tsubaki** x *C.chekiangoleosa*), named and released by Kazuo Yoshikawa in 1998.

Kurohime. (Black Princess). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.331; English translation p.230. Small, dark red, tubular to trumpet shaped single, cylindrical stamens, filaments pale red. Flowers mid-season. Leaves elliptic, small to medium size. Upright, vigorous growth. Selected from wild japonicas in Matsuyama City, Ehime prefecture, Japan. Named and released by Tokihiro Kôno in 1985.

Kurohoshi. Different reading for **Kuroboshi.**

Kuroi-hitomi. (Dark Eyes). *(C.japonica),* Chinka-en, Niigata, 1994-1995, Retail List: Dark red, small single. Originated in the Niigata Prefecture, Japan.

Kurokami. (Black Deity), *(C.japonica),* JCS., 1989, *Japan Camellia*, No.30, p.13,, colour photo: Brilliant, deep red, small size, single, opening cup-shaped with 5-6 rounded, embracing, slightly notched petals. Stamens in a central column, pinched in at apex, anthers yellow, filaments white, pinkish at base, joined for the lower third. Originated in Kagoshima Prefecture, Japan.

Kuroko. (Beauty Spot), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.48, colour photo, p.212, description: Medium size, pink, single with a thin, irregular, white margin to the 5-6 large, crinkled petals, with the stamens in a spreading, dominant, yellow ring. Originated in Shimane Prefecture, Japan.

Kurojishi. (Black Lion), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.48, colour photo, p.212, description: Medium size, deep crimson, full, peony form; no stamens visible. Leaves

light green, apices acuminate, elliptic, margins serrulate. Originated in Niigata Prefecture, Japan. Synonym: 'Himejishi'.

Kuro-renge. (Black Lotus). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.84 with colour photo; English translation p.56. Medium to large, blackish crimson, lotus-form semi-double, tubular stamens tending to fall into disorder. Flowers mid-season to late. Leaves oblong, small. Upright, compact growth. A chance seedling of **Kon-wabisuke,** named and released by Shinichi Noguchi in 1989. From Tokyo.

Kurosawa-haku. (Kurosawa's White). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.331; English translation p.229. Small, white single, thick petals. Flowers early to mid-season. Leaves elliptic, medium size. Upright, vigorous growth. A selected wild japonica raised by the Kurosawa family on Izu Ôshima Island. Named and released by Takeo Ogawa in 1969.

Kurosawa-mokkô. (Kurosawa Woodcarver), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.256: Large size, white, open peony form with emarginate petals. Originated in Japan. (Believed extinct.) Different reading: 'Kurozawa-mokkô'.

Kuroshin-tsubaki. (Dark Stamens Camellia), (Wabisuke), Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No.11, p.116, p.120, colour photo, botanical drawing and description: Small size, china rose, saucer shaped single of 8-9 petals with incurved edges, an irregular cluster of stamens, filaments ivory white, anthers dark chocolate brown. Leaves broad-ovate, glossy olive green, margins serrate. Originated in Japan.

Kuroshio. (Japanese Current), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.48, colour photo, p.212, description: Medium size, 8-9 cm across, dark scarlet, with 6-7 large, irregular petals and a compact, central stamen column with pinkish filamens joined for the lower third, and yellow anthers. Leaves deep green, broad elliptic, apices acute, margins finely serrulate. Blooms midseason to late. See p.189, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated on Izu Ôshima Island, Japan. Discovered and released by Takeo Ogawa in 1969.

Kuro-subaki. Steffek, 1949, *Plant Buyer's Guide*, ed.5, p.49. Corruption of the Japanese name **Kurotsubaki.**

Kurosuzume. (Black Sparrow), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.134, p.67, colour photo, p.127, description: Leaves ovate-oblong, to broadly elliptic, rounded bases, thin, venation impressed, margins minutely serrulate, 4.9-6.8 cm x 2.1-2.9 cm wide; petioles pale green, 5-6 mm long, densely hairy. Single with 6-8 petals, unequal, erect or cupped, red, (Currant red 821/1-2). Stamens short, 1.2 cm long with reddish filaments. Flowers mid-season. Found in the wild in Yatsuo-machi, Toyama Prefecture, Japan.

Kurosuzume (Tokyo). (Black Sparrow). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.83 with colour photo; English translation p.56. Small, dark red, lotus-form double, small stamen column. Flowers mid-season to late. Leaves oblong, small, wavy. Slow, spreading growth, dense branches. A chance seedling of **Kuro-tsubaki.** Named and released by Shinichi Noguchi in 1992.

Kuro-tsubaki. (Black Camellia), *(C.japonica)*, Mizumo, 1829, *Sômoku Kinyôshû* in the section for unusual leaves. Double as for the red 'Irokuroki' like the 'Mokurenbana', meaning dark red flower. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Tokyo Nursery Catalogue, 1896 and the Nihon Shokubutsu Kaisha Ltd. Nursery catalogue, 1912-1913: "Black-red with a purple shade" and Chûgai Nursery Catalogue, 1934-1935 describes it as a "brilliant, black, double flower". For modern colour photos see: Fendig, 1953, *American Camellia Catalogue.* colour pl.; Adachi, 1960, *Camellia, Its Appreciation and Artistic...*, p.198; Tuyama, 1966, *Camellia Cultivars of Japan*, pl.132; Tuyama, 1968, *Camellias of Japan*, pl.274; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.2: *Encyclopedia of Camellias in Colour*, vol.I, 1973, pl.155; Seibundô Shinkôsha, 1979, *Senchinshû*, p.48; Macoboy, 1981, *The Colour*

Dictionary of Camellias, p.98. Leaves dull green, lanceolate elliptic to elliptic, finely serrate, petioles glabrous, nigrescent, buds nigrescent. Flowers semi-double to open peony with narrow petals and irregular stamens, dark red. (Currant red 821/1). Flowers late season. Young shoots and roots show dark purplish colour. Synonyms: 'Black Prince', 'Black Jap', 'Purpurea', 'Old Port', 'Black Camellia'. Originated in Kantô area, Japan. Corruption of the Japanese name: 'Kuru-subaki', 'Kuto-tsubaki' 'Kuro-subaki', 'Kuru Tsubaki'. Chinese synonym 'Heichun'.

Kuro-wabisuke. (Black Wabisuke), *(C.japonica),* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.58; Katayama, 1960. *Tsubaki Ochabana;* Saitama Botanical Gardens, 1960, *Plant List;* Minagawa, 1962, *Chinkashû.* Also see following colour photos: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.131; Tuyama, 1968, *Camellias of Japan*, pl.273; Satô, 1975, *Chûbu no Tsubaki*, p.73; Leaves narrowly oblong-elliptic, shortly cuspidate-acuminate at apex, dark green. obscurely serrulate. Flowers single, dark red, (Currant red 821/1) often veined deeper colour. Flowers mid-season. Plant habit, slow growing. Originated in the Chûbu area, Japan. An account of these "black Camellias" appears in the *American Camellia Yearbook*, 1974 in a report of cytological studies by Dr W. Ackerman in which he recommends this group of plants be designated *C.japonica* (Purpurea Group). Katayama lists what appears to be the same form under the name **Eiraku.** Chinese synonym 'Heituozhu'.

Kuroyuri. (Black Lily), *(C.japonica),* Inazawa Nurseries Co. Ltd Catalogue, 1986-1987, p.1, A-4; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.227, colour photo and description: Small to medium size, dark red, campanulate, lily-like blooms, with 5 long, strap-like petals and a central stamen column with pinkish filaments, joined for the lower third. Mid-season blooming. Leaves deep green, narrowly elliptic, apices tapering, long acuminate, margins finely serrulate. A seedling of **Kujaku.** Originated in the Ôsaka Prefecture, Japan. Originated and released by Yoshihiko Mishima in 1979.

Kurozome. (Dark Dyed), *(C.japonica),* Tateyama Nursery Catalogue, 1954: Medium size, formal double, off-white. Originated in Japan. Sport of **Haku-otome.** Possible error for **Sumizome.**

Kurozawahaku. (Kurozawa White), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.46, colour photo and description: Medium size, white with a cream centre, wide, cup-shaped single with 6 broad, emarginate, overlapping petals and a central stamen cylinder with creamy filaments, joined for the lower half and yellow anthers. Blooms mid-season to late. Leaves dark green, wide ovate, margins serrate. Originated in Izu Ohshima, Japan.

Kurozuru. (Black Crane), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.48, colour photo, p.212, description: Deep crimson, single, opening cup-shaped with 6-7 large, overlapping petals and a bold, compact, central stamen cylinder, slightly spreading. Leaves broad-elliptic to elliptic, mid-green, apices blunt acuminate, margins serrate. Originated in Ôno City, Fukui Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.83 with colour photo; English translation p.56. A cultivar at a private family in Fukui Prefecture. Named by Tokuji Ôoka in 1974, released by Yoshizumi Tobioka.

Kurrajong. *(C.japonica),* ACRS, 1959, *Camellia Annual*, No.6, p.21, Reg. No.35: Originated by E.G. Waterhouse, Gordon, N.S.W., Australia. A seedling of **Great Eastern.** Formal double, creamy white. Blooms mid-season to late., Flowers 10 cm across. Foliage similar to parent.

Kurtzii. *(C.japonica),* Morren, 1836, *L'Horticulteur Belge*, pl.51, p.51: Originated by Kurtz of Baltimore, USA and imported to France by Faucheux about 1843: A seedling of **Anemoniflora** with the foliage showing a resemblance to the parent with its fine, sharp serration. The 5 outer petals are orbicular, notched at the apex, and of an intense rose-red with very fine purplish veining. The centre petals are very small, erect, numerous, serried, pleated, of a pure white with veins and touches of violet and borders of yellow.

Kuru Tsubaki. Coolidge Camellia Garden Catalogue, 1952. Corruption of the Japanese name **Kuro-tsubaki.**

Kuruijishi. (Raging Lion), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.212: Red linear markings on a soft, peach-pink ground and white spots, irregular, open, peony form, outer petals reflexed. Early blooms. Leaves ovate, small with small, sharp serrations and acuminate apex. Petioles hairy. The name was given because of the great variation in flower colour and form. Originated in Kurume, Fuku'oka Prefecture, Japan.

Kurumasaka. (Place Name), *(C.japonica)*, Yashiro, 1841, Ichijima, 1906, *Kokon Yôrankô.* Reprint. No description. Originated in Japan. (Believed extinct.) Different reading: 'Kurumazaka'.

Kuruma-yadori. (Ancient Parking Place), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Large size, semi-double flowers, white with pink graduation towards the margins, narrow petals. Originated in Japan. (Believed extinct.)

Kurume-akebono. (Kurume 'Akebono'), *(C.hiemalis)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.39: Medium size, rose-red, formal double. Blooms early to mid-season. Originated in Kurume, Fuku'oka Prefecture, Japan.

Kurume-benikirin. ('Red Kirin' from Kurume). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.46 with colour photo; Vermilion with neutral white markings, medium size formal double. Upright growth. Leaves medium size, elliptic, base obtuse, margins revolute. An 80 year old tree in a private garden in Kusano-machi, Japan.

Kurume-genji. (see below), *(C.japonica)*, Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.109, black and white photo; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.440; Seibundô Shinkôsha, 1979, *Senchinshû*, p.48, colour photo, p.212: Medium size, open, peony form, rose pink, veined deeper colour, bordered white; outer petals large, emarginate, inner petals folded, erect, dividing stamens into 3-5 fascicles. Often various sports of white, red and striped flowers appear. Leaves lanceolate-elliptic, apices acuminate, shiny mid-green, margins shallowly serrate. Synonyms: 'Nanairo-tsubaki', 'Chûbu-tônishiki'. Similar to **Hikarugenji.** Originated in Kurume, Fuku'oka Prefecture, Japan. Has a variegated leaf sport known as **Ueda-sakuraba.** "Kurume" is the name of a district in Japan and "Genji" was a prince of the Minamoto Clan made famous by the book "Genji-Monagatari", (Tale of Genji) by Murasaki, Shikibu.

Kurume-goshiki-tsubaki. ('Goshiki-tsubaki' from Kurume). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.24; Parti-coloured, small single. A 90 year old tree in Kusano-machi.

Kurume-hino-tsukasa. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.298 with colour photo; English translation p.209. Synonym for the *C.hiemalis* **Hi-no-tsukasa** from Kurume**.**

Kurume-kikôshi. (Young Nobleman from Kurume). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.38 with colour photo; Soft pink, small formal double. Vigorous, upright growth. Leaves elliptic, medium size, recurved at both extremities. Late flowering. A 200 year old tree in Kusano-machi, Japan.

Kurume-kingyo. *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.85 with colour photo; A garden tree raised at the Ishibashi Cultural Center, Kurume, Japan. Presumed to be a seedling of the fish-tailed camellia **(Kingyo-tsubaki).** Soft pink with crimson streaks and spots. Medium size, saucer-shaped single. Short, prominent stamen column. Vigorous, spreading growth. Leaves large, narrowly elliptic, and fish-tailed at the apex. Flowers mid-season to late.

Kurume-komachi. (Kurume's Beautiful Girl). *(C.japonica), Kurume Camellia*, 1997, English translation, p.8; Soft pink fading to white at base. Small standard single, tubular stamen cluster. Originated by T. Kunitake, Kurume, Japan.

Kurume-mikenjaku. (‘Mikenjaku’ from Kurume). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.44 with colour photo; Vermilion with bold white markings. Large formal double to peony form. Small split stamen cluster. Upright habit. Leaves large, long elliptic. Late flowering. A 120 year old tree at Kusano Elementary School, Kusano-machi, Japan.

Kurume-otome. (Kurume Maiden), *(C,japonica),* Inazawa Nurseries Co. Ltd Catalogue, 1988-1989, p.2, A-77; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.390, colour photo and description: Light pink, medium to large formal double. Leaves glossy, dark green, elliptic, apices acuminate, margins sharply serrate. Originated in Kurume, Fuku’oka Prefecture, Japan. Named and released by Yoshikatsu Ueno in 1990.

Kurume-shiranami. (White Waves of Kurume), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka* p.335, colour photo and description: Medium size, white with bright red speckles and a few stripes, semi-double of 2-3 rows of emarginate, ovate petals, somewhat waved, and a central stamen cluster with yellow anthers. Blooms mid-season to late. Leaves dark green, oblong-ovate, apices blunt acute. Originated in Kurume, Fuku’oka Prefecture, Japan.

Kurume-shokkô. (‘Shokkô’ from Kurume), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.244, description, p.245, colour photo: Medium size, brilliant red with white variegation, wide, cup shaped single with a central stamen cylinder, having pinkish filaments, joined for the lower third, and yellow anthers. Blooms mid-season to late. Originated in Kurume, Fukutoka Prefecture, Japan. Resembles **Shokkô.** Named and released by Takatoshi Matsuno in 1970.

Kurume-tamatebako. (Treasure Box from Kurume). *(C.japonica), "Camellias in Kurume*", ICS Congress, Kurume 2010, p.39 with colour photo; White with red streaks. Medium size formal.double. Flowers shatter. Upright plant. Leaves medium size, elliptic. Late flowering. A 200 year old tree in a private garden, Kusano-machi, Japan.

Kurun Jura. RHS., 1953, *The Rhododendron and Camellia Yearbook*, No.7, p.153. Corruption of the Japanese name ‘Konronkuro’, different reading for **Konronkoku.**

Kusaka. (Under the Sun), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.573: Small, cupped, semi-double, 3-4 rows of petals, crimson and pink with a broad, white margin. Originated in Japan. (Believed extinct.)

Kusakami. Williams & Thompson, 1950, *American Camellia Yearbook*, p.41. Different reading for “Sôshi”, synonym for **Sôshi-arai.**

Kusano-haku. (White camellia from Kusano). *(C.japonica), Kurume Camellia,* 1997, English translation, p.8; Pure white, small campanulate single. Flowers mid-season. Named by the Kurume Camellia Society, Japan.

Kusensunago. Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details.

Kushidama-cha. (Skewered Jewel Camellia), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô:* Listed only as red. Originated in Japan. (Believed extinct.) Chinese reading: ‘Zhuanzhu Cha’.

Kushi-no-ha. (Comb Leaf). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.222 with colour photo; Small red tubular single with tubular stamens. Flowers mid-season. Leaves lanceolate, medium size, coarsely denticulate. Spreading, somewhat dwarf growth. A seedling of ‘Hiiragiba-tsubaki’, (**Hiiragi-tsubaki**), originated and named by Shinichi Nogichi, released in 1998. From Tokyo, Japan.

Kushima-no-haru. (Spring in Kushima). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.80 with colour photo; English translation p.54. Small, pink, occasionally with white stripes, bowl shaped single, tubular stamen cluster. Flowers early to mid-season. Leaves somewhat elliptic, medium size, flat. Upright, vigorous growth. Selected from wild japonicas growing in

Kushima Island, Ômura City, discovered and named by Yoshinori Amano in 1992. From Nagasaki Prefecture.

Kusudama. (Ornamental Ball, decoration for Boy's Festival, May 5th), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.I, 1972, p.366; Satô, 1975, *Chûbu no Tsubaki*, p.8, colour photo: Medium size, 10 cm across, variant peony form, irregular to normal form with inner curved petals, with a pale, pink ground, peppered and flecked crimson. Leaves oblong to wide-ovate with an abrupt, acute apex, impressed venation, dark green, shallowly serrate margins. Early flowering. A cross from (**Tarô'an** x **Iwane-shibori**) x 'Seihi', originated by Satô, Minoru, Nagajima-gun, Aichi Prefecture, Japan and approved by the Chûbu Camellia Society Registration Board in Apr.1970. Synonym: 'Chûbu-kusudama', 'Yuba-shibori'. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.255. Note: Yokoyama, 1975, *Gendai Tsubaki Meikan* lists this as 'Yuba-shibori' and classes it as a *C.rusticana.* Chinese synonym 'Gongchangjiao' as 'Yuba-shibori'.

Kusudama. (Ornamental Ball), *(C.rusticana),* Yokoyama et al., 1975, *Gendai Tsubaki Meikan*, p.107; Seibundô Shinkôsha, 1979, *Senchinshû*, p.46. Flowers deep red, peony form double with wavy petals, late blooming. Originated in Higashi Kanbara-gun, Niigata Prefecture, Japan and named by Yaichi Kawamura in 1966. Resembles **Hatano.** Different reading: 'Kusutama'.

Kusutama. Different reading for **Kusudama.**

Kute Kate. *(C.japonica),* ACS, *The Camellia Journal,* Mar. 2009, p.29, Regn No. 2724. Originated and propagated by John L. Spencer, Lakeland, Fla., USA. *American Camellia Yearbook,* 2008, p.118 with colour photo; A 13 year old seedling of **Edna Campbell**, first flowered 2003. The 7 cm diameter x 7.5 cm deep flowers are bright red and of formal double or peony form. The centre develops a mass of small petaloids as the flower ages. Growth is upright and open, at average rate. Dark green leaves are 9 cm x 3.8 cm.

Kuto-tsubaki. Ghisleni, Pier Luigi, 1982, *Le Camellie***,** p.191. Corruption of the Japanese name **Kuro-tsubaki.**

Kwan Yuen. (*C.reticulata* hybrid), Heartwood Nursery, Seedling List 2009; A 15 cm plus diameter semi-double to rose form, coral-rose flower. Like a larger **Coral Delight**. Prefers warm summers with some sun protection. Strong, compact plant. A cross of **Buddha** x **Coral Delight.** Flowers midseason. Originated in 1981 by Daniel Charvet., Fort Bragg, Calif., USA (HW76C16).

Kwan Yuen Special. (*C.reticulata* hybrid) SCCS, *Supplementary List* 2011. Coral rose variegated white. A virus variegated form of **Kwan Yuen**. Originated in 2009 by Daniel Charvet, Fort Bragg, Calif., USA.

Kwangtonfen. Waterhouse, 1965, *International Camellia Journal*, No.3. p.26. Different reading for 'Quangchoufen', a synonym for **Otome.**

Kwaidomaru. Yashiroda, 1950, *American Camellia Yearbook*, p.20. Different reading for **Kaidô-maru.**

Kwangtungfen. Kadoori, 1979. *Experimental and Extension Farm and Botanic Gardens,* p.48. Chinese synonym for Japanese *C.japonica* **Otome.** Also given the Chinese synonym 'Fenshiguan shimei' for the USA synonym 'Pink Perfection', synonym for **Otome**.

Kyakkô. (Limelight), *(C.rusticana),* Hagiya, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, Feb.1967, p.6, black and white photo: Medium size, 8-9 cm across x 4 cm deep, semi-double to open peony form, soft, peach pink, striped with dark red. About 20 stamens mixed with centre petals. About 45 petals. Leaves small, ovate, keeled, wavy; petioles hairy. Originated in Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya.

Kyarabiki. (Dyeing to Dark Brown), *(C.sasanqua),* Hantei, Kinta, 1827, *Sômoku Kihin Kagami:* Long, narrow leaves. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.161 as 'Kyarabiki-sazanka'. Originated in Japan. (Believed extinct.)

Kyle. *(C.japonica),* ACS, *The Camellia Journal*, June 2013, p.25 with colour photo; Regn No.2839; Originated, propagated and registered by Vernon E. Howell, Lucedale, Miss., USA. ACS, *Yearbook*, 2013, p.120 with colour photo; A very large, 14cm diameter x 7.5cm deep semidouble, bright red. Chance seedling with 9+ petals. (Photo shows a peony form flower). There are usually petaloids among the stamens, which have yellow anthers and yellow filaments. Flowers fall whole. Upright plant with average growth rate. Mid-green leaves average 10cm x 7.5cm with medium serration. Flowers early to midseason.

Kyle Variegated. *(C.japonica),* ACS, *The Camellia Journal*, June 2013 with colour photo; Regn No. 2840; Originated, propagated and registered by Vernon E. Howell, Lucedale, Miss., USA. ACS, *Yearbook*, 2013, p.120 with colour photo. A bright red and white variegated form of **Kyle**, first flowered 2008. Very large, 12.7cm diameter x 7.5cm deep flower, leaves 7.5cm x 5cm. Other details as for **Kyle.**

Kyle White. *(C.japonica),* ACS, *The Camellia Journal,* Sept. 2013, p.26 with colour photo; Regn No. 2861; ACS, *Yearbook,* 2013, p.121 with colour photo. The 45 year old chance seedling was originated by Herman Walker, Lafayette, La, USA. Registered by Florence Crowder, Denham Springs, and propagated by the American Camellia Society, Fort Valley. No connection with **Kyle.** The medium size, 7.5-10cm diameter x 5-6.5cm deep flower is white, semidouble to rose form with yellow anthers and white filaments. 28 petals with a central notch. Flowers fall whole. Plant is upright and open. Dark green leaves average 9cm x 3.8cm with low serration. Flowers midseason to late.

Kyleana. *(C.japonica),* Verschaffelt, 1850, *Nouvelle Iconographie*, Book XII, pl.I: A perfection variety with uniform, bright, cherry red colour, except at the centre, which is conspicuous by numerous, white stripes. The blossoms are large, full bodied and open easily. The petals are rounded, emarginate and convex. Originated by Mr. Kyle, London, England.

Kylie Sherie. *(C.hybrid).* Camellia Haven catalogue, 2005, p.16. Miniature white informal double, cluster bud flowering. Strong upright growth. A seedling of **Our Melissa,** raised by N. Haydon, Takanini, New Zealand. Colour photo, front cover, *New Zealand Camellia Bulletin*, Mar. 2008, also *Camellias, The Gardener's Encyclopedia*, 2007, Jennifer Trehane, p.312.

Kyo-betan. Vanderbilt, 1941, *Camellia Research, II,* p.4. Corruption of Japanese name **Kyôbotan.**

Kyôbotan. (Peony of Kyôto), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in section of peony forms: Light colour flower with red stripes. Large size. Itô, Ko'emon, 1879, *Chinkashû:* Light pink, striped deeper pink, large pagoda form. For colour photos see: Adachi, 1960, *Camellia. Its Appreciation & Artistic...*, p.99; Tuyama, 1966, *Camellia Cultivars of Japan*, pl.27; Tuyama, 1968, *Camellias of Japan*, pl.380, p.193, description, p.202; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.108; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.315; Satô, 1975, *Chûbu no Tsubaki*, p.108; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.377; Seibundô Shinkôsha, 1979, *Senchinshû*, p.43, description, p.210: Leaves broadly oblong, apices long acuminate, margins depressed crenate, mid-green. Flowers peony form, pale pink striped densely with deep red (Cardinal red 822/3). Flowers mid-season to late. Originated in Kantô, Japan. Different reading: 'Kyohbotan'. Corruption of name: 'Kyo-betan'. Local name in Kyûshû: 'Nishijin'. Solid colour sport: **Kôkirin.** Other sport: **Kyôbotan-fukurin.**

Kyôbotan. (Peony of Kyôto), *(C.japonica), Chinka Zufu*, (Before 1700), Watanabe, 1969, pl.52, 161: Medium size, crimon, peony form Camellia. Originated in Japan. (Believed extinct.)

Kyôbotan-fukurin. (Kyôbotan with Ornamental Border), *(C.japonica),* JCS., 1970, *Tsubaki*, No.8, p.10. First reported by Ôdaira, Kazutoshi. Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.104: Sport of Kyôbotan with a white ground and smokey red flush at the base of the petals. Originated in Tokyo, Japan. Resembles: **Kiyomizu-shibori,** 'Kyôbotan-nishiki', **Yaeshiratama,** all in the *Chinka Zufu*, (before 1700).

Kyôbotan (Katayama). (Katayama's Kyôbotan), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.44, colour photo, p.210, description: Medium size, pink, peony form with some stamens mixed with the centre petals, corolla convex. Leaves shining, mid-green, broad-ovate, suddenly acute apices, margins sharply serrulate. Originated in Kansai, Japan. Synonym: 'Momoiro-kagura'.

Kyôchidori. (Kyôto Plover), *(C.japonica),* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.58. No description. Originated in Japan.

Kyô-ezo-nishiki. (Edo Brocade from Kyôto), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.216: White with broad, light red streaks, medium size, single. Originated in the Kansai area, Japan.

Kyôfuji-nishiki. (Kyôto Wisteria Brocade), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.584: Medium size, semi-double, pinkish white ground, densely and finely marked crimson, leaving margins more or less unmarked. Originated in Japan. (Believed extinct.)

Kyôfun-cha. (Pink Palace Camellia). *(C.japonica),* Don Ellison, 1997, "Camellias - A Photo Dictionary", p.53 with colour illustration, erroneously as 'Kyufun-cha': This camellia originated in China under the name **Gongfeng.** It is a medium sized, pink formal double, flowering mid-season on a medium growing, upright plant. Orthographic error 'Kyufun-cha'.

Kyô-goromo. (Kyôto Clothes), *(C.sasanqua),* Kajitsu-en, 1905, *Chabaika Meikan:* White, medium size flower with red graduating towards the margins. Originated in Japan.

Kyoh-botan. Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, p.213. Different reading for **Kyôbotan.**

Kyoh-karako. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.213. Different reading for **Kyôkarako.**

Kyoh-nishiki. Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai* p.213. Different reading for **Kyônishiki.**

Kyôhôzan. (Mount Kyôhô), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.216, colour photo and description: Medium size, brilliant red, wide campanulate single with 6 wide, rounded, overlapping petals and a compact centre column of stamens with pink and white filaments, joined for their lower third and yellow anthers. Blooms mid-season to late. Leaves dark green, broad-elliptic, apices acute, margins coarsely serrate. Originated in the Chûbu area, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.75 with colour photo; English translation p.51. A cross between **Kisoji** and **Katsuragawa.** Named and released by Minoru Satô in 1988.

Kyôkanoko. (Fawn of Kyôto), *(C.japonica),* Fendig, 1953, *American Camellia Catalogue* as 'Kyo-kanako': Large size, red, semi-double to peony form. Medium, bushy growth. Mid-season blooming. Corruption of name: 'Kyo-Ko'. Originated in Japan. Sports: **Kyo-Kanoko Surprise, Kyo-Kanoko Variegated.**

Kyo-Kanoko Surprise. *(C.japonica), American Camellia Yearbook,* 1965, p.238, Reg. No.767: A sport of **Kyôkanoko** that was first seen in 1959 on a plant owned by Mr J.M. Jones, Savannah, Georgia, USA. The flowers have light pink throats with tips of petals ringed with white, otherwise the same form of flower and plant as the parent.

Kyo-Kanoko Variegated. *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue*, as 'Kyo-Kanoko Var.': Virus variegated form of **Kyôkanoko** - Red blotched white. Originated in USA.

Kyo-karaka. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Kyôkarako.**

Kyôkarako. (Kyôto Anemone), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in section on anemone form: Small size, red flower. Itô, Ko'emon, 1879, *Chinkashû*, Rose red, small, anemone form double. (Believed extinct.) Originated in Japan. The name has been re-used for a modern variety.

Kyôkarako. (Kyôto Anemone), *(C.rusticana)*, Minagawa, 1933, *Chinkashû;* Wada, 1941, *Japanese Garden Treasure*, p.29: Large size, white with red streaks, beautiful petaloids in the centre. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.37, p.70; Tuyama, 1968, *Camellias of Japan*, pl.387, p.197, Description, p.204: Leaves large, broadly elliptic to oblong-elliptic, obscurely crenate, apices acute, petioles more or less hairy. Flowers anemone form, 8-9 large, outer petals, emarginate, rounded with a central mass of irregular, small petals and petaloids. Colour white ground, shortly striped deep rose (022-022/1). Flowers mid-season. Seibundô Shinkôsha,1979, *Senchinshû*, p.43 & 210; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.361, colour photo and description: Large size, white to faintest pink ground with soft pink and crimson streaks and speckles, open, anemone centred double with 2 rows of large, emarginate, outer petals and an anemone centre of small, erect petals and petaloids. Leaves deep green, ovate, apices acute, recurved, margins serrate. Originated in Kantô area, Japan. Sport: **Ô-karako.** Different reading 'Kyoh-karako'. Synonym: 'Shibori-ôkarako'. Resembles **Awajishima.**

Kyôkaraito. (Kyôto Chinese Thread), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Dark red, semi-double, lotus form, medium size. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.78. Originated in Japan. (Believed extinct.)

Kyôkasuri. Mizuno, 1681, *Kadan Kômoku.* Different reading for **Kyô-tobi'ira.**

Kyoko. SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.59. Abbreviation for **Kyô--Kanoko Variegated.**

Kyokkô. (Rays of the Rising Sun), *(C.japonica)*, Shufu no Tomosha, 1976, *Tsubaki to Sazanka*, p.48: Large size, semi-double, white with red streaks and soft pink markings intermixed. A small diameter stamen cylinder with yellow anthers. Leaves bright green, elliptic, apices acuminate, margins serrulate. Flowers mid-season. Plant habit is weeping. Different reading: 'Kyokkoh'. For further colour photos see: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.403. Seibundô Shinkôsha, 1979, *Senchinshû*, p.44. Originated in the Chûbu area, Japan. Different reading: 'Kyokkoh'. Synonym: 'Nagoya-kyokkô'. Named and released by Eimei Nagata around 1960.

Kyokkô. (Rays of the Rising Sun), *(C.japonica)*, *Encyclopedia of Camellias in Colour*, vol.1, 1972, p.367: Vermilion red, large size, peony form, late flowering. Originated on Shikoku Island, Japan.

Kyokkô. (Rays of the Rising Sun), *(C.japonica)*, Chûgai Nursery Co. Catalogue, 1934-1935, p.32: Blackish, crimson single, round petalled flower. Late blooming. This was imported to the USA by McIlhenny in 1934 and listed in his 1937 Catalogue. Corruption of name: 'Kijokko'. These characters have also been used for the name of a more modern *C.japonica.*

Kyokkô. (Polar Light). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.76 with colour photo; English translation p.51. Medium size pale pink of transparent touch, semi-double. Flowers mid-season. Leaves elliptic, medium size. Upright growth. A cross between *C.lutchuensis* and *C.reticulata* hybrid **Lasca Beauty.** Named and released by Kazuo Yoshikawa in 1980s. From Osaka.

Kyokkoh. Andoh, 1974, *Tsubaki Nyumon*, p.56. Different reading for **Kyokkô.**

Kyokkô-kan. (Diadem of Sun's Rays), (Higo), *Higo Rokka*, 1989, p.30: Large size, 11-12 cm across, rose-pink ground, shading to red, with 6-8 petals, with a spreading burst of stamens like a diadem. Blooms mid-season. Originated in the Kumamoto Prefecture, Japan. A mutation of **Ôkan,** designated as a new Higo around 1985 by the Higo Camellia Society.

Kyôkomachi. (Kyôto Beauty), *(C.japonica)*, Tuyama, 1966, *Camellia Cultivars of Japan*, pl.200, p.352: Medium to small size, semi-double with the faintest blush ground, having light red streaks, 3-4 rows of rounded, imbricate petals. Stamens sparse and abortive. Originated in Aichi Prefecture, Japan. Named by Satô, Minoru.

Kyôkosode. (Kyôto Sleeve), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Semidouble with 3 rows of petals, red spots and streaks on a white ground. Originated in Japan. (Believed extinct.)

Kyôkosode. (Kyôto Sleeve), *(C.japonica)*, Satô, 1975, *Chûbu no Tsubaki*, p.76: Rose form to formal double, red with white spots, medium size. Leaves round-ovate, small, olive to mid-green, matt, margins sharply serrulate. Growth slow and lacks vigour. Originated in Chûbu District, Japan. This cultivar is synonymous with **Saifu,** which is its local name in the Chûbu district. There is also a plain red form. The petals layers are similar, but slightly finer than **Otome.** There are trees 250 years old on the Mino Road, Lower Gifu Prefecture, Japan. The plain red form is called **Nanbanboshi**. See Tuyama, 1966, *Camellia Cultivars of Japan*, p.274 and JCS., 1972, *Encyclopedia of Camellias in Colour*, vol.1, 1972, pl.290, p.334.

Kyokuhô. (Mountain Name), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.210: Red, anemone form, the petaloids lightly bent inwards. Small size, early flowering. Leaves large, ovate, curved outwards and curled. Tree habit vigorous and wide spreading. Selected from the Yuki-tsubaki, *(C.rusticana)* group in the Toyama Prefecture, Japan.

Kyômiyabi. (Kyôto's Refined Taste), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.281, colour photo and description: Medium size, pink with rare, red streaks, wide campanulate single with 5 broad, overlapping, emarginate petals and a central stamen cylinder with white filaments, joined for the lower half and small, yellow anthers. Blooms early to mid-season. Leaves dark green, elliptic, apices acuminate. Originated in the Kyôto Prefecture, Japan. A chance seedling of **Tarô'an.** Named and released by Misoji Yamaguchi in 1985. JCS 1996, *Japan Camellia,* No.49, p.10 with colour plate.

Kyomski. Lort-Phillips, 1970. *International Camellia Journal*. Corruption of the Japanese name **Kyô-nishiki.**

Kyô-nishiki. (Kyôto Brocade), *(C.japonica)*, Cho, [before 1867], *Chinkafu*, Illustration p.26, 27. Medium size, single of 5-6 petals, large, overlapping, emarginate with a centre column of stamens, yellow anthers, white filaments. The modern cultivar is unlikely to be the same as that illustrated by Cho. Originated in Japan. (Believed extinct.)

Kyô-nishiki. (Kyôto Brocade), Minagawa, 1949, *Chinkashû; Encyclopedia of Camellias in Colour*, vol.I, 1972, p.363. Single, campanulate flowers of medium size. Purple red stripes and small spots on white ground, or dark red. Stamens like a tea whisk. Flowers mid-season. Leaves are yellowish green. Originated by Minagawa, Jisuke, Kantô, Japan. The Higo and vernalis camellias of the same name are different cultivars. To avoid confusion the names **Kantô--kyônishiki** and **Higo-kyônishiki** are now used and the name **Kyô-nishiki** is reserved for the vernalis cultivar. Seibundô Shinkôsha, 1979, *Senchinshû*, p.40 and Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.259 both list this camellia as 'Kantô-kyônishiki'. According to Andoh, this is a seedling of **Kokinran.**

Kyô-nishiki. (Kyôto Brocade), *(C.x vernalis)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû* describes this as a single, medium sized, striped. Chûgai, Nursery Co. Catalogue, 1935-1936, p.26 under

Sasanqua: Red, vertical variegation. McIlhenny 1937, *600 Varieties of Camellias* has "rose red to white at base"; while Yashiroda, 1950, *American Camellia Yearbook*, p.16 has "White with a few broad, pink bands, round edged petals, spreading growth and slender twigs." For colour photo see *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.559. Originated in Japan. Corruption of the name: 'Kyuto-nishiki', 'Kyomski'.

Kyô-nishiki-higo. (Kyôto Brocade Higo), (Higo), Tanigachi, 1912, *Chinka Kyôkan* as 'Kyô-nishiki': White, striped pink. Medium size. For colour photos see: Hiratsuka, 1964, *Higo Camellia*, p.24 as 'Kyô-Nishiki'. Tuyama, 1968, *Camellias of Japan*, pl.335, p.169, description, p.190. Synonym for **Higo-kyônishiki.**

Kyô-no-homare. (Glory of Kyôto), Inazawa Nurseries Co. Catalogue, 1986-1987, p.4, A-189. Synonym for **Kakure-iso.**

Kyô-no-kumo. (Uncertain), *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue* as 'Kyo-no-kumo': Red, single, medium size, mid-season flowering. Originated in Japan.

Kyô-no-kure. (Today's Sunset), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* In the section of various colours on the one branch. 5 petals, one red, one pink, the rest white, single with medium size, red petaloids with blotches. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.107. Originated in Japan. (Believed extinct.)

Kyô-no-mai. (Dance of Kyôto). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.75 with colour photo; English translation p.51. Medium size, red, sake cup-shaped to trumpet form single, cylindrical stamen column. Late flowering. Leaves elliptic, somewhat small, flat. Upright, vigorous growth. A chance seedling of 'Goshiki-yae-chiri-tsubaki' (**Goshikichiri-tsubaki**), originated and named by Katsuyoshi Yoshikawa and Naoyoshi Adachi in 1982. From Kyoto.

Kyô-shibori. (Kyôto Dappled), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki, Irohanayose Irotsuki.* Double. Medium size. White dappled with red. Originated in Japan. (Believed extinct.)

Kyôshôji. (Kyôshô Temple), *(C.rusticana)*, *Encyclopedia of Camellias in Colour*, vol. I, 1972, pl.47, p.53, description, p.298: Medium size, soft pink with a mauve tone, single of 7-9 petals, rounded, emarginate. Small stamen cluster broken by an occasional petaloid. Different reading: 'Kyôsyôji'. A cultivar at Kyôshô Temple in Kawakita District, Ishikawa Prefecture, Japan. Named and released by Ryôji Nakamura in 1970.

Kyôsyôji. ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.14. Different reading for **Kyôshôji.**

Kyoto. *(C.rosiflora)*, *American Camellia Yearbook*, 1976, p.155: A *C.rosiflora* chance seedling which has small pink flowers and a faint spicy fragrance. Long, springy branches. Leaves are elliptical, small, grey-green. Originated in USA.

Kyoto Botanical Garden Variegated. *(C.japonica)*, *Camellias*, Y.C. Shen, 2009, p.58 with colour photo, as 'Kyoto Botanical Garden Var.'; Crimson single flower with 5-6 petals, about 5 cm diameter. Very bold centre of stamens for such a small flower. Most leaves have an irregular border of yellow variegation. Imported from Japan by Nuccios Nurseries, original name lost.

Kyoto Brocade Higo. *Camellias*, Y.C. Shen, 2009, p.215 with colour photo; Synonym for 'Kyô-nishiki-higo' (**Higo-kyônishiki**).

Kyô-tobi'ira. (Kyôto Variegated), *(C.japonica)*, Mizuno, 1681, *Kadan Kômoku:* Large size, semi-double with petaloid flags on thin filaments like the **Koshimino** form. Originated in Japan. Different reading: 'Kyôtobi'iri'. (Believed extinct).

Kyôto-nishiki. Wada, 1941, *Japanese Garden Treasures*, p.32 in autumn flowering sasanquas as 'Kyuto-nishiki': A corrupted name for **Kyô-nishiki.**

Kyô-tsukasa. (Lord of Kyôto), (Higo), Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.58. No description. Originated in Japan.

Kyôwarawa. (Children of Kyôto), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*. A small sized, snow white single, convex form flower. Early blooming. Originated in Japan. See JCS., 1969, *Tsubaki*, No.7, p.38. (Believed extinct.)

Kyoyo. (unknown), (Higo), Tamura, Teruo, 1956, *Higo Tsubaki Shinkaki*, (9):2, 33-34: Medium size, single. Red spots on white. Originated in Japan.

Kyûbei-sarasa-kingyo. (Kyûbei's Variegated Fishtail), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû* in section on dotted leaves. Originated in Japan. (Believed extinct.)

Kyûfun-cha. (Pink Palace Camellia), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*. Different reading 'Miyako-cha'. Chinese reading 'Gongfen-cha'. No description. Originated in China. Don Ellison, *Camellias, A Photo Dictionary*, 1997, p.53 with colour photo; Pink formal double, medium size, with raised centre. Flowers mid-season. Medium, upright growth.

Kyûkyoku. Inazawa Nurseries Co. Ltd Catalogue, 1987, C-19. Japaene synonym for the Chinese *C.japonica* **Jiuqi.**

Kyûrai. Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details.

Kyuto-nishiki. Wada, 1941, *Japanese Garden Treasure*, p.32. Corruption of the Japanese name **Kyô-nishiki.**

L.

L.A. Walker. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.130. Abbreviation for **Lawrence Walker.**

L. Enfantin. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **L'Enfant.**

L.F.R. Hilsman, 1966, *American Camellia Yearbook*, p.138. Abbreviation for **Lauretta Feathers.**

L.H. Paul. (*C.reticulata* hybrid). ACS, *The Camellia Journal*, June 2008, p.31 with colour photo, Regn No.2725. A cross of **Suzanne Withers** x **Jean Pursel** which first flowered in 1996. Originated and propagated by E. Hulyn Smith, Valdosta, Ga., USA. The 15.8 cm diameter, irregular peony to rose form double flower is dark pink, with lighter pink at the petal edges. Heavy petal texture and flowers mid-season to late. Plant is upright, spreading and vigorous. *American Camellia Yearbook*, 2008, p.118 with colour photo; Dark green leaves are 13.3 cm x 9.5 cm.

L.M. Cromartie. Fendig, 1953, *American Camellia Catalogue.* Abbreviation for **Lady Mary Cromartie.**

L.T. Dees. *(C.japonica), American Camellia Yearbook*, 1983, p.161, Reg. No.1888: A large, red, formal double *C.japonica*, chance seedling that blooms mid-season to late. Originated by C.V. Bozeman, Hattiesburg, Mississippi, USA. The 8 year old seedling first bloomed 1976. Average flower size 12.5 cm across x 4 cm deep with 77 petals. Plant growth is upright and medium in rate with light green leaves, 7.5 cm long x 4 cm wide. Sport: **L.T. Dees Variegated.** Chinese synonym: 'Disi'.

L.T. Dees Variegated. *(C.japonica), American Camellia Yearbook*, 1983, p.161, Reg. No.1889 as 'L.T. Dees Var.': A large, red blotched with white, due to infection with colour breaking virus, formal double. Originated by C.V. Bozeman, Hattiesburg, Mississippi, Georgia, USA. Chinese synonym 'Hua Disi'.

L. Maspattata. *Gardeners' Chronicle*, 1879, 11:688. Orthographic error for **Inaspettata.**

L'Amazzone. Scarlatti Catalogue, 1888. Synonym for **Amazone.**

L'Amour. *(C.japonica)*, R.D., 1892, *Gardeners' Chronicle*, ser.3, 11: 438: A pale, pinkish red, a very fine variety. Originated in England.

L'Andalusa. *(C.japonica)*, Luzzatti 1851, *Collezione di Camelie*, p.23. No description. Originated in Florence, Italy. (Believed extinct.)

L'Ange Bleu. *(C.reticulata)*, Originated by Roger Salaün, "Stervinou", Guipronvel, France. A 16 year old plant, first flowered 2008, parentage unknown. Plant is upright with rapid growth. Dark green, elliptic, reticulata type leaves, 12cm x 5cm. Flower is a loose informal double, colour rose lavender, 13-14cm diameter x 4-5cm deep. Loose stamens among the central petaloids, anthers yellow, filaments white. Long mid-season flowering, flowers fall whole.

L'Anniversaire. Real Companhia Horticolo-Agricola Portuense Catalogue No.29, 1895-1896, p.50. Synonym for **Anniversario.**

L'Anniversario. van Houtte Catalogue, 1858, 72:16. Synonym for **Anniversario.**

L'Arioste d'Italie. van Houtte Catalogue, 1843-1844, 12:tt. Synonym for **L'Ariosto.**

L'Ariosto. *(C.japonica)*, van Houtte Catalogue, 1841, 7:12. No description. Charles van Geert Nursery Catalogue, No.105, 1848, p.113: Rose form, soft cherry red, tending to orange. Originated in Italy by Mariani. Orthographic errors: 'L'Arioste d'Italie', 'Ariosto d'Italie', 'L'Arioste', 'L'Ariosta', 'Ariiota'. Abbreviation: 'Ariosto'.

L'Arvenire Nuova. Architetto Catalogue, 1859. Synonym for **L'Avvenire.**

L'Avenir. Verschaffelt, 1854, *Nouvelle Iconographie*, pl.IV. Orthographic error for **L'Avvenire.**

L'Avenire. Verschaffelt, 1854, *Nouvelle Iconographie*, text facing pl.VI. Orthographic error for **L'Avvenire.**

L'Avvenire. *(C.japonica)*, Luzzatti, 1851, *Collezione di Camelie*, p.22: Flower imbricated. Extraordinary fullness and size. Colour clear, wine red, sometimes with white lines. Obtained from seed of 'Donckelaeri' (**Masayoshi**), by Sig. V. Corsi. See Verschaffelt, 1854, *Nouvelle Iconographie*, Book III, pl.IV as 'L'Avenire': Distinctly lanceolate to narrowly elliptic, acuminate leaves and a very large, pink, perfection bloom, veined a deeper pink, 9-10.5 cm across. Orthographic errors: 'L'Avenir', 'L'Avenire', 'Avenire'. Synonyms: 'Bressonie', 'L'Avenire Nuova', 'Laurel Leaf', 'Mary Thomas'. Variegated form: 'Lalla Rookh'. The name 'Lallarook' (**Lalla Rookh**) was given to the variegated form of **L'Avvenire** by Guichard Souers, France. It was imported to the USA where it received the synonym 'Laurel Leaf' due to its distinctive, narrow leaves with pale green veins and sharply serrated margins, giving the appearance of the common laurel. Received the RHS, "Award of Merit" in 1964 as 'L'Avenir'. Chinese synonym 'Awenni'.

L'Elegante. *(C.japonica)*, Waterhouse, 1951, *American Camellia Yearbook*, p.89 in a report on camellia in the Caledonia Nursery, Guernsey: White with a few flesh markings, yellow stamens. Received from Louis van Houtte, 1899. Thought to be a renamed Japanese variety.

L'Enfant. *(C.japonica)*, Fruitland Nursery Catalogue, 1949-1950, p.30. No description. Originated in USA. (Believed extinct.) Orthographic error: 'L. Enfantin'.

L'Esperia. *(C.japonica)*, van Houtte Catalogue, 1841, 7:12. No description. Berlèse, 1845, *Monographie*, ed.2, p.254 as 'L'Esperie': White, peony form with streaks of rose-red. Originated in Italy. Orthographic errors: 'Esperia', 'L'Esperie', 'L'Hesperia'.

L'Esperie. Berlèse, 1845, *Monographie*, ed.3, p.254. Orthographic error for **L'Esperia.**

L'Hesperia. Cachet Catalogue, 1845-1846, p.3. Synonym for **L'Esperia.**

L'Imperatrice. *(C.japonica)*, Burdin, Chambery Nursery Catalogue, 1834, p.19. No description. Originated in Italy. Abbreviation: 'Imperatrice'. (Believed extinct.)

L'Inaspettata. Franchetti, 1855, *Collezione di Camelie*, p.41. Synonym for **Inaspettata.**

La Bellageri. Auguste van Geert Nursery Catalogue, No.65, 1869-1870, p.54. Orthographic error for 'La Bella Geri', synonym for 'Geri Imbricata' (**Geri**).

La Belle France. *(C.japonica)*, *American Camellia Yearbook*, 1967, p.41. No description. *American Camellia Yearbook*, 1983, p.162, Reg. No.1914: A large, pink edged, white, variably striped red, semi-double *C.japonica* chance seedling of **Lady Vansittart** that flowers mid-season to late. Originated by David L. Feathers, Lafayette, California, USA. The 15 year old seedling first bloomed 1970. Average flower size 10 cm across x 5.5 cm deep with 20 petals, pink to white filaments. Plant growth is spreading and dense, slow with light green leaves, 10 cm long x 4 cm wide.

La Belle Pêche. *(C.japonica)*, Vanderbilt, 1940, *Camellia Research*, p.5. No description. Magnolia Gardens and Nursery Catalogue, 1942-1943: White sprinkled with pink. Medium size semi-double. Said to have come from Europe to Magnolia Gardens.

La Belle Therese. *(C.japonica)*, Verschaffelt Catalogue, 1846, p.55. No description. Originated in Italy. Orthographic variant: 'La Bella Theresa'. (Believed extinct.)

La Bois. Vanderbilt, 1941, *Camellia Research II*, p.4. Orthographic error for **Madame Lebois.**

La Boheme. *(C.japonica)*, Magnolia Gardens and Nursery Catalogue, 1942-1943: Red. Large, loose, semi-double to peony form. Mid-season blooming. Originated at Magnolia Gardens, John's Island, South Carolina, USA.

La Bonomiana Rubra. *(C.japonica)* Volonte Catalogue, 1888, p.112: The red sport of **Bonomiana.** Originated in Italy. Synonym: 'Bonomiana Rouge'.

La Borgia. Franchetti, 1855, *Collezione di Camelie*, p.38. Synonym for **Borgia.**

La Campace. *(C.japonica)*, Anonymous, 1882, *Gardeners' Chronicle*, ser.2, 17:438: In the Camellia House of Francis W. Savage, Springfield is a plant of the above named seedling from Florence, Italy. The flowers present a greater variety of colour than others known; they are carnation-flake on a pale ground, veined in bright crimson. They have a distinct resemblance to **Jubilee** but of greater variety of colour.

La Canarina. *(C.japonica)*, Jean Vervaene fils, 1864, Price List, No.1, p.7. No description. Originated in Italy.

La Candeur. *(C.japonica),* van Houtte Pere English Catalogue, 1896-1897, 265O:109: Large size, single, white. Originated in France.

La Capucine. *(C.japonica),* Jean Vervaene fils, 1864, Price List, No.1, p.7. Orthographic error: 'La Capucini'.

La Capucini. Verschaffelt Catalogue, 1867-1868, p.43. Orthographic error for **La Capucine.**

La Chabotterie. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.18; Red, imbricated.

La Chiocciola. *(C.japonica),* Mercatelli Catalogue, 1894. No description. Originated in Italy. (Believed extinct.)

La Circassa. *(C.japonica),* Auguste van Geert, 1848, Catalogue, No.36, p.39. No description. Hovey & Co. Catalogue, 1857, p.10. No description. Originated in Italy. (Believed extinct.)

La Citrì. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.113 with colour photo; Medium to large peony form, pinkish with pink and red streaks (RHS.CC.51A, 51B and 46B). A seedling of 'Pomponia semiplena' **(Pomponia Semi-duplex)** x **Moshio,** first flowered in 1977. Originated by Dott. Guido Cattolica, Livorno, Italy.

La Commensa. Scarlatti Catalogue, 1888. Synonym for **Commensa.**

La Concordia. Leguay, Jan.1853, *Revue Horticole,* p.30. Synonym for **Concordia.**

La Constitucione. van Houtte Catalogue, 1857, 67:45. Orthographic error for **La Costituzione.**

La Constitution. Baptiste & Son Nursery Catalogue, 1861, p.9. Orthographic error for **La Costituzione.**

La Constitutione. Bull Nursery Catalogue, 1869-1870. Orthographic error for **La Costituzione.**

La Constituzione. Verschaffelt, 1854, *Nouvelle Iconographie,* Book XI, pl.III. Orthographic error for **La Costituzione.**

La Constituzioni. *Gardeners' Chronicle* 1889. Orthographic error for **La Costituzione.**

La Costituzione. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.23: Flower perfectly imbricated, of a clear rose with stripes of white. Verschaffelt, 1854, *Nouvelle Iconographie,* Book XI, pl.III: It is conspicuous for its peculiar colouring being fasciculated half pink and half white, which two colours contend for the surface of the petals. It forms blossoms well above the average size, imbricated with some irregularity. The petals are of different shapes, either rounded or lanceolate, full or bilobate. At the centre they are ruffled and overlap one another. It is a beautiful, streaked variety. Originated in Florence, Italy. Orthographic errors: 'La Constitucione', 'La Constitution', 'La Constitutione', 'La Constituzione', 'La Constituzioni'.

La Constance. *(C.japonica),* Cachet Catalogue, 1845-1846, p.7 as 'La Coustance'. No description. Originated by Santarelli, Italy. Orthographic variant: 'La Constanza'. (Believed extinct.)

La Constanza. Santarelli Catalogue, 1862. Orthographic variant for **La Constance.**

La Coustance. Cachet Catalogue, 1845-1846, p.7. Orthographic error for **La Constance.**

La Dea Flora. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.14 as 'Dea Flora': Perfectly imbricated in a spiral, dark rose, the outer rows of petals being a paler rose at the apex. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.103 as 'Dea Di Flora'. The two names given are grammatically incorrect. Later listings are in the correct form: **La Dea Flora.** Franchetti, 1855, *Collezione di Camelie,* p.39: Originated in Florence, Italy, by Benucci. Soft pink, the outer rows of petals with the tips very pale pink, almost whitish. Spiral imbrication.

La Esmeralda. *(C.japonica),* Verschaffelt Catalogue, 1850, p.47. No description. Verschaffelt, 1853, *Nouvelle Iconographie,* Book XI, pl.I: We received it from Italy five or six years ago. The

foliage, rather small but graceful, and its deep green, set off the regular, pink blossoms with whitish margins. Said to be originated by Mariana, Italy.

La Esperanza. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.69: Red, medium size, formal double. Vigorous, open, upright growth. Blooms mid-season to late. Originated by Miss E Spears, Charleston, South Carolina, USA.

La Faraggiana. Catholica et al., 1992, *Nineteenth Century Camellias in Italy*, p.83-84, pl.76. Synonym for **Pallade.**

La Favorita. *(C.japonica),* Verschaffelt, 1844, Catalogue, No.50, p.21. No description. Cachet Catalogue, 1845-1846, p.7. No description. Burdin Maggiore & Co. Catalogue, 1845: Vivid rose with stripes of white on different petals. Abbreviation: 'Favorita'. Orthographic variant: 'La Favorite'.

La Favorite. Verschaffelt Catalogue, 1847-1848, p.58. Orthographic variant for **La Favorita.**

La Fenice. *(C.japonica),* Mercatelli Catalogue, 1894. No description. Originated in Italy. (Believed extinct.)

La Fortunata. *(C.japonica),* Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete*, p.6. No description. van Houtte Catalogue, 1858, 72:16. No description. Mercatelli Catalogue, 1881: Bright rose, striped with white. Imbricated. Originated in Italy by Luzzatti, Florence. Abbreviation: 'Fortunata'.

La Frezzolini. Franchetti, 1855, *Collezione di Camelie*, p.39. Synonym for **Frezzolini.**

La Gitana. Verschaffelt Catalogue, 1844, p.21. Synonym for 'Gitana' (**Ghittina**).

La Giuggiola. Franchetti, 1855, *Collezione di Camelie*, p.39. Synonym for **Giuggiola.**

La Graciola. Duncan & Davies Nursery Catalogue, 1924, p.31. Synonym for **Odoratissima.**

La Graciosa. Cachet Catalogue, 1845-1846, p.7. Orthographic variant for **La Graziosa.**

La Graciousa. Andersons Sydney Nursery Catalogue, 1938-1939. Orthographic error for **La Graziosa.**

La Italia. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.128. Orthographic variant for **L'Italia.**

La La Strawberry. *(C.japonica), Camellias,* Y.C. Shen, 2009, p.137 with colour photo; A sport of **Oo-La-La** at Nuccio's Nurseries, Altadena, Calif., USA. Strawberry red with petals edged white. Other details as for **Oo-La-La.**

La Laura Mortara. Volonte Catalogue, 1888, p.113. Synonym for **Laura Mortera.**

La Madre Teodota. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie*, p.23: Very light rose, imbricated double, the outer rows of petals lightly striped with white. The flower sometimes forms a spiral. As this flower originated in Italy, the Italian version of the name is accepted as valid before de Jonghe's French form 'La Mère Théodète'. Originated by Benucci, Italy.

La Maestacca. Peer, 1956, *American Camellia Yearbook*, p.56. Orthographic error for **Maestosa.**

La Maestosa. Luzzatti, 1851, *Collezione di Camelie*, p.23. Synonym for **Maestosa.**

La Maestoza. van Houtte Catalogue, 67:44. Orthographic variant for **Maestosa.**

La Maestro. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.128. Orthographic error for **Maestosa.**

La Maetosa. RHS., 1927, Journal, p.282. Orthographic error for **Maestosa.**

La Maga. *(C.japonica),* Anonymous, 1877, *R. Società Toscana di Orticultura Bollettino* No.2:107. No description. Originated in Italy by Santarelli as seedling of **Variegata.** (Believed extinct.)

La Malmaison. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.18; Red semi-double.

La Mère Théodète. de Jonghe, 1851, *Traité de la Culture du Camellia*, p.111. Orthographic variant for **La Madre Teodota.**

La Messeri. *(C.japonica),* Cattolica, G., *Le mie Camelie*, *My Camellias*, 2005, p.114 with colour photo; Large size semi-double, flat to slightly reflexed, red (RHS.CC.47B). Very prominent, Higo like group of flared stamens. A seedling of 'Pomponia Semiplena' **(Pomponia Semi-duplex)** x 'Rubra Plena' **(Rubra),** first flowered in 1985. Originated by Dott. Guido Cattolica, Livorno, Italy.

La Niobe. Prudente Besson Catalogue, 1865. Synonym for **Niobé.**

La Niobée. de Bisschop Nursery Catalogue, 1937. Orthographic error for **Niobé.**

La Niobés. de Bisschop (N.D.) Catalogue pour Horticulteurs & Marchands. Orthographic error for **Niobé.**

La Norma. *(C.japonica),* Verschaffelt, 1844, Catalogue, No.50, p.21. No description. Isola Madre Catalogue, 1845. No description. Cachet Catalogue, 1845-1846, p.7. No description. Scarlatti Catalogue, 1888: White with splashes of rose-red. Originated in Italy by Scarlatti. Synonym: 'Norma'.

La Norrnande. *(C.japonica),* Verschaffelt Cataogue, 1844-1845, p.26. No description. Originated in France. (Believed extinct.)

La Nuova Iride. Fratelli Rovelli Catalogue, 1852, p.20. Synonym for **Nuova Iride.**

La Pace. *(C.japonica),* Verschaffelt, 1860, *Nouvelle Iconographie*, Book XII, pl.IV: Regularity of form, colouring, white ground with red and crimson-scarlet stripes in profusion. The blossoms are of medium size, composed of numerous, large, ovate or rounded petals, perfectly imbricated, with a rose-shaped tendency. Originated as a seedling in Italy by Santarelli. Abbreviation: 'Pace'. Sports: **La Pace Rubra, La Pace Nuova.** Synonyms: 'La Pace'(Italy), 'La Pace 1', 'La Pace Vera'. Some descriptions mention a rosy ground, but this variation is common with camellias of this colouring. In America the red form, **La Pace Rubra** was erroneously listed as 'La Pace' by McIlhenny, 1948-1949 and also SCCS, 1950, *The Camellia. Its Culture and Nomenclature* and the true **La Pace** listed as 'La Pace'(Italy). Orthographic variant: 'Lapace'.

La Pace 1. Fendig, 1953, *American Camellia Catalogue.* Synonym for **La Pace.**

La Pace 2. Fendig, 1953, *American Camellia Catalogue.* Synonym for **La Pace Rubra.**

La Pace (Italy). SCCS, 1950, *The Camellia. Its Culture and Nomenclature.* Synonym for **La Pace.**

La Pace Nuova. *(C.japonica),* Mercatelli Catalogue, 1881: Petals of the circumference are light rose sprinkled with white, central petals streaked white, sometimes all white. Very striking and beautiful. A sport of **La Pace** fixed by Santarelli, Florence, Italy.

La Pace Rosea. Withers, 1983, ACRS, *Camellia News*, No.84. Synonym for **La Pace Rubra.**

La Pace Rouge. Nantes, *Services des Espaces, Collections*, 1980. Synonym for **La Pace Rubra.**

La Pace Rubra. *(C.japonica),* Rovelli Catalogue, 1892-1893: A sport of **La Pace** - Flower red. Puddle & Hanger, 1961, RHS., *The Rhododendron and Camellia Yearbook*, No.15, p.117: Formal double, petals numerous, ovate or rotund, 5 cm long x 3.4-4.0 cm wide, rounded or slightly notched, imbricated, outer petals slightly reflexed. No stamens visible, Size, 8-9 cm across. Colour Carmine (RHS.HCC. 21 /1) deepening to HCC.21 in the centre. Leaves broadly elliptic, 9 cm long x 5-5.5 cm wide, coarsely serrate, acute to apiculate, deep, glossy green. It is the crimson sport of 'La Pace'. Synonyms: 'La Pace Rosea', 'La Pace Rouge', 'La Pace 2', 'Red Pressii'.

La Pace Vera. Contini & Nava of Intra Catalogue, 1900. Synonym for **La Pace.**

La Padrona. *(C.japonica),* de Jonghe, 1851, *Traité de la Culture du Camellia*, p.111: Double, well imbricated, deep, soft pink, striped white. Orthographic variant: 'Padrona'(La). Originated in Italy from Brescia.

La Page. *(C.japonica),* Abbott's Nursery Catalogue, 1892-1893, p.10. No description. Townhill Park Nurseries Ltd Catalogue.1953-1954, p.5: Clear red, single with centre ring of bright yellow stamens. Originated in England.

La Paloma. Milling, 1949, *American Camellia Yearbook*, p.226. Synonym for 'Paloma' (**Brilliant**).

La Panetaria. *(C.japonica),* de Jonghe, 1851, *Traité de la Culture du Camélia,* p.111. No description. Originated in Italy. (Believed extinct).

La Peppermint. *(C.japonica),* Rubel, 1934, *Camellias, Winter Flowering Novelties for Florists.* Price List No.69, p.3: White, striped carmine to pale pink, striped carmine. Medium size, rose form double. Bushy, upright growth. Flowers early to mid-season. In America the name has been

erroneously applied to **Angela Cocchi, Bella Romana** and **Eureka Variegated.** Sport: **Brilliant (South).** Synonym: 'Brilliant Variegated'. Originated in the USA.

La Peri. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.12. No description. Originated in Italy by Carrega. (Believed extinct.)

La Petite. *(C.reticulata* hybrid*),* ACRS., 1981, *Camellia News*, No.79, p.28, Reg. No.266; colour plate, p.40: Originated by Erica McMinn, Camellia Lodge Nursery, Noble Park, Victoria, Australia. A second generation seedling *C.reticulata* **Janet Clark** x *C.fraterna*, open pollinated seedling that first flowered 1979. The plant has an upright, spreading habit with grey-green, 6 cm x 2.5 crn leaves, laneolate with long, tapering apices, small, distinct serrations and short petioles. The semidouble to incomplete double flowers are 4 cm across and medium pink, shaded cyclamen. Mid-season flowering. Chinese synonym 'Lapai'.

La Piacente. *(C.japonica),* van Houtte Catalogue, 1859, 77:60. No description. Tirocco, 1928, *La Camelia*, p.44: Flowers of bright colour with lighter interior, imbricated in spiral form. Originated in Italy.

La Poma. *(C.japonica),* Malbis Nursery Catalogue, ca. 1945. No description. Originated in USA. (Believed extinct.)

La Porta Vera. *(C.japonica),* Scarlatti Catalogue, 1888. No description. Most distinctive variety. Originated by Scarlatti, Italy. (Believed extinct.)

La Previdenza. Burdin Maggiore & Co., 1849-1850, Catalogue General. van Houtte Catalogue, 1851, 44:15; Luzzatti, 1851, *Collezione di Camelie*, p.23. Synonym for **Previdenza.**

La Prima Vera. *(C.japonica),* van Houtte Catalogue, 1859, 77:60. No description. Originated in Italy. Orthographic variants: 'Primavera', 'La Primavera'. 'Primavera'(La). (Believed extinct.)

La Primavera. van Houtte Catalogue, 1861-1862, 89:23. Orthographic variant for **La Prima Vera.**

La Providenza. Alexis Dalliere, 1852, Price List, p.18. Orthographic variant for **Providenza.**

La Psallette. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.18; Small semi-double pink, clear salmon at the centre, then shading with bright petals, regular and recurved. Fragrant. Leaves dark green and wavy. A seedling of **Berenice Boddy** x **Marjorie Magnificent,** originated by Dr Clifford Parks, Chapel Hill, N.C., USA.

La Puce. *(C.japonica),* Paul, 1879, *Gardeners' Chronicle*, ser.2, 11: 488: Flowers rosy pink, often dashed irregularly with white. Large, semi-double, petals large and pointed; somewhat crumpled and crowded in the centre of the flower. Originated in France.

La Rapita. *(C.japonica),* van Houtte Catalogue, 1858, 72:16 and 72:25 as 'Rapita(La)': Imbrication perfect, pinkish white streaked with carmine. Originated in Italy. Abbreviation: 'Rapita'.

La Reine. *(C.japonica),* Veitch, James Jr, 1853, Catalogue of Select Stove Plants…, p.14. Fine imbricated white. Frères Noisette, Nantes Nursery Catalogue, 1857, p.36: Pure white with broad pink stripes; peony form. Kite, J., Apr.1859, *The Florist, Fruitist, and Garden Miscellany*, 12:116: Rosy red, semi-double. Originated in England. Synonyms: 'La Reine(2)', 'La Reine II'. In America 'Lady Mary Cromartie' was erroneously given as synonym for **La Reine**. Sport: **La Reine Variegated.**

La Reine I. SCCS, 1954, *The Camellia. Its Culture and Nomenclature.* Pseudonym for **Lady Mary Cromartie.**

La Reine II. SCCS, 1954, *The Camellia. Its Culture and Nomenclature*. Synonym for **La Reine.**

La Reine(1). Fendig, 1953, *American Camellia Catalogue.* Pseudonym for **Lady Mary Cromartie.**

La Sonnambula. *(C.japonica)*, Santarelli, 1862, *R. Società Toscana d'Orticultura Bollettino*, in a collection of seedlings raised in Tuscany, Italy: Formal double, vivid rose at the circumference, brighter at the centre with some marks of white on the petals. Orthographic variants: 'La Somnambula', 'Somnambula'. Orthographic error: 'La Sonnambola'. Originated by Santarelli Italy. Chinese synonym 'Lasang'.

La Sorela. Hume, 1946, *Camellias in America*, p.334. Orthographic error for **La Sorella.**

La Sorella. *(C.japonica)*, Malbis Nursery Catalogue, 1945: Red, white and pink. Medium size, rose form double. Blooms mid-season. Originated in USA by Malbis. Synonym: 'Horry Frost'.

La Speciosa. Volonte Catalogue, 1888. Synonym for **Speciosa.**

La Speranza. *(C.japonica)*, van Houtte Catalogue,1858, 72:24 as 'Speranza': Vivid carmine red, edge of petals striped and spotted with white, perfectly imbricated. Verschaffelt, 1858, *Nouvelle Iconographic*, Book XII, pl.I: Received in 1857 from Italy, where it was obtained from seed. The flowers, larger than average, are bicoloured, composed of numerous, large petals, regularly imbricated, those of the periphery being convex, rounded, pink tinged carmine and intersected by a broad, white, longitudinal stripe; the central ones are smaller, erect and resemble the heart of a rose and of a uniform cherry-red. Abbreviation: 'Speranza'. Originated in Italy by Luzzatti, Florence.

La Stella Polare. *R. Società Toscana di Orticultura Bollettino*, 1862. Synonym for 'Stella Polare', orthographic variant for **Etiole Polaire.**

La Traviata. *(C.japonica), R. Società Toscana di Orticultura Bollettino*, 1862 in a list of seedlings originated in Tuscany, Italy. No description. (Believed extinct.)

La Vergine. Franchetti, 1855, *Collezione di Camelie*, p.40. Abbreviation for **La Bella Vergine.**

La Verne Ragland. *(C.japonica), American Camellia Yearbook*, 1970, p.166, Reg. No.1073: A 5 year old chance seedling that first bloomed 1964. Originated by Reg Ragland, Pauma Valley, California, USA. Plant growth is upright, average and dense with medium sized, dark green leaves. The formal double flower is brilliant red, 9 cm across x 2.5 cm deep and has 14 outside petals and 30 smaller petals. Blooms mid-season.

La Verne Red. *(C.japonica)*, Coolidge Rare Plant Gardens Ltd. Catalogue, ca. 1936. No description. Originated in USA. (Believed extinct.)

La Vertole**.** William Bull Nursery Catalogue, 1867, p.80. Orthographic error for 'La Vestale', synonym for **Vestale.**

La Vespertina. *(C.japonica)*, Anonymous, 1877, *R. Società Toscana di Orticultura Bollettino*, 2:107. No description. Originated in Italy from seedlings of **Countess of Orkney** raised by Santarelli. (Believed extinct.)

La Vestale. van Houtte Catalogue, 1858, 72:16, 26. Synonym for **Vestale.**

La Vestale Santarelli. *(C.japonica)*, Santarelli, 1862, *R. Società Toscana di Orticultura Bollettino*, in a collection of camellia grown from seed in Tuscany, Italy: Ivory white with some streaks of bright crimson. Imbricated. Very large.

La Villageoise. Seidel, 1846, Pflanzen Catalog, p.8. Frères Noisette, Nantes Nursery Catalogue, 1857, p.36. Synonym for **Villageoise.**

La Villanella. *(C.japonica)*, Santarelli, 1862, *R. Società Toscana di Orticultura Bollettino*, in a collection of seedlings raised in Tuscany, Italy. No description. (Believed extinct.)

La Vinia Maggi. André Leroy, 1873, Catalogue, p.135. Orthographic error for **Lavinia Maggi.**

Labella di Giorni. Auguste van Geert, 1848, Catalogue, No.36, p.39. Orthographic error for **La Bella di Giorno.**

Labellageri. Auguste van Geert, 1852, Catalogue, p.34. Synonym for **Geri.**

Laccata. *(C.japonica)*, Verschaffelt Catalogue, No.50, 1844, p.21. No description. Seidel, 1846, Pflanzen Catalog, p.8. Originated in Italy. (Believed extinct.)

Laciniata. *(C.japonica)*, Sacco, 1830-1833 according to Schiavone, 1981, *Il Giardino nell Camelie* pl.32. Originated by Sacco, Milan, Italy. (Believed extinct.)

Laciniate. *(C.japonica)*, Berlèse, 1840, *Monographie*, ed.2, p.232: Leaves 9.5 cm x 5.4 cm, lanceolate, recurved apex, prominent venation, regular serration; buds oval-oblong, medium size, green scales. Flower over 9.5 cm across, double, cherry-red; exterior petals oval, obtuse, not very numerous, strongly emarginate, spoon shaped, spread apart horizontally; those at the centre in a bunch, of a small number, some erect, others laid down, irregular with some hidden stamens. Originated in Italy by Mariani.

Lacrima di Venezia. Victor de Bisschop Nursery Catalogue, 1935, p.12. Othographic error for **Lagrime di Venezia.**

Lacryma di Venezia. André Leroy, 1911, Catalogue No.59, P.48. Orthographic variant for **Lagrime di Venezia.**

Lacrymoidi Venezia. Vanderbilt, 1940, *Camellia Research*, p.5. Orthographic error for **Lagrime di Venezia.**

Lactea. *Floricultural Cabinet*, vol.III, 1835, p.186. British hybrid having white flowers. See Berlèse, 1841, *Iconographie*, pl.45. Synonym: 'Lactea de Loddiges'. Synonym for **Nivea.**

Lactea Alba. *(C.japonica)*, Magnolia Gardens and Nursery Catalogue, 1942-1943. An old Magnolia Gardens variety. Large, white, semi-double to rose form double. Dense, spreading growth. Flowers mid-season to late.

Lactea Casoretti. *(C.japonica)*, Maupoil & Figlio Catalogue, 1853. No description. Originated in Italy by Casoretti. Orthographic errors: 'Lattea di Casoretti', 'Lactea di Casoretti'. (Believed extinct.)

Lactea de Loddiges. Burdin Maggiore & Co. Catalogue, 1845, Synonym for **Nivea.**

Lactea de Joung. Isola Madre Catalogue, 1845. Orthographic error for 'Lactea de Young', synonym for **Nivalis.**

Lactea de Young. Jacob Makoy et Cie Nursery Catalogue, 1836, p.16. Synonym for **Nivalis.**

Lactea de Yung. Longone Catalogue, 1846. Orthographic error for 'Lactea de Young', synonym for **Nivalis.**

Lactea di Casoretti. Burdin Maggiore & Co. Catalogue, 1862. Orthographic variant for **Lactea Casoretti.**

Lactea Elegans. *(C.japonica)*, van Houtte Catalogue, 1842, 9:54: Wide petals. Very pretty white. Originated in Italy.

Lactea Nova. *(C.japonica)*, van Houtte Catalogue, 1841, 7:11. No description. Originated in Italy. (Believed extinct.)

Lactea Youngii. Berlèse 1841, *Iconographie*, p. facing pl.45. Synonym for **Nivalis.**

Lactea Young's. Franco Agostoni, 1844, *Catalogo Plantarum....* Synonym for **Nivalis.**

Lactella. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Lacteola.**

Lacteola. *(C.japonica),* Berlèse, 1837, *Monographie*, ed.1, p.55: Leaves 7.5 cm long x 5 cm wide, roundish-oval, a little obtuse, finely serrate, of an obscure green; buds large, oblong, scales yellowish with a black edge. Flower large, 9 cm across, semi-double, of a pure white, interior petals erect, a little rumpled, mixed with sterile stamens. Originated in Italy. Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 68. Orthographic error: 'Lactella'.

Lactescens. *(C.japonica)*, Herbert, 1837, *Amaryllidaceae & Suppl.*, p.367. Double, white. Seedling of the single red (**Rubra Simplex**) pollinated by 'The Striped' (**Variegata**), Synonym: 'Luna'. Originated in England.

Lactus Speciosis. *(C.japonica)*, Fratelli Rovelli Catalogue, 1852, p.24, as 'Lactus Speciosus'. Same form as **Pendulata**. Originated in Italy. (Believed extinct.)

Lacy Love. *(C.reticulata), American Camellia Yearbook*, 1980, p.168, Reg. No.1647: A very large, pink, semi-double *C.reticulata* ('Crimson Robe' (**Dataohong**) x **Jean Pursel**), blooms mid-season to late. Originated by Frank Pursel, Oakland, California, USA. The 6 year old seedling first bloomed 1979. Average flower size 15.5 cm across x 7.5 cm deep with a pinkish-yellow cluster of petaloids and yellow anthers. Petals veined deeper red, heavy texture. Plant growth upright, open and rapid in rate with dark green leaves, heavily veined, serrate, 13 cm long x 8 cm wide. Sport: **Lacy Love Variegated.**

Lacy Love Variegated. *(C.reticulata),* Cannon, 1980, ACS., *The Camellia Journal*, vol.39, No.4, p.19 as 'Lacy Love Var.': A virus variegated form of **Lacy Love** - Pink blotched white. Originated in USA.

Lacy Pink. McIlhenny, 1937, *600 Varieties of Camellias*, p.8. This name has been used as a synonym for both **Otome** as 'Pink Perfection' and **Hishikaraito**, not to mention 'Nuccio's Lacy Pink'.

Ladell Brothers. *(C.japonica), American Camellia Yearbook*, 1966, p.93, Reg. No.876: A sport of **Alyne Brothers** that was first observed in 1960. Originated by Mr Brothers, Thomasville, Georgia, USA. Plant habit is upright and open. Leaves are light green, 8 cm long x 4 cm wide. The peony form flower, similar to **Debutante,** is rose pink and has yellow anthers and white filaments. It measures 10.5 cm across x 6 cm deep and has 16 petals and 118-136 petaloids. Early blooming.

Ladies Blush. Smith, ed., Sept.1856, *Horticulturalist*, e:431. Synonym for **Incarnata.** Note: Hibbert & Buist, 1832, *The American Flower Garden Directory*, p.356, gives this as another name for 'Flavescens', as synonym for **Incarnata.**

Ladies Head Dress. P., 1837, *Magazine of Botany & Gardening*, 3:151. A synonym for 'Pomponia' (**Pompone**) which is "The Ladies Head Dress of the French."

Ladies Maid. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.125. Orthographic error for **Lady's Maid.**

Ladiner's Red. Lindo Nursery Price List, 1940-1941. Orthographic error for 'Ladinier's Red', synonym for **Prince Eugene Napoleon.**

Ladinier's Red. McIlhenny, 1937, *600 Varieties of Camellias*, p.8. Orthographic errors: 'Ladiner's Red', 'Ladner's Red'. Synonym for **Prince Eugene Napoleon.**

Ladner's Red. Coolidge Rare Plant Garden, Camellia Catalogue, ca.1949. Orthographic error for 'Ladinier's Red', synonym for **Prince Eugene Napoleon.**

Lady. *(C.japonica),* Vanderbilt, 1940, *Camellia Research*, p.5. No description. Originated in USA. (Believed extinct.)

Lady A. Buller. Bransford Nurseries Catalogue, 1966, p.4. Abbreviation for 'Lady Audrey Buller', synonym for 'Nagasaki', (**Mikenjaku**).

Lady Adelaide Campbell's. Sweet, 1826, *Hortus Britannicus* as 'Lady (Adl.) Campbell's'. Synonym for **Rubricaulis.** Orthographic variants: 'Lady Campbell's', 'Lady Admiral Campbell's'.

Lady Adele Campbell. Berlèse, 1840, *Monographie*, ed.1, p.215, 236. Synonym for **Conchiflora.**

Lady Adilaun. McEacharn, 1955, RHS., *The Rhododendron & Camellia Yearbook*, No.9, p.38. Orthographic error for **Lady Ardilaun.**

Lady Admiral Campbell's. Loudon, ed., 1825, *Greenhouse Companion*, p.74. Orthographic error for 'Lady Adelaide Campbell's', synonym for **Rubricaulis.**

Lady Admiral Campbell's Double Striped. *Magazine of Horticulture*, 1836. Synonym for **Rubricaulis.**

Lady Admiral Campbell Improved. *(C.japonica)*, Korner, 1962, *International Camellia Journal*, No.1: Single to semi-double pink. Originated in Germany.

Lady Alice. *(C.japonica)*, Verschaffelt Catalogue, 1849-1850, p.47. No description. Originated in England. (Believed extinct.)

Lady Alice. Rubel, 1936, *Camellia Culture under Glass*, p.44. Synonym for **Arajishi** as 'Aloha'.

Lady Allingham. *(C.japonica)*, SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Red and white. Medium large, peony form. Loose, upright growth. Originated in the USA at the Flowerwood Nursery, Mobile, Alabama. Orthographic error: 'Lady Allington'.

Lady Allington. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Lady Allingham.**

Lady Ann. *(C.japonica)*, SCCS., 1978, *Camellia Nomenclature*, p.90: White, large, semi-double to peony form with fimbriated petals. Mid-season blooming. Originated by M. Talia, Santa Clara, California, USA.

Lady Ardilaun. *(C.japonica)*, G.W.H., "Garden Flora", 1889, *The Garden*, 36(930):247: Small, white, formal double. B.S. Williams Nursery Catalogue, 1891, p.42: Flowers 6 cm in diameter, broad with well shaped guard petals and anemone centre, pure white with a small, primrose base. Orthographic errors: 'Lady Adilaun', 'Lady Ardilawn'. Originated in England.

Lady Ardilawn. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Orthographic error for **Lady Ardilaun.**

Lady Astor. *(C.japonica)*, NCCS., 1949, *Bulletin*, vol.3, No.2, p.7: White striped red and sporting blush pink. Medium large size, semi-double. Seedling of **Tricolor**, raised by Mrs Edinger. Originated in the USA.

Lady Audrey Buller. P.H., Apr.1901, *The Garden*, vol.59, p.281. Synonym for **Mikenjaku** as 'Nagasaki'.

Lady Bank's. *(C.oleifera)*, Aiton, 1812, *Hortus Kewensis*, 4:235. Imported from China by William Kerr in 1811 for the Royal Gardens, Kew and was brought out by Captain Wellbanks on the East Indiaman "Cuffnells". For many years it was erroneously identified as a *C.sasanqua.* See Sealy, 1958, *Monograph*, pp.208-209. It was illustrated in Edward's *Botanical Register*, 1815, vol.1, pl.12 and also by Chandler & Booth, 1831. pl.5. Synonyms: 'Lady Bank's White Sasanqua', 'Lady Bank's Camellia', 'Chandler's Sasanqua', 'Sasanqua Alba', 'Sasanqua Alba Semi-plena', 'Sasanqua'(Lady Banks), 'Flore Alba Simplex'. Originated in China.

Lady Bank's Rosy Sasanqua. Paxton, 1831-1832, *Horticultural Register.* Synonym for *C.rosiflora.*

Lady Bank's White Sasanqua. Prince, 1828, *Camellia Japonica or Japan Rose. A Short Treatize on Horticulture*, p.170. Synonym for **Lady Bank's.**

Lady Barbara. *(C.japonica)*, Valley Garden Centre Catalogue, 1946-1947: Rose pink, marbled white. Medium size, imbricated, formal double. Medium, bushy, compact growth. Blooms mid-season. Originated in the USA.

Lady Barker. Eastwoodhill Arboretum, 1982, A *List of Trees, Shrubs and climbers*, p.4. Orthographic error for Lady Parker.

Lady Belhaven. *(C.japonica)*, van Houtte Catalogue, 1857, 67:44 as 'Lady Bethaven'. No description. *Journal of Horticulture and Cottage Gardener*, June 1862, p.170: Rich carmine, fine substance. Scarcely imbricated in the centre. Another of the Woodhall seedlings. Originated in England by Dickson. Orthographic error: 'Lady Bethaven'.

Lady Belmont. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.125. Orthographic error for 'Lady Belmore', synonym for the **Countess of Belmore.**

Lady Belmore. Guilfoyle Nursery Catalogue, 1875. Synonym for **Countess of Belmore.** This name has also been erroneously applied to **Thompsonii Rosea** and **Countess of Orkney Rosea.**

Lady Beresford. Hazlewood Nursery Catalogue, 1945, p.10: Cherry-red, medium size, peony form. For black and white photo see Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II, p.189. Synonym for **Mrs Beresford.**

Lady Bessie. *(C.japonica)*, NCCS., 1954, *Bulletin.* No description. Originated in USA. (Believed extinct.)

Lady Bethaven. van Houtte Catalogue, 1857, 67:44. Orthographic error for **Lady Belhaven.**

Lady Bird. *(C.japonica)*, SCCS Bulletin, vol.11, No.6, p.5, June 1950. Fendig, 1951, *American Camellia Catalogue*, with colour pl.: Medium, white splashed and streaked bright rose-red, irregular double (peony form), 8-10 cm across x 6 cm deep with 17 outer petals and 87 petaloids. Buds are large, round and light green. Leaves light green, broadly oval to elliptic, 12.5 cm x 5.5-6.0 cm. Texture similar to **Debutante.** Tips prominent, veins notable and ridged underneath. Serrations coarse and shallow. Plant is bushy, compact and average. Originated by Homer and Birdie Wilson, Fresno, California, USA from seed of unknown parent in 1945. First flowered 1949. Registered with the ACS. as No.63.

Lady Bourgham. Fratelli Rovelli Catalogue, 1852, p.20. Orthographic error for **Lady Brougham.**

Lady Bowen. *(C.japonica)*, Baptist & Son Catalogue, 1864: Creamy white, pink stripes. Hazlewood Nursery Catalogue, 1945: Cream white, striped faint pink. Medium large, formal double. Originated in Australia by Guilfoyle and named after the wife of the Governor of Queensland of that time. Sport: **Lady Bowen Pink.**

Lady Bowen Pink. *(C.japonica)*, Hazlewood & Jessep,1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.125: Soft pink sport of **Lady Bowen.** Originated in Australia.

Lady Brougham. van Houtte Catalogue, 1839, 1:5. Synonym for **Carminea.**

Lady Brougham. *(C.japonica)*, Cachet Catalogue, 1840-1841, p.3. No description. Berlèse, 1843, *Iconographie*, pl.295: The flower is 10-11 cm across, full, regular, formal double of pure white, petals round, cup-shaped, nearly entire, 5-6 rows, imbricated. There are in commerce two camelias **Lady Brougham,** one has a red flower, similar to C. 'China Tat' (**Carminea**), but this one in question has white flowers. Synonym: 'Lady Brougham Alba'. Orthographic errors: 'Lady Brougman', 'Lady Bourgham'.

Lady Brougham Alba. Berlèse, 1843, *Iconographie* index with reference to pl.224, Synonym for **Lady Brougham.**

Lady Brougham Brouchi. Vanderbilt, 1940, *Camellia Research*, p.3. Synonym for **Carminea.**

Lady Brougham Rubra. Berlèse, 1843, *Iconographie* index with reference to pl.295. Synonym for **Carminea.**

Lady Broughton. *(C.japonica),* Verschaffelt, 1849, *Nouvelle Iconographie*, Book IX, pl.I: We received this camellia from Jackson & Co., horticulturalists of Kingston, England. Its blossoms, which are not less than 11 cm across, are regularly imbricated, of a deep cherry-red, which become paler towards the petal margin. The petals are very full and emarginate.

Lady Buller. Sander Fils Nursery Catalogue, [before 1914]. Abbreviation for 'Lady Audrey Buller', synonym for **Mikenjaku.**

Lady Byron. Seidel, 1846, Pflanzen Catalog, p.8. Orthographic error for 'Lord Byron', synonym for **Byronii.**

Lady Cambia. *(C.japonica),* J.& W. Blackburn Nursery Catalogue, 1986-1987, p.19: Pink semi-double. Originated in England.

Lady Campbell. Veitch Nursery Catalogue, 1903, p.21. Synonym for **Rubricaulis.**

Lady Campbell. Carbury Nursery Catalogue, 1956-1957, p.14: Semi-double red. Orthographic error for **Campbellii (Guichard).**

Lady Campbell (Brampton). *(C.japonica),* Laxton & Bunyard, Brampton Nursery Catalogue, 1965-1966, p.43, invalidly as 'Lady Campbell': Fully double, pink flowers striped crimson. Originated in England.

Lady Campbell. *(C.japonica),* Kiyono Nursery Catalogue, 1934, p.15: Red, medium size, rose form double. Very dark green leaves. Vigorous, wide, compact growth. Originated in USA by Bolen.

Lady Campbell's. Prince Nursery Catalogue, 1822. Abbreviation for 'Lady Adelaide Campbell's', synonym for **Rubricaulis.**

Lady Campbell's Red Stemmed. Loudon, 1841, *An Encyclopedia of Plants*, p.1238. Synonym for **Rubricaulis.**

Lady Caultwell. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Lady Crutwell'. Synonym for **Suibijin.**

Lady Charlotte. *(C.japonica),* Magnolia Gardens and Nursery, 1942-1943, Pale pink semi-double. Fendig, 1953, *American Camellia Catalogue*, with colour plate: Medium to large, pale pink, semidouble, 10-11 cm across. There are 3 rows of rather square, wavy petals with pale pink to white veins and prominent, central stamens with pale yellow filaments and dark yellow anthers. Leaves medium green, lanceolate, 8 cm long x 3.8 cm wide, slightly glossy, twisted and recurved, serrulate on plant, upright and spreading. A seedling originated in Magnolia Gardens, John's Island, South Carolina, USA from seed of unknown parents. See Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.1, p.197, black and white photos. Sport: **Lady Charlotte Variegated.**

Lady Charlotte Variegated. *(C.japonica),* Fruitland Nursery Catalogue, 1945-1946, p.26 as 'Lady Charlotte Var.': A virus variegated form of **Lady Charlotte** - Pink blotched white. Originated at Magnolia Gardens, John's Island, South Carolina, USA. See black and white photos, p.124, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III.

Lady Claire. Hillier Nursery Catalogue, 1939. Orthographic error for 'Lady Clare', synonym for **Akashigata.**

Lady Clancarty. *(C.japonica), The Garden.* 1887. No description. Originated in England. (Believed extinct.)

Lady Clara. *(C.japonica), The Garden*, 1887, p.318: Shaded pinkish. One of several varieties of Japanese camellias worthy of note, received from W. Gordon, Twickenham, England. (Believed extinct.)

Lady Clare. Reuthe Nursery Catalogue, No.16, 1911. Synonym for **Akashigata.**

Lady Clare Variant. Overlook Nurseries Catalogue, 1948-1949. Synonym for **Ôniji.**

Lady Clare Variegated. Hazlewood Nursery Catalogue, 1945, p.10 as 'Lady Clare Var.'. Synonym for **Ôniji.**

Lady Cooper. *(C.japonica)*, Baptiste & Son Nursery Catalogue, 1861, p.9. No description. Originated in Australia. (Believed extinct.)

Lady Cordelia. *(C.japonica)*, Waterhouse, 1951, *American Camellia Yearbook*, p.89 as an unpublished name from the C. Smith notebook, Caledonia Nursery, Guernsey, 1887. Red marbled white, semi-double. A re-named Japanese variety obtained from L. van Houtte. Orthographic error: 'Lady Cornelia'.

Lady Cornelia. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Lady Cordelia.**

Lady Crafton. Berlèse, 1845, *Monographie*, ed.3, p.175. Orthographic error for **Lady Grafton.**

Lady Cromartie. Mark S. Cannon Scion Catalogue, 1962, p.6. Abbreviation of **Lady Mary Cromartie.**

Lady Cromarty. Haskin's Nursery Catalogue, 1966, p.3. Orthographic error for **Lady Mary Cromartie.**

Lady Crutwell. Waterhouse, 1951, *American Camellia Yearbook*, p.87. An unpublished name from the register of the Caledonia Nursery, Guernsey, 1887. A Japanese variety obtained from L. van Houtte that has been identified as Suibijin.

Lady Cutler. *(C.x williamsii)*, ACRS., 1971, *Camellia News*, No.34, p.34, Reg. No.132: Originated by L. Jury, New Plymouth, New Zealand. Parents *C.saluenensis x C.japonica* **Ville de Nantes.** First flowered 1958 with 10-11 cm, semi-double, bright pink with cyclamen overcast flowers. The leaves are 7.5 cm long x 3.2 cm wide, acuminate and recurved of apex. Also registered with the NZCS as No.101.

Lady Darby. Vanderbilt, 1941, *Camellia Research, II*, p.4. Synonym for **Semi-Double Blush.**

Lady Daresbury. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.12 colour photo: Small, blush pink, formal double seedling of **Pink Poppy.** Originated in USA by Richard Dodd, Marshallville, Georgia.

Lady Dartner. *(C.japonica)*, Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, 1997. p.4: Medium size, blush white semi-double bloom on an upright plant. Originated in Australia.

Lady Dawn. *(C.japonica)*, Gerbing Azalea Gardens Catalogue, 1943, p.220: Medium size, formal double, pink. Originated in the USA.

Lady de Cullock. van Houtte Pere Catalogue, 1896, 265P:109. Orthographic error for **Lady McCulloch.**

Lady de Samerez. McIlhenny Catalogue, 1935. Orthographic error for **Lady de Saumarez.**

Lady de Sanquinae. *(C.japonica)*, Portland Camellia Nursery Camellia Catalogue, 1946-1947, p.6: Pink with an occasional red stripe. Medium size, semi-double. Originated in the USA.

Lady de Saumarez. *(C.japonica)*, Caledonia Nursery Catalogue, ca.1920, p.23: Similar to **Tricolor,** from which it is a sport, this plant has a splendid habit, bold foliage, and carrying large quantities of rosy, single blooms. First originated and introduced by the Caledonia Nursery,

Guernsey, Channel Isles. Synonyms: 'Tricolor Red', 'Tricolor Bolen's Red', 'Tricolor (Seibold) Red', 'Wakanoura Red', 'Bush Hill Beauty', 'Mr Rufus', 'Lady Somers'. This variety, **Lady de Saumarez,** is erroneously listed in American literature as red with white spots which is actually the form correctly known as **Lady Mackinnon**, hence the names 'Pride of Rosebud Farm', 'Pride of Portland', 'Eulalia Sally', 'Tricolor S. Folki' and 'India Kruger' commonly given as synonyms of **Lady de Saumarez** are actually synonyms of **Lady Mackinnon.** Orthographic errors: 'Lady de Samarez", 'Lady de Zaumarez', 'Lady de Saumerez', 'Lady Summerez', 'Lady de Sausmares', 'Lady Saumarez', 'Lady de Summerez', 'Lady de Saumerey', 'Lady de Sausmarez'. Note: According to Verschaffelt, 1844, Catalogue, the original name for this **Tricolor** sport was 'Decipiens', but as it is now universally known as **Lady de Saumarez** this is let stand. There is also a form with fimbriated petals known as **Fred Sander.** Chinese synonym 'Sama Furen'.

Lady de Saumarez Variegated. Griffith & Strothers, 1954, ACS., *Nomenclature Cross Reference List.* Synonym for **Lady Mackinnon.**

Lady de Saumerey. van den Broek Nursery Catalogue, 1985-1986. Orthographic error for **Lady de Saumarez.**

Lady de Saumerez. SCCS Bulletin, vol.11, No.2, p.17, Dec. 1949. Mason's Nursery Catalogue, 1959-1960. Orthographic error for **Lady de Saumarez.**

Lady de Sausmares. Sandhurst Nursery Catalogue, 1959. Orthographic error for **Lady de Saumarez.**

Lady de Sausmarez. Stocklands Estate, Longbank Catalogue, 1950-1951, p.18. Orthographic error for **Lady de Saumarez.**

Lady de Sumerez. SCCS, 1942, *The Classification of Camellias,* p.4. Orthographic error for **Lady de Saumarez.**

Lady de Summerez. Manning, 1939, *Plant Buyer's Index.* Orthographic error for **Lady de Saumarez.**

Lady de Vere. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Shell pink. Medium size, semi-double with a loose, upright growth. Originated as a seedling at Magnolia Gardens, John's Island, South Carolina, USA. See black and white photo, p.190, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II. Orthographic variant: 'Lady Devere'.

Lady de Zaumarez. Mount Congreve Gardens Catalogue, 1967-1978, p.1. Orthographic error for **Lady de Saumarez.**

Lady Derby. Wilson, 1930, *House & Garden,* 57(3):158. Synonym for **Commensa.**

Lady Devere. Wilmot, 1943, *Camellia Variety Classification Report*, Orthographic variant of **Lady de Vere.**

Lady Dillingham. Valley Garden Supplies Catalogue, 1946-1947. Synonym for **Mrs Rowena Dillingham.**

Lady Don. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.126. Orthographic error for **Lady Dunn.**

Lady Dorothee Walpole. *(C.japonica),* Stefano Pagliai Catalogue, 1867: Rosy, flesh pink, all veined a vivid rose-pink, petals bordered with white and all striped and dotted carmine. Imbricated. Originated in Italy as a sport of **Princess Frederick William.**

Lady Dunn. *(C.japonica),* Gerbing's Azalea Garden Catalogue Supplement, 1943-1944: Originated at Loxley, Alabama, USA comes this early, large, peony form camellia. The colour is deep pink to rose-pink. Occasional stripes of red can be found on a petal. Foliage is long pointed, dull green. Growth is slow, open and inclined to be willowy. Orthographic error: 'Lady Don'.

Lady Dunce. Anderson & Co. Ltd. Nursery Catalogue, 1936. Orthographic error for 'Lady Duntz', synonym for **Great Western.**

Lady Duntz. Baptist & Son Nursery Catalogue, 1864. Synonym for **Great Western.**

Lady Eddinger. Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.125. Orthographic error for **Lady Edinger.**

Lady Eddinger (Solid Sport). Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.127. Synonym for **Susan Brown.**

Lady Edinger. *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue:* Large, semi-double, to open peony form, creamy white, flecked and striped Neyron Rose 623, occasionally darker, sports to Neyron Rose 623/1 with lighter margins and deeper stripes. A second sport, solid opal rose; 11 cm across x 5 cm deep with petals up to 25, outer reflexed, undulate, firm substance, notched apex. Centre of flower, wide spread group of crimped stamens and a few petaloids, filaments creamy white, anthers bright yellow. Leaves elliptic to narrow-elliptic, dull mid-green, 8 cm x 4.3 cm, margins crenate, apex long pointed, recurved. Habit, upright, spreading, vigorous. A seedling that originated at Rosebud Farm, Hood, California, USA. Synonym: 'Lady Edinger Variegated'. Sport: **Susan Brown.** Orthographic errors: 'Lady Eddinger', 'Lady Endinger'. For black and white photo see Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.125.

Lady Edinger Variegated. Hillcrest Nursery Catalogue, 1958 as 'Lady Edinger Var'. Synonym for **Lady Edinger.**

Lady Eleanor Campbell. van Houtte Catalogue, 1841, 7:11. Orthographic variant for **Lady Eleanor Campbell's.**

Lady Eleanor Campbell's. *(C.japonica)*, Harrison, ed., 1835, *Floricultural Cabinet*, p.118 as 'Lady Eleanor Campbell's Hybrid': A seedling from 'Middlemist's Blush', (**Middlemist's Red**). A beautiful flower, the centre petals being occasionally mottled with white. A seedling raised in Scotland in the garden of Walter Frederick Campbell by the gardener, Walter Henderson. Synonyms: 'Venustum', 'Orphaline de Gand', 'Elinsonii'. Orthographic variants: 'Lady Eleanor Campbell', 'Lady Eleonor Campbell', 'Lady Eleanore Campbell', 'Lady Eleonore Campbell', 'Lady Eleanora', 'Lady Eleonora Campbell'. Orthographic errors: 'Lady Elenore de Campel', 'Lady Elonara Campbell', 'Lady Eleon. Champbel', 'Eleonore Campell', 'Lady Eleonore de Campbelle'.

Lady Eleanore Campbell. Makoy Catalogue, 1838. Orthographic error for **Lady Eleanor Campbell's.**

Lady Elisnore. *(C.japonica)*, Marnock, 1839, *Floral Magazine*, 3(32), p.258. No description. Originated in England. (Believed extinct.)

Lady Elizabeth Dickens. *(C.japonica)*, Donard Nursery Catalogue, 1944, p.5. Single; clear rose-pink. Originated in England.

Lady Elonara Campbell. Lemaire, 1844, *Revue Horticole.* Orthographic error for **Lady Eleanor Campbell's.**

Lady Emily Cathcart. *(C.japonica)*, Robinson, ed., 1903, *Flora & Sylva*, vol.1, p.257:- At Emys there are many large bushes, one of the most beautiful being the shell-pink **Lady Emily Cathcart.** Originated in England.

Lady Endinger. River View Nursery Catalogue, 1958-1959, p.11. Orthographic error for **Lady Edinger.**

Lady Erma. *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue:* Pink. Complete peony. Early. SCCS., 1954, *The Camellia. Its Culture and Nomenclature:* Soft pink. Medium size, formal double to peony form with scalloped edged petals. Early to mid-season flowering. Originated by M. Munga, Fresno, California, USA.

Lady Estelle Peel. *(C.japonica), American Camellia Yearbook*, 1986, p.92, Reg. No.1998: A large to very large, dark pink, shaded to pale pink, semi-double, *C.japonica* chance seedling, flowering midseason. Originated by Virginia E. Majette, Pensacola, Florida, USA. The 10 year old seedling first flowered 1981. Average flower size, 11 cm across x 6 cm deep with 27 petals, 7 petaloids, yellow anthers and pink filaments. Plant growth is average with dark green leaves 8 cm x 5 cm.

Lady Ethel Hill. *(C.japonica), American Camellia Yearbook*, 1962-1963, p.220, Reg. No.629: A 7 year old chance seedling that first bloomed 1960. Originated by Mrs Ethel English, Dawson, Georgia, USA. Plant growth is upright and spreading with dark green leaves, 10 cm long x 5 cm wide. The single flowers, similar to **Kimberley,** are 11 cm across and 4 cm deep with 6 petals. The fuchsia coloured flowers have a bright, velvety sheen with petals slightly apart and stamens erect.

Lady Eva. *(C.japonica), American Camellia Yearbook*, 1975, p.238, Reg. No.1349: A 7 year old chance seedling that first bloomed 1972. Originated by Marvin Jernigan, Warner Robins, Georgia, USA. Plant growth is upright, spreading and open with dark green leaves, 11 cm long x 5.5 cm wide. The semi-double to loose, peony form type bloom is red group 49C flushing to red group 55C on outer edge of petals, large rabbit ears, 4 clusters of small, cream coloured petaloids with 38 petals and 430 petaloids. Average size is 10.5 cm across x 3, 8 cm deep. Late blooming.

Lady Faier. Verschaffelt Catalogue, No.50, 1844, p.21. Orthographic error for **Lady Fayer.**

Lady Fair. *(C.japonica), American Camellia Yearbook*, 1966, p.93, Reg. No.875: A semi-double, light pink, flower, 13 cm across x 5 cm deep; anthers yellow and filaments cream. Has heavy, creped petals and blooms early. A seedling from *C.japonica* 'Magnoliiflora', (**Hagoromo**) x 'Lotus' (**Gauntlettii**) that first bloomed 1957 at 10 years. Originated by Mrs C.T. Brown, Guyton, Georgia, USA. Plant habit is upright and medium in rate with dark green, waxy leaves, 11 cm long x 7 cm wide.

Lady Fayer. *(C.japonica)*, Cachet Catalogue, 1845-1846, p.7. No description. Originated in England. (Believed extinct.) Orthographic error: 'Lady Faier'.

Lady Fernanda. *(C.japonica),* ACS, *The Camellia Journal,* June 2006, p.28, colour photo p.29, Reg No. 2675. A chance seedling that first flowered 1970. Originated by Magnolia Plantation & Gardens, Charleston, S.C.,USA. The 10 cm diameter rose form double flower has 80 petals and is medium pink with some shading. Yellow stamens and white filaments. Falls in one piece. Plant is upright and dense. Flowers mid-season. *American Camellia Yearbook*, 2006, p.58 with colour photo. Dark green leaves are 9.5 cm x 3.8 cm.

Lady Foster. Cachet Catalogue, 1845-1846, p.7. Synonym for **Fosterae.**

Lady France. McIlhenny Catalogue, 1941-1942, p.9. Synonym for **Souvenir de Bahuaud-Litou.**

Lady Frances. *Standardized Plant Names*, 1942. Synonym for **Souvenir de Bahuaud-Litou.**

Lady Francis. SCCS,.1950, *The Camellia. Its Culture and Nomenclature.* Synonym for **Souvenir de Bahuaud-Litou.**

Lady Fraser. *(C.japonica), American Camellia Yearbook*, 1981, p.101, Reg. No.1735: A large size, pale pink with rose stripes, peony form, *C.japonica* chance seedling, originated by Fraser Ledbetter, Simons Island, Georgia, USA. The 7 year old seedling first bloomed 1978. Average flower size, 10.5 cm across x 5 cm deep with 84 petals, yellow anthers, pink filaments. Plant growth is upright, dense and medium in rate with dark green leaves, 8.2 cm x 3.8 cm.

Lady Gem. Cachet Catalogue, 1840-1841, p.3. Synonym for **Resinii.**

Lady Glencora. *(C.pitardii x C.reticulata), New Zealand Camellia Bulletin*, 1981, vol.XII, No.2, p.5, Reg. No.158: A hybrid raised by A.H. Burwood, Inglewood, New Zealand. The seed parent a *C.pitardii* cross from California and the male parent *C.reticulata* **Buddha.** First flowered 1976. It has medium growth to form a plant of average habit. Foliage dark green, 9.5 cm x 4 cm. The flower, 13 cm across x 8.5 cm deep is mid-pink, varying from semi-double to peony form. It has 14 petals plus 7 rabbit ears. Flowers early to late season. Orthographic error: 'Lady Gwen-Cora'.

Lady Gwen-Cora. Thermal Nurseries (Rotorua), Ltd Catalogue, 1986, p.11 . Orthographic error for **Lady Glencora.**

Lady Gowrie. *(C.x williamsii),* Waterhouse, 1952, *Camellia Trail*, p.31: Large semi-double, 12-13 cm across with about 20 petals and a narrow cylinder of slender stamens. The tall petals are deeply notched at the apex, forming two lobes. Colour fuchsine pink (627/2 to /1). Raised from seed by E.G. Waterhouse, Gordon, N.S.W., Australia from a plant of *C.saluenensis* from Marchants Nursery, England. See colour photo p.51, Macoboy, 1981, *The Colour Dictionary of Camellias.* Received an RHS, P.C.,1963.

Lady Graffton. *Notiziario delta Società Italiana delta Camelia*, Mar.1990, vol.XXVI, No.l, p.18. Orthographic error for **Lady Grafton.**

Lady Grafton. *(C.japonica),* Harrison ed., 1838, *The Floricultural Cabinet*, vol.6, p.149: Double, light red. Berlèse, 1840, *Monographie*, ed. 2, pp.130, 229: A more or less spherically shaped peony form of strongly veined, light salmon red. Exterior petals, not numerous, large, emarginate, while the interior petals are numerous and irregular. Synonyms: 'Lady Pretiosa', 'Pretiosa'. Orthographic errors: 'Lady Crafton', 'Lady Graston'. For illustration see pl. 135, Berlèse, 1843, *Iconographie* and Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 93.

Lady Graston. Trillon, Le Mans Nursery Catalogue, 1845, p.5. Orthographic error for **Lady Grafton.**

Lady H. Clive's. Sweet, 1830, *Hortus Britannicus*, p.74. Synonym for **Cliveana.**

Lady Harland. *(C.japonica)*, Verschaffelt, 1844, Catalogue, No.50, p.21. Cachet Catalogue, 1845-1846, p.7. No description. Originated in England. (Believed extinct.)

Lady Harriet. *(C.japonica)*, van Houtte Catalogue, 1841, 7:11. Similar to **Lady Grafton.** Very beautiful but not such pronounced veining. Charles van Geert Nursery Catalogue, 1845, p.8: Brilliant vermilion rose, shaded and margined white. Orthographic error: 'Lady Harriette'. Originated in England.

Lady Harriette. Seidel, 1846, Pflanzen Catalog, p.8. Orthographic error for **Lady Harriet.**

Lady Helen. Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I, p.166. Synonym for **Helen Hunt.**

Lady Helen Campbell. van Houtte Catalogue, 1841, 7:11. Orthographic variant for **Lady Hélène Campbell.**

Lady Hélène Campbell. *(C.japonica)*, van Houtte Catalogue, 1839, 1:5. No description. Originated in England. (Believed extinct.) Orthographic variant: 'Lady Helen Campbell'.

Lady Henrietta. *(C.japonica)*, Harrison, ed., 1838, *Floricultural Cabinet*, p.149: Double, rose mottled. Berlèse, 1840, *Monographie*, ed.2, pp.203, 235 as 'Lady Henriette': Also Mertens & Fontaine, *Collection de cent espèces.....camellia*, 1845, pl. 65 as 'Lady Henriette'. Flower of over 8 cm across, full, soft white stripes with some marks and longitudinal lines of deep rose or pale cerise; corolla regular, round, with the centre a little elevated, but erect; exterior petals in many rows, broad, oval, entire, thick, elegantly displayed; those of the interior are very small, less imbricated, of a small number, and forming a heart, curled and shell-like: there are stripes of rose or red. Similar form to **Lineata.** Orthographic variant: 'Lady Henriette'. Originated in England.

Lady Henriette. van Houtte Catalogue, 1839, 1:5. Orthographic variant for **Lady Henrietta.**

Lady Henriette. Trillon, 1845, Catalogue, p.5: Bright red. Well made. Synonym for **Belle Henriette.**

Lady Hill. *(C.japonica)*, van Houtte Catalogue, 1841, 7:11: Globe shaped, soft pink variegated with white, powdered and flecked with cherry red...formed like **Lady Grafton** but larger. Originated in England.

Lady Hope. *(C.japonica)*, Camellia Grove Nursery Catalogue, 1944: Sport of **Prince Frederick William** - Light pink, flaked white. Originated in Australia. Synonym: 'Mary Sandoz'.

Lady Hortance. Verschaffelt, 1844-1845, Catalogue, p.26. Orthographic error for **Lady Hortense.**

Lady Hortence. Verschaffelt Catalogue, 1846, p.55. Orthographic error for **Lady Hortense**.

Lady Hortense. *(C.japonica)*, Rousseau, Angers Nursery Catalogue, 1842-1842, p.3: Pale pink. Berlèse, 1845, *Monographie*, ed.3, p.175: Leaves of different forms from 5 cm x 4 cm to 9 cm x 6 cm, horizontal, almost flat, serrations sharp, mid-green; buds ovate, acuminate in autumn and flattened in spring, solid, scales greenish at the base, blackish at the apex. Flower full, peony form, 9-10 cm across, vivid cherry-red with nuances similar to **Preston Eclipse.** Exterior petals in 4 rows of average size, rounded, thin, transparent, notched, close set and reflexed, regularly imbricated; those of the centre forming a body somewhat broad, upright, serried, small and strap-like, dark red like the first. Orthographic errors: 'Lady Hortence', 'Lady Hortance'.

Lady Hovey. Lindo Nursery Price List, 1940-1941. Synonym for **Mrs Anne Marie Hovey.**

Lady Hulmess. G.W.T., Feb.1938, *Gardeners' Chronicle*, ser.3, 103: 142. Orthographic error for 'Lady Hume's Blush', synonym for **Incarnata.**

Lady Hume. *The New England Farmer and Horticultural Register*, 1841, p.28. Abbreviation for 'Lady Hume's Blush', synonym for **Incarnata.**

Lady Hume Pink. Vanderbilt, 1941, *Camellia Research, II,* p.4. Synonym for **Incarnata.**

Lady Humes. Fisher Holmes Catalogue, 1832-1833. Abbreviation for 'Lady Hume's Blush', synonym for **Incarnata.**

Lady Hume's Blush. Seidel, 1816-1817, *Allegemeinen Deutches Garten Magazin*, 2:VIII. Synonym for **Incarnata.** Orthographic errors and variants: 'Lady Hulmess', 'Lady Hume', 'Lady Hume Pink', 'Lady Humes', 'Hume's Blush', 'Pudeur de Madamoiselle Hume', 'Lady Hume's Double Blush', 'Lady Hume's Camellia'.

Lady Hume's Camellia. Loudon, 1838, *Arboretum Britannicus*, p.383. Synonym for **Incarnata.**

Lady Hume's Double Blush. *Magazine of Horticulture*, 1835. Synonym for **Incarnata.**

Lady Ida Pearl. *(C.japonica),* ACS, *Yearbook,* 2013, p.121 with colour photo. Originated, registered and propagated by Tom Sellers, Bolivia, N.C, USA. A 24 year old seedling, parentage unknown, first flowered 1995. Large, 10cm diameter x 3.8cm deep, flower is white, with 30 petals, semidouble to formal double. (photo shows a formal double with bud centre and no stamens described). Heavy petal texture, and flower falls whole. Dense, spreading, vigorous growth. Mid-green leaves average 10cm x 6.5cm. Flowers midseason to late.

Lady in Pink. *(C.japonica), American Camellia Yearbook*, 1982, p.174, Reg. No.1796: A large, bright, rosepink, semi-double *C.japonica* chance seedling of **Lady in Red,** that blooms early to mid-season. Originated by Paul Gilley, Grand Ridge, Florida, USA. Average flower size, 12.5 cm across x 6 cm deep with 18-20 petals, light creamy filaments, yellow anthers. Plant growth is upright and medium in rate with dark green leaves, 8 cm long x 5 cm wide.

Lady in Red. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.70: Seedling of Letitia Schrader, 12.5 cm across. Reddest red. Very large, semi-double with waxy sheen. Vigorous, compact, upright growth. Mid-season blooming. Originated in USA by McCaskill Gardens, Pasadena, California. Received the "Margarete Hertrich Award" from the SCCS, in 1960. See colour photo, front cover, SCCS., 1959, *The Camellia Review*, vol.21, No.2. Sport: **Lady in Red Variegated.** Chinese synonym: 'Hongzuang Furen'.

Lady in Red Variegated. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.70 es 'Lady in Red Var.': A virus variegated form of **Lady in Red** - Reddest red variegated with white. Originated in McCaskill Gardens, Pasadena, California, USA.

Lady Jane. (*C.japonica),* Waterhouse, 1951, *American Camellia Yearbook*, p.89: A Camellia purchased from L. van Houtte in 1887 by Caledonia Nursery, Guernsey. Rich red double, stout, sturdy bloom, not large but very telling. A Japanese import renamed by Caledonia Nursery.

Lady Jane Grey. Vanderbilt, 1940, *Camellia Research*, p.5. Synonym for **Eugene Lizé.**

Lady Jean. *(C.japonica),* Valley Garden Centre Catalogue, 1946-1947: Red spotted with white. Medium size, imbricated formal double. Medium size, compact, upright growth with medium size, deep green foliage. Mid-season to late flowering. Originated in USA.

Lady Juliette. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* No description. Originated in USA.

Lady Kay. *(C.japonica),* Thompson, 1950, *American Camellia Yearbook*, p.144: **Lady Kay,** the complete double, irregular sport of **Ville de Nantes**, is variegated and fimbriated like its parent. Large size, bright scarlet, blotched white. Registration No.48 with the ACS. Originated by Al Cordoza, Palo Alto, California, USA in 1946. It has all the characteristics of **Ville de Nantes** except that it is a full, incomplete double with 25-30 petals and large petaloids. Sport: **Lady Kay Red.** It received the "William Hertrich Award" in 1951 and the "Sewell Mutant Award" from the SCCS in 1983. See colour photo facing p.47, *American*

Camellia Yearbook, 1983 and on p.99, Macoboy, 1981, *The Colour Dictionary of Camellias.* Synonyms: 'Lady Kay'(Lewis), 'Lady Kay'(Bush). Chinese synonym: 'Kaifuren'.

Lady Kay (Bush). Bob Wines Nursery Catalogue, 1985-1986, p.2. Synonym for **Lady Kay.**

Lady Kay Red. *(C.japonica)*, Fendig, 1953, *American Camellia Yearbook*, as 'Lady Kay Rod': A solid red form of **Lady Kay.** Originated at the James Rare Plant Nursery, Campbell, California, USA. See black and white photo, p.132, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Synonym: 'Ville de Nantes Sport No.3'. Chinese synonym 'Hong Kai Furen'.

Lady Kay (Mrs. O.V. Lewis). Valdosta Camellias, 1986, ACS., *The Camellia Journal*, vol.41, No.4, p.9, as 'Lady Kay (Lewis)'. ACS Nov. 1994, *The Camellia Journal*, vol.49, No.4, inside back page, Valdosta Camellia Scions. No description. A special clone of **Lady Kay.**

Lady Kay Rod. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Lady Kay Red.**

Lady Kyle. *(C.japonica)*, Verschaffelt, 1855, *Nouvelle Iconographie*, Book I, pl.III: Two years ago we received this camellia from England where it had been obtained from seed. Its blossoms, larger than average, are a vivid rose with here and there a few white stripes. An irregular, peony form double of about 10 cm across.

Lady Lanstar. Baronscourt Nursery Catalogue, 1986-1987. No description. No valid listing located. Renamed 'Lady Vanstar.' in their 1988 Catalogue. Probably an error for **Lady Vansittart.**

Lady Lascelles. *(C.japonica)*, Waterhouse, 1951, *American Camellia Yearbook*, p.87: Purchased from L. van Houtte by the Caledonia Nursery, Guernsey, in 1887. Carnation double. Quite ordinary. Believed to have been imported from Japan and renamed by the Caledonia Nursery. (Believed extinct.)

Lady Laura. *(C.japonica), American Camellia Yearbook*, 1974, vol.I, p.171, Reg. No.1269: A 7 year old chance japonica seedling, that first bloomed 1969, originated by T.E. Lundy, Pensacola, Florida, USA. Plant growth is upright, average and medium in rate with dark green leaves, 11 cm long x 5 cm wide. The peony form, **Daikagura** type, bloom is pink variegated with rose. It measures 10.5 cm across x 5 cm deep with 6 rows of petals with 12-15 per row and 3-7 petaloids, yellow anthers and cream filaments. Blooms mid-season. Sport: **Lady Laura Red.** Orthographic error: 'Lady Lura'. Chinese synonym: 'Laola Furen'.

Lady Laura Red. *(C.japonica)*, *American Camellia Yearbook*, 1984, p.179, Reg. No.1921: A medium red, peony form *C.japonica* sport of **Lady Laura.** First observed 1974. Bloom size and description same as parent. Registered by John Terry, USA.

Lady Lee. *(C.x williamsii*), SCCS., 1984, *Camellia Nomenclature*, p.140: Salmon pink. Medium size, rose form double to formal double with 4 rows of petals. Vigorous, upright growth. Early to midseason flowering. A seedling of *C.saluenensis x C.japonica* **Debutante,** originated in USA by David L. Feathers, Lafayette, California.

Lady Leonore Campbell. Maupoil & Figlio Catalogue, 1847 as 'Lady Leonore Campbel'. Orthographic error for **Lady Eleanora Campbell's.**

Lady Linda. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.6. No description. Originated in USA. No valid listing located.

Lady Loch. *(C.japonica)*, Taylor & Sangster Nursery Catalogue, 1889: A sport of **Aspasia Macarthur** with the same floral form and size. Its colour is salmon pink bordered white. For colour illustration see pl.III, Waterhouse, 1952, *Camellia Trail* and p.55, Macoboy, 1981, *The Colour Dictionary of Camellias.* Synonyms: 'Elizabeth Johnston', 'Edward Billing', 'Duchess of York', 'Pink Lady', 'Mrs Edward Billing', 'Elizabeth of Glamis'. Orthographic error: 'Lady Locke'. Chinese synonym: 'Luochi Nüshi'.

Lady Locke. Avenue Nurseries Catalogue, 1958, p.19. Orthographic error for **Lady Loch.**

Lady Long's Camellia. Edwards, 1822, *Botanical Register.* Synonym for **Myrtifolia.**

Lady Lotus. Vanderbilt, 1941, *Camellia Research, II,* p.4. Synonym for **Gauntlettii.**

Lady Love. (*C.reticulata* hybrid). SCCS 1996, *Camellia Nomenclature*, p.135: Light pink, medium to large size, formal double. Average, dense growth. Blooms mid-season. A seedling of *C.x williamsii* **Coral Delight** x *C.reticulata* hybrid **Royalty**, originated by T. Croson, Powers, Oregon, USA.

Lady Lucile. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Lady Lucille.**

Lady Lucille. *(C.japonica)*, Fruitland Nursery Catalogue, 1947-1948, p.28: Semi-double, fluffy white. Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II, pp.188, 191, black & white photo: Medium to large, 11 cm across x 5.5 cm deep, white, varying in form from semi-double to incomplete, peony form. Petals are thick, creamy white, up to 30 segments. Centre consists of a cluster of loosely arranged stamens with creamy white filaments and dark, golden anthers. Leaves oblong-lanceolate, slightly cupped, raised venation, 10 cm x 4 cm, dull, dark green, road, shallow serrations. Originated by Mr & Mrs Madsen, Ocean Springs, Mississippi, USA from seed of unknown parents. Orthographic error: 'Lady Lucile'.

Lady Lura. Cannon, 1976, ACS., *The Camellia Journal*, vol.31. Orthographic error for **Lady Laura.**

Lady Lundy. *(C.japonica)*, Cannon, 1975, ACS., *The Camellia Journal*, vol.30, No.4. No description. Originated in USA. No valid listing located.

Lady Lynn. *(C.japonica)*, Waterhouse, 1951, *American Camellia Yearbook*, p.87: Purchased by the Caledonia Nursery, Guernsey from L. van Houtte in 1887. Believed to have been imported from Japan and renamed by Caledonia Nursery. (Believed extinct.)

Lady Macculloch. Waterhouse, 1951, *American Camellia Yearbook*, pp.88, 90. Orthographic variant for **Lady McCulloch.**

Lady Mackinnon. *(C.japonica)*, Williams, B.S., *Own New Plants for 1891.* Introduced by Mr Gerald Waller. Crimson curiously mottled with white. The blooms are about 6.5 cm in diameter, quite single with golden anthers. This is the white variegated form of **Lady de Saumarez.** Synonyms: 'Tricolor Folki', 'Pride of Portland', 'Pride of Rosebud Farm', 'Eulalia Sally', 'India Kruger', 'Quartet Mottled', 'Etienne de Bore', 'Hopkins Variegated'. Pseudonyms in USA: 'Lady de Saumarez', 'Melody'. Orthographic error: 'Lady McKennan'. For colour photo see p.99. Macoboy, 1981, *The Colour Dictionary of Camellias.*

Lady Macon. *(C.japonica),American Camellia Yearbook*, 1960, p.200, Reg. No.511: (Wheeler's seedling 459). A 10 year old chance seedling which first bloomed 1955. Originated by Wheeler's Central Georgia Nurseries, Macon, Georgia, USA. Growth habit average, medium, dense branching, leaves dark green, 7.5 cm x 3.8 cm. Flowers anemone form, 13-15 cm across x 6 cm deep with 20-25 vivid pink petals with a sheen and 30-35 petaloids, white stamens. Late flowering. For colour photo see: Front cover, ACS., 1960, *The Camellia Journal*, vol.15, No.3; Front cover *New Zealand Camellia Bulletin*, vol.VII, No.4. 1972. Sport: **Lady Macon Variegated.** Chinese synonym 'Makang Furen'.

Lady Macon Variegated. *(C.japonica)*, Mark S. Cannon Scion Catalogue, 1962, p.6. No description. SCCS., 1962, *Camellia Nomenclature*, as 'Lady Macon Var.': A virus variegated form of **Lady Macon** - Vivid pink, blotched white. Originated in USA.

Lady Margaret. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.20. Synonym for **Ella Drayton** as 'Climax'.

Lady Margaret. *(C.japonica)*, Waterhouse, 1951, *American Camellia Yearbook*, p.87. Obtained by Caledonia Nursery, Guernsey, from L. van Houtte in 1887. Imported from Japan and renamed by Caledonia Nursery. (Believed extinct.)

Lady Margaret Dunne. *(C.japonica), Gardeners' Chronicle*, 1878. No description. Originated in England. (Believed extinct.)

Lady Marian. Reuthe, Fox Hill Hardy Plant Nursery Catalogue, No.16, 1911. Synonym for **Kumasaka,** renamed by Caledonia Nursery, Guernsey, from a plant obtained from L. van Houtte in 1887, originally imported from Japan. Orthographic variant: 'Lady Marion'.

Lady Marion. Wilson, 1930, *Home and Garden.* Orthographic variant for 'Lady Marian', synonym for **Kumasaka.**

Lady Marion Variegated. Fendig, 1953, *American Camellia Catalogue*. Synonym for **Hanatachibana.**

Lady Marion Cromartie. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Lady Mary Cromartie.**

Lady Mary Cromarte. Portland Camellia Nursery Catalogue, 1946-1947, p.10. Orthographic error for **Lady Mary Cromartie.**

Lady Mary Cromartie. *(C.japonica)*, Fruitland Nursery Catalogue, 1941-1942, p.28: A large size, deep rose-pink, incomplete double, 10-11 cm across, 8-10 large, outer petals, broad-ovate, recurved, deeply notched; centre of flower, wide spreading, stamen cluster, surrounded by small, semi-erect inner petals. Filaments light yellow, anthers golden. Leaves elliptic, dull, dark green, thin, flexible, 8.5 cm x 4.5 cm, acuminate apex, serrations broad and shallow. Originated at Magnolia Gardens, John's Island, South Carolina, USA. Orthographic errors: 'Lady Mary Cromarte', 'Lady Mary Cromarty', 'Lady Marion Cromartie'. Abbreviation: 'Mary Cromartie'. Sport: **Lady Mary Cromartie Variegated.** Pseudonym: 'La Reine'. Synonym: 'Lady Mary Cromartie Pink'. See black & white photo, p.201, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I.

Lady Mary Cromartie Pink. Fruitland Nursery Catalogue, 1943-1944, p.28. Synonym for **Lady Mary Cromartie.**

Lady Mary Cromartie Variegated. *(C.japonica)*, Fruitland Nursery Catalogue, 1943-1944, p.28: A virus variegated form of **Lady Mary Cromartie** - Deep rose-pink, blotched white. Originated in USA at Magnolia Gardens, John's Island, South Carolina. Synonyms: 'Forever Amber', 'Variegated Lady Mary Cromartie'. Orthographic variant: 'Lady Mary Cromartie Variant'. Erroneously equated with **La Reine Variegated** in America. For black & white photo see p.201, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I.

Lady Mary Cromartie Variant. Overlook Nursery Catalogue, 1948-1949, p.22. Orthographic variant for **Lady Mary Cromartie Variegated.**

Lady Mary Cromarty. McIlhenny Catalogue, 1946-1947, p.8. Orthographic error for **Lady Mary Cromartie.**

Lady Mary Labouchere. *(C.japonica), Gardeners' Chronicle*, 1859, p.315: A very light rose with a tendency to be blotched. A cupped variety with ragged petals. Originated in England.

Lady Maude Walpole. *(C.japonica)*, Stefano Pagliai Catalogue, 1867: Magnificent flower, vivid carmine rose, very full, perfectly imbricated. A sport of **Virginia Franco.** Originated in England. Synonym: 'Virginia Franco Rubra'. For colour illustration see: Waterhouse, 1952, *Camellia Trail*, p.1 as 'Virginia Franco Rubra'.

Lady McCamley. *(C.japonica),* ACRS, *Camellia News,* 1995, No.135, p.12, colour photo p.19, Reg. No.451: Originated by Francis McCamley, Blakehurst, NSW, Australia. A chance seedling of *C.japonica* **Tama-no-ura.** First flowered 1993. The deep pink (RHS.CC.52B), single flower of 5 petals has a white margin on each petal. Flower size is 9 cm across x 4 cm deep. Early and free flowering on a plant vigorous and bushy/ Leaves glossy green, flat, slightly curled, elongated, serrations almost absent, apices blunt acute, 9.6 cm long x 7 cm wide. Petals fluted. Flowers shed whole.

Lady McCullagh. Mount Congreve Gardens Catalogue, 1967-1968, p.1. Orthographic error for **Lady McCulloch.**

Lady McCulloch. *(C.japonica),* G.W.H., Garden Flora, 1889, *The Garden*, 36(930):247. No description. B.S. Williams Nursery Catalogue, 1891, p.42: Flowers 8-10 cm across, double, petals broad and good shape, nearly white but spotted and splashed with rose towards the centre. van Houtte Pere Catalogue, 1898, 275: 203: Almost double, of a snow white, sometimes faintly streaked with carmine. Puddle & Hanger, 1961, RHS., *The Rhododendron and Camellia Yearbook*, No.15, pp.116, 117: Semi-double, white, lightly blotched and flecked with carmine (HCC.21/1), 8.5-9 cm across, petals, 15-18, 4 cm x 4 cm, central petals smaller and sometimes broadly ovate, forming a campanulate flower. Stamens conjoined in clusters of 14 or 15, with one or two petaloids. Leaves elliptic, 8 cm long x 3.4-4.0 cm wide, relatively coarsely serrate, long-acuminate or acuminate, deep glossy green on a plant of spreading, bushy habit. Introduced from Japan by Gerald Waller, first distributed by L. van Houtte and B.S. Williams. Sports: **Lady McCulloch Pink, Lady McCulloch Carmine**. Orthographic errors: 'Lady MacCulloch', 'Lady Macullough', 'Lady McCullock'. Pseudonym: 'Sabina'.

Lady McCulloch Carmine. (*C.japonica),* Anderson, 1961, *Camellias*, p.74: Carmine, mid-season. Puddle & Hanger, 1961, RHS., *The Rhododendron and Camellia Yearbook*, No.15, p.117: A sport of **Lady McCulloch,** Carmine 21/1, paler in the centre of the petals but blotches of deeper colour running from base to apex. Flower shape and foliage characteristics identical to that of the parent. Originated in England.

Lady McCulloch Pink. *(C.japonica),* Anderson, 1961, *Camellias*, p.74: Neyron rose striped carmine. Mid-season. Puddle & Hanger, 1961, RHS., *The Rhododendron and Camellia Yearbook*, No.15, p.117: Sport of **Lady McCulloch,** very near Neyron Rose (HCC.623/2) striped Carmine (HCC.21), petals irregularly margined with white. Foliage and flower form identical to parent. Originated in England.

Lady McCullock. Wakefield, 1964, *Camellias for Every Garden*, p.140. Orthographic error for **Lady McCulloch.**

Lady Mildred. *(C.japonica),* Hume, 1946, *Camellias in America*, p.248: Flower large, 10 cm wide x 4 cm deep, self carmine-crimson 21-22, with deeper veinings; petals thick, round, 4.5 cm x 4.5 cm, apices notched, bases rounded to short haft, inner petals creped; stamens numerous, sometimes with a few small, petaloids around the outside of the cylinder, filaments crimson, pistil 3.5 cm long, style crimson. Leaves dark, glossy green, 10 cm x 6 cm, elliptic, bases rounded, apices abruptly, sharp pointed, serrations sharp. Selected as a seedling at Glen Saint Mary Nurseries, Glen Saint Mary, Florida, USA.

Lady Mulberry. SCCS., 1950, *The Camellia. Its Culture and Nomenclature.* Synonym for **H.A. Downing.**

Lady Nancy Adare. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Pink with petals bordered white. Medium size, semi-double. Medium, loose, upright growth. Mid-season flowering. Originated by Magnolia Gardens, John's Island, South Carolina, USA. Synonym: 'Irresistable'. See black & white photo, p.203, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I. Sport: **Lady Nancy Adare Variegated.**

Lady Nancy Adare Variegated. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.127: A virus variegated form of **Lady Nancy Adare** - Pink bordered and blotched white. Originated in Australia.

Lady of the Lake. *(C.japonica),* Gerbing Azalea Gardens Catalogue, 1941: Another exquisite white, waxy petals, semi-double, irregular construction. Midseason flowering. Diameter 10-12 cm, stamens in 5 fascicles with a few central petals intermixed, anthers yellow, filaments pale cream. Leaves green, curved, narrow-lanceolate, matt, tips recurved, sharply serrate. Plant with a loose, upright, vigorous habit. See black and white photo, p.204, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I. Originated in the USA at Magnolia Gardens, John's Island, South Carolina. Sport: **Lady of the Lake Variegated.**

Lady of the Lake (Australia). SCCS., 1954, *The Camellia. Its Culture and Nomenclature.* Synonym for **Francois Wiot.**

Lady of the Lake (New Zealand). SCCS., 1958, *The Camellia. Its Culture and Nomenclature*, p.52. Previously listed as 'Lady of the Lake'(Australia). Synonym for **Francois Wiot.**

Lady of the Lake Variegated. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* White variegated pink. Semi-double. Mid-season. Originated in USA.

Lady of the Lourdes. Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.21. Synonym for **White Princess.**

Lady Pamela. (*C.reticulata* hybrid). ACRS, *Camellia News,* 1994, No.131, p.9, Bob Withers, "A Mother Superior: ACRS, *Camellia News,* 1996, No.139, p.10, colour photo p.2, Reg. No.467. Registered by Dr R.M. Withers, Donvale, Victoria, Australia. A cross of *C.reticulata* hybrid **Suzanne Withers** as seed parent x *C.reticulata* hybrid **Arcadia,** that first flowered 1994. The semi-double flower of 21 petals has 13 white inner petals and 8 outer petals shading from light pink to pink (RHS.CC.68C) towards the outer edges. Diameter is 12 cm x 7 cm deep. Flowers freely mid-season on a rapid growing, upright, open plant. Leaves are glossy olive green, keeled, elliptic, acuminate apex, serrate margins, 12 cm long x 6.5 cm wide. Petals fluted. Filaments arranged in a column. An attractive large bicolour flower with high rabbit ears surrounding the stamens.

Lady Parker. *(C.japonica),* Guilfoyle Nursery Catalogue, 1866: Fine rose, cupped. Perfect shape. This is believed to be a Camden Park seedling raised by Macarthur as Lady Parker was a daughter of John Macarthur. Orthographic error: 'Lady Barker'. Originated in Australia.

Lady Parker Peony. Hazlewood Nursery Catalogue, 1949. Hazlewoods received this from New Zealand under the erroneous name of 'Lady Parker' and temporarily called it 'Lady Parker Peony'. It proved to be **Triumphans.**

Lady Patricia Mountbatten. Magnolia Gardens and Nursery Catalogue, 1945-1946. Synonym for **Patricia Mountbatten.**

Lady Pielemeier. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Lady Pielmeier.**

Lady Pielmeier. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Light rose-pink. Medium size, peony form. Vigorous, compact growth. Flowers mid-season to late. Originated in USA by Mrs E.R. Pielmeier, San Marino, California. Orthographic error: 'Lady Pielemeier'.

Lady Pollock. *(C.japonica),* Waterhouse, 1951, *American Camellia Yearbook*, p.87: Obtained from L. van Houtte by the Caledonia Nursery, Guernsey, in 1887. Small, rather double red, useless - sold to Lord Penryhn in 1899. A Japanese import renamed by Caledonia Nursery. (Believed extinct.)

Lady Preciosa. Seidel, 1846, Pflanzen Catalog, p.8. Catalogus Horto Aksavana Coluntur (Leningrad), 1869, p.26. Orthographic error for 'Lady Pretiosa', synonym for **Lady Grafton.**

Lady Pretiosa. van Houtte Catalogue, 1844-1845, 18:14. Synonym for **Lady Grafton.** Abbreviation: 'Pretiosa'. Orthographic error: 'Lady Preciosa'.

Treseder of Truro Camellia List, 1971, p.16: Large anemone to peony form. Rose pink. Originated in England.

Lady Wilton. van Houtte Catalogue,1841, 7:11. Synonym for **Wiltoniae.**

Lady Wilton's. Chandler & Booth, 1831, *Illustrations and Descriptions of Camellias....* Synonym for **Wiltoniae.**

Lady Winneke. *(C.japonica),* ACRS., 1981, *Camellia News,* No.79, p.28, Reg. No.264, color pi., p.40: Originated by L.I. Hobbs, Victoria, Australia. Chance seedling of *C.japonica* 'Tinsie' (**Bokuhan**), that first flowered 1978. It has an upright growth habit with 7.6 cm x 4.5 cm, slightly obovate, mid-green leaves, pointed apices, tapered base, small serrations. The 6.4 cm diameter, blood red, peony form flowers are produced early to mid-season. Chinese synonym 'Wennake Furen'.

Lady Young. *(C.japonica),* Baptist & Son Nursery Catalogue, 1871, p.28: Blush, spotted carmine. Originated by Guilfoyle, N.S.W., Australia. (Believed extinct.)

Lady's Maid. *(C.x williamsii),* Eagle Heights Nursery Catalogue, 1962: Light orchid pink. Medium size, semi-double. Vigorous, compact, upright growth. Mid-season blooming. A seedling of **Lady Gowrie** raised by E.G. Waterhouse, Gordon, N.S.W., Australia. Orthographic error: 'Ladies Maid'.

Laetitia Cavalli. van Houtte Catalogue, 1875-1876, 163:304. Orthographic error for **Letizia Cavalli.**

Laevis. *(C.japonica),* Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. Originated by Ridolfi in Italy. No description. (Believed extinct).

Lafayette. *(C.japonica),* McIlhenny, 1935, *List of Camellias,* p.8: Light red, single, small blossoms with large petals, crepe-like texture. Prominent stamens in the form of a crown. Originated in USA by McIlhenny, Avery Island, Louisiana, USA.

Lafayette Beauty. *(C.reticulata* hyb.), *American Camellia Yearbook,* 1983, p.162, Reg. No.1917: A very large, silvery pink, semi-double, *C.reticulata* chance seedling of **Lasca Beauty,** mid-season flowering. Originated by David L. Feathers, Lafayette, California, USA. The 6 year old seedling first bloomed 1983. Average flower size 15 cm across x 6 cm deep with 20 petals, yellow anthers and white filaments. Plant growth is upright and rapid with dark green leaves, 12.5 cm long x 7 cm wide.

Lafcadio Hearn. *(C.japonica),* McIlhenny Catalogue, 1945-1946, p.12: Variety originated in Jungle Gardens, Avery Island, Louisiana, USA. Medium size, spinel red, lightly stained pomegranate purple, double; outer petals imbricated; inner petals irregularly grouped and interspersed with a few white stamens. Medium to rose form double to peony form. See black and white photos, p.195, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II.

Lafe Alewine. *(C.japonica), American Camellia Yearbook,* 1962-1963, p.220, Reg. No.635: A 9 year old chance seedling that first bloomed 1959; originated by A.L. Alewine, Waycross, Georgia, USA. Plant growth is average with light green leaves, averaging 10 cm x 4 cm. The deep pink flowers, 10-12.5 cm across x 2.5 cm deep, are formal double, similar to **Alba Plena.** The flower has 10 rows of petals and no stamens. Early blooming.

Larry Davis. *(C.reticulata), New Zealand Camellia Bulletin*, 1980, vol.XIII, No.6, p.22, Reg. No.199: A chance seedling of *C.reticulata* 'Crimson Robe' (**Dataohong**), raised by Mrs I. Berg, Whakatane, New Zealand, that first flowered 1981. The plant has average, upright growth with dark green leaves, 10 cm x 4 cm. The large size, peony form flowers are mauve pink with a number of petaloids, white filaments and dark yellow anthers. There are about 42 petals and the bloom measures 11-12 cm across x 5 cm deep. Blooms mid-season.

Larry Piet. *(C.reticulata* hybr.), SCCS., 1988, *The Camellia Review*, vol.50, No.2: A large, heavy flower, red, semi-double through to formal double. A seedling of *C.reticulata* **Pharoah** x *C.reticulata* hybrid **Harold L. Paige**. Originated by Meyer Piet, California, USA. *American Camellia Yearbook*, 2001, p.95, colour photo p.c14. The 13 year old seedling first flowered in 1989. Long lasting flowers are 15 cm across x 6.5 cm deep. Heavy petal texture. Plant is upright, open and vigorous, with dark green leaves 12.5 cm long x 5 cm wide.

Lasandra. *(C.japonica), American Camellia Yearbook*, 1980, p.168, Reg. No.1577: A large, deep rose variegated white, peony form *C.japonica* chance seedling of **Tiffany,** raised by Paul Gilley, Grandridge, Florida, USA. Average flower size is 11 cm across x 6 cm deep. The centre is filled with twisted petals and petaloids. Anthers bright yellow with lighter coloured filaments. Synonym: 'Lasandra Variegated'.

Lasandra Variegated. Valdosta Camellias, Nov.1987, ACS., *The Camellia Journal*, vol.42, No.4, p.19 as 'Lasandra Var.'. Synonym for **Lasandra.**

Lasang. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.417; Chinese synonym for the Italy *C.japonica* **La Sonnambula,** as 'La Sonambula'.

Lasca Beauty. *(C.reticulata x C.japonica), American Camellia Yearbook*, 1974, p.171, Reg. No.1290: A 6 year old hybrid ('Cornelian' (**Damanao**) x **Mrs D.W. Davis**) that first bloomed 1970, originated by Dr Clifford Parks, Chapel Hill, North Carolina, USA while at the Los Angeles State and County Arboretum and grown by David L. Feathers, Lafayette, California. Plant growth

is upright and open with dark green leaves, 13 cm x 8 cm. The semi-double, 'Donckelaeri' (**Masayoshi**) style bloom, is soft pink with 15 petals, yellow anthers and cream filaments. Thick, heavy textured petals with large caliper twigs. Blooms mid-season. Received the Aubrey Harris Hybrid Award, 1978. Sport: Lasca Beauty Variegated. See colour photo, front cover, ACS., 1975, *The Camellia Journal*, vol.30, No.4. Chinese synonym: 'Lasika Jiaofiao'.

LASCA Beauty. SCCS Review, Oct-Dec 2011, p.25; Different rendering of **Lasca Beauty** adopted by SCCS to emphasise the cultivar's origin at the Los Angeles State and County Arboretum.

Lasca Beauty Variegated. *(C.reticulata x C.japonica)*, Gentry, 1975, ACS., *The Camellia Journal*, vol.30, No.4 as 'Lasca Beauty Var.'. A virus variegated form of **Lasca Beauty** - Soft pink, blotched white. Originated in USA.

Lasi. Gao, Jiyin, 1993, *The Observations from the Camellia World*, No.539, p.67. Chinese synonym for the New Zealand *C.saluenensis x C.reticulata* hybrid **Fair Lass.**

Lasika Jiaojiao. Chinese synonym for USA C. *reticulata* hybrid **Lasca Beauty.**

Lassie. *(C.japonica), American Camellia Yearbook*, 1977, p.214, Reg. No.1429: A very large size, light red, anemone form. A 7 year old seedling of *C.japonica* **Pink Elephant;** originated by Paul Gilley, Grandridge, Florida, USA. The **Elegans** type bloom is light red with 12-16 petals, 50 petaloids, light cream filaments, yellow anthers. Average size, 12.5 cm across x 6 cm deep. Many small petals mixed with the petaloids. Blooms early to mid-season. Plant growth is upright and rapid in rate with dark green leaves, 10 cm long x 5 cm wide. Sport: **Lassie Variegated.**

Lassie Variegated. *(C.japonica)*, Cannon, 1980, ACS., *The Camellia Journal*, vol.35, No.4 as 'Lassie Var.'. A virus variegated form of **Lassie** - Light red, blotched white. Originated in USA.

Lassintha. *(C.japonica)*, Rollisson & Son, 1846, Catalogue No.1, p.7. Originated in England. No description. (Believed extinct).

Lastesii Nova. *(C.japonica)*, Berlèse, 1849, *Annales Société Centrale d'Horticulture de France*, vol.40, p.79: A flower 10 cm across, formal double, of dark carmine, petals full, rounded, emarginate, cupped, with margins reflexed under. Orthographic error 'Latesii Nova'.

Latafolia. Magnolia Gardens and Nursery Catalogue, 1944-1945. Orthographic error for **Latifolia.**

Latafolia Variegata. Camellia Grove Nursery Catalogue, 1945, p.9. Orthographic error for **Latifolia Variegated.**

Latesii Nova. Verschaffelt Catalogue, 1844-1845, p.26. Orthographic error for **Lastesii Nova.**

Late Alba Plena. Valley Garden Supply Catalogue, 1946-1947. Not considered sufficiently distinctive to be classified as a different cultivar. Synonym for **Alba Plena.** Synonym: 'Paul Howard's White'.

Late Bell. *(C.japonica), Collected Papers*, ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.47; Purple cloudy pendent group. Purple flower, bell shaped corolla.

Late Spring. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Synonym for **Songchunqui.**

Late Spring Red. Bartholomew, 1982, *American Camellia Yearbook*, p.152. Synonym for **Wanchunhong.**

Late Tricolor. Overlook Nursery Catalogue, 1942-1953. Synonym for 'Bolen's Late Tricolor' (**Tricolor California**).

Late White Empress. Synonym for **Overlook White.**

Lateriatis. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Lateritius', synonym for **Enrico Bettoni (US).**

Lateritius. McIlhenny, 1934, *List of Camellia Japonica for Sale.* Synonym for **Enrico Bettoni (US).**

Lateritus. Vanderbilt, 1941, *Camellia Research, II,* p.4. Orthographic error for 'Lateritius', synonym for **Enrico Bettoni (US).**

Latifolia. *(C.japonica),* Anonymous,1834, *Revue Horticole*, pp.508, 509; Morren, 1834, *L'Horticulteur Belge Journal*, vol.2, p.93. Puddle & Hanger, 1960, RHS., *The Rhododendron and Camellia Yearbook*, No.14, p.154: Semi-double, with 11-13, broadly ovate, emarginate petals, colour Carmine 21/1, flower 8-10 cm across; stamens numerous, but merged in with centre petals. Leaves deep green, glossy, very broadly elliptic, apex short acuminate, margins widely serrate, 11.5 cm long x 7 cm wide. Plant habit, spreading and vigorous. In America **Latifolia** had been confused with **Gloire de Nantes** and **Leeana Superba** and the variegated form, with **Fanny Bolis** and **Gloire de Nantes Variegated** when these in fact, are all distinct cultivars. Nevertheless Buist, 1845, *American Flower Garden Directory*, p.222 describes the correct cultivar. Orthographic errors: 'Latafolia', 'Lattrifolia'. Synonyms: 'Latifolia Red', 'Latifolia Rosea', 'Latifolia Nannetensis'. Sport: **Latifolia Variegated.** See black and white photo, p.136, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Note: Krussman, Gerd, 1976, *Manual of Cultivated Broad-leaved Trees and Shrubs*, p.268 states "Breeder Guichard Soeurs, Nantes: This is erroneous as **Latifolia** originated before 1834, prior to the existence of Guichard Soeurs. It is believed that Krussman was referring to **Gloire de Nantes** as the two names were confused in some areas of the USA.

Latifolia Alba. *(C.japonica),* Peer, 1956, *American Camellia Yearbook*, p.55. No description.

Latifolia Flore Pleno Alba. Parmentier, 1818, *Catalogue des Arbres et Plants Cultiveés...*, p.15. Synonym for **Alba Plena.**

Latifolia Macrantha. *(C.japonica),* Jacob Makoy Catalogue, 1836, p.16. No description. Cels, Paris Nursery Catalogue, 1836-1837, p.9. No description. Berlèse, 1840, *Monographie*, ed.2, pp.129-130: Cherry Red. Synonym: 'Macrantha Latifolia'. Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 29 gives this as a virus variegated form of **Latifolia,** from an unknown breeder, Belgium 1834. Orthographic error: 'Latifolia Macrontha'. van Houtte Catalogue, 1844-1845, 18:14 gives **Latifolia Macrantha** as a synonym for 'Conspicua'(Loddiges), however he later dropped this synonymity as incorrect.

Latifolia. Mrs Wilmot's Variety. The Sunningdale Nursery, Surrey Catalogue, 1955, p.7. A fine sport of the above (**Latifolia**) in which the leaves are larger and the flowers richer colour. Believed to be only a better grown **Latifolia** and thus a synonym.

Latifolia Nannetensis. André Leroy Catalogue, 1911, p.48. Synonym for **Latifolia.**

Latifolia Nova. *(C.japonica),* Berlèse, 1937, *Monographie*, ed.1, p.128: Leaves 7.5 cm wide and about the same in length, and, in a manner imbricated, rounded at the base, point recurved, glossy and prominently veined. Flower vase-form, 7.5 cm across, of a cherry-red, interior petals irregular, festooned and curled; those of the exterior often with 2 or 3 rounded lobes. Originated in England. Berlèse, 1843, *Iconographie*, p. facing pl.109 lists 'Macrantha' or **Latifolia Nova.**

Latifolia Red. Vanderbilt, 1941, *Camellia Research, II,* p.4. Synonym for **Latifolia.**

Latifolia Rosea. Cels, Paris Nursery Catalogue, 1839, p.29, 1846-1847. Synonym for **Latifolia.**

Latifolia Rubra. Cattolica et al, *Camelie dell'Ottocento in Italia,* p.48, plate 19. Synonym for **Latifolia.**

Latifolia Superba. *(C.japonica)*, Cachet Catalogue, 1840-1841, p.3. No description. Originated in France. (Believed extinct.)

Latifolia Variegata. Hazlewood's Nursery Catalogue, 1945. Orthographic variant for **Latifolia Variegated.**

Latifolia Variegated. *(C.japonica)*, Wilmot, 1945, *Camellia Variety Classification Report*, p.4. No description. Camellia Grove Nursery Catalogue, 1945, p.9 as 'Latafolia Variegata': Rose red blotched white. Variegated form of **Latifolia.** In America **Latifolia Variegated** has been erroneously equated with **Fanny Bolis, Gloire de Nantes Variegated** and **Leeana Superba Variegated,** however these are distinct cultivars. Orthographic errors: 'Latafolia Variegata', 'Latifolia Variegata'. See black and white photo, p.212, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I and colour photo, p.100, Macoboy, 1981, *The Colour Dictionary of Camellias.* Chinese synonym 'Fuse Ladi'.

Lattea di Casoretti. Maupoil & Figlio Catalogue, 1853. Orthographic error for **Lactea Casoretti.**

Lattice White. *(C.japonica)*, Camellia Grove Nursery Catalogue, 1944: Informal, double white with golden stamens. Originated in Australia.

Lauchmani. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Lankmannii.**

Lauchmanni. Berlèse, 1837, *Monographie*, ed.1. Orthographic error for **Lankmannii.**

Laukmannii. Maupoil & Figlio Catalogue, 1842. Orthographic error for **Lankmannii.**

Laura. *(C.japonica)*, Verschaffelt, 1858, *Nouvelle Iconographie*, Book X, pl.I: Received from Italy two years ago. Its blossoms, nearly of the largest size, (10 cm across), belong by their regularity, to the class of perfections, and are of a delicate pink, deepest at the centre. It has numerous, small petals; those external, larger and rounded, faintly emarginate, the following ones, ovate-acute, resembling, at the centre, the heart of a rose.

Laura Bondi. Treseders of Truro Camellia List, 1971, p.16: Large double to rose form double. Originated in England. Orthographic error for **Laura Rondi.**

Laura Boscawen. *(C.x williamsii)*, RHS, 1985, *Camellias. A Wisley Handbook*, p.28, pl. p.49: Medium size, light red, anemone form with a broad, central, cushion of petaloids and rare stamens. The plant is a stiff, twiggy bush, prolific flowering. Originated by David L. Feathers, Lafayette, California, USA.

Laura Camp. *(C.japonica), American Camellia Yearbook*, 1954, p.319, Reg. No.192: A 12 year old seedling originated by Hugh Shackelford, Albany, Georgia, USA. Bloomed for the first time 1949. Plant growth is average, compact and pyramidal. The pink flowers are incomplete doubles with mixed petaloids similar to **Pink Star**, 11-14 cm across and appear early to mid-season.

Laura Claire. *(C.japonica)*, ACS, *The Camellia Journal*, Dec. 2005, p.28 with colour photo p.29, Reg. No. 2664. A chance seedling that first flowered 1995. Originated by C.M. and Lillian Gordy, Ocala, Fla., USA, and propagated by Erinon Nursery, Plymouth, Florida. The 7.5 cm diameter, formal double flowers are soft pink, fading to cream at the centre. Incurving of the petals often gives the edges an appearance of deep lavender pink. *American Camellia Yearbook*, 2005, p.43 with colour photo p.c5. Plant growth is upright and open, with light green leaves, 7.5 cm x 4.5 cm.Flowers mid-season.

Laura Coates. *(C.japonica)*, Gunnell, 1841, *Magazine of Horticulture*, 7:217: Originated by Joshua Pierce. A superb, white seedling. Originated in USA.

Laura Cooper. *(C.japonica), American Camellia Yearbook*, 1993, p.69, colour plate pp.70-71: Originated by William C. Stout, Pensacola, Florida, USA. The 15 year old seedling first flowered 1982. Medium size, pale pink, striped deeper pink, formal double, chance seedling.

Average flower size is 8 cm across x 3 cm deep with 100 petals. Colour and pattern similar to **Carter's Sunburst.** Sometimes petals form a hexagonal shape. Plant growth is upright and dense with dark green leaves 7.5 cm long x 4 cm wide. Blooms mid-season.

Laura Courant. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.70: Blush with a few streak of pink. Imbricated. Originated in Italy.

Laura Dasher. Wilmot, 1943, *Camellia Variety Classification Report*, p.7. Synonym for **Rosea Superba.**

Laura di Valchiusa. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.71: Crimson red. Central petals veined white. Originated in Italy by Franchetti, Florence.

Laura Durazzo. *(C.japonica),* Charles Vuylsteke, 1877-1878, Catalogue, p.9. No description). Originated in Italy.

Laura E. Greggs. *(C.japonica), American Camellia Yearbook*, 1980, p.169, Reg. No.1624: A large size, light pink, striped, formal double, *C.japonica* chance seedling, flowering early to mid-season. Originated by Paul Gilley, Grandridge, Florida, USA. The 15 year old seedling first bloomed 1979. Average flower size, 11 cm across with 50 petals. Plant growth is upright, average, medium in rate, with dark green leaves, 7.5 cm long x 3.8 cm wide.

Laura Franchetti. *(C.japonica),* Anonymous, 1879, *R. Società Toscana di Orticultura Bollettino*, 4:99-102: Rose coloured flower. Fratelli Rovelli, 1896, Catalogue, pp.38, 42. Large imbricated red with white blotches. Originated in Italy by Franchetti, Florence.

Laura Gatteschi. *(C.japonica),* Anonymous, 1879, *R. Società Toscana*, *di Orticultura Bollettino*, 4:99-102: A variety from **Margherita di Savoia** by seed. Imbricated; red shaded paler, to white veined red. Rovelli Catalogue, 1896: Imbricated, soft red, paling to white, vivid red venation. Originated in Italy.

Laura Gordy. *(C.japonica)* ACS, *Yearbook*, 2013, p.122 with colour photo; A 12 year old seedling, first flowered 2007, parentage unknown. Originated and registered by C.M and Lillian Gordy, Ocala, Fla., USA. Propagated by Loch Laurel Nursery, Valdosta, Ga. Medium size, 10cm diameter x 7.5cm deep flower is semidouble to rose form double, soft pink. Soft gold anthers and cream filaments. Flowers fall whole. Spreading growth at average rate. Mid-green leaves average 10cm x 4.5cm with average serration. Flowers mid-season.

Laura Ghirardi.. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.112 with colour photo; Medium size semi-double, orange shaded white (RHS.CC.23D). Some central stamens. A seedling of **Hagoromo** x **Alba Simplex**, first flowered in 1990. Originated by Dott. Guido Cattolica, Livorno, Italy.

Laura Greggs. ACS 1992, *The Camellia Journal*, vol.47, No.4, p.13. Valdosta Camellia Scions. Abbreviation for Laura E. Greggs.

Laura Greggs Variegated. *(C.japonica),* ACS 1993, *The Camellia Journal*, vol.48, No.4, p.32; Valdosta Camellia Scions as 'Laura Greggs V.': A white blotched, virus variegated form of **Laura E. Greggs.**

Laura Jacobson. *(C.japonica),* Garden Gateway Nursery Catalogue, 1955. No description. Originated in USA.

Laura Lovely. *(C.japonica),* SCCS, 1964, *Camellia Nomenclature*, p.74: Pink. Large, peony form with high centre. Originated in USA by David L. Feathers, Lafayette, California.

Laura Moriera. *Notizzario della Società Italiana della Camelia*, Dec. 1989, No.4, p.19. Orthographic error for **Laura Mortera.**

Laura Mortera. *(C.japonica),* Fratelli Rovelli Catalogue, 1852, p.20. No description. Leguay, Jan.1853, *Revue Horticole*, p.30: Icy pink striped dewy white. Franchetti, 1855, *Collezione di Camelie*,

p.40: Perfect spiral imbrication, small flower, satin pink with some delicate white stripes, deeper centre. Originated in Italy by Cesare Franchetti. Synonym: 'La Laura Mortera'. Orthographic error: 'Laura Moriera'.

Laura Neill. *(C.japonica), American Camellia Yearbook*, 1980, p.169, A very large, red to rose-red, semidouble *C.japonica* chance seedling, blooms early to mid-season. Originated by D.V. Neill, Gulfport, Mississippi, USA. The 15 year old seedling first bloomed 1969. Average flower size 14 cm across x 7.5 cm deep with 30 petals, 20 petaloids and yellow anthers. The flower has a high centre. Plant growth is upright, open and rapid in rate with dark green leaves, 8-10 cm long x 5-6 cm wide.

Laura Padoa. Rovelli Catalogue, 1891-1892. Orthographic error for **Laura Padova.**

Laura Padova. *(C.japonica)*, Mercatelli Catalogue, 1881: Medium flower, perfectly imbricated, petals delicate rose, transparent, faintly veined, lighter at the centre, sometimes streaked red. Originated in Italy. Orthographic error: 'Laura Padoa'. Chinese synonym 'Lapa'.

Laura Polka. Valley Garden Supplies Catalogue, 1946-1947. Synonym for **Mathotiana Rosea.**

Laura Rondi. *(C.japonica)*, Fratelli Rovelli Catalogue, 1852, p.20. No description. Franchetti, 1855, *Collezione di Camelie*, p.40: Very fully imbricated, the outer rows of petals are deep carmine red, those of the centre, paler and striped white. Magnificent. Verschaffelt, 1856, *Nouvelle Iconographie*, Book I, pl.III: Blossoms of medium size, imbricated, bright cherry-red at the circumference, delicate pink in the middle and carmine pink in the centre. Originated in Brescia, Italy. Orthographic errors: 'Lauri Rondi', 'Laura Bondi'.

Laura Rubra. *(C.japonica)*, Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. Originated by Ridolfi in Italy. No description. (Believed extinct).

Laura Schafer. *(C.japonica)*, Buzard, 1954, *American Camellia Yearbook*, pp.213, 214: Large white. Chalice shaped, semi-double with slow, compact growth. Originated by Mrs Laura Schafer, Washington State, USA. Synonyms: 'White Angel', 'Schafer's White', 'Mrs Schafer's White', 'Mrs Laura Schafer', 'Mrs Schafer'.

Lauretta Feathers. *(C.reticulata* hyb.), *American Camellia Yearbook*, 1984, p.179, Reg. No.1928: A very large, blush white to edged pink, semi-double, *C.reticulata* hybrid chance seedling of **Lasca Beauty;** early flowering. Originated by David L. Feathers, Lafayette, California, USA. The 6 year old seedling first bloomed 1982. Average size flower 15 cm plus across, with 11 petals, gold anthers and white filaments. Opens flat with creped petals, tends towards white as the bloom ages. Plant growth is upright and dense and rapid in rate, with very dark green leaves, 15 cm long x 7.5 cm wide. In the 1961 *American Camellia Yearbook*, p.109, Hilsman published "Lauretta Feathers" as tentative name for the Feather's hybrid, **Williams Lavender** x 'Crimson Robe' (**Dataohong**), but, as no description accompanied it, this had no validity.

Laurian Brown. (*C.reticulata* hybrid). *Camellias*, Y.C. Shen, 2009, p.26 with colour photo; Large, soft pink formal double, petals sometimes arranged in tiered form. Vigorous, upright plant. A seedling of **Lasca Beauty** originated by Boskoop Nursery from seed sown in 2000.

Laurice Bray. James Trehane & Son Ltd Nursery Catalogue, 1978. Orthographic error for **Laurie Bray.**

Laurie. *(C.japonica),* ACS, *The Camellia Journal*, Aug. 1998, p.23, Reg. No.2470. A small, rose, formal double chance seedling. Flowers mid-season. Originated by Charles T. Elliott, Sr, Swainsboro, Ga., USA. *American Camellia Yearbook*, 1998, p.4, colour photo before p.1. The 16 year old seedling first flowered in 1992. Average flower size is 7.5 cm across x 1.8 cm

deep with 85 petals. Plant growth is upright, dense and average, with dark green leaves 9 cm long x 3.5 cm wide.

Laurie Bray. *(C.japonica)*, ANZCRS., 1955, *Camellia Annual*, No.2, p.5, Reg. No.4: Originated by George Linton, Somersby, N.S.W., Australia. The seedling grew under a plant of **Edith Linton.** Semi-double, soft pink with paler shadings, 14-17 petals, spaced and ruffled. Size up to 12 cm across. First flowered 1952. Erect habit, foliage dark green, curved. Early to mid-season flowering. See the Paul Jones illustration on the front cover of ACRS., 1963, *Camellia News*, No,12 and on p.22, ACRS, 1977, *Camellia News*, No.66. Orthographic error: 'Laurice Bray'. Sport: **Laurie Bray Variegated.**

Laurie Bray Variegated. *(C.japonica)*, Shackelford, 1966, ACS., *The Camellia Journal*, vol.21, No.5 as 'Laurie Bray Var.': A virus variegated form of **Laurie Bray** - Soft pink, blotched white. Originated in USA.

Laurra Serra. Auguste van Geert Catalogue, No.73, 1875-1876, p.69. Orthographic error for **Laura Serra.**

Lavada Bailey. *(C.japonica)*, SCCS., 1981, *Camellia Nomenclature*, p.94: Deep pink. Large to very large peony form. Medium, upright growth. Mid-season blooming. Originated by H. Bailey, Plant City, Florida, USA.

Lavendel. Outteridge, 1962, *1000 Named Camellias in Australia.* Synonym for **Purple Woronzoff.**

Lavender. *(C.japonica)*, Lindo Nursery Catalogue, ca. 1945. No description. Originated in USA.

Lavender Bouquet. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.130. No description. Originated in the USA. No valid listing located.

Lavender Number 1. *(C.hybrid)*, *American Camellia Yearbook*, 1973, p.117, facing colour photo: Large, deep orchid pink semi-double. Originated by David L. Feathers, Lafayette, California, USA.

Lavender Pink. *(C.sasanqua)*, SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Deep lavender pink. Single. Originated in USA.

Lavender Prince II. *(C.x williamsii)*, *American Camellia Yearbook*, 1982, p.174, Reg. No.1780: A large, china rose, semi-double *C.hybrid ([C.saluenensis x C.japonica* **William's Lavender**] x *C.japonica* **Princess Lavender**), blooms mid-season to late. Originated by Dr Clifford Parks, Chapel Hill, North Carolina, USA. The 17 year old seedling first bloomed in 1967. Average flower size is 11 cm across x 5 cm deep with 12 petals, yellow anthers and cream filaments. Plant growth is upright, open and rapid with dark green leaves.

Lavender Queen. *(C.sasanqua)*, Overlook Nursery Catalogue, 1942-1943, p.42: Large, single flowers of deep, lavender pink. Originated by K. Sawada, Mobile, Alabama, USA. For black and white photo see p.308, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Another *C.sasanqua* invalidly named 'Lavender Queen' by Fruitland Nursery was renamed **Orchid.**

Lavender Queen (2). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Orchid.**

Lavender Swirl. *(C.x williamsii). New Zealand Camellia Bulletin*, March 1998, Issue No. 129, vol.XX, No.4, p.21, Reg. No.388. Registered by O. Blumhardt, Whangarei, New Zealand. A cross of *C.saluenensis* x *C.japonica* **K. Sawada** which first flowered in 1985. Flower is a large to very large formal double, 12 cm diameter x 5 cm deep, and often showing a distinct spiral formation. Colour is a soft lavender pink, darkening towards the centre of the flower, (RHS.CC. 62B-62C shading to 62A). The plant is upright, of average density and vigour, with dark green leaves 8 cm long x 3 cm wide. Flowers mid-season. Chinese synonym 'Zixuanfeng'.

Laverne Norris. *(C.japonica),* ACS, *The Camellia Journal,* May 1998, p.18, Reg. No.2447. A very large, pink variegated white seedling of **Nina Avery,** pollen parent unknown. Flowers mid-season to late. Originated by Marvin Jernigan, Warner Robins, Ga., USA. *American Camellia Yearbook,* 1998, p.4, colour photo before p.1. The 18 year old seedling first flowered 1982. Average flower size is 14 cm across x 9 cm deep, with 40 petals, yellow anthers and white filaments. Plant growth is upright, spreading, dense and average with dark green fimbriated leaves 14 cm long x 5 cm wide.

Laverne Ragland. *(C.japonica),* SCCS., 1970. *Camellia Nomenclature,* p.84: Brilliant red. Medium, formal double. Medium, compact, upright growth. Mid-season flowering. Originated in USA by Reg Ragland, California.

Lavinia Lane Rountree. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997, p.16, Reg. No.2424. A large, white, loose peony, chance seedling. Flowers early to late. Originated by Jean Peacock, Twin City, Ga., USA. *American Camellia Yearbook,* 1997, p.4, colour photo before p.1. The 11 year old seedling first flowered in 1993. Average flower size is 11.5 cm across x 6.5 cm deep, with 12-19 petals, 6-15 petaloids, yellow anthers and white filaments. Plant growth is spreading and average with dark green leaves 8.5 cm long x 4.5 cm long.

Lavinia Maggi. *(C.japonica),* van Houtte Catalogue, 1858, 72:16: Imbricated, tricolor, very large flower. Van Houtte, 1860, *Flore des Serres,* vol.13, F.1323 as 'Contessa Lavinia Maggi': A large, magnificently imbricated flower, having round, fat buds, numerous petals, pure white ground with definite dashes of dark carmine. See also pl.105, *The Floral Magazine,* 1862, vol.2. Orthographic errors: 'Lavinia Moggi', 'La Vina Maggi', 'Lavinia Maggie', 'Contessa Lawinia Maggi', 'Lavina Maggi', 'Lafina Maggi', 'Livinia Maggi', 'Lavinia Maggie', La Vinia Maggi', 'Contessa Livinia Maggi'. Synonym: 'Contessa Lavinia Maggi'. 'Lavinia Maggi Imbricated'. Sports: **Roi des Belges, Lavinia Maggi Rosea, Lavinia Maggi Rouge, Lavinia Maggi Alba.** Originated in Italy by Onofrio Maggi and distributed by Lechi, Brescia. Received a RHS., F.C.C. in 1862 as 'Contessa Lavinia Maggi'. Chinese synonym 'Kenmaji', as 'Contessa Lavinia Maggi'. Note: It is apparent that many of the plants still in existence, also published photographs, have a pale pink background instead of the original description of pure white.

Lee A. Markley. Fruitland Nursery Catalogue, 1943-1944, p.20. Synonym for **Otome** as 'Pink Perfection'.

Lee Baby. *(C.japonica), American Camellia Yearbook*, 1975, p.238, Reg. No.1361: A 12 year old chance japonica seedling, that first bloomed 1960; originated by Dr & Mrs H.G. Mealing, North Augusta, South Carolina, USA. Plant growth is upright and medium with dark green leaves, 8 cm x 3.8 cm. The rose form double type blooms is light pink, deep in the centre, yellow anthers, white filaments, 32 petals. Average size is 5.5 cm across by 5.0 cm deep. Colour of bloom is RHS.CC.625/1 phlox-pink. It opens into a fairly flat flower, showing stamens. Blooms mid-season to late.

Lee Chun. *(C.sasanqua). Camellias*, Y.C. Shen, 2009, p.320 with colour photo; Milky white with yellow at the base of the petals. Semi-double, with a few small central petaloids, diameter 5 cm. Leaves elliptic, dark green. Dwarf growth.

Lee Eagleson. *(C.japonica), American Camellia Yearbook*, 1974, p.171, Reg. No.1295: A 7 year old japonica seedling of **Ville de Nantes** that first flowered 1969. Originated by Marjorie Washburne, Port Arthur, Texas, USA. The plant growth is upright and average with light green leaves, 10 cm x 5.5 cm. The semi-double bloom is clear, bright pink with 20 petals, yellow anthers and filaments. Average size, 10 cm across. Blooms mid-season.

Lee Gaeta. *(C.reticulata* hybr.), SCCS., 1990, *Camellia Nomenclature*, p.128: Dark red, large to very large, semi-double with upright leaves. Vigorous, open, upright growth. Blooms early to late. A seedling of *C.reticulata* hybrids **Emma Gaeta** x **Arcadia.** Originated by Piet & Gaeta, California, USA.

Lee Poe. *(C.japonica), American Camellia Yearbook*, 1981, p.101, Reg. No.1716: A large, medium pink fading into lighter pink in centre, anemone form, chance seedling of **Tiffany,** mid-season blooming. Originated by W. Lee Poe Sr., Birmingham, Alabama, USA. Average size flower is 11 cm across x 7 cm deep with 38 large and 16 small petals and 237 petaloids, yellow anthers and whitish filaments, Plant growth is average with dark green leaves, 13 cm long x 7.5 cm wide. See colour photo inside back cover, ACS, 1981, *The Camellia Journal*, vol.36, No.3 and front cover, SCCS., 1982, *The Camellia Review*, vol.43, No.6.

Lee Roy Smith. (*C.reticulata* hybrid). ACS, *The Camellia Journal*, June 2008, p.31 with colour photo, Regn No.2726. A cross of **Lilette Witman** x **Hulyn Smith.** Originated by Jack Mandarich,

Garner, N.C., USA, and propagated by E. Hulyn Smith, Valdosta.. First flowered in 1992. The 16.5 cm pink semidouble flower has special fluorescence and frosting, golden anthers and white filaments. Heavy petal texture and flowers mid-season. Plant is upright and vigorous. *American Camellia Yearbook,* 2008, p.119 with colour photo; Light green leaves are 11.5 cm x 5.7 cm.

Lee Ryan. *(C.japonica), American Camellia Yearbook,* 1974, vol.II, p.235, Reg. No.1328: A 6 year old chance seedling that first flowered 1970. Originated by H.W. Steindorff, Greenville, Alabama, USA. Plant growth is average with dark green leaves, 8 cm x 3.8 cm. The formal double type bloom is delicate pink with over 60 petals. Average size is 8 cm across x 4.5 cm deep. Rosebud centre with tiny rose-red brush marks on almost every petal. Blooms mid-season.

Lee Shugerman. Cannon, 1977, ACS, *The Camellia Journal*, vol.32, No.4, p.37. No description. No valid listing located.

Lee Wells. *(C.japonica), American Camellia Yearbook*, 1962-1963, p.220, Reg. No.599: A 10 year old chance seedling of **Lindsay Neill** that first bloomed 1956. Originated by Dr R.F. Wells, Panama City, Florida, USA. Plant is spreading and medium with dark green leaves averaging 11 cm x 5 cm. The semi-double flower, similar to **Finlandia**, is 11-12.5 cm across x 5 cm deep and rose red with golden stamens and 14-16 petals and rare petaloids. Flower buds are oval, showing colour easily, slow opening. Two or more rows of petals, inner petals curled and twisted with a mass of golden stamens.

Lee Wilkes. *(C.japonica). American Camellia Yearbook,* 1980, p.169, Reg. No.1634: A large, medium red to fuchsia, single *C.japonica* chance seedling, blooms early to mid-season. Originated by Mrs Herman Johnson, Madison, Florida, USA. The 7 year old plant first bloomed 1976. Average flower size 11 cm across x 7 cm deep with 6 petals and yellow anthers. The bloom is bell-shaped and petal edges almost purple. Plant growth is upright and rapid with dark green leaves, 11 cm long x 5 cm wide.

Lee Wilkins *(C.japonica),* ACS, *The Camellia Journal*, Dec. 2013, p.27 with colour photo; Regn No.2878; Originated, registered and propagated by Vernon E. Howell, Lucedale, Miss., USA. *ACS, Yearbook,* 2013, p.123 with colour photo; A 33 year old seedling, parentage unknown, first flowered 1990. Large size, 10cm diameter x 5cm deep flower is red heavily variegated white, semidouble with 20 petals. Photo shows stamens in tubular form, yellow anthers, white filaments. Heavy petal texture, and falls in one piece. Dense, spreading plant with average growth rate. Dark green leaves average 7.5cm x 5cm, with medium serration. Flowers midseason.

Leeana. Loddiges Catalogue,1836, p.25. Abbreviation for **Leeana Superba.**

Leeana Superba. *(C.japonica),* Morren, 1834, *L'Horticulteur Belge*, *Journal Jardiniers Amateurs*, 2:191, pl. 40: A superb variety from Lee. This brilliant camellia is from the glass houses of M. Verlieuwen of Ghent and flowered 17 April, 1834. The flower is 7.5 cm across. The calyx has 12 sepals passing into petals; the petals have 4 rows, to a number of almost 30, those of the interior are rose-pink, variegated with white, the exterior are red, sometimes with a dart of red down the centre, emarginated and rounded. The leaves are smooth, rounded and pointed, shining, 8 cm x 5 cm. This variety was named for the celebrated London horticulturist, Mr. Lee. It has been largely listed as 'Leana Superba', but the orthography **Leeana Superba** is the valid one. Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 8. This cultivar was imported from Japan twice; once by John Reeves to England through Macao, China, 1831, when it was named 'Bealei' and previously, by von Siebold to Belgium 1829, when it was named **Leeana Superba.** The first importation appears to have been when sent from Batavia, Jakarta by Governor Baron Van de Capellen to his family, having obtained it via Canton, China under the name 'Camellia Granda'. The family gave it to the Botanic

Garden of Ghent on 9 January 1820. See 'Bealei' for further details. Synonyms: 'Bealei', 'Bealei des Anglais', 'Bealei des Horticulteurs du Continent', 'Bealei Palmer', 'Beali Palmer', 'Bealii', 'Conde de Farrobo', 'Bealiana', 'Bealei Vera', 'Bealei Superba', 'Bealei Belgi Inglese', 'Bealigamo', 'Lanei Superba', 'Palmer's Bealei des Anglais', 'Coccinea Magna', 'Sieboldii', 'Seiboldii', 'Coccinea Major', 'Leeana Vera', 'Lanei Superba' and 'Palmer's Beauty'. Orthographic errors: 'Leana Superba', 'Leona Superba', 'Leena Superba', and 'Lena Superba'. In America 'Leana Superba' was erroneously given as a synonym for **Gloire de Nantes** and **Fanny Bolis.** Originated in Japan. Japanese name unknown.

Lemon Drop. *(C.japonica)*, Donnan, 1981, *American Camellia Yearbook*, p.82: Miniature formal double with a faint lemon colour on the petals and a deeper lemon cast to the bud centre. *American Camellia Yearbook*, 1982, p.174, Reg. No.1785: A miniature to small white with a lemon centre, anemone form, originated by Nuccio's Nurseries, Altadena, California, USA. The 7 year old seedling first bloomed 1976. Average size 5.5 cm across. Plant growth is upright,

dense and medium in rate with dark green leaves. See colour photo, front cover, SCCS, 1981, *The Camellia Review*, vol.43, No.2.

Lemon Glow. *(C.japonica)* SCCS, *Supplementary List* 2011, Medium size, yellow, formal double sport of **Dahlohnega.** Vigorous, compact growth. Originated in 2009 by Cam Too Camellia Nursery, Winnsboro, S.C., USA.

Lemon Honey. *(C.japonica), New Zealand Camellia Bulletin*, 1972, vol.VII, No.4, p.6, Reg. No.57: A seedling from **Ochroleuca** x **White Giant** that first flowered 1968. Originated by D.G. O'Toole, Ohope, New Zealand. Plant growth is upright, medium with dark green leaves, 9 cm x 5 cm. The flower is a formal double of about 60 petals, the outer being large and rounded. Each petal has a thickened midrib which is a clear lemon yellow against a creamy white back-ground. Flower size is 9 cm across x 4.5 cm deep.

Lemon Pink. *(C.japonica),* Good, 1955, *American Camellia Yearbook*, p.278. No description. Originated in USA.

Lemon Queen. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.132. No description. Originated in USA. No valid listing located.

Lemon Twist. (*C.nitidissima* hybrid). Nuccio's Nurseries Catalogue, 1996, p.35, Nuccio's # NXO-8728. A seedling of (*C.japonica* **Guilio Nuccio** x *C.pitardii*) x *C.nitidissima.* Off-white to pale yellow colour, deeper at centre. Medium size semi-double. Vigorous, upright, open growth. Late flowering. Originated by Nuccio's Nurseries, Altadena, Calif., USA.

Len Bray. *(C.reticulata* Hybr.*),* ACRS., 1980, *Camellia News*, No.74, p.25, Reg. No.257: Originated by T.J. Savige, Wirlinga, N.S.W., Australia. A chance seedling of **Barbara Clark** that first bloomed 1976. The 10.5 diameter, formal double is a red colour shading between RHS.CC.55A and 55B. Blooms mid-season to late. The upright, dense plant has obovate, 10 cm x 5 cm leaves with acute base, acuminate apex and small serrations. See colour photo, p.5, ACRS, 1981, *Camellia News*, No.79.

Len Hobbs. *(C.japonica),* ACRS, *Camellia News*, 1994, No.131, p.7, Reg. No.438, colour photo front cover: Originated by Len Hobbs, Doncaster East, Victoria, Australia as a chance seedling of 'Tinsie' (**Bokuhan**), that first flowered 1984. A vivid red (RHS.CC.46B), single flower of 7-8 petals. Free flowering over a long period on an open, average growing plant. Flowers 10 cm across x 4 cm deep. Petals notched, fimbriated and curled. Stamens in Higo form, averaging 176. Flowers shed, calyx retained; stigma turns deep purple.

Len Jacobs. *(C.japonica),* ACRS., 1985, *Camellia News*, No.95, p.29, Reg. No.327: Originated by Len Jacobs, Cherry Gardens, South Australia. A chance seedling of **Dr Tinsley** that first bloomed 1978. The upright, dense plant has informal, 9.5-10.5 cm flowers, 9 cm deep, pale pink centre, darker pink edges. Blooms mid-season to late.

Lena. *(C.japonica),* Jacob Makoy et Cie Nursery Catalogue, 1849, p.20. No description. Originated in Belgium. (Believed extinct.)

Lena Bell Shugerman. Cannon, 1977, ACS., *The Camellia Journal*, vol.32, No.4, p.37 (Advert). No description. No valid listing located.

Lena-Beth. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature*, p.53: Deep pink with orange cast. Large peony form. Mid-season flowering. Originated by Mrs L. McDaniel, McComb, Mississippi USA.

Lena Jackson. *(C.japonica),* New Camellia Varieties, 1949, *American Camellia Yearbook*, p.247: This seedling appeared amongst seed from Tokayama, Japan, planted in 1936. It was acquired by Ingleside Nurseries, Georgia, USA in 1943 and first bloomed 1944. It opens like a tight, blush-pink rose-bud, finally opening fully to show stamens. Fully open it measures 10-12 cm

across. Blooms mid-season. The plant is a bushy, upright, vigorous grower. Leaves are long, narrow, serrated and very dark green. Registration No.31 with the ACS.

Lenora Taylor. *(C.japonica), American Camellia Yearbook*, 1974, vol.II, p.237, Reg. No.236: A 15 year old chance seedling that first bloomed 1961. Originated by Harvey V. Taylor, Lecompte, Louisiana, USA. Plant growth is upright, dense and medium in rate with light green leaves, 6 cm x 2.5 cm. The peony form flower is pink striped red. Average size is 6 cm across x 2.5 cm deep with 8 petals and yellow anthers and filaments. Blooms early.

Lenore Weil. *(C.japonica), American Camellia Yearbook*, 1960, p.200, Reg. No.515: A sport of **Mrs Baldwin Wood,** first observed 1953. Originated by Dr Nathan Weil Jr., Jacksonville, Florida, USA. Plant growth is spreading, dense and medium, with dark green leaves, 8.5 cm long x 4.5 cm wide. The pink, anemone form flower is deep pink near the base, fading to blush pink near petal edge with rose stripes and stippling and yellow stamens. There are 19 petals and 7-9 petaloids. Blooms early to mid-season. Orthographic error: 'Leonora Weil'.

Len's Gift. *(C.japonica),* C.Aust., *Camellia News,* Autumn 2008, No.176, p.13, colour photo p.19, Reg. No. 574. Originator was Len Hobbs, Doncaster, Vic, Australia. Registered by Roy H. Campbell, Maddington, W.A. A chance seedling that first flowered in 2000. The light pink, informal double flower has 55 petals and is 13 cm across x 6 cm deep. Flowers early to mid-season. on an upright, fast growing plant. Leaves deep green, oval. Flowers shed whole

Leodora. *(C.japonica),* La Société Royale d'Horticulture de Belgique, 1842, *Catalogue des Plantes*, p.22. No description. Berlèse, 1843, *Iconographie*, vol.2, pl.200: The flower, 10 cm across, is full, cherry red, which lightens to carmine-rose as the flower develops. The outer petals, in 4-5 rows, are 4 cm wide x 5 cm long, round, entire, not numerous, shining, transparent, spread out and imbricated with regularity. Those of the centre are of small number, different shapes, generally rumpled and forming a heart. We posses under this name two plants, one with the flowers double, white, striped with irregular form; the other, red, full, regular form.

Leon Benson. *(C.japonica), American Camellia Yearbook,* 1978, p.131, Reg. No.1501: A large, medium pink, anemone to peony form chance *C.japonica* seedling that flowers mid-season. Originated by Feral Zerkowsky, Slidell, Louisiana, USA. This 14 year old seedling that first bloomed 1970, has 100 petals and petaloids; pink petaloids arranged in a collar of rosettes, anthers yellow, filaments pink. Average size 11 cm across x 5 cm deep. Plant growth is upright, dense and medium in rate with leaves 7.5-8.0 cm long x 4.0-4.5 cm wide. See colour photo, front cover, ACS., 1978, *The Camellia Review*, vol.33, No.1.

Léon Leguay. *(C.japonica),* van Houtte Catalogue, 1858, 72:16. No description. Verschaffelt, 1859, *Nouvelle Iconographie*, Book XI, pl.II: Originated in France by Mr Miellez, Lille. This camellia, which is a perfection amongst perfections, the small size of the petals and their serried, imbricative arrangement, has blossoms of medium size and a uniform, vivid, cherry-red colouring with perfect imbrication. Synonym: 'Leon Leguay'(France). Orthographic error: 'Leon Lequay'.

Leon Lequay (France). SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Synonym for **Léon Leguay.**

Leon Leguay (Mcllhenny). *(C.japonica),* McIlhenny, 1941, *700 Varieties of Camellias*, p.9 invalidly as 'Leon Leguay': Large, full semi-double. Solid, light red. In his 1948-1949 catalogue he describes it as: Large, single, 5 petalled bloom, carmine lightly washed aster-purple, petals

much crinkled; stamens short, in form of a compact crown. Mid-season blooming. This has been listed as **Leon Leguay (McIlhenny)** to distinguish it from the valid **Léon Leguay.**
