Tali-pao-chu. Fang, 1930, *Diannan Chahua Xiaozhi.* Different reading for 'Dali Baozhu', synonym for **Dali Cha.**

Tali Queen. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Western synonym for **Dali Cha.**

Tali Tieh-ch'ih. Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.25. Different reading for **Dali Diechi.**

Talia. *(C.japonica),* Verschaffelt Catalogue, 1844-1845, p.30. No description. (Believed extinct.)

Taliensis. Smith, 1917, Notes, Royal Botanic Gardens, Edinburgh, as *Thea taliensis.* The species *Camellia taliensis* (W.W. Sm.) Melchior

Talier Xiaojie. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for USA *C.reticulata* hybrid **Miss Tulare.**

Tallahassee. Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I, p.102. Synonym for 'Donckelaeri'(**Masayoshi**).

Tallahassee Donckelarii. Chidamian, 1959, *Camellias for Everyone.* Synonym for 'Donckelaeri' (**Masayoshi**).

Tallahassee Girl. *(C.japonica)* Doty et al., 1949, *American Camellia Yearbook:* A seedling originated by Camellia Nurseries, Tallahassee, Florida. A large, incomplete double, similar to 'Hatsutsuru'. Colour a very soft pink, lighter than 'Magnoliiflora' (**Hagoromo**). Blooms early. Filaments white, anthers yellow. Leaves medium to dark green, round-elliptic, 11 cm long x 6 cm wide, apex acute, serrations becoming prominent towards the apex. For illustration see, p.317, Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II.

Talmont. *(C.japonica) American Camellia Yearbook*, 1968, p.137, Reg. No.981: An 11 year old chance seedling that first bloomed 1959; originated by Mrs W.P. Bevis, Tallahassee, Florida, USA. Plant growth is upright and average with light green leaves, 6 cm long x 3.2 cm wide. The peony form bloom is 11 cm across x 7 cm deep with 41 petals and 69 petaloids. White with golden stamens. Blooms early to mid-season.

Tam O'Shanter. *(C.japonica) American Camellia Yearbook*, 1968, p.137, Reg. No.1004: A 5 year old chance seedling that first bloomed in 1963; originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is upright, dense and medium in rate with dark green leaves, 11 cm x 6 cm. The rose form double flower is 10 cm across x 2.5 cm deep with 77 petals. Deep rose outer to dainty pink centre, petal tips curled in. Blooms mid-season to late.

Tama. (Place Name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.159 with colour photo; English translation p.109. Medium size, semi-double, cupped petals. Pale red splashes and small stripes on white ground, also completely white and red flowers appear on mature plants.

Flowers early to late. Leaves elliptic, medium size. Somewhat upright growth. A cultivar raised by a private family in Koma'e City. Named and released by Shûhô Kirino in 1990. From Tokyo.

Tama Americana. *(C.japonica),* Nuccio's Nurseries Retail Price List, 1993-1994, p.17: Rose red with broad white border. Medium sized semi-double with occasional petaloids. Medium, open, upright growth. Originated by Nuccio's Nurseries, Altadena, California, USA, as a seedling from **Tama-no-ura.**

Tama Bambino. *(C.japonica),* Nuccio's Nurseries Retail Price List, 1993-1994, p.17: Rose pink, bordered white, miniature peony with narrow, pointed petals. Blooms early to mid-season. Originated by Nuccio's Nurseries, Altadena, California, USA, as a seedling of **Tama-no-ura.** Nuccio's #9212. Chinese synonym 'Yingyupu'.

Tama Beauty. *(C.japonica),* Nuccio's Nurseries Retail Price List, 1993-1994, p.17: Rose pink bordered white. Medium to large, loose peony form. Medium, bushy growth. Blooms early to mid-season. Nuccio's #8915, as a seedling of **Tama-no-ura.** Originated by Nuccio's Nurseries, Altadena, California, USA. Chinese synonym 'Meili'.

Tama Bell. *(C.japonica),* Nuccio's Nurseries Retail Price List, 1993-1994, p.17: Miniature to small, bell shaped single. White with red at petal base and an occasional red petal. Vigorous, loose, upright growth. Blooms early to mid-season. Originated by Nuccio's Nurseries, Altadena, California, USA, as a seedling of **Tama-no-ura.** Nuccio's #8714.

Tama Carousel. *(C.japonica),* SCCS, *Supplementary List* 2014. A seedling of **Tama-no-ura** x **Nuccio.s Carousel**. Medium size semidouble, with centre petals upstanding, and occasional petaloids. Pink with a white border. Flowers early to midseason. Average, upright, bushy growth. Originated by Bradford King, Arcadia, Calif., USA.

Tama Electra. *(C.japonica),* Nuccio's Nurseries Retail Price List, 1993-1994, p.17: Small to medium size single; brilliant dark red, bordered white. Vigorous, compact, upright growth. Blooms early to mid-season. Originated by Nuccio's Nurseries, Altadena, California, USA, as a seedling of **Tama-no-ura.** Nuccio's #9127. Chinese synonym 'Aiyupu'.

Tama Glitters. *(C.japonica),* Nuccio's Nurseries Retail Price List, 1993-1994, p.17: Red bordered white, medium to large size semi-double to loose peony form. Medium, upright, spreading growth. Blooms early to mid-season. Originated by Nuccio's Nurseries, Altadena, California, USA, as a seedling of **Tama-no-ura.** Nuccio's #8804. Chinese synonym 'Shanshuo'.

Tama Noura. Gentry, 1979, ACS., *The Camellia Journal*, vol.34. Corruption of Japanese name **Tama-no-ura.**

Tama Peacock. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 2002, p.21, colour photo p.20, Reg. No.2568. Blooms are semi-double, tubular form, and maroonish colour with red washing to white border. Originated by Nuccio's Nurseries, Altadena, California, USA, and introduced in their 1999 catalogue. Nuccio's #9121. *American Camellia Yearbook,* 2002, p.132, colour photo p.c12. The seedling first flowered in 1991. Flowers measure 10 cm across x 7.5 cm long. Plant is upright with average growth. Note: Although described as a chance seedling, the name and description indicate **Tama-no-ura** to have been one of the parents. Chinese synonym 'Kongque Yupu'.

Tama Vino. *(C.japonica),* Nuccio's Nurseries Retail Price List, 1993-1994, p.17: Small to medium size semi-double with long, narrow petals. Wine red, washing out to broad, white border. Medium, upright growth. Blooms early to mid-season. Originated by Nuccio's Nurseries, Altadena, California, USA, as a seedling of **Tama-no-ura.** Nuccio's #91307. See colour photo between pp.38-39, 1993 *International Camellia Journal.*

Tama-akane. JCS., 1987, *Japan Camellia*, No.25, p.13. Synonym for **Oboko.**

Tama-ama-no-kawa. (Milky Way of Tama). (*C.nitidissima* hybrid). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.291 with colour photo; Flower colour changeable – pale yellow or pale apricot or pale orange pink. Small to medium size, tubular single Tubular to columnar boss of stamens. Leaves elliptic, medium size, somewhat waved. A natural seedling of *C.nitidissima*, named by Shinichi Noguchi, Tokyo, Japan, and released in 2005.

Tama-Ariake. (Jewel of Ariake) (*C.japonica*) from Nagasaki Pref. *Japan Camellia* No.78, August 2005; A crossing of **Tama-no-ura** × **Iwane-shibori**. Red bordered white, semi-double to peony form, split stamens, medium to large. Blooming early to mid-season. Leaves lanceolate, medium. Branches weeping. Tree vigorous. Originated by Kaoru Kusumoto.

Tamabotan. (Noble Peony), *(C.rusticana)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô, 1879, *Chinkashû:* Peony. White, large pagoda form. Tuyama, 1966, *Camellia Cultivars of Japan* as 'Gyoku-botan'; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.246, p.116, description, p.327: White. Large, cup-shaped semi-double to open peony form, double. Vigorous, upright growth. Leaves deep, glossy green, thin, broad-elliptic. Originated in Kantô area, Japan. Different reading for **Gyokubotan**. Chinese reading: 'Yumudan'. See colour photos: Satô, 1975, *Chûbu no Tsubaki*, p.95; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.91, 228. Synonym for **Gyokubotan.**

Tamachû. (Gem of Loyalty), *(C.japonica)* Inazawa Nursery Co. Ltd. Catalogue, 1980-1981: White, semi-double, medium size flower. Originated in Japan.

Tamadare. (Bead Screen), *(C.japonica)* Itô, Ihei, 1710, *Zôho Chinkinshô*, vol.2; Iwasaki, 1829, *Honzô Zufu*; Yashiro, 1841, *Kokon Yôrankô*, vol.311: Large, reddish pink, double with 3-4 rows of petals with white edges, but centre of the flower is thick pink. The corolla is piled up like 'Hikarugenji'. The stamens resemble a bamboo whisk. Originated in Japan. (Believed extinct.) Synonym: 'Tamadare-tsubaki'. Thought to be a synonym for **Tamasudare** in *Honzô Hanamaki'e*, 1739. See: JCS., 1981, *Tsubaki*, No.20, p.120.

Tamadare. (Bead Screen), *(C.japonica)* Minagawa, 1933, *Chinkashû;* Tuyama, 1968, *Camellias of Japan*, pl.386, p.196, description, p.204: Leaves oblong to oblong-elliptic, apex cuspidately crenate, lateral veins slightly elevated, petioles glabrous. Flowers semi-double, widely cup-shaped, sometimes a mass of folded petaloids in the centre; colour pink, occasionally striped with rosy red. Petals deciduous. Flowers mid-season to late. Originated in Saitama Prefecture, Japan by Minagawa, Jisuke. For colour pls. & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.181 & p.316; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.320 & p.338; Seibundô Shinkôsha, 1979 *Senchinshû*, pp.90, 228. Resembles **Naniwagata**. Different to the old Itô variety. Synonym: 'Tamadare (2)'. Different reading: 'Gyokusui'.

Tamadare (l). Fendig, 1953, *American Camellia Catalogue.* Synonym for Itô's **Tamadare.**

Tamadare (2). Fendig, 1953, *American Camellia Catalogue.* Synonym for Minagawa's **Tamadare.**

Tamadare-tsubaki. Itô, Ihei, 1710, *Zôho Chikinshô*, vol.2. Synonym for **Tamadare.**

Tamafubuki. (Pretty Splashed Flower), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.90, colour photo, p.228, description: Medium size, semi-double pale pink, peppered and dashed crimson, opening wide, cup-shaped; petals in 3 rows, emarginate; central stamen column, anthers yellow, filaments light cream. Leaves shiny mid-green, ovate, twisted, acuminate apex, margins serrate. Originated in Kantô area, Japan. A seedling of **Juraku.** *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.162 with colour photo; English translation p.111. Stated to throw sports of various colour combinations. Stated to be a chance seedling of **Hototogisu,** named and released by Totsurô Nakamura in 1979.

Tamafuyô. (Beautiful Lotus), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.15. Pure white, large size, cupped semi-double. Originated in Japan.

Tamafuyô. ICS, Apr. 1990, *Japanese Camellia Cultivar List*, p.39. Synonym for **Tamafuyô (Kantô).**

Tamafuyô (Kantô). ('Tamafuyô' from Kantô), *(C.hiemalis)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.49: Medium size, irregular, informal peony form double, white ground graduating to pale red. Originated in Saitama Prefecture, Japan. Synonym: 'Tamafuyô'.

Tamafuyô (Kumamoto). ('Tamafuyô' from Kumamoto), *(C.sasanqua)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.47: Medium size, single, white ground graduating to red. Originated in Kumamoto Prefecture, Japan.

Tamafuyô-sazanka. (Beautiful Lotus Sasanqua), *(C.sasanqua)*, Itô, Ihei, 1719, *Kôeki Chikinshô;* Yashiro, 1841, *Kokon Yôrankô*, vol.344, Ichijima reprint, p.570: Light red, large, cupped semi-double with broad petals. Originated in Japan. (Believed extinct.) Abbreviation: 'Tamafuyô'.

Tama-fuyô (Tokyo). (Jewel Cotton Rose). (*C.hybrid*). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan)*, 2010, p.281 with colour photo as 'Tama-fuyô; Medium to large size peony form, petal edges frilled. White shading to pink. Flowers mid-season to late. Cherry tree-like leaves. A cross of **Sakuraba Party Dress** x **Angel Wings**, made by Shinichi Noguchi, Tokyo, Japan, in 2004.

Tamagaki. (Shrine Hedge), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, white, compact single with big bamboo-like stamens. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.26. (Believed extinct.)

Tamagaki. (Shrine Hedge), *(C.sasanqua)*, Ashizawa, 1898, *Chabaika Taishû;* Hakoda, Seibundô Shinkôsha, Dec.1973, *Garden Life*, p.44; JCS., 1987, *Tsubaki*, No.26, p.47; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.36: Medium size, white, semi-double. Blooms early to mid-season. Originated in Angyô, Saitama Prefecture, Japan. Chinese synonym 'Yuheng'.

Tamagashiwa. Synonym for **Tamagashiwa-tsubaki.**

Tamagashiwa-tsubaki. (Beautiful Oak Camellia), *(C.japonica)* Itô, Ihei, 1733, *Chikinshô Furoku*, vol.3; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, white, single, often with petaloid centre, sasanqua-like stamens. Originated in Japan. (Believed extinct.) Synonym: 'Tamagashiwa'.

Tamagasumi. (Jewelled Haze), *(C.japonica)*, Satô, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, p.80; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.51, p.19, description, p.211; Satô, 1975, *Chûbu no Tsubaki*, p.17: Medium size, single, opening to a spherical shape, ground faint, blush pink, densely marked with short red dashes. Large, yellow stamen cluster. Leaves broad-lanceolate, apex tapering acuminate, glossy deep green, margins shallowly serrate. Originated in Chûbu area, Japan in 1968 by Sakuragi, Shun'ichi, Inazawa City, Aichi Prefecture as a seedling of **Tarô'an.** Early blooming. Different reading: 'Tamakasumi'. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.119 & p.308; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.279. Sport: **Tama-shibori.**

Tamagawa. (Tama River), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Itô, Jukyû, 1739, *Honzô Hanamaki'e* as a pink flower; Yashiro, 1841, *Kokon Yôrankô*, vol.311. No description. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, as peach pink. See: JCS., 1969, *Tsubaki*, No.7, p.26; ibid, 1983, No.22, p.128: Medium size. pinkish white, formal double, glossy, Originated in Japan. (Believed extinct.)

Tamagawa. (Tama River), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.144: Medium size, crimson, semi-double, opens flat; colour fading to pink at petal edge. Stamens broken into fascicles. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.104. (Believed extinct.)

Tamagawa. (Tama River), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.315: Flower, cup-shaped single, glossy pinkish white. Medium size. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.138. (Believed extinct.)

Tamagawa. (Tama River), *(C.japonica)* Katayama, 1960, *Tsubaki Ochabana* as 'Tamagawa-tsubaki': Medium size, single, light red. *Enyclopedia of Camellias in Colour*, vol.I, 1972, pl.28, p.47, description, p.295: Small, light red, campanulate single with fine veining of slightly deeper colour; stamens in a central cylinder, joined for the lower third, anthers yellow. Leaves olive green, lanceolate to ovate, long tapering acuminate apex, margins shallowly, coarsely serrate. Originated in Kansai area, Japan. See colour photo: Seibundô Shinkôsha, 1979 *Senchinshû*, p.89.Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.133. Synonym: 'Tamagawa-tsubaki'.

Tamagawa-chidori. (Tamagawa Plover), *(C.japonica)* Iwasaki, 1828, *Honzô Zufu:* Flowers are white dappled with small, pink dots, single. Originated in Japan. See JCS., 1981, *Tsubaki*, No.20, p.108. (Believed extinct.)

Tamagawa-tsubaki. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.64. Synonym for Katayama's **Tamagawa.**

Tama-gekkô ('Gekkô' from Tama) (*C.hybrid*) from Kodaira, Tokyo. *Japan Camellia* No.84, August 2007: Pale yellow, single, small, cylindrical stamens, blooming February to May. Leaves narrowly ovate, medium size. Tree spreading and weeping. An interspecific hybrid between a small, white-flowered seedling and *C.cucphuongensis*. Produced by Shinichi Noguchi and named in 2002.

Tamaginsekai. (Silver World of Tama), *(C.japonica)* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.160, illustration and description: Medium size, white, semi-double; petals in 3 rows, overlapping, emarginate; stamens sometimes broken into fascicles by the odd, small, erect centre petal. Leaves elliptic, mid-green, apex long acuminate, margins shallowly serrate. Originated by Yokoyama, in 1973 in Kanagawa Prefecture, Japan. Resembles **Ginsekai** and **Tsuki-no-miyako.** See colour photo & description, pp.89, 228. Seibundô Shinkôsha, 1979, *Senchinshû.*

Tamago. (Egg), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.299: Miniature, semi-double, pink fading to white at petal edge. Originated in Japan. Some scholars believe that this cultivar is the same as **Sukiya.** See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.113.

Tamago. (Egg), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.215: Medium size, deep crimson, spherical shaped single with centre of petaloids. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.90. (Believed extinct.)

Tamago. (Egg), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.314: Small, campanulate single, pink with colour fading to white at base of petals; central stamen column, anthers yellow, filaments white. Originated in Japan. (Believed extinct.) Possibly the same as the above pl.299. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.150.

Tamago. (Egg), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.501: Large, semi-double, petals red at base fading to pink at margins. Originated in Japan. (Believed extinct)

Tamagoryô. (Tama Imperial Mausoleum). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.160 with colour photo; English translation p.110. Large, pink bordered white, semi-double, cupped petals. Flowers mid-season to late. Leaves elliptic, large, thick, glossy. Cespitose growth, vigorous. A chance seedling of **Tamatebako**. Named and released by Minoru Satô in 1977. From Aichi Prefecture.

Tamahara. Kyôto Engei Kurabu, 1975, *Kyôto Engei*, No.73, p.21. Thought to be an orthographic error for **Tamasudare** in *Tsubaki Hyakuro no Zu.* 1874.

Tama-hikari. (Illuminated Pearl). *(C.japonica).* Claude Thoby, 1993, *Camélias*, pp.13, 19, 20, 24: Luminous salmon rose, single. Flowers mid-season to late. Originated in Japan.

Tamahime. (Precious Princess), *(C.japonica),* Tuyama, 1966, *Camellia Cultivars of Japan,* pl.119, description, p.202: Large, brilliant crimson, semi-double, 12 cm across with large, rounded, overlapping petals in 4-5 rows; small, abortive stamens with 1 or 2 small, erect petals in the centre. Leaves bright green, venation impressed, elliptic, apex acuminate, margins coarsely serrate. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.194, pp.99, 319; Seibundô Shinkôsha, 1979 *Senchinshû*, p.90. Resembles **Yae-hime.** Originated in Angyô, Saitama Prefecture, Japan and named by Minagawa, Jisuke about 1930.

Tamahime. (Precious Princess). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.161 with colour photo; English translation p.111. Miniature, pink single to imperfect anemone form, apricot stamens with partial petaloids, long flower stalks, profuse. Flowers early to late. Leaves elliptic, medium size, Spreading growth. A cross between Higo **Ôtahaku** and *C.sinensis* 'Sayama-kaori'. Named and released by Kaoru Hagiya in 1983.

Tama-Hizen. (Jewel of Hizen) (*C.japonica*) from Nagasaki Pref. *Japan Camellia* No.78, August 2005: A crossing of **Tama-no-ura** × **Iwane-shibori**. Double, somewhat tubular, deep red bordered white, medium to large, tubular to split stamens, blooming in mid to late season. Leaves elliptic, medium size. Branches and tree upright growth. Originated by Kaoru Kusumoto. 'Hizen' is an old name for part of the present Nagasaki and Saga Prefectures.

Tama-ikari. (Jewelled Anchor), *(C.japonica)* Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, p.210 as 'Tamaikari': Medium size, pink, single with colour fading to near white at base of petals, opening wide cup-shaped. Petals 6-7, emarginate with somewhat wavy margins; stamens cluster, spreading, circular. Anthers brownish-yellow, filaments white, fragrant. The seed pod of this variety opens in an anchor shape, hence its name. Originated in Kumamoto Prefecture, Japan by Ôta, Tsugu'o and named by Adachi, Chôka in 1964. A seedling of **Nioi-fubuki.** See colour photos & descriptions: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.36, p.49 & p.296; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.89, 227. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.138. Erroneously listed as a Higo by SCCS., *Camellia Nomenclature*, 1984. Corrupted name: 'Tamai Kari'. Chinese synonym: 'Yumao'.

Tama-Isahaya. (Jewel of Isahaya) (*C.japonica*) from Nagasaki Pref., *Japan Camellia* No.78, August 2005: A crossing of **Tama-no-ura** × **Iwane-shibori.** Semi-double, tubular to trumpet shape, deep red bordered white, tubular stamens, blooming early to mid season. Leaves lanceolate, medium. Branches somewhat weeping. Tree vigorous. Originated by Kaoru Kusumoto.

Tamajishi. (Tama Lion). *(C.japonica),* JCS, 1996, *Japan Camellia*, No.51, p.10 with colour plate: Deep red in the centre with a clear white border, open irregular double with dispersed stamens. Medium to large size. A seedling of **Tama-no-ura** originating in Fukuoka Prefecture, Japan.

Tama-kanzashi. (Jewelled Hairpin). *(C.japonica),* Kinji Ohara, Tateyama, Chiba, 1993-1994, List of Camellias: Light pink, anemone form, fragrant. A seedling of **Tama-ikari.** Originated in Japan by Kinji Ohara.

Tamakanzashi. (Tama's Ornamental Hairpin). *(C.japonica),* JCS, 1996, *Japan Camellia*, No.51, p.10 with colour plate: Deep red with thin white border, semi-double with three rows of round petals. Size medium to large. Blooms mid-season. A seedling of **Tama-no-ura** originating in Fukuoka Prefecture, Japan.

Tamai Kari. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* Corruption of the Japanese name **Tama-ikari.**

Tamakashiwa. Different reading and abbreviation for **Tamagashiwa-tsubaki.**

Tamakasumi. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.166. Different reading for **Tamagasumi.**

Tamakatsura. (Jewelled Ivy), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.334: Medium size, tulip shaped single, petals 5 with waved and scalloped edges; colour pinkish white ground with red stripes. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.140. (Believed extinct.)

Tamakawa. Anonymous, 1969, *American Camellia Yearbook*, p.93. Different reading for **Tamagawa.**

Tamakujaku. (Beautiful Peacock), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Wada Nursery List, 1939: White, edges and stripes of red, large, semi-double. Originated in Japan. Different reading: 'Tamakujyaku'.

Tamakujyaku. Yashiroda, 1950, *American Camellia Yearbook*, p.23. Different reading for **Tamakujaku.**

Tama-kurenai. (Red Tama) (*C.hybrid*) from Ehime Pref. *Tsubaki* No.38, Japan Camellia Society, 1999. Seed parent *C.japonica* **Tama-ikari**, pollen parent *C.granthamiana*. Peach pink, single, flat, early blooming. Leaves resembling but smaller than those of *C.granthamiana*. Tree upright growth, vigorous. Originated by Hiroyasu Watanabe in 1997.

Tamamidori. (Beautiful Green), (*C.sasanqua*), Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.15 as 'Tama-midori': Deep pink, medium, semi-double with round petals. Originated in Japan.

Tama-miyako. *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.169 with colour photo; Large, deep pink bordered white. Semi-double, lotus form. Tubular stamens. Flowers mid-season. Leaves elliptic, medium size. Upright growth. A cross of **Tama-no-ura** x **Miyakodori**, made and named by Shunsuke Hisatomi Fuluoka Pref., Japan, in 2005.

Tamamizu. (Beautiful Water), *(C.japonica)* Shirai-Bunko, 1789, *Shishiki Hanagatachô:* White, large size, single. Large stamens. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.78. Originated in Japan. (Believed extinct.)

Tamamonomae. (Name of a Legendary Beauty), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pls. 461 & 522: Semi-double, white with red stripes. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, pp.139, 152. (Believed extinct.) Note: "Mae" is an honorific title to a woman's name.

Ta-ma-nao. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.27. Different reading for **Damanao.**

Tamanao. Yü, 1964, *Camellian*, 'Garden Camellias of Yunnan'. Different reading for **Damanao.**

Tamangtou. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.427; Chinese synonym for the Italy *C.japonica* 'Tramonto' **(Il Tramonto).**

Tama-no-haru. (Spring of Jewels). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.161 with colour photo; English translation p.111. Medium size, pink semi-double, three outer petals white, petals shatter, sasanqua-like stamens. Flowers mid-season. Leaves elliptic, medium size. Upright growth. A cross between *C.sasanqua* **Asahi-no-umi** and *C.yuhsienensis.* Named and released by Kaoru Hagiya in 1984. From Niigata.

Tama-no-hikari. *(C.japonica), Collected Papers*, ICS Congress, Cornwall, 2008; 'Tama-no-ura Camellias', Hiruki, Chuji, p.VIII 2. Bright red with white edge. Cylindrical single with cylindrical stamen cluster. Flowers early to mid-season. Leaves medium size, long-lanceolate. Plant erect, upright. A cross of a Yabutsubaki (wild japonica) x **Tama-no-ura**, originated byI. Noguchi, Japan.

Tama-no-hime. (Jewelled Princess), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.90, colour photo, p.228: Pale pink peppered and streaked red, semi-double with most stamens converted to petaloids, opening wide, cup-shaped. Leaves broad-elliptic, flat, apex acuminate. Originated in Chûbu area, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.161 with colour photo; English translation p.111. A chance seedling of **Tamatebako.** Originated and released by Yoshiaki Yamada in 1975.

Tama-no-kanzashi. (Jewelled Pearl). *(C.japonica),* Kairyô-en Catalogue, Autumn 1995, colour photo front cover, description p.106: A new star-shape, white edged camellia. Sharp and clear white margin on each rounded, red petal. 10 petalled semi-double seedling of **Tama-no-ura.** Originated in Japan.

Tama-no-i. (Pretty Well), *(C.japonica)* Itô, Ihei, [ca.1750], *Hyakka Tsubaki Nayose Irotsuki*, No.38: Large, lotus form double white. In the opinion of some scholars this is the same as **Kenkyô.** See: Tuyama, 1968, Camellia *of Japan*, appendix, p. 12.

Tama-no-i. (Pretty Well), *(C.japonica)* ICS, Apr.1990, *Japanese Camellia Cultivar List*, p.23. No description. Originated in the Ehime Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.161 with colour photo; English translation p.110. Small, large and small white mottles on red ground, tubular to flat single, cylindrical stamen cluster. Flowers mid-season. Leaves elliptic, medium size, flat. Spreading, vigorous growth. Raised by a private family in Hôjô City, named and released by Tokihiro Kôno in 1977.

Tama-no-ito. (Thread of Beads). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.112. No description. From Kurume City, Japan.

Tama-nokoshi. (Remaining Jewel), *(C.japonica) Nagoya Chinzu'e*, (ca.1910). Owned by Usami, Nao-hachi. Described as two types. One is a white flower and the other red. The latter is believed to be extinct. See: Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû*, No.6, p.125. The name may also be written as 'Tamo-no-koshi', meaning 'marry into prominent family'. Tateyama Nursery Catalogue, 1957: White, medium size, formal double, opening with a bud centre. Leaves mid-green, elliptic, margins serrulate, apex acuminate. Originated in Chûbu area, Japan. Synonym: 'Tamanokori'. See colour photos & descriptions: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.419, p.175 & p.354; Seibundô Shinkôsha. 1979, *Senchinshû*, p.90, description, p.229 as 'Tamanokoski' (Chûbu). Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.388. There is another similar variety of the same name from Kanaoka Chinju-en, Takarazuka-shi, Kansai area. The name 'Remaining Jewel' implys that the centre of the flower does not open fully, but remains as a bud, like a jewel. See description in *Nihon no Chinka.* Resembles **Tamatebako, Shiragiku, Shiro-suminokura, Hôshu.**

Tama-nokori. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.166. Synonym for **Tama-nokoshi.**

Tama-no-o. (See Note), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.708: White, single with 6-7 waved petals; opening flat, stamens in a central column, greenish-blue filaments. Originated in Japan. (Believed extinct.) Different reading: 'Tama-o'. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.157. Note: This is a poetic term for "life"; literally, a thread to lace up jewelled beads.

Tama-no-reijin. (Beautiful Lady) (*C.japonica*) from Chiba Pref. *Japan Camellia* No. 77, May 2005: A crossing of **Betty's Beauty** × **Tama-no-ura.** Bright peach red bordered white, open peony, medium to large, blooming mid to late season. Leaves lanceolate, medium. Tree upright to spreading growth. First flowered in 1999. Released in 2005. Originated by Atsushi Itoh. *Japan Camellia* 99, May 2013, p.2 with colour photo; JCR Regn 2013-3, (ser. No.3).

Tama-no-tsuyu *(C.japonica).* Asociasión Española de La Camelia, *Camelia,* No.4, 2004, p.25; Colour photo but no details.

Tama-no-ura. (Place name of Discovery), *(C.japonica)* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.161, illustration and description: Medium sized, campanulate single, 6 petals, red edged clear white, the edging tending to disappear on late blooms and on young plants. Cylindrical stamen cluster, white filaments. Blooms early to mid-season. Leaves dark green, long-lanceolate, apex tapering acuminate, gently wavy, margins serrate, venation somewhat raised. Discovered in the wild by Tomokazu Fujita in 1947 in Tama-no-ura, Fuku'e Island, Gotô Archipelago, Nagasaki Prefecture, Japan, and selected by Konomi, Masahiro, Kurume City, Fuku'oka Prefecture. Named and released by Prefectural Camellia Society. First exhibited in Nagasaki in 1973. First introduced to the West by Nuccio's Nursery, 1979. See colour photos & descriptions: Katei Gahô, ed., 1984, *Chabana Koyomi, vol.1, Tsubaki*, p.63; Front cover, SCCS., 1979, *The Camellia Review*, vol.41, No.l. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.90, 228. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.273 as 'Tamanoura'. See frontispiece to *International Camellia Register*. Chinese synonym 'Yuzhipu'.

Tama-no-yae-akebono. (Double-form 'Akebono' made from 'Tama-no-ura'). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.81 with colour photo; A seedling of **Tama-no-ura**, raised by T. Kunitake, Kurume, Japan in 1995. Deep red, bordered clear white. Medium to large size, semi-double to loose peony form. Tubular to split stamen cluster. Somewhat spreading growth. Leaves medium size, elliptic. Flowers mid-season.

Tamaojinsha-akayabu. (Red Wild Japonica from Tamao Shrine) (*C.japonica*) from Ehime Pref. *Japan Camellia* No.63, August 2000: Red, Single, small, tubular to trumpet shape, tubular stamen cluster, blooms in autumn. Found in 1982 and selected by Kyûshi Fujiwara in the precincts of a historic shrine, Tamaojinsha, in Ônishi Town.

Tamarnao. Yü, 1950, RHS., Camellia and Magnolia Conference Report Index, p.130. Different reading for **Damanao.**

Tamasaburô. (Personal Name), *(C.japonica)* JCS., 1984, *Tsubaki*, No.23, p.37 with illustration: The camellia has only three petals, small, dark red with concave, overlapping petals. Stamens are large, cylindrical. Early flowering. Leaves oval, apex acute, margins waved, shallowly serrate. Introduced by Sasai, Nobuo. Selected from, wild japonicas growing in Nagahama Town, Kita District, Japan, named by Ôzu Camellia Enthusiasts Club.

Tamasaka. (Chance Meeting), *(C.japonica)* Itô, Ihei, 1710, *Zôho Chikinshô*, vol.III; Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Yashiro, 1841, *Kokon Yôrankô*, vol.311; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large, semi-double white, heavily splashed and streaked with red. Three rows of petals. Many different designs appear; bamboo whisk-like spreading stamens. See: JCS., 1983, *Tsubaki*, No.23, p.133; ibid, 1969, No.7, p.26. Note: Kanji characters are varied. Originated in Japan. (Believed extinct.) Different readings: 'Meguriai', 'Kaigo'.

Tamasasa. (Beautiful Bamboo Leaves), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Single, large size, white with pink splashes. Different reading: 'Tamazasa'. Originated in Japan. (Believed extinct.)

Tama-shibori. (Dappled Gem), *(C.japonica)* Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, p.102: White single, opening spherically with a rare stripe of red; anthers golden, filaments white. A sport of **Tamagasumi.** Originated in Chûbu area, Japan. See colour photo, pp.90, 228, Seibundô Shinkôsha, 1979, *Senchinshû.* Originated by Harutarô Sakuragi, named and released by Eimei Nagata in 1968.

Tamashima-tsubaki. Ichijima reprint, 1906, Yashiro, 1841, *Kokon Yôrankô*, vol.306, p.344. Cited from *Honzô Kômoku Keimo.* Synonym for **Tamatebako.**

Tamashiro. (Beautiful White), *(C.japonica)* Mizuno, 1681, *Kadan Kômoku:* Large. Originated in Japan. (Believed extinct.)

Tamaso. Anonymous, 1969, *American Camellia Yearbook*, p.89. Different reading for **Tamasudare.**

Tamasudare. (Jewelled Screen), (*C.japonica)*, Uekiya Seigorô, 1874, *Tsubaki Hyakuro no Zu*, vol.I: Pure white, semi-double. Petals in two rows, central stamen column, yellow anthers, white filaments. Originated in Japan. (Believed extinct.)

Tamasudare. (Jewelled Screen), *(C.japonica)* Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large semi-double with overlapping petals; central, cylindrical, stamen cluster. Pale red with a white border. Originated in Japan. (Believed extinct.) Possible synonym for **Tamadare** in *Zôho Chikinshô*, 1710. *See:* JCS., 1983, *Tsubaki*, No.22, p.127; ibid, 1969, No.7, p.26.

Tamatebako. (Legendary Jewel Box), *(C.japonica)*, Itô, Ihei, 1719, *Kôeki Chikinshô*, vol.I; Itô, Jukyû, 1739, *Honzô Hanamakie*, vol.15; Iwasaki, 1829, *Honzô Zufu*; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, described as synonym for 'Karamatsu'; Yashiro, 1841, *Kokon Yôrankô*, vols.306, 311. Cited from *Honzô Kômoku Keimô* and described as synonym for 'Hôjucha' & 'Tamashima', (*Yamato Honzô*, 1708). Tuyama, 1968, *Camellias of Japan*, pl.53, p.27, description, p.101: White, rose form double with centre bud formation, petals round. Leaves broadly elliptic, or ovate-elliptic, a little undulate, thinly acuminate at apex, mid to deep green, margins serrulate. For colour photos & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.82; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.253, pp.118, 328; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.90, 224. Originated in Kantô, Japan. Synonyms: 'Tamashima-tsubaki', 'Hôjucha', 'Tamashima', 'Karamatsu', 'Paochu'. Resembles **Chûbu-tametebako** and 'Hôju' (**Hoshû**). See: JCS., 1983, *Tsubaki*, No.22, p.134; ibid, 1981, No.20, p.120; 1969, No.7, pp.26, 36.

Tamatebako. Satô, 1975, *Chûbu no Tsubaki*, p.70. Synonym for **Chûbu-tamatebako.**

Tamatori. (Taking Jewels), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large double with 4-5 rows of pink petals; cylindrical stamen cluster. Synonym: 'Fuzankai'. See: JCS., 1969, *Tsubaki*, No.7, p.27. Originated in Japan.

Tama-tsubaki. (Jewelled Camellia), *(C.japonica)* Yashiro, 1841, *Kokon Yôrankô*, vol.306; Ichijima reprint, p.333 as synonym for **Shiratama;** also listed ibid, vol.307, p.351. Cited from Hayashi, Razan, 1635, *Hyakuchinzu* foreword. No description. Originated in Japan.

Tama-tsubaki. (Jewelled Camellia), *(C.japonica)*, Andoh, 1974, *Tsubaki Nyûmon:* Red, large to medium size, double. Big old tree in the precincts of the Mangan Temple, Matsu'e City, Shimane Prefecture, Japan. Note: 'Tama-tsubaki' is a poetic word for camellia and a common expression for spherically formed camellia flowers.Originated in Japan.

Tamatsujima. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, as 'Tamatsu-jima'. Different reading for **Tamatsushima.**

Tamatsushima. (Tamatsu Island), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Chûgai Nursery Catalogue, 1935-1936, p.26: Large size, pink edged white with dark pink outside. Semi-double, early blooming. Originated in Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.305 with colour photo; English translation p.214. White with deep red graduations at the petal margins, single with cupped petals, medium size. Different reading 'Tamatsu-jima'. Corruption of name 'Tamatsuyima'.

Tamatsushima. (Tamatsu Island), *(C.japonica)* Uekiya Seijirô, 1874, *Tsubaki Hyakuro no Zu*, vol.II: White semi-double with pink tips to petals. Described as synonym for 'Takakurayama'. Originated in Japan. Note: Tamatsushima is a place name in the Wakayama Prefecture.

Tamatsuyima. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Tamatsushima.**

Tamatsuyu. (Dew Drop), (*C.rusticana*), JCS., 1980, *Tsubaki,* No.9, p.7. No description. Originated in Niigata Prefecture, Japan.

Tamatsuzumi. (Jewelled Drum), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.123, colour photo and description: Medium size, soft pink, single, opening through a spherical shape to drum-shape with 6-7 wide, overlapping petals with crinkled margins and a broad stamen cylinder with white filaments, joined for lower half, and bright yellow anthers. Blooms from very early to mid-season. Leaves deep glossy green, broad-elliptic, flat, apices abrupt acuminate, margins serrate. Originated with a private family in Gifu City, Japan. Named by Nagaharu Niwa in 1984, released by Gifu Camellia Club.

Tama-usagi. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.65; ibid, 1970, No.10, p.160. Synonym for **Shiragiku.** See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.222.

Tama-usagi-Hôkyôji. (Pretty Rabbit at Hôkyô Temple), Tuyama, 1968, *Camellias of* Japan, pl.56, p.28, description, p. 102: Leaves large, flat, thick, broadly elliptic, apex shortly acuminate. Flowers formal double, white, outer spreading horizontally, inner unfolding, forming a small heart. Blooms mid-season. Originated at the Buddhist temple Hôkyô, Kyôto City, Japan. For colour photos see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.417. The name alludes to the White Rabbit in Alice in Wonderland. Synonym for **Shiragiku.** Note: Tuyama lists 'Tamausagi-hôkyôji' and **Shiragiku** separately, but it has now been confirmed that they are the same cultivar.

Tamausugi. Hazlewood & Jessep, 1989, Checklist - *Camellia Cultivars from Nursery Catalogues.* Corruption of the Japanese name: 'Tama-usagi', synonym for **Shiragiku.**

Tamawa. *(C.japonica),* Kan Yashiroda Ltd Kagawaken Nursery Catalogue, 1931-1932, p.8. Red anemone flower. Originated in Japan.

Tamayura. (Ancient word for Dim), (*C.rusticana*), Yokoyama, 1975, *Gendai Tsubaki Meikan*, pl.162: Medium size, pinkish white, rose form double, with rounded, notched petals opening to an incomplete double peony form with a few divided vestigal stamens. Leaves elliptic to broad-elliptic, mid-green, often with a feather of gold down the midrib, apex acuminate, serrulate, slightly raised venation; petioles hirsute. Originated by Ohoka, Tokuji in Kariwa-gun, Niigata Prefecture, Japan. For colour photo & descriptions see p.292, Yokoyama & Kirino, 1989, *Nihon no Chinka;* Seibundô Shinkôsha, 1979, *Senchinshû*, pp.91, 228. A sport of **Machi-akari.**

Tamazasa. Different reading for **Tamasasa.**

Tamazono-goshiki. (Tamzono's Five Colours), *(C.japonica)* ICS., Apr. 1990, *Japanese Camellia Cultivar List,* p.23. No description. Originated in Nagasaki Prefecture, Japan.

Tamazusa ('Letter' in an old Japanese expression) (*C.japonica*) from Kodaira, Tokyo. *Japan Camellia* No.84, August 2007: White, single, small, cupped petals, cylindrical stamens, blooming from October to March. Tree upright growth. Leaves, elliptic, medium. A descendant of a crossing of **Tamagasumi.** Produced by Shinichi Noguchi and named in 2002.

Tambakasuri. Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.19, p.166. Different reading for **Tanbakasuri.**

Tamborine's Jewel. (C.hybrid). ACRS, *Camellia News*, 1999, No.151, p.10, colour photo p.2, Reg. No.526. Originated by Kevin Coase, Eagle Heights, Tamborine Mountain, Queensland, Australia. A chance seedling that first flowered in 1984. The semi-double fuschine pink (RHS.CC.64D) flower has 19-20 petals in 3 tiers, and is 9.5 cm across x 6.5 cm deep, flowering mid-season to late on a broad, upright plant of medium growth. Leaves green, matt, keeled, narrowly elliptic, acuminate apex, serrulate margins, 6.2 cm long x 2.3 cm wide. Petals open vase-shaped, standing apart. Filaments in a column. Single flowers only at leaf axils, no multiple budding.

Tamerlain (Grand). de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias*, p.137. Orthographic variant for **Grand Tamerlan.**

Tamie Fraser. *(C.japonica),* ACRS., 1989, *Camellia News,* No.111, p.12, Reg. No.368: Originated by the Hon. Malcolm Fraser, Nareen, Victoria, Australia. An informal double to peony form flower of 50 petals with a pale pink centre, shading to a deeper pink at the petal edge (RHS.CC.59C-55C). The 11 cm x 6 cm flowers are produced mid-season to late on an upright, dense, medium growing plant. Leaves elliptic, glossy, deep green, flat, finely serrate, 10 cm long x 5.5 cm wide. The flower sometimes opens with a bud centre. See colour photo, p.2, ACRS, June 1990, *Camellia News,* No. 113. Chinese synonym: 'Tafo'.

Tamiya. Chinese synonym for USA *C.japonica* **Tammia.**

Tamiya-de-kifu. (Tamiya's Yellow Variegated), *(C.japonica)* Mizuno, 1829, *Sômoku Kinyôshû*, vol.5: Leaves with yellow variegation. Different reading: 'Tamiya-de-kihu'. (Believed extinct.)

Tamiya-de-kihu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.166 as 'Tamiyade-kihu'. Different reading for **Tamiya-de-kifu.**

Tammia. *(C.japonica) American Camellia Yearbook*, 1972, p.136, Reg. No.1221: A 10 year old chance seedling that first bloomed 1969. Originated by Ferol Zerkowsky, Slidell, Louisiana, USA. Plant growth is upright, dense and medium with dark green leaves, 7.5 cm long x 3.8 cm wide. The formal double, often opening star-shaped, miniature bloom is white with a pink border and 90-100 incurved petals, measuring 5-6 cm across x 3.8-5 cm deep. Blooms mid-season to late. Stated by SCCS., *Camellia Nomenclature* as 'Very similar to, if not the same, as **Grace Albritton.**' For colour photos see: Facing p.100, *American Camellia Yearbook*, 1974; Front cover, *New Zealand Camellia Bulletin*, vol.XIII, No.5, 1984; pl.141, p.68, *Encyclopedia of Camellias in Colour*, vol.II, 1978; Front cover, SCCS., 1975, *The Camellia Review*, vol.36, No.3; Front cover, ACS., 1973, *The Camellia Review*, vol.28, No.4. Orthographic error: 'Tammy'. Sports: **Tammia Blush, Tammia Fire Opal.** Received the 1980 John A. Tyler Jr. Miniature Award. Chinese synonym: 'Tamiya'.

Tammia Blush. *(C.japonica) American Camellia Yearbook*, 1977, p.219, Reg. No.1460: A miniature formal double mutant of **Tammia,** first observed 1976 and originated by Ferol Zerkowsky, Slidell, Louisiana, USA. It has a blush pink centre with a deeper pink border. Blooms mid-season to late.

Tammia Fire Opal. *(C.japonica)* SCCS., 1981, *Camellia Nomenclature*, p.154: A sport of **Tammia.** White flecked and streaked radiant scarlet. Originated by J.L. Carvain, Dallas, Texas, USA.

Tammy. Cannon, 1971, ACS., *The Camellia Journal*, vol.26, No.4. Orthographic error for **Tammia.**

Tammy. *(C.japonica),* ACS, *The Camellia Journal,* June 2013, p.25 with colour photo; Regn No. 2841; ACS, *Yearbook*, 2013, p.141 with colour photo; Originated, registered and propagated by Vernon E. Howell, Lucedale, Miss., USA. A 12 year old seedling, first flowered 2004, parentage unknown. Large size, 11.5cm diameter x 6.5cm deep, flower is described as semidouble to formal double, but no stamens described. 20+ raised and incurved petals show a rose form in photo. Heavy petal texture, and flowers fall whole. Plant is upright and dense, with vigorous growth. Dark green leaves average 10cm x 5cm, with medium serration. Flowers early to midseason.

Tamora. *(C.japonica)* Waterhouse, 1947, *Camellia Quest*, p.16. Originated by Sir William Macarthur, Camden Park, N.S.W., Australia, as Seedling No. 40/51. Not distributed and now unidentifiable. (Believed extinct.)

Tamponeana. Berlèse, 1837, *Monographie*, ed.1, pp.104, 129. Mertens & Fontaine, *Collection de cent espèces.....camellia*, 1845, pl.79. Orthographic error for **Tamponetiana.**

Tamponeana Rosea. van Houtte Catalogue, 1846-1847, 27:32. Orthographic error for **Tamponetiana Rosea.**

Tamponet. Berlèse, 1835, *Annales de la Société d'Horticulture de Paris*, 17:53-58. Synonym for **Tamponetiana.**

Tamponetiana. *(C.japonica)* Berlèse, 1835, *Annales de la Société d'Horticulture de Paris*, 16:287, 289 as 'Tamponeana': 'Ten new Camellias obtained from seed by Mr Tamponet'. Berlèse, 1840, *Monographie*, ed 2, pp.176-177 as 'Tamponetiana': Leaves oval, a little lanceolate, 8 cm x 5.5cm, venation apparent, dull green. Flowers 8 cm across, cherry red, approaching amaranth, double, well formed; petals rounded, regularly reflexed, the second row elevated, those of the centre rumpled, marked with white spots; a few sterile stamens in the centre. Originated by Mr Tamponet, Paris, France. Orthographic errors, 'Tamponnetiana', 'Tamoneana', 'Tamponiana', 'Tamponettiana'. Synonym: 'Tamponet'.

Tamponetiana Rosea. *(C.japonica)* van Houtte Catalogue, 1846-1847, 27:32 as 'Tamponeana Rosea': A rose-red sport of **Tamponetiana.** Originated in France.

Tane. *(C. hybrid). New Zealand Camellia Bulletin*, Nov. 2008, p.18, Regn. No.484. A chance seedling of **Moshio,** male parent unknown, showing non-reticulata hybrid appearance. Raised by Rodger Aitchison, Palmerston North, NZ. Plant is spreading, open and of medium growth rate. Light green leaves are 8.5 cm x 4 cm. Flower is semi-double, 9-10 cm wide x 5 cm deep, with 16-20 lightly veined, waved and orbicular petals of fairly heavy texture. Stamens are small, in about 4 clusters, filaments white, anthers yellow. Colour is dark pink (RHS 52A). Flowers early to late season.

Taneji-aka-yabu. (Red Camellia from Taneji Temple). *(C.japonica)*, Seibu Maizuru Institute of Botany, 1993-1994, *Seibu no Tsubaki*, No.4: Dark red single. Medium size. Originated at Seibu Maizuru Farm, Japan.

Taner Williams Red. Carey Holmes Nursery Catalogue, 1946. Orthographic error for **Tanner William's Red.**

Taneride. *(C.japonica)* Verschaffelt Catalogue, 1844-1845, p.30. Berlèse, 1849, *Annales de la Société Central d'Horticulture de Paris*, vol.40, p.230: Regular formal double, somewhat rose form, 10-11 cm across; pure carmine red. Centre more or less regular. Petals in 8-9 rows, very

numerous, broad, rounded, some indented, some entire with pointed apices, curled, serried and closely packed, forming a very round, convex flower similar to **Lowii.** Originated in Italy. Orthographic error: 'Tancride'.

T'ang. *(C.reticulata* hybr.), *American Camellia Yearbook,* 1967, p.233, Reg. No.941: A 5 year old chance seedling of **Buddha** that first bloomed 1965. Originated by Esther Rideout, Laguna Hills, California, USA. Plant growth is upright and open, very vigorous with dark green leaves, 11 cm long x 6 cm wide. A reticulate form of **Buddha** but with 5 erect rabbit ear petals, 12.5-13 cm across x 8 cm deep with 20-25 petals. Colour a light medium pink. Early blooming.

Tangerine Queen. (*C.reticulata* hybrid). C.Aust., *Camellia News,* Autumn 2009, p.9 with colour photo. Regn No. 578; Originated by Andrew Gilliam, Falls Creek, NSW, Aust. A chance seedling of **Terrell Weaver** that first flowered in 2002. The large, semi-double flower has 10 – 12 petals and is orange red (RHS.CC 50B). Flower diameter is 15 cm and height 8 cm. Occasional petaloids and rabbit ears. Leaves dull green, obovate, 11 cm x 7 cm. Flowers mid-season to late on an open spreading plant of medium growth rate. Very thick petals with a distinct orange cast.

Tangetsu. (Pale Moon). *(C.japonica), Nagoya Camellia Society Bulletin,* No.25, p.7, colour plate No.20: Originated by Kôji Funakoshi, Nagoya, Japan. A chance seedling of **Kikuzuki.** Small size, 6 cm across, pale pink single with long petals curving outwards like **Kikuzuki.** Early blooming. Weak fragrance.

Tange-wabishin. (Tange's Aborted Stamens), (Wabisuke), ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.23: No description. Originated in Ehime Prefecture, Japan.

Tango. (*C.reticulata* hybrid). ACS, Aug. 1996, *The Camellia Journal*, vol.51, No.2, p.31, Reg. No.2378. A large, black red crimson, formal double, **Craig Clark** seed parent x ('H-404' - a seedling of *C.pitardii* var. *yunnanica* x *C.reticulata* 'Cornelian' [**Damanao**]). Flowers mid-season. Originated by Houghton S. Hall, San Anselmo, Calif., USA. *American Camellia Yearbook*, 1996, p.5, colour photo before p.1. The 16 year old seedling first flowered in 1986. Average flower size is 12.7 cm across x 7.5 cm deep with 35 petals. Form and colour unique. Five separate tiers of petals, all deeply incurved with black picotee edges and a bud centre. Plant growth is upright, spreading, dense and medium in rate with dark green leaves 11.5 cm long x 4.5 cm wide.

Tango-no-koe. (Voice of Tango), *(C.sasanqua),* Kajitsu-en, 1905, *Chabaika Meikan:* Large size, white graduations with pink towards the edge of the petals. Originated in Japan.

Tangredi. Verschaffelt Catalogue, 1846, p.59. Orthographic error for 'Tancrède', synonym for **Magnifica Rosea.**

Tan-hsin-tsu. Wabisuke & Andoh, 1981, *Tsubaki*, p.157. Different reading for **Tan Xinzi.**

Tanikaze. (Wind in the Valley), *(C.japonica)* Minagawa, 1956, *Engei Shinchichiki Tsubaki no Hinshu to sono Saibai;* Satomi, 1956, *Camellia Varieties in Japan*, p.13: Medium size, red, single, opening wide cup-shaped. Petals 5-6, large, rounded, fine veining of deeper red. Central

stamen column, gold anthers, pinkish filaments. Leaves mid-green, elliptic, margins serrate, apex acuminate. Originated in Kantô area, Japan.

Tanikaze. (Wind in the Vally), *(C.japonica)* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Double, red stripes and moires, divided stamens. Originated in Japan. (Believed extinct.)

Tanikaze. (Wind in the Valley), *(C.japonica)* Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.42; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.88, 227: Deep red, small size, single, tubular, stamens in cylindrical cluster. Originated in the Kansai area, Japan.

Tan-se Chiu-hsin. Chuang, 1959, *Yunnan Shanchahua.* Different reading for **Danse Jiuxin.**

Tanima-no-otome. (Maiden of the Valley), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.88, colour photo, p.227, description: Large to medium, ivory white, semi-double, petals becoming creamy towards their bases, 2-3 rows, opening wide, cup-shaped, large and rounded. Stamens divided, filaments white. Originated in Ojiya City, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1971.

Tanima-no-tsuru. (Crane in the Valley), *(C.rusticana)*, Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.65. No description. Tuyama, 1968, *Camellias of Japan*, pl.167, p.84, description, p.138: Leaves broadly elliptic, apex shortly acuminate, margins obscurely crenate, petioles more or less hairy. Flowers single, 6 petals, large, widely cup-shaped, petals wrinkled and cultimated recurved outwards, rosy pink (Spinel pink 0023/1). Blooms early to mid-season. This variety at one time, it is said, was in Tsuruma Dani in Kanazawa City and named 'Tanima-notsuru' in the late Edo period. It is an important variety for Chabana (Tea Ceremony) and was cultivated for many years by Kaneko, Kengo of Kanazawa City, Ishikawa Prefecture, Japan. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.371; Katei Gahô, ed., 1984, *Chabana Koyomi vol.I*, *Tsubaki*, p.54. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.89, 227. Yokoyama & Kirino. 1989, *Nihon no Chinka*, p.163.

Tani-no-tomori. (Light in the Valley), *(C.japonica)* Satô, 1975, *Chûbu no Tsubaki*, p.57: Medium-small, cup-shaped single, bright deep red; petals number 5, rounded, emarginate; central stamen column, anthers pale gold, filaments white, becoming pink in fused portion. Leaves glossy, deep green, narrowly elliptic to elliptic, apex long acuminate, margins finely, shallowly serrulate. Originated in Chûbu area, Japan. The original tree is in the garden of Mr Nakajima, Takatoshi, Kasuga-chô, Shizu'oka City. Named and released by Minoru Satô in 1972. See colour photo, Seibundô Shinkôsha., 1979, *Senchinshû*, pp.88, 227.

Taniwatari. (Song of the Nightingale in the Valley), *(C.japonica)* Okumura [ca 1810], *Chinka Hin'i.* Description not seen. Originated in Japan. (Believed extinct.)

Tanja. Anonymous, 1969, *American Camellia Yearbook*, p.90. Different reading for **Tanju.**

Tanju. (obscure), *(C.japonica)* Itô, Ihei, 1695, *Kadan Chikinshô.* #52: Medium size, double, cherry pink. The corolla is short white petaloids in the centre of the flower. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* as small, lotus shape. See: JCS., 1982, *Tsubaki*, No.21, p.103; ibid, 1969, No.7, pp.22, 34; ibid, 1969, No.7, pp.22, 34. Originated in Japan. Different reading 'Tanshu'. (Believed extinct.)

Tankai. (Legendary Personal Name), *(C.japonica)* Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, p.210: Large, pink; peony form with 2 rows of large outer petals and a confused centre of folded, erect, irregular, small petals, petaloids and rare stamens. Leaves mid-green, elliptic, apex acuminate, margins sharply serrate. Blooms mid-season. Originated in Kagawa Prefecture, Japan. See colour photo, pl.421, p.169, *Encyclopedia of Camellias in Colour*, vol.II, 1978 and ibid, 1972, vol.I, p.367; Seibundô Shinkôsha, 1979, *Senchinshû*, p.228. Nippon Tsubaki - Sasanqua Meikan, 1998, p.162 with colour photo; English translation p.111. A chance seedling of 'Okitsu-tsubaki', named and released by Saneichi Koyama in 1971.

Tankei. (Brief Torch), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.42, colour photo and description: Small size, white, campanulate single with 5 broad, long emarginate, rounded petals, tending to reflex about a short, broad stamen column with creamy filaments, joined for lower half, and yellow anthers. Buds always above leaves. Blooms mid-season to late. Leaves matt mid-green, narrow-elliptic to elliptic, flat, long, tapering acute, margins serrate. A seedling of **Hatsu-arashi-Saga** x **Shirokikuzuki**. Originated in Niigata Prefecture, Japan. Named and released by Hideyo Katô in 1980.

Tanner-Williams Red. Kiyono Nursery Catalogue, 1938-1938. Orthographic variant for **Tanner William's Red.**

Tanner William's Red. *(C.japonica)* Kiyono Nursery Catalogue, 1936-1937, p.15, (Illustr.): A semi-double to loose peony form, deep orange red.. Blooms mid-season. Vigorous, compact growth. Originated in USA.

Tannin-matsushima. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name: **Tennin-matsushima.**

Tanotome. Quanstrom, 1980, SCCS., *The Camellia Review*, vol.41, No.5, p.9. Synonym for **Otome.**

Tansechiuhsin. Ikeda, 1976, *American Camellia Yearbook.* p.144. Different reading for **Danse Jiuxin.**

Tansetsu. (Cinnabar Snow), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.92, colour photo, p.229: Small, wide campanulate single, red with clear white blotches at petal apices; petals 6, of irregular length, emarginate, the larger being reflexed. Leaves lanceolate, thin, slightly warped, apex long tapering acuminate, mid-green, obscurely crenate. Originated in Kumamoto Prefecture, Japan.

Tansha. (Cinnabar), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.283, colour photo and description: Medium size, deep pink densely marked with dark cinnabar red streaks and speckles, single, with 7 irregularly sized petals in 2 rows; emarginate and crinkled with a central stamen column, having pale yellow filaments, joined at lower half, and bright golden anthers. Blooms early to mid-season. Leaves deep green, elliptic, apices long acuminate, margins sharply serrate. Originated in Ishikawa Prefecture, Japan as a natural seedling of **Honshi-ratama.** Resembles **Nukifude** but more cup-shaped. Originated by Tadao Yamaguchi, named and released in 1980.

Tanshoku-oki-no-ishi. Tokoyama, 1975, *Gendai Tsubaki Meikan*, p.163. Different reading for **Usuiro-oki-no-ishi.**

Tan Xinzi. (Reddish-Brown Purple Heart), *(C.japonica)* Fang, 1930, *Diannan Chahua Xiaozhi:* The centre is a deep reddish brown and the heart is purple. (Bartholomew 1982, *American Camellia Yearbook*, p.151). Originated in China. Different reading: 'Tan-hsin-tsu'.

Tanushimaru. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.191. Synonym for **Fukiage-shibori.**

Tanya. (Title to a Drama). *(C.sasanqua),* McIlhenny, 1937, *600 Varieties of Camellias*,: Originated by Coolidge Rare Plants Gardens, East Pasadena, California, USA from seed of unknown parents, imported from Japan in 1927. A small, deep rose-pink, with a deeper shade on petal margins, single, 4 cm across, 5-6 petals, triangular in shape with notched apex. Leaves mid-green, narrowly oval, 5 cm x 2 cm, sharply acuminate, margins finely serrulate. Low growing plant, suitable for prostrate training.

Taohong. (Peach Red), *(C.japonica)* Fang, 1930, *Diannan Chahua Xiaozhi:* The flower is red like a peach blossom. (Bartholomew, 1982, *American Camellia Yearbook*, p.150). Originated in China. Different reading: 'T'ao-hung'.

Taohong Baozhu. (Pink Jewel), *(C.reticulata),* Feng et al., 1986, *Yunnan Camellias of China*, p.76 as 'Taohongbaozhu': Leaves oblong to broad-elliptic, apices acuminate to long-acuminate and recurved; bases cuneate to broad cuneate; margins sparsely and shallowly serrate, 7-11 cm long x 3.5-5.5 cm wide. Flowers pink, 12 cm across; petals about 21, outer whorls slightly twisted and erect forming a nearly spherical corolla. Stamens divided into fascicles between petals; pistil mal-developed. Early blooming. Originated in Yunnan, China as a chance seedling from the wild form reticulata. Different reading: 'T'ao-hung Pao-chu'. Synonym: 'Pink Jewel'.

Taohong Beidi. Shao, Taohong, 1991, *The Observations from the Camellia World,* p.10. Chinese synonym for the USA *C.japonica* **Blond Betty.**

Taohong Jinxin. (Peach Red, Gold Heart), *(C.japonica),* Wang & Yu, 1989, Camellias, No.8, p.20: Small tree. Flower buds ovate, flowers pink, single with 6 emarginate petals. Stamens multiple with long filaments, united at the base with shorter styles. Flowers 7-8.5 cm across. Late flowering. Originated in China.

Taohong Mudan. (Crimson Peony), *(C.reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.20 as 'Taohong Moudan': Peony type, crimson, mid-season. From Tengchong. Feng et al., 1986, *Yunnan Camellias of China*, p.102 as 'Taohongmudan': Leaves elliptic, apices acuminate, bases cuneate, margins coarsely and deeply serrate, reclinate in a V-shape, 6.5-11 cm long x 3.3-4.5 cm wide. Flowers pink (RHS.CC.55A-B), diameter about 13 cm. Petals about 37, outer whorls rolled, inner whorls twisted and folded. Stamens numerous, sometimes petaloid, placed among petals. Pistils mostly rudimentary. Flowers early to mid-season. The cultivar was selected from open pollinated plant of *C.reticulata* f. *simplex* in Tengchong. Different readings: 'T'ao-hung Mou-tan'. Synonym: 'Crimson Peony'.

Taohong Mudan. (Crimson Peony), *(C.japonica)* Wang & Yü, 1981, *Shancha Hua:* Medium size, crimson, peony form. Late flowering. Originated in China.

Taohong Wubao. (Five Crimson Treasures), *(C.japonica)* Liu, 1959, *Ching Kuo Chu Ming Tichi Ching Hua Hui:* A medium size, crimson, formal double. Originated in China.

Taohong Xiuqiu. (Crimson Embroidered Ball), *(C.reticulata)*, Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.17: Butterfly winged type. Light crimson. Mid-season. Tengchong. Feng et al., 1986, *Yunnan Camellias of China*, p.70, colour photo and description: Leaves oblong to broad-elliptic, apices acuminate and recurved, bases cuneate, bright green above, thick, midribs sometimes with short hairs beneath, 8.5-9 cm. long x 3.5-4.2 cm wide. Flowers pink (RHS.CC.58B), diameter about 10 cm. Petals mostly 25, folded over to form a ball shape. Stamens numerous, divided into fascicles placed among petals, Pistil rudimentary. Blooms midseason. The cultivar was selected from an open pollinated plant of *C.reticulata* f. *simplex* in Tengchong. Different readings: 'T'ao-hung Hsiu-ch'iu', 'Taohongxiuqiu'. Synonyms: 'Spinel Pink Ball', 'Crimson Variegated Ball'.

Taohong Zhaoyang. (Crimson Perfection), *(C.reticulata)*, Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.15: Butterfly wings type. Crimson. Early, Tengchong. Feng et al., 1986, *Yunnan Camellias of China*, p.43, colour photo and description: Leaves elliptic to long-ovate, apices acuminate and recurved, bases cuneate, sharly reclinate, rugose, 9.7-11.5 cm. long x 4.7-6.5 cm wide. Flowers pink (RHS.CC.52B), diameter about 13 cm. Petals about 25, large, outer whorls flat, bent outwards at apex, inner whorls folded and erect. Stamens numerous, grouped round pistil, well developed, fertile. Blooms mid-season. This cultivar was selected from an open pollinated plant of wild form reticulata in Tengchong. Different readings: 'T'ao-hung Chao-yang', 'Taohongzhaoyang'. Synonyms: 'Spinel Pink Perfection', 'Crimson Morning Sunshine'.

Taohongpao. *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong* 2012, p.16 with colour photo. No details. Photo shows loose peony to rose form double, red, central petals smaller and streaked with white.

Taohua. Chinese synonym for French *C.japonica*, **Fleur Dipater** as 'Peach Blossom'.

T'ao-hung Chao-yang. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.25. Different reading for **Taohong Zhaoyang.**

T'ao-hung Hsiu-ch'iu. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.25. Different reading for **Taohong Xiuqiu.**

T'ao-hung Mou-tan. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.26. Different reading for **Taohong Mudan.**

T'ao-hung Wu-pao. Different reading for **Taohong Wubao.**

Taojin. (Panning Gold), Gao & Zhuang, 1989, *The Camellia in China*, p.72, No.521. Chinese synonym for the USA *C.reticulata* **Forty-Niner.** Later changed to 'Taojinzhe'.

Taojinzhe. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.426; Chinese synonym for the USA *C.reticulata* hybrid **Fortyniner.** Previous synonym 'Taojin'.

T'ao-liu. Different reading for **Daoliu.**

Taoli Zhengchun. (Peach & Plum Vying in Spring), *(C.japonica)*, Gao & Zhuang, 1989, *The Camellia in China*, p.53, No.340, colour photo No.198: Medium size, 6-8 cm across, red, formal double, sometimes tiered or hexangular, 8-9 rows of petals, becoming smaller and more pointed to the centre. Leaves mid-green, elliptic, serrulate, apices acute. Originated in China.

Taoqi. Gao, Jiyin, 1993, *The Observations from the Camellia World,* No.530, p.67. Chinese synonym for Australian *C.pitardii* hybrid **Gay Pixie.**

Taorau. *(C.japonica)* Pennel Nursery Catalogue, 1957. Medium size, double, red. Originated in New Zealand.

Taoshanqiu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.423; Chinese synonym for the USA *C.japonica* **Dorothy Hills.**

Taotaohung. Durrant, 1967, *New Zealand Camellia Bulletin.* Error for 'Tsaotaohung', different reading for **Zaotaohong.**

Tao-Tuen. *(C.japonica)* Dodd, 1968. *Adventure in Camellia Seedlings*, p.4, colour photo: A medium size, pink, formal double seedling of **Elegans.** Originated by Richard Dodd, Marshallville, Georgia, USA.

Taoye. (Peach Leaved), *(C.japonica),* Chen Jingyi, 1253, *Quan Fang Bei Zu*. Leaves long and lanceolate like peach leaves. Originated in China. (Believed extinct).

Tapis Rouge. *(C.japonica),* Originated and propagated by Alain Jouno. Registered by Parc Botanique de Haute Bretagne, Le Chatellier, France. A 4 year old plant, first flowered 2014. Parentage unknown. To be further propagated by a nursery. Flower is a single with round petals and wide open form, colour bright pink. Stamens tubular to columnar, anthers and filaments yellow. Plant is very erect, with medium growth rate. Leaves are mid-green, flat, 9.5cm x 6.5cm.

Tappanii. *(C.japonica)* Hogg, 1838, *Magazine of Horticulture*, 4:155: A medium sized, deep crimson with thick petals. Originated in the USA by M. Floy, New York. (Believed extinct.)

Tar Baby. *(C.japonica) American Camellia Yearbook*, 1985, p.185, Reg. No.1977: A medium, blood red, anemone form *C.japonica* chance seedling, originated by Dr M.D. Wine, Thomasville, Georgia, USA that first bloomed in 1975 as a 10 year old seedling. Size, 9-10 cm across x 5 cm deep with 15 petals, numerous petaloids, red anthers, white filaments. Plant growth is upright and medium with dark green leaves, 11 cm x 5 cm.

Taraibune. (Boat like Washtub), *(C.rusticana),* Izu Ohshima, 1980, Hawaii Botanic Garden List. No description. Originated in Japan.

Tarantella. (*C.reticulata* hybrid). *New Zealand Camellia Bulletin*, Nov. 2008, p.18, Regn. No.483 as 'Spanish Dancer'. (Name later changed because of an earlier published, but later registered, Australian cultivar.) A cross of *C.sasanqua* x *C.reticulata* hybrid **Gael's Dream** x *C.japonica* **Takanini,** first flowered in 2004. Raised by Neville Haydon, Takanini, NZ. Plant is upright, of average density and rapid growth. Dark green leaves are 9.5 cm x 2.5–3.5 cm, narrowly elliptic, apices cuspidate. A peony form flower, 9.5 cm wide and 2.5–3 cm deep, with 16 to 20 fluted, orbicular petals. Colour is a vibrant red, (RHS 53C) and a light scent. Stamens are in a loose column between the petals, cream filaments with bright yellow anthers. Flower is of true reticulata form, but flowers early to mid-season.

Taresei-kujaku. (Drooping Peacock), *(C.japonica)* Craig, 1972, *American Camellia Yearbook*, p.58: The rarest of the group of 'Lily Leaved' Camellias. Long, narrow, linear leaves, up to 15 cm long. Red with heavily variegated petals, single with long slender petals. Originated in the Gam-agôri City, Aichi Prefecture, Japan. Different reading: 'Tareshô-kujaku'. Resembles **Yuri-tsubaki.**

Tareshô-kujaku. Different reading for **Taresi-kujaku.**

Tardioni. Vanderbilt, 1940, *Camellia Research*, p.7. Orthographic error for **Targioni,** synonym: 'Teresa Targioni'.

Targeonii. Baptist & Son Nursery Catalogue, 1861, p.9. Orthographic error for **Targioni,** synonym: 'Teresa Targioni'.

Targini. Killiow Garden Catalogue, 1965-1966, p.2, Orthographic error for **Targioni,** Synonym: 'Teresa Targioni'.

Targinia. Killiow Gardens Catalogue, 1985-1986. Orthographic error for **Targioni**, synonym: 'Teresa Targioni'.

Targioni. *(C.japonica)* August van Geert Catalogue, 1848, p.23. No description. Van Houtte Catalogue, 1851-1852, 45:42: Pure white with a network of cerise streaks, well imbricated. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, vol.40, p.78 as 'Teresa Targionia' or 'Tozzetti': Flower 10-11 cm across, ranunculiform, of a rose-white with bands and lines of red. Petals are in 5-6 rows, very full, the exterior are reflexed and entire, the others shell-like; those of the centre are irregularly placed, some entirely white, others blotched or divided by lines or stripes of red. Originated in Italy by Mad. Libri, Florence. Orthographic errors: 'Teresa Targionia', 'Teresa Tarbionia', 'Teresa Torgioni', 'Tardioni', 'Targeonii', 'Targinia', 'Torioni', 'Torgioni', 'Targioni', 'Targiono', Theresa Targioni'. Synonyms: 'Teresa Targioni'. 'Tozzetti'. Sport: **Targioni Rosea.**

Targioni Rosea. *(C.japonica)* Ambroise Verschaffelt, 1854, Catalogue, p.19. No description. Frederico Burnier Catalogue, 1855-1856: This variety was fixed from a sport of **Targioni.** Colour vivid rose, with center lined minutely with white, Imbricated. Franchetti, 1855, *Collezione di Camelie*, p.59: A variety fixed from a sport of **Targioni**; bright pink with centre of petals finely lined with white. Imbricated. Originated in Florence, Italy. See pl.IV, Book IV, Verschaffelt, 1857, *Nouvelle Iconographie.*

Targiono. Seidel, 1870, *Pflanzen Catalog*, p.11. Orthographic error for **Targioni.**

Tarleya. van Houtte Catalogue, 1851, 44:26. Orthographic error for **Fairleya.**

Tarmamao. Durrant, 1963, *New Zealand Camellia Bulletin.* Orthographic error for 'Tamarnao', different reading for **Damanao.**

Tarô. Seibundô Shinkôsha, 1979, *Senchinshû*, p.244. Old name for **Fujinami.**

Taroan. Wada, Hakonya Nurseries Catalogue, 1935. Pseudonym for **Kumagai.**

Tarô'an. (See below), *(C.japonica)* Minagawa, 1933, *Chinkashû*, Description not seen. Chûgai Nursery Catalogue, 1934-1935, p.32: Soft pink, round petals, single, elegant flowering from December (early). Tuyama, 1966, *Camellia Cultivars of Japan*, pl.97, p.164; Tuyama, 1968, *Camellias of Japan*, pl.83, p.42, description, p.110: Leaves broadly elliptic to obovate-elliptic, deep green, thick, venation somewhat impressed. Flowers medium size, single, widely cup-shaped, petals wavy at the margins, pink (Rose madder 23/3) in colour. Wide, neat stamen cylinder, filaments whitish. Flowers early to mid-season. Plant habit pendulous. A famous old cultivar from the Nagoya District, Japan that is much used for the tea ceremony (Chabana); named for Tarô'an, a famous devotee of the tea ceremony from the middle Edo Period. For colour photos see: Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.63, p.23; *Encycloptlia of Camellias in Colour*, vol.I, 1972, pl.41, p.297; Seibundô Shinkôsha, 1979, *Senchinshû*, p.91 as 'Tarôan'(Engei). Different readings: 'Tarohan', 'Taroan'. In England, Sunningdale Nurseries Catalogue, 1968-1969. p.10 reported that, due to propagation from stock survival material from import 'Tarô'an', the Japanese Higo **Kumagai** was erroneously released in England under the name **Tarô'an** for some years. Nowadays, to avoid confusion, the synonyms 'Tarô'an'(Engei) or 'Engei-Tarô'an' are used in Japan.

Tarô'an (Engei). Seibundô Shinkôsha, 1979, *Senchinshû*, p.91. Synonym for **Tarô'an.**

Tarô'an (Jingû). (Tarô'an' from Shinto Shrine Atsuta Jingû), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.91: Medium size, silvery pink, fading somewhat towards the petal tips, rather

flat single of 6 petals, becoming reflexed; short, compact stamen cylinder. Leaves medium to dark green, waved oblong-ovate, apex short acute. Originated in Atsuta Shrine, Nagoya City, Chûbu area, Japan. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, as 'Jingû-tarô-an'.

Tarô'an (Sekido). Seibundô Shinkôsha, 1979 *Senchinshû*, p.91, colour photo, p.228: A small, silvery pink, tubular single of 5 petals with frill shaped margins and a large, creamy, central stamen cluster. Originated in the garden of a wealthy merchant of the Sediko family from where a plant was sent to the Jômanji Temple, Inuyama City, Aichi Prefecture, Chûbu area, Japan. Synonym for **Sekido-Tarô'an.** Other synonyms: 'Sekido-no-tarô-an', 'Usujômanji'. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.106, 107.

Tarô'an-nishiki. (Tarô'an Brocade), *(C.japonica)* Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.166. No description. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.120, p.76, description, p.309: Cup-shaped single, medium to small, light pink with red streaks and dots and a large, cylindrical stamen cluster with yellow anthers and cream filaments. Petals 5-6, large, overlapping, emarginate. Leaves elliptic to elliptic-lanceolate, apex long-acuminate to acuminate, glossy, dark green, margins shallowly, bluntly serrate. Originated by Nakayama, Heishiro, about 1953, in the Chûbu area, Japan as a chance seedling of **Tarô'an.** See: Satô, 1975, *Chûbu no Tsubaki*, p.13; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.91, 228. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.275. Resembles **Yumemakura**. Different reading: 'Tarohan-nishiki'. Sport: **Tarôkaku.**

Tarohan. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.23. Different reading for **Tarô'an.**

Tarohan-nishiki. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.23. Different reading for **Tarô'an-nishiki.**

Tarohkaja. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.210. Different reading for **Tarôkaja.**

Tarôkaja. (Name of Comedian in Kyôgen Drama), (Wabisuke), Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, single, pale purple, very early blooming. Itô, Ko'emon, 1879, *Chinkashû:* Pink, small, single. Early blooming. Tuyama, 1968, *Camellias in Japan*, pl.399, p.203, description, p.208: Branchlets erect and straight, bark greyish to greyish white. Leaves narrowly elliptic to broadly lanceolate, venation impressed, petioles glabrous. Flowers single, 7-8 cm across, light pink (Rhodomine pink 527/1), petals, 5-6, arcuated half above, horizontally spreading and wrinkled all over. Staminal tube orange yellow. Blooms early to mid-season. In rare cases produces viable seeds and is the parent of divers wabisuke type cultivars. See: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.222, p.390; *Encyclopedia of Camellia in Colour*, vol.I, 1972, pl.188, p.362; p.137, Yokoyama & Kirino, 1989, *Nihon no Chika.* In the *Journal of Japanese Botany*, 1910, Makino raised this member of the Wabisuke group to species rank as *Thea reticulata*, Tarôkaja' becoming *Thea reticulata* var. *rosea*, but this is invalid as Lindley, (1827) had already used *reticulata* in the camellia genus. In 1952 Kitamura reclassified *Thea reticulata* var *rosea* as the species *Camellia uraku* but in 1970 reverted to it being a form of Wabisuke. A large and ancient plant of **Tarôkaja** grows in the garden of the Buddhist Temple Tôji-in, Sakyô-ku, Kyôto where it was known as 'Wabisuke' and is the origin of the use of that name for this cultivar. Around Kyôto it is also known as 'Momoiro-wabisuke'. Another Japanese synonym is 'Bunzô-wabisuke', a name given to one individual plant. Likewise a specific plant in the convent Chôfukuji, Kyôto is called 'Koshikibu'. The famous Tea Master, Oda, Urakusai (Lord Oda Nagamasu) favoured it as a variety most suitable for the teahouse arrangement. (Chabana). Oda Uraku. was the younger brother of Oda Nobunaga, a famous 16th Century Shôgun and a contempory of St. Francis Xavier. The word 'Uraku' is Zen Buddhism for 'Existing Pleasure'. Further Japanese synonyms are 'Tosa-tsubaki', 'Tarôkaja--tsubaki', 'Koshikibu' and 'Uraku'. Its variegated form is known as 'Tarôkaja-shibori'. Different readings are 'Tarohkaja' and 'Tarôkanja'. Its Western synonym is 'Judith'. The

cultivar is common on mainland China and may have originated there. Corruptions of its name are: 'Taro-Kandjia', 'Tarô-Kanjia', and 'Taro-kwanja'. For botanical drawings, colour photo and description see pp.9-12, Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No.11. The comedy character Tarôkaja is a raw country bumpkin servant whose dialect is not understood by his educated master and vice-versa, the misunderstandings arising from this cause them to perform a comic dance.

Tarôkaja-shibori. (Dappled Tarôkaja), (Wabisuke), Izu Oshima, 1980, *Hawaii Botanic Garden List* as 'Tarôkajashibori'. A virus variegated form of **Tarôkaja** - Pink blotched with white. Originated in Japan.

Tarôkaku. (Tarô Tower), *(C.japonica)* Satô, 1975, *Chûbu no Tsubaki*, p.13: Small, medium size, campanulate single, pale pink, streaked and speckled with red. Large central stamens group, anthers bright yellow, filaments creamy. Petals, 5-6, emarginate, somewhat irregular. Leaves shiny, deep green, elliptic, apex long acuminate, margins serrate. Originated by Hoshino, Yutarô, in the Chûbu district, Japan. A seedling of **Tarô'an.** *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.350, p.144; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.91, 228. Note: Formerly this was called 'Tarô'an-nishiki' but now changed to avoid confusion with another cultivar of the same name.

Taro-Kandjia. Williams & Thompson, 1950, *American Camellia Yearbook*, Corruption of the Japanese name **Tarôkaja.**

Tarôkanja. Sakata & Co. Nursery Catalogue, 1939. Different reading for **Tarôkaja.**

Tarquiniana. *(C.japonica)* van Houtte Catalogue, 1848:35-45. No description. Originated in Italy. (Believed extinct.)

Taruhime. (Pendant Beauty), *(C.hybrid)*, Hagiya, 1986, *Studies in Interspecific Hybridization of Camellias*, No.2, p.7, colour photo, 12, p.6: A seedling of **Elegant Beauty** x **Tiny Princess** that first flowered 1982. Originated by Dr Kaoru Hagiya, Niigata University, Japan. Flowers peach pink, 15 petals, overlapping semi-double, about 6 cm across. Petals rounded ovate. A small number of scattered stamens with reddish filaments. Blooms early and abundantly. Leaves silver-green, small, long, oval, curved, venation and serration obscure. Plant habit bushy and spreading with slender branches.

Taruma. (Founder of Zen Buddhism), Mizuno, 1681, *Kadan Kômoku*. **Daruma** is the valid reading for this cultivar. 'Taruma' is the ancient writing which often omitted the two dots 'dakuten' besides the first character.

Taryjophilon. *(C.japonica)* Peer, 1956, *American Camellia Yearbook*, p.57. No description. (Believed extinct.)

Tasasago. SCCS., 1984, *Camellia Nomenclature*, p.101. Corruption of the Japanese **Takasago**, the old name for Formosa.

Tashira. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.223. Corruption of the Japanese name **Tashiro.**

Tashiro. (Place Name), *(C.rusticana)*, Hagiya & Ishizawa, Mar.25th., 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.9, p.6 (J) black & white pl. & p.60: Medium size, 8-9 cm across, very pale pinkish white, semi-double to rose form double with petals in 4-5 rows, outer long-oval, slightly notched, inner pointed, channelled, all somewhat keeled with rows apart, centre a few, short abortive stamens, filaments almost white. Leaves elliptic to long-oval, 8-9 cm long,

mid-green, apex acute, margins serrulate. Late blooming. Collected in Higashi Kubiki-gun, Niigata Prefecture in 1958. Named and released by Kaoru Hagiya. See colour pls: Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.187, p.61. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.88, 227. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.297.

Tatehongô (Place Name), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.232, p.117, description, p.160: Leaves ovate-elliptic, apex suddenly cuspidate, olive green, impressed venation, margins strongly serrate towards the apex, 6.2-7 cm long x 3.7-3.9 cm wide; petiole 3-5 mm long, very hairy. Flowers formal double, dark rose (Claret rose 021/1), petals concave on inner side, recurved at apex, emarginate, 24-52, diminishing in size to the centre. Stamens very few, mostly changed to small petaloids. Blooms mid-season to late. Originated by Mr Yoshihiko Sakurai, Tatehongô, Yatsuo-machi, Toyama Prefecture, Japan.

Tate's China. *Gardeners' Chronicle,* 1841. Synonym for **Brooksiana.**

Tate's Big Red. Gerbing, 1958, Azalea Garden Catalogue. Orthographic error for **Tait's Big Red.**

Tateyama-nishiki. (Mount Tate Variegated), *(C.japonica)* ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.23. No description. Originated in Toyama Prefecture, Japan.

Tatsuko-hime. (Princess Tatsuko), *(C.hybrid)*, ICS., Apr.1990. *Japanese Camellia Cultivar List*, p.31: Very small size, crimson, lotus form double. Blooms late season. Originated in Niigata Prefecture, Japan. A seedling of *C.saluenensis x C.hybrid* **Baby Bear.**

Tatsunami. (Standing Waves), *(C.japonica)* Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pale pink, double with 3-4 rows of petals with red spots. Bamboo whisk-like stamen cluster. Originated in Japan. (Believed extinct).

Tatsunami. (Standing Waves), *(C.japonica)* Tuyama, 1968, *Camellias of Japan*, pl.24, p.12, description, p.92: Leaves rather large, broadly elliptic, a little wavy, deep green, venation somewhat impressed. Large, white, single; petals 7-9, large, overlapping, margins crinkled and irregular; stamen cluster, broad and spreading, anthers brownish-yellow, filamernts creamy. Originated in Momoyama, Kyôto City, Japan.

Ta-tsu-p'ao. Watanabe & Andoh, 1981, *Tsubaki*, p.158. Different reading for 'Dazibao', synonym for **Zhusha Zipao.**

Tatsuta. (Name of a River), (Higo), Uekiya, Bunsuke, 1830, *Uekiya Bunsuke Hikki:* Single, striped. Tateyama Nursery Catalogue, 1957: Medium size, single, white with red stripes. Originated in Kumamoto Prefecture, Japan. See: Hiratsuka, 1964, *Higo Camellia*, p.124.

Tatsuta. (Place Name), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.227: Self red, Medium size, single. Early blooming. A sport of **Tatsuta-nishiki.** Originated in the Chûbu area, Japan.

Tatsutagawa. (Tatsuta River), *(C.japonica)* Itô, Ihei, 1695, *Kadan Chikinshô.* Large flat, semi-double flower with red variegation on a pale pink background. Originated in Japan. (Believed extinct.)

Tatsutagawa. (Tatsuta River), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pis. 408 & 530; Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Yashiro, 1841, *Kokon Yôrankô*, vol.310. Large size, semi-double white with red stripes. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, pp. 151, 139; ibid, 1964, No.5, p.79. Originated in Japan. (Believed extinct.)

Tatsutagawa. (Tatsuta River), *(C.sasanqua)*, Askizawa, Yagorô, 1898, *Chabaika Taishû;* Wada, 1941, *Japanese Garden Treasures*, p.32 as 'Tattagawa': Peach pink, medium. Yashiroda, 1950, *American Camellia Yearbook*, p.15: Short, broad petals of peach pink colour. Habit upright, bushy, vigorous, early flowering, single. Leaves long-elliptic. Originated in Japan. Different reading: 'Tattagawa'. See: *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.384. Note: This is the name of a river famous for the autumn foliage on its banks, and the name in classical literature refers to the autumn. Therefore camellias bearing the name "Tatsuta" are generally autumn flowering.

Tatsutagawa. (Tatsuta River), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanyose Irotsuki:* Pale red with red stripes and white edges, semi-double, bamboo whisk-like stamens. Thought to be the same as **Tatsugawa** in *Kadan Chikinshô*, 1695. See: JCS., 1969, *Tsubaki*, No.7, p.26; ibid, 1982, No.21, p.103. Originated in Japan. (Believed extinct),

Tatsutahime. (Princess Tatsuta), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Yashiroda, 1950, *American Camellia Yearbook*, pp.22, 23 as 'Tatsuta-hime': White shaded pink inside and pink outside, medium size, semi-double, 8-9 cm across, petals broad. An upright grower that blooms early to mid-season. Originated in Japan. Different reading 'Tattahime'.

Tatsuta-nishiki. (Tatsuta Brocade), *(C.japonica)* Satomi, 1956, *Camellia Varieties of Japan*, p.13: Pink striped deeper pink and edged white, medium, single. Vigorous, compact growth. Tuyama, 1968, *Camellias of Japan*, pl.321, p.162, description, p.186: Leaves narrowly elliptic to elliptic, base cuneate, apex gradually acuminate, strongly wavy, margins minutely depressed-serrulate; venation prominent; petioles more or less hairy. Flowers single, palest pink, splashed and striped deeper pink in various shades and an obscure white margin. Blooms early to late. Originated in Ôsaka Prefecture, Japan. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.151 & p.313; Satô, 1975, *Chûbu no Tsubaki*, p.5 as 'Tatsutanishiki'; Seibundô Shinkôsha, 1979, *Senchinshû*, p.88. Tatsuta is a village in the Aichi Prefecture. There is an ancient tree of this cultivar in 'Tatsuta-mura'. Sports: **Miyuki-nishiki** (white sport), **Tatsuta** (red sport). Synonyms: 'Tatsuta-shibori', 'Miyuki-nishiki-Kansi'. Different reading: 'Tatta-nishiki'.

Taylor Maid. *(C.x williamsii)*, Camellia Haven Catalogue, 1981; *New Zealand Camellia Bulletin*, 1984, vol.XIII, No.8, p.12, Reg. No.219: A chance seedling, originated by J. Taylor, Taranaki, New Zealand that first flowered about 1975. It has bright cyclamen pink (RHS.Red Purple Group, 57D), anemone form flowers about 11 cm across x 5 cm deep with about 32 petals and 62 petaloids, with yellow anthers and cream to pink filaments. Three rows of guard petals around an anemone centre. Blooms mid-season. Plant has a dense, compact, upright habit, medium growth rate, dark green leaves, 10 cm long x 5 cm wide. For colour photo see front cover, *New Zealand Camellia Bulletin*, 1986, vol.XIV, No.7.

Taylor Variegated. *(C.japonica)* Gill, 1950, *Society of Florists and Nurserymen*, Dec.13th. Synonym: 'Three-in-one'. Orthographic variant: 'Taylor's Variegated'. Originated in USA.

Taylori. *(C.japonica)* L.L. Liebig, 1839, *Verzeichnis von Warmen und Kalten Hauspflanzen...*, p.11.No description. Originated in Italy. (Believed extinct.)

Taylor's Perfection. *(C.x williamsii), New Zealand Camellia Bulletin*, 1975, vol.IX, No.1, p.30, Reg. No.109: A putative hybrid of unknown parentage that first bloomed 1968. Growth habit is open and upright with light green leaves, 8.5 cm x 2.5 cm. Flower semi-double with 15 petals and an occasional petaloid, yellow anthers, cream filaments, colour light pink, size up to 14 cm x 7 cm. Flowers mid-season to late. Chinese synonym 'Shiquan Dataile'.

Taylor's Supreme. *(C.x williamsii), New Zealand Camellia Bulletin*, 1975, vol.IX, No.1, p.30, Reg. No.108: A putative hybrid of unknown parentage that first bloomed 1968. Growth habit is upright and of medium density, with light green leaves, 9 cm x 4 cm. The flower is semi-double with up to 20 petals and some petaloids. The colour is rose-pink with yellow anthers and cream filaments, 11.5 cm across x 5 cm deep. Mid-season to late blooming.

Tedd Gilley. *(C.japonica)* SCCS., 1976, *Camellia Nomenclature*, p.148: Dark red. Large, loose, peony form. Medium, spreading, upright growth. Blooms mid-season. Originated in USA by Paul Gilley, Grand Ridge, Florida.

Teddie Ulmer. *(C.japonica) American Camellia Yearbook,* 1973, p.195, Reg. No.1236: A 10 year old chance japonica seedling that first bloomed 1965. Originated by Dr & Mrs H.G. Mealing, North Augusta, South Carolina. Plant growth upright and medium with medium to deep green leaves, 9.5 cm long x 7 cm wide. The semi-double, 'Donckelaeri' (**Masayoshi**) type, blooms are red with yellow anthers; size 10.5 cm across. Blooms mid-season.

Teddy Jr. *(C.japonica)* SCCS., 1964, *Camellia Nomenclature,* p.119: Fuchsia pink. Small, semi-double to rose form double with small, upright petaloids, with lily shaped flags. Originated in USA by Frank Griffin Snr., Columbia, South Carolina.

Tedesco. *(C.japonica)* Gentry, 1979, ACS., *The Camellia Journal,* vol.34, No.4. No description. Originated in USA. No valid listing located.

Tedinia. *(C.japonica), Jardim Portuense,* 1844, April, No.7, p.103; Scarlet, striped white at the centre of each petal, very regular and beautiful flower. Commonly known as 'Estrelinha do Tedhim'. Probably obtained by Mr. J.J. de Sequeira Tedim. *Jornal da Sociedade Agricola do Porto,* 2nd series 1857, August, No.8; Agricultural Exhibition; Camellia 'Estrelinha'. Originated in Porto, Portugal.

Tedori. (Place Name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.174 with colour photo; English translation p.120. Pale pink bordered white, sake cup-shaped single, cylindrical stamen column. Flowers mid-season to late. Leaves ovate, small, flat. Spreading growth. A natural seedling of unknown parentage. Named and released by Tadao Yamaguchi in 1985. From Ishikawa Prefecture.

Teelin's White Strand. *(C.japonica)* Dodd, 1968, *Adventure in Camellia Seedlings,* p.3, colour photo: Large, white, open peony form seedling of **Dear Jenny.** Originated by Richard Dodd, Marshallville, Georgia, USA.

Teen Age Queen. *(C.japonica)* SCCS., 1972, *Camellia Nomenclature,* p.141: Blush pink, usually with one small pink stripe. Large, thick semi-double. Compact, upright growth. Blooms mid-season. Originated in USA by Hugh Shackelford, Albany, Georgia.

Teenager. *(C.sasanqua),* ACRS., 1968, *Camellia News,* No.32, p.17, Reg. No.89: Originated by G.W. Hooper, Bexley North, N.S.W., Australia. seedling of **Fukuzutsumi** that first flowered 1964. Growth habit is upright, compact and vigorous. Mid-season to late bloming. Flowers are single, rose-madder, HCC.CC.23/2, 5.5 cm across, Leaves dark green, 9 cm long with blunt apex.

Tekla. Tammia Nursery Catalogue, 1958. Orthographic error for **Teckla.**

Tekla Variegated. Mark S. Cannon Scion Catalogue, 1962, p.10 as Tekla Var'. Orthographic error for **Teckla Variegated.**

Teleier Zhiniang. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the USA *C.reticulata* **Terrell Weaver.**

Telstar. *(C.sasanqua),* ACRS., 1980. *Camellia News,* No.74, p.24, Reg. No.233: Originated by Alice Spragg, Sutherland, N.S.W., Australia A seedling of **Narumigata** that first flowered 1972. A tall, upright, dense plant with deep green, 4 cm x 1.8 cm leaves. The semi-double flowers have white, crinkled petals, inside light to dark pink with a border of rose at the apex. Blooms early to mid-season.

Temari-tsubaki. *Encyclopedia of Camellias in Colour,* vol.I, 1972, p.376. Synonym for *C.maliflora* Lindley. Imported to Japan in 1963 and renamed 'Temari-tsubaki' by Tuyama.

Temmoku. *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.24; Deep red with white marking. Medium size single. A 100 year old tree in Ohashi-machi.

Tempest. *(C.japonica)* Berlèse, 1840, *Monographie*, ed.2, pp.149, 230: Originated by Harrison, England. Flower large, over 13.5 cm across, simple single, cherry-red, with numerous stamens, spread with regularity and diverting from the centre in concentric rings.

Temple Bowen. (*C.reticulata* x C.x *williamsii*), *American Camellia Yearbook*, 1982, p.179, Reg. No.1792: A very large, deep red, semi-double, *C.reticulata* hybrid (*C.reticulata* 'Crimson Robe' (**Dataohong**) x [*C.hybrid* **Brigadoon** x *C.reticulata* 'Cornelian'(**Damanao**)]). Blooms mid-season to late. Originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first bloomed 1978; flower size 16 cm across x 7.5 cm deep. Plant growth is upright, average and rapid in rate with dark green leaves, heavily serrated, 11.5 cm long x 6 cm wide.

Temple de Venus. *(C.japonica)* Verschaffelt, 1853, *Nouvelle Iconographie*, Book VI, pl.II: Peony formed arrangement of numerous central petals, surrounded by a denticulated margin; the exterior petals are ample and their white colour contrasts with the crimson pink of the background. Originated in Italy. Orthographic variant: 'Temple of Venus'.

Temple Festival. (*C.reticulata*), *New Zealand Camellia Bulletin*, 1972, vol.VII, No.6, p.33, Reg. No.66: A seedling from *C.reticulata* **Buddha** x 'Crimson Robe' (**Dataohong**), originated by D.G. O'Toole, Ohope, New Zealand that first bloomed 1969. The plant has an open, spreading habit, with light green leaves, 12 cm x 5 cm. The flower is semi-double with 19 petals, the centre ones being upright and folded, size is 16 cm across x 10 cm deep; colour RHS.CC., Red Purple Group 58B with darker veining. Mid-season blooming.

Temple Garden. (*C.reticulata* hybrid), ACRS., N.S.W. Foundation Branch, 1984, *Newsletter*, issue No.7, August, incorrectly as 'Garden Temple'. *Camellia News*, No.99, 1986, p.22, Reg. No.341: Originated by Bill Hooper, Camellia Vale Nursery, Bexley North, N.S.W., Australia from a chance seedling of **Lila Naff.** First flowered 1980. The large, 16.5 cm across x 4.2 cm deep, deep pink (RHS.CC.57B), peony to informal double flowers have fluted and waved petals. Mid-season blooming.

Temple Incense. *(C.japonica)* Levi, 1967, *American Camellia Yearbook*, p.55: Large, semi-double pink with a silvery sheen, petals folded and twisted with some fimbriation and a large, spreading stamen cluster with golden anthers and white filaments. Leaves elliptic, apex acute, margins serrulate. An open pollinated seedling of **Arabella,** fragrant. Originated by David Feathers, Lafayette, California. For colour photo see p.190, Macoboy, 1981, *The Colour Dictionary of Camellias* and the back cover ACRS., 1981, *Camellia News*, No.79.

Temple Mist. *(C.reticulata x C.japonica)*, SCCS., 1970, *Camellia Nomenclature*, p.164: Rose-red with iridescent petals. Large to very large semi-double with irregular petals. Medium, upright growth. Blooms mid-season. Originated in USA by Frank Maitland, California. Sport: **Temple Mist Variegated.**

Temple Mist Variegated. *(C.reticulata x C.japonica)*, Gentry, 1969, ACS., *The Camellia Journal*, vol.24, No.4 as 'Temple Mist V.': A virus variegated form of Temple Mist - Rose-red blotched with white. Originated in USA. Chinese synonym 'Hua Miaowu'.

Temple of Venus. Ambroise Verschaffelt, 1851-1852, Catalogue Général, p.18. Real Campanhia Horticolo-Agricola Portuense Catalogue, 1895-1896, p.55. Orthographic variant for **Temple de Venus.**

Tempo. *(C.japonica)* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.223: Soft pink, blotched with white. Originated in USA.

Temptation. *(C.japonica)* Waterhouse, 1951, *American Camellia Yearbook*, p.89: Caledonia Nursery Ledger entry dated 1899. Rose-red single, like the common *C.japonica.* Originally named 'Seduction' and renamed **Temptation.** A Japanese variety imported by Waller. (Believed extinct.)

Temptation. *(C.hiemalis),* James Rare Plant Nursery Catalogue,1954-1955, p.12: Our seedling. One of the largest flowers we have in this group; white single with a touch of blush on the edges. Flower stays on the bush for 5-7 days. Strong, bushy growth habit with foliage like its parent **Shôwa-no-sakae.** SCCS., 1956. *The Camellia. Its Culture and Nomenclature:* White blushed pink on petals edge. Large single. Originated in USA.

Ten Below. *(C.japonica)* SCCS., 1962, *Camellia Nomenclature,* p.101: Bright red. Large, semi-double. Cold hardy. Mid-season flowering. Originated in the USA by Ashby.

Ten Thousand Flowers Camellia. Feng et al., 1981, *Yunnan Shanchahua.* Synonym for **Wanduocha.**

Tendaiji. JCS., 1969, *Tsubaki,* No.7, p.34. Orthographic error for **Tenkôji** in *Tsubaki Irohanayose Irotsuki*, 1859.

Ten Plus. *(C.reticulata x C.japonica), American Camellia Yearbook*, 1980, p.174, Reg. No.1667: A very large pink with mottled, whitish pink centre petals, semi-double *C.reticulata* hybrid, ('Crimson Robe' (**Dataohong**) x ['Cornelian' (**Damanao**) x **Mrs D.W. Davis**]), blooms mid-season to late. Originated in USA by Frank Pursel, Oakland, California. The 6 year old seedling first flowered 1979, average flower size, 15.5 cm across x 6 cm deep. Good texture with some veining. Plant growth is upright and medium with dark green leaves, 11 cm long x 8 cm wide.

Tendresse. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.19; Single, pink.

Tenero. *(C.japonica)* Vogel, Hellmut, 1982, *Azaleen, Eriken, Kamelien,* 2nd ed., p.202: Frost hardy, single flowers, rose coloured. Blooms early. Originated by Hermann Sutter, Germany, 1954.

Teng Shih Shan Ch'a. Old Chinese name for *C.tenii.* Different reading: 'Denshi Shancha'.

Tengjiao. *(C.reticulata) Chinese Camellia Culture,* 2003, p.246 with colour photo; Pink flower, diameter 10-12 cm, from Tengchong County, China. Flowers mid-season to late.

Tengniang. Gao, Jiyin, 2008, *The Identification....Outstanding Camellias,* p.118 with colour photo; Synonym for the Japan *C.japonica* **Fujimusume.**

Tengyun. (Flying Rhythm), *(C.reticulata),* China Regn No.35. *China Flowers & Horticulture*, July 2008, No.14, p.43, with colour photo; Taken from a wild population in Tenchong County by Zhang Weichuan, Tengyue Town, Yunnan, China. Flowers peony form, peach red, 10-14 cm diameter. 36-41 petals in 6-8 whorls, the outer two twisted, the inner petals folded, forming a spherical corolla. Numerous stamens distributed among the folded petals Pistil undeveloped. Leaves long-elliptic to broad-lanceolate, 6.2-11 cm long x 2.8-5.1 cm wide, apices acuminate, bases cuneate, margins slightly sinuate, inward curved. Flowers midseason.

Tenjin. (Heavenly Gods), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû,* p.233: Purple tinged red. Single, campanulate blooms with central stamen cluster pinched in at the top. Small size, early blooming. Leaves obovate, small, apex acute, slightly keeled at midrib, margins small serrations. Plant habit spreading and vigorous. Originated in Kurume City, Fuku'oka Prefecture, Japan. Tenjin is a synonym for the shrine Temmangû, Dazaifu City.

Tenjin-karako. (Tenjin's Anemone), *(C.japonica)* Tuyama, 1968, *Camellias of Japan*, pl.51, p.26, description, p.100: Leaves ovate or ovate-elliptic, recurved, thick, venation impressed, dark green, 5.8-8 cm long x 3.8-5.1 cm wide. Flower white anemone form, outer row of petals 6-12, inner petals, with a few fan-shaped petaloids form a globular head of 3-3.5 cm diameter, the number of inner petals and petaloids is 45-66. Blooms late. Originated at Ono Chikushi-dô, Dazaifu, Fuku'oka Prefecture, Japan.

Tenjû. (Life Span), (Higo), Craig, 1971, *American Camellia Yearbook*, p.62: A large pink coloured Higo camellia resulting from the cross **Shintsukasa-nishiki** x **Osaraku.** See photo, p.141, Macoboy, 1981, *The Colour Dictionary of Camellias. Nippon Tsubaki - Sasanqua Meikan,*

1998, p.175 with colour photo; English translation p.121. Pink, saucer-shaped single, apricot stamens, filaments white, medium size. Flowers mid-season to late. Leaves elliptic, medium size. Spreading growth.

Tenkô. (Heavenly Fragrance), (Higo), Higo Camellia Society, Apr. 1965, *Higo Tsubaki*, No.1, illustration front cover: Medium size, very soft pink, petals, 6-7, margins crinkled and fluted, stamens spreading, anthers light yellow, filaments whitish-yellow. Slightly fragrant. Flowers mid-season. One of the fragrant Higos like **Akatsuki-no-kaori** of Kumamoto City and **Nioi-fubuki:** Petal ends wavy; stamens more or less 100, light yellow colour. Petals and stamens joined at base. Pistil shorter than stamens, 3-4 fid, vague purplish-red colour. Leaves elliptic to long-elliptic, dark green. A seedling of **Osaraku** originated by Shimodake, Kiichirô, Kumamoto, Japan in 1950. See colour photos: *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.369; ibid, vol.II, 1978, pl.295. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.102, 233. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.116.

Tenkôji. (Temple Name), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Deep red, medium size, double with 3-4 rows of embracing petals, stamens divided. Orthographic error: 'Tendaiji'. See: JCS., 1969, *Tsubaki*, No.7, p.34. (Believed extinct.)

Tenmei. Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.16. Different reading for **Honobono.**

Tenmoku. (Tea Bowl), *(C.japonica)* Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, A-377, p.8: Dark red with white variegations, medium size, campanulate single. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.243, colour photo and description: Medium size, deep red with clear white blotches and moires, wide, campanulate single, with 5 emarginate, wide petals and a central stamen column with pinkish filaments and bright yellow anthers. Late blooming. Leaves dark green, lanceolate, apices tapering acuminate, margins serrate. Originated in Mogi Town, Nagasaki Prefecture, Japan. Discovered and named by Hisato Baba in 1978. Note: One of the famous forms of the classical tea bowl.

Tennin-kwan. Chûgai Nursery Catalogue, 1934-1935. Synonym for **Mikenjaku.**

Tennin-matsushima. (Celestial Maiden from Matsushima), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in the section 'single flowers': White with red stripes, large size. Itô, Ko'emon, 1879, *Chinkashû:* Single, white, streaked with dark pink, large size. Minagawa Nursery List, 1955; Satomi, 1956, *Camellia Varieties of Japan*, p.13 as 'Ten'nin-matsushima': Single white, streaked red. Vigorous, spreading growth. Tuyama, 1968, *Camellias of Japan*, pl.339, p.172, description, p.191: Leaves among the smaller ones, elliptic to oblong, acuate at the apex, minutely serrulate at the margin, petiole glabrous. Flowers single, pale pink (Crimson 21/3), veined deeper pink and striped with rose (Crimson 21/1), petals 6-8, horizontally spreading at the apex. Late flowering. For other colour illustations and descriptions see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pls.127, 128 & p.310. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.179; Satô, 1975, *Chûbu no Tsubaki*, p.94 as 'Tenninmatsushima'. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.102, 233. Yokoyama & Kirino, 1989, *Nihon no Chinka* p.269. These colour plates show that this cultivar can vary from almost white through to pink with an obscure white border. Originated in Kantô area, Japan. Resembles **Aki-no-yama, Washi-no-yama** and **Shiratama-shibori.** See: JCS., 1969, *Tsubaki*, No.7, p.36. Note: "Tennin" is the name of the celestial maiden from Matsushima.

Tennin-no-an. Different reading for **Tennin-no-iori.**

Tennin-no-iori. (Celestial Maiden's Retreat), *(C.japonica)* Chûbu Tsubaki Kyôkai, 1957, *Tsubaki Meikan.* Description not seen. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.134, p.80, description, p.310, 311: Medium small, campanulate single, petals 5-6, rounded overlapping, white ground with a peppering and flecking of deep pink; stamens in a central compact cylinder, anthers yellow, filaments cream. Leaves deep green, flat, elliptic, apex acuminate,

margins finely serrulate, prominent venation. Plant habit wide-spreading. Originated in Chûbu area, Japan. For other colour pls. see: Satô, 1975, *Chûbu no Tsubaki*, p.36 as 'Tenninnoiori. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.102, 233. Resembles **Shibori-hatsu'arashi,** 'Minamino'.

Tennin-no-kaori. (Celestial Maiden's Fragrance), *(C.japonica)* Inazawa Nursery Co. Ltd. Catalogue, 1980-1981, C-43, p.12: Medium size, white single, early blooming. Originated in Aichi Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.175 with colour photo; English translation p.121. Cylindrical stamens. Leaves broadly elliptic, medium size, flat. Upright, vigorous growth. A natural seedling of **Rôgetsu**. Originated and released by Shinichi Asai in 1973.

Tennin-shibori. (Tennin Variegated), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanquas of Japan*, p.16 as 'Ten'nin-shibori': White, splashed pure pink. Large, single with rounded, incurved petals. Originated in Japan.

Tennô-an. (Emperor's Lodge), *(C.japonica)* Inazawa Nursery Co. Ltd. Catalogue, 1955: Light pink. Medium size, single, tubular form. Vigorous, upright growth, Very early. Originated in Japan. Different reading: 'Tennohan'.

Tennohan. Inazawa Nurseries Co. Ltd. Wholesale Price List, 1986-1987. Different reading for **Tennô-an.**

Tennôzan. (Tennô Mountain), *(C.japonica)* Satô, 1975, *Chûbu no Tsubaki*, p.66, colour photo and description: Deep red, single, about 5 cm across, campanulate; petals 5-6, slightly notched, channelled, of somewhat uneven length; stamens in a short, compact central group, anthers yellow, filaments pinkish. Leaves ovate to broad-ovate, glossy dark green, apex short acuminate, venation impressed, margins serrate. Originated in Chûbu area, Japan. Sport of **Benikarako.** See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.102, colour photo, p.233 description.

Tennôzan. (Tennô Mountain). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.176 with colour photo; English translation p.121. Medium size, deep red, standard to campanulate single, thick petals, cylindrical stamen cluster. Flowers mid-season to late. Leaves broadly elliptic, medium size, apex reflexed. Upright, vigorous growth. A chance seedling, parentage unknown, originated and released by Fumio Naitô in 1980.

Tennyo. (Celestial Maiden), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.233: Red flecks on a white ground and small spots. A 5 petalled single of tubular form. Medium to large size. Stamens in compact central cylinder, Blooms early to mid-season. Selected from wild japonicas in Anan City, Tokushima Prefecture. Named and released by Hideyuki Kimoto. Note: "Tennyo" is the name of the heavenly maiden from the legend of "Hagoromo".

Tennyo-no-kaori. (Perfume of Celestial Maiden), *(C.sasanqua)*, Yûsuke, Sakata & Ken'ichi Arisumi, 1983, *International Camellia Journal*, p.22. No description. Originated in Japan.

Tennyo-no-koromo. (Robe of Celestial Maiden), *(C.japonica)* Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.47; Seibundô Shinkôsha, 1979, *Senchinshû*, p.233: Pale pink, single, small to medium, campanulate blossom with central cylindrical stamen cluster, filaments very pale yellow. Mid-season blooming. Leaves mid-green, medium sized, ovate, gently curved. Plant habit erect. Originated in Unoki Town, Ishikawa Prefecture, Japan. Named and released by Ryôji Nakamura in 1965.

Tennyo-no-mai. (Dancing Goddess), *(C.hybrid)*, ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.31: Medium to large size, white, peony form. Early flowering. Originated in Niigata Prefecture, Japan as a seedling of *C.sasanqua* **Hitomaro** x *C.oleifera.*

Tennyo-no-mai. (Dancing Goddess), *(C.sasanqua)*, Hakoda, 1974, *Nôkôdai Nôjôhô*, No.6, p.54; JCS., 1987, *Tsubaki*, No.26, p.47; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.36: Medium size, pink, single flower. Early blooming. Originated in Kumamoto Prefecture, Japan.

Tennyo-no-mai. (Dance of Heavenly Maiden). *(C.japonica)*, Kinji Ohara Tateyama, Chiba, 1993-1994, List of Camellias. A red sport of **Hagoromo.** Synonym for **Magnolia.**

Tenorio. *(C.japonica)* Stefano Pagliai Catalogue, 1867. No description. Originated in Italy. (Believed extinct.)

Tenpyôji. (Tenpyô Temple), *(C.japonica)* Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.47: Pink, single, flat flower, small size, late blooming. Leaves long-elliptic. Originated in Ishikawa Prefecture, Japan.

Tenrinji-gakkô (Moonlight on Tenrin Temple), (Wabisuke), Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.48; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.274, description, p.239: Very small, deep red, single, 3 cm across; petals 5-6, small, rounded, even, opening through tubular to cupshaped, about a small, pinched in cluster of white, sterile stamens. Leaves large, long elliptic, dull dark green, apex tapering acuminate, margins coarsely serrate. Very early flowering. The original tree was located in the precincts of Tenrin Temple, Matsu'e City, Shimane Prefecture, Japan. See colour photo and description, p.55, Katei, Gahô, ed, 1984, *Chabana Koyomi, vol.I, Tsubaki;* Seibundô Shinkôsha 1979, *Senchinshû*, pp.103, 233; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.180. Tenrinjigekkô. Izu-Oshima, 1980, *Hawaii Botanic Gardens List.* Different reading for **Tenrinji-gakkô.**

Tenryô (Imperial Fief), (Higo), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.288, colour photo and description: Large size, white with bright red patches, streaks and peppering, single, with 6 broad, rounded, overlapping petals, opening saucer-shaped, with a large, central, spreading burst of numerous, yellow stamens with white filaments. Blooms mid-season to late. Leaves deep green, elliptic, apices blunt acute, margins serrate, recurved. Originated in Kumamoto Prefecture, Japan by Tsugio Ôta in 1980s.

Tenryû. (Heavenly Dragon), *(C.japonica)* Mainichi Shinbun, 1971, *Tsubaki:* Medium size, rose coloured, single, petals 5 large. lacinated margins, crinkled, surrounding a central stamen column, anthers light yellow, filaments whitish. Leaves lanceolate to obovate, bright green, apex blunt acute, margins serrulate. Originated in Kansai area, Japan. See colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, p.102. Named after the Tenryûji Buddhist Temple, Kyôto, Japan.

Tenryûkô. Different reading for **Tenryû-kurenai.**

Tenryû-kurenai. (Tenryû Red), *(C.x vernalis)*, Tanaka et al., 1986, *Journal of Japanese Society of Horticultural Science*, 55(2):208. A triploid cultivar of *C.x vernalis* discovered by Katsuhiro Maeda in Toyota Town, Shizu'oka Prefecture, Japan. Named and released by Takashi Tsuyama and Fusako Yamazaki. JCS., 1987, *Tsubaki*, No.26, p.51: Flower, single, red, medium size. Different reading: 'Tenryû-kô'.

Tenryû-no-mai. (Dance of Heavenly Dragon), *(C.sasanqua)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.47; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.36: Medium size, deep pink, semi-double camellia. Blooms early. Originated in the Shizu'oka. Prefecture, Japan.

Tensha'en-no-tsubaki. (Tensha Garden Camellia), *(C.japonica)* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.210: Rouge coloured, fading to centre, double, small sized. Originated in Japan.

Tenshi. (Heavenly Boon), *(C.japonica)* Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.36; Shufu-no-Tomo-Sha, 1976, *Tsubaki to Sazanka*, colour photo inside cover: Medium sized, light pink, single; petals 5-6, colour fading to centre, length irregular, waved or fluted; stamens in a flared, central group, anthers golden, filaments creamy. Leaves medium to light green, lanceolate, apex tapering acuminate, margins twisted and serrated. Raised by a private family in Kawasaki City, collected, named and released by Eiichi Kaneko of Tokorazawa City around 1960. See colour pl.292, p.126, *Encyclopedia of Camellias in Colour*, vol.II, 1978 and p.128, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Resembles **Asomusume.**

Tenshin. Different reading for **Tenjin.**

Tenshi-no-mai. (Dancing Angel) (*C.japonica*) from Chiba Pref. *Japan Camellia* No.77, May 2005: A natural seedling of **Tulip Time**. Pink shading lighter towards centre, outer petals purplish pink, open peony to a double layer of petals, medium to large, blooming mid to late season. Leaves elliptic, medium. Tree upright growth. Bloomed first in 1995, released in 2005. Originated by Atsushi Itoh.

Tenshôji-miyakodori. ('Miyakodori' from the Tenshô Temple), *(C.japonica)* Seibundô Shinkôsha, 1979 *Senchinshû*, p.102, colour photo, p.233, as 'Tensyôji-miyakodori': Medium size, white, semi-double to open peony form with 3-4 rows of outer, channelled petals and a centre of a few abortive stamens and small, erect petals. Leaves olive green, lanceolate, apex tapering acuminate, margins twisted, shallowly serrate. Originated in Chûbu area, Japan. Resembles: **Daijôkan.**

Bray, Pensacola, Florida, USA. Plant growth is upright and rapid with dark green leaves, 10 cm long x 4.5 cm wide. The semi-double flower is 13 cm across x 5 cm deep with 31 petals. Colour light rose-pink with golden anthers and white filaments. Blooms early to mid-season.

Terry Gilley. *(C.japonica) American Camellia Yearbook*, 1974, vol.II, p.239-240, Reg. No.1323: A 4 year old *C.japonica* seedling that first bloomed 1972, (**Dr.W.G. Lee** x **Tomorrow's Dawn**). Originated by Paul Gilley, Grand Ridge, Florida, USA. The plant growth is upright and average with dark green leaves measuring 11 cm x 6 cm. The semi-double, **Frizzle White** type, flower is brilliant red with 14-18 petals and 3-4 petaloids, cream filaments and yellow anthers. Average size is 13 cm across x 6 cm deep. Blooms early to mid-season. Sport: **Terry Gilley Variegated**.

Terry Gilley Variegated. *(C.japonica)* Gentry, 1977, ACS., *The Camellia Journal*, vol.32, No.4. A virus variegated form of **Terry Gilley** - Brilliant red blotched white. Originated in USA.

Terrye Eller. *(C.japonica) American Camellia Yearbook*, 1960, p.207, Reg. No.476: A 9 year old chance seedling that first bloomed 1954; originated by Joseph E. Miller, New Orleans, Louisiana, USA. Plant growth is average with dark green leaves with heavy to light serrations, 8 cm long x 6 cm wide. The light, blush pink, rose form double flowers have darker pink markings, suffused darker pink, 6-7.5 cm across x 2.5 cm deep with 55-60 petals and very small, yellow stamens. Blooms early to mid-season.

Tersiana. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete, p.*15, Synonym for **Terziana.**

Tersiana Nuova. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.15. Orthographic variant for **Terziana Nuova.**

Tersicora. Verschaffelt Catalogue, 1844-1845, p.30. Charles van Geert, 1846, Catalogue Général, p.76. Orthographic error for **Terzicora.**

Tersii. *Catalogue des Plantes la Société d'Horticulture de Belgique,* 1842, p.23. Orthographic variant for **Terzi.**

Tertiana. Berlèse, 1840, *Monographie*, ed.2, p.234. Synonym for **Terziana.**

Tertii. Berlèse, 1840, *Monographie,* ed.2, p.234. Orthographic error for **Terzi.**

Teruhi. NCCS., 1948, *Bulletin*, vol. 12, p.9. Synonym for **Daikagura.**

Teruhi-benifukizume. (Teruhi's Red Anemone), *(C.japonica)* Izu-Ôshima, 1980. *Hawaii Botanic Gardens List*, p.13. No description. Originated in Kansai area, Japan.

Teruhi-tsubaki. Yôshun-en Nursery Catalogue No.586, Feb.1954. Synomyrn for **Shôhitairin.**

Teruko. (*C.reticulata* hybrid). ACRS, *Camellia News*, 1994, No.131, p.8. Dr. R. Withers: "A Mother Superior": A seedling of *C.reticulata* hybrids **Suzanne Withers** x **Jean Pursel,** originated by John Hunt, South Croydon, Victoria, Australia. A large flower with high rabbit ears; white in the centre deepening to pink at petal margins. Bright yellow to orange pollen.

Terukuni-no-haru. (Radiant Country in Spring), (*C.japonica*), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.143, colour photo and description: Medium size, red with a fine venation of deeper colour, single with 5 irregular petals set apart, large, somewhat crinkled at the margins, with a central stamen cylinder with long pistil and white filaments, joined for the lower third and light yellow anthers. Blooms early to mid-season. Leaves glossy mid-green, flat, elliptic to broad-elliptic, apices acute, margins sharply serrate. Selected from wild japonicas in Kurume City, Fuku'oka Prefecture, Japan. Collected and released by Haruitsu Hirano in 1987.

Teruna. (Name refers to fraterna), *(C.fraterna x C.japonica*), JCS., 1987, *Japan Camellia*, No.25, p.10, No.4: Small, pale peach pink, cylindrical to campanulate single. Blooms mid-season. It is a cross between *C.fraterna x C.japonica* 'Sasameyuki'. Usually in such cases the *C.fraterna* is dominant, however in this case the *C.japonica is* dominant. Originated by Sasai, Okayama Prefecture, Japan.

Terutehime. (Princess Terute). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.174 with colour photo; English translation p.120. Miniature, pink shading to pale pink, bowl-shaped single held on flower stalk, scattered stamens, profuse. Flowers early to late. Leaves elliptic, medium size. Spreading growth, dense branches. A cross between *C.japonica* 'Ôtajiro' and *C.sinensis* 'Sayama-kaori'. Named and released by Kaoru Hagiya. From Niigata Prefecture.

Terwilliger. The Pacific Camellia Society, 1946, *Camellia Nomenlature*, p.24. Synonym for **Margherita Coleoni Variegated.**

Terzi. Cachet Catalogue, 1840-1841, p.3. No description. Berlèse, 1840, *Monographie*, ed.2, p.176, as 'Terzii': Leaves lanceolate, apex recurved, dark green with spots of yellowish green; buds obtuse, large, flattened, scales blackish at base to whitish at apex; flower about 9 cm across, vivid carmine, full, petals rounded, notched, large, numerous, imbricated regularly from circumference to centre where a small, crinkled centre group is marked with white. Obtained from seed by Mariani, Milan, Italy and dedicated to Madame le Marquise Terzi. Orthographic errors: 'Tertii', 'Tersi', 'Terzii'. Synonym for **Terziana.**

Terziana. (*C.japonica*), Jacob Makoy Catalogue, 1839, p.18. No description. Berlèse, 1840, *Monographie*, ed.2, p.176. Imbricated, deep orange red with sparse longitudinal lines, whitish. Jacob Makoy Catalogue, 1841, p.11: Irregular to regular double, beautiful ruby red, central white stripes. Orthographic errors: 'Tertiana', 'Tersiana'. Synonym : 'Terzi'. Originated in Italy by Mariani. Chinese synonym 'Tezina'.

Terziana Nuova. *(C.japonica)* Medici Spada, *1857*, *Catalogo nel Giardino a Villa Quiete* p.15 as 'Tersiana Nuova'. No description. Originated in Italy. (Believed extinct.)

Terzicora. *(C.japonica)* Jacob Makoy Catalogue, 1839, p.18. No description. Van Houtte Catalogue, 1841, 7:20. No description. Originated in Italy. (Believed extinct.) Orthographic errors: 'Tersicore', 'Therpsicore', 'Tersicora', Terpsicora', 'Terpschora'.

Tetonia. Verschaffelt, 1844, Catalogue, No.50, p.23. Orthographic error for **Teutonia.**

Tetori. (obscure), *(C.japonica)* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.23. No description. Originated in Ishikawa Prefecture, Japan.

Tetsuguruma. (Iron Carriage), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.101, colour photo, p.233: Small size, apricot pink, campanulate single with 4-5 large, notched, overlapping petals, outcurved at the apex. Stamens short with large yellow anthers. Blooms early in autumn. Leaves elliptic, dark green, apex acuminate, margins finely, obscurely serrulate. Originated in Tsurugi Town, Ishikawa Prefecture, Japan. Named and released by Seizô Matsui.

Teuro-no-kegoromo. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Tsuru-no-kegoromo.**

Teutonia. *(C.japonica)* Berlèse, 1843, *Iconographie* vol.2, pl.186 as 'Teutonia' (Grüneberg): Flowers 10-11 cm across, formal double with red and pale rose rays on white with a flesh tint. The petals are in 7-8 rows, numerous, large, rounded, close-set, imbricated with extreme regularity from the circumference to the centre. Originated by Mr Grüneberg, Francfort-sur-le-Main, Germany, from seed imported from England. It first bloomed in 1837. Van Houtte Catalogue, 1843-1844, 12:eee, as 'Teutonia' synonym 'Victoria and Albert': Superb camellia with the ability to bear flowers of both solid red and solid white and of a very beautiful shape. See also pl.III, Book IX, Verschaffelt, 1850, *Nouvelle Iconographie.* Sports: **Teutonia Alba, Teutonia Pink, Teutonia Amabilis, Teutonia Rosea, Teutonia Alba Rosea Cincta, Teutonia Negri.** Synonyms: 'Victoria and Albert', 'Teutonia Tricolor', 'Kennedy Variegated', 'Imbricata Plena', 'Giardino Schmitz'. Orthographic errors: 'Teutoniana, 'Tutonia', 'Tetonia', 'Teutonica'. It has been confused with the cultivars **Montironi** and **Elisabeth** in USA., but, while very similar, the three are separate and distinct varieties.

Teutonia Alba. *(C.japonica)* Berlèse, 1845, *Monographie*, ed.3, p.117: The solid white form of **Teutonia,** fixed by grafting. Originated in Belgium. Synonyms: 'Teutonia White'.

Teutonia Alba Rosea Cincta. *(C.japonica)* van Houtte Catalogue, 1851, 44:16. Variety fixed by grafting, [from **Teutonia**]. There is no description, but, from the name, would appear to be white with pink outer borders. Orthographic variant: 'Teutonia Albo Roseo Cincta'.

Teutonia Albo Roseo Cincta. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.15. Orthographic variant for **Teutonia Alba Rosea Cincta.**

Teutonia Amabilis. *(C.japonica)* Verschaffelt, 1855, *Nouvelle Iconographie*, Book III, pl.III as 'Teutonia var. Amabilis': A sport of **Teutonia** fixed by Van Geersdale by grafting in Belgium. A rosy coloured formal double with a white border to the petals. Orthographic variants: 'Teutonia Var. Amabilis', 'Teutonia Variegated Amabilis'. Synonym: 'Teutonia Amabilis Versicolor'.

Teutonia Amabilis Versicolor. Koch, 1862, *Belgique Horticole*, pp. 119-120. Synonym for **Teutonia Amabilis.**

Teutonia Deep Pink. Overlook Nursery Catalogue, 1948-1949. Synonym for **Teutonia Rosea.**

Teutonia Elizabeth Pink. Vanderbilt, 1940, *Camellia Research*, p.7. Synonym for **Teutonia Rosea.**

Teutonia Elizabeth Shell Pink. Vanderbilt, 1940, *Camellia Research*, p.7. Synonym for **Teutonia Pink.**

Teutonia (Gruneberg). Fendig, 1953, *American Camellia Yearbook.* Synonym for **Teutonia.**

Teutonia Light Pink. Overlook Nursery Catalogue, 1948. Synonym for **Teutonia Pink.**

Teutonia Negri. *(C.japonica)* Graulhie, Jun. 1844, *Revue Horticole*, p.67. A deep red sport of **Teutonia;** originated in Belgium.

Teutonia Pink. *(C.japonica)* Backhouse Nursery Catalogue, 1873: Shell pink, medium size, formal double. Sport of **Teutonia.** Synonyms: 'Pink Teutonia', 'Teutonia Light Pink', 'Pinkie', 'Lady Webb', 'Teutonia Elizabeth Shell Pink'. Originated in England.

Teutonia Red. McIlhenny Catalogue, 1942. Synonym for **Teutonia Rosea.**

Teutonia Rosea. *(C.japonica)* Jose Maria Serra Establecimiento de Horticultura 1855, Catalogue, p.9. Koch, 1862, *Belgique Horticole*, pp.119-120. A rose-red sport of (**Teutonia**), fixed by grafting. Originated in Belgium. Synonyms: 'Teutonia Red', 'Teutonia Deep Pink', 'Teutonia Elizabeth Pink'.

Teutonia Tricolor Imbricator Plena. Schneider, Sept.1894, *Revue Horticole*, p.432. Synonym for **Teutonia.**

Teutonia var. Amabilis. Verschaffelt, 1855, *Nouvelle Iconographie*, Book III, pl.III. Orthographic variant for **Teutonia Amabilis.**

Teutonia Variegated Amabilis. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Teutonia Amabilis.**

Teutonia Versicolor. van Houtte Catalogue, 1862-1863, 93:72. Synonym for **Teutonia Alba Rosea Cincta.**

Teutonia White. McIlhenny Catalogue, 1942 for the white form of 'Teutonia' for which the valid name is **Teutonia Alba.** However 'Teutonia White' has also been erroneously applied to sports of **Montironi** and **Elizabeth** in the USA.

Teutoniana. Anonymous, 1859, 'Garden Memoranda', *The Gardeners' Chronicle and Agricultural Gazette*, Mar.26, p.267. Orthographic error for **Teutonia.**

Teutonica. Padova, 1855, *Catalogi Plantarum Caesarei Regii Horti.* Orthographic error for **Teutonia.**

Teutori. *(C.japonica)* Cachet Nursery Catalogue, 1845-1846, p.7. No description. (Believed extinct.)

Tewediana. Fratelli Rovelli Catalogue, 1852, p.27. Orthographic error for 'Tweediana', synonym for **Juliana.**

Texas Star. *(C.sasanqua)*, Blackwell Nursery Catalogue, 1950-1951, p.13 and in the 1953-1954 Catalogue with illustration on p.17: Light pink, medium size, single. Originated in USA by Price Magee from seed imported from Japan. Fendig, 1951, *American Camellia Catalogue:* Small, clear pink becoming light pink towards the centre, single, 5.8-7.8 cm across. Petals rectangular, about 3.2cm long. Texture crêped, tips notched, bases tapered. Central, lemon yellow stamens. Leaves, glossy deep green, elliptic, 3.8 cm long x 1.5 cm wide. Habit upright with a compact pyramidal shape.

Texing Laqieer. Shao, Taichong, 1992, *The Observations from the Camellia World*, No.363, p.78. Chinese synonym for the USA *C.japonica* **Rachel Tarpy Variegated.**

Tezina. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.423; Chinese synonym for the Italy *C.japonica* **Terziana.**

Thai Silk. (*C.reticulata* hybrid). ACRS, *Camellia News*, 1992, No.123, p.5, Reg. No.413: Named by Dr. R. Withers, Donvale, Victoria, Australia. Originated by Nuccio's Nurseries, Altadena, California, USA. A chance seedling that first flowered in 1983. The salmon pink (RHS.CC.55B), medium sized, single flower of 8 petals, 9 cm across x 3 cm deep, is free flowering, early to mid-season on a very slow growing, dwarf, bushy plant. Leaves glossy green, ovate, crinkled and with a serrate margin and acute apex, 6 cm long x 3 cm wide. Has *C.japonica* type leaves. Petals are creped and crinkled. Stem growth is contorted. An ideal plant for Bonsai culture.

Thais. *(C.japonica)*, Dodd, 1968, *Adventure with Camellia Seedlings*, p.4, colour photo: A medium size, deep pink, irregular informal double with a crown of upright, folded petals, surrounding a cushion of lighter pink petaloids and small petals. Originated in USA by Richard Dodd, Marshallville, Georgia from a chance seedling of 'Donckelaeri' (**Masayoshi**).

Thalia. *(C.sasanqua).* ACS, *The Camellia Journal*, Sept 2005, p.28 with colour photo p.29, Reg. No. 2650. A chance seedling that first flowered in 1997. Originated by Robert Green, Fairhope, Ala., USA, and propagated by Green Nurseries. The 5 cm diameter, white flower with outer half suffused with pink, loose peony to rose form flower has a special fluorescence. Dense, semi-dwarf growth habit. Flowers profusely early to midseason. *American Camellia Yearbook*, 2005, p.47 with colour photo p.c8. Dark green leaves are 5 cm x 1.8 cm.

Thamasini. Ysabau ed., 1848-1849, *Journal d'Horticulture Pratique de la Belgique*, p.302. Orthographic error for **Thomasini.**

Thanksgiving. *(C.japonica) American Camellia Yearbook*, 1959, p.282, Reg. No.421: A 7 year old chance seedling, originated by Harold Larson, Orange, California, USA that first bloomed 1955. The light green leaves are 12.5 cm long x 6 cm wide. Plant growth is open, spreading and rapid. The semi-double flowers, resembling **Adolphe Audusson** in form, are turkey red with 16-18 petals and yellow stamens, 10 cm across x 3.8 cm deep, Blooms early to mid-season.

Thanksgiving Queen. *(C.reticulata)*, Ben Rayner, 1973, ACRS., *Camellia News*, No.50, p.2. No description. Originated in USA by John R. Sobeck. California. No valid listing located.

The Barnville Ring. *(C.japonica)* Cannon, 1971, ACS., *The Camellia Journal*, vol.26, No.4. No descripton. Originated in USA. No valid listing located.

The Belle. *(C.japonica)* Azalea Glen Nursery Price List, 1945-1946. No description. Originated in USA. (Believed extinct.)

The Bougere. *(C.japonica)* Laurason, 1952, *American Camellia Yearbook*, p.240: A large, light red of unknown origin.

The Bride. *(C.japonica)*, Henderson, E.R., Nursery Catalogue, 1867, p.34: Beautiful pure white. Originated in England. (Believed extinct.)

The Bride. *(C.japonica)* Pyron J., 1958, *American Camellia Yearbook*, p.91. A blush pink, formal double, larger than **Alba Plena.** A vigorous grower. Originated in USA by Hugh Shackelford, Albany, Georgia, USA.

The Choice. *(C.japonica)* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.224. Light red. Originated in USA.

The Cow. Wilmot, 1945, *Camellia Variety Classification Report*, p.4. Synonym for **Latifolia.**

The Czar. *(C.japonica)* Hodgins Nursery Catalogue, 1913, p.44. A large, semi-double, crimson (RHS.CC.,Crimson 22/1) with 3-4 rows of thick, orbicular, densely veined petals which reflex and give display to the vertical cylinder of stamens 5 cm and upwards long. Flowers are 12-14 cm across. Plant habit is erect, compact and stocky with dark green leaves. Originated by Neil Breslin, East Camberwell, Victoria, Australia. The original plant was removed to the Royal Botanic Gardens, Melbourne. This cultivar is a triploid and has proved largely infertile. See pl.VII, Waterhouse, 1952, *Camellia Trail.* Sports: **Hugh Kennedy, The Czar Variegated.**

The Czar Variegata. Camellia Lodge Nursery Catalogue, 1959, p.11. Names given after 1958 are illegal if a part latin name, under the rules of the Horticultural Code. See: **The Czar Variegated.**

The Czar Variegated. *(C.japonica)* Camellia Lodge Nursery Catalogue, 1959, p.11 as 'The Czar Variegata': A virus variegated form of **The Czar** - Crimson blotched with white. Originated in Australia.

The Daffodil. *(C.japonica)* Fruitland Nursery Catalogue, 1948 as 'The Daffodil' FN. Deep Rose. Medium semi-double, resembling a deep cup daffodil with the base of the petals flat and a complete ring of stamens surrounding the petaloids in the centre. Originated at Fruitlands Nursery, Augusta Georgia.

The Daimio. *(C.japonica)* Nicholson's *Dictionary of Gardening Supplement*, 1900, p.188: Single crimson with large yellow anthers. Imported from Japan by Waller.

The Dove. *(C.japonica)* Lindo Nursery Price List, 1940-1941: White, small, loose, semi-double, showing stamens. Originated in USA by Orton.

The Drunken Lady Yang. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.144. Synonym for **Zuiyangfei.**

The Duchess. *(C.japonica) The Garden*, 1891. RHS Award of Merit. Exhibited by Paul. Rich pink. Originated in England.

The Duchess of Cornwall. *(C.x williamsii)*, Tregrehan Camellia Nurseries Catalogue, 1980, ACS, Reg. No.1801, 1982: A medium to large, silvery blush pink double *C.hybrid (C.saluenensis x C.japonica* **Adolphe Audusson**). Blooms mid-season. Originated by Gillian Carlyon, Par, Cornwall, England. The 21 year old seedling first flowered 1967, average size is 10 cm across. Plant growth is spreading and rapid with dark green leaves. Received the RHS Award of Merit, 1984.

The Duke. Lindo Nursery Camellia List, 1944-1945. Synonym for **Meridith Lake.**

The Dwarf. Peer, 1949, SCCS., *The Camellia Bulletin*, vol.11, No.2, p.11. Synonym for **Hentiangao**.

The Elf. *(C.japonica)* ACS., 1985, *The Camellia Journal*, vol.40, No.2, p.31, Reg. No.1971: A medium to large, light pink, semi-double *C.japonica* chance seedling that blooms mid-season; originated by Ted Alfter, Bakersfield, California, USA. The 11 year old seedling first flowered 1977. Average flower size, 10 cm across x 4.5 cm deep with 15-17 petals. Plant growth is spreading, dense and slow with dark green leaves, 6 cm long x 3.8 cm wide. See p.185, *American Camellia Yearbook*, 1985. Chinese synonym: 'Zhuru'.

The Emperor. de Jonghe, 1851, *Traité de la Culture du Camellia*, p.123. Synonym for **Emperor.**

The Emperor. Portland Camellia Nursery Camellia Catalogue, 1946-1947, p.9 as synonym for **Gigantea** as 'Emperor Wilhelm'.

The Emperor of Japan. SCCS, 1954, *The Camellia, Its Culture and Nomenclature*, p.84. Synonym for **The Mikado.**

The Flirt. *(C.japonica)*, SCCS, 1962, *Camellia Nomenclature*, p.101: Blush pink. Large semi-double, with undulating, notched petals and 2-3 large petaloids interspersed with white stamens. Medium upright growth. Blooms mid-season. Originated by Reg Ragland, California USA.

The Hobbit. *(C.sasanqua). New Zealand Camellia Bulletin*, July 2006, No.154, p.14. Reg. No. 472. A chance seedling that first flowered 1999, of typical *C.sasanqua* flower and leaf form. Plant gowth is medium rate and dense. Flowers early. Leaves are 7 cm x 2.5 cm, dark green. Flower is 9 cm across by 3.5 cm deep, with 8-9 petals, single in form, occasionally semi-double.Main colour is creamy white (RHS.CC. 155D) with the margins greyish pink (RHS.CC. 186C). The petals are waved, the lightly crumpled effect giving complexity to the flower. Stamens yellow, filaments cream, well separated and giving the centre a starburst effect. Lightly

scented and the compact growth is a feature. Registered by N. Haydon, Takanini, New Zealand.

The Japan Rose. Curtis, 1819, *Monography* ... Synonym for **Alba Simplex.**

The King. Marnoch, 1839, *Floral Magazine*, 3(32):257. Synonym for **Kingii** as 'Clusiana'.

The Lil Red Devil. *(C.japonica)* Fruitland Nursery Catalogue, 1948: Small, red, single, originated at Fruitland Nursery, Augusta, Georgia, USA. Abbreviation: 'Lil Red Devil'.

The Lily. Clibrans Altingham Nursery Catalogue, 1954-1955. Orthographic variant for **Le Lys.**

The Lucky Seven. Yang, 1965, *A Study of the Camellia Varieties of Taiwan*, p.4, Synonym for **Qiqiao.**

The Lunar World. *Camellias*, Y.C. Shen, 2009, p.60 with colour photo; Synonym for **Gessekai.**

The McCulloch. *(C.japonica),* C. Aust, *Camellia News*, No.182, Autumn 2010, p.8 with colour photo; Regn No.609; A chance seedling of **Pukekura**. Medium size, formal double, white, flat and fully imbricated. Narrow, open, upright plant. Sun hardy. Flowers early to mid-season. Originated by Terence E. Pierson, Jasper's Brush, NSW, Australia.

The Mikado. *(C.japonica)* Nicholson, 1900, *The Supplement to the Dictionary of Gardening;* G., W.H. Garden Flora, 1889, *The Garden*, 36(930):247: A mutation of the variable camellia cultivar **Hikarugenji** from which it differs only by the regular white border to the petals, which is not crossed by any rose coloured streaks as in **Hikarugenji**. It was introduced from Japan by Mr Gerald Waller. Note the camellia known as **Mikado** is a different cultivar, being a Magnolia Gardens, South Carolina, introduction. Synonyms: 'Herme Sport Number 4', 'The Emperor of Japan'.

The Misses Dent. *(C.japonica)* Fendig, 1956, *American Camellia Yearbook,* p.33: Originated by the Misses Miriam and Ophelia Dent, Brunswick, Georgia, USA from seed of the single red. It first flowered 1953. The small, incomplete double, white flower is 5.5 cm across. Two tiers of outer petals are wedge shaped and cupped in the centre. The inner petals are semi-erect and deeply notched. Blooms early to mid-season.

The Monarch. *(C.japonica),* Anonymous, May,1842, *The Florist's Journal***,** 3:97-103, colour pl.28: Deep pink, sometimes spotted white. Large, full peony form. Medium, compact growth. Blooms mid-season. Originated by J. Halley, England. Verschaffelt, 11852, Nouvelle Iconographie, Book III, pl.III. A seedling of **Variegata.** Abbreviation: 'Monarch'. Synonyms: 'Monarch'(Halley); 'Halley's Monarch', 'Grand Monarch', 'Red Ball', 'Pauline Lapeau', 'Monarch Variegated'. American pseudonyms: 'Honneur d'Amerique', 'Grunnellii', 'Venus', 'Enrico Bettoni'(US). Orthographic error: 'Monarck', 'Monnarch'.

The Old Huntsman. *(C.japonica)* Dodd, 1968, *Adventure in Camellia Seedlings***,** p.8, colour photo: Medium size, red, semi-double with 2-3 rows of large, round-ovate petals and a short, slightly irregular column of central stamens. A seedling of **Letitia Schrader;** originated by Richard Dodd, Marshallville, Georgia, USA.

The Peony Flowered. *Camellia Digest*, 1(3),1943. Synonym for **Paeoniiflora.**

The Pilgrim. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature***,** p.89: Cream white. Large, peony form. Medium, upright growth. Mid-season flowering. Originated in USA by Harvey Short, Ramona, California, USA.

The Queen. Fendig, 1951, *American Camellia Catalogue.* Orthographic variant for **La Reine.**

The Real McCoy. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.107: White. Large, semi-double with irregular petals. Vigorous, upright growth. Mid-season blooming. Originated by F. McCoy, Fairhope, Alabama, USA.

The Red Baron. *(C.x williamsii), American Camellia Yearbook,* 1975, p.241, Reg. No.1376: An 8 year old seedling of **J.C. Williams,** originated by Charles R. Phillips, Frederick, Maryland, USA. Plant growth is dense, upright and rapid with dark green leaves, 10.5 cm long x 5 cm wide. The rose form double bloom is deep red, 15 petals and rarely shows any anthers. Average size, 8 cm across x 5.5 cm deep. Early blooms.

The Revolutionary Banner. *(C.hybrid),* Huang, 1979, *American Camellia Yearbook,* p.120: Apparently a hybrid between *C.reticulata* and *C.japonica* which was first named 'Turtle's Armour'. A large, red peony form. Originated in China.

The Sam Stallings. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.101: Cream White. Large, semidouble with stamens interspersed in the petals. Originated in USA by S.H. Stallings, Smithfield, North Carolina.

The Shelander. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Selma Shelander.**

The Stage of Spring. *Camellias,* Y.C. Shen, 2009, p.126 with colour photo; Synonym for **Haru-no-utena**.

The Star of Queen. *Calendar,* 2014. Chin Shiang Josme Camellia Nursery, Taichung City, Taiwan. Photo of genetically variegated leaves. No other information.

The Sun. *Camellias,* Y.C. Shen, 2009, p.60 with colour photo; Synonym for **Taiyô.**

The Swan. Vanderbilt, 1940, *Camellia Research,* p.7. Erroneous synonym for **Yobukodori.**

The Swan. Coutts J., 1923, *Gardeners' Chronicle,* ser.3, 73:93. Synonym for **Devonia.**

The Swan. SCCS, 1942, *Classification of Camellias,* p.4. Synonym for **Il Cigno.**

The Tall Men. *(C.japonica)* Dodd, 1968, *Adventure in Camellia Seedlings,* p.7, colour photo: Medium size, irregular complete double, full peony form; centre a mass of small, semi-erect, folded and twisted petals and petaloids; deep crimson. Originated as a seedling of Iwane-shibori by Richard Dodd, Marshallville, Georgia, USA.

The White Waratah. *Camellia Digest,* 1(3),1943. Synonym for **Anemoniflora Alba.**

The Wilderness Stone. *(C.japonica)* Dodd, 1968, *Adventure in Camellia Seedlings,* p.13, colour photo: Medium size, pink, rose form double with large, rounded petals. A seedling of **Pink Star,** originated by Richard Dodd, Marshallville, Georgia, USA.

Thea Bohea. Tagliabue, 1840, *Nomenclatore Camelliae.* Synonym for *C.sinensis* var. *sinensis.*

Thea Chinesis. Hilsman, 1966, *American Camellia Yearbook,* p.121: Appears to be a genetically variegated, deformed leaf *C.japonica,* but blooms suggest possible hybridity. Imported from Japan by Mr Ned Metcalf, California as a distinct camellia species.

Thea Chinensis. Chandler & Booth, 1831, *Illustrations and Descriptions of the Genus Camellia.* Synonym for the 'Single Red', 'Rubra Simplex' (**Rubra**).

Thea sinensis var. rosea. Makino, 1905, *Botanical Magazine,* Tokyo, IX:135: Synonym for *Camellia sinensis* var. *sinensis* f. *rosea.*

Thea viridis. Tagliabue, 1840, *Nomenclatore Camelliae.* Synonym for the species *Camellia sinensis* var. *sinensis.*

Thea viridis nova. Tagliabue, 1840, *Nomenclatore Camelliae.* Synonym for *C.sinensis* var. *sinensis* f. *macraphylla.*

Thecla Feretti. *(C.japonica)* Mariotti Catalogue, 1924: Large, beautiful pink. Free flowering. Originated in Italy.

Thedim. *(C.japonica)* Loureiro, Catalogue, No.9, 1872-1873: Medium size, formal double of vivid cherry, with stripes and splashes of white, imbricated in a tiered form. Originated in Portugal.

Thelma Dale. *(C.japonica)* Magnolia Gardens and Nursery Catalogue, 1948-1949, p.7; Fruitland Nursery Catalogue, 1948-1949, p.28; Anonymous, 1948, *American Camellia Yearbook*, p.175: A sport appeared on **Mrs Baldwin Wood** in 1944 and was named **Thelma Dale.** It is self silver pink, otherwise identical to the above. ACS, Reg. No.74, *American Camellia Yearbook*, 1954. See illustr. pp.186-187, *American Camellia Yearbook*, 1952 and Fendig, 1951, *American Camellia Catalogue.* Sports: **Thelma Dale Blush, Charlotte Bradford.** Synonym: 'Mrs Baldwin Wood Pink'.

Thelma Dale Blush. *(C.japonica)* Cannon, 1962, ACS., *The Camellia Journal*, vol. 17, No. 1, inside cover; *American Camellia Yearbook*, 1965, p.248, Reg. No.753: A sport of **Thelma Dale** first observed 1957 by Ewell F. Wilkersen, Biloxi, Mississippi, USA. Plant growth is the same as the parent. The semi-double flower, 9-11 cm across, is very pale pink.

Thelma Sanford. SCCS, 1951, *The Camellia. Its Culture and Nomenclature.* Synonym for **Ruth Royer.**

Thelma Shelander. SCCS., 1954, *The Camellia. Its Culture and Nomenclature*, p.84. Orthographic error for **Selma Shelander.**

Theme Song. *(C.japonica)* SCCS., 1976, *Camellia Nomenclature*, p.149: Red. Medium to large semi-double with stamen cluster. Slow, compact, upright growth. Mid-season blooming. Originated in the USA by Harry Novick, Woodland Hills, California, USA.

Theo de Tullio. *(C.japonica). American Camellia Yearbook*, 1966, p.101, Reg. No.830: A 9 year old chance *C.japonica* seedling that first bloomed 1958. Originated by Julington Nurseries, Jacksonville, Florida, USA. The leaves are dark green, 7.5 cm long x 5 cm wide. Plant growth is upright, open and medium in rate. The light blush pink bloom, with light yellow anthers and white filaments, is 12.5 cm across x 7.5 cm deep with 28-30 petals. Flower form is semi-double to loose peony form with wavy petals. It has 3 alternate rows of petals, curved to stand apart with centre petals of crêpe texture. Fragrant. Blooms mid-season.

Theodolini. *(C.japonica)* Verschaffelt, 1857, *Nouvelle Iconographie*, Book VII, pl.I: Mr Van Geersdaele of Ghent, received this variety from Italy ... The extreme regularity of the imbrication of its numerous, rounded petals class it with the perfections, amongst which its ruddy and beautiful pink colouring makes it conspicuous.

Theodora Lechi. *(C.japonica)* van Houtte Catalogue, 1860-1861, No.53. [from] Ch. Luzzatti. No description. Originated in Italy. (Believed extinct.)

Theodoria. *(C.japonica), Jardim Portuense*, 1844, April, No.7, p.105; Medium size flower, vivid pink with a small cluster formed by petals and stamens, and sometimes some white radial markings. Originated in Porto, Portugal.

Theola Clark. *(C.japonica) American Camellia Yearbook*, 1962-1963, p.225, Reg. No.632: A 10 year old chance seedling that first bloomed 1957; originated by Dr Parker, Lucedale, Mississippi, USA. Plant growth is dense and rapid with light green leaves, averaging 9.5 cm long and 7.5 cm wide. The peony form flowers, 11-12.5 cm across x 6 cm deep, are rose-red with white stamens, 25 petals and 6-8 petaloids. Blooms mid-season to late.

Theophila. Cachet Catalogue, 1845-1846, p.7. Orthographic error for **Theophylla.**

Theophila Striata. Charles van Geert Nursery Catalogue, 1845. Synonym for **Palmer's Perfection.**

Theophile. Cachet Catalogue, 1840-1841, p.2. Orthographic error for **Theophylla.**

Theophile Guillon. *(C.japonica)* de Jonghe, 1851, *Traité de la Culture du Camellia*, p.123. No description. Originated in France. (Believed extinct.)

Theophiliana Striatiflora. van Houtte Catalogue, 1846-1847, 27:32. Synonym for **Palmer's Perfection.**

Theophilla. Del Lungo e Girardi, 1928, *Le Camelie*, p.135. Orthographic variant for **Theophylla.**

Theophylla. *(C.japonica)* Rousseau, Angers Catalogue, 1842-1843, p.4 as 'Theophilla': 'Imbricated, pink blotched white.' Berlèse, 1845, *Monographie*, ed.3, p.236, 237: The leaves are round-ovate, almost cordiform, venation prominent, embossed, apex acuminate, margins serrate, deep green. Buds large, obtuse, solid, scales whitish green. The flower, 10 cm across, full, formal double, cherry-red, bright, vivid with touches of rose; the petals are in 8-9 rows of average size, rounded, thin, transparent, a little emarginate, numerous, close~set and imbricated from the circumference to the centre with good regularity. Originated in Belgium. Orthographic errors: 'Theophila', 'Theophile', 'Theophilla', 'Theopylla'.

Theophylla Stricta. Jacob Makoy Catalogue, 1842, p.10. Synonym for **Palmer's Perfection.**

Theophylla Striatiflora. van Houtte Catalogue, 1843-1844, 12:eee. Synonym for **Palmer's Perfection**.

Theo's Mini. *(C.japonica) American Camellia Yearbook*, 1981, p.106, Reg. No.1726: A miniature, rose-pink, amenone form *C.japonica* mutant of **Elegans,** mid-season flowering. Originated by Mrs Henry S. Stone, Baton Rouge. Louisiana, USA. Average flower size is 4 cm across x 3.2 cm, deep with 18 petals and 80 petaloids. Plant growth is average and medium with dark green leaves, 7.5 cm x 3.2 cm.

Therchia Franchini. Pacific Nursery Catalogue, 1895-1896. Orthographic error for **Teresa Franchini.**

Theresa. *(C.japonica)* William Bull Catalogue, 1873, p.154. No description. Originated in France. (Believed extinct.)

Theresa Bragadino. Jean Verchaffelt Catalogue, 1867-1868, No.11, p.47. Orthographic variant for **Teresa Bragadino.**

Theresa Burnham. *(C.japonica)* ACS, *The Camellia Journal*, June 2013, p.25 with colour photo; Regn No.2849; ACS, *Yearbook,* 2013, p.141 with colour photo; Originated, registered and propagated by Walter Creighton, Semmes, Ala., USA. A 6 year old seedling of **Marc Eleven**, first flowered 2008. Medium size, 10cm x 5cm, flower is described as semidouble to formal double with 50 petals. Photo shows a typical bud-centred formal double. Flowers fall whole. Plant is upright and dense, with average growth rate. Dark green leaves average 9.5cm x 3.8cm. Flowers early to midseason.

Theresa Gambini. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* p.225. Synonym for **Virginia Marini.**

Thunbergiana. Baumann, Mulhouse Catalogue, 1841, p.14; Van Houtte Catalogue, 1844-1845, 18:7. Orthographic variant for 'Thunbergia', synonym for **Althaeiflora.**

Thunbergiana Nova. Verschaffelt Catalogue, 1847-1848, p.63. Synonym for **Althaeiflora.**

Thunbergii. Seidel, 1846, Pflanzen Catalog, p.11. Orthographic error for 'Thunbergia', synonym for **Althaeiflora.**

Thunderbolt. SCCS, 1962., *Camellia Nomenclature*, p.101. Synonym for 'Glen 40 Variegated' (**Coquettina**).

Thunderhead. SCCS., 1947, *The Camellia. Its Culture and Nomenclature*. Synonym for **Mrs Baldwin Wood.**

Thwediana Suberba. Berlèse, 1845, *Monographie*, ed.3, index. Orthographic error for 'Tweediana Superba', synonym for **Juliana.**

Ti Kuan Yin. (Iron Goddess of Mercy) *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias*, 2005, p.147 with colour photo; Medium size formal double, pink (RHS.CC.63A and 63B) with white streaks. A seedling of 'Rosa Simplex' **(Aitonia)** x **Moshio,** first flowered in 1997. Originated by Dott. Guido Cattolica, Livorno, Italy.

Tian Kaite. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the Australian *C.lutchuensis* hybrid **Sweet Emily Kate.**

Tian Pingguo. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the USA *C.japonica* **Candy Apple.**

Tianehu. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the USA *C.japonica* **Swan Lake (Monrovia).**

Tianfu Mudan. (Sechuan Peony), *(C.japonica) G*ao & Zhuang, 1989, *The Camellia in China,* p.35, No. 160: Medium to large size, 9-10 cm across, red, with 9-10 large petals and 100 small petals. Blooms mid-season. Originated in China. Synonym: 'Gemingqi'.

Tianjiao. (Prideful Sky). *(C.japonica),* Gao, Jiyin, Ltr, 22nd August 1994. Chinese name given Nuccio's #9310. Gao, Jiyin, 2008, *The Identification....Outstanding Camellias*, p.169 with colour photo; Flowers orange red to red, tight peony, large, more than 60 petals, edges wavy. Leaves pale green, obovate-elliptic, deep and sharp serrations of edges, veins distinct. Compact plant, average growth. Flowers early to late.

Tianlongwu. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.159. Chinese synonym for **Tenryû-no-mai.**

Tianmeng. Chinese synonym for the NZ *C.hybrid* **Sugar Dream.** Later changed to 'Tangmeng'.

Tianmeng. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.87. Chinese synonym for **Sweet Dreams.**

Tianniu. Chinese synonym for USA *C.japonica* **Sugar Babe.**

Tiannüwu. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.169. Chinese synonym for **Tennyo-no-mai.**

Tianshanfen. *(C.rosthorniana) Proceedings of the ICS Congress*, Chuxiong 2012, p.189, also as 'Tianshan fen'. Colour photos pp.189-190. A superior form of the species selected by Xu Lin et al, Wuhan City, China. Miniature pale pink single.

Tianshi. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.567, p.70. Chinese synonym for the Australian *C.japonica* **Luana's Angel.**

Tianxiangshui. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the NZ. *C.hybrid* **Scentuous.**

Tianxiashao. *(C.japonica), Chinese Camellia Culture*, 2003, p.258 with colour photo; Genetically variegated leaves with irregular golden margins. Small pink, peony form flower, diameter 7-8 cm. Some white markings at the petal edges. Flowers mid-season. Discovered by Mr Tang Chenghe, Jinhua, China.

Tianzhenni. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.426; Chinese synonym for the Australia *C.hybrid* **Sweet Jane.**

Tianzhufan. *(C.japonica)* Gao & Zhuang, 1989, *The Camellia in China.* p.55, No.361, colour photo, No.219: Large size, semi-double, 9-11 cm across, white with red streaks, 3 rows of outer petals and a central stamen column. Similar to **Ezo-nishiki.**

Tiaopigui. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the Australian *C.pitardii* hybrid **Sprite.**

Tiaoqing. Gao, Jiyin, 1993, *The Observations from the Camellia World,* No.546, p.68. Chinese synonym for the New Zealand *C.sasanqua* **Gay Sue.**

Tiara. *(C.japonica)* Magnolia Gardens & Nursery Catalogue, 1942-1943: Orange red. Medium size, semi-double to formal double. Vigorous, compact, upright growth. Blooms mid-season. Originated at Magnolia Gardens, John's Island, South Carolina, USA. Sport: **Tiara Variegated.**

Tiara Variegated. *(C.japonica)* Fruitland Nursery Catalogue, 1947-1948, p.30 as 'Tiara Var'. A virus variegated form of **Tiara** - Orange red blotched with white. Originated at Magnolia Gardens, John's Island, South Carolina, USA. Synonym: 'Tara Variegated Special',

Tiara Variegated Special. Abbots Knoll Nursery Catalogue, 1961. An unstable form; so reduced to a synonym for **Tiara Variegated.**

Tic Tock. Loder, 1970, RHS., *Rhododendron and Camellia Yearbook.* Orthographic error for **Tick Tock.**

Tick Tock. *(C.japonica) American Camellia Yearbook,* 1955, p.341, Reg. No.232: A 12 year old chance seedling, originated by the Tick Tock Nursery, Thomasville, Georgia, USA that first flowered 1949. Plant growth is upright and rapid. The flowers, 10.5-13 cm. across, are incomplete double with mixed petaloids, similar to **Nobilissima,** with 12 large petals and a number of petaloids. The colour is white, striped and flecked with cherry-red. Early flowering. Sports: **Tick Tock Blush, Tick Tock Red, Tick Tock Red Variegated, Tick Tock Speckled.** Orthographic error: 'Tic Tock'. See *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.143.

Tick Tock Blush. *(C.japonica)* Tammia Nursery Catalogue, 1962: A blush pink sport of **Tick Tock**, originated at Tammia Nursery, Slidell, Louisiana, USA.

Tick Tock Red. *(C.japonica)* Cannon, 1959, *Camellian*, vol.IX, No.4, p.31: A red sport of **Tick Tock.** Originated by Mark Cannon, Dothian, Alabama. All other characteristics are the same as the parent.

Tick Tock Red Variegated. *(C.japonica)* Mark S. Cannon Scion Catalogue, 1962, p.10; Laurel Lakes Nursery Catalogue, 1964 as 'Tick Tock Red Var.': A virus variegated form of **Tick Tock Red** -Red blotched with white. Originated in USA.

Tick Tock Speckled. *(C.japonica)* Tick Tock Nursery Catalogue, 1965: A sport of **Tick Tock.** White speckled and marked with cherry-red. Originated in USA at the Tick Tock Nursery, Thomasville, Georgia.

Tick Tock Truly. *(C.japonica),* ACRS, 1997, *Camellia News*, No.140, p.19, colour plate: Sport of **Tick Tock,** pink with white picotee margins. Peony to anemone form. Otherwise the same as parent. Originated by Clem Truran, NSW, Australia.

Tickled Pink. *(C.japonica)* Griffin F, ed., 1958, *Camellian*, vol.IX, No.4, p.13; *American Camellia Yearbook*, 1959, p.282, Reg. No.380, with colour pl. facing p.18: A 7 year old seedling of the cross **White Empress** x **Ville de Nantes.** Originated by Ferol Zerkowsky, Slidell, Louisiana, USA and first flowered 1954. Plant growth is rapid with glossy, dark green leaves, 12.5 cm x 5cm. The peony form, pink flowers with white stamens, average 12 cm, with 5 very large petals. Flowers early to mid-season. Sport: **Tickled Pink Variegated.**

Tickled Pink Variegated. *(C.japonica)* SCCS., 1966, *Camellia Nomenclature*, p.129 as 'Tickled Pink Var.': a virus variegated form of **Tickled Pink** - Pink and white. Originated in USA.

Tid Bit. Gentry, 1986, ACS., *The Camellia Journal*, vol.41, No.1, p.23. Orthographic variant for **Tidbit.**

Tidbit. *(C.hybrid)*, Kramers Bros. Nursery Catalogue, 1983: Blush pink with dark pink markings. Miniature semi-double of pine cone form. Originated at Kramer Bros. Nursery, Upland, California, USA. Orthographic variant: 'Tid Bit'.

Tiddlywinks. *(C.japonica) American Camellia Yearbook*, 1982, p.179, Reg. No.1789: A miniature, light pink with dark stripes, formal double *C.japonica* chance seedling that is late blooming. Originated by James Lynch, Franklinten, Louisiana, USA. The 10 year old seedling first bloomed 1976. Average flower size, 5 cm across x 3.6 cm deep. Plant growth is upright and medium with dark green leaves, 8 cm x 3.8 cm.

Tide of Flowers. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.106. Synonym for **Moshio.**

Tiffany. *(C.japonica)* Womak, 1962-1963, *American Camellia Yearbook*, p.1: 'The beautiful Urabec seedling **Tiffany**, which can be best described as very large, loose peony form, the colour closely resembling **Debutante.**' Dekker, 1964, *American Camellia Yearbook*, p.64, colour pl. facing p.212: (Plant Patent No,2159) Grown from Japanese camellia seed provided by Ralph Peer, by Dr John H. Urabec, La Canada, California. Select Camellia Inc. Catalogue, 1963: A large size 6" informal double flower of a warm pink with stamens intermixed with petaloids, a very large rose form to loose irregular, semi-double. Blooms mid-season to late on a vigorous, upright shrub with large, mid-green leaves. First flowered 1956. Reg. No.707, *American Camellia Yearbook*, 1965. This cultivar has received the following awards: Margarete Hertrich Award, 1964; John Illges Award, 1966; William. E Woodroof, Camellia Hall of Fame Award, 1978; National Camellia Hall of Fame award, 1978. See colour photos: p.120, Macoboy, 1981, *The Colour Dictionary of Camellias* and front cover, SCCS., 1964, *The Camellia Review*, vol.26, No.1. Sport: **Tiffany Variegated.** Chinese synonym: 'Sishaluo'.

Tiffany Variegated. *(C.japonica)* Gentry, 1968, ACS., *The Camellia Journal*, vol.23, No.1, p.26 as 'Tiffany Var,': A virus variegated form of **Tiffany** - Pink and white; originated in USA. Chinese synonym 'Fuse Sishaluo'.

Tiffany's Dawn. *(C.japonica),* ACRS, *Camellia News,* Autumn 2002, No.158, p.8, colour photo front cover, Reg. No.538. Originated by Jim Scott, Howrah, Tas., Australia. A chance seedling of *C.japonica* **Tiffany,** pollen parent unknown. First flowered 1990. The pale pink, semi-double to anemone form flower has 10-12 petals and a variable number of petaloids, 50 or more, and is 10 cm across by 4 cm deep. Stamens are in a cup-shped column. Flowers mid-season to late on an upright, slow growing, medium bush. Leaves dark green , glossy, broadly elliptic, 11 cm long x 7 cm wide.

Tiffy J. *(C.japonica), American Camellia Yearbook,* p.80, Reg. No.2215, colour photo between pp.80-81: Very large, blush pink, rose form double to peony form chance seedling of *C.japonica* **Dazzle.** Blooms mid-season. Originated by O.L. Jacobson, Jacksonville Beach, Florida, USA. The 9 year old seedling first flowered 1986. Average flower size is 13 cm across x 9.5 cm deep. Plant growth is upright, spreading and medium in rate with dark green leaves 12.5 cm long x 6 cm wide.

Tiger Claw White. Synonym for **Huzhaobai.**

Tigernach. *(C.japonica)* Guilfoyle Nursery Catalogue, 1866, p.19. No description. Originated in Australia. (Believed extinct.)

Tiki. *(C.japonica)* McCaskill Gardens Catalogue, 1962; *American Camellia Yearbook*, 1965, p.248, Reg. No.737: Originated by the McCaskill Gardens, Pasadena, California, USA. (SCCS.,No.62-26), A chance seedling that first bloomed 1957. An anemone form flower, 5-6 cm across. Colour is rosy salmon with petaloids that are white, streaked and edged rosy salmon. Plant is upright and compact.

Til Andia. *(C.japonica)* Domoto Nursery Catalogue, 1955: Large semi-double white. Originated in USA by T. Domoto, California.

Tilcove Imbricata. *(C.japonica),* Peer, 1956, *American Camellia Yearbook*, p.57. No description.

Tillie Rice. Hillcrest Nursery Catalogue, 1958. Synonym for **Claudia Phelps.**

Tillie Wirth. *(C.japonica) American Camellia Yearbook*, 1954, p.334, Reg. No.179: A variegated sport of **Big Beauty**, first observed by Homer G. Fritchie, Slidell, Louisiana, USA, grafted and first bloomed 1950. Plant growth is upright and compact with large, yellowish, dark green leaves, broadly ovate, short, blunt serrations, 10 cm long x 8 cm wide. Colour pink and white, an incomplete double with 31 petals and small petaloids, size 10-12 cm across. Orthographic error: 'Tillie Worth'.

Tillie Worth. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Tillie Wirth.**

Tillmani. Wilmot, 1943, *Camellia Variety Classification Report*, p.14. Orthographic error for **Tillmannii.**

Tillmannii. *(C.japonica)* Glen St Mary Nursery Co. Catalogue, 1937, p.2 as 'Tillmanni'. No description. Originated in USA. (Believed extinct.) Orthographic error: 'Tillmani'.

Tilong. (Carrying Lantern), *(C.japonica)* Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.77: Small tree, spreading with young twigs purplish red. Leaves yellowish green, glossy, midribs prominent, lateral veins obscure. Flowers abundant, dark scarlet or purplish scarlet, 10-11 cm across; petals 11-12 in 2-3 rows, loosely studded with large petaloids, pink lineate, basally connate. Among the petaloids are 5-6 large ones, irregularly shaped. Pistil degenerate. Buds heart shaped, pale greyish or brownish green with purple tint. Originated in Wenzhou, China. See colour photo No.121, Gao & Zhuang, 1989, *The Camellia in China*, p.42, No.224. **Tim Crocker's Pink.** *(C.japonica),* ACS, *The Camellia Journal*, Nov.2001, p.21, colour photo p.20, Reg. No.2560. A formal double chance seedling, with star form blooms of medium pink. Originated by Eileen C. Hart, Odessa, Fla., USA. *American Camellia Yearbook*, 2001, p.97, colour photo p.c15. The 11 year old seedling first flowered in 1990. Flowers measure

7.5 cm across x 2.5 cm deep with 30-35 petals. Plant is upright and of average growth rate. Flowers mid-season to late. The light green leaves are 5 cm long x 3.8 cm wide.

Tim Crocker's Pink. *(C.japonica),* ACS, *The Camellia Journal,* Nov.2001, p.21, colour photo p.20, Reg. No.2560. A formal double chance seedling, with star form blooms of medium pink. Originated by Eileen C. Hart, Odessa, Fla., USA. *American Camellia Yearbook,* 2001, p.97, colour photo p.c15. The 11 year old seedling first flowered in 1990. Flowers measure 7.5 cm across x 2.5 cm deep with 30-35 petals. Plant is upright and of average growth rate. Flowers mid-season to late. The light green leaves are 5 cm long x 3.8 cm wide.

Timandra. *(C.japonica)* Waterhouse, 1947, *Camellia Quest,* p.16. Camden Park Seedling No.64/52. Originated by Sir William. Macarthur, Camden Park, N.SW, Australia. Not now distinguishable. Extinct.

Timbreata. Harrison ed., 1837, *The Floricultural Cabinet,* p.268. Orthographic error for **Fimbriata.**

Times Square. *(C.japonica)* Fendig, 1953, *American Camellia Yearbook:* Red. Complete double. Mid-season. SCCS, 1954, *The Camellia. Its Culture and Nomenclature,* p.84: Rose-red. Medium large, four-pointed square, formal double. Vigorous, compact, upright growth. Mid-season flowering.

Timothy Gilley. *(C.japonica) American Camellia Yearbook,* 1982, p.179, Reg. No.1826: A large, rose--pink, semi-double, *C.japonica* chance seedling; originated by Paul Gilley, Grand Ridge, Florida, USA. The 5 year old seedling first bloomed 1980. Average flower size, 12.5 cm across x 6 cm deep with 12-14 petals, 6-8 petaloids, creamy filaments and bright yellow anthers. Plant growth is average with light green leaves 10 cm long x 6 cm wide.

Tina. *(C.japonica) American Camellia Yearbook,* 1977, p.219, Reg. No. 1414: A large, white, formal double. A 6 year old chance *C.japonica* seedling that first bloomed 1973; originated by Paul Gilley, Grand Ridge, Florida, USA. The **Alba Plena** type bloom is white with more than 50 petals, size 11 cm across x 3.7 cm deep. Blooms early, often with a spiral formation. Plant growth is upright, dense and medium with dark green leaves, 7.5 cm x 3.7 cm.

Tina Gaillard. Hastie, 1948, *American Camellia Yearbook,* p.57. Orthographic error for **Tina Gilliard.**

Tina Gilliard. *(C.japonica)* Magnolia Gardens and Nursery Catalogue, 1942-1943: Pink. Large, semi-double seedling from 'Derbiana'. It has prominent stamens and is a vigorous, upright plant. Originated at Magnolia Gardens, John's Island, South Carolina, USA. Orthographic error 'Tina Gaillard'.

Tinctorum Roseum. *(C.japonica)* Rousseau, Angers Catalogue, 1842-1843, p.4: 'Pink'. Originated in Italy. (Believed extinct.)

Tingley. Nantes, *Services des Espaces, Collections,* 1980. Abbreviation for **Mrs Tingley.**

Tingsili Boshi. Gao,Jiyin, Ltr, 30 July 1990. Chinese synonym for USA *C.japonica* **Dr Tinsley.**

Tinker Bell. *(C.japonica)* Robinson, 1958, *American Camellia Yearbook*, p.61: An outstanding seedling from Nuccio's Nurseries, Altadena, California, USA, very similar in colour and form to **Johnny's Folly,** with the exception that the red striping and specks are on a medium pink background. It has a solid red sport named **Jingle Bells.** Chinese synonym 'Yaoling'.

Tinker Toy. *(C.japonica)* Donnan, 1981, *American Camellia Yearbook*, p.82: A miniature having an anemone bud centre of creamy white petaloids, flecked with red. Guard petals are creamy white flecked with faint red streaks. *American Camellia Yearbook*, 1982, p.179, Reg. No.1786: Originated by Nuccio's Nurseries, Altadena, California, the 9 year old seedling first bloomed 1976. Average flower size is 5.5 cm across. Plant growth is dense and medium with light green leaves, For colour photo see pl. facing p.76, 1982 Yearbook.

Tinker's Damn. *(C.japonica)* Cannon, Scion Catalogue, 1962, p.10. No description. Originated in USA. No valid listing located.

Tinkle Bells. Jury, 1961, *American Camellia Yearbook*, p.89. This name subsequently changed to **Joyful Bells** due to its resemblance to 'Tinker Bell'.

Tinkey Lee. Fruitland Nursery Catalogue, 1945-1946. Orthographic error for **Tinky Lee**.

Tinky Lee. *(C.japonica)* Magnolia Gardens and Nursery Catalogue, 1944-1945: Light pink. Large rose form double to formal double. Vigorous, upright growth. Early to mid-season flowering. Orthographic error: 'Tinkey Lee'. A chance seedling grown by Dr W.G. Lee, Macon Georgia, USA about 1920. See illustr., Fendig, 1952, *American Camellia Catalogue.* Sport: **Tinky Lee Variegated.**

Tinky Lee Variegated. Fendig, 1953, *American Camellia Catalogue.* A virus variegated form of **Tinky Lee.** Light pink and white. Originated in USA.

Tinsie. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Synonym for **Bokuhan**. Imported from Japan to the USA by the Star Nursery, California about 1930. Sold to Harry Davis, El Monte, California who gave it the synonym 'Tinsie'.

Tinsie Blush. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.132. Synonym for **Momoiro-bokuhan.**

Tinsie (Blush). Gentry, 1971, ACS., *The Camellia Journal*, vol.26, No.4, p.21. Synonym for **Momoiro-bokuhan.**

Tinsie Gold. *(C.japonica),* ACRS, *Camellia News*, 1992, No.123, p.5, Reg. No.415: Originated by Dr Graeme Downe, Endeavour Hills, Victoria, Australia. A genetic leaf sport of 'Tinsie' (**Bokuhan**), that first appeared in 1982, with leaves having a wide yellow border (RHS.CC.7A), surrounding a glossy green centre (RHS.CC.141A). Leaves are elongate, curled, finely serrate with acuminate apex 7 cm long x 2.7 cm wide. The plant is upright and bushy. Flowers like a small 'Tinsie'.

Tinsie Grande. *(C.japonica), Camellias*, Y.C. Shen, 2009, p.180 with colour photo; A sport of 'Tinsie' **(Bokuhan)** propagated by Nuccio's Nurseries, Altadena, California, USA. Flower is larger than the parent. Guard petals are red, and the centre a mixture of red and white frilled petaloids.

Tinsie Two. *(C.japonica)* SCCS, 1960, *Camellia Nomenclature*, p.108: Deep rose-red outer guard petals with pink stamens and petaloids. Miniature anemone form. Medium, compact, upright growth. Blooms early to mid-season. Originated by Harvey Short, Ramona, California, USA. Orthographic error: 'Tinsie Number 2'.

Tinsie Number 2. Rogers Nursery Catalogue, 1974. Orthographic error for **Tinsie Two.**

Tinsie Variegated. Gentry, 1978, ACS., *The Camellia Journal*, vol.33, No.4. Synonym for **Hoshi'iribokuhan.**

Tinsley 71. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Dr Tinsley.**

Tinsley Smith. *(C.japonica) American Camellia Yearbook*, 1954, p.334, Reg. No.128: A 5 year old seedling of **Lady Vansittart;** originated by Miss Ruth Loman, Wilmington, North Carolina, USA that first flowered 1952. Plant growth is open, spreading and well branched. Leaves dark green, 11 cm long, sharply serrate at apex end, apex acute, recurved. Flowers semi-double, numerous stamens forming five groups; 18 large petals, colour cherry-red to dark rose-red, petals veined a darker colour. Blooms mid-season. Sport: **Tinsley Smith Variegated.**

Tinsley Smith Variegated. *(C.japonica)* SCCS., 1960, *Camellia Nomenclature*, p.108 as 'Tinsley Smith Var.': A virus variegated form of **Tinsley Smith** - Cherry-red blotched white. Originated in USA.

Tiny. *(C.reticulata* hybr.), Dryden, 1970, SCCS., *The Camellia Review*, vol.31, No.6, p.23: A 10 cm diameter. misted red, irregular semi-double. A reticulata hybrid chance seedling, originated by Frank Maitland, San Fernando Valley, California.

Tiny Bell. *(C.japonica)* Domoto Nursery Catalogue, 1968: Salmon pink. Small semi-double to loose anemone form. Medium, compact growth. Blooms mid-season to late. Originated in USA by T. Domoto, California. Chinese synonym: 'Xiaolingdang'.

Tiny Bit. *(C.saluenensis* hybr.), SCCS., 1987, *Camellia Nomenclature*, p.150: Soft pink. Miniature anemone form. Slow spreading growth. Mid-season blooming. *C.saluenensis x C.hyrid* **Tiny Princess** by F.Jury, Tikorangi, New Zealand. A sister seedling to **Itty Bit,** but never released into commerce.

Tiny Bud. *(C.japonica)* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Clear pink. Small peony form. Mid-season to late flowering. Originated by Mrs C. Grischow, Portland, Oregon, USA.

Tiny Gem. *(C.hybrid).* SCCS, *The Camellia Review*, Jan-Mar 2010, p.13; A very compact dwarf plant with small dark green leaves. Tiny white single flower. Originated by Nuccio's Nurseries, Altadena, California, USA.

Tiny Girl. *(C.japonica) American Camellia Yearbook*, 1981, p.106, Reg. No.1723: A small, salmon pink, formal double *C.japonica* chance seedling that flowers mid-season to late; originated by E.P. Atkin, Shreveport, Louisiana, USA. The 9 year old seedling first bloomed 1977. Average flower size, 7 cm across x 3.7 cm deep with 65 petals. Plant growth is open and rapid with dark green leaves, 7.5 cm long x 3.2 cm wide.

Tiny Me. *(C.japonica) American Camellia Yearbook*, 1971, p.50, Reg. No.1159: A 15 year old chance *C.japonica* seedling that first bloomed 1960; originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is open, upright and medium with dark green leaves, 6 cm long x 3.2 cm wide. The anemone form flower is 5-5.5 cm across x 3.7 cm deep with 6-9 petals and 28-96 petaloids. The light pink flower is lightly to heavily variegated, yellow anthers and flesh coloured filaments. Blooms mid-season to late.

Tiny Pearl. *(C.sasanqua), American Camellia Yearbook*, 1975, p.242, Reg. No.1372: A 10 year old chance sasanqua seedling that first bloomed 1968. Originated by W.F. Wilson Jr., Hammond, Louisiana, USA. Plant growth is spreading and average with light green leaves, 4.3 cm long x 2.2 cm wide. The formal double to incomplete double type bloom is light pearl pink or blush pink; 15 petals, 8 petaloids with unusual chartreuse anthers. Average size is 4.8 cm across x 1.2 cm deep. Blooms early

Tiny Princess. *(C.japonica x C.fraterna.), American Camellia Yearbook*, 1961, p.230, Reg. No.525: A 7 year old hybrid seedling of *C.japonica* **Akebono** x *C.fraterna* that first bloomed in 1956. Originated by K.Sawada, Mobile, Alabama, USA. The medium textured, finely serrate, mid-green leaves are 5 cm long x 2.5 cm wide. The flowers are 5.2 cm. across x 2.5 cm deep; white shaded a delicate pink, semi-double to single to loose peony form with small petaloids.

The cultivar holds *C.fraterna* characteristics. Blooms mid-season. Chinese synonym 'Xiaogongzhu'.

Tiny Rose. *(C.japonica),* ACS, *The Camellia Journal,* May 1997, p.21, Reg. No.2397. A miniature, rose pink semi-double chance seedling. Flowers mid-season. Originated by Toichi Domoto, Hayward, Calif., USA. *American Camellia Yearbook*, 1997, p.7, colour photo before p.1. The seedling is over 15 years old. Average flower size is 2.5 cm across x 1.8 cm deep, with 15 petals. Plant growth is upright and medium with light green leaves 2.5 cm long x 1.2 cm wide. Previously named 'Domoto's Red Rose'. Note: Use of a plant genus name as the last name for a cultivar is illegal under the Nomenclature Code, para.17.13, 1995, p.22.

Tiny Spots. Waterhouse, 1970. *Camellia News*, No.40, p.9. Synonym for **Diandianhua.**

Tiny Star. *(C.hybrid), New Zealand Camellia Bulletin*, 1978, Vol.X, No.4, p.24, Reg. No.136: A seedling of *C.japonica* **Berenice Boddy** x *C.hybrid* **Tiny Princess,** originated by O.Blumhardt, Whangarei, New Zealand, that first bloomed 1975. Plant habit is upright and open with mid-green leaves, 6 cm long x 3.5 cm wide. The bloom is semi-double with 16 petals and rare stamens and measures from 3-5 cm across, soft pink. Blooms early to mid-season. See colour photo front cover, *New Zealand Camellia Bulletin*, vol.XIV, No.5, 1986. Chinese synonym: 'Xiao Xingxing'.

Tiny Tama. *(C.japonica), Camellias,* Y.C. Shen, 2009, p.84 with colour photo; A chance seedling of **Tama-no-ura,** raised by Nuccio's Nurseries, Altadena, California, USA. Miniature single, 4-5 cm diameter. White, with red at the base of each petal. Leaves lanceolate, bright dark green, 4-5 cm x 3 cm. Plant habit spreading.

Tiny Tim. *(C.japonica)* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Ashes of Roses. Large, semi-double of **Hagoromo** form. Slow, dwarf growth. Originated in USA by Herrin. Sport: **Tiny Tim Variegated.**

Tiny Tim Variegated. *(C.japonica)* SCCS., 1960, *Camellia Nomenclature,* p.108 as 'Tiny Tim Var.': A virus variegated form of **Tiny Tim** - Ashes of Roses and white. Originated in USA.

Tiny Tot. *(C.japonica)* SCCS., 1962, *Camellia Nomenclature*, p.102: White with an occasional pink streak. Miniature formal double. Medium, open, upright growth. Blooms mid-season to late. Originated in USA by Harvey Short, Ramona, California.

Tôbijin. (Chinese Beauty), *(C.reticulata* hyb.), ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.31: Very large size flower, deep pink, peony form. Late blooming. Raised from seed of *C.reticulata* **Buddha** received from New Zealand**..** Originated in the Kumamoto Prefecture, Japan. Released by Tsugio Ôta in 1977, named by Yoshiaki Andoh.

Tobi-no-hagasame. Nobelius Nursery Catalogue, 1940. Corruption of the Japanese name **Toki-no-hagasane.**

Tobirenge. (Splashed Lotus), *(C.japonica),* Uekiya, Seijirô, 1874, *Tsubaki Hyakuro no Zu,* vol.2: Large, semi-double with two rows of long, narrow petals, white with red streaks down the side of the

petals. Described as a synonym for **Tamatebako** at that time. Different reading: 'Chôrenge'. Originated in Japan. (Believed extinct.)

Tôbôsaku. (Eastern Conjunction), *(C.japonica) Encyclopedia of Camellias in Colour*, vol.I, 1972, p.371: Medium size, soft pink, cup-shaped single, with 5-6 large, concave, overlapping petals, wrinkled and uneven in size, notched; stamens yellow, in a large, spreading central group; early blooming. Leaves strong, glossy green, elliptic to obovate, apex acuminate, margins obscurely to sharply serrate, venation prominent. Originated by Kaneko, Torao, Mikuchi-shin-machi, Kanazawa City, Ishikawa Prefecture, Japan from a seedling of **Seiôbo.** Named and released by Muneyuki Iwatani. Different reading: Tôhô-saku'. See colour photos & descriptions: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.287, p.124; Seibundô Shinkôsha., 1979, *Senchinshû*, pp.104, 234. Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp. 142, 143.

Tôbusa. (Personal Name), *(C.japonica)* Satomi, 1956, *Camellia Varieties of Japan*, p.13 as 'Tohbusa': White spotted pink. Large semi-double to peony form. Blooms mid-season. Originated in Japan. Note: The local name for **Daikagura** in the Shikoku district.

Toby. *(C.japonica),* ACS, *The Camellia Journal*, May 1998, p.18, Reg. No.2445. A large, red, semi-double chance seedling. Flowers mid-season to late. Originated by Paul Gilley, Grandridge, Fla., USA. *American Camellia Yearbook*, 1998, p.6, colour photo before p.1. The 17 year old seedling first flowered in 1989. Average flower size is 11.5 cm across x 5 cm deep, with 24 petals, yellow anthers and white filaments. Plant growth is upright and vigorous with dark green leaves 12.7 cm long x 5.7 cm wide.

Toby Ellen. *(C.japonica)* Cannon, 1971, ACS., *The Camellia Journal*, vol.26, No.1. No description. Originated in USA. No valid listing located.

Tochi Domoto SCCS *Camellia Nomenclature* 2009, p.121; Orthographic error for **Toichi Domoto.**

Tochi Princess. *(C.rusticana). Camellias,* Y.C. Shen, 2009, p.85 with colour photo; Synonym for **Tochihime.**

Tochihime. (Tochi Princess), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.106, colour photo, p.234, description: Miniature red, irregular single, petals 5 in number, of uneven length; stamens in a small, irregular cluster. One of the smallest *C.rusticana* in cultivation. Leaves long, narrowly elliptic, mid-green, apex long tapering acuminate, margins shallowly, coarsely serrate, prominent venation. See p.155, colour photo, Yokoyama & Kirino. 1989, *Nihon no Chinka.* The name 'Tochi' is takn from Tochi'o City, Niigata Prefecture, Japan, where the variety originated. Synonym 'Tochi Princess'.

Todagiku. Different reading for **Totagiku.**

Todakasuri. Different reading for **Toda-tobi'iri.**

Toda-tobi'iri. (Toda Variegated), *(C.japonica)* Itô, Ihei, 1695, *Kadan Chikinshô:* Medium sized flower, variegated with red. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Semi-double in 2 rows, white with a pink cast, red speckles, small size. See: JCS., 1969, *Tsubaki*, No.7, p.33. Originated in Japan. (Believed extinct.) Different reading: 'Todakasuri'.

Todd Gilley. *(C.japonica) American Camellia Yearbook*, 1974, vol.II, p.240, Reg. No.1326: A 6 year old chance *C.japonica* seedling that first bloomed 1971; originated by Paul Gilley, Grand Ridge, Florida, USA. Plant growth is upright, spreading and medium in rate with dark green leaves, 10cm long x 5 cm wide. The loose peony form, **Daikagura** type, bloom is bright, dark red with 25-35 petals and few petaloids with bright yellow anthers and yellow filaments. Average size, 12.5 cm across x 6 cm deep.

Tôemon. (Personal Name), *(C.japonica)* Seibundô, Shinkôsha, 1979, *Senchinshû*, p.233: Outer petals have a few pale red spots on a white background. Irregular blossoms with petaloids in the cen-

tre, anenome form. Medium size, late season flowering. Plant habit upright and vigorous, leaves broad-elliptic. Originated in Kansai area, Japan.

Toen-nishiki. (obscure), *(C.sasanqua)*, Miyazawa, 1954, *Kanshô Jumoku:* Large double. Pink with large, white spots. Originated in Japan.

Toffee Apple. *(C.sasanqua)* C. Aust., *Camellia News*, Autumn 2011, No.185, p.20 with colour photo; Regn No.658-N. Chance seedling of **Fukuzutsumi**, first flowered 2002. Originated by Justin Jones, Marian Grove Nursery, Mangrove Mountain, NSW, Australia. Medium to large, semi-double to informal double blooms. White petals with a broad edge of bright dark pink. Strong upright grower.

Togano'o-chiri-tsubaki. (Scattering Camellia of Togano'o), *(C.japonica)* Izu-Ohshima, 1980, Hawaii Botanic Garden List as Toganoochiritsubaki'. No description. Originated in Japan.

Togano'o-yama-tsubaki. (Mountain Camellia of Togano'o), *(C.japonica)* Izu-Ohshima, 1980, Hawaii Botanic Garden List as Toganooyamatsubaki'. No description. Originated in Japan. Togano'o' is a place name in Kyôto City.

Togariba-sazanka. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.6. Japanese group name for *Camellia kissi* Wallich.

Togashijiro. (Togashi's White), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.35, p.18, description, p.95 as 'Togashi-jiro': An upright snow camellia with white flowers, shaded yellow. Leaves elliptic-lanceolate, olive green to green, keeled, venation impressed, margins minutely serrulate; petioles green and hairy. Flower medium size, semi-double, 12-15 petals, narrow broadly oblong to elliptic, yellowish towards the base, inner petals semi-erect, channelled; stamens 2.7-3.2 cm high, spreading a little, irregular, filaments yellowish. Flowers early to mid-season. Originated by Shôsaku., Yoshida, Togashi-shinbô, Kanazawa City, Ishikawa Prefecture, Japan and plants are abundant in Toyama Prefecture. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.235, & p.325; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.104, 234.

Tôgen. (Shangri-La), (Higo), Izu-Ôshima, 1980, Hawaii Botanic Garden List. No description. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.142 colour photo and description: Medium size, distinct pink, vase-shaped single with 5 broad, overlapping, crinkled petals and a central stamen cylinder with yellow stamens. Flowers mid-season to late. Leaves dark green, elliptic, apices acuminate. A chance seedling of unknown parentage, originated by Tôhei Takahashi, Nishio City, Aichi Prefecture.

Tôgenhaku. Different reading for **Tôgenjiro.**

Tôgenjiro. (Tôgen White), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.16, colour photo and description: Medium size, white, spherical shaped single of 5-6 wide, overlapping, concave petals and a broad, central, yellow stamen cluster. Blooms mid-season to late. Leaves glossy, bright green, flat, elliptic, apices acuminate, margins serrate. A chance seedling raised by Tôhei Yakahashi, Nishio City, Aichi Prefecture. Released by Minoru Satô in 1974. Different reading: 'Tôgenhaku'.

Togenkiyo. Orthographic error for for **Tôgenkyô.**

Tôgenkyô. (Shangri-La), *(C.sasanqua)*, Kyôto Engei Kurabu, 1967, *Tsubaki Tokushû*, No.8, p.91, illust.13: Semi-double, 11-12 petals, flower 7-9 cm across, stamens 85-95, yellow. Colour peach pink. Originated in Kumamoto Prefecture, Japan. A Higo sasanqua, slected and named by Sadatsugu Yamasaki. See: Seibundô Shinkôsha, Dec.1971, *Garden Life*, p.16.

Togetherness. (*C.fraterna* hybrid). ACRS, *Camellia News*, 1995, No.135, Reg. No.454: Originated by Mrs. M. Baker, Macleod, Victoria, Australia. A chance seedling of the *C.fraterna* hybrid **Snow Drop.** First flowered 1993. The single flower has 6-8 petals, shading from pale pink

(RHS.CC.62D to 63C), in the centre to deep pink on the outer edge. Size 3.3 cm across x 1.5 cm deep. Free flowering from early to mid-season on a slow growing, upright, dense plant. Leaves dark green, matt, flat, ovate with serrate margins and acute apices, 4.6 cm long x 2.6 cm wide. Petals notched and fluted. Filaments columnar. Flowers shed whole. Pleasant perfume.

Tôha. (Personal Name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.178 with colour photo; English translation p.124. Medium size, white single, petals waved, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size, recurved at margins. Upright growth. A natural seedling found under a plant of **Hatsu-arashi.** Named by Tôha Hideshima, released by Taneo Okada in 1996.

Tohbusa. Satomi, 1956, *Camellia Varieties in Japan*, p.13. Different reading for **Tôbusa.**

Tôhô. (Abundant Peaches), *(C.japonica)* Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.48; *Encyclopedia of Camellias in Colour,* vol.I, 1972, p.367; ibid, vol.II, 1978, pl.424, p.170, description, p.259: Soft peach pink, full double with a single row of large, waved guard petals about a full, compact hemispherical centre of small, folded, twisted, semi-erect petals with no stamens visible. Leaves shiny mid-green, broad-ovate, apex acuminate, margins shallowly, coarsely serrate. Plant habit erect, slow growing. Originated in Mure Town, Kagawa Prefecture, Japan. Selected by Saneichi Ogawa, named by Hisashi Hirai in 1972. See: Seibundô Shinkôsha, 1979. *Senchinshû*, p.234.

Tôhoku. (North East), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.553: White with some pink streaks and marks, medium size, semi-double with divided stamens; petals in two rows, edges irregular and wavy. Tohyoh-no-hikari. Different reading for **Tôyô-no-hikari.**

Toichi Domoto. *(C.japonica),* Nuccio's Nurseries Catalogue, 2007, p.15; Medium size formal to rose form double. Medium rose pink with deep rose pink stripes. Upright, compact, rather slow growth. Flowers early to mid-season. Raised by Toichi Domoto, a pioneer camellia grower in California. Named and released by Nuccio's Nurseries, Altadena, California, USA.

Toichi Formal. *Camellias,* Y.C. Shen, 2009, p.180 with colour photo; Synonym for **Toichi Domoto.**

Toichi's Nioi. *(C.japonica), Camellia Photo Collection*, Japan circa 1999, p.250 with colour photo; Anemone form with a single row of guard petals and a very wide petaloid centre. Petals and petaloids have a white base striped red. Raised by Toichi Domoto, Hayward, Calif., USA.

Toichi's Petite. *(C.japonica), Camellias,* Y.C. Shen, 2009, p.181 with colour photo; A sport of 'Tinsie Blush' **(Momoiro-bokuhan)** propagated by Toichi Domoto, Hayward, Calif., USA. Flower is similar, but leaves are altered.

Toichi's Tricolor. *(C.japonica), Camellias*, Y.C. Shen, 2009, p.181 with colour photo; Miniature single, 5 cm diameter. Pink petals are slashed radially with wide crimson and cerise stripes. Oval leaves. Upright growth. Raised by Toichi Domoto, Hayward, Calif., USA.

Tôi-kai. Watanabe, 1970. Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.167. Orthographic error for **Tôkai.**

Toiki. (Sigh) (*C.hybrid*) from Ehime Pref. *Japan Camellia* No.63, August 2000: A seedling of *C.rosiflora*. Pink, single, flower type and color similar to those of *C.rosiflora* except that it is

larger. Early blooming. Tree vigorous. Originated by Kyûshi Fujiwara in 1998, named by Katsuko Fujikawa.

Tôjibotan. (Peony of Winter Solstice), *(C.japonica)* Himuro, 1982, *Murasuzume:* Pink splashed deeper pink, semi-double to open peony form. Early blooming. Originated in Kanagawa Prefecture, Japan. A seedling of **Hatsu-arashi.** *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.177 with colour photo; English translation p.123. Leaves elliptic, medium size. Upright growth with short nodes. Originated by Teiji Himuro. Registered to the Ministry of Agriculture & Fishery in 1993, No. 3489.

Tôjin. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Different reading for **Karahito.**

Tôjô. (Eastern Ray of Light), *(C.sasanqua),* Hellyer, A.G.H., 1958, *Garden Plants in Colour*, p.31. Line drawing showing a single of 7 petals. No description. Originated in Japan.

Tôkaba. (Peach Flower, Horse), *(C.japonica)* Sakuden, 1630, *Hyakuchinshû:* Medium size, single. White with red stripes. Originated in Japan. (Believed extinct.) Different reading: 'Tôka-no-uma'. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.108.

Tôkabijin. (Beautiful Woman by Peach Tree), *(C.japonica)* Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.37; Seibundô Shinkôsha, 1979, *Senchinshû*, p.103, colour photo, p.233, description: Large, warm red, semi-double; petals in 3-4 rows, rounded, overlapping; inner petals somewhat crinkled, semi-erect; stamens in a central column, anthers golden, filaments whitish. Leaves thick, ovate, shining mid-green, apex blunt acute, margins obscurely crenate. Originated in Kantô area, Japan.

Tôkachô (Peach Blossom and Bird), *(C.japonica)* Yashiro, 1841, *Kokon Yôrankô*, vol.311: Different reading for **Toki.**

Tôkadô. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.176 with colour photo; English translation p.122. Small, white, cup-shaped single, thick and round petals, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size. Upright growth. Selected from wild japonicas growing in Chita District. Collected and released by Hikaru Sakakibara in 1990. From Aichi Prefecture.

Tokagama. *(C.japonica)* Fruitland Nursery Catalogue, 1945. Thought to have originated as a corruption of the Japanese name 'Tôkayama' erroneously listed by McIlhenny from 1935 for a red, formal double which proved a pseudonym for **Margherita Coleoni**. However the variety listed by Fruitlands was a medium sized, red, single, also described in the SCCS., 1950, *The Camellia. Its Culture and Nomenclature.* Marchants, Keepers Hill Nursery, England list it in their 1956 catalogue as 'Crimson with bowl shaped crown of red, yellow tipped stamens'.

Tôkagen. (Shangri-la), *(C.sasanqua),* Seibundô Shinkôsha, Dec.1971, *Garden Life.* No description. Originated in the Kumamoto Prefecture, Japan.

Tôkai. (Eastern Sea), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.28: Large, dark red, flat single with 6 lobulate, separated petals and a large ring of stamens with golden anthers and very long pistil. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû,* No.4, p.90.

Tôkai. (Eastern Sea), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.141; Hamamatsu, 1825, *Setsuyô Kikan:* Small, campanulate single, dark red. Originated in Japan. (Believed extinct.) Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû,* No.4, p.104.

Tôkai. (Eastern Sea), *(C.japonica)* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.174: Medium size, deep red, single, opening wide campanulate; petals numbering 5, irregular lengths, reflexed at apex. Stamens in central column, pinched in and closed at top. Slightly fragrant. Leaves small, elliptic, shining mid-green, apex acuminate, margins serrulate. Originated in Izu Ohshima Island,

Japan. See colour photo & description: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.103, 233. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.200.

Tôkainigô. (Tôkai Number 2), *(C.japonica)* Izu-Ôshima, 1980, Hawaii Botanic Garden List. No description. One of the wild camellias from Izu Ôshima Island, Japan.

Tôkai-nishiki. (Tôkai Brocade), *(C.japonica)*, Izu-Ôshima, 1980, Hawaii Botanic Garden List as 'Tôkainishiki'. No description. One of the wild camellias from Izu Ôshima Island, Japan.

Tôkamachi. (Tôka Town), *(C.rusticana)*, Satomi, 1956, *Camellia Varieties in Japan*, p.17: Purplish pink. Medium single to semi-double to incomplete anemone form. Leaves large and strongly serrate. Vigorous, compact growth, Blooms mid-season. Originated in Tôka-machi, Niigata Prefecture, Japan.

Tokami-shibori. (Mt. Togami's Dappled), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.331, colour photo and description: Medium size, bright deep red with clear white blotches, semidouble with 15-16 irregular, emarginated petals in 3 rows and a central cylinder of stamens with yellow anthers. Blooms mid-season to late. Leaves olive green, lanceolate to elliptic, apices recurved, tapering acuminate, margins shallowly serrate. Originated in Matsu'e City, Shimane Prefecture, Japan. A variety commonly planted in Yasuki City, Shimane Prefecture. Named and released by San-in Camellian Club in 1975.

Tôkan. (Crown of Peach). *(C.japonica), Kurume Camellia*, 1997, English translation, p.31. Pink, deeper at the petal edges. Small, sphrical single. Flowers mid-season.

Tôka-no-uma. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.167. Different reading for **Tôkaba.**

Tôkasen. (Name of classic Chinese drama). *(C.japonica), Nagoya Camellia Society Bulletin*, 1992, No.25, p.5, colour photo No.15: Originated by Kôji Funakoshi, Nagoya, Japan. A chance seedling of 'Saga-hatsuarashi' (**Hatsuarashi-saga**). Medium to large size, 10 cm across, single of 8-9 petals, incurved, ruffled, and cylindrical stamens. Light pink, fading to white at centre. Weak fragrance. Blooms mid-season to late.

Tôkayama. (Mount Tôka), *(C.japonica)* Satomi, 1956, *Camellia Varieties in Japan*, p.13: White, large, formal double. Medium, bushy growth. Blooms mid-season. Originated in Japan. Synonym: 'Tokayama (1)'. Corruptions of the name: 'Tokoyama', 'Tokyana', 'Tokayana'. Note: Some confusion exists in the UK with **Takayama** being confused with **Tôkayama.**

Tokayama. McIlhenny, 1935, *List of Camellias for Sale.* Renamed 'Tokayama'(South) as it was not the true **Tôkayama**. 'Dobrielle' was erroneously listed as a synonym in his 1937 Catalogue and it was later found to be **Margherita Coleoni.**

Tokayama (South). SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.89: This is a renaming of McIlhenny's 'Tokayama' which proved to be a pseudonym for **Margherita Coleoni.**

Tokayama (1). Vanderbilt, 1941, *Camellia Research* II, p.8. McIlhenny imported the true **Tôkayama** from Chûgai, Japan in 1934 but confused it with a red formal double he received from Bobinck and Atkins Nursery at the same time which was later confirmed as **Margherita Coleoni**. Synonym for **Tôkayama.**

Tokayama (2). Vanderbilt, 1941, *Camellia Research*, II, p.8. Renamed 'Tokayama'(South) a synonym for **Margherita Coleoni.**

Tokayana. Geo. Jackson & Son, 1957-1958, Planters Handbook, No.15, p.18. Orthographic error for **Tôkayama.**

Tôkenkyo. Different reading for **Azumakenkyô.**

Toki. (Ibis), *(C.japonica)* Yashiro, 1841, *Kokon Yôrankô,* vol.311. From Yasaburô's Nursery. No description. Originated in Japan. Different reading 'Tôkachô'. (Believed extinct.)

Tokihime. (Ibis Princess). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.180 with colour photo; English translation p.125. Miniature, palest pink single. Flowers mid-season. Leaves elliptic, miniature, dull. Dwarf growth, dense branches, slow-growing. A cross between *C.rusticana* **Shûgetsu** and *C.transnokoensis.* Named and released by Kazuo Yoshikawa in 1996. From Osaka.

Toki-hime (Goto). *Proceedings of the ICS Congress,* Chuxiong 2012, p.84. An historic plant of yabu-tsubaki on Goto Island, Japan. Estimated age 250 years.

Toki'iro-botan. (Pale Pink Peony), *(C.japonica)* Inazawa Nurseries Co. Ltd. Catalogue, 1980-1981, p.8, A-100: A large, yellowish-pink, lotus form double. Originated in Japan.

Tokiiro-wabisuke. Satomi, 1956, *Camellia Varieties in Japan.* Synonym for **Tarôkaja.**

Tokijiro. (White Ibis), *(C.japonica)* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.15; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* Peony form, double, cherry pink, margins white, with red splashes, very large. Tuyama, 1966, *Camellia Cultivars of Japan,* pl.87, description, p.144: Large size, faint blush pink, rose form double, opening to show a small, abortive stamen group, petals, rounded, emarginate, in 4 rows. Blooms late. Leaves broad-ovate, dark green, coarsely serrate. Originated in Japan. While Tuyama refers this name to Itô, Ko'emon, 1879, the illustration is different to the Itô description. The Itô cultivar has red stripes. Ishii, Yugi presumes that the modern **Tokijiro** is the self pale pink form of the ancient cultivar. See: JCS., 1983, *Tsubaki,* No.22, p.121; ibid, 1969, No.7, p.24. See: Seibundô Shinkôsha, 1979, *Senchinshû,* pp. 104, 234.

Toki-no-hagasane. (Folded Feathers of Japanese Ibis), *(C.japonica)* Itô, Ko'emon, 1879, *Chinkashû:* Peony form, white blushed pink, large. Tuyama, 1968, *Camellias of Japan,* pl.72, p.36, description, pp.106, 107: With many branches and very floriferous. Leaves broadly elliptic to oblong-elliptic, venation a little impressed; petioles glabrous. Flowers palest pink at the beginning but later almost white, peony form with a few scattered stamens. Petals thin and delicate, often strongly wavy. Late blooming. An old variety from Kantô area, Japan. See colour pls. & descriptions: Tuyama, 1966, *Camellia Cultivars of Japan,* pl.89; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.225 & p.324; *American Camellia Yearbook,* 1947 facing p.27; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.107, 234. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.120. Corruptions of name: 'Taki-no-hagasane', 'Tobi-no-hagasane', 'Uno-ha-gasane', 'Tsuki-no-hagasane'. Resembles 'Chô-no-hagasane' (**Hagoromo**). Different reading: 'Toki-no-ha-gasane', 'Tokinohagasane'. Synonyms: 'Ubane', 'Bessie Morse Bellingrath', 'Betty Hopfer', 'Kent Deigaard', 'Bessie Bellingrath', 'Bessie M. Bellingrath', 'Ibis Plumage', 'Ibis'.

Toki-no-hagasane (2). Fendig, 1953, *American Camellia Catalogue.* Pseudonym. for **Dorbrielle.**

Toki-no-mai. (Dance of the Ibis), *(C.japonica) Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.454, p.178, description, p.264: Medium size, full anemone form with one row of outer guard petals, transparent, white with red streaks and a full hemispherical centre of small, erect, compact, folded and twisted petals with no stamens visible. Leaves long-elliptic, keeled, thick, dark green, sometimes, apex tapered acuminate, margins irregularly and coarsely serrate, becoming obscure towards the petiole. Originated in Murakami City, Niigata Prefecture, Japan. Named and released by Tokuji Ôoka in 1973. See colour pl.: Seibundô Shinkôsha, 1979, *Senchinshû,* pp.105, 384, 385, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Sport: **Kifukurin-toki-no-mai.**

Tokishiro. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.227. Different reading for Tokijiro.

Tokio. Nobelius Nursery Catalogue, 1939. Different reading for **Tokyo.**

Toki-no-megumi. (Blessing of Ibis), *(C.japonica)* ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.23: Medium to large size, very pale pink, bowl-shaped single. Blooms early to mid-season. Originated in Okayama Prefecture. Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.180 with colour photo; English translation p.124. Red graduations on palest pink ground, bowl-shaped single, round petals, tubular stamens. Leaves elliptic, medium size. Named by Nobuo Sasai in 1989, released in 1997.

Toki-otome. (Ibis Maiden), *(C.japonica)* ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.23: Medium to large size, pale pink, formal double. Purchased at a nursery in Yatsuo City, Osaka Prefecture, Japan in 1990 by Sin'ichirô Kishida.

Tokiwa. (Forever), *(C.japonica)* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* The flower is a small cherry-pink semi-double to single with thin petals. Originated in Japan. (Believed extinct.) See: JCS., 1982, *Tsubaki*, No.21, p.100; ibid, 1969, No.7, p.33.

Tokiwa. (Forever),*(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pls.107 & 265: Medium size, deep crimson, petaloid single anemone form, with 7 guard petals around a large centre of fan-shaped petaloids. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, pp.100, 120. (Believed extinct.)

Tokiwa-beni (Red Camellia from Tokiwa) (*C.hybrid*) from Tokyo, *Japan Camellia* No.60, August 1999: Thought to be a natural crossing between 'Tokiwazakura' and **Benibato**. Peach red, 6 to 7 cm across, blooms in early to late season, bears fruits, bloomed first in 1998. Leaves medium. Tree upright growth. Found by Yaichirô Fujimoto.

Tokiwadoki. (obscure), *(C.japonica)* Uekiya, Seijirô, 1874, *Tsubaki Hyakuro no Zu*, vol.3, No.33: Campanulate single, white with red stripes. Originated in Japan. Kyôto Engei Kurabu, 1975, *Kyôto Engei*, No.73, p.21. (Believed extinct.)

Tokiwa-hime. (Princess Tokiwa). (*C.lutchuensis* hybrid). *"Camellias in Kurume"*, ICS Congress, Kurume 2010, p.113. No description. From Niigata Pref. Japan.

Tokiwa-tsubaki. (Tokiwa Camellia), *(C.japonica)* Kyôto-shoin, 1991, Mizuno & Watanabe, *Kyô-tsubaki*, pl.21, p.22: Single, pink, medium size, cup-shape, cylindrical stamen cluster. Originated in Kôshô-in, Kyôto, Japan.

Tokka. (Mental stage in Nô). (*C.reticulata* hybrid). *Nagoya Camellia Society Bulletin*, No.26, p.44, colour photo No.15: A chance seedling of *C.reticulata* hybrid **Barbara Clark.** Light pink finely striped darker pink, 10 cm across. Rose form double to semi-double with notched petals. Centre of sparse stamens with white filaments. Late flowering. Prolific flowering. Very vigorous. Originated by Kôji Funakoshi, Nagoya, Japan.

Tôkô. Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Chûgai Nursery Catalogue, 1935-1936 as 'Toko'. Different reading for **Azuma-beni.**

Tôko. (Peach Lake), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.103, colour photo, p.233, description: Medium size, irregular, incomplete, informal double, peony type, cherry red with large, waved, irregular guard petals and a centre of erect and semi-erect, folded and twisted, small petals with no stamens visible. Leaves glossy mid-green, oval with acute apex and serrate margins. Originated in Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1973.

Tôko. (Lantern Bottle). *(C.reticulata hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.177 with colour photo; English translation p.122. Peach red, tubular to trumpet shaped single, slender petals, cylindrical stamen column. Flowers mid-season. Leaves elliptic, small, flat. Upright

growth. A cross between *C.japonica* **Sasameyuki B** and *C.reticulata* hybrid **Brian.** Originated by Nobuo Sasai in 1984, released in 1997. From Okayama Prefecture.

Tokomatsu. (Everlasting Summer). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.87 with colour photo; Small red single, trumpet shape, petal edges serrated. Tubular stamen ring. Flowers early to late. Leaves ovate, medium size. Upright growth. Parentage unknown. Named and released by Soshin Hirai, Saitama Pref., Japan, in 2007

Tokoyama. Vanderbilt, 1940, *Camellia Research*, p.7. Corruption for the Japanese name **Tôkayama.**

Tôkôyô. (Ocean of Eastern Light), *(C.japonica)* Satô, 1975, *Chûbu no Tsubaki*, p.16 colour photo and description: Soft peach pink, fading almost to white at petal base, medium sized, bowl-shaped single with a large stamen cluster of about 120 stamens with golden anthers and 6-7, large, overlapping petals, emarginate, opening cup-shaped. Leaves elliptic to broad-ovate, dark green. Originated in Chûbu, Japan. A seedling of **Shûfûraku** x **Daikagura.** Named and released by Minoru Satô in 1958.

Tokuhime. (Virtuous Princess), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.31: Very small size, crimson, campanulate single. Blooms mid-season. Fragrant. A seedling of *C.japonica* **Tôkai** x *C.lutchuensis*, originated in Niigata Prefecture, Japan. Named and released by Kaoru Hagiya.

Tokumaru. (Place Name), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.126, colour photo and description: Small size, pink, campanulate single with 5 emarginate, crinkled, embracing petals and a central stamen cylinder with yellow stamens. Blooms mid-season to late. Leaves bright green, elliptic to narrowly-elliptic, apices long acuminate, margins coarsely and sharply serrate. Originated in Tokumaru, Masaki Town, Ehime Prefecture, Japan. Named and released by Tokihiro Kôno around 1979.

Tokunaga. Sukekatsukyô-ki, 1637. Monk Hôrin, 1639, *Kakumeiki;* Hirayama, (Late 17th Century), *Tsubaki Byôbu.* Synonym for **Semi-no-hagoromo** in the *Hyakuchinshû*, Sakuden, 1630. See: JCS., 1986. *Tsubaki*, No.25, p. 15. Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, pp.47, 48.

Tokunaga. (Personal Name), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.345: Medium size, white, semi-double with 2-3 rows of petals with irregular margins. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p. 142.

Tokunaga. (Personal Name), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.635: Medium size, white, rose form double with 6-7 rows of small petals, opening to show a vestigal, small stamen cluster. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.154. Thought to be the same as the above, and synonym for **Semi-no-hagoromo.**

Tokuonji. (Name of Temple). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan*), 2010, p.82 with colour photo; Medium size, deep red single, tubular to trumpet form. Columnar stamens. Leaves ovate, medium size. Upright, vigorous growth. A wild camellia growing in the garden of Kodomo-no-kuni in Yokohama, Japan. Named by Shuho Kurino in 1950s.

Tokusa. (Horse Tail), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.180: Small, open peony, white with pink streaks, irregular petals and scattered stamens. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.3, p.109.

Tokusai. (Personal Name), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.415: Small to medium size, single of 5 petals, convex corolla, white becoming light pink at base, streaked

with red, opening vase shaped with central stamen cluster. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p. 154.

Tokusai. (Personal Name), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.479: Small to medium size, single of 7 petals, 4 opening flat and 3 semi-erect, which cup a tall stamens column. Colour base white with crimson streaks, joining at petal margins. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.142.

Tokusai. (Personal Name), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.594: Small to medium size, campanulate single to semi-double, two rows of petals, 9-11 in number, about a large stamen column. Originated in Japan. (Believed extinct.) See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.147.

Tokuzan-tsubaki. (Tokuzan's Camellia), Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.48; Seibundô Shinkôsha, 1979, *Senchinshû*, p.105, colour photo, p.234: Small size, pure white, single of 7-8 petals, large, rounded, overlapping, slightly emarginate, compact, cental stamen column, somewhat tapering and pinched in at the top, anthers brownish yellow, filaments white. Leaves ovate, dark glossy green, margins obscurely crenate. Plant habit horizontally spreading. Colour photo, p.52, Yokoyama & Kirino, 1989, *Nihon no Chinka*. Found in the late Kondô, Tokuzan's garden in Ehime Prefecture, Japan. Named and released by Shigeichi Yagi in 1969. Different reading: 'Tokusan-tsubaki'.

Tokwa-no-uma. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.65. Different reading for 'Tôka-no-uma', different reading for **Tôkaba.**

Tokyana. Barnham Nurseries Ltd. Catalogue, 1967-1968. Corruption of the Japanese name **Tôkayama.**

Tokyio. Gills Nursery Catalogue, *1922*. Corruption of Japanese name **Tokyo.**

Tokyo. (Name of City), (Higo), Gills Nursery Catalogue, 1922 as 'Tokyio': Medium size, red, single with large group of central stamens and petaloids. Imported from Japan to Australia by Nobelius. Orthographic errors: 'Tokio', 'Tokyio'.

Tom Cat. *(C.japonica)* Cannon, 1964-1965, Scion Catalogue, p.16. No description. Dekker, 1965, *American Camellia Yearbook*, p.64, and 1966, p.101, Reg. No.821: A 9 year old chance seedling that first bloomed 1959, originated by Dr Albert C. Tuck, Thomasville, Georgia, USA. Plant growth is upright, open and medium in rate with light green leaves, 8 cm long x 4.5 cm wide. The semidouble flowers, similar to **Frizzle White,** measure 13 cm across x 8 cm deep with 12 petals and 4-6 petaloids. Colour is light rose-pink with light stamens. Blooms mid-season to late. Sport: **Tom Cat Variegated.** See colour photo, p.120, Macoboy, 1981, *The Colour Dictionary of Camellias* and pl.145, p.69, *Encyclopedia of Camellias in Colour*, vol.II, 1978.

Tom Cat Supreme. Shackelford, 1966, ACS., *The Camellia Journal*, vol.21, No.5. Synonym for **Tom Cat Variegated.**

Tom Cat Variegated. *(C.japonica)* SCCS, 1966, *Camellia Nomenclature*, p.130 as 'Tom Cat Var.': A virus variegated form of **Tom Cat** - Light rose-pink blotched with white. Originated in USA.

Tom-Chi-Chi. Cannon, 1964, ACS., *The Camellia Journal*, vol.19, No.1, back cover. Orthographic error for **Tomo-Chi-Chi.**

Tom Clower. *(C.japonica)* Fendig, 1951, *American Camellia Catalogue:* Large phlox-pink, complete double, imbricated (formal), 10-10.5 cm across. Buds, usually double on alternate sides, are round and light green. They form early but open late. Leaves light green, elliptic to obovate, 8 cm long x 5 cm wide. Tip short and slender, veins recessed. Serrations shallow and wide apart, 3 mm pitch. Plant habit open and vigorous. Originated by Mr & Mrs T.S. Clower,

Gulfport, Mississippi, USA. First flowered 1944. Registered as No.88, *American Camellia Yearbook*, 1954.

Tom Coker. *(C.japonica)* Belle Fontaine Nursery Catalogue, 1961. No description. Originated in USA. No valid listing located.

Tom. Crown Jewels. Gentry, 1984, ACS., *The Camellia Journal*, VoI.39, No.4, p.17. Abbreviation for **Tomorrow Crown Jewel.**

Tom. Dawn. Gentry, 1984, ACS., *The Camellia Journal*, vol.39, No.4, p.17. Abbreviation for **Tomorrow's Dawn.**

Tom Durrant. *(C.reticulata), New Zealand Camellia Bulletin*, 1966, vol.IV, No.5, p.32, Reg. No.28: A seedling of *C.reticulata* 'Wild Form' x 'Shot Silk' (**Dayinhong**), originated at Tirau, New Zealand by Dr Jane Crisp. The flower is peony form, 12-14 cm across with 16-20 erect petals. The colour is crimson (HCC.CC.22/1) shading to Rose Bengal (HCC.25/2). The plant has a vigorous, erect growth habit with dark green, lanceolate leaves, 12 cm long x 5 cm wide. See colour photo, p.25, *New Zealand Camellia Bulletin*, 1966, vol.IV, No.6.

Tom Eagleson. *(C.japonica), American Camellia Yearbook*, 1974, p.174, Reg. No.1294: A 6 year old *C.japonica* seedling that first bloomed 1970; originated by Tom Eagleson, Port Arthur, Texas, USA. Plant growth is upright, dense and rapid in rate with dark green leaves, 8 cm long x 5 cm wide. The rose form double, **Julia Drayton** type, bloom is bright red with 48 petals, 9.5 cm across x 5 cm deep. Blooms mid-season.

Tom Hatley. *(C.japonica).* ACS, *Yearbook* 2011, p.146 with colour photo, Regn No.2813. A 20 year old chance seedling, first flowered 1998. Originated by M. Thomas Hatley, Charlotte. N.C., USA. Medium to large flower is 10.8 cm diameter x 6.5 cm deep, with 20 petals in separated layers. Heavy petal texture. Central column of stamens with yellow anthers and white to pink filaments. Plant is upright, with open growth at average rate. Mid-green leaves are 10 cm x 4.5 cm. Flowers midseason.

Tom Herrin. *(C.japonica)* Mark S. Cannon Scion Catalogue, 1962, p.10; SCCS., 1964, *Camellia Nomenclature*, p.121: White marked red. Large semi-double to peony form. Vigorous, upright growth. Blooms mid-season. Originated in USA by Tom Herrin. See, p.120, Macoboy, 1981, *The Colour Dictionary of Camellias*. Sport: **Tom Herrin Red.**

Tom Herrin Red. *(C.japonica),* Mark S. Cannon, 1964-1965, Scion Catalogue. No description. SCCS., 1966, *Camellia Nomenclature*, p.130: A solid red form of **Tom Herrin.** Originated in USA by Tom Herrin.

Tom Hoffman. *(C.reticulata* hybr.), *American Camellia Yearbook*, 1982, p.179, Reg. No.1852: A very large, bright red, semi-double, *C.hybrid* (*C.reticulata* 'Crimson Robe' (**Dataohong**) x [5XC(*C.reticulata* 'Cornelian' (**Damanao**) x *C.japonica* **Mrs D.W. Davis**) x *C.reticulata* 'Cornelian']), flowering mid-season to late. Originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first bloomed 1981. Average flower size, 15.5 cm across x 5 cm deep. Plant growth is upright, semi-dense and medium in rate with dark green finely serrulate leaves, 10.5 cm x 7.5 cm.

Tom Howe. *(C.japonica)* Hillcrest Nursery Catalogue, 1958: White striped pink. Large single to anemone form. Upright growth. Blooms early to mid-season. Originated in USA by Hillcrest Nurseries.

Tom Knudsen. (*C.japonica*), *American Camellia Yearbook*, 1967, p.233, Reg. No.961: A 10 year old chance seedling that first bloomed 1956; originated by Frank Maitland, Sylmar, California, USA. Plant growth is upright and sturdy with dark green leaves, 7.5 cm long x 5.5 cm wide. The very dark red flowers range from rose form double to formal double with a velvety sheen. The flower is 11 cm across x 7.5 cm deep with 50 petals and 4 petaloids. Blooms early to mid-season. See p.120, Macoboy, 1981, *The Colour Dictionary of Camellias*. Sport: **Tom Knudsen Variegated.** Chinese synonyms: 'Tangmu Nashen' and 'Hongzhenzhu'..

Tom Knudsen Variegated. (*C.japonica*), Gentry, 1969, ACS., *The Camellia Journal*, vol.24, No.1 as 'Tom Knudsen V.': A virus variegated form of **Tom Knudsen** - Very dark red blotched white. Originated in USA.

Tom. Lisa. Gentry, 1984, ACS, *The Camellia Journal*, vol.39, No.4, p.17. Abbreviation for **Tomorrow's Lisa.**

Tom. Park Hill. Gentry, 1984, ACS., *The Camellia Journal*, vol.39, No.4, p.17. Abbreviation for **Tomorrow Park Hill.**

Tom. Park Hill Blush. Gentry, 1984, ACS., *The Camellia Journal*, vol.39, No.4, p.17. Abbreviation for **Tomorrow Park Hill Blush.**

Tom. Park Hill Pink. Gentry, 1984, ACS., *The Camellia Journal*, vol.39, No.4, p.17. Abbreviation for **Tomorrow Park Hill Pink.**

Tom Perkins. *(C.x williamsii). American Camellia Yearbook*, 1994, p.62, colour photo between pp.64-65: Large size, rose red outer petals with neyron-rose mid-petals and blossom pink inner petals, formal double *C.x williamsii* seedling of **Creation.** Originated by F.F. Becker II, Brookhaven, Mississippi, USA. A 10 year old seedling that first bloomed 1987. Average flower size is 10.5 cm across x 7.5 cm deep with 60+ petals. The plant is upright and vigorous with dark green leaves 10 cm long x 5 cm wide. Chinese synonym 'Bojinsi'.

Tom Pouce. *(C.japonica)* Verschaffelt Catalogue, 1847-1848, p.63. No description. Fratelli Rovelli Nursery Catalogue, 1852, p.27: Imbricated double, pale pink; Franchetti, 1855, *Collezione di Camelie*, p.60: Small pink flower, colour fading to white, regular, petals numerous. de Jonghe, 1851, *Traité de la Culture du Camellia*, p.123: Formal double, pink changing to white. Originated in France. Orthographic errors: 'Thom Ponce', 'Tomm Pouce', 'Tom Pourcez'.

Tom Pouce. A. Stervinou, Catalogue 2008, p.13; French translation of **Tom Thumb**. Not allowable under International Commission rules.

Tom Pourcez. *Notiziaro della Società Italiana della Camellia*, Dec.1989, No.4, p.27. Orthographic error for **Tom Pouce.**

Tom Thumb. *(C.japonica)* SCCS., 1964, *Camellia Nomenclature*, p.121: Medium pink with darker pink edge. Medium, upright growth. Blooms mid-season. Originated by A. Krueger, San Gabriel, California, USA. Received the William E. Wylam Miniature Award, 1974. See p.121, Macoboy, 1981, *The Colour Dictionary of Camellias*. Note: The 1964 and 1966 issues of Camellia Nomenclature both give this as a pink with a darker pink edge. However from the 1968 issue and on, the description was changed to pink with a white edge, and this is the form that currently carries the name "Tom Thumb". From this it would appear that the sport "Thumbellina" was originally named "Tom Thumb". Due to the present universal use of the name **Tom Thumb** for the white edged form and **Thumbellina** for the dark pink edged form, these are let stand. Sports: **Thumbellina, Tom Thumb Blush.**

Tom Thumb Blush. *(C.japonica)*, SCCS *Camellia Nomenclature* 2009, p.122; A blush pink sport of **Tom Thumb**, raised in 1999 by Vi Stone, Baton Rouge, La., USA. Other details as for **Tom Thumb**.

Tomassini d'Italia. Louis Leroy, 1893, Catalogue, p.19. Synonym for **Thomasini.**

Tomaya. (Hut of Rushes), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chinkin-shô*, #170. Large white, 10 layer double. Kasuya, Kamegorô, 1859, *Tsubaki Irohayanose Irotsuki:* Beautifully arrayed snow white petals in full double. See JCS., 1969, *Tsubaki*, No.7, pp.24, 33, and ibid. 1982, No.21, p.100. Originated in Japan. (Believed extinct). Could be the same as the *Chinken Zufu* **Tomaya.**

Tomaya. (Ancient Hut of Rushes), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.307: Small to medium, white, rose form double with 4 rows of pointed petals and a few scattered stamens. See: JCS., 1964, *Tsubaki*, No.5, p.137. Thought to be the same as the above. Originated in Japan. (Believed extinct.)

Tomazini (d'Italie). Rousseau, Angers Catalogue, 1842-1843, p.4. Synonym for **Thomasini.**

Tomiko. (Personal Name) (*C.reticulata* hybrid) from Ibaragi Pref. *Japan Camellia* No. 67, February 2002: A natural seedling of **Barbara Clark.** Purplish pink, single, tubular, tubular stamen cluster, small, blooms in spring. Leaves elliptic, deep green, somewhat reflexed. Tree appearance resembles that of the Wabisuke family. Originated by Kunimitsu Suzuki in 1998.

Tomitamonogurui. Synonym for **Someya-no-teishu.**

Tomm Pouce. Verschaffelt Catalogue, 1849-1850, p.5. Orthographic error for **Tom Pouce.**

Tommasini. de Jonghe, 1851, *Traitè de la Culture du Camellia*, p.123. Large double imbricated flower, pale pink. Orthographic variant for **Thomasini.**

Tommaso Lazzarini. Roda Nursery Catalogue, 1885. Orthographic error for **Tommaso Lazzerini.**

Tommaso Lazzerini. *(C.japonica) R. Società Toscana d'Orticultura Bollettino,* 1876: Large, pink, formal double. Fratelli Roda, 1885, Nursery Catalogue, p.47: Medium sized perfectly imbricated flower, pale pink with a tendency to ashen. Originated in Italy by Santarelli as a seedling of 'Baldocci'. Orthographic error: 'Tommoso Lazzerini'.

Tommie Bowman. *(C.japonica), American Camellia Yearbook*, 2000, p.7, colour photo p.c14, Reg. No.2540. A red with purple tint, anemone form chance seedling with 8 large petals and 84 smaller, yellow anthers and yellow filaments. Average flower size is 7.5 cm across x 5 cm deep. Originated by Elizabeth R. Scott, Aiken, S.C., USA. The 12 year old seedling first flowered in 1994. Plant is upright and dense with average growth. Flowers early to mid-season and is cold hardy. Dark green leaves are 8.2 cm long x 3.2 cm wide.

Tommoso Lazzerini. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.227. Orthographic error for **Tommaso Lazzerini.**

Tommy Land. *(C.reticulata x C.lutchuensis).* Valdosta Camellias. Nov. 1990, ACS., *The Camellia Journal*, vol.46, No.4, p.22. No description. *American Camellia Yearbook*, 1992, p.39, Reg. No.2225: Very large size, dark red, semidouble *C.reticulata* 'Crimson Robe' (**Dataohong**) x *C.lutchuensis.* Originated by Frank Pursel, Oakland, California, USA. First bloomed 1984. Average flower size is 15 cm across x 8.7 cm deep. Plant growth upright, average and medium in rate with dark green leaves 11 cm long x 7 cm wide.

Tommy Weeks. (*C.reticulata* hybr.), *American Camellia Yearbook*, 1983, p.165, Reg. No.1911: A very large, deep red, semi-double, *C.reticulata* 'Crimson Robe' (**Dataohong**) x **Jean Pursel** seedling that blooms early to mid-season. Originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first bloomed 1982. Average flower size, 13 cm across with crinkled petals. Some veining in the petals is a darker red. Plant growth is upright, average and medium with dark green serrated leaves, 12.8 cm long x 4.5 cm wide.

Tomochichi. Cannon, 1963, ACS., *The Camellia Journal*, vol.18, No.5, p.28. Orthographic variant for **Tomo-Chi-Chi.**

Tomo-Chi-Chi. *(C.japonica)* Pyron, 1959, *American Camellia Yearbook*, p.91: A rich red, peony form with a sheen. Mid-season blooming. Large. Originated as a seedling of unknown parentage by Aurther Funk, Gimball's Point, Savannah, Georgia and named for a friendly Indian Chief who assisted the Georgia Colonists. Orthographic error: 'Tom-Chi-Chi'. Orthographic variant: 'Tomochichi'.

Tomo'e. (Eddy Design), *(C.japonica)* Itô, Ihei, 1695, *Kadan Chikinshô:* Large formal double red with piled up corolla in an eddy form. Thought to be synonymous with **Shirotomo'e** from *Honzô Hanamaki'e.* Originated in Japan. (Believed extinct.)

Tomo-no-ura. (Tomo's 'Tama-no-ura'). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.169 with colour photo; Large semi-double, deep red widely bordered white. Flowers mid-season to late. Leaves ovate, medium size. Upright growth with excellent branching. Selected by Tomo'o Ebata from seedlings of unknown parentage. Named by Tora Ebata, released by Soshin Hirai in 2005. From Saitama Pref., Japan.

Tomorrow. *(C.japonica) American Camellia Yearbook*, 1954, p.335, Reg. No.145: An 8 year old seedling of unkown parentage, originated at Tick Tock Nursery, Thomasville, Georgia, USA and first bloomed in 1950. Plant growth is rapid, open and slightly pendulous, with mid-green, oval leaves, coarsely serrate. Flower buds large, round, brown, showing colour a long time before opening. Flowers are incomplete double with large petaloids (Similar to **Gloire de Nantes**), 20-22 petals, 13-15 cm across. Flower colour is strawberry red, slightly lighter than **Woodville Red.** Blooms early to mid-season. Received the 'John Illges Award' in 1956 and the 'National Camellia Hall of Fame Award' in 1978. RHS., 'Award of Merit', 1960. Synonym: 'Ed Anderson'. See colour photos: *American Camellia Yearbook*, 1958, facing p.114.; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.121. This camellia has generated the largest number of sports of any camellia so far, according to the number that have been named. No doubt many of them are very similar. They are as follows: **Tomorrow Blush, Tomorrow Crown Jewel, Leanne's Tomorrow, Tomorrow Delight Variegated,** 'Tomorrow Moonlight', '**Tomorrow, Marbury's Light Pink',** 'Tomorrow Peaches', **Tomorrow Park Hill,** 'Tomorrow Pink', 'Tomorrow Queen', **Tomorrow Park Hill Blush,** 'Tomorrow Supreme', **Tomorrow Park Hill Pink, Tomorrow White,** 'Tomorrow Sunrise', **Tomorrow Peony Variegated,** 'Tomorrow Tuxedo', 'Tomorrow Pink Variegated', **Tomorrow Variegated, Tomorrow's Dawn, Tomorrow's Lisa, Tomorrow's Dawn Bessie**, **Tomorrow's Delight,** 'Tomorrow's Dawn Delight', **Tomorrow's Dawn Blush, Tomorrow's Dawn Peony, Tomorrow's Dawn Variegated, Tomorrow's Tropic Dawn, Tomorrow's Sweet Image, Queen of Tomorrow**, **Pink Tomorrow, Pink Tomorrow Variegated.** Chinese Synonym: 'Mingtian'.

Tomorrow Blush. *(C.japonica)*, Cannon, 1980, ACS., *The Camellia Journal*, vol.35, No.4: Blush pink sport of **Tomorrow.** Originated in USA.

Tomorrow Contortionné. J & F Thoby, Gaujacq, France, Catalogue, 2009, p.8; Red, peony form. Insufficient description to decide if it differs from the many named sports of **Tomorrow.**

Tomorrow Crown Jewel. *(C.japonica)* Tick Tock Nursery Catalogue, 1968: A sport of **Tomorrow.** White brushed red in the throat, with occasional streak of red on one or more petals. For colour photo see: p. 121, Macoboy, 1981, *The Colour Dictionary of Camellias.*

Tomorrow (Crutches). *(C.japonica)* Cannon, Scion Catalogue, 1964-1965, p.15. No description. Originated in USA. No valid listing located.

Tomorrow Delight. Cannon, 1970, ACS., *The Camellia Journal*, vol.25, No.l. Orthographic variant for **Tomorrow's Delight.**

Tomorrow Delight Variegated. *(C.japonica)* Mark S. Cannon, 1970, ACS., *The Camellia Journal*, vol.25, No.4 as Tomorrow Delight Var.': A virus variegated form of **Tomorrow's Delight** - Pink and white. Originated in USA.

Tomorrow (Gus Roberts). *(C.japonica)* Mark S. Cannon Scion Catalogue, 1964-1965, p.15. No description. Originated in USA. No valid listing located.

Tomorrow, Kayko Variegated. *(C.japonica)* Mark S. Cannon Scion Catalogue, 1964-1965, p.16. No description. Originated in USA. No valid listing located.

Tomorow Leannne's. SCCS., 1978, *Camellia Nomenclature*, p.154. Synonym for **Leanne's Tomorrow.**

Tomorrow, Marbury's Light Pink. *(C.japonica) American Camellia Yearbook*, 1977, p.219, Reg. No. 1421: A very large, light pink with an outer edge of each petal a lighter pink. A semi-double sport of **Tomorrow** first observed 1960. Originated by S.L.Marbury, Wilmingon, North Carolina, USA. It differs from **Leanne's Tomorrow** in that each petal is lighter, almost silvery. Blooms early to mid-season.

Tomorrow Moonlight. Cannon, 1968, ACS., *The Camellia Journal*, vol.23, No.4, p.12. An unstable form of **Tomorrow Park Hill.**

Tomorrow Park Hill. *(C.japonica)* Mark S. Cannon Scion Catalogue, 1964-1965, p.16. No description. *American Camellia Yearbook*, 1965, p.248, Reg. No.779: A sport of **Tomorrow Variegated,** first observed in 1960. Originated by Mrs R. Peer, Hollywood, California. Plant growth is upright and open, rapid in rate with dark green leaves the same as **Tomorrow.** The semi-double flowers are 13 cm across x 6 cm deep. The colour is a light, soft pink, deepening towards the petal edge and with some variegation. Blooms early to mid-season. For colour photos see: *American Camellia Yearbook*, 1977, facing p.51; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.121. This cultivar has received the following awards: The William Hertrich Award, 1968; The Sewell Mutant Award, 1967; The William Woodroof Camellia Hall of Fame Award, 1978; The National Camellia Hall of Fame Award, 1981. Orthographic error: 'To Morrow Park Hill'. Orthographic variant: 'Park Hill Tomorrow'. Abbreviation: 'Tom. Park Hill'. Synonyms: 'Tomorrow Moonlight', 'Tomorrow Peaches', 'Tomorrow Sunrise'. Chinese Synonym: 'Huashan Mingtian'.

Tomorrow Park Hill Blush. *(C.japonica) American Camellia Yearbook*, 1980, p.174, Reg. No.1597: A large to very large, soft, light pink, semi-double mutant of **Tomorrow Park Hill** that blooms early to mid-season; originated by R. Stanley Magee, Bogalusa, Louisiana, USA. Flower has no markings other than the soft pink colour. Plant characteristics the same as its parent. See colour photo: Rear cover, ACS., 1987, *The Camellia Journal.* vol.42, No.2. Chinese synonym: 'Xiuhong Huashan Mingtian'.

Tomorrow Park Hill Pink. *(C.japonica)* Woodroof, 1974, *American Camellia Yearbook*, vol.II, p.29: A sport of **Tomorrow Park Hill** without the variegation. Originated in USA. Abbreviation: 'Parkhill Pink'. Chinese Synonym: 'Fenbian Fuse Mingtian'.

Tomorrow Park Hill Pink Blush. ACS 1992, *The Camellia Journal*, vol.47, No.4, p.13. Valdosta Camellia Scions advert. Synonym for **Tomorrow Park Hill Blush**.

Tomorrow Peaches. Cannon, 1968, ACS., *The Camellia Journal*, vol.23, No.4. An unstable form of **Tomorrow Park Hill.**

Tomorrow Peony. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* Synonym for **Tomorrow.**

Tomorrow Peony Variegated. *(C.japonica) American Camellia Yearbook*, 1968, p.137, Reg. No.1000: A sport of **Tomorrow Variegated** that was first observed in 1962 by Richard E. Ward, Birmingham, Alabama. Growth habit, rate and leaves are the same as **Tomorrow.** The peony form flower is the same size and colour as **Tomorrow,** but heavily variegated. Size of blooms is up to 16 cm across. Some flowers consist of 6 separate flowerlets in a circle, with another centre flower in the form of a tulip. Has 45-55 petals and about 200 petaloids. Blooms mid-season. Keeps well when cut.

Tomorrow Pink. Cannon, 1970, ACS., *The Camellia Journal*, vol.25, No.1. Orthographic variant for **Pink Tomorrow.**

Tomorrow Pink Variegated. Mark S. Cannon Scion Catalogue, 1964-1965, p. 16. as 'Tomorrow Pink Var,'. Orthographic variant for **Pink Tomorrow Variegated.**

Tomorrow Queen. Cannon, 1984, ACS, *The Camellia Journal*, vol.39, No.4, p.19. Synonym for **Queen of Tomorrow.**

Tomorrow Sunrise. Pyron, 1970, *American Camellia Yearbook*, p.106. Synonym for **Tomorrow Park Hill.**

Tomorrow Supreme. Griffin ed., 1958, *Camellian*, 11:18. Synonym for **Tomorrow Variegated.**

Tomorrow Tuxedo. Pyron, 1969, *American Camellia Yearbook*, p.100. Synonym for **Tomorrow Variegated.**

Tomorrow Variegata. Hillebrand Nursery Catalogue, 1976. Names including latin words are not permitted by the Horticultural Code for new names after 1958. Error for **Tomorrow Variegated.**

Tomorrow Variegated. *(C.japonica)* McCaskill Garden's Newest Camellias, 1957. A virus variegated form of **Tomorrow** - Strawberry red blotched with white in varying degrees. Synonyms: 'Tomorrow Supreme', 'Tomorrow Tuxedo'. Orthographic error: 'Tomorrow Variegata'. Sport: **Queen of Tomorrow.** Chinese synonym: 'Fuse Mingtian'.

Tomorrow Watters. *(Cjaponica)*, Bob Wines Nursery Catalogue, 1985-1986, p.4. No description. Originated in USA. No valid listing located.

Tomorrow White. *(C.japonica), American Camellia Yearbook*, 1985, p.185, Reg. No.1967: A large, pure white sport of **Tomorrow.** Originated by I. John Movich, La Verne, California, USA. First observed 1973. Plant growth and flower form as the same as for the parent.

Tomorrow's Dawn. *(C.japonica) American Camellia Yearbook*, 1960, p.208, Reg. No.463: A sport of **Tomorrow,** originated by L.W.Ruffin Jr. and R.E.Allums, Ellisville, Mississippi, USA. Plant growth is the same as the parent, leaves medium green, oval, coarsely serrate. The soft pink, incomplete double flowers, 13-15 cm across, have 20-22 petals with large petaloids. The colour of the flower varies from deep, soft pink to light pink in the heart of the flower, shading to a snow white border. Flowers early to mid-season. Abbreviation: 'Tom. Dawn'. Sports: **Tomorrow's Dawn Blush, Tomorrow's Dawn Variegated, Tomorrow's Dawn**

Peony. Synonym: 'Tomorrow's Dream'. Orthographic errors: 'To Morrow's Dawn', 'Tomorrow's Down'. For colour photos see: SCCS., 1961, *The Camellia Review*, vol.23, No.2 and on the front cover, ACS., 1961, *The Camellia Journal*, vol. 16, No.2. Received the Sewell Mutant Award of the ACS for 9164. Chinese synonym: 'Mingtian Zhixiao'.

Tomorrow's Dawn Bessie. *(C.japonica) American Camellia Yearbook*, 1980, p.14, Reg. No.1618: A very large, deep soft pink, shading to white at the edge, peony form to semi-double mutant of **Tomorrow,** that blooms early to mid-season. Originated by Bob Waters, Kilgore, Texas, USA. First observed 1977. Average flower size, 14 cm across x 2 cm deep with 45-50 petals. Improved texture and wide white border and more petals than parent. Plant growth is open and slightly pendulous, rapid in rate with mid-green leaves. See colour photo, pl.147, p.71, *Encyclopedia of Camellias in Colour*, vol.II, 1978. Abbreviation: 'Tom. Dawn Bessie'.

Tomorrow's Dawn Blush. *(C.japonica) American Camellia Yearbook*, 1982, p.179, Reg. No.1842: A very large, blush pink with a wide white border, semi-double mutant of **Tomorrow's Dawn** that blooms early to mid-season. Originated by Clyde Copeland, Jackson, Mississippi, USA. Plant and flower characteristics are the same as the parent but the flower does not have the red streaks. Abbreviation: 'Tom. Dawn Blush'.

Tomorrow's Dawn Delight. Shackelford, 1972, ACS., *The Camellia Journal*, vol.26, No.1: Synonym for **Tomorrow's Delight.**

Tomorrow's Dawn Peony. *(C.japonica)* Cannon, 1967, ACS., *The Camellia Journal*, vol.22, No.1: **Tomorrow's Dawn** with a denser petallage. Originated in USA.

Tomorrow's Dawn Variegated. *(C.japonica)* Gentry, 1968, ACS., *The Camellia*, vol.23, No.1, p.26: A virus variegated form of **Tomorrow's Dawn** - Pink blotched white. Originated in USA.

Tomorrow's Delight. *(C.japonica)* SCCS., 1972, *Camellia Nomenclature*, p.143: Sport of **Tomorrow**. Soft creamy white with a few flecks and streaks of red. Originated in USA by J. Fuller, Montgomery, Alabama, USA. Synonyms: 'Tomorrow's Dawn Delight', 'Tomorrow Delight'.

Tomorrow's Down. Torsanlorenzo Catalogue, 1984-1985. Orthographic error for **Tomorrow's Dawn.**

Tomorrow's Dream. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* Synonym for **Tomorrows Dawn.**

Tomorrow's Lisa. *(C.japonica)* SCCS., 1978, *Camellia Nomenclature*, p.155: Sport of **Tomorrow Park Hill.** Blush white with red flecks and a few streaks of pink, turning red. Originated in USA by A.R. Fatherree, Jackson, Mississippi.

Tomorrow's Marbury Lt. Pink. ACS 1994, *The Camellia Journal*, vol.49, inside front cover; Valdosta Camellia Scions advert. Orthographic error for **Tomorrow Marbury's Light Pink.**

Tomorrow's Sweet Image. *(C.japonica) American Camellia Yearbook*, 1974, p.174, Reg. No.1261: A sport of **Tomorrow Park Hill** that first flowered 1970. Originated by Jon Laird Carvain, Dallas, Texas, USA. Plant growth is upright and rapid. The semi-double to loose peony form bloom is pale orchid pink, heavily variegated with white; yellow anthers and white filaments. It measures 14-17 cm across. Blooms mid-season.

Tomorrow's Tropic Dawn. *(C.japonica) American Camellia Yearbook*, 1968, p.137, Reg. No.1010: A sport of **Tomorrow's Dawn**, first observed in 1965. Originated by R. M. Merino, Fresno, California, USA. Growth habit the same as the parent. Flower formation same as the parent; white with an occasional **Tomorrow** red line or a small wedge, or with a **Tomorrow's Dawn** pink line or small dash or both. As the flower matures the background colour becomes blush. Chinese synonym: 'Mingtian Redai Zhixiao'.

Tomoshibi. (A Light), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.106, colour photo, p.234, description: Medium size, anemone form with 6-7 outer guard petals, narrow, oblong,

notched, pale pink and a compact cushion of small, folded, erect petals and petaloids of the same colour in the centre. Leaves obovate, dark green, coarsely serrate, petioles hirsute. Originated in Jô'etsu. City, Niigata Prefecture, Japan. Named and released by Kaoru Hagiya. Colour photo, p.354, Yokoyama & Kirino, 1989, *Nihon no Chinka.*

Tomoshiraga. (White Haired Couple), *(C.rusticana)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.290, colour photo, p.291, description: Medium size, white, single with 8 ovate, fluted petals and central stamen column with rare petaloids and yellow anthers. Blooms mid-season to late. Leaves shining, deep green, elliptic, apices acuminate, margins serrate. Originated in Niigata Prefecture, Japan from before 1925. Red or variegated flowers appear often on old big trees of this variety. Note: The name symbolises everlasting happily married life. (Until the couples' hair turns white).

Tomoshiroga. ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.23. Different reading for **Tomoshiraga.**

Tomowarai. (Smiling together), *(C.japonica)* Wada, 1941, *Japanese Garden Treasures*, p.28: Single, funnel campanulated, beautiful salmon pink. Originated in Japan. Note: Kanji characters and meaning are not confirmed.

Tomuro. (Place name), *(C.japonica)* Inazawa Nurseries Co. Ltd. Catalogue, 1987-1988, p.11, A-528: Dark red single, campanulate bloom, medium size, early flowering. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.183, colour photo and description: Small size, deep red, wide campanulate single with 5 wide, embracing, concave petals, some slightly reflexed, and a central stamen column with yellow anthers. Blooms mid-season to late. Leaves small and flat, shining mid-green, elliptic, apices tapering acuminate, Margins serrate. Originated in Ishikawa Prefecture, Japan. An old cultivar, named and released by Tadao Yamaguchi in 1981.

Tonan. (The World), *(C.japonica)* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.65. No description. Originated in Japan.

Tonasegawa. (Tonase River), *(C.japonica)* Sakuden, 1630, *Hyakuchinshû:* Large red, mounted double, 3 rows, lower 4 row, middle 4 petals, upper 4 petals. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.103. Originated in Japan. (Believed extinct.)

Tonda-monogurui. Sakuden, 1630, *Hyakuchinshû. Chinka Zufu*, (before 1700), Watanabe, 1969: Large size, red, anemone form. Synonym for **Someya-no-teishu.** See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.3, p.93.

Tongcaoban Songzike. (Pith Paper Petalled Pine Cone Shell), *(C.reticulata)*, Chuang, 1959, *Yunnan Shancha Hua.* No description. Different readings: 'Tung-tsao-pan Sung tzu-k'o', 'Tungtsaobansungtzeke'. Originated in Yunnan, China. (Believed extinct.)

Tongcaopan. Yü, 1950, RHS, Camellia and Magnolia Conference Report, p.130. Different reading for 'Tungtsaoban', synonym for **Juban.**

Tongliu. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.77, No.347. Chinese synonym for the New Zealand *C.rosiflora x C.tsaii* **Baby Willow.**

Tongniao. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.425; Chinese synonym for the Japan *C.japonica* **Kayoidori.**

Tongyan. (Childish Face). *(C.reticulata*), China Regn No.12. *China Flowers & Horticulture,* Apr 2007, No.14, p.49, with colour photo; Originated by Yang Dakui, Dazhuang Village, Tenchong, Yunnan, China. Flowers light pink, slightly darker at the base, 8-12 cm diameter. 24-26 petals, imbricated, arranged in 5-6 whorls, flat with emarginated apex. Stamens as petaloids, pistil incomplete. Leaves broad-lanceolate to elliptic 5-9 cm long and 2-5 cm wide, apices acuminate, bases cuneate, slightly incurved and reflexed downwards. Flowers mid-season.

Tongzimian. (Baby Face), *(C.reticulata),* Yü & Feng, 1958, *Yunnan Shancha Hua Tuchih;* Feng et al., 1985, *Yunnan Camellias of China*, p.81 colour photo and description: Leaves oblong to ellipticovate, reclinate in a V-shape, apices obtusely rounded, bases obturely rounded to broad-cuneate, 7-10.5 cm. long x 3.5-4.5 cm. wide. Flowers small, white with a slight pink flush (RHS.CC.56D, 36D when open), diameter 7-9 cm. Petals about 35 in 5-7 whorls, outer whorls large, inner whorls small, imbricately arranged. Stamens mostly petaloid, very few rudimentary, pistils rudimentary. This cultivar has a shrubby habit, short branches, numerous nearly erect side branches, leaves concentrated at the top of the branches, and small pink and white flowers like the colour of a baby's face. The flower colour is the lightest among the Yunnan Camellias. In Dali, where this cultivar originated, it is called 'Yinhong Juban'. This is a rare cultivar. Blooms late. Different readings: 'Tungtzumien', 'T'ung-tzu-mien', 'Tungtzemien'. Synonyms: 'Yinhong Juban', 'Ruanzhi Baihong', 'Baby Face', 'Young Boy's face', 'Boyish Face'. See colour photos: Feng et al., 1981, *Yunnan Shancha Hua*, pp. 122, 123.

Tongzimian. *Chinese Camellia Culture,* 2003, Appendix, p.567. Synoym for the Shanghai *C.japonica* **Yueguang.**

Toni Finlay's Fragrant. *(C.x williamsii). New Zealand Camellia Bulletin,* 1995, Issue No.120, vol.XIX, No.1, p.46, Reg. No.362: Originated by J.R. Finlay, Whangarei, New Zealand. Colour pink (RHS.CC.62B), anemone form with yellow anthers, straw coloured filaments, 8 petals and 80 petaloids. Size 10 cm across x 5 cm deep. Growth habit is average and medium density and rate, with dark green leaves 10 cm long x 4.5 cm wide. Flowers are fragrant and early to mid-season blooming. Flowers are self-grooming, falling intact. A seedling of **Mrs. Bertha A. Harms** x (**Salab** seedling x **Lookaway**).

Toni Lee. *(C.hybrid). New Zealand Camellia Bulletin,* 1995, Issue No.120, vol.XIX, No.1, p.46, Reg. No.358: Originated by K.R. Watson, Waikanae, New Zealand. Pale to deep pink (RHS.CC.56A & 55A-B), single with yellow anthers on white filaments and with 7 petals. Flowers are 6 cm across x 3 cm deep. A chance seedling. Plant growth is spreading and slow, and leaves are dark green 9 cm long x 5 cm wide. Blooms early to late.

Toni Odero. *(C.japonica) R. Società Toscana di Oricultura Bollettino,* 1877, No.2, p.107 as 'Tony Odero': Large, regular, imbricated flowers, outer petals white with large red spots. Mercatelli Catalogue, 1881, p.36: Large, regularly imbricated flower, outer petals pure white with large red blotches, centre petals pale pink. Originated in Italy by T. Odero, Genoa. Orthographic errors: 'Tony Oderi', 'Tonio Odero', 'Tito Odero', 'Tonio Odes'.

Tonio Odero. van Houtte Catalogue, 1879-1880, 184:241. Charles Vuylsteke, 1877-1878, Catalogue, p.10. Orthographic variant for **Toni Odero.**

Tô-nishiki. (Chinese Brocade), *(C.japonica)* Tuyama, 1968, *Camellias of Japan*, pl.383, p.195, description, p.203: Leaves broadly oblong-elliptic, base rounded, apex acute, obscurely depressed-crenate margins. Flower medium size, irregular peony form, dark rose (Crimson 22/1) broadly bordered white. Flower colour is similar to **The Mikado** and **Hikarugenji.** Flowers mid-season. Originated in Sofu'e-machi, Nakagami-gun, Aichi Prefecture, Japan. See: Satô, 1975, *Chûbu no Tsubaki*, p.87 as 'Tônishiki'. A Kantô variety with the same name characters uses the different reading **Kara-nishiki,** but is a different cultivar.

Tô-nishiki. (Chinese Brocade), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Minagawa, 1937, *Chinkashû:* Pink ground, red speckles, bamboo whisk-like stamens. Thought to be a different reading for **Kara-nishiki** from *Honzô Zufu*, 1829, which is also listed in the modern bibliographies; i.e. Tuyama, 1966, *Camellia Cultivars of Japan*, p.338. Originated in Japan.

Tonnie Leche. McIlhenny Catalogue, 1941. Synonym for 'Alba Superba' [**Alba Superba (MG)].**

Tonoyama. (Place Name), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.77, colour photo and description: Medium size, very pale pink, campanulate single with 5-6 wide, overlapping petals and a central stamen column with white filaments, joined for the lower third, and yellow anthers. Blooms mid-season to late. Leaves glossy, thick, deep green, broad-elliptic, apices acute, margins shallowly serrate. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1985.

Tony Hunt. (*C.reticulata* hybrid). ACRS, *Camellia News*, 1991, No.119, p.11, Reg. No.402: Originated by John Hunt, Boronia, Victoria, Australia as a cross of *C.reticulata* hybrids **Overture** x **Lasca Beauty,** that first flowered 1988 on a 5 year old plant. Very large, incomplete double to loose peony form, with pink flowers (RHS.CC.55B), 20 cm across x 13 cm deep. 25 folded and fluted petals intermixed with fascicles of stamens. Flowers mid-season on an upright, rapid growing plant. Leaves glossy green, flat, elliptic, margins serrulate, apices acuminate. Colour photo, 1994, Camellia News No.128, p.2.

Tony Odero. *R. Società Toscana di Orticultura Bollettino*, 1877, No.2, p.107. Orthographic variant for **Toni Odero.**

Tony Pinheiro. (*C.reticulata* hybrid). ACS, *The Camellia Journal*, Nov. 2000, p.29 with colour photo. A semi-double seedling of **Four Winds** x **Lilette Witman.** Red with some fluorescence. Heavy petal texture. Plant growth is upright, dense and vigorous. Flowers early to late. Originated by Jack L. Mandarich, Salinas, Calif., USA. *American Camellia Yearbook*, 2000, p.7, colour photo p.c14. The 12 year old seedling first flowered in 1992. Flowers have 16 petals and golden anthers. Average flower size is 15 cm across x 5.7 cm deep. The dark green leaves are 12.7 cm long x 7.5 cm wide.

Tonya. *(C.japonica) American Camellia Yearbook*, 1976, p.164, Reg. No.1386: An 8 year old chance *C.japonica* seedling that first bloomed 1972; originated by Paul Gilley, Grandridge, Florida, USA. Plant growth is upright, dense and rapid with dark green leaves, 7.5 cm x 5 cm. The semidouble, **Frizzle White** type bloom is brilliant red with 12 large petals, 6 large petaloids, light red filaments and yellow anthers. The plant is slightly pendulous, average size bloom is 12.5 cm across x 6 cm deep. Blooms early to mid-season. Chinese synonym 'Tuoniya'.

Tony's Joy. *(C.reticulata x C.japonica)*, SCCS., 1981, *Camellia Nomenclature*, p.182: Bright red. Large to very large, semi-double. Blooms mid-season. Originated in USA by A. Funari, Santa Clara, California from a *C.reticulata x C.japonica* seedling.

Tooey. *(C.japonica)* Cannon, 1966, *American Camellia Yearbook*, p.73; *American Camellia Yearbook*, 1967, p.233, Reg. No.925: An 8 year old chance seedling that first bloomed 1956. Originated by Mr & Mrs H.E. Ashby, Bonneau, South Carolina, USA. Plant habit is upright, open and slow with dark green leaves, 10 cm x 2 cm. Flower is semi-double, similar to **Frizzle White,**

and is 12.5 cm across x 3.7 cm deep. Colour is soft pink with golden stamens. Petals fold over to partly cover the stamens. Blooms mid-season.

Tô-ôfu. (Father of the East King), *(C.japonica)* Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.40; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.304, p.129, description, p.243: Large, light pink, single, 5-6 large, overlapping petals with irregular margins, opening wide cup-shaped about a large dominent centre cluster of stamens with pale golden anthers. Early blooming. Leaves glossy medium green, broad-ovate, prominent venation. For further colour pl.: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.103, 234. Originated in Chûbu area, Japan by Haruichi Sakuragi. Named and released by Hiroshige Hayakawa. The form of this plant and leaves resembles **Seiôbo.**

Tootie. *(C.japonica) American Camellia Yearbook*, 1983, p.165, Reg. No.1836: A very large, pink, semi-double *C.japonica* chance seedling that blooms early to mid-season; originated by Mary McLeod, Monticello, Florida, USA. The 8 year old seedling first bloomed 1978. Average flower size is 12.4 cm across x 7 cm deep with 18 petals, orange-yellow stamens and pinkish-white filaments, Two or three rabbit ears. Plant growth is upright, average and medium with dark green leaves, 8cm long x 4.5 cm wide.

Tootsie. *(C.japonica) American Camellia Yearbook*, 1968, p.138, Reg. No.995: A 9 year old chance seedling that first bloomed 1964; originated by Richard E. Ward, Jr., Birmingham, Alabama, USA. Plant growth habit is spreading, open and slow with dark green leaves, 5 cm long x 2.5 cm wide. The formal double flower is 5-5.5 cm across x 2 cm deep with 105 petals. Colour is chalk white. Flower frequently opens to form a 5-pointed star. Blooms mid-season to late. See colour photo p.26, *New Zealand Camellia Bulletin*, vol.XVI, No.7, Nov. 1990.

Top Fragrance. (*C.japonica* hybrid). *New Zealand Camellia Bulletin*, March 1999, Issue No.132, vol.XXI, No.1, p.16, Reg. No.406. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between a hybrid seedling [(**Mrs Bertha A. Harms** x **Salab**) x **Tama-ikari**] x *C.japonica* **Kramer's Supreme,** which first flowered in 1993. Flowers range from anemone to peony form, 8- 10 cm diameter x 4-4.5 cm deep, with about 12 petals and about 65 quite large petaloids plus many stamens. The colour is a deep pink (RHS.CC.52A) and the flower has a light scent. The plant is upright, and of average density and growth rate and flowers early to mid-season. The dark green leaves are 9 cm long x 5 cm wide.

Top O' the Morn. *(C.japonica)* SCCS., 1958, *Camellia Nomenclature*, p.84: A variegated red on pink with the back of the flower a light clear pink, forming a variegated semi-double, poppy-like flower. A low, bushy grower. Blooms mid-season to late. Originated by C.S. Hearn, Arcadia, California, USA.

Top Red Lion's Head. Ikeda, 1976, *American Camellia Yearbook*, p.144. Erroneous synonym for **Dinghong Jiuxin** as 'Tinghungchiuhsin'. (Should be 'Top Red Nine Hearts')

Top Red Nine Hearts. Waterhouse, 1970. ACRS., *Camellia News*, p.9. Synonym for **Dinghong Jiuxin.**

Top Sargeant. Fruitland Nursery Catalogue, 1950-1951, p.25. Orthographic error for **Top Sergeant.**

Top Sergeant. *(C.japonica)* Fruitland Nursery Catalogue, 1950-1951, p.25 as 'Top Sargeant': A large red, full, peony form. Early to mid-season flowering. Originated in USA by Fruitland Nursery, Augusta, Georgia. Orthographic errors: 'Top Sargent', 'Top Sargeant'.

Topiary Pink. (*C.pitardii* hybrid). *New Zealand Camellia Bulletin*, March 2003, Issue No.144, vol.XXIII, No.2, p.14, Reg. No.449. Registered by Mark Jury, Tikorangi, New Zealand. A chance seedling of *C.pitardii* var. *pitardii* which first flowered in 1990. Flower is a miniature formal double, 4 cm diameter x 2 cm deep, with about 25 petals and no stamens. The outer petals are obcordate in shape, and strongly notched. Colour is a clear blush pink

(RHS.CC.73C). Plant has a distinctive upright pillar form, dense and slow-growing, with small, narrow dark green leaves 4 cm long x 1.5 cm wide. Flowers mid-season.

Tôraku. (Peach Pleasure), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.104, colour photo, p.234, description: Miniature, smaller than 'Momosuzume', purplish pink single, petals to the number of 5, long oblong, irregular length, crinkled. with a large central column of yellow stamens. Leaves deep green, lanceolate, apex tapering acuminate, margins serrulate and waved. Suitable for container culture. Originated in Unazuki-machi, Toyama Prefecture, Japan.

Torch. *(C.japonica)* Magnolia Gardens and Nursery Catalogue, 1942-1943: Dark red. Medium to large, semi-double. Mid-season to late blooming. Originated in USA by Magnolia Gardens, John's Island, South Carolina.

Tordero. *(C.japonica)* Linden Nursery Catalogue, 1871-1872, p.19. No description. Originated in Italy. Orthographic error: 'Tordoro'.

Tordoro. Mercatelli Catalogue, 1895. Orthographic error for **Tordero.**

Toreador. *(C.japonica)* Magnolia Gardens and Nursery Catalogue, 1944-1945: Pink. Medium, size, semi-double with petaloid centre. Originated in USA at Magnolia Gardens, John's Island, South Carolina.

Torgioni. van Houtte Catalogue, 1851, 44:27. Orthographic error for **Targioni.**

Tôri. (Peach Village), *(C.japonica)* Yokoyama. & Kirino, 1989, *Nihon no Chinka*, p.132, colour photo and description: Small to medium size, pink, campanulate single with 5 wide, embracing petals with pointed summits and rolled-in lateral margins, and a central stamen cylinder with white filaments, joined for the lower half, and yellow anthers. Blooms mid-season. Leaves elliptic, olive green, apices acuminate, margins serrate. Originated in Ehime Prefecture, Japan. Selected from natural seedlings by Haruko Shiro'oka. Named and released by Tokihiro Kôno in 1985.

Toricelli. *(C.japonica)* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete* p.15. No description. Originated in Italy. (Believed extinct.)

Toridon. *(C.japonica)* Cachet Catalogue, 1840-1841, p.3. No description. Originated in Italy. (Believed extinct).

Toridori. (Diversity), *(C.japonica)* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Light coloured, full, double. The base of the flower is variegated with white in a splashed pattern. Different reading: 'Toritori'. See., JCS, 1969, *Tsubaki*, No.7, pp.23-24.

Torikai. (uncertain), *(C.japonica)* Shirai, Mitsutarô, 1926, *Tsubaki Kai:* A pink single with an anemone centre. Originated in Japan.

Tôrinji. (Torin Temple), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.265, colour photo and description: Small to medium size, pink with some white at the margins, campanulate single, with rounded, embracing petals and a central stamen column, with white filaments, joined for the lower third, and pale yellow anthers. Blooms mid-season to late. Leaves glossy deep green, broad-ovate, apices abrupt-acute, margins serrate. The old tree of this variety is in the precincts of the Torin Temple, on the northern side of Shinji lake, Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1988.

Tori-no-ko. (Chicken), *(C.japonica)* Itô, Ihei, 1710, *Zôho Chikinshô*, vol.II; Itô, Jukyû,1739, *Honzô Hanamaki'e;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Hamamatsu, 1825, *Setsuyô Kikan;* Yashiro, 1841, *Kokon Yôrankô*, vol.311: Large three fold flower. The corolla has long slender petals with gaps between each like a lotus flower. Tuyama, 1968, *Camellias of Japan*, pl.354, p.179, description, p.195: Flowers semi-double, pale pink striped rose

(Spinel red 0023), petals widely opened and gradually recurved outwards. Late flowering. Petals fall after flowering. Loosely branching, leaves narrowly elliptic to lanceolate-elliptic long angustate to both ends, remotely depresso-crenate at the margin, petioles glabrous. Although the ancient descriptions are somewhat different to the modern variety, these are now believed to be the same as the modern cultivar. For further colour pls. & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.14, p.32; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.306, p.337; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.98, p.35. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.106, 234. Originated in Kantô area, Japan. Synonym: 'Tori-no-ko-tsubaki'. Different reading: 'Niwatori-no-ko'. Orthographic error: 'Tsuri-no-ko'. Sports: **Benitorinoko, Hi-no-renge.** See: JCS., 1983, *Tsubaki*, No.22, p. 119; ibid, 1969, No.7, p.23.

Tori-no-ko-tsubaki. Itô, Ihei, 1710, *Zôho Chikinshô.* Synonym for **Tori-no-ko.**

Toritamago. (Hen Egg), *(C.japonica)* Tateyama Nursery List 1957: Large, lotus form, pink with vertical stripes. Originated in Japan. Different reading: 'Niwatori-tamago'.

Tôsen. (Fountain of Peaches), (Wabisuke), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.122, colour photo and description: Small size, soft pink, with red graduating to the petal edge, wide campanulate single with 5 broad, emarginate, overlapping petals and a central stamen cylinder with white filaments, joined for the lower third, and yellow anthers. Blooms mid-season to late. Leaves, glossy, deep green, elliptic, apices tapering acuminate, margins serrate. A seedling of **Tarôkaja.** Originated in Ôsaka Prefecture, Japan.

Tôsenji. (Tôsen Temple), *(C.japonica)* Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.49; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.404, p.163, description, p.256: Large, semi-double, soft pink with crimson stripes; petals in 2-3 rows, large, rounded, emarginate, innermost row a little crinkled, sometimes a petaloid or small petals breaks the stamen cluster into fascicles; anthers brownish-yellow, filaments creamy. Leaves dark to medium green, dull surface, centre rib keeled, obovate; apex acuminate, margins serrate. Originated at Kurume, Fuku'oka Prefecture, Japan, See colour photo & description, pp.103, 233, Seibundô Shinkôsha, 1979, *Senchinshû.* Seedling of **Fukumusume.**

Tôsenka. (Flower of Peach Fountain). *(C.x williamsii). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.177 with colour photo; English translation p.123. Small to medium, purplish red, lotus-like tubular to trumpet shaped semi-double, cylindrical stamen column. Flowers mid-season to late. Leaves narrowly elliptic, small to medium. Weeping branches. A cross between *C.japonica* 'Kujaku-tsubaki' (**Hakuhan-Kujaku**) and *C.x williamsii* **Tulip Time.** Originated by Nobuo Sasai in 1979, released in 1985. From Okayama Prefecture.

Tôsenkyô (Fun of the Tôsen Game), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.31: Small size, pink, single with anemone centre to double, fragrant flower. Blooms mid-season. Originated in Niigata Prefecture, Japan. Note: 'Tôsen' is a game in which the Ôgi fan is thrown at a target and was popular in the Edo era before 1868. A seedling of **Dream Girl** x **Umegaka.** Named and released by Kaoru Hagiya in 1980.

Tôshenji. *Kurume Camellia,* 1997, English translation, p.10; Bright pink with crimson dots. Large, open peony form. A chance seedling of **Fukumusume**. Different reading for **Tôsenji.**

Tôshi. Different reading for **Kara-ito.**

Tôshikanoko. Itô, Ihei, 1695, *Kadan Chikinshô.* Different reading for **Kayoikanoko.**

Tôshun. (Winter Spring), *(C.japonica)* Shirai-Bunko, 1789, *Shoshiki Hanagatachô* Deep red, double, sake cup shape, large size, scattered stamens. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77. Originated in Japan. Different reading 'Fuyuharu'. (Believed extinct.)

Tosi. *(C.japonica)* van Houtte Catalogue, 1845-1846, 23:52: Imbricated, very full, pink. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, vol.40, p.311: Flower, rose form double to formal double, 9-10 cm across, orange red with blood red veins. Petals in 6-7 rows, rounded, emarginate, regularly imbricated. Originated in Italy by Casoretti.

Toso-no-yoi. (Intoxicated on Spiced Sake), *(C.hybrid),* ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.31: Large size, pale pink ground with red graduations, bud centered form opening to peony form. Blooms early to mid-season. A seedling of *C.japonica* var. *rusticana* **Sasayaki** x **Show Girl.** Named and released by Kaoru Hagiya in 1980.

Tôsui. (Being Spellbound by Peaches). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.177 with colour photo; English translation p.123. Small, pale pink with pink shading in outer petals, wrinkled and creped round petals, tubular single, cylindrical stamen column. Flowers early to mid-season. Leaves elliptic, medium size, somewhat flat. Upright, vigorous growth. A natural seedling of **Hatsukari.** Originated by Nobuo Sasai in 1979, released in 1997. From Okayama Prefecture.

Tô-suiren. (Pink Water Lily), (*C.amplexicaulis* hybrid). *Japan Camellia* 101, May 2014, p.5 with colour photo; JCR Regn No.2014-8, (ser. No.21); A selection from seedlings of *C.amplexicaulis*, pollen parent an unknown *C.japonica.* Pink, semidouble, with several separated layers of long, narrow, channelled petals. Diameter 14-16cm. Leaves elliptic. A 9 year old seedling, first floered in 2011. Originated by Kimihide Hashimura.

Totagiku. (obscure), *(C.japonica)* Yashiro, 1841, reprinted, Ichijima, 1906, *Kokon Yôrankô*, vol.310, p.362. Description not seen. Originated in Japan. (Believed extinct.)

Totamashi. (obscure), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pls.599 & 601: White with a touch of pale blush pink, medium size, slightly irregular, rose form double. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, pp. 148, 152. Originated in Japan. (Believed extinct.)

Tôtenko. (Crowing in the Dawn), *(C.sasanqua)*, McIlhenny, 1937, *600 Varieties of Camellias*, p.6 as 'Totenko': Five petalled single, large. Rose-pink fading to white, faintly tinged pink on lower third of the petals, wrinkled and irregular, 10 cm across. Prominent, yellow-tipped stamens in the form of a crown. Imported to USA by McIlhenny from Chûgai Nursery in 1935.

Tôtenko. (Crowing in the Dawn), *(C.rusticana), Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.193, p.99, description, p.319: Large, rose-pink, semi-double to rose form double with 3-4 rows of petals about an irregular stamen group, Some semi-erect, small petals in inner-most row with whitish marks. Leaves dark green, elliptical, apex abrupt acuminate, margins shallowly serrate. Originated in Chûbu area, Japan. A natural seedling of 'Sodekakushi', (**Gauntlettii**), named by Yamada, Yoshiharu in 1970, Aichi Prefecture, See colour photos & descriptions: Satô, 1975, *Chûbu no Tsubaki.* p.82; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.103, 233. Synonym: 'Beni-sodekakushi'.

Tôtômi. (Remote Inlet), *(C.japonica)* Hamamatsu, 1825, *Setsuyô Kikan*, vol.23; *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.8: Large, dark crimson, single with large, circular stamen cluster, partly petaloid. (Believed extinct), Different reading 'Tôtoomi'. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.87.

Tôtoomi. Different reading for **Tôtômi.**

Totsu. (Convex), *(C.japonica)* Mizuno, 1681, *Kadan Kômoku:* Double, white spotted with red. Originated in Japan. (Believed extinct.)

Tô-tsubaki. Itô Ihei, 1695, *Kadan Chikinshô*, vol.I. Described as a single, anemone form, very large, leaves like 'Mokusei' *(Osmanthus fragrans).* Different readings: 'Toh-tsubaki', 'Kara-tsubaki'. Synonyms: 'Nankin-tsubaki', 'Nanzancha'. While it has been used specifically to designate the reticulata **Captain Rawes** it was also used as a group name for *C.reticulata* in Japan which invalidated its use as a cultivar name.

Tô-tsubaki. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Three varieties listed under this name. One is a large, anemone form, the second is white with red stripes, the third is in the section for variegated leaves as pale red, peony form. These are all thought to be *C.reticulata* of unknown names, imported from China. See: JCS., 1969. *Tsubaki*, No.7, pp.23, 36, 37.

Totts. *(C.japonica), American Camellia Yearbook*, 1994, p.63, Reg. No.2287, colour photo between pp.64-65: Originated by Robert Ehrhart, Walnut Creek, California, USA. Very large size white to creamy yellow peony form *C.japonica* chance seedling that first bloomed 1988. Average flower size is 13 cm across x 5.5 cm deep with creamy yellow anthers. Growth is upright and dense and vigorous with dark green leaves 8.5 cm long x 5 cm wide.

Touch of Pink. *(C.japonica)* Nuccio's Nurseries Catalogue, 1978: A blush pink to deeper pink tipped edges. Large to very large, semi-double with irregular petals to anemone form. Vigorous, open, upright growth. Blooms early to mid-season. Originated at Nuccio's Nurseries, Altadena, California, USA.

Touchdown. *(C.japonica) American Camellia Yearbook***,** 1965, p.249, Reg. No.700: (SCCS., No.62-36) A deep rose-pink sport of 'Kickoff' that was first observed in 1960. Originated by Nuccio's Nurseries, Altadena, California. Flowers are peony form, 12.5 cm across x 7.5 cm deep. Plants are vigorous, upright and open. Sports: **Touchdown Blush, Cheerleader.**

Touchdown Blush. *(C.japonica)* SCCS., 1981, *Camellia Nomenclature***,** p.158: A blush pink sport of **Touchdown.** Originated by G. Stewart, Sacramento, California, USA.

Touchdown Variegated. Tammia Nursery, 1965, ACS., *The Camellia Journal***,** vol.20, No.4 as 'Touchdown Var': Synonym for **Cheerleader.**

Touming Fenbeidi. Shao, Taichong, 1991, *The Observations from the Camellia World,* p.10. Chinese synonym for the USA *C.japonica* **Betty by George.**

Tourielli. Berlèse, *Annales de la Société Central d'Horticulture de Paris*, vol.40, p.81. Orthographic error for 'Tornielli', abbreviation for **Tornielli d'Italie.**

Tournesi Alba. van Geert Nursery Catalogue, 1845 and corrected to **Tourresi Alba** in following catalogues.

Tournezi Alba. Charles van Geert, 1847, Catalogue No.101, p.15. Orthographic error for **Tourresi Alba.**

Tourresi Alba. *(C.japonica)* van Geert Nursery Catalogue, 1846: Pure white, formal double, similar to 'Innocenza'. Originated in Belgium. Orthographic errors: 'Tournesi Alba', 'Tournezi Alba'.

Tourresiana. *(C.japonica)* Tourres, Macheteaux Catalogue, 1839, p.22. No description. Van Houtte Catalogue, 1841, 7:20: Anemone form, bright cerise red with purple veins. Berlèse, 1843, *Iconographie*, description facing pl.213: A medium size, 10 cm across, cherry-red, anemone form with purple veining. The exterior petals, in 5 rows, are large and wide, the others form a cup; those in the centre are irregular, small and distorted. Originated as a seedling by M. Tourres, Macheteaux, France. Orthographic errors: 'Torresiana', 'Thourresiana'.

Towardi. *(C.japonica)* Charles van Geert Nursery Catalogue, 1845. No description. (Believed extinct.)

Towne's Blush. Vanderbilt, 1940, *Camellia Research*, p.7. Orthographic error for **Town's Blush.**

Town's Blush. *(C.japonica)*, Oriental Importing Co. Catalogue, 1887. A blush rose, medium size, double. Originated in USA. Orthographic error 'Towne's Blush'.

Toy Trumpet. *(C.japonica)*, SCCS., *Camellia Nomenclature*, p.130: Rose-pink. Miniature, semi-double. Vigorous, open, upright growth, flowers mid-season. Originated by Dr. L.E. Chow, Bakersfield, California, USA.

Toyama. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.65. Missreading of the characters for **Tomaya.**

Tôyama-kasuri. (Toyama Variegated), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.327: Medium size, semi-double to peony form, with three rows of petals of pale pink with white border and red streaks. A ring of stamens in the centre broken by the odd small, erect petal. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.139. Originated in Japan. (Believed extinct.)

Tôyama-no-akebono. (Tôyama's 'Akebono'). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.325. English translation p.236. Medium size, pale pink, cup to bowl shaped single, cylindrical stamen column. Very early to mid-season. Leaves narrowly elliptic, medium size. Upright, vigorous growth. A natural seedling from near the growing site of **Shiratama**. Named by Shôei Tôyama, released by Taneo Okada in 1993. From Osaka.

Toyama Number 1. *(C.rusticana).* Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement***,** [p.22] colour pl. as 'Toyama No.1': Red incomplete double with two rows of large, rounded, cordate guard petals and a centre of small, semi-erect, light red petals mixed with stamens with yellow anthers and white filaments. Originated in Japan. Note: This series of names are provisional. It is not known what eventual names, if any, were applied to them.

Toyama Number 2. *(C.rusticana)*, Adachi, 190, *Camellia. Its Appreciation and Artistic Arrangement***,** [p.26], colour pl. as 'Toyama No.2'. Formal double, cherry-red with a white bar down the centre of each petal. Originated in Toyama Prefecture, Japan.

Toyama Number 3. *(C.rusticana)*, Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement***,** [p.28], colour pl. as 'Toyama No.3': Rose form, crimson, showing some central irregularity and stamens with yellow anthers, when fully open. Petals tend to reflex. Originated in Toyama Prefecture, Japan.

Toyama Number 4. *(C.rusticana)*, Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement***,** [p.47], colour pl. as 'Toyama No.4': Petals embracing, emarginate, stamens not seen. Rose form double, pale pink. Originated in Toyama Prefecture, Japan.

Toyama Number 5. *(C.rusticana)*, Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement***,** [p.34], colour pl. as 'Toyama No.5': Rose form double, fuchsia pink with definite, deeper pink veining. Petals in 5-6 rows, imbricated with some vestigal stamens when fully open. Originated in Toyama Prefecture, Japan.

Toyen-nishiki. (obscure), *(C.sasanqua)*, Chûgai Nursery Co. Catalogue, 1935-1936, p.26: Pink with white variegation. Large double. Originated in Japan. Note: Probably the same as **Toen-nishiki.**

Toyo-akari. (Harvest Light), *(C.sasanqua)*, Satomi, 1958, p.16: Light pink. Large single with narrow, incurved petals. Originated in Japan.

Toyo-akari. (Harvest Light), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan:* Large size, white with red margins. Originated in Japan.

Toyohime. (Princess Toyo, a Goddess) (*C,japonica*) from Ibaragi Pref. *Japan Camellia* No. 67, February 2002: Parentage unknown. Pink, misted with white, and whiter at the flower centre. Flat, lotus formed semi-double, large. Cylindrical stamen cluster. Leaves elliptic, medium, somewhat twisted. Originated by Kunimitsu Suzuki in 2000.

Toyohira. (Place Name), *(C.rusticana)*, Izu-Ohshima, 1980, *Hawaii Botanic Garden List*, p.14. No description. Originated in Japan.

Toyokawajiro. (White Camellia from Toyokawa). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.182 with colour photo; English translation p.126. Medium size, white, tubular to trumpet shaped single, thick petals, cylindrical stamen column. Flowers early to mid-season. Leaves elliptic, large, flat, thick. Upright, vigorous growth. A natural seedling of unknown parentage. Originated by Sachiko Ôtomo in 1963, named by Kôji Tomino. From Aichi Prefecture.

Tôyô-nishiki. (Eastern Brocade), *(C.japonica)* Chûgai Nursery Co. Catalogue, 1935-1936, p.25: White with crimson variegation. Single. Tuyama, 1968, *Camellias of Japan*, pl.345, p.175, description, p.193: Leaves oblong to broadly-oblong, suddenly acuminate at the apex, margins crenate-serrulate; petioles glabrous. Flowers single, white, narrowly striped or minutely spotted with rosy red (Rose opal 022), petals strongly wavy. Central stamen cylinder, filaments slightly incurved. Late flowering. See colour photos & descriptions: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.104, 234. Originated in Kansai area, Japan. *Encyclopedia of Camellias in Colour*. vol.I, 1972, pl.113 & p.308..

Tôyô-no-hikari. (Eastern Radiance), *(C.rusticana)*, Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.189, p.61, description, p.210 as 'Tohyoh-no-hikari': Rose form double to form a double with 4-5 rows of petals, 15 in number, rounded in outer rows, pointed in inner row, colour light red with rounded blotches of pure white, 9-10 cm across. Vestigal stamens seen when fully open. Leaves long-ovate and twisted, short, hairy petioles. For colour pl. see *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.460 and Seibundô Shinkôsha, 1979, *Senchinshû*, pp.104, 234: Originated at Higashi-kanbara-gun, Niigata Prefecture, Japan. Named and released by Tokuji Ôoka in 1977. Synonym: 'Donchô'.

Toyo-no-sakura. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.325 with black and white photo; English translation p.236. Medium size, pink semi-double, slender petals, cylindrical stamen column. Flowers mid-season. Leaves narrowly elliptic, medium size, flat. Upright, vigorous growth. A natural seedling of **Oki-no-nami.** Named and released by Masayo Watazu in 1987. From Shimane Prefecture.

Toyosato. (Personal Name), *(C.japonica)* Tuyama, 1968, *Camellias of Japan*, pl.271, p.137, description, p.173: Leaves dark green, elliptic, flat, obscurely crenate, 8.6-9.4 cm long x 4.8-5.3 cm wide; petioles 9 mm long, smooth. Flower single, narrowly cup-shaped, deep red, (Currant red

821/3) Stamens simple column with filaments pale pink. Flowers late. Originated from seed sent from Okinawa Island by Tomoyoshi Toyosato.

Toyota. (Place Name), *(C.japonica)* Hino, Sukekatsu, 1637; *Sukekatsukyôki; Chinka Zufu*, (before 1700), Watanabe, 1969, pls.53 & 152: Medium size, semi-double, white, with cylindrical stamen column. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, pp.93, 105. Originated in Japan. (Believed extinct.)

Toyotamahime. (Toyotama Princess), *(C.sasanqua x C.fraterna)*, Hagiya, 1986, *Studies in Interspecific Hyridization of Camellias*, No.2, p.7, colour photo, p.6: A seedling from *C.sasanqua* **Asahi-noumi** x *C.fraterna.* Flower light peach pink with lighter pink graduations towards the centre petals. Petals are ovate with notched apex, 7-8 overlapping; flower cherry-like, stamens about 25, irregular, filaments white. Flowers early in leaf axils. Leaves silvery green, small, long-oval, veins and serrations prominent. Habit is luxuriant and spreading. Originated by Dr Kaoru Hagiya, Niigata University, Japan. Toyotamahime is the name of a princess in a Japanese myth.

Toyotamashiro. (Toyotama White), *(C.japonica)* Funaki Nursery Catalogue, 1986, No.164, p.9; Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.9, A-419: Small, white, tubular single, suitable for Chabana. Originated in Kantô area, Japan. This Toyotama is a place name.

Toyotsuhaku. (Toyotsu White), *(C.japonica)* Inazawa Nurseries Co. Ltd, Catalogue, 1986-1987, p.10, A-469: Small, white, campanulate single with thick petals. Originated in Kurume City, Fuku'oka Prefecture, Japan. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.37, colour photo and description: Small size, white, campanulate single with 5 broad, overlapping, waved petals and a central stamen column with off-white filaments, joined for the lower third, and yellow anthers. Late flowering. Leaves glossy light green, elliptic to obovate, apices acuminate, margins serrate.

Toyotsuhime. (Princess Toyotsu). *(C.japonica), Kurume Camellia,* 1997, English translation, p.10; Pale peach, small standard single. Named bt T. Kunitake, Kurume, Japan.

Tôzô. (Personal Name), *(C.japonica)* Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.48 as 'Tôzô-tsubaki'; Seibundô Shinkôsha, 1979, *Senchinshû*, p.233: White margins on pale red ground, or completely red, large single, sometimes with a petaloid centre. Stamens cylindrical to spreading. Blooms mid-season. Leaves medium size, obovate to ovate, apex blunt acute, keeled at midrib, thick, prominent venation. Plant habit is erect and vigorous. Both flower form and colour are very variable, sometimes anemome form. Originated in Ehime Prefecture, Japan. The original tree was designated as a protected plant of Iyo City. Named and released by Shigeichi Yagi in 1972.

Tôzô-tsubaki. Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.48. Synonym for **Tôzô.**

Tozzetti. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France*, vol.40, p.78. Synonym for **Targioni.** Orthographic error: 'Tozzotti'.

Tozzotti. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Tozzetti', synonym for **Targioni.**

Tracey Spencer. *(C.reticulata)*, ACRS., 1970, *Camellia News*, No.40, p.27, Reg. No.131: Originated by Mr & Mrs F.N. Spencer, Cheltenham, Victoria, Australia. A seedling of the wild form reticulata that first flowered 1969. Plant habit is upright and vigorous. Flowers are 15 cm across x 7.5 cm deep; rose coloured and early blooming. The semi-double flowers have 15 crimped and fluted petals. The glossy, dark green, reticulate leaves are 8 cm x 5 cm and distinctly serrate.

Trachir. Mercatelli Catalogue, 1894. Orthographic error for **Trackir.**

Trackir. *(C.japonica)* Verschaffelt, 1859, *Nouvelle Iconographie*, Book IX, pl.IV: Originated in Italy by Mr Sangalli, Milan. Flowers of the largest size, vivid pink at the circumference, more delicate at the centre, formed of numerous, large, ovate petals, becoming somewhat acuate towards the centre; each intersected by a pale pink stripe. Orthographic variant: 'Trakir'. Orthographic errors: 'Trachir', 'Traktir'.

Trade Bait. *(C.japonica)* Belle Fontaine Nursery, 1965, ACS., *The Camellia Journal*, vol.21, No.1, p.26. No description. Originated in USA. Orthographic error: 'Traid Bait'. No valid listing located.

Trade Wind. Anonymous, 1948, *American Camellia Yearbook*, p.170. Orthographic variant for **Tradewind.**

Tradewind. *(C.japonica)* Fruitland Nursery Cataloue, 1945: Parentage unknown. Originated by Fruitland Nursery, Augusta, Georgia, USA. First flowered 1943. Large, deep rose-pink, irregular full peony form with no stamens showing. Late blooming, upright growth. Orthographic variant: 'Trade Winds'.

Tradition. *(C.japonica)* Dodd, 1968, *Adventure in Camellia Seedlings*, p.12, colour photo: Large, deep pink, of **Elegans** form with very large outer petals in 2 rows, rounded, overlapping, strongly wavy, surrounding a petaloid centre, pink with white markings. A seedling of **Pink Star,** originated by Richard Dodd, Marshallville, Georgia, USA.

Traid Bait. Cannon, 1970, ACS., *The Camellia Journal*, vol.25. Orthographic error for 'Trade Bait'.

Trakir. Mercatelli Catalogue, 1881, p.36. Orthographic variant for **Trackir.**

Traktir. Burdin Maggiore & Co. Catalogue, 1862. Orthographic error for **Trackir.**

Tramento. Rubel, 1940-1941, 'Floral Gems from China', Catalogue, No.79, p.23. Orthographic error for **Il Tramonto.**

Tramonteo. da Silva Nursery Catalogue, 1958-1959. Orthographic error for **Il Tramonto.**

Tramonto. van Houtte Catalogue, 1858, 72:25. Abbreviation for **Il Tramonto.** Chinese synonym 'Tamangtou'.

Tranquillity. *(C.reticulata)*, ACRS., 1969, *Camellia News*, No.36, p.15, Reg. No.112: Originated by H.A. Pederson, Collaroy Plateau, NSW, Australia from seed of **Damanao** supplied by Miss P. Kirkpatrick, Gordon, NSW. It first bloomed 1968. The plant has a vigorous, erect, open habit of growth. The 12.5 cm across flowers are Tyrian rose (RHS.CC.24/1-/2), semi-double to incomplete double with large, fluted and waved petals. Blooms mid-season. The 10.5 cm long x 4.5 cm wide leaves are ovate with a short acuminate apex. Named the day of the first manned landing on the moon at the Sea of Tranquillity.

Transarisanensis. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.6 as *C.parvifolia* Makino. Japanese group name 'Taiwan-hime-sazanka'. The species *Camellia transarisanensis* (Hay), Cohen Stuart. (1919).

Transnokoensis. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.6 as *C.transnokoensis* Hayata. Japanese group name 'Tereba-hime-sazanka'. The species *Camellia transnokoensis* Hayata. (1919).

Transparens. *(C.japonica)* de Jonghe, 1851, *Traité de la Culture du Camellia*, p.123. No description. (Believed extinct.) Orthographic variant: 'Transparent'.

Transparent. de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias*, p.137. Orthographic variant for **Transparens.**

Transpink. (*C.transnokoensis* hybrid). *New Zealand Camellia Bulletin*, March 2004, Issue No.147, vol.XXIII, No.5, p.9, Reg. No.459. Registered by N. Haydon, Takanini, New Zealand. A chance seedling of *C.transnokoensis* that first flowered in 1996. Flower is a miniature, trumpet shaped single, 3 cm diameter x 2.5 cm deep, with 6-7 obcordate petals, and the gold anthers on white filaments form a compact central mass. Colour is a soft pink (RHS.CC.73C) and shade from 73B to 73D. The flower has an appealing honey scent. The plant is upright, verging on columnar, of dense structure and medium growth rate, with small, lanceolate, matt, dark green leaves which offset the flower colour for a very attractive overall appearance. Flowers mid-season to late.

Transqueniana Vera. *(C.japonica),* James Veitch Jr, 1852, Catalogue of Select Stove Plants…, p.14. No description. Originated in England. (Believed extinct).

Transtasman. *(C.hybrid).* ACRS, *Camellia News*, 1997, No.143, p.17, colour photo p.23, Reg. No.495. Originated by Ray Garnett, Beaumaris, Victoria, Australia. First flowered in 1987. A cross of *C.pitardii* var. *pitardii* as seed parent and *C.transnokoensis*. A pale pink (RHS.CC.56B) single flower of 6 petals, edges of petals deeper pink RHS.CC.68B, and 4 cm across x 2 cm deep. Free flowering mid-season to late on an upright plant of medium growth rate. Leaves glossy green, narrowly elliptic, lightly keeled, serrate margins, acuminate apex, acute base, 4.5 cm long x 1.8 cm wide. Petals fluted. Filaments columnar. Alternate petals shorter, reflexed with age and edged pink.

Trantsman. ACS, *The Camellia Journal*, Mar 2011, p.8; Orthographic error for **Transtasman**.

Tri-Color. SCCS, 1942, *Classification of Camellias*, p.1. Orthographic variant for **Tricolor.**

Tricolor. *(C.japonica)* Siebold & Zuccarini, 1835, *Flora Japonica;* Berlèse, 1835, *Annales de la Société d'Horticulture, Paris*, 16:33; Berlèse, 1841, *Iconographie*, vol.1, pl.3: Flowers 9-10 cm across, semidouble, pure white background, striped all along the length of the petals with several lines, some soft rose, some blood red. Mertens & Fontaine, *Collection de cent espèces.....camellia*, 1845, pl. 2. Puddle and Hanger, 1960, RHS., *The Rhododendron and Camellia Yearbook*, No 14, p.160: Semi-double of 14-20 petals orbicular, 4.5 cm long x 4.5 cm wide, margins notched at apex. Petals form a cup-shaped bloom, but spread almost flat with age. Stamens in a central column, often intermingled with a few petaloids. Flower diameter 7-9 cm. Colour very variable but was originally white striped with Neyron rose, 623. Leaves bright medium green, lanceolate, apex long acuminate, margins strongly and coarsely serrate, undulate and twisted at the centre with a tendency for the margins to roll under. It forms a well-clothed, dense spreading bush. This is a most variable cultivar and not only has produced a number of sports but the type itself is variable in background colour, from white through the pale shades of pink, and the number of petals can vary considerably on the one plant, occasionally producing single blooms. The Japanese name for this cultivar is 'Ezo-nishiki', (Brocade of Hokkaido). In Japan the earliest date of valid publication for 'Ezo-nishiki' yet located, is in Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, which leaves **Tricolor** as the prior, valid name. However it is obviously much older than this as it was one of the camellias brought to Europe from Japan in 1829 by Dr Frans von Siebold. In USA considerable confusion occured due to its erroneous equation with the Japanese cultivar, **Wakanoura.** This spilt over into the naming of the various mutations which occured in the "Tricolor" group. These are: **Lady de Saumarez** ('Aka-ezo-nishiki'), **Lady Mackinnon, Fred Sander, Fred Sander Variegated, Cinderella, Raspberry Ice, Tricolor White** (**Shiro-ezo-nishiki**), **Tricolor Pink, Dainty (California), Jewel Bowden, Chalk Pink, Nishiki-gasane, Miyako-no-nishiki**. Also in the 160 years since its importation to Europe it has accumulated an impressive list of synonyms and orthographic errors which include: 'Tricolor Sieboldii', 'Tricolor de Sieboldii', 'Seiboldii', 'Sieboldiana', 'Tricolor Siebold', 'Tricolor'(Siebold), 'Tricolor Sieboldii Vera', 'Tricolor Sieboldtii, 'Tricolour', 'Seiboldtii', 'Tricolor de van Siebold', 'Siebold', 'Tricolor Sieboldii Variegated', 'Siebold Wakanoura Variegated', 'Tri Color', 'Wakanoura', 'Wakanoura Variegated', 'Siebold's Tricolor', 'Cooper Variegated', 'Tricolo de Sieboldii', 'Peppermint Stick', 'Tricolor' (Wakanoura), 'Variegated Tricolor', 'Tricolor de Siebold', 'Quartette'. For colour plates and descriptions see: Urquhart, 1956, *The Camellia;* Tuyama, 1966, *Camellia Cultivars of Japan*, pl.8 and Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.129, p.43 as 'Ezo-nishiki'. *Floricultural Magazine*, 1839, p.229; Berlèse, 1841, *Iconographie*, vol.1, pl.3; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.343, p.342; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.23, 203. Verschaffelt, 1844, Catalogue, No.50, p.24: The camellias "Tricolor" and "Decipiens" are identical and able to bear entirely red flowers; the first obtained from a graft of "Decipiens" of which the flowers are variegated. It thus appears the "Decipiens" is the same as **Lady de Saumarez** ('Aka-ezo-nishiki').

Tricolor Sieboldi. Mercatelli Catalogue, 1843. Synonym for **Tricolor.**

Tricolor Sieboldi Folki. Fruitland Nursery Catalogue, 1941-1942, p.27. Synonym for **Lady Mackinnon.**

Tricolor Sieboldi Red. Fruitland Nursery Catalogue, 1936-1937, p.16. Synonym for **Lady de Saumarez.**

Tricolor Sieboldi Variegated. Fruitland Nursery Catalogue, 1939-1940. Synonym for **Tricolor.**

Tricolor Sieboldi Vera. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.15. Synonym for **Tricolor.**

Tricolor Sieboldi White. Fruitland Nursery Catalogue, 1936-1937, p.16. Synonym for **Tricolor White.**

Tricolor (Sieboldi) White. Fendig, 1953, *American Camellia Catalogue,* erroneously as a synonym for "Leucantha". Synonym for **Tricolor White.**

Tricolor Sieboldii. Colla, 1843, *Camelliografia,* p.85-86. Synonym for **Tricolor.**

Tricolor Sieboldii Imbricata. Mercatelli Catalogue, 1881. Synonym for **Tricolor Plena.**

Tricolor Sieboldtii. Burdin Maggiore & Co. Catalogue, 1849-1850. Synonym for **Tricolor**.

Tricolor Spotted. McIlhenny, 1937, *600 Varieties of Camellias*. Synonym for **Lady Mackinnon.**

Tricolor Superba. *(C.japonica)* Camellia Digest, 1(3),1943. No description. SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.65: Variable colour from almost white to solid red, but the majority, white striped red or light pink, margined white. Large semi-double. A seedling originated at Overlook Nurseries, Mobile, Alabama. For illustration see p.249, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III.

Tricolor var. Angelo Cocchi. Wilmot, 1943, *American Nurseryman*, 78(7):7. Synonym for **Angela Cocchi.**

Tricolor (Wakanoura). Sewell, 1951, *American Camellia Yearbook*, p.276. Pseudonym for **Tricolor.**

Tricolor Waratah. *(C.japonica)*, Hogg, 1838, *Magazine of Horticulture*, 4:155 as 'Tricolor Warratah'. Originated by M. Floy, USA. No description. (Believed extinct.)

Tricolor Whipplii. Vanderbilt, 1940, *Camellia Research*, p.7. Orthographic variant for 'Whipple Tricolor', synonym for **Lady de Saumarez.**

Tricolor White. *(C.japonica)* Fruitland Nursery Catalogue, 1936-1937, p.13; McIlhenny, 1937, *600 Varieties of Camellias:* Semi-double; petals loosely arranged; tips turned down; pure white, stamens in the form of a crown, greenish white tipped yellow ochre. Fendig, 1952, *American Camellia Catalogue:* Medium to large pure white, semi-double, up to 10 cm across, petals are rectangular, 5 cm x 3.8 cm and tend to curl downwards. The margins are occasionally shallowly notched and wavy. The stamens form a tight central cluster, solidly united at the base and 3.2 cm long. Filaments are white at the base and pale yellow towards the anthers which are large and dull gold. The leaves are dark, glossy green, narrowly oval, 10 cm x 6 cm. Apex blunt, base tapered, margins bend downward from midrib, serrations coarse. Plant habit is vigorous, compact and upright. Hardy and flowers freely. A sport of **Tricolor**, it has sometimes been erroneously called "Leucantha", which is a different cultivar. Synonyms: 'Siebold White', 'White Tricolor', 'Tricolor Sieboldii White', 'White Tricolor Siebold', 'Shiro-ezo-nishiki'. Pseudonyms: 'Leucantha', 'Wakanoura White', 'Shiro-wakanoura'.

Tricolore. Rousseau, 1842-1843, Catalogue, p.4. Longone Catalogue, 1910-1911. Orthographic variant for **Tricolor.**

Tricolore de Mathot. van Houtte Catalogue, 1859, 77:96. Synonym for **Tricolor Nova.**

Tricolore National. *(C.japonica)*, Porcher, Dec. 1847, *Revue Horticole*, p.442-452 in a discussion on white variegation 'From the first moment of thoughtless enthusiasm on one growth from which is obtained a new variety, at the Flore Lyonnaise one may receive a wrong picture of the alleged camellia 'Tricolore National'.' No description. (Believed extinct.)

Tricolor (Van-Sieboltd). Rousseau, Angers Catalogue, 1842-1843, p.4. Orthographic error for 'Tricolor'(Siebold), synonym for **Tricolor.**

Tricolour. E.G.Henderson & Son, 1871, Spring Catalogue, p.50. Parkclose Estates Catalogue. 1965. Orthographic error for **Tricolor.**

Tricolour de Genova. Smith, J. & Sons Nursery Catalogue, 1883. Orthographic error for **Tricolor Nuova di Genova.**

Tricolour de Mathot. E.G. Henderson & Son, 1871, Spring Catalogue, p.50. Orthographic error for for 'Tricolor de Mathot' synonym for **Tricolor Nova.**

Tricolour Imbricata. Smith, J. & Sons Nursery Catalogue, 1883. Orthographic error for 'Tricolor Imbricata', synonym for **Bella Romana.**

Tricolour Imbricata Plena. Shepherd & Co. Nursery Catalogue, 1883-1884. Orthographic error for 'Tricolor Imbricata Plena', synonym for **Tricolor Plena**.

Tricolour Imbricated Plena. E.G. Henderson & Son, 1871, Spring Catalogue, p.50. Orthographic variant for **Tricolor Imbricata Plena.**

Tricolour Red. Waterhouse, 1970, ACRS., *Camellia News.* Synonym for **Sansehong.**

Trifida. Wada, 1941, *Garden Treasures of Japan*, p.29. Synonym for **Kingyo-tsubaki.**

Triflora. *(C.japonica)* Hearn Nursery Catalogue, 1945. No description. Originated in USA. (Believed extinct.)

Trigonie. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.229. Synonym for **Contessa Tozzoni.**

Trihinoumi. Camellia Forest Nursery Catalogue, 1990, p.6. Corruption of the Japanese name **Higo-asahi-no-umi.**

Trilby. *(C.japonica)* Magnolia Gardens and Nursery Catalogue, 1944-1945: Delicate, pale pink, single. Medium size. Originated at Magnolia Gardens, John's Island, South Carolina, USA.

Trinity. Yang, 1965, *A Study of the Camellia Varieties of Taiwan*, p.4. Synonym for **Sanhehui** as 'Sha Ho-hui'.

Trinket. *(C.japonica)* McCaskill Gardens Nursery Catalogue, 1974: Soft pink with shaded pink centre. Miniature, anemone form. Vigorous, bushy, upright growth. Blooms mid-season. Originated at McCaskill Gardens, Pasadena, California, USA.

Triomfi di Loddi. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.229. Orthographic error for **Trionfo di Lodi.**

Triomfo di Bergamo. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.229. Orthographic variant for **Triomphe de Bergama.**

Triomphans. Anonymous, 1838, *Revue Horticole*, p.203-204. Orthographic variant for **Triumphans.**

Triomphant. Anonymous, 1834, *Revue Horticole*, p.508-509. Orthographic variant for **Triumphans.**

Triomphant Alba. Cachet Catalogue, 1840-1841, p.2. Orthographic variant for 'Triumphans Alba', synonym for **Imbricata Alba.**

Triomphe d'Alost. van Geert Nursery Catalogue, 1845. Synonym for **Hendersonii.**

Triomphe de Baltimore. van Houtte Catalogue, 1862-1863, 93:73. Orthographic variant for **Triumph of Baltimore.**

Triomphe de Bergama. *(C.japonica)* de Jonghe, 1851, *Traité de la Culture du Camellia*, p.123 as 'Triomphe de Bergame'. No description. Verschaffelt, 1853, *Nouvelle Iconographie*, Book XI, pl.III as 'Triompho di Bergama': Received from Italy. It belongs to the perfections, amongst which it may be distinguished by its large blossoms, with very ample petals which are rounded, convex, quite spread out, and delicately veined. A rich cherry-red colouring with a few white stripes in the centre. Orthographic variants: 'Triomphe de Bergame', 'Trionfo di Bergama' Orthographic error: 'Truimpho di Bergama'.

Triomphe de Bergame. de Jonghe, 1851, *Traité de la Culture du Camellia*, p.123. Orthographic variant for **Triomphe de Bergama.**

Triomphe de Cernobbio. *(C.japonica)* Verschaffelt Catalogue. 1847-1848, p.63. No description. Fratelli Rovelli Catalogue, 1852, p.27: Imbricated, white streaked and speckled with delicate pink. Franchetti, 1855, *Collezione di Camelie*, p.60 as 'Trionfo di Cernobbio': White speckled with red and streaked with pink. Orthographic variant: 'Trionfo del Cernobbio'. Orthographic errors: 'Triomphe de Cernobbto', 'Triomphe Cernobio', 'Triumfo di Cerniobo', 'Triumphe Cernobio', 'Triomphe di Cernobia'.

Triomph de Cernobbto. Verschaffelt Catalogue, 1850, p.50. Orthographic error for **Triomphe de Cernobbio.**

Triomphe de Cernobio. de Jonghe, 1851, *Traité de la Culture du Camellia*, p.123. Orthographic error for **Triomphe de Cernobbio.**

Triomphe de Florence. *(C.japonica)* Verschaffelt Catalogue, 1847-1848, p.63. No description. Verschaffelt, 1854, *Nouvelle Iconographie*, Book IX, pl.III: Pure white flowers of large size and perfect imbrication, with petals ovate or acute lanceolate. Originated in Florence, Italy. Orthographic variants: 'Trionfo di Fiorenza', 'Trionfo di Florenza'.

Triomphe de Gand. Anonymous, 1841, *Gardeners' Chronicle.* Synonym for **Cockii.**

Triomphe de la Villa Biani. Frères Noisette, Nantes Nursery Catalogue, 1857, p.39. Orthographic error for **Triomphe de la Villa Ciani.**

Triomphe de la Villa Ciani. *(C.japonica)* Verchaffelt Catalogue, 1847-1848, p.63. No description. de Jonghe, 1851, *Traité de la Culture du Camellia*, p.123: No description. Franchetti, 1855, Catalogue: Vivid pink with white streaks at the centre; imbricated. Originated in Italy by Sada. Fratelli Rovelli Catalogue, 1852, p.27: Imbricated. Deep pink with white border at the centre. Orthographic variant: 'Trionfo della Villa Ciani'. Orthographic errors;: 'Triomphe de la Villa Biani', 'Triumfo, della Villa Ciani'.

Triomphe de Liege. *(C.japonica)* Verschaffelt, 1855, *Nouvelle Iconographie*, Book IV, pl.I: A spiral multiplicity of its numerous central petals, like a full rose or an anemone, and a uniform vivid cherry-carmine colouring. Originated from seed by Mr Defresne, Liege, Belgium. See also pl.298, Lemaire, 1861, *L'Illustration Horticole*, vol.8.

Triomphe de Lodi. van Houtte Catalogue, 1861-1862, 98:114. Orthographic variant for **Trionfo di Lodi.**

Triomphe Loddi. Bull, William, Nursery Catalogue, 1869-1870. Orthographic error for **Trionfo di Lodi.**

Triomphe de Lombardi. Jean Vervaene fils, 1864, Price List, No.1, p.8. Orthographic error for **Triomphe de Lombardie.**

Triomphe de Lombardiae. Hazlewood & Jessep, 1972, *Checklist - Camellias from Nursery Catalogues*, p.229. Orthographic error for **Triomphe de Lombardie.**

Triomphe de Lombardie. *(C.japonica)* Verschaffelt, 1858, *Nouvelle Iconographie*, Book XII, pl.III: Originated in Lombardy, Italy. Its blossoms, up to 14 cm across, are a vivid, uniform, cherry-red with rare delicate white stripes at the centre, and are composed of innumerable, medium size, rounded petals, more or less deeply lobulate, loosely but regularly imbricated. Orthographic variant: 'Trionfo di Lombardia'. Orthographic error: 'Triumphe de Lombarda, 'Triomphe de Lombardiae', 'Triomphe de Lombardi'.

Triomphe de Malines. *(C.japonica)* Verschaffelt, 1850, *Nouvelle Iconographie*, Book XII, pl.IV: Thought to be a sport of **Press's Eclipse,** obtained by Mr August van Geert, Belgium from an unknown breeder in Mechelen (Malines). A peony form with large exterior petals, rounded, emarginate and at the centre they are smaller, erect, rumpled and clustered in a thick heart. The colour is pale pink with here and there a vivid purple blotch.

Triomphe de Mayence. *(C.japonica)* Verschaffelt Catalogue, 1849-1850, p.50. No description. Verschaffelt, 1854, *Nouvelle Iconographie*, Book, VI, pl.IV: Originated from seed by Sigismund, Baron de Pronay, Germany. The blossoms are 11-12 cm across, of a delicate pink; the very numerous petals, oval or rounded, lobulate or emarginate, are arranged in regular imbrication. The leaves are large and elongated. Synonym: 'Tricolor de Mayence'.

Triomphe de Milano. *(C.japonica),* Seidel, 1870, *Pflanzen Catalog*, p.11: Resembles 'Platypetala' (**Platipetala**). Originated in Italy.

Triomphe de New York. *(C.japonica)* Verschaffelt Catalogue, 1849-1850, p.50. No description. Franchetti, 1855, *Collezione di Camelie*, p.255: Perfectly imbricated. Dark cherry-red with a lighter centre; some petals lightly margined and lined with white. Originated in USA.

Triomphe de Pisaro. Loureiro Catalogue No.9, 1872-1873. Orthographic error for **Trionfo di Pisari.**

Triomphe de Philadelphia. Linden Nursery Catalogue, 1871-1872. Orthographic variant for **Triumph of Philadelphia.**

Triomphe de Wondelgem. *(C.japonica)* Verschaffelt, 1860, *Nouvelle Iconographie*, Book VI, pl.I: Originated from seed by Mr de Loose, Ghent, Belgium. Blossoms of largest size, full bodied, imbricated with desirable regularity, composed of very numerous and very large orbicular petals, emarginate and convex, smaller at the centre to form an erect bud centre. The colouring is true pink with a few broad, rare stripes towards the centre. B.S. Williams 1889, New and General Plant Catalogue: Large imbricated petals, white, speckled and streaked with rose. Apparently the name became taken over by a virused form. Orthographic errors: 'Triomphe de Wondelghem', 'Triomphe de Wondelghen', 'Triomphe de Wondelgheim', 'Triomphe de Wondelgelm', 'Triomphe de Wondelghern', 'Triomphe de Wondelglen', 'Triumph de Wondeghelm', 'Triumph de Wondelghern', 'Truimph de Wongleheim', 'Triumph de Wondelghem', 'Trionfo di Vondelgeni', 'Triumphe de Wandelgem', 'Triomple de Wondelghem', 'Triomphe de Woom Delgen', 'Trionphe de Wondelgem'.

Trionphe de Wondelgem. Carlo Constantini, 1886, Catalogue. Orthographic error for **Triomphe de Wondelgem.**

Triphausa. Cachet Catalogue, 1840-1841, p.l. Orthographic error for 'Triphosa', synonym for **Tryphosa Unica Alba.**

Triphosa. Tagliabue, 1840, *Nomeclatore Camelliae* ... Van Houtte Catalogue, 1841, 7:20. Synonym for **Tryphosa Unica Alba.**

Triphosa. *(C.japonica)* Thomasville Nursery Catalogue, 1838-1939: White. Large, slightly cupped semi-double. Vigorous, spreading growth. Blooms mid-season. Synonyms: 'May Watson', 'Mrs Fritz Saunders'. The parent plant is in Magnolia Gardens, John's Island, South Carolina, USA and is said to have originally been imported from Europe. However the modern cultivar in America is not the same as the original European camellia of that name. See illustration, p.349, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I. See also colour photo, Francesco, 1984, *Floriculture, Lago Maggiore*, p.10 as 'Thriphosa'.

Triphosa. Berlèse, 1843, *Iconographie*, text facing pl.139. Abbreviation for 'Triphosa Vera', synonym for **Tryphosa Unica Alba.**

Triphosa Alba. Berlèse, 1845, *Monographie*, ed.3, index, p.337. Synonym for **Tryphosa Unica Alba.**

Triphosa Vera. Berlèse, 1840, *Monographie*, ed.2, pp.87, 226: Leaves 9 cm x 5.6 cm, some round-oval, others ovate-lanceolate, prominent venation, deep green; flower about 11 cm across, full, white, circumferential petals a little reflexed, those at the centre, numerous, gathered together in a tuft, short, unequal. Resembles **Lacteola.** Illustrated by Berlèse, 1843, *Iconographie*, pl.139 as 'Triphosa Vera' and in text on facing p. as 'Triphosa'. The illustration shows a medium sized, white, peony form camellia. Synonym for: **Tryphosa Unica Alba.**

Triple Flower. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.177. Synonym for 'Sandanzaki'.

Triple Tiara. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.177. Synonym for **Sandanka.**

Triplex. *(C.japonica)* Guilfoyle Nursery Catalogue, 1866, p.19. No description. Originated in Australia. (Believed extinct.)

Tristan. *(C.japonica)* Dodd, 1968, *Adventure in Camellia Seedlings*, p.16, colour photo: A large, deep pink, semi-double with two rows of fluted and waved petals about a spreading column cluster with small, pale yellow anthers on white filaments. A seedling of Ville de Nantes originated by Richard Dodd, Marshallville, Georgia, USA.

Tristem Carlyon. Duncan & Davies (UK), Nursery Catalogue, 1986. Orthographic error for **Tristrem Carlyon.**

Tristran Carlyon. West End Nurseries Catalogue, 1988, p.4. Orthographic error for **Tristrem Carlyon.**

Tristrem Carlyon. *(C.reticulata* hybr.), Tregrehan Camellia Nursery Catalogue, 1973: Originated by Gillian Carlyon, Par, Cornwall, England, from the cross *C.japonica* 'Rosea Simplex' (**Aitonia**) x Borde Hill hybrid **Salutation**: Flowers peony form, up to 10 cm across, colour RHS,CC. Red Group 55A with centrally a few petaloids streaked with white. Received an RHS., Award of Merit, 1977. See colour photo facing p.57, RHS., *Rhododendrons with Magnolias and Camellias* and also on the front cover, 1987, Tregrehan Camellia Nurseries Catalogue. Orthographic errors: 'Tristem Carlyon', 'Tristran Carlyon'.

Triumfo della Villa Ciani. Fratelli Rovelli, 1852, Catalogue, p.27. Orthographic error for **Triomphe de la Villa Ciana.**

Triumph. *(C.japonica)* Magnolia Gardens and Nursery Catalogue, 1942-1943: Dark red, small, single. Originated in the USA at Magnolia Gardens, John's Island, South Carolina.

Triumph de Lombarda. Giles & Sons Nursery Catalogue, 1881. Orthographic error for **Triomphe de Lombardie.**

Triumph of Baltimore. *(C.japonica)* Hovey, 1851, *Magazine of Horticulture*, 17:237: Originated in USA by S. Feast. A large bold flower, regular and full to the centre; colour pale blush or pink, irregularly striped with deep rose or bright crimson in the way of a carnation. Orthographic variant: 'Triomphe de Baltimore'.

Triumph of Philadelphia. *(C.japonica)* Verschaffelt, 1860, *Nouvelle Iconographie*, Book II, pl.II: Originated in the USA as a seedling by S. Feast, Baltimore. Blossoms of the medium size, formed of large, rounded petals, scarsely lobate, regularly imbricated, of a vivid pink with rare transversal stripes. Orthographic variant: 'Triomphe de Philadelphia'.

Triumphalis. *(C.japonica,)* van Houtte Catalogue, 1843-1844, 12:eee. No description. (Believed extinct.)

Triumphans. *(C.japonica)* Courtois, 1833, *Magazin d'Horticulture*, 1[pt.D]:317. No description. Scheidweiler, 1833, *Horticole Belge Journal Amateur*, 1:28: Among the collections we cite Verleeuwen Bros…among other [varieties] camellia 'Switsiana', **Triumphans** etc. Van Houtte Catalogue, 1839, 1:8: Very large, peonyform, brilliant pink, gained at Ghent. Berlèse, 1837, *Monographie.* ed.1, p.89, 128: Leaves 6 cm wide x 7.5 cm long, roundish-oval, slightly acuminate, venation distinct, a little undulate towards the middle, thick, like those of **Colvillii**; bud spherical, depressed at the summit, and as large as a small walnut, before it expands into bloom; scales calycinal, large, thick, rounded, of a yellowish colour; flower 8 cm across, very full, regular, cherry-red, gradually shaded a pure rose, whose intenseness diminished from the circumference to the centre; petals large, a little recurved at the exterior extremity, imbricated gracefully, slightly veined with red and rose; sometimes the petals of the centre, which are small, are striped with white. Originated in Belgium. Berlèse, *Iconographie*, Book 2, 1843, pl.104, also Mertens & Fontaine, *Collection de cent espèces.....camellia*, 1845, pl.33. Synonyms: 'Triomphant', 'Lady Parker Peony', 'Allen's Pink', 'Harmony', 'Trionfans', 'Triomphans', 'Triumphans Nova'. Orthographic errors: 'Triumphaus', 'Triumphanus', 'Triunphas', 'Triumphus', 'Tryumphans'.

Trixey. *(C.japonica), New Zealand Camellia Bulletin,* March 1998, Issue No.129,, vol.XX, No.4, p.22, Reg. No.392. Registered by Mrs F.V. Upson, New Plymouth, New Zealand. A 12 year old seedling of unknown parentage but with general characteristics of *C.japonica,* which first flowered 1989. Flower is a large, high-crowned formal double, 10 cm diameter x 5.5 cm deep, and 75 – 90 petals, half of which open out and half remain in a crown bud centre. Colour is bright pink shading to white at the centre of the flower (petal tip RHS.CC.62A; main petals and general appearance 62D; the bases of the central petals are near white). A slow growing, free flowering bush with dark green leaves 7 cm long x 3.5 cm wide. Late flowering.

Trojan Horse. *(C.japonica)* Belle Fontaine Nursery, 1965, ACS., *The Camellia Journal*, vol,21, No.1, p.26. No description. SCCS., 1970, *Camellia Nomenclature*, p.139: Deep pink. Large, semi-double to loose peony form. Medium, upright growth. Blooms mid-season. Originated in USA by Wilkes Nursery, Moultrie, Georgia. Sport: **Trojan Horse Variegated.**

Trojan Horse Variegated. (*C.japonica),* Gentry, 1969. ACS., *The Camellia Journal,* vol.24, No.4 as 'Trojan Horse V: A virus variegated form of **Trojan Horse** - Deep pink blotched white. Originated in USA.

Tronfo di Firenze. Contini Catalogue, 1915. Orthographic error for **Triomphe de Florence.**

Trophy. (*C.reticulata* hyb.), Nuccio's Nurseries Catalogue, 1988-1989, p.26, #7680: Large, irregular rose form. Medium orchid pink. Handsome, robust grower. Large, thick, dark green leaves. Late

blooming. *American Camellia Yearbook*, 1989, p.128, Reg, No.2133: Plant growth is upright, dense and rapid in rate. The 15 year old seedling first bloomed in 1976. Originated at Nuccio's Nurseries, Altadena, California. A seedling of **Margaret Davis** x **Nuccio's Ruby.**

Trotter. *(C.japonica)* McIlhenny, 1935. *List of Camellias for Sale*, p.15: Very double, blush pink dotted and streaked bright red. Originated at Jungle Gardens, Avery Island, Louisiana, USA.

Trottii. *(C.japonica)* van Houtte Catalogue, 1845-1846, 23:52 as 'Trotti': Imbricated, very full, pink. Originated in Italy by Casoretti.

Troubadour. *(C.japonica)* Magnolia Gardens and Nursery Catalogue, 1942-1943: Salmon pink. Medium size, semi-double of pine cone formation. Medium, compact, upright growth. Blooms mid-season. Sport: **Jessie Katz.** See: Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II, p.330 for black & white illustration. Originated at Magnolia Gardens, John's Island, South Carolina.

Trovata. *(C.japonica)* Stefano Pagliai Nursery Catalogue, 1867. No description. Originated in Italy. (Believed extinct.)

Truda Jean. *(C.japonica),* ACRS, *Camellia News*, 1995, Issue No.135, p.12, Reg. No.452: Originated at Eryldene, Gordon, NSW, Australia. A chance *C.japonica* seedling that first flowered 1988. A pale pink (RHS.CC.62C-D), single flower of 5 petals. Flowers freely, early, on a medium growing, upright plant. Leaves dark green, glossy, flat, ovate, margins serrate, 8 cm long x 4 cm wide. Petals flat, filaments cylindrical. Flowers shed whole.

Trudy. *(C.japonica) American Camellia Yearbook*, 1954, p.335, Reg. No.134: A seedling of unknown parentage, 11 years old, originated by Frank F. Baker Jr., Macon, Georgia, USA. It first flowered 1945. Plant growth is slow and upright, with leaves 8 cm x 3.7 cm, glossy, medium green, slightly serrate, apices cuspidate, bases tapering. Flower small, single, 5 petals adnate to the stamens; anthers replaced by red spotted flags; stamens red. Flower bright red. Late blooming.

Trudy George. *(C.japonica),* ACS, *The Camellia Journal*, Mar. 2008, p.C11 with colour photo, Regn No.2711. A solid pink sport of **Ben George**, first observed in 2000 by E. Hulyn Smith, Valdosta, Ga., USA, and propagated by Erinon Camellias, Plymouth, Fla. The 15 cm plus diameter x 5-7.5 cm deep, single to semi-double flower has darker stripes. Prominent spray of stamens, with yellow anthers on cream filaments. Flowers mid-season. Upright, vigorous plant. *American Camellia Yearbook*, 2008, p.128 with colour photo; 37 petals and 2-3 petaloids.Dark green leaves 9-10 cm x 3.8 cm.

Trudy Smith. *(C.reticulata* hyb.), *American Camellia Yearbook*, 1982, p.180, Reg. No.1821: A very large, dark red. semi-double to peony form *C.reticulata* hybrid, (*C.reticulata* **Dataohong** x [(*C.reticulata* **Damanao** x *C.japonica* **Mrs D.W Davis**)], flowers mid-season to late; originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first bloomed in 1981. Average flower size, 15.5 cm across x 5.5 cm deep with heavy textured petals. Plant growth is average with dark green leaves, 12 cm x 6 cm.

True Echols. *(C.japonica) American Camellia Yearbook*, 1980, p.174, 173, Reg. No.1625: A very large, rose-red, peony form *C.japonica* chance seedling, bloomed early to mid-season; originated by Paul Gilley, Grandridge, Florida, USA. The 5 year old seedling first bloomed 1978. Average flower size is 12.5 cm across x 7.5 cm deep with over 30 petals and over 30 petaloids, bright yellow anthers with pale filaments. Plant growth is upright and medium in rate with dark green leaves, 8 cm x 6 cm.

True Echols Variegated. *(C.japonica),* ACS 1992, *The Camellia Journal*, vol.47, No.4, p.13. Valdosta Camellia Scions advert. as 'True Echols V.': A white blotched, virus variegated form of **True Echols**. Originated in USA. Chinese synonym 'Hua Huibo'.

True Love. *(C.japonica)* Pyron, 1959, *American Camellia Yearbook*, p.92: An unusual 11-13.5 cm across, incomplete double, six pointed star formation with about 78 petals. Chalk white with a faint dash of pink on some petals. Originated by Trues' Camellia Nursery, Columbus, South Carolina, USA.

True Pink. Bartholomew, 1982, *American Camellia Yearbook*, p.151. Synonym for 'Zhenggongfen' (**Gongfen**).

Truly Fair. *(C.japonica)* Fendig. 1953, *American Camellia Catalogue:* Light pink. Medium size, deeply fimbriated, semi-double. Upright, bushy growth. Mid-season blooming. Originated in USA.

Trumbullii. Trillon, Le Mans Nursery Catalogue, 1843, p.9. Orthographic error for **Turnbullii.**

Trumpet Fanfare. *(C.hybrid). New Zealand Camellia Bulletin*, March 2003, Issue No.144, vol.XXIII, No.2, p.15, Reg. No.452. Registered by O. Blumhardt, Whangarei, New Zealand. A cross of *C.x williamsii* **Ruby Bells** x *C.japonica* x *C.reticulata* **Diamond Head**, best classified as a non-reticulata hybrid as there is some doubt about the reticulata parentage of **Diamond Head**, and the flower has no reticulata characteristics. It first flowered 1982. Flowers are semi-double, 8 cm diameter x 5 cm deep, trumpet-shaped, reminiscent of a vireya rhododendron. The 13-14 petals are long and narrow, with length 2½ times the width, and are unusually recurved for a camellia. Colour is a pillar-box red (RHS.CC.50A). Stamens are long, in a compact column, with bright yellow pollen on light yellow filaments. Very free-flowering. The plant is early flowering, upright, dense and of medium growth rate, with dark green leaves 7 cm long x 3 cm wide.

Trumpeter. *(C.japonica)* Camellia Grove Nursery Catalogue, 1946, p.8: Scarlet. Large single of trumpet form, 12 cm across, 7 very large petals, veined; erect central stamen column. Foliage pendulous. Originated by E.G. Waterhouse, Gordon, N.SW, Australia.

Tryphosa Alba. Le Texnier Catalogue, 1911, p.28. Synonym for **Tryphosa Unica Alba.**

Tryphosa Unica Alba. *(C.japonica)* James Burnett, ed., 1837, *Magazine of Botany and Gardening*, vol.3, new ser.p.154: A French seedling of great beauty, raisd by Bollweiler and presented to me for dedication. The flowers are quite large, full and round, the petals arranged after the form of **Welbankiana** and filled with scattered stamens. It is a lovely white colour of the **Pompone** formation. Illustrated in Berlèse, 1843, *Iconographie*, pl. 139 as 'Triphosa Vera' and in the text on facing p. as 'Triphosa'. Synonyms: 'Triphosa', 'Triphosa Alba', 'Lactea', 'Tryphosa Alba'. Orthographic error: 'Triphausa'.

Tsubaki-hime. (Camellia Princess), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.31: Very large size, pink, double. Blooms early. A seedling of *C.reticulata* hybrid **Mouchang** x *C.granthamiana.* Originated in the Osaka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.171 with colour photo; English translation p.118. Upright, fast growing, a wide site needed. Parentage stated to be *C.reticulata* hybrid **Lasca Beauty** x *C.granthamiana*.

Tsubaki-yama. (Camellia Hill), *(C.japonica)* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.171: Deep pink double, opening to semi-double, colour becoming paler to the centre. Petals in 3-4 rows, outer, broad, rounded, emarginate, over-lapping; inner becoming smaller, cordate, with a short tuft of stamens in the centre. Leaves long-ellitic to lanceolate-elliptic, deep green, apex tapering acuminate, margins obscurely serrulate, depressed venation. Flowers mid-season. It resembles **Shunshokô** but the colour is darker and the petals thicker. It was named by Tuyama, Takashi in 1973. The tree was at Tokyo University Akamon (Red Gate Senior School) on a small hill named 'Tsubaki-yama'. It is the same as that obtained by Yoshizawa Tsubaki-en from Angyô, Kawaguchi-shi, Saitama Prefecture, and named 'Bunan-no-homare' and an old tree, about 110 years of age is in Kurume City, Fuku'oka Prefecture, Japan. The original **Tsubaki-yama** at Tokyo University no longer exists. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.376, p.153; Seibundô Shinkôsha, 1989, *Senchinshû*, pp.100, 232.

Tsukasa-shibori. (Tsukasa's Variegated), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.250, colour photo and description: Small size, white with red flecks and streaks, campanulate single with 5 emarginate petals of irregular size and a broad, central, stamen column with golden anthers. Blooms very early to mid-season. Leaves shining, deep green, flat, lanceolate to elliptic with long tapering apices, margins serrate. Originated in Kurume City, Fuku'oka Prefecture, Japan. A natural seedling of **Hatsu-arashi-Saga.** Resembles **Shibori-hatsu'arashi.**

Tsukayama-ichi-gô. (Tsukayama No.1), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.164, description, p.165, colour photo: Large size, red, campanulate single with 5 broad, rounded, thick, overlapping petals and a yellow, central stamen column. Blooms early to mid-

season. Leaves bright green, oblong-ovate, margins irregularly serrate. Flowers are frost hardy. Originated in Ôsaka Prefecture, Japan.

Tsukayo. (Place Name), *(C.rusticana)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.93, colour photo and description: Small size, pale pink, enclosed single with 5 broad, concave, cleft, embracing petals, enclosing irregular stamens with light yellow anthers. Blooms mid-season to late. Leaves glossy mid-green, broad-elliptic, apices tapering acute, margins serrate. Originated in Toyama Prefecture, Japan. Named and released by Takeo Ogawa in 1979.

Tsukikage. (Moonbeam), *(C.japonica)* Itô, Ihei, 1695, *Kadan Chikinshô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Variegated with red on light coloured ground in a splashed pattern. Double and a large flower. Originated in Japan. See: JCS., 1969, *Tsubaki*, No.7, p.34. (Believed extinct.)

Tsukikage. (Moonbeam), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.311: Medium size, white, open peony form with light greenish base. Stamens irregularly petaloid. Originated in Japan. Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.137. (Believed extinct.)

Tsukikage. (Moonbeam), *(C.sasanqua)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô*, vol.16: White, large size, single. Originated in Japan. (Believed extinct.)

Tsukikage. (Moonbeam), *(C.japonica)* Funaki-en Catalogue, 1986, No.150, p.8; Inazawa Nurseries Co. Ltd Catalogue, 1986-1987, p.2, A-57: White single with round, embraced, overlapping petals. Medium size. Originated in Kantô area, Japan.

Tsukikyûden. (Palace in the Moon), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan:* Large size, double, white with pink graduations. Originated in Japan.

Tsukimachihime. (Moon Watching Princess), *(C.rusticana x C.oleifera)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.86, colour photo and description: Very small size, soft pink, single with 5 irregular sized petals, 3 large, rounded, emarginate, 2 small and rounded; stamens in an open cylinder with white filaments, joined for lower half and golden anthers. Fragrant. Blooms midseason to late. Leaves dark green, small, elliptic, apices tapering acuminate, margins sharply serrate. Plant habit pendulous. Originated in Niigata Prefecture, Japan. A seedling from *C.rusticana* **Kikôshi** *x C.oleifera. Nippon Tsubaki - Sasanqua Meikan*, 1998, p.169 with colour photo; English translation p.117. Parentage stated to be **Kikôshi** x *C.lutchuensis*. Named and released by Kaoru Hagiya in 1974.

Tsukimi-guruma. (Moon Viewing Carriage), *(C.japonica)* Tuyama, 1966, *Camellia Cultivars of Japan*, pl.96: Light pink, shading to the bottom, campanulate single. Medium sized flower. Colour illustrations: Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.67; *Encyclopedia of Camellias in Colour*, vol.I, pl.48, p.54; Seibundô Shinkôsha., 1979, *Senchinshû*, p.99; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.75. These illustration show a medium sized, pale soft pink, campanulate single of 5 petals, oval, emarginate, of unequal length; stamen column short. anthers yellow. Leaves obovate, bright green, apex abruptly acuminate, margins shallowly to coarsely serrate, venation prominent. Blooms early to mid-season. Originated in Kantô area, Japan. Corruptions of name: 'Tsukonigrurimi', 'Tsukonicruruma', 'Tsukoni Grupuma', 'Tsukone Gruruma', 'Tsukoniguruma', 'Tsukonegruma', 'Tsumimi Guruma'. Resembles;**Yobukodori,**Sakasafuji.Synonyms:'Tsukimi-guruma-Nagoya', 'Chûbu-tsukimi-guruma'. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.169 with colour photo; English translation p.117. A huge tree is thriving at Higashiyama Botanical Garden. **Goshazakura** (Higo) is the same variety.

Tsukimi-guruma (Kantô). (Moon Viewing Carriage). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.169 with colour photo; English translation p.117. Small, palest pink single, cylindrical stamen cluster. Flowers early to mid-season. Leaves elliptic, medium size. Upright growth. Stamen cluster and overall appearance quite different from **Tsukimi-guruma.** Synonym: 'Hatsuwarai'. From Saitama Prefecture.

Tsukimi-guruma-Nagoya. (Moon Viewing Cariage from Nagoya), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon. 1879, *Chinkashû* as one of the 'Santsuma' (Three Spouses) with **Yukimiguruma** and **Hanamiguruma.** The stamens of these cultivars is like a wheel. i.e. 'Kuruma'. Spreading wide in a ring formation. Tuyama, 1966, *Camellia Cultivars of Japan,* p.162; Tuyama, 1968, *Camellias of Japan,* pl.113, p.57, description, p.120; Satô, 1975, *Chûbu no Tsubaki,* p.74 as 'Tsukimi-guruma': Leaves elliptic to broad-elliptic, with rather longer glabrous petioles. Flowers of Higo camellia type, petals broad, rounded at the apex and wrinkled at the margin, light pink with fine dots in deeper pink that is distributed more densely towards the margin. Staminal tube low and broad with stamens a little scattered. Late flowering. There had been some confusion with the previous cultivar, but it is now generally agreed that Dr Tuyama's 'Tsukimi-guruma-Nagoya' is the same variety as the old Edo cultivar **Tsukimi-guruma.** Synonyms: 'Chûbu-tsukimi-guruma', 'Goshozakura'.

Tsukimi-no-en. *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.83 with colour photo; A seedling of **Kantô-tsukimiguruma,** raised by S.Hisatomi, Japan, named and released in 2000. Soft pink, small tubular single. Prominent but pinched stamen cluster. Vigorous, upright growth. Leaves medium size, oblong. Flowers mid-season.

Tsukimi-no-sakazuki. (Moon Viewing Sake Cup), *(C.japonica)* Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.10, A-480: Pale peach pink, single, with overlapping petals - small. Blooms midseason. A superior flower for Chabana. Originated in Japan.

Tsukimi-shiro. (Moon Viewing White Camellia). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.113. No description. From Kurume City, Japan.

Tsuki-no-e. (Picture of the Moon). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.168 with colour photo; English translation p.116. Small size, small stripe of red on pale pink ground, tubular to bowl-shaped single, round petals, cylindrical stamens. Flowers early to mid-season. Leaves elliptic, medium size, flat. Somewhat spreading growth. A seedling of **Shiratama,** originated by Nobuo Sasai in 1982, released in 1997. From Okayama Prefecture.

Tsuki-no-fue. (Flute under the Moon), *(C.japonica)* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.170, illustration and description: Small size, tulip-shaped, white, single of 5-6 petals, pointed oval, slightly reflexed; stamen column with light yellow anthers and white filaments. Leaves glossy medium green, slightly twisted, lanceolate, tapering acuminate apex, margins serrulate. Originated in Kantô area, Japan by Yokoyama. A seedling of **Hototogisu.** See colour photo & description: Seibundô Shinkôsha, 1979, *Senchinshû,* p.99.

Tsuki-no-hagasane. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Toki-no-hagasane.**

Tsuki-no-hikari. (Moonlight), *(C.sasanqua),* Ishii, Yûgi, 1933-1934, *Jissai Engei Chabai no Hinshu Kaistsu;* Yashiroda, 1950, *American Camellia Yearbook,* p.24: Large, semi-double, pure white with pink edges; petals fleshy, thick, broad, glossy without usual crêpe; upright, stout branched. Said to be a seedling of **Tsuki-no-kasa.** Early blooming. Originated in Japan.

Tsuki-no-kamo. (Duck against the Moon), *(C.sasanqua),* Kajitsu-en, 1905, *Chabaika Meikan:* Light red, base white, medium size,. Originated in Japan.

Tsuki-no-kamome. (Seagull against the Moon), *(C.sasanqua),* Ashizawa, 1898, *Chabaika Taishû:* Small white with pink graduation. Originated in Japan.

Tsuki-no-kasa. (Corona of Moon), *(C.sasanqua),* Ashizawa, Yagorô, 1989, *Chabaika Taishû;* Nihon Shubyô Co. Catalogue, 1910: Pink tinged white with a red centre. Medium sized single with thick petals, with waved petal edge, sometimes irregularly arranged. Leaves green to yellowish green, sometimes variegated. An upright but lax grower. Early blooming. Originated in Kantô area, Japan. For illust. see: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.539.

Tsuki-no-kasa. (Corona of Moon), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.99, colour photo, p.232, description: Soft pink with colour fading to petal base, single with 7 petals, large, rounded, overlapping, emarginate, opening wide cup-shaped. Leaves deep green, coriaceous, elliptic, margins serrulate, apex acuminate. Originated in Yonezawa City, Yamagata Prefecture, Japan. Corruption of name: 'Tsuki-no-Rasa'.

Tsuki-no-miyako. (City of the Moon), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, pp.99, 232, in the double flower section; Itô, Ko'emon, 1879, *Chinkashû:* White, large, double. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.56, description, p.102: Medium to large, semi-double, 9.5 cm across. Petals oval in 2-3 rows, usually standing apart. Small number of stamens usually divided into fascicles, joined at base; anthers deep yellow, filaments light yellow. Blooms midseason. Leaves medium dark green, broadly oval to lanceolate, 7 cm x 3.5 cm, apex acuminate to abrupt acuminate, recurved. For colour pls. & descriptions, see Fendig, 1952, *American Camellia Catalogue; Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.242, pp.115, 326. Kasuya Kamegorô 1859, *Tsubaki Irohanayose Irotsuki*. See: JCS., 1969, *Tsubaki*, No.7, p.36. Corruption: 'Tuki no Mi Yak'.

Tsuki-no-ôji. (Prince of the Moon), (Wabisuke), ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.24: Very small size, deep red, sake cup form single. Originated in Kagoshima Prefecture, Japan.

Tsuki-no-Rasa. Fendig, 1950, *American Camellia Yearbook.* Corruption of Japanese name **Tsuki-nokasa**.

Tsuki-no-shizuku. (Trickle of the Moon), *(C.japonica)* Mainichi Shinbun. 1971 *Tsubaki;* Seibundô Shinkôsha, 1979 *Senchinshû*, p.99, color photo, p.232, description: Small size, formal double with 5-6 rows of strongly concave, white petals, with the margins curled in, opening finally to show a few abortive stamens. Note: The final character on p.99, *Senchinshû* translating as 'Dew' is a misprint. Originated in Kantô area, Japan.

Tsuki-no-utage. (Banquet Under the Moon), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.101, colour photo and description: Small size, soft pink, wide campanulate single of 5 irregular sized, rounded, somewhat reflexed petals and a pinched in stamen column with pale yellow filaments, joined for the lower third and yellow anthers. Blooms early to mid-season. Leaves glossy, dark green, elliptic to broad-elliptic, apices tapering acute, Margins serrate. Originated in Okayama Prefecture, Japan. A seedling of **Shôkôshi.** Named and released by Nobuo Sasai in 1978.

Tsuki-no-wa. (Halo around Moon), *(C.japonica)* Seibundô Shinkôsha, 1979 *Senchinshû*, p.232: Clear white, large, star shaped blotches on a deep red ground. A large, single, cup-shaped blossom of 5 large, rounded, reflexed petals, with a cylindrical stamen column. Blooms mid-season. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.246, colour photo. Leaves long oval, medium size, flat, apex acuminate, even, dark green. Plant habit erect and vigorous. Originated in Kurume City, Fuku'oka Prefecture, Japan. A chance seedling, named and released by Katsumi Miyahara in 1975.

Tsukisekai. (The Lunar World). *(C.rusticana). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.168 with colour photo; English translation p.116. Medium size, red, sake cup-shaped single, rusticana-type flared stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size, variegated with white or yellow. Upright, weak growth. Selected from wild rusticanas. Named and released by Tsugitarô Nagao in 1960s. From Niigata Prefecture. Different reading for **Gessekai.** Other reading 'Getsusekai'.

Tsukisekai. Satomi, 1956, *Camellia Varieties of Japan*, p.17. Different reading for **Gessekai.**

Tsukonigrururna. Waterer Nursery Catalogue, 1952-1953, p.19. Corruption of the Japanese name **Tsukimi-guruma.**

Tsukonicruruma. Try, 1965, RHS., *The Rhododendron and Camellia Yearbook*, No.19, p.157. Corruption of the Japanese name **Tsukimi-guruma.**

Tsukoni Grupuma. Killiow Gardens Catalogue, 1985-1986. Corruption of the Japanese name **Tsukimi-guruma.**

Tsukubane. (Shuttlecock Playing). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.220 with colour photo; Small white single, tubular form. Flowers mid-season. Leaves narrowly lanceolate, medium size. Spreading, somewhat weeping growth. A cross between a sibling of **Sakuraba-shiro-nadeshiko** and a strain of **Shiro-yuriba-tsubaki.** Originated, named and releeased by Shinichi Noguchi, Tokyo, Japan.

Tsukubashiro. (Tsukuba White), *(C.rusticana)*, Hagiya, 1984, ACS., *The Camellia Journal*, vol.29, No.2, p.18. No description. Originated in Japan. 'Tsukuba' is a place name.

Tsukone Gruruma. Cannon Scion Catalogue, 1964-1965, p.15. Corruption of the Japanese name **Tsukimi-guruma.**

Tsukoniguruma. RHS., 1971, *Magnolia & Camellia Yearbook*, No.25, p.113. Corruption of the Japanese name **Tsukimi-guruma.**

Tsukumo-gakkô. ('Gakkô' from Tsukumo), *(C.japonica)* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.24: Very small size, vivid red, tubular single. Blooms early to mid-season. Originated in Chiba Prefecture, Japan.

Tsukumo-jishi. (Tsukumo Lion), *(C.japonica) Encyclopedia of Camellias in Colour*, vol.I, 1972, p.364: Medium to large, full, peony form to anemone, pink with white edges and rare red streaks, similar to **Hikarugenji** but softer colours. The centre consists of stamens formed into fascicles of small petaloids which produce much honey. Late flowering. Leaves deep green, broad oval, margins coarsely serrate. Originated in Japan from the collection of Kurihara, Yoshifumi, Shimo-shakuji'i, Nerima-ku, Tokyo, Japan. Released by Kazutoshi Ôhira around 1970. For illustrations see: Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.171; Seibundô Shinkôsha, 1979, *Senchinshû*, p.99. 'Tsukumo' is a place name in Okayama Prefecture.

Tsukumo-tamanami. (Beautiful Waves in Bay of Tsukumo Islands), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.232: White. Single, small campanulate blooms. Filaments white. Early to mid-season flowering. Leaves medium sized, long-oval, undulate, margins shallowy serrate. Plant habit weeping, variable. Selected from wild japonicas growing in Tabira Town, Nagasaki Prefecture, Japan. Discovered by Masaru Matsuda in 1977, named and released by Kiichi Okada. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.30, colour photo.

Tsukushikô. (Kyûshû Red), *(C.japonica)*, Izu-Ôshima, 1980, Hawaii Botanic Garden List, p.13. No description. Originated in Japan.

Tsukushi-no-aki. (Kyûshû Autumn), *(C.japonica)* Inazawa, Nurseries C. Ltd. Catalogue, 1988-1989, p.1, A-40: Medium size, very early, red flowers bloom in autumn. Originated in Japan.

Tsukushi-no-haru. (Kyûshû Spring), *(C.japonica)* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.210: White to pale pink, variegated with pale red. Large, double flower. Leaves broad-elliptic, sharply serrate, acuminate apices. Originated in Kyûshû area, Japan. Orthographic error: 'Tsukasa-no-haru'.

Tsukushi-no-homare. (Glory of Kyûshû), *(C.japonica)* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.210: Large, very pale pink, semi-double form. Originated in Kyûshû area, Japan.

Tsukusi No Haru. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.230. Corruption of the Japanese name **Tsukushi-no-haru.**

Tsumabeni. (Red Edge), *(C.sasanqua)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô*, vol.344: Single, small size, red border on petal edges. Originated in Japan. (Believed extinct.)

Tsumabeni. (Red Wife), *(C.japonica)* Hamamatsu, 1825, *Setsuyô Kikan:* No description. Originated in Japan. (Believed extinct.)

Tsumabeni. (Red Edged), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.16: White irregularly bordered light pink. Small, single, early blooming. Originated in Japan.

Tsumabiki. (Flipping with Nail), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.162, 163, colour photo and description: Small size, red, bordered with little white spots on petals edge, tubular to campanulate single with 5 irregular, pointed petals with folded lateral margins and a broad stamen cylinder with cream filaments, joined for lower half and yellow anthers. Blooms mid-season to late. Leaves deep green, flat, lanceolate-elliptic, with tapering acuminate apices and serrate margins. Selected from wild japonicas growing on Izu Ohshima Island, Japan. Named and released by Takeo Ogawa in 1969.

Tsumadohime. .(Tsumado Princess), *(C.japonica)* Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.3, A-134: Dark red, single, tubular flower with cylindrical stamen column. Plant habit, dwarf with bending trunk. Blooms mid-season. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.326. English translation p.235. Leaves elliptic, small, flat. Flowers mid-season. Spreading growth, branches zig-zagged in 'Unryû' form. Selected from wild japonicas growing in Niigata City, Japan. Named and released by Hideyo Katô in 1983.

Tsumagome. (Place Name), *(C.japonica)* Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.48; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.305, p.129, description, p.243; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.101, 232: Medium size, pale pink, single of 5-6 petals with colour fading to almost white toward the centre, opening wide cup-shaped, petals reflexed, emarginate, in some rare cases with pink stripes. Stamens in a central cylinder; anthers golden, filaments pale cream. Leaves deep green, elliptic, apex acute, margins serrate. Blooms mid-season. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.97, colour photo. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1975.

Tsumaoribeni. (Tsumaori Red), *(C.sasanqua)*, Wada, 1941, *Japanese Garden Treasures*, p.32: Semi-double, autumn flowering sasanqua, red with incurved petals. Originated in Japan. Note: 'Tsumaori' is an old Japanese word for bending the edge and refers to the incurved petals.

Tsumaorigasa. (Tsumaori Umbrella), *(C.sasanqua)*, Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu;* Nihon Shubyô Co. Catalogue, 1910: Deep carmine. Medium size, cupped single to semi-double of 6+ petals, thick, glossy, incurved edge. Early blooming. See colour pl.534, p.213, *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.387. Corruptions of name: 'Tsume-origasa', 'Tsumari-Gasa'. Originated in Kantô area, Japan. A 'Tsumaorigasa' is an ancient umbrella with a long pole handle, used by nobles and monks, and refers to the shape of the bloom.

Tsumaorigasa. (Tsumaori Umbrella), *(C.japonica)* Himuro, 1982, *Murasuzume:* Rose-pink splashed rose, semi-double with out-curved petals. Originated in Kanagawa Prefecture, Japan. A sport of **Ezo-nishiki.**

Tsumaori-gasa-shibori. Synonym for *C.sasanqua* **Hitomaro.**

Tsumari-Gasa. Vanderbilt, 1940, *Camellia Research*, p.7. Corruption of Japanese sasanqua name **Tsumaorigasa**.

Tsumbo. Different reading for **Tsunbo**.

Tsumeno-kôsai. (Red Petal Edges), *(C.japonica)* Sakuden, 1630, *Hyakuchinshû:* Medium size, white, edged red, single. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.108. (Believed extinct.) Different reading: 'Tsumekôsai'.

Tsumeorigasa. Different reading for **Tsumaorigasa.**

Tsumekôsai. Different reading for **Tsumeno-kôsai.**

Tsumimi Guruma. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* Corruption of Japanese name **Tsukimi-guruma.**

Tsunayakata. (Rope House). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.171 with colour photo; English translation p.118. Medium size, white, tubular single, cylindrical stamen column. Flowers mid-season to late. Leaves ovate, medium size, thick, somewhat waved. Upright, vigorous growth. Selected from wild japonicas growing in Hirado City. Discovered in 1975 by the staff of the Agriculture Section of Hirado City Office. Named and released by Saburô Kumazawa. From Nagasaki Prefecture.

Tsunbo. (Deafness), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.93: Large, dark red, single with 6 long, narrow petals, opening flat; centre a large cushion of petaloids and stamens. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.98. (Believed extinct.)

Tsunbo. (Deafness), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.612: Large, anemone form, to semi-double, deep red, two rows of large, rounded and wavy, overlapping petals. Centre a large cushion, almost entirely of flagged petaloids. Originated in Japan. Thought to be the same as the above. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.155. (Believed extinct.)

Tsunbo-daiku. (Deaf Carpenter), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.414: Medium size, dark crimson, single with 6 irregular petals and a round centre of short stamens, some transfigured to flagged petaloids. Originated in Japan. See; Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.142. (Believed extinct.)

Tsunbo-daiku. (Deaf Carpenter), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.543: Large, dark crimson, single of 7 irregular petals and a centre of spreading stamens with small anthers. Originated in Japan. Thought to be the same as the above. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.143. (Believed extinct.)

Tsunayakata. (Tsuna Mansion), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.100 colour photo, p.232, description: Medium size, campanulate white, single, 5-7 petals, thick, broad, overlapping; central stamen column, golden anthers creamy filaments. Leaves, thick, undulate, dark green, obovate, apex acuminate, margins serrulate. See Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.22, 23, colour photo & description. Originated in Hirado City, Nagasaki Prefecture, Japan.

Tsuni-no-kasume. (Corrupted Name), *(C.sasanqua)*, de Vos, 1959, List of Sasanquas Growing at U.S. National Arboretum. No description. Corruption of an unknown Japanese name.

Tsunoba-shiratama. Different reading for 'Kakuba-shiratama' (**Rôgetsu**).

Tsu-p'ao. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.26. Different reading for **Zipao.**

Tsura-Kagira. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Corruption of the Japanese name **Tsurikagari.**

Tsuratsura-tsubaki. (Ancient Poetic Name for Camellia), *(C.japonica)* Seibundô Shinkôsha, 1979, *Senchinshû*, p.101, colour photo, p.232, description: Medium size, deep red, single of 5-6 petals, overlapping, emarginate, slightly crêped; stamens in a central column, inclined to

pinch in at the top, anthers bright yellow, filaments pink. Leaves deep green, oval, apex acuminate, margins serrulate. Selected from wild japonicas on Koseyama, Nara Prefecture, Japan. Named and released by Ikuo Nishihata around 1960.

Tsuribune. (Fishing Boat), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pale red, three rows of petals. Flower form is similar to **Moshio.** See: JCS., 1969, *Tsubaki*, No.7, p.27; ibid, 1982, No.21, p.104. Originated in Japan.

Tsurigi-no-ma. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Tsurugino-mai.**

Tsurikagari. (Fishing Beacon), *(C.japonica)* Iwasaki, 1829, *Honzô Zufu*: Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, lists this as one of the 5 trees; Tuyama, 1968, *Camellias of Japan*, pl.292, p.148, description, p.178: Leaves narrowly ovate-oblong to elliptic, twisted, long acuminate at the apex, manifestly crenate at the margin, petioles glabrous. Flowers red (Claret rose 021), semi-double, with rather poor staminal tube, petals recurving, slightly marbled with white. Petals deciduous. Late blooming. Originated in Kantô area, Japan. The white spotted form of **Moshio.** For colour plates & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.17 & p.36. Satô, 1975, *Chûbu no Tsubaki*, p.48. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.255 & p.328; Seibundô Shinkôsha, 1979, *Senchinshû*, p.101; Yokoyama & Kirini, 1989, *Nihon no Chinka*, p.333, colour photo. Corruptions of name: 'Tsuri-Kagiri', 'Tsuri Kagira'. Form of **Oki-no-nami**. See: JCS., 1969, *Tsubaki*, No.7, p.37; ibid, 1981, No.20, p.114.

Tsurikagari. (Fishing Beacon), *(C.sasanqua)*, Ashizawa, 1898, *Chabaika Taishû:* Red, medium size. Originated in Japan.

Tsuri Kagira. Hazlewood & Jessep, 1972, *Check List - Camellia Cultivars from Nursery Catalogues.* Corruption of the Japanese name: **Tsurikagari.**

Tsuri-Kagiri. SCCS., 1958, *Camellia Nomenclature*, p.85. Corruption of the Japanese name **Tsurikagari.**

Tsuriko Gari. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.230. Corruption of Japanese. name **Tsurikagari.**

Tsuruga. Hino, Sukekatsu, 1637, *Sukekatsukyôki;* Sakuden, 1630, *Hyakuchinshû;* Hirayama, (Late 17th Century), *Tsubaki Byôbu.* Synonym for **Takukinkô.** See: JCS., 1986, *Tsubaki*, No.25, p.15; Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, pp.48, 105.

Tsuruga. (Place Name), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.14: Small to medium sized single, 6-7 petals, white with heavy streaks and fine dotting of crimson. Slender stamen column. Originated in Japan. (Believed extinct.) Thought to be synonymous with the above for Kakukinkô' in *Hyakuchinshû*, 1630. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.88.

Tsuruga-shibori. (Tsuruga Variegated), *(C.japonica)* Mizuno, 1681, *Kadan Kômoku:* White with purplish variegation. Different reading 'Tsuruba-shibori'. (Believed extinct.) Originated in Japan. See: JCS., 1965, *Tsubaki*, No.5, p.28.

Tsurugata. (Name of Mountain in Kurashiki City), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.37, colour photo and description: Medium size, white, wide cup-shaped single with 5 broad, rounded, overlapping petals and a central stamen cylinder with white filaments, joined for the lower half and yellow anthers. Blooms mid-season to late. Leaves shining mid-green, broad-ovate, apices abrupt acute, margins obscurely serrate. Originated in Okayama Prefecture, Japan. Named and released by Siichirô Sasai in 1978.

Tsuruga-tsubaki. Andoh, 1984, *International Camellia Journal*, No.16, p.46. Synonym for **Takukinkô.**

Tsurugi. (Place Name), *(C.rusticana), Encyclopedia of Camellias in Colour*, vol.I, 1972, p.57, p.300; Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.172: Medium size, white, single with 6-7 petals of unequal length, fluted and sometimes folded on periphery. Pale yellow stamen column. Leaves deep green, lanceolate, recurved, apex acuminate, margins serrulate. Selected from wild camellias in Tsurugi-chô, Ishikawa Prefecture, Japan. Named by Nagamoto, Kenji in 1960. See: Seibundô Shinkôsha. 1979, *Senchinshû*, pp.101, 232. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.172 with colour photo; English translation p.119. Stated to be named and released by Tamon Fukuoka in 1948.

Tsurugiji. (Tsurugi Way). *(C.x williamsii). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.173 with colour photo; English translation p.119. Small, pale pink, tubular single, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, small recurved. Upright growth. A cross between **Tulip Time** and **Sasameyuki.** Originated by Tadao Yamaguchi, named and released in 1987. From Ishikawa Prefecture.

Tsurugi-komachi. (Tsurugi Beauty). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan, 1998,* p.172 with colour photo; English translation p.119. Miniature, deep red, tubular single, slender stamen cylinder. Flowers mid-season to late. Leaves oblong, small, somewhat recurved. Spreading growth. A cross of 'Yomaki-no-sato' x **Koiso**. Originated and released by Tadao Yamaguchi in 1993. From Ishikawa Prefecture.

Tsurugi-no-mai. (Sword Dance), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Wada, 1941, *Garden Treasures of Japan*, p.31, as 'Ken-no-mai': Medium size, resembling **Kenkyô,** but smaller, with shorter petals; vigorous spreading growth; single, late bloomer. Leaves light green, slightly cupped. See colour photo, pl.42, p.122, Tuyama, 1979, *Ishii's Selected Japanese Camellias, including Sasanquas* as 'Tsuruginomai'. See also Seibundô Shinkôsha, Dec.1973, *Garden Life*, p.44. JCS., 1989, *Tsubaki*, No.26, p.47. Originated in Kantô area, Japan. Yashiroda, 1950, *American Camellia Yearbook*, p.15; Ishii, 1950, *Engei Jiten*, vol.2. Different reading 'Ken-no-mai'.

Tsurugi-no-mai. (Sword Dance). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.173 with colour photo; English translation p.120. Large, deep red, irregular semi-double, long narrow petals, split stamens. Leaves elliptic, medium size. Upright, fat and sparse branches. A cross between *C.hiemalis* and *C.reticulata* **William Hertrich**. Named and released by Kaoru Hagiya in 1978. From Niigata Prefecture.

Tsuruhime. (Crane Princess), *(C.japonica)* JCS., 1984, *Tsubaki*, No.23, p.35: Very pale pink single with long tubular blossoms, stamen column closed in at the end; small to medium size. Late blooming. Leaves shining mid-green, flat, elliptic, apices acuminate, margins serrate. Originated in Ehime Prefecture, Japan by Sasai, Nobuo. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.72, colour photo. There is a very old tree of this variety in Ômishima-chô, Ehime Prefecture, that is designated a National Monument. Named and released by Toshihiro Murakami in 1977.

Tsuruhime (Niigata). (Crane Princess). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.173 with colour photo; English translation p.119. Miniature, red shading on pink ground, sake-cupped single, profuse. Flowers early to mid-season. Leaves narrowly elliptic, small. Spreading growth, branches weeping. A cross between *C.hiemalis* and *C.fraterna.* Named and released by Kaoru Hagiya in 1980. From Niigata Prefecture.

Tsuruka-shibori. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.65. Different reading for **Tsuruga-shibori.**

Tsuru-kekoromo. Tateyama Nursery Camellia List, 1959. Different reading for **Tsuru-no--kegoromo.**

Tsuru-no-kegoromo. (Robe of Crane Feathers), *(C.japonica)* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, in the section on double flowers; Itô, Ko'emon, 1879, *Chinkashû:* Large, semidouble, white blushed pink. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.87, p.144. *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.224, p.109, description, p.324: White blushed pink. Large semi-double, 15-16 petals in 3 rows, standing apart in pine cone formation; stamens about 20 in a central column. Leaves ovate, medium to dark green, apex acuminate, margins serrulate. Originated in Kantô area, Japan. Corruptions of name: 'Teuro-no-kigoromo', 'Tsuru-no-koromo', 'Turu-no-kegoromo'. See colour photo & description, pp.101, 233, Seibundô Shinkôsha, 1979, Senchinshû. See: JCS., 1969, *Tsubaki*, No.7, p.35.

Tsurunoko. (Crane Chick), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.114: Large double of pine cone formation, dark red. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.100. (Believed extinct.)

Tsurunoko. (Crane Chick), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.346: Medium size, scarlet, semi-double with 3 rows of petals and a compact, white, central stamen column, anthers yellow, filaments white. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.142. (Believed extinct.)

Tsuru-no-ko. Wada, 1941, *Garden Treasures of Japan*, p.38. Orthographic error for **Tori-no-ko.**

Tsuru-no-koromo. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Tsuru-no-kegoromo.**

Tsuru-no-minato. (Crane Harbour), *(C.japonica)* Funaki-en Catalogue, 1986-1987, p.9, No.156: Small to medium size, white, campanulate single. Originated in Nagasaki Prefecture, Japan.

Tsushima-chidori. (Tsushima Plover), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.210, colour photo and description: Small size, deep vermilion red, wide campanulate single with 5 rounded, overlapping, emarginate or cleft petals and a narrow stamen column with yellow anthers. Blooms mid-season to late. Leaves light green, elliptic to broad-elliptic, apices acute, margins shallowly serrate. Selected from wild japonicas growing on Tsushima Island, Nagasaki Prefecture, Japan. Named and released by Tokuji Ôoka in 1982.

Tsushima-no-musume. (Tsushima Girl). *(C.japonica)*, Kinji Ohara, Tateyama, Chiba, 1993, *List of Camellias:* Bright red, single, tubular. Small to medium size. Medium, upright growth. Mid-season blooming. Originated in Nagasaki Prefecture. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.170 with colour photo; English translation p.117. Leaves elliptic, small. Upright growth. Selected from wild camellias growing on Tsushima Island. Named and released by Taka'aki Sugimoto in 1985. From Nagasaki to Tokyo.

Tsuta-momiji. (Red Ivy Leaves in Autumn), *(C.yuhsienensis* hyb.), ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.31: Medium size, white ground with pink graduations; single like a Chinese bellflower. Blooms early to mid-season. A seedling of **Kanjirô** x *C.yuhsienensis*. Chinka-en Catalogue, 1991-1992, colour photo front page, description p.2: Autumn flowering, fragrant. Elegant, medium size, pink flower with white blotches. A cross of *C.yuhsienensis* x 'Tachi-kantsubaki' (**Utamakura**), by Dr Hagiya, Niigata, Japan.. See also Kairyô-en Autumn Mail Order Catalogue, 1994, p.29, colour photo. Note: The first two references give a different breeding.

Tsuta-no-hosomichi-aka-yuri. (Red Lily by the Ivy Path), *(C.japonica)* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.24: Very small size, deep pink, tubular single. Blooms mid-season. Originated in Shizu'oka Prefecture, Japan. Named and released by Shizuo Suzuki in 1985.

Tsuta-no-hosomichi-shira-yuri. (White Lily by the Ivy Path), *(C.japonica)* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.24: Very small size, white, tubular single. Blooms mid-season. Originated in Shizu'oka Prefecture, Japan. Named and released by Shizuo Suzuki in 1984.

Tsutsumijiro. (Tsutsumi's White), *(C.japonica)* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.54 colour photo, p.55, description: Medium size, white, wide cup-shaped single with 5 broad, rounded, overlapping petals and a broad, yellow stamen column. Petals are thick and hardy against frost. Blooms mid-season to late. Leaves glossy, flat, elliptic, apices acuminate, margins sharply serrate. Originated in Osaka Prefecture, Japan.

Tsutsui-kasuri. (Tsutsui Variegated), *(C.japonica) Chinka Zufu*, (before 1700), Watanabe, 1969, pl.360: White with rare marks of pink and red, large, semi-double with 3 rows of petals, inner row small; stamens few, short with small yellow anthers and white filaments. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.143. (Believed extinct.)

Tsutsuji-cha. Ichijima, 1906, *Kokon Yôrankô*, 1841, vol.306, reprint p.345. Chinese reading 'Chizhu Cha'. Synonym for **Irihi-no-kage** in *Hyakuchinshû*, Sakuden, 1630.

Tsutsuji-tsubaki. Sakuden, 1630, *Hyakuchinshû.* Synonym for **Irihi-no-kage.**

Tsuyoshigahaha. (Tough Mother), Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.65 as 'Tsuyoshi-ga-haha'. Different reading for **Kangahaha** in *Hyakuchinshû*, Sakuden, 1630.

Tsuyo-no-tama. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Tsuyu-no-tama.**

Tsuyukusa. (Dayflower). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.172 with colour photo; English translation p.119. Medium size, white, bellflower-shaped single, cylindrical stamen column. Flowers very early to early. Leaves broadly elliptic, medium size. Branches weeping. A natural seedling of unknown parentage. Originated and named by Sachiko Ôtomo in 1985. From Aichi Prefecture.

Tsuyu-no-tama. (Dew Drop), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû;* Ishii, 1932, *Genshoku Engei Shokobutsu Zufu*, vol.4: Pink flushed white and bordered pink. Large single with waved petals. Originated in Japan. Corruptions of name: 'Tsuyo-no-tama', 'Tsyu-no-tama'.

Tsuzumigaoka. Izu-Oshima, 1980, Hawaii Botanical Garden List. Different reading for **Tsuzumi-oka.**

Tsuzuminami. (Drum Wave), (Higo), Uekiya, Bunsuke Hikki, 1830. Striped single flower of 6-7 petals. See: Hiratsuka, 1964, *Higo Camellia*, p.123. Originated in Japan. (Believed extinct.).

Tsuzumi-no-taki. (Drum by Waterfall), *(C.japonica)* ICS, Apr.1990, *Japanese Camellia Cultivar List*, p.24: Medium size, white ground with stripes of pink, single to irregular double to anemone form. Late blooming. Originated in Niigata Prefecture, Japan.

Tsuzumi-oka. (Place Name, 'Drum Hill'), *(C.rusticana)*, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, Feb.1967, p.19: Large, red, semi-double with 3-4 rows of broad, rounded, overlapping petals and a small cylindrical stamen group. Late flowering. Pendulous branches, floriferous, petioles hirsute. Collected from Kita-kanbara-gun, Niigata Prefecture, Japan in 1958. Named and released by Kaoru Hagiya in 1967. Different reading: 'Tsuzumigaoka'. See colour photo: Seibundô Shinkôsha, 1979 *Senchinshû*, p.100.

Tsuzura-nishiki. McIlhenny, 1937, *600 Varieties of Camellias.* Corruption of the Japanese name **Tsuzure-nishiki.**

Tsuzure-nishiki. (Designed Brocade), *(C.sasanqua)*, Chûgai Nursery Co. Catalogue, 1936-1937, p.26 as 'Tsudzure-nishiki': Light flesh pink with red variegation, semi-double, large. Originated in Japan. Corruptions of name: 'Tzuzuya-nishiki', 'Tsudzure-nishiki'.

Tsuzure-nishiki. (Designed Brocade), *(C.japonica)* Satomi, 1956, *Camellia Varieties in Japan*, p.14: Red mottled white. Large semi-double. Vigorous, upright and open growth, Blooms

mid-season. Tuyama, 1968, *Camellias of Japan*, pl.303, p.153, description, p.181: Leaves narrowly obovateelliptic to broadly elliptic, abruptly long acuminate at the apex, coarsely crenate-serrulate at the margin half above, petioles glabrous. Flowers semi-double to open peony type, rose (Rose opal 022), petals rounded at the apex with small white blotches, inner petals much smaller and wavy, intermingled with petaloids and stamens. Flowers early to late season. Originated in Kansai area, Japan. Many old trees are in Shiku'oka Island, under different names such as 'Iyo-iwane', **Reikô.** See colour photos: Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.8, p.4; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.262 & p.330; Yokoyama. 1975, *Gendai Tsubaki Meikan*, p.172; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.100, 232. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.330, colour photo. Illustrations show a camellia variable of form, from a true semi-double with a compact central stamen column to an open peony form. Corruptions of name: 'Tsuzura-nishiki', 'Tuzure-Nishiki'. Synonyms: 'Iyo-iwane'., 'Iyo-iwane-shibori', 'Reikô', 'Oedo'.

Tsuzure-no-nishiki. (Designed Brocade), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White with fine red speckles, double with 3-4 rows of petals, cylindrical stamen cluster. Originated in Japan. See: JCS, 1969, *Tsubaki*, No.7, p.34. (Believed extinct.)

Tsyu-no-tama. Chûgai Nursery Co. Catalogue, 1939-1949, p.19. Orthographic error for **Tsuyu-no-tama.**

Tu Chuan Cha. (Cuckoo), *(C.japonica)* Ichijima, 1906, *Kokon Yôrankô.* Japanese reading 'Hototogisu-tsubaki', synonym for 'Yabu-tsubaki', group name for wild camellias.

Tuanye Diechi. (Broad Leaf Butterfly Wings), *(C.reticulata)*, Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.16: Butterfly wings type. Spinel pink. Blooms mid-season. [from] Tengchong. Feng et al., 1986, *Yunnan Camellias of China*, p.86, colour photo and description, as 'Tuanyediechi': Leaves broad-elliptic to obovate, apices short pointed to acuminate, bases broad cuneate or bluntly rounded, margins coarsely serrate, bright dark green above, veins conspicuously sunken, 8-11 cm long x 4-7 cm wide. Flowers pink (RHS.CC.,57C), diameter 13cm. Petals about 19, outer whorls large, slightly curved, inner whorls folded and erect. Stamens numerous, placed amongst petals. Pistils mostly rudimentary. Flowers from early to mid-season. The cultivar was selected from an open pollinated plant of *C.reticulata* f. *simplex* in Tengchong, Yunnan, China. Different reading: 'T'uan-yeh Tieh-ch'ih'. Synonyms: 'Round Leaf Butterfly wings', 'Broad Leaf Butterfly Wing'.

Tuan-yeh Tieh-ch'ih. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.25. Different reading for **Tuanye Diechi.**

Tubby Habel. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997, p.15, Reg. No.2410. A large, dark "mahogany" red with dark veins, semidouble to anemone form chance seedling. Late flowering. Originated by Dr James M. Habel, Jr, Suffolk, Va., USA. *American Camellia Yearbook,* 1997, p.7, colour photo before p.1. The seedling first bloomed in 1982. Average flower size is 10.8 cm across x 4.5 cm deep with 30 petals, 10 petaloids, yellow anthers and white filaments. Plant growth is spreading and average, with dark green leaves 10 cm long x 3.8 cm wide.

Tubiflora. *(C.japonica)* Loudon, 1840, *The Gardeners' Magazine*, vol.16: Tubular red of 5-6 emarginate petals and a central stamen column, according to the plate. A seedling raised in Italy by Dr Luigi Sacco. See Schiavone, 1981, pl. 1 & 2. (Believed extinct.)

Tucca. Verschaffelt, 1856, *Iconographie*, vol.VI. in pl. & index. Abbreviation for **Tuccari.**

Tuccari. *(C.japonica)* van Houtte Catalogue, 1847, 30:13: Poppy coloured, extremely well imbricated, medium sized flower [from] Lechi. Van Houtte Catalogue, 1858-1859, 72:26: Rose suffused vermilion, blotched or striped white. Verschaffelt, 1856, *Nouvelle Iconographie*, Book VI, pl.IV: Sent to us from Italy. Its blossoms, larger than average, offer very simple lanceolate or

rounded oblong petals, full or lobate, of a vivid cherry-red, veined a deeper shade, often intersected by a distinct white stain. Abbreviation: 'Tucca'.

Tuccheri. *(C.japonica)* Burdin Maggiore & Co. Catalogue, 1855-1856: An imbricated, carmine red with white macules. Originated in Italy. Orthographic errors: 'Tucheri', 'Tucheria', 'Tuchera', 'Tucchieri', 'Tuckeri'.

Tuchuan. Based on the same characters as 'Tu Chuan Cha'. Japanese reading **Hototogisu-tsubaki.** Translation 'Cuckoo'.

Tuckeri. Catalogo della Stablimento Agrario-Botanico di Castagnola e Casabono, 1867-1868. Orthographic error for **Tuccheri.**

Tuckiana. *(C.japonica)* Anonymous, Mar.30, 1912, *Gardeners' Chronicle*, ser.3, 51:208: Mr Bennett-Poe showed flowers of a seedling camellia, which he had raised from seed ripened in the South of France, now flowering for the first time. The flowers are single about 7.5 cm across, of a delicate pink with numerous yellow stamens. It has been identified as Camellia **Tuckiana.**

Tudor Baby. *(C.japonica),* ACS, *The Camellia Journal*, Aug. 2001, p.21, colour photo p.20, Reg. No.2549. A formal double chance seedling, dark red with black petal edges. Flowers mid-season. Originated by Hulyn Smith, Valdosta, Ga., USA. *American Camellia Yearbook*, 2001, p.97, colour photo p.c15. The 10 year old seedling first flowered in 1997. Flowers measure 7 cm across x 3.2 cm deep. The plant is upright and vigorous with light green leaves 9 cm long x 3.8 cm wide.

Tudor Baby Variegated. *(C.japonica),* ACS, *The Camellia Journal*, Aug. 2001, p.21, colour photo p.20, Reg. No.2550. A virus variegated form of **Tudor Baby,** the variegation being in a moired pattern. Strong contrast between the very dark red and the white. Originated by Hulyn Smith, Valdosta, Ga., USA. *American Camellia Yearbook*, 2001, p.98, colour photo p.c16. Other details as for **Tudor Baby.**

Tuesday's Child. *(C.japonica) American Camellia Yearbook*, 1960, p.208, Reg. No.441: A 9 year old chance seedling of **Imura** that first flowered 1947; originated by Camelliana, Antioch, California, USA. Plant habit is upright and medium in rate, with dark green leaves, 11 cm x 5.5 cm. The coral red (Nickersen Fan 10R5 1/4/12) semi-double flowers, 11-12.5 cm across x 5 cm deep, have long, strap-like petals, silvery margins and red veins. Blooms mid-season.

Tuffet. *(C.japonica) American Camellia Yearbook*, 1965, p.239. Reg. No.708: (SCCS.,63-1). A miniature *C.japonica* seedling, 7 years old that first bloomed 1958; originated by Estelle Lindsley, San Diego, California, USA. A bright red, tight peony form, 5-5.5 cm across x 3.7 cm deep, similar in form to **Professor Sargent.** Vigorous, upright growth. Blooms early to late.

Tuhsinkueiyeh. Ikeda, 1976, *American Camellia Yearbook*, p.138. Different reading for **Duxin Guiye.**

Tui Song. *(C.reticulata)*, *New Zealand Camellia Bulletin*, 1967, vol.V, No.3, p.10, Reg. No.33: A chance seedling of **Damanao** originated by Jack Clark, New Lynn, New Zealand. The plant has an upright habit of growth with light green, reticulate leaves, 12 cm x 4 cm. The flower colour is rose madder, semi-double, 12.5 cm across and blooms mid-season.

Tulande. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.418. Chinese synonym for the USA *C.reticulata* hybrid **Jean Toland.**

Tulip Time. *(C.x williamsii)*, SCCS, 1981, *Camellia Nomenclature*, p.199: Light pink. Medium sized single of tulip form. Vigorous, open growth. Blooms mid-season. Originated in USA by David Feathers, Lafayette, California. Chinese synonym 'Yujinxiang'.

Tumbergiana. Fratelli Rovelli Catalogue, 1852. Orthographic error for 'Thunbergia', synonym for **Althaeiflora.**

Tumida. *(C.japonica)* van Houtte Catalogue, 1843-1844, 12:eee: Medium size flower with round petals, imbricated up to the centre, soft white with bluish tinge. The leaves are round and very distinguished. Van Houtte Catalogue, 1844-1845, 18:20: Pure white, streaked with carmine. Verschaffelt, 1849, *Nouvelle Iconographie*, Book II, pl.II as 'Carswelliana Alba': Received from Mr Gruneberg of Frankfort, Germany, 5 or 6 years ago. The shrub grows sturdily, the branches being covered with numerous leaves 9-10 cm long and 7-8 cm wide, rounded-oval, thick, deep green fully serrate with smooth veining. The bloom is 9 cm across, white, but distinctly shaded and striated a bright, or some times a delicate pink. The abundant petals, regularly imbricated, rounded or slightly emarginate at the vertex, diminish in size towards the centre. This camellia is also known as 'Tumidia'. Synonyms: 'Fortuita', 'Carswelliana Alba'.

Tumida de la Villa Ciana. *(C.japonica)*, de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias*, p.138. No description. Originated in Italy. (Believed extinct).

Uchigumori. (Inner Shadow), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Pale pink, base red, large. Originated in Japan. (Believed extinct.)

Uchikumori. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.65 as 'Uchi-kumori'. Different reading for **Uchigumori.**

Uchino. (Meaning Uncertain). *(C.japonica),* Kinji Ohara, 1993-1994, Tateyama, Chiba, *List of Camellias:* White, single, tubular form; small to medium size. Flowers in early spring. Originated by Kinji Ohara, Japan.

Uchino-ko. *American Camellia Yearbook,* 1987, p.9. Corruption of the Japanese name **Uchi-no-kô.**

Uchi-no-kô. (Inner Red), *(C.x vernalis)*, Takayuki, Tanaka, et al. 1986, *Journal of Japanese Society of Horticultural Science*, 55(2):213. A pentaploid cultivar, originated in Japan. Corruption of name: 'Uchino-ko'.

Uchûden. (Temple in the Cosmos), (Higo), Yoshimura, 1961, *Higo Tsubaki Meikan:* White ground striped pink, stamens fully opened. Leaves medium size. Originated in Japan.

Uchû-no-hikari. (Light of the Cosmos), (Higo), Vi Stone, SCCS., 1983, *The Camellia Review*. vol.45, No.2, p.21: Pink edged white, 11 cm across. Sport of **Taikanhô.** *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.38 with colour photo; English translation p.24. Large, red stripes and white borders on deep pink ground, flat single with apricot form yellow stamens. Flowers mid-season to late. Leaves elliptic, medium size. Spreading growth. Sport of **Daikanbô.** Recognised as a new Higo variety by the Higo Camellia Society in 1984. Note; The ICS Register entry for **Daikanbô** records confusion between it and **Taikanhô.**

Udagawa. (Personal name), *(C.japonica)*, Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.74, illustration and description: Light red, large size, semi-double; petals veined a deeper colour, oval, waved, reflexed with a thin stamen column. Originated in Angyô, Saitama Prefecture, Japan by Uda-gawa, Haruyuki.

Uda-tsubaki. (Camellia from Uda). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.38 with colour photo; English translation p.24. Medium size, pale pink, lotus form semi-double. Flowers mid-season to late. Leaves narrowly elliptic, medium size, flat. Upright growth. An old camellia of this sport survives at the Uda family home in Haibara Town, Nara Prefecture. Named and released by Ikuo Nishihata in 1965.

Udekemi. Mertens & Fontaine, 1845, *Collection de cent especes…*p.71. Abbreviation of **Baronne d'Udekem.**

Udoguro. (Black camellia from Udo). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.39 with colour photo; English translation p.25. Medium size, dark red single, glossy petals. Flowers early to mid-season. Leaves elliptic, medium size. Collected at Udo Shrine, Miyazaki Prefecture. named and released by Takeo Ogawa in 1992. From Miyazaki to Izu Island.

Udonge. (Rare Chance), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Light pink, usually with white petaloids, convex corolla, occasionally pink petaloids and a centre of yellow anthers. Medium size. Described as a synonym for 'Mikunimusô'. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.2, p.111. Originated in Japan. (Believed extinct.) Note: "Udonge" is a legendary plant said to bloom once in 3000 years.

Ueda-de-otome. (Ueda's Maiden), *(C.japonica)*, Mizuno, 1829, *Sômoku Kin'yôshû*, vol.5: Yellow variegated leaves. Resembles **Shinchû-otome.** See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7 p.165. Originated in Japan. (Believed extinct.)

Ueda-de-sunago. (Ueda's Dotted), *(C.japonica)*, Mizuno, 1829, *Sômoku Kin'yôshû*, vol.5: Leaves dotted, long elliptic. Resembles 'Mizunde-idaten'. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7 p.167. Originated in Japan. (Believed extinct.)

Ueda-sakuraba. (Ueda's Cherry Leaf), *(C.japonica)*, First listed in ACS *Yearbook*, (before 1970). Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.72, illustration and description: Pink, irregularly

edged white, open, informal peony form with large outer petals and a centre of erect, folded and fluted petals mixed with petaloids and stamens. Sometimes self red flowers are produced. Leaves broad-lanceolate; apex caudate, deep shining green, serrations deep and sharp like a cherry leaf. Late blooming. A variegated leaf sport of **Kurume-genji.** Originated in Chûbu area, Japan by Toshiaki Ueda in 1967.. See colour photo & description: Seibundô Shinkôsha, 1979, *Senchinshû*, p.20, 201. Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.378, 379.

Ueno-shibori. (Spotted Ueno), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.201: Vertical red spots on a white ground, Small spots occur. Blossoms are bowl shaped; stamens cylindrical. Flower single, medium size. Blooms early. Leaves long-oval, apex acuminate, margins finely serrulate. Plant habit upright and vigorous. A seedling of **Hatsu-arashi-Saga.** Originated in Kurume City, Fuku'oka Prefecture, Japan.

Uetsuma. Different reading for **Kamitsuma.**

Ugetsu. Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details.

Uggerii. Oudin, Lisieux Nursery Catalogue, 1845-1846, p.48. Orthographic error for **Ugoni.**

Ugo Fascolo. Jean Verschaffelt Catalogue No.11, 1867-1868, p.47. Orthographic error for **Ugo Foscolo.**

Ugo Foscolo. *(C.japonica),* van Houtte Catalogue, 1858, 72:26: Imbricated, brilliant pink. Verschaffelt, 1859, *Nouvelle Iconographie*, Book I, pl.I: Its aspect is pyramidal; the foliage medium, of a beautiful green. Its blossoms, above average in size (about 10 cm across) and pink, somewhat crimson towards the centre, are composed of numerous oval petals at the centre, rounded at the circumference, scarsely lobulate, serried and imbricated with utmost regularity. Originated in Italy by Guicciardini. Synonym: 'Contessa Marietta'. Orthographic errors: 'Ugo Fascolo'.

Ugomi. Prince & Co. Catalogue, 1846-1847, p.10. Orthographic error for **Ugoni.**

Ugoni. *(C.japonica),* Tagliabue, 1840, *Nomenclatore Camelliae* as 'Hugoni". No description. Franco Agostoni, 1844, *Catalogo Plantarum.* van Houtte Catalogue, 1854-1855, 53:47, as 'Ugoni d'Italia': White lined with carmine pink. Imbricated. Originated in Italy. Synonym: 'Italia d'Italia. Orthographic errors: 'Ugomi', 'Ugonii', 'Uggerii', 'Hugoni'.

Ugonii. Burdin Maggiore & Co. Catalogue, 1845-1846, p.43. Costa, 1846, *Catalogue de la collection de camellias présentée à sa majesté L'Imperatrice de toutes les Russies et Reine de Pologne*, p.14. Orthographic error for **Ugoni.**

Ugoni d'Italie. van Houtte Catalogue, 1843-1844, 12:eee. Synonym for **Ugoni.**

Uguisu. (Japanese Nightingale), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku:* Large, red double. See: JCS, 1965, *Tsubaki*, No.5, p.29. Originated in Japan. (Believed extinct.)

Uguisi-no-yume. (Warbler's Dream). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.72 with colour photo; Small red single, tubular form. Slightly pinched stamen column. Flowers early. Leaves ovate, medium size. Upright growth. A cross of **Uraku 64** x **Fukushima-yuri,** Originated by Kuraji Iino, Hyogo Pref., Japan, in the 1990s.

Uheinaoyumi, (Personal name), *(C.japonica),* Usami, Naohachi, (ca.1910), *Nagoya Chinzu'e:* Yashiro, 1841, *Kokon Yôrankô*, vol.306, Ichijima reprint, p.346: white, double, medium size. Resembles **Takasago**. Different readings: 'Utoji Naoyumi', 'Uhe Naoyumi'. See: Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû*, No.6, p.126.

Uhe Naoyumi. Yashiro, 1842, *Kokon Yôrankô*, vol.306. Ichijima reprint, p.346. Different reading for **Uheinaoyumi.**

Ujibeni. (Red Uji), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.481: Medium size, red with lighter borders, semi-double with 3 rows of irregular, ragged edged petals and a wide cushion of short stamens. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.151. Originated in Japan. Different reading: 'Ujikurenai'.

Ujikurenai. *Chinka Zufu*, (before 1700), Watanabe 1969, pl.481. Different reading for **Ujibeni.**

Ukibeni. Different reading for **Ukikurenai.**

Ukibune. Different reading for **Ukifune.**

Ukifune. (Floating Boat), *(C.sasanqua)*, Itô, Ihei, 1719, *Kô'eki Chikinshô;* Yashiro, 1841, reprinted Ichijima, 1906, *Kokon Yôrankô*, vol.344, pp.570, 572: White semi-double, large. Originated in Japan. (Believed extinct.) Note: This is a heroine's name in *Genji-monogatari.* A small boat floating in the stream symbolises her sad fate.

Ukifune. (Floating Boat), (*C.japonica*), *Chinka Zufu*, (before 1700), Watanabe, 1969 pl.11: Dark red, single with rounded, slightly cordate petals and a central ring of stamens with a petaloid or two. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.88. Originated in Japan. (Believed extinct.) Note: This is a heroine's name in *Genji-monogatari.* A small boat floating in the stream symbolises her sad fate.

Ukifune. (Floating Boat), (*C.japonica*), Seibundô Shinkôsha, 1979, *Senchinshû*, p.20 colour photo, p.201, description: Soft salmon pink single with large petals, crinkled and crêped, medium size, opening bowl-shaped. A large, circular stamen cluster with yellow anthers and whitish filaments. Leaves undulate. Originated in Chûbu area, Japan. Note: This is a heroine's name in *Genji-monogatari.* A small boat floating in the stream symbolises her sad fate.

Ukigumo. (Floating Clouds), *(C.sasanqua)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô*, vol.344: Semi-double, pink ground with white streaks. Originated in Japan. Different reading: 'Ukikumo'. (Believed extinct).

Ukihashi. (Floating Bridge), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe. 1969, pl.438: White ground with large, crimson stripe and some light pink markings. Small single, opening flat; cylindrical stamen cluster. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.147. Originated in Japan. (Believed extinct.)

Uki-komachi. (Beauty from Uki). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.35 with colour photo; English translation p.22. Miniature, deep red, small sake-cup-shaped single with tubular stamen cluster. Flowers early to mid-season. Fairly upright and vigorous. Selected from wild camellias growing in Uki Town, Isahaya City, discovered and named by KyûmaNishimura in 1982. From Nagasaki Prefecture.

Ukikumo. Different reading for **Ukigumo.**

Ukikurenai. (Dull Pink), *(C.sasanqua)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, reprinted, Ichijima, 1906, *Kokon Yôrankô*, vol.344: Dull pink, irregularly striped lighter pink. Small single. Originated in Japan. Different reading: 'Ukibeni'. (Believed extinct.)

Ukikusa-shibori. (Striped Ukikusa), (*C.japonica*), JCS., ed. Mainichi, Shinbun, 1971, *Tsubaki* p.120, pl.170: Ground pinkish white, densely speckled and dotted light red, bowl-shaped single, with a wide but short group of stamens. Originated in Japan. Note: "Ukikusa" is a rootless water plant and alludes to a rootless life.

Ukimabune. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.36 and English translation p.23. Orthographic variant for **Ukimafune.**

Ukimafune. (Floating Leisure Boat), *(C.japonica),* Himuro, 1982, *Murasuzume:* Rose-pink with one or two deep rose stripes, single. Originated in Kanagawa Prefecture, Japan in 1984. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.36 with colour photo, as 'Ukimabune'; English translation p.23. Tubular to trumpet shaped single, round petals, tubular stamen cluster, small. Flowers mid-season to late. Leaves elliptic, medium size. Upright growth with thin branches. A chance seedling of Kyôkarako. Originated by Teiji Himuro, registered by the Ministry of Agriculture and Fishery, No.3501.

Ukimidô. (Floating Temple). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.36 with colour photo; English translation p.23. Red splashes and streaks on pale pink ground. A medium size, bud-centred formal double with channeled petals. Flowers mid-season to late. Leaves ovate, medium size. Spreading growth. A chance seedling of unknown parentage, originated by Shinichirô Kishikawa in 1992, named by Kiyoshi Tarumoto. From Osaka.

Ukishima. (Floating Island), (*C.japonica*), ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.24. No description. Originated in Ehime Prefecture, Japan.

Ukiyo. (The Transitory World), (*C.japonica*), Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Red, semi-double with 3 rows of petals with white markings. See: JCS, 1969, *Tsubaki*, No.7, p.22. Originated in Japan. (Believed extinct.)

Ukiyo. (The Transitory World), *(C.rusticana),* Tateishi et al., 1970, *Journal of Japanese Botany*, vol.45: White ground with red streaks, double lotus form blooms. Originated in Japan.

Ukiyô. Different reading for **Ukyô.**

Ukiyo-nishiki. (Ukiyo Brocade), *(C.japonica),* Uekiya, Seijirô, 1874, *Tsubaki Hyakuro no Zu*, vol.2, No.11: Medium size, formal double with numerous small petals, white bordered red. Listed as a synonym for **Otome,** but this is not possible to confirm. Originated in Japan. (Believed extinct.)

Ukon. (Turmeric). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.36 with colour photo; English translation p.23. A medium size, pale yellow semi-double. Flowers mid-season. Large leaves with clear veins resembling those of *C.nitidissima.* Upright growth. An F2 hybrid obtained by crossing 'Koki 90' back to *C.nitidissima*. Named and released by Kazuo Yoshikawa in 1996. Scheduled to be on the market from autumn of 1997. From Osaka.

Ukyô. (Possibly West Kyôto), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, reprinted, Ichijima, 1906, *Kokon Yôrankô.* Semi-double, pink with red streaks; rhododendron form. different reading: 'Ukiyô'. Originated in Japan. (Believed extinct.)

Ulania. (*C.japonica*), Verschaffelt Catalogue, 1844-1845, p.30. No description. Originated in Italy. (Believed extinct.)

Ulania Extra. *(C.japonica),* Alex Verschaffelt, 1846, Catalogue, p.59. No description. Originated in Italy. (Believed extinct).

Ulante. Verschaffelt, 1853, *Nouvelle Iconographie*, Book III, pl.II, Orthographic error for **Ulantha.**

Ulantha. (*C.japonica*), Herbert, 1837, *Amaryllidaceae & Suppl.*, p.367: Originated by Rev. Herbert, London, England from **Pompone** x **Alba Simplex.** White striped with pink; flowers in 4 uniform compartments. Verschaffelt, 1853, *Nouvelle Iconographie*, Book III, pl.II as 'Ulante': Petals numerous, regularly imbricated, outspread, convex, slightly emarginate, pure white

with a few delicate pink stripes at the centre they are erect, obovate, with a pale yellow tint at the base. Synonym: 'Hylas'. Orthographic errors: 'Ulanthe', 'Ulante'.

Ulanthe. Robert Tyas, 1843, *Popular Flowers*, p.86. Orthographic error for **Ulantha.**

Ulbertina. Abbott, T. Catalogue, 1892-1893, p.11. Orthographic error for **Ubertina.**

Ulmari. (*C.japonica*), van Houtte Catalogue, 1839, 1:9. No description. Originated in Italy. (Believed extinct.)

Ulpan. Guilfoyle, 1883, *Catalogue of Melbourne Botanic Gardens*, p.172. Orthographic error for **Ulpian.**

Ulpian. *(C.japonica)*, Guilfoyle Nursery Catalogue, 1866, p.19. No description. Originated in Australia. Orthographic error: 'Ulpan'. (Believed extinct.)

Ulrich Brunner Rose. Vanderbilt, 1941, *Camellia Research*, II, p.7. Synonym for **Cheerful.**

Ultima. *(C.japonica)*, Vervaene, J. Catalogue No.1, 1875, p.23. No description. Originated in Belgium. (Believed extinct.)

Ulysses in Autumn. *(C.japonica)*, Dodd, 1968, *Adventure in Camellia Seedlings*, p.7, colour photo: Deep crimson, semi-double with 3 rows of rounded petals and small, red stamen cluster. A seedling of **Iwane-shibori,** originated in USA by Richard Dodd, Marshallville, Georgia.

Umakura. (Place Name in Izu Ôshima), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.132, colour photo and description: Small size, pink, cup-shaped single with 5 broad, rounded petals, irregular in length and with crinkled, reddish margins; short, broad stamen column, filaments white, joined at lower half, anthers yellow. Leaves glossy deep green, ovate, apex acute, margins serrate. Blooms early to mid-season. Originated in Izu-Ôshima, Japan. Named by Take'o, Ogawa, Izu Ôshima in 1965.

Umberto di Savoia. *(C.japonica)*, Stefano Pagliai Catalogue, 1867, as 'Umberto di Savoja': Flesh white, ribboned and dotted with vivid carmine. Imbricated. Originated in Italy by C. Franchetti. Orthographic variants: 'Umberto di Savoja', 'Umberto di Savoya'.

Umberto di Savoja. Stefano Pagliai Catalogue, 1867. Orthographic variant for **Umberto di Savoia.**

Umberto di Savoya. Linden Catalogue, 1875. Orthographic variant for **Umberto di Savoia.**

Umbilicata. *(C.japonica)*, Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. No description. Ridolfi, Florence Catalogue, 1848, p.9. No description. Originated in Italy. (Believed extinct.)

Umbilicata Variegata. *(C.japonica)*, Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. No description. Ridolfi Florence, Catalogue, 1848, p.9. No description. Originated in Italy. (Believed extinct.)

Umebôshi. Different reading for **Umehôshi.**

Umega-eda. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.169. Different reading for **Umega'e.**

Umega'e. (Plum Branch), *(C.x vernalis)*, Shirai Bunko, 1789, *Shoshiki Hanagatachô:* Red with white spots. Medium size. Originated in Japan. Different reading: 'Umega-eda'. See; Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.81. (Believed extinct.)

Umega'e. (Plum Branch), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Single, very small, light red with embracing petals. Originated in Japan. (Believed extinct.)

Umega'e-haku. (White Plum Branch), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.16: Pure white. Large, single with round petals. Originated in Japan.

Umegaka. (Scent of Plum Blossom), *(C.x hiemalis)*, Yamamoto, 1956, *Botan'en;* Nakamura, Tsuneo, Seibundô Shinkôsha, 1965, *Tsubaki to Sazanka;* Tuyama, 1968, *Camellias of Japan*, pl.405, p.206, description, p.209: Leaves among the larger ones, very broadly elliptic, very shortly acuminate at the apex, lateral veins elevated. Flowers semi-double, palest pink, tinged with a deeper pink on the outer side of the petals. Flowers from early to late. Different reading: 'Umegakaori'. For further colour photo & description: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.556, pp.218, 391. Originated in Takarazuka City, Hyôgo Prefecture, Japan. It is said that this is a possible synonym for **Chiri-tsubaki** from *Chinka Zufu*, (before 1700). Synonym: 'Pink Shishigashira'. It is a pink sport of **Shishigashira.**

Umegakaori. Different reading for **Umegaka.**

Umegaki. (Plum Tree Hedge), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Deep pink, large. Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement*, illustr. (p.65); Hiratsuka, 1964, *Higo Camellia*, p.30 and back p.13: Flower pink, 9 cm across with 7 petals. Stamens fully opened, wide spreading, light pink. Leaves large, ovate-elliptic. See colour photo & description: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.23, 202; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.169. Originated in Kumamoto Prefecture, Japan.

Umegaki. (Plum Tree Hedge), *(C.sasanqua)*, McIlhenny. 1937, *600 Varieties of Camellias*, p.13; Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.16: Small, single, solid pink. Originated in Japan.

Umehôshi. (Buddhist Priest with Plum Blossom), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Red with a few white stripes, small, single with heavily crêped petals. Originated in Japan. Different reading: 'Umebôshi' and 'Umeboshi', meaning 'dried plum', a favorite food of ancient times. Synonym: 'Ume-no-hôshi'. (Believed extinct.)

Ume-no-hôshi. Watanabe, 1960, Kyôto Engei Kurabu *Tsubaki Tokushû*, No.1, p.65. Synonym for **Umehôshi.**

Ume-no-kaze. Yashiro. 1841, reprinted, Ichijima, 1906, *Kokon Yôrankô*, vol.344, p.571, from *Hiden Kakyô.* Abbreviation for **Ume-no-kaze-sazanka.**

Ume-no-kaze. (Breeze of Plum Blossom), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.16: White, splashed and often bordered pink. Medium size, semi-double. Leaves variegated. Originated in Japan.

Ume-no-kaze. (Breeze of Plum Blossom), *(C.x vernalis)*, Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu:* Red with white spots; single, large. Originated in Japan.

Ume-no-kaze. (Breeze of Plum Blossom), *(C.x vernalis)*, Kirino, Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.37: White with light red blotches, small size, double; flowers mid-season. Originated in Angyô, Saitama Prefecture, Japan.

Ume-no-kaze. (Plum Breeze). *(C.vernalis). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.293 with colour photo; English translation p.205. Medium size, pale pink with deeper pink on the backs of the outer petals, sake cup-shaped semi-double. Flowers early to mid-season. Leaves narrowly elliptic, medium size. Upright growth, with horizontally spreading branches. Origin unknown, old trees growing in and around Kitahama City and Angyô. Not the same as **Ume-no-kaze** from the Edo era.

Ume-no-kaze-beni. (Red 'Ume-no-kaze'), *(C.x vernalis),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu:* Self red sport of **Ume-no-kaze.** Originated in Japan. Different reading: 'Ume-no-kaze-kurenai'.

Ume-no-kaze-kurenai. Different reading for **Ume-no-kaze-beni.**

Ume-no-kaze-sazanka. (Breeze of Plum Blossom Sasanqua), Itô, Ihei, 1733, *Chikinshô-furoku*, vol.3: Large, semi-double, white with red spots or moires. Diverse designs appear. Originated in Japan. (Believed extinct.)

Umezu-kasuri. (Umezu Variegated), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.220: Miniature semi-double, white with rare red streak. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.114. Originated in Japan. (Believed extinct.)

Umilis. Shiavone, 1981, *Il Giardino dell'Camellie*, pl.4. Orthographic variant for **Humilis.**

Uminaibi. (Ancient Queen in Ryûkyû). *(C.japonica),* Hiroshi, Matsuda, Okinawa, 1994, JCS, *Tsubaki*, No.33, p.35, illustration p.33: Deep red, small cup-shaped single with bright yellow anthers. Blooms Dec. to Jan. Leaves medium size, obovate. Bush upright and sturdy. Selected in the wild from the var. *C.hozanensis* on Ishigaki Island, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.39 with colour photo; English translation p.25. Named and released by Hiroshi Matsuda in 1991. From Okinawa Prefecture.

Umi-no-oto. (Sea Sound), *(C.sasanqua),* Chûgai Nursery Co Catalogue, 1938-1939, p.20: White with scarlet variegation. Large. Originated in Japan.

Umi-no-shiro. (White Sea Mist), *(C.sasanqua),* Wakefield, 1958, *Gardeners' Chronicle*, ser.3, 143:288: A crinkled white with pale pink flushed petal tips. Originated in Japan.

Umorebi. (Banked Fire), *(C.japonica),* Yamaguchi Tsubaki-en, Catalogue, 1985-1986; Inazawa Nurseries Co. Ltd Catalogue, 1986-1987, p.9, A-425: Bright peach red, medium size, bowl-shaped single. Blooms early. Suitable for Chabana. Originated in Chûbu area, Japan.

Unnan-tsubaki. Watanabe, 1970, Kyôto Engei Kurabu *Tsubaki Tokushû*, p.169. Japanese common name for *C.yunnanensis.*

Uncle John. *(C.japonica),* Gerbing Azalea Garden Catalogue, 1958: Purple red. Large, full peony form. Originated in USA by Malbis, Theodore, Alabama.

Uncle Jube. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings*, p.15, colour photo: Medium size, open peony form, red with centre of mixed stamens and petaloids. Originated as a seedling of **Ville de Nantes** by Richard Dodd, Marshallville, Georgia, USA.

Uncle Sam. (*C.japonica*),Rubel, 1940, *Florist's Review*, 86(2236):26: Rose red, large, rose form double. Vigorous, bushy growth. Blooms mid-season. Lindo Nursery Catalogue,1940: Full double. Medium red. Large. Originated in USA. Sports: **New Horizons, Mrs Confer.** Synonyms: 'Rosalie', 'Henry Barnell', 'Betsy Ross', 'Frau Muller', `Tycoon', 'Rosalie'(California). For illustration see p.351, Hertrich, 1954, *Camellias in the Huntington Gardens, v*ol.I.

Uncle Sam. Variegated. SCCS., 1947, *The Camellia. Its Culture and Nomenclature* as 'Uncle Sam Var', synonym for **Mrs Confer.**

Uncle Toi. *(C.sasanqua).* Camellia Forest Nursery Catalogue, 2008, p.8. Single pink flowers on a plant with smaller leaves. Vigorous upright growth.

Uncle Tom. *(C.japonica),* SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.66: Light purplish pink. Medium size, full peony form. Vigorous, bushy growth. Blooms mid-season. Originated in USA by Malbis, Daphne, Alabama.

Undaunted. (*C.japonica*), Fendig, 1952, *American Camellia Catalogue:* Large, clear, deep pink irregular double (peony form), 10 cm across x 6 cm deep, outer petals 5 cm in diameter. Centre a mass of petaloids with no stamens visible. Leaves dark, glossy green, 8-12 cm long x 5-9 cm wide, apex acuminate and bent downwards, veins obscure, serrations shallow. Plant habit is hardy, vigorous and bushy. Late flowering. Originated from seed of unknown parents by Mrs Elizabeth C. Councilman, El Monte, California. First bloomed in 1948 at 11 years old. Registration No.141 with ACS., 1954, *American Camellia Yearbook.* Synonyms: 'Damon Runyon', 'Rusty'.

Underwoods. Hazlewood Nursery Catalogue, 1941. Synonym for **Tricolor.**

Underwood's Red. Hazlewood & Jessep. 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.232. Synonym for **Lady de Saumarez.**

Unforgettable. *(C.japonica),* ACS., Nov.1987, *The Camellia Journal*, vol.42, No.4, p.22, Reg. No.2063: Large, light pink, anemone to peony form, *C.japonica* chance seedling. Blooms early to late. Originated by Matt Talia, Santa Clara, California, USA. *American Camellia Yearbook*, 1987, p.85: The 7 year old seedling first flowered 1980. Average flower size is 10 cm across x 7 cm deep with 86 petals, 60 petaloids, yellow anthers and light yellow filaments. Plant growth is upright and rapid with dark green leaves, 8 cm x 6 cm.

Unica. *(C.japonica),* van Houtte Catalogue, 1845-1846, 23:52: White, medium size, peony form flower, perfectly full and very late blooming; and in 1854, 53:47 Catalogue: Waxy white, well imbricated, sometimes peony form. Originated in England by Rev Herbert, London. Orthographic error: 'Unicus'.

Unicus. Scott, J. & Sons Nursery Catalogue, 1868. Orthographic error for **Unica.**

Unifer de Tebro. Peer, 1956, *American Camellia Yearbook*, p.55. Orthographic error for **Ninfa del Tebro.**

Unifer del Tebro. Guichard, Henri, Catalogue, 1894. Orthographic error for **Ninfa del Tebro.**

Uniflora. *(C.japonica),* Jacob Makoy Nursery Catalogue, 1836, p.17. No description. Originated in Belgium. (Believed extinct.)

Unique. *(C.japonica),* Buist Catalogue, 1857-1858, p.11: Mottled rose. Originated in USA by Robert Buist, Philadelphia. (Believed extinct.)

United States. *(C.japonica),* Dunlap, 1840, *Magazine of Horticulture*, 6:23: Shrub vigorous, leaves broad, oval, 10 cm long x 9 cm wide, dark green, margins serrate, recurved at the apex, coarser in texture than 'America'. Flower, 11 cm across with form similar to 'Punctata' but partakes the character of 'Eclipse' in colour and is as fragrant as **Parksii.** Its parents are the old 'Middlemist' fertilized with 'Eclipse'. Originated in USA by T. Dunlop.

University Red. Camellia Grove Nursery Catalogue, 1944. Synonym for **Mikunikô.**

Uniyro. Express Publications Ltd., 1989, *Gardening with Camellias and Azaleas,* [p.80]. Corruption of the Japanese name 'Unryû'.

Unknown Soldier. *(C.japonica),* Puls, 1965, *American Camellia Yearbook,* p.82: During World War II, Mrs Butler found a seedling which she named **Unknown Soldier**. It is a late bloomer in shades of pink, very double. In form it resembles Alba Plena. Originated in St Francesville, Louisiana, USA.

Unknown Warrior. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.232. No description. Originated in USA. No valid listing located.

Unku. Lanning Roper, 1954, RHS., *The Rhododendron & Camellia Yearbook*, p.139: Corruption of the Japanese name 'Unryû'.

Uno-hagasane. Williams & Thompson, 1950, *American Camellia Yearbook*, p.40 as 'Uno-ha-gasane'. Corruption of the Japanese name **Toki-no-hagasane.**

Unrin-in. (Unrin Temple), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.683: Small, deep red double, 4 rows of petals and stamens in fascicles. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.154. Originated in Japan. (Believed extinct.)

Unryû. Satô 3975, *Chûbu no Tsubaki.* Synonym for **Mikawa-unryû.**

Unryû-cha. (Zig-zag Sasanqua), *(C.sinensis)*, Kirino, 1976, *Nihon no Tsubaki*, pp.120, 234: White, very small, single, early blooming. Branches zig-zag growth. Although thought to be a sport from *C.sinensis*, Kirino lists this as a *C.sasanqua*. Originated in Japan.

Unryû-tsubaki. (Zigzag Camellia), (*C.japonica*), Kyôto Engei Kurabu, *Tsubaki Tokushû*, 1967, No.8, p.3, black and white photo; Kyôto Engei Kurabu, 1969, *Hana to Ki no Bunka*, p.144: Small to medium, campanulate single, crimson veined deeper, with central stamen cylinder, yellow anthers, red filaments. Leaves medium green, broad-ovate to ovate, apex blunt acute, margins sharply serrulate; branchlets and twigs in characteristic zig-zag growth. Originated in Izu Ôshima, Japan. See colour photo & description, Seibundô Shinkôsha, 1979, *Senchinshû*, p.250. Synonyms: 'Unryû', **Mikawa-unryû.** Corruption of name: 'Unku', 'Uniyro'. 'Unryû' implies a zig-zag shape like a dragon in the clouds. Chinese synonym: 'Feilong', later changed to 'Yunlong'. Note: There are two different 'Unryu-tsubaki', (zig-zag camellias). ie, **Mikawa-unryû** and **Kishû-unryû.**

Unshû-yuri. (Lily from Izumo). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan)*, 2010, p.67 with colour photo; Deep red, medium to large, lily form. Flowers early to mid-season. Leaves elliptic, medium size. Spreading, vigorous growth. A natural seedling of 'Unshû-giô' Found in Rakuzan, Matsu'e City, Japan. Released by Yasushi Ihara in 2004.

Upezzini d'Italia. Burnier & Grilli Catalogue, 1846-1847. No description. Originated in Italy. (Believed extinct.)

Urabeni. (Pinkish Lining), *(C.sasanqua)*, Itô, Ihei, 1719, *Kô'eki Chikinchô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.15: White shaded light cherry pink. Large semi-double. Originated in Japan. Different reading: 'Urakurenai'. Synonym: 'Urabeni-sazanka'. (Believed extinct.)

Urabeni-sazanka. Itô, Ihei, 1719, *Kô'eki Chikinchô.* Synonym for 'Urabeni'. Note: *Kô'eki Chikinchô* lists this two ways; one as **Urabeni**, the other as 'Urabeni-sazanka'.

Uragami-kaidô. Different reading for **Urakami-kaidô.**

Urakami-kaidô. (Urakami Main Road), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.24. No description. Originated in Nagasaki Prefecture, Japan. 'Urakami' is the site of the famous Catholic Church, Urakami Tenshudô, destroyed by the atom bomb, leaving only the statue of the Virgin Mary. Different reading: 'Uragami-kaidô'.

Urakasumi. (Haze in the Bay). *(C.x williamsii). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan)*, 2010, p.287 with colour photo; Medium size single, peach red bordered white, trumpet shape. Flowers early to mid-season. Leaves elliptic, medium size. Upright growth. A natural seedling of **Tulip Time,** named and released by Soshin Hirai in 2004.

Uraku. Makino, 1910, *Journal of Japanese Botany* as *Thea reticulata* var. *rosea*, revised to *C.uraku* Kitamura. However in 1970 Kitamura decided it belonged to the Wabisuke group. It is now reduced to a synonym for **Tarôkaja.** However it is known by the synonym 'Uraku'

mainly in the Kansai area. The name 'Uraku' refers to Oda Urakusai. He was the famous tea ceremony master in the 16th century, and younger brother to the famous general Oda, Nobunaga and he loved this flower.

Urakurenai. Different reading for **Urabeni.**

Uraku-90. (Uraku of 1990). (Wabisuke). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.39 with colour photo; English translation p.25. Bluish pale pink tubular single with tubular stamens, small size, fragrant. Flowers mid-season to late. Leaves elliptic, somewhat large. Upright, vigorous growth. A chance seedling of **Tarôkaja,** named and released by Shinichi Noguchi in 1990. From Tokyo.

Uraku 64. (Wabisuke), Kyôto Engei Kurabu,1982, *Tsubaki Tokushû,* No.11, pp.61, 63, 65; Hagiya, 1984, ACS., *American Camellia Journal,* vol.39, No.2, p.18. No description. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.147, colour photo, p.146, description: Medium size, deep pink, opening wide campanulate single with 5 wide, irregular sized, crinkled petals. Stamens in a central column, pinched in at top, light yellow filaments, joined for lower third, anthers dull gold. Leaves shiny mid-green, elliptic, apex tapering acuminate, margins serrate. Blooms early to mid-season. A seedling of **Tarôkaja** that first bloomed 1964. Originated in Tokyo, Japan, by Noboru, Nagahama.

Uraku Sukiya. Kitamura, 1956, *American Camellia Yearbook*, p.22. Synonym for **Tarôkaja.**

Uraku-tsubaki. Kitamura 1956, *American Camellia Yearbook*, p.22. Synonym for **Tarôkaja.** See: Kyôto Engei Kurabu, 1960, *Tsubaki Tokushû*, No.1, p.20; JCS, 1972, *Encyclopedia of Camellias in Colour*, vol.I, p.362.

Uraku-tsutano. (Wabisuke), JCS., 1988, *Japan Camellia*, No.29, p.4. colour photo: Small to medium size, soft pink, semi-double with 3-4 rows of petals about a short, irregular stamen column. Leaves light green, broad-elliptic, obscurely serrate. Originated in the Kyôto Prefecture, Japan. A natural seedling of **Tarôkaja.**

Urania. *(C.japonica),* Verschaffelt Catalogue, 1846, p.59. No description. Medici Spada, 1858, *Delle Nuove Camellie che si vengono ottenendo dalle Semine Romane*, p.8: Flowers large, rose form, numerous petals, perfectly imbricated, soft rosy white, gradually deepening to the centre with uniform variegation with stripes similar to a Flanders Piccotee. Colour lilac to violet. Originated in Italy by Delgrande, Rome.

Urania (Fiaes). *(C.japonica)*, Louriero Catalogue, No.1, 1865, p.35, and No.9, 1872-1873, p.47 invalidly as 'Urania': Formal double. Light pink with white stripes. Originated in Portugal at Fiaes.

Urashima. (Place Name in Wakayama Prefecture), *(C.japonica)*, Yokoyama. & Kirino, 1989, *Nihon no Chinka*, p.164, colour photo and description: Small size, red, wide vase-shaped single with 6 irregular, wide, emarginate and crinkled petals. Central stamen cylinder with creamy-white filaments, joined for the lower half, anthers light yellow. Leaves glossy, deep green, obovate to elliptic, apex tapering acuminate, margins serrate. Mid-season blooming. Originated in Katsu'ura, Wakayama Prefecture, Japan.

Urayama-biraki. *(C.sasanqua)*, Yashiro, 1841, reprinted, Ichijima, 1906, *Kokon Yôrankô*, vol.306, p.328. Cited from *Yakuhô Zakki.* No description seen. Originated in Japan. (Believed extinct.)

Uriba-tsubaki. Cannon, 1970, ACS., *The Camellia Journal*, vol.25. Corruption of the Japanese name 'Yuriba-tsubaki'.

Urizun. (Vivid Spring). *(C.japonica),* Hiroshi, Matsuda, Okinawa, 1994, JCS, *Tsubaki*, No.33, p.35, Colour photo p.34: Small size, bright red, cup-shaped single. Blooms mid-season. Leaves medium size, elliptic. Bush spreading and sturdy. Said to be a chance seedling of **Goeku-**

shiratama. In Okinawa, "Urizun" is the period from April to May in the lunar calendar, the season of rebirth.

Urselii. *(C.japonica)*, Mertens & Fontaine, 1845, *Collection de cent especies ou variétés du genre Camellia*, p.16, ph. p.19: - Deep rose red with the colour becoming paler towards the petal edge. Medium size, slightly irregular formal double. Obtained directly from Japan by Vandermaelen of Belgium in 1833, and dedicated to the Duke d'Ursel, President of the Société de flore de Bruxelles.

Ursolina. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.232. No description. Originated in Italy. (Believed extinct.)

Uruwashi. (Graceful), *(C.japonica)*, JCS., 1973, *Tsubaki*, No.12, p.3, illustration (10), description, p.11: Medium size, 8-9 cm across, semi-double. White ground with broad to narrow stripes of pink, veined red or solid red; or solid pink; white whorls on pink; red vertical streaks on pink; pink spots on white; or pink and red spots on white. Very variable. Two to three rows of large, rounded, overlapping, emarginate petals and a small group of stamens in the centre. Leaves glossy green, obovate, apex acute, margins obscurely serrulate. Discovered in Tokyo, Japan by Makishima Teiichi. Flowers early to mid-season.

Usa. (Usa), *(C.japonica)*, Hamamatsu, 1825, *Setsuyô Kikan; Chinka Zufu*, (before 1700), Watanabe, 1969, pl.71: Large, deep red, double peony form with an outer row of numerous, small petals, a centre of 4 or 5 erect rabbit eared petals, surrounded by a mass of orange and red petaloids. Originated in Japan. Usa refers to 'Usa Shrine' and is an old name for a City in Fuku'oka Prefecture. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.95. (Believed extinct.)

Usa. (Usa), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.83: Small to medium size, deep crimson, anemone form with 5 irregular outer petals and a central cushion of deep crimson petaloids with a long white stigma. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.114. Originated in Japan. (Believed extinct.)

Usa. (Usa), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.217: Small, dark red peony form with irregular outer petals. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.122. Originated in Japan. (Believed extinct.)

Usa. (Usa), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.534: Medium to large, dark red, full peony form with irregular outer petals. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.158. Originated in Japan. Possibly the same as ibid, pl.71. (Believed extinct.)

Usa-tsubaki. (Usa Shrine Camellia), *(C.japonica)*, Hino, Sukekatsu 1637, *Sukekatsukyôki*. No description. Originated in Japan. (Believed extinct.)

Usa-tsubaki (Takaya). *(C.japonica)* Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details.

USC Fight On. *(C.reticulata* hyb.), SCCS., 1982, *The Camellia Review*, vol.44, No.2, p.1, description, colour pl. front cover: A cross of **Flower Girl** x 'Crimson Robe' (**Dataohong**) has been given the tentative title 'USC Fight On'. The colours are the dark red and gold of the USC football team and the song "Fight On" is known through-out College football. Originated by Lee Gaeta and Meyer Piet, California, it first bloomed 1979. The flower is 10-11 cm across, semi-double with dark red, wavy petals. The centre of the bloom has red stamens and a 5 cm burst of bright golden anthers. See colour photo: front cover, SCCS, 1982, *The Camellia Review*, vol.44, No.2. Synonym for **Fight On.**

Ushiroda-kurowabi. (Ushiroda's Black Wabisuke Type Camellia). *(C.japonica), "Camellias in Kurume"*, ICS Congress, Kurume 2010, p.87 with colour photo; A ccross of **Bokuhan** x **Kuro-tsubaki** originated by S. Hisatomi, Kurume, Japan, named in 2005. A black red, medium size, spherical shaped single. Prominent tubular circle of stamens with pink-red filaments. Vigorous, upright growth. Leaves small, elliptic, deep green. Flowers mid-season.

Usiro-kan-tsubaki. Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.350. Corruption of the Japanese name 'Usu-iro-kantsubaki', synonym for **Shôwa-no-sakae.**

Usobeni. Magnolia Gardens and Nursery Catalogue, 1950-1951 as 'Uso Beni'. Corruption of the Japanese name **Usubeni.**

Uso-otome. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Corruption of the Japanese name 'Usu-otome' (**Otome**).

Usuba-himetsubaki. (Thin Leaved, Small Camellia), *(C.nokoensis)*, JCS, ed., 1972, *Encyclopedia of Camellis in Colour*, vol.I, p.206, pl.500 & p.376; Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.21: Very small, white, single; late blooming. Originated in Formosa. Synonym: 'Nôkôsancha'. Group name for *C.nokoensis* Hayata.

Usubeni. Overlook Nursery Catalogue, 1948-1949, p.34. Synonym for **Shôwa-no-sakae.**

Usubeni. (Pale Red), *(C.sasanqua)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.47: Medium size, single, light red. Hakoda says originated in England, but it would have come from Japan to England originally, where it was probably confused with **Shôwa-no-sakae.** No English listing of the name located.

Usubenidairin. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.16 as 'Usu-beni-dairin', A different reading for **Usukô-tairin.**

Usubeni-shimeri. (Moist Pale Red), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.429: Medium size, double, white with garnet red dashes and peppering. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.107. Originated in Japan. (Believed extinct.)

Usubeni Variegated. Harris' Longview Nursery Catalogue, 1955-1956 as 'Usubeni Var'. Synonym for **Momozono-nishiki.**

Usugaki-hiroshima. Different reading for **Usukaki-hiroshima.**

Usugasane. (Pale Double), *(C.japonica)*, Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, light red, semi-double with 3 rows of petals. Blooms early to mid-season. See: JCS, 1969, *Tsubaki*, No.7, p.28; ibid, 1982, No.21, p.104. Originated in Japan. (Believed extinct.)

Usugasane. (Pale Double), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16. No description. Originated in Japan. (Believed extinct.)

Usugasumi. (Light Haze), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1: Very large, pink coloured flower, wide and piled up. Originated in Japan. Different reading: 'Usukasumi'. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Corruption: 'Usutsuyu'. See: JCS, 1969, *Tsubaki*, No.7, p.34; ibid, 1982, No.21, p.104. (Believed extinct.)

Usugasumi. (Light Haze), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Pale pink, medium size. Originated in Japan. (Believed extinct.)

Usugenji. (Light Genji), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.342: Pink, shading to pale pink at petal margins; small, campanulate single of 7 petals. Originated in Japan. (Believed extinct.)

Usugeshô. (Light Make-up), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan:* Pale pink with red graduation; medium size. Originated in Japan.

Usugeshô. (Light Makeup), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.202: Light peach pink, double embracing blossom, When fully open meagre stamens and pistil exposed. Flowers mid-season. A medium to large flower. Leaves wide-oval, large, thick, deep green. Flower form is like **Haru-no-mai** but it has no spots. The tree grows like **Shikainami-Nagoya.** Originated in Chûbu, Japan.

Usugeshô. (Light Makeup), (Higo), Hiratsuka, 1964, *Higo Camellia*, p.17, No.29 & back p.12, as 'Usugesyô'; Seibundô Shinkôsha, 1979, *Senchinchû*, p.202: Soft rose-pink, 11 cm across, 6 petals, 130 white stamens in spreading circle. Late blooming. Originated by Kiyota, Takeshi, Tsuboi-chô, Kumamoto-shi, Japan in 1962. Different reading: 'Usugesyô'.

Usugeshô. (Pale Make-up). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.37 with colour photo; English translation p.23. Medium size, pale pink, long tubular single with tubular stamens. Flowers early to late. Leaves large, elliptic. Upright, vigorous growth. A cross between **Tarô'an** and **Shirohassaku,** named and released by Minoru Satô in 1980. From Aichi Prefecture.

Usugesshô. (Light Moonlight Shining), *(C.japonica)*, Kaji, Shubyô-en, Catalogue, 1980-1981, *Sanin no Tsubaki*, pl.; Funaki-en Catalogue, 1986-1987, p.2, No.29; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.24. Small size, pale pink, campanulate, pinched stamen cluster. Originated in Shimane Prefecture, Japan.

Usugesyô. Hiratsuka, 1964, *Higo Camellia*, p.12. Different reading for **Usugeshô.**

Usuginu. (Light Silk Kimono), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.56, p.56, description, p.298: Very pale, almost white, apricot pink, single with 6-7, large, round, overlapping, emarginate petals opening cup-shaped. Stamens in a spreading, Higo-like group, anthers yellow, filaments light cream. Leaves mid-green, lanceolate, edges rolled under, serrate, apex short acuminate, strongly twisted. Originated in Kansai area, Japan. Named and released by Katayama Juraku-en Nursery. Different readings: 'Usukoromo', 'Usugoromo'. See colour photo & description: Seibundô Shinkôsha, 1979 *Senchinshû*, pp.20, 202.

Usuginu. (Light Silk), *(C.japonica)*, Shirai, 1812, *Tsubaki Nayosechô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Light cherry colour, semi-double, lotus shape with 3-4 rows of petals, tubular stamens. Originated in Japan. Note: Last character different to previous listed; 'ginu' = 'kinu' = silk. Different reading: 'Usukinu'. See: JCS, 1969, *Tsubaki*, No.7, p.27; ibid, 1982, No.21, p.104. (Believed extinct.)

Usuginu. (Light Silk). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.36 with colour photo; English translation p.23. Small to medium size, palest pink, tubular single with tubular stamen cluster. Flowers mid-season to late. Leaves ovate to elliptic, small. Upright, vigorous growth. A seedling of unknown parentage, named and released by Totsurô Nakamura in 1994. From Machida, Tokyo.

Usugoori. Izu-Ôshima, 1980, Hawaii Botanic Gardens List. Different reading for **Usugôri.**

Usugôri. (Thin Ice), *(C.rusticana)*, Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.46; Seibundô Shinkôsha, 1979, *Senchinshû*, p.21, colour photo, p.202, description: Large size, red, peony to semi-double or anemone form, with one row of outer petals, oval, somewhat irregular, finely veined a deeper colour. Large diameter cluster of short stamens with bright yellow anthers, sometimes rare petaloids or small, erect petals mixed with stamens. Leaves light green,

lanceolate, apex tapering acuminate, margins sharply serrate, petioles hirsute. Originated in Toyama Prefecture, Japan. Different readings: 'Usugoori', 'Usukôri'.

Usugôri. (Thin Ice). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.37 with colour photo; English translation p.23. Small red semi-double. Late flowering. Leaves narrowly elliptic, small, recurved, plicate along the centre rib. Tending to grow in multiple stocks, vigorous. A cultivar raised by a private family in Tonami District, discovered by Hideo Hori in 1970s, named and released by Minoru Takeuchi. From Toyama Prefecture.

Usugoromo. (Thin Kimomo), *(C.japonica)*, Itô, Ihei, 1710, *Zôho Chikinshô*, vol.2: White, medium size flower, full double with short, pointed petals. Resembles a chrysanthemum. Originated in Japan. Different readings: 'Usukoromo'. (Believed extinct.)

Usugoromo. Different reading for **Usuginu.**

Usugumo. (Light Clouds), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.377: Medium size, cup shaped, mauve colour with white markings, tubular stamens. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.143. Originated in Japan. (Believed extinct.)

Usugumo. (Light Clouds), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.546: Semi-double, white with pale pink at the centre of the petals, opens flat with scattered stamens. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.155. Originated in Japan. (Believed extinct.)

Usugumo. (Light Clouds), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16. Light red, small single. Originated in Japan. (Believed extinct.)

Usugumo. (Light Cloud), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Double, medium size, pale colour with streaks, tubular stamens. Originated in Japan. See: JCS, 1969, *Tsubaki*, No.7, p.28; ibid, 1982, No.21, p.104. (Believed extinct.)

Usugumo. (Light Clouds), *(C.rusticana)*, *Yukitsubaki no Kai*, *Journal*, 1967: Medium size, anemome to peony form, white with pink and red streaks and patches. Outer petals two rows of large, rounded, somewhat waved, emarginate; surrounding a centre with fascicles of pale yellow stamens, scattered among small, erect, folded petals and petaloids. Leaves glossy, light green, ovate, apex blunt acute, margins serrate. Originated in Jo'etsu City, Niigata Prefecture, Japan by Kawamura, Yaichi. See colour photos & description: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.332, p.340. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.21, 202. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya.

Usuhassaku. (Pale 1st of August), *(C.japonica)*, *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.49, p.54, description, p.298 as 'Usu-hassaku': Medium size, soft, pale pink, cup-shaped single with incurved petals; broad, stamen column with yellow anthers and white filaments. Leaves deep green, long-elliptic, prominent venation. Flower shape and leaves resemble **Shirohassaku** but unrelated. Originated in Chûbu area, Japan. See: Satô, 1975, *Chûbu no Tsubaki*, p.39; Seibundô Shinkôsha, 1979, *Senchinshû*, p.21, 202. Named by Minoru Satô in 1970.

Usu-iro. (Light Colour), *(C.japonica)*, Iwasaki, 1828, *Honzô Zufu*. Light red, double, small size. See: JCS, 1981, *Tsubaki*, No.20, p.118. Originated in Japan. (Believed extinct.)

Usuiro-amagashita. (Pale Coloured Universe), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.467: Large, semi-double, crimson with petal edges fading almost to white toward the centre. Petals, irregular, in 3 rows. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.153. (Believed extinct.)

Usuiro-hiroshima. Tomita, et al, 1980, Heibonsha Color Shinsho, *Tsubaki*, p.148. Orthographic error for **Usukaki-hiroshima.**

Usuiro-jishi. (Pale Coloured Lion), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.341: Large size, double with 6-7 rows of petals, pink deepening to red at petal base with large white spots. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.141. (Believed extinct.)

Usuiro-kantsubaki. Fendig, 1951, *American Camellia Catalogue.* Synonym for **Shôwa-no-sakae.** Corruptions of name: 'Usuro-kantsubaki', 'Usiro-kantsubaki'.

Usuiro-koshimino. (Pale Koshimino), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.420: Medium size, semi-double, centre petals standing up out of the stamen cluster. Pale red. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.157. (Believed extinct.)

Usuiro-manyô (Pale Manyô), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.701 as 'Usuiro-manyô': Light pink fading to white at petal base, veined deeper pink and colouring to red in the centre of the outer half of the petals. A semi-double with 3 rows of petals and petaloids. Originated in Japan. Note: 'Manyô' means 'long lasting world' and it is the abbreviated title for the famous Japanese anthology *Manyôshû* and also means 'many petals'. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.157.

Usuiro-oki-no-ishi. (Pale 'Oki-no-ishi'), *(C.japonica)*, Katayama, 1960, *Tsubaki Ochabana* as 'Usu-oki-no-ishi'; Tuyama, 1966, *Camellia Cultivars of Japan*, p.346: Large, semi-double, light red with 4 rows of large, rounded, overlapping petals and a small central stamen cluster; anthers yellow, filaments white. Leaves small, mid-green, elliptic, acuminate apex, serrate margins. Originated in Japan as a mutation of 'Goshiki-ya'e-chiri-tsubaki'. Synonym: 'Usu-oki-no-ishi'. See: Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.163 as 'Tanshoku-oki-no-ishi', and Seibundô Shinkôsha, 1979, *Senchinshû*, p.20, 202. Different reading: 'Tanshoku-oki-no-ishi'.

Usuiro-ryômen. (Pale Both Sides), *(C.japonica)*, Yashiro, 1841, reprint, Ichijima, 1906, *Kokon Yôrankô*, vol.311, p.363. Nurseryman Yasaburo's collection. Description not seen. Originated in Japan. (Believed extinct.)

Usuiro-shibori. (Pale Brocade), *(C.japonica)*, Kampfer, 1712, *Amoenitatum Exoticarum* as 'Usirasji--Borie'. No description. Originated in Japan. (Believed extinct.)

Usu-iro-sodekakusi. (Pale 'Sodekakusi'). *(C.japonica)*, Kinji Ohara, Tateyama, Chiba, 1993-1994, *List of Camellias:* Light pink, double flower with incurved petals. Medium to large size. Originated by Japan.

Usuiro-tairin. (Large, Pale Flower), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.184: Crimson with pink borders to petals, large, semi-double with 3 rows of large, notched petals and a small stamen column. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.109. Originated in Japan. (Believed extinct.)

Usuiro-tarô'an. (Pale Coloured 'Tarô'an'), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.80, colour photo and description: Medium size, very pale pink, campanulate single with 7 rounded, overlapping petals with the apices a little reflexed and irregular. Stamens in a short cylinder, filaments white, joined for the lower third, anthers yellow. Leaves glossy mid-green, elliptic, apex tapering acuminate, margins serrate, branches pendent. Blooms early to mid-season. Originated in Ôsaka, Japan.

Usuiro-tsubaki. (Pale Coloured Camellia), *(C.japonica)*, *Jikeikyôki*, 1632. No description. See: JCS, 1986, *Tsubaki*, No.25, p.15. Originated in Japan. (Believed extinct.)

Usujimo. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.169. Different reading for **Usushimo.**

Usujômanji. Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.73. Synonym for **Sekido-tarô'an**.

Usukagami. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.169. Orthographic error for **Usugasumi** from *Kadan Chikinshô*, 1695.

Usukaki. (Pale Persimon), *(C.japonica)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e:* Large size, single, pale pink with red base. Originated in Japan. (Believed extinct.)

Usukaki-hiroshima. (Pale Persimon from Hiroshima), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.198: Light pink, fading to white at petal edge, medium size, single, embracing cup-shaped with a central stamen column, yellow anthers, white filaments. Different reading: 'Usugaki-hiroshima'. Orthographic error: 'Usuiro-hiroshima'. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.111. Originated in Japan. (Believed extinct.)

Usukasumi. Anonymous, 1968, *American Camellia Yearbook*, p.89. Different reading for **Usugasumi.**

Usukau. Different reading for **Usukô.**

Usukau-tairin. Different reading for **Usukô-tairin.**

Usukazura. (Pale Cherry), *(C.japonica)*, Itô, Ihei, 1710, *Zôho Chikinshû:* Pink with some white spots. Convex, medium large size, 8-fold flower. Originated in Japan. (Believed extinct.)

Usukewai. (Pale Make-up), (Higo), Uekiya, Bunsuke, 1830, *Uekiya Bunsuke Hikki*. Described only as pale pink, single. Originated in Japan. See: Hiratsuka, 1964, *Higo Camellia*, p.123. (Believed extinct.)

Usukinu. Different reading for **Usuginu.**

Usukô. (Light Red), *(C.sasanqua)*, Itô, Ihei, 1719, *Kô'eki Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e:* Light red, single, medium size, early blooming. Different reading: 'Usukau'. Originated in Japan. (Believed extinct.)

Usukô-no-koben. (Small Petalled Pale Red), *(C.sasanqua)*, Yashiro, 1841, reprint, Ichijima, 1906, *Kokon Yôrankô*, vol.344, p.568. Description not seen. Originated in Japan. (Believed extinct.)

Usukô-no-ôben. (Large Petalled Pale Red), *(C.sasanqua)*, Yashiro, 1841, reprint, Ichijima, 1906, *Kokon Yôrankô*, vol.344, p.568. Description not seen. Originated in Japan. (Believed extinct.)

Usukoromo. Anonymous, 1969, *American Camellia Yearbook***,** p.95. Different reading for **Usugoromo.**

Usukôri. Different reading for **Usugôri.**

Usukô-tairin. (Large, Pale Red Flower), *(C.sasanqua)*, Itô, Ihei, 1695, *Kadan Chikinshô* Light red, large size, flat flower. Originated in Japan. (Believed extinct.) Different reading: 'Usubenitairin', 'Usukau-tairin'.

Usu-oki-no-ishi. Katayama, 1960, *Tsubaki Ochabana***.** Synonym for **Usuiro-oki-no-ishi.**

Usukumo. Different reading for **Usugumo.**

Usume-no-mai. (Dance of Usume), *(C.sasanqua)*, Ishii, 1950, *Engei Daijiten.* Yashiroda, 1950, *American Camellia Yearbook***,** p.24: Rose coloured, semi-double, medium size with 12 or

more petals, some of which are curled. Spreading, weak grower. Blooms mid-season. Originated in Japan.

Usumi-no-mai. (Dance of Usumi), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan:* Red graduations on white ground, large size flower. Originated in Japan.

Usumomiji. (Pale Maple), *(C.japonica)*, Itô, Jyukyû, 1739, *Honzô Hanamaki'e***,** vol.15; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pale red, semi-double, flat flower, medium size with 3 rows of petals, variegated with deep red. See: JCS, 1983, *Tsubaki***,** No.22, p.128; ibid, 1969, No.7, p.28; 1982, No.21, p.104. Originated in Japan.

Usumyohrenji. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues***,** p.232. Different reading for **Usumyôrenji.**

Usumyôrenji. (Pale Myôren Temple), *(C.japonica)*, Wada, 1941, *Japanese Garden Treasures*, p.28, as 'Usu-Myorenji': Beautiful, tubular campanulated, rosy pink flower with showy, yellow stamens peeping out, single. Tuyama, 1968, *Camellias of Japan***,** pl.107, p.54, description, p.118: Pink, single bush camellia of the Nagoya Province, Japan. Leaves broadly elliptic to oblong--elliptic, shortly acuminate at the apex, thick, flat on upper surface, impressed venation. Petioles glabrous. Petals pink (Spinel pink 0625/0-1), a little lobulated at the apex. Staminal tube comparatively large, a little irregular, filaments yellowish. Blooms mid-season to late. Originated in Chûbu area, Japan. See: Tuyama, 1966, *Camellia Cultivars of Japan*, p.184; Satô, 1973, *Chûbu no Tsubaki*, p.5; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.27, pp.47, 295; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.21, 202. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.144. Corruption of name: 'Asuniyouense'. Different reading: 'Usu-myohrenji'. Note: No relationship with **Benimyôrenji** or **Shiro-myôrenji.**

Usu-otome. (Fair Maiden). *(C.japonica)*, Yokohama Nursery Catalogue, 1892. Tuyama, 1966, *Camellia Cultivars of Japan*, p.174. While this name has been used as a synonym for **Otome,** according to Yoskiaki Andoh it is correctly the name of a different cultivar, which is similar to **Otome**, but slightly larger and a little lighter pink, with petals that tend to recurve. However, it appears that it is the same as 'Frau Minna Seidel'. If this is so, 'Frau Minna Seidel' becomes the prior valid name.

Usuro-kantsubaki. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name 'Usu'iro-kantsubaki', synonym for **Shôwa-no-sakae.**

Ususarasa. (Light Chintz), *(C.japonica)*, Itô Ihei, 1695, *Kadan Chikinshô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Double, medium large, variegated in many patterns. Stamens tubular. See: JCS, 1969, *Tsubaki*, No.7, pp.28, 34; ibid, 1982, No.21, p.104. Originated in Japan. (Believed extinct.)

Ususazanka. (Pale Sasanqua), *(C.sasanqua)*, Inazawa Nurseries Co. Ltd Catalogue, 1980-1981, p.11, B-17: Peach pink coloured, formal double. Originated in Japan.

Ususeiôbo. (Pale 'Seiôbo'), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka***,** p.71, colour photo, p.70, description: Small size, very pale pink, tubular single with 5 overlapping wide petals with irregular margins. Stamens cylindrical cluster with yellow anthers. Leaves deep green, elliptic, apex acuminate, margins serrulate. Originated in Ishikawa Prefecture, Japan as a seedling of **Seiôbo** x **Nono-ichi.** Flowers early to mid-season. Originated, named and released by Tadao Yamaguchi in 1983.

Usushimo. (Light Frost), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Itô, Ihei, 1710, *Zôho Chikinshô*, #61; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Piled up, about 7 rows of petals

with thin, sharp tips. The corolla is variegated with many small spots like falling frost. Originated in Japan. Different reading: 'Usujimo'. (Believed extinct.)

Usushimo. *Tsubaki Hachiboku Sanboku Tsuki Meisai* (before 1868): White, medium size, like 'Usukoromo'. Probable error for **Usuyuki** in *Kadan Chikinshô.* See: JCS, 1982, *Tsubaki*, No.21, p.104.

Usu-wabisuke. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû***,** No.1, p.65; Satô, 1975, *Chûbu no Tsubaki***,** p.56, colour photo and description: Small, pale fuchsia pink, single, campanulate form, petals rounded, crinkled, overlapping; stamens short, irregular, in a central column. Leaves deep green, narrow-elliptic to obovate, apex long tapering acuminate, margins finely serrate. Synonym for **Tarôkaja**. Local name in Chûbu area.

Usuyukari. (Thin Relations), *(C.japonica)*, Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.48; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.314, p.133, description, p.244: Faint pink, medium size, single with 5 thick petals opening saucer shaped; petals slightly crêped on edges, large, round, overlapping. Leaves tending to olive green, ovate, apex blunt acute, margins serrate. Originated in Kurume City, Fuku'oka Prefecture, Japan. See colour photo: Seibundô Shinkôsha, 1979 *Senchinshû*, pp.21, 202. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.71.

Usuyuki. (Light Snow), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, #136; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White, 8-fold double flower; resembles **Usugoromo.** See: JCS, 1969, *Tsubaki*, No.7, p.34. Originated in Japan. (Believed extinct.)

Usuyuki. (Light Snow), *(C.sasanqua)*, Itô Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: White, large size, single with long, slender petals. Originated in Japan. (Believed extinct.)

Usuyukihime. (Princess Light Snow). *(C.japonica), Kurume Camellia*, 1997, English translation, p.11; Light pink, small tubular single. Flowers mid-season. A seedling of **Momosuzume**, originated by M. Kunitake, Kurume, Japan.

Usuyuki-shibori. (Dappled Light Snow), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.440: Faint pink ground, with colour deepening towards the centre of the petal and red peppering and dashes; rose form double to peony type. Small. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p. 143. Originated in Japan. (Believed extinct.)

Usuyuki-shibori. (Dappled Light Snow), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.547: Soft pink ground with dots and peppering of red, medium size, semi-double; petals in 3 rows; stamens irregular, filaments white. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.147. Probably the same as the above. Originated in Japan. (Believed extinct.)

Usuyuki-shibori. (Dappled Light Snow), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.575: White background with red streaks; medium size, open peony form with a group of large, erect, centre petals. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.164. Originated in Japan. (Believed extinct.)

Usuzakuro. (Pale Pomegranate), *(C.japonica)*, Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, pale red. Convex corolla like a pomegranate. See: JCS, 1969, *Tsubaki*, No.7, p.27; ibid, 1982, No.21, p.104. Originated in Japan. (Believed extinct.)

Usuzumi. (Light Black Ink), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16. Pink, single, medium size. Originated in Japan. (Believed extinct.)

Utage. (Banquet), *(C.rusticana)*, Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.74 illustration and description: Red ground with large white spots or moired pattern; medium size, semi-double

with petals in two rows, large, cordate, overlapping. Leaves deep green, broad-elliptic, apex acuminate, recurved, margins serrate, undulate, petioles hirsute. Originated in Toyama Prefecture, Japan by Makino, Kôroku. See pl.389, *Encyclopedia of Camellias in Colour*, vol.II, 1978, p.161. Seibundô Shinkôsha, 1979, *Senchinshû*, pp.22, 202. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.327.

Utage-no-sakazuki. (Cup of the Banquet). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.38 with colour photo; English translation p.24. Vermilion, tubular to sake-cup-shaped single. Flowers very early to mid-season. Leaves elliptic, medium size. Upright, vigorous growth. A cross between **Tarô'an** and **Benimyôrenji**. Named and released by Minoru Satô in 1989. From Aichi Prefecture.

Utage-no-tsuki. (Moon at the Banquet), *(C.japonica)*, Satô, 1975, *Chûbu no Tsubaki*, p.77: Soft pink, single, 7 cm across with 6-7 petals and a large burst of stamens with small, orange anthers and yellow filaments. Leaves glossy mid-green, obovate, apex acuminate to blunt acuminate, margins sharply serrate. Originated in Chûbu area, Japan. Named and released by Minoru Satô in 1969.

Utamakura. (Oft Repeated Epithets in Poetry), *(C.japonica)*, Itô, Ko'emon, 1879, *Chinkashû:* White striped pink, single, medium size. Seibundô Shinkôsha, 1979, *Senchinshû*, p.22, colour photo, p.202, description: Medium size, single, opening wide, cup-shaped; white to blush pink, streaked and dotted crimson. The background is finely peppered in some areas and the crimson streaking is dense. Petals, 6-7, large, rounded, emarginate, overlapping. Leaves strong, glossy green, oval to lanceolate, apex acuminate, recurved, margins finely serrulate. Originated in Kantô area, Japan. See: pl.176, p.306, Tuyama, 1966, *Camellia Cultivars of Japan.* Similar to **Momochidori.** Orthographic errors: 'Uta-ikada' and 'Uta-momo' in Kasuya, Kamegorô, 1859.

Uta-ikada. Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki* in section for single flowers. Possible orthographic error for **Utamakura.** See: Tuyama, 1966, *Camellia Cultivars of Japan*, p.306.

Utamakura. JCS., 1987, Tsubaki, No.26, p.49. A synonym for the *C.sasanqua* **Kanjirô** as 'Tachikantsubaki'. See: JCS, 1972, *Encyclopedia of Camellias in Colour*, vol.I, p.387.

Utamaro. (Personal Name), (*C.japonica*), Satô,1975, *Chûbu* no *Tsubaki*, p.40, colour photo and description: Background pale pink, densely, finely dotted and dashed deep pink; medium size, vase shaped single of 5-6 large, rounded, emarginate, overlapping petals and a stout, central stamen column of about 100, anthers yellow, filaments cream. Leaves ovate, mid-green, apex acuminate, inclined to reflex, Margins finely serrulate, prominent venation. Originated in Chûbu area, Japan. See colour photo & description, pp.22, 202, Seibundô Shinkôsha, 1979, *Senchinshû.* "Utamaro" is the famous artist. Kitagawa, Utamaro who printed the wood engravings 'Uki'yo'e' in the Edo era. Originated and released by Shinichi Asai in 1936.

Utamomo. JCS, 1969, *Tsubaki.* No.7, p.36. Possible error for **Utamakura** in Kasuya, Kamegorô, 1859.

Utoji-naoyumi. Usami, Na'ohachi, (ca.1910), *Nagoya Chinzu'e:* White, double, medium size. Resembles **Takasago.** Different reading for **Uheinaoyumi.** See: Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû.* No.6. p.126.

Utsuki-asaye. J & F Thoby, Gaujacq, France, Catalogue, 2009, p.8; Pink, semi-double.

Utsukushi-asahi. (Beautiful Morning) (*C.x williamsii*). Kramer Bros Nursery Catalogue, 1979, as 'Utsukushi-asaye': Coral. Medium size. semi-double. Blooms mid-season. A seedling of

C.japonica **Dr Tinsley** x *C.saluenensis*, originated at Kramer Bros. Nursery, Uplands, California, USA. Sport: **Utsukushi-asahi Variegated.** See p.188, Macoboy. 1981, *The Colour Dictionary of Camellias*.

Utsukushi-asahi Variegated. (*C.x williamsii*). Kramer Bros. Nursery Catalogue, 1979 as 'Utsukushi--asaye Var.': A virus variegated form of **Utsukushi-asahi** - Coral blotched white. Originated at Kramer Bros. Nursery. Uplands, California, USA.

Utsukushi-asaye. Kramer Bros Nursery Catalogue. 1979. Corruption of the Japanese name **Utsukushi-asahi**.

Utsukushi-asaye Variegated. Kramer Bros Nursery Catalogue, 1979. Corruption of Japanese name **Utsukushi-asahi Variegated.**

Utsurigi. (Caprice) *(C.nitidissima hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.335 with black and white photo; English translation p.226. Medium size, pale pink single, petal centre pale yellow. Flowers mid-season. Leaves narrowly elliptic, large, very glossy. Upright, fast growth. A second filial of 'Kôki 90', obtained by back-crossing to *C.nitidissima.* Named and released by Kazuo Yoshikawa in 1997. From Osaka.

Utsusemi. (Personal name). *(C.japonica).* Kasuya, Kamegorô, 1859. *Tsubaki Irohanayose Irotsuki* in the section on double flowers; Itô, Ko'emon, 1879, *Chinkashû*: White. medium size. semi-double. Wada, 1941, *Japanese Garden Treasures*, p.31: White semi-double, bowl-shaped. Tuyama, 1966, *Camellia Cultivars of Japan,* pl.75. description, p.130: White. semi-double with 2-3 rows of petals with a centre of a few stamens and from 1-6 semi-erect centre petals. Outer petals. 10-12. large, rounded, edges translucent. Leaves lanceolate to elliptic-lanceolate, dark green, apex acute, margins sharply serrulate, wavy. Venation prominent. Originated in Kantô area. Japan. See colour photos & descriptions: *Encyclopedia of Camellias in Colour.* vol.I, 1972, pl.243, pp.115, 326; Seibundô Shinkôsha, 1979. *Senchinshû*, pp.22, 202. Similar to **Amanogawa** and **Tsuki-no-miyako.** Different reading: 'Karasemi'. Synonyms: 'E.H. Rust', 'Queen Elizabeth'. 'Semi-double White'. Pseudonym: 'Snow Maiden'. Note: Utsusemi is the name of one of the heroines in the ancient novel *Genji Monogatari.*

Utsushi-kokoro. (Changing Heart), *(C.sasanqua).* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Light red, large size, semi-double, flat flower. Different reading: 'Utsushi-gokoro'. See: Kyôto Engei Kurabu, 1964. *Tsubaki Tokushû*, No.5. p.82. Originated in Japan. (Believed extinct.)

Utsushi-gokoro. Different reading for **Utsushi-kokoro.**

Uuryûtsubaki. Satô, 1975, *Chûbu no Tsubaki*, p.90. Orthographic error for **Unryû-tsubaki,** (synonym 'Unryû').

Uzen-kozakura. (Pretty Cherry of Uzen), *(C.rusticana).* Seibundô Shinkôsha, 1979, *Senchinshû,* p.22, colour photo, p.202, description: Very small size, white, tinged with slightest pink, cup-shaped single of 5 irregular petals, oblong, notched; stamens spreading, anthers pale yellow, filaments white. Leaves deep green, lanceolate to round-ovate, apex blunt acute, margins finely serrulate, petioles hirsute. Originated in Yonezawa City, Yamagata Prefecture, Japan. See pp.82, 83, Yokoyama & Kirino, 1989. *Nihon no Chinka* for colour photo and description. Named and released by Tokuji Ôoka in 1966.

Uzu. (Swirl). (*C.japonica*). JCS., 1973, *Tsubaki.* No.12, p.1. colour photo, p.9 description: Red. Medium to small, rose form double to semi-double with cylindrical bud centre, the flower finally opening with a pine cone effect with a few, weak, irregular stamens in the centre. Blooms mid-season to late. Leaves, medium to dark green, lanceolate, apex tapering acuminate, margins serrate. This cultivar is said to originate in Takarazuka, Yamamoto but it does not exist there

now. It is a curious flower, with its rose-like, tall centre. It was named by Kiyoshi Tarumoto. For colour photos see: *Encyclopedia of Camellias in Colour*, vol.II, 1978. pl.372; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.22, 202. Yokoyama & Kirino, 1989. *Nihon no Chinka*, p.318.

Uzukô. (Red Swirl), *(C.sasanqua)*, Itô, Ihei, 1695, *Kadan Chikinshô*, p.30, Illustr.22: Medium size, red inside, inner petals circinate. Originated in Japan. (Believed extinct.)

Uzumaki. (Swirl), *(C.sasanqua)*, Itô, Ihei, 1719, *Kô'eki Chikinshô*, p.31, illustr.24: No description seen. Originated in Japan. (Believed extinct.)

Uzumasa-idaten. ('Idaten' from Uzumasa), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.397: White. Small to medium, open peony form. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.161. Originated in Japan. (Believed extinct.) Note: 'Idaten' symbolises early blooming.

Uzura-kasuri. (Variegated Quail), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.398: Pale pink, finely peppered deeper pink and streaked red. Small peony form. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.161. Originated in Japan. (Believed extinct.)

Uzuryômen. Itô Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, reprinted, Ichijima, 1906, *Kokon Yôrankô*, vol.344, p.569. Synonym for **Namiryômen.**

Uzushio. (Whirling Tides), *(C.rusticana), Encyclopedia of Camellias in Colour*, vol.I, 1972, p.370: Pink, peony to anemone centered form, 8 cm across with 3 rows of large, rounded guard petals, a little waved, emarginate, and a cushion of small, erect, folded centre petals of the same colour. Stamens intermixed with petals, anthers yellow. Blooms mid-season. Leaves mid-green, broad-elliptic, apex blunt acute, margins crenate, petioles hirsute. Habit low and bushy. Originated in Yatsuo Machi, Toyama Prefecture, Japan by Hori, Hideo in 1965. Named and released by Minoru Takeuchi. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.202, description, p.21 colour photo.

V.

V.P.Single. Camellia Grove Nursery Catalogue, 1944. Abbreviation for 'Victoria Park Single'.

V.P. Special. Camellia Grove Nursery Catalogue, 1945. Synonym for 'Victoria Park Single'.

Vadiaena. Burdin Maggiore & Co. Catalogue, 1856-1857. Orthographic error for **Wadieana.**

Vagabond. (*C.japonica*), Mark Cannon Scion Catalogue, 1963-1964, p.15. No description. ACRS., 1971, *Camellia News*, No.43, p.35, Reg. No.144: Originated by F.S. Tuckfield, Berwick, Victoria, Australia from *C.japonica* **Anemoniflora** seed. The 9-10 cm across, cardinal red single flower has broad, reflexed petals with a few stamens, a cluster of petaloids and a protruding stigma. The 9-9.5 cm x 3.7-4.5 cm, dark green leaves have an obovate base with an acuminate apex.

Val Bieleski. (*C.reticulata* hybrid). *New Zealand Camellia Bulletin,* March 2000, Issue No.135, vol.XXI, No.4, p.6, Reg. No.418. Registered by N. Haydon, Takanini, New Zealand. A distinctive sport of **Valentine Day** *(C.reticulata x C.japonica)* first recorded in 1992 by Mrs V. Bieleski, and propagated by Camellia Haven Nursery. The very large flower is peony form, 14 cm diameter x 9 cm deep, with 36-44 petals, and displaying a number of apparently normal stamens having golden anthers. Colour is the characteristic **Valentine Day** salmon pink (RHS.CC.52A fading to RHS.CC.55A). The plant is rapid-growing, spreading, of average density, and flowers mid-season to late. The mid-green leaves are 12 cm long x 5 cm wide.

Val Parker. (*C.japonica*), SCCS., 1974, Camellia *Nomenclature*, p.149: Deep red. Large, semi-double with small, narrow, upright petals, surrounding stamens. Vigorous, compact, upright growth. Blooms mid-season. Originated by J.M. Haynie, Theodore, Alabama, USA. Sport: **Val Parker Variegated.**

Val Parker Variegated. (*C.japonica*), Gentry, 1972, ACS., *The Camellia Journal*, vol.2, No.4, as 'Val Parker Var.': A virus variegated form of **Val Parker** - Deep red, blotched white. Originated in USA.

Val Tevareda. Hillebrand Nursery Catalogue, 1977. Orthographic error for **Valtevareda.**

Valdeado. Halliday, 1880, *Camellia Culture*, p.141. Orthographic error for **Valtevareda.**

Vale Beauty. (*C.japonica*), ACRS., 1977, *Camellia News*, No.66, p.26, Reg. No.188: Originated by G.W. Hooper, Bexley North, NSW, Australia as a seedling of **Mikenjaku** as 'Nagasaki'. It has an upright, dense habit and produces white, formal double, medium sized flowers with outer petals shading pink. Blooms early to mid-season. Leaves oblong-elliptic, 9 cm x 6 cm, pointed apex, serrate margins. Chinese synonyms: 'Xigu Xianjing'

Vale Mist. *(C.sasanqua),* ACRS., *Camellia News*, No.79, p.28, Reg. No.273: Originated by G.W. Hooper, Bexley North, NSW, Australia. A chance seedling of **Edna Butler** that first flowered 1976. The upright, dense plant has 5 cm x 4.5 cm, oblong-oval, very dark green leaves with a blunt apex. The flower is pure white, semi-double, 7-7.5 cm across, with gold anthers. Blooms early to midseason.

Vale Princess. *(C.sasanqua),* ACRS., 1977, *Camellia News*, No.66, p.26, Reg. No.190: Originated by G.W. Hooper, Bexley North, NSW, Australia. A chance seedling of **Edna Butler** that first bloomed 1974. The plant has an upright growth habit, flowering early to mid-season with large, light lavender pink flowers with fluted petals. Leaves dark green, lanceolate, 5.5 cm x 2.3 cm with tapering apex and base, margins serrate.

Vale Queen. (*C.reticulata*), ACRS., 1977, *Camellia News,* No.66, p.17, Reg. No.191: Originated by G.W. Hooper, Bexley North, NSW, Australia. A seedling of 'Willow Wand' (**Liuye Yinhong**) x 'Crimson Robe' (**Dataohong**), that first flowered 1973 on a 4 year old plant. The upright, open plant produces very large, semi-double, irridescent pink flowers with irregular petals, midseason to late. The dark green leaves are lanceolate, 14.5 cm x 6 cm, sharply pointed, margins serrate.

Vale Sunset. (*C.japonica*), ACRS., 1977, *Camellia News,* No.66, p.26, Reg. No.189: Originated by G.W. Hooper, Bexley North, NSW, Australia from **Great Eastern** seed that first flowered 1975 at 6 years of age. The plant has a spreading, dense growth habit with medium size, dark red, informal double flowers in mid-season. Leaves oblong-elliptic, 8.5 cm x 6.2 cm, medium green, sharp apex, rounded base.

Valentin Yauoancq. *(C.japonica),* A 21 year old chance seedling, first flowered 2000, originated by François Le Moal, Douarnez, France. Flower is single, cup to trumpet shape, colour white (RHSCC 155D) with radial stripes of red (RHSCC 58B). Average size 8-9 cm diameter x 8-9 cm deep. Central column of 65-70 stamens with ivory filaments and yellow anthers. Flowers midseason to late. Plant is of average, upright growth, with dark green leaves (RHSCC yellow green group 147), 6-8 cm x 4-4.5 cm. Propagated by Ladan Jardiniere Pepiniere, Confort Meilars, France.

Valentine. Vanderbilt, 1940, *Camellia Research,* p.7. Synonym for **Akebono Pink.**

Valentine Day. (*C.reticulata*.x *C.japonica*), Garner, 1967, *American Camellia Yearbook*, p.67: An outstanding seedling, the result of the cross *C.reticulata* 'Crimson Robe' (**Dataohong**) x *C.japonica* **Tiffany.** Originated by Howard Asper, Escondido, California, USA. Plant growth is average and upright with light green leaves. Flower is medium salmon pink, large to very large, formal double with rose-bud centre. Blooms mid-season. For colour photos see: *American Camellia Yearbook*, 1970 facing p.84; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.165; Front cover, *New Zealand Camellia Bulletin*, vol.IX, No.3, 1975. Reg. No.1122, *American Camellia Yearbook*, p.50, 1971. Received the 'Frank L. Stormont Reticulata Award', 1981; 'The National Camellia Hall of Fame Award', 1978; The RHS, 'Award of Merit', 1975 and the Aubrey Harris Hybrid Award of the ACS in 1972. Sport: **Valentine Day Variegated**. Chinese synonym: 'Qingrenjie'.

Valentine Day (Houser). (*C.reticulata* hybrid). ACS 1992, *The Camellia Journal,* vol.47, No.4, p.13. Valdosta Camellia Scions advert. A heavily variegated form of **Valentine Day.** However, considered to be a synonym for **Valentine Day Variegated.**

Valentine Day Variegated. *(C.reticulata) x C.japonica),* SCCS., 1981, *Camellia Nomenclature*, p.182 as 'Valentine Day Var.': A virus variegated form of **Valentine Day** - Medium salmon pink and white. Originated in USA. Chinese synonym: 'Banse Qingrenjie'.

Valtevareda. *(C.japonica)*, Fratelli Rovelli Catalogue, 1852, p.28 as 'Vallevareda': Brescia, 1851. Delicate rose, tinted with vivid carmine, broad, rounded, bilobated petals, Very large and very double. Verschaffelt, 1853, *Nouvelle Iconographie*, Book I, pI.I: Among the numerous varieties of camellias with pink imbricated blossoms, none possess the degree of perfection of floral form and delicacy of colouring. It was grown from seed in Italy since only two years. Originated in Italy by Rossi. Van Houtte Catalogue, 1854-1855, 53:47: Very large, well imbricated, vivid pink; later in 1862-1863 Catalogue, 93:74 added 'Often spotted with snow white', [from] Rossi. However this would be **Valtevareda Variegata**. Hertrich, 1954,

Camellias in the Huntington Gardens, vol.I, p.329 illustration, p.328, text: Complete double, formal type; Camellia rose 622/self,/1 and /2, lighter towards the centre, to 9 cm across x 4 cm deep. Petals about 40, obovate, 4 cm long x 3cm wide, uniform apical notching, recurved outer rows, firm texture. Centre of flower, 20-25 additional, progressively smaller segments, similar in shape but about half the size of the outer ones. No visible stamens. Leaves oblong to obovate, 8-9 cm long x 4-5 cm wide, medium glossy green, wavy margins, serrulate, apices short pointed, venation light on both sides. Habit upright, dense, late flowering. The name has been misspelt many ways: 'Val Tevareda', 'Valavareda', 'Valderado', 'Valeredo', 'Vallerareda', 'Valle Vareda', 'Vallevareda', 'Vallevaredo', 'Valtahureda', 'Valtavareda', 'Valtavaredo', 'Valtaveridiana', 'Valtevaredo', 'Valtervareda', 'Valterverado', 'Valtevadero', 'Valtevarido', 'Valteverada', 'Valteverda', 'Valteveredo', 'Valtererido', 'Valtevarede', 'Valvaredo', 'Valthevaredo', 'Volteveredo', 'Waltewaredoo', 'Valle Varedo'. Variatissima. *(C.japonica)*, Guilfoyle, 1875, *Melbourne Botanic Gardens Paper*, p.26. No description. Originated in Australia. (Believed extinct.)

Varichi. van Houtte Catalogue, 1842-1843, 9:20. Orthographic error for **Varischi.**

Varichii. Downing Nursery Catalogue, (before 1859). Orthographic error for **Varischi.**

Variegata. *(C.japonica)*, Andrew's *Botanist's Repository*, 1797, pl.91: This camellia is interesting historically as it was one of the first horticultural cultivars of the Genus *Camellia* to be introduced into Europe, having came to England in 1792 from China together with **Alba Plena** and was often referred to as the 'Old Double Striped'. Its colour is rose pink to red, irregularly blotched white, rather than striped and the flower is variable, often being nearer semi-double than full double. Chandler & Booth, 1831, *Illustrations and Descriptions of Camellias* pl.6: Deep rose madder with broad bands and patches of white, which are themselves streaked with deep rose madder. One of the first camellia to be brought from China, being imported in 1792 by Captain John Corner, on the "Carnatic", East Indiaman, for Gilbert Slater, the ship's principal owner (Farrington, 1999, *Catalogue of East India Company*

Ships' Journals and Logs 1600-1834, p.105, and Journal and Log of "Carnatic" in the British Library, London). The colour is a fine dark rose or red colour, irregularly blotched with white; but in this respect they vary considerably, the early flowers being elegantly variegated, while the later ones are generally plain red. They are from 7.5-10 cm in expansion. The outer petals are each 3.8 cm in diameter, roundish cordate, thick and fleshy at the base, and broad and thin at the points and edges. They are nearly flat and evenly disposed in several rows, laid one above the other; but recurve with age. The centre petals are small and round, frequently arranged in tufts, with a few parcels of stamens intermixed with them. Some flowers are as double as a rose, without any staminea being perceptible: others, again, are of irregular shape and little more than semi-double. For illustrations see Loddiges, 1819, *The Botanical Cabinet*, vol.4, t.329; Curtis, 1819, *Monograph*, pl.2; Edwards *Botanical Register*, 1816, vol.1, pl.22. Synonyms: 'Variegata Plena', 'Variagata Striata', 'Old Striped', 'Dianthiflora', 'Dianthiflora Striata', 'Rajada', 'Almiscarada', 'Vaucluse', 'Variegata Putosa', 'Variegata' (panaché), 'Variegata Flore Plena Rubra', 'Variegata Vera', 'Plena Variegata', 'Variegato', 'Striata Plena', 'Variegato Pleno', 'Carnation Striped', 'Old Double Striped'.

Variegata. RHS., Index, 1937, p.282-283 as a *C.sasanqua* with variegated foliage. Abbreviation for **Sasanqua Variegata.**

Variegata Alba. *(C.japonica)*, van Houtte Catalogue, 1843-1844, 12:eee: Originated in Germany by Gruneberg, Frankfurt. White, peony form, some petals all white, others carmine, others with pink bands or very light, pink spots.

Variegata a feulles Panacheé. Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:313 as 'Var. (a feuilles Panachée). Synonym for **Foliis Variegatis.**

Vaughn Drinkard. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Red. SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.91: (Plant Patent No.1308), Light salmon rose to dark rose. Very large anemone form with irregular mass of large and small petaloids mixed with, and joined to fascicles of stamens in the central area. Vigorous, upright growth. Blooms mid-season. Originated by R.O. Rubel Jr., Mobile, Alabama, USA. Sport: **Vaughn Drinkard Variegated.** Synonym: **Dona Julia**.

Vaughn Drinkard Variegated. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.91. A virus variegated form of **Vaughn Drinkard** - Light salmon rose to dark rose blotched white. Originated in USA. Note: SCCS., *Camellia Nomenclature,* 1960 changed the name of **Vaughn Drinkard** to **Dona Julia** and gave the name **Vaughn Drinkard** to the variegated form. Plant patent 1308 was granted Oct.5, 1954 and published by the American Association of Nurserymen Inc., 1957, p.32.

Vault of Heaven. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.139. Synonym for **Ô-zora.**

Vautini. Verschaffelt Catalogue, 1844-1845, p.30. Orthographic error for 'Vantini', abbreviation for **Vantini d'Italie.**

Vauxii. *(C.japonica),* Prince & Co. Nursery Catalogue, 1844, p.105, and van Houtte Catalogue, 1844--1845, 18:20. No description. Oudin Nursery Catalogue, 1845-1846, p.48: A delicate pink, widely spotted with white. Van Houtte Catalogue, 1846-1847, 27:33, as 'Vauxii'(Smith): Superbly formed, crimson scarlet. Verschaffelt, 1852, *Nouvelle lconographie,* Book X, pl.III: Although old in collections, this Italian camellia will hold a place by reason of its good form and its rich, deep crimson colouring. This blossom occupies an intermediate position between the perfectly imbricated form and the irregular form. The petals of the circumference are rather regularly imbricated, but as they draw nearer the centre they become smaller and are irregularly grouped.

Vauxii(Srnith). Prince & Co. Nursery Catalogue, 1844, p.105. Synonym for **Vauxii.**

Veance. *(C.sasanqua).* Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, 1997, p.2: Large, white edged pink, single flowers on an upright, fast growing plant. Origin unknown.

Vedrine. *(C.japonica),* McIlhenny, 1935, *List of Camellias,* p.16: Dark red, very double, peony type of open character. Centre petals interspersed with yellow stamens. Gerbings Azalea Gardens Catalogue, 1941-1942: A large, loose, deep red, peony-like flower, averaging 11 cm across. The stamens are intermingled with petaloids in the inner portion of the flower, Slightly twisted foliage. Slow, open growth. Blooms mid-season to late. Propagation of this plant started from an old specimen at Vidrine, near Lafayette, Louisiana; it was named **Vedrine** by Mrs Mary Swords Debaillon. Sport: **Eleanor of Fairoaks.** Synonyms: 'Ruby Glow', 'Mehl's Red', 'Red Chandler', 'Margaret Lawrence', 'Bolen's Pride', 'Cleo Wittie', 'Mrs J.R. McKenzie', 'Payne's Red', 'Lewis Red Peony'. Orthographic errors: 'Vidrine', 'Verdrine'. See colour illust.: Macoboy, 1981, *The Colour Dictionary of Camellias,* p.123; G.G. Gerbing, 1945, *Camellias;* Fendig, 1949, *American Camellia Catalogue.* Chinese synonym 'Weidelin'.

Vedrine Variegated. SCCS, 1947, *The Camellia. Its Culture and Nomclature* as 'Vedrine Var'. Synonym for **Eleanor of Fairoaks.**

Vega. *(C.japonica),* Claude Thoby, 1993, *Camélias,* pp.13, 19, 20, 53, colour photo p.17: Vivid pink, peony form flower with petaloids and stamens intermixed. Lightly scented. Leaves dark green, lanceolate. Originated in France by Claude Thoby, Carquefou.

Vega (Cattolica). *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.148 as 'Vega' with colour photo; Medium to large size flower, informal double, white with red or pink

streaks (RHS.CC.45B to 55B). Occasional presence of stamens. A seedling of 'Giorgia Bianca' x Rosa Simplex' (**Aitonia**), first flowered in 1983. Originated by Dott. Guido Cattolica, Livorno, Italy.

Veigans. Colla, 1843, *Camelliografia*, (illust.), p.83. Synonym for **Elegans.**

Veiled Beauty. *(C.japonica), American Camellia Yearbook*, 1969, p.167, Reg. No.1062: A 6 year old chance seedling that first bloomed 1963. Originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is upright, open and medium with light green leaves, 11 cm x 5 cm. The rose form double to open peony form flower averages 12 cm across x 7.5 cm deep with 93 petals and 12 petaloids, golden anthers and flesh pink filaments. Colour is graduating, rose-pink outer petals to light pink centre. Blooms mid-season to late. Sport: **Veiled Beauty Variegated.** Chinese synonym 'Xiumei'.

Veiled Beauty Variegated. *(C.japonica)*, Gentry, 1977, ACS., *The Camellia Journal*, vol.23, No.4 as 'Veiled Beauty Var.': a virus variegated form of **Veiled Beauty** - Rose-pink and white. Originated in USA.

Veiled Betty Sheffield. Keeton, 1965, ACS., *The Camellia Journal*, vol.20, No.2, p.11. An unstable form of **Betty Sheffield.**

Veinveanna. Portland Camellia Nursery Camellia Catalogue, 1946-1947, p.11. Synonym for **Mikenjaku** as 'Nagasaki'.

Velbankiana. Francesco Ascione, 1856, Catalogo delle piante … nel Giardino Inglese Caserta, p.15. Orthographic error for **Welbankiana.**

Velma Grantham. *(C.japonica)*, Pyron, 1962-1963, *American Camellia Yearbook*, p.85: A variable flower in formation and colour. Basically peony form, white with a few wedge shaped, pink markings near the margins, or blush with narrow pink margins or solid pink. Originated by Archie Grantham, Bogalusa, Louisiana, USA. See colour photo of front cover of ACRS., 1962, *The Camellia Journal*, vol.17, No.5 and pl.149, *Encyclopedia of Camellias in Colour*, vol.II, 1978, p.71. Reg. No.661, *American Camellia Yearbook*, 1965, p.249. Sports: **Velma Grantham Blush, Velma Grantham Pink, Velma Grantham Variegated.**

Velma Grantham Blush. *(C.japonica)*, Cannon, Mark, Scion Catalogue, 1964-1965, p.16. No description. *American Camellia Yearbook*, 1965, p.249, Reg. No.662: A blush-pink coloured sport of **Velma Grantham.** Peony form blooms. 11 cm across x 8 cm deep with 35-45 petals, delicate blush pink with deeper blush pink border. Originated by Tammia Nursery, Slidell, Lousiana, USA.

Velma Grantham Pink. *(C.japonica)*, Tammia Nursery Catalogue, 1965-1966, p.7. No description. *American Camellia Yearbook*, 1965, p.249, Reg. No.663: Solid, medium pink sport of **Velma Grantham** with same growth habit and flower formation. Originated by Tammia Nursery, Slidell, Louisiana, USA.

Velma Grantham Variegated. *(C.japonica), American Camellia Yearbook*, p.249, Reg. No.664: A variegated sport of **Velma Grantham** with white flecks and blotches and a moire pattern on a pink background. Flower formation and growth habit the same as parent. Originated at Tammia Nursery, Slidell, Louisiana, USA.

Velma Webber. *(C.japonica)*, Lindo Nursery Catalogue, 1944. Description not seen. Originated in USA. (Believed extinct.)

Velvet Glow. *(C.japonica), American Camellia Yearbook*, 1961, p.230, Reg. No.556: A 7 year old chance seedling that first bloomed in 1957; originated by Robert W. Wilder, Fairhope, Alabama, USA. Plant growth is rapid and upright with dark green leaves, 10-11 cm long x 5-5.5 wide.

The anemone form flowers, 11-12 cm across x 5 cm deep, are white with yellow stamens, 14 petals and 32 petaloids. Blooms mid-season.

Vel Vety. Ghisleni, 1982, *Le Camelie*, p.195. Orthographic error for **Velvety.**

Velvety. *(C.sasanqua)*, Overlook Nursery Catalogue, 1948-1949: Medium size, crimson red, single, 8 cm across. Colour RHS.CC.27-27/1 with 7-8 round petals, slightly ruffled. Stamens short and light yellow. Leaves dark green, broadly elliptic, apex short acute, serrations fine on a vigorous, upright plant. Originated by K. Sawada, Crichton, Alabama, USA from chance seed. Originally listed as 'Crimson Velvetii' in 1941, changed to 'Velvety' in 1948. Orthographic error: 'Vel Vety'. Chinese synonym: 'Erong'.

Venanzio. *(C.japonica)*, RHS., 1937, *Journal*, Index, p.283. No description. Originated in Italy. (Believed extinct.)

Vener. Rousseau, Angers Nursery Catalogue, 1842-1843, p.5. Orthographic error for **Venere.**

Venera. Jacob Makoy, Catalogue, 1841, p.11. Orthographic error for **Venere.**

Venere. *(C.japonica)*, Cachet Catalogue, 1840-1841, p.3. No description. Berlèse, 1840, *Monographie*, ed.2, pp.177-178, 232. Ibid, 1843, *Iconographie* III, colour plate as 'Venus' or **Venere**, which shows a loosely imbricated double of deep pink and some white mottling. Van Houtte Catalogue, 1842-1843, 9:20: Imbricated. Brilliant red. Charles van Geert, 1847, Catalogue No.101, p.17: Perfect imbrication, deep pink, finely marbled and streaked with white and pale pink. Originated in Italy. Orthographic errors: 'Vener', 'Venera'.

Venere Pictorum Rosea. *(C.japonica)*, Schiavone, 1981. *Il Giardino dell'Camelia*, pl.11. No description. Originated in Italy by Dr. Sacco, Milan about 1834. (Believed extinct.)

Veneris. Berlèse, 1843, *Iconographie*, p. facing pl.225. Synonym for **Venosa** as 'Venus'.

Venetia. J & F Thoby, Gaujacq, France, Catalogue, 2009, p.8; Single white.

Venetia la Bella. *(C.japonica)*, Verschaffelt, 1855, *Nouvelle Iconographie*, Book XII, pl.III: Of Italian origin with unusual amplitude of the petals; of medium size, the petals are regularly imbricated, of vivid pink with paler margins and delicate crimson veining.

Venezia. *(C.japonica)*, Angelo Longone, 1861, Catalogue: A more than average beautiful flower, petals large, well imbricated, a beautiful vivid rose, margined with white and finely veined with crimson. Very floriferous. Originated in Italy.

Venosa. *(C.japonica)*, Jacob Makoy Catalogue, 1833. No description. Courtois, 1833, *Magazin d'Horticulture*, 1[pt.D]:317: Veined. Herbert, 1937, *Amaryllidaceae & Suppl.*, p.368: 'Ven'osa' or 'Venus'. Flower regular, but not sufficiently full, red veined with white. From a seedling from [single red x 'Striped' (**Variegata**)] x **Variegata.** Originated by Rev. Herbert, London, England. Berlèse, 1840, *Monographie*, ed.2, pp.104, 227: Leaves very much resembling 'Theresiana': flower 6-8 cm across, double, rose colour, petals broad, slightly veined with pale rose, like those of 'Pomponia Rosea', (**Paeoniiflora**) or of 'Theresiana' from which **Venosa** differs very little. Synonyms: 'Venus', 'Veneris', 'Pompon Gris', 'Paeoniiflora Aurea'.

Venturi. *(C.japonica)*, Isola Madre Catalogue, 1845. No description. Fratelli Rovelli Catalogue, 1852, p.28: Imbricated. Streaked dark rose. Franchetti, 1855, *Collezione di Camelie*, p.61: Deep pink with some streaking to the centre of the petals; imbricated. Verschaffelt, 1857, *Nouvelle Iconographie*, Book IX, pl.I: Received a few years ago from B. Lechi, Brescia, Italy ... its blossoms are nearly of the largest size, full-bodied, formed of ample, oval petals, rounded, rather deeply emarginated at the summit, very regularly imbricated, outspread; while at the

centre they are upright, serried and form a heart, all of a uniform pink colour, except for a few rare white stripes here and there. Orthographic error: 'Venturii'.

Venturii. van Houtte Catalogue, 1847, 30:13. Orthographic error for **Venturi.**

Venus. Herbert, 1837, *Amaryllidaceae & Suppl.*, p.368. Synonym for **Venosa.**

Venus. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.37 as a synonym for **Enrico Bettoni (US).**

Venus de Medici. Guilfoyle *Catalogue of Melbourne Botanic Gardens*, 1883, p.172. Orthographic error for 'Venus de Medicis', synonym for **Prince Eugene Napoleon.**

Venus de Medicis. Purchase Nursery Catalogue, 1871. Synonym for **Prince Eugene Napoleon.**

Venusta. Paxton, 1831-1832, *Horticultural Register*, vol.I, p.633. Synonym for **Rosa Mundi.**

Venusta. *(C.japonica),* Anon, 1830, "Ueber die Cultur der Kamellien" in *Der Blumen Gaertner,* p.54. Burdin Chambery Nursery Catalogue, 1834, p.19. No description. Harrison, ed., 1837, Cels, Paris Nursery Catalogue, 1836-1837, p.10. No description. *The Floricultural Cabinet*, p.267: Cunningham's double dark red, large and fine. Originated in England. Berlèse, 1837, *Monographie*, ed.1, p.116: 'Gray Venus', 'Gray', 'Eclipse', 'Splendida', 'Venusta', 'Punctata Plena'. All of these camellias are sub-varieties which so resemble each other it would be better to put them all under 'Punctata Plena'. Berlèse is confusing the 'Venusta' which is the synonym for **Rosa Mundi** and this comment does not apply to Cunningham's **Venusta.**

Venusta Alba. *(C.japonica),* Berlèse, 1840, *Monographie*, ed.2, pp.87, 226: Leaves dull green; bud, oblongoval, a little acuminate, scales yellowish; flower pure white, 8-9 cm across, double; exterior petals not numerous, wide, irregular, notched, spread out and arranged somewhat irregularly; those following not so large and of a small number. Originated in Italy.

Venusta Coccinea. *Catalogue des Plantes la Société Royale d'Horticulture de Belgique*, 1842, p.23. Synonym for **Ornata.**

Venusta Grandiflora. *(C.japonica),* Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.14. No description. Originated in Belgium. (Believed extinct).

Venusta Superba. *(C.japonica), Catalogue des Plantes la Société Royale d'Horticulture de Belgique*, 1842, p.23. No description. Originated in Belgium. (Believed extinct.)

Venustissima. *(C.japonica),* Berlèse, 1837, *Monographie*, ed.1, pp.90, 128: Leaves round-oval like those of 'Masteri'; 9 cm long x 7.5 cm wide. Flower anemoniform, large, cherry-red, sometimes striped with white. Originated in Germany.

Venustissima Quadrangularis. *(C.japonica),* Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. No description. Originated in Italy at Bibbiani. (Believed extinct).

Venustum. Harrison, ed., 1835, *The Floricultural Cabinet,* p.118. Synonym for **Lady Eleanor Campbell's.**

Venzaghi. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.15. Orthographic error for **Venzughi.**

Venzughi. *(C.japonica),* van Houtte Catalogue, 1851, 44:27: [from] Ulrich. No description. Originated in Germany. (Believed extinct.) Orthographic error: 'Venzaghi'.

Vera Colwillii. Tagliabue, 1840, *Nomenclatore Camelliae.* Synonym for **Colvillii Vera.**

Vera Harper. *(C.japonica),* ACS, *The Camellia Journal,* June 2005, p.8, colour photo p.9, Reg. No.2646. A chance seedling that first flowered 1980. Originated by John W. Shirah, Lakeland, Fla, USA, and propagated by Shirah's Camellia Nursery. The 10 cm diameter, formal double

flower is pastel pink with 56 petals, darker at the edges, and with a few red stripes. Falls in one piece. Flowers very early. *American Camellia Yearbook*, 2005, p.47, colour photo p.C8. Plant is spreading with vigorous growth. Dark green leaves are 9. cm x 5 cm.

Verdrine. Valley Garden Supplies Catalogue, 1946-1947. Orthographic error for **Vedrine.**

Vereconda. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare.* Orthographic error for 'Verecunda', synonym for **Verecunda Nova.**

Verecunda. Charles van Geert Nursery Catalogue, 1845, p. 15. No description. Burdin Maggiore & Co. Catalogue, 1845, p.43. No description. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare* as 'Vereconda': Vivid rose with a white line on each petal; imbricated. Synonym for **Verecunda Nova**. Orthographic errors: 'Vereconda', 'Verecunde'.

Verecunda Nova. *(C.japonica)*, Oudin, Lisieux Nursery Catalogue, 1844, p.13: Perfect imbricated form, pink with a white stripe at the centre of the petals. Changed to 'Verecunda' in the 1845 catalogue.

Verecunde. Architetto Catalogue, 1855. Orthographic error for 'Verecunda', synonym for **Verecunda Nova.**

Veretinea. Cachet Nursery Catalogue, 1845-1846, p.7. Orthographic error for **Veretunna.**

Veretuna. van Houtte Catalogue, 1851, 44:27. Orthographic error for **Veretunna.**

Veretunna. *(C.japonica)*, Colla, 1843, *Camelliografia*, [illust.], p.88: Blood red with fine venation of a little darker colour. Flower semi-double, 6-7 cm across, 9-12 petals alternatively disposed in 2-3 rows, rather recurved, round-oval, emarginate. Originated in Italy by Negri, Milan. Orthographic errors: 'Veretinea', 'Veretuna'.

Verga. van Houtte Catalogue, 1858, 72:26. Orthographic error for '**Verger d'Italie'.**

Verge d'Italie. Auguste van Geert, 1854, Catalogue, No.36, p.45. Orthographic error for **Verger d'Italie.**

Vermilion Lion's Head. Ikeda, 1976, *American Camellia Yearbook*, p.139. Synonym for **Yinzhuhong.**

Vermilion Purple Gown. Ikeda, 1976, *American Camellia Yearbook*, p.140. Western synonym for **Zhushu Zipao.**

Verna Halbert. *(C.japonica), American Camellia Yearbook*, 1972, p.137, Reg. No.1208: A 9 year old seedling that first bloomed 1967; originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is upright and medium with heavy, dark green leaves, 12.5 cm long x 6 cm wide. The semi-double, irregular petalled bloom is flesh pink with yellow anthers and filaments. It has 28 petals and 11 petaloids and measured 12-13 cm across x 6 cm deep. Blooms mid-season. See colour photo: front cover SCCS., 1972, *The Camellia Review*, vol.33, No.4.

Vernal Breeze. *(C.hybrid),* SCCS, *Supplementary List* 2014. A seedling of *C.japonica* x *C.lutchuensis*, originated by Camellia Forest, Chapel Hill, NC., USA. Small white single, very fragrant. Flowers late. Vigorous, upright growth.

Vernalis. Makino, 1906, *Tokyo Botanical Magazine*, 19(227):135-136. This name now applies to a hybrid grex from a primary *C.japonica x C.sasanqua* hybrid, backcrossed to *C.japonica* and should be designated *C.x vernalis.* It has also been applied as a synonym for **Ginryû,** synonym 'Dawn'.

Vernelle Register. *(C.japonica),* Gentry, 1980. ACS., *The Camellia Journal*, vol.35, No.4. No description. Originated in USA. No valid listing located.

Vernice Anne. *(C.japonica), American Camellia Yearbook*, 1975, p.242, Reg. No.1381: A sport of **Debutante** first observed 1969; originated by Vernice A. Meskell, San Marino, California,

USA. Plant growth is spreading, open and medium, with dark green leaves, 8 cm x 5 cm. The peony form **Debutante** style bloom is rosy pink with 30 petals and 35 petaloids, yellow anthers and creamy white filaments, 10 cm across x 5 cm deep. Firm, upright petals and strong fragrance. Blooms mid-season.

Vernie Koegler. *(C.japonica), American Camellia Yearbook,* 1985, p.185, Reg. No.1972: A large to very large, rose-red, semi-double to anemone form *C.japonica* (**Letitia Schrader** x **All American**), that blooms early to mid-season. Originated by Ted Alfter, Bakersfield, California, USA. The 7 year old seedling first bloomed 1980, 11-12.5 cm across x 6 cm deep with 20-25 petals. When it blooms anemone it has 10 guard petals and 50 upright centre petals. The plant growth is upright and rapid with dark green leaves, 10 cm x 6 cm.

Vernon E. Howell. *(C.japonica),* ACS, *The Camellia Journal,* June 2003, p.25, colour photo p.24, Reg. No.2599. A red semi-double to full peony chance seedling with yellow anthers and yellow filaments. Flowers early to late. Originated by Vernon E. Howell, Lucedale, Miss., USA. *American Camellia Yearbook,* 2003, p.67, colour photo p.c5. The 9 year old seedling first flowered in 1997. Flower has 63 petals and measures 12 cm across x 7.5 cm deep. Heavy petal texture. Plant is upright, dense and vigorous with dark green leaves 9 cm long x 6.5 cm wide.

Vernon Mayo. *(C.japonica),* Tammia Nursery Catalogue, 1965-1966, p.7. No description. *American Camellia Yearbook*, 1971, p.234, Reg. No.934: A 6 year old chance seedling that first bloomed 1962, originated by Ferol Zerkowsky, Slidell, Louisiana, USA. Plant growth is upright and rapid with dark green leaves 11 cm long x 5 cm wide. The anemone form bloom is 11-12 cm across x 5cm deep with 50 large petals and 150 petaloids. Colour is rose opal with silver overcast and golden anthers and white filaments. Blooms mid-season. See colour photo facing p.116, *American Camellia Yearbook,* 1970. Sport: **Vernon Mayo Variegated.**

Vernon Mayo Variegated. *(C.japonica),* Gentry, 1969, ACS., *The Camellia Journal,* vol.24, No.4 as 'Vernon Mayo V.': Virus variegated form of **Vernon Mayo** - Rose opal and white. Originated in USA.

Veronica. *(C.japonica),* Seidel, 1897, *Preisverzeichnis:* Delicate rose, sometimes with filaments. McIlhenny Catalogue, 1940, p.5: Large semi-double. Rose madder, occasional white spots. Originated in Germany.

Viola Sims. Hillcrest Nursery Catalogue, 1958. Orthographic error for **Viola Simmons.**

Viola Spragg. *(C.sasanqua),* ACRS., 1980, *Camellia News*, No.74, p.24, Reg. No.230: Originated by Alice Spragg, Sutherland, N.SW, Australia. A chance seedling that first flowered 1973. The upright, open plant has early blooming, 7.5 cm across, rose to red, peony to informal double flowers. The dark green lanceolate leaves are 6 cm long x 2.5 cm wide, variable in size and shape.

Violacea. Arnaud Catalogue, 1839-1840. Abbreviation for **Violacea Superba.**

Violacea Plenissima. Isola Madre Catalogue, 1845. Synonym for **Violacea Superba.**

Violacea Superba. *(C.japonica),* Rinz, 1835, *Gardening Magazine*, vol.11, p.544: Particularly remarkable for its violet colour and beautifully shaped, abundant flowers. Van Houtte Catalogue, 1841, 7:21: Brilliant except for its foliage. Its flowers, of the most delicate pink, are a charming rosette. Berlèse, 1843, *Iconographie,* vol.3, pl.296: Flower 10-11 cm across; full, rosiform, regular, of an deep, orange-red violet, which diminishes in intensity as the bloom matures. The petals are ample, rounded, numerous, in 5-6 rows, notched and imbricated. Those of the centre are of diverse forms, close-set, much smaller than the first, disposed irregularly; sometimes nevertheless, imbricated following those of the circumference. Originated by J. Rinz, Frankfurt-on-Main, Germany. Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl.82, and giving the origin as the United Kingdom. Synonyms: 'Exuberans', 'Violacea Plenissima'. Abbreviation: 'Violacea'. Orthographic errors: 'Violacia', 'Violacia Superba'.

Violacia. Berlèse, 1843, *Iconographie,* on pl.296. Orthographic error for **Violacea Superba.**

Violet Boon. *(C.reticulata), New Zealand Camellia Bulletin,* 1975, vol.IX, No.3, p.5, Reg. No.118: A chance seedling of *C.reticulata* originated by Mrs Ida Berg, Whakatane, New Zealand, that first flowered 1970. It has an upright, open growth habit with mid-green leaves, 8 cm x 4.5 cm. The flower is semi-double to loose, peony form with 15 petals, some petaloids, yellow anthers and white filaments. The size is 11-12 cm across x 6 cm deep and colour Red Group, RHS.CC.55B.

Violet Bouquet. *(C.japonica), American Camellia Yearbook,* 1970, p.171, Reg. No.1117: A 10 year old chance seedling that first bloomed 1965; originated by Mrs W.H. Gabes, Baton Rouge, Louisiana, USA. Female parent **Debutante**. Plant growth, upright, rapid and open with medium size, dark green leaves. The anemone form bloom is violet purple with yellow anthers and white filaments, 10 cm across x 5 cm deep with 12 large petals and 220 petaloids. Flowers early to mid-season. Chinese synonym: 'Zihuashu'

Violet Weymouth. *(C.sasanqua),* ANZCRS, 1958, *Camellia Annual,* No.5, p.30, Reg. No.30: A seedling from the garden of Mr Justice Kitto, Gordon, N.S.W., Australia and raised by Lucy Singleton, St. Ives. The flower has two rows of petals, from 7-10, sometimes showing some petaloids. Petals are crinkled. Colour Neyron rose fading to silvery pink.

Violette Rose. *(C.reticulata* hybr.), SCCS., 1984, *Camellia Nomenclature,* p.128: Lavender. Large, semi-double. Vigorous, open growth. Blooms early to mid-season. A seedling of the *C.reticulata* **Buddha.** Originated by David Feathers, Lafayette, California.

Viomeani. *(C.japonica),* Harrison ed., 1838, *The Floricultural Cabinet,* vol.6, p.11: Double. Rose colour with white spots.

Virgata. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.236. No description. Originated in Australia. (Believed extinct.)

Virgilia. *(C.japonica),* Waterhouse, 1947, *Camellia Quest,* p.16: Camden Park Seedling 39/51, originated by Sir William Macarthur, Camden Park, N.S.W., Australia. Not described or released for sale. Extinct.

Virgillae Marmorata. *(C.japonica),* van Houtte Catalogue, 1849-1850, 38:53. No description. Originated in Italy. (Believed extinct.)

Virgin di Colle Beato. Halliday, 1880, *Practical Camellia Culture,* p.141. Orthographic variant for **Vergine di Collebeato.**

Virgin Maria. *(C.japonica) Proceedings of the ICS Congress,* Chuxiong 2012, p.84. An historic plant of yabu-tsubaki on Goto Island, Japan. Estimated age up to 200 years.

Virgin of the Blessed Hill. SCCS., 1981, *Camellia Nomenclature,* p.160. Synonym for **Vergine di Collebeato.**

Virgin White. Griffiths, 1958, *American Camellia Catalogue,* p.6. Synonym for **Otome White.**

Virginia. *(C.japonica),* p., 1837, *Magazine of Botany & Gardening,* 3:153: Unicolour pink. Two rows of large, external petals and a central group of numerous, small petals. Originated in Italy. Synonym: 'Virginea Nova', 'Virginia'(Italie), 'Virginia d'Italie', 'Virginia d'ltalia'. Orthographic error: 'Virginea'(Italie).

Virginia Alexandrina. (*C.japonica*), Costa, 1846, *Catalogue de la collection de camellias présentée à sa majesté L'Imperatrice de toutes les Russies et Reine de Pologne*, p.6. No description. (Believed extinct.)

Virginia Alfter. *(C.japonica), American Camellia Yearbook*, 1984, p.182, Reg. No.1938: A medium size, bright red, anemone to loose peony form *C.japonica* (**Lindsay Neill** x **All American Variegated**) seedling, that blooms early to mid-season. Originated by Ted Alfter, Bakersfield, California, USA. The 13 year old seedling first bloomed in 1975. Average flower size, 9.5 cm across x 5-7 cm deep with 35 petals. Plant growth is upright and rapid with dark green leaves, 10cm long x 6 cm wide. Sport: **Virginia Alfter Variegated.**

Virginia Alfter Variegated. (*C.japonica*), ACS, Aug.1984, *The Camellia Journal*, vol.39, No.3, with colour pl. on front cover as 'Virginia Alfter Var', ACS., Reg. No.1939: A virus variegated form of **Virginia Alfter** - Bright red blotched white. Originated by Ted Alfter, Bakersfield, California, USA.

Virginia Bresciana. (*C.japonica*), Franchetti, 1855, *Collezione di Camelie*, p.62: Imbricated formal double, ivory-white, transparent. Originated in Italy.

Virginia Cabrillini. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.236: Crimson. Originated in Italy. (Believed extinct.)

Virginia Cagle. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature*, p.104: Blush pink. Medium size, semi-double with 3 rows of large petals and 3 very large, upright, wavy petals in a cluster of delicate stamens forming a trumpet. Blooms early. Originated in USA by C. Rester, Poplarville, Mississippi.

Virginia Carlyon. *(C.japonica),* Tregrehan Camellia Nursery Catalogue, 1973: Crimson velvet, semi-double, large flower. Colour photo facing p.115, *American Camellia Yearbook*, 1976. Originated by Gillian Carlyon, Par, Cornwall, England.

Virginia Cesana. *(C.japonica),* Stefano Pagliai Catalogue, 1867: Imbricated, bright, carmine rose, centre lighter, all marbled white. Originated in Italy as a sport of **Solfatara.**

Virginia Colubbini. *R. Società Toscana di Orticultura Bollettino*, 1862. Orthographic error for 'Vergine Calubini', synonym for **Vergine di Collebeato.**

Virginia Cutter. Hallstone, 1982, *American Camellia Yearbook*, caption to colour pl. facing p.45. Abbreviation for **Virginia W. Cutter.**

Virginia d'Italie. van Houtte Catalogue, 1845-1846, 23:52. Synonym for **Virginia.**

Virginia Darden. (*C.japonica*), *American Camellia Yearbook.* 1968, p.138, Reg. No.979: A 10 year old chance seedling that first bloomed 1961. Originated by W.A. Fickling Sr., Macon, Georgia, USA. Plant growth habit is upright and medium with dark green leaves, 10.5 cm long x 3.8 cm wide. The semi-double to anemone form bloom, similar to **Frizzle White,** with petaloids, is 10.5 cm across x 5.5 cm deep with 16 petals and 16-150 petaloids. Red with yellow anthers and filaments. It has a crispy texture like Jessie Katz. Blooms early to mid-season. Sport: **Virginia Darden Variegated.**

Virginia Darden Variegated. *(C.japonica)*, ACS., 1969, *The Camellia Journal*, vol.24, No.1 as 'Virginia Darden V.'. A virus variegated form of **Virginia Darden** - Red heavily blotched white. Originated in USA.

Virginia Davis. *(C.japonica)*, SCCS, Bulletin, vol.11, No.2, p.19, 1949. No description. SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.67: White. Large, formal double. Vigorous, upright growth. Blooms mid-season. See p.24 for illustration. Originated by H. Davis, El Monte, California, USA.

Virginia de Colle Beato. Smith Nursery Catalogue, 1894-1895. Orthographic error for **Vergine di Collebeato.**

Virginia Eyler. *(C.japonica)*, *American Camellia Yearbook*, 1954, p.336, Reg. No.194: A 16 year old chance seedling; originated by Harry B. Stanton, Savannah, Georgia, USA that first flowered 1942. Plant growth is upright and rapid with medium green leaves, 10 cm long x 6 cm wide, finely serrate. Flowers 7.5-8 cm across, complete double, imbricated, similar to **Alba Plena,** with 70-80 petals, light pink, heavily veined. Flowers mid-season.

Virginia Franca. Louis Leroy, 1863, Catalogue, p.124. Orthographic error for **Virginia Franco.**

Virginia Franco. *(C.japonica)*, Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete*, p.8. No description. Van Houtte Catalogue. 1858, 72:26: Blush white, stippled, lined and streaked with pink and carmine red; small, numerous petals, convex imbrication. A small to medium size, formal double camellia, originated in Italy by Franco, Florence. Sports: **Virginia Franco Rosea,** 'Virginia Franco Rubra', **Sofia Roncaglia, General Cialdini, Lady Maude Walpole.** Orthographic errors: 'Virgine Franco', 'Virgine Francois', 'Virginia Franco', 'Virginie Franco', 'Virginia Franca'. For illustration see: Waterhouse, 1952, *Camellia Trail*, pl.1. Chinese synonym 'Falanke'.

Virginia Franco Rosea. *(C.japonica)*, Hazlewood Nursery Catalogue, 1947, p.15: Rose, changing to soft pink, white margins. Medium size, formal double. Waterhouse, 1947, *Camellia Quest*, p.30 and pl.III: A sport of **Virginia Franco**. Soft pink with a white margin. For colour illustation see pl.I, Waterhouse, 1952, *Camellia Trail.* Chinese synonym: 'Falanke Meigui'.

Virginia Franco Rubra. Waterhouse, 1952, *Camellia Trail*, p.20, pl.I. Synonym for **Lady Maude Walpole.**

Virginia Goldsmith. *(C.japonica)*, Linden Nursery Catalogue, No.94, 1875, p.25. No description. Originated in Belgium. Orthographic variant 'Virginia Goldsmidt'. (Believed extinct.)

Virginia Goldsmidt. Scarlatti Catalogue, 1888. Orthographic variant for **Virginia Goldsmith.**

Virginia Griffin. *(C.japonica)*, Gentry, 1967, ACS., *The Camellia Journal*, vol.22, No.5, p.28. No description. Originated in USA. No valid listing located.

Virginia Griffin Variegated. *(C.japonica)*, Gentry, 1967, ACS., *The Camellia Journal*, vol.22, No.5, p.28 as 'Virginia Griffin V.'. No description. Originated in USA. No valid listing located.

Virginia J. *(C.japonica)*, *American Camellia Yearbook*, 1959, p.282, Reg. No.417: An 8 year old chance seedling, originated by J.H. Johnson, Andalusia, Alabama, USA. The light green leaves are 9.5cm long x 4.5 cm wide. The flowers are semi-double, pink with yellow stamens, 39 petals and several petaloids. The blooms average 11 cm across x 5 cm deep. Early flowering.

Virginia McCowan. *(C.japonica)*, *American Camellia Yearbook*, 1977, p.220, Reg. No.1443: Large, white shading to light pink at outer edge of petals, semi-double, *C.japonica*, flowers

mid-season to late. A 14 year old chance seedling of **Elegans;** originated by Richard Dodd, Marshallville, Georgia, USA. The **Frizzle White** type bloom has 24-30 petals and few petaloids, yellow anthers and white filaments. Average size, 11 cm across x 6 cm deep. Plant growth is upright and medium with dark green leaves, 11 cm long x 5 cm wide.

Virginia Marini. *(C.japonica), R. Società Toscana di Orticultura Bollettino*, 1878: Very large flower, perfectly imbricated. Petals bright rose, veined and striped deeper rose and carmine red, bordered white. A sport of **Madame Ambroise Verschaffelt** fixed by grafting by Franchetti, Florence. The name 'Madame Linden', published by *L'Illustration Horticole.* vol.25, p.47, pl.308 and **Virginia Marini** published the same year by the *Bollettino della Reale Società Toscana di Orticultura* are for the same sport. Priority has been given to the Italian name **Virginia Marini** as it is the sport of an Italian variety. Synonyms: 'Teresa Gambini', Theresa Gambini', 'Madame Linden', 'Madame Ambroise Verschaffelt Pink', 'Madame Ambroise Verschaffelt Rosea'. Orthographic error: 'Virgina Marini'. Sport: **Madame Ambroise Verschaffelt Variegated.**

Virginia Mathis. *(C.reticulata* hybr.), *American Camellia Yearbook*, 1985, p.185, Reg. No.1982: A very large, soft pink, veined pink, becoming lighter at petal margins, semi-double to peony form *C.reticulata* hybrid, 'Crimson Robe' (**Dataohong**), x **Jean Pursel**; originated by Frank Pursel, Oakland, California, USA. The 19 year old seedling first bloomed 1983. Flower size, 17.5 cm across x 7.5 cm deep. Plant growth is upright and rapid with medium green leaves, 12.5 cm long x 6 cm wide. Orthographic error: 'Virgina Mathis'.

Virginia Mercatelli. *(C.japonica)*, Grilli, 1881, *Bollettino della R. Società Toscana di Orticultura*, 6:297-300. Description not seen. Originated in Italy. (Believed extinct.)

Virginia Nalle. *(C.japonica)*, ACS., Feb.1990, *The Camellia Journal*, Vol.45, No.1, p.12, Reg. No.2184: Small size, white, formal double *C.japonica*, chance seedling. Blooms early to mid-season. Originated by S.R. & Va Faircloth, Mobile, Alabama, USA. *American Camellia Yearbook*, 1990, p.90, colour pl. between p.90-91: The 8 year old seedling first bloomed 1983. Average flower size, 7 cm across. Plant growth is open, upright and medium in rate with dark green leaves 7.5 cm long x 3.8 cm wide.

Virginia Parrish. *(C.japonica)*, Mark Cannon Scion Catalogue, 1964-1965, p.16. No description. *American Camellia Yearbook*, 1966, p.101, Reg. No.823: A 6 year old chance seedling that first bloomed 1960, originated by Dr Albert C. Tuck, Thomasville, Georgia, USA. Plant growth is average, dense and rapid with dark green leaves, 8 cm x 5.5 cm. The peony form flower, 10 cm across x 8cm deep is irridescent red with light stamens. Blooms mid-season.

Virginia Philipson. *(C.japonica)*, Franchetti, 1855, *Collezione di Camelie*, p.62: Outer and central petals a softer pink, a little paler than **Sacco.** Intermediate petals paler with some soft white sreaks. Petals transparent and thin. Imbricated. Verschaffelt, 1857, *Nouvelle Iconographie*, Book II, pl.III: We are indebted for this variety to Mr C. Franchetti who obtained it from seed. The blossoms are of medium size, a delicate pink of a paler shade at the centre where only a few vague stripes appear. The petals arrangement is intermediate between the perfect and the irregular imbrication. With the exception of those of the circumference, the imbrication of which is flawless, the following petals are inserted in a somewhat disorderly way and are deeply emarginate at the apex. Originated in Florence, Italy. Orthographic error: 'Vergine Philippson'.

Virginia R. *(C.saluenensis* hyb.) Kramer Bros. Nursery Catalogue, 1983: Pink. Small formal double. Originated at Kramer Bros. Nursery, Upland, California, USA. Sport: **Virginia R Variegated.**

Virginia R Variegated. *(C.saluenensis* hyb.), Kramer Bros. Nursery Catalogue 1983: A virus variegated form of **Virginia R** - Pink and white. Originated at Kramer Bros. Nursery, Upland, California, USA.

Virginia Rich. *(C.japonica), American Camellia Yearbook*, 1958, p.292, Reg. No.336, illustr. facing p.82: A 10 year old chance seedling that first flowered 1954. Originated by Central Georgia Nurseries, Macon, Georgia, USA. Plant growth is upright and medium. The leaves are 7.5 cm long x 5 cm wide, some serrate, others smooth. The flower is cream in the centre, shading to white, to light pink, to orchid. There are 65 petals, the outer large and round. Towards the centre they are narrower and shorter with 5 cream coloured petals in the centre, then 15 white, 15 light pink and 30 in the outer row are orchid tinted pink. The flower size is 10 cm across x 3.8 cm deep. Mid-season blooming.

Virginia Robinson. *(C.japonica),* Nuccio's Nurseries Catalogue, 1956: Light orchid pink. Large, semi-double. Vigorous, compact, upright growth. Blooms mid-season to late. For colour photo see p.124, Macoboy, 1981, *The Colour Dictionary of Camellias.* Sport: **Virginia Robinson Variegated**. Chinese synonym: 'Lubinsun'.

Virginia Robinson Variegated. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.111 as 'Virginia Robinson Var.': A virus variegated form of **Virginia Robinson** - Light orchid pink blotched white. Originated in USA.

Virginia Smith. *(C.japonica),* ACS., 1987, *The Camellia Journal*, vol.42, No.2, p.8, Reg. No.2038: Large, deep rose, peony form *C.japonica* chance seedling. Early blooming. Originated by Walter K. Smith, Tylertown, Mississippi, USA. *American Camellia Yearbook*, 1987, p.86 with colour photo between p.60 & 61: The 14 year old seedling first flowered 1981. Average flower size, 10 cm across x 7 cm deep with 21 petals, 115 petaloids, yellow anthers and pink filaments. Plant growth is upright, average and rapid in rate with dark green leaves, 8 cm long x 3.8 cm wide.

Virginia Sunrise. *(C.japonica).* SCCS, *Nomenclature Supplement*, 2014. Originated by Dr. J.M. Habel Jr., Suffolk, Va., USA. Red blotched white with yellow anthers and pink filaments. Medium to large, semidouble to anemone form. Vigorous upright growth. Flowers mid-season.

Virginia Thompson. (*C.japonica*), Griffin Sr. ed., 1956, *Camellian,* 3:21. No description. Originated in USA.

Virginia Torriani. (*C.japonica*, Franchetti, 1855, *Collezione di Camelia*, p.62. No description. Originated in Italy. (Believed extinct.)

Virginia W. Cutter. *(C.hybrid),* Cutter, 1973, *American Camellia Yearbook*, p.69 and colour photo facing p.180: Cutter hybrid #E66/5 'Bertha Harms' (**Mrs. Bertha A. Harms**) x 'Ackerman 6332',(*C.japonica x C.lutchuensis).* Lutchuensis fragrance. Flower anemone form, 12.5 cm across x 4 cm deep; 8 guard petals with over 100 petaloids interspersed with stamens. Petals heavily veined. Colour - Red, Munsel Hue 2.5R7/8. Leaves japonica type, dark shining green, 11 cm x 8 cm maximum. Originated by Dr R.K. Cutter, Berkeley, California, USA.

Virginia Womack. (*C.reticulata* hyb.), *American Camellia Yearbook*, 1977, p.220, Reg. No.1410: A large, light pink, formal double. A 5 year old chance seedling of **Felice Harris** that first bloomed 1973. Originated by Dr R.K. Womack, Shreveport, Louisiana, USA. The Alba Plena type bloom is light pink with 96 petals. Average size, 10 cm across x 3.8 cm deep. Early blooming. Plant growth is uright, medium, with dark green leaves, 10 cm x 6 cm. Chinese synonym 'Womake'.

Virginia Zuffi. (*C.japonica*), Linden Nursery Catalogue, No.94, 1875. No description. Originated in Italy. (Believed extinct.)

Virginica. (*C.japonica*), M. Floy & Sons, Nursery Catalogue, 1832, p.55: Semi-double blush with very large flowers. Hogg, 1838, *Magazine of Horticulture,* 4:155: Flowers large, light rose. Berlèse, 1840, *Monographie*, 2nd ed.: From Floy of New York. Flower of more that 10 cm across, double, cherry-red, broad petals, long, well imbricated, numerous, in many rows; corolla of the type of **Novaboracensis.** Originated by Michael Floy, New York, USA. Synonyms: 'Floy's Virginica', 'Virginica America', 'Virginica Floy's', 'Virginica (New York)'.

Virginica. (*C.japonica*), Jacob Makoy et Cie., Catalogue, 1833. No description. Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:317; No description. Berlèse, 1840, *Monographie*, ed.2, pp.104, 227: Leaves small, oblong-lanceolate, 5.8 cm long x 3.2 cm wide, prominent venation, dusky green, glossy; buds oblong, scales green; flower, 8 cm across, full, of a soft rose, scarsely deeper than **Wilbrahamia,** resembling in form **Paeoniiflora;** that is, at the circumference, 2 rows of large petals with a centre of small, erect twisted petals. Originated in Belgium by Pronay. Synonyms: 'Virginica' (Pronay), 'Virginica de Pronay', 'Virginica Nova'.

Virginica Alba. Berlèse, 1840, *Monographie*, ed.2, p.83. Synonym for **Nivea.**

Virginica Americana. Berlèse, 1840, *Monographie*, ed.2, p.231. Synonym for Floy's **Virginica.**

Virginica de Pronay. Verschaffelt, 1844-1845, Catalogue, p.24. Synonym for **Virginica.**

Virginica Floyi. Burnier & Grilli Catalogue, 1846-1847. Synonym for Floy's **Virginica**.

Virginica (New York). van Houtte Catalogue, 1839, 1:9. Synonym for Floy's **Virginica**.

Virginica Nova. Verschaffelt, 1844, Catalogue, No.50, p.24. Maupoil & Figlio Catalogue, 1847. Synonym for the Belgium **Virginica.**

Virginica (Pronay). Verschaffelt Catalogue, 1846, p.60. Synonym for the Belgium **Virginica.**

Virginica Superba. (*C.japonica*), Verschaffelt Catalogue, No.50, 1844, p.24. No description. Originated in Belgium. (Believed extinct.)

Volumnia. *(C.japonica)*, Waterhouse, 1947, *Camellia Quest*, pp.16, 23: Camden Park seedling 34/51. Bright crimson, two rows of outer petals, very broad and large and of thick substance; inner very small and placed like the old 'Waratah' (**Anemoniflora**). Originated by Sir William Macarthur, Camden Park, N.S.W, Australia. Never distributed or listed for sale. Extinct.

Volunteer. *(C.japonica), New Zealand Camellia Bulletin*, March 2003, Issue No.144, vol.XXIII, No.2, p.15, Reg. No.450. Registered by Mark Jury, Tikorangi, New Zealand. A chance seedling from a *C.japonica* mother which first flowered in 1996, and was named for the "Year of the Volunteer". The flower is a compact anemone form, 8 cm diameter x 4 cm deep, with 9-10 outer petals and about 110 large petal-like petaloids interspersed with a few hidden stamens. The flower is a bi-colour, mainly of a bright strawberry pink (RHS.CC.58C) with a darker centre (RHS.CC.52A). The many petals and petaloids are edged with a white to very pale pink border, the width of which is variable through the season. The plant is upright, and of average density and growth rate with dark green glossy leaves 8 cm long x 4 cm wide. Flowers early to late season. Note: The characteristics of this plant suggest that one of the parents is the *C.japonica* **Tama-no-ura.**

Von den Westeni. *(C.japonica)*, Jacob Makoy et Cie., Catalogue, 1849, p.20. No description. Originated in Holland. (Believed extinct.)

Vonnie Cave. (*C.pitardii* hybrid). *New Zealand Camellia Bulletin*, March 2004, Issue No.147, vol.XXIII, No.5, p.10, Reg. No. 461. Registered by Peter Cave, Cambridge, New Zealand. A chance seedling from *C.pitardii* var. *pitardii* which first flowered in 1992. Flower is a single to semi-double with about 7 petals (4 large, 3 from sepals), and about 60 stamens with yellow anthers on white filaments forming a 1 cm wide column. Colour is a very pale cream, flushed pink on the reverse side of the sepals, (RHS.CC.71D) and the plant is notably floriferous. Plant is spreading, of open structure and medium growth rate, with small, sharp-toothed, dark green leaves 5 cm long x 2 cm wide. Flowers mid-season to late.

W.H. Rish. (*C.japonica*), SCCS., 1974, *Camellia Nomenclature*, p.151: Coral pink. Large, semi-double with irregular petals and interspersed stamens. Vigorous, compact, upright growth. Blooms mid-season. Originated by W.H. Rish, Winnsboro, South Carolina, USA. Sport: **W.H. Rish Variegated.**

W.H. Rish Variegated. (*C.japonica*), Gentry, 1971, ACS., *The Camellia Journal*, vol.26, No.4, p.21 as 'W.H. Rish V.': A virus variegated form of **W.H. Rish** - Coral pink blotched with white. Originated in USA by W.H. Rish, Winnsboro, South Carolina, USA.

W.L. Dawning. Thomasville Nursery Catalogue, 1942, p.10. Orthographic error for **W.L. Downing.**

W.L. Downing. Thomasville Nursery Catalogue, 1942, p.10, as 'W.L.Dawning'. No description. McIlhenny Catalogue 1949-1950, p.16. Abbreviation for **William L. Downing.** Orthographic errors: 'W.N. Downing, 'H.L. Dawning'.

W.L. Smith. (*C.japonica*), ACS., Aug.1987, *The Camellia Journal*, vol.42, No.3, p.6, Reg. No.2051: Large, (three colours of blooms on the one bush) #1: White with large, dark red stripes, sometimes covering half the bloom; #2: Dark red; #1 pink with dark red stripes and petals edged in white. Semidouble to peony form *C.japonica* chance seedling. Blooms midseason. Originated by Walter L. Smith. Tylertown, Mississippi, USA. *American Camellia Yearbook*, 1987, p.86. The 15 year old seedling first flowered 1982. Average flower size is 11 cm across x 7.5 cm deep. Plant growth is upright, average and medium in rate with dark green leaves. 10.3 cm long x 5.5cm wide.

W.M. Jernigan. *(C.reticulata).* ACS, *The Camellia Journal*, Aug. 1998, p.23, Reg. No.2455. A very large pink with veining in the petals, semi-double cross of 'Homeyer No.158' (**Tom Durrant** x 'Tali Queen' [**Dali Cha**]) x **Nuccio's Ruby.** Flowers mid-season to late. Originated by Marvin Jernigan, Warner Robins, Ga., USA. *American Camellia Yearbook*, 1998, p.7, colour photo before p.1. The 19 year old seedling first flowered 1983. Average flower size is 16.5 cm across x 9 cm deep, with 47 petals and white anthers and filaments. Plant growth is upright and open with dark green leaves 17.5 cm long x 6.5 cm wide.

W.M.W. Hilsman, 1966, *American Camellia Yearbook*. Renamed 'Dr Walker Wells'.

W.P. Gilley. (*C.reticulata*), *American Camellia Yearbook*, 1983, p.165, Reg. No.1883: A large, bright pink, semi-double *C.reticulata* chance seedling of **Mouchang**; mid-season to late blooming. Originated by Paul Gilley, Grand Ridge, Florida, USA. The 6 year old seedling first bloomed 1980. Average flower size 12.5 cm across x 5 cm deep with 10-14 petals, yellow anthers and pink filaments. Plant growth is upright and medium in rate with dark green leaves, 12.5 cm long x 5 cm wide. Sport: **W.P. Gilley Variegated.** Chinese synonym 'Jili'.

W.P. Gilley Variegated. (*C.reticulata*), Valdosta Camellias, Nov.1990, ACS., *The Camellia Journal*, Vol.46, No.4. p.22 as 'W.P. Gilley V.': A virus variegated form of **W.P. Gilley** - Bright pink blotched white. Originated in USA. Chinese synonym 'Hua Jili'.

W.R. Guilfoyle. (*C.japonica*), Guilfoyle. 1883, *Catalogue of Melbourne Botanic Gardens*, p.127. No description. Tayler & Sangster Nursery Catalogue. 1905, p.27: Bright crimson, very fine. Originated in Australia.

W.S.Hastie. *Catalogue General des Plantes la Société Royale d'Horticulture de Belgique*, 1842, p.23. Synonym for **C.M. Hovey Variegated.**

Waadii. *Catalogue General des Plantes la Société Royale d'Horticulture de Belgique*, 1842. p.23. Orthographic error for **Wardii.**

Waardii. Jacob Makoy et Cie. Catalogue, 1839, p.18. Orthographic error for **Wardii.**

Wabasuki. Geo. Jackman & Son, 1957-1958, Planters Handbook, No.19. Orthographic error for **Wabisuke.**

Wabesuki. Stonehurst Nursery Catalogue, 1963-1964. Corruption of the Japanese name **Wabisuke.**

Wabihito. Wada, 1941, *Japanese Garden Treasures*, p.32. Erroneous reading for **Wabito.**

Wabiske. Kitamura, 1950 as *Camellia wabiske f. –bicolor*. Note: The characters for 'Wabisuke' are usually pronounced as 'Wabiske' in Japan, although the correct transliteration is **Wabisuke**. The use by Kitamura has lead to the use of the form 'Wabiske' in botanical nomenclature.

Wa-Bi-Suki. Forrest, 1985, *Trees and Shrubs Cultivated in Ireland*, Corruption of the Japanese name **Wabisuke.**

Wabisuke. (Wabisuke), Itô, Ihei, 1695, *Kadan Chikinshô*, vol.1; also listed in the *Zoho Chikinshô*, 1710, Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, described this a: Red, small size, single, tubular flower with white spots. Another name is 'Kochô'. In the *Journal of Japanese Botany*, 1910, Makino gave it taxanomic standing as *Thea reticulata* f. *bicolor*. He revised this to *Camellia reticulata* var. *wabiske*, in 1910, but this remains invalid as Lindley had previously used this designation for a different camellia species. Kitamura finally nominated it as *Camellia wabiske* f. *bicolor* in 1950. Sealy 1958, lists *C.wabiske* among the doubtful and excluded species. Chang, 1981, does not treat this material as a species at all. Flowers are single, campanulate, petals out-curving; colour crimson, RHS.CC. 22/1 with white spots. Leaves elliptical to narrow-elliptic, apex acuminate.

venation impressed, margins crenulate-serrulate. Blooms mid-season. 'Wabisuke' is also a group name for a collection of putative hybrids of ancient origin and very low fertility or totally infertile, in Japan. It is thought that the original cross was between *C.japonica* and *C.sinensis.* Different reading: 'Wabiske'. The Japanese pronounce 'wabisuke' as 'wabiske' and this orthography was used by the early botanists before the adoption of the Hepburn transliteration system by the Horticultural nomenclature code. **Wabisuke** is now regarded as the prior and valid latin orthography, although pronounced 'wabiske' For various colour illustrations & descriptions see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.459, pp.186, 361; Tuyama, 1968, *Camellias of Japan*, pl.402, p.204; Seibundô Shinkôsha, 1979, *Senchinchû*, pp.164, 257. For botanical drawings, colour photo and description see: pp.12-16, Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No.11. Synonyms: 'Kochô-wabisuke', 'Shibori-wabisuke', 'Azuma-wabisuke', 'Futairo-wabisuke', 'Campanulata Bicolor', Wabisuke-shibori'. It is known around Kyôto as 'Kochô-wabisuke' (Butterfly Wabisuke) which is also listed in Itô, Ko'emon, 1879 *Chinkashû.* 'Kochô' is given as a synonym in the *Kadan Chikinshô.* The synonym 'Shibori-wabisuke' is used by the Katayama Nursery for form said to be a little larger in size, so that now the name **Kochô-wabisuke** is commonly used in Japan, for this variety instead of 'Wabisuke'. The name 'Wabisuke' had also been used for the white form **Shiro-wabisuke** by Makino, 1910, but is now corrected. Orthographic error: 'Wabasuki'. Orthographic variant: 'Wabiske'.

Wabisuke-beni'ironomono. (Red Wabisuke), (Wabisuke), Yashiro, 1841, *Kokon Yôrankô*, vol.308, Ichijima reprint, 1906, p.360. No description. Originated in Japan. A possible synonym for **Beni-wabisuke,** but this cannot be confirmed.

Wabisuke f. bicolor. Kitamura, 1950, *Acta Phytotax.* XIV.63. Specific designation for **Wabisuke.**

Wabisuke Pink. SCCS., 1958, *Camellia Nomenclature*, p.98. Synonym for 'Toki'iro-wabisuke' (**Tarôkaja**).

Wabisuke Red. A.J. Mackie Nursery Catalogue, 1962, p.5. Synonym for **Beni-wabisuke**.

Wabisuke-shibori. Kan, Yashiroda Ltd Nursery Catalogue, 1931-1932, p.8. Synonym for **Wabisuke.**

Wabisuke-shiro. Kan, Yashiroda Ltd Nursery Catalogue, 1931-1932, p.8. Synonym for **Shiro-wabisuke.**

Wabisuke White. A.J. Mackie Nursery Catalogue, 1962, p.5. Synonym for **Shiro-wabisuke**.

Wabisuke-tsubaki. Itô, Ihei, 1935. Reprint of *Zôho Chikinshô*, 1710, by Kyôto Engei Kurabu. Synonym for **Wabisuke.**

Wabisuke-tsubaki-no-nakana. (Wabisuke Camellia Group), Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.243: From earliest times there have been Wabisuke Tsubaki Campanions, as they are known. While there is still this tradition, there have been added in modern times 20 varieties that have the following attributes in common: 1. Ovaries with silky hair. (3 exceptions). 2. Sexual organs retrogressive. 3. Seed cannot develop with rare exceptions. The variety has a small, cup-shaped or campanulate flower with slender cylindrical stamens group with white or no anthers and flowers early season. The leaves are small, narrow-elliptic with sharp serrations. The actual origin of the Wabisuke Tsubaki is unknown. The Japanese word 'Wabisuke' has the connotation of loneliness or forlornness.

Wabisuki. Mount Congreve Garden Catalogue, 1967-1968, p.1. A corruption of the Japanese name **Wabisuke.**

Wabito. (Lilliputian), *(C.sasanqua)*, Minagawa, Jisuke, 1930, *Chabai Sonota no Katarogu;* Wada, 1941, *Japanese Garden Treasures*, p.32 as 'Wabahito': Rose. Small cupped single. Early.

Originated in Japan. The meaning of the word is given as 'Lilliputian', but the characters also make an old word for a Japanese. Different reading: 'Wajin'.

Wabiyama. (Mount Wabi), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Very small, red with white spots. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.4, p.79. Originated in Japan. (Believed extinct.)

Wacissa. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Waucissa.**

Wada-no-hara. (Fields of Wada), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû:* Red. Full double with erect inner petals with waved margins. Originated in Japan. (Believed extinct.)

Wada's Favourite. *(C.sasanqua)*, Wada, 1941, *Japanese Garden Treasures*, p.32: Lavender rose, double rose shaped. Blooms early. Originated in Japan.

Wada's Gloriosa. *(C.sasanqua)*, Wada, 1941, *Japanese Garden Treasures*, p.32: Anemone flowered with many thick petals, rosy red beneath, white edged with rosy suffusion. Listed as a giant strain of *C.sasanqua.*

Wada's Mystery. *(C.japonica)*, Wada, 1941, *Japanese Garden Treasures*, p.29: Flowers of immense size, broadly campanulate with imbricated, massive petals, black crimson. Leaves large, lustrous, dark green. Originated in Japan by Wada.

Wada's Unique. *(C.sasanqua)*, Wada, 1941, *Japanese Garden Treasures*, p.32: Anemone flowered with many thick petals, rich pink beneath and white edged with a pink suffusion. The largest sasanquas of all. Originated in Japan by Wada.

Wadatsumi. (The Sea God), *(C.rusticana)*, Hagiya & Ishizawa, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.9, pp.60, 61, illustr.(12): Red, medium size, full peony form, 8 cm across; outer petals, 15 in number, large, frilled; inner petals, 30 in number, folded, erect and twisted, mixed with scattered stamens. New growth dark red. Early blooming. Leaves prominent venation, petioles hirsute. Collected in Itoigawa City, Niigata Prefecture, Japan, in 1960. Named and released by Kaoru Hagiya. See: *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.370; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.164, 257; Yokoyama & Kirino, 1989, *Nihon no Chinka*, pp.368, 369.

Wade Hamilton. Magnolia Gardens & Nursery Catalogue, 1945-1946. Synonym for **Sergeant Barrios.**

Wadi. van Houtte Catalogue, 1841, 7:22. Orthographic error for **Wadieana.**

Wadiana. Trillon, Le Mans Nursery Catalogue, 1843, p.9. Orthographic error for **Wadieana.**

Wadieana. *(C.japonica)*, Loudon, 1835, *Gardeners' Magazine*, 11:294: Named after Mr. Wadie, propagator of Thompson's Nursery. Petals of dead white colour, the flower large, distinct from either the old white double (**Alba Plena**) or the white double fringed (**Fimbriata**); the petals are larger and less compactly disposed, the centre is filled. Originated at Thompson's Nursery, England. Orthographic errors: 'Waadii', 'Wadeii', 'Wadiana', 'Vadiaena', 'Wadies', 'Wadii', 'Wadi'.

Wadies. Loudon, 1841, *An Encyclopedia of Plants*, p.1239. Synonym for **Wadieana.**

Wadii. Loddige's Nursery Catalogue, 1836, p.7. Orthographic error for **Wadieana.**

Waga-jin. Fendig, 1953, *American Camellia Catalogue.* Corruption of Japanese name **Wagôjin.**

Wagamama. (Whim), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû.* Light pink anemone with large and small petaloids mixed, light pink and deep red. Originated in Japan. Ancient synonym: 'Bukkôji'. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.112. (Believed extinct.)

Wagatsuma-shibori. Different reading for **Azuma-shibori.**

Wagner. McIlhenny Catalogue, 1941, p.15. Abbreviation for **Wagner Red.**

Wagner Red. *(C.japonica)*, Lindo Nursery Catalogue, 1940-1941. No description. Vanderbilt, 1940, *Camellia Research*, p.7. No description. Originated in the Lindo Nursery, Chico, California. Abbreviation: 'Wagner'. Orthographic error: 'Walker Red'.

Wagôjin. (God of Harmony), *(C.sasanqua)*, Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu;* Chûgai Nursery Catalogue, 1936-1937, p.26: White with pink graduations, medium size, semi-double, each bud generally producing two flowers. Wada, 1941, *Garden Treasures of Japan*, p.32: Large, white, striped and flushed with red, semi-double. Each bud generally producing two flowers. Leaves elliptic, occasionally leaf apices split into two. Originated in the Kantô area, Japan. Synonyms: 'Myôto-zaki', 'Wagô-no-kami'. Different reading: 'Wagôshin'. Corruptions of name: 'Wayojin', 'Waga-jin'. See: JCS, 1972, *Encyclopedia of Camellias in Colour*, vol.I, pl.554, p.391.

Wagonii. *(C.japonica)*, Auguste van Geert Catalogue, 1848, p.23. No description. Originated in Holland. (Believed extinct.)

Wagô-no-kami. Yashiroda, 1950, *American Camellia Yearbook*, p.19. Synonym for **Wagôjin.**

Wagôshin. Yokohama Catalogue, 1955. Different reading for **Wagôjin.**

Wahroongah. *(C.sasanqua)*, Camellia Grove Nursery Catalogue, 1975, p.19: Large size, single, white edged, bright pink. Strong, upright, columnar growth. Good hedge specimen. Early blooming. Originated in Australia.

Waicissa. *(C.japonica)*, Mark S. Cannon Scion Catalogue, 1962. p.11. No description. Originated in USA. No valid listing located.

Wairere. *(C.reticulata), New Zealand Camellia Bulletin*, 1979, vol.XI, No.3, p.21, Reg. No.147: A chance seedling of *C.reticulata*, raised by H.K. Clark, Matamata, New Zealand, which first flowered 1987. The plant has an upright, dense, growth habit, mid-green, reticulate foliage, 8 cm long x 3cm wide. The blooms are semi-double to peony form with 17-20 petals and an occasional petaloid, white filaments and golden anthers. The flower colour is a rich pink (RHS.CC.Red Purple Group 58B fading to 57D); size very large, 17 cm across x 7 cm deep. Long blooming season.

Wainhetu Beauty. Hewton Nurseries Catalogue, 1973-1974, p.3. Orthographic error for **Waiwhetu Beauty.**

Waitic. (*C.reticulata* hybrid). SCCS 1993, *The Camellia Review*, vol.55, No.1, p.13; "The Continuing Search for new Varieties" by Neville Haydon: A cross of *C.reticulata* x *C.japonica* **Waiwhetu Beauty** made by Les Jury, New Zealand. A dwarf grower.

Waiwheta Beauty. Jury & Jury, 1955, *American Camellia Yearbook*, p.63. Orthographic error for **Waiwhetu Beauty.**

Waiwhetu Beauty. *(C.japonica)*, Waterhouse, 1949, *American Camellia Yearbook*, p.156: Light pink. Medium size, semi-double with loose petals and petaloids. Vigorous, low spreading growth. Blooms mid-season. A chance seedling from New Zealand. See illustration on p.44, Sharp, 1957, *Camellias Illustrated.* Orthographic errors: 'Waiwheta Beauty', 'Wainhetu Beauty'. Chinese synonym 'Waimeiren'.

Wakaba-kô. (Young Leaves Red), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Red, medium size. Originated in Japan. (Believed extinct.)

Wakahime. (Young Princess), *(C.hybrid)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.31: Small size, pale pink, cup-shaped single. Blooms mid-season. A seedling of **Chôchidori** x *C.hybrid* **Tulip Time.** Originated in Okayama Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.287 with colour photo; English translation p.202. White, bellflower-shaped single, red graduations on outer petals, lanceolate and channelled petals, cylindrical stamen cluster, small to medium size. Leaves elliptic, medium size. Upright growth. Originated by Nobuo Sasai in 1983, released in 1990.

Waka-ka'ede. (Young Maple), *(C.sasanqua)*, Hakoda, 1974, *Nôkôdai Nôjôhô*, No.6, p.56; Yûsuke Sakata & Ken'ichi Arisumi, 1983, *International Camellia Journal*, No.15, p.22. Flower rose-pink, single, medium size. See JCS., 1987, *Tsubaki*, No.26, p.47. ICS., Apr.,1990, *Japanese Camellia Cultivar List*, p.36: Medium size, light crimson, single. Blooms early to mid-season. Sakata et al., Mar.1981, "Studies in the Flower Colour of Camellias II', *Memoirs of the Faculty of Agriculture*, Kagoshima University, vol.XVI, p.92. Selected from wild japonicas growing in Kurume City, Japan. Named and released by Shunsuke Hisatomi in 1985.

Waka-ka'ede. (Young Maple), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.222, colour photo & description as Wakakaede': Small size, deep vermilion red, wide, vase-shaped single with 6-7 wide, rounded, overlapping, emarginate thick petals, and a central stamen column, with white filaments and yellow anthers. Leaves deep green, broad-elliptic, apex acute. Flowers mid-season to late. Originated in Kurume City, Fuku'oka Prefecture, Japan.

Wakakusa. (Young Grass), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshû*, vol.I; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Pale pink, with white borders and red streaks. Semi-double; medium size, with 3 rows of petals. The points of the corolla are white with bamboo whisk-like stamens. Originated in Japan. Corruption of name 'Wanokusa'. (Believed extinct.)

Wakamiya. (Place Name). *(C.japonica), Kurume Camellia*, 1997, English translation, p.11; Deep crimson, edged white. Small anemone form. Flowers mid-season. Stout plant habit. Named by Y. Kunitake, Kurume, Japan.

Wakamizu. (See Note at End). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.287 with colour photo; English translation p.202. Small, lotus-form semi-double, pink graduation on pale pink ground, scattered stamens, fragrant. Flowers early. Leaves elliptic, small. Spreading growth, weeping branches. A cross between *C.hiemalis* and *C.drupifera*. Named and released by Kaoru Hagiya in 1984. From Niigata Prefecture. Note: 'Wakamizu' means water ladled on the New Year's Day to be used in Shinto ceremonies, dedicated to Gods, and used to cook meals. Said to bring good health for the year to persons who drink it.

Waka-mura. Vanderbilt, 1941, *Camellia Research*, II. p.8. Corruption of the Japanese name 'Wakanoura', erroneously used here as a synonym for **Tricolor.**

Waka-mura Red. Vanderbilt, 1941, *Camellia Research*, II, p.8. Orthographic error for 'Wakanoura Red', an erroneous synonym for **Lady de Saumarez.**

Waka-mura Variegated. Vanderbilt, 1941, *Camellia Research*, II, p.8, as Waka-mura Vareg.'. Orthographic error for Waka-no-ura Variegated', erroneous synonym for **Tricolor.**

Wakamurasaki. (Light Purple), *(C.japonica)*, Title from old literature, *Genji Monogatari*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.164, colour photo, p.257, description: Small size, campanulate single; light purplish red with white blotches, flushing to pink. Central stamen column. Leaves deep green, elliptic, apex tapering acuminate, margins serrulate, twisted, long

petioles. Blooms mid spring. Nuccio's Camellia Nursery Catalogue, 1994: Blush pink. Single. Medium upright growth. Originated with a private family on Sado Island, Niigata Prefecture, Japan. Named and released by Tokuji Ôoka in 1970s.

Wakamurasaki. (Title from *Genji Monogatari*), *(C.sasanqua),* Hakoda, JCS., 1987, *Tsubaki*, No.26, p.47; ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.36: Medium size, crimson, single. Originated in Saitama Prefecture, Japan.

Wakamusha. (Young Soldier), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan*, pl.86, p.43, description, p.111: A snow camellia with spreading branches. Leaves oblong-elliptic, apex shortly acuminate, base obtuse, deep, shining green, 5.4-7.3 cm long x 2.3-4 cm wide, petioles green, hairy, 8-10 mm long. Open, vase-shaped flowers, petals 5-7, largest 6 cm long x 4.7 cm wide, inflexed and emarginate, thin, semi-transluscent, pale pink, deeper at apex and on petal reverse. Stamens 4 cm high, spreading to 2.6 cm diameter, filaments pale yellow with a touch of orange. Flowers early. From seed collected at Yatsuomachi, Toyama Prefecture, Japan.

Wakana. *(C.japonica), Kurume Camellia*, 1997, English translation, p.11; Peach pink, medium size, tubular single. Flowers mid-season. Originated by T. Kunitake, Kurume, Japan.

Wakanahime. (Herb Princess), *(C.hybrid),* Hagiya, 1986, *Studies in Interspecific Hybrids of Camellias*, p.5, colour photo 4, p.4: Flower peach pink, outer petals 15, with approximately 40 irregular, small, erect petals in the centre, 5-6 cm across. Petals oval, wavy. Stamens scattered, filaments white, ovary hirsute. Fragrant, Flowers early in leaf axils. Leaves small, ovate, twisted, venation and serration both obscure. Growth habit spreading with slender branches. A seedling of *C.x williamsii x C.lutchuenensis*, originated by Dr Kaoru Hagiya, Niigata University, Japan.

Wakanoura. (Wakanoura Bay), *(C.japonica),* Shirai-Bunko, Higashi-murayama, 1789, *Shoshiki Hanagatachô:* Double, pale pink with deep red stripes, lotus shape. originated in Japan. Possibly the same as the modem **Wakanoura,** but not certain.

Wakanoura. (Wakanoura Bay), *(C.japonica),* Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Itô, Ko'emon, 1879, *Chinkashû:* Pinkish white spotted deeper pink, large, semi-double. Tuyama, 1968, *Camellias of Japan*, pl.344, p.174, description, p.192: Leaves narrowly elliptic to narrowly ovate-elliptic, gradually acuminate at the apex, venation a little impressed, minutely crenateserrulate at the margin, petioles glabrous. Flowers double with narrow petals, pale pink to white, delicately striped or spotted deeper pink (Spinel pink 0625/1) to deep red (Cardinal red 822/3). Late blooming. Originated in Kantô area, Japan. In America this cultivar name has been seriously confused with **Tricolor** ('Ezo-nishiki'), partly due to incorrect identification in the 1940's by Dr Hume and McIlhenny. Corruptions of name: 'Wako-no-ura', 'Waka-mura', 'Waukonoura', 'Wakenoura'. Different reading: 'Waka-no-ura'. For colour pls. & descriptions see: Adachi, 1966, *Camellia. Its Appreciation and Artistic...*, p.99; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.313, pp.140, 337; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.163, 257. Sport: **Wakanoura-aka.**

Wakanoura. (Wakanoura Bay), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Snow white, semi-double in 3 rows, with spots and streaks of red, cylindrical stamen cluster. Somewhat different from the modern cultivar. Originated in Japan. Described as one of the three trees with **Moshio** and **Higuruma.**

Wakanoura. (Wakanoura Bay), *(C.sasanqua),* Shimada, Yaichi, 1957, *Kumamoto no Sazanka ni tsuite*, *Dantairin;* Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.16: Pure white. Large, single. Originated in Kumamoto Prefecture, Japan. Selected and named by Sadatsugu Yamasaki before 1880. Regarded as one of the finest Higo sasanquas.

Wakanoura-aka. (Red Wakanoura), *(C.japonica)*, Satomi, 1956, *Camellias of Japan*, p.16: The red sport of **Wakanoura**. Originated in Japan. In America, erroneously used as a synonym for **Lady de Saumarez** as 'Tricolor Siebold Red' and 'Wakanoura Red'.

Wakanoura Pink. Waterhouse, 1948, *American Camellia Yearbook*, p.59. Erroneous synonym for **Tricolor Pink.**

Wakanoura Red. McIlhenny, 1937, *600 Varieties of Camellias*, p.14. Erroneous synonym for **Lady de Saumarez.** Orthographic error: 'Waka-mura Red'.

Wakanoura Rose. Rhodelia Nursery Catalogue, (before 1945). Erroneous synonym for **Lady de Saumarez.**

Wakanoura Rosea. Portland Nursery Camellia Catalogue, 1946-1947, p.4. Erroneous synonym for **Lady de Saumarez.**

Wakanoura-shiro. Satomi, 1956, *Camellias of Japan*, p.16 erroneously as a synonym for 'Leucantha', itself used as an invalid synonym for **Tricolor White.**

War Cry. *(C.japonica), American Camellia Yearbook*, 1966, p.102, Reg. No.891: A 9 year old chance seedling that first bloomed 1960; originated by G.S. Clarke Jr., Savannah, Georgia, USA. Plant growth is upright, dense and medium. The dark green leaves are 11 cm long x 7 cm wide. The loose, peony formed flower is heavily veined, velvet red, 15 cm across x 5.5 cm deep, with 12 petals, 21 rabbit ears and 22 petaloids, interspersed with 15 groups of yellow stamens. Mid-season blooming. Sport: **War Cry Variegated.**

War Cry Variegated. *(C.japonica)*, Gentry, 1969, ACS., *The Camellia Journal*, vol.24, No.4 as 'War Cry V': a virus variegated form of **War Cry** - Velvet red blotched white. Originated in USA.

War Eagle. (*C.japonica*), Pyron, 1960, *American Camellia Yearbook*, p.38: Flower 12.5 cm across, dark red, full peony to loose peony form. Named for the Auburn University football team, the 'War Eagles'. Originated by Dr Gilbert E. Fisher, Union Springs, Alabama. Reg. No.590, *American Camellia Yearbook*, 1961, p.230. Flowers have more than 30 petals. Blooms mid-season. Plant growth is upright, open and rapid with dark green leaves, 12.5 cm long x 6 cm wide. According to the SCCS, *Camellia Nomenclature*, this is a synonym for **Roman Soldier,** named by Shackelford two years before (1958) when it was renamed from 'Sir Galahad'.

Warabe-no-koe. (Voice of a Child), (*C.japonica*), Yokoyama, 1975, G*endai Tsubaki Meikan*, p.243, illustration and description: Medium sized, campanulate single, 5 petalled white with red streaks and a short, thick, stamen cylinder. Leaves mid-green, obovate, flat, apex acuminate, recurved, margins shallowly serrate, sometimes rolled under. A seedling of **Tafuku-benten,** originated by Nakamura, Totsuro, in Kantô area, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.164, colour photo, p.257, description. Resembles 'Yuri-shibori'.

Warabe-tsubaki. (Child Camellia), *(C.japonica)*, Kuriya, 1969, *Chûbu Camellia Society Journal*, No.2: An ancient and sacred relic in the Kongôji, Yamaga, Kumamoto Prefecture, Japan. The camellia has never flowered, the buds always wither and fall, leading to the fable that the priest who originally cared for the original tree in the 15th Century, would return when the tree flowered. Leaves elliptic, apex acuminate, base cuneate, 7.1-7.2 cm long x 2.2-3.2 cm wide; margins serrated with 24-26 serrations, rather leathery, thick, glossy, deep yellow-green, slightly pinkish upper surface, pale yellow green lower, somewhat undulate. Buds profusely, up to 4 per stem. Originated in Japan.

Warabe-uta. (Children's Folksongs), (*C.japonica*), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.221, colour photo and description: Medium size, glossy deep red, cup-shaped single, with 5 large, rounded, overlapping, concave thick petals and a central cylinder of stamens with pinkish filaments, joined for the lower third, and yellow anthers. Flowers mid-season to late. Originated in Mi'e Prefecture, Japan. Nippon Tsubaki - Sasanqua Meikan, 1998, p.288 with colour photo; English translation p.202. A natural seedling of 'Yûkô'. Named and released by Minoru Satô in 1987.

Warai-okina. Different reading for **Shô-ô.**

Waraku. (Peace & Harmony), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû*, p.252; ICS. Apr.1990, *Japanese Camellia Cultivar List.* p.25: Very small size, light pink, irregular, sake cup shaped single. Blooms early to late. Originated in Toyama Prefecture, Japan. Synonym for **Momosuzume.**

Warata Nova. *Annales de la Société d'Horticulture de Paris*, 1832. Orthographic variant for **Waratah Nova.**

Warata Plena Alba. Rossi, Johannes, ed., 1826, *Catalogus Plantarum Horti* .... Synonym for 'Waratah Alba Plena'.

Warata Plena Rubra. Rossi, Johannes, ed., 1826, *Catalogus Plantarum Horti*.... Synonym for **Anemoniflora.**

Warata Purpurea. Jacob-Makoy, 1829, Catalogue, p.7. Orthographic error for 'Waratah Purpurea, synonym for **Anemoniflora.**

Warata Purpurescens. Jacob-Makoy, 1830, Catalogue, p.6. Synonym for **Anemoniflora.**

Warata Rose. Vanderbilt, 1940, *Camellia Research*, p.7. Orthographic variant for 'Waratah Rosea', synonym for **Anemoniflora Rosea.**

Warata Rosea. Burdin, Chambery Nursery Catalogue, 1834, p.19. Orthographic variant for 'Waratah Rosea', synonym for **Anemoniflora Rosea.**

Warata Rossa. Gaetoni Savi Catalogue, 1834. Synonym for 'Waratah'.

Warata Rubra. Maupoil Catalogue, 1826. Synonym for **Anemoniflora.**

Warata Rubra Plena. Maupoil Catalogue, 1826, p.23. Synonym for **Anemoniflora.**

Warata Rubra Vera. Colla, 1843, *Camelliografia.* Orthographic variant for 'Waratah Plena Rubra', synonym for **Anemoniflora.**

Warata Spinea Rubra. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.32; Peony form (similar to **Pompone**), carmine coloured. Originated in Portugal.

Warata Striata. Burdin, Chambery Nursery Catalogue, 1834, p.19. Orthographic variant for 'Waratah Striata', synonym for **Anemoniflora Striata.**

Warata Striata Chinensis. Burdin, Chambery Nursery Catalogue, 1834, p. 19. Orthographic variant for 'Waratah Striata Chinensis', synonym for **Rawesiana.**

Warata Striata Knightii. Burdin, Chambery Nursery Catalogue, 1834, p.19. Orthographic variant for 'Waratah Striata Knightii', synonym for **Waratah Flamea.**

Warata Variegata. Burdin, Chambery Nursery Catalogue, 1834, p.19. Orthographic variant for 'Waratah Variegata', synonym for **Waratah Tricolor.**

Warata Variegata de Knight. Jacob-Makoy, Catalogue, 1830, p.6. Synonym for 'Knight's Waratah', synonym for **Dianthiflora.**

Warata Wariegata. Tourres, Macheteaux Catalogue, 1839, p.22. Orthographic variant for 'Waratah Variegata', synonym for **Waratah Tricolor**.

Waratah. Aiton, 1812, *Hortus Kewensis*, 4:235 as 'Warrata'h'. Synonym for **Anemoniflora**, also used invalidly as a synonym for **Mariana**. Orthographic errors: 'Warata', 'Warrata', 'Warratah'.

Waratah Alba. Anon, 1830, "Ueber die Cultur der Kamellien" in *Der Blumen Gaertner,* p.54. Wendschuch, 1834, *Anleitung zur cultur der Camellien. p*.24 as 'War. Alba'. Synonym for **Anemoniflora Alba.** Orthographic errors: 'Waratha Alba', 'Warata Alba', 'Warrata Alba', 'Warratah Alba'.

Waratah Alba Plena. Berlèse, 1841, *Iconographie*, p. facing pl.78. as 'Warratah Alba Plena'. Synonym for 'Anemoniflora Alba Plena'. Orthographic errors: 'Warata Flore Plena Alba', 'Warata Alba Plena', 'Warratah Alba Plena'.

Waratah Alba Tripetala. *(C.japonica)*, Antofilo ed., 1857-1858, *I Giardini, giornal d'orticulture,* vol.IV, p.97 as 'Warrata Alba Tripetala', in a list of camellias originated in the Brozzoni Gardens, Italy. (Believed extinct.)

Waratah Anemoniflora. Rubel Longview Catalogue, 1933 as 'Warratah Anemoniflora'. Synonym for **Anemoniflora.**

Waratah Ancien. Berlèse, 1844, *Annales de la Société d'Horticulture de Paris*, 35:344 as 'Waratha Ancien'. Synonym for **Anemoniflora.**

Waratah Argentea. *(C.japonica)*, Annonymous, 1832, *Annales de la Société d'Horticulture de Paris*, 10:310-317 as 'Warrata Argentea' as presented by Berlèse. No description. Originated in Italy. (Believed extinct.)

Waratah Aurea. *(C.japonica)*, Verschaffelt Catalogue, 1847-1848, p.63, as 'Warratah Aurea'. No description. (Believed extinct.)

Waratah Bicolor. *(C.japonica)*, Tagliabue, 1840, *Nomenclatore Camelliae* ... No description. Oudin, Lisieux Nursery Catalogue, 1844, p.13 as 'Warratah Bicolor: (New) Pink speckled with blood red. Ridolfi, 1848, Catalogue delle Piante, p.9, as 'Warrata Bicolor': Large, dark red outer petals. Inner petals in a small cluster, almost pure white. Originated in France.

Waratah Carnation. Tagliabue, 1840, *Nomenclatore Camelliae....* Synonym for **Anemoniflora Striata.**

Waratah Carnea. Anon, 1830, "Ueber die Cultur der Kamellien" in *Der Blumen Gaertner*, p.54. Shneiderff, 1841, *Catalogo piante Trovano Giardino...*,p.9 as Warrata Carnea'. Synonym for **Anemoniflora Carnea.**

Waratah China. Berlèse, 1841, *Iconographie* text opposite pl.57 as 'War. China'. Synonym for **Rawesiana.**

Waratah Corallina. Baumann & Baumann, 1832, *Collection de camellias élevés à Bollweiler* as 'W'tah Corallina'. Synonym for **Corallina.** Orthographic error: 'Warratah Coronaria'.

Waratah Dernii. Baumann & Baumann, 1829-1835, *Collection de camellia élevés à Bollweiler* as 'W'tah Dernii'. Synonym for 'Dernii', itself a synonym for **Augusta..**

Waratah Flammea. (*C.japonica*), Debonnaire, 1832, *Annales de la Société d'Horticulture de Paris*, 11:15-20 as 'Warata Flamma'. A bicoloured camellia with an orange-red ground, striped in pink and white. Originated in France. Orthographic errors: 'Waratah Flammula', 'Warata Flamma', 'Waratah Flamula'.

Waratah Flamula. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.238. Orthographic error for **Waratah Flammea.**

Waratah Flore Pleno. Anonymous, 1832, *Catalogo delle piante esistente nel giardino della Signora Marchesa di Priero al Villar Perosa*, p.16. Synonym for **Anemoniflora.**

Waratah Grandiflora. L.L. Liebig, 1839, *Verzeichnis von Warmen und Kalten Hauspflanzen...,* p.11, as 'Warrata Grandiflora'. No description. Originated in Germany. (Believed extinct).

Waratah Incarnata. Tagliabue, 1840, *Nomenclatore Camelliae....* Synonym for **Anemoniflora Carnea.**

Waratah Knight. Poiteau, 1835, *Annales de la Société d'Horticulture de Paris*, 16:350. Synonym for **Knightii.**

Waratah Kooper. *(C.japonica)*, Tagliabue, 1840, *Nomenclatore Camelliae....* No description. (Believed extinct.)

Waratah Kurtzii. *(C.japonica)*, Anonymous, 1835, *Magazine of Horticulture*, 1:196: Mr Edward Kurtz exhibited a new camellia raised by himself from seed and now it blooms for the first time. The seed was from the old 'Waratah', (**Anemoniflora**). Its form is that of the anemone flowered or Waratah; the large petals are of a clear carmine, veined with a deep tint of the same colour and are cordate; the centre petals are white with occasional sulphur tinges and pencilled with deep, bright pink; many of them edged with yellow. Originated in Maryland, USA. Orthographic error: 'Warratah Kuttzi'.

Waratah Lutea. *(C.japonica)*, Burnier & Grilli Catalogue, 1846-1847 as 'Waratahlutea'. No description. van Houtte Catalogue, 1846-1847, 27:33: Pure white waratah form with 3 rows of regular external petals, with the centre a yellow group; orange and white. Orthographic error 'Warratha Lutea'. [from] Madame Lambert. Originated in Italy.

Waratah Macrantha. *(C.japonica)*, Catalogo ed Inventario delle Pianti vivi asistentii nei Giardini…, 1856, as 'Warrata Macranta'. No description. Originated in Italy. (Believed extinct).

Waratah Maculata. *(C.japonica)*, Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.14: Anemone form, red blotched white as 'Warratah Maculata'. Originated in Belgium.

Waratah (McIlhenny). *(C.japonica)*, McIlhenny, 1937, *600 Varieties of Camellias*, invalidly as 'Warratah': Semi-double, large, medium red. Originated in USA.

Waratah Mesteri. Baumann & Baumann, 1829-1835, *Collection de Camellias élevés à Bollweiler* as 'Wtha Mesterii', synonym for 'Masterii', itself a synonym for **Master's Double Red..**

Waratah Micrantha. *(C.japonica)*, Tagliabue, 1840, *Nomenclatore Camelliae...* No description. Originated in Italy. (Believed extinct.)

Waratah Mignonne. *(C.japonica)*, Hogg, 1838, *Magazine of Horticulture*, 4:155: Originated in USA by Michael Floy, New York. Maroon, small, very double. Orthographic error: 'Warratah Mignonne'.

Waratah Nova. *(C.japonica)*, Debonnaire, 1832, *Annales de la Société d'Horticulture de Paris*, 11:15-20 as 'Warata Nova': A new cultivar in the Berlèse collection. Berlèse, 1845, *Monographie*, ed.3, p.271 and index p.336: Leaves 10.8 cm long x 6.8 cm wide, broad-lanceolate, thick, recurved, reclined; petiole reddish; buds large, scales greenish. Flowers deep orange-red; exterior petals broad, numerous, imbricated, the others also somewhat imbricated, small, a large number forming a central boss like **Rawesiana.** Originated in England. Orthographic errors, 'Warrata Nova', 'Warata Nova', 'Waratha Nova'. Synonym: 'Rossii Varietas'.

Waratah Parviflora Striata. Verschaffelt Catalogue, 1847-48, p.63 as 'Warratah Parvifl. Striata'. Synonym for **Parviflora Striata.**

Waratah Pencillata. Baumann & Baumann, 1828-1835, as 'Wtha Pencillata'. Synonym and orthographic error for **Penicillata.**

Waratah Petalata. *(C.japonica),* Anonymous, 1841, *Catalogo delle piante esistente nell'imperiale e reale Giardino di Boboli*, p.13 as 'Warrata Petalata'. No description. Originated in Italy. (Believed extinct.)

Waratah Pisani. Gaetano Savi Catalogue, 1834. No description. Originated in Italy. (Believed extinct.)

Waratah Plena Alba. Rossi, Johannes ed., 1826, *Catalogus Plantarum Horti...*, p.14 as 'Warata Plena Alba'. Orthographic error for 'Waratah Alba Plena'.

Waratah Pomponia. Tagliabue, 1840, *Nomenclatore Camelliae* .... Synonym for **Pompone.**

Waratah Plena Rubra. Rossi, Johannes ed., 1826, *Catalogus Plantarum Horti...*, p.14 as 'Warata Plena Rubra'. Synonym for **Anemoniflora.**

Waratah Purpurea. Jacob-Makoy, 1830, Catalogue, p.6 as 'Warata Purpurea'. Harrison ed., 1838, *The Floricultural Cabinet*, p.11 as 'Warratah Purpurea'. Synonym for 'Purple Waratah', itself a synonym for **Anemoniflora.**

Waratah Red. Loudon, 1825, *The Greenhouse Companion.* Synonym for **Anemoniflora.**

Waratah Rose. Vanderbilt, 1940, *Camellia Research*, p.2, as 'Warata Red'. Synonym for **Anemoniflora Rosea.**

Waratah Rosea. Prince Nursery Catalogue, 1828, p.169 as 'Warratah Rosea'. Synonym for **Anemoniflora Rosea.**

Waratah Rossa. Gaetani Savi Catalogue, 1834, as 'Warata Rossa'. Synonym for **Anemoniflora Rosea.**

Waratah Rubra. Shneiderff, 1841, *Catalogo piante Trovano Giardino*, pp.9, 13 as 'Warrata Rubra'. Synonym for **Anemoniflora.**

Waratah Rubra Vera. Colla, 1843, *Camelliografia*, p.134 as 'Warata rubra vera'. Synonym for **Anemoniflora.**

Waratah Sanguinea. *(C.japonica),* Oudin, Lisieux Nursery Catalogue, 1844, p.13 as 'Warratah Sanguinea': (New), Very vivid red, Magnificent. Originated in Italy.

Waratah Scarlet. Tagliabue, 1840, *Nomenclatore Camelliae* .... Synonym for **Anemoniflora.**

Waratah Sinensis. Berlèse, 1841, *Iconographie*, text opposite pl.57. Synonym for **Rawesiana.**

Waratah Speciosa. Trillon, Le Mans Nursery Catalogue, 1843, p.10 as 'Warratha Speciosa'. Synonym for **Rawesiana.**

Waratah Striata. Anonymous, 1832, *Annales de la Société d'Horticulture de Paris*, 10:310-317 as 'Warrata Striata', Synonym for **Anemoniflora Striata.**

Waratah Striata Chinensis. Burdin Chambery Nursery Catalogue, 1834, p.18. as 'Warata Striata Chinensis'. Synonym for **Rawesiana.**

Waratah Striata Nova. Anonymous, 1832, *Annales de la Société d'Horticulture de Paris*, 10:388-406 as 'Warrata Striata Nova'. Synonym for **Anemoniflora Striata.**

Waratah Striped. Vanderbilt, 1941, *Camellia Research*, II, p.8 as 'Warrata Striped'. Synonym for **Anemoniflora Striata**.

Waratah Tricolor. *(C.japonica),* van Houtte Catalogue, 1839, 1:9 as 'Warratah Tricolor': The form and colour of the old **Anemoniflora** but with pink and white spots. Originated in Belgium. Synonyms: 'Waratah Variegata', 'Warrata Tricolor de Young'. Orthographic error: 'Waratha Tricolor'.

Waratah Variegata. Shneiderff, 1841, *Catalogo piante Trovano Giardino...*, p.9 as 'Warrata Variegata'. Synonym for Waratah Tricolor'.

Waratah Variegata Nova. *(C.japonica),* Tagliabue, 1840, *Nomenclatore Camelliae....* No description. Originated in Italy. (Believed extinct.)

Waratah White. Guilfoyle Nursery Catalogue, 1866, p.19. Synonym for **Anemoniflora Alba.**

Waratea Rosea. Jacob Makoy Nursery Catalogue, 1838. Orthographic error for 'Waratah Rosea'; synonym for **Anemoniflora Rosea.**

Warath. Isola Madre Catalogue, 1845. Orthographic error for 'Waratah'. Synonym for **Anemoniflora.**

Waratha Ancien. Anonymous, 1844, *Annales de la Société d'Horticulture de Paris*, 35:344. Orthographic error for 'Waratah Ancien'; synonym for **Anemoniflora.**

Washingtonia. André Leroy, 1868, Catalogue, p.134. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.239. Orthographic variant for **Washingtonii.**

Washingtoniana. Berlèse, 1840, *Monographie*, ed.2, pp.150-151, 231. Orthographic variant for Washingtonii.

Washingtonii. *(C.japonica)*, Hogg, 1838, *Magazine of Horticulture*, p.157: Superb rose pink, centre scarlet, very double. Verschaffelt, 1848, *Nouvelle Icongraphie*, Book III, pl.II: The name indicates that its native country is America. It is named for the famous Virginia planter, George Washington. It is a shrub of vigorous growth, covered with large, thick leaves, oval-elongated, acuminate, regularly serrate, glossy deep green. Buds are large, round-oval; the elegant blossom, full and well open, is from 9-11 cm across; the petals are broad, rounded, regularly imbricated from the centre to the circumference, of a cherry-red colour, intersected for the most part, by a white stripe. Originated by Michael Floy, New York, USA. Orthographic errors: 'Washingtoniana', 'Washingtoni', 'Wasingtonii', 'Wasingtoniana'. Synonyms: 'Washingtonia', 'Washington de Floy', 'Washington'(Floy), 'Wahingtonii Vera'. Note: There are three camellias that have been named for George Washington. The first, known as **Washingtonii**, was originated by Michael Floy. The second, a J.B. Smith seedling was introduced by Boll under the name **General Washington.** The third was raised by Dr J.S. Gunnell and named **General George Washington** in 1843.

Washingtonii Vera. Henri Goleotti, 1849, Catalogue Botanique. Synonym for **Washingtonii.**

Washino. Hazlewood & Jessep, 1972, *Checklist -Camellia Cultivars from Nursery Catalogues*, p.239. Corruption of the Japanese name **Washi-no-o.**

Washi-no-o. (Tail of an Eagle), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Double deep red with white spots, large stamens separated. Note: Shirai-Bunko, 1789 lists **Washi-no-o** separately from **Masayoshi** indicating that they were not synonyms. Corruption: 'Washino'.

Washi-no-o. Synonym for **Masayoshi.**

Washi-no-yama. (The Legendary Buddhist Mount of Eagles), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.311; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in early blooming section; Itô, Ko'emon, 1879, *Chinkashû:* White striped red, small. Blooms early. Tuyama, 1968, *Camellias of Japan*, pl.318, p.161, description, p.185: Leaves ovate-oblong, rounded at the base, acuminate at the apex, venation impressed, obsurely and minutely crenate at the margin, petioles glabrous. Flowers single, narrowly cup-shaped, white, striped in varying degrees from red to pink (Cardinal red 822 to China rose 024/2), petals wrinkled. This modern cultivar is the same as the old Itô variety, which was particularly noted for its early blooming. For colour photos & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.164, p.286; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.116; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.132, p.310; JCS, 1969, *Tsubaki*, No.7, p.36. Resembles **Aki-no-yama.** Sport: **Fukurin-washi-no-yama.**

Washio. Uekiya Bunsuke, 1830, *Uekiya Bunsuke Hikki*, as synonym for **Masayoshi.**

Washû. (Mt. Washû), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.359, colour photo and description: Large size, clear red double, with 3 rows of imbricated outer petals and a small, convex centre of small petals and petaloids, anemone form. No stamens visible. Leaves light green, elliptic, apex acuminate, sharply serrate. Blooms late. Originated in Okayama Prefecture, Japan. Named and released by Nobuo Sasai in 1976.

Wasingtoniana. Trillon, 1843, Catalogue, p.9. Orthographic error for **Washingtonii.**

Wasingtonii. Verschaffelt Catalogue, 1846, p.60. Orthographic error for **Washingtonii.**

Wassella. *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue.* No description. Originated in USA.

Wassingtoniana. Fratelli Rovelli Catalogue, 1852, p.28. Orthographic error for **Washingtonii.**

Wata-bôshi. (Cotton Hat), *(C.japonica), Japan Camellia* 101, May 2014, p.5 with colour photo, JCR Regn No.2014-7, (ser No.20) Parentage unknown, a third generation seedling of **Yuri-kamome.** White single with cupped petals, small, 4.8 – 5.6 cm diameter. Large columnar cluster of stamens. Blooming early to late, first bloomed in 2009. Originated by Ichiro Kanatsuki.

Wataridori. (Migratory Bird), *(C.japonica),* Mizuno, Katsuhiko, 1981, *Kyô no Tsubaki to Tera*, p.107, illustration: Medium size to small, white, cup-shaped single with broad, rounded petals with irregular edges and short, compact stamens cluster. Leaves dull dark green, oval, apex acute, margins shallowly, obscurely serrate. Originated in Kyôto, Japan.

Watashimori. (Ferryman), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.503: A semi-double white with some red streaks, petals overlapping. Stamens divided. Iwasaki, 1828, *Honzô Zufu:* Double, white with pink streaks. See: JCS, 1981, *Tsubaki*, No.20, p.109; Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.165. Originated in Japan. (Believed extinct.)

Watashimori. (Ferryman), *(C.japonica),* Itô, Jukyû, 1739, *Honzô Hanamaki'e:* Single, cherry pink with red streaks and spots, convex corolla. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* describes it as: White with red spots, convex corolla. See: JCS, 1983, *Tsubaki*, No.22, p.118; ibid, 1982, No.21, p.101. Originated in Japan. (Believed extinct.)

Wataya. (Cotton Hawker), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Single, clear white, erect centre petals, convex corolla. Described as a synonym for **Koshimino** but this cannot be confirmed. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.78. Originated in Japan. (Believed extinct.)

Watayajiro. Stone, 1983, SCCS., *The Camellia Review*, vol. 45, No.2, p.21. Different reading for **Watayashiro.**

Watayashiro. (White Wataya), (Higo), Uekiya Bunsuke, 1830, *Uekiya Bunsuke Hikki:* Medium size, white, single, Higo. Originated in Kumamoto Prefecture, Japan. (Believed extinct.) Different reading: 'Watayajiro'. See: Hiratsuka, 1964, *Higo Camellia*, p.123.

Water Lily. Vanderbilt, 1940, *Camellia Research*, p.7. Synonym for **Cameo Pink.**

Water Lily. The Sunningdale Nurseries Catalogue, 1858, p.7. Used as an invalid synonym for **Gauntlettii.**

Water Lily. *(C.x williamsii),* Anderson's Camellias Nursery Catalogue, 1967, p.10; Colour is Tyrian rose with porcelain rose cast and flowers through the season. *New Zealand Camellia Bulletin*, 1967, vol.V, No.2, p.9, Reg. No.32: A hand pollinated hybrid of *C.saluenensis x C.japonica* **K.Sawada;** originated by Felix M. Jury, Waitara, New Zealand. The plant has an upright, compact habit with dark green leaves, 6.5 cm long x 4 cm wide. The flower is a formal double with about 50 petals and measures 11 cm across x 5 cm deep and its colour is Tyrian rose (RHS.CC.24/2) with Porcelain rose (RHS.CC.620/2) cast. Blooms from early to late Orthographic variant: 'Waterlily'. See colour photo p.189, Macoboy, 1981, *The Colour Dictionary of Camellias.* Chinese synonyms: 'Shuixian' & 'Shuixian Cha'. Received the RHS. H.C.C., 21 April, 1987.

Waterii. van Houtte Catalogue, 1873-1874, 150-y:39. Orthographic error for **Walteri.**

Waterlily. Duncan & Davies Nursery Catalogue, 1979. Orthographic variant for **Water Lily.**

Waterloo. Kiyono Nursery Catalogue, 1940-1941, p.22. Synonym for **Etherington White**. Note: Kiyono listed **Etherington White** in his 1938-1939 catalogue as 'Ethlington White' and then revised the name to 'Waterloo' in his 1940-1941 Catalogue.

Watermelon Pink. Greenbrier Farm Catalogue, 1944. Abbreviation for 'Mutt's Watermelon Pink', later renamed **Slenderlee.**

Waters Eliza. *(C.japonica),* Feasts Nursery Catalogue, 1858, p.17. No description. Originated in USA. (Believed extinct.)

Watery Hibiscus. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.12 as synonym for **Shuifurong.**

Watônai. (Hero of Bunraka) *(C.japonica),* Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* Dark red with white spots, triple rows of petals, with piled up centre petaloids. See: JCS, 1969, *Tsubaki*, No.7, p.25; ibid, 1982, No.21, p.101. Originated in Japan. (Believed extinct.)

Watsoniana. *(C.japonica),* Courtois, 1833, *Magazin d'Horticulture*, 1(pt.D):317. No description. Berlèse, 1845, *Monographie*, ed.3, p.239 as 'Watzoniana': Leaves 8-9 cm long x 5-6 cm wide, ovate, apex acuminate, mid-green; buds average, scales yellowish; flowers 8-9 cm across, rose form double, flat cherry-red, veined blood-red; petals in 4-5 rows, rounded, not numerous, cup-shaped; those at the centre, small, long, close-packed, elevated, the form of the centre like **Sericea.** Orthographic errors: 'Watzonia', 'Watzoniana'. Synonym: 'Watsoniana Nova'.

Watsoniana Nova. Verschaffelt Catalogue, No.50, 1844, p.24. Synonym for **Watsoniana.**

Watter's Tomorrow. Gerbing Azalea Gardens, 1966, ACS., *The Camellia Journal*, vol.21, No.5, inside front cover. A virus infected, highly variegated form of **Tomorrow.** Synonym for **Tomorrow Variegated.**

Webb's White. *(C.japonica),* ACS, *The Camellia Journal*, June 2008, p.32 with colour photo, Regn No.2717; A chance seedling that first bloomed in 1985. Originated by Webb Hart, Slidell, La., USA, and propagated by John L.G. Grimm, Metairie, La. The 9-9.5 cm diameter flower is white with a yellowish centre. Described as a formal double with 45 petals and 64 petaloids. Flowers early. Upright, dense plant with average growth rate. *American Camellia Yearbook*, 2008, p.129; Dark green leaves 9-10 cm x 3.8 cm

Wedding Bells. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature*, pp.105-106: Shaded light and dark blush pink. Large, semi-double of bell form with heavy substance. Vigorous, pendulous growth. Mid-season blooming. Originated by Harvey Short, Ramona, California, USA.

Wedding Cake. *(C.japonica), American Camellia Yearbook*, 1981, p.106, Reg. No.1689: A large, soft pink, peony form *C.japonica* (**Mrs Bertha A. Harms** x **Fragrant Frill**), early to late blooming; originated by Jack L. Mandarich, Menlo Park, California, USA. Average flower size, 12.5 cm across x 6 cm deep with 16 petals, 130 petalolds and golden anthers. Some fragrance. Plant growth, upright and spreading. Leaves 10 cm long x 6 cm wide. Chinese synonym 'Xidan'gao'.

Wedding Pink. *(C.japonica),* Gambles Nursery Catalogue, 1948. The pink sport of 'Leda'. Originated in Leawood Gardens, near Adelaide, South Australia. Synonyms: 'Leda Rosea', 'Pink Leda'.

Wedding Ring. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature*, p.87: White. Medium to large, single with slender petaloids and a ring of golden stamens. Vigorous, upright growth. Blooms early to mid-season. Originated in USA by Harvey Short, Ramona, California.

Wee Wun. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature,* p.156: Red. Small, loose, peony form. Vigorous, upright growth. Originated in USA by Novick.

Weeks Hall. (*C.japonica*), Rubel Catalogue No.74, 1940-1941, p.25. No description. Originated in USA. (Believed extinct.)

Weelaunee. (*C.japonica*), SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Deep red. Medium large, semi-double. Originated in USA by Rosa, Florida.

Weeping Anna. (*C.japonica*), SCCS., 1954, *The Camellia Review,* vol.11, p.17. No description. Originated in USA.

Weeping Maiden. *(C.sasanqua).* Lattin, 1959, *American Camellia Yearbook,* p.22: Originated by Dr John D. Lawson, Camelliana Nursery, California, USA. A seedling of unknown parentage, a vigorous, rapid growing plant of pendulous habit with long, drooping branches. Foliage is dark green and above average size of sasanqua cultivars. The bloom is a single white, shading to blush pink margins, quite fragrant and reached about 8 cm across. *American Camellia Yearbook,* 1960, p.208, Reg. No.442.

Welbanhsiana. Ridolfi, Florence Catalogue, 1848, p.9. Orthographic error for **Welbankiana.**

Welbankiana. (*C.japonica*), Curtis, 1819, *Monograph on the Genus Camellia:* The new white Camellia japonica, called, by the Horticultural Society, **Welbankiana,** after Captain Welbank, who, as well as Captain Rawes, imported a plant in 1816 and both plants bloomed in 1819. Captain Welbank's at Mr Turners, Rook's Nest Park, Surrey, and Captain Rawes's at Mrs Palmer's Bromley. Loudon, 1825, *The Greenhouse Companion,* p.75 as 'Wellbank's Camellia': Double white. On p.74 this separately lists 'Luteo-alba' as 'Bassington's yellowish white'. This may be Seidel's 'Lutea Plena' or the plant brought in by Captain Rawes. Chandler & Booth, 1831, *Illustrations and Descriptions of Camellias,* pl.27 as 'Welbankii' (Captain Welbank's White C.): The flowers are of a yellowish white colour, 7.5-8.5 cm in diameter. They be said to rank between the the 'Double White' (**Alba Plena**) and the **Pompone**...The petals are not arranged in any sort of order, so that the flower has a confused appearance. The exterior petals are of a roundish form, from, 2.5-3.8 cm in diameter, much undulated, a little recurved or divided. The centre petals are irregularly shaped; sometimes they resemble **Pompone**, but are twisted and in tufts, with several parcels of imperfect stamina intermixed. In the Botanical Register (t.708) where it is figured under the name of 'Luteo-Albicans', it is stated to have been introduced by the late Mr Bassington, of Stoke Newington. Synonyms: 'Welbank's White', 'Welbank's White Flowered Japanese Camellia', 'Flavescens', 'White Peony Flowered', 'White Moutan Camellia', 'Luteo-Albicans', 'Heptangularis', 'Lutea Alba', 'Heptangulans Alba'.

Orthographic errors: 'Walbankiana', 'Welbanckiana', 'Welbanckii', 'Welbankii', 'Welbancksiana', 'Welbanksii', 'Wilbancksiana', 'Wellbankiana', 'Wellbankii', 'Wellbanksana', 'Wilbanksiana', 'Wilsbanksiana', 'Welbancksii', 'Wellbancksiana', 'Webank's White', 'Wellbankia', 'Walbankii', 'Welbanksiana', 'Welbanksiani', 'Vilbankiana', 'Wellbanckii', 'Wouelbackiana', 'Wouelbanckiana', 'Welbenkiana', 'Velbanksiana'. The description given in SCCS, *Camellia Nomenclature is* incorrect, the cultivar is creamy white and has no pink markings and is not an anemone form. In Burnett's *The Magazine of Botany and Gardening.*---vol.3, new ser., p.153, 1835 as 'Welbankii', 'Luto Albicans' is given as a synonym with reference to *The Botanical Register.* This indicates that **Welbankiana** may have been introduced as early as 1812.

Welbankiana (C.N.). *(C.japonica),* SCCS., 1949, *The Camellia. Its Culture and Nomenclature*, p.67, erroneously as 'Welbankiana': White, occasonally dashed pink and sporting to solid pink. Medium, large anemone form. Loose, spreading growth. Blooms mid-season to late. Sport: **Welbankiana Rosea**. Later issues state 'China to England (Wellbanks), 1820.' However this applies to the original **Welbankiana,** which is a different cultivar. The origin of this plant is unknown.

Wen Shan Shan Cha. Common Chinese name for *C.wenshanensis.*

Wenban Feiye Cha. (Formal, Thick Leaved Camellia), *(C.japonica),* Chang Shao Yun, 1987, *Camellias from Zhejiang*, p.90, colour photo, [p.121]: Medium large, strong red, formal double with 6-7 rows of 60-70 large, rounded, imbricated, concave petals. Leaves wide obovate, light green, apex blunt acute, obscurely serrate. Blooms mid-season to late. Originated in China.

Wenban Hongbinlang. (Formal Red Betel Nut), *(C.japonica),* Wang & Yu, 1989, *Camellias*, No.130, p.55, colour pl.[p.165]: erroneously as 'Wenban Hongbinlong': Deep red, formal double. Sport of **Wenban Huabinlang.** Originated in China.

Wenban Huabinlang. (Formal Variegated Betel Nut), *(C.japonica),* Wang & Yu, 1989, *Camellias*, No.129, p.55, colour pl.[p.164] erroneously as 'Wenban 'Huabinlong': Leaves dark green and glossy with 6-8 pairs of veins. Buds spherical, bracteoles with whitish hairs. Petals about 60 in 10 rows, opening row by row with a special bud centre. Flowers slightly purplish red with white patches. 8-9 cm in diameter. Sport: **Wenban Hongbinlang.** Originated in China. Has been mistaken for **Huabinlang.**

Wendi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.408; Chinese synonym for the USA *C.japonica* **Wendy.**

Wendi Brown King. *(C.japonica),* ACS, *The Camellia Journal*, Aug. 1997, p.16, Reg. No.2426. A medium size, pale blush pink, peony form chance seedling. Flowers early to mid-season. Originated by Alma Brown, Wilmington, N.C., USA. *American Camellia Yearbook*, 1997, p.8, colour photo before p.1. The 23 year old seedling first flowered in 1980. Average flower size is 10 cm across x 7.5 cm deep, with 33 petals, 25 petaloids, yellow anthers and yellow

filaments. Plant growth is upright, dense and slow, with light green leaves 11.5 cm long x 5 cm wide.

Wendy. *(C.japonica), American Camellia Yearbook,* 1976, p.164, Reg. No.1387: A 6 year old chance *C.japonica* seedling that first flowered 1974; originated by Paul Gilley, Grandridge, Florida, USA. Plant growth is upright, open and medium with dark green leaves averaging 8 cm x 5 cm. The semi-double, 'Donckelaeri' (**Masayoshi**) style flower, is dark red, variegated white, 14 petals, pink filaments and yellow anthers. Average size flower is 12.5 cm across x 5 cm deep. Blooms early to late. Chinese synonym 'Wendi'.

Wendy Gaye. *(C.japonica),* ACRS., 1970, *Camellia News,* No.40, p.26, Reg. No.120: Originated by E.R. Sebire, Wandin North, Victoria, Australia from seed supplied by the Huntington Gardens, California. First flowered 1968. The upright, open, vigorous plant produces flowers 11 cm across, incomplete double, bright red with white striped petaloids. Blooms mid-season. The bright green leaves are 8 cm x 5 cm, with acuminate apex and serrulate margin.

Wendzalea. (*C.azalea* hybrid). *American Camellia Yearbook,* 2009, p.35 with colour photo; 'Wendzalea, a Promising Camellia Hybrid', Mark Crawford;. A cross of **Wendy** x *C.azalea,* first flowered 2007. Originated by E. Hulyn Smith, Valdosta, Ga., USA. Pink semi-double with upstanding central tube of stamens.

Wenfude. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.408; Chinese synonym for the USA *C.japonica* **Winifred Womack.**

Wenxing. (Civil Star), *(C.reticulata).* China Regn No.36. *China Flowers & Horticulture,* July 2008, No.14, p.43 with colour photo; Selected from the wild forest in Tenchong County, Yunnan, China and named by Yin Minlun, Tengyue Town, Yunnan. Flowers peony form, bright red, 12-16 cm diameter. Petals 28-32, outer almost flat, inner dense and curved with some white spots. Stamens divided in 6-9 bundles among the petals. Pistil undeveloped. Leaves elliptic to elliptic-ovate, 6-12 cm long x 3.8-5.7 cm wide, apices acuminate, bases broad cuneate or obtuse. Leaf flat or slightly incurved, margins prominently serrated. Flowers early to mid-season.

Weroona. *(C.sasanqua),* ACRS., 1963, *Camellia News,* No.12, p.24, Reg.No.53: Originated by E.G. Waterhouse, Gordon, N.S.W., Australia. A seedling from an unidentified sasanqua that had been distributed under various synonyms as 'No-Mene', 'Special Pink' and 'Zerbia'. Flowers up to 10cm across, semi-double with occasional petaloids. Colour white, deeply stained rose with deeper rose on underside of petals. Orthographic error: 'Weerona'. See colour pl. front cover, ACRS, 1976, *Camellia News,* No.62.

White Adolphe Ausdusson. SCCS., 1958, *Camellia Nomenclature*, p.13. Synonym for **Adolphe Audusson Special**

White Anemone. Vanderbilt, 1941, *Camellia Research*, II, p.8. Synonym for **White Waratah (Dunlaps).**

White Anemone. Loudon, 1840, *Encyclopedia of Plants.* Synonym for **Anemoniflora Alba.**

White Anemone. *Camellias*, Y.C. Shen, 2009, p. 169 with colour photo; Synonym for **Shirokarako.**

White Anemone Flora Alba. Phelps, Jul.1934, "History of Camellias", *Garden Club of America, Bulletin*, ser.5,(7-12):55. Synonym for **Anemoniflora Alba.**

White Anemone-Flowered. Booth, 1830, *Transactions of the Horticultural Society of London*, 7:548. Synonym for **Anemoniflora Alba.**

White Anemone Mutabilis. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.240. Synonym for **Paeoniflora Alba.**

White Angel. SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.92. Synonym for **Laura Schafer.**

White Anita. *(C.japonica)*, Tammia Nursery Catalogue, 1958: White sport of **Anita.** Medium size. Originated in USA at Tammia Nurseries, Slidell, Louisiana.

White Ball. *(C.japonica)*, McIlhenny Catalogue, 1941, p.15: A compact, peony type blossom, outer two rows of petals irregular and standing out parallel to the base, inner petals whirled irregularly. Petals occasionally lined rose colour, a few inconspicuous stamens. Originated in USA at Jungle Gardens, Avery Island, Louisiana. Synonym: 'Early White Ball'.

White Bead. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.117. Synonym for **Shiratama.**

White Beauty. *(C.japonica)*, McIlhenny Catalogue, 1945-1946, p.13: A medium size, semi-double blossom; petals wide and flaring, longer than wide, deeply V'ed; pure white, stamens in the form of a compact crown, pale greenish yellow, tipped with wax yellow. Originated in Jungle Gardens, Avery Island, Louisiana.

White Bleichroeder. SCCS., 1946, *Camellias*, p.13. Synonym for **Haku-otome** as 'Otome White'.

White Bouquet. *(C.japonica)*, Nuccio's Nurseries Catalogue, 2007, p.15; White, medium to large semi-double. Vigorous, upright, somewhat loose growth. Flowers mid-season. Originated by Nuccio's Nurseries, Altadena, California, USA.

White Butterfly. *(C.sasanqua)*, Overlook Nursery Catalogue, 1939-1940, p.25: White, edged pink. Single centre petals give the appearance of white butterflies. Medium, compact, upright growth. Originated at Overlook Nursery, Crichton, Alabama, USA.

White Butterfly. *(C.japonica)*, *American Camellia Yearbook*, 1948, p.175: First bloomed 1939, upright in growth; foliage is small, serrate and dull green in colour. Slow grower. Flower semi-double, small, porcelain-white; petals waved with groups of stamens intermingled. Early blooming. Originated at Bradford's Wayside Nursery, Ocean Springs, Mississippi from a seedling of **Duchess of Sutherland** x **Tricolor White**. First flowered 1939. See *American Camellia Yearbook*, 1954, p.336, Reg. No.80.

White Buttons. *(C.japonica)*, SCCS., 1962, *Camellia Nomenclature*, p.106: White. Miniature formal double. Originated in USA by Domoto, California. Sport: **White Buttons Red.**

White Buttons Red. *(C.japonica)*, Robinson, 1967, *American Camellia Yearbook*, p39: The solid red sport of **White Buttons.** Originated in USA.

White by Gate. Ferey's Fine Flowers Catalogue, 1960. Abbreviation for **White by the Gate.**

White by the Gate. *(C.japonica)*, SCCS, 1956, *The Camellia. Its Culture and Nomenclature*, p.92: White. Medium size, formal double. Vigorous, upright growth. Blooms mid-season. Originated at Hyman's Nursery, Lafayette, Louisiana, USA. Abbreviation: 'White by Gate'.

White Camellia. Ikeda, 1976, *American Camellia Yearbook*, p.141. Translation for 'Baichahua', synonym for **Alba Plena.**

White Caps. *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue:* White, semi-double. SCCS, 1956, *The Camellia. Its Culture and Nomenclature*, p.92: White. Medium size, semi-double. Blooms midseason to late. Originated in USA by David Feathers, Lafayette, California.

White Cascade. *(C.japonica)*, *Camellias*, Y.C. Shen, 2009, p.66 with colour photo; White, tubular to trumpet shaped small single, cylindrical stamens. Flowers mid-season. Leaves narrowly

elliptic, small, waved. Branches weeping. A chance seedling of **Kegon** raised by Ikuo Nishihata, Japan, and released in 1980.

White Chandleri. Gerbings Azalea Gardens Catalogue, 1941-1942. Synonym for **Madge Miller.** The name was also invalidly used as a synonym for **Shiro Chan** by Domoto in 1954.

White Chandleri Elegans. Portland Camellia Nursery Camellia Catalogue, 1947-1948. Synonym for 'Chandleri White'. However **Shiro Chan** is in such universal use for this cultivar that it is let stand as the valid name.

White China. *(C.japonica)*, Maupoil & Figlio Catalogue, 1847. Large, white, informal double. Origin unknown.

White Christmas. *(C.japonica), American Camellia Yearbook*, 1948, p.167: Unknown parentage; originated by Clarence S. Hearn, USA. First flowered 1942. The complete double irregular flowers are 10-11 cm across, white, opening early to late. Plant growth is vigorous, erect and open.

White Chrysanthemum. Macoboy,, 1981, *The Colour Dictionary of Camellias*, p.117. Synonym for **Shiragiku.**

White Chrysanthemun Petal. Ikeda, 1976, *American Camellia Yearbook*, p. 144. Synonym for **Baijuban.**

White Cleopatra. *(C.sasanqua),* Nuccio's Nurseries Catalogue, 1979-1980: Medium size, white, semi-double sport of **Cleopatra.** Originated at Nuccio's Nurseries, Altadena, California, USA.

White Cloud. *(C.japonica)*, Fruitland Nursery Catalogue, 1946-1947, p.29: White. Large, semi-double, Blooms mid-season. Originated at Fruitland Nursery, Augusta, Alabama, USA. For illustration see: p.260, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III.

White Coppelia. Loder, 1982, *International Camellia Journal*, p.41. Syunonym for **Coppelia Alba.**

White Cornelian. Yü, 1950, RHS., *Camellia & Magnolia Conference Report,* index, p.130. Synonym for 'Baimanao', (**Damanao**).

White Crane. Magnolia Gardens and Nursery Catalogue, 1945-1946. Synonym for **Hakutsuru.**

White Crane. Valley Garden Supplies Catalogue, 1946-1947. Erroneously as a synonym for **Hakurakuten.**

White Crêpe. Yashiroda, 1950, *American Camellia Yearbook*, p.17. Synonym for **Shirochirimen.**

White Cross. SCCS., 1984, *Camellia Nomenclature*, p.133: White, medium size, semi-double. Orthographic variant for **Whitecross.**

White Czar. Chandler's Nursery Catalogue, 1935, p.35. Synonym for **Gauntlettii.**

White Daikagura. Fruitland Nursery Catalogue, 1946-1947. Synonym for **Conrad Hilton.** Also erroneously used for **Joshua E. Youtz.**

White Deb. *(C.japonica)*, Garner, 1967, *American Camellia Yearbook*, p.68: A chance seedling of Frank Maitland, San Fernando, California, USA. It is a chalk white version of **Debutante**, except slightly larger and earlier. It was reported as 'White Debutante' but is being registered as **White Deb.**

White Debutante. Pitkin, 1966, SCCS., *The Camellia Review.* Renamed **White Deb.**

White Delight. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.240: Snowy white. Originated in the USA.

White Dew. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.240. Synonym for **Shiratsuyu.**

White Dove. McIlhenny, 1937, *600 Varieties of Camellias*. Orthographic variant for 'White Doves', synonym for **Fuji-no-mine.**

White Doves. Coolidge Garden Catalogue, 1936. Synonym for **Fuji-no-mine.**

White Doves Benten. (*C.sasanqua*), Nuccio's Nurseries Catalogue, 1983-1984. A variegated foliage form of **Mine-no-yuki** as 'White Doves'. Very slow bushy growth. Originated in USA., at Nuccio's Nurseries, Altadena, California.

White Dragon. *(C.japonica)*, ACS., Feb.1987, *The Camellia Journal*, vol.42, No.1, p.17, Reg. No.2035: Very large, white, single, *C.japonica* seedling, (**Mrs Bertha A. Harms** x **Cherry Blossom**). Late flowering. Originated by Dr W.L. Ackerman, Maryland, USA. *American Camellia Yearbook*, 1987, p.86 with colour photo between pp.60, 61. The 8 year old seedling first bloomed 1983. Average size bloom, 13 cm across x 5 cm deep with 6 petals, dark yellow anthers and cream filaments. Plant growth is spreading, average and medium in rate with dark green, serrated leaves, 8 cm x 5.5 cm. Chinese synonym: 'Bailong'.

White Dream. (*C.japonica*), SCCS., 1976, *Camellia Nomenclature*, p.157: White. Full, peony form. Medium, upright growth. Blooms mid-season. Originated in USA by Hugh Shackelford, Albany, Georgia.

White Duchesse de Cases. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Orthographic error for **White Duchesse Decazes.**

White Duchesse Decazes. *(C.japonica)*, SCCS., 1947, *The Camellia. Its Culture and Nomenclature* as erroneously 'White Duchesse de Cases': - A white sport of **Duchesse Decazes,** originated at Coolidge Gardens, USA.

White Dyke. SCCS, *Bulletin*, 1949, vol.11, No.2, p.22. Don & Blanche Miller Camellia Nursery advert, 1950, SCCS, *Camellia Review*, vol.12, No.2, p.23. Abbreviation for 'White Daikagura', synonym for **Conrad Hilton.**

White Ear. (*C.japonica*), Jacob Makoy et Cie Catalogue, 1836, p.15. No description. Origin unknown. (Believed extinct.)

White Eighteen Scholars. Synonym for **Baishiba Xueshi.**

White Elegans. Fruitland Nursery Catalogue, 1943-1944, p.26, 29. A Plant Patent No.1300 was granted 7 Sept.1954 to Paul E. Shepp, Pasadena, originator. Renamed **Snow Chan.** Regarding the confusion surrounding the white sports in the **Elegans** group of cultivars, see discussion under **Shiro Chan.**

White Elf. (C.hybrid), Potomac Valley Camellia Society, *News Letter*, 1986. No description. ACS., 1987, *The Camellia Journal*, vol.42, No.1, p.17, Reg. No.2032: Miniature, white with flushed pink margins, single *C.x hybrid ([C.pitardii var pitardii x C.fraterna]* x *C.japonica* **Fragrant Star**). Originated by Dr W.L. Ackerman, Ashton, Maryland, USA. Blooms mid-season to late. *American Camellia Yearbook*, 1987, p.86 with colour photo between pp.60, 61. The 11 year old seedling first bloomed 1978. Average flower size, 3.8 cm across x 2 cm deep with 5 petals, yellow anthers and creamy filaments. Very floriferous. Light, musky fagrance. Plant growth is upright, dense and slow in rate with dark green leaves, 4 cm long x 2 cm wide.

White Empress. (*C.japonica*), Vanderbilt, 1943, *Camellia Digest*, 1(3), No description. Fendig, 1949, *American Camellia Catalogue:* Large semi-double, 12.5-15 cm across. Mass of yellow stamens gives this pure white a yellow glow. Leaves large, dark green, tapered ends, shallow serrations, 10 cm x 5 cm. Habit vigorous, compact, upright. Free flowering, spreading branches. Originated from seed imported from Japan by K. Sawada, Mobile, Alabama. First

bloomed 1939. For colour photo see, p.125, Macoboy, 1981, *The Colour Dictionary of Camellias.* Chinese synonym 'Baihuanghou'.

White Enchantment. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.240. No description. Originated in USA. No valid listing located.

White Fairy. (*C.japonica*), SCCS., 1958, *Camellia Nomenclature,* p.87: White, medium size, semi-double. Originated by Mark Cannon, Dothan, Alabama, USA.

White Finlandia. Fruitland Nursery Catalogue, 1944-1945, p.27. Synonym for **Finlandia.**

White Flora. RHS., 1950, *Camellia and Magnolia Conference Report,* index, p.130. Synonym for **Flora.** The white was probably added to distinguish the original clone of **Flora** from its pink mutation.

White Fluffy Pearl. Savige, 1983, *International Camellia Journal,* No.15, p.47: Synonym for **Baimianzhu.**

White Foam. (*C.japonica*), Griffin ed., 1958, *Camellian,* 9:19: White. Large, semi-double with loose petals. Upright growth. Mid-season blooming. Originated in USA.

White Foreign Camellia. Ikeda, 1976, *American Camellia Yearbook,* p.144: Translation for 'Baiyang Cha'; synonym for **Alba Plena.**

White Formal. (*C.japonica*), Mark S. Cannon Scion Catalogue, 1962, p.11. No description. Originated in USA. No valid listing located.

White Frills. (*C.sasanqua*), SCCS., 1958, *Camellia Nomenclature,* p.96: Coolidge Gardens Wholesale Price List, 1958-1959, p.7: White. Large peony form. Originated in USA. Chinese synonym: 'Baizhebian'

White Gem. (*C.japonica*), Funchess, 1951, *American Camellia Yearbook,* p.16. No description. Originated in USA by Sawada, Overlook Nurseries, Mobile Alabama.

White Giant. (*C.japonica*), Vanderbilt, 1943, *Camellia Digest,* 1(3). No description. Magnolia Gardens and Catalogue, 1944-1945: Very large, white flower resembling 'Lotus' (**Gauntlettii**), but blooms more freely. Flowers mid-season. Leaves very large, dark shiny green. Originated in USA by K. Sawada, Mobile, Alabama from seed imported from Japan, first flowered 1939. For illustration see: p.360, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I. Sport: **White Giant Variegated.**

White Giant Variegated. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.240: White and pink sport of **White Giant.** Originated in USA.

White Glory. (*C.sasanqua*), Anonymous, 1948, *American Camellia Yearbook,* p.171: Colour pure white, 7 petals, ruffled. Stamen cluster, 2.5 cm across. Growth habit upright with dark green foliage, 4-5 cm long x 2-3 cm wide. Originated in USA by the Fruitland Nurseries, Augusta, Georgia.

White Goddess of Mercy. Savige, 1983, *International Camellia Journal,* No.15, p.47. Synonym for **Guanyinbai.**

White Gold. (*C.japonica*), ACS., 1956, *Quarterly,* 4:13: White with golden line. Medium sized, anemone form. Blooms mid-season to late. Originated in USA by Baker.

White Guilfoylei. (*C.japonica*), Abbott's Nursery Catalogue, 1892-1893, p.11. No description. Originated in Australia. (Believed extinct.)

White Hawaii. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.410. No description. Chinese synonym 'Bai Xiaweiyi'.

White Heather. *(C.japonica),* Hazlewood & Jessep, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.240. No description. Originated in USA. No valid listing located.

White Hawk. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.137. Synonym for **Hakutaka.**

White Herme. Fruitland Nursery Catalogue, 1942-1943, p.27. Synonym for **Colonial Lady**. Also used erroneously by Sea Island Nursery and others as a synonym for **Finlandia.**

White Hexagon. Yang, 1965, *Camellia Cultivars of Taiwan.* Synonym for **Bailiujiao.**

White Hexagonal. *Encyclopedia of Camellias in Colour*, vol.II, pl.156. Synonym for **Bailiujiao** as 'Baluga'.

White Hibiscus. *(C.japonica)*, Vanderbilt, 1943, *Camellia Digest*, 1(3). No description. SCCS, 1947, *The Camellia. Its Culture and Nomenclature:* White. Large, single to semi-double. Medium, upright growth. Early to mid-season blooming. Originated in the USA by the Overlook Nurseries, Mobile, Alabama.

White High Hat. *American Camellia Yearbook*, 1955, p.341, Reg. No.247 as a white sport of **High Hat,** originated by K. Sawada, Mobile, Alabama. However in the same yearbook on p.32 is the another report of a white sport of **High Hat** named **Conrad Hilton** and this is accepted as the prior name. Fruitland Nurseries in 1946 listed the same white sport as 'White Daikagura'.

White Hikarugenji. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.240. Synonym for **Egret.**

White Hope. *(C.japonica)*, Magnolia Gardens and Nursery Catalogue, 1943: Cream white. Large, formal double to peony form. Originated in USA at Magnolia Gardens, John's Island, South Carolina.

White Il Tramonto. Coolidge Camellia Gardens Camellia Catalogue, 1951. Synonym for **Pax.**

White Jade Cup. Ikeda, 1978, *American Camellia Yearbook*, p.141. Translation of 'Baijupei', synonym for **Alba Plena.**

White Jap. Fruitland Nursery Catalogue, 1950-1951, p.32. Abbreviation for 'White Japanese', synonym for **Shiragiku.**

White Japanese. Vanderbilt, 1941, *Camellia Research*, II, p.8. Synonym for **Shiragiku** as 'Purity'. Abbreviation: 'White Jap.'.

White Jewel. SCCS., 1958, *Camellia Nomenclature*, p.49. Synonym for **Shiratama.**

White Jewel. *(C.japonica)*, ACS, Aug. 1996, *The Camellia Journal*, vol.51, No.2, p.31, Reg. No.2377. A miniature, white formal double seedling of **Eyes of March**, pollen parent unknown. Late flowering. Originated by E. Ray Bond, Dallas, Tex., USA. *American Camellia Yearbook*, 1996, p.5, colour photo before p.1. The 15 year old seedling first flowered in 1985. Average flower size is 4.5 cm across x 1.2 cm deep with 60 petals. Plant growth is upright, open and vigorous, with light green leaves 9.5 cm long x 4.5 cm wide.

White Jordan. SCCS., 1946, *Camellias*, p.13. Abbreviation for 'White Jordan's Pride', synonym for **Colonial Lady.**

White Jordan's Pride. Valley Garden Supplies Catalogue, 1946-1947. Synonym for **Colonial Lady.**

White Kagura. Chûgai Nursery Catalogue, 1935. Synonym for **Shiro-daikagura**.

White King. *(C.japonica)*, Vanderbilt, 1943, *Camellia Digest*, 1(3). No description. SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* White. Large semi-double with large, thick petals and upright growth. Originated by the Overlook Nurseries, Mobile, Alabama. USA.

Mid-season blooming. See illustration, p.339, Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II.

White Knight. *(C.japonica)*, Magnolia Gardens and Nursery Catalogue, 1944-1945: White, open peony form. Originated as a chance seedling at Magnolia Gardens, John's Island, South Carolina, USA.

White Knight. *(C.japonica)*, *American Camellia Yearbook*, 1954, p.337, Reg. No.164: A 7 year old chance seedling, originated at Knight's Nursery, Gainesville, Florida, USA that first flowered 1952. Leaves 8-10 cm long x 5-7 cm wide, elongate-ovate, margins slightly undulate, medium to heavy serrations, dark green. Flowers complete double, incompletely imbricated with 75-85 petals in 13 rows, 7.5 cm across x 3.9 cm deep, colour white, early blooming.

White Lady. *(C.japonica)*, Try, 1962, *Rhododendron & Camellia Yearbook*, No.16, p.130. A variety in the exhibition of Hawkin's Bros. No description. Originated in England. No valid listing found.

White Lady Vansittart. Royal Botanic Gardens, Kew, 1973 Catalogue. Orthographic variant for **Lady Vansittart White.**

White Laurel Leaf. Valley Garden Supply Catalogue, 1946-1947. Synonym for **Pax.**

White Lightning. *(C.x williamsii)*, SCCS., 1990, *Camellia Nomenclature* p.155: White with faint blush pink on back of petals, medium to large size, formal double. Bushy growth. Blooms early to late. A seedling of *C.saluenensis* x *C.japonica* **Hallelujah**. Originated in USA by Piet & Gaeta, California.

White Lily. *(C.japonica)*, Outteridge, 1962, *1000 Named Camellias in Australia*, p.17: White, Semi-double, medium size, mid-season blooming. Originated in Australia.

White Lookaway. Cannon, Mark, Scion Catalogue, 1963-1964, p.15. Synonym for **Colonial Lady.**

White Lucinda. *(C.sasanqua).* Camellia Grove Catalogue, 1994, p.19: Semi-double with loose cushion of petaloids above central stamens. White with faint pink blush. Blooms long lasting. Early flowering. Originated in Australia.

White Magnoliiflora. Portland Nursery Price List, 1942 as 'White Magnoliaflora'. Synonym for **Yobikodori.**

White Maiden. Vanderbilt, 1941, *Camellia Research*, II, p.8. Synonym for **Shiro-otome.**

White Masterpiece. Pioneer Camellia News, 1984. Synonym for **Masterpiece.**

White Matsukasa. Longview Nursery Catalogue, 1955. Synonym for **Kagiri.**

White May. *(C.japonica)*, Mount Congreve Garden Catalogue, 1967-1968, p.l: White single form camellia. Originated in England.

White Melbourne. Fendig, 1953, *American Camellia Catalogue.* Orthographic variant for **Melbourne White.**

White Mermaid. *(C.japonica)*, Camellia Forest Nursery Catalogue, 2008, p.20; A sport of **Kingyo-tsubaki** (known in America as 'Mermaid'). Medium size, white, single flowers. Most leaves narrow down, then flare out to three points, giving a "fishtail" appearance.

White Miniature. *(C.japonica)*, Le Texnier, 1911, *Le camellia, essais sur l'histoire de quelques fleurs d'ornement* as 'White Minature': Small, white double flowers 3-4 cm in diameter, introduced by E.G. Lowe, Nottingham, England in 1879.

White Monsieur d'Offoy. *(C.japonica)*, Hazlewood & Jessep. 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.241: White sport of **Monsieur d'Offoy.** Originated in USA.

White Moon Goddess. Synonym for **Baichang'e Cai.**

White Moutan. Booth, 1830, *Transactions of the London Horticultural Society*, 7:552-553. Synonym for **Welbankiana.**

White Nun. *(C.japonica)*, Dekker, 1959, *American Camellia Yearbook*, p.73: This is the unique name of one of McCaskill's chance seedlings of **Gauntlettii.** This mid-season bloomer is a very large semi-double with thick petals of the purest white. The vigorous, upright bush has large, rich green foliage. For illustration see: Macoboy, 1981, *The Colour Dictionary of Camellias*, p.126: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.151, p.73. Chinese synonym: 'Bainigu'.

White Opal. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.241. No description. Originated in USA. No valid listing located.

White Orchid. *(C.saluenensis x C.reticulata)*, Feathers, RHS., 1961, *The Rhododendron and Camellia Yearbook*, No.15, p.88-89, illust., p.34: A cross of *C.saluenensis x C.reticulata* 'Crimson Robe' (**Dataohong**) originated by David Feathers, Lafayette, California, USA. Orchid like blooms on a leggy plant; flowers of the palest orchid pink.

White Otome. Fruitland Nursery Catalogue, 1944-1945, p.27. Synonym for **Shiro-otome.**

White Paeony-Flowered. Curtis, 1919, *Monograph on the Genus Camellia.* Synonym for **Welbankiana.**

White Pagoda. Yang, 1965, *Camellia Varieties of Taiwan.* Synonym for **Alba Plena.**

White Pearl. *(C.japonica)*, Lindo Nursery Catalogue (ca.1945). Description not seen. Originated in USA. (Believed extinct.)

White Pearl. *(C.japonica)*, *American Camellia Yearbook*, 1975, p.242, Reg. No.1360: A 12 year old chance seedling japonica that first bloomed 1969; originated by Mrs L.S. Carswell, Waycross, Georgia, USA. Plant growth is average with dark green leaves, 7.5 cm long x 3.8 cm wide. The semi-double, **Frizzle White** type, bloom is white with yellow anthers and 22 petals. Average size, 11 cm across x 5 cm deep. Blooms mid-season. As Lindo's 'White Pearl' is not identifiable the name is let stand for this cultivar.

White Peony. Yang, 1965, *Camellia Varieties of Taiwan.* Synonym for **Baimudan.**

White Peony. *(C.japonica)*, SCCS., 1950, *The Camellia. Its Culture and Nomenclature*, p.67: White, Medium to large, full peony form. Vigorous, compact, upright growth. Blooms mid-season to late. Originated in USA by G.G. Gerbing, Florida. Synonym: 'Gerbing's White Peony'. Orthographic variant: 'White Paeony'. For illustration see: p.361, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I.

White Perfection. *(C.japonica)*, Rousseau, Angers Catalogue, 1842-1843, p.5 as 'With Perfection'; Verschaffelt Catalogue, 1847-1848, p.63. No description. Originated in England. (Believed extinct.)

White Perfection. *(C.japonica)*, McIlhenny Catalogue, 1940, p.5: Small, pure white, fully imbricated, similar in form to 'Pink Perfection' (**Otome**). Originated in USA by Jannock. For illustration see: p.363, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I, and in G.G. Gerbing, 1945, *Camellias*, p.229 as 'Alba Supreme'. Synonyms: 'Perfection Alba', 'Alba Supreme', 'Snow Queen', 'White Perfection III'.

White Perfection I. Vanderbilt, 1941, *Camellia Research*, II, p.8. Synonym for **Hakutsuru.**

White Perfection II. Vanderbilt, 1941, *Camellia Research*, II, p.8. Synonym for **Shiragiku** as 'Neige d'Or'.

White Perfection III. Vanderbilt, 1941, *Camellia Research*, II, p.8. Synonym for **White Perfection.**

White Pin Cushion. *(C.japonica)*, SCCS., 1958, *Camellia Nomenclature*, p.87: White. Medium size, semidouble with stamens standing out like pins in a pin cushion. Blooms mid-season. Originated in USA by Baker.

White Pine Cone. *(C.japonica)*, Vanderbilt, 1941, *Camellia Research*, II, p.8: By Overlook, USA. Seedling. Can also be listed as 'Matsukasa Alba'. Gerbing, 1943-1944, Azalea Gardens Catalogue: Originated at Overlook Nursery, this fine seedling with pure white flowers, petals standing apart, resembling a pine cone. Late flowering. Large roundish foliage, medium green. Growth vigorous and upright. Originated by K. Sawada, Overlook Nurseries, Critchton, Alabama from seed imported from Japan. First flowered 1933. This variety should not be confused with **Kagiri** or **Matsukasa**. Synonym: 'Matsukasa Alba'.

White Pom Pon. *(C.japonica)*, SCCS., 1954, *The Camellia. Its Culture and Nomenclature*, p.86 as 'White Pom Pom': White with cream white petaloids. Large, loose, semi-double to anemone form. Originated in USA.

White Pompone. Booth, 1830, *Transactions of the Horticultural Society of London*, 7:548. Synonym for **Paeoniiflora Alba.**

White Poplar Camellia. Ikeda, 1976, *American Camellia Yearbook*, p.141. Translation for 'Baiyangcha', synonym for **Alba Plena**.

White Poppy. Vanderbilt, 1940, *Camellia Research*, p.2 as synonym for 'Amabilis White', itself a synonym for **Kamo-honnami.**

White Porcelain. *(C.japonica)*, ACS, *The Camellia Journal*, Mar. 2007, p.29 with colour photo; Reg. No.2696. A chance seedling that first flowered in 2000. Originated by V.E. Howell, Lucedale, Miss., USA, and propagated by the Camellia Nursery, Lucedale. The 12.7 cm diameter, porcelain white, formal double flower has heavy petal texture, and 45 petals. Plant is upright and open with average growth rate. Flowers early to mid-season. *American Camellia Yearbook*, p.72 with colour photo; Flower depth is 5cm. Dark green leaves are 9 cm x 6.5 cm.

White Potato Chips. Clower, 1950, *American Camellia Yearbook*, p.119. Synonym for **Clower White.**

White Precious Pearl. Savige, 1985, *International Camellia Journal*. No.18, p.107. Synonym for **Baibaozhu.**

White Princess. *(C.japonica)*, SCCS., 1945, *Camellias*, p.14: White, semi-double. Mid-season. Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.258. Cream white. Large, peony form with satiny petal texture. Vigorous, upright growth. Blooms mid-season. Imported from Japan and named by the Jannock Nurseries, Altadena, California. Synonym: 'Lady of the Lourdes'. For illustration see: p.261, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III.

White Queen. *(C.japonica)*, Vanderbilt, 1943, *Camellia Digest*, 1(3). No description. Magnolia Gardens and Nursery Catalogue, 1945-1946: An Overlook seedling. White, very large, semi-double. Fendig, 1952, *American Camellia Catalogue:* Very large, white, semi-double, 10-15 cm across and petals pointed at the tips. Centre petals form a small, star-shaped cup-like container for stamens. Filaments light yellow, anthers darker yellow. Bud elliptic. Blooms mid-season. Leaves thin, curled and deeply serrate, medium green, broadly elliptic, 9.5 cm long x 5 cm wide. Slim prominent apex, tapering base, fine serrations. Habit upright and vigorous. A seedling originated by K. Sawada, Overlook Nursery, Crichton, Alabama, USA from seed imported from Japan. First flowered 1937. See illustration: p.364, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I.

White Queen. *(C.sasanqua),* Nuccio's Nurseries Catalogue, 1955, p.19: Large single white with showy stamens. Open, upright growth. SCCS., 1958, *Camellia Nomenclature*, p.96: Large single, white. For illustration see: p.345, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Originated in USA.

White Retic. *(C.reticulata x C.japonica),* Nuccio's Nurseries Catalogue, 1979: Large semi-double, white with blush pink reverse. Donnan, 1981, *American Camellia Yearbook*, p.83: This is a seedling originated by Hamilton Fish, Santa Cruz, California, USA and released by Nuccio's Nurseries in 1979. The bloom is a large semi-double with white petals, having a blush pink cast on the underside. Vigorous, open, upright growth. Blooms mid-season to late. Orthographic error: 'White Reticulata'. For colour pl. see p.165, Macoboy, 1981, *The Colour Dictionary of Camellias.*

White Reticulata. Utick, 1973, ACRS., *Camellia News*, No.51, p.25. Orthographic error for **White Retic.** Although White Reticulata' was published first, it has no standing as there was no description or other accompanying data.

White Ribbon. *(C.sasanqua),* A marketing name used for **Paradise Barbara** for a charitable campaign.

White Rose. *(C.japonica),* Coutts, J., 'Single Camellias', 1923, *Gardeners' Chronicle*, ser.3, 73:93: Medium size, white, cup-shaped single. Originated in England.

White Rosita. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.241: White, formal double. Originated in USA.

White Sasanqua. *(C.sasanqua),* Brodies Biloxi Nursery Catalogue, 1945. No description. Originated in USA.

White Satin. *(C.sasanqua),* Anonymous, 1948, *American Camellia Yearbook*, p.171: Colour white, slightly pink tipped in the bud (Outer small petals). Total of 7 petals, all indented like dogwood petals. Stamen cluster 2.5-3.2 cm in diameter. Flower size, 8-10 cm across. Growth habit upright and dense with leaves mid-green, serrate, 3.8-5 cm long x 2-2.5 cm wide. Blooms early. Originated in USA by Fruitland Nursery, Augusta, Georgia.

White Shell Flowered. James Burnett, ed., 1837, *The Magazine of Botany and Gardening...*, vol.3, new ser. p.153. Synonym for **Conchiflora Alba.**

White Silk Ball. Savige, 1986, *International Camellia Journal*, No.18, p.107. Synonym for **Baimianqiu.**

White Snow. Yang, 1965, *Camellia Varieties of Taiwan.* Translation for 'Baixue', synonym for **Fujino-mine.**

White Spiral. Anonymous, 1962, *New Zealand Camellia Bulletin*, vol.II, No.5, p.22 and facing pl. The camellia was later registered as **James Lockington**, Reg. No.25, *New Zealand Camellia Bulletin*, vol.IV, No.5, p.32, Mar.1966.

White Spotted Peacock. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.92. Synonym for **Hakuhan-kujaku.**

White Star. Funchess, 1951, *American Camellia Yearbook*, p.16. Synonym for **Candidisssima.**

White Star. *(C.japonica),* ACRS, *Camellia News*, 1995, No.135, p.11, Reg. No.446: Originated by Kenneth Brown, Mitcham, Victoria, Australia. A chance seedling of *C.japonica* **Hagoromo** ('Magnoliiflora'). First flowered 1989. White semi-double of 14 petals, 8 cm across x 6 cm deep. Flowers freely mid-season to late on a bushy, slow growing plant. Leaves olive green, glossy, ovate, curled, margins serrate, apices acuminate, 11.5 cm long x 6 cm wide. Petals stand apart. Filaments in central bunch. Flowers shed whole. Colour photo on p.2. Note:

There is no relationship between this camellia and 'White Star', the synonym of **Candidissima.**

White Stork. Fruitland Nursery Catalogue, 1946-1947, p.28. Synonym for **Hakutsuru.**

White Striped Crimson. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.1, p.18. Synonym for **Yudaihong.**

White-Striped Purple Gown. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.144. Synonym for **Zipao Yudai.**

White Superlative. *(C.japonica)*, SCCS., 1972, *Camellia Nomenclature*, p.149: White. Large, high centered, peony form. Vigorous, upright growth. Blooms mid-season, originated by Hugh Shackelford, Albany, Georgia, USA.

White Surprise. *(C.japonica), American Camellia Yearbook*, 1975, p.242, Reg. No.1362: A sport of 'LookAway', first observed 1960; originated by Dr & Mrs H.G. Mealing, USA. Plant growth is upright and medium with dark green leaves, 11 cm x 6 cm. The semi-double, 'Herme' (**Hikarugenji**) style, flower is ivory white with yellow anthers and white filaments. Average size is 10 cm across x 5 cm deep. Heavy substance, thick petals and is a tetraploid. Blooms early to late.

White Swan. *(C.japonica)*, J. Coutts, Nov. 22nd 1930, *Gardeners' Chronicle*, p.424; Anonymous, 1939, *Gardeners' Chronicle*, ser.3, 106:302. Single, pure white, bright yellow stamens. There has been considerable confusion in the UK. with the single white camellias **Alba Simplex, Devonia, Yukimiguruma** and **White Swan.** Synonym: 'Alba Simplex White Swan'. W.J. Marchant Nursery Catalogue, 1937, p.34: Attractive form of good habit, furnished with medium sized, deep green, pointed leaves. The profusely born, 10-12 cm across flowers, milk white, usually consist of 7 fan-shaped petals. Each bloom has a few petaloid stamens. Slieve Donard Catalogue, 1942, p.6: Fine, semi-double, white. P.C. Norcutt Ltd. Book Catalogue, 1964, p.37: Single, white, large pure white, flower with bright boss of yellow stamens. Originated in UK.

White Swan (McIlhenny). *(C.japonica)*, McIlhenny Catalogue, 1945-1946, invalidly as 'White Swan': Small to medium sized white, peony form with central petals interspersed with a few stamens. Late flowering. Originated in USA.

White Tempo. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.241: No description. Originated in USA. No valid listing located.

White Teutonia. Lindo Nursery Price List, 1941-1942. Synonym for **Teutonia Alba.**

White Three Scholars. Synonym for **Baisan Xueshi.**

White Throat Betty. Mark S. Cannon Scion Catalogue, 1962, p.11. Synonym for **Betty Sheffield White Throat.**

White Throne. *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue:* White. Semi-double. Mid-season. SCCS, 1954, *The Camellia. Its Culture and Nomenclature*, p.87: White. Large semi-double with wide petals. Vigorous, upright growth. Originated by Harvey Short, Ramona, California, USA.

White Tipped Blush Pink. *(C.sasanqua)*, McIlhenny, 1941, *700 Varieties of Camellias:* White single, tipped blush pink. Originated in Japan.

White Tipped Flesh. *(C.sasanqua)*, McIlhenny, 1941, *700 Varieties of Camellias:* White single with flesh pink tips. Originated in Japan.

White Tipped Pink. *(C.sasanqua)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.242: White petals, tipped with pink, single. Originated in USA.

White Tomorrow. Cannon, 1967, ACS., *The Camellia Journal*, vol.22, No.4, p.26. Synonym for **Tomorrow's Tropic Dawn.**

White Tricolor. Overlook Nursery Catalogue, 1939-1940, p.21. Orthographic variant for **Tricolor White.**

White Tricolor Sieboldi. Fruitland Nursery Catalogue, 1940-1941. Synonym for **Tricolor White**, erroneously as 'Leucantha'.

White Tulip. *(C.japonica)*, Waterhouse, 1952, *Camellia Trail*, p.21 and pl.II: Originated by Cheeseman's Nursery, Victoria. A single white with creamy yellow stamens and golden anthers, having 7 petals, the three inner semi-erect, forming an open, urn-shape. The plant has an open spreading habit. See colour pl. ACRS, front cover, 1976, *Camellia News*, No.62.

White Vansittart. *(C.japonica), List of Camellias at Kew*, 1956: Predominantly white form of **Lady Vansittart** from the Caledonia Nursery, Guernsey, The Channel Isles. Orthographic variant: 'Lady Vansittart White'.

White Velvet. *(C.japonica), American Camellia Yearbook*, 1960, p.208, Reg. No.480: A 4 year old chance seedling that first flowered 1959; originated by Julington Nurseries Inc., Jacksonville, Florida, USA. The dark green leaves, 8 cm long x 5 cm wide. The rose form double, white flowers are 11cm across x 5 cm deep with 40-50 petals. The velvet textured petals are waved and overlaid in alternative rows, giving a tiered effect. Blooms mid-season.

White Virgin. Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I, p.270. Synonym for **Shiro-otome.**

White Wabisuke. *Camellias*, Y.C. Shen, 2009, p.219 with colour photo; Translation of the valid name **Shiro-wabisuke.**

White Wakanoura. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.38. Synonym for **Tricolor White.**

White Warata. Seidel, 1847, *Pflanzen Catalog*, p.12. Orthographic error for 'White Waratah', synonym for **Anemoniflora Alba.**

White Waratah. Loudon, 1838, *Arboretum et Fruticetum Britannicum*, p.387. Synonym for **Anemoniflora Alba.**

White Waratah (Dunlaps). *(C.japonica)*, Dunlap, 1840, *Magazine of Horticulture*, 6:23 as 'White Warratah': Flower full and as compact as **Anemoniflora,** rendering it quite distinct from the 'White Warratah' (**Anemoniflora Alba**) and **Welbankiana.** A seedling of 'Waratah' (**Anemoniflora**) fertilized by 'Pomponia' (**Pompone**). Originated in USA by T. Dunlap.

White Warratah. William Falla & Co., 1827-1828, Nursery Catalogue, p.50. William Prince, 1828, *A Short Treatise on Horticulture*, p.168. Orthographic variant for 'White Waratah', synonym for **Anemoniflora Alba.**

White Wings. *(C.japonica), American Camellia Yearbook*, 1967, p.234, Reg. No.940: A putative sport of **Mrs Charles Simons,** first observed 1948 and commercially introduced 1963. Plant growth is spreading and open with light green leaves, 10 cm x 5 cm. The semi-double flower is 12.5 cm across x 7.5 cm deep. Colour is white with yellow stamens. Wide, wavy petals, some upright. Blooms mid-season.

White Wish. *(C.japonica x C.granthamiana)*, SCCS., 1986, *The Camellia Review*, vol.48, No.2, p.7, No.14: A cross of *C.japonica* **Silver Chalice** x irradiated *C.granthamiana.* A large, white, semi-double, 15 cm across. Originated in USA.

White Wonder. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.241. No description. Originated in USA. No valid listing located.

White Yoibijin. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.241. Synonym for **Kamo-honnami.**

Whitecross. *(C.sasanqua)*, ACRS., 1980, *Camellia News*, No.75, p.24, Reg. No.241: Originated by Alice Spragg, Sutherland, N.S.W., Australia. A chance seedling that first flowered 1970. The open, upright plant has small, light green leaves, 4.5 cm long x 2 cm wide. The 7 cm across, semi-double, white flowers are given a yellowish colour from the bright yellow stamens. Blooms early to late. Orthographic variant: 'White Cross'.

Whitehead's Pride. *(C.japonica)*, SCCS., 1954, *The Camellia. Its Culture and Nomenclature*, p.87. Originated by Mrs R.B. Whitehead, Valdosta Georgia. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.241: Rich pink, semi-double. Originated in USA.

Whiteout. (*C.japonica* hybrid). *New Zealand Camellia Bulletin*, March 1999, Issue No.132, vol.XXI, No.1, p.17, Reg. No.410. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between *C.japonica* **Tama-ikari** and C.hybrid **Superscent.** Flowers are anemone form, 10 cm diameter x 5 cm deep, with about 30 petals and 50 petaloids mixed together, and broken into several chambers. Colour is white, and the flower has a very weak scent. The plant is spreading and open, of average growth rate, with dark green leaves 8 cm long x 5 cm wide. Flowers early to mid-season.

Whithe Doves. Torsanlorenzo Catalogue, 1984-1985. Orthographic error for 'White Doves', synonym for **Mine-no-yuki.**

Whithinii. Baumann, Mulhouse, Catalogue, 1841-1842, p.15. Synonym for **Bedfordiae.**

Whithonia. Burdin, Chambery Nursery Catalogue, 1834, p.19. Orthographic error for **Wiltoniae**

Whitney Gaeta. *(C.japonica)*, SCCS., 1990, *Camellia Nomenclature*, p.112: Light pink deepening to coral pink at margins; small to medium size, formal double. Compact, upright growth. Blooms early to mid-season. Originated in USA by Piet & Gaeta, California.

Whittums. Camellia Grove Nursery Catalogue, 1944. Synonym for **Virginia Franco**.

Whoopee. *(C.japonica), American Camellia Yearbook*, 2000, p.8, colour photo p.c15. The veined red with white margins, semi-double flower is cup-shaped. Some solid red flowers are also produced. A 20 year old chance seedling which first flowered in 1990. Flowers early to mid-season. Originated by Frank A. Wilson, III, Leslie, Ga., USA. Flowers are 7.5 cm across x 6.5 cm deep, with 16 petals. Plant growth is upright and average, with dark green leaves 9 cm long x 3.8 cm wide.

Wicke. *(C.japonica)*, SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Pink, white and red and variegated flowers on the same plant. Medium sized semi-double with large foliage. Blooms mid-season. Originated in USA by Mr. Wicke, Portland, Oregon.

Widdle Wun. *(C.japonica)*, SCCS., 1976, *Camellia Nomenclature*, p.158: Rose pink. Anemone form miniature. Medium, upright growth. Blooms mid-season. Originated in USA by Harry Novik, Woodland Hills, California.

Wide Awake. *(C.japonica), New Zealand Camellia Bulletin*, 1970, Vol.VI, No.7. p.32, Reg. No.48: A chance seedling from *C.japonica* 'Charles Goodson'; originated by B.J. Rayner, Stratford, New Zealand and first flowered 1967. The plant is upright, dense and rapid. The foliage is dark green, 7.5 cm long x 4 cm wide. The flower is bright red, single with 8 petals, crimped and lying flat with a large centre of distinctive stamens. Chinese synonym: 'Qingxing'.

Wiemeriana Serai. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.241. Orthographic error for 'Wiemeriana Serni'.

Wiemeriana Serni. Harrison ed., 1838. *The Floricultural Cabinet*, p.149. Orthographic error for 'Wiemariana Serni', synonym for 'Wiemarii'.

Wihlbrahamii. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.15. Orthographic error for **Wilbrahamia.**

Wilamina. *(C.japonica)*, SCCS., 1951. *The Camellia. Its Culture and Nomenclature:* Clear, soft pink with darker pink edge and white tipped centre. Medium size, formal double with incurved petals. Medium, compact growth. Originated in USA by C.A. Pederson, Downey. California, USA. Orthographic error: 'Wilemina'. Colour photo: p.18, *New Zealand Camellia Bulletin*, 1988, Vol.XV, No.7. Chinese synonym 'Weila'.

Wilbanksia. Seidel, 1846, Catalogue, p.11. Orthographic error for **Welbankiana.**

Wilbanksiana. Poiteau, 1835. *Revue Horticole.* Orthographic error for **Welbankiana.**

Wilber Foss. *(C.x williamsii)*, Movich. 1972, *American Camellia Yearbook*-, p.64 as 'Wilber W. Foss': A hybrid *C.saluenensis* x **Beau Harp;** originated by Les Jury. New Plymouth. New Zealand. The bloom is 11-12.5 cm across and is an intensely brilliant pink-red, full peony form. It blooms early to late on a vigorous, compact, upright plant. Reg. No.97, *New Zealand Camellia Bulletin*, 1975, vol.IX, No.1, p.28. Orthographic error: 'Wilbur Fosse'. See colour pl. cover; SCCS., *The Camellia Review*, vol.38. No.1, 1976. Chinese synonym 'Fusi'.

Wilbrahami. L.L. Liebig, 1839, *Verzeichnis von Warmen und Kalten Hauspflanzen…,* p.11. Orthographic error for **Wilbrahamia.**

Wilbrahamia. (*C.japonica*), Jacob Makoy et Cie Catalogue, 1833. No description. Courtois, 1833, *Magazin d'Horticulture.* 1(pt.D):317. No description. Berlèse, 1837, *Monographie*, ed.1, pp.64-65, 126 as 'Wilbrohamia': Leaves 7.5 cm long x 5 cm wide. elongate, almost flat, very serrate, deep green; bud oblong, scales green; flower 7.5 cm across. double, delicate rose; exterior petals not numerous, but well arranged, some spotted; those of the centre smaller, intermingled with abortive stamens; form like Fasciculata Nova. Originated in England. Synonym: 'Wilbrahamia Rosea'. Orthographic variants and errors: 'Wilbrahamii', 'Wilbrohamia', 'Wilbrahamiana', 'Wihlbrahmii', 'Willbonstriana', 'Wilbrohomia', 'Wihlbrahamii', 'Willbrohama', 'Witbrohamia', 'Wilbrahami'.

Wilbrahamia Rosea. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.14. Synonym for **Wilbrahamia.**

Wilbrahamiana. Anonymous, Jul. 1857, *Gardeners' Chronicle*, 3174:499. Orthographic variant for **Wilbrahamia.**

Wilbrahamii. van Houtte Catalogue. 1839, 19. Orthographic variant for **Wilbrahamia.**

Wilbrohamia. Anon, 1830, "Ueber die cultur der Kamellien" in *Der Blumen Gaertner*, p.54. Burdin Maggiore & Co. Catalogue. 1836, p.38. Orthographic error for **Wilbrahamia.**

Wilbrohoma. Berlèse, 1849, *Monographie*, ed.2, p.96. Orthographic error for **Wilbrahamia.**

Wilbur Fosse. Wall Cottage Nursery Catalogue, 1982. Orthographic.error for **Wilber Foss**.

Wilbur W. Foss. Movich. 1972. *American Camellia Yearbook*. p.64. The name selected and registered by the raiser was **Wilber Foss,** therefore 'Wilbur W. Foss' must be regarded as a synonym and an orthographic error.

Wild Form. This designation has been used to distinguish the single *C.reticulata* and *C.oleifera* grown from seed collected in the wild.

Wild Orange Blossom. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.93. Synonym for **Hanatachibana.**

Wild Rose. *(C.japonica)*, Coutts, J., 1930, *Gardeners' Chronicle*, ser. 3, 88:42. A single variety. No other description. Originated in England. (Believed extinct.)

Wild Rose. *(C.sasanqua)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.262: Pale pink, single. Originated in USA.

Wild Rose (Stevens). *(C.japonica)*, Stevens, 1959, *New Zealand Camellia Bulletin*, vol.1, No.3, p.21 invalidly as 'Wild Rose': A pale rose-pink single. Originated in Japan and imported to New Zealand and named by Wally Stevens.

Wild Silk. *(C.reticulata), New Zealand Camellia Bulletin*, 1966, vol.IV, No.5, p.32, Reg. No.27: A hand pollinated seedling of *C.reticulata* 'Wild Form' x 'Shot Silk', (**Dayinhong**); originated by Dr Jane Crisp, Tirau, New Zealand. The flowers are a loose peony form, 12-15 cm across with 12-14 petals and up to 20 rabbit eared petaloids. The colour is rose-pink (RHS.CC. China rose 024/1- /2) The habit of growth is well furnished and erect. Leaves are long and narrow, midgreen with characteristic reticulata veining.

Wild Turkey. *(C.japonica)*, Gentry, 1971, ACS., *The Camellia Journal*, vol.26, No.4, p.21. No description. Originated in USA. No valid listing located.

Wildenovia. *(C.japonica)*, Berlèse, 1840, *Monographie*, ed.2, p.198: Flower 8 cm across, double, orange-red veined cerise. The petals of the outer rows are wide, notched and imbricated, reflexed like a cup, those of the second row are smaller, thickly and irregularly disposed; after the latter there is a repeat of the large petals, irregular, notched and some upright, the others turned down, with the centre composed of a group of small, unequal petals. Originated in Germany. Orthographic error: 'Wildenowia'.

Wildenowia. Del Lungo e Girardi, 1928, *Le Camelie*, p.145. Orthographic error for **Wildenovia.**

Wilder. *(C.japonica)*, SCCS., 1960, *Camellia Nomenclature*, p.112: Light pink shading to cream white in the centre. Large formal double of flat form. Mid-season blooming. Originated in USA.

Wilderi. *(C.japonica)*, Breck, Jos., 1841, *The New England Farmer and Horticulturist Register*, 19:228: Leaves 3.8 cm across x 7.5 cm long, oval, acuminate, slightly dentated, a very fine green, with prominent midrib; petioles short. A shrub of free, upright, but rather slender growth; buds quite round, with apple green scales; flower medium size, 8-10 cm across. Colour delicate, clear rose; petals 75-80 in number, imbricated, of the most perfect rose-leaf shape, and arranged with exquisite regularity, from the circumference to the centre; corolla very round, free in its inflorescence, every flower expanding perfectly. The superiority of this variety, when compared with ... the old 'Double White', 'Lady Hume', **Imbricata** and others is its round petals with scarely a serrature or indentation on the edge. Raised from the seed of the single red camellia, fertilized by 'Punctata'. Verschaffelt, 1853, Nouvelle Iconographie, Book X, pl.IV. Originated by Marshal P. Wilder, Dorchester, Massachusetts. Synonyms: 'John Laing', 'Wilderi Rosea', 'Lady Campbell', 'Wilderi de Boston'. Orthographic errors: 'Wilderii', 'Wildery', 'Welderi', 'Wilde Rii'.

Wilderi-Alba. Guilfoyle Nursery Catalogue, 1881, p.92. Synonym for **Mrs Abby Wilder.**

Wilderi de Boston. Seidel, 1870, *Pflanzen Catalog*, p.12. Synonym for **Wilderi.**

Wilderi Rosea. van Houtte Catalogue, 1872-1873, 144-S:38. Synonym for **Wilderi.**

Wilde Rii. Halliday, 1880, *Camellia Culture*, p.103. Orthographic error for **Wilderi.**

Wilder's Alba. van Houtte Catalogue, 1862-1863, 93:70. Synonym for **Mrs Abby Wilder.**

Wilder's Rose. *(C.japonica)*, Jean Verschaffelt, 1864, Catalogue No.8, p.20 as 'Wilder's Rosea'. Verschaffelt Catalogue, 1867-1868, p.48. No description. It appears likely that this name was originally a synonym for Wilderi but it has become separated out in America as a different

cultivar. Gerbing Azalea Gardens Catalogue, 1938-1939: Full double, deep pink, 7.5cm across, profuse bloomer mid-seaon; tall, upright growth, dull green foliage. Rubel Catalogue No.76, 1937, p.3: Full double, deep rose-pink, with occasional white blotch. Flowers 6-7.5 cm across. Blooms early through mid-season. Synonyms: 'Mrs John Laing', 'Michael Feray', 'Rubel's No.10'. Orthographic variants: 'Wilder's Rosea', 'Wilderi Rosea'. For illustration see: p.365, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I.

William George Beavis. (*C.japonica*), ACRS., 1968, *Camellia News*, No.32, p.17, Reg. No.94: Originated by Mrs W.G. Beavis, Doncaster, Victoria, Australia, from a seedling from under **Spencer's Pink,** which first bloomed 1967. Compact habit with semi-double flowers, 10 cm across, soft rose-pink with yellow stamens. Blooms mid-season. Leaves medium green, deeply serrate, apex acuminate, 8 cm long x 4.5 cm wide. Orthographic error: 'William George Bevis'.

William George Bevis. SCCS, 1970, *Camellia Nomenclature*, p.145. Orthographic error for **William George Beavis.**

William H. Cutter. *(C.japonica)*, *American Camellia Yearbook*, 1955, p.341, Reg. No.231: A 7 year old chance seedling, originated by W.H. Cutter, Macon, Georgia, USA, that first flowered 1952. Plant growth is upright, compact and rapid. The leaves are glossy dark green; buds long, pointed and green. The rose coloured flowers, 12-13 cm across, are semi-double, similar to 'Donckelaeri' (**Masayoshi**), with 15 petals and some petaloids. Flowers mid-season. Orthographic error 'Willie Cutter'. Sport: **William H. Cutter Variegated.**

William H. Cutter Variegated. *(C.japonica)*, SCCS., 1960, *Camellia Nomenclature*, p.113 as 'William H. Cutter Var.': A virus variegated form of **William H. Cutter** - Rose colour blotched white. Originated in USA.

William Hertrich. *(C.reticulata)*, Womack, 1962, *American Camellia Yearbook*, p.3: Deep cherry-red. Very large semi-double with heavy irregular petals and large, reflexed outer petals, small, loosely arranged, upright, inner petals, folding and intermixing with stamens. Vigorous, bushy growth. Blooms mid-season. A seedling of **Damanao.** Received the 'Frank L Stormont Reticulata Award', 1963 and the RHS 'Award of Merit', 1981. For colour photo see: *American Camellia Yearbook*, 1962-1963, facing p.20 and Macoboy, 1981, *The Colour Dictionary of Camellias*, p.166.

William Honey. *(C.japonica)*, ANZCRS., 1955, *Camellia Annual*, No.2, p.5, Reg. No.2: Plant of unknown origin from the Melbourne Botanic Gardens, Victoria, Australia. Bushy, slightly pendulous habit. Flower incomplete double with large, upright petaloids, taller than the stamens which are in bunches amidst the petals. Diameter 8-10 cm. Colour white with carmine stripes, RHS.CC.21/1. Very prolific. Blooms early. Bears a carmine sport, **William Honey Rosea.** See colour photo: p.22, ACRS. 1977, *Camellia News*, p.66.

William Honey Rosea. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.242: Rose pink sport of **William Honey.** ACRS, *Camellia News*, Dec. 1975, p.32. Reg. No.176. Originated in Australia.

William Jackson. *(C.japonica)*, *American Camellia Yearbook*, 1973, p.195, Reg. No.1249: An 8 year old seedling of **Tiffany** that first flowered in 1968; originated by W.B. Jackson, Tyler, Texas, USA. Plant growth is rapid and upright with distinct, glossy green leaves, 11 cm x 6 cm. Flowers are very large, red with a fuchsia overlay, loose to full peony form, occasionally anemone and semi-double. Flowers early to late. See colour photos: Front cover, SCCS., *The Camellia Review*, vol.34, No.4, 1983 and ACS., 1972, *The Camellia Journal*, vol.27, No.3. Sport: **William Jackson Variegated.**

William Moultrie. *(C.japonica),* River View Nursery, 1957-1958, p.13. Description not seen. Originated in USA.

William Niblo. *(C.japonica),* Verschaffelt, 1860, *Nouvelle Iconographie*, Book XII, pl.I: Received this camellia from New York, USA, where it originated from seed. The foliage is small; the large flowers are a delicate pink, deeper towards the circumference where sometimes appears a few large longitudinal stripes. The petals are uniform, rounded, outspread and regularly imbricated; at the centre of each of them is a pale pink stripe.

William Noell. Belle Fontaine Nursery Catalogue, 1982. Abbreviation for **William C. Noell.**

William Parmentier. *(C.japonica),* Camellia Grown at Kew, List, 1956. No description. Originated in England.

William Paulk. *(C.japonica),* SCCS., 1990, *Camellia Nomenclature*, p.112: Red striped white, large size, semi-double. Vigorous, spreading, upright growth. Blooms mid-season. Originated by E. Paulk, Ocala, Florida, USA. ACS., Nov.1989, *The Camellia Journal*, vol.44, No.4, p.17, Reg. No.2183. *American Camellia Yearbook*, 1989, p.128, colour photo [p.136]: The 10 year old seedling first bloomed 1980. Average flower size 12 cm across x 5 cm deep, with 14 petals, 5-6 petaloids and yellow anthers and filaments. Dark green leaves, 8 cm x 4 cm.

William Paulk Lavender. *(C.japonica),* ACS, The Camellia Journal, Dec 2008, p.34 with colour photo, Regn No. 2738; A deep lavender sport of **William Paulk**. Found by Clarence and Lillian Gordy, Ocala, Fla., USA in 1991, and introduced in 2007 by Erinon Nursery, Plymouth, Fla., USA, and Loch Laurel Nursery, Valdosta, Ga., USA. Yellow anthers and pink filaments, other details as for **William Paulk.** Flowers mid-season to late. *American Camellia Yearbook*, 2008, p.128 with colour photo.

William Peen. Louis Leroy, 1863, Catalogue, p.124. Orthographic error for **William Penn.**

William Penn. *(C.japonica),* Buist, 1854, *American Flower Garden Directory*, 6:222: Originated by Dick. Dark reddish crimson; large bold petals, fully double; plant of free growth; foliage dark green. Apparently the variety became variegated as in 1859, Verschaffelt's *Nouvelle Iconographie*, Book XI, pl.I describes it as: "Last year this Camellia was sent to us from the USA. It soon blossomed in our glasshouse where the pure white vies with the most ruddy colouring, showing a double colouring arranged in an unusual way. The oval rounded, perfectly imbricated petals are arranged so that the rows of the circumference, imbricated and

serried, form with those of the centre, outspread in the form of a star." The modern variety is different again. Orthographic errors: 'William Gem', 'William Peen'.

William Penn. *(C.japonica)*, Gerbings Azalea Gardens Catalogue, 1940-1941: Medium size, peony form flowers (8 cm across), deep purple with large white markings. Deep green, heavily serrated foliage, tall willowy growth. Blooms mid-season. For illustration see, p.264 Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Synonyms: 'Purple Peony', 'Bell Camp', 'Serratifolia', 'William Penn Variegated', 'Purple Penny'. As the original cultivar appears lost to cultivation, the name is let stand for the modem cultivar. Sport: **William. Penn Red.**

William Penn Red. *(C.japonica)*, Vanterbilt, 1943, *Camellia Digest*, 1(2): The solid red form of the modern **William Penn.** Originated in USA.

William Penn Variegated. Vanderbilt, 1943, *Camellia Digest*, 1(2): Synonym for **William Penn.**

William R. Blanchard. *(C.japonica)*, Thomasville Nursery Catalogue, 1942, p.10 as 'Wm. R. Blanchard': Deep pink to light red; medium size; semi-double. Originated in USA by Thomasville Nursery, Thomasville, Georgia.

William Rosa. *(C.japonica)*, Fendig, 1950, *American Camellia Catalogue:* Large, salmon pink, semi-double, 10 cm across x 3.8 cm deep; petals wedge shaped, 3.8 cm long, reflexed and deeply notched, veined a darker pink. Stamens central with white filaments and yellow anthers. Leaves, medium to light green, lanceolate, 10 cm long x 3.8 cm wide, tapering acuminate, coarsely serrate. Originated as a seedling grown by Camellia Nurseries, Tallahassee, Florida from seed of **Reverend John Bennett.** Sport: **William Rosa Variegated.**

William Rosa Variegated. *(C.japonica)*, Fruitland Nursery Catalogue, 1951-1952. A virus variegated form of **William Rosa,** salmon pink smudged with white. Originated at the Camellia Nurseries, Tallahassee, Florida, USA.

William S. Hastie. *Country Life*, 1908. Synonym for **Julia Drayton,** invalidly as 'Mathotiana'.

William S. Hastie. Hume, 1931, *Azalea and Camellias*, p.33. Synonym erroneously for **C.M. Hovey.** Note: For a number of years the name 'William S Hastie' was applied indiscriminately for the cultivars of **C.M. Hovey** and **Julia Drayton** erroneously as 'Mathotiana', and accumulated a number of abbreviations and errors: 'William Hasting', 'Wm. S. Hastie', 'William S. Hastie', 'Wm. S. Hastie', 'William Hastie', 'W.S. Hastie'.

William S. Hastie (Mississippi). SCCS., 1960, *The Camellia, Its Culture and Nomenclature*, p.67 as 'William S. Hastie' (Miss.). Synonym for **C.M. Hovey.**

William Sellers. *(C.reticulata), American Camellia Yearbook*, 1976, p.164, Reg. No.1396: An 8 year old *C.reticulata* ('Tali Queen' x 'Chang's Temple'). Originated by W.E. Sellers, Mobile, Alabama, USA. Plant growth is spreading and slow with dark green leaves, 11 cm long x 6 cm wide. The semi-double bloom is deep crimson with 20 petals, white filaments and yellow anthers. Average size 14 cm across x 7 cm deep. Petals are large, interlocking and folded back. Mid-season blooming. Sport: **William Sellers Variegated.**

William Sellers Variegated. *(C.reticulata)*, Cannon, 1983, ACS., *The Camellia Journal*, vol.38, No.4 as 'William Sellers Var.': A virus variegated form of **William Sellers.** Deep crimson blotched white. Originated in USA.

William Spragg. *(C.japonica)*, ACRS., 1975, *Camellia News*, No.58A, p.10, Reg. No.173: Originated by Alice Spragg, Sutherland, N.S.W., Australia from a seedling of **Jean Lyne** x **Emperor of Russia Variegated** that first bloomed 1971. The semi-double 10-12 cm across flower varies from deep red to petals shaded white, but most blooms are deep red with white marbling and flecking. Dense, bushy, upright growth with strong green leaves, obovate lanceolate, apex

acute, margins obscurely serrate, 8-10.5 cm long x 4.7-5.8 cm wide. Blooms mid-season to late.

William T. Wood. *(C.japonica)*, Lindo Nursery Catalogue, 1942. Description not seen. Originated in USA.

William The Conqueror. van Houtte Catalogue, 1847-1848, 31:38. Synonym for **William the 1st.**

William the 1st. *(C.japonica)*, van Houtte Catalogue, 1842, 9:59: Richly shell-shaped; imbricated at the circumference, the other petals being numerous and peony form. Synonym: 'William the Conqueror'.

William the IVth. *(C.japonica)*, van Houtte Catalogue, 1839, 1:9 as 'William the IVth' (Cunningham's). No description. Oudin, Lisieux Nursery Catalogue, 1844, p. 13: Very large peony flower, circumference imbricated, very rich scarlet. Johnson, 1847, *Dictionary of Modern Gardening*, p.115 as 'William the 4th': Rose spotted with white. Originated in England by Cunningham. Orthographic variants: 'William IV', 'William the Fourth', 'William the 4th', 'William 4'. Orthographic error: 'Willyam the IV'.

William the 4th. Johnson, 1847, *Dictionary of Modern Gardening*, p.115. Orthographic variant for **William the IVth.**

Williamina Soper. *(C.japonica)*, ACRS., 1980. *Camellia News*, No.74, p.24, Reg. No.248: A chance seedling of 'Celtic Rosea'; originated by Oke's Garden Nursery, Bomaderry, N.S.W., Australia. The formal double flower is 9 cm across, pale pink with deeper pink stripes and incurved centre petals. Mid-season blooming. Leaves mid-green, 12.5 cm long x 5.5 cm wide. Chinese synonym 'Xuanzhuanbo'.

Williams. *(C.japonica)*, Gerbing Azalea Gardens Catalogue, 1941-1942: New camellia from Middleton Gardens. (Middleton No. 11). Semi-double, it is usually described as the darkest red, measuring 10-12.5 cm across with two rows of petals, veined with lighter shadings of red. Long-pointed, dark green foliage. Originated in USA.

William's Lavender. *(C.saluenensis)*, Fruitland Nursery Catalogue, 1946-1947, p.26: Lavender pink. Medium size single. Fendig, 1951, *American Camellia Catalogue:* Small to medium, lavenderpink, single about 7.5 cm across. There are 6 wedge-shaped petals, each about 4 cm long. Their rounded tips are slightly notched. There are many stamens contained in an upright cylinder. Leaves bright, glossy, medium green, oval, 6 cm x 3.8 cm with sharply pointed tips and finely serrate. Plant habit is upright, compact and hardy. Originated in USA by Fruitland. Nurseries, Augusta, Georgia from seed imported from England. First flowered 1942. While it was grown from seed of *C.saluenensis*, it appears to have some *C.japonica* in its makeup. Orthographic error: 'William Lavender'. See colour pl., Fendig, 1951, *American Camellia Catalogue.* Chinese synonym 'Weilian Zihua'.

William's Lavender Variegated. *(C.saluenensis)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.243: A virus variegated form of **William's Lavender**.

Dark red blotched with white. Originated in USA. Note: As with **William's Lavender**, probably is a hybrid x *japonica.*

Williams Middleton. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1944-1945: Dark red veined lighter red. Large semi-double. Vigorous, upright growth. Blooms mid-season to late. Originated in the USA at Middleton Place. Orthographic variant: 'William Middleton'. Sport: **Williams Middleton Variegated.**

William's Red. Vanderbilt, 1941, *Camellia Research,* II, p.8. Synonym for **Jarvis Red.**

Williamsianum. *(C.x williamsii),* Ard Dararch Shrub Nursery Catalogue, 1979: Small single, phlox pink. Originated in England.

Williamsii. According to *The International Code of Botanical Nomenclature* the hybrid name *C.x williamsii* applies to all crosses and back crosses involving *C.saluenensis* and *C.japonica.* It is invalid as a cultivar name.

Williamsii Alba. *(C.x williamsii),* SCCS., 1968, *Camellia Nomenclature,* p.162: White, medium sized single to semi-double with flared and twisted petals. Vigorous, compact bushy growth. Blooms early to mid-season. A seedling of **J.C. Williams;** originated by R. Carr, Tulare, California, USA. Note: According to the Horticultural Code this name is illegal as all cultivar names which include any botanical latin, that have been introduced after 1958 are invalid.

Williamsii Coppelia. Hillier & Sons Supplementary List, 1949, No.10, p.8. Synonym for Coppelia.

Williamsii Glendoick. *(C.x williamsii),* Glendoick Gardens Ltd Nursery Catalogue, 1965-1966, p.7: Another clone (not **J.C. Williams**) strong growth with much darker, cherry-red flowers. Originated in UK. Note: Name is invalid. See note under **Williamsii Alba.**

Williamsii Lanarth. *(C.x williamsii),* John Scott Nursery Catalogue, 1957-1958: Single, bell-shaped, pure pink flowers. Blooms mid-season. Originated in England.

Williamsii Semi-double. Ingwersen Nursery Catalogue, 1957-1958. Synonym for **Citation.**

Williamsii Special. *(C.x williamsii),* Tregrehan Camellia Nursery Catalogue, 1963: Semi-double. Soft pink, upright growth. Free flowering, 6-7.5 cm diameter blooms. Originated at Tregrehan, Par, Cornwall, England. Note: See under **Williamsii Alba.**

Williamsii Wisley Forms. Stonehurst Estate Nursery Catalogue, 1964-1964. A grex of small, pale pink single forms of *C.x williamsii* that originated in England at Wisley.

Willie Cutter. River View Nursery Catalogue, 1957-1958, p.13. Orthographic error for **William H. Cutter.**

Willie Hite. *(C.japonica), American Camellia Yearbook,* 1956, p.66, Reg. No.281: A 12 year old chance seedling that was originated by W.M. Hite, Marion, South Carolina, USA that first flowered 1946. Leaves average 9 cm x 5 cm, dark green, pronounced serration, prominent venation. Plant growth is dense and columnar. The blooms, similar to **Berenice Boddy** in form, are 9 cm across x 3.8 cm deep with 18-26 petals and 1-3 petaloids. Colour is light pink, shading to deeper pink at the edge of cordate petals. Central petals are crinkled with closely formed yellow stamens. Flowers from early through mid-season. Chinese synonym 'Haite'.

Willie Moore. *(C.japonica),* Wine, 1956, *American Camellia Yearbook,* pp.40, 41: A clear pink with dark pink wedges, semi-double. Blooms mid-season. Medium, compact growth. Originated at the Tick Tock Nursery, Thomasville, Georgia. Sport: **Willie Moore Variegated**.

Willie Moore Variegated. *(C.japonica),* Wine, 1956, *American Camellia Yearbook,* p.40. A virus variegated form of **Willie Moore.** Clear pink blotched white. Originated at the Tick Tock Nursery, Thomasville, Georgia.

Willie Slappey. *American Camellia Yearbook,* 1955. Synonym for **Sarah Frost.**

Willie Smith. *(C.japonica),* Fruitland Nursery Catalogue, 1946-1947, p.20: Rose-pink. Large, semi-double. Spreading growth. Blooms mid-season. Originated in USA by Harper.

Willie's Child. *(C.japonica),* Wine, 1956, *American Camellia Yearbook*, p.41: A seedling of **Willie Moore;** originated by Tick Tock Nursery, Thomasville, Georgia, USA. A large, incomplete double, bright rose-pink. Plant habit is upright, rapid and hardy. Sport: **Willie's Child Variegated.**

Willie's Child Variegated. *(C.japonica),* Wine, 1956, *American Camellia Yearbook*, p.41: A virus variegated form of **Willie's Child.** Bright rosepink blotched white. Originated at the Tick Tock Nursery, Thomasville, Georgia, USA.

Willis. Fendig, 1953, *American Camellia Catalogue.* Abbreviation for **Willis Smith.**

Willis Smith. *(C.japonica),* Fendig, 1951, *American Camellia Catalogue.* No description. Originated in USA. Abbreviation: 'Willis'.

Willmeta. *(C.japonica),* Hansen, 1950, *American Camellia Yearbook*, p.173, as 'Wilmetta': Apple blossom pink. Small single resembling apple blossom. Slow, open willowy growth. Orthographic errors: 'Willametta', 'Wilmetta'. It was named from the combination of the christian names of Will and Meta Jensen and it was a seedling they brought with them from Holland.

Willmetta. SCCS., 1956, *The Camellia. Its Culture and Nomenclature.* p.93. Orthographic error for **Willmeta.**

Willomena Summers. *(C.japonica),* Lindo Nursery Catalogue, 1942. Description not seen. Originated in USA. (Believed extinct.)

Willow Leaf. *(C.sasanqua),* Overlook Nursery Catalogue, 1942-1943, p.41: White, margined pink, single. Overlook Nursery Catalogue, 1951-1952, p.31: Leaves of this variety are very unusual. They are long and narrow, slightly crenate. Resembles the leaves of the willow. Flower single, with 6 petals, medium size, white, with faint pink margin. A compact, upright grower. Fendig, 1951, *American Camellia Catalogue* with colour pl.: Medium, white with margins of rose-pink, single, 7.5 cm across, There are 6 wedge-shaped petals, standing separate from each other, about 5 cm long with shallow notch on top. Central stamens are spreading and prominent, Bud opens poppy-fashion. Leaves dark, glossy green, long, narrow lanceolate, 5-7 cm long x 1.6 cm wide. Resembles a willow leaf. Tip sharp. Leaf bends upward from the midrib and downwards at both ends. The plant habit is vigorous, compact and densely foliated. Originated at Overlook Nurseries, Crichton, Alabama, USA from seed of unknown parentage.

Willow Leaf Osmathus. Ikeda, 1976, *American Camellia Catalogue,* p.138. Synonym for 'Liuye Daguiye', itself a synonym for **Xiguiye.**

Willow Leaf Pink. Yü, 1950, RHS., *Camellia and Magnolia Conference Report.* Synonym for **Liuye Yinhong.**

Willow Leaf Spinel Pink. Lammerts, 1950, *American Camellia Yearbook,* p.10. Synonym for **Liuye Yinhong.**

Willow Wand. NCCS., 1950, *Bulletin,* 10:6; SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* This is the approved Western synonym for **Liuye Yinhong.**

Will's Hybrid 324. *(C.x williamsii), New Zealand Camellia Bulletin*, 1976, vol.IX, No.5, p.11. Given as the name of the female parent of **Mona Jury.** It is a seedling of *C.saluenensis x C.japonica* **Daikagura**. Originated in New Zealand by Les Jury, New Plymouth.

Will's Hybrid 460. (C.x *williamsii)*, *New Zealand Camellia Bulletin*, 1976, vol.IX, No.5, p.11. Given as the name of the female parent of **Jury's Yellow.** It is a seedling of *C.saluenensis x C.japonica* **Edith Linton**. Originated by Les Jury, New Plymouth, New Zealand.

Will's Path. *(C.japonica),* Hayworth, 1987-1988, RHS., *Rhododendron with Magnolias and Camellias*, p.94: Entered by J.W. Graham in the single japonica class. A single pink, similar in size and shape to **Jupiter** and is an attractive pink with no trace of blue. Originated as chance seedling at Caerhays Castle, Cornwall, England, where it was found by a path, known as Will's Path, hence the name. (Ltr., J.W. Graham, 19-1-88).

Willtoniae. Courtois, 1833, *Magazin d'Horticulture*, p.313. Orthographic error for **Wiltoniae.**

Wilma Sheffield. *(C.japonica),* SCCS., 1964, *Camellia Nomenclature.* p.127: Dark cerise pink. Large semi-double with upright petals and occasionally intermingled petaloids and stamens. Medium, spreading growth. Blooms mid-season. Originated in USA by H.G. Sheffield, Silshee, Texas.

Wilma Stewart. (*C.japonica*), SCCS., 1981, *Camellia Nomenclature*, p.166: Brilliant pink blotched with white. Large semi-double. Medium, upright growth. Blooms early to mid-season. Originated in USA by W. Stewart, Savannah, Georgia.

Wilmetta. Hansen, 1950, *American Camellia Yearbook*, p.171. Orthographic error for **Willmeta.**

Wilmorana. *Catalogus Horto Aksakoviana Columter St. Petersberg,* 1850. Orthographic error for **Villemorgeana**.

Wil's Wonder. *(C.hybrid).* C.Aust., *Camellia News,* Autumn 2007, No.173, p.6, colour photo p.19, Reg. No. 570. Originated by Graeme Wilfred Atkins, Nunawading, Vic, Australia. A cross with *C.sasanqua* as the seed parent, pollinated with mixed pollen of *C.hybrid* **Spring Festival** and *C.fraterna.* First flowered in 2003. A semi-double, bright lavender pink (RHS.CC. 68A-73A) flat flower of 9-10 petals, 6 cm across x 1 cm deep. Flowers freely, midseason to late, on an upright slender plant of medium growth. Leaves mid-green, slightly curled, matt, 5 cm x 2.5 cm. Flowers shatter. Crepe-like texture with flared stamens.

Wilsbanksiana. Wilmot's 1943, *Camellia Variety Classification Report.* Orthographic error for **Welbankiana**.

Wilson. Los Angeles State and County Arboretum *Field Inventory*, 25th Feb. 1993, p.166. Abbreviation for **C.M. Wilson.**

Wilson's Red. (*C.japonica*), Camellia Grove Nursery Catalogue, 1944: Informal, peony form double, red. Originated in the garden of Mr. Wilson, Doncaster, Victoria, Australia. It also occurs in other old plantings and would appear to be an old unidentified cultivar.

Wilthonia. Tagliabue, 1840, *Nomenclatore Camelliae.* Orthographic error for **Wiltoniae**.

Wiltonia. Hovey & Co. Nursery Catalogue, 1834-1835, p.26. Orthographic error for **Wiltoniae.**

Wiltoniae. *(C.japonica),* Sweet, 1830, *Hortus Britannicus*, ed.2, p.74: Mrs Wilton's Camellia. Knights. Berlèse, 1837, *Monographie*, ed.1, pp.65, 87: Leaves of medium size, a little elongated; flower rather small, double, rose colour, sometimes passing for cherry-red, often striped with white; petals in two rows, imbricated, bent down; those at the centre, small, twisted, erect, often mixed with stamens, or with pistil alone. Originated in England by Jos. Knight, Chelsea as a seedling of **Variegata Alba.** Synonyms: 'Lady Wilton's', 'Parviflora', 'Lady Wilton'. Orthographic errors: 'Wiltoni', 'Wiltonia', 'Whilthonii', 'Wiltonia', 'Willtoniae', 'Woultonia', 'Withonia', 'Wilthonia', 'Wittonia'.

Wiltonii. Loddiges Catalogue, 1830, p.22. Orthographic error for **Wiltoniae.**

Win Houlden. *(C.reticulata x C.saluenensis), New Zealand Camellia Bulletin*, 1982, vol.XII, No.5, p.7, Reg. No.177: A seedling raised by Mrs Ida Berg, Whakatane, New Zealand. The seed parent was an unnamed seedling from *C.reticulata* **Dataohong** x *C.saluenensis* and the pollen parent **Damanao.** Growth habit is medium and spreading. The flower is a peony form, dark rose, 11.5cm across. Mid-season blooming.

Wind Song. (*C.japonica*), Camelliana Nursery Catalogue, 1961-1962, inside cover: Large size, peony form of deep, glowing pink. Segments of golden stamens distributed through the petals. SCCS., 1964, *Camellia Nomenclature*, p.128: Deep pink. Large, loose peony form with segments of golden anthers interspersed among the petals. Originated in USA at the Camelliana Nursery.

Windbigler's C.1. (*C.japonica*), Walter Allan Nursery Catalogue, 1948-1949: A very fine white. Originated in USA.

Windale. (*C.reticulata* x *C.japonica*), SCCS., 1981, *Camellia Nomenclature*, p.183: Bright red. Large to very large, semi-double with crinkled petals. Medium, upright growth. Blooms mid-season to late. Originated in USA by G. Stewart, Sacramento, California from the cross *C.reticulata* **Dataohong** x *C.japonica* **Reg Ragland.**

Windsor Prince. (*C.japonica*), *The Sacramento Bee*, Mar.3, 1966: Raised by R. Try, Windsor, England. No description. No valid listing located.

Windsor Princess. (*C.japonica*), Try, 1963, RHS., *The Rhododendron and Camellia Yearbook*, No.17, p.141: The bloom is a large semi-double, three rows of delicate pink petals with a centre of yellow stamens. A seedling originated by Reginald A.R. Try, Windsor, England.

Wine Flower. (*C.japonica*), Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.243. No description. Originated in USA. No valid listing located.

Winfred Womack. Belle Fontaine Nursery Co. Catalogue, 1960. Orthographic error for **Winifred Womack.**

Winged Victory. (*C.japonica*), Gordon Waterhouse, 1966, ACRS., *Camellia News*, No.23, p.16: White, large, semi-double to open peony form. Originated in Australia. Propagated plant of doubtful origin. Very similar to **Pukekura.**

Wings. Vanderbilt, 1941, *Camellia Research*, II, p.8. Synonym for **Benibotan** as 'Herme Pink'.

Wings of Song. (*C.japonica*), Pyron, 1960, *American Camellia Yearbook*, p.38: A very large, white, semidouble to peony form, size up to 15 cm across. Often the flower has a two tiered effect with petals spreading out of the centre of the stamens. Originated in USA by Hugh Shackelford, Albany, Georgia, USA.

Wingster Dreifaltigkeit (Trinity). *(C.japonica), International Camellia Journal* 2005, p.129 with colour photo; Reg. No. 55. Open pollinated seedling of **Shibori-seiôbo**. Originated by Peter Fischer, Wingst, Germany. First flowered 1992. A spreading, open shrub of medium growth rate. Flowers mid-season to late. Flower is 6 cm x 3.5 cm, a cup-shaped single to semi-double of 7 to 9 petals. Base colour is white, with highly variable pink and red striping, spotting or banding, all on the same bush. Golden stamens.

Wingster Fanal. *(C.japonica), Kamelien, 75 Years of Camellia,* Catalogue, 2008, p.30 with colour photo; Originated by Peter Fischer, Wingst, Germany. A seedling of **Paul Jones Supreme,** pollen parent unknown. A semi-double to peony form flower, 7.5cm diameter. White, with many narrow or wide, bright red stripes. A few pale yellow stamens among the central petaloids. Shiny mid-green leaves, 6cm x 2.5cm. Dense, upright growth.

Wingster Frùhling. *(C.japonica), Kamelien, 75 Years of Camellia*, Catalogue, 2008, p.30 with colour photo; Originated by Peter Fischer, Wingst, Germany from wabisuke seed brought back from Japan. First flowered 2008. A single flower, diameter 5cm, with 7 petals, funnel-shaped and slightly fragrant. Whitish-pink colour with a few irregular light red stripes. Stamens ochre yellow, wabisuke type. Leaves bright mid-green, 6cm x 2.5cm, slightly serrated. Slow, upright growth.

Wingster Olymp. *(C.japonica),* P.Fischer, *Kamellien,* ca.1990 p.11, colour plate p.12: White, semi-double, large bloom of beautiful form. Plant growth is strong, wide spreading and erect. Originated in Germany.

Winifred Baldwin. *(C.japonica),* ACS., 1989, *The Camellia Journal*, vol.44, p.9, Reg. No.2157: Large size, pink and white variegated semi-double *C.japonica* chance seedling. Blooms mid-season. Originated in USA by S.T. Borom, Charleston, South Carolina. *American Camellia Yearbook*, 1989, p.128, colour photo [p.136]: The 8 year old seedling first bloomed 1985. Average flower size, 12.5 cm across x 5 cm deep with 15 petals and yellow anthers. Pink veins in petals with border of white. Occasionally a solid pink bloom. Plant growth is upright, average and medium, with dark green leaves, 8 cm long x 3.8 cm wide.

Winifred Coulter. *American Camellia Yearbook*, 1954, p.337, Reg. No.29: A seedling of **Princess Baciocchi,** originated by Mrs Stuart A. Coulter, Charter Oak, California, USA. First flowered 1945. Plant growth is rapid and compact. Flower is incomplete double with large petaloids, 8-10 cm across. Colour is rosy red. Blooms mid-season.

Winifred Hafele. *(C.japonica), American Camellia Yearbook*, 1960, p.209, Reg. No.482: A 10 year old seedling that first bloomed in 1955; originated by Julington Nurseries Inc. Jacksonville, Florida, USA. The dark green leaves average 5-7.5 cm in length and 3.8 cm in width. The cherry-red, peony form flower, similar to **Daikagura** in form, is 10-12.5 cm across x 6 cm deep with 30-35 petals, with light gold stamens, red tipped. There are large, waved petals, two sets of stamens, one set with small petals grouped round a central group of stamens and larger petals. Late blooming.

Winifred Hills. *(C.x vernalis), New Zealand Camellia Bulletin*, 1970, vol.VI, No.7, p.33, Reg. No.51: A chance seedling of **Hiryû** which first flowered 1965; originated by Mrs W. Hills, Whakatane, New Zealand. The plant is upright, dense and rapid in rate, with dark green leaves, 5.5 cm long x 2.5 wide. The flower is RHS.CC. Red-Purple Group 66C, anemone form, 8.5 cm across x 3.5 cm deep with 12-13 petals and up to 96 petaloids.

Winifred Sebire. *(C.reticulata),* ACRS., 1973, *Camellia News*, No.51, p.36, Reg. No.155: Originated by E.R. Sebire, Wandin North, Victoria, Australia. A seedling of 'Tali Queen' (**Dali Cha**) which first bloomed 1970. Plant habit is upright, open and vigorous. The deep rose-pink, semi-double to informal double, 15 cm across blooms open in mid-season. Leaves are dark green, 11-12.5 cm long x 5 cm wide with shallow serration. See colour photo, p.4, ACRS., 1977, *Camellia News*, No.66. Sport: **Winifred Sebire Variegated.**

Winifred Sebire Variegated. *(C.reticulata),* Cannon, 1979, ACS., *The Camellia Journal*, vol.34, No.4. A virus variegated form of **Winifred Sebire.** Deep rose-pink blotched with white. Originated in USA.

Winifred Womack. *(C.japonica), American Camellia Yearbook*, 1955, p.342, Reg. No.240: A 10 year old seedling of 'Magnoliiflora', (**Hagoromo**), originated by Alden Davis, Coden, Alabama, USA, that first flowered 1951. Plant growth is average, slightly pendulous, and rapid in rate, with dark green leaves, long, slender, and slightly serrate. The flowers are 11-13 cm across, semidouble with 36 petals in 4 rows of 9 each. The colour is blush pink. Mid-season blooming. Orthographic error: 'Winfred. Womack'. Synonym: 'Bobby Guillat'. See

illustration, p.267, Hertrich, 1959, *Camellias in the Huntington Garden*, vol.III. Chinese synonym 'Wenfude'.

Winifred Young. *(C.japonica), New Zealand Camellia Bulletin*, 1989,. vol.XVI, No.1, p.27, Reg. No.262: Originated by Keith Brushfield, Somersby, N.S.W, Australia. A seedling of 'Ubane', (**Toki-nohagasane**) it first flowered 1970. The plant has an open, spreading growth habit with midgreen leaves 8-9 cm long x 5-6 cm wide. The semi-double, pink flowers are of medium size, 9 cm across x 4 cm deep with 13 petals and 15-20 petaloids. Mid-season to late flowered. Colour RHS.CC.62C centre, 62B edge.

Winkie. *(C.japonica), American Camellia Yearbook*, 1971, p.50, Reg. No.1133: A 10 year old chance *C.japonica* seedling which first bloomed 1971. Originated by Dunn Camellia Gardens, Mobile, Alabama, USA. The plant growth is upright, open and rapid in rate with glossy, dark green leaves, 10 cm x 5 cm. The flower is 15 cm across x 7.5 cm deep with 38 petals and 15 petaloids with rabbit ears. It is a dark rose-pink with deep yellow anthers and yellow filaments. Blooms early through mid-season. See colour pl.153, *Encyclopedia of Camellias in Colour*, vol.II, 1978, p.73. Sport: **Winkie Variegated.**

Winkie Variegated. *(C.japonica), American Camellia Yearbook*, 1971, p.50: A virus variegated form of **Winkie.** Rose-pink blotched white. Originated in USA.

Winner's Circle. *(C.reticulata), American Camellia Yearbook*, 1984, p.182, Reg. No.1958: A very large, salmon pink, semi-double to peony form *C.reticulata* chance seedling that flowers mid-season. Originated at Nuccio's Nurseries, Altadena, California, USA. The 5 year old seedling first bloomed 1980. Average flower size is 15 cm across. Plant growth is upright, dense and rapid with large, light green leaves. See colour photo, front cover, SCCS., 1985, *The Camellia Review*, vol.46, No.3 and p.2, *International Camellia Journal*, No.21, 1989. Chinese Synonym: 'Changsheng Jiangjun'.

Winnie Davis. *(C.japonica),* McIlhenny Catalogue, 1944-1945, p.12: A small white, lined and blotched rose, outer rows of petals fully imbricated, inner petals cupped about a bud centre. Originated in USA at Jungle Gardens, Avery Island, Louisiana. Synonym: 'Winnie Davis I'.

Winnie Davis I. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Synonym for **Winnie Davis.**

Winnie Davis II. Urquhart, 1956, *The Camellia.* Synonym for 'Donckelaeri', (**Masayoshi**).

Winnie Davis (2). Fendig, 1953, *American Camellia Yearbook.* Synonym for 'Donckelaeri', (**Masayoshi**).

Winsome. *(C.hiemalis),* Wylam, 1956, American Camellia Yearbook, p.25: The flowers of **Winsome** are variable in form from semi-double to anemoniform and are a clear white with a delicate pink edge. Originated at McCaskill Gardens, Pasadena, California as a seedling from **Shishi-gashira.**

Winston. Hilsman, 1966, *American Camellia Yearbook*, p.122. Orthographic error for **Winton.**

Winter Carnival. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* White. Complete double. Mid-season. SCCS., 1954, *The Camellia. Its Culture and Nomenclature.* p.88: White. Medium size, formal double. Medium, open growth. Blooms mid-season. Originated by Harvey Short, Ramona, California, USA.

Winter Charm. Camellia Forest Nursery Catalogue, 1990, p.6. Orthographic error for **Winter's Charm.**

Winter Cheer. *(C.japonica),* Hazlewood Nursery Catalogue, 1945, p.15: Crimson red with lighter centre. Medium large, semi-double with irregular petals. Bushy growth. Mid-season to late flowering. A seedling found growing at the foot of **Tricolor** at Treseder's old Nursery, Alt Street,

Ashfield, N.S.W., Australia. For illustration see Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.268.

Winter Chrysanthemum. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.243. Synonym for **Kikutôji.**

Winter Dream. Camellia Forest Nursery Catalogue, 1990, p.6. Orthographic error for **Winter's Dream.**

Winter Fire Cascade. *Camellias,* Y.C. Shen, 2009, p.66. Orthographic error for **Winter's Fire Cascade.**

Winter Gem. *(C.x williamsii),* ACRS., 1977, *Camellia News*, No.66, p.27. Reg. No.197, colour photo, p.4: Originated by E.R. Sebire, Wandin North, Victoria, Australia. Seed parent **Margaret Waterhouse**. First bloomed 1970. The tall, bushy, vigorous plant produced 9-10 cm flowers of cherry-red from early to late season. Leaves mid-green, 5-6 cm long x 5 cm wide.

Winter Glory. *(C.japonica),* Rhodellia Nursery Catalogue, [before 1945]: Pale pink. Medium sized semi-double. Early blooming. Originated in USA.

Winter Morn. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.93: White. Large sized semi-double to anemone form. Vigorous, upright growth. Blooms mid-season. Originated in USA by E.W. Miller, Escondido, California, USA.

Winter Rose. Camellia Forest Nursery Catalogue, 1990, p.6. Orthographic error for **Winter's Rose.**

Winter Rouge. (*C.oleifera* hybrid). ACS, *The Camellia Journal,* Aug. 1997, p.17, Reg. No.2435. A medium size, hot pink, semidouble cross of *C.oleifera* x *C.sasanqua.* Originated by Tom Dodd Nurseries, Semmes, Ala., USA. Flowers early. *American Camellia Yearbook,* 1997, p.8, colour photo before p.1. The 10 year old seedling first flowered in 1987. Average flower size is 9 cm across x 2.5 cm deep, with 16 petals, 6-8 of which are rabbit-eared. Yellow anthers and yellow filaments. Winter hardy to -5° F. and to -10° F. with protection. Plant growth is spreading, open and vigorous with dark green leaves 5 cm long x 3.8 cm wide.

Winter Star. Camellia Forest Nursery Catalogue, 1990, p.6.Orthographic error for **Winter's Star.**

Winter Sun. SCCS., 1974, *Camellia Nomenclature*, p.165. Orthographic variation for **Wintersun.**

Winter Treasure. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Large, white, semi-double, 12-12.5 cm across. There are from 18-25 broad petals, slightly waved and notched at the tip. The stamen cluster is central. Filaments are pale cream, anthers are yellow. Flower buds are long and green, showing a little brown shading. First flowered 1949. Leaves medium green long-elliptic, many over 12.5 cm long. Smooth, drooping and tapered at both ends. Plant habit slightly pendulous, rapid, hardy grower. Originated by Miss Ruth Loman, Wilmington, North Carolina, USA from seed of unknown parents. Reg. No. 129, *American Camellia Yearbook*, 1954, p.337.

Winter Waterlily. *(C.oleifera x C.sasanqua),* Camellia Forest Nursery Catalogue, 1990, p.6: Pink double. Originated by Dr W. Ackerman, USA. ACS., May 1991, *The Camellia Journal*, vol.46, No.2, p.18, Reg. No.2202: Small, white, anemone to formal double hybrid *C.oleifera x C.sasanqua* **Mine-no-yuki.** Early blooming.

Winter's Beauty. *(C.japonica x C.oleifera).* ACS 1995, The Camellia Journal, vol.50, No.4, p.28, Reg. No.2361: Small size, shell pink, peony form C.japonica **Billie McCaskill** x *C.oleifera.* Early flowering. Cold hardy. Originated by Dr William L. Ackerman, Ashton, Maryland, USA. ACS 1995, *American Camellia Yearbook*, p.10 with colour photo: The 14 year old seedling first flowered 1989. Average flower size is 7.5 cm across x 6 cm deep with 19 petals. Plant is very cold hardy. It survived -151/4F without damage. Long blooming season with hardy

flower buds. Plant growth is upright, dense and medium rate with dark green leaves 7.5 cm long x 2.5 cm wide.

Winter's Charm. *(C.sasanqua* x *C.oleifera),* ACS., 1988, *The Camellia Journal* vol.43, No.2, p.9, Reg. No.2080: Medium size, lavender pink, peony form *C.hybrid (C.sasanqua* **Takara-awase** x *C.oleifera),* early blooming. Originated by Dr W.L. Ackerman, Ashton, Maryland, USA. *American Camellia Yearbook*, 1988, p.190, colour photo, pp.186, 187. The 6 year old seedling first bloomed 1986. Average flower size, 8 cm across x 3.8 cm deep with 14 petals and 14 petaloids, golden yellow anthers and pale yellow filaments. Commercially introduced 1987. Cold hardy to -12ºF. Plant growth is upright, average and medium in rate with dark green leaves, 7.8 cm long x 3.2 cm wide. Orthographic error: 'Winter Charm'.

Winter's Cupid. *(C.hybrid).* Camellia Forest Nursery Catalogue, 2008, p.10; Small single white flowers produced in profusion in autumn. Leaves are small, dark green and somewhat leathery. Upright growth with short internodes, making it very compact. Offered as a cold hardy selection. *C.oleifera* **Plain Jane** x *C.sasanqua*. Raised by Dr William L. Ackerman, Ashton, Maryland, USA.

Winter's Dancer. (*C.hiemalis* x *C.oleifera*). SCCS *Camellia Nomenclature* 2009, p.191; Dark pink shading to light pink at the margins. Semidouble to loose peony form. Slow, spreading growth. Flowers mid-season. *C.hiemalis* **Bill Wylam** x *C.oleifera* **Plain Jane.** Originated by Dr William L. Ackerman, Ashton, Maryland, USA.

Winter's Darling. *(C.hiemalis x C.oleifera).* ACS 1993, *American Camellia Yearbook*, p.70, colour plate p.74, Reg. No.2270: Originated by Dr William L. Ackerman, Ashton, Maryland, USA. A miniature, deep cerise pink, anemone form seedling of *C.hiemalis* **Shishigashira** x *C.oleifera.* Early flowering. The 12 year old seedling first flowered 1985. Average flower size is 4 cm across x 3.2 cm deep with 12 petals, 52 petaloids, yellow anthers and white filaments. Cold hardy to -101/4F. Plant growth is spreading, average and medium in rate with dark green leaves 7.5 cm long x 2.5 cm wide.

Winter's Dream. *(C.hiemalis x C.oleifera),* ACS., 1988, *The Camellia Journal*, vol.43, No.2, p.9, Reg. No.2084: Medium size, pink, semidouble *C.hybrid (C.hiemalis* **Peach Puff** x *C.oleifera),* early blooming. Originated by Dr W.L. Ackerman, Ashton, Maryland, *American Camellia Yearbook*, 1988, p.190, colour photo pp.186, 187: Average flower size, 9.5 cm across x 5 cm deep with 15 petals, 3 petaloids, dark yellow anthers, pale yellow filaments. Commercially introduced, 1987. Cold hardy to -12ºF. Plant growth is upright, dense and medium in rate with dark green leaves, 9.5 cm. long x 3.8 cm wide. Orthographic error: 'Winter Dream'.

Winter's Dream Variegated. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.321 with colour photo. A virus variegated form of **Winter's Dream.** Chinese synonym 'Hua Dongmeng'.

Winter's Fancy. *(C.hybrid).* SCCS *Camellia Nomenclature* 2009, p.191; Deep pink, semi-double, with creped petals. Flowers mid-season. *C.hiemalis* **Bill Wylam** x *C.hiemalis* **Shishi-gashira** x *C.oleifera* **Plain Jane**. Originated by Dr William L. Ackerman, Ashton, Maryland, USA.

Winter's Fire. ***(****C.oleifera x C.x vernalis).* ACS 1993 *American Camellia Yearbook*, p.70, colour photo between pp.70-71; Reg. No. 2271: A medium, bright pinkish red, semidouble *[C.oleifera x C.sasanqua]* x *C.x vernalis* **Takarazuka.** Early flowering. Originated by William L. Ackerman, Ashton, Maryland, USA. The 12 year old seedling first bloomed 1984. Average flower size is 9.5 cm across x 3.2 cm deep with 12 petals, yellow anthers and white filaments. Cold hardy to -101/4F without injury. Plant growth is upright, average and medium in rate with dark green leaves 9 cm long x 3.2 cm wide.

Winter's Fire Cascade. *(C.hybrid). Camellias,* Y.C. Shen, 2009, p.66 with colour photo as 'Winter Fire Cascade'.; A mutation of **Winter's Fire,** raised by Nuccio's Nurseries, Altadena, California, USA. Weeping branches, other details as for parent.

Winter's Fire Variegated. *(C.oleifera x C.x vernalis). Camellias,* Y.C. Shen, 2009, p.51 with colour photo; A virus variegated form of **Winter's Fire.**

Winter's Hope. *(C.hybrid),* ACS., 1988, *The Camellia Journal*, vol.43, No.2, p.8, Reg. No.2077: A medium size, white, semi-double *C.hybrid* (*C.oleifera x C.hybrid* **Frost Princess**), early blooming. Originated by Dr W.L. Ackerman, Ashton, Maryland, USA. *American Camellia Yearbook*, 1988, p.190, colour photo, pp.186, 187. The 8 year old seedling first bloomed 1985. Average flower size 9.5 cm x 3.8 cm with 12 petals, yellow anthers and creamy white filaments. Commercially introduced 1987. Cold hardy to -10ºF. Plant growth is spreading, average and medium in rate with dark green leaves, 6 cm long x 3 cm wide.

Winter's Interlude. *(C.oleifera x C.sinensis),* ACS., May 1991, *The Camellia Journal,* vol.46, No.2, p.18, Reg. No.2202: Miniature pink, anemone form *C.hybrid* (*C.oleifera x C.sinensis* 'Pink Tea'). Early blooming. Originated by Dr William L. Ackerman, Ashton, Maryland, USA. *American Camellia Yearbook,* 1991, p.81, colour photo between pp.80-81. The 10 year old seedling first flowered 1984. Average flower size is 6 cm across x 3.2 cm deep with 12 petals and 76 petaloids. Plant growth is upright, dense and medium in rate with dark green leaves 7.5 cm long x 2.5 cm wide. Plant hardy to -101/4F. Attractive landscaping plant. Chinese synonym 'Dongqu'.

Winter's Joy. (*C.oleifera* hybrid). ACS, *The Camellia Journal,* Nov. 1997, p.7, Reg. No.2439. A medium size, medium pink, semi-double hybrid (*C.oleifera* x *C.hiemalis*) x *C.oleifera*. Flowers early. Originated by Dr William L. Ackerman, Ashton, Md., USA. *American Camellia Yearbook,* 1997, p.8, colour photo before p.1. The 16 year old seedling first flowered in 1986. Average flower size is 9 cm across x 3.2 cm deep with 18 petals, deep yellow anthers and creamy filaments. Flower petals are fluted. Plant growth is upright, average and medium, with dark green leaves 6 cm long x 3 cm wide. Chinese synonym 'Dongle'.

Winter's Moonlight. (*C.oleifera* hybrid). SCCS *Camellia Nomenclature* 2009, p.192. White, single to anemone form. Compact, average growth. Flowers mid-season to late. Cold hardy to -15° F. *C.japonica* 'Tricolor Red (Siebold' **(Lady de Saumarez**) x *C.oleifera* **Plain Jane**. Originated by Dr William L. Ackerman, Ashton, Maryland, USA.

Winter's Own. (*C.reticulata*). ACRS., 1985, *Camellia News*, No.95, p.20, Reg. No.325: Originated by M.F. Greentree, Kingsgrove, N.S.W., Australia. A seedling of *C.reticulata* hybrids **Lasca Beauty** x **Arbutus Gum**. First flowered 1983. The semi-double to peony form, pink, large to very large flowers open early to mid-season. The upright, vigorous plant has mid-green, vigorous ovate, reticulate leaves with serrate margins. Sport: **Winter's Own Variegated.**

Winter's Own Variegated. (*C.reticulata*), ACRS., 1989, *Camellia News,* No.111, p.13, Reg. No.378: Originated by M.E. Greentree, Kingsgrove, NSW, Australia. A virus variegated form of **Winter's Own** with similar general characteristics. Pale pink semi-double to loose peony form, 16 cm across x 8 cm deep, wavy petals, rabbit ears, marbled and moired white.

Winter's Peony. *(C.hybrid).* ACS, *The Camellia Journal*, Nov. 2000, p.29 with colour photo. Reg. No.2533. A hybrid of *C.oleifera* (PI 162561) x (*C.sasanqua* x *C.hiemalis* **Shishigashira**). A 20 year old seedling that first bloomed in 1986. Originated by Dr William L. Ackerman, Ashton, Md., USA. *American Camellia Yearbook*, 2000, p.8, colour photo p.c15. The light pink peony to rose form double flower has 36 petals, 14 petaloids, pale yellow anthers and creamy filaments. Average flower size is 7 cm across x 3.2 cm deep. Flowers early to mid-season. Plant growth is upright with dense, medium to slow growth, and develops a pyramidal

form without pruning.. Plant is cold hardy to -10° F. The dark green leaves are 7 cm long x 2.5 cm wide.

Winter's Red Rider. *(C.hybrid).* ACS, *The Camellia Journal*, Nov. 2000, p.29 with colour photo, Reg. No.2534. A hybrid of *C.hiemalis* **Shishigashira** x *C.oleifera* **Lu Shan Snow.** The 21 year old seedling first flowered in 1985. Originated by Dr William L. Ackerman, Ashton, Md., USA. *American Camellia Yearbook,* 2000, p.8, colour photo p.c15. The lavender pink, single flower has 8 petals, yellow anthers and creamy filaments. Average flower size is 6.5 cm across x 2.5 cm deep. Flowers early. Plant is upright and dense with very slow growth. Good bonsai specimen. Plant is cold hardy to -10° F. Dark green leaves are 5 cm long x 1.8 cm wide.

Winter's Rose. *(C.oleifera x C.hiemalis), American Camellia Yearbook*, 1988, p.191, Reg. No.2079, colour photo pp.186-187: A miniature, shell-pink, formal double *C.hybrid (C.oleifera x C.hiemalis)*, early flowering, originated by Dr W.L. Ackerman, Ashton, Maryland. The 6 year old seedling first bloomed in 1986. Average flower size is 5 cm across x 2.5 cm deep with 28 petals. Commercially introduced 1987. Cold hardy to -12ºF. Plant growth is spreading, average and medium in rate with dark green leaves measuring 7 cm long x 2.5 cm wide. Orthographic error: 'Winter Rose'.

Winter's Snowman. (*C.oleifera* hybrid). ACS, *The Camellia Journal,* Nov. 1997, p.7, Reg. No.2440. A small white, semi-double to anemone form hybrid (*C.oleifera* 69-142 x *C.hiemalis*) x *C.oleifera.* Flowers early. Originated by Dr William L. Ackerman, Ashton Md., USA. *American Camellia Yearbook,* 1997, p.8, colour photo before p.1. The 16 year old seedling first flowered in 1987. Average flower size is 7.5 cm across x 2.5 cm deep, with 10 petals, 8-22 petaloids, pale yellow anthers and creamy filaments. Plant growth is uprightaverage and medium, with dark green leaves 7.5 cm long x 3.5 cm wide. Plant is cold hardy to -10° F.

Winter's Star. *(C.hybrid), American Camellia Yearbook*, 1988, p.191, Reg. No.2085 colour photo, pp.186, 187: A medium, lavender pink, single *C.hybrid (C.hybrid* **Frost Prince** x *C.hiemalis* **Shôwa-no-sakae**), early blooming. Originated by Dr W.L. Ackerman, Ashton, Maryland, USA. This 8 year old seedling first bloomed in 1983. Average size flower is 8 cm across x 2 cm deep with 6 petals, orange anthers and pale yellow filaments. Commercially introduced 1987. Cold hardy to -12º Plant growth is upright, dense and medium in rate with dark green leaves, measuring 7 cm long x 3.2 cm wide. Chinese synonym 'Dongxing'.

Winter's Star II. *(C.hybrid).* ACS, *The Camellia Journal,* Nov. 1997, p.7, Reg. No.2441. A medium size, lavender pink, single sport of *C.hybrid* **Winter's Star**. Observed and propagated by the Bond Nursery Corp., Dallas, Tex., USA. *American Camellia Yearbook*, 1997, p.8, colour photo before p.1. First observed in 1990, and has since flowered true for 5 years on propogations. Average flower size is 9 cm across, with 6 petals and golden stamens. Very cold hardy. Plant growth is spreading and average, with dark green leaves 6.5 cm long x 3.2 cm wide.

Winter's Star Light. *(C.hybrid).* ACS, *The Camellia Journal,* Aug. 1997, p.17, Reg. No. 2434. A medium size, white to blush pink – some lightly flecked pink, single sport of *C.hybrid* **Winter's Star.** Flowers early to mid-season. Observed and propagated by the Bond Nursery Corp., Dallas, Tex., USA. *American Camellia Yearbook*, 1997, p.8, colour photo before p.1. First observed in 1989, and has flowered true in propagation for 7 years. Average flower size is 9 cm across x 2.5 cm deep, with 6 petals, yellow anthers and yellow filaments. Winter hardy to -5° F. and to -10° F. with protection. Plant growth is upright, dense and average, with dark green leaves 6.5 cm long x 3.8 cm wide.

Winter's Sunset. *(C.hybrid).* ACS, *The Camellia Journal,* Feb. 1999, p.22, Reg. No.2487. A miniature, lavender purple crosss of *C.oleifera* [PI 162561] x (*C.sasanqua* x *C.oleifera*). Flowers early. Originated by Dr. William L. Ackerman, Ashton, Md., USA. *American Camellia Yearbook,*

1999, p.1, colour photo before p.1. The 17 year old seedling first flowered in 1987. Average flower size is 6.5 cm across x 2.5 cm deep, with yellow anthers and creamy white filaments. Plant growth is upright and the dark green leaves are 5.7 cm long x 3.2 cm wide. Cold hardy to -10° F.

Winter's Toughie. *(C.hybrid).* SCCS *Camellia Nomenclature* 2009, p.192. Lavender pink, semi-double with fluted petals. Slow to moderate growth, somewhat spreading. Flowers mid-season. *C.oleifera* **Plain Jane** x *C.sasanqua* **Jean May**. Originated by Dr William L. Ackerman, Ashton, Maryland, USA.

Winter's Waterlily. *(C.oleifera x C.sasanqua).* ACS 1991, *American Camellia Yearbook*, p.81, Reg. No.2203, colour photo between pp.80-81: A small size, white, anemone to formal double seedling *C.oleifera* x *C.sasanqua* **Mine-no-yuki.** Blooms early. Originated by William L. Ackerman, Ashton, Maryland, USA. The 9 year old seedling first flowered 1985. Average flower size is 7.5 cm across x 3.2 cm deep with 21 petals, 15 petaloids, yellow anthers, cream filaments. Growth upright, medium in rate with dark green leaves 7.5 cm long x 3.2 cm wide. Cold hardy to -101/4F. Attractive landscaping plant.

Wintersun. (*C.reticulata*), ACRS., 1970, *Camellia News*, No.40, p.27, Reg. No.126: Originated by F.S. Tuckfield, Berwick, Victoria, Australia. A chance seedling from 'Crimson Robe', (**Dataohong**). The plant has a spreading, open, vigorous habit of growth and flowers from mid-season to late. The 12.5-13 cm, deep pink, informal double flowers are produced in abundance. Large, wavy petals surround petaloids and an occasional stamen. The dark olive green, lanceolate, reticulate leaves are 10-12 cm long x 3.8-5 cm wide with acuminate apex, finely serrate. Orthographic variant: 'Winter Sun'.

Winton. (Caerhay's Hybrid), Hillier, 1955, RHS., *The Rhododendron and Camellia Yearbook*, No.9, p.23: This delightful form is growing at Chandler's Ford. Flowers about 4-5 cm across, carmine in bud, opening almond pink. The other characters the plant shares in common with **Cornish Snow.** A *C.cuspidata x C.saluenensis* hybrid from a group of seedlings raised at Exbury prior to 1939 and named by Hillier. Orthographic error: 'Winston'.

Wirkafeld. *(C.japonica)*, Tagliabue, 1840, *Nomenclatore Camelliae.* No description. Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.14. No description. Originated by Campbell in UK. (Believed extinct.)

Wirlinga Belle. *(C.rosiflora x C.x williamsii)*, ACRS., 1973, *Camellia News*, No.51, p.36, Reg. No.156: Originated by T.J.Savige, Wirlinga, N.S.W., Australia. A seedling from *C.rosiflora x C.x williamsii*. First bloomed 1971. The soft pink, 4.6 cm, single flower blooms early to mid-season. It has a spreading to open habit of growth with flowers that fall easily. The mid-green 7 cm x 3.2cm leaves are narrowly obovate, apex acuminate, finely serrulate.

Wirlinga Belle 'Ginga'. (Wirlinga Belle 'Galaxy') (*C.hybrid*) from Tokyo. *Japan Camellia* No.60, August 1999: A mutation of **Wirlinga Belle.** White misted with pink at the base of the petals. Found in Yokohama by Yaichirô Fujimoto around 1993.

Wirlinga Bride. (*C.tsaii* hybrid). ACRS, *Camellia News*, 1992, No.123, p.4, Reg. No.410, colour plate front cover: Originated by T.J. Savige, Wirlinga, NSW, Australia, from a cross between *(C.tasii x C.cuspidata)* seed parent x *C.fraterna* pollen parent. First flowered 1989. Miniature size, white single with creped petals, 2.5 cm long x 2 cm deep. A cluster flowering, miniature hybrid that flowers early to mid-season. Flowers shed whole. Leaves glossy green, lanceolate, margins tend wavy, finely serrate, acuminate apex, 3.5 cm long x 1.7 wide. Filaments white, anthers golden. A vigorous shrub with arching, fern-like branches. Cluster flowering, both terminal and axillary. Extremely floriferous.

Wirlinga Cascade. *(C.hybrid),* ACRS, 1987, *Camellia News*, No.103, p.22, Reg. No.350 with colour photo on rear cover: Originated by T.J. Savige, Wirlinga, N.S.W., Australia. A chance seedling of **Wirlinga Belle** that first flowered 1978. A pink 6 petalled, single flower, 4.5 cm across x 2.5cm deep. Colour RHS.CC.35B-C shading to 55C-D at base. Tall, upright, open plant with long pendulous branches and vigorous growth. Leaves vary from round ovate to ovate, apex blunt acute to long caudate, matt green surface, coarse serrations, 6 cm long x 3 cm wide. Flowers down the stem in leaf axils as well as apical. A cluster flowering hybrid with up to 9 buds per terminal. Flowers fall complete. See colour photo facing p.48, *International Camellia Journal*, No.20, Oct. 1988.

Wirlinga Garland. *(C.sasanqua).* ACRS, *Camellia News*, 1998, No.147, p.12, colour photo p.19, Reg. No.502. Originated by Thomas J. Savige, Wirlinga, NSW, Australia. Seed parent *C.sasanqua* **Red Willow,** pollen parent unknown. First flowered 1991. The deep pink (RHS.CC.54A) semi-double flowers of 10-12 petals are 9.5 cm across by 3 cm deep, and appear early season on a very pendulous, open plant of average growth. Leaves mid-green, smooth, narrowly obovate, obscure serrations, blunt acute apex, narrowly cuneate base, 8.5 cm long x 2.8 cm wide. Petals emarginate.

Wirlinga Gem. *(C.rosiflora* hyb.), ACRS., 1981, *Camellia News*, No.79, p.28, Reg. No.268: Originated by T.J. Savige, Wirlinga, N.S.W., Australia. A seedling from *C.hybrid* **Tiny Princess** x *C.rosiflora* that first flowered 1976. The plant has a dense spreading to pendulous habit with variable leaves, 5 cm x 2.5 cm, elliptic-ovate, apices cuspidate, bases obtuse, mid-green. The 4 cm flowers are the palest pink, deepening at petal edge (RHS.CC.52D), 12-15 stamens, 10 mm long, filaments white, anthers pale yellow, 8-9 petals. Flowers profusely in leaf axils. Early blooming.

Wirlinga Jewel. (C.hybrid). ACRS, *Camellia News*, 1998, No.147, p.12, colour photo p.19, Reg. No.503. Seed parent C.hybrid **Tiny Princess,** pollen parent unknown. First flowered 1996. The light pink to pink (RHS.CC.55C) informal to formal double flower has 12-18 outer petals and 6-12 smaller, twisted, inner petals. Size is 9.5 cm across x 3 cm deep, and it flowers early season on an open, bushy plant of medium growth. Leaves mid-green, matt, ovate, sharp fine serrations, apex acuminate, 7 cm long x 3.5 cm wide. Stamens rare. Sometimes opens as a bud centre formal with 3 rows of petals, maturing to an informal double. Petals lightly veined deeper pink (RHS.CC.55B).

Wirlinga Plum Blossom. (C.hybrid). ACRS, *Camellia News*, 2000, No.154, p.18, colour photo front cover, Reg. No.530. Originated by Thomas J. Savige, Wirlinga, NSW, Australia. Seed parent *C.rosiflora;* pollen parent *C.fraterna.* First flowered 1992. A small, single, soft pink (RHS.CC.55C) flower, 6-8 petals, 6 cm across x 2.5 cm deep. The miniature, cluster-type hybrid flowers floriferously early to mid-season on a fast growing, tall, open plant. Leaves mid-green, matt, ovate, long acuminate apex, serrulate margins, slightly channelled, 7 cm long x 3.5 cm wide. Petals round, slightly crinkled. Filaments in a central burst.

Wirlinga Princess. *(C.hybrid),* ACRS., 1977, *Camellia News*, No.66, p.28, Reg. No.204: Originated by T.J. Savige, Wirlinga, Australia from a seedling of **Tiny Princess** x *C. rosiflora* that first bloomed 1975. It has an open, spreading growth habit and produces single to semi-double flowers in mid-season, 4-5 cm across, with 9 crinkled petals with pale pink edges fading to white in the centre with deeper pink on reverse. There are some petaloids and white filaments. The pale to mid-green, 5 cm x 2.5 cm leaves, have acuminate apex, obtuse base and dentate margins. See colour photo front cover, 1988, *New Zealand Camellia Bulletin*, vol.XV, No.7. Chinese synonym 'Aozhou Gongzhou'.

Wirlinga Rosette. (C.hybrid). ACRS, *Camellia News*, 1996, No.139, p.10, Reg. No.472. Originated by Thomas J. Savige, Wirlinga, NSW, Australia. A seedling of C.hybrid **Tiny Princess,** pollen parent unknown. A soft pink (RHS.CC.55D) semi-double bowl shaped flower of 12 petals,

4.5 cm diameter x 3 cm deep. Flowers floriferously mid-season on an average growing erect plant. Leaves dull green, matt, wide-elliptic, acuminate apex, shallow blunt serrations, 5 cm long x 2.5 cm wide. Petals rounded, some emarginated cupped. Filaments scattered and central. A cluster flowering hybrid with flowers a regular bowl shape, and colour fading towards the centre.

Wirlinga Ruffles. (C.hybrid). ACRS, *Camellia News*, 1998, No.147, p.13, colour photo p.19, Reg. No.505. Originated by Thomas J. Savige, Wirlinga NSW, Australia. Seed parent C.hybrid **Tiny Princess,** pollen parent unknown. First flowered 1995. The light pink to pink (RHS.CC.28D) semi-double flowers have 16-18 petals, and appear early to mid-season on a tall, open vigorous growing plant. Flower diameter is 5.5 cm x 2.5 cm deep. Leaves dull green, matt, wide ovate, serrulate margins, acute apex, base rounded, 7 cm long x 4 cm wide. Petals ruffled. Petaloids rare, filaments in a cluster. Cluster flowering developing with age of bush.

Wirlinga Snow Drift. *(C.sasanqua).* ACRS, *Camellia News*, 1998, No.147, p.12, colour photo p.19, Reg. No.501. Originated by Thomas J. Savige, Wirlinga, NSW, Australia. Seed parent *C.sasanqua* **Plantation Pink,** pollen parent unknown. First flowered 1995. The semi-double flower of 10-13 petals is white, with pink (RHS.CC.55B) margins on the petals, occasionally on the reverse of some outer petals, and is 10 cm across x 2.8 cm deep. Flowers early season on a fast growing, bushy, open plant. Leaves dark green, glossy, channelled, elliptic, fine shallow serrations, apex acuminate, base narrow cuneate. Crinkled petals. Small leaves in relation to flower size. Petals rounded, emarginated, occasionally two centre petals erect.

Wirlinga Star. *(C.hybrid).* C. Aust, *Camellia News*, No.182, Autumn 2010, p.9 with colour photo; Regn No.622-N; A soft pink, cluster flowered, miniature informal double. Originated by Thomas J. Savige, Wirlinga, NSW, Australia.

Wishing for the Stars. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.135. Synonym for **Miyako-osaraku.**

Wishing Star. *(C.japonica)*, Mark S. Cannon Scion Catalogue, 1960, p.11. No description. SCCS., 1962, *Camellia Nomenclature*, p.108: Light pink. Large, semi-double to anemone form with star-shaped outer petals, surrounding a centre of twisted petals and petaloids. Vigorous, compact, upright growth. Blooms mid-season. Originated in the USA at McCaskill Gardens, Pasadena, California.

Wishuwell. *(C.japonica)*, Levi, 1967, *American Camellia Yearbook*, p.41: Medium size, mid-pink, open peony form. Originated in USA by David Feathers, Lafayette, California. For colour photo see p.20, *American Camellia Yearbook*, 1970.

Wisley Form. *(C.x williamsii)*, Stonehurst Estates Nursery Catalogue, 1962. No description. Originated in England. No valid listing located.

Wisley White. Anderson's Camellia Catalogue, 1961; L.R. Russell Ltd Nursery Catalogue, 1961, p.20. Synonym for **Hakurakuten.**

Witch Doctor. *(C.japonica)*, SCCS, 1962, *Camellia Nomenclature*, p.108: Rose-red. Large, semi-double to rose form double. Early to mid-season blooming. Originated in USA by C. Demetropolis, Mobile, Alabama.

Wonder of White. *(C.japonica),* ACS, *The Camellia Journal*, May 2002, p.12 with colour photo, Reg. No.2565. A white formal double flower. Originated by Gordon E. Eade, Pensacola, Fla., USA. ACS, *The Camellia Journal,* Aug. 2002, p.21, colour photo p.20. Details repeated with incorrect originator. *American Camellia Yearbook,* 2002, p.132, colour photo p.c12. The 20 year old seedling first flowered in 1990. Flowers are 9.5 cm across x 2.5 cm deep, with 66 petals. Flowers early to mid-season. Plant is upright and vigorous with dark green leaves 9 cm long x 3.2 cm wide.

Wonderland. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.88: Brilliant deep rose. Large, semi-double to peony form. Vigorous, open growth. Blooms mid-season to late. Originated by Harvey Short, Ramona, California, USA. An 8 year old seedling of 'Lotus', (**Gauntlettii**) x **Princess Baciocchi** that first flowered 1959. Flower size, 15 cm across x 6 cm deep. Stamens often interspersed with a few petaloids. *American Camellia Yearbook,* 1965, Reg. No.734. (SCCS., No.62-23). Sport: **Wonderland Variegated.**

Wonderland Variegated. *(C.japonica),* Cannon, 1965, ACS., *The Camellia Journal*, vol.20, No.1 as 'Wonderland Var.' A virus variegated form of **Wonderland.** Brilliant deep rose blotched white. Originated in USA.

Wonderous. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Orange red. Large, loose peony form. Vigorous, sturdy growth. Blooms mid-season. Originated in USA in the Magnolia Gardens, John's Island, South Carolina. Sport: **Wonderous Variegated.**

Wonderous Variegated. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1944-1945 as 'Wonderous Var.'. A virus variegated form of **Wonderous.** Orange red blotched white. Originated in the Magnolia Gardens, John's Island, South Carolina, USA.

Wood Nymph. *(C.x williamsii),* Van den Brock Nursery Catalogue, 1978: Silver blush pink, single to semi-double with an arching habit. Originated in England.

Wood Sprite. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.108: Blush pink. Small, semi-double. Vigorous, bushy, upright habit. Mid-season blooming. Originated in USA at McCaskill Gardens, Pasadena, California, USA.

Woodford Harrison. *(C.reticulata). American Camellia Yearbook,* 1980, p.175, Reg. No.1648: A very large, deep rose-red veined red, semi-double *C.reticulata* hybrid ('Crimson Robe' x [5XC = **Damanao** x **Mrs D.W. Davis**] x **Damanao**) that bloomed mid-season. Originated by Frank

Pursel, Oakland, California, USA. The 7 year old seedling first bloomed 1978. Average flower size, 15.5 cm across x 10 cm deep with 15-18 petals, high rabbit ears, yellow anthers. Petals heavy substance. Plant growth is upright, spreading and rapid with dark green, deeply serrate leaves, 11 cm long x 8 cm wide. Sport: Woodford Harrison Variegated.

Woodford Harrison Variegated. *(C.reticulata)*, Cannon, 1983, *The Camellia Journal*, vol.38, No.4 as 'Woodford Harrison Var.' A virus variegated form of **Woodford Harrison.** Deep rose red, veined red and blotched with white. Originated in USA.

Woodfordii. *(C.japonica)*, Mertens & Fontaine Nursery Catalogue, 1845, p.101, ph. p.104: Originated in England as a seedling grown from seed sent from Turin, Italy. Flower form similar to **Triumphans.** The shrub is robust with tan bark marked with grey. Leaves are medium spaced alternatively, lanceolate, short petiole, apex long pointed, slanted and twisted, upper surface glossy deep green, lower surface with yellow shade, 7 cm long x 5 cm wide; margins profoundly dentate, alternatively large and small. Flower 8 cm across, forms a perfect sphere, coloured a uniform, clear cherry-red with some orange-red; the petals of the 3 outer rows are oval, notched at the apex, bent and strongly reflexed; the centre petals occupy 9 of the corolla and are of the same size, pleated and shell-shaped in the same manner.

Woodiana. *(C.japonica)*, Buist, 1845, *The American Flower Garden Directory*, p.227, 3rd ed. There is another camellia (other than **Woodsii**) called **Woodiana,** with foliage similar to **Woodsii,** but the flower is cherry-red and semi-double. Originated in USA.

Woodii Alba. Trillon, 1843, Catalogue, p.10. Orthographic error for **Woodsii Alba.**

Woodii Rosea. Trillon, 1843, Catalogue, p.10. Synonym for **Woodsii.**

Woodland Glen. *(C.japonica)*, *American Camellia Yearbook*, 1966, p.102, Reg. No.873: An 8 year old chance seedling that first bloomed 1961; originated by Henry Novick, Woodland Hills, California. Plant growth habit is upright, open and medium with dark green leaves, 10 cm long x 5 cm wide. The semi-double flower is rose-red with a touch of white on the last row of petals. Anthers and filaments are yellow. Size is 12.5-13 cm across x 5 cm deep. Blooms mid-season.

Woodland Rose. *(C.japonica)*, Hearn Nursery Catalogue, 1958. Description not seen. Originated in USA.

Woodlands Beauty. *(C.japonica)*, *New Zealand Camellia Bulletin*, 1975, vol.IX, No.3, pA, Reg. No.112: A chance *C.japonica* seedling raised by Mrs R.J. Clarke, Auckland, New Zealand, from seed distributed by the NZCS. The plant, which has a bushy habit, first bloomed 1967. It has dark green leaves, 10 cm x 4.5 cm. The flower is anemone form with 12-15 petals and a central mass of filaments of unusual length, up to 4 cm. The colour is Red Group, 55B, shading to almost white att he centre. Flowers early to late season.

Wood's Superb. Prince & Co. Nursery Catalogue, 1828, p.169. Synonym for **Woodsii.**

Woodsia. Cels, Paris Nursery Catalogue, 1836-1837, p.10. Orthographic error for **Woodsii.**

Woodsia Rubra. Prince & Co. Nursery Catalogue, 1844. Synonym for **Woodsii.**

Woodsia Alba. Prince & Co. Nursery Catalogue, 1844. Orthographic error for **Woodsii Alba.**

Woodsiana. *(C.japonica).* Berlèse, 1837, *Monographie* ed.1, pp.90, 128: Leaves 7.5 cm x 5 cm, lanceolate, acuminate, regular and finely serrate; bud small, scaled green; flower medium size, irregular semi-double, cherry-red. This cultivar, which originated in Belgium, is different to **Woodsii** which originated in England. It is erroneously spelt 'Woodtiana' in the text and 'Woodsiana' in the index.

Woodsii. *(C.japonica),* William Prince Nursery Catalogue, 1828, p.169 as **Woodsii** or 'Wood's Superb'. Description not seen. Chandler & Booth, 1831, *Illustrations and Descriptions of Camellias*, pl.23: It originated with Mr Chandler, at the Vauxhall Nursery, about 1819 and was named for Mr Woods of Camberwell Green. Although a seedling from the 'Waratah' (**Anemoniflora**), it possesses few of the characters that distinguish that variety. The flowers are well formed. When fully open, they seldom measure less than 10 cm. Their colour is pale red. The whole of the petals are ranged pretty regularly over one another. Those exterior are large and spreading, of a roundish cordate form, from 2.5-3.8 cm in breadth. They occupy three rows, and surround a number of small, erect petals in the manner of the 'Waratah', and give the centre of the flower a similar convex appearance. The small petals are thick at the base, but towards the point, which is blunt and round, they are broad and thin and a little incurved. All are faintly marked with dark veins. Orthographic error: 'Wodsii', 'Woodii', 'Woodin', 'Woodsia', 'Woodtii', 'Woodsi', 'Woodsia Rubra', 'Woodii Rosea', 'Woodsii Rosea'. Synonyms: 'Woods', 'Wood's Camellia', 'Wood's Superb', 'Mr Wood's', 'Woodsii Rosea', 'Woodsii Pink'.

Woodsii Alba. *(C.japonica),* Charles van Geert, 1848, Catalogue No.105, p.121 as 'Woodsii Alba Nova': Exceptionally large flower, outer petals milk white with broad bands, stripes and spots of carmine; those at the centre more confused than **Kingii,** with the colour of yellowish tea with lake-red speckles. Berlèse, 1844, *Annales de la Société d'Horticulture de Paris*, 34(197):205: White. Medium size. External petals in 5 rows, separated from an anemone centre of irregular, erect petals and abortive stamens. Synonym: 'Woodsii Alba Nova'. Orthographic errors: 'Woodsia Alba', 'Woodii Alba', 'Wodsii Alba'.

Woodsii Alba Nova. Charles van Geert, Nursery Catalogue, No.101, 1847, p.17. Synonym for **Woodsii Alba.**

Woodsii Chandler. Baxter & Wooster, 1850, Supplement to Loudon's *Hortus Britannicus* as 'Woodsii Chandl.'. Synonym for **Woodsii.**

Woodsii Pink. Wilmot, *Camellia Variety Classification Report*, 1943, p.14. Synonym for **Woodsii.**

Woodsii Rosea. Burdin Maggiore & Co. Catalogue, 1845. Synonym for **Woodsii.**

Woodtii. Berlèse, 1837, *Monographie,* ed.1, p.128. Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 99. Orthographic error for **Woodsii.**

Woodville Blush. Shackelford, 1968, ACS., *The Camellia Journal*, vol.23. Abbreviation for **Woodville Red Blush.**

Woodville Red. *(C.japonica)*, Blackwell Nursery Catalogue, 1944-1945: A large, brilliant red to strawberry red, irregular peony form with no outer guard petals, up to 13 cm across; 130-150 petaloids form an hemispherical mass in the centre. Leaves long, narrow, deeply serrate, pale to medium green, apex acuminate, 7 cm long x 3.8 cm wide. This is a very old cultivar in America and has been given many names, but the Blackwell Nursery listing of **Woodville Red** appears to be the earliest valid publication. This name came from a specimen in the garden of Mrs Thomas White, Woodville, Mississippi, said to have been planted about 1822. Synonyms: 'Kollock', 'Mrs White', 'Mrs Wright', 'Gruenwald Red', 'Henri Bry', 'Black Beauty', 'Martin Roberts'. Sport: **Woodville Red Blush**. Chinese synonym 'Hongmuwu'.

Woodville Red Blush. *(C.japonica)*, *American Camellia Yearbook*, 1961, p.230, Reg. No.522: A sport of **Woodville Red,** first propagated by Leslie G. Thomas, Azalea Road Nursery, Mobile, Alabama. Growth habit is rapid and upright, similar to parent, with light green leaves, 7.5-8 cm long x 3.8 cm wide. The peony form flowers are blush pink, fading to white with golden anthers, 10 cm across x 6 cm deep with 60 petals. Blooms mid-season. Abbreviation: 'Woodville Blush'. Chinese synonym 'Danfen Wude'.

Woody Estes. *(C.japonica)*, Fendig, 1956, *American Camellia Yearbook*, p.32: A mutation of **Professor Sargent,** originated by Charles Estes, Sea Island Nursery, St. Simmons Island, USA. Medium Pink, speckled and striped red, irregular double in form, 8 cm across. Formation, season and growth habits the same as the parent.

Wormslow White. (*C.japonica*), Fendig, 1953, *American Camellia Catalogue.* No description. Originated in USA.

Wuyue. Gao, Jiyin, Ltr, 5 November 1991. Chinese Synonym for the USA *C.sasanqua* **Misty Moon.**

Wuzi. (Dance Pose), *(C.japonica)*, Chang, Shao Yun. 1987. *Camellias from Zhejiang*, p.70: Double hibiscus type. Small tree with spreading crown. Leaves thin, elliptic to lanceolate, suddenly caudate at apex, cuneate base, horizontally spreading and slightly drooping with fine texture; petioles long; internodes long; margins scarsely serrate; midrib elevated both sides, side veins depressed above. Flowers scarlet, the inner petaloids pink lineate, 8-9 cm across, from semi-double to crown form, petals 14-15 in two rows, basally connate. Normal stamens, 80-100, scattered between petaloid stamens in 6-7 fascicles. Pistils degenerate, filament-like, rarely seed bearing. Buds round, green. Blooms mid-season to late. Originated in Xinchang Prefecture, China.

Wylmer Pool. *(C.japonica)*, *American Camellia Yearbook*, 1974, vol.II, p.240, Reg. No.1304: A 15 year old chance seedling that first bloomed 1963. Originated by Ferol Zerkowsky, Slidell, Louisiana, USA. Plant growth is upright, dense and rapid with dark green leaves, 8-10 cm long x 3.8-4.5 cm wide. It has various flower forms and is white to blush with pink petals, to all pink, also variegated pink and white. Size is 11-12.5 cm across x 7-7.5 cm deep. It has yellow anthers and filaments with 75 petals and 40 petaloids, Blooms mid-season. Synonym: 'Could Be'. For colour photo see pl. facing p.52, *American Camellia Yearbook*, 1974, vol.I and front cover SCCS, 1975, *The Camellia Review*, vol.36, No.6. Sports: **Wylmer Pool Blush, Wylmer Pool Pink.**

Wylmer Pool Blush. *(C.japonica)*, Anonymous, 1975, ACS., *The Camellia Journal*, vol.30, No.1, p.32: A blush pink sport of **Wylmer Pool**. Originated at Massee Lane, Fort Valley, Georgia, USA.

Wylmer Pool Pink. *(C.japonica)*, Anonymous, 1975, ACS., *The Camellia Journal*, vol.30, No.1, p.32: A strong pink form of **Wylmer Pool**. Originated at Massee Lane, Georgia, USA.

Wyn Carter. *(C.japonica), New Zealand Camellia Bulletin*, 1992, Issue No.112, vol.XVII, No.5, p.38, Reg. No.321: Originated by T. Lennard, Te Puke, New Zealand. A chance seedling of 'Fuyajo' (**Kon-wabisuke**) that is 7 years old and first bloomed 1991. It has upright growth of medium rate and its mid-green leaves are 7 cm long x 4.5 cm wide. It is a rose form double flower of very dark, purplish red shade veined darker red to the petal base, with good rabbit ears. Blooms mid-season to late. Size 10 cm across x 5.5 cm deep with 35 petals and 10 petaloids. The pollen is yellow and the filaments light rose. Flower colour is RHS.CC.59-61B at petal base.

Wyn Hawkes. *(C.japonica)*, ACRS., 1985, *Camellia News*, No.95, p.20, Reg. No.326: Originated by R. Hawkes, Woodside, South Australia from a seedling of *C.japonica* **Henry Turnbull** x **Polar Bear** that first flowered 1982. The upright, vigorous plant produces large, white, single, early flowers and has large, lanceolate leaves.

Wynne Rayner. *(C.x williamsii)*, *New Zealand Camellia Bulletin*, 1966, vol.IV, No.6, p.10, Reg. No.29: A chance seedling of *C.saluenensis;* originated by B.J. Rayner, Stratford, New Zealand. The flower is semi-double to anemone form with 10 or more petals and a varying number of petaloids, 13cm across, coloured cyclamen to deep rose and the stamens retain their gold colour. The leaves are dark green, 8 cm x 5 cm, and its habit is open and upright. For colour photo see p.189, Macoboy, 1981, *The Colour Dictionary of Camellias.* Received the RHS Award of Merit, 1986. Chinese synonym 'Leini'.

Wynyard. *(C.japonica)*, Outteridge, 1962, *1000 Named Varieties of Camellias in Australia*, p.17: Pink. Informal double. Medium size. Blooms mid-season to late. Originated in Australia.

Xanthenna. (*C.japonica*), Guilfoyle Nursery Catalogue, 1866, p.19. No description. Originated in Australia. (Believed extinct.)

Xanthus. (*C.japonica*), Guilfoyle Nursery Catalogue, 1866, p.19. Pure white. Very similar to **Alba Plena.** Originated in Australian by Guilfoyle, Double Bay, N.S.W.

Xeremia. *(C.hybrid).* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.19; Pink semi-double.

Xiafeng Relang. (Summer's Wind and Hot Waves). (*C.azalea* hybrid); *China Flowers and Horticulture*, No.22, 15 Nov. 2012, p.44 with colour photo, Regn No. E-095; Originated by Palm Landscape Architexture Co. Ltd., China. A seedling of *C.azalea* x **Daikagura**, first flowered 2010. A very large, 13-18 cm diameter flower, semidouble to peony form, 37 petals, outer petals in rows, inner petals slightly waved. Flower colour pink with some red petals, and some deep red veining visible. 196 stamens, filaments light red, stigma split into 7 at the tip. Leaves dark green, coriaceous, edges shallowly serrate. Plant spreading, dense and vigorous. Flowers from summer to midwinter.

Xialuote. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.24. Chinese synonym for **Charlotte Blount.**

Xiameijin. (Beautiful Flawed Brocade), *(C.japonica)*, Gao & Zhuang, 1989, *The Camellia in China*, p.54, No.352, colour photo No.210: Large size, white with red streaks, semi-double of 11-13 broad, rounded petals in 2-3 rows and a central stamen column. Originated in China.

Xiameng Chunling. (Mr. Chunling's Summer Dream), (*C.azalea* hybrid), *China Flowers and Horticulture*, No.24, 15 Dec. 2012 with colour photo, Regn No. E-108; Originated by Palm Landscape Architexture Co. Ltd., China. A cross of **Miyakodori** x *C.azalea*, sown 2006, first flowered 2010. A very large peony form, over 13cm diameter, 16 large outer petals, more than 40 twisted central petals. Colour peach-red, some white spots on the centre petals. Stamens sparse among the petals, filaments light yellow, anthers yellow, stigma split into 6 at top. Leaves dark green, long-elliptic, blunt at tip, shallowly serrate. Upright plant with vigorous growth. Blooms summer to midwinter.

Xiameng Hualin. (Mr. Hualin's Summer Dream). (*C.azalea* hybrid); *China Flowers and Horticulture*, No.22, 15 Nov. 2012, p.44 with colour photo, Regn No. E-095; Originated by Palm Landscape Architexture Co. Ltd., China. A seedling of **Miyakadori** x *C.azalea*, first flowered 2010. Flowers red, peony form, large to very large, 12-14 cm diameter. Outside petals obovate, inner petals twisted, deep red with veining visible. Many stamens, sprayed, filaments pink. Leaves dark green, long-elliptic to lanceolate, thick-coriaceous, surfaces smooth, edges shallowly serrate. Plant upright, vigorous growth. Flowers summer to midwinter

Xiameng Kejuan. (Mrs Kejuan's Summer Dream), (*C.azalea* hybrid); *China Flowers and Horticulture*, No.24, 15 Dec. 2012 with colour photo, Regn No. E-107; Originated by Palm Landscape Architexture Co. Ltd., China. A seedling of **Dr Clifford Parks** x *C.azalea*, first flowered 2010. A bright red, single flower, 6.5-7 cm diameter, with 6 elliptic petals, reflexed at top to give a trumpet shape. Many stamens in tubular form, filaments pink, anthers yellow. Leaves dark green, long-elliptic, thick, slightly hairy at tips, shallowly serrated edges. Plant upright, dense, vigorous. Flowers summer to midwinter.

Xiameng Wenqing. (Mr. Wenqing's Summer Dream), (*C.azalea* hybrid); *China Flowers and Horticulture*, No.22, 15 Nov. 2012, p.44 with colour photo, Regn No. E-094; Originated by Palm Landscape Architecture Co. Ltd., China. A seedling of *C.azalea* x **Dr Clifford Parks**, first flowered 2010. Flowers bright red, anemone to peony form, occasionally semidouble.

Large to very large, 10-15 cm diameter, about 15 obovate outer petals, notched at top. Central petals warped. Leaves dark green, elliptic, shiny, edges shallowly serrate. Plant upright, dense and vigorous. Flowers midsummer to winter.

Xiameng Xiaoxuan. (Summer's Dream in Slight Whirl). (*C.azalea* hybrid); *China Flowers and Horticulture*, No.22, 15 Nov. 2012, p.45 with colour photo, Regn No. E-097; Originated by Palm Landscape Architecture Co. Ltd., China. A seedling of *C.azalea* x **Daikagura**, first flowered 2010. Flowers pink, rose form to formal double, medium to large, 9-12 cm diameter. Over 38 petals, regularly arranged, slightly involute at edges. Leaves dark green, broad-elliptic, edges shallowly serrate. Plant compact, dense and vigorous. Flowers summer to midwinter. Previous publication, ACS *Journal*, Dec 2011 as 'Xiari Xiaoxuan'.

Xiameng Yanping. (Mr. Yanping's Summer Dream), (*C.azalea* hybrid); *China Flowers and Horticulture*, No.24, 15 Dec. 2012 with colour photo, Regn No. E-105; Originated by Palm Landscape Architecture Co. Ltd., China. A seedling of **Tama Beauty** x *C.azalea*, first flowered 2010. Flowers light to deep pink, small central petals sometimes edged white. Anemone to peony form, medium size, 9.5-10 cm diameter. About 8 flat guard petals, notched at tips, 110 central petals held together as a ball. A few stamens among the petals, anthers yellow. Leaves dark green, broad-elliptic, thick, edges shallowly serrated. Plant upright, dense and vigorous. Blooms summer to mid-winter.

Xiameng Yulan. (Mrs Yulan's Summer Dream). (*C.azalea* hybrid); *China Flowers and Horticulture*, No.24, 15 Dec. 2012 with colour photo, Regn No. E-106; Originated by Palm Landscape Architecture Co. Ltd., China. A seedling of **Miyakodori** x *C.azalea*, first flowered 2010. A bright red single flower, 10-15 cm diameter, 6 interarranged, magnoliua-like petals, obovate. Colour light pink with darker veining visible. Filaments 30-50, milk-white, anthers yellow. Leaves dark green, long-elliptic, thick, slightly reflexed, edges shallowly serrated. Plant upright, dense and vigorous. Flowers summer to midwinter.

Xiaoguiye. (Osmanthus Leaf), (*C.reticulata*), Yü, 1950, RHS., *Camellia & Magnolia Conference Report*, p.17, fig.11, as 'Hsiaokueiyeh' or 'Small Osmanthus Leaf': Leaves lanceolate, concave, long acuminate at apex, cuneate at base, 5-7.5 cm long x 1.6-2.5 cm wide. Flowers light carmine (HCC 21/3), sometimes marked with white stripes on inner petals, double, 8-10 cm across. Petals in 5-6 whorls, oblong-obovate, flat, emarginate or slightly lobed at the apex, attenuate at the base, loosely arranged. Stamens many, filaments short, sometimes petaloid and narrow lanceolate. Pistils rudimentary. This variety can easily be distinguished by its very narrow lanceolate leaves and small carmine flowers. The leaf shape is like *Osmanthus fragrans* hence its Chinese name. Flowers mid-season to late. See Feng et al. 1986, *Yunnan Camellias of China*, p.55, colour photo and description. It originated in Kunming, China. Different readings: 'Hsiaokueiyeh', 'Hsiao-kuei-yeh'. Synonyms: 'Small Osmanthus Leaf, 'Small Osmanthus Leaved', 'Osmanthus Leaf'.

Xiaosongzi. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.58, colour photo, [p. 137], (Small Pine Cone). Synonym for **Songzi.**

Xiaotaohong. (Little Crimson), (*C.japonica*), Huang Nursery Catalogue, Shanghai, 1949: A medium size, 8-9 cm across, soft blush pink, formal double of 70-80 petals. Leaves broad-ovate, glossy green, apex blunt acute, keeled. Originated in China. See colour photo (p.131), Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.96 and No.158A & B, Gao & Zhuang, 1989, *The Camellia in China*. Note: There is a *C.reticulata* of the same name.

Xiaotaohong. (Small Crimson), (*C.reticulata*), Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.15: Butterfly wing type. The outer whorl of petals larger and flat, the inner ones twisted and upright, stamens united into bundles among wavy petals, crimson, mid-season. Tengchong. Feng et al., 1986, *Yunnan Camellias of China*, p.60 colour photo and description: Leaves long-elliptic, apices acuminate to long acuminate, bases cuneate, dark green above, veins sunken, 8.5-12 cm long x 4-6 cm wide. Branches horizontal. Flowers pink (RHS.CC.55B-C), diameter about 11 cm. Petals about 19, curved. Stamens numerous, placed among petals. Pistils mostly rudimentary. Flowers mid-season. The cultivar was selected from an open pollinated plant of *C.reticulata* Lindl. f. *simplex* Sealy in Tengchong, Yunnan. Different reading: 'Hsiao-tao-hung'. Synonym: 'Small Crimson'.

Xiaotaohong. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.406; the present Chinese synonym for the Japan *C.rusticana* **Otome.**

Xiaowubao. Shanghai Botanic Garden's List, 1985. (Five Small Treasures). See Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.84. Synonym for **Hongshiba Xueshi.**

Xiaowucai. *(C.japonica), Chinese Camellia Culture*, 2003, p.238 with colour photo; From Fujian Province, China. Petals are rose-shaped. Colour white or watery white with red lines in the centre of petals. Formal double. Flower colour is changeable. Flowers early to mid-season.

Xiaowuxin. (Small Five Hearts), *(C.japonica)*, Fang, 1930, *Dainnan Chanhua Xiaozhi*. The flowers are small peony form with the colour deep red with white spots. Yü, 1964, *Camellian* in facsimile of 'Garden Camellias of Yunnan', p.12 as 'Hsiaowusin', with the last character for star (xing not xin): Leaves broad-ovate to elliptic, acuminate at the apex, rounded to broad cuneate at the base, 6-7 cm long x 4-4.5 cm wide; petioles 9 mm long. Flowers carmine, sometimes the outer most whorl of petals variegated white, double, anemone form, 5-6 cm across. Petals: Those of the outer whorl orbicular-obovate, 2-3 cm long x 1-2.5 cm wide and of the inner whorls obovate to spathulate, 1.5-2.5 cm long x 0.8-1.5 cm broad. Stamens 20-30, divided into 3-5 groups and mixed with inner petals; filaments filaform, cuneate and adnate at base; ovary green, glabrous. Early flowering. Originated in China. Different reading: 'Hsiaowusin'. Synonym 'Xiaowusing'.

Xiaoxingxing. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the New Zealand *C.hybrid* **Tiny Star.**

Xiaoye Fenfurong. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.563 as 'Xiaoyefenfurong'; Erect growth. Leaf yellowish green, occasionally with white spots, elliptic, 7-8 cm x 3-4 cm, apex acuminate, base broad cuneate, margins obtusely serrate. Juvenile twigs and leaves red. Flower pink or pink with white margin, pink with red stripes, or half red and half white., 7-8 cm diameter, outer petals in 2-3 rows, stamens and petaloids mixed in the centre, pistil well developed. Flowers mid-season. From Anhui, China. Other forms **Xiaoye Hongfurong** and **Xiaoye Huafurong.** From Anhui, China.

Xiaoye Hongfurong. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.563 as 'Xiaoyehongfurong'; Erect growth. Leaf yellowish green, occasionally with white spots, elliptic, 7-8 cm x 3-4 cm, apex acuminate, base broad cuneate, margins obtusely serrate. Juvenile twigs and leaves red. Flower red, 7-8 cm diameter, outer petals in 2-3 rows, stamens and petaloids mixed in the centre, pistil well developed. Flowers mid-season. From Anhui, China.

Xiaoye Huafurong. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.563 as 'Xiaoyehuafurong; Details as for **Xiaoye Fenfurong** and **Xiaoye Hongfurong**, except that juvenile twigs and leaves are green, new leaves have red stripes. Flower is white or white with purple margin, or pink or red. From Anhui, China.

Xiaoye Jinxin. (Small Leaf – Gold Heart). (*C.japonica),* Gao, Jiyin, Ltr, 31st Jan. 1993: Red single with golden stamens. Leaves smaller than **Yuangye Jinxin.** Vigorous, cold hardy. Blooms early to late. Originated in China.

Xiaoye Mudan. (Small Leaf Peony), (*C.reticulata*), Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.21: Peony type. Petals irregularly arranged, loosely folded and twisted making a ball-like flower, intermingled with stamens and petaloids. Crimson. Blooms mid-season to late. Kunming. Feng et al., 1986, *Yunnan Camellias of China,* p.94 colour pl. and description: Leaves small, elliptic, apices acuminate, bases cuneate to broad-cuneate, 9.5-10.5 cm long x 4-5 cm wide. Flowers pink (RHS.CC.61D), diameter 11-15 cm. Petals 30-34 in 6-7 whorls, outer 2-3 whorls regularly arranged, inner 2-3 whorls in small pieces, curved or two petals connate, margins emarginate. Stamens divided into several groups by curved petals. Pistils rudimentary, flattened, a few well developed. This is a new cultivar selected from seedlings of open pollinated plants by researchers of the Kunming Botanical Garden, Yunnan, China. It flowers midseason to late. Its flowers are similar to **Mudan Cha,** only brighter in colour. Different reading: 'Hsiao-yeh Mou-tan'. Western synonym: 'Small Leaf Peony'.

Xiaoye Yindie. (Small Leaf Spinel Pink), (*C.reticulata*), Feng et al., 1986, *Yunnan Camellias of China,* p.76 as 'Xiaoyeyindie', colour photo and description: Leaves elliptic, apices acuminate to long-acuminate, bases cuneate, dark green above, reclinate, margins revolute, 5-8 cm long x 2.5-4 cm wide. Flowers spinel pink, 12 cm across. Petals about 17, outer whorl slightly twisted, inner twisted and erect. Stamens in fascicles around poorly developed pistil. Flowers mid-season. This cultivar was selected from open pollinated plants of *C.reticulata* Lincil. f. *simplex* Sealy at Tengchong, China. Synonym: 'Small Leaf Pink'. Different reading: 'Hsiao-yeh Yin-tieh', 'Hsiaoyehyintieh'.

Xiaoyinhong. (Small Spinel Pink), (*C.reticulata*), Ikeda, 1974, *American Camellia Yearbook,* p.114 as 'Hsiaoyinhung' as new varieties raised by the Yunnan Botanical Institute. No description. Feng et al., 1986, *Yunnan Camellias of China,* p.59, colour pl. and description as 'Xiaoyinhong': Leaves small, ovate, apices acuminate, bases cuneate to broad-cunneate, 6-7.5 cm long x 3-3.5 cm wide. Flowers deep spinel pink (RHS.CC.68A) diameter 10-12 cm. Petals 19-21 in 3-4 whorls, outer two whorls flat, slightly undulate, inner whorls small, slightly curved, erect. Stamens numerous, divided into 6-7 groups placed among petals. Stigmas apically 4-parted, mostly well developed, fertile. Blooms mid- season to late. This is a new

cultivar selected by researchers at the Kunming Botanical Garden, Yunnan, China. Different reading: 'Hsiao-yen-hung'. Synonym: 'Small Crimson'.

Xiaoyulan. (Small Magnolia), (*C.reticulata*), Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.10: Magnolia type. Petals straight, rather long, the corona looks like a magnolia flower when fully open. Crimson. Mid-season. Tengchong. Feng et al., 1986, *Yunnan Camellias of China*, *p*.34, colour photo and description: Leaves elliptic to elliptic-ovate, bases cuneate to broad-cuneate, rough above, mid-rib conspicuous, 6-9 cm long x 3-4.5 cm wide. Flowers pink (RHS.CC.58B), single, diameter 4-4.5 cm, shaped like a magnolia flower. Petals 5-6, erect. Stamens numerous, united to form a tube. Pistils well developed, fertile. This cultivar was introduced from the Yunhua Commune, Tengchong County in 1965. Flowers mid-season. Different reading: 'Hsiao-yu-lan'. Western Synonym: 'Small Magnolia'.

Xiaozhenzhu. Gao & Zhuang, 1989, *The Camellia in China,* p.78, No.598. Synonym for the USA *C.sasanqua* **Little Pearl.**

Xiari Fendai. (Summer's Pink Girl), (*C.azalea* hybrid); *China Flowers and Horticulture,* No.22, 15 Nov. 2012, p.45 with colour photo, Regn No. E-098; Originated by Palm Landscape Architecture Co. Ltd., China. A seedling of *C.azalea* x **Yupan Jinhua,** first flowered 2010. A pink to light red single form, medium to large, 9-12 cm diameter, with 9-12 petals, tips slightly notched, some red veining visible and nearly transparent under sunlight. Filaments pink and tube-like at the base, anthers yellow. Leaves dark green, long-elliptic, soft, edges slightly serrate. Plant spreading, dense and strong growing. Flowers summer to midwinter. Previosly published ICS Journal 2011, p.55 as 'Xiari Hongxiannu'.

Xiari Fenli. (Summer's Pink Beauty) (*C.azalea* hybrid) C.Aust., *Camellia News,* No.187 Spring 2011, p.8 with colour photo. A cross of *C.azalea* x **Dr Clifford Parks.** Flowers dense, pink with a few white stripes, semi-double to rose form double. Diameter 9-10 cm, 45 petals, outer petals obovate and arrangement regular, centre petals slightly wrinkled, stamens clustered, filaments pink. Plant compact but vigorous with dense branches. Flowers summer to early winter

Xiari Fenniang. (Summer's Pink Lady) (*C.azalea* hybrid) ICS, *Journal* 2011, p.56 with colour photo. A cross of **Tama Beauty** x *C.azalea*. Flowers dense, pink, shading to light pink at the centre, wide open single form. Diameter about 9 cm, petals 8-10, broad-obovate, tips slightly notched, stamens 70-80, anthers light yellow, filaments milk-white. Plant spreading and with dense branches. Flowers summer to early winter.

Xiari Fenqun. (Summer's Pink Dress) (*C.azalea* hybrid) ICS, *Journal* 2011, p.56 with colour photo. A cross of **Tama Beauty** x *C.azalea.* Flowers dense, light pink, slightly cupped semi-double. Centre has over 100 stamens and some petaloids, a few with white blotching. Dwarf, compact growth. Flowers summer to early winter. *China Flowers and Horticulture,* No.22, 15 Nov. 2012, p.46 with colour photo, Regn No. E-099; Originated by Palm Landscape Architecture Co. Ltd., China. 18-35 petals arranged regularly, obovate, split and curly at tips. Filaments light red, anthers yellow. Leaves dark green, elliptic, thick coriaceous, shiny, edges shallowly serrated. Plant compact, growth vigorous. Flowers summer to midwinter.

Xiari Guangchang. (Summer's Square) (*C.azalea* hybrid) ICS, Journal 2011, p.57 with colour photo. A cross of *C.azalea* x **Dr Clifford Parks**. Flowers dense, deep red, semi-double. Diameter 8-14 cm with 17 petals, obovate, slightly notched tips and darker red veins visible. Over 100 stamens with occasional erect petaloids interspersed. Filaments light pink and stamens yellow. Compact plant with dense branches. Flowers summer to midwinter. *China Flowers and Horticulture*, No.22, 15 Nov. 2012, p.46 with colour photo, Regn No. E-101; Originated by Palm Landscape Architecture Co. Ltd., China. Leaves dark green, long-elliptic, thick coriaceous, surfaces smooth, edges shallowly serrate.

Xiari Guanghui. (Summer's Sheen), (*C.azalea* hybrid); *China Flowers and Horticulture,* No.22, 15 Nov. 2012, p.46 with colour photo, Regn No. E-100; Originated by Palm Landscape Architecture Co. Ltd., China. A seedling of *C.azalea* x **Francis Eugene Phillips**, first flowered 2010. Flower is a red single form, medium to large, 8-12 cm diameter, 5-9 petals with deep red veins, regularly shaped, broad-obovate, tips slightly notched. Filaments pink. Leaves dark green, broad-elliptic, shiny, edges serrated. Plant compact, dense and vigorous. Flowers summer to midwinter.

Xiari Hongjuan. (Summer's Red Silk) (*C.azalea* hybrid) ICS, *Journal* 2011, p.56 with colour photo. A cross of *C.azalea* x **Dixie Knight Supreme**. Flowers dense, bright red, single form. Diameter 9-11 cm with 7-9 petals, slightly waved, crinkled and thick. Filaments pink, anthers yellow. Plant upright with dense branches. Flowers summer to early winter.

Xiari Hongpa. (Summer's Red Handkerchief) (*C.azalea* hybrid) ICS, *Journal* 2011, p.58 with colour photo. A cross of *C.azalea* x **Dr Clifford Parks**. Flowers dense, dark red occasionally blotched white, single form. Diameter 8-9 cm with 7 petals, broad-obovate, tips slightly notched, surface slightly wrinkled, darker red veins visible. Central column of stamens, filaments light red, anthers yellow. Plant upright, compact and densely branched. Flowers summer to early winter.

Xiari Hongrong. (Summer's Red-Velvet) (*C.azalea* hybrid) ICS, *Journal* 2011, p.57 with colour photo. A cross of *C.azalea* x **Royal Velvet**. Flowers dense, dark red with a hairy texture, single form. Diameter 9-10 cm with 7-9 petals, obovate, slightly wrinkled and notched edges. About 90 stamens, filaments red and anthers yellow. Flowers summer to early winter. *China Flowers and Horticulture,* No.24, 15 Dec. 2012 with colour photo, Regn C-102; Originated by Palm Landscape Architexture Co. Ltd., China. Leaves dark green, long-elliptic and thick-coriaceous. Plant compact, upright and vigorous.

Xiari Hongxiannu. ICS Journal, 2011, p.55. Later registered as **Xiari Fendai.**

Xiari Hongyang. (Summer's Red Sun). (*C.azalea* hybrid). ICS, *Journal* 2011, p.55 with colour photo. A cross of **Tama Beauty** x *C.azalea*. Flowers dense, bright red, single form. Diameter 10-12 cm, petals 8-12, anthers yellow and filaments light pink. Plant upright and densely branched. Flowers summer to early winter.

Xiari Kuangwu. (Summer's Dance) (*C.azalea* hybrid) ICS, *Journal* 2011, p.55 with colour photo. A cross of **Tama Beauty** x *C.azalea*. Flower is light red, semi-double, diameter 9-12 cm. 118-25 petals with wavy tips. Some scattered stamens with yellow anthers in the centre. Plant upright. Flowers summer to early winter.

Xiari Mudan. ICS *Journal* 2011, p.54 with colour photo; Later registered as **Xiayong Guose.**

Xiari Qixin. (Summer's Seven Hearts). (*C.azalea* hybrid) ICS, *Journal* 2011, p.58 with colour photo. A cross of *C.azalea* x **Dr Clifford Parks**. Flowers dense, deep red, peony form. Diameter 8-9 cm, with 19 large outer petals, broad-obovate, tips notched, surface slightly wrinkled. 124 petaloids, erect and twisted, with 7 swirls visible. A few stamens with light red filaments. Very compact plant with dense branches. Flowers summer to early winter. *China Flowers and Horticulture, No.24,* 15 Dec. 2012 with colour photo, Regn E-103; Originated by Palm Landscape Architexture Co. Ltd., China. First flowered 2010. Leaves dark green, long-elliptic, shining, edges thinly serrated.

Xiari Tiage. (Summer's Balcony) (*C.azalea* hybrid) ICS, *Journal* 2011, p.58 with colour photo. A cross of *C.azalea* x **Dr Clifford Parks**. Flowers dense, red with purple tones, peony form. Diameter 8-10 cm with 8-10 large outer petals tightly arranged, broad-obovate and tips slightly notched. A ring of over 80 twisted petaloids above these, toped by 5 large, raised

petals. Some central stamens. Compact but vigorous growth with dense branches. Flowers summer to early winter.

Xiari Zhujiang. (Summer's Zhujiang River) (*C.azalea* hybrid) (ICS, *Journal* 2011, p.57 with colour photo. A cross of *C.azalea* x **Bob Hope**. Flowers claret red to red, occasionally blotched white, semi-double to peony form, diameter 8-10 cm, 19 loosely arranged petals, broad-obovate, margins involute and tips slightly notched. Over 70 stamens, filaments milk-white and anthers light yellow. Plant upright. Flowers summer to early winter.

Xiyingchun. (Joyfully Welcoming Spring), (*C.reticulata*), Savige, 1980, *International Camellia Journal*, No.12, p.72: Pink, semi-double. Feng et al., 1986, *Yunnan Camellias of China*, p.37 colour photo and description: Leaves oblong to ovate-elliptic, apices acuminate, bases cuneate, dark green above, margins revolute, leaf blades slightly arched, 9-10 cm long x 3.5-5 cm wide. Flowers spinel pink (RHS.CC.58D), diameter about 13 cm. Petals about 20, long flat, sometimes hamulate in the concaved apex. Flowers very similar to a lotus flower when open. Stamens numerous, around pistil. Pistils mostly rudimentary. Flowers mid-season to late. The cultivar was selected from an open pollinated plant of *C.reticulata* Lindl. f. *simplex* Sealy in Tengchong County, Yunnan, China. Different reading: 'Hsi-ying-ch'un'. Synonyms: 'Happy Spring', 'Happy Welcome to Spring'.

Xizhu. (Happy Illumination), (*C.reticulata*), Gao & Zhuang, 1989, *The Camellia in China*, p.70, No.505, colour photo No.299: Leaves strong green, elliptic, apices acute, margins serrulate, 5-7 cm long x 3-4cm wide. Flowers, small size, pink fading to white at the centre, single with 7-8 petals with a broad stamen column in the centre, gold anthers, white filaments. Flowers early to mid-season. Originated at Tengchong County, Yunnan Province, China.

Xizi Xianghe. (Westlake fragrant lotus) *Proceedings of the ICS Congress*, Chuxiong 2012, p.168. No details. Originated by John Wang, Calif.,USA.

X'mas Cheer. Rhodelia Nursery Catalogue, [before 1945]. Abbreviation for **Christmas Cheer.**

X'mas Glory. Vanderbilt, 1940, *Camellia Research*, p.2. Abbreviation for **Christmas Glory.**

X-tra Pink. *(C.japonica), American Camellia Yearbook*, 1998, p.7, Reg. No. 2449, colour photo before p.1. A large, deep to light rose pink with bluish sheen or undertones and veining, semi-double chance seedling. Flowers mid-season. Originated by Paul Gilley, Grandridge, Fla., USA. The 15 year old seedling first flowered 1985. Average flower size is 13.5 cm across x 6.5 cm deep, with 17 petals, 50 petaloids, yellow anthers and white filaments. Plant growth is upright and average with dark green leaves 10 cm long x 5 cm wide.

Xuesa Taohua. (Snow Flecked Peach Blossom), (*C.reticulata*), Tsui Wah Garden, 1974, *Chungkuo Shantung Moutan, Yunnan Chahua Chanlan.* No description. Feng et al., 1986, *Yunnan Camellias of China*, p.88, colour photo and description: Leaves oblong-ovate, apices acuminate, bases cuneate to broad-cuneate, veins sunken, rugose, 9-12 cm long x 4-5.5 cm wide. Flowers pink (RHS.CC.57D), diameter 13-14 cm. Petals 30-32 in 5-6 whorls, regularly arranged, with white stripes. Stamens numerous, divided into several groups. Pistils rudimentary, flattened. Flowers mid-season. This is a new cultivar selected from seedling of **Damanao** by researchers at the Kunming Botanical Garden. First bloomed 1967. Different readings: 'Hsuesantaohua', 'Hsüehsa T'ao-hua', 'Hsuehsat'aohua'. Synonym: 'Snow Flakes on Peach Blossom'.

Xueshi. Yü (with Feng), 1958, *Yunnan Shancha Hua Tuchih.* (Snow Lion). Different reading: 'Hsueh-shih'. A name reserved for the form of **Damanao** where the flower has more white than red. However as the white markings are caused by the variegating virus and are unstable, this name must be regarded as a synonym for **Damanao.**

Xueta. (Snow Pagoda), *(C.japonica),* Huang Nursery Catalogue, 1949. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.99, colour photo [p.135]: A white rose form double to formal

double, 8-9 cm across, with 5-6 rows of emarginate, crinkled petals, loosely imbricated. Blooms mid-season. See colour photo, No.160, Gao & Zhuang, 1989, *The Camellia in China*, p.47, No.280. Originated in China. Different reading: 'Hsueh-ta'.

Xuexiaoguo. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.425; Chinese synonym for the Jaspan *C.rusticana* **Yuki-oguni.**

Xueyan. (Snow Beauty), CSC., 1989, *Report of Camellias in China*, p.6. Orthographic error for 'Yueyan' (Snow Goose).

Xueyan. (Snow Goose), *(C.reticulata)*, Gao & Zhuang, 1989, *The Camellia in China*, p.58, No.386, colour photo No.244: Leaves dark green, elliptic, 6.5-9 cm long x 2.8-3.2 cm wide. Flower large size, 10-14 cm across, white, semi-double, with 20-25 fluted petals with faint pink blush centre, irregular stamen group. Lotus type, outer petals pink, inner silvery pink, a lengthwise white stripe down the centre of each inner petal, 12-14 cm across, petals in 5 whorls; stamens few in several clusters, either adnate basally to inner petals or intermingled. Pistil degenerate, flat and thin, cleft to the ovary. Very late flowering. Leaves ovate, rather thick, wavy, incurved lengthwise like a broad 'V".

Xueyu. (Snow Jade), *(C.reticulata).* China Regn No.37. *China Flowers & Horticulture*, July 2008, No.14, p.44 with colour photo; Selected from the wild forest in Tenchong County, Yunnan, China, and named by Liu Zhongxiang, Tengyue Town. Flowers loose peony form, peach red, 12-17 cm diameter. Petals 22-25 in 5-6 whorls, the outer curved, inner erect and folded when opening, twisted when fully open. Apices have white spots. Some central stamens. Leaves elliptic to oblong-ovate, 7.6-10.8 cm long x 3.6-5.7 cm wide, apices acuminate and bent downwards, bases obtuse to broad cuneate, leaf incurved and having some irregular yellow dots and spots.

Yabana-shirakumo. Yashiro, 1841, Kokon Yôrankô, vol. 306, Ichijima reprint, p.339, Corruption for **Yae-shiratama** in *Kadan Chikinshô*, 1695.

Yabu-Fukue19gô . (*C.japonica* var. *spontanea*), Pamphlet, "*Camellias at the Goto Camellia Forest Park*", with colour photo; A selected form of Yabu-tsubaki. Red cupped single with tight central cylinder of yellow anthers.

Yabugasane. (Double Bush Camellia), Tuyama. 1968, *Camellias of Japan*, pl.179, p.91, colour photo, p.141, description: Leaves widely ovate to broadly elliptic, base rounded, apex bluntly acute, dark green, venation impressed, 6.4-8.1 cm long x 3.8-4.9 cm wide; petioles 7-11 mm long, glabrous. Flowers semi-double, deep red (Cardinal red 822/1), petals flat but inner ones wavy, variegated a pale red, petals 20-24, the largest 5 cm long x 4.3 cm wide. Stamen cluster small, unequal in length, filaments creamy to pinkish. Flowers mid-season to late. Originated in Itô Hospital gardens, Tanbara-machi, Shûsô-gun, Ehime Prefecture, Japan.

Yabujiro. (White Wild Camellia), *(C.japonica)*, Tuyama, 1966, *Camellia Cultivars of Japan*, p.86: This is a general name for a small white single camellia in Japan. It is not a specific name for a camellia cultivar. Originated in Japan.

Yabu Kakuba Shiro. *(C.japonica), Camellia Photo Collection*, 1997 Japan, p.80 with colour photo; Small white cup-shaped single, incurving petals. Tubular stamen cluster.

Yabu-no-uchi. (Within the Bamboo Grove), *(C.japonica)*, Katayama, 1960, *Tsubaki Ochabana:* Medium size, single, pale pink. Tuyama, 1968, *Camellias of Japan*, pl.80, p.40 colour photo; *Encyclopedia of Camellia in Colour.* 1972, vol.I, p.366: Leaves deep green, Often with yellow variegation, broadly elliptic to obovate-elliptic, suddenly cuspidate-acuminate at the apex, upper surface flat, shiny, venation impressed. Flowers clear pale pink (Camellia rose 622/3), single, with petals deeply bilobate, strongly waved and wrinkled. Stamens broadly cup-shaped, with large, yellow anthers. Blooms mid-season to late. A seedling of **Miyakodori.** Originated by Mr Katayama, Ikeda-shi, Ôsaka Prefecture, Japan. See also Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.231; Seibundô Shinkôsha, 1979, *Senchinshû*, p.153, colour photo.

Yabu-tsubaki. (Bush Camellia), Mizuno, 1681, *Kadan Kômoku:* Single or double, red or white, many types. Yashiro, 1841, *Kokon Yôrankô*, vol.306; cited from *Honzô Kômoku Keimô*, (1803) as synonym for 'Chih-chu-cha', & ibid, vol.310, no description. The commmon wild or bush single camellia. Also known as 'Yama-tsubaki' or Mountain Camellia. Tuyama, 1966, *Camellia Cultivars of Japan*, p.6, pl.1; *Encyclopedia of Camellias in Colour*, 1972, vol.I, p.272, photos pp.33, 34. Common name for *C.japonica* var. *spontanea*, the common wild camellia of Japan, a medium sized single with 5-7 petals, pink to dark pink, occasionally white with blossoms from flat to campanulate to incurved form. See also JCS, 1965, *Tsubaki*, No.5, p.29; Seibundô Shinkôsha, 1979, *Senchinshû*, p.166.

Yachitose-tsubaki. (Eternal Camellia), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.306, Ichijima reprint, p.333. Ancient synonym for **Shiratama.**

Yachiyo. (Countless Ages), *(C.japonica)*, JCS., *Tsubaki*, No.12, 1973, p.8 illustr. 29, description, p.15: A medium size, 8-9 cm across, soft pink single of 7-8 irregular petals, opening flat with a large higo-like centre of stamens mixed with pink petaloids. Flowers mid-season. Leaves 10-11 cm long x 4.5 cm wide, suddenly acute, edges strongly wavy, rough serration, venation reticulate, concave. Yabu camellia lineage. Originated in Yatsuo-machi, Toyama-ken, Japan by Kirino,

Shûhô. For colour photos see: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.450; Seibundô Shinkôsha, 1979, *Senchinshû*, pp. 152, 253.

Yachiyojishi. (Eternal Lion), Himuro, 1982, *Murasuzume:* White striped rose, large, anemone form. Originated in Kanagawa Prefecture, Japan. A seedling of **Kyôkarako**. See *Japan Camellia*, 1983, No.22, p.67.

Yae-amagashita. (Double Universe), *(C.japonica)*, Nakayama, 1851, *Senka'ô-den*, 1st ser. vol.5: Red, semi-double with white variegation. Originated in Japan. (Believed extinct.) Different readings: 'Yae-amegashita-tsubaki', 'Yaye-amagashita-tsubaki'. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.79.

Yae-arare. (Double Hailstone), *(C.sasanqua)*, McCaskill's Gardens Nursery Advert., SCCS, 1950, vol.12, No.3, p.18. Nuccio's Nurseries Catalogue, 1951-1952, p.15: White, edged pink, large double. Imported from Japan by Domoto Nurseries, Hayward, California, USA. For illustration & descriptions see p.347, Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III. Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.16. Chinese synonym: 'Bachongsan'.

Yae-asukagawa. (Double Asuka River), *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.273: Miniature size, deep red, formal double with clear, white spots. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.121. (Believed extinct.)

Yae-bachizuri. (Double Flower with Drum Stick-like Pattern), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.177, 374: Medium size, semi-double with 4-5 rows of petals; white with pink shadings and red streaks. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.145; ibid, 1963, No.4, p.109. Originated in Japan. (Believed extinct.)

Yae-boshi. (Double Star). *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*. Small, formal double red flower with a few white spots. Originated in Japan. Different reading 'Yae-hoshi'. (Believed extinct.)

Yae-chirimen. (Double Crêpe), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.160: Deep red, rose form double, 2-3 rows of irregular petals, medium size. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.106. (Believed extinct.)

Yae-chirimen. (Double Crêpe), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.333: Deep red, large double with 4-5 rows of petals. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.140. Thought to be the same as above. Originated in Japan. (Believed extinct.)

Yae-chirimen. (Double Crêpe), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.583: Medium size, red, semi-double with 2 rows of long strap-like petals with a tall centre of stamens and red and white petaloids. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.141. Originated in Japan. (Believed extinct.)

Yaegaki. (Double Hedge), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* Hamamatsu, 1825, *Setsuyô Kikan*, vol.23. Semi-double, embracing petals, pink ground with red stripes. Flower form resembles 'To-tsubaki' (as *C.reticulata)*. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.78. Originated in Japan. (Believed extinct.)

Yaegaki. (Double Hedge), *(C.japonica)*, Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* White, semi-double in 3 rows with red speckles and spots, cylindrical stamen cluster. See: JCS, 1969, *Tsubaki*, No.7, p.28. Originated in Japan. (Believed extinct.)

Yae Gasimi. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.245. Corruption of Japanese name **Yae-gasumi.**

Yae-gasumi. (Double Mist), *(C.sasanqua)*, Ashizawa, 1898, *Chabaika Taishû:* Large size, semi-double, white with pink graduation towards petal edge. Chûgai Nursery Catalogue, 1935: Petals are

oblong and irregularly notched. Stamens close grouped, filaments light yellow, anthers dark yellow. Leaves glossy green, elliptic, 5 cm x 2 cm; apex acute, bases cuneate. An upright but weak grower. Early flowering. Wada. 1941, *Garden Treasures of Japan*, p.32: Semi-double white flushed with red. Very large. Originated in Kantô area, Japan. Imported from Japan by McIlhenny, Avery Island, Louisiana, USA. Corruption of name 'Yae Gasimi'.

Yae-gasumi. (Double Mist), *(C.japonica)*, Fendig, 1953, *American Camellia Catalogue:* A medium size, pink, complete double. Mid-season flowering. Originated in Japan. Chinese synonym: 'Bachongxia'.

Yaegenji. (Double Genji), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* Large double, light coloured flowers with red spots. The margin of the corolla is white. Originated in Japan. This variety is said to still exist. See: JCS, 1983, *Tsubaki*, No.22, p.131 and ibid, 1969, No.7, p.28.

Yae-goromo. (Double Coat), *(C.japonica)*, Himuro, 1982, *Murasuzume:* Deep rose, semi-double with a peony centre. Originated in Kanagawa Prefecture, Japan. Different reading: 'Yaye-goromo'. A seedling of **Aki-no-yama.**

Yae-ha-hatsushi. (Double Loose Ends), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.133: Apricot pink fading to light pink at petal edges. Semi-double with 3 rows of petals. Medium sized. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.103. (Believed extinct.) Different reading: 'Yae-hashi-hatsushi'.

Yae-hakikake. (Double Bespattered), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1968 pl.243: Small, semi-double, white with pink areas and red streaks, 3 rows of petals. Central stamen column, white filaments. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû.* No.4, p.117. Originated in Japan. (Believed extinct.)

Yae-hakuzuru. (Double White Crane). *(C.japonica)*, *Nagoya Chinzu'e*, owned by Usami, Naohachi, (ca.1910). For this see: Asai, Keitarô, 1965, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.6, p.126: White double, medium size. Resembles **Matsuga'e** if not the same. (Believed extinct.) Originated in Japan.

Yae-hashi-hatsushi. Different reading for **Yae-ha-hatsushi.**

Yae-hime. (Double Princess), *(C.japonica)*, Minagawa, 1959, *Shinsen Chinkashû:* Deep pink. Medium size, rose form double with 4 rows of large, round, overlapping petals and a centre of a few petals mixed with 2-3 small, erect petals. Leaves glossy mid-green, lanceolate, apex acuminate, recurved, strongly serrate. Originated in Japan. For colour photos & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, p.204, pl.120; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.87; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.195 & p.315; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.152, 252. Sport: **Chûbu-tsurikagari.** Synonym: 'Chûbu-moshio'.

Yae-hiryû. (Double Scarlet Dragon), *(C.sasanqua)*, Nihon Shokubutsu Kaisha Ltd. Catalogue, 1912-1913, p.28: Medium size, red, double. Originated in Japan. Synonym for **Hiryû.**

Yae-hitoe. (Double Wild Camellia), *(C.japonica)*, Hamamatsu, 1828, *Setsuyô Kikan;* Nakayama, 1851, *Senka'oden.* Description not seen. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.79. Originated in Japan. (Believed extinct.)

Yae-iroyoshi. (Double Fine Coloured), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.29: Large, deep red, semi-double with 3 rows of irregular shaped petals. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.136. Originated in Japan. (Believed extinct.)

Yae-isahaya. (Double Isahaya), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.660: Deep red with white spots, large, rose form double with 4 rows of petals. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.151. Originated in Japan. (Believed extinct.)

Yae-jikkô. (Double 'Jikkô'), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.154, colour photo, p.252, description: Deep red, medium size, anemone form double with 2 rows of rounded guard petals and a small, compact centre of petalolds. Leaves lanceolate, mid-green, apex acuminate, recurved, shallowly serrate. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.265 with colour photo; English translation p.187. A sport of **Benikarako** ('Jikkô') from the Enshôji Temple in Yamato-Kôriyama City, Nara Prefecture, Japan. Named and released by Ikuo Nishihata in 1960.. Different reading: 'Yae-nikkô'.

Yae-jishi. (Double Lion), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.216: Deep scarlet with white spots, medium size, incomplete double with two rows of petals. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.113. Originated in Japan. (Believed extinct.)

Yae-jishi. (Double Lion), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.365: Light red with paler petal margins, rose form double with 5-6 rows of petals with irregular edges. Thought to be the same as above. Originated in Japan. (Believed extinct.)

Yae-jishi. (Double Lion), *(C.japonica).* Monk Hôrin's Diary, 1645, *Kakumeiki.* No description. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.47. Originated in Japan. (Believed extinct.)

Yae-jishi. (Double Lion), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.446: Dark crimson with white markings, large, open, incomplete double peony form. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.140. Thought to be the same as pl.216. Originated in Japan. (Believed extinct.)

Yae-kara-tsubaki. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.56. Synonym for **Kara-tsubaki.**

Yae-kikyô. (Double Chinese Bell Flower), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Medium size, medium cherry coloured petals in 3 rows, disordered stamens. JCS, 1969, *Tsubaki*, No.7, p.28. Originated in Japan. (Believed extinct.)

Yae-kingyo-tsubaki. (Double Fish Tail Camellia), *(C.japonica)*, Inazawa Nursery Co. Ltd. Catalogue, 1986-1987, p.8, A-411: Red, double flower with multi-apical leaves of mid-green. Originated in Japan.

Yae-kumagai. (Double Kumagai), *(C.japonica)*, Izu Ôshima, 1980, Hawaii Botanic Gardens List, p.18. No description. Originated in Japan.

Yae-matsukaze. (Double, Wind in Pines), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.588, 597: White semi-double with red striping. Medium size. Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* White with a pink cast, medium size, semi-double with red streak. Stamens in a bamboo whisk form. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, pp.154, 156; JCS, 1969, *Tsubaki*, No.7, p.28. Originated in Japan. (Believed extinct.)

Yae-matsushima. (Double Pine Island), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.566: Red with white spots on outer petals, small, full peony form flower. No stamens visible. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.149. Originated in Japan. (Believed extinct.)

Yaemomi. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.66. Corruption for **Yae-momiji.**

Yae-momiji. (Double Maple), *(Japonica)*, Iwasaki, 1829, *Honzô Zufu*: This flower has many white petals with red dapples. See: JCS, 1981, *Tsubaki*, No.20, p.110. Originated in Japan. (Believed extinct.)

Yae-myôjô. (Double Morning Star), *(C.sasanqua)*, Itô, Ihei, 1695, *Kadan Chikinshô:* Red with white dots, 3-4 rows of petals. Originated in Japan. (Believed extinct.)

Yae-naniwa. (Double 'Naniwa'), *(C.sasanqua)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Pinkish white, pink petal edge, single, medium size flower. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.81. Originated in Japan. Naniwa is the old name for Ôsaka. (Believed extinct.)

Yae-nikkô. Different reading for **Yae-jikkô.**

Yae-sazanka. (Double Sasanqua). *(C.sasanqua)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.647: White, small, single with 7 pointed petals. In spite of its name, the illustration shows a single flower. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.147. Originated in Japan. (Believed extinct.)

Yae-shibori. (Dappled Double), *(C.japonica)*, Mizuno, 1681, *Kadan Kômoku:* Large, spotted. See: JCS, 1965, *Tsubaki*, No.5, p.29. Originated in Japan. (Believed extinct.)

Yaeshide. (Name obscure), *(C.sasanqua)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô*, vol.344; Ichijima reprint, p.571: Medium size, double pink with 6 or 7 red petaloid stamens protruding from the centre. A tidy one. Originated in Japan. (Believed extinct.)

Yae-shirakumo. (Double White Cloud), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.168: Pale pink with white blotched, medium size, double, or white with red streaks. Early flowering. Originated in Japan. (Believed extinct.)

Yae-shirakumo. (Double White Cloud), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô:* Light coloured double, large size, scattered opal stripes. Petals with white edges. Kasuya, Kamegorô, 1859. *Tsubaki Irohanayose Irotsuki*. Originated in Japan. Incorrectly read as 'Yabana-shirakumo'. (Believed extinct.)

Yae-shiratama. (Double White Gem), *(C.japonica)*, Yokohama Gardeners' Association Catalogue, 1891 as 'Yayeshiratama': A complete double, white ball. Originated in Japan.

Yae-shiratama. (Double White Gem), *(C.japonica)*, Minagawa, 1933. *Chinkashû;* Tuyama. 1966, *Camellia Cultivars of Japan*, pl.60. description p.106: White, semi-double blossoms, wide outside petals, channelled. curved and standing apart, medium to large size. Stamens few and small. Leaves wide-ovate to obovate. medium size, sharply serrate, venation inconspicuous. Blooms mid-season. Plant habit is spreading. Originated in Angyô, Saitama Prefecture, Japan. It has the same name as the Tôdaiji **Yae-shiratama** but is a different cultivar. It resembles **Ginsekai.** Synonym: 'Abundance'. Corruptions: 'Yai Shiratama', 'Yaeshirodama'. Different reading: 'Yaye-shiratama'. See: Seibundô Shinkôsha, 1979. *Senchinshû*, p.252.

Yae-shirodama. Fendig, 1953, *American Camellia Catalogue.* Corruption for the Japanese name **Yae-shiratama.**

Yae-shiro-wabisuke. (White Double-formed Wabisuke). (Wabisuke). *"Camellias in Kurume"*, ICS Congress, Kurume 2010, p.128. No description. From Chubu area, Japan.

Yae-shokkô. (Double Chinese Red), *(C.japonica).* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Double, sake cup shape with streaks. See: Kyôto Engei Kurabu. 1964, *Tsubaki Tokushû*, No.5, p.79. Originated in Japan. (Believed extinct.)

Yae-some. (Double Dyed), *(C.sasanqua)*, Shirai-Bunko. 1789, *Shoshiki Hanagatachô:* Deep red. semi-double. large. See: Kyôto Engei Kurabu. 1964, *Tsubaki Tokushû*, No.5, p.82. Originated in Japan. (Believed extinct).

Yae-wabisuke. (Double Wabisuke), *(C.sasanqua).* Nakamura, Tsuneo, Seibundô Shinkôsha, 1965, *Tsubaki to Sazanka.* p.90; Tuyama. 1968, *Cultivars of Japan*, pl.406, p.206, description, p.210: Leaves broad-elliptic, undulate, margins crenate. Flowers semi-double. very small, rose (China rose 024/1), petals channelled, slightly wavy. Early blooming. Cultivated for many years in the garden of the Reikan Temple, Sakyô-ku, Kyôto-shi, Japan. Although called 'Double Wabisuke' it is closer to *C.sasanqua*. Synonym: 'Chirihime' according to Andoh 1971.

Yae-wabisuke. (Double Wabisuke), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.152, colour photo. p.252, description: A white with rare marks of pink, 6-7 rows of petals, irregularly imbricated. Petals emarginate, opening vase-shaped. Leaves dull, mid-green, lanceolate apex acuminate, base cuneate, conspicuous venation. Originated in Kansai, Japan. Although the name translates as 'Double Wabisuke' it is a *C.japonica* (Yabu Tsubaki).

Yae-yama. (Name of Islands), *(C.hozanensis)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.192, colour photo and description: Small size, deep red, wide-campanulate single with 5 broad, rounded emarginate, overlapping, slightly reflexed petals and a stamen column with pinkish filaments joined for lower third and bright yellow anthers, ovary hirsute. There occasionally appears Wabisuke type degenerate stamens. Leaves wide-elliptic, glossy mid-green, apices acute, margins shallowly serrate. Blooms early to mid-season. Originated in Iriomote Island, Yaeyama, Okinawa Prefecture, Japan in a *C.hozanensis* community. Collected and named by Shûhô Kirino, released by Takeo Ogawa in 1980.

Yae-yukibeni. (Double Red Snow), *(C.japonica)*, Itô, Toku'emon, 1788, *Tsubaki Hanagata Tsuki Obo'echô:* White with red spots, double with 8 rows of petals. Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* Pinkish white with red spots, double. Originated in Japan. (Believed extinct.)

Yae-yukitsubaki. (Double Snow Camellia), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.259, p.131, description, p.169: Leaves ovate or ovate-oblong, base rounded, venation impressed, margins crenate. Flowers anemone form, outer petals deep red (Cardinal red 822/1), central mass strongly variegated white. Outer petals 5-6, largest 4.5 cm long x 2.9 cm broad; inner petals and petaloids 17-28, obolanceolate, thinly stalked, small fan-shaped, red, variegated white, intermingled with a few fertile stamens, filaments cadmium yellow. Late blooming. Found in the wild at Shiritaka-yama, Kanazawa-shi, Ishikawa Prefecture, Japan. It was originally named *Camellia rusticana* var. *kagomontana* by Prof. Genkai, Masamune.

Yagi-tsubaki. (Yagi Camellia), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.308. No description. Originated at Yagi village, Shimofusa Province, Japan. (Believed extinct.)

Yagorô. (Personal Name), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.235: Red fading to soft pink at petal edge. Small, urn-shaped single. Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.116. Originated in Japan. (Believed extinct.)

Yagumo-dachi. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.171. Different reading for **Yakumo-tatsu.**

Yagura. (Personal Name), *(C.japonica)*, *Tsubaki Byôbu*, owned by Hirayama, Toku'o, (late 17th century). No description. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.48. Originated in Japan. (Believed extinct.)

Yagura-tsubaki. (Tower Camellia), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.666: White, small, with the appearance of a semi-double with a second tier like a single type bloom

arising from the centre. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, 152. Originated in Japan. (Believed extinct.)

Yahagi. (obscure), *(C.japonica)*, Itô, Ihei, 1695. *Kadan Chikinshô*, #169: Large, light coloured flower. The corolla is thick and wide in shape. See: Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki* as: Double in 4 to 5 rows. Other descriptions are similar. See: JCS, 1969, *Tsubaki*, No.7, p.28. Originated in Japan. (Believed extinct.)

Yahata. (Eight Flags), *(C.japonica)*, ICS., Apr. 1990. *Japanese Camellia Cultivar List*, p.25: Medium size fading white, formal double. Blooms mid-season. Originated in Okayama Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.268 with colour photo; English translation p.188. Palest pink, slender petals. Leaves elliptic, medium size, flat. Upright, vigorous growth. Collected and named by Seiichiro Sasai, released by Nobuo Sasai in 1976.

Yai Shiratama. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.245. Corruption of the Japanese name **Yae-shiratama.**

Yakko. (Clown), *(C.japonica)*, *Encyclopedia of Camellias in Colour*, vol.I, 1972, p17, p.41, description. p.292; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.153, 253: Red, single, opening cup-shaped, medium size to large, 6-7 large, rounded, overlapping, emarginate petals, some waved; stamen cylinder, compact, broad, anthers yellow. Leaves mid-green, lanceolate-elliptic to broad- lanceolate, apex acuminate, margins serrate to shallowly serrate, lightly waved. Originated in Kansai area, Japan. The original tree is in the Reigan Temple, Sakyôku, Kyôto.

Yakôhai. (Luminous Wine Cup), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.25: Medium size, dark red, long tubular single. Long keeled petals. Blooms mid-season to late. Originated in Kôbe-shi, Hyôgo Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.266 with colour photo; English translation p.187. Spreading growth. A natural seedling of Chôchidori, named by Kiyoshi Tarumoto in 1985, released by Kuraji Iino.

Yakumo. (Personal Name), *(C.japonica)*, Yokoyama & Kirino,,1989, *Nihon no Chinka*, p.236, colour photo and description: Medium size, rose-pink with vague white blotches, wide-campanulate single with 7 petals in two rows, wide, rounded, emarginate and overlapping. A central column of stamens with pinkish filaments, joined for the lower third, anthers bright yellow. Leaves elliptic, mid-green, apices acute, margins shallowly serrate. Blooms mid-season to late. Originated in Matsu'e City, Shimane Prefecture, Japan. Named and released by Takeshi Ishitobi in 1978. Note: The name refers to the famous novelist Lafcadio Hearn, who lived in Matsu'e-shi and whose Japanese name was Koizumi, Yakumo.

Yakumo-dachi. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, p.66. Different reading for **Yakumo-tatsu**.

Yakumo-tatsu. (Eight Clouds Rising), (*C.japonica*), Sakuden, 1630, *Hyakuchinshû.* Classified as a changeable camellia. Pink. Large, double. Originated in Japan. Different readings 'Yagumo-dachi', 'Yakumo-dachi'. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.114. (Believed extinct.)

Yakushibeni. (Red Yakushi), (*C.japonica*), Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.230 with black & white illustration: Large size, light red, open, incomplete double peony form with stamens dispersed among small, irregular centre petals. Leaves deep-green, broad-ovate, apex acute, slightly recurved, margins serrulate. Originated in Kurume City, Fuku'oka Prefecture, Japan. See colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, p.152. Note: 'Yakushi' is the name of a Temple and also the name of the Buddha of healing.

Yakushima-ringo-tsubaki. (Apple Camellia from Yakushima). *(C.macrocarpa). Kurume Camellia*, 1997, English translation, p.32. Small, crimson single. Large fruit with thick walls. Flowers mid-season.

Yakushi-murasaki. (Purple Yakushi), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.230: Dark purple red, large, formal double. Originated in Kurume City, Fuku'oka Prefecture, Japan.

Yakushi-no-mai. (Dance of the Buddha of Healing), (*C.japonica*) JCS., 1986, *Japan Camellia,* No.22, p.4: Originated in the Nagano Prefecture, Japan as a seedling of **Asuka.** The flower has linear variegation of dark red on light red. Double, large flower with petals somewhat reflexed. Blooms mid-season. Plant habit, spreading with pendant branches.

Yakushima-tsubaki. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.66 & ibid, 1970, No.10, p.171. Japanese group name for *C.japonica* var. *macrocarpa* Masamune. Synonyms: 'Ringo-tsubaki', 'Oumi-tsubaki', *C.hayaoi.* See: JCS, 1972, *Encyclopedia of Camellias in Colour,* vol.I. p.272.

Yalan. (Refined Orchid). *(C.reticulata). Collected Papers,* 1994, Jan.8-11; International Symposium on Camellia Chrysantha, p.176 – "Selecting and Breeding new varieties of *C.reticulata*": Tiered type with 18-20 petals in 3-4 radiate rows; looks like an orchid. Petals long, narrow and spoon-shaped. Margins darker pink, inner parts light pink. Size 7-8 cm across. Stamens few, singly or severally from the base of inner petals. Pistil degenerate and divided to the base. Blooms mid-season to late. Leaves ovate, 7.2-9 cm long x 3-4.3 cm wide, forming a Vee-shape. Originated in China.

Yamabiko. (Mountain Echo), (*C.japonica*), Itô, Ihei, 1695, *Kadan Chikinshô,* vol.I, #77; Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* Medium size, peony, convex shape, flowers red with white line like a paper cord. See: JCS, 1969, *Tsubaki,* No.7, p.34. Originated in Japan. (Believed extinct.)

Yamadera-tsubaki. (Mountain Temple Camellia), (*C.x vernalis*): Nagoya Camellia Society Bulletin, 1984, Tsubaki No.17: Discovered by Hikozo, Hayashi, at the Jihô-in Temple, Utsumi, Chiba Peninsula, Chiba Prefecture, Japan. "Jihô" is also called "Yamadera". Small to medium sized, fluted single with slightly incurved petals and cylindrical stamen tube. Thick, glossy petals. Its colour is scarlet, resembling *C.x vernalis* **Hiryû.** Young branches and mid-ribs are hairy and ovary pubescent. Leaves are sasanqua-like, elliptic and wavy. Vigorous grower. Blooms early to late.

Yamaga-no-yuki. (Country House in the Snow), (*C.rusticana*), Tuyama, 1968, *Camellias of Japan,* pl.156, p.78, description, p.134: Leaves broad-elliptic, apex acute ending in a blunt tip, venation impressed, 5.7-8.5 cm long x 3.3-4.7 cm wide; petiole 6-7 mm long, hairy. Flowers single, rosy red (Rose opal 022-022/1), emarginate, a little wrinkled. Petals 6-8, the largest 5.2 cm long x 4.5 cm wide. Stamens shortly cylindrical, filaments cadmium yellow with a nuance of pink. Blooms mid-season to late. Originated at Togashi-shinbô, Kanazawa-shi, Ishikawa Prefecture, Japan.

Yamagasumi. (Mountain Haze), (*C.japonica*), Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.81, colour photo and description: Medium size, pale pink, cup-shaped single of 6-7 wide, rounded, emarginate petals, somewhat reflexed and irregular in size, with a central stamen column, filaments white, joined for the lower half, anthers bright yellow. Leaves elliptic, deep green, thick, reflexed, apices tapering acuminate. Blooms early to mid-season. Originated in Chûbu area, Japan. A natural seedling, parentage unknown. Originated and released by Harukazu Sakuragi in 1982.

Yamagata Number 1. (*C.rusticana*), Adachi, 1960, *Camellia. Its Appreciation & Artistic Arrangement,* as 'Yamagata No.1', [p.19], colour photo: Medium red single with deep red veining. 5-6 large, rounded, cordate petals. Leaves dark green, elliptic, apex acuminate, margins crenate. Originated in Yamagata, Japan. Note: This group of Adachi camellias No.1 - 7 are provisional

names for *C.rusticana* gathered in Yamagata Prefecture by Mr Adachi. As far as is known no other names have been attached to them. nor have they been commercially propagated.

Yamagata Number 2. (*C.rusticana*), Adachi, 1960, *Camellia. Its Appreciation & Artistic Arrangement* as 'Yamagata No.2', [p.20], colour photo: Medium size, pink veined red, open peony form. Leaves broad-ovate, mid-green, margins serrate. Originated in Yamagata, Japan.

Yamagata Number 3. (*C.rusticana*), Adachi, 1960, *Camellia. Its Appreciation & Artistic Arrangement* as 'Yamagata No.3', [p.25], colour photo: Medium size, red with fine veining of deeper red, formal double. Leaves light green, blunt acute apex, shallowly, widely crenate margins. Originated in Yamagata, Japan.

Yamagata Number 4. *(C.rusticana),* Adachi, 1960, *Camellia. Its Appreciation & Artistic Arrangement* as 'Yamagata No.4', [p.34], colour photo: White with light pink streaks and crimson splashes, semi-double of 9-10 petals with stamens shortly cylindrical. Originated in Yamagata, Japan.

Yamagata Number 5. *(C.rusticana).* Adachi, 1960, *Camellia. Its Appreciation & Artistic Arrangement*, as 'Yamagata No.5', [p.35], colour photo: Soft pink, single with lemon coloured stamens cluster. Originated in Yamagata, Japan.

Yamagata Number 6. *(C.rusticana),* Adachi, 1960, *Camellia. Its Appreciation & Artistic Arrangement* as 'Yamagata No.6', [p.351, colour photo: Roseate white with occasional crimson stripe, semidouble with 3 rows of petals and small stamen cluster. Originated in Yamagata, Japan.

Yamagata Number 7. *(C.rusticana),* Adachi, 1960, *Camellia. Its Appreciation & Artistic Arrangement* as 'Yamagata No.7', [p.39], colour photo: Variable from pale pink with white margins and red streaks of self red, semi-double to rose form double, occasionally showing rare, sterile stamens when fully open. Leaves yellowish green, broad-ovate, apex blunt acute. Originated in Yamagata, Japan.

Yamaguni. (Place Name). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.48 with colour photo; Small to medium, pale pink single, tubular form. Tubular stamen ring. Flowers early to late. Leaves ovate, medium size. Upright growth. Found in Yasuki City, Shimane Pref., Japan, in 2005. Released by Sayama, named for an old document, Izumo Fudoki.

Yamaji. (Name of the Owner's Store), *(C.japonica),* Seibundô Shinkôsha, Apr. 1976, *Garden Life,* p.48; ibid, 1979, *Senchinshû*, p.253: Pale red, anemone form, small, mid-season blooming. Leaves small. long-ovate, undulate, mid-green. Plant habit upright and vigorous. Originated in Kagawa Prefecture, Japan as a seedling of **Bokuhan**. Named after the owner's store by Saneichi Koyama.

Yamaji. (Mountain Path), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.153, colour photo, p.253: Different characters to **Yamaji** above. Pale peach pink, semi-double with long oval petals, some emarginate. Leaves dark green, oval, apex acuminate, margins finely, shallowly serrulate, petioles hirsute. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.307. A mutation of **Tashiro**. Originated with a private family in Mure Town, Niigata Prefecture, Japan. Named and released by Kaoru Hagiya in 1973.

Yamakawa. (Possibly a Personal name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.36: Medium size, rose form double, red with white markings; 6-7 rows of petals, cylindrical stamen cluster. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.140. Originated in Japan. (Believed extinct.)

Yamamba. *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.306. Different reading for **Yama-uba.**

Yamamichi. (Mountain Way), *(C.japonica), Tsubaki Byôbu*, owned by Hirayama, Toku'o, (late 17th century): No description. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.48. Originated in Japan. (Believed extinct.)

Yama-momiji. (Mountain Maple). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.194 with colour photo; Medium size single, tubular to trumpet shape, small stripes and sprays of red on pale pink ground. Tubular stamen ring. Flowers early to mid-season. Leaves ovate, slightly waved. Upright, vigorous growth. Parentage unknown. Originated by Takashi Shiota, Ishikawa Pref., Japan, named and released in 2005.

Yamamori. (Mountain Keeper), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô*, vol.I, #78: Small, convexed, pink flower with some white spots, centre petaloids erect and white coloured. Originated in Japan. (Believed extinct.)

Yamamoto Murasaki. (Yamamoto's Murusaki), *(C.japonica), Japan Camellia* 99, May 2013, p.3 with colour photo, JCR Regn 2013-6, (ser. No.6); Selected from natural seedlings. Single, purplish, tubular, medium size, early blooming. Originated by Naoyuki Yamamoto.

Yamamusume. (Mountain Maiden), (Wabisuke), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.158, colour photo and description: Small size, red, campanulate single with 5 rounded, oval, overlapping petals and a central column of degenerate stamens with pinkish filaments and white anthers. Leaves, slender, elliptic, glossy mid-green; apices tapering acute, margins serrate. Blooms early to mid-season. Originated in Matsu'e, Shimane Prefecture, Japan. Named and released by Takeshi Ishitobi in 1978.

Yamanami. (Vein of Mountain Ore), *(C.rusticana), Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.381, p.156, description, p.253: Very pale pink, medium size, semi-double with oval, emarginate petals in 3 rows and a somewhat irregular central stamen cluster, anthers and filaments yellow. Originated in the Niigata Prefecture, Japan.

Yamanashide-benten. (Benten from Yamanashi), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû*, vol.5: Round, margined leaves, irregularly edged and variegated yellowish. White flower with red spots, single. A 'Benten' type camellia, originated in Kansai area, Japan. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.167. (Believed extinct.)

Yamanashi-benten. Synonym for **Yamanashide-benten.**

Yamanashi-benten-tsubaki. (Benten from Yamanashi), *(C.japonica),* Katayama, 1957, *Tsubaki Ochabana:* Flower red, single, medium size; leaves variegated. Originated in the Kansai area, Japan.

Yamanashi-benten. (Benten from Yamanashi), *(C.japonica),* Hantei, Kinta, 1827, *Sômoku Kihin Kagami.* Description not seen. Thought to be synonym for **Yamanashide-benten** in the *Sômoku Kinyôshû.* See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.160. (Believed extinct.)

Yamanashi-suishô. Synonym for **Yamanashide-suishô.**

Yamanashide-suishô. (Yamanashi Crystal), *(C.japonica),* Mizuno, 1829, *Sômoku Kinyôshû*, vol.5: A camellia with white variegated round leaves. Thought to be synonym for **Suishô-tsubaki** in *Sômoku Kihin Kagami.* See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.163. Originated in Japan. (Believed extinct.)

Yamane-kotobuki. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.269 with colour photo; English translation p.189. Small, tubular to trumpet shaped single, large and small white mottles on deep red ground, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, small, somewhat reflexed. Upright growth, slender branches. A cultivar raised

by a private family in Ôzu City. Named and released by Ôzu Camellia Enthusiasts Club in 1975. From Ehime Prefecture.

Yama-no-kami-tsubaki. Nagoya Camellia Society Bulletin, 1984, *Tsubaki*, No.17. Synonym for **Chita-awayuki.**

Yam-no-kamo-usu-hassuku. Nagoya Camellia Society Bulletin, 1984, *Tsubaki*, No.17. Synonym for **Chita-awayuki.**

Yamanoi. (Mountain Spring), *(C.japonica)*, Yashiro, Kôken, 1798, *Kokon Yôrankô*, vol.309; *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.458: Large, semi-double, roseatte white with red streaks; 11-13 long oval petals with a tall cylinder of stamens with white filaments. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.144. Originated in Japan. (Believed extinct.) Orthographic error: 'Yama-no-ri'.

Yamanoi-kasuri. (Variegated Mountain Well), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.124: White with a rare patch of red. Small, urn-shaped, semi-double. Originated in Japan. (Believed extinct.)

Yama-no-ri. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.66 as 'Yama-nori'. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.102. Orthographic error for **Yamanoi.**

Yama-no-uta. (Mountain's Song). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.269 with colour photo; English translation p.189. Small to medium size, vermilion, tubular to bowl shaped single, cylindrical stamen cluster. Flowers mid-season to very late. Leaves elliptic, medium size, waved. Upright, vigorous growth, dense branches. Selected from wild japonicas in Kinosaki Town, Hyôgo Prefecture. Named and released by Minoru Satô in 1968.

Yama-no-yuki. (Snow on the Mountain), *(C.japonica)*, Yashiro, Kôken, 1841, *Kokon Yôrankô*, vol.310. Description not seen. Originated in Japan. (Believed extinct.)

Yamaro-Midori. Ghisleni, 1982, *Le Camellia*, p.188. Corruption of the Japanese name **Yamato-midori.**

Yamasakura. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.172 as 'Yama-sakura'. Different reading for **Yamazakura.**

Yamasan. (Obscure), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.25. No description. Originated in Kurume City, Fuku'oka Prefecture, Japan.

Yamashiro. (Place Name), (*C.sasanqua*), Itô Jukyû, 1739, *Honzô Hanamaki'e.* Large white, single with long, narrow petals. Originated in Japan. (Believed extinct.)

Yamataka-ainofu. Synonym for **Yamatakade-ainofu.**

Yamatakade-ainofu. (Yamataka's Marble Variegation), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû* in section on marble-like variegated leaves. Large rounded leaves with pointed apices. 'Ai-no-fu' is an obsolete expression for 'marble-like variegation' and Yamataka is the person who originated the variety in Japan. Flowers red, double, large. Different readings: 'Yamataka-hazama-no-fu', 'Yamatakade-hazamano-hu'. Synonym: 'Yamataka-ainofu'. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.164. (Believed extinct.)

Yamatakade-hazanano-hu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.172. Different reading for **Yamatakade-ainofu.**

Yamataka-iro-age. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.172. Synonym for **Yamatakade-iro-age.**

Yamataka-tsubaki. Watananbe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*,p.10, p.172. Synonym for **Yamatakade-tsubaki**.

Yamata-kagami. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Yamato-kagami.**

Yamataka-hazama-no-fu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.172 as 'Yama-takade-hazamano-hu'. Different reading for **Yamatakade-ainofu.**

Yamatakade-iro-age. (Yamataka's Dyeing), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû* in the section on yellow variegated leaves. Resembles **Sabashide-chaga'eshi**. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû.* No.7, p.166. Originated in Japan. (Believed extinct.) Different reading: 'Yamataka-iro-age'.

Yamatakade-tsubaki. (Yamataka's Camellia), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû*, in the section on white variegated leaves. Narrow, long leaves, glossy green, waved. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.166. Originated in Japan. (Believed extinct.) Synonym: 'Yamataka-tsubaki'.

Yamate Pink. *(C.vernalis)*, Takayuki Tanaka et al., 1987, *American Camellia Yearbook*, p.11, "Studies on origin of *Camellia x vernalis.* Date of origin, 1957. No description. Originated in Japan.

Yamato-beni. (Japan Red), *(C.japonica)*, Saitama Botanic Gardens Catalogue, 1960; Katayama, 1960, *Tsubaki Ochabana:* Red. Medium size, single. Blooms mid-season. Originated in Japan. Note: 'Yamato' is a central province in Japan, south of Kyôto, now the Prefecture of Nara. It is also the name used for all of Japan by the ancient literate.

Yamato-beni. (Japan Red), (Higo), Kita, Tsune'o, Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.80: Large size, single, red flower. Higo type stamens. A sport of **Yamato-nishiki.** Originated in Kumamoto Prefecture, Japan.

Yamato-botan. (Japanese Peony), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.63: Orange red with colour fading towards the petal edge. Medium size, irregular, incomplete peony form. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.94. Originated in Japan. (Believed extinct.)

Yamato-botan. (Japanese Peony), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.450: Dark crimson. Large, peony form with 5-6 rows of petals with stamens scattered through the last 3 rows. Originated in Japan.

Yamato-botan. (Japanese Peony), *(C.japonica)*, Hamamatsu, 1825, *Setsuyô Kikan;* Yashiro, 1841, *Kokon Yôrankô* vol.309: Double red, cylindrical stamen cluster. Originated in Japan. (Believed extinct.)

Yamato-chasen. (Japanese Tea Whisk), *(C.japonica)*, Hamamatsu, 1825, *Setsuyô Kikan:* No description. Originated in Japan. (Believed extinct.)

Yamato-gasuri. (Japanese Splashed Pattern), *(C.japonica)*, Seibundô Shinkôsha, 1979 *Senchinshû*, p.153, colour photo, p.253: Roseatte white with red streaks and flecks; medium size, semi-double with 3 rows of irregular sized petals, stamens very few, central. Leaves dark, glossy green, elliptic, apex acuminate, margins shallowly serrate. Originated in Kansai, Japan. Resembles: **Ezo-nishiki.**

Yamato-hime. (Japanese Princess), *(C.rusticana)*, Minagawa, 1960, *Chinkashû:* Clear, soft pink, peony form. Round, concave petals in 4-5 open rows with stamens interspersed, visible when fully open. Blooms mid-season to late. Leaves large, dusky green, impressed venation, reflexed, wide-obovate. A seedling of **Hototogisu,** originated in Kantô area, Japan by Hirosuke Minagawa.. See colour photos & descriptions: *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.364 & ibid, vol.II, 1978, pl.423; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.154, 253.

Yamato-hime. (Japanese Princess), *(C.x vernalis)*, Tanaka et al., Sept.1986. 'Cytogenetic Studies of the Origin of *C.x vernalis'*, *Journal of the Japanese Society of Horticultural Science*, vol.55, No.2, pp.208, 211: Small single red, with united stamens and leaves 5.5 cm long x 2.4 cm wide. A triploid member of the vernalis group. Hakoda, JCS., 1987, *Tsubaki*, No.26, p.51. ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.42: Small size, single, crimson. Originated on Sado Island, Niigata Prefecture, Japan, where the original tree still survives. Released by Ôoka Chinju'en Nursery in the late 1970s.

Yamato-homare. (Japanese Glory), *(C.japonica)*, Saitama Botanic Gardens Price List, 1960, No.219. No description seen. Originated in Japan.

Yamato-jishi. (Japanese Lion), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.225: Red. Formal double with some short white streaks on centre petals. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.115. Originated in Japan. (Believed extinct.)

Yamato-kagami. (Japanese Mirror), *(C.sasanqua)*, Chûgai Nursery 1935-1936, p.26: Crimson variegation. Medium size. Originated in Japan. Corruption of name: 'Yamata-kagami'.

Yamato-kasuri. (Japanese Splashed Pattern), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.702; Hamamatsu, 1825, *Setsuyô Kikan:* Dark red with some fine white lines. An urn-shaped single of 6-7 petals. Small. Originated in Japan. Different reading of 'Yamato-gasuri' is used for the Kansai camellia of the similar name characters. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.157. (Believed extinct.)

Yamato-kasuri. (Nara's Splashed Patterns). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.268 with colour photo; English translation p.189. Medium size, red vertical stripes on white and pink grounds, semi-double, occasionally anemone. Flowers mid-season to late. Leaves elliptic to narrowly elliptic, medium size, flat. Upright growth, not strong. Selected from plantings in Yamayo-kôriyama City, Nara Prefecture. Named and released by Ikuo Nishihata in 1965.

Yamato-midori. (Japanese Verdure), *(C.sinensis)*, Kondô, 1978, *International Camellia Journal*, No.10, p.64 as 'Yamato-Midori'. No description. Source, Ackerman (1971). Originated in Japan. Corruption of name: 'Yamaro-Midori'.

Yamato-nishiki. (Brocade of Old Japan), *(C.sasanqua)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Large single, red streaks on a pink ground. Nihon Shubyô Co. Catalogue, 1910: Pink with deep red veining; single. Blooms mid-season. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.82. Some old trees survive in the Kantô and Chûbu areas.

Yamato-nishiki. (Brocade of Old Japan), *(C.x vernalis)*, Minagawa Catalogue, 1885: Flower pink with red and white streaks, single, small. See colour photo & description: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.560, pp.218, 392: Small size, pink, veined deeper with whitish streaks, single of 5 irregular petals with incurved apices and a central stamen cluster with yellow anthers. Leaves elliptic, margins serrate, dull green. Originated in Japan.

Yamato-nishiki. (Brocade of Old Japan), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hangatachô.* Single, flat. Streaks and flecks. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77. Originated in Japan. (Believed extinct.)

Yamato-nishiki. (Brocade of Old Japan), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* White striped pink with rich stamens. Very large. Chûgai Nursery Catalogue, 1935-1936, p.25: Purplish crimson variegation on white, single. Hiratsuka, 1964, *Higo Camellia*, p.34 and back p.4; Tuyama, 1968, *Camellias of Japan*, pl.338, p.171, description. p.190: Higo camellia. Leaves ovate-elliptic to narrowly ovate, cuspidate-acuminate at the apex, coarsely crenate-serrate margins; petiole glabrous. Flowers single, 11 cm across, 6-8 petals, white, striped in deep rosy red (Carmine 21). Stamens uniformly scattered. Late flowering. Originated in Kumamoto

Prefecture, Japan. Different readings: 'Nihon-nishiki', 'Nippon-nishiki'. Synonyms: 'Yamato-nishiki'(Higo), 'Higoyamato-nishiki'. Corruptions of name: 'Yomato-nishiki', 'Yamoto-nishiki', 'Yamato-Nishiti'. Mutations: **Shinonome, Kuni-no-hikari, Yamato-beni.** For colour photos see Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* pl.159 and Adachi, 1960, *Camellia. Its Appreciation & Artistic Arrangement,* p.54; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pp.81, 311; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.125, 241; Yokoyama & Kirino, 1989, *Nihon No Chinka.* p.287 as 'Higo-yamato-nishiki'. In China under the Chinese synonym 'Dahejin', this cultivar has produced two sports; a white named 'Baidahejin' and a pink, 'Fendahejin', synonym for **Shôwa-no-hikari.** Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.418; Chinese synonym 'Feihou Ribenjin'.

Yamato-nishiki-beni. (Red 'Yamato-nishiki'), *(C.x vernalis),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu:* Self red type of **Yamato-nishiki.** Originated in Kantô, Japan.

Yamato-nishiki-boshi. Different reading for **Yamato-nishiki-hoshi**.

Yamato-nishiki (Higo). Stone, Vi, 1983, SCCS., *The Camellia Review,* vol.45, No.2, p.21. Synonym for **Yamato-nishiki.**

Yamato-nishiki-hoshi. (Spotted 'Yamato-nishiki'), *(C.x vernalis),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu:* White spotted flower of **Yamato-beni.** Different reading: 'Yamato-nishiki-boshi'. Originated in Kantô, Japan.

Yamato-nishiki Rose. McIlhenny 1937, *600 Varieties of Camellia,* p.6. Synonym for **Shôwa-no-hikari.**

Yamato-Nishiti. Ghisleni, 1982, *Le Camelie,* p.192. Corruption of the Japanese name **Yamato-nishiki.**

Yamato-sangai. (Three Tiered 'Yamato'), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969; Iwasaki, 1828, *Honzô Zufu:* Red, medium size double, hose-in-hose, three tier flower, white with spots on the outer petals. Thought to be the same as **Iroteruyama** in *Hyakuchinshû,* (1630), and **Akayamato-sangai** in the *Kadan Chikinshô,* (1695). Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.121; ibid, 1964, No.5, p.148. (Believed extinct.)

Yamatozome. (Japanese Dyed), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Deep red double. lotus shape. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.77. Originated in Japan. (Believed extinct.)

Yama-tsubaki. (Mountain Camellia), *(C.japonica),* Iwasaki, 1829, *Honzô Zufu*. This grows in the mountains to a height of 20 feet. Leaves are thick, round and serrate. It flowers in winter. The flower has 5-6 crimson petals with a central cylindrical stamen column with white filaments. Originated in Japan. Described as a synonym for 'Chih-chu-cha' (**Zhizhu Cha**) in *Honzô Kômoku Keimô.* Synonym: 'Yabu-tsubaki' (Bush Camellia). See: JCS, 1981, *Tsubaki*, No.20, p.100; Tuyama, 1966, *Camellia Cultivars of Japan*, p.6.

Yama-uba. (Old Woman of the Mountain), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.306 as 'Yamamba': White. Medium semi-double with 3 rows of petals, a flat flower, central stamen column with white filaments. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.137. Originated in Japan. (Believed extinct.)

Yamaya. (Place name), *(C.rusticana),* Satomi, 1956, *Camellia Varieties in Japan:* Pink with a purplish cast, medium to large size. A vigorous, compact plant. Originated in Japan. Different reading 'Sanya'.

Yamayuri. (Mountain Lily), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.175, colour photo and description: Medium size, deep red, campanulate single with 6-7 long-oval,

channelled, emarginate petals, irregular in length, with a central stamen column, pinkish filaments and small, yellow anthers. Leaves mid-green, elliptic; apices acuminate, margins shallowly serrate, branches pendant. A seedling of 'Kujaku-tsubaki' (**Hakuhan-kujaku**). Late blooming. Originated in Kansai area, Japan. Originated by Toshiaki Kosaki in 1977, named by Tôhei Takahashi.

Yamazaki-Ohnishiki. (*C.sasanqua* Higo type). *Collected Papers*, ICS Congress, Kurume 2010, p.33 as 'Yamazaki-Ohnishil', "Introduction of Higo-sasanqua, Takayuki Tanaka". Single flower with red margin, 7-11 petals, 89-122 stamens. Leaves 6.3 cm x 2.7 cm. Originated in Japan.

Yamazaki-sanshoku-tsubaki. (Yamazaki's 3 Coloured Camellia), *(C.japonica)*, JCS., 1973, *Tsubaki*, No.12, p.5, coloured photo, pl.17 & p.12: Pink, irregularly bordered white, striped red, medium size, 8 cm across, formal double. Colour pattern variable. Mid-season blooming. Leaves broadobovate, 9 cm x 5 cm, suddenly acute. Originated from the gardens of Kakogawa City, Hyôgo Prefecture, Japan from a tree 4 meters high and 120 years years old by Yamazaki Tarô.

Yamazakura. (Mountain Cherry), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.I, #88; Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* The corolla is white and imbricated like that of a chrysanthemum. Medium size. Originated in Japan. Different reading: 'Yamasakura'. (Believed extinct.)

Yamazakura. (Mountain Cherry), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.578: White with pink patches and crimson streaks. Medium size, open, peony form. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.164,. Originated in Japan. (Believed extinct.)

Yamoto-nishiki. Vanderbilt, 1940, *Camellia Research* p.8. Corruption of the Japanese name **Yamato-nishiki.**

Yan Yang Tian. *(C.japonica), Collected Papers*, ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.47; Red gem pendent group; Red flower, cupped corolla.

Yanagiba. (Willow Leaf), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.154, p.77, description, p.133 as 'Yanagi-ba': Leaves narrowly elliptic, thin, undulating, apex long acuminate, glossy mid-green, acutely serrulate margins, venation impressed, 6-7 cm long x 2.5 cm wide; petiole 6-7 mm long, very hairy. Flowers single, not widely opened, red (Currant red 821/3). Petals 5-8, emarginate; stamen column spreading at apex, filaments light cadmium yellow. Blooms midseason to late. Originated in the wild at Kami-sasahara, Toyama Prefecture, Japan.

Yanagiba-sazanka. *(C.salicifolia)*, Tuyama, 1968, *Camellias in Japan*, pl.418, p.212, description, p.213; Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.19: Densely branching, branchlets subpendulous, slender. Leaves narrowly oblong-elliptic, gradually acuminate to a blunt tip, shallowly serrate, upper surface shortly hairy, lower surface villose; petioles densely villose. Flowers very small, white, bracteoles and sepals light green, lanceolate, villose; petals ovate, apex obtuse, strongly recurved. Mid-season flowering. The common name for *Camellia salicifolia* Champ. ex. Benth., 1851.

Yanagiba-wabisuke. Tuyama, 1966, *Camellia Cultivars of Japan. Encyclopedia of Camellias in Colour*, 1972, vol.I, p.362; Seibundô Shinkôsha, 1979, *Senchinshû*, p.238. Synonym for **Hatsukari** as **Shôwa-wabisuke.**

Yanagi-no-kaze. (Wind in the Willows), *(C.hybrid)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.31: Very small size flower. light pink, campanulate single. Late blooming. Seedling of *C.japonica* **Aki-no-yama** x *C.cuspidata.* Originated in Niigata Prefecture, Japan. Named and released by Kaoru Hagiya in 1984.

Yanagi-tsubaki. (Willow Camellia), *(C.japonica)*, Hamamatsu, 1825, *Setsuyô Kikan.* No description. Originated in Japan. (Believed extinct.)

Yanaota. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the NZ *C.japonica* **Otahuhu Beauty.**

Yang Chia Tsao Tao Hung . Fang, 1930, *Diannan Chahua Xiaozhi*. Different reading for 'Yangjia Zaotaohong', synonym for **Zaotaohong.**

Yangenjiao. Gao & Zhuang, 1989, *The Camellia in China*, p.54, No.350, Colour photo No.208. Chinese reading for the Japanese **Iwane-shibori.**

Yangfei. Savige, 1986, *International Camellia Journal*, No.18, p.113. Synonym for **Yangfei Cha.**

Yangfei Cha. (Imperial Concubine Yang's Camellia), *(C.japonica)*, Wang, 1621, *Qunfangpu;* Fang, 1930, *Diannan Chahua Xiaozhi* lists a camellia cultivar as 'Zui Yangfei' (Intoxicated Yangfei) as peach red, early flowering. The outer row consists of 8 large petals and the centre has the most (petals). Originated in China. Synonyms: 'Yangfei', 'Zui Yangfei', 'Yangquifei', 'Yangfei Shancha' 'Quifei Cha', 'Guifei Zuijiu'. Different reading: 'Yang-fei Ch'a'. Japanese reading: 'Yôkihi'. See colour photo, [p.124], Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.73 as 'Guifei Zuijiu'.

Yang-fei Ch'a. Different reading for **Yangfei Cha.**

Yang-fei Shan-ch'a. Wang, Shimao, 1587, *Xue Pu Za Shu.* Wang, 1935, *Kuang Chun Fangpu.* Reprint from 1708 edition. (Qunfangpu, 1630). Different reading for 'Yangfei Shancha', synonym for **Yangfei Cha.**

Yangenjiao. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.48. Chinese synonym for **Iwane-shibori.**

Yangguifei. (Imperial Concubine Yang), Gao & Zhuang, 1989, *The Camellia in China*, p.77, No.581. Chinese synonym for the Japanese *C.sasanqua* **Yôkihi.**

Yanghong Cha. (Rosy Pink Camellia), *(C.japonica)*, Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.91: Rose form double. Plant habit spreading, young branches green. Leaves elliptic, yellowish green, maculate, young leaves purplish green, large, thin, finely textured, curved, cuneate at base, apex short caudate, venation indistinct. Flowers rosy, 7 cm across, petals 60-70 in 8 rows, nearly round. slightly concave at tip, separate or barely connate at base. Buds short heartshaped, greenish-yellow. Blooms early to mid-season. Originated in Hangzhou, China.

Yanghong Xiuqiu. (Carmine Embroidered Ball), *(C.reticulata)*, Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.22: Peony type. Petals irregularly arranged, loosely folded and twisted making a ball-like flower, sometimes intermingled with stamens and petaloids. Crimson. Mid-season. Tengchong. Feng et al., 1986, *Yunnan Camellias of China*, p.80 as 'Yanghongxiuqiu': Leaves broad-elliptic to ovate, apices acuminate to acute, bases bluntly rounded to cordate, conspicuously reclinate in a V-shape. 7.5-9.5 cm. long x 5-6.5 cm wide. Flowers pink (RHS. CC.53D), diameter about 15 cm. Petals more than 19, outer whorls large. slightly rounded. inner whorls curved, rolled and erect. Stamens numerous, divided into fascicles by petals. Pistils mostly rudimentary. Flowers mid-season to late. This cultivar was selected from open pollinated plant of *C.reticulata* Lindl. f. *simplex* Sealy in Tengchong County, China. Different reading: 'Yang-hung Hsiu-ch'iu'. Synonyms: 'Crimson Ball', 'Spinel Pink Ball'.

Yanghonglan. (Water-pink Basket). *(C.japonica)*, Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.227 with colour photo; Originated around Shifang City, Sichuan, China. Flowers carmine-red, anemone form, medium to large. Outside petals broad-round, arranged regularly and tightly, inner small petals semi-erect or clustered, darker veins visible. Leaves dark green, lance shaped and shiny. Compact but vigorous plant. Flowers mid-season.

Yanghongpian. (Pieces of Scarlet), *(C.japonica),* Wang & Yu, 1989, *Camellias,* [p.163] colour photo: Formal double with 10 rows of crimson petals; 8 cm across. Originated in China.

Yang-hung Hsiu-ch'iu. Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.27. Different reading for **Yanghong Xiuqiu.**

Yangjia Zaotaohong. Fang, 1930, *Diannan Chahua Xiaozhi.* (Yang family, early peach red). Synonym for **Zaotaohong.**

Yang Kui Fei. Different reading for 'Yangquifei', synonym for **Yangfei Cha.**

Yangquifei. Chen, 1955, *Guanshan Shumuxue.* Different reading 'Yang-kui-fei', synonym for **Yangfei Cha.**

Yangzhi. (Rouge), *(C.reticulata),* Feng Guomei, 1989 July, Chuxiong Camellia Catalogue: Large size red, open peony form with fascicles of stamens with yellow anthers and irregular waved petals. Leaves elliptic, mid-green; acute apices. Blooms mid-season. Originated in Chuxiong, China.

Yangyu Zhi Die. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.411; Chinese synonym for the Japan *C.sasanqua* **Ageha-no-chô.**

Yanhong. *(C.sasanqua).* ACS, *The Camellia Journal,* Sept. 2009, p.27, Regn. No.2767.; Originated by Yonghong Hu, Jian-Guo Fei and Yali Zhang at the Shanghai Botanical Gardens, China. *American Camellia Yearbook*, 2009, p.120 with colour photo; A cross of **Shishigashira** x **Shinonome,** first bloomed in 1992. Small semi-double flower is 7 cm diameter x 3.2 cm deep. Colour deep red to red (RHS.CC.53A to 53B). 20 petals, with yellow anthers and light yellow filaments. Fragrant. Flower when opening is a rose form double. Dense plant, average growth rate. Flowers early to mid-season.

Yanhong Jiuxin. (Bright Red Nine Hearts), *(C.reticulata),* Chuang, 1959, *Yunnan Shancha Hua.* No description. Originated in Yunnan, China. Different reading: 'Yen-hung Ch'iu-hsin'.

Yanhong Songzike. *(C.reticulata) Fine Camellia Garden, Chuxiong,* 2012, p.24 with colour photo. No details. Photo shows a red rose form double with a small ring of central stamens.

Yanhudie. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.422; Chinese synonym for the New Zealand *C.reticulata* **Brilliant Butterfly.**

Yaniangfungquan. Wang & Yu, 1989, *Camellias*, p.47. Corruption of **Yuangyang Fengguan.**

Yani-shibori. (White Spotted Rouge). *(C.japonica),* Yashiro, Kôken, 1841. *Kokon Yôrankô,* vol.309. No description. Originated in Japan. (Believed extinct.)

Yankouhong. Gao, Jiyin, Ltr, 25 Jun 1990. Chinese synonym for the USA *C.japonica* **Lipstick.**

Yann. *(C.japonica), International Camellia Journal,* 1995, No.27, p.73 by Jean-Claude Rosmann. No description.

Yann Variegated. J & F Thoby, Gaujacq, France, Catalogue, 2009, p.8, as 'Yann Variegata' (incorrect use of latin). Mixed colours, single to semi-double. A virus variegated sport of **Yann.**

Yansongguo. Gao, Jiyin Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica* **Fir Cone.**

Yantongcao. (Colourful Chrysanthemum Petal). *(C.reticulata). Collected Papers,* 1994, 8-11th Jan., International Symposium on *Camellia chrysantha,* p.172; "Selecting and Breeding new varieties of *C.reticulata*": Crimson, rose form double with 30-34 petals in 6-7 rows with petals reducing in size towards the centre. Size 8-10 cm across. Conspicuous veining. Stamens few, singly or severally from the base of interior petals. Pistil degenerate and divided

to the base. Flowers mid-season to late. Leaves thick ovate, 7.5-10 cm long x 3.5-4.5 cm wide; Vee-shape. Originated in China.

Yanzhi. (Rouge), *(C.japonica)*, Fang, 1930, *Diannan Chahua Xiaozhi:* Its colour is rouge red. Different reading: 'Yen-chih'. Orthographic error: 'Yenzhi'.

Yanzhi Dainzu. (Spots of Snow on Rouge), *(C.japonica)*, Gao & Zhuang, 1989. *The Camellia in China*, p.49, No.301. colour photo No.174: Medium size, carmine red with variable white spots. formal double with 5-7 rows of round petals. Leaves mid-green, obovate, waved. Originated in China.

Yanzhilian. (Rouge Lotus), *(C.japonica)*. Wang & Yü, 1981, *Shancha Hua:* A large red, formal double. Chang, Shao Yun. 1987. *Camellias from Zhejiang*, p.95, colour photo [p.142]. There are two camellias of this name the first one is a deep red, formal double of spiralled formation, 9-11 cm across. about 100 small petals, becoming pointed towards the centre. Leaves elliptic to broad-elliptic, mid-green, flat, apex blunt acute. Originated in China. See colour photo, No.156, Gao & Zhuang, 1989. *The Camellia in China*, pp.46, 47.

Yanzhilian. (Rouge Lotus), (*C.japonica*), Savige, 1986, *International Camellia Journal*, No.18, p.113: This is the second camellia of this name. It is a smaller, deeper red, formal double with less petals. which are reflexed, while the leaves have twisted edges. Originated in China.

Yanzhi Mudan. (Rouge Peony), *(C.japonica*, Huang's Nursery Catalogue, Shanghai. 1949: A medium size, red, peony form. Different reading 'Yen-chih Mou-tan'. Originated in China.

Yanzhipian. (Rouge Cosmetic Flakes) *(C.japonica)*, Huang's Nursery Catalogue, Shanghai, 1949: No description. Originated in China. Different reading: 'Yen-chih-pien'.

Yaohuang Weizi. (*C.reticulata* hybrid), China Regn No.54, *China Flowers & Horticulture,* Aug. 2009, No.16, p.50 with colour photo; A seedling of (['WW1' - F1 hybrid of **Suzanne Withers**], x **Honeymoon**) as female parent and **Elaine's Betty** as male parent. Originated by John Wang, Orinda, Calif, USA. Flower white, formal double, 9-10 cm diameter, slightly pink at the margins of the outer petals, apices of inner petals acute and pale yellow. Flower shatters. Late flowering. Plant erect, slow growing. Leaves dark green, elliptic, 10-12 cm x 5-6 cm, flat, base wide cuneate, margin serrate.

Yaohuang Weizi Yellow Wei Lavender. ACS, *Yearbook* 2011, p.17 with colour photo; Valid name plus translation.

Yaoling. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.429; Chinese synonym for the USA *C.japonica* **Tinker Bell.**

Yarai-en. (Yarai Nursery), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû* in the section for marble-like, variegated leaves. Large round leaves. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.164: Pink, single, cup-shape. Originated in Japan. (Believed extinct.)

Yard Pink. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.245: Deep pink, peony form. Originated in USA.

Yasaka. (Place Name), *(C.japonica)*, Okumura, [ca.1810], *Chinka Hin'i.* Description not seen. Originated in Japan. (Believed extinct.)

Yasaka-kasuri. (Yasaka's Variegated), *(C.japonica)*, Mizuno, 1681, *Kadan Kômoku:* White spotted with red. Double. Different reading: 'Yasaka-tobi'iri'. Originated in Japan. (Believed extinct.)

Yasaka-tobi'iri. Different reading for **Yasaka-kasuri.**

Yasashii Haha. (Tender-hearted Mother), *(C.japonica), Japan Camellia* 101, May 2014, p.4 with colour photo; JCR Regn No. 2014-1, (ser No. 14); Selected from natural seedlings in the forest of the Yamamoto estate. Vermilion to red with deep red stripes, Cup-shaped flower, average

diameter 12cm. Very prominent, fat, tubular stamen group with white filaments and yellow anthers. Originated by Naoyuki Yamamoto, found 2007 and studied until 2011 to ensure characteristics stable

Yashichi-moshio. (Yashichi's 'Moshio'), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû* in section on leaves with yellow variegation. Leaves with flecks, flower described as good. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.166. Originated by Yashichi, Japan. (Believed extinct.)

Yashichi-sakuraba. (Yashichi's Cherry Leaved), *(C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû* in section on margined leaves. The young leaves have a bluish margin which becomes white with age. The flower is a white, single with pink stripes. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.166. Originated in Japan by Yashichi. (Believed extinct.)

Yashioji. (Road toYashio), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.152, colour photo, p.253 description: Double, white with pink patches and red streaks and ticks. Medium size, open peony form with fascicles of stamens scattered among smaller, erect centre petals. Leaves long-elliptic, petioles hirsute. Originated in Takada City, Niigata Prefecture, Japan. Named and released by Kaoru Hagiya in 1973. Blooms mid-season.

Yashiro. Different reading for **Yatsushiro.**

Yasohachi. (Old Japanese for Eighty Eight), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.253: The outer petals to midway are peach pink, the inner petals fade to pale pink. Single tubular to campanulate blooms with the stamen column pinched in at the top. Small size. Early blooming. Leaves medium to small, ovate, apex blunt acute, sometimes undulate; petiole hirsute. Habit upright, variable, well branched. Its old name is 'Tsukano Hayazaki' (Tsukano's Early Flowering.) The characters for the number 88 are usually read 'Hachijû-hachi'. Originated in Ishikawa Prefecture, Japan. Named and released by Taku Shiota in 1980.

Yaso-okina. (Eighty Year Old Man), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan:* Medium size, pinkish white. Originated in Japan. (Believed extinct.)

Yasohshima. (Name of Village), *(C.rusticana)*, Tuyama. 1968, *Camellias of Japan*, pl.124, p.62, description, p.124: Leaves dark green, thin, elliptic-lanceolate, shortly acuminate apex, finely serrate margins, 7-8.3 cm long x 2.5-2.7 cm wide; petioles 6-9 mm long, hairy. Flowers semi-double, 10-14 petals, flat, pink (Carmine rose 621/2), emarginate. Stamens in 5-6 fascicles, split by small petals; filaments creamy. Late blooming. Originated in the Yatsuo-machi, Toyama Prefecture, Japan. The name means 'Many Islands' but is the name of a village near Yatsuo-machi. Different reading: 'Yasojima'. Yasojima. Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.172. Different reading for **Yasohshima.**

Yasumiko. (Female Name), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.152, colour photo, p.253, description: Soft pink with a touch of white frosting on an odd petal, opening vase-shaped, 6-8 petals. Stamens in a large central cylinder, yellow anthers, white filaments. A very small bloom. Early flowering. Leaves, small, broad-elliptic, undulate. Petioles hirsute. Originated in Katsuyama-shi, Fukui Prefecture, Japan. Named and released by Tokuji Ôoka. See p.109, Yokoyama & Kirino, 1989, *Nihon no Chinka.*

Yasuda-benten. (Variegated Leaves from Yasuda), *(C.japonica)*, Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki* in the sector on variegated leaves. No description. See: JCS, 1969, *Tsubaki*, No.7, p.37. Originated in Japan. (Believed extinct.)

Yasurai. (*C.japonica*), Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, p.210: Dark red, Medium size, double. Mid-season blooming. Originated in Japan.

Yasuriba. (Rasp Leaf), (*C.japonica*), Nuccio's Nurseries Retail Price List, 1987-1988, p.29: Small grey-green leaf with reddish new growth. Very coarse foliage, almost like sandpaper. Very compact, upright and bushy. Very rarely, if ever, flowers but interesting for its foliage. Imported to USA from Japan by Nuccio's Nurseries. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.267 with colour photo; English translation p.187. An 'Apple Camellia' seedling from Yakushima Island. Named and released by Takashi Tsuyama in 1975.

Yatesi. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.220, p.69. Chinese synonym for the USA *C.reticulata* **Graem Yates.**

Yatsugashira. (Many Heads), (*C.japonica*), Tuyama, 1968, *Camellias of Japan,* pl.219, p.111, colour photo, p.155, description: Leaves elliptic, light green, very shortly acuminate apex, margins minutely serrulate, venation impressed, 4.6-6.8 cm long x 1.9-3.2 cm wide. Flowers with 3-6 heads, including a central one, deep rose (Carmine 21/1 to 21/2), petals, 23-29, inner petals often larger than the outer ones, erect with irregular lobulation of margins. Stamens grouped 2-5 in a circle, each accompanied by several large petals. Pistil central with about 6 twisted, unequal stylar arms of pale greenish yellow, split to the base. Blooms mid-season to late. Originated at Hosono, Shirohata-machi, Toyama Prefecture, Japan.

Yatsu-hana-shirakumo. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.l72. Different reading for 'Yabana-shirakumo' in *Kokon Yôrankô* reprint, vol.306, p.339, as a corruption for **Yae-shirakumo** in *Kadan Chikinshô*, 1695.

Yatsuhashi. (Place Name), (*C.japonica*), Itô, Ihei, [before 1750], *Hyakka Tsubaki Nayose Irotsuki:* Pale red single. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Large size, single, pale pink with flecks, spreading stamens. See: Tuyama, 1968, *Camellias of Japan*, Appendix p.14; JCS, 1969, *Tsubaki*, No.7, p.28. Originated in Japan. (Believed extinct.)

Yatsuhashi. (Place Name), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* White speckled pink. Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement*, p.66: Leaves very broadly elliptic, apex acuminate, margins crenate. Flowers white to pink, thinly or thickly striped with red in varying degrees of shade with small notations among the stripes. Petals thin, curved at apex, 10 cm across with 6 petals and about 160 yellow stamens in a circle. Blooms mid-season to late. See: Hiratsuka, 1964, *Higo Camellia,* p.38 & back p.14. Seibundô Shinkôsha, 1979, *Senchinshû*, p.153, colour photo. Originated in Kumamoto Prefecture, Japan.

Yatsuhashi. (Place Name), (*C.sasanqua*), Itô, Ihei, 1695, *Kadan Chikinshô:* Purplish red, medium size, semi-double. Originated in Japan. (Believed extinct.)

Yatsuhashi (Chûbu). (Place Name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.267 with colour photo; English translation p.188. Medium size, vertical stripes of red on white ground, flat single, semi-apricot stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size, twisted. Somewhat spreading growth. An old camellia from Aichi Prefecture, parentage unknown.

Yatsumine-no-tsubaki. (Camellia from Eight Ridges), (*C.japonica*), Yashiro, 1841, *Kokon Yôrankô*, vol.306, 307; Ichijima reprint, pp.333, 351. No description. Originated in Japan. (Believed extinct.)

Yatsunomiya. (Eight Shrines), (*C.japonica*), *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.700: White with dark crimson streaks. Small, campanulate single. Originated in Japan. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.156. (Believed extinct.) Synonym: 'Hachinomiya-tsubaki'.

Yatsuo. (Place Name), (*C.japonica*), *Encyclopedia of* Camellias in Colour, vol.II, 1978, pl.321, p.135, description, p.245; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.152, 253: White. Small size,

single with 5-6 creped and irregular petals; stamen cluster light yellow, somewhat spreading. Leaves mid-green, lanceolate-elliptic, apex long acuminate, strongly serrate, recurved. Dwarf growth. Originated in Yatsuo-machi, Toyama Prefecture, Japan. Named and released by Shûhô Kirino in 1968. See p.61, Yokoyama & Kirino, 1989, *Nihon no Chinka.*

Yatsuo-nishiki. (Yatsuo Brocade), (*C.rusticana*) Tuyama, 1968, *Camellias of Japan*, pl.381, p.194, description, p.203: Leaves pale green to green, elliptic to oblong, apex shortly acuminate or acuminate-cuspidate, venation impressed, margins depressed-crenate, 6.4-9.4 cm long x 3.2--5.5 cm wide. Flowers rose form double, opening to open peony form, white or palest pink, thinly striped deep rose (Spinel red 0023). Petioles very hairy. Outer petals 14-19, inner petals 8-16. Stamens in two concentric circles, each circle subdivided into 4-6 groups, filaments creamy. Blooms mid-season to late. Originated in Mr Urano's garden, Ogura, Shinbô-mura, Toyama Prefecture, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.153, 253; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.337. Synonym: 'Shibori-hôju'.

Yatsuo-no-ka. (Fragrance of Yatsuo), (*C.rusticana*), Watanabe, 1960 Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.66; ibid, 1970, No.10, p.172. No description. Fendig, 1953, *American Camellia Catalogue* erroneously as 'Yatsuo-no-tsubaki': White variegated red, single. Originated in Toyama Prefecture, Japan. Orthographic error: 'Yatsuo-no-tsubaki'.

Yatsuo-no-tsubaki. (Camellia from Yatsuo), *(C.japonica)*, Yashiro, 1841, *Kokon Yôrankô*, vol.306, Ichijima reprint, pp.332, 333. Originated in Japan. (Believed extinct.).

Yatsuo-no-tsubaki. Fendig, 1953, *American Camellia Catalogue.* Apparently based on an error for the final character. Erroneous reading for **Yatsuo-no-ka.**

Yatsushiro. (Place Name), *(C.japonica)*, Itô, Ihei, 1695, *Kadan Chikinshô*, vol.II, #96: Large, double, deep red flower. It is said that the colour is so strong that it can be seen through the paper it is wrapped in. Almost all the early Japanese lists of the 18th Century list this name. Itô, Jukyû, 1739, *Honzô Hanamki'e;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki*, vol.322. The *Chinka Zufu* carries illustrations of three different camellias with this name. See: JCS, 1983, *Tsubaki*, No.22, p.123; ibid, 1969, No.7, p.28. (Believed extinct.) Different reading: 'Yashiro'.

Yatsushiro. (Place Name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.227: Red with the colour fading to the petal margins. Small, semi-double. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.115. (Believed extinct.)

Yatsushiro. (Place Name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.595: Deep red, fading to petal edge. Large, semi-double with 2-3 rows of irregular petals. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.152. (Believed extinct.)

Yatsushiro. (Place Name), Itô, Toku'emon, 1788, *Tsubaki Hanagata Obo'echô; Chinka Zufu*, (before 1700), Watanabe, 1969, pl.454: Crimson. Medium size, rose form double with 4-5 rows of imbricated petals. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.150. (Believed extinct.)

Yau. (Night Rain), (Higo), Yoshimura, 1963, *Higo Tsubaki Meikan*, No.7: Light pink streaked deeper pink, occasionally with white spots, 9 cm across with 6-8 petals and large, circular stamen cluster. Originated in Kumamoto Prefecture, Japan.

Yawata. *Chinka Zufu*, (before 1700), Watanabe, 1969; Hamamatsu, 1825, *Setsuyô Kikan.* Different reading for **Hachiman-tsubaki.**

Yawata-shibori. Mizuno, 1681, *Kadan Kômoku.* Different reading for **Hachiman-shibori.**

Yawata-tobi-iri. Mizuno, 1681, *Kadan Kômoku.* Different reading for **Hachiman-kasuri.**

Yawata-tsubaki. Andoh, 1984, *International Camellia Journal*, No.16, pp.46, 49. Synonym for **Hachiman-tsubaki.**

Yaye-goromo. Himuro, 1982, *Murasuzume.* Different reading for **Yae-goromo.**

Yaye-hiryû. Different reading for 'Yae-hiryû', synonym for **Hiryû.**

Yaye-amagashita-tsubaki. Joshua Condor, 1893, *Landscape Gardening in Japan*, p.117. Synonym for **Yae-amagashita.**

Yayoi. (Month of March in Lunar talendar), *(C.japonica)*, Tuyama, 1968, *Camellias of Japan*, pl.85, p.43, description, p.11: Leaves ovate to ovate-elliptic, apex shortly acuminate, margins crenate- serrulate, venation impressed, 5.5-7.6 cm long x 2.3-4.4 cm wide. Flowers single, not widely opened, petals 4-6, pale pink; stamen cylinder slender, filaments pale creamy. Blooms late. Originally located growing wild in Kiso-dani, Kanazawa-shi, Ishikawa Prefecture, Japan.

Yayoi. (March in Lunar Calendar), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.261, colour photo and description: Medium size, white with pink and red streaks, wide-campanulate single with 5 ovate, fluted, somewhat reflexed petals and broad stamen column with white filaments, joined for the lower third and bright golden anthers. Leaves deep glossy green, ovate; apices acute, margins serrate. Blooms early to mid-season. Originated in Kumamoto Prefecture, Japan. Note: Not the same as Tuyama's 'Yayoi'.

Yazhi. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the English *C.japonica* **Elegans.** Other synonyms in China for this cultivar are 'Chahua Shangren' and 'Juxing Meihing Manao'.

Ye Ming Zu. (Evening Glow Pearl. (*C.reticulata* hybrid) ACS, *Yearbook* 2012, p.57 with colour photo; Large to very large, no parentage given. Photo shows a loose anemone form flower with a mixed centre of petaloids and golden stamens. Colour is white washed with light pink. Petals waved. Originated by John Wang, Orinda, Calif., USA.

Yeamans Hall. *(C.japonica)*, ACS, *The Camellia Journal*, June 2006, p.28 as 'Yeamani's Hall', colour photo p.29 as 'Yeamans' Hall', Reg. No.2676. A chance seedling that first flowered 1992. Originated by Sam Borom, propagated by Coastal Carolina Camellia Society, Mt. Pleasant, S.C., USA. The 10 cm diameter, formal double flower is shell pink with darker pink striping. Falls in one piece. Flowers early to late. *American Camellia Yearbook*, 2006, p.66 with colour photo; Plant is upright and dense with average growth rate. Dark green leaves are 11.5 cm x 3.8 cm. SCCS, *Nomenclature Supplement*, as **Yeamans Hall**.

Yin-fen Mou-dan. Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.26. Different reading for **Yinfen Mudan.**

Yinfen Mudan. (Pink Peony), (*C.reticulata*), Ikeda, 1974, *American Camellia Yearbook, p.*114 as 'Fen-moutan'. No description. Feng et al., 1986, *Yunnan Camellias of China*, p.78 as 'Yinfenmudan': Leaves elliptic-ovate, slightly reclinate on both sides, apices acuminate, bases broad-cuneate, 7.5-10 cm long x 3-4 cm wide. Flowers bright pink (RHS.CC.68A), diameter 11-13 cm. Petals 25-30 in 4-5 whorls, outer whorls flat, inner whorls folded, curved and erect. Stamens numerous, divided into several groups by curved petals. Pistils well developed, very few rudimentary, fertile. This is a new cultivar selected from seeds of 'Zaotaohong' by researchers in the Kunming Botanical Garden. It is a vigorous grower with bright pink flowers. Early blooming. Different reading: 'Yin-fen Mou-tan'. Synonyms: 'Pink Peony', 'Spinel Pink Peony', 'Fenmoutan'.

Yinfen Mudan. (Pink Peony), (*C.japonica*), Gao, Jiyin, Apr.1990; CSC., Nomenclature Convention, Wuxi City, Jiangsie, China: Rose-form, large, silver pink, a few gold anthers sparkle in the sunlight. Dark green leaves. Blooms mid-season to late, Originated in Liangyungang City, Shandong Province, China.

Yinfeng. *(C.japonica), Chinese Camellia Culture,* 2003, p.255 with colour photo; White semi-double with occasional small petals interspersed in a very prominent central group of stamens. Diameter about 10 cm. Flowers mid-season to very late. Originated by Ms Xu Biyu, Flower Gardens of Hangzhou City, China.

Yingchunhong. (Welcome Spring Red), (*C.reticulata*), Yü & Feng, 1958, *Yunnan Shanchahua Tichih.* Feng et al., 1986, *Yunnan Camellias of China*, p.59 with colour photo: Leaves long-ovate, margins of both sides reclinate, apices acuminate, bases cuneate to broad-cuneate, 8-10 cm long x 3.5-5.5 cm. wide. Flowers pink with white spots (RHS.CC.58B), diameter 10-12 cm.

Petals about 19 in 4-5 whorls, obovate, with white spots occupying about half the corolla, sometimes one third, margins slightly undulate. Stamens partly petaloid, a few rudimentary and divided into several groups in the flower centre. Pistils mostly rudimentary, a few well developed and fertile. This is a new cultivar selected from seedlings of **Zaotaohong** by researchers from the Kunming Botanical Garden. Its leaf form is similar to **Zaotaohong** but smaller and the petals have white spots. It is a vigorous grower, well branched and foliated. Early blooming. Different reading: 'Ying-ch'un-hung'. Synonyms: 'Welcome Spring', 'Welcome Spring Red'.

Ying-ch'un-hung. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.24. Different reading for **Yinchunhong.**

Yingdou. (Shadow City), (*C.japonica*), Savige, 1986, *International Camellia Journal*, No.18, p.113: A medium size, incomplete double, densely dotted, stippled and streaked with crimson. Stamens and petals intermixed in the centre. Originated in China.

Yingduo. Gao, Jiyin, Ltr, 30 July, 1990. Chinese synonym for the USA *C.japonica* **Kick Off**. The name of the Chinese synonym for **Kickoff** has since been changed to 'Kaisai'.

Yinghua. (Oriental Cherry Blossom), (*C.sasanqua*), Gao & Zhuang, 1989, *The Camellia in China*, p.77, No.583, erroneously as 'Yin hua': Medium size, 7-8 cm across, cherry red, single of 6-7 petals. Japanese reading: 'Sakuraba'.

Yinghuacha. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.430; Chinese synonym for the species *C.maliflora.*

Yingtaohong. (Crimson Cherry), Gao & Zhuang, 1989, *The Camellia in China*, p.71, No.513. Chinese synonym for the Australian *C.reticulata* **Cherry Glow.**

Yingyupu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.426; Chinese synonym for the USA *C.japonica* **Tama Bambino.**

Yingzhi Baifurong. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.563 as 'Yinzhibaifurong'; Shrub to small tree, branches spaced evenly, grey. Leaves ovate to elliptic, 7-8 cm x 3-4.5 cm, apex acuminate, base broad cuneate, green, matt, thick, main vein prominent, margin occasionally waved, dense and large serrations. Flower hibiscus form, white, 4-5 large outer petals, reddish towards the centre, smaller petals dispersed among the stamens, 10-12 cm diameter. Flowers mid-season to late. From Jiangsu, China.

Yingzhi Fenfurong. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.563 as 'Yinzhifenfurong'; A pink sport of **Yinzhi Baifurong.** Other details the same.

Yingzhi Furong. (Stiff Branched Hibiscus), *(C.japonica),* Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.65: Compact, upright shrub with purplish red new growth. Leaves flat, deep green, elliptic, rather small, petioles purplish red. Flowers semi-double, deep red, 7 cm across with 11 petals in two rows, unsymetrical, margins crimped. Over 100 petaloid stamens,

clustered in the centre, lined with white, basally connate in fascicles. Normal stamens about 50, scattered among the petaloids. Ovaries and styles degenerate. Buds elliptic, green tinted red. Blooms mid-season. originated in Hanzhou, China.

Yingzhi Huafurong. (Stiff Branched Variegated Hibiscus), *(C.japonica),* Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.66: Branches sturdy. Leaves elliptic-lanceolate, venation prominent, margins serrulate, apex caudate, base cuneate, 7.5-8 cm long x 3.2-3.6 cm wide, thin, fine texture. Flowers bright scarlet, velvety, white blotched. Petals 24-26 in 2-3 whorls, in various shapes, basally connate. Stamens normal, 157-166 in 6-7 fascicles, partly clustered in the centre, partly mixed with inner petals. Buds yellowish green, heart-shaped. Blooms mid-season. Originated in Hanzhou, China.

Yinhaixuan. Gao, Jiyin, Ltr, 30 July 1990. Synonym for the USA *C.japonica* **Silver Triumph**.

Yinhe. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the USA *C.cuspidata* hybrid **Milky Way.**

Yinhehua. (Silver Lotus), *(C.reticulata),* Feng et al, 1981, *Yunnan Shancha Hua*, p.17, illustration 25 and in *Yunnan Camellias of China*, 1986, p.42 with colour photo: Leaves oblong to long-oblong, apices acuminate to long-acuminate, bases cuneate, margins very sparsely and shallowly serrate, dark green above, slightly reclinate in a V-shape, blades slightly arched, 9-11.5 cm long x 3.5-4.5 cm wide. Flowers spinel pink (RHS.CC.62B-C), diameter 12 cm. Petals about 22, spatulate. Stamens numerous, divided into 3-4 fascicles among pistils. Pistils mostly rudimentary. Flowers mid-season to late. This cultivar was selected from an open pollinated plant of *C.reticulata* Lindl, f. s*implex* Sealy in Tengchong, Yunnan, China.

Yin-ho-hua. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.24. Different reading for **Yinhehua.**

Yinhong. (Silver Red), *(C.japonica),* Fang, 1930, *Diannan Chahua Xiaozhi.* The colour is a very light red. Originated in China. Different reading: 'Yin-hung'.

Yinhong Diechi. (Spinel Pink Butterfly Wings), *(C.reticulata),* Fang, 1930, *Diannan Chahua Xiaozhi:* The petal shape is like butterfly wings and the colour is siver red. Feng & Yü in 1958 believed this variety to be the same as that grown in Yunnan under the name 'Maye Diechi' which has now been changed to **Maye Taohong.** Xia Lifang, one of the authors of *Yunnan Shancha Hua*, believes that Fang's **Yinhong Diechi** no longer exists and the name has been re-used by the Kunming Botanic Gardens for a new seedling. See following.

Yinhong Diechi. (Spinel Pink Butterfly Wings), *(C.reticulata),* Feng et al, 1981, *Yunnan Shancha Hua*, p.38, illustration 63, description, p.117: Leaves obovate, flat, apices acuminate, margins undulate, 8.5-11 cm long x 3.5-5 cm wide. Flowers spinel pink (RHS.CC.67D), diameter 12-15 cm. Petals about 20 in 3-4 whorls, outer two whorls flat, inner curved and erect. Stamens numerous, divided into several fascicles among curved petals. Pistils mostly fertile. A new cultivar selected from open pollinated seeds at the Kunming Botanical Garden, Yunnan, China. Flowers mid-season to late. See also, Feng et al., 1986, *Yunnan Camellias of China*, p.65, colour pl. Different reading: 'Yin-hung Tieh-ch'ih'. Synonyms: 'Pink Butterfly Wings', 'Silver Red Butterfly Wings'.

Yinhong Juban. Chuang, 1959, *Yunnan Shancha Hua.* Different readings: 'Yin-hung Chü-pan', 'Yinhungtsueban'. Synonym: 'Spinel Pink Chrysanthemum Petal'. Synonym for **Tongzimian.**

Yinhong Shizi. (Spinel Pink Lion), *(C.reticulata),* Feng et al., 1986, *Yunnan Camellias of China*, p.74, colour photo and description as 'Yinhongshizi': Leaves oblong to broad-elliptic, apices acuminate, margins sparsely and shallowly serrate, 9-12 cm long x 4.5-6.5 cm wide. Flowers spinel pink, diameter 11 cm. Petals about 20, outer whorls flat, inner whorls twisted and erect.

Stamens divided into fascicles placed among petals. Pistils not well developed. Flowers mid-season. This cultivar was selected from an open pollinated plant of *C.reticulata* Lindl, f. *simplex* Sealy in Tengchong. Different reading: 'Yinhungshihtzu', 'Yin-hung Shih-t'zu'. Synonym: 'Spinel Pink Lion'.

Yinhua. (Oriental Cherry), *(C.sasanqua).* Gao & Zhuang, 1989, *The Camellia in China.* p.77, No.583: Silvery pink, single of 7-8 cm across, and 6-7 petals. Blooms early. Originated in China.

Yinzhuhong. (Vermillion Lion's Head), *(C.reticulata)*, Yü & Feng, 1958. No description. Originated in China. Different reading: 'Yinchuhung', 'Yin-chu-hung'. Synonyms: 'Vermilion Red', 'Vermilion Lions Head'.

Yipinhong. (First Class Red), *(C.reticulata)*, Ikeda, 1976, *American Camellia Yearbook*, p.141 as 'Pinhung'. No description. Feng et al., 1981, *Yunnan Shancha Hua*, p.61, colour pl. No.100, description, p.125: Leaves long and narrow, oblong to long ovate-lanceolate, apices acuminate and recurved, bases cuneate, margins undulate, reclinate, 7.5-10.5 cm long x 3-4 cm wide. Flowers pink (RHS.CC.58B-C), diameter 12-13 cm. Petals about 20 in 4-5 whorls, both sides reclinate, overlapping to form a radiate form corolla. Stamens numerous, divided into several groups placed in the centre. Pistils mostly rudimentary. This new cultivar selected from seedlings of open pollinated seed by researchers at the Kunming Botanical garden. It has strong growing axillary buds. The cultivar is well-branched and well-foliaged and its flower form is unusual. Blooms mid-season. Different reading: 'I-p'in-hung'. Synonyms: 'Pinhung', 'First Class Red', 'First Class Crimson', 'Superior Red'. See p.91, Feng et al., 1986, *Yunnan Camellias of China* for colour pl.

Yirgella. *(C.japonica)*, ACRS., 1975, *Camellia News*, No.58A, p.9, Reg. No.166: Originated by Sid Campton, Gosford, N.S.W., Australia. A mutation of *C.japonica* **Isabel** found in the garden of Mrs Dottie Stead, Carlingford, NSW, about 1946. The growth habit and blooms are similar to the parent but the leaves are genetically variegated yellow around the margins and green towards the centre. This has further sported to a pink bloom with a white edge named **Geoff Hamilton.**

Yisha. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.418; Chinese synonym for the USA *C.japonica* **Esther Ann.**

Yitena. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.418; Chinese synonym for the Belgium *C.japonica* **Etna.**

Yixiang. (Released Fragrance), *(C.japonica)*, Gao, Jiyin, 1990, CSC., Nomenclature Convention, Wuxi City, Jiangsu, China: Medium size, bright pink, formal double to anemone form, very fragrant. Long, narrow leaves, medium growth. Blooms early to mid-season. Originated in Jiaxing City, Zhejiang Province, China. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.79. From Fujian Province, China. Flowers deep pink, fragrant, peony to rose form double, medium size. Dark green, long-elliptic leaves prominent veins. Flowers mid-season to late.

Yixin Shizitou. Yü & Feng, 1958, *Yunnan Shanchahua.* Different readings: 'I-hsin Shih-tzu-t'ou', 'Yihsinshitzetou'. Synonym: 'Single Heart Lion Head'. Synonym for **Shizitou.**

Yô. (Shine), *(C.reticulata* hybrid*),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.31: Medium to large size, white with red variegations, or pink with red variegations, pine cone form double. A seedling of *C.japonica*, **Juraku** x *C.reticulata* hybrid **Barbara Clark**. Originated in Ôsaka Prefecture, Japan by Shinichirô Kishikawa in 1983. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.280 with colour photo; English translation p.197. Parentage stated to be 'Shûraku' x **Barbara Clark.**

Yoake-no-sora. (Sky at Dawn). *"Sasanquas, The Winter Flowers"* ICS Congress, Kurume 2010, English translation, p.64; Synonym for **Akeyukusora.**

Yoang Imbricata. Franchetti, 1855, *Collezione di Camelie,* p.62. Orthographic error for **Young's Imbricata.**

Yoashuya. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the USA *C.japonica* **Joshua E. Youtz.**

Yobeki-dori. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* A corruption of the Japanese name **Yobukodori,** however the SCCS., *Camellia Nomenclature* has accepted this orthography to separate two different cultivars with the names **Yobukodori** and **Yobikodori.**

Yobiho-Dori. Vanderbilt, 1940, *Camellia Research,* p.8. Corruption of the Japanese name **Yobukodori** or **Yobikodori.**

Yobiki-Dori. Nelson, 1950, *American Camellia Yearbook,* p.36. Corruption of the Japanese name **Yobukodori** or **Yobikodori**.

Yobikodori. (Cuckoo), (*C.japonica*), Chûgai Nursery Catalogue, 1934-1935, p.32: Snow-white, lotus shaped, very large flower. It was imported from Chûgai to the USA by McIlhenny, Jungle Gardens, Louisiana whose description in his 1937 catalogue is 'A very large semi-double, three rows of long, narrow petals standing loosely up and out from the base; stamens in the form of a loose crown with an occasional petaloid. Colour white, stamens ivory, tipped yellow ochre. Slow compact growth. Blooms mid-season.' Corruptions of name 'Yobekodori', 'Yobeho Dori', 'Yokuki-dori', 'Yubuko-Dori', 'Youbiko Dori', 'Yobiki Dori', 'Yobeki-dori', 'Yobiho Dori'. Synonyms: 'The Swan', 'Calling Bird'. Note: SCCS., *Camellia Nomenclature* used the erroneous orthography 'Yokeko-dori' for this cultivar. Also 'Magnoliiflora Alba' has been erroneously given as a synonym, but is, in fact, a synonym for **Miyakodori.**

Yobikodori. Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.173. Different reading for **Yobukodori.**

Yobikodori-Kansai. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.173. Different reading for 'Yobukodori-Kansai', synonym for **Miyakodori.**

Yobikodori-Nagoya. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.173. Different reading for **Yobukodori-Nagoya.**

Yobuki-dori. Nihon Shokubutsu Kaisha Ltd. Catalogue, 1912-1913, p.27. Corruption of the name **Yobukodori.**

Yobukodori. (Cuckoo), (*C.japonica*), Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki,* as one of the three birds with **Miyakodori** and **Inaoi-dori.** Itô, Ko'emon, 1879, *Chinkashû:* Pale pink, small, single. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.90, description, p.150; JCS, 1972, *Encyclopedia of Camellias in Colour*, 1972, vol.I, pl.42, p.297: Pale pink, medium size, single of 5-6, rounded, emarginate petals, waved and crinkled. Stamens in a central column, yellow anthers, white filaments joined for lower third. Leaves elliptic, deep green, apex acute. Originated in Japan. See colour photos & descriptions: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.161, 256; p.90, Yokoyama & Kirino, 1989, *Nihon no Chinka. The* variety that reached USA is a different clone from the Chûgai Nursery. See entry above under

'Yobiko-dori'. The name translates as 'calling nestling' and has often appeared in ancient Japanese poems. It is also the name of the Japanese cuckoo and is one of the famous camellias in Japan of the Edo era. Different reading: 'Yobikodori'. Corruptions of name: 'Yobuku Dori', 'Yobeki-dori', 'Yobiho-dori', 'Yobiki Dori'. See: JCS, 1969, *Tsubaki*, No.7, pp.35, 37.

Yobukodori. (Cuckoo), (*C.sasanqua*), Murayama, Seibundô Shinkôsha, Dec.1971, *Garden Life*, p.16: Flower colour red, Originated in Kumamoto Prefecture, Japan as a Higo-sasanqua.

Yobukodori. Kirino, Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû*, No.10, p.37; Hakoda, JCS., 1987, *Tsubaki*, No.26, p.51. Synonym for the *C.x vernalis* **Omigoromo** (Chûbu) as 'Gaisen'.

Yobukodori-Kansai. (Kansai Cuckoo), Tuyama, 1968, *Camellias of Japan*, pl.41, p.21, description, p.97: This is the same as the **Miyakodori** of the Tokyo district, Leaves lanceolate, recurved, a little plicated along the midrib, petioles glabrous. Petals whitish, narrowly oblong, minutely notched at the apex, folded slightly along the middle line and recurved. Petals subdeciduous. Synonym for Miyakodori. Different reading: 'Yobikodori-Kansai'.

Yobukodori-Nagoya. (Nagoya Cuckoo), (*C.japonica*), Tuyama, 1966, *Camellia Cultivars of Japan*, p.150. Different reading: 'Yobikodori-Nagoya'. Widely cultivated in the Chûkyô district, it has smaller flowers than that of the Tokyo **Yobukodori** and its colour is pink, including some rose colour. It has a small leaf, linear, long-elliptic, like a sasanqua. According to Mr Kiyoshi, Sekiya, this cultivar exists in the Mie and Gifu Prefectures. The name 'Yobukodori' appears in the *Manyôshû* of ancient times and means a parent bird calling for its young or for a lost mate. It is also the name for the Cuckoo. It is also known as 'Yobikodori' and there is another name for it in Western Japan, which is 'Miyakodori'.

Yobuku Dori. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.245. Corruption of the Japanese name **Yobukodori.**

Yodo-asahi. Tateyama Nursery Catalogue, 1957. Same characters as **Yodo-no-asahi.**

Yodo-guruma. (Carriage of Yodo), *(C.sasanqua)*, Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu:* White with pink petal margins, large. Originated in Japan. (Believed extinct.).

Yodo-no-asahi. (Sunrise over Yodo), *(C.japonica)*, Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* Peony form, castilian red mottled white, large. Tuyama, 1968, *Camellias of Japan*, pl.302, p.153, description, p.181: Leaves elliptic to narrowly elliptic, shortly acuminate at the apex, lateral veins slightly elevated, veinlets slightly impressed towards leaf margins, petioles glabrous. Flowers semi-double, deep red (Currant red 821/1), petals widely opened, with small white blotches, subdivided, dense tufts of stamens densely arranged, prominent in the centre. Late blooming. Different readings: 'Yodo-asahi', 'Yodo-no-chôjitsu'. See colour pls & descriptions: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.153 & p.266; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.105; *Encyclopedia of Camellias in Colour*, 1972, vol.I, pl.261, p.329; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.160, 256. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.333. Corruption of name: 'Yodo-no-ashi'.

Yodo-no-ashi. Anderson's Nursery Catalogue, 1958. Corruption of the Japanese name **Yodo-no-asahi.**

Yodo-no-beni. (Red Yodo), *(C.japonica)*, Tateyama Nursery Catalogue, 1957: Red with white horizontal stripes; large, double. Originated in Japan.

Yôgetsu. (Sun and Moon), *(C.japonica)*, Tateyama Nursery Catalogue, 1957: Variegated foliage, medium size yellow spots on blue-green foliage. Flower small, red, single. Originated in Japan.

Yogo-no-umi. (Lake Yogo), *(C.japonica)*, Yokoyama & Kirino, 1989. *Nihon no Chinka*, p.197, colour photo and description: Small size, dark red, wide-campanulate single with 5 broad, overlap-

ping double lobed petals and a stamens column with pinkish filaments, joined for their lower third and bright yellow anthers. Leaves small, slender, elliptic, mid-green, apices blunt acute, margins serrate. Blooms early to mid-season. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.280 with colour photo; English translation p.197. Selected from wild japonicas on the northern shoe of Lake Biwa, Shiga Prefecture. Discovered by Mokichi Tachibana and Takeo Ogawa in 1960s, named and released by Ogawa.

Yoheihaku. Chûgai Nursery Co. Catalogue, 1936-1937, p.25. Different readings: 'Yoheijiro', 'Yoheishiro'. Synonyms: 'Albatross', 'September Morn'. Synonym for **Shirabyôshi.** Chinese synonym: 'Jiuyue Zhichen'.

Yoheijiro. Tuyama, 1966, *Camellia Cultivars of Japan*, pp.114, 136. *Encyclopedia of Camellias in Colour*, 1972, vol.I, p.327; Seibundô Shinkôsha, 1979, *Senchinshû*, p.222. Different reading for 'Yoheishiro', synonym for **Shirabyôshi.**

Yoheijiro-Nagoya. (Yohei's White from Nagoya), *(C.japonica),* Tuyama, 1968, *Camellias of Japan*, pl.48, p.24, description, p.99: Bush camellia cultivar of stout growth. Leaves elliptic or narrowly elliptic, somewhat undulate, with glabrous petioles. White peony flowered with petals irregularly undulated that become more strongly wavy at the centre, with stamens intermingled with the petals. The base of the flower is shaded yellow. Late flowering. This cultivar is often taken as synonymous with **Shirabyôshi** of the Tokyo district, but it is different in floral shape, the leaves being more slender and more shortly acuminate at the apex. An old cultivar of the Nagoya district.

Yoheishiro. *(C.japonica),* Nuccio's Nurseries Catalogue, 1948-1949, p.12, Hertrich, 1954, *Camellias in the Huntington Gardens*, vol.I, pp.366, 369. This is a different reading for 'Yoheijiro', synonymous with **Shirabyôshi.** In Japan 'Yoheihaku' is synonymous with **Shirabyôshi** as listed in Itô's *Chinkashû*, 1879; however this cultivar, as described by Nuccio and Hertrich, is different to 'Yoheijiro': Semi-double to incomplete double, white to faintest blush pink to pale pink, 9 cm across x 5 cm deep. Petals, retuse, sharp, irregular marginal notching, about 15 outer petals, reflexed, firm substance. Centre of flower, curved and folded petals and a few variable petaloids, about a close grouping of short stamens, dark golden anthers, white filaments. Leaves variable, tending to twist and curve, deep-set midrib, 7-8 cm long x 4-4.5 cm wide, dark, glossy mid-green, thin, coarsely serrate margins, apices short acute, venation well defined. Blooms early to mid-season. Note: See Tuyama, 1966, *Camellia Cultivars of Japan,* pp. 144, 471.

Yohshun. Izu-Ohshima, 1980, Hawaii Botanic Gardens List. Different reading for **Yôshun.**

Yoibijin. Nobelius Nursery Catalogue, 1838. Different reading for **Suibijin.**

Yoibijin Alba. Izu-Ohshima, 1980, Hawaii Botanic Gardens List. Different reading for 'Suibijin Alba', synonym for **Kamo-honnami.**

Yoibiniana. Knight's Nursery Catalogue, 1981. Corruption of the Japanese name 'Yoibijin', different reading for **Suibijin.**

Yoichi. Synonym for **Yoichi-tsubaki.**

Yoichi. (Popular male given name in Old Japan), (*C.japonica*), Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.48; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.420, p.169, description, p.259: Light red. Open, incomplete peony form, 11 cm across, with 2 rows of large, flat outer petals and a centre of small erect petals mixed with fascicles of stamens. Some central petals with white streaking. Leaves ovate to broad-ovate, suddenly acuminate apex, serrate margins, sometimes rolled under, dull green. Thought to be a synonym for **Iyotairin.** Originated in the Ehime Prefecture, Japan. Many trees are being grown in Ôzu City. See colour photos: Seibundô Shinkôsha, 1979, *Senchinshû*, p.159. Yokoyama & Kirino, 1989, *Nihon no Chinka*,

p.311. This is one of the 5 big camellias in the Ehime Prefecture. Note: The name refers to Suminokura, Yoichi.

Yoichi. (Popular male given name in old Japan), (*C.japonica*), Hirayama's *Tsubaki Byôbu*, (late 17th century); *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.476: Crimson. Medium size, open irregular peony form double with fascicles of stamens mixed with the centre petals. Originated in Japan. Probably the same as the above.

Yoichi-tsubaki. (Popular male given name in old Japan), (*C.japonica*), Mizuno, 1681, *Kadan Kômoku. Chinka Zufu*, (before 1700), Watanabe, 1969, pl.61: Deep red. Rose form double, 5-6 rows of imbricated petals. Large. Thought to be the same as the above cultivar and as a synonym for 'Suminokura-tsubaki' in the *Hyakuchinshû*, 1630. The name refers to the wealthy merchant Suminokura, Yoichi in the Edo era. Originated in Japan. (Believed extinct.)

Yoichi-tsubaki. Sakuden, 1630, *Hyakuchinshû.* Synonym for 'Suminokura-tsubaki' (**Suminokura**).

Yoigijin. Forrest, 1985, *Trees and Shrubs Cultivated in Ireland.* Corruption of the Japanese name 'Yoibijin', different reading for **Suibijin.**

Yoigokoro. (Being Intoxicated). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.279 with colour photo; English translation p.196. Miniature, lotus-form double, pink graduations on pale pink ground, fragrant, profuse, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, small. Spreading growth. A cross between *C.japonica* 'Kanyô-bukuro' (**Kan'yôtai**) and *C.hiemalis.* Named by Nihon Nôyaku Co., released by Kaoru Hagiya in 1983. From Niigata Prefecture.

Yoihime. (Drunken Princess). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.280 with colour photo; English translation p.196. Miniature, bowl shaped single, pink graduations on pale pink base, scattered stamens, long petioles, profuse. Flowers early to late. Leaves narrowly elliptic, medium size. Spreading growth. A cross between 'Raikôji-shidare' and *C.sinensis* 'ZI'. Named and released by Kaoru Hagiya in 1980. From Niigata Prefecture.

Yoimachi. (Evening Waiting), *(C.sasanqua x C.fraterna), American Camellia Yearbook*, 1982, p.181, Reg. No. 1779: A miniature white marked with pink, single, *C.hybrid (C.sasanqua* **Narumigata** x *C.fraterna),* early flowering; originated by Dr Clifford Parks, Chapel Hill, North Carolina, USA. The 13 year old seedling first flowered 1973. Average flower size is 5 cm across x 2.5 cm deep with about 7 petals, yellow anthers and cream filaments. Plant growth is upright, dense and medium with dark green leaves.

Yoimiya. (Eve of Shrine's Festival), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.159, colour photo, p.255, description: Red with some white streaking on small white centre petals. Medium to large, open peony form bloom with row of large, ovate guard petals, surrounding a mass of small, erect, irregular petals and stamens. Leaves mid-green, broad ovate, apex acute, margins serrulate, recurved. Petioles hirsute. Blooms mid-season. Originated in the Itoigawa-shi, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1970.

Yoinimonsashi. Different reading for **Yoinimonsasu.**

Yoinimonsasu. (Leaves at the Gate at Evening), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Small, single, red, edged deep red, striped very narrow blue lines. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.114. (Believed extinct.) Different readings: 'Yoinimonsashi', 'Yoinomonsasu', 'Shômonsasu', 'Syômonsasu'. Corruption of name: 'Kaminarimon-tsubone'.

Yoi-no-mai. (Dance in Drunkenness). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.279 with colour photo; English translation p.196. Small, bud-centred to lotus-form A chance seedling, creamy white with pink graduation, flared stamens. Flowers mid-season. A cross between 'Gyokuro' and *C.vernalis* **Gaisen.** Named and released by Kaoru Hagiya in 1978. From Niigata Prefecture.

Yoinomonsasu. Heibonsha Colour Shinsho, 1980, *Tsubaki*, Tomita et al, p.127. Different reading for **Yoinimonsasu.**

Yoi-no-myôjô. (Morning Star in the Evening), *(C.japonica),* ICS., Apr. 1990, *Japanese Camellia Cultivar List,* p.25. No description. Originated in the Aichi Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.321; English translation p.241. Medium size, white, tubular to trumpet shaped single, round petals, cylindrical stamen cluster. Flowers mid-season. Leaves elliptic, medium size, flat. Upright, vigorous growth. Parentage unknown, originated and released by Fumio Naitô in 1975.

Yoi-no-tsukasa. (Lord of the Evening), *(C.japonica),* Izu-Ohshima 1980. Hawaii Botanical Garden List. No description. Originated in Japan.

Yoi-okesa. (Evening Folksong), *(C.rusticana),* Uehara Keiji, 1959, *Jumoku Daizusetsu,* vol.III. *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.284, p.122, description, p.240; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.159, 255: Pale pink with fine veining of deeper red and whitish streaking. Small size with narrow serrated petals. Leaves glossy mid-green, ovate, coarsely serrate. Originated in the Niigata Prefecture, Japan. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.115.

Yoi-okesa. (Evening Folksong). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.279 with colour photo; English translation p.196. Miniature, tubular single, white stripes on pale pink to pink ground, petals serrated, cylindrical stamen column. Flowers mid-season. Leaves broadly elliptic, small. Spreading growth, of wild japonica parentage. A cultivar raised at a private family on Sado Island. Collected and released by Tokuji Ôoka in 1972. From Niigata Prefecture.

Yoizuki. (Evening Moon), *(C.japonica),* ICS, Apr. 1990, *Camellia Cultivar List,* p.25. Pink with white base, single, tubular to cup or trumpet shaped. Originated in the Chûbu District, Japan.

Yokawa. (Yoko River), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.15; *Chinka Zufu,* (before 1700), Watanabe 1969, pl.74; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White with pink patches and red streaks. Large open peony form with stamens interspersed through the centre petals. Different reading: 'Yokogawa'. Originated in Japan. See: JCS, 1983, *Tsubaki,* No.22, p.116; ibid, 1969, No.7, p.26, & Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.159. (Believed extinct.)

Yoki Botan. Vanderbilt, 1940, *Camellia Research*, p.8. Corruption of the Japanese name **Yukibotan.**

Yôkihi. (Consort Yôki), *(C.japonica),* Uekiya, ca.1874, *Tsubaki Hyakuro no Zu*, vol.III, No.7; *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.35, 545: White with the faintest blush, medium size single of 5 large, rounded petals and a short stamen column with yellow anthers and white filaments. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.91, & ibid, 1961, No.2, p.124, & 1962, No.3, p.166. (Believed extinct.)

Yôkihi. (Consort Yôki), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô;* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.17: Lilac pink fading to white at petal centre. Medium sized, 5 petalled single with notched oblong petals. Originated in Japan. (Believed extinct.)

Yôkihi. (Consort Yôki), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.513: Large, white, semi-double, petals in 3 rows, irregular margins, a few petaloids among the stamens. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.143. (Believed extinct.)

Yôkihi. (Consort Yôki), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.209, p.106, description, p.151 as 'Yôki-hi': Leaves elliptic to narrowly elliptic, apex tapering acuminate, flat, venation a little impressed, 8.4-9.8 cm. long x 3.2-4.8 cm wide; petioles 7-8.5 mm long, hairy. Flowers widely cup-shaped, rosy red (Crimson 22/1), petals loosely undulate, thick texture, petals 10-13 with 1-8 inner petals, smaller and irregularly lobulate, folded or funnel-shaped. Stamens in 5 fascicles among the petals, filaments deep yellow tinged red, rarely petaloid. Flowers mid-season to late. Originated in the garden of Mr Iwata, Shimbô, Kanazawa-shi, Ishikawa Prefecture, Japan. 'Yôki' was a famous beautiful Emperor's Consort of ancient China; consort 'Yangkee'. See: Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.47.

Yôkihi. (Consort Yôki), *(C.japonica)*, JCS., 1988, *Japan Camellia*, No.27, p.13 with colour photo: Small size, soft pink with thin, irregular white edge. Campanulate single, opening cup-shaped with 5 broad, rounded, embracing petals, slightly reflexed. Central stamen column, yellow anthers, white filaments joined for lower third of their length, plant habit drooping. See colour photo p.268, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated in Tabira-chô, Hirado, Nagasaki Prefecture, Japan with a private family. Collected and named by Hisashi Hirado in 1985..

Yokihi. *(C.sasanqua). Sasanqua,* Shanghai Municipal Gardens, 2007, p.81 with colour photo; Red single with long narrow petals slightly reflexed. Sprayed stamen centre.

Yôkihi. Hakoda, JCS., 1987, *Tsubaki*, No.26, p.51 as 'Yokihi'. Tanaka et al., Sept.1986, *Journal of the Japanese Society for Horticulture Science*, vol.55, No.2, p.208. Synonym for **Gaisen.**

Yôkô. (Sunshine), *(C.japonica)*, Watanabe, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, p.2, black & white photo: Medium pink. Single, opening widely cup-shaped with 6-7 large, over-lapping petals with crinkled edges. Leaves mid-green, broad-ovate to ovate-elliptic, apex acuminate, margins serrulate, reflexed. Originated in Kansai area, Japan. See colour pls & descriptions: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.25, pp.47, 295; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.159, 255.

Yokobu'e. (Flute), *(C.japonica)*, Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.9, A-446: Medium size, dark red, with white moires and thick petals, single. Late season blooming. Good for Chabana. Originated in Jô'etsu City, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1967. Different reading: 'Yokobuye'. See colour photo, p.240, Yokoyama & Kirino, 1989, *Nihon no Chinka.*

Yokobuye. (Flute), *(C.japonica)*, Himuro, 1982, *Murasuzume* as Yokobuye: Different reading for 'Yokobu'e'. Pink fading to white towards the centre. Medium size, peony form double. A seedling of **Tsukimi-guruma.** Originated in Kanagawa Prefecture, Japan.

Yokoehaku. Different reading for **Yokoeshiro.**

Yokoeshiro. (Yokoe's White), *(C.japonica)*, Iwasaki, 1829, *Honzô Zufu*: This flower has many white petals which resemble those of a chrysanthemum. Originated in Japan. (Believed extinct.) Different reading: 'Yokoehaku'.

Yokogawa. Itô, Ihei, 1695, *Kadan Chikinshô*, vol.I: Different reading for **Yokawa.**

Yokogawa-shibori. (Yokogawa Variegated), *(C.rusticana)*, Minagawa, 1933, *Chinkashû* in section on early blooming. No description. Tuyama, 1968, *Camellias of Japan*, pl.304, p.154, description, p.181: Leaves broadly obovate-oblong, abruptly long acuminate at the apex,

veinlets slightly impressed, coarsely crenate-serrate at the margin half above, petioles more or less hairy. Flowers of the peony type, rose (Rose opal 022), blotched white, inner petals folded. Late blooming. For colour illustrations & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.30; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.294; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.160, 256 as 'Yokokawa-shibori'. A variegated form of **Nôbotan.** Resembles **Ayakawa-shibori.** Different reading: 'Yokokawa-shibori'. There is possibly a relationship with **Yokawa** from *Kadan Chikinshô*, 1695. Orthographic variant: 'Yokokawa-shibori'.

Yokogumo. (Trailing Clouds), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* Large size single, pink mottled white. Originated in Japan. Different reading: 'Yokokumo'. See: JCS, 1969, *Tsubaki*, No.7, p.26.

Yokogumo. (Trailing Clouds), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.135: White with deep pink lines and streaks. Medium sized semi-double. Originated in Japan. (Believed extinct.)

Yokogumo. (Trailing Clouds), *(C.japonica)*, Minagawa, 1960, *Shinsen Chinkashû:* Pink single. Tuyama, 1968, *Camellias of Japan*, pl.279, p.141, description, p.175: Leaves elliptic to narrowly obovate-elliptic, suddenly acuminate at the apex. Petioles glabrous. Flowers open vase-shaped, deep red blotched white. Late flowering. Originated in the Kantô district, Japan. For colour illustrations & descriptions see: Tuyama, 1966, *Camellia Cultivars of Japan*, pl.139 & p.240; *Encyclopedia of Camellia in Colour*, vol.I, 1972, pl. 102 & p.306; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.160, 256. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.236. Resembles **Amagashita** and **Shokkô.** Said to be originated by Jisuke Minagawa. Different reading: 'Yokokumo'.

Yokohama. Mariotti Catalogue, 1924. Synonym for **Gauntlettii.**

Yokokawa. Different reading for 'Yokogawa' (**Yokawa**).

Yokokawa-shibori. Different reading for **Yokogawa-shibori.**

Yokokumo. Different reading for **Yokogumo.**

Yokonami. (Transverse Waves), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Single, true red with white moires like waves. Early flowering. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.77. (Believed extinct.)

Yokonami-shibori. ('Yokonami' Dappled), *(C.japonica)*, Chûbu Tsubaki Kyôkai, 1957-1969, *Tsubaki Meikan:* Red with white markings. Large, semi-double with petals in 3 rows, large, overlapping, somewhat crinkled and a small central stamen cluster. Leaves small, dark green, elliptic, apex tapering acuminate, recurved. Originated in the Chûbu district, Japan. For colour photo see: Satô, 1975, *Chûbu no Tsubaki*, p.88. Very similar to **Ômidare** or **Ranbyôshi.**

Yoko-no-asahi. Wada, 1941, *Garden Treasures of Japan.* Erroneous reading for **Yodo-no-asahi.**

Yomato-nishiki. Katz & Strother, 1957, *American Camellia Yearbook*, p.263. Corruption of the Japanese name **Yamato-nishiki.**

Yomegashima. (An Island in Lake Shinji), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.161, colour photo, p.256, description as 'Yome-ga-shima': Soft pink with fine veining of deeper pink and rare red streaks. Medium size, single of 5-6 petals, opening wide cup-shaped, petals emarginate with some marginal crinkling. Compact, central stamen column. Leaves dark green, long-elliptic, apex acute, strongly recurved. Originated in Shimane Prefecture, Japan from a private family in Kamo Town. Named and released by Tomohisa Arikawa in 1973. Colour photo p.278, Yokoyama & Kirino, 1989, *Nihon no Chinka.*

Yômei. (Shining Sun), *(C.rusticana)*, Nagao Sôsei-en, 1958, *Tsubaki Mokuroku.* Description not seen. Originated in Japan.

Yomi-no-ginka. (Silver Flower from the Nether World), (Wabisuke). Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.48; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.279, p.122, description, p.240; JCS, 1979, *Tsubaki*, No.18, p.3: Red with silvery frosting on the petals. Small semidouble, opening wide cup-shaped, 8-12 oblong, emarginate petals. Leaves large, glossy, mid-green, elliptic, blunt acute apex, obscurely serrate. Originated in Shimane Prefecture, Japan. Found 1974. For colour photos see: Seibundô Shinkôsha, 1979, *Senchinshû*, p.160. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.312. For botanical drawings and colour photo and description see Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû*, No.11, pp.98, 99, 100.

Yomi-no-ginka. (Silver Flower in the Next World). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.282 with colour photo; English translation p.198. Miniature, peach red, tubular semi-double with 9-11 petals, cylindrical stamens with degenerated anthers. Flowers mid-season to late. Leaves elliptic, medium size, curved outwards, occasional jointed leaves. Spreading growth. Selected from wild japonicas growing in a suburb of Matsu'e City. Named and released by Tomohisa Arikawa in 1976. From Shimane Prefecture.

Yona P. Dowdle. *(C.japonica), American Camellia Yearbook*, 1971, p.51, Reg. No.1139: An 8 year old chance seedling that first bloomed 1967; originated by Charles L. Dowdle, Gulfport, Mississippi, USA. Plant growth is upright and rapid with dark green leaves, 10 cm x 4.5 cm. The semi-double bloom, similar to **Frizzle White**, is medium to deep pink (Munsel Hue 7.5 RP 7/10 to 7.7 RP 6/12) with silvery sheen overcast. It has yellow anthers and filaments with 18 petals and 2 petaloids. Blooms early to mid-season. The very large, textured petals with numerous rabbit ears, has one off-white petal standing. Sport: **Yona P. Dowdle Variegated.**

Yona P. Dowdle Variegated. (*C.japonica*), *American Camellia Yearbook*, 1971, p.51. A virus variegated form of **Yona P. Dowdle** - Pink blotched with white. Originated by Charles L. Dowdle, Gulfport, Mississippi, USA.

Yongfu Dahong. *(C.japonica), Chinese Camellia Culture*, 2003, Appendix, p.568 as 'Yongfudahong'; Fast growing small tree, branches long and soft. Juvenile branches and leaves red. Mature leaf green and shiny, long-elliptic to obovate, 8-9 cm x 3-4 cm. Apex acuminate, base broad cuneate, flat, middle vein prominent, fine, sharp serrations. Flower double, red, 10-12 cm diameter. Large petals in several rows, sometimes with smaller petals and stamens interspersed with the large petals. Flowers mid-season to late. From Fujian Province, China.

Yongii. Lemaire, 1844, In Paillet, *Des Genre Camellias, Rhododendrons, Azalées…* p.163. Orthographic error for 'Youngii', synonym for **Epsomensis.**

Yongle Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.33. Chinese synonym for **Eiraku.**

Yong's New Red. Burdin Maggiore & Co., 1839-1840, Catalogo General. Orthographic error for 'Young's New Red', synonym for **Epsomensis.**

Yonobotan. (Peony of Night), (*C.japonica*), Uekiya, Seijirô, 1874, *Tsubaki Hyakuro no* Zu, vol.II, No.19. No description. Different reading: 'Yorunobotan'. Originated in Japan. (Believed extinct.)

Yorishide. (*C.japonica*), Ichijima, 1906, (Reprint Yashiro 1841), *Kokon Yôrankô*, vol.310, p.362: No description. Different reading: 'Yorishite'. Originated in Japan. (Believed extinct.)

Yorishite. Different reading for **Yorishide.**

York and Lancaster. Prince & Co. Nursery Catalogue, 1844, p.105. Orthographic variant for **York et Lancaster.**

York et Lancaster. (*C.japonica*), Makoy Nursery Catalogue, 1838; *The Greenhouse*, 1838: White striped rose pink. Medium large, formal double. Originated in England. Orthographic variant: 'York and Lancaster'.

Yoroi-tsubaki. (Armored Camellia), (*C.japonica*), Izu Ôshima, 1980, Hawaii Botanic Gardens List. No description. Originated in Japan.

Yorozuyo. (Myriad Ages), (*C.japonica*), Okumura, ca.1810, *Chinka Hin'i.* Pale pink, single, long tubular shape. Different reading: 'Bandai'. Originated in Japan. (Believed extinct.)

Yoru-no-ame. (Evening Rain), (*C.japonica*), ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.25. No description. Originated in Shimane Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.282 with colour photo; English translation p.198. Small to medium size single, small and large red stripes on white ground, fructifying, cylindrical stamen column. Flowers mid-season to late. Leaves narrowly elliptic, small. Upright growth. Collected from a wild japonica community in Matsu'e City. Named and released by San-in Camellian Club in 1980.

Yorunobotan. Different reading for **Yonobotan.**

Yoru-no-chô (Butterfly in the Evening), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû*, p.256: Dusky red, peony form, 10 outside petals, inner petals are waved and intermixed with stamens; filaments red. Medium to large size. Late blooming. Leaves medium large, ovate, apex acuminate, margins prominently serrated. Petioles hirsute. Of Yuki tsubaki lineage, originating in Arai City, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1969.

Yoru-no-nishiki. (Evening Brocade), (*C.japonica*), Sakuden, 1630, *Hyakuchinshû:* Red. Large single to anemone form with petaloids tipped pink and red, filaments white, anthers yellow. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.110. (Believed extinct.)

Yoru-no-nishiki. (Evening Brocade), (*C.japonica*), *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.658: White densely striped with crimson. Large semi-double; petals in two rows, undulate, irregular margins; central stamen column. See: Kyôto Engei Kurabu, 1964. *Tsubaki Tokushû*, No.5, p.151. Originated in Japan. (Believed extinct.)

Yosemite. (*C.japonica*), SCCS, Bulletin, vol.11, No.5, p.5, 1950. SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Rose red. Medium size semi-double with white stamens and fluted petals. Medium, compact growth. Blooms midseason. Originated as a seedling raised by H.A. Bogh, Oakland, California, USA. See Hertrich, 1959, *Camellias in the Huntington Gardens*, vol.III, p.271.

Yoshiaki Andoh. (*C.reticulata*.x *C.japonica*), SCCS., 1984, *The Camellia* Review, vol.45, No.4, colour pl. p.14. A seedling of the cross *C.reticulata* **Damanao** x *C.japonica* **Mrs D.W. Davis;** originated by Meyer Piet, California, USA. A very dark rich red, Higo style flower with a burst of golden stamens and a diameter up to 15cm.

Yoshida. (Personal Name), (*C.japonica*), Monk Hôrin, 1639, *Kakumeiki*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.39: White with soft pink and deep pink stripes. Small size single with 5 emarginate petals, opening flat; central stamen column. Originated in Japan. See: Kyôto Engei Kurabu, 1963. *Tsubaki Tokushû*, No.4, p.121; ibid, 1961, No.2. p.47. (Believed extinct.)

Yoshida. (Place Name), (*C.rusticana*), Satomi, 1956, *Camellia Varieties of Japan,* p.31: Red. Large single with open stamens. Vigorous, compact growth. Originated in Japan. Corruption of name 'Yoshido'.

Yoshida-monogurui. (Crazy Yoshida), *(C.japonica)*, Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Blooms in diverse colours, red, white or white with red variegation. Originated in Japan. See: Kyôto Engei Kurabu, 1964. *Tsubaki Tokushû*, No.5, p.80. (Believed extinct.)

Yoshida-ômura. (Yoshida Village), Hino, Sukekatsu, 1637, *Sukekatsukyôki*. Descripton not seen. Originated in Japan. See: JCS, 1986, *Tsubaki*, No.25, p.15. (Believed extinct.)

Yoshida-yashiki. (Yoshida's Estate). *(C.japonica), Kurume Camellia,* 1997, English translation, p.11; Bright crimson, small, standard single. Flowers mid-season. Named by T. Kunitake, Kurume, Japan.

Yoshido. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.246. Corruption of the Japanese name **Yoshida.**

Yoshihime. (Princess Yoshi), *(C.sasanqua x C.hybrid)*, Hagiya, 1986, *Studies in Interspecific Hybridization of Japan*, No.2, p.7, colour pl.11, p.6: A seedling of *C.sasanqua* **Asahi-no-umi** x *C.japonica x C.fraterna* **Tiny Princess**. Flowers red with dark petal edge, 12-13 ovate, overlapping petals, semi-double, about 6 cm across. Stamens small and scattered, filaments white. Early blooming; strongly fragrant. Leaves small, oval, silver green, serration and venation obscure. Habit bushy and spreading. Originated by Dr Kaoru Hagiya, Niigata University, Japan.

Yoshiki-no-aki. (Autumn in Yashiki). *(C.japonica), Kurume Camellia,* 1997, English translation, p.11; Soft pink, peppered with crimson dots. Medium size, trumpet shaped single. A seedling of **Seiôbô.** Flowers early season. Originated by H. Imamura.

Yoshiki-sazanka. *(C.sasanqua). Kurume Camellia*, 1997, English translation, p.51. White, small to medium size, wide open single. A native strain in Nagaiwayama, Kurume City, Japan.

Yoshino. (Place Name), *(C.japonica)*, Iwasaki, 1829, *Honzô Zufu:* This flower has many narrow, white petals. Originated in Japan. See: JCS, 1981, *Tsubaki*, No.20, p.124. (Believed extinct.)

Yoshino. (Place Name), Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.200, p.64, description, p.210: Apricot pink with the colour fading to almost white at the centre. Medium sized single with 5-7 wide, overlapping petals, crimped at the apex. Cylindrical stamen cluster. Leaves large, broad-lanceolate, mid-green, coarsely but shallowly serrate, apex blunt acute. Originated in Japan.

Yoshimasa. (Personal Name), *(C.japonica)*, Uyesa, 1844, *Sômoku Benran.* Large size, true red, white moires; double in 3 rows. Originated in Japan. Resembles **Masayoshi**. See: Kyôto Engei Kurabu, 1961, *Kyôto Engei*, No.65, p.6.

Yoshinogawa. (Yoshino River), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.670: White with streaks, speckles and peppering of crimson. Large single with 7-8 large, overlapping, somewhat undulate petals and a central stamen column. Originated in Japan. The district of Yoshino is famous for its cherries. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.153. (Believed extinct.)

Yoshinogawa. (Yoshino River), *(C.sasanqua)*, Itô, Jukyû, 1739, *Honzô Hanamaki'e*, vol.16: Pinkish white, pink speckles, large size, single. Originated in Japan. (Believed extinct.)

Yoshino-ginyô (Yoshino Silver Leaf), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.25. No description. Originated in the Chiba Prefecture, Japan.

Yoshino-shizuka. (Title of No Drama), *(C.japonica)*, Okumura, ca.1810, *Chinka Hin'i.* Double anemone form, pale pinkish white, centre petaloids yellowish. Originated in Japan. (Believed extinct.) Note: The name refers to Shizuka Gozen, the mountain Yoshino.

Yoshinoyama. (Mount Yoshino), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki*, p.99: Deep shining pink, finely veined a deeper colour. Medium size, semi-double; long oval, channelled petals in two rows, set apart, 13-15 in number with a small, broken stamen cluster in the centre. Originated in the Chûbu area, Japan.

Yoshinoyama. (Mount Yoshino), *(C.sasanqua),* Seibundô Shinkôsha, Dec.1971, *Garden Life*, p.16. Described only as 'Higo-sazanka' in the ancient list. Originated in Kumamoto Prefecture, Japan. (Believed extinct.)

Yoshitsukasa. (Master of Ceremonies), *(C.japonica)*, Nakamura, 1965, *Tsubaki to Sazanka;* Senka-en, 1970, *Tsubaki Annai Kurume Gensan no Tsubaki:* Red with moired white blotches. Large, cup-shaped single, petals 6-7, large, irregular, overlapping with a broad, central stamen cylinder, anthers yellow, filaments creamy. Leaves large, mid-green, lanceolate-elliptic, apex tapering acuminate, recurved, margins serrate. Originated in Kurume, Fuku'oka Prefecture, Japan. A seedling of **Masayoshi,** named and released by Tadashi Otsuka in 1960 See colour photos & descriptions: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.340; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.160, 256. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.245.

Yoshitsune. (Personnal Name), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.423: Light mulberry red with mulberry red stripes with paler petal margins. Medium to small rose form double with 3-4 rows of imbricated petals, rounded, concave. Stamens scattered through centre petals. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3, p.163. (Believed extinct.)

Yôshun. (Sunny Spring), *(C.rusticana),* Seibundô Shinkôsha, 1966, *Garden Life,* No.17, p.22 as 'Yôshyun'; Tuyama, 1968, *Camellias of Japan*, pl.188, p.95, description, p.145: Leaves narrowly elliptic to lanceolate-elliptic, thin, finely denticulate, venation somewhat impressed, 5.7-6.7 cm long x 2.4-3 cm wide; petioles 7-9 mm long, very hairy. Flowers semi-double, 6 cm across, deep pink (Carmine rose 621/1), petals about 20, widely spreading. Filaments poor, divided into subgroups, anthers cadmium yellow. Flowers mid-season to late. Originated in a private garden, Higashi-shimojô, Niigata Prefecture, Japan. Named by Mr Kawamura in 1964, See colour pls. & descriptions: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.179 & p.317; Seibundô Shinkôsha, 1979 *Senchinshû*, pp.160, 255. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.127. Different readings: 'Yohshun', 'Yôshyun'.

Yôshyun. Seibundô Shinkôsha, 1966, *Garden Life,* No.17, p.22. Different reading for **Yôshun.**

Yotsugaya. (Four Valleys), *(C.japonica),* Okumura, Shigejirô, [ca 1810], *Chinka Hin'i.* Double red with many white spots. Originated in Japan. (Believed extinct.)

Yotsutsujidono. (Personal Name), *(C.japonica),* Kampfer, 1712, *Amoenitatum Exoticarum* as 'Josttsjinodonno'. No description. Originated in Japan. 'Yotsutsujidono' is said to be the name of an ancient vassal noble who loved camellias. (Believed extinct.)

Yotsuya-kahei. (obscure), *(C.japonica),* Uekiya Seigorô, 1874, *Tsubaki Hyakuro no Zu*, vol.I, No.32: Red with white blotches. Large semi-double with two rows of petals. Originated in Japan. See: Kyôto Engei Kurabu, 1975, *Kyôto Engei*, No.73, p.22. (Believed extinct.)

Yotsuya-sangai. (obscure), (*C.japonica*), Itô, Ihei, 1695, *Kadan Chikinshô*, vol.I, #83; Yashiro, 1841, *Kokon Yôrankô*, vol.310; Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* The corolla is white and piled up about 10-fold. Large flower. The leaves are slender. Originated in Japan. Different reading: 'Yotsuya-sankai'. See: JCS, 1969, *Tsubaki*, No.7, p.34. (Believed extinct.)

Yotsuya-sankai. Different reading for **Yotsuya-sangai**

You Name It. *(C.japonica)*, Mark Cannon Scion Catalogue, 1962, p.11. No description. Originated in USA. No valid listing located.

Yu Ming Hua. Ichijima, 1906, (Yashiro, 1841, reprint), Kokon Yôrankô, vol.344. Chinese common name for *C.sasanqua*. Note: The Japanese reading 'Gyokumeika' is an ancient name used for *C.sasanqua*.

Yu Mou Tan. Huang Nursery Catalogue, Shanghai, 1949. Different reading for **Yumudan.**

Yuangye Diechi. (Round Leaf Butterfly Wings), (*C.reticulata*), Gao & Zhuang, 1989, *The Camellia in China,* p.61, No.416: Leaves mid-green, Broad-ovate. Flower large size, 11-13 cm, across, crimson, open peony with 19-25 petals, some erect and flaring like butterfly wings. Blooms mid-season. Originated in Tengchong County, Yunnan Province, China.

Yuanxuan. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.422; Chinese synonym for the Japan *C.japonica* **Inzen.**

Yuanyang Fengguan. (Mandarin Duck's Crest), (*C.japonica*), Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.86, colour photo, [p.115]: Medium size, red, with pink stripes, double form with 6-7 rows of rounded, emarginate, imbricated petals with a bud centre. Gao & Zhuang, 1989, *The Camellia in China,* p.44, No.250, colour photo No.138. Red sport of **Chidan** from the Fujian Prefecture. Synonym 'Kongquewei'. Corruption: 'Yaniangfungquan'. Originated in China.

Yuanye Jinxin. (Round Leaf Cold Heart), (*C.japonica*), Wang & Yü, 1981, *Shancha Hua;* Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.47: Small tree to 6 meters high, conical crown, dense, upright, leafy branches, sturdy. Leaves ovate to broadly-elliptic, slightly convex at apex, truncate to round at the base, flat, margins serrulate, dark green, oily, glossy, midrib elevated, side veins obscure, thick; petioles 10-13 mm long. Flower scarlet, single, 4-5 cm across, 5-7 petals, notched at apex. Stamens normal, over 100, outer basally connate into a tube. Pistil normal, taller than stamens, protruding as flower opens. Buds elliptic or long-obovate, short yellowish-brown, downy, scales green with tan edge. Blooms mid-season. Originated in Zhejiang, China.

Yuanzihong. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.15. Synonym for **Atomic Red.**

Yûba'e. (Evening Glow), (*C.rusticana*), Hagiya & Ishizawa, Mar.1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, p.16, illustration, 13; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.155, 254. Pale pink, becoming white at the base, formal double with petals somewhat irregular, 7-8 cm across, petals about 65. Leaves dark green ovate, 6-7 cm long. Petioles hirsute. Collected in Mitsuke City, Niigata Prefecture, Japan. Named and released by Kaoru Hagiya in 1968.

Yubahaku. (Yuba's White), (*C.japonica*), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.365, colour photo and description: Large size, white, incomplete double to formal double or peony form, large, round, outer petals, more or less imbricated and a couple of erect smaller petals, petaloids and stamens intermixed in the centre, filaments white, anthers golden. Leaves, glossy mid-green, elliptic, apices acute, margins serrulate. Flowers mid-season to late. Originated in Kyôto Prefecture, Japan. A sport of 'Yuba-shibori' (**Kusutama**). Named and released by Misoji Yamaguchi in 1981.

Yubai Luxi. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica* **Lucy Stewart.**

Yuba-shibori. (Yuba Variegated), (*C.rusticana*) Yokoyama, 1975, *Gendai T*subaki *Meikan*, p.235: Soft pink, finely and densely peppered red with fine red ticks. Large semi-double with petals in 3 rows, large, rounded; inner petals a little undulate. Small irregular stamen cluster, sometimes in two or more fascicles with erect, folded centre petals. Blooms early. Leaves glossy dark green, elliptic, apex long acuminate, margins shallowly serrate. Originated in Kansai area, Japan. Sport: **Yubahaku.** Synonym: 'Kusudama' from Chûbu. For colour photos & descriptions see; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.433; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.158, 255; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.374. Yuba is a place name and means an Archery Gallery. Synonym for **Kusudama** from Chûbu. Chinese synonym 'Gongchangjiao'.

Yûbe-no-kane. (Evening Bell), (*C.rusticana*), Izu Ohshima, 1980, Hawaii Botanic Gardens List, p.19 as 'Yûnokane'. No description. Atagawa Tropical & Alligator Gardens, 1988, p.210. No description. Originated in Japan.

Yûbi. (Gentle Beauty), *(C.sasanqua)*, Hakoda, JCS., 1987, *Tsubaki*, No.26, p.47; ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.37: Medium size, white graduating to red margins, semi-double. Early blooming. Originated in Fuku'oka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.317 with colour photo; English translation p.223. Leaves narrowly elliptic, small. Selected from seedlings of **Yûki,** in Kurume City. Originated and named by Shunsuke Hisatomi. Less petals than **Yûki,** but a clearer red border.

Yubuko-Dori. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Yobikodori.**

Yucha. *Encyclopedia of Camellias in Colour*, 1972, vol.I, pl.509 & p.378; Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.15. Japanese popular name for *C.oleifera*, synonym 'Abura-tsubaki'.

Yuchun. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.96. (Rainy Spring). Synonym for 'Xiaojaohong'.

Yudaihong. (Jade Striped Red), (*C.reticulata*), Feng et al., 1981, *Yunnan Shacha Hua*, p.21, pl.31, description p.110: Leaves oblong to broad-lanceolate, flat, hard and rough above, veins conspicuous, apices acuminate, bases cuneate, 10.5-13 cm long x 2.5-3 cm wide. Flowers pink (RHS.CC.55A), diameter 12-13 cm. Petals 20-22 in 3-4 whorls, long spatulate, larger in outer whorls, smaller in inner, with white stripes, apically notched. Stamens partly petaloid, some divided into several groups or united to form a tube. Pistils mostly rudimentary, a few fertile. This is a cultivar selected from open pollinated seeds at the Kunming Botantical Gardens, Yunnan, China. Blooms early. Different reading 'Yü-tai-hung'. Synonym: 'Jade Striped Red'. See colour photo, Feng et al., 1986, *Yunnan Camellias of China*, p.46.

Yudan. *(C.japonica), Chinese Camellia Culture*, 2003, p.257 with colour photo; Formal double with 70-80 petals, white covered with small red spots. Diameter 12 cm. Flowers mid-season. Originated by Lin Zhaohong, Jinhua, China.

Yudanibeni. (Hot Springs Valley Red), *(C.japonica)*, Yokoyama. & Kirino, 1989, *Nihon no Chinka*, p.183: Small size, deep, glossy red, wide campanulate single with 5 large, wide, rounded, reflexed petals, about a central stamen cylinder with white to pinkish filaments, joined for their lower half, anthers yellow. Leaves shining, deep green, lanceolate, apices tapering acuminate, margins serrate. Late flowering. Selected from wild japonicas in Ehime Prefecture, Japan. Named and released by Tokuji Ôoka in 1986.

Yudie. Jade Butterfly), (*C.reticulata*), Gao & Zhuang, 1989, *The Camellia in China*, p.58, No.383, colour photo, No.241: Leaves deep green, broad-elliptic, 8.1-10.3 cm long x 4.4-5.2 cm wide. Flowers medium to large size, 8.1-10.3 cm across, semi-double to open peony, white, becoming pink on petal reverse and apex, 21-22 petals. Blooms mid-season. Originated in Tengchong County, Yunnan Province, China.

Yue Zhi Yinü. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.427; Chinese synonym for the Japan *C.rusticana* **Koshi-no-otome.**

Yueguang. *(C.japonica), Chinese Camellia Culture*, 2003, Appendix, p.567; Leaf deep green, lustrous, long-elliptic, 8-9 cm x 3-4 cm, apex acuminate to caudate, base cuneate, vein obvious, margins shallowly serrate. Flower double, pink with narrow or wide red stripes, 8-10 cm diameter, often in hexagonal shape.About 70 thick, shiny petals, regularly arranged. Late flowering. From Shanghai, China. Synonym 'Tongzimian'.

Yueguangwan. Gao, Jiyin, Ltr, 25-5-1990. Chinese synonym for the USA *C.japonica* **Moonlight Bay.**

Yueguangqu. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the USA *C.japonica* **Moonlight Sonata.**

Yuehanhengte. Shao, Taichong, 1992, *The Observations from the Camellia World*, No.571, p.70. Chinese synonym for the Australian *C.reticulata* hybrid **John Hunt.**

Yûen. (Elegant and Beautiful). *(C.hybrid). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.294 with colour photo; Medium size single, pale pink changing to pale yellow in the centre. Flowers mid-season. Leaves ovate, medium size. Upright growth. An F2 hybrid of 'Koki 90' x 'Koki 92', originated and released by Kazuo Yoshikawa, Osaka, Japan, in 1999.

Yueshuya. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.413; Chinese synonym for the USA *C.japonica* **Joshua E. Youtz.** Previous spelling 'Yaoshuya'.

Yuexia. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica* **Moonbeam.**

Yueyuan. (Round Moon), Gao & Zhuang, 1989, *The Camellia in China*, p.74, No.534. Chinese synonym for the Japanese *C.sasanqua* **Mangetsu.**

Yufurong. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.563; Dense canopy, branches sparse, erect. Leaf deep green lustrous, elliptic, 8-9 cm x 4-5 cm, soft, margins obtusely serrate, main vein prominent. Flower white, 12-14 cm diameter. Stamens short, in tubular form. Late flowering. From Wenzhou, Zhejiang Province, China.

Yûga. (Elegance) (*C.reticulata hybrid*) from Ehime Pref. *Tsubaki* No.38, Japan Camellia Society, 1999. Seed parent *C.reticulata hybrid* **Show Girl**, pollen parent *C.granthamiana*. Pink, semi-double, occasionally with petaloids appearing, petals relatively thick, medium size, early blooming. Leaves resembling but smaller than those of *C.granthamiana*. Tree upright growth, vigorous. Flower shape resembles that of **Show Girl,** tending to vary with growing environment. Originated by Hiroyasu Watanabe.

Yugashira. (Name of Place of Origin), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.155, colour photo, p.254, description: Pinkish white with pink and red stripes and speckles. Medium size, campanulate single with short, compact stamen column with white filaments and a protruding style. Leaves thick deep green, ovate, apex acute. Blooms mid-season. Originated in Ômishima-chô, Ehime Prefecture, Japan, where an old tree is growing as a protected plant. Named and released by Toshihiro Murakami. Colour photo Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.249.

Yûgen. (Mystery), *(C.x vernalis)*, Yûsuke Sakata & Ken'ichi Arisumi, 1983, *International Camellia Journal*, No.15, p.22 as 'Yugen'. No description. Tanaka et al., Sept.1986, 'Cytogenetic Studies of the Originn of *C.vernalis', Journal of the Japanese Society for Horticultural Science*, vol.55, No.2, pp.208: 211: Medium size, single, deep red with united stamens and leaves 4.6 cm x 2.2 cm. See: JCS, 1987, *Tsubaki*, No.26, p.51. Originated in Nagasaki Prefecture, Japan.

Yûgen-no-hikari. (Light on the Mystery), *(C.japonica)*, Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.47; ibid, 1979, *Senchinshû*, p.154, colour photo, p.253, description: Pinkish white to white. Medium size, single, opening wide bell-shaped, 6-7 broad, overlapping, undulate petals. Stamens broad, irregular, in a central column, pale yellow. Leaves light green, ovate, apex acuminate, recurved, margins obscurely serrulate. Nippon Tsubaki - Sasanqua Meikan, 1998, p.270 with colour photo; English translation p.189. The original tree is growing at Kenroku'en Park in Kanazawa City, Japan. Named and released by Ryôji Nakamura in 1978.

Yûgetsu. (Enjoy Watching the Moon). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.270 with colour photo; English translation p.189. Medium size, pale pink, sake cup-shaped single, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic to ovate, medium size, flat. Spreading growth. A natural seedling of **Kantô-tsukimiguruma.** Named and released by Ikuo Nishihata in 1980. From Nara Prefecture.

Yûgiri. (Evening Mist), (*C.japonica*), Iwasaki, 1829, *Honzô Zufu:* Petals are double and white and have narrow red lines. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* describes a very large flower. Originated in Japan. Different reading: 'Yûkiri'. See: JCS, 1981, *Tsubaki*, No.20, p.110; ibid, 1969, No.7, p.30. (Believed extinct.)

Yûgiri. (Evening Mist), (*C.japonica*), *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.365: The mother tree is in the residence of Satô, Kikusaburô, Shimo-ochiai, Shinjuku-ku, Tokyo, Japan,

who named it, so it is not the same as the Iwasaki cultivar. White to faintest blush, formal double, petals in 7-8 rows, imbricated, concave. Flowers mid-season. Leaves medium size, long-oval, bright dark green, apex acuminate, surface wavy. For colour photos and descriptions see: *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.385; Seibundô Shinkôsha, 1979 *Senchinshû*, pp.154, 253. Resembles **Hôshu** and **Tama-nokoshi.** Originated in Chûbu, Japan.

Yugiri. (Evening Mist). (Higo). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.253 with colour photo; Medium size, flat single, deep pink radial stripes on pink ground. Filaments pale yellow, ume-jin (apricot) form. Flowers mid-season to late. Leaves broad-ovate, large. A sport of **Shintsukasa-nishiki,** recognized by the Higo Camellia Society in 1992.

Yuguang. (Lustrous Jade), (*C.japonica*), Savige, 1986, *International Camellia Journal*, No.18, p.113: A medium sized, soft blush pink, complete formal double, outer petals emarginate, inner pointed. Originated in China.

Yuguo Zhi Yu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.428; Chinese synonym for the Japan Higo **Mikuni-no-homare.**

Yûgure. (Eventide), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.126: White. Large semi-double, petals in 3 rows, large, overlapping, cordate. Small, central stamen group with white filaments. Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.102. Originated in Japan.

Yûgyô-in. (Personal Name), (*C.japonica*), *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.17: White, open campanulate single with 6-7 large, smooth petals and cylindrical stamen column. Originated in Japan. (Believed extinct.)

Yuhangyuan. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.412; Chinese synonym for the USA *C.japonica* **Astronaut.**

Yuheng. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.408; Chinese synonym for the Japan *C.sasanqua* **Tamagaki.**

Yûhi. Tateyama Nursery Catalogue, 1957; Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.173, Different reading for the Higo **Sekiyô.**

Yûhikaku. (Yuhi's Palace), (*C.sasanqua*), Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.17 as 'Yûhi-kaku': Bright deep pink with yellow stamens. Large single with round, waved petals. Originated in Japan.

Yu-hsin-ma-nao. Watanabe & Andoh, 1980, *Hana to Ki no Bunka Tsubaki*, p.155. Different reading for **Yuxin Manao.**

Yuhong. (Red Jade), *(C.japonica),* Fang, 1930, *Dainnan Chahua Xiaozhi:* The colour is red, resembling red jade. Originated in China. Different reading: 'Yu-hung'.

Yuhsienensis. ACS 1992, *The Camellia Journal*, vol.47, No.4, p.13; Valdosta Camellia Scions advert. The species *Camellia yuhsienensis*. Reclassified by Chang as a form of *C.grijsii.*

Yü-hung. Tsukamoto & Andoh, 1981, *Tsubaki*, p.156. Different reading for **Yuhong.**

Yuille Pink. (*C.japonica*), SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Pink spotted white. Medium to large anemone form. Compact, upright growth. Early blooming, Originated in USA.

Yujie. (Jade Pure) (*C.reticulata* hybrid). China Regn No.25. *China Flowers & Horticulture*, Feb 2008, No.4, p.48, with colour photo; A hybrid of *C.reticulata* with *C.vietnamensis* as pollen parent, originated at the Kunming Institute of Botany, Yunnan, China, and named by Xia Lifang.

Leaves are similar to *C.vietnamensis,* vigorous, flowers early. Flower single, white with a pink flush, 8-10 petals in 2 whorls, 10-12 cm diameter. Does not bear fruit. Leaves elliptic, bases broad cuneate to obtuse, apices acuminate, margins finely serrate, 5.2-9 cm long x 3.3-4.8 cm wide.

Yujinxiang. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.416; Chinese synonym for the USA *C.x williamsii* **Tulip Time.**

Yûkanji-meigetsu. (Moon over Yûkanji Temple), (*C.japonica*), *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.371: White, medium size, single, very early flowers, 8 cm across with 7 reflexed petals. Stamens faint yellow, compact column. Leaves dark green, ovate with wavy margins, coarsely serrate. The original tree, 120 years old, is in Yûkanji, Tsubata-chô, Ishikawa Prefecture, Japan. Named and released by Shûhei Niwa in 1971. It blooms about 15th September, known as 'Meigetsu' the moon of the 15th day of the 8th lunar month. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.330; Seibundô Shinkôsha, 1979, *Senchinshû*, *p*p.154, 253. Yukari-no-iori. (Yukari Hermitage), *(C.japonica)*, Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.173. No description. Originated in Japan.

Yukari-no-iro. Satomi, 1956, *Camellia Varieties of* Japan. (Colour of Souvenir). Synonym for **Shokkô-nishiki.**

Yukari-tsubaki. Tuyama, 1968, *Camellias of Japan,* pl.417, p.212, description, p.213. Japanese common name for *C.assimilis.*

Yukemuri. (Hot Spring Smoke), (*C.japonica*), Yokoyama & Kirino, 1989. *Nikon no Chinka*, p.82, colour photo and description: Large size, very pale pink, saucer-shaped single with 5 large. rounded, overlapping, somewhat crinkled petals, and a broad stamen cylinder, filaments light yellow, joined at the lower half, anthers light yellow. Flowers early to mid-season. A seedling of **Honshiratama.** Originated in Ishikawa Prefecture, Japan. Named and released by Tadao Yamaguchi in 1979.

Yûki. (Personal Name for Women), *(C.sasanqua)*, Hakoda, JCS., 1987, *Tsubaki,* No.26, p.47; ICS., Apr. 1990, *Japanese Camellia Cultivar List*, p.37: Medium size, white with red petal margins, semi-double. Early blooming. Originated in Kurume City, Fuku'oka Prefecture, Japan in the 1960s, named by Shunsuke Hisatomi. Chinese synonym: 'Youxi'.

Yuki-akari. (Snow Light), *(C.rusticana)*, *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.236, p.113, description, p.325; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.155, 254: White. Medium size, 8cm across, single with 8-9 large, rounded overlapping petals, some emarginate to cordate. Stamen cluster funnel-shaped, pale yellow anthers, white filaments. Leaves lanceolate to broadlanceolate, mid-green, long acuminate apex, margins shallowly serrate, petioles hirsute. Late flowering. Originated in the Jôritsyji Temple, Yatsuo Town, Toyama Prefecture, Japan. Named and released by Shûhô Karin in 1967. Colour photo: Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.291.

Yukibata. (Growing Near Snow), *(C.rusticana)*, Tuyama, 1968, *Camellias of Japan*, pl.164, p.82, descripton, p.137: Leaves broadly elliptic, apex shortly acuminate, venation impressed, margins crenate, 8.6-8.9 cm long x 4.4 cm wide, petioles 8 mm long, manifestly hairy.

Flowers single, red (Crimson 22-22/1), widely cup-shaped or horizontally opened, petals 5-7, largest 5.6 cm long x 4.4 cm wide, flat, narrowly incised. Stamens cylindrical, filaments pale yellow. Blooms late. Originated in the wild at Kitta, Arakawa-machi, Niigata Prefecture, Japan.

Yukibata-tsubaki. (Camellias Growing Near Snow), (Intermediate *C.rusticana),* Yokoyama. 1975, *Gendai Tsubaki Meikan*, p.9; Seibundô Shinkôsha, 1979, *Senchinshû*, p.165: General name for camellias intermediate between *C.japonica* and *C.rusticana.* originated on the Japan sea side of the watershed in the Hokuriku and Tôhoku districts, Japan. Petioles vestigially hirsute.

Yukibeni. (Red Snow), *(C.japonica),* Itô, Ihei, 1696, *Kadan Chikinshô*, vol.I, #95: Single, red flower with white spots. The margins of the corolla are white. See also pls. 30 and 403, *Chinka Zufu* (before 1700), Watanabe, 1969. Originated in Japan. Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.136, ibid, 1962, No.3, p.159. (Believed extinct.) Different readings: 'Yukikurenai', 'Setsukô', 'Sekkô'.

Yukibotan. (Snow Peony), *(C.japonica),* Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki* in peony flower section; Itô, Ko'emon, 1879, *Chinkashû;* Tuyama, 1966, *Camellia Cultivars of Japan*, pl.67, p.116: Large, white, peony form. Tuyama, 1968, *Camellias of Japan*, pl.44, p.22, description, p.98: Upright bush camellia cultivar of rather weak growth. Leaves broadly oblong to ovate-oblong, surface flat, venation sub-impressed. Petioles glabrous. Flowers very large, pure white peony, petals much undulated, with small petal-like petaloids in the stamens. Late flowering. Originated in the Kantô district, Japan. Imported to USA by McIlhenny, Jungle Gardens, Avery Island, Louisiana and listed by him in 1937. Synonyms: 'Pride of Descanso', 'Snowish Peony'. Chinese reading: 'Xuemudan'. Corruption of name: 'Yoki-Botan'. For colour pls & descriptions see: Urquhart, 1956, *The Camellia*, vol.I; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.238 & p.326; Seibundô Shinkôsha, 1979, *Senchinshû* pp.157, 254. Puddle & Hanger, 1962, RHS., *The Rhododendron and Camellia Yearbook*, No.16, p.123 gave 'Shirobotan' and 'Hakubotan' as synonyms, however as these names had been previously used for other cultivars this must be rejected. Resembles **Shiro-daikagura.**

Yukidaruma. Valley Garden Supplies Catalogue, 1946-1947 as 'Yuki-daruma'. Synonym for **Pax.**

Yuki-Deruma. Hume, 1946, *Camellias in America*, p.340. Orthographic error for 'Yukidaruma', synonym for **Pax.**

Yukidoke. (Thaw). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.18 with colour photo; Small white single, tubular to cup-shaped, tubular stamens. Flowers mid-season. Leaves broad-ovate, medium size. Upright, vigorous growth. A seedling of **Soshô**, released by Misoji Yamaguchi, Kyoto, Japan.

Yukidôrô. (Snow Lantern), *(C.japonica),* Kasuya, Kamegorô,1859, *Tsubaki Irohonayose Irotsuki:* Small, white, semi-double with 3-4 rows of petals. Stamens intermixed with centre petaloids. Originated in Japan. (Believed extinct.)

Yukidôrô. (Snow Lantern), *(C.rusticana),* Zenji Kamo, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, p.31; Tuyama, 1968, *Camellias of Japan*, pl.74, p.37, description, p.107; JCS, 1972, *Encyclopedia of Camellias in Colour*, vol.I, pl.227 & p.324: Leaves obovate-elliptic, venation impressed, 7.2-10.8 cm long x 3.8-4.7 cm wide. Colour palest pink (Rose-pink 427/3), but inside a shade of pale orange. Petals 7-11, unequal and irregularly undulate. The central mass is composed of 104-121 thinly stalked petaloids with deformed anthers and a second (and, rarely, a third) whorl of 4-10 small inner petals. Originated by Zenji Kamo, Takaoka-shi, Toyama Prefecture, Japan. Different reading: 'Yukitôrô'. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.157, 254. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.379.

Yukifujin. (Snow Wife), *(C.rusticana)*, Tateishi et al., 1970, *Journal of Japanese Botany;* Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987: Medium size, white, bowl-shaped single blossoms. Early flowering. Heavy texture. Originated in Japan.

Yukigasa. (Snow Hat), *(C.japonica)*, Minagawa, 1933, *Chinkashû;* Tuyama, 1968, *Camellias in Japan*, pl.17, p.9, description, p.90: Bush camellia of stout growth. Leaves broadly elliptic to elliptic oblanceolate, gradually acuminate to a blunt tip with glabrous petiole. Flowers single, pure white, campanulate at base, but the petals horizontally expanded half above, beautifully waved at margin. Staminal tube simple, style erect and thick, a little divided into 3 or more arms somewhat irregularly. Blooms mid-season to late. 'Yuki' = snow while 'gasa' is a bamboo hat worn by farmers on snowy days. See colour photos & descriptions: Satô, 1975, *Chûbu no Tsubaki*, p.61; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.83 & p.303; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.156, 254. Originated in the Chûbu area, Japan. Note: It is not confirmed that Minagawa's "Yukigasa" is the same as "Yukigasa" from Chûbu.

Yuki Gashiki. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.246. Corruption of the Japanese name **Yukigeshiki.**

Yukigeshiki. (Snow Scene), *(C.rusticana)*, Hagiya, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, p.19, illustration and description: White to blush pink, becoming white as it opens and a yellowish cast at the centre of the flower. Medium size, semi-double to anemone form, 7-8 cm across. Large outer petals, 11-12, rounded, emarginate, overlapping. In the semi-double form there is a short, expanding stamen cluster with yellow anthers and filaments. This centre can be largely petaloid (up to 130) to form an anemone centre in some conditions. Leaves mid-green, 7-8 cm long, obovate, apex suddenly acute, margins strongly serrate, petioles hirsute. Originated in Hori-no-uchi-machi, Naka-u'onuma-gun, Niigata Prefecture, Japan in 1967. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya. Corruption of the name: 'Yuki Gashiki'. For colour photos & descriptions see: Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.181, p.210; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.226, p.324; Seibundô Shinkôsha, 1979. *Senchinshû*, pp.156, 254.

Yukigeshô (Snow Make-up), *(C.rusticana)*, Shufu-no-Tomosha, Kirino, 1976, *Nihon no Tsubaki*, pp.134, 233; Seibundô Shinkôsha, 1979, *Senchinshû*, p.156, colour photo, p.254, description: Very pale apricot shade of pink. Single, opening irregularly with 5 petals, folded or reflexed back and a short, spreading stamen cluster, deep yellow anthers. Leaves mid-green, wide-ovate, apex acute, recurved, margins serrate, petioles hirsute. Selected from wild japonicas in Yatsuo Town, Toyama Prefecture, Japan. Named and released by Shûhô Kirino in 1968.

Yukigoromo. (Snow Cape), *(C.rusticana)*, Seibundô Shinkôsha, 1966, *Garden Life*, No.17, p.38: Pure white, campanulate single. Seibundô Shinkôsha, 1979, *Senchinshû*, p.254: Palest pink, single campanulate form with spread stamens. Petals are tinged with peach colour at the base, Filaments yellow, stamens short, dark yellow, about 160. Medium size, 6-7 cm across. Mid-season blooming. Leaves medium-small, long-ovate, undulate, sharply serrate. Petiole short and hirsute. Plant habit bushy. This is a snow camellia from Higashi-Kanbara-gun, Niigata, Japan. Collected, named and released by Yaichi Kawamura in 1966.

Yuki-haki. Treseder & Hymans, 1975, *Growing Camellias*, p.177. Corruption of Japanese name 'Yukihaku', different reading for **Yukishiro.**

Yukihaku. Southdown Nursery Catalogue, 1981. Different reading for **Yukishiro.**

Yukihashi-tama-no-ura. ('Tama-no-ura' from Yukihashi), *(C.japonica)*, Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.10, A-514: Medium size, single, dark red with white variegation. Originated in Japan. 'Yukihashi' is a place name in Fuku'oka. Prefecture and 'Tama-no-ura' is a place name on Fuku'e Island, Nagasaki Prefecture, and a camellia variety.

Yukihime. (Snow Princess), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.254: White, campanulate single, opening evenly. Stamens cylindrical, filaments white. Blooms early to midseason. Leaves medium size, long-ovate, apex acuminate, loosely curved, occasionally some white variegation. Plant habit upright and vigorous. A natural wild camellia from Tabira Town, Nagasaki Prefecture, Japan. Discovered by Ryô Kawashita in 1976, named by Zaiki Kajikawa.

Yukihira. (Ancient name for Blacksmith), *(C.japonica)*, Itô, Toku'emon, 1788, *Tsubaki Hanagata tsuki Obo'echô;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White. Medium size semidouble with red spots. Originated in Japan. See: JCS, 1969, *Tsubaki*, No.78, p.30. (Believed extinct.)

Yukikagari. (Bonfire in the Snow), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.17: White slightly shaded pink. Large semi-double with round petals. Originated in Japan.

Yukikagerô (Snow, Shimmering of the Air), *(C.rusticana)*, *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.370; Seibundô Shinkôsha, 1979, *Senchinshû*, p.254: Light peach pink, paler at the base, double blooms, 6-8 cm across with 15-20 petals, 3-4 petaloids with scattered stamens, changing to a more formal order at the centre. Blooms mid-season. Leaves medium sized, ovate, flat, apex acuminate, petioles long and hirsute. Plant habit upright and branching. Originated in Japan by Takeuchi, Minoru, Ôtanaka-ku, Toyama City and named by him in 1957.

Yukikamakura. (Kamakura Snow), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.251 colour photo and description: Medium to large size, pinkish white with speckles and dashes of light red, wide cup-shaped single of 6 overlapping, broad, emarginate petals and a stamen cylinder with white filaments, joined at their lower half and light yellow anthers. Leaves mid-green, broad-ovate, apices abrupt acute, margins serrate. Very early to late blooming. Originated in the Toyama Prefecture, Japan. Named and released by Hisako Kamo in 1980s. Note: 'Kamakura' is a small hut of snow in which children play games and eat candies. A traditional winter event in the Tôhoku area in Japan.

Yukiki-no-seki. (Traffic Barrier), *(C.sasanqua)*, Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.17: Deep pink. Very large semi-double with round petals. Originated in Japan.

Yukikochô. (Snow Butterfly), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.156, colour photo, p.254, description, as 'Yuki-kochô': Bright red. Small, 5 petalled single, opening flat. with a short, broad stamen centre, anthers bright gold. Leaves narrow-elliptic, apex tapering acute, venations impressed, margins obscurely serrate, petioles hirsute. Selected from wild plants in Toyama Prefecture, Japan. Named and released by Sadayuki Katayama.

Yukikomachi. (Snow Belle), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Garden Life*, p.38; Tuyama, 1968, *Camellias of Japan*, pl.127, p.64, description, p.125: Branches spreading in the old tree. Leaves oblong-elliptic to elliptic, olivaceous green, surface flat and shiny, lateral nerves subimpressed or flat, veinlets impressed, 7.5-8.7 cm long x 3.9-4.5 cm wide. Petioles, 7-8 mm long, hairy. Flowers low in height, peony type, pink (Camellia rose 622/3). Hairy petals 3, normal petals 23-29, often with 1-3 smaller folded petals or 1-2 shortly funnel-shaped or irregularly formed petaloids. The largest petals broadly-oblong, 4.1 cm long x 2.2 cm wide, loosely wavy. Stamens 2.3-2.9 cm high, half cleft to several groups. Flowers mid-season to late. Originated at Mr Hasegawa's private garden, Higashi-kanbara-gun, Niigata Prefecture, Japan. Named and released by Kaoru Hagiya in 1968. For colour photos see: Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.178; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.214 & p.322; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.157, 254; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.304.

Yukikomachi. (Snow Belle), (Higo), W.C. Slowcock Ltd Nursery Catalogue, 1960, p.60: Double, deep rose-pink. Medium size, single with flared, pale yellow stamens. Originated in Japan.

Yukikurabe. (Compared with snow), *(C.sasanqua)*, Hantei, Kinta, 1827, *Sômoku Kihin Kagami:* White flower. Variegated leaves. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû* No.7, p.161. Originated in Japan. (Believed extinct.)

Yuki-kurenai. *Chinka Zufu*, (before 1700), Watanabe, 1968, pls.30, 403. Different reading for **Yukibeni.**

Yukimatsuri. (Snow Festival), *(C.rusticana*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.157, colour photo, p.255, description: White. Medium size, rose form double with petals in 3-4 rows, emarginate, imbricated, with slender twisted petals with a few stamens scattered in the centre. Leaves mid-green, ovate, apex acuminate, margins serrulate, long hirsute petioles. Originated in Sanjô-shi, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1973.

Yukimi. Waterhouse, 1948, *American Camellia Yearbook*, p.63. Abbreviation for **Yukimiguruma.**

Yukimigoto. *(C.japonica)*, Minagawa, 1956, *Tsubaki no Hinshu to Sono Saibai*, p.30: Single, large white with a wheel-like centre. This is a triploid. Originated in Japan. Note: It is possible that this is an orthographic error for **Yukimiguruma.**

Yukimiguruma. (Snow Viewing Carriage), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* lists this as one of the 3 spouses with **Hanamiguruma, Tsukimi-guruma** and **Beniguruma.** Itô, Ko'emon, 1879, *Chinkashû:* Large, white, single. Tuyama, 1966, *Camellia Cultivars of Japan*, pl.54, p.100; Tuyama, 1968, *Camellias of Japan*, pl.23, p.12, description, p.91, 92 as 'Yukimi-guruma - Tokyo': Bush camellia of upright growth with coarse, thick branches. Leaves broadly elliptic, cuspidate acute at the apex. deep green, plicated along the midrib, veinlets often impressed. Petioles glabrous. Flowers pure white with 7-8 petals expanded horizontally and strongly wavy for the whole margins. Staminal tube expanded but anthers are not scattered. Guruma is a variant reading of kuruma = wheel and is often attributed to camellias with widely expanded corolla and wide staminal tube. The stamen cluster is a flaring cup-shape of about 120 stamens, filaments light yellow, anthers golden. This cultivar was imported from Japan to America by Domoto in 1932 and erroneously named 'Amabilis'. Synonyms given include 'Mrs Francis Sanders', 'White Poppy', 'Subije'. In the UK it was erroneously known as 'White Swan', a name used by McIlhenny, Louisiana, for a different cultivar. In England the names 'Devonia' and 'Alba Simplex' have also been erroneously equated with **Yukimiguruma.** For colour photos see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.96 & p.305; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.65; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.158, 255; Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.60. It resembles **Shôwa-no-homare.** Synonym in Japan: 'Yukimi-guruma - Tokyo'. Corruption of name: 'Yukimi Jurima'. See: JCS, 1969, *Tsubaki*, No.7, pp.30, 35.

Yukimiguruma. (Snow Viewing Carriage), *(C.sasanqua).* Sanseidô, 1937, Hosaka Hachirô, *Genshoku Kaboku Zufu*, pp.113-118: White semi-double, large flat flower. Originated in Japan.

Yukimiguruma-Tokyo. Tuyama, 1968, *Camellias of Japan*, pl.23, as 'Yuki-mi-guruma Tokyo'. Synonym for **Yukimiguruma.**

Yukimi Jurima. R.E. Harrison Nursery Catalogue, 1955-1956, p.37. Corruption of the Japanese name **Yukimiguruma.**

Yuki-no-hana. (Snow Flower). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.273 with colour photo; English translation p.192. Large, palest pink, flat single. Flowers early to mid-season.

Leaves elliptic, large. Upright, vigorous growth. Fertile. A cross between *C.reticulata* hybrid **Lasca Beauty** and *C.granthamiana.* Named and released by Kazuo Yoshikawa in 1995. From Osaka.

Yuki-no-ko-no-momo. (Snow Children's Peach). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.273 with colour photo; English translation p.192. Medium size, deep pink shading to white at the centre, sake cup-shaped single, circular stamens. Flowers mid-season to late. Leaves elliptic to oblong, medium size. Upright, vigorous growth. A natural seedling of **Yukimiguruma.** Named and released by Totsurô Nakamura in 1994. From Tokyo.

Yukimi-no-sakazuki. (Cup for Drinking Sake at a Snow Viewing Party), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan*, pl.2, p.1, description, p.84 as 'Yuki-mi-no-sakazuki'; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.158, 255: Leaves dark green, oblong, slightly shiny, margins crenate and twisted, venation impressed, 7.2-10.1 cm long x 3.4-5.3 cm wide; petiole hairy. Flower white, single, opening wide cup-shaped, petal 5-7, broadly orbicular, apex slightly bilobate or irregularly undulate. Stamen cylinder, 2.3 cm long x 2.3 cm diameter at the apex, filaments creamy yellow. Blooms mid-season. Originated in the temple garden of Jôryû-ji, Yatsuo-machi, Toyama Prefecture, Japan. Named and released by Takeda Pharmaceutical Research Institute in 1968.

Yukimiyagura. (Snow Viewing Tower), *(C.rusticana)*, *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.442, p.174, description, p.262; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.158, 255: Leaves dark green, glossy, elliptic, apex long acuminate, margins serrulate. Flower very pale pink to almost white. Small size, 5-7 cm across, of a form consisting of 5 large outer petals, a ring of stamens with variable petaloids, inside this a further ring of petals, erect, irregular and notched, finally, a centre of stamens, anthers pale yellow. Stamens number about 200 in all. Originated in Toyama Prefecture, Japan. Named and released by Minoru Takeuchi in 1975.

Yukimochi-bokuhan. ('Bokuhan' Carrying Snow), *(C.japonica), Encyclopedia of Camellias in Colour*, vol.I, 1972, p.367; Seibundô Shinkôsha, 1979, *Senchinshû*, p.255: Outer petals dark red, petaloids white, small anemone form blooms. Mid-season to late flowering. Leaves medium sized, long-ovate, apex acuminate, base cuneate, undulate, dark green. Because of the white layer of petals near the base, it is thought that it is a graft chimera of **Bokuhan.** Originated in Kagawa Prefecture, Japan.

Yuki-n-Nagame. McIlhenny Catalogue, 1941. Corruption of the Japanese name **Yuki-no-nagame.**

Yuki-no-akebono. (Dawn in the Snow), *(C.sasanqua)*, Seibundô Shinkôsha, Dec.1971, *Garden Life*, p.16: Described as listed as a Higo sasanqua in ancient bibliography. Originated in Kumamoto Prefecture, Japan. (Believed extinct.)

Yuki-no-ashita. (Morning Snow), *(C.japonica)*, Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki:* White with pure, clear red spots against the white base. Single with a central bunch of stamens. Originated in Japan. See: JCS, 1969, *Tsubaki*, No.7, p.30. (Believed extinct.)

Yuki-no-kasa. (Bamboo Snow Hat), *(C.japonica)*, Anonymous, [ca.1810], *Chinka Issoku.* Description not seen. Originated in Japan.

Yuki-no-mine. Domoto Nursery Catalogue, 1948. Orthographic variant of **Mine-no-yuki.**

Yuki-no-mitsugu. (Tribute of Snow), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan:* White, medium size. Originated in Japan. (Believed extinct.)

Yuki-no-nagame. (Snow Scene), *(C.sasanqua)*, Chûgai Nursery Catalogue, 1938-1939, p.20: White, incurved full double. Large flower. Originated in Japan. Corruptions of name: 'Yuki-no-nagamo', 'Yuki-n-nagame'.

Yuki-no-nagamo. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Yuki-no-nagame.**

Yuki-no-oto. (Sound of Snow), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.26. No description. Originated in the Tokyo Prefecture, Japan.

Yuki-no-shita. (Under the Snow), *(C.japonica)*, Okumura, [ca.1810]. *Chinka Hin'i;* Yashiro, 1841, *Kokon Yôrankô*, vol.309: Red, single, centre petaloids with white streaks. Originated in Japan. (Believed extinct.)

Yuki-no-tani. (Valley of Snow), *(C.sasanqua)*, Itô, Jukyû, 1739. *Honzô Hanamaki'e*, vol.16: White semidouble, large size, thick petals. Originated in Japan. (Believed extinct.)

Yuki-no-uta. (Poem of Snow), *(C.japonica) Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.429, p.171 description, p.260: White. Large, 12 cm across, peony form with about 35 round, fleshy petals and scattered yellow stamens. Mid-season blooming. Leaves ovate to wide-ovate, flat, thick, sometimes with yellow variegation on dark green. Originated in Shibata City from a cross between *C.rusticana* and Yabu Tsubaki, Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1973.

Yuki-no-yama. (Snow Mountain), *(C.japonica)*, Iwasaki, 1828, *Honzô Zufu*: White double. Originated in Japan. Probably a synonym for **Sessan** in *Kadan Chikinshô* 1695. See: JCS, 1981, *Tsubaki*, No.20, p.122. (Believed extinct.)

Yuki-no-yama. (Snow Mountain), *(C.sasanqua)*, Itô, Ihei, 1695, *Kadan Chikinshô.* No description. Yashiro, 1841, *Kokon Yôrankô* vol.344. No description. Different reading: 'Yukiyama'. Originated in Japan. (Believed extinct.)

Yuki-no-yamaji. (Snowy Mountain Pass), *(C.sasanqua)*, Seibundô Shinkôsha, Dec.1971, *Garden Life*, p.16: Listed as 'Higo sazanka', white single. Originated in the Kumamoto Prefecture, Japan.

Yuki-oguni. (Snowy Oguni Basin), *(C.rusticana)*, Hagiya & Ishizawa, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, illustration p.7, description, p.19: Leaves oblong or oblong-elliptic, broadest above the middle, thin, venation sub-impressed, 5.9-8.5 cm long x 3.2-4.2 cm wide, petioles very hairy. Flowers peony form, 10-11 cm across, pink (Camellia Rose 622/3 to Carmine rose 621/2), petals 23-53. obovate, wavy and bilobate, 1-2 rather large inner petals and petaloids intermixed with about 140 stamens, filaments a creamy yellow. Originated in the Oguni-machi, Kariwa-gun, Niigata Prefecture, Japan in 1958, named in 1963. Different reading: 'Yuki-okuni'. See colour photos & descriptions: Tuyama, 1968, *Camellias of Japan*, pl.99; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.212 & p.322; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.156, 254; Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.174. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.367. Chinese synonym 'Xuexiaoguo'.

Yuki-onna. (Snow Lady), (Higo), *Uekiya Bunsuke Hikki*, 1830: White with relatively fewer stamens. Originated in Kumamoto, Prefecture, Japan. See: Hiratsuka, 1964, *Higo Camellia*, p.124. Corruption of name: 'Yuki-Onnan'.

Yuki-Onnan. Vi Stone, 1983, SCCS., *The Camellia Review*, vol,45, No.2, p.21. A corruption of the Japanese name **Yuki-onna.**

Yuki-otome. (Snow Maiden), *(C.rusticana)*, Izu Ohshima, 1980, Hawaii Botanic Gardens List, p.19 as 'Yukiotome'. Formal double white. Originated in Japan.

Yûkiri. Different reading for **Yûgiri.**

Yukisarasa. (Snow Chintz), *(C.rusticana)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.399, colour photo and description: Medium size, white with red and pink streaks and speckles, formal

double with outer 3-4 rows of rounded petals, inner somewhat erect and incurved to form a bud centre while opening. Leaves thick, broad-ovate, deep green, apices abruptly acute, margins shallowly serrate. Petioles hirsute. Late flowering. Originated in the Toyama Prefecture Japan. Named and released by Mitsuroku Makino in 1989. Resembles **Kikusarasa.**

Yukisarashi. (Snow Bleached), *(C.rusticana)*, JCS., 1973, *Tsubaki*, No.12, p.2, colour pl. No.6: White, medium size, 9-11 cm across, semi-double to open peony form with 2-3 rows of large, overlapping petals with crinkled edge, 17 petals and 10 petaloids. Stamens in small, irregular groups or dispersed among the petaloids and small erect petals. Filaments white, pistil retrogressive. Late flowering. Leaves light, olive green, broad-ovate, apex blunt acute, margins serrate. Originated in Toyosaka-machi, outside of Niigata City. Collected in 1962 by Hagiya & Ishizawa and named in 1971. For further colour pl.: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.156, 254.

Yukishiro. (Snow White), *(C.rusticana)*, Fendig, 1953, *American Camellia Catalogue:* Pure white, medium size, single with yellow stamens. Originated in Japan. Different reading: 'Yukihaku'.

Yukishiro-karako. (Snow White Anemone), *(C.japonica)*, Shufunotomo-sha, Kirino, 1976, *Nihon no Tsubaki*, pp.135, 231; Seibundô Shinkôsha, 1979, *Senchinshû*, p.157, colour photo, p.254, description: White. Small size, anemone form with about 9 large guard petals about an anemone centre of petaloids, small erect petals and stamens. Leaves mid-green, flat, elliptic, margins obscurely serrulate. Petioles hirsute. Originated in Kurobe City, Toyama Prefecture, Japan. Named and released by Toyama Rusticana Lovers Club in 1965. Resembles **Shirokarako** and **Kotohajime**.

Yukisudare. (Snow Bamboo Blind), *(C.japonica)*, Seibundô Shinkôsha, 1979 *Senchinshû*, p.254: White. Bowl-shaped single type flower with a fat cylinder of stamens. Medium size. Early flowering. Leaves medium size, ovate, acuminate apex. Plant habit, upright and vigorous. Parentage unknown, originated in the Chûbu area, Japan by Haruichi Nagata. Named and released by Eimei Nagata in 1975.

Yukisugata. (Pose in the Snow), (Higo), *Uekiya Bunsuke Hikki*, 1830: Medium size. white, single. Originated in Kumamoto Prefecture, Japan. See: Hiratsuka, 1964, *Higo Camellia.* p.124. (Believed extinct.)

Yukitôrô. (Lanterns in the Snow). Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.234. Different reading for: **Yukidôrô.**

Yuki-tsubaki. Sawada, 1951, *American Camellia Yearbook.* p.104. Tuyama. 1966 *Camellia Cultivars of Japan.* pl.3. p.10; *Encyclopedia of Camellias in Colour*, 1972. vol.I, p.273; Seibundô Shinkôsha, 1979, *Senchinshû*, pp.157.165. Japanese common name for *C.japonica* var. *rusticana.*

Yukiyama. Yashiro. 1841. *Kokon Yôrankô*, vol.344, Ichijima. reprint, p.571. Based on the same characters as 'Yuki-no-yama'. Different reading for **Sessan.**

Yukiyama-sazanka. Different reading for 'Yuki-no-yama' as a possible synonym for 'Setsuzan-sazanka' in *Kôeki Chikinshô* 1719. Synonym for **Sessan.**

Yukizora. (Snow Heaven), (Higo), Taniguchi, 1912, *Chinka Kyôkan.* No description. Originated in Kumamoto Prefecture. Japan.

Yukizuri. (Snow Suspending), *(C.japonica).* ICS.. Apr.1990. *Japanese Camellia Cultivar List*, p.26. No description. Originated in Ishikawa Prefecture, Japan. Note: "Yukizuri" ia a cone shaped rope work to support branches of trees to prevent them from being broken by the weight of snow.

Yûkô-no-hikari. (Radiance of Friendship), *(C.japonica).* Satô, 1975, *Chûbu no Tsubaki*, p.35 as 'Yûkônohikari': Vermilion red. Medium size. cup-shaped single with 5-6 large, round

overlapping petals with some fluting and notching. Stamens in a central cylindrical group with red filaments and yellow anthers. Leaves medium to dark green. ovate-lanceolate. lustrous, long acuminate apex, strongly and sharply serrate. impressed venation. Plant habit errect and well furnished. Originated in South Korea by Boku Shunkin, named and propagated in the Chûbu area, Japan by Minoru Satô. for further colour photos see: Seibundô Shinkôsha, 1979. *Senchinshû*, pp.154, 253; Yokoyama & Kirino, 1989. *Nihon no Chinka*, p.222. Sport: **Yûkô-no-hoshi.**

Yûkô-no-hoshi. (Star of Friendship), *(C.japonica).* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.222: Vermilion red with white spots, medium size. single. Sport of **Yûkô-no-hikari.** Originated in the Chûbu district, Japan. Named and released by Minoru Satô in 1977.

Yukuai Huiyi. Gao. Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.reticulata* **Pleasant Memories.**

Yukuhashi-tama-no-ura. *(C.japonica), Kurume Camellia,* 1997, English translation, p.11; Deep crimson with white mottles. Medium size campanulate single with dark green leaves tubular stamen cluster. Flowers mid-season. Named by T. Kunitake, Kurume, Japan.

Yukusue. (Future). *(C.japonica), Chinka Zufu,* (before 1700), Watanabe. 1969. pl.592: Deep crimson. Medium size. irregular peony form. Originated in Japan. See: Kyôto Engei Kurabu, 1962, *Tsubaki Tokushû*, No.3. p.147. (Believed extinct.)

Yu-lan Ch'a. Yü & Bartholomew, 1980, *American Camellia Yearbook.* p.23. Different reading for **Yulan Cha.**

Yulan Cha. (Magnolia Camellia), *(C.reticulata),* Feng et al., 1981. *Yunnan Shancha Hua,* p.9, illustration 12. description, p.106: Leaves thick. long-elliptic to oblong, apices short pointed or bluntly rounded. bases cuneate, 7.5-8.5 cm. long x 3-3.5 cm. wide. Flowers deep pink (RHS.CC.58B). single, diameter 4-5 cm, shaped like a magnolia flower when fully open. Petals 6-7, long, hooded, erect. Stamens numerous, united to form a cylinder. Pistils fertile. This is a new cultivar, selected from seedlings from open pollinated seeds at the Kunming Botanical Gardens. Yunnan. China. Early flowering. Western synonym: 'Magnolia Camellia', 'Red Magnolia'. Different reading: 'Yu-lan Ch'a'.

Yulan Chahua. Chen, 1955. *Chungkua Shumu Fenlai Hsueh.* Synonym for **Hagoromo.**

Yulanpian. (Magnolia Petal). *(C.japonica),* Gao & Zhuang, 1989. *The Camellia in China,* pp.53, 54. No.348. colour photo No.206: Medium size, white becoming blush pink at petal base. semi-double with 11-14 large, irregular, emarginate petals, with the centre sometimes broken into fascicles by small, erect petals. Leaves deep green, elliptic, serrulate. Originated in China.

Yuletide. *(C.x vernalis),* Nuccio's Nurseries Catalogue, 1963: Brilliant orange red single with yellow stamens. Dekker, 1965, *American Camellia Yearbook*, p.61: A Hiryû seedling. A bushy, upright shrub with small, very dark green leaves and small, brilliant red flowers. A 5 year old chance seedling that first bloomed 1959. Plant growth is upright, dense and medium. Leaves 4.5 cm x 2.5 cm. The flower has golden anthers, is 7.5 cm across with 5-7 petals and is early blooming. Originated by Nuccio's Nurseries, Altadena, California, USA. Received the Ralph Peer Sasanqua Seedling Award for 1974. See: *American Camellia Yearbook*, 1971, p.51, Reg. No.1130. For colour photos see: *American Camellia Yearbook*, vol.II, 1974, facing p.12; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.179; Front cover, 1965, SCCS., *The Camellia Review.* vol.26, No.6.

Yuletide Spirit. *(C.sasanqua),* Originated by Robert Green, Green Nurseries, Fairhope, Ala., USA. Large, deep coral red single. Dense, upright, spreading growth. Introduced 2000.

Yulinbai. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.99. (White fish scales). Synonym for **Xueta.**

Yulinjia. (Fish Scale Armour), *(C.japonica)*, Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.91, colour photo, [p.121]: Light red, formal double with 6-8 rows of rounded, imbricated petals. Originated in China. See Gao & Zhuang, 1989, *The Camellia in China*, p.45, No.262, colour photo No.146.A & B.

Yulinglong. (Jade of Elegance), *(C.japonica)*, Fang, 1930, *Diannan Chahua Xiaozhi*, p.152: It is tiny, white and lovely. Originated in China. Different reading: 'Yü-ling-lung'.

Yü-ling-lung. Tsukamoto & Andoh, 1981, *Tsubaki*, p.159. Different reading for **Yulinglong.**

Yulouchun. (Beautiful Tower in Spring), *(C.japonica)*, Huang Nursery Catalogue, Shanghai, 1949: Description not seen. Originated in China. Different reading: 'Lu Lou Ch'un'.

Yulouchun. *Chinese Camellia Culture*, 2003, p.251 with colour photo; A *C.hybrid* developed by Mr Huang Delin, Shanghai, China. First flowered 1991. Large pure pink anemone form . Flowers mid-season.

Yumao. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the Japanese *C.japonica* **Tama-ikari.**

Yume. (Dream). *(C.yuhsienensis* hybrid*).* Chinka-en, Niigata Retail List, 1991-1992, p.2, colour photo front page; Kinji Ohara, Tateyama, Chiba, 1993-1994, List of Camellias: A single composed of 3 purplish pink inner petals and 3 white petals. See colour photo *New Zealand Camellia Bulletin*, 1995, Issue No.121, vol.XIX, No.2, p.17. Hybrid between *C.yuhsienensis* x *C.hiemalis* 'Kan-tsubaki' (**Shishigashira**) originated by Dr Kaoru Hagiya, Niigata, Japan..

Yume-akari. (Dream Light). (*C.yuhsienensis* hybrid). Kairyô-en, Kawaguchi Catalogue, 1993, p.1, colour photo: A hybrid of *C.yuhsienensis* x *C.hiemalis* **Shishigashira**, originated by Dr Kaoru Hagiya, Niigata, Japan. A small size, open peony, deep pink with white outer petals. Leaves dark green, serrulate, ovate.

Yumechiyo. (Nick Name for Female), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.26; Yamaguchi Tsubaki-en Catalogue 1991, No.339: Pale pink, small, single, cup shape. Originated in Ishikawa Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.277 with colour photo; English translation p.194. Flowers mid-season to late. Leaves ovate, medium size, flat, reflexed. Upright growth. Selected from wild japonicas in Mattô City. Named and rleased by Hara in 1980.

Yumedono. (Dream Palace), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.158, colour photo, p.255, description: Light pink, campanulate single of 5 petals, some pointed due to folding in of petal edge at apex. Small, broad stamen cluster with yellow anthers. Leaves mid-green, ovate, apex acute, margins serrate, undulate. Blooms mid-season. Selected from wild camellias in Niigata Prefecture, Japan, released in 1970.

Yumegokoro. (Dreaming Heart), *(C.japonica)*, Mainichi Shinbun, JCS, 1971, *Tsubaki*, p.120, colour photo: Pink veined deeper pink with some white areas on the petals. A medium size, single of 5 rounded, overlapping petals, apex emarginate and crinkled, opening wide cup-shaped. Leaves deep green, ovate, apex blunt acute, margins serrate. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour*, vol.I., 1972, pl.107, pp.72, 307; Seibundo Shinkôsha, 1979, *Senchinshû*, pp.158, 225. Originated in Sofu'e-chô, Nakajima-gun, Aichi Prefecture. Collected at side of Kiso River by Asai, Shinichi.

Yumegomori. (Confined in a Dream), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.26. No description. Originated in Ishikawa Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.276 with colour photo; English translation p.194. Small, red, tubular to

trumpet shaped single, cylindrical stamen cluster. Flowers mid-season to late. Leaves narrowly elliptic, small, flat, plicate. Upright growth. A cultivar from a private family in Tsurugi Town, Ishikawa Prefecture. Named and released by Tokio Hara in 1982.

Yumeiren. (Jade Beauty), *(C.japonica)*, Huang Nursery Catalogue Shanghai, 1949. Description not seen. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.98: Leaves elliptic, flat, apex short acuminate, 7.5-8.5 cm long x 3.8-4.2 cm wide, base broadly cuneate, glossy green, margins serrulate, venation smooth above, petioles 7-8 mm long. Flowers formal double. white tinted light green, 7-8 cm across with 70-80 petals in 8-9 rows mostly separate. Buds yellowish green, heart-shaped, sparsely short downy. Blooms mid-season. Originated in China. Synonym: 'Dabai Hehua'. See Gao & Zhuang, 1989, *The Camellia in China*, p.47, No.281, colour photo No.161.

Yumeiren. (Corn Poppy), *(C.reticulata)*, Feng et al., 1981, *Yunnan Shancha Hua*, p.16, illustration 23, description, p.108: Leaves oblong to obovate, apices acuminate, bases broad cuneate, light green above, conspicuously reclinate in a V-shape, 7-9 cm long, 4-6 cm wide. Flowers red (RHS.CC.52B), diameter about 15 cm. Petals more than 16, flat and long, similar to a poppy flower. Stamens central and numerous. Pistils mostly rudimentary. Flowers early to mid-season. This cultivar was selected from open pollinated seed of *C.reticulata* f. *simplex* Sealy at Tengchong, Yunnan, China. Different reading: 'Yü-mei-jen'. Synonyms: 'Crimson Corn Poppy', 'Field Poppy', 'Corn Poppy'. Note: The first character is different to that of the *C.japonica* above.

Yumeiren. (Corn Poppy), *(C.japonica)*, Gao & Zhuang, 1989, *The Camellia in China*, p.52, No.328, colour photo No.188: Medium size, 8-11 cm across. Soft pink with red patchs and streaks, formal double, with 6-7 rows of rounded, emarginate petals. Leaves mid-green, elliptic. Blooms mid-season. Originated in China.

Yumeji. (Two Dreams), *(C.hybrid)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.84 colour photo and description: Very small size, white with very pale purplish pink edges, open cup-shaped single with 5 broad, rounded, overlapping, reflexed petals and a compact stamen cluster, white filaments, joined for the lower third, light yellow anthers. Leaves ovate, mid-green, apices acute, margins serrate. Blooms mid-season. Originated in Hyôgo Prefecture, Japan. Orthographic error: 'Yumeli'. A seedling of **Shuchûka** x *C.fraterna.* Named and released by Nobuo Sasai in 1980. Note: "Yumeji" is the name of a poet and romantic painter in the Taishô era. See also following **Yumeji** with different kanji characters and meaning.

Yumeji. (Pathway of Dreams), *(C.rusticana)*, Hagiya & Ishizawa, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.9, illustration (K), description, p.61: Pale peach pink. Medium size, peony form with about 17 wavy outer petals and 14 inner petals, about 130 stamens, dispersed among the petals. Mid-season blooming. Petaloids 4-10. Leaves medium size, ovate, curved and twisted. Plant habit upright and vigorous. Originated in Tochio City, Niigata Prefecture, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.255.

Yumekazari. (December Ornament), (C. *japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.372, colour photo and description: Large size, soft pink with rare red streak, white border, informal, incomplete double with large, irregular, waved outer petals and some smaller, erect fluted inner petals and a stamen cluster with yellow anthers. Leaves elliptic, deep green, apices tapering acute, margins serrulate. Flowers mid-season to late. Originated in Izu Ohshima, Japan. A sport of **Azumakazari.** Discovered and released by Takeo Ogawa in 1985.

Yume-kikuzuki. (Dreaming 'Kikuzuki'). *(C.rusticana). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.276 with colour photo; English translation p.194. Medium size, pale pink shading to white at the centre in winter, tubular to trumpet shaped single, somewhat slender petals, cylindrical stamen

column. Flowers early to mid-season. Leaves elliptic, medium size. Upright growth. A natural seedling of **Kikuzuki.** Named and released by Kôji Funakoshi in 1988. From Aichi Prefecture.

Yume-komachi. (‘Komachi’ in a Dream). *(C.hybrid). "Camellias in Kurume",* ICS Congress, Kurume 2010, pp.115 & 128 . No description. From Kurume City, Japan.

Yumekurenai. (Dreaming Crimson). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.276 with colour photo; English translation p.194. Small, deep red, sake cup-shaped single, thick and glossy petals, cylindrical stamen column. Flowers mid-season to late. Leaves narrowly elliptic, small, somewhat waved. Upright, vigorous growth. A cross between ‘Hagui’ and **Tomuro.** Originated and released by Tadao Yamaguchi in 1991. From Ishikawa Prefecture.

Yumeli. ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.31. Orthographic error for **Yumeji.**

Yumemakura. (In a Dream), *(C.japonica),* Chûbu Tsubaki Kyokai, 1969, *Tsubaki Meikan:* Soft pink background due to densely fine peppering of light red with some streaks of red. Medium size, single of 7 petals opening widely cup-shaped, emarginate with some apical fluting. Stamen cluster is broad and spreading, anthers dull gold, filaments creamy. Leaves glossy strong green, ovate. Apex blunt acute, recurved, shallowly serrate. For colour photos & descriptions see: *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.351; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.158, 255. Resembles **Tarô’an-nishiki**. Originated and released by Shinichi Asai, Chûbu area, Japan in 1968.

Yumemiro-hitomi. (Dreaming Eyes). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.277 with colour photo; English translation p.194. Pale pink changing to white, medium to large anemone form, petaloids creamy white. Flowers early. Leaves elliptic, medium size, recurved. Spreading growth, thick branches. A cross between *C.x williamsii* **Citation** and *C.granthamiana.* Named and released by Kaoru Hagiya in 1980. From Niigata Prefecture.

Yume-no-furusato. (Dreaming of Home). *(C.japonica),* JCS, 1996, *Japan Camellia*, No.51, p.10 with colour plate: Pale pink becoming lighter to centre. A bell-shaped flower of 6 channelled petals. A small to medium size single with tubular stamen cluster. Blooms mid-season. Originated by Tomita Kunitake, Kurume, Fukuoka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.277 with colour photo; English translation p.195. A natural seedling of unknown parentage. Leaves narrowly elliptic, small. Upright, vigorous growth.

Yumenohurusato. Kurume Shibu colour poster illustration, 1997. Different reading for **Yume-no-furusato.**

Yume-no-ukihashi. (Floating Bridge in a Dream). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.277 with colour photo; English translation p.194. Medium size, flat single, pink graduations on pale pink ground, cylindrical stamen column. Flowers mid-season. Leaves elliptic, small, reflexed. Upright growth with coarse branches. A cross between *C.sasanqua* **Asahizuru** and *C.pitardii* var. *yunnanica.* Named and released by Kaoru Hagiya in 1980. From Niigata Prefecture.

Yume-wabisuke. (Dream Wabisuke) *(C.x vernalis). "Sasanquas, The Winter Flowers*" ICS Congress, Kurume 2010, English translation p.68; Deep peach red, small single, degenerated stamens, early to mid-season. From Shizuoka (Hamamatsu).

Yumi. (Name for Female), *(C.saluenensis* hyb.), ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.31: Small size, very pale pink, graduating to white, single. A *C.saluenensis* cross, originating in Ôsaka Prefecture, Japan. Named and released by Kazuo Yoshikawa in 1982.

Yumian Beiti. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the USA *C.japonica* **Betty’s Beauty.**

Yuming. (Jade Tea), *(C.japonica),* Chen, Jingye, 1253, *Quan Fang Bei Zu:* Flowers white. Originated in China. (Believed extinct).

Yumingtuan. (Jade Tea Bouquet), *(C.japonica),* Fang, 1930, *Diannan Chuahua Xiaozhi:* It is as white as an egret and the flowers are terminal. Originated in China. Different reading: 'Yü-ming-tuan'.

Yü-ming-tuan. Watanabe & Andoh, 1981, *Tsubaki,* p.159. Different reading for **Yumingtuan.**

Yummy Fragrance. *(C.x williamsii). New Zealand Camellia Bulletin,* 1995, Issue No.120, vol.XIX, No.1, p.46, Reg. No.359: Originated by J.R. Finlay, Whangarei, New Zealand. Bright red (RHS.CC.47A-51A), peony form with yellow anthers, white filaments, 9 petals and 10 petaloids. The blooms are 10 cm across x 5 cm deep. Growth habit is upright and medium in rate. Leaves dark green, 8 cm long x 5 cm wide. Blooms early to late. Fragrant. A seedling of **Mrs Bertha A. Harms** x (**Salab** seedling x **Kramer's Supreme**).

Yûmomiji. (Scarlet Tinged Leaves in the Evening). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.271 with colour photo; English translation p.191. Large, peach red, semi-double with some petaloids, split stamens, light fragrance. Flowers early to mid-season. Leaves ovate, medium size, reflexed. Spreading, dense growth. A cross between *C.hiemalis* and *C.reticulata* **William Hertrich.** Named and released by Kaoru Hagiya, Niigata Prefecture, Japan, in 1979.

Yumudan. (Jade Peony), *(C.japonica),* Huang Nursery Catalogue, Shanghai, 1949, Description not seen. Gao & Zhuang, 1989, *The Camellia in China,* p.34, No.152, colour photo No.75: Medium size, 7-8 cm across, white, peony form with outer two rows of large, waved, irregular petals and a concave centre of petals, petaloids and stamens. Leaves dark green, broad-ovate, serrulate, apices abrupt acuminate. Late blooming. Originated in China.

Yûnami. (Waves at Evening), *(C.japonica),* Inazawa Nurseries, Co. Ltd Catalogue, 1988-1989, p.9, A-437: Medium size, pale peach pink single. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.124, colour photo and description: Medium to small size, pale pink, saucer-shaped single with 5 broad, rounded, overlapping, reflexed petals with somewhat crimped margins, a central stamen cylinder with cream filaments, joined at the lower half, and light yellow anthers. Blooms early to mid-season. Originated at Izu Ôshima, Japan. Collected and released by Takeo Ogawa in 1969.

Yûnami-chidori. (Plover on the Evening Waves), *(C.japonica),* Himuro, 1982, *Murasuzume:* Soft pink streaked and splashed deep rose and bordered with white. Medium size semi-double. Originated in Kanagawa Prefecture, Japan. A seedling of **Higurashi.**

Yunban Guliao. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica* **McVey's Guilio Nuccio.**

Yunban Shancha Zhidu. Gao, Jiyin, Ltr, 5 November 1991, Chinese synonym for the USA *C.hybrid* **Massee Lane Variegated.**

Yuncha. (Yunnan Camellia), *(C.reticulata),* Wang, Xiangjin, 1621, *Qunfangpu.* No description. (Believed extinct).

Yun Nan Shan Cha. Yü, 1951, *Yun Nan ti Chahua.* Chinese common name for *C.yunnanensis.*

Yunfeng. *(C.reticulata) Fine Camellia Garden, Chuxiong,* 2012, p.24 with colour photo. Abbreviation of **Yunfengcha**.

Yunfengcha. (Yunnan's Peak). *(C.reticulata),* China Regn No.13. *China Flowers & Horticulture,* Apr 2007, No.14, p.49, with colour photo; Originated by Yu Bingfu, Tengyue Town, Tenchong, Yunnan, China. Flowers rose form, bright deep peach red, 13-15 cm diameter. About 40 petals, imbricated in 7-8 whorls, outer petals larger. Flowers mid-season. Leaves elliptic to ovate, 4.2-6.5 cm long x 2.2-4.4 cm wide, apices obtuse to acute, bases cuneate to round, margins slightly reflexed. Slow growth.

Yungii. Cachet Catalogue, 1840-1841, p.2; Berlèse, 1845, *Monographie,* ed.3, p.201. Orthographic error for 'Youngii', synonym for **Epsomensis.**

Yunhailuo. (Yunnan's Conch Shell), *(C.reticulata),* Gao & Zhuang, 1989, *The Camellia in China*, p.57, No.379, colour photo No.237: Leaves strong green, ovate to broad-ovate, 9-10 cm long x 5-5.5 cm wide; open, irregular, peony form flower, pink, with 22-26 petals. Early blooming. Originated in Tengchong County, Yunnan Province, China.

Yunhua. Gao & Zhuang, 1989, *The Camellia in China*, p.60, No.405, colour photo No.262. Abbreviation for **Yunhua Cha.**

Yunhua Camellia. Bao, 1980, ACS., *The Camellia Journal*, vol.35, No.2, p.18. Synonym for **Yunhua Cha.**

Yün-hua Ch'a. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.25. Different reading for **Yunhua Cha.**

Yunhua Cha. (Splendid Spring Camellia), *(C.reticulata),* Feng, et al., 1981, *Yunnan Shancha Hua*, p.34, illustration 56, 57, description, p.116: Leaves elliptic, apices acuminate, bases cuneate or bluntly rounded, dark green above, reclinate in a V-shape, margins undulate, 6-9 cm long x 3.7-5 cm wide. Flowers red (RHS.CC.58C), diameter about 15 cm. Petals more than 14, sometimes up to 23. Stamens numerous, usually central, sometimes among petals. Pistils mostly rudimentary. Flowers early to mid-season. This cultivar was selected from an open pollinated plant of *C.reticulata* Lindl. f *simplex* from near Yunhua, Tengchong County, Yunnan, China. Different reading: 'Yun-hua Ch'a'. Synonyms: 'Yunhua Camellia', 'Splendid Spring Camellia'. See p.60, Feng et al., 1986, *Yunnan Camellias of China.*

Yunhua Jinhuan. (Yunhua's Gold Earring), *(C.reticulata),* Gao & Zhuang, 1989, *The Camellia in China*, p.58, No.389, colour photo No.246: Leaves dark green, obovate, 9-9.5 cm long x 3.5-4.6 cm wide. Flower medium size, 10-10.5 cm across, deep silvery pink, semi-double, with 19-21 round petals with a wide centre of 246-276 stamens, with rare, small petals intermixed. Blooms midseason to late. Originated in the Tengchong County, Yunnan Province, China.

Yûniji. (Evening Rainbow), *(C.sasanqua),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Red with white spots, single. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, 82. Originated in Japan. (Believed extinct.)

Yunlong. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.406; Chinese synonym for the Japan *C.japonica* **Unryû-tsubaki**. Previous synonym 'Feilong'.

Yunnan Hedinghong. *(C.reticulata) Fine Camellia Garden, Chuxiong,* 2012, p.19 with colour photo. No details. Photo shows a red, full rose form double, with a few central stamens.

Yunnanensis. Bean, 1930, *The Camellia. New Flora & Silva.* The species *Camellia yunnanensis.*

Yunnanhong. (Yunnan Red), *(C.japonica),* He, Yudu, (Ming Dynasty): Double red flower. Large like a peony. Originated in Sichuan, China. (Believed extinct).

Yû-no-kane. (Evening Bell), Izu Ohshima, 1980, Hawaii Botanic Gardens List, p.19 as 'Yuunokane'. Erroneous reading for **Yûbe-no-kane.**

Yu-no-machi-beni. (Red Camellia from Spa Town). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.275 with colour photo; English translation p.193. Small, vermilion, tubular single, cylindrical stamen cluster. Flowers mid-season to late. Leaves narrowly elliptic, small. Upright, vigorous growth. Selected from wild japonicas near Dôgo Hot Spring, Ehime Prefecture. Named and released by Tokihiro Kôno around 1980.

Yunomachi-jiro. (White, Hot Springs Resort), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.158, colour photo, p.255, description: White. Large size, single to semi-double with 6-7 large, long, crinkled and waved petals opening wide cup-shaped, with central stamen column, yellow anthers, white filaments. Leaves dark green, elliptic, apex tapering acuminate, margins waved, sharply serrate. Originated in the Kantô area, Japan. Named and released by Tokio Yoshizawa around 1960.

Yunü. (Pure and Beautiful Girl). (*C.reticulata* hybrid). *Collected Papers,* 1994, Jan. 8-11; International Symposium on *Camellia Chrysantha,* p.171; "Selecting and Breeding new varieties of *C.reticulata*": Spinel pink, rose form double of 24-28 petals in 5-6 rows. Colour of outer petals darker, inner lighter. Size of bloom 10-12 cm across. Stamens are few, singly or severally at base of interior petals. Pistil degenerate, split to the base. Blooms mid-season to late. Leaves ovate, flat, thin, 8-10 cm long 3.8-5.8 cm wide. Originated in China.

Yunü Hongjiao. (Pretty Girl in Red), *(C.japonica)*, Gao, Jiyin, Apr.1990, CSC., Nomenclature Convention, Wuxi City, Jiangsu Province: Formal double, dark red to bright, velvety red, blotched irregularly with white; more than 80 petals. Dark green leaves, upright growth. Blooms mid-season to late. Originated in Liangyungang City, Shandong Province, China.

Yunyunhong. (Red Clouds), *(C.japonica),* Chang, Shao Yun. 1987, *Camellias from Zhejiang,* p.63: Small tree, spreading. Leaves dark green, elliptic, medium size, slightly distorted. Flowers semi-double, irregular anemone form, scarlet, 7 cm across with 23-28 petals in 4 rows, separate or basally connate. Small petaloid stamens, about 50, clustered in the centre like a small ball about 2.6 cm across. Stamens partly petaloid, basally connate for half their length, short, tube-like, a few separate. Buds brownish yellow. Blooms mid-season. Originated in Zheijiang, China.

Yunzhen. (Yunnan Needle) *(C.reticulata),* China Regn No.9. *China Flowers & Horticulture,* Apr 2007, No.8, p.48, with colour photo; Selected from a wild population in Tenchong, Yunnan, China. Named by Duan Huaigao, Dayun Village, Tenchong. Leaves deep green, lanceolate to oblong, 8.3-10 cm long, 3.3-5.2 cm wide, apex acuminate to long acuminate, bases cuneate. Flowers peach, 10-12 cm diameter. About 40 petals in 7-8 rows, with a rare needle-like appendix 3mm long on the tip.

Yupan Jinhua. (Jinhua's Jade Tray). *(C.hybrid).* Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.298 with colour photo; Originated by John Wang, San Francisco, USA, and introduced to China 2002. Possible breeding a *C.x williamsii* x a fragrant cultivar. Flowers white to light pink or yellowish with green tone, edged with pink. Sweetly fragrant. Anemone to peony form, large to very large – up to 16 cm diameter, petals broad and wrinkled or serrated at the edges and waved. A large number of petaloids mixed with yellow stamens forming a central raised ball. Leaves light green, broad-obovate and deeply serrated, similar to **Helen Bower**. Upright, vigorous plant. Flowers early to late.

Yuqing. (Jade Chime Stone), *(C.japonica),* Chen, Jingyi, 1253, *Quan Fang Bei Zu.* Flower white. Originated in China. (Believed extinct).

Yuraku. (Pleasure), *(C.japonica)*, ICS., Apr. 1990, *Japanese Camellia Cultivar List.* p.26. No description. Originated in Nagasaki Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.277 with colour photo; English translation p.195. Small, palest pink, bowl-shaped single, cylindrical stamen cluster. Flowers early to mid-season. Leaves oblong, medium size,

somewhat waved. Upright growth. Selected from wild japonicas in Tabira Town, Nagasaki Prefecture. Discovered and named by Kôhei Oka in 1980.

Yuri. (Female Name), *(C.japonica)*, Yokohama & Kirino, 1989, *Nihon no Chinka*, p.176, colour photo and description: Small size, deep red single with 5 long pointed petals of irregular length in a lily-like form and a central stamen cylinder with yellow anthers. Leaves deep green, ovate, apices blunt acute, slightly twisted and reflexed. Blooms early to mid-season. Parentage unknown, originated and released by Toshiaki Kosaki, Chûbu area, Japan in 1985. Note the different characters to the *Chinka Zufu* **Yuri.**

Yuri. (Lily), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe 1969, pl.608. Hamamatsu, 1828, *Setsuyô Kikan:* White. Small size, two tiered flower. A row of outer guard petals with a fountain of long, erect petals errupting from the centre. See: Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû*, No.5, p.145. Originated in Japan. (Believed extinct.)

Yuri Gagarin. *(C.japonica)*, Cattolica, G., *Le mie Camelie, My Camellias*, 2005, p.109 with colour photo; Medium size semidouble, red (RHS.CC.53B) with central column of stamens, yellow anthers. A seedling of 'Rubra Simplex' **(Rubra)** x 'Rosa Simplex' **(Aitonia),** first flowered in 1986. Originated by Dott. Guido Cattolica, Livorno, Italy.

Yuriba. (Lily Leaf), *(C.japonica)*, Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in odd leaves section; Itô, Ko'emon, 1879, *Chinkashû:* Small deep red single and small stamen cluster, White spots. Leaves long, narrow, linear form, long tapering acuminate apex, coarsely serrate. Synonym: 'Yuriba-tsubaki' and probably synonymous with **Konnô-yuriba** in Mizuno, *Sômoku Kinyôshû*, 1829. Thought to be same as modern **Yuri-tsubaki.** See: Tuyama, 1966, *Camellia Cultivars of Japan*, p.372; JCS, 1969, *Tsubaki*, No.7, p.37.

Yuriba-tsubaki. Satomi, 1956, *Camellia Varieties of Japan.* Synonym for 'Yuriba' as possible synonym for **Yuri-tsubaki.**

Yuri-chidori. (Lily Plover). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.279 with colour photo; English translation p.196. Medium size, red, trumpet shaped single, cylindrical stamen column. Flowers early to late. Leaves especially slender and long, small. Weeping branches. A natural seedling of **Chôchidori.** Originated and released by Takeo Ogawa in 1990. From Izu Ôshima.

Yurichô. (Lily butterfly). *(C.x williamsii).* Yamaguchi Tsubaki-en Catalogue, 1991-1992, No.572. A seedling of **Chôchidori** x **Angel Wings.** Light pink fading to white at petal base. Trumpet shaped with ruffled, keeled petals. Blooms medium size. Originated by Yamaguchi Tsubaki-en, Kyoto, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.278 with colour photo; English translation p.195 as **Yuri-cho.** Small, trumpet shaped single, pink shading to white at the base, cylindrical stamen column. Flowers mid-season to late. Leaves narrowly elliptic, small. Upright growth

Yuri-hagoromo. (Lily 'Hagoromo'), *(C.japonica)*, Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.73, colour photo and description: Small size, pale pink, tubular single of 5 irregular long petals with a central column of stamens with white filaments and soft yellow anthers. Late blooming. Leaves lanceolate to ovate, mid-green, apices acuminate to acute, reflexed, margins shallowly serrate. Blooms mid-season. Originated in Okayama Prefecture, Japan. A chance seedling of **Hagoromo.** Named and released by Nobuo Sasai in 1979.

Yurihime. (Lily Princess), *(C.japonica)*, Andoh, 1971, *Tsubaki Meika no Shôkai to Saibai*, pl.134, p.45, description, p.210: Large size, white, single of 7-8 large, heavily textured, rounded, overlapping petals with a broad cylinder of yellow stamens. Leaves dull olive green, broad-ovate, apex blunt acute, reflexed, margins serrate, raised venation. Originated in Angyô, Saitama Prefecture, Kantô area, Japan. Named and released by Yoshizawa Camellia Nursery around

1970. For further colour photos & descriptions see: *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.79 & p.303: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.159, 255.

Yurikago. (Swinging Cradle), *(C.rusticana), Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.228, p.110, description, p.324: Palest pink to white. Medium size, 8-9 cm across, semi-double with about 20 petals in 3 rows, crinkled and incurved, with a spreading, central stamen cluster. Leaves glossy, large elliptic, medium to dark green, slightly undulate, apex acute, tending to recurve, margins shallowly serrate. Petioles hirsute. Originated with a private family in Ojiya City, Niigata Prefecture, Japan. Collected, named and released by Yaichi Kawamura in 1970.Synonym: 'Kohaku'.

Yurikago. (Swinging Cradle), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.151, colour photo, p.150, description: Small size, light red, cup-shaped single with 7 broad, rounded, reflexed overlapping petals in 2 rows. Stamens in a central cylinder, filaments white, joined for the lower half, anthers yellow. Leaves deep glossy green, broad-lanceolate, apices tapering acuminate, margins serrulate. Blooms mid-season to late. Originated in Hamada City, Shimane Prefecture, Japan.

Yurikamome. (Lily Seagull), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.26. No description. Originated in the Shimane Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.278 with colour photo; English translation p.195. Small to medium size, palest pink changing to white, trumpet shape to flat single, cylindrical stamen column. Flowers early to mid-season. Leaves narrowly elliptic, small. Upright growth, weeping branches. Selected from cultivars at a private family in Kashima Town. Named and released by San-in Camellian Club in 1983.

Yuri-no-tsuyu. (Dew on the Lily), *(C.japonica),* Inazawa Nurseries Co. Ltd. Catalogue, 1985-1986, A--388: Pure white, lily-like flowers. Medium size. Originated in Japan.

Yuri-shibori. (Lily Variegated), *(C.japonica),* Seibundô Shinkôsha, Apr. 1976, *Garden Life*, p.39; *Encyclopedia of Camellias in Colour*, vol.II, 1978, pl.352, p.144, description, p.249: Small campanulate single, white with crimson streaks, 8-9 long, channelled, emarginate petals. Leaves small, midgreen, venation conspicuous, lanceolate, apex tapering acuminate, margins sharply serrate, wavy and reflexed. Introduced by Kan Utsugi of Chiba from a nursery in Osaka, Japan. For colour photo: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.159, 255. Resembles **Enoshima-miyakodori.** Sport: **Yûyake-fuji.**

Yurisibori. Kurume Shibu colour poster illustration, 1997. Corruption of **Yuri-shibori**. See ICS Register, p.2029.

Yuritate. (obscure), *(C.japonica),* Ichijima, 1906, (Yashiro, 1841 reprint), *Kokon Yôrankô*, vol.310, p.362. No description. Originated in Japan. (Believed extinct.)

Yuri-tsubaki. (Lily Camellia), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969 pl.208: White, medium size, single with 6-7 rounded petals. Originated in Japan. See: Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû*, No.4, p.112. (Believed extinct.)

Yuri-tsubaki. (Lily Camellia), *(C.japonica),* Adachi, 1960. *Camellia. Its Appreciation & Artistic Arrangement*, p.89, colour pl.; Tuyama, 1966, *Camellia Cultivars of Japan*, pl.212, p.372.; Tuyama, 1968, *Camellias of Japan*, pl.150, p.75, description, p.132: Branches sparse, pendulous. Leaves linear-lanceolate, often strongly arcuate, side veins a little elevated, indistinctly crenate at the margins. Petioles glabrous. Flowers single, red (Delft rose 020), petals, 5 or more, very slender and arcuated outwards. Staminal tube slender and rather poor. Late flowering. Originated in Japan. For colour photos & descriptions see: Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.47; *Encyclopedia of Camellias in Colour*, vol.I, 1972, pl.440 & p.358; Satô, 1975, *Chûbu no Tsubaki*, p.87. Yokoyama & Kirino, 1989, *Nihon no*

Chinka, p.174. Note: There are two forms of this 'Lily Camellia', the self red one and the variegated. Tuyama believes the Mizuno (1829) listing of **Konnô-yuriba** is the first listing of what is now called **Yuri-tsubaki** for the self red form and the Kasuya, Kamegorô, (1859) listing of **Yuriba** is the first for the variegated form. It was also called 'Sasaba-tsubaki' (Bamboo Leaf Camellia) and 'Konnô-Yuriba' (Golden King Lily Leaf) according to Yokoyama. This line of camellias was believed extinct as the original plant had died. However in 1962 specimens were located in the residences of the Imamiya and Kamigamo Shrines, Kyôto. Synonym: 'Nagasaki-tsubaki'.

Yûsen. (Hermit), *(C.sasanqua)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.262: Bright pink, single. Originated in Japan.

Yûsen-no-makura. (Travelling Hermit's Pillow), *(C.japonica)*, Sakuden, 1630, *Hyakuchinshû*. Very large, double, white. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.98. (Believed extinct.)

Yûshôki. JCS, 1972, *Encyclopedia of Camellias in Colour*, vol.I, p.309. Synonym for 'Shishôka' which is thought to be a synonym for **Reikanji-ezo-nishiki.**

Yü-shih-tzu. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.25. Different reading for **Yushizi.**

Yûshinhaku. (Gentle-hearted White). *(C.japonica). Japan Camellia* 99, May 2013, p.2 with colour photo; JCR Regn No.2013-1, (ser No.1); Parentage unknown. White single, petals slightly wrinkled. Leaves slightly reflexed, variegated with yellowish-green to yellow spots. Stamens columnar, filaments white, anthers yellow. Plant vigorous. Early blooming. Originated by Naoyuki Yamamoto.

Yushizi. (Jade Lion), *(C.reticulata)*, Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.16: Butterfly wings type. The outer whorl of petals larger and flat, the inner ones twisted and upright, stamens united into bundles, rarely free. Crimson, mid-season flowering. Originated in Tengchong County. Feng et al., 1981, *Yunnan Shancha Hua*, p.42, pl.71, description, p.119: Leaves obovate to broad-elliptic, apices short pointed or acuminate, bases cuneate, margins coarsely, shallowly serrate, slightly declinate, rugose, 9.5-10.5 cm long x 4.2-6 cm wide. Flowers red (RHS.CC.50B), diameter about 12 cm. Petals more than 21, outer whorls slightly folded, inner whorls folded and erect; stamens many, divided into fascicles among the centre petals. Pistils mostly rudimentary. Flowers early to mid-season. This cultivar was selected from seed of an open pollinated plant of *C.reticulata* Lindl. f. *simplex* Sealy at Tengchong County, Yunnan Province, China. Different reading 'Yü-shih-tzu'. Synonyms: 'Crimson Lion', 'Jade Lion'. For another colour pl. see: Feng et al., 1986, *Yunnan Camellias of China*, p.68.

Yuxiehong. (Fish Blood), *(C.japonica)*, Yü, 1964, 'The Garden Camellias of Yunnan' in *Camellian*, p.6 as 'Yusuehung': Flowers carmine, 7-8 cm across. Originated in China. Leaves obovate, apex acuminate, cuneate at base, shining deep green above, 6-7 cm long x 3-3.5 cm wide. Flowers carmine, sometimes variegated with white markings on outer petals, formal double, petals orbicular-obovate, apex rounded, gradually diminishing in size to the centre. No stamens or pistil. Flowers mid-season. Synonym: 'Fish Blood'.

Yuxin Manao. (Jade Heart Cornelian), *(C.japonica)*, Fang, 1930, *Diannan Chahua Xiaozhi*, p.150: The centre is white with red margins. Originated in China. Different reading: 'Yu-hsin-ma-nao'.

Yuxuanzhuan. (Dextrose), Liu, 1959, *Chungkuo Chuming Tichi Chung Hua Hui.* Description not seen. Originated in China. Different reading: 'Yu-hsuan-chuan'.

Yuxuehong. (Shining Red Snow), *(C.japonica)*, Chen, 1955, *Kuan Shang Shumu Hsüeh.* Description not seen. Originated in China. Different reading: 'Yu Hsueh Hung'.

Yûyake-fuji. (Sunset over Fuji). *(C.japonica)*, Funaki-en Camellia Catalogue, 1988-1989, No.234, colour photo; Kairyô-en Catalogue, Autumn Issue 1995, p.29. A sport of **Yuri-shibori**, a 5-6 petalled single. Deep pink veined deeper, fading to white margins. Originated in Japan.

Yuyama-guro. (Yuyama's Black). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.277 with colour photo; English translation p.195. Medium size, crimson semi-double, cupped petals, cylindrical stamen column. Late flowering. Leaves elliptic, medium size, waved. Upright growth. Selected from wild japonicas growing in Himi City. Named and released by Hiroshi Ôta and Yasufuli Fukuda in 1980s. From Toyama Prefecture.

Yuyan. (Gorgeous Jade), *(C.reticulata)*, Gao & Zhuang, 1989, *The Camellia in China*, p.58, No.385, colour photo, No.243: Leaves mid-green, elliptic, 7-7.8 cm long x 2.7-3 cm wide, margins finely serrulate, apices tapering acuminate. Flower medium size to large, 9-11 cm across, soft pink, semidouble with 13-17 fluted and waved petals. Stamens central, 70-77. Blooms mid-season. Originated in the Tengchong County, Yunnan Province, China.

Yuyi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.412; Chinese synonym for the Japan *C.japonica* **Hagoromo.**

Yûzakura. (Evening Cherry), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.155, colour photo, p.253, description: White to faintest pink. Small size, campanulate single with 5 petals with their edges folded in at the apex to form a point; broad stamen cluster. Blooms mid-season. Leaves dark green, long-elliptic, slightly reflexed. Petioles hirsute. Originated in the Niigata Prefecture, Japan. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya in 1973. Different reading: 'Yuuzakura'.

Yûzan. (Mount Yû), *(C.sasanqua)*, Kajitsu-en, 1905, *Chabaika Meikan*, White with pink graduations, very large size. Originated in Japan. (Believed extinct.)

Yûzen. (Old Dyeing Method), *(C.japonica)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.155, colour photo, p.253, description: Pale pink background, striped and dotted densely with deep pink. Small to medium size, single opening spherically with a broad, central stamen cluster. Flowers mid-season. Leaves elliptic, reflexed, apices acute. Originated in Chûbu area, Japan. Parentage unknown, originated and released by Toshiaki Kosaki in 1970.

Yuzhipu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.408; Chinese synonym for the Japan *C.japonica* **Tama-no-ura.**

Yûzuki. (Evening Moon), *(C.japonica)*, *Chinka Zufu*, (before 1700), Watanabe, 1969, pl.644: White with pink patches and vivid crimson stripes. Medium size, single of 5 petals and a central stamen column. Originated in Japan. See: Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû*, No.2, p.127. (Believed extinct.)

Yûzuki. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.64. Synonym for **Yûzuki (Niigata).**

Yuzuki. (Hot Spring Moon), *(C.japonica)*, ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.26: Small size, pale pink, tubular single. Blooms late season. Originated in Ehime Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.275 with colour photo; English translation p.193. Small, pink with a milky white cast, tubular single, cylindrical stamen cluster. Flowers mid-season to late. Leaves elliptic, small to medium, venation impressed. Upright to spreading growth. Origin unknown, named and released by Tokihiro Kôno in 1989.

Yûzuki (Chûbu). (Chûbu Evening Moon), *(C.japonica)*, Satô, Kyôto Engei Kurabu, 1968, *Tsubaki Tokushû*, No.9, p.68; Satô, 1975, *Chûbu no Tsubaki*, p.51 as 'Yûzuki': Soft pink, medium to small, campanulate single with a broad, yellow stamen cluster. Leaves glossy, mid-green, elliptic, apex acuminate, recurved, margins bluntly serrate. Originated in Chûbu, Japan. Named and released by Minoru Satô in 1967. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.155, 253 as **Yûzuki (Chûbu).** A seedling of **Shûfûraku** x **Tarô'an.**

Yûzuki (Kantô). (Kantô Evening Moon). *(C.japonica)*, *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.321; English translation p.240. Small, purplish pale pink, long tubular single. Flowers mid-season. Leaves elliptic to ovate, small to medium. Somewhat spreading growth. Appeared in *Senchinshû* in 1980, details unknown.

Yûzuki (Niigata). (Niigata Evening Moon), *(C.rusticana)*, Hagiya, 1967, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, p.20; Seibundô Shinkôsha, 1979, *Senchinshû*, p.155, colour photo, p.254,

description: A small to medium size, white, tubular single, 5-8 cm across, of 5-6 large, rounded, reflexed petals with a short, wide column of 70-80 stamens, filaments faint yellow, almost white, joined for the lower third and yellow anthers. Leaves dark green, lanceolate, 6-8 cm long, a little wavy, long, tapering, blunt acuminate apex and sharply serrate. Petioles hirsute. Late blooming. Collected at Urakawahara, Higashi Kubiki-gun, Niigata Prefecture, Japan in 1960. Collected by Susumu Ishizawa, named and released by Kaoru Hagiya. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.64 as 'Yûzuki'.

Yûzuru. (Evening Crane), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.155, colour photo, p.254, description: Soft pink. Medium size semi-double with petals in 3 rows, elongated, emarginate, somewhat irregular. Stamens in a spreading central group. Leaves matt green, elliptic. Petioles long, hirsute. Originated in Kitakanbara-gun, Niigata Prefecture, Japan. Collected, named and released by Tokuji Ôoka in 1970. Sport: **Fukurin-yûzuru.**

Yvonne Amazonica. (*C.reticulata* hybrid). *New Zealand Camellia Bulletin,* 1992, Issue No.112, vol.XVII, No.5, p.36, Reg. No.311: Originated by H. Burwell, Inglewood, New Zealand. It is 15 years old and first bloomed 1979. The growth is spreading, dense and of medium rate. The leaves are dark green, 11 cm long x 5.5 cm wide. The blooms are semi-double, occasionally peony form and are 14 cm across x 5 cm deep and have 22 petals. The colour is dark ruby red (RHS.CC.60A), and the stamens have yellow anthers and cream filaments. Flowers early to late.

Yvonne Marie. *(C.x williamsii*), *New Zealand Camellia Bulletin*, 1984, vol.XIII, No.6, p.24, Reg. No.216: A chance seedling from an un-named *C.x williamsii* raised by Mrs J.E. Shaw. Waima, Northland, NZ., which first bloomed 1973. Spreading and slow growth with light green leaves, 8cm x 4 cm. White, peony form flower, 13 cm across x 6 cm deep, with ivory petals and about 40 petaloids with cream filaments and yellow anthers. Flowers mid-season to late.

Yvonne Rolfe. (*C.reticulata* hybr.), ACRS., 1983, *Camellia News*, No.87, p.22, Reg. No.301 with colour photo on front cover: Originated by Bill Hooper, Camellia Vale Nursery, Bexley North, N.S.W. Australia. A chance seedling of *C.reticulata* **Arch of Triumph** that first bloomed 1979. A light crimson pink, loose, peony form, 15 cm flower, produced mid-season to late. The plant is erect, open with 11 cm x 5 cm dark green, acuminate leaves.

Yvonne Tyson. (*C.japonica*), Fendig, 1951, *American Camellia Catalogue:* Large phlox pink with salmon undertones, anemone form, 12-15 cm across. The outer petals are large, inner petaloids intermixed with many golden stamens. Leaves are heavy, twisted and dark green on a plant of rapid, compact, vigorous growth. Originated by W.V. Tyson, Savannah, Georgia, USA from seed of unknown parents. First flowered 1947. Sport: **Yvonne Tyson Variegated.** See: *American Camellia Yearbook*, 1954, Reg. No.71.

Yvonne Tyson Variegated. (*C.japonica*), SCCS., 1956, *The Camellia. Its Culture and Nomenclature*, p.94 as 'Yvonne Tyson Var.': A virus variegated form of **Yvonne Tyson.** Phlox pink blotched white. Originated in USA.

Z.

Z. (*C.japonica*), Zimmerman, 1953, *American Camellia Yearbook*, p.315-319. No description. Originated in the USA as an unknown camellia from the University of Washington, Seattle in 1927 and used for studies on cold hardiness. See black and white illustration. p.17 *International Camellia Journal*, No. 2, 1964. It is a medium size, formal double pink.

Zac Chaffin. *(C.japonica).* ACS 1995, *The Camellia Journal*, vol.50, No.1, p.15, Reg. No.2307: Large size, red and white streaked, semi-double C.japonica chance seedling. Blooms mid-season to late. Originated in the USA by Dr O.V. Lewis, Picayune, Mississippi. ACS 1995, *American Camellia Yearbook*, p.11 with colour photo: The 30 year old seedling first bloomed 1965. Average flower size is 11 cm across x 7.5 cm deep with 14 petals, 6 petaloids, yellow anthers and filaments. Plant growth is upright, spreading and vigorous with dark green leaves 10 cm long x 5 cm wide.

Zalii. Verschaffelt, 1844, Catalogue, No.50, p.25. Orthographic error for **Zoli.**

Zambo. (*C.japonica*), Shepherd & Co. Nursery Catalogue, 1874: Crimson veined darker red. Medium large, formal double. Originated in Australia. For colour photos see: Macoboy, 1981, *The Colour Dictionary of Camellias*, p.127.

Zambo Variegated. *(C.japonica),* Ferreira & Celina, 2000, *O Mundo da Camélia*, p.115 with colour photo; A virus variegated form of the Australia cultivar **Zambo**. Carmine to dark red-purple, spotted with white.

Zamia Rosa Nova. (*C.japonica*), Fréres Noisette, Nantes Nursery Catalogue, 1857, p.60. Carmine pink. Originated in France. (Believed extinct.)

Zanderini. (*C.japonica*), *Piantaio Comunale Romano,* 1859. No description. Originated in Italy. (Believed extinct.)

Zangetsu. (Pale Moon in Dawning Sky). *(C.japonica),* Chinka-en Niigata Retail List, 1994-1995, p.61: Pale pink, small sized, campanulate single. Originated in the Niigata Prefecture, Japan.

Zangetsu. (A Morning Moon). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan,* 1998, p.115 with colour photo; English translation p.78. Medium size, pinkish pale yellow, cup-shaped single with thin petals. Flowers mid-season. Leaves narrowly elliptic, medium size, glossy. Upright, vigorous growth. An interspecific hybrid between three species. Named and released by Kazuo Yoshikawa in 1994. From Osaka.

Zankô. Different reading for **Nokorika.** (Higo sasanqua).

Zannoni. Medici Spada, 1857, *Catalogo Generale nel Giardino a Villa Quiete,* p.15. Orthographic error for 'Zavonio', synonym for **Schiavone.**

Zanonia. Herincq, 1848, *Revue Horticole,* p.302-307. Orthographic error for 'Zaviono', synonym for **Schiavone.**

Zanset. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.247. Corruption of the Japanese name **Zansetsu**.

Zansetsu. (Lingering Snow), (*C.japonica*), Minagawa, 1933, *Chinkashû:* Leaves large, rhombeo-elliptic, to broadly elliptic, thick, margins evolute; petioles smooth. Flowers formal double, imbricated, pure white, with few or no stamens. Outer petals appressed to each other. Often while partly open the flower falls. Late blooming. Originated in the Kantô district, Japan. In Kansai and Niigata there are different varieties of the same name; the former called **Zansetsu-Kansai** and the latter **Zansetsu-Niigata.** See colour photos & descriptions: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.411, p.353; Tuyama, 1966, *Camellia Cultivars of Japan*, pl.83, p.140. Corruption of name 'Zanset'.

Zansetsu. (Lingering Snow), (*C.sasanqua*), Ashizawa, 1989, *Chabaika Taishû;* Yashiroda, 1950, *American Camellia Yearbook*, p.18: White, medium size, single. Originated in Kantô, Japan. Synonym: 'Zansetsu'(Edo).

Zansetsu (Edo). Hakoda, JCS., 1987, *Tsubaki,* No.26, p.47. Synonym for the *C.sasanqua* **Zansetsu.**

Zansetsu-Kansai. (Lingering Snow, Kansai), *(C.japonica)*, Tateyama Nursery, *Nihon Tsubaki Mitate Banzuke*, 1957 as 'Zansetsu'; Tuyama, 1966, *Camellia Cultivars of Japan*, p.140: Snow white, full double, multiple whorled, marginate small petals; flower opens fully. Medium size. Originated in Kansai area, Japan.

Zansetsu (Kumamoto). (Lingering Snow - Kumamoto), *(C.sasanqua),* Hakoda, 1987, *Tsubaki*, No.26, p.47: Medium size, white single. Originated in the Kumamoto Prefecture, Japan.

Zansetsu-Niigata. (Lingering Snow, Niigata), *(C.rusticana)*, Seibundô Shinkôsha, 1979 *Senchinshû*, p.65, colour photo, p.218, description as 'Zansetsu': Leaves elliptic, medium green, centre variegated with feathery gold markings, apex acuminate, recurved, obscurely serrate, petioles hirsute. Flower red, medium to small single of 5 irregular petals, edges waved; stamens

central, of irregular length, anthers yellow. Mid to late season blooming. Originated in Niigata Prefecture, Japan.

Zaochun. (Early Spring), *(C.japonica)*, Yang. 1965, *Camellia Varieties of Taiwan*, p.3 as 'Ts'ao-ch'un': Leaves dark green, 6.8-8 cm long, 2.4-4.3 cm wide. Flower crimson, semi-double of 12 petals, 7 cm across. Originated in China.

Zaochun Dahong. (Early Spring Scarlet), *(C.japonica)*, Savige, 1986, *International Camellia Journal*, No. 18, p.113: A large size, bright red, hemispherical, complete informal double with waved and fluted petals. Similar, if not the same, to **Zaochun Dahongqiu.** Originated in China.

Zaohong Dahongqiu. (Early Spring Scarlet Ball), *(C.japonica)* Wang & Yü, 1981, *Shancha Hua:* Scarlet, almost ball-shaped red, loose, somewhat irregular, formal double. Originated in China. See colour photo, [p.116], Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.81. Synonym: 'Dahong Shiziqiu'.

Zaohua Hedinghong. (Early Red Headed Crane). *(C.japonica)*, Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.79: Small tree, spreading with stiff branches. Leaves long-elliptic, 7-7.5 cm long x 3.3-3.5 cm wide, incurved, apex long caudate, cuneate base, margins wavy and undulate, yellowish green, midrib elevated, side veins sunken; petioles long and purplish red. Flower light, purplish red. dull, 9 cm across with 11-13 petals in 2 whorls, basally connate. Petaloid stamens, over 100, clustered with 7-8 large petaloids in the centre. Normal stamens, 16-90, intermixed with the petaloids. Pistils degenerate. Buds elliptic, green with scales with tan edges. Mid-season flowering. Originated in Sechuan. China.

Zaohua Jinxin. (Early Flower, Cold Heart), *(C.japonica)*, Wang & Yü, 1981, *Shancha Hua:* Red. Medium size, semi-double with yellow stamens in the centre. Originated in China.

Zaôkikuzuki. ('Kikuzuki' of Mt. Zaô), (*C.rusticana*), Tuyama, 1968, *Camellias of Japan*, pl.159, p.80, description, p.135 as 'Zaô-kiku-zuki': Leaves small, thick, oblong to narrowly oblong, bases rounded, apex short acuminate, margins denticulate, gradually undulate, venation slightly impressed, 5-7.4 cm long x 3.6-5.5 wide; petioles 4-6 mm long, very hairy. Stamens small, scattered, filaments whitish. Flowers rose colour (Camellia rose 622), single, not so widely open, petals strongly incurved laterally, giving a pointed appearance. Petals 5-6, the largest, 6.7 cm long x 4.9 cm wide. Late blooming. The flower form resembles that of **Kikuzuki**. Originated in the wild at Mt Zaô, Niigata Prefecture, Japan.

Zaomudan. (Early Peony), *(C.reticulata)*, Yü & Feng, 1958, *Yunnan Shancha Hua;* Feng et al., 1981, *Yunnan Shancha Hua*, p.66, colour pl.106, description, p.127: Leaves small, thick, oblong to oblong-ovate, apices short pointed, bases broad-cuneate to rounded, 5.1-7.2 cm long x 2.4-3.6 cm wide. Flowers deep spinel pink (RHS.CC.58C), diameter 9-12 cm, corolla spherical. Petals about 20 in 3-4 whorls, outer whorls flat, inner folded, curved, erect. Stamens numerous, divided into 2-4 groups by curved petals. Pistils mostly rudimentary. This is a new cultivar selected from seedlings of open pollinated seeds at the Kunming Botanic Garden, Yunnan, China. It is characterised by its dense, dwarf growth habit and flowers early to midseason. Different readings: 'Tsaomoutan', 'Tsao-mu-tan'. Synonym: 'Early Peony'. For colour photos see between pp.20, 21, *New Zealand Camellia Bulletin*, vol.V, No.4, as 'Early Peony' and on p.79, Feng et al., 1986, *Yunnan Camellias of China.*

Zaôshirayuki. (The White Snow of Mt. Zaô), *(C.rusticana)*, Seibundô Shinkôsha, 1979, *Senchinshû*, p.65, colour photo, description, p.218: White, small size, single, of 5-6 petals with sides incurved to give the petals a pointed appearance, large, spreading stamen cluster, anthers old--gold. Leaves dull dark green, elliptic, apex acuminate, margins serrulate, petioles hirsute. Originated in the Yamagata Prefecture, Japan. From a private family in Yonezawa City, named and released by Tokuji Ôoka in 1974.

Zaotaohong. (Early Crimson), (*C.reticulata*), Fang, 1930, *Diannan Chahua Moazhi,* as 'Yangjia Zaotaohong': It is crimson and early flowering and the petals are numerous. Feng et al., 1981, *Yunnan Shancha Hua,* pl.67, p.41, description, p.118: Leaves elliptic to elliptic-ovate, apices acuminate and recurved, bases cuneate, 8.3-11 cm long x 3.6-6 cm wide. Flowers pink (RHS.CC.58B), diameter 10-14 cm. Petals 20-25 in 3-4 whorls, outer whorls slightly undulate, inner curved. Stamens numerous, divided into 8-10 fascicles scattered among petals, to united to form a cylinder. Pistil fertile. This cultivar is vigorous and tall. Flowers early to mid-season. There is an old tree in the Black Dragon Pool Park, Kunming that is 10 meters tall and over 250 years old. Fang (1930) records that there are two kinds of **Zaotaohong** – 'Yangjia Zaotaohong' and 'Huangjia Zaotaohong'. However the differences depends on culture and these two names are regarded as synonyms. Western synonym: 'Early Crimson'. Other synonyms are 'Early Peach Bloom' and 'Early Peach Red'. Different readings: 'Tsaotaohung', 'Tsaot'aohung'. For further colour photo see p.66, Feng et al., 1986, *Yunnan Camellias of China.*

Zaoxi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.431; Chinese synonym for the Japan *C.japonica* **Moshio.**

Zeneide, Contessa d'Ispan. (*C.japonica*), van Houtte Catalogue, 1860-1861, 83:54: Dark carmine, transparent, imbricated petals. Originated in Italy by Luzzatti. Van Geert Catalogue, No.65, 1869-1870, p.59: Light cherry red, twelve rows of imbricated petals in a formal double flower. Orthographic errors: 'Zencide, Contessa d'Ispan', 'Zenaide d'Ispahan', 'Zenaide d'Isahan'.

Zen'emon-fukurin. (Zen'emon's Margined Leaf Camellia), *(C.japonica):* Mizuno, 1829, *Sômoku Kinyôshû*: Camellia with leaves margined with whitish colour. Originated in Japan by Zen'emon. Different reading: 'Zen'emon-hukurin'. Note: Large whitish spots look like white margined leaves, See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.167. (Believed extinct).

Zen'emon-hukurin. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.174. Different reading for **Zen'emon-fukurin.**

Zen'emon-shirofu-otome. (Zen'emon's 'Otome' with white Variegated Leaves), (*C.japonica*), Mizuno, 1829, *Sômoku Kinyôshû*, vol.5: An "Otome" with round, white variegated leaves originated by Zen'emon, Japan. Different reading: 'Zen'emon-shirahu-otome'. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p,162. (Believed extinct.)

Zen'emon-shirahu-otome. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.10, p.174. Different reading for **Zen'emon-shirofu-otome.**

Zen'emon-shishigashira. (Zen'emon's Lion Head), (*C.japonica)*, Mizuno, 1829, *Sômoku Kinyôshû*, vol.5: Listed in the section for marble-like leaf variegation. Large, round leaves with yellow spots. Originated in Japan by Zen'emon. See: Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû*, No.7, p.164.

Zengakuren. (Entire School Federation), (*C.rusticana*), Hagiya & Ishizawa, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.8, p.62: Crimson colour, semi-double with large, rounded, emarginate petals; short central stamen cylinder with deep yellow anthers and reddish filaments, medium size, 7-8 cm across. Outer petals about 10, mixed with inner petals; stamens approximately 100. Centre pistil protrudes with divided apex. Leaves long-ovate with short, hairy petiole. Collected in Takada City, Niigata Prefecture, Japan 1960. The name refers to the militant students Federation in Japan which is very leftist and infers that the colour is as red as the communist flag. See colour photo: Seibundô Shinkôsha, 1979, *Senshinshû*, pp.84, 226.

Zengfeng. Gao & Zhuang, 1989, *The Camellia in China*, p.81, No.630. Chinese synonym for the UK *C.x williamsii* **Donation.**

Zenith. (*C.japonica*), Magnolia Gardens & Nursery Catalogue, 1944-1945, (Number 107 Tea Garden): Rose-pink marbled white. A medium sized formal double. Originated in USA.

Zenna. (See below), (*C.japonica*), Funaki-en Catalogue, 1986-1987, p.6, No.127: Yokoyama & Kirino, 1989, *Nihon no* Chinka, p.104, colour photo and description: Medium size, pale pink, softening to almost white at the centre, wide campanulate single of 7 wide, overlapping petals with irregular, reflexed margins and a central stamen cluster, white filaments, joined for lower third, anthers pale yellow. Leaves mid-green, elliptic, apices acuminate, margins shallowly serrate. Blooms mid-season to late. Note: The name refers to Dr Edward Jenner, the Englishman who originated the small pox innoculation system, and whose memorial is built at Kagamiyama, Shimane Prefecture, Japan, where this cultivar originated as a wild japonica growing on Mt Kagami..

Zenobia. *(C.japonica), American Camellia Yearbook*, 1994, p.63, colour photo between pp.64-65: Very large oriental red, peony form *C.japonica* chance seedling that blooms early to late. Originated by Zenobia M. Kendig, Lutherville, Maryland, USA. A 20 year old seedling that first bloomed 1985. Average flower size is 13.5 cm across x 8 cm deep with 16 petals, 9 petaloids, gold anthers and yellow filaments. Clusters of gold stamens between petal layers and central rabbit ears. Growth is upright, open and average in rate, with dark green leaves 13 cm long x 7 cm wide.

Zenobia (Cattolica). *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.150 as 'Zenobia' with colour photo; Medium size, formal double, red (RHS.CC.46C). Petals often in spiral formation. A seedling of 'Plutone' x 'Rubra Simplex' **(Rubra)** first flowered in 1989. Originated by Dott. Guido Cattolica, Livorno, Italy.

Zensekai. (The Whole World), (*C.japonica*), Hiroshima, 1958, Nô-en Catalogue, p.24: Medium size, semi-double with gold mottled foliage. Originated in Japan.

Zhang Family Camellia. Feng et al., 1981, *Yunnan Shancha Hua*, p.93. Synonym for **Zhangjia Cha.**

Zhangjia Cha. (Zhang Family Camellia), (*C.reticulata*), Lammerts, 1950, *American Camellia Yearbook*, p.10 as 'Changchatiechih': 'Chang's Temple'. The semi-double flowers are very large, 15-20 cm in diameter, of brilliant pale pink. A new variety recently discovered in an ancient ruin in Yunnan, China, known as Chang's Temple. Large, wide leaves; vigorous, compact habit of growth. Feng et al., 1981, *Yunnan Shancha Hua*, p.43, colour photo No.73, description, p.119: Leaves elliptic to oblong-ovate, flat or slightly reclinate, apices acute, bases cuneate, 7-9 cm long x 3-4.5 cm wide. Flowers pink (RHS.CC.57D-C), diameter 11-15 cm. Petals about 20 in 3-4 whorls, outer whorls slightly curved and undulate. Corolla, hemispherical to globose. Stamens conspicuously divided into 5-7 groups among curved petals. Pistil well developed, fertile, fruit large, oblate. This cultivar has purple buds. It originated in Kunming, Yunnan, China, where there was a large old tree, 10 meters high in the Zhangjia Temple, Songhuaba, Kunming, hence its name. The tree died in 1958. Blooms mid-season to late. For colour photos see: Feng et al., 1986, *Yunnan Camellias of China*, p.61; *American Camellia Yearbook*, 1980 facing p.14; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.93; *New Zealand Camellia Bulletin*, vol.V, No.4, 1967, pp.20, 21, as 'Chang's Temple'. Different reading: 'Changchiacha', 'Chang-chia Ch'a'. Synonyms: 'Chang's Camellia', 'Chang's Family Camellia', 'Chang's Crimson', 'Zhang Family Camellia', 'Chang's Temple'. Chinese synonyms: 'Zhangjia Diechi'and 'Zhangjiahong'.

Zhaohe Zhi Guang. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.420; Chinese synonym for the Japan Higo **Shôwa-no-hikari.** Previously as 'Zhaohe Rongguang'.

Zhaohe Zhi Rong. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.420; Chinese synonym for the Japan *C.hiemalis* **Shôwa-no-sakae**. Previously as 'Huazhaohe Zirong'.

Zhaohe Rongguang. Gao & Zhuang, 1989, *The Camellia in China*, p.74, No.546. Chinese synonym for the Japanese *C.hiemalis* **Shôwa-no-hikari.** Synonym later amended to 'Zhaohe Zhi Guang'.

Zhaohua Hedinghong. (Early Flowering 'Hedinghong'), (*C.japonica*), Gao & Zhuang, 1989, *The Camellia in China,* p.42, No.229: Medium sized, red-purple, semi-double to anemone form with 11-13 outer petals, 9 cm across x 2 cm deep. Originated in China.

Zhaoqing. (Personal Name), *(C.reticulata),* China Regn No.51, *China Flowers & Horticulture,* June 2009, No.12, p.50; Named for Pricess Zhaoqing of Dali Kingdom in the Song Dynasty. Propagated from a tree, approx 200 years old, in Shisang Town. Flowers incomplete peony form, peach red, 12-13 cm diameter, petals 19-26 in 3-4 whorls, margins jagged, most stamens petaloid, balance in several bundles among the petals. Leaves elliptic, apices acuminate, bases cuneate, incurved, prominent veining, margins serrate, 8.5-10.2 cm x 4.8-6.0 cm. Flowers mid-season.

Zhaorihe. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.152. Chinese synonym for the Japanese *C.sasanqua* **Asahizuru.**

Zhaoxia. (Morning Cloud), (*C.reticulata*), Yü & Bartholomew, 1980. *American Camellia Yearbook*, p.14: Wavy type. Petals wavy or undulating, stamens and pistil well developed or partly becoming petaloids. Crimson. Blooms mid-season. From Tengchong County. Feng et al, 1981, *Yunnan Shancha Hua*, pl.54, p.32, description, p.115: Leaves lanceolate to oblong, apices acuminate to long-acuminate, bases cuneate, margins revolute, dark green above, reclinate in a V-shape, slightly arched, 8-11 cm long x 2-4 cm wide. Flowers red (RHS.CC.54B), diameter about 9 cm. Petals about 20, outer whorls spatulate, inner undulate, curved and erect. Stamens numerous among the petals. Pistils mostly rudimentary. Blooms mid-season. This cultivar was selected from an open pollinated plant of *C.reticulata* Lindl. f. *simplex* at Tengchong, Yunnan, China. Different reading: 'Chao-hsia'. Synonyms: 'Morning Glory', 'Morning Clouds'. See colour photo, p.58, Feng et al. 1986, *Yunnan Camellias of China.*

Zhaoyi. (Lucky Omen), (*C.reticulata*). Gao & Zhuang, 1989, *The Camellia in China*, p.59, No.395, colour photo No.252: Leaves dark green, broad-ovate, 7.3-9 cm long x 3.7-5 cm wide, apices blunt acute, margins serrulate. Flowers medium to large. 10-12 cm across x 5-6 cm deep, peony form with 21-23 petals in 3-4 whorls. Blooms mid-season. Originated in Tengchong County, Yunnan Province, China.

Zhaozhun Dahongqiu. (Early Autumn Crimson Ball), (*C.japonica*), Gao & Zhuang, 1989, *The Camellia in China*, p.43, No.235, colour photo No.128: Medium size, red, spherical shaped, full, peony form of twisted and folded petals. Originated in China.

Zhengbai. (Unmixed White), (*C.japonica*), Savige, 1986, *International Camellia Journal*, No.18, p.113: A large size, white, formal double with channelled petals coming to points. Originated in China.

Zhengfeng. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.p.137. Chinese synonym for **Donation**. Earlier spelling 'Zengfeng'.

Zhengfuzhe. Gao Jiyin, Ltr, 5 November 1991. Chinese synonym for USA *C.japonica* **Conquistador.**

Zhenggongfen. (Queen's Face Powder) *(C.japonica)*, Wang, 1621, *Qunfangpu.* The colour is a true pink. Originated in China.

Zhengyi. Gao & Zhuang, 1989, *The Camellia in China*, p.54, No.235, colour plate No.217. Chinese synonym for the Japanese *C.japonica* **Masayoshi** as 'Donckelaeri'.

Zhenjie. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the Japanese *C.japonica* **Shiragiku** as 'Purity'.

Zhenni Mogen. Gao & Zhuang, 1989, *The Camellia in China*, p.79, No.613. Chinese synonym for the Australian *C.sasanqua* **Jane Morgan.**

Zhennite. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.48. Chinese synonym for **Jeanette Cousin.**

Zhennû Posaier. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the USA *C.reticulata* hybrid **Jean Pursel.**

Zhenqimiao. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the USA *C.reticulata* hybrid **Bravo.**

Zhenxue. Gao, Jiyin, 1993, *The Observations from the Camellia World*, No.441, p.62. Chinese synonym for the USA *C.oleifera* hybrid **Snow Flurry.**

Zhenyunfen. (Pink Halo), (*C.japonica*), Liu, 1959, *Chungkuo Chuming Tishi Chung Hua Hui:* Belongs to the 'Eighteen Scholars' series. Flowers are pink with a white halo. Originated in China.

Zhenzhu. Fang, 1930, *Diannan Chahua Xiaozhi.* Synonym for **Zhenzhu Cha.**

Zhenzhu Cha. (Pearl Camellia), *(C.japonica)*, Wang, 1621, *Qunfangpu:* Petals are fragmented and the colour pale red. Originated in China. (Believed extinct.)

Zhenzhu Cha. (Pearl Camellia), *(C.grijsii)*, Gao, Jiyin, Apr.1990. Nomenclature Convention, Wuxi City, Jiangsu Province, China: A cultivar of *C.grijsii*, a native of the Sechuan Province. Miniature, white, formal double, with greenish or yellowish cast, very fragrant, reminiscent of aniseed.. Small, light green leaves, densely flowering, mid-season to late. Medium growth.

Zhenzhuhua. (Pearl Flower), (*C.reticulata*), Chuang, 1959, *Yunnan Shancha Hua.* Considered to be a 'Damanao' relative from Dali, Kunming, China. No description.

Zhichun08. (Spring of 2008) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong*, p.63, as '08zhichun', with colour photos. Maternal plant is in front of Donglin Temple, Zixi Mountain, Chuxiong, China. Named by Zhang Fangyu. Flowers butterfly form, pink, 11-12 petals, diameter 12 cm. Leaves oblong-elliptic, 6-9 cm x 3.5-4 cm, apices acuminate. Flowers early to midseason.

Zhinan. (Name of a Monk) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong*, p.51 with colour photos. Maternal plant is located at the relic of Guzhulin Temple, Zixi Mountain, Chuxiong, China. Light red, semi-double to loose peony form. Flowers midseason.

Zhizhu Cha. (Rhododendron Camellia), *(C.japonica)*, Li, Shi Zhen, 1590, *Bencao Gangmu:* The calyx is green and the colour is a deep red like rhododendrons. The flowers are in groups of three or more. Originated in China. Different reading: 'Chih-chu Ch'a'. Synonyms: 'Zhizhuhua', 'Dujuancha'.

Zhizhuhua. Chang & Chang, 1867, *Pen Tsao Kang Mu.* A revised edition of Li (1590). Synonym for **Zhizhu Cha.**

Zhizibai. (Cape Jasmine White), *(C.japonica),* Watanabe & Andoh, 1980, *Tsubaki*, p.147 as 'Chih-tzu-pai': Small size, formal double. Originated in China.

Zhongban Baozhu. Chang, Shao Yun, 1987, *Camellias* from *Zhejiang*, p.61, (Double Precious Pearl). Synonym for **Haiyunxia.**

Zhongbu Zuozhiya. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.407; Chinese synonym for the USA *C.japonica* **Middle Georgia.**

Zhongguo Wawa. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica*, **China Doll.**

Zhongqu. Gao, Jiyin, Ltr, 25 June 1990. Chinese synonym for the USA *C.japonica* **Harvey Short's Finale.**

Zhongshi. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica* **Yours Truly**.

Zhongtai. (Double Terrace), *(C.japonica),* Savige, 1986, *International Camellia Journal*, No.18, p.113: A medium size, red, formal double with large, heavily textured petals. Originated in China. Synonym: 'Hongtaige'.

Zhouye Qihua. Gao, Jiyin, Ltr, 25 June 1990. Chinese synonym for the USA *C.japonica* **Holly Bright.**

Zhouye Yinhong. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.569 as 'Zhouyeyinhong'; Shrub with medium growth. Leaf elliptic to long elliptic, middle vein prominent, 8-10 cm x 4-5 cm. More than 80 petals in several rows, short and round, thin, regularly arranged, spinel red, lighter in the centre. Outer petals sometimes have white stripes. Flower diameter 8-9 cm. Flowers mid-season. From Sichuan Province, China.

Zhuanban. (Curved Petal), (*C.japonica*), Chuang, 1959, *Yunnan Shancha Hua.* Description not seen. Originated in China. Different reading 'Chuan-pan'.

Zhuang Yuanhong. (Red No.1 Scholar). *(C.japonica),* Gao, Jiyin, Ltr, 1st January 1993: Medium size, red formal double with small leaves and vigorous, compact growth. Very cold hardy. Blooms early to late. Originated in China.

Zhuangyuanhong. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.89, 101. (Red Gown of No.1 Scholar). Used as synonym for both **Hongsan Xueshi** and **Putaohong.**

Zhuapolian. (Scratched Face), *(C.japonica),* Wang & Yü, 1981, *Shancha Hua:* A large, loosely imbricated, formal double, white with a rare, fine red line. Originated in China. Synonyms: 'Guaxian', 'Baijiaxin'.

Zhubaohe. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for Nuccio's *C.sasanqua* **Jewel Box.**

Zhubili. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.411; Chinese synonym for the England *C.japonica* **Jubilee.**

Zhubili Meigui. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.411; Chinese synonym for the England *C.japonica* **Jubilee Rosea.**

Zhubin. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica*, **Guest of Honor.**

Zhudinghong. Ikeda, 1976, *American Camellia Yearbook*, p.141 as 'Chutinghung'. Synonym for **Hedinghong.**

Zhuhongbing. (Vermilion Cake), (*C.japonica*), Liu, 1959, *Chung Kuo Chuming, Tishi, Chung Hua Hui*: Perfectly symetrical, round, vermilion coloured, formal double. Early flowering. Originated in China. Different reading: 'Chu Hung Ping'.

Zhuhong Jiuxin. (Scarlet Nine Hearts), (*C.reticulata*), Chuang, 1959, *Yunnan Shancha Hua.* Description not seen. Originated in China. Different reading: 'Chu-hung Chiu-hsin'.

Zhuhong Juban. (Scarlet Chrysanthemun Petal), (*C.reticulata*), Chuang, 1959, *Yunnan Shancha Hua:* Scarlet, formal double, medium size. Originated in Dali, Yunnan, China. Different readings: 'Chuhungtsueban', 'Chu-hung Tsue-ban'.

Zhulide Leshi. Gao, Jiyin, 1993, *The Observations from the Camellia World*, No.547, p.68. Chinese synonym for New Zealand *C.sasanqua* **Jury's Joy.**

Zhuliya. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.143. Chinese synonym for the USA *C.hybrid* **Julia.**

Zhuliye. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.hybrid* **Julie.**

Zhuru. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica* **The Elf.**

Zhuruihuang. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.411; Chinese synonym for the New Zealand *C.x williamsii* **Jury's Yellow.** Previously as 'Jurui Huang'.

Zhusha. (Cinnabar), (*C.japonica*), Savige, 1986, *International Camellia Journal*, No.18, p.113: Small to medium size, formal double, red, opening to a bud centre with 7-8 rows of petals, outer rows reflexed, inner, some erect. Leaves large, elliptic, dull green, obscurely serrate. Originated in China.

Zhushahong. (Cinnabar Red), (*C.japonica*), Fang, 1930, *Diannan Chahua Xiaozhi:* The colour is red like cinnabar. Originated in China.

Zhushalian. (Cinnabar Lotus), (*C.japonica*), Wang & Yü, 1981, *Shancha Hua:* A lotus form bloom with cinnabar red colour. Originated in China. Different reading: 'Chu-sha-lien'.

Zhusha Zipao. (Cinnabar Purple Gown), (*C.reticulata*), Feng & Shi, 1966, *Yunnan Shanchahua Zhi-wuxue* as 'Chu-sha Tsu-p'ao'. Description not seen. Feng et al., 1981, *Yunnan Shancha Hua*, pl.115. p.73, description, pp.128, 129: Leaves are thick, broad-elliptic to broad-ovate, flat with sunken venation, apices short pointed or rounded, bases rounded, 7.5-11.5 cm long x 4-7 cm wide. Flowers deep purplish to blackish purple (RHS.CC.53A), diameter 13-15 cm, forming a spherical corolla. Petals about 40 in 6-7 whorls, large orbicular to broad-ovate, outer whorls flat, inner whorls folded or with small petals, erect forming a raised centre. Stamens few, scattered in several groups among curved petals. Pistils rudimentary. Originated in Dali, Yunnan, China. Blooms mid-season. Fang, 1930 records that **Zipao** has deep purple flowers. 'Dazipao' has the same colour as **Zipao** but is larger. 'Dazipao' is the old name for **Zhusha Zipao.** Synonyms: 'Vermilion Purple Gown', 'Cinnabar Purple Gown'. Different readings: 'Chu-sha Tsup'ao', 'Chushatsepao'. See colour photo, p. 199, Feng et al., 1986, *Yunnan Camellias of China.*

Zibao. (Purple Treasure), *(C.reticulata).* China Regn No.28. *China Flowers & Horticulture,* Feb 2008, No.4, p.50 with colour photo; Selected from the ancient Delin Temple, Zixi Mountain, Yunnan, China, and named by the Zixi Mountain Administration Office. Flowers rose form double to peony, red, 8.4-10 cm diameter. Petals about 32 in 5-7 whorls, gradually smaller from the outer to the inner petals. Leaves elliptic, deep green, flat, 6.7-12.5 cm long x 3.6-5.6 cm wide, apices acuminate, bases cuneate to broad cuneate. Flowers early to mid-season.

Zibingzi. (Purple Pancake), (*C.japonica*), Savige, 1984, *International Camellia Journal*, No.16, p.32, illustration, p.440: Formal double, purplish red, with small petals. Originated in China.

Zichonglou. (Purple Double Tower), (*C.japonica*), Gao & Zhuang, 1989, *The Camellia in China*, pp.38, 39, No.192, colour photo No.103: Medium size, 7-8 cm across, red, semi-double, with 4 rows of large, rounded petals and a small, irregular, central, stamen cluster. Late flowering. Originated in China.

Zidai. (Name of a Monk) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong*, p.54 with colour photos. Maternal plant is located at the west relic of Guzhulin Temple, Zixi Mountain, Chuxiong, China. Named by Zhang Fangyu. Flowers rose form double, deep pink, 6-7 cm diameter. Petals 15-22, sub-circular, mostly flat. Stamens rudimentary and only some fertile. Leaves oblong-elliptic, 9-12 cm x 4-5 cm, thick, apices acuminate to caudate, margins shallowly serrate, bases cuneate.

Zidan. (Purple Red) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong*, p.68 with colour photos. Maternal plant is located at the lower level of Donglin Temple, Zixi Mountain, Chuxiong, China. Flowers loose peony form, pink, 14-16 cm diameter with about 22 petals. Outer petals flat, inner folded erect. Leaves lanceolate to elliptic, apices caudate, bases cuneate. Flowers early to midseason.

Zidie. (Purple Butterfly) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong*, p.59 with colour photos. Maternal tree located in the Camellia Garden of Zixi Mountain, Chuxiong, China. Named by Zhang Fangyu. Flowers loose peony form, crimson, 13-15 cm diameter. Petals 22-27 in 4-5 whorls. Stamens divided into several groups among the petals. Leaves elliptic, 8-9 cm x 3.5-5 cm, apices acuminate, shallow serrate. Base cuneate to broad cuneate. Flowers midseason to late.

Zifeicui. (Purple Jade), (*C.japonica*), Chang, Shao Yun, 1987, *Camellias from Zhejiang*, [p.142] colour photo, p.95, description: Medium size, purplish to light scarlet, formal double of 7-8 rows of close-set, imbricated petals, 70-80 in number, reflexed in a full bloom, prominently notched, Leaves dull green, elliptic, flat, 8 cm long x 5 cm wide, margins shallow, obtuse serrations, midrib prominent, other veining obscure. Originated in Sechuan, China.

Zifen. (Purple Flavour) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong*, p.67 with colour photos. Maternal plant is located at the back yard of Ziding Temple, Zixi Mountain, Chuxiong, China. Named by Zhang Fangyu. Single flower, deep red, petals heavily notched. Leaves lanceolate, 11 cm x 4 cm, apices caudate, bases cuneate, margin serrations obvious. Flowers early to midseason.

Zifen. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica* **Orchid Pink.**

Ziguan. (Purple Crown), (*C.japonica*), Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.80: Spherical peony form, bright purplish red, 8-9 cm across; petals velvety, irregular. Petaloid stamens, curved and crumpled, about 50 clustered ball-like; normal stamens about 150 in 5-6 groups, basally connate, intermixed with petals; pistil degenerate; buds elliptic, rusty green. Blooms mid-season. Leaves yellowish green, thick, flat, elliptic, drooping at apex, serrulate from middle to apex, none towards base. Originated at Hangzhou, China.

Ziguan. (Purple Crown), (*C.sasanqua*), Gao & Zhuang, 1989, *The Camellia in China*, p.76, No.572: Medium size, 8 cm across, purplish red, single with 7-9 small petals and central stamens. Blooms early. Originated in China,

Zighsii. Anonymous, 1845, *Annales de Gand,* 1:186. Synonym for **Duca di Litta.**

Ziheling. *(C.japonica), Collected Papers*, ICS Congress, Falmouth 2008, Genetic Analysis on 20 Camellia Varieties by ISSR Markers, Sui Ni and Jiyuan Li as 'Zi he ling'; A mauve formal double from Jinhua, China.

Zihonglian. (Purple Red Lotus), (*C.japonica*), Huang, Nursery Catalogue, Shanghai, 1948: Medium size, rose form double of a deep purplish red colour. Chang, Shao Yun, 1987, *Camellias from*

Zhejiang, p.90: Petals 60-70 in 8 rows, nearly round, a little concave, buds short, nearly round, greenish yellow. Blooms mid-season. Leaves variable from oblong to obovate, and a few lanceolate incurved at apex, recurved both side, rounded or obtuse at the base, deep, glossy green, thick, margins serrulate, midrib elevated, venation uneven, petioles 15 mm long. See: Gao & Zhuang, 1989, *The Camellia in China*, p.45, No.260, colour photo No. 145 as 'Zi hong lian'. Originated in Hangzhou, China.

Zihonme. Waterhouse, 1965, *International Camellia Journal*. vol.1, No.3, p.26. Taiwanese for **Zihongmei.**

Zihongmei. (Purple Red Plum). (*C.sasanqua*), Yang. 1965, *Camellia Varieties of Taiwan* as 'Tzu-hung-mei': Leaves elliptic, mid-green, 4.5 cm long x 1.9 cm wide. Flower purple-red colour, semi-double with 12 petals. Early blooming. Originated in China. Different reading: 'Tsu-hung-mei', 'Zihonme'.

Zihua Jinxin. (Purple Flower, Gold Heart), (*C.japonica*), Wang & Yü 1981, *Shancha Hua:* Large size, purple-red. semi-double of 9-10 petals with a large stamen cluster having golden anthers. Originated in China.

Zihuashu. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica* **Violet Bouquet.**

Zihudie. (Purple Butterfly), (*C.japonica*), Wang & Yü, 1981, *Shancha Hua.* Description not seen. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.69. colour photo. [p.128]: Deep red, open peony form, 8-9 cm across, 18-24 petals. outer petals large, ruffled, inner, curved, erect, fluted, mixed with stamens, anthers golden. Leaves elliptic. light green, apex acuminate. Originated in China. Synonym: 'Dazidie'.

Zijiang Jinhua. Gao, Jiyin. Ltr, 30 July 1990. Chinese synonym for USA *C.japonica* **Maroon and Gold.**

Zijinguan. (Purple & Gold Crown), (*C.japonica*), Savige, 1986, *International Camellia Journal*, vol.18. p.113: A medium size, 10-11 cm across, deep maroon red, complete informal double, with large outer petals and a mixture of 18-23 medium sized and small, erect, folded and twisted centre petals. Blooms early to mid-season. Originated in China.

Zijuan. *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong*, p.54 with colour photos. Maternal plant is located at the relic of Gongdelin Temple, Zixi Mountain, Chuxiong, China. Named by Zhang Fangyu. Flowers loose peony form, carmine, 9-10 cm diameter. Petals 21-27 in 3-4 whorls, outer petals larger. Leaves elliptic, 7-9 cm x 4-5 cm, apices acuminate, margins shallow serrate, base cuneate. Flowers midseason.

Zikui.(Purple Chieftan), (*C.japonica*). Gao & Zhuang, 1989, *The Camellia in China*, p.44. No.242: Medium size, 8 cm across, purple red, double. Blooms mid-season. Originated in China.

Zili. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for the USA *C.sasanqua* **Chansonette.**

Zilian. (Zixi Lotus), *(C.reticulata)*, China Regn No.52, *China Flowers & Horticulture*, June 2009, No.12, p.50 with colour photo; Selected from the camellia forest on Zixi Mountain, Chuxiong. Flowers rose form, peach red, 10-11 cm diameter. Petals 26-28 in 3-4 whorls, flat to slightly incurved, central yellow stamens. Leaves long-elliptic, 6.2-8.7 cm x 2.3-3.7 cm, apices acuminate and reflexed backward, bases cuneate, margins finely serrate. Flowers mid-season.

Zilin. *(C.reticulata). Zixi Mountain, Camellia Species Garden,* 2012, p.23. No details.

Ziling. (Smart Purple) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong,* p.57 with colour photos. Maternal plant is located at the left relic of Gongdelin Temple, Zixi Mountain, Chuxiong, China. Named by Lu Xianliang. Flowers semi-double to loose rose form, deep red, 11 cm diameter. Petals 12-15, slightly cupped, stamens divided into 3-4 groups. Leaves

oblong-elliptic, 7-12 cm x 3-4.5 cm, thick, apices caudate to acuminate, veins obvious, margins shallow serrate, base cuneate. Flowers midseason.

Ziluijiao. (Purple Hexagon), (*C.japonica*), Shanghai Botanic Gardens List, 1984: A medium size. formal double, often with tiered or star-shaped imbrication. Deep purplish red. Originated in China.

Zilpha Slauenwhite. (*C.japonica*). SCCS.. 1968, *Camellia Nomenclature*, p.145: Rose pink. Small size, semi-double with upright petals mingled with stamens. Blooms mid-season. Originated by Mrs E. Cain, Mullins, South Carolina, USA.

Zimei Hongjiao. (Purple Favour and Red Love). *(C.japonica),* Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.76; Originated in China. Flowers light pink with sparse red stripes. Semi-double, medium size, more than 20 petals. Leaves dark green, flat. Vigorous, upright plant. Flowers mid-season.

Zimudan. (Purple Peony). (*C.japonica*), Shanghai Botanic Garden List, 1984: A medium size, deep maroon red. peony form. Originated in China.

Zina Maria. (*C.japonica*), SCCS., 1984, *Camellia Nomenclature*, p.110: Pale pink centre, deepening to rich pink at outer edge. Medium size, formal double. Slow, bushy growth. Blooms mid-season. Originated in USA by David Feathers, Lafayette, California.

Zing. (*C.japonica*). McCaskill Gardens Catalogue, 1978: Rose red. Miniature formal double. Blooms mid-season. Vigorous. bushy. upright growth. Originated in USA. by McCaskill Gardens, Upland, California.

Zipao. (Purple Gown), (*C.reticulata*). Fang, 1930, *Diannan Chahua Xiaozhi:* The colour is purplish, and the flowers are as large as peonies. Feng et al., 1981, *Yunnan Shancha Hua*, pl.88, p.53. description, p.122, 123: Leaves thick, broad-ovate or oblong-ovate, margins revolute, apices acute or acuminate and recurved, bases broad-cuneate, 8.3-9 cm long x 4-5.5 cm wide. Flowers purplish red (RHS.CC.53A-B), diameter 12-14 cm, occasionally to 16 cm fully expanded. Petals about 46 in 6-8 whorls, becoming gradually smaller from outer to inner whorl, a few inner petals folded and erect. Stamens mostly petaloid, rudimentary, pistil rudimentary. This has the deepest colour among the Yunnan Camellias. If the central petals have white stripes it is called 'Zipao-yudai' which is "Purple Gown with Jade Stripes". However this is not a stable form and the name is reduced to synonymity. A more stable variegated form is known as **Manao Zipao.** Synonyms: 'Purple Gown'. 'Zipao Yudai', 'Zipao Jindai'. Different readings; 'Tsu-p'ao', 'Tsepao' 'Tzepao'. Received a RHS., Award of Merit, 1966 as 'Tzepao'. For colour photos see: Feng et al, 1986, *Yunnan Camellias of China*, p.82; Macoboy, 1981, *The Colour Dictionary of Camellias*, p.167; Front cover, *New Zealand Camellia Bulletin*, vol.IV, No.3, 1965 as 'Purple Gown'.

Zipao Jindai. Chuang, 1956, *Yunnan Shancha Hua.* (Purple Gown, Gold Stripes). Synonym for **Zipao.** Different readings: 'Tze-p'ao Chin-tai', 'Tzepaochintai'.

Zipao Yudai. Fang, 1930, *Diannan Chahua Xiaozhi.* (Puple Gown, Jade Stripe), Synonym for **Zipao.** Different readings: 'Tze-p'ao Yu-tai', 'Tzepaoyutai'.

Zipao Yudai. (Purple Gown, Jade Belt), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China*, p.49, No.302, colour photo No.175: Medium size, red with whitish streaks in the centre of the inner petals, formal double with 5-6 row of broad, rounded, emarginate petals. Leaves light green, ovate, margins shallowly serrate. Originated in China.

Ziqiang. (Purple Rose) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong,* p.58 with colour photos. Maternal plant is located at the relic of Gongdelin Temple, Zixi Mountain, Chuxiong, China. Named by Zhang Fangyu. Flowers semi-double to loose peony form with 13-18 petals. Stamens loosely open with a few petaloids. Leaves oblong-elliptic, 7-12 cm x 3-4.5

cm, thick, apices caudate to acuminate, veins obvious, margins shallow serrate. Flowers midseason.

Ziqixin. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.570; Twigs purple. Leaf elliptic, base round, middle vein prominent, deep green, 6-7 cm x 3.5-4 cm. Flat petals, 8 to 12 in 2-3 rows, somewhat short, regularly arranged. Twisted petaloid stamens in several bundles, mixed with normal stamens. Flower deep purple to red, 8-10 cm diameter. Flowers early to late. A seedling of **Qixinhong**. From Sichuan Province, China.

Zironghua. *(C.japonica), Chinese Camellia Culture*, 2003, Appendix, p.563; From Fujian Province, China. No further details.

Zisonghua. (Purple Pine Cone), *(C.japonica),* Wang & Yü, 1981, *Shancha Hua:* Medium size, rose form double, deep purplish pink. Originated in China.

Zisuda. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for the USA *C.japonica* **Grape Soda.**

Zita Marks. *(C.japonica)*, Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.247. No description. Originated in USA. No valid listing located.

Ziting. (Name of a Monk) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong,* p.62 with colour photos. Maternal plant is located at the relic of Gongdelin Temple, Zixi Mountain, Chuxiong, China. Named by Zhang Fangyu for a famous monk. Flowers loose peony form, deep pink, with 19-21 petals, diameter 10 cm.. Leaves oblong-elliptic, 8.6 cm x 3 cm, apices acuminate.

Ziwei. (Old Name for Mt Zixi) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong,* p.55 with colour photos. Maternal plant is located at the relic of Zhiguanlin Temple, Zixi Mountain, Chuxiong, China. Named by Zhang Fangyu. Flowers deep crimson, semi-double with 13-15 petals, 10-12 cm diameter. Stamens numerous in tubular form with a few petaloids. Stigma 5 valve. Leaves oblong-elliptic, 8-12 cm x 4-5 cm, apices acuminate and reflexed, margins sparsely serrate, base cuneate. Flowers midseason.

Zixi. (Purple Stream), *(C.reticulata),* Feng Guomei, 1989, July, Chuxiong Camellia Catalogue: Large size, 12-14 cm across, deep purplish pink. Open peony form with large central stamen cluster with golden anthers. Blooms mid-season. Originated in Chuxiong, China.

Zixia. (Glowing Purple) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong,* p.29 with colour photos. Maternal plant is located at the relic of Nianfotang Temple, Zixi Mountain, Chuxiong, China. Estimated to be 600 years old. Pink anemone form. Flowers midseason to late.

Zixuanfeng. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.427; Chinese synonym for the New Zealand *C.x williamsii* **Lavender Swirl.**

Ziyan. (Purple Flame), *(C.reticulata),* Feng Guomei, 1989, July, Chuxiong Camellia Catalogue. Colour photo: Large size, 12-14 cm across, deep purplish red semi-double to open rose form double with 3 rows of broad rounded petals. Blooms mid-season to late. Originated in Chuxiong, China.

Ziyigongzhu. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica* **Princess Lavender.**

Ziyou Ling. Gao, Jiyin, Ltr, 30 July 1990. Chinese synonym for Nuccio's *C.hybrid* **Freedom Bell.**

Ziyu. (Purple Jade) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong,* p.52 with colour photos. Maternal plant is located at the relic of Guzhulin Temple, Zixi Mountain, Chuxiong, China. Named by Zhang Fangyu. Flowers rose to loose peony form, deep red, 8-12 cm

diameter with 15-18 petals. Stamens in several groups with some as petaloids among the petals. Leaves oblong-elliptic, 9-13 cm x 4-4.5 cm, margins barely serrate, bases cuneate.

Ziyun (Chuxiong). (Purple Cloud) *(C.reticulata) Records of Camellia Ancient Trees in Chuxiong,* p.53 with colour photos. Maternal plant is located at the relic of Guzhulin Temple, Zixi Mountain, Chuxiong, China. Named by Zhang Fangyu. Flowers semi-double, crimson, 14 cm diameter, with 12-14 petals and central cylinder of stamens. Leaves lanceolate, 10-13 cm x 4-6 cm, apices acuminate and reflexed. Margins shallow serrate, veins obvious, base cuneate. Flowers midseason.

Ziyun. (Purple Cloud). *(C.hybrid***).** Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.368 with colour photo; Originated by the Xinzhu Camellia Society, Taiwan. Red, rose form double, medium size.

Ziyuntai. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.427; Chinese synonym for the Japan *C.sasanqua* **Shi-undai.**

Zizhonglou. (Purple Double), *(C.japonica),* Huang Nursery Catalogue, Shanghai, 1949: Purplish red, anemone form double. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.60, pl.(p.151): Purplish red, anemone form double of large, twisted outer petals and a compact centre of small petaloids. Leaves light green, elliptic, midrib yellowish, apex tapering acute, margins serrate. Originated in China. Different reading: 'Tzu-chung-lou'. Synonyms: 'Tieke Boazhu', 'Xioabaozhu', 'Moluo'.

Zoë. *(C.japonica),* Burnier & Grilli Catalogue, 1846-1847: Medium size, anemone form, pure white with the centre a pale straw colour. Originated in Italy by Carlo Luzzatti, Florence.

Zoe Elizabeth. *(C.japonica),* ACRS., 1985, *Camellia News,* No.95, p.20, Reg. No.328: Originated by Mr & Mrs R. Keightley, Wattle Park, South Australia. A chance seedling that first flowered 1982. Bears medium sized, blood red flowers (RHS.80/2), mid-season to late on an upright plant with medium size, deep green leaves.

Zolermio. *(C.japonica),* van Houtte Catalogue, 1842, 9:21: Pink flower. Perfect form. Originated in Italy. (Believed extinct.)

Zoli. *(C.japonica),* van Houtte Catalogue, 1844-1845, 18:21: Rose colour. Good form. Orthographic errors: 'Zali'.

Zorina. *(C.japonica)*, SCCS., 1970, *Camellia Nomenclature*, p.147: Deep red. Large formal to rose form double. Late blooming. Originated in USA by Armstrong.

Zougongsheng. (Zou's Sacred Temple), *(C.japonica)*, Sakata et al., Mar.1981; "Studies in the Flower Colours of Camellias", II, *Memoirs of the Facaulty of Agriculture*, vol.XVII, p.89; Kagoshima University. Yusuke Sakata & Ken-ich Arisumi, 1983, *International Camellia Journal*, No.15, p.19. No description. Originated in China.

Zui Hong. *(C.japonica), Collected Papers*, ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...*, Chen Junzhi and Chen Jinshui, p.47; Long pistil group – pistil raised above stamens by more than 0.5 mm. Red flower, mid-floral, mid-folia.

Zui Xiantao. *(C.japonica), Chinese Camellia Culture*, 2003, Appendix, p.569 as 'Zuixiantao'; Shrub, branches evenly dispersed, robust growth. Leaf broad ovate, 5-6 cm x 3-4 cm, apex acute, base cuneate to broad cuneate, green and lustrous, main vein prominent, large and dense serrations. Flower semi-double hibiscus form, pink, 7-9 cm diameter, outer petals large and flat, inner joined together in peach shape. Flowers mid-season. From Sichuan Province, China.

Zuichô. (Auspicious Bird). *(C.x williamsii). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan)*, 2010, p.280 with colour photo; Large semi-double in lotus form, soft pink. Long, narrow, fluted petals. Flowers mid-season to late. Leaves narrow-elliptic, medium size. Upright growth. A cross of **Miyakodori** x **Tulip Time**, originated and named by Soshin Hirai, Saitama Pref., Japan. around 2000

Zuigetsu. (Auspicious Moon). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.139 with colour photo; English translation p.95. Small, pale pink shading off to white at the centre, tubular single with round petals, cylindrical stamen column. Flowers early to mid-season. Leaves somewhat elliptic, medium size, flat. Somewhat upright growth. A cross between **Tsurugata** and **Sayokyoku.** Originated by Nobuo Sasai in 1984, released in 1997. From Okayama Prefecture.

Zuigyoku. (Auspicious Jewel), *(C.japonica)*, Satô, 1975, *Chûbu no Tsubaki*, p.52, colour photo and description; Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.149: White. Medium size, single with 6-7 large, rounded petals, creped around the margins. Large, spreading circle of stamens, pale yellow filaments, old-gold anthers. Leaves broad-elliptic, dark green, recurved. Originated in Inazawa City, Aichi Prefecture, Japan by Kiraku Sakuragi in 1972. Previously known as 'Hayazakihon'ami'. See: Seibundô Shinkôsha, 1979, *Senchinshû*, pp.81, 225.

Zuihô. (Peak of Auspicious Omen), *(C.kissi x C.japonica.)*, JCS., 1987, *Japan Camellia*, No.24, p.13: The first *C.kissi* hybrid raised in Japan. Originated by Ogawa Takeo, Izu Ôshima, Japan from

C.kissi x *C.japonica*. Whitish pink graduations on a white ground, single, cup-shaped blooms, small flowers 4.2 cm across. Fragrant. Cold hardy with profuse blooming. Flowers early to mid- season. See: Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.62. Originated and released by Takeo Ogawa in 1985.

Zuihô. (Auspicious Treasure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.139 with colour photo; English translation p.95. Medium size, dark red, trumpet shaped single, slender stamen cylinder. Flowers mid-season to late. Leaves elliptic to narrowly elliptic, somewhat large. Upright, vigorous growth. The original tree of 60 cm circumference is growing at Renshôji Temple in Sunami Town, Motosu District. Named by Nagaharu Niwa in 1989, released by Gifu Camellia Club. From Gifu Prefecture.

Zuihôka. (Flower of Auspicious Treasure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.140 with colour photo; English translation p.95. Medium to large, peony to lion form, small stripes of red on white ground, occasionally flowers all red, scattered stamens. Flowers early to mid-season. Leaves elliptic, medium size, flat. Upright growth. A chance seedling of **Tsurugata.** Originated and named by Nobuo Sasai in 1984. From Okayama Prefecture.

Zuijiaohong. (Intoxicatingly Beautiful Red), *(C.reticulata)*, Yü & *B*artholomew, 1980, *American Camellia Yearbook*, p.12: Wavy type. Petals wavy or undulating. Stamens and pistil well developed or partly becoming petaloid. Carmine, early. Originated in Kunming. Feng et al., 1981, *Yunnan Shancha Hua*, pl.29, p.19, description, p.109, 110: Leaves elliptic to ovate, flat, apices acuminate, bases cuneate, 7-9 cm long x 4-5.5 cm wide. Flowers large, dark red (RHS.CC.53D), diameter 13-15 cm. Petals 19-22 in 4-5 whorls, flat, apices 1-3 notched, becoming gradually smaller from outer to inner whorls. Stamens mostly petaloid, a few remaining in the centre. Pistils rudimentary, flattened. This is a new cultivar selected from open pollinated seed by researchers of the Kunming Botanical Garden, Yunnan, China. It has thick and strong branches. Blooms early to mid-season. Synonyms: 'Charming Red', 'Charmingly Drunk Red', 'Intoxicatingly Charming Red', 'Intoxicatingly Beautiful Red'. Different reading: 'Tsui-chiao-hung'. See colour photo, Feng et al., 1987, *Yunnan Camellias of China*, p.45.

Zuika. (Auspicious Flower). *(C.japonica), Nagoya Camellia Society Bulletin*, No.26, 1993, p.37, No.1: A seedling of **Kikuzuki.** Fragrant. Pink fading to white at base. Size about 10 cm across. Semi-double flower with somewhat keeled petals, reflexing outwards. Cylindrical, or occasionally divided, stamen cluster. Long flowering from autumn to spring. See colour photo on p.37. Originated by Dr Funakoshi, Nagoya, Japan.

Zuikô. (Auspicious Light), *(C.japonica)*, Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, p.210 as 'Zuikoh': White. Large size, semi-double with separated stamens. Blooms mid-season. Leaves medium size, ovate, apex acuminate. Originated in Kagawa Prefecture, Japan. See: Seibundô Shinkôsha, 1979, *Senchinshû*, p.225. Believed to be a chance seedling of 'Sodekakushi' (**Gauntlettii**).

Zuikô-nishiki. (Auspicious Radiant Brocade), (Higo), Craig, 1971, *American Camellia Yearbook*, p.62; Seibundô Shinkôsha, 1979, *Senchinshû*, p.81, colour photo, p.225: Similar to **Yamato-nishiki** but rounder with a denser pattern of smaller crimson splashes on a pale pink background. Leaves round, broad-ovate, mid-green, apex abrupt acute. Originated in Kumamoto Prefecture, Japan. Designated as a Higo variety by the Higo Society in the 1970s.

Zuikoh. Andoh, 1971, *Tsubaki*, *Meika no Shôkai to Saibai*, p.210. Different reading for **Zuikô.**

Zuiren. (Auspicious Screen), *(C.sasanqua)*, Ashizawa, Yagorô, 1898, *Chabaika Taishû:* Tuyama & Yamada, 1979, *Ishii's Selected Camellias…,* pp.127, 126, 160: White with light pink edges and reverse. Large single with 5 wide, crinkled petals, a centre of spreading stamens and an occasional trumpet-shaped petaloid. Originated in Japan. (Believed extinct.

Zuiryû. (Auspicious Dragon), *(C.japonica)*, Sasai Nursery, Okayama, Catalogue, 1982-1983, p.4; Yamaguchi Tsubaki-en, Kyôto, Catalogue, 1985-1986, p.122: Red, single, campanulate, tubular stamen cluster, medium size flowers; long narrow leaves. Originated in the Kantô area, Japan.

Zuisen. (See below). *(C.japonica)*, Hiroshi, Matsuda, Okinawa, 1994, JCS, *Tsubaki*, No.33, p.35: Very small, deep red, sake-cup shaped single, with round petals. Blooms mid-season. Leaves medium size, elliptic. Bush is spreading and sturdy. A selected wild *C.japonica* var. *hozanensis*. Named for the "Zuisen" gate to the Shuri Castle.

Zuishi. (Intoxicated Lion), *(C.reticulata)*, Gao & Zhuang, 1989, *The Camellia in China*, p.57, No.375, colour photo No.233: Leaves light green, elliptic, 10-11 cm long x 4-4.3 cm wide. Flower large size, 10-11 cm across, light crimson, irregular, peony form with 20-24 petals, wavy and fluted. Flowers mid-season. Originated in Tengchong County, Yunnan Province, China.

Zui-syo. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.67. Different reading for **Zuishô.**

Zuishô (Auspicious Omen), (*C.japonica*), Katayama, 1960, *Tsubaki Ochabana:* Red striped white. Medium size, single. Mid-season blooming. Originated in Japan by Katayama, Ôsaka-fu, Japan. Different reading: 'Zui-syo'.

Zui-un. (Auspicious Clouds), (*C.japonica*), Seibundô Shinkôsha, Apr.1976, *Garden Life*, p.40; Seibundô Shinkôsha, 1979, *Senchinshû*, p.81, colour photo, p.224, description as 'Zuiun': Pinkish white with some red at the base of the petals or large white moire on deep red background. Incomplete peony form with 2-3 rows of large, overlapping outer petals and smaller, erect, curved centre petals. Leaves round-elliptic, dark green, apices acuminate. Originated in the Chûbu area, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.138 with colour photo; English translation p.94. The original tree survives at Seiryûji Temple on Mt. Zuiun, Minami-Ise. Named and released by Kôji Tomino in 1971.

Zuiyangfei. (Intoxicated Yangfei), (*C.japonica*), Fang, 1930, *Diannan Chahua Xiaozhi:* A large flower of peach red with about 8 large, outer petals and an anemone centre of smaller ones. Different reading 'Tsui-yang-fei'. It is thought that **Yangfei Cha,** Wang (1621) is the original valid name. Synonym: 'Guifei Zuijiu'.

Zuiyangfei. (Intoxicated Yangfei), (*C.japonica*), Chang, Shao Yun, 1986, *Camellias from Zhejiang*, p.55: Small tree, spreading with long branches. Leaves long-elliptic, medium size, yellowish green, distinct venation. Flowers pink, 7-8 cm across with 25-30 petals in 4 rows, narrow, long, notched at apex, separate. Stamens rare with degenerate pistil. Buds short-elliptic, green. Flowers mid-season. Note: This cultivar is different from **Zuiyangfei** above or **Baichang'e Cai.** Sometimes the same popular name is given to a number of different cultivar in different camellia growing areas of China.

Zuiyô (Auspicious Shine), (*C.japonica*), Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.182, colour photo and description: Small to medium size, deep red, campanulate single of 5 channelled, pointed, reflexed petals and a stamen column with pinkish filaments, joined for the lower third, anthers yellow. Leaves mid-green, long narrow-lanceolate, apices tapering acuminate, margins bluntly, shallowly serrate. Blooms mid-season. A chance seedling of **Yuri-tsubaki,** originated in Okayama Prefecture, Japan. Named and released by Nobuo Sasai in 1980.

Zuobaoji. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.165. Chinese synonym for **Saohime.**

Zuoxuanzhuan. (Sinistrose), (*C.japonica*), Liu, 1959, *Chung Kuo Chuming Tichi Chung Hua Hui:* A red, spirally imbricated, formal double, left handed. Originated in China. Different reading: 'Tso Hsuan Chuan'.

Zushiô (Name of Japanese folklore hero), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû*, p.81, colour photo, p.225, description: White. Medium size, semi-double with 2-3 rows of somewhat irregular, waved and notched petals and an irregularly, spreading stamen cluster, filaments pale yellow, anthers yellow. Leaves mid-green, broad-ovate, apex blunt acute, margins serrulate, petioles hirsute. Originated in Kashiwazaki City, Niigata Prefecture, Japan. Collected, named and released by Tokuji Ôoka in 1970. Zushiô is the name of the young hero of the old Japanese folklore *Sanshôdayû.*

Zuxuanwu. Gao, Jiyin, Ltr, 5 November 1991. Chinese synonym for the USA *C.japonica* **Pirouette.**

AMENDMENTS TO THE TEXT OF THE INTERNATIONAL CAMELLIA REGISTER AND THE FIRST AND SECOND SUPPLEMENTS.

S.p. 38 **An Van Astel.** Change to **An Van Gastel.**

R.p. 187 **Belle Rankin.** Delete (Believed extinct). Add "Light red with some visible veining, darker towards edges. 25 petals and 20 petaloids. Leaf 7.5 cm x 3.8 cm". Personal communication, John Grimm.

S.p. 75 **Camões.** Separate into two cultivars, **Camões (João José Gomes)** and **Camões (Marques Loureiro).**

R.p. 291 Carroll Waller. Delete entry.

R.p. 291 **Carroll Walker.** Change to **Carroll Waller**. Delete (Correction of previous entry).
