Conte Luppi. *(C.japonica),* Verschaffelt Catalogue, 1850, p.45 and 1854, *Nouvelle Iconographie,* Book VIII, pl.I as 'Comte Lupi': This variety is of Italian Origin. It is conspicuous for its large, pink blossoms, formed by regularly imbricated petals, outspread and biform, the two exterior rows being almost orbicular, and slightly emarginated and convex, while the following are smaller,

obovate, lanceolate, sub-acuminate, mucronate, hooded by the incurving of their margins, with white tips. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.102 as 'Comte Lupi' [Mariana] : Imbricated, of a beautiful deep pink. Orthographic error 'Comte Luppi'.

Conte Maffei. Angelo Longone Catalogue, 1861. Orthographic error for **Conte Maffeis.**

Conte Maffeis. *(C.japonica),* Burnier & Grilli Catalogue, 1846-1847. No description. de Jonghe, 1851, *Traité de la Culture du Camélia,* p.102: Imbricated. A beautiful deep pink. Verschaffelt, 1853, *Nouvelle Iconographie,* Book II, pl.III: The blossoms are very large for a Camellia, measuring from 13 to 14 cm. The numerous petals are regularly imbricated, outspread, rounded, full or bilobate; the heart small and open; the colouring a delicate pink with vivid tints. Originated by F. Mariani, Milan, Italy. Orthographic variant: 'Comte Maffeis'. Orthograhic errors: 'Comte Maffes', 'Comte Maffei', 'Comte Maffay', 'Compte Maffi', 'Conte Maffei'.

Conte Maggi. *(C.japonica),* Fratelli Rovelli Catalogue, 1852, p.14: Brescia. Imbricated; red at the circumference, white centre. Franchetti 1855, *Collezione di Camelia,* p.20: Petals broad, circumference, deep red with large blotches of white; the centre, pale pink, shaded with white, more than 80 petals, large and perfectly imbricated. Originated in Brescia, Italy.

Conte Medici Spada. Stefano Pagliai Catalogue, 1867, p.65. Abbreviation for **Conte de Medici Spada.**.

Conte Paola Tosi. Franchetti, 1855, *Collezione di Camelie,* p.20. Synonym for **Conte Tosi.**

Conte Pietro Boutourline. Torsanlorenzo Catalogue, 1984-1985. Synonym for **Conte Bouturlin.**

Conte Pietro Bouturlin. Hillebrand Catalogue, 1984. Synonym for **Conte Bouturlin.**

Conte Pirlo. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.l2: Red lined with white. Imbricated. Originated in Italy by Faroli. Orthographic variant: 'Comte Pirlo'.

Conte Rusca. *(C.japonica),* Fratelli Rovelli Catalogue, 1852, p.14: Lombardy. No description. Originated in Italy. (Believed extinct.)

Conte Soranza. William Bull Retail Catalogue, 1867, p.73. Orthographic error for **Conte Soranzo.**

Conte Soranzo. *(C.japonica),* Franchetti, 1855, *Collezione di Camelie,* p.21: Imbricated, soft pink, paler in the centre. Numerous petals. Verschaffelt, 1859, *Nouvelle Iconographie,* Book VII, pl.III as 'Conte di Soranzo': We are indebted for this camellia to Sylvestre Grilli & Co., who sent it in 1856. Its blossoms, of good medium size, have the petals of the circumference and intermediate rows, regularly imbricated with an anemone centre of a ruffled group of petals. The general colouring is pink, becoming almost white towards the middle while the centre resumes the former shade. Originated by Bouturlin, Florence, Italy. Orthographic variant: 'Conte di Soranzo', 'Comte de Soranzo'. Orthographic error: 'Conte di Sorazo', 'Conte Soranza'.

Conte Spada. Scarlatti Catalogue, 1888. Abbreviation for **Conte de Medici Spada.**

Conte Taverna. Burdin Maggiore & Co. Catalogue, 1863. Abbreviation for **Conte Lorenzo Taverna.**

Conte Tornielli. Burdin Maggiore & Co. Catalogue, 1880-1881. Synonym for **Tornielli d'Italie.**

Conte Tosi. *(C.japonica),* Burdin Maggiore & Co. Catalogue, 1845, p.41. No description. Fratelli Rovelli, 1852, Catalogue, p.14: Imbricated in spirals. Carmine pink, paler at centre, lined white. Franchetti, 1855, *Collezione di Camelie,* p.20 as 'Conte Paola Tosi': Circumference carmine pink, centre paler, often striped with white. Imbricated. Burdin Maggiore & Co.

Catalogue, 1856-1857: Pink with the centre deeper, striped with white. Originated in Italy by B. Lechi. Synonyms: 'Comte Paola Tosi', 'Conte Paola Tosi', 'Comte Paul Tosi'.

Contemplation. *(C.pitardii x C.japonica), New Zealand Camellia Bulletin,* 1985, vol.XIV, No.1, p.25, Reg. No.223: Originated by Mrs A.B. Durrant, Rotorua, New Zealand from *C.pitardii* var. *pitardii x* 'Fuyajo'. It is 17 years old and first flowered 1973. A slow, dense grower with upright, spreading habit. Leaves, mid-green, 8 cm x 3.5 cm. The semi-double flowers, 8-10 cm across x 4 cm deep, have 20-24 petals with occasional petaloids, white filaments and golden anthers. The colour is lavender pink, RHS.CC, Red-purple 62C with deeper veining. The petals are precisely fluted, flower is well displayed and the golden stamens persist to fall. Flowers mid-season.

Contessa Mariana. Verschaffelt, 1860, *Nouvelle Iconographie,* Book VII, pl.IV. Orthographic variant for **Contessa Marianna.**

Contessa Marianna. *(C.japonica),* Verschaffelt, 1860, *Nouvelle Iconographie,* Book VII, pl.IV on page facing plate: A perfection amongst perfections. We are indebted it to Count Bouturlin, Florence, Italy in whose garden it was raised from seed. Its blooms, of medium size, have short, rounded petals at the circumference, then they become oblong to the centre. Of a vivid pink at the circumference, they then become a delicate pink, almost white, while the heart itself is crimson pink. Orthographic variants: 'Comtesse Marianna', 'Contessa Mariana'. Orthographic error: 'Countessa Mariana'.

Contessa Marietta. van Houtte Catalogue,1860-1861, 83:53. Synonym for **Ugo Foscolo.**

Contessa Massiani. Corbelli Catalogue, 1882. Orthographic error for **Contessa Mastiani.**

Contessa Mastiani. *(C.japonica),* Luzzatti, 1851, *Collezione di Camellia,* p.11: Magnificent camellia, ivory white with spots and lines of pink. Petals large and imbricated. Originated in Italy.

Orthographic variant: 'Comtesse Mastiani', 'Comtesse de Mastiani'. Orthographic errors: 'Comtesse Massiani', 'Comtesse Massiana', 'Contessa Mastiana', 'Contessa Massiani', Contessa Mastiana'.

Contessa Melegari. Jean Verschaffelt Catalogue No.11, 1867-1868, p.39. Abbreviation for 'Contessa Clelia Melegari', synonym for **Mattutina.**

Contessa Millo. *(C.japonica),* Franchetti, 1855, *Collezione di Camelie,* p.22. Beautiful imbricated flower. Pink. Originated in Italy.

Contessa Mocenigo. *(C.japonica),* Burnier & Grilli Catalogue, 1846-1847. No description. Luzzatti, 1851, *Collezione di Camelia,* p.11: Very double like **Candidissima** with spots of vivid red. Franchetti, 1855, *Collezione di Camelie,* p.22: Pearl white, spotted with vivid rose. Imbricated. Orthographic error: 'Comtesse Moncenigo', 'Comtessa Nocenigo', 'Contessa Macenigo'. Sport: **Professore Zannetti.** Originated in Italy by Mariani.

Contessa Nancini. Ysabeau, ed., 1848-1849, *Journal d'Horticulture Pratique, de la Belgique,* vol.6, p.302. Orthographic error for **Contessa Nencini.**

Contessa Nathalia de Medici Spada. Linden Catalogue, 1875. Orthographic variant for **Contessa Natalia de Medici Spada.**

Contessa Natalia de Medici Spada. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.9: Perfectly imbricated, rose form double; petals at circumference, large and outspread; those towards the centre folded in a shell shape, of a vivid pink with graduations of vermilion, a band of almost white divides the outer petals whilst the inner petals have darker edges. Originated at the Villa Quiete, Italy. Orthographic variant: 'Contessa Nathalia de Medici Spada'.

Contessa Nava. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.69: Ivory white; imbricated. Burdin Maggiore & Co. Catalogue. 1862. No description. Gelli & Figlio Catalogue, 1871-1872: Ivory white. Originated in Italy.

Contessa Negroni. Fratelli Rovelli Cata;logue, 1852, p.15. Orthographic error for **Contessa di Negroni.**

Contessa Nencini. *(C.japonica),* Burnier & Grilli Catalogue, 1846-1847: Flower very full double, well imbricated with the form and colour of **Incarnata;** petals semi-transparent with stripes and lines of rosy carmine. van Houtte Catalogue, 1845-1846, 23:3 lists this camellia as 'Comtesse Nencini' but as it was originally released and named by Burnier and Grilli, Italy, according to their catalogue, their orthography is considered as the valid one. Also Mercatelli, 1881 gives Bibbiani - Ridolfi as the originators and it is thus an Italian cultivar. See also Verschaffelt, 1849, *Nouvelle Iconographie,* Book IX, pl.II for colour illustration. Synonyms: 'Pecchioliana', 'Pecchioli', 'Puccini', Jean Freppa', 'Rosa Alboeflora', 'Peltata', 'Pecchiolana', 'Rose Albaflora', 'Rosalboeflora', 'Peccholana'. Orthographic variant: 'Comtesse Nencini'. Orthographic errors: 'Contessa Nancini', 'Comtesse Nancino', 'Comtesse Nencine', 'Comtesse Nancini', 'Nencini', 'Comtesse de Nencini', 'Comtesse Mencuil'. A sport of **Giulia Gherardesca.**

Contessa Nieuport. Hume, 1946, *Camellias in America,* p.329. Orthographic variant for **Comtesse de Nieuport.**

Contessa Nigrino. Charles Vuylsteke, 1876-1877, Price List, p.19. Orthographic error for **Contessa Negroni.**

Contessa of Derby. Rovelli Catalogue, 1893-1894, p.35. Orthographic error for **Countess of Derby.**

Contessa Otolini. Auguste van Geert, 1857, Catalogue No.43, p.33. Orthographic error for **Contessa Ottolini.**

Contessa Ottolina. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Contessa Ottolini.**

Contessa Ottolini. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.10: Bright brick red, darker at the circumference, a little lighter at the centre, some small spots of white. Franchetti, 1855, *Collezione di Camelie,* p.23: Beautifully imbricated, brick red, the petals often striped with white. van Houtte Catalogue, 1851, 44:7 lists this variety as 'Comtesse Ottolini' but as it is an Italian variety, the Italian orthography takes precedence. Orthographic variant: 'Comtesse Ottolini'. Orthographic errors: 'Comtesse d'Ottolina', 'Comtesse Ottolina', 'Countess d'Ottoline', 'Countess Ottolina', 'Contessa Otolini', 'Contessa Ottonelli'. Originated in Italy by Franchetti.

Contessa Paolina. Jean Verschaffelt, 1861-1862, Price List, p.22. Linden Nursery Catalogue, 1878, No.99, p.8. Abbreviation for 'Contessa Paolina Maggi', synonym for **Paolina Maggi**

Contessa Paolina Guicciardini. *(C.japonica),* Jean Vervaene fils, 1864, Price List No.1, p.5 as 'Contessa Pauline Guicciardino'. van Houtte Catalogue, 1865-1866, 110:26. No description. van Houtte Catalogue, 1866-1867, 116:17: Large, imbricated flower, concave white petals, lightly tinted a very soft, rosy pink. Mercatelli Catalogue, 1881: Ivory white faintly streaked light rose, petals large, perfectly imbricated. Very large. Orthographic variant 'Comtesse Pauline Guicciardini'. Originated in Italy by Guicciardini, Florence.

Contessa Paolina Maggi. van Houtte Catalogue, 1871, p.49. Synonym for **Paolina Maggi.**

Contessa Paolina Maggi Rosea. *(C.japonica),* Jean Verschaffelt Catalogue, 1867-1868, p.39. No description. The deep pink sport of **Paolina Maggi.** Synonyms: 'Mrs H. Boyce Rosea', 'Kallista', 'Paolina Maggi Rosea'. Orthographic error: 'Contessa Paolini Maggi Rosea'. Originated in Belgium.

Convestable. *(C.japonica),* E.G. Henderson Nursery Catalogue, 1868, p.70. No description. Originated in England. (Believed extinct.)

Convexa. *(C.japonica), Biblioteca Agraria,* 1827: Leaves large, long, deeply serrate, convex in the centre. Flower, double, colour deep red, petals regular. Originated in Italy.

Coolearna. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings,* p.15, colour photo: A seedling of **Ville de Nantes.** A strong red coloured, open, informal double with 2-3 rows of large, crinkled and reflexed guard petals and a centre of smaller, erect, twisted petals mixed with golden stamens. Originated by Richard Dodd, Marshallville, Georgia, USA.

Coolgardie Star. (C.sasanqua). ACRS, *Camellia News,* 1991, No.119, p.11, Reg. No.397: Originated by Keith Abbott, Rossmoyne, Western Australia. Seed parent **Setsugekka**. First flowered 1986 at 3 years of age. Loose, informal, rose form double white flower of 18 petals, 5 cm across x 2 cm deep. Early blooming on a vigorous, upright plant. Leaves obovate, dark glossy green, 5.5 cm long x 2.5 cm wide. Notched petals, some petaloids, pure white with a strong distinctive perfume.

Cooper. *(C.japonica),* Oudin Nursery Catalogue, 1845-1846, p.43: Bright Scarlet, peony form, very elegant. Originated in England.

Cooper Powers. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.41: Soft shell pink. Large semi-double with slightly curved petals and petaloids interspersed with stamens. Medium, compact growth. Mid-season blooming. Originated by Mrs C. Powers, Georgia, USA. Sport: **Cooper Powers Variegated.**

Cooper Powers Variegated. *(C.japonica),* Cannon, 1963, ACS., *The Camellia Journal,* vol.18, No.1 as 'Cooper Powers Var.'. A virus variegated form of **Cooper Powers** - Shell pink and white. Originated in USA.

Cooper Variegated. The Pacific Camellia Society, 1946, *Camellia Nomenclature,* p.9 as 'Cooper Var.' Synonym for **Tricolor** as 'Wakanoura Variegated'.

Cooperi. *(C.japonica),* van Houtte Catalogue,1839, 1:2: Salmon red, Imbricated. Berlèse, 1843, *Iconographie,* pl.226: The flower is 12 cm across, very double, formed like a round rose, regularly imbricated by tiers. The colour is a clear, vivid pink, tinted flesh pink. The petals are disposed in 6-7 rows, ample, numerous, separated, regularly imbricated, notched, almost imperceptalble veins and reflections in the cup shape in one and the other intervals between the rows; those that form the last row are lengthened with spots of white. Geldorf, Const., 1844 reports that this variety produces red, pink and white flowers. Synonym: 'Cooperi Imbricata', 'Cooperi'(Youngs). Orthographic errors: 'Cooperii', 'Copperi Imbricata'. Originated in England by Young.

Cooperi Imbricata. Luzzatti, 1851, *Collezione di Camelie,* p.12. Synonym for **Cooperi.**

Cooperii (Youngs). Oudin Nursery Catalogue, 1845-1846, p.43. Synonym for **Cooperi.**

Coquettii. *(C.japonica),* Tourres, Macheteaux, Catalogue, 1839, p.21. No description. Anonymous, Sept.1839, *Revue Horticole,* p.389: A seedling raised by M. Tourres, Macheteau, France; described by Berlèse in his *Monographie,* ed.2, 1840 and illustrated and described in his *Iconographie,* 1843, pl.213. Verschaffelt also described and illustrated this variety in his 1848, *Nouvelle Iconographie,* Book V, pl.IV. It is a formal double with numerous, broadly obovate petals, 5.5 cm long by 4.5 cm wide, becoming smaller towards the centre, rounded at apex, bases tapered, imbricated. Under some climatic condition the flower varies to incomplete double, exposing rare stamens when fully open, 10-11 cm across, colour Turkey Red 721 /1, tending to deeper in the centre. Leaves, dark, glossy green, narrowly ovate to elliptic, 8 cm long x 4-5 cm wide, apex acuminate, decurved, margins serrulate. Received an "Award of Merit" from the RHS in 1956. Orthographic errors: 'Coquette', 'Coquetti', 'Coquetii', 'Cocquettii', 'Cocquete', 'Cocquetti'. Synonyms: 'Glen 40', 'Glen No.40', 'Coquettii Vera', 'Alabama Glen 40', 'Alabama', 'Incomparabilis Vera'. Chinese synonym: 'Meiguo Dahong'. Sports: **Coquettina**, 'Glen 40 Variegated'.

Coralliana. Jacob Makoy et Cie Catalogue, 1841, p.10. Orthographic error for **Corallina.**

Corallina. *(C.japonica),* Chandler & Buckingham, 1825, *Camellia Britannica,* pl.5, p.13; Chandler & Booth, 1831, *Illustrations and Descriptions of Camellia...* pl.10: The flowers are very attractive being of deep crimson and upwards of 10 cm in diameter. The petals are of one size and form' from 12-16 in number and arranged in two rows. They are roundish cordate, about 2.5 cm broad, rather deeply divided at their extremity and taper to a narrow, thick base. The centre petals are numerous and of the same red colour as the outer petals, but half their length and rise upright in the centre in a dense mass about 2.5 cm across. Each has the same white tip peculiar to the centre petals of the Waratah, (**Anemoniflora**); those on the outside are wedge shaped, slightly incurved and shorter than those in the centre, the latter being often striped with white and irregular in form. Raised from seed by Chandler, England in 1819. Orthographic errors: 'Coralina', 'Corallina', 'Coralliana', 'Corrallina', 'Coralino'. Synonyms: 'Coral Coloured', 'Coral Flowered', 'Waratah Corallina', 'Colorata Nova'.

Corallina (Baumann). *(C.japonica),* Burett, ed., 1837, *Magazine of Botany and Gardening*, vol.3, p.152: Besides Chandler's **Corallina,** another is listed from Baumann, Bollwieler - 'This camellia is in no way inferior to the English **Corallina**; the colour of the flowers is, however, different, this being a bright rose. The guard petals are in 2-3 rows and bell-shaped, the inner ones are

smaller and irregular, forming a loose cone at the centre. It is a free growing variety and an abundant bloomer.'

Corallina Taurinensis. *(C.japonica),* Shneiderff, ed., 1841, *Catalogo della piante che si Trovano nel Giardino,* p.8. No description. Originated in Italy. (Believed extinct.)

Cordelia. *(C.japonica),* Loddige's Catalogue, 1849, p.34. No description. Originated in England. (Believed extinct.)

Cordifolia. *(C.japonica), Biblioteca Agraria,* vol.XI, 1829: Leaves large, base cordate, margins lightly turned over; flower, medium size, red coloured, marbled with purple, the petals of the circumference smooth and regular, while those of the centre are oblong and irregular. Poiteau also lists this variety Jan.1836, Revue Horticole, p.166-170. This Camellia should not be confused with the species *Camellia cordifolia.*

Cordifolia. Nakai, 1940, *Journal of Japanese Botany,* 16(12):2. Originally designated *Thea cordifolia* by Metcalf, 1932. Listed by Sealy in *A Revision of the Genus Camellia,* 1956, p.101, 102 as *C.cordifolia* (Metcalf) Nakai.

Cornelian Rose. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Manao Juban.**

Cornelian Rose Flower. Ikeda, 1976, *American Camellia Yearbook,* p.40. Synonym for **Manao Juban** as 'Marnaotsueban'.

Corneliar. Coolidge Gardens Camellia Catalogue, 1952. Orthographic error for 'Cornelian', synonym for **Damanao.**

Cornellii. *(C.japonica),* Berlèse, 1841, *Iconographie,* vol.1, pl.24: Complete double. Irregularly imbricated, 8-9 cm across, white, some petals streaked with a thin, faint line of pale cerise. Originated in Italy. Orthographic error: 'Cornielli'.

Cornielli. Frères Noisette, Nantes, Nursery Catalogue, 1857, p.35. Orthographic error for **Cornellii.**

Cornerais Bahuaud. Treseder of Truro Camellia List, 1971, p.9. Orthographic error for **Cormerais Bahuaud.**

Cornis Flora. SCCS, 1947, SCCS., *The Camellia. Its Culture and Nomenclature.* Name later corrected to **Cornus Flora.**

Cornish Clay. *(C.japonica),* Mount Congreve Gardens' *Computerised List of Camellias,* Feb.1994, p.2. No description. Originated in the UK.

Cornish Cream. *(Caerhays hybrid),* Anonymous, 1948, Awards of Merit, *Gardeners' Chronicle,* ser.3, 123:72: A hybrid of the blush-pink *C.saluenensis* and the white *C.cuspidata.* The variety is of neat habit with broadly lanceolate leaves and bearing small, single white flowers. RHS, "Award of Merit", 1984 when shown by J.C. Williams, Caerhays Castle, Cornwall, England.

Cornish Pink. *(C.hybrid).* Otter Nursery Ltd, Catalogue, 1995. No description. Originated in UK.

Cornish Snow. *(Caerhays Hybrid),* RHS, Journal, 1948. Granted an 'Award of Merit'. A seedling raised at Caerhays Castle by Mr. Williams, using *C.cuspidata* as the seed parent and *C.saluenensis* as the pollen parent. See also *Shrubs for Milder Counties,* 1948, p.204 by Arnold-Forster. It is white, with occasional pink flush, small, single flower on a tall growing plant with cuspidata-like leaves, 5.5 cm x 3 cm. Flowers are about 5 cm across and have 8 petals and a yellow stamen cluster. Chinese synonym: 'Mixue'.

Cornish Snow Michael. Hillier & Son Supplementary List, 1960-1961, p.8. Synonym for Michael.

Cornish Snow Winton. Hillier & Son Supplementary List, 1960-1961, p.8. Synonym for Winton.

Cornish Spring. *(C.japonica x.C.cuspidata),* Tregrehan Camellia Nursery, 1973: Small size, single, pink; floriferous. Vigorous, upright growth. ('Rosa Simplex' x *C.cuspidata).* Gallagher, 1976, *American Camellia Yearbook,* p.121: "Two seeds from Miss Carlyon's first series of crosses are interesting. The first was *C.japonica* 'Rosa Simplex' x *C.cuspidata.* One has been named **Cornish Spring.** The flowers favour *C.cuspidata* being small singles, but they are bright pink in colour. Covered head to foot in their pink blossoms, they make a wonderful addition to the garden. The flowers are followed by the very bronze foliage typical of *C.cuspidata.* Originated by Miss Gillian Carlyon, Tregrehan, Par, Cornwall, United Kingdom. Received a RHS, "Award of Merit" in 1986. Flowers up to 4 cm in diameter, clear, soft pink veined slightly deeper. Anthers brownish, golden yellow." See colour pl. p.66, Fischer, 1986, *Kamellien.*

Cormendatore. Peer, 1956, *American Camellia Yearbook,* p.57. Error and abbreviation for **Commendatore Betti.**

Cornus Flora. *(C.japonica),* SCCS., 1947, *The Camellia. Its Culture and Nomenclature* as 'Cornis Flora': Light pink shaded deeper pink, Small single. Vigorous, upright growth. Name corrected in later issues. See Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.81 for black and white photo.

Corollina. Berlèse *Monographie,* English edition. 1838, reprinted by McIlhenny, p.75, 107. Orthographic error for **Corallina.**

Corona. *(C.sasanqua),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.251. Pink and white. Originated in USA.

Corona of Moon. Yashiroda, 1950, *American Camellia Yearbook,* p.15. Synonym for **Tsuki-no-kasa.**

Coronata. *(C.japonica),* Marin Burdin & Co. Catalogue, 1822, p.55. No description. Gaetono Savi Catalogue, 1823 as 'Japonica Plena Coronato'. No description. Scheidweiler ed., 1833, *Horticulture Belge, Journal Jardin Amateur,* vol.I, p.28, as a part of the merchants Verleeuwen Bros. collection. No description. van Houtte Catalogue, 1839, 1:2: Transparent pink. Imbricated to the centre. He gives it as Press's while most other lists of the time give Low as the originator. Charles van Geert Catalogue, 1845 as 'Coronata London', describes it

as: Perfect impression, as much for its beautiful form as its soft rose colour. A beautiful *Rosa centifolia:* Note - *The Florist Journal,* vol.4, 1843 has "mottled with rose, reflexed. Synonyms: 'Coronata Loudon', 'Coronata Vera de Londres', 'Coronata d'Inghil', 'Coronata de Low', 'Coronata di Low', 'Coronata'(Low), 'Coronata Nova de Low', 'Coronata Inglese', 'Knight's Coronata'. Orthographic error 'Coronata Depres'. Chinese synonym: 'Jiamian Dianli'.

Coronata Alba. *(C.japonica),* Tourres, Macheteaux, Catalogue, 1835, p.17. No description. Anonymous,1841, *Catalogo della piante esistenti nell'lmperiale e reale giardino di Boboli,* p.12. No description. Verschaffelt, 1850, *Nouvelle Iconographie,* Book XI, pl.III: This variety has blossoms of flawless regularity and purest white. It has recently been obtained from seed in Italy and we have acquired the entire stock. Its flowering is profuse. The numerous petals are large, imbricated, compact and convex; at the apices is a slight indentation which often terminates in a groove which divides the petals into two lobes.

Coronata Blush. *(C.japonica),* Franco Agostoni, 1844, *Catalogo Plantarum...* No description. Originated in Italy. (Believed extinct.)

Coronata Crispata Alba. Verschaffelt Catalogue, No.50, 1844, p.19. as 'Coronata Crispa Alba'. synonym for **Coronata Crispata Candida.**

Coronata Crispata Candida. *(C.japonica),* Verschaffelt, 1844-1845, Catalogue, p.24. No description. Burnier & Grilli Catalogue, 1846-1847: Large, full peony form with petals crinkled and twisted. Originated by Guicciardini, Florence, Italy. Abbreviation: 'Crispata Candida'. Synonym: 'Coronata Crispata Alba'.

Coronata Crispata Rosea. *(C.japonica),* Verschaffelt, 1844-1845, Catalogue, p.24. No description. Burnier & Grilli Catalogue, 1846-1847: Large, rose-pink, of spherical form, petals contorted like the leaves of the Holly. Originated by Burnier & Grilli Florence, Italy. Abbreviation: 'Crispata Rosea'. Synonym 'Crispata Candida Rosea'.

Coronata Crispata Rubra. Verschaffelt Catalogue, No.50, 1844, p.19. Synonym for **Coronata Rubra.**

Coronata de Press. *(C.japonica),* There appear to be two camellias named **Coronata.** This name is confirmed for that raised by Press, first listed by van Houtte, 1839, Catalogue, 1:2. Transparent pink. Imbricated to the centre. Originated in England.

Coronata Drepres. *(C.japonica),* Verschaffelt Catalogue, No.50, 1844, p.19. Synonym for **Coronata de Press.**

Coronata d'Inghil. Anonymous, 1841, *Catalogo delle piante esisente nell'lmperiale e real Giardino di Boboli,* p.12. Synonym for **Coronata.**

Coronata de Low. Cels, Paris, Nursery Catalogue, 1836-1837, p.9. Synonym for **Coronata.**

Coronata di Low. Burnier & Grilli Catalogue, 1846-1847. Synonym for **Coronata.**

Coronata Expansa. *(C.japonica),* Index Seminum Palermo University, 1827. No description. Originated in Italy. (Believed extinct.)

Coronata Inglese. Grilli, 1843-1844, Catalogo Generale. Synonym for **Coronata.**

Coronata London. Charles van Geert Nursery Catalogue, 1845. Synonym for **Coronata.**

Coronata Low. Tagliabue, 1840, *Nomenclatore Camelliae.* Synonym for **Coronata.**

Coronata Miniata. *(C.japonica),* Burnier & Grilli Catalogue, 1846-1847: Peony form with light red striped carmine. Originated by Burnier & Grilli, Florence Italy.

Coronata Miniata Nova. *(C.japonica),* Alex Verschaffelt, 1846, Catalogue, p.52. No description. Verschaffelt, 1852, *Nouvelle Iconographie,* Book V, pl.II: Obtained by seed in Italy some years previously and sent by Burnier & Grilli, Florence. It is distinguished by the following arrangements of its roseate minimum petals; the external ones very large, rounded, emarginate, outspread; the intermediate ones, erect for the most part, shell-like and ruffled; the central ones, very numerous, short, wrinkled and grouped in a compact, peony shaped heart. A reproduction of the Verschaffelt plate is facing p.54, *American Camellia Yearbook,* 1971. Synonym 'Crispata Miniata Nova'. Orthographic errors: 'Coronata Minuata', 'Coronata Minuata Nova'.

Coronata Minuata. Vanderbilt, 1940, *Camellia Research,* p.3. Orthographic error for **Coronata Miniata.**

Coronata Minuata Nova. *Camellia Society of America Yearbook,* 1939. p.37. Orthographic error for **Coronata Miniata Nova.**

Coronata Nova. *(C.japonica),* Jacob Makoy et Cie Catalogue, 1839, p.16. No decription. Trillon, Le Mans, Catalogue, 1843, p.4: Vivid red streaked white. Maupoil & Figlio Catalogue, 1847. No description. Originated in Italy.

Coronata Nova de Londres. *(C.japonica),* Berlèse, 1840, *Iconographie,* vol.2, pl.187: The flower is 9-10 cm across, full and regular, rounded and flared out, of a clear, cherry red, washed with a delicate and transparent red and veined with lines of very vivid red. The petals are in 5-6 rows, numerous, thin, channelled, pleated to begin with, opening out and becoming a soft pink when the bloom is fully open. The petals diminish, little by little as they advance to the centre and are imbricated from the circumference to the centre. Orthographic error: 'Coronata Nova de Lourdes'. Originated in England. Synonym: 'Coronate Vera de Londres'. It must not be confounded with the other of the same name, (**Coronation Nova**) which is a deep cherry red, sometimes self coloured sometimes with splashes of white.

Coronata Nova de Low. Cachet, 1840-1841, Catalogue, p.1. Synonym for **Coronata.**

Coronata Plena. Rossi, ed., 1826, *Catalogue Plantarum Horti Regii Modentiensis ad annum,* p.14. Orthographic variant for **Coronata.**

Coronata Rosa. Berlèse, 1837, *Monographie,* ed.1, p.118. Given as 'Coronata Rosea' in the Synoptical Table. Orthographic error for **Coronata Rosea.**

Coronata Rosea. *(C.japonica),* Berlèse, 1837, *Monographie,* ed.1, p.118, 132, as 'Coronata Rose': Leaves 10 cm by 6 cm, roundish-oval, a little acuminate, prominently veined, deeply serrate; flower, large, double, well formed, deep cherry red; exterior petals broad, well displayed, striped or spotted with white; those of the interior, smaller, contorted, also striped and spotted white. Ridolfi, 1848, Catalogo delle Piante, p.7: Deep rose pink, different from others. Note: This is probably a sport of the original variegated cultivar. Originated in England by Low. Synonym: 'Coronata Rosea de Low'.

Coronata Rosea de Low. Berlèse, 1843, *Iconographie,* facing pl.248. Synonym for **Coronata Rosea.**

Coronata Rubra. *(C.japonica),* Shneiderff, Enrico, ed., 1841, *Catalogo delle piante che si Trovano nel Giardino,* p.8. No description. Synonyms: 'Rubra Coronata', 'Rubra Coronata d'Inghilterra', 'Coronata Cripata Rubra'. Originated in England.

Coronata Vera de Londres. Berlèse, 1843, *Iconographie,* pl.187. Synonym for **Coronata Nova de Londres.**

Coronation. *(C.japonica),* Camellia Grove, Catalogue, 1872. Deep rose, marbled white. Originated in Australia

Coronation (Australia). SCCS, 1964, *Camellia Nomenclature,* p.36. Synonym for **Coronation.** See "International Camellia Register", p.403.

Coronation (US). *(C.japonica),* SCCS., 1954, *The Camellia. Its Culture and Nomenclature:* White. Very large semi-double. Vigorous, open, spreading growth. Mid-season flowering. Originated by McCaskill Gardens, Pasadena, California, USA., as a seedling of 'Lotus', (**Gauntlettii**). See colour photo: pl.35, p.32, *Encyclopedia of Camellias in Colour,* vol.II, 1978.

Coronato Pleno. *(C.japonica),* Parmentier, Joseph, Catalogue, 1812, p.7. No description. Originated in China. (Believed extinct.)

Coronde Fondi. Funchess, 1951, *American Camellia Yearbook,* p.16, 34. Orthographic error for **Corrine Fonde.**

Coronet. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* White. Informal Double, Early flowering. Originated in USA.

Coronide. *(C.japonica),* Burdin Maggiore & Co, 1849-1850, Catalogue General: Dark red, sometimes regular, sometimes ball-shaped; very beautiful. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare:* Deep red, sometimes regular, sometimes cup-shaped, very beautiful. Originated in Italy.

Corporal Pugg Johnson. *(C.japonica),* SCCS, 1970, *Camellia Nomenclature,* p.39: Dark Red. Medium size single. Medium growth. Early flowering. Originated by J.L. Solomon, Georgia, USA.

Corra Alba. van Houtte Catalogue,1839, 1:2. Synonym for **Haylockii.**

Corra Rubra. *(C.japonica),* van Houtte Catalogue, 1843-1844, 12:10: Deep scarlet, flat flower. Originated in Belgium.

Corradina. Verschaffelt, 1860, *Nouvelle Iconographie,* Book I, pl.I: Orthographic error for **Corradino.**

Corradine. Fendig.1953, *American Camellia Catalogue.* Orthographic error for **Corradino.**

Corradino. *(C.japonica),* Verschaffelt, 1860, *Nouvelle Iconographie,* Book I, Pl.I: Its blossoms of the largest size, 11.5 cm, are composed of an infinite number of petals, quite small compared to the size of the flower, perfectly rounded, slightly emarginate at the apex, all closely imbricated with the utmost regularity; the ground is a delicate pink, growing paler towards the centre, where a few white stripes are grouped. Originated in Italy by Luzzatti, Florence. Orthographic errors: 'Corradine', 'Corradina', 'Coradino', 'Crradino', 'Coradina'. Synonym: 'Corradino' (Luzzatti).

Corradino (Luzzatti). Vervaene Catalogue, 1888, No.11. Synonym for **Corradino.**

Corradino (Negri). *(C.japonica),* Mercatelli Catalogue, 1881, p.15. as 'Corradino': Very dark carmine, sometimes spotted white. Medium size flower, perfectly imbricated. Although Mercatelli refers this to Verschaffelt, 1860, it would appear to be a different cultivar with a different originator either erroneously or invalidly named 'Corradino'. Originated by Negri, Milan, Italy.

Corri Delle. Hazlewood & Jessep,1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.49. Synonym for **Imperator.**

Corrine Fonde. *(C.japonica),* Flowerwood Nursery Catalogue, 1948: Orange red, medium large peony form. Compact growth. Originated by the Flowerwood Nursery, Mobile, Alabama, USA. Orthographic error: 'Coronde Fondi'.

Corroboree. *(C.japonica),* Eagle Heights Nursery Catalogue, 1962: White striped crimson, medium size semi-double. Blooms mid-season. Originated by Gordon Waterhouse, N.S.W., Australia from

seed of 'Tricolor'. See colour photo, Macoboy, 1981, *The Colour Dictionary of Camellias*, p.78. Sports to 'Boomerang'.

Corrollina. Robert Tyas, Popular Flowers, 1843, p.85. Orthographic error for **Corallina.**

Corry Van Gasteren. *(C.reticulata x C.japonica),* Gentry, 1980, ACS., *The Camellia Journal,* vol.35, No.4 . No description. SCCS, 1981, *Camellia Nomenclature,* p.172: Deep pink. Large to very large, semidouble. Medium, upright growth. Flowers mid-season to late. Originated by A.N. Funari, Santa Clara, California, USA from seed of *C.reticulata* 'Cornelian' (**Damanao**) x *C.japonica.*

Corsa. *(C.japonica),* Cachet Catalogue, 1846, p.6. No description. Originated in Italy. (Believed extinct.)

Corsage. *(C.japonica), American Camellia Yearbook,* 1961, p.220, Reg. No.582: A 9 year old chance seedling that first bloomed 1955; originated by W.F. Wilson, Jr., Louisiana, USA. Plant growth is pyramidal with average denseness and light green leaves averaging, 10.5 cm long by 5 cm wide. The formal double flower, similar to **Alba Plena,** is 7.8-8.5 cm in diameter and 3 cm deep and has 75-90 petals. The flowers are pink, Maerz & Paul Colour Chart, plate 42 12 or plate 41 C-2. A good corsage flower.

Corsica. (*C.japonica),* High Banks Nursery, Hawkshurst, Kent, 1994-1995 Catalogue, p.3: Double red; dark matt green leaves. Medium growth. Originated at Cobland's Nursery, Tonbridge, UK.

Corsini. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelia,* p.13: Rose-pink, magnificent flower. Form of a dahlia, perfection, extra. Originated in Italy.

Corsini Bronzit. *(C.japonica),* Piantaio Comunale Romano Catalogue, 1857. No description. Originated in Italy. (Believed extinct.)

Côrte n'Aldeia. *(C.japonica),* José Marques Loureiro Catalogues, No.1, 1865, p.37, & No.9, 1872-73, p.42; Light carmine, veined deeper, formal double. Originated in Portugal. Orthographic variant 'Côrte n'Aldêa'. Orthographic errors 'Corte n'Aldeira', 'Corte na Aldeira'. Note; Catalogue No.1 used the orthography 'Côrte n'Aldêa', but all later catalogues used the more modern orthography now recognised as the valid name.

Coruscans. Hogg, Thomas, 1838, *Magazine of Horticulture,* 4:155: Originated by Floy, New York, USA. Deep, rich crimson double. Synonym for **Crassiflora Coruscans.**

Curvathecefolia. Berlèse, 1837, *Monographie,* ed.1. Orthograpgic error for **Curvatifolia.**

Cosmopolitan. André, ed., 1864, *Plantes de terre de bruyères...,* p.46. Orthographic variant for **Cosmopolitana.**

Cosmopolitana. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.10. No descriptihon. Verschaffelt, 1859, *Nouvelle Iconographie,* Book VIII, pl.IV: Blossoms of gay, pink colours with faint, white bands at the centre. The petaline imbrication is regular. The petals of the external rows are ample, rounded, convex, outspread and full. At the centre they decrease suddenly in size, are oval, serried and arranged in an open heart. Orthographic errors: 'Cosmopolitano', 'Cosmopolitan', Cosmopolita'. Origined in Brescia, Italy.

Cosmopolitano. Jean Vervaene fils, 1864, Price List No.1, p.5. da Silva, 1880, *Forcing Varieties of Camellias in Oporto,* p.7. Orthographic variant for **Cosmopolitana.**

Cospicua. Volonte Catalogue, 1888, p.112. Orthographic error for **Conspicua.**

Costa. Costa Catalogue, 1846, p.16. Orthographic variant for **Costae.**

Costabili. *(C.japonica),* Ambroise Verschaffelt, 1853, Supplement to Catalogue Général, p.10, as 'Costabile'. No description. Burdin Maggiore & Co. Catalogue, 1856-1857, p.73. No description. Verschaffelt, 1860, *Nouvelle Iconographie*, Book VIII, pl.III, as 'Costabile': Blossoms of the largest size, formed of very numerous and large petals, extremely compact and overlapping very closely, with perfect imbrication towards the circumference where they are large, rounded and vivid reddish pink; towards the centre, oval, loosely outspread, much less compact, ruffled at the heart, all of a clear pink with white stripes or very large streaks. The Italian orthography is accepted as valid for an Italian variety. Originated by B. Lechi, Brescia, Italy. Orthographic errors: 'Castabile', 'Costable', 'Costabile'.

Costable. Vanderbilt, 1940, *Camellia Research,* p.3. Orthographic error for **Costabili.**

Costae. *(C.japonica),* Colla, *Camelliografia*, 1843, p.113: Petals all of the colour of dark rose. Corolla of numerous petals, irregularly disposed in several rows with openings and reflexed petals, the form is also irregular. The whole of the corolla forms a globe nearly the same as the *Viburnum roseum.* Orthographic variant: 'Costa'.

Costantin de Catters. Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete*, p.5. Orthographic error for 'Constantin de Caters', synonym for **Constantin.**

Costantino Tretiakoff. Roda Catalogue, 1885, p.42. Orthographic error for **Constantin Tretiakoff.**

Costanza Hall. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.69: Vivid carmine satin. Imbricated. Originated in Italy by Hall.

Costei. The species *Camellia costei* Léveille in Fedde, Report sp.Nov.x 148 (1911). Nakai, 1940, *Journal of Japanese Botany,* 16(12):3.

Costituzione (La). van Houtte Catalogue, 1860-1861. Orthographic variant for **La Costituzione.**

Côtes D'Armor. *(C.hybrid)* ICS *Journal*, 2008, p.121 with colour photos; A cross between the *C.x williamsii* **Mary Jobson** x the *C.reticulata x C.saluenensis* **Inspiration.** First flowered in 1996 at circa 22 years. Originated by Fañch Le Moal, Guingamp, France, on behalf of the Camellia Association of Guingamp. See also ICS *Journal*, 2004, pp18-19, "Baptism of 'Côtes D'Armor'.". An average upright plant of rapid growth rate. Flowers mid-season. Semi-double, red-purple (RHSCC N57C, fading to 67C). Diameter 12-15 cm x 5-6 cm deep. Spent flowers fall whole.

Cottage Queen. (*C.reticulata* hybrid). SCCS, *Supplementary List* 2011; White with deeper rose coloured bas petals. Medium size, single to semi-double. Strong, upright, open growth. {(*C.pitardii* var *yunnanica* x **Forty-Niner**) x [(*C.pitardii* var *yunnanica* x **Zipao** 'Purple Gown') x (*C.saluenensis* x *C.transnokoensis*)]}. Flowers midseason. Originated by Daniel Charvet, Fort Bragg, Calif., USA.

Countess of Belmore. *(C.japonica),* Purchase, Samuel, Nursery Catalogue, 1871 as "crimson". An Australian variety named after the wife of the then Governor of N.S.W., The Earl of Belmore. Synonym: 'Lady Belmore'. Orthographic error: 'Countess of Belsmore'. The name has been applied erroneously to **Thompsonii Rosea** and to **Countess of Orkney Rosea.**

Countess of Belsmore. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Countess of Belmore.**

Countess of Bethelem. Seidel, 1870, Pflanzen Catalog, p.6. Orthographic error for **Contessa Bethlen.**

Countess of Buccleugh. *(C.japonica),* Shepherd & Co. Nursery Catalogue, 1883-1884, p.37: Rosy carmine, splendidly imbricated. Originated in Australia.

Countess of Castlebar. Cremorne Nursery Co. Catalogue, 1900, p.31. Orthographic error for **Contessa di Castelbarco.**

Countess of Derby. *(C.japonica),* Veitch Nursery Catalogue, 1856, pl.1: Good bearing and vigour, leaves of a good, dark green; flowers very large, petals well rounded, of a good form with ribbons and stripes of rose. According to *The Floral Magazine* of 1861, "Of Italian Origin imported in 1856 by Messrs Veitch & Sons - Flowers large, quite double, distinctly and distantly flaked with rosepink, outer petals reflexed. In young flowers the petals assume a cuplike form." It was also figured and described in *The Florist,* 1859, Verschaffelt, 1860, *Iconographie,* Book I, pl.II, and van Houtte, 1861, *Flore des Serres* vol.14, p.167 with the plate F1861 a copy of the one in *The Florist.* Verschaffelt's description is: A gigantic Flemish pink, a rose or an anemone (its floral form resembles all three types), a white ground, broadly banded a vivid pink or crimson. Originated by Schmitz of Florence, Italy, according to Verschaffelt or by Franchetti, according to Stefano Pagliai, 1867 Catalogue, p.69, and imported and named by Veitch of England. Orthographic errors: 'Contessa of Derby', 'Contess of Derby', 'Countesse of Derby'. Orthographic variant: 'Comtesse de Derby'. The 'Countess of Derby' illustrated and described by Hertrich in *Camellias in the Huntington Gardens,* vol.III, 1959, pp.54, 55 is a different cultivar, even though the history given is for the valid Camellia.

Countess of Derby (US). *(C.japonica),* SCCS., 1947, *The Camellia. Its Culture and Nomenclature,* erroneously as 'Countess of Derby': "White striped carmine. Large rose form double.", and in 1954: "Pale pink to white, striped carmine red. Large rose form double to peony form. Medium, compact, upright growth. Not the same as the variety listed in the old literature, which was a formal double". See Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III, pp.54, 55.

Countess of Ellesmede. de Bisschop Nursery Catalogue, 1937, p.5. Orthograhic error for **Countess of Ellsmere.**

Countess of Ellsmede. *Camellia Society of America Yearbook,* 1939, p.27. Orthographic error for **Countess of Ellsmere.**

Countess of Ellesmere. *(C.japonica),* Beck's, May,1850, *The Florist and Garden Miscellany,* vol.3, p.114-115 with colour plate facing p.113; which shows a double flower with almost white base and pink stripes on the petals. Raised by seed saved from 'Alnuts White', **Chandleri** and **Gilesii,** they suppose it owes its parentage to the former variety. *The Gardeners' Magazine of Botany,* 1850, p.168: Mssrs. Jackson of Kingston (England) contributed a seedling camellia called **Countess of Ellesmere,** a pretty cupped, white flower, slightly marked with rosy purple; the petals are tolerably firm, but rather serrated at the edges and the centre a little confused. Synonym: 'Countess of Ellesmere'(Jackson). Sport: **Countess of Ellesmere Bicolore.** Orthographic errors: 'Countess Ellesmore', 'Countess of Ellsmede', 'Countess Ellesmede', 'Comtesse of Elaske', 'Countess of Ellesmore'. Orthographic variant 'Contessa di Ellesmere'. Duncan & Davies Nursery erroneously list 'Countess of Ellesmere' as a synonym for 'Colvellei', ('Colvillei'). Synonym: 'Andrea Doria'.

Countess of Ellesmere Bicolore. *(C.japonica),* van Houtte Catalogue, 1862-1863, 93:65. No description but apparently a form of **Countess of Ellesmere.** (Believed extinct.)

Countess of Ellesmere (Jackson). von Biedenfeld, 1856, *Practische Grundlehren der Culture von Camelien*, p.37. Synonym for Countess of Ellesmere.

Countess of Ellesmore. Jose Maria Serra, 1855, Establecimiento de Horticultura Catalogue, p.10. Orthographic error for **Countess of Ellesmere.**

Countess of Hainault. Paul, 1889, *Gardeners' Chronicle,* p.427. Orthographic error for **Comtesse du Hainaut.**

Countess of Hastings. *(C.japonica), Horticultural Magazine & Gardeners' & Amateurs Calendar,* 1864, No description. Originated in England. Orthographic variant: 'Marchioness of Hastings'. (Believed extinct.)

Countess of Nieuport. Fendig, 1953, *American Camellia Catalogue.* Orthographic variant for **Comtesse de Nieuport I.**

Countess of Orckney. Jean Verschaffelt, 1860-1861, Price List, p.11. Contini & Nava of Intra Catalogue, 1900. Orthographic error for **Countess of Orkney.**

Countess of Orknay. de Bisschop Nursery Catalogue, 1935, p.3. Orthographic error for **Countess of Orkney.**

Countess of Orkney. *(C.japonica), Journal of the Horticultural Society of London,* 1847, vol.2, p.37: 'A large fine flower with a white ground striped with rosy pink'. Raised by Mr Nicholson, gardener to the Earl of Orkney and named for his Countess. It aroused great interest when exhibited at the show of the Horticultural Society of London. In 1848 it was figured and described in van Houtte's *Flore des Serres,* vol.4, F.349 and Beck's *The Florist* with a plate: The flower is circular in outline, composed of large, stout petals perfectly smooth on the edge. These gradually diminish towards the centre, but, as they become smaller their form is less perfect in outline. The petals are transparent in texture, of a creamy white and are striped with two shades of bright, rosy pink, clear and well defined. Verschaffelt, 1855, *Iconographie,* Book VI, pl.II figured and describes what seems to be a different cultivar of formal double form, but it is possible this is artistic licence. In USA a formal double cultivar has erroneously been named 'Countess of Orkney'. See plate facing p.37 Hume's *Camellias in America,* 1946 and on p.93, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I. This has been renamed in *Camellia Nomenclature* as **Countess of Orkney (United States).** Sports: **Burnham Beeches, Countess of Orkney Rosea.** Orthographic errors: 'Comtesse of Orkney', 'Countess Orkney', 'Countess of Orknay', 'Duchesse of Orkney', 'Contessa d'Orckeney', 'Comtesse d'Orkeney', 'Comtesse of Orknay', 'Countess of Orckeny'. Orthographic variant: 'Comtesse d'Orkney'. Synonyms: 'Countess of Orkney'(Australia), 'Countess of Orkney'(English), 'Ethel Haydon'.

Countess of Orkney (English). SCCS., 1950, *The Camellia. Its Culture and Nomenclature.* Synonym for **Countess of Orkney.**

Countess of Orkney (Australia). SCCS., 1964, *Camellia Nomenclature,* p.36. Synonym for **Countess of Orkney.**

Countess of Orkney Rosea. *(C.japonica),* Hazlewood Nursery Catalogue, 1945: Rose-pink sport of 'Countess of Orkney'. Originated by Hazlewood's Nursery, Epping, N.S.W., Australia. This sport has been equated erroneously with the **Countess of Belmore.**

Countess of Orkney (United States). *(C.japonica)* ,SCCS., 1966, *Camellia Nomenclature,* p.36: "White streaked rose. Large formal to rose form double. Slow compact growth". For colour photo see Hume, 1946, *Camellias in America* facing p.37 as 'Countess of Orkney'; also Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I, p.93, black and white photo. Pseudonym: 'Americana'. Synonyms: 'Maid of Orleans', 'Mckenzie Variegated'.

Countess Orkney. J.& W. Gelding Nursery Catalogue, 1887-1888, p.53. Orthographic error for Countess of Orkney.

Countess of Oxford. *(C.japonica),* Brisbane Botanic Gardens Catalogue, 1885. No description. Originated in Australia. (Believed extinct.)

Coupe de Beauté. Verschaffelt, 1858, *Iconographie,* Book V, pl.III. Orthographic variant for **Cup of Beauty.**

Couple Flower. Fendig, 1953, *American Camellia Catalogue.* Synonym for the *C.sasanqua* **Meotozaki.**

Couple Flowered. Yashiroda, 1950, *American Camellia Yearbook,* p.19. Synonym for *C.sasanqua* **Meotozaki.**

Courageous. *(C.japonica), American Camellia Yearbook,* 1966, p.86, Reg. No.863: A chance seedling of **Iwane-shibori** that bloomed for the first time 1961 at 10 years. Originated by J.F. Marscher, Beaufort, South Carolina, USA. Plant growth is slow. Leaves are dark green, 9.5 cm x 6 cm.

The flower is anemone form, 11.5 cm across by 6 cm deep with 20 petals and 18 petaloids. The colour is strong red (25R5/12) with yellow anthers and white filaments. Petaloids are flecked with white. Blooms mid-season.

Court Cherry. Yashiroda, 1950, *American Camellia Yearbook,* p.17. Synonym for *C.sasanqua* **Goshozakura.**

Court Yard White. *(C.japonica),* Fendig, 1965, *American Camellia Yearbook,* p.33: Originated by C.S. Tait Sr., Brunswick, USA from seed of unknown parents. The flower is medium to large white semidouble, 8.5-10 cm across, somewhat similar to **Snowdrift.** The bush is a profuse bloomer and flowers early to mid-season.

Courtesan. *(C.japonica),* ACRS., 1971, *Camellia News,* No.43, p.35, Reg. No.142: Originated by F.S. Tuckfield, Berwick, Victoria, Australia. Seed parent **Great Eastern,** pollen parent unknown. First bloomed 1966. The plant has an upright, dense growth habit, with 9 cm diameter semi-double, bell-shaped flowers with few stamens. The colour varies from bright red with darker red stripes to a light pink ground with a clear white margin on the outer edge. The 12.5 cm long by 5 cm wide leaves are dark green with acuminate apex and small serrations. It produces a solid red sport. Chinese synonym 'Liren'.

Courtesan Rouge. *(C.japonica),* ACRS., 1971, *Camellia News,* No.43, p.35, Reg. No.143: Originated by F.S. Tuckfield, Berwick, Victoria, Australia. A solid, deep red sport of **Courtesan.** All other data follows the parent. Chinese synonym 'Mingji Luoge'.

Courthouse Red. *(C.japonica),* NCCS., *Camellia Bulletin,* 1949, p.11: Rose coloured, loose semi-double. A local name for an old unnamed plant at the old Sacramento Courthouse, California, USA.

Courtney. *(C.japonica),* Gentry, 1984, ACS., *The Camellia Journal,* Vol.39, No.4, p.17. Small white, formal double with some pink shading. Originated in USA.

Courtney Hall. *(C.japonica),* ACS, *The Camellia Journal,* Sept. 2008, p.30 with colour photo, Regn No. 2731; A chance seedling which first bloomed in 1996. Originated by Marion Hall, Dothan, Ala., USA. The 9 cm white formal double flower has incurving petals. Flowers mid-season to late. Plant is upright with average growth rate. Note; the photo accompanying the registration appears to show pink shading towards the petal edges. *American Camellia Yearbook,* 2008, p.108 with colour photo; Dark green leaves 9 cm x 3.8 cm.

Coventry. *(C.japonica), American Camellia Yearbook,* 1971, p.45, Reg. No.1156: An 8 year old chance seedling that first bloomed 1966; originated by J.M. Haynie, Theodore, Alabama, USA. Plant growth is upright, average in density and medium in rate. The dark green leaves average 11 cm x 5.5 cm. The loose, semi-double flower is 11-12.5 cm across and 7cm deep with 16 petals and 13 petaloids. The white flower is of medium-heavy texture, six fascicles of stamens with petaloids intermixed. Flowers mid-season to late.

Cover Girl. *(C,japonica),* Mark S. Cannon Scion Catalogue, 1964-1965, p.4. No description. Nuccio's Nurseries Catalogue, 1965: Clear pink. Medium size, formal double. Medium, compact, upright growth. Mid-season to late flowering. Originated by Nuccio's Nurseries, Altadena, California USA. See colour plates Front cover, SCCS, *The Camellia Review,* vol.26, No.5, 1965. *Encyclopedia of Camellias in Colour,* vol.II, 1978, p.32, pl.36.

Covillii. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for Colvillii.

Cramoisiana Parmentieri. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.50. Orthographic error for **Cramoisina Parmentieri.**

Cramoisina Parmantieri. *Camellia Society of America Yearbook,* 1939, p.27. Orthographic error for **Cramoisina Parmentieri.**

Cramoisina Parmentieri. *(C.japonica),* Berlèse, 1837, *Monographie,* ed.1, p.70, 127: Leaves 10 cm long by 6 cm wide, a little acuminate, reflexed like those of **Althaeiflora,** finely serrate, almost flat; bud, medium size, oblong with green scales; Flower, large, double, cherry-red; exterior petals 6, broad, crenate at the apex, the others tufted, numerous, arranged in fascicles, leaning on each other, striped with white at the apex and form a regular ball; corolla very near the size and form of **Anemoniflora.** Originated by Parmentier, 1833, Belgium. Orthographic errors: 'Cramoisina Parmentieri', 'Cramoisina Parmantieri','Cramoisina Parmontieri', 'Cramoisiana Parmentieri'.

Cramoisina Parmontieri. Vanderbilt, 1940, *Camellia Research,* p.3. Orthographic error for **Cramoisina Parmentieri.**

Crane. *(C.japonica),* Hearn Nursery Catalogue, 1958. No description. Originated by Hearn, Arcadia, California, USA. (Believed extinct.)

Crane at Sunrise. *Camellias,* Y.C. Shen, 2009, p.313 with colour photo; Synonym for the *C.sasanqua* **Asahizuru.**

Crane Crest. Dryden, 1982, SCCS, *The Camellia Review,* vol.44, No.1, p.16. Western synonym for **Heding Cha.**

Crane Crest Red. Feng et al., 1981, *Yunnan Shanchahua,* p.121. Synonym for **Hedinghong.**

Crane Dance at Dawn. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.136. Synonym for **Asahizuru.**

Crane's Crown. Yü, 1964, *Camellian,* 'The Garden Camellias of Yunnan', p.6. Synonym for **Hedinghong.**

Crane's Feather. *(C.japonica), New Zealand Camellia Bulletin,* vol.V, No.4, p.37, Reg. No.39: A chance seedling of **White Giant** raised by Mrs T. Durrant, Rotorua, New Zealand which first bloomed 1965. Slow but sturdy growth with stiff, olive green foliage, the leaves measuring 12 cm x 8 cm with coarse, sharp serrations. The flower is white, up to 14 cm across, with about

15 petals, some rabbit ears and an anemone centre. The filaments are lemon yellow, giving the flowers a yellow cast. The flowers have the charateristic scent of **White Giant.**

Cranbourne. *(C.x williamsii),* Findlay, 1968, RHS., *The Rhododendron and Camellia Yearbook*, No.22, p.17, in a list of *C.x williamsii* grown at Windsor. No description.

Crapnelliana. The species *Camellia crapnelliana* Tutcher in Journal Linn. Soc. London XXXVII:63, (1904).

Crasifolia. Rousseau, Angers, Nursery Catalogue, 1842-1843, p.1. Orthographic error for **Crassifolia.**

Crassiflora. Hogg, 1838, *The Magazine of Horticulture*, 4:155. Synonym for **Crassiflora Coruscans.**

Crassiflora Coruscans. *(C.japonica),* Hovey, 1835, *The American Gardeners' Magazine:* In the nursery of M. Floy & Son. Amongst the varieties he has raised is **Crassiflora Coruscans** which flowered for the first time in the past winter. We think it one of the most rich and truly splendid he has raised...Coruscans, as the name indicates, comes nearer to scarlet than we have seen. Hogg, Thomas, 1838, *Magazine of Horticulture,* vol.4, p.155 as 'Crassiflora': 'Originated by Floy. Deep crimson, forming a ball. Very good'. Berlèse, 1840, *Monographie*, ed.2, p.197 as 'Salicifolia' or 'Crassiflora de Floy': More than 10.8 cm in diameter, very full, a dark, crimson orange red, outer petals rounded, broad, few in number, those of the centre numerous, narrow, long, compact, erect, quilled and forming a compact ball. Originated by Floy, New York, USA. Synonyms: 'Crassiflora', 'Salicifolia', 'Crassiflora de Floy', 'Floy's Salicifolia', 'Salicifolia'(Floy's).

Crassiflora de Floy. Berlèse, 1840, *Monographie,* ed.2, p.234. Synonym for **Crassiflora Coruscans.**

Crassifolia. *(C.japonica),* Anonymous, 1832, *Annales de la Société d'Horticulture de Paris,* 10:310-317 as presented by Godofroy in full flower at Apr.18th, 1832 meeting. No description. Courtois, 1833 *Magazin d'Horticulture,* p.314: Broad, thick, coriaceous leaves; bright, light red, double flowers, the central petals concealing the stamens. Harrison ea., 1838, *Floricultural Cabinet,* vol.6, p.11 as "Double, dark rose". Originated in France. Synonym 'Crassifolia de Chandler'. Orthographic error: 'Crasifolia'.

Crassifolia de Chandler. Geldorf, Const., 1844, Catalogue of Plants and Price List, p.5. Synonym for **Crassifolia.**

Crassinervia. *(C.japonica),* J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Cactus, Camelien..,* p.218. No description. Cels, Paris, Nursery Catalogue, 1836-1837, p.9. No description. Berlèse, 1840, *Monographie,* ed.2, p.111, 228, as 'Crassinervis de Chandler': Leaves of average size, oblong-oval, a little spoon shaped, reflexed, apex recurved, prominent venation, almost no serration; buds with scales blackish at the base and green at the apex, large, obtuse, flattened. Flower 9.5 cm across, full, cherry-red, petals imbricated, broad, a few in a cup shape, notched. Synonyms: 'Crassinervis de Chandler', 'Crassinervis'(Chandler), 'Crassinervia de Chandler'. Originated in England.

Crassinervia de Chandler. Vanderbilt, 1940, *Camellia Research,* p.3. Orthographic error for **Crassinervia.**

Crassinervis. *(C.japonica),* Michael Floy, New York, Catalogue, 1823, p.28. No description. Sweet, 1826, *Hortus Britannicus,* Pt.I., p.62 as "thick nerved". Loddige's *Botanical Cabinet,* vol.XV, 1828, folio 1475: This variety was introduced a few years since from China, we believe, by Captain Rawes. We just noticed it in Mr Kent's collection, from whom we obtained it. At first sight the flowers much resemble the **Anemoniflora** but the colour is paler and the form more

cupped. The leaves are also different, being much wrinkled, while of the other kind they are peculiarly flat and smooth. It blooms at the same season as the other kinds, the flowers remaining for a long time and not dropping off while fresh as is usual with **Anemoniflora.** Originated in China. Synonyms: 'Kent's Camellia', 'Kent's Hexangularis', 'Kentii Crassinervis de Lodd.', 'Crassinervis Serni'.

Crassinervis de Chandler. Berlèse, 1840, *Monographie,* ed. 2, p.111, 228. Synonym for **Crassinervia** .

Crassinervis (Chandler). von Biedenfeld, 1856, *Practische Grundlehren der cultur von Camellien,* p.20. Synonym for **Crassinervia.**

Crassinervis de Lodd. Makoy Catalogue, 1838. Synonym for **Crassinervis.**

Crassinervis Semi. Harrison, ed., 1838, *Floricultural Cabinet,* vol.6, p.149. Synonym for **Crassinervis.**

Craulhieri. Frères Noisette, Nantes, Nursery Catalogue, 1857, p.13. Orthographic error for 'Graulhieri', synonym for **Adrien Lebrun.**

Crawfordia. Vanderbilt, 1940, *Camellia Research,* p.3. Orthographic error for **Crawfordii.**

Crawfordii. *(C.japonica),* Glen St. Mary Nursery Catalogue, 1937, p.2 as 'Crawfordi'. No description. Originated in USA. (Believed extinct.) Orthographic error: 'Crawfordia'. Synonym: 'Crawford's Pink'.

Crawford's Pink. Vanderbilt, 1941, *Camellia Research, II,* p.2. Synonym for **Crawfordii.**

Crawley's Red. *(C.japonica),* Vanderbilt, 1941, *Camellia Research, II,* p.2. No description. Originated in USA. (Believed extinct.)

Crazy Sue. *(C.japonica),* ACS, Aug. 1995, *The Camellia Journal,* vol.50, No.3, p.37, Reg. No.2345: Medium size, red to pink to white blotched red or pink and various other combinations of red and/or pink and/or white. A chance seedling. Blooms early to mid-season. Originated in the USA by William H. smith, Gainesville, Florida. ACS 1995, *American Camellia Yearbook,* pp.3, 4 with colour photo: the 12 year old seedling first flowered 1987. Average flower size is 8 cm across x 5 cm deep with 38 petals and 65 petaloids. Plant growth is upright, dense and vigorous with dark green leaves 10 cm long x 5.5 cm wide.

Cream Bar. *(C.japonica)* Hillier's Arboretum, 1987, Hampshire County Council List, p.2. No description. Originated in England. No valid listing located.

Cream Peony. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Becky Sharp.**

Cream Puff. *(C.japonica),* ACS., Feb.1987, *The Camellia Journal,* vol.42, p.17, Reg. No.2036: Large size, chalky white, peony form *C.japonica,* (**Frost Queen** x **White Butterfly**). Late flowering. Originated by Dr W.L. Ackerman, Maryland, USA. *American Camellia Yearbook,* 1987, p.79: The 8 year old seedling first bloomed 1984. Average flower size, 10.5 cm across x 7.5 cm deep with 48 petals, 68 petaloids, yellow anthers and creamy filaments. Very heavy substance, velvety texture, lemony fragrance.

Cream Puff (Jury). (*C.hybrid*) NZCS *Bulletin* No. 178, July 2014, p.18 as 'Cream Puff', no photo; A cross of *C.pitardii* var *pitardii* x **Tiny Princess**, raised by Mark Jury, Tikorangi, New Zealand. No further details.

Creation. *(C.x williamsii),* McCaskill Gardens Nursery Catalogue, 1958. Luminous, soft pink. Large semi-double to anemone form. Slow, bushy growth. Originated at McCaskill Gardens, Pasadena, California, USA from *C.japonica* **Elegans** x *C.saluenensis* **Apple Blossom.**

Synonym: 'Hybrid 203'. See colour plate facing p.208, *American Camellia Yearbook,* 1960. Sports: **Creation Blush, Creation Variegated**. Chinese synonym 'Faming'.

Creation (Clarke). *(C.japonica),* RHS., 1981-82, *Rhododendrons with Magnolias and Camellias,* p.106 invalidly as 'Creation': "Award of Merit", 14 March, 1981 as a hardy flowering plant. Flowers single; 7 or 8 petals with a cluster of stamens; up to 8.5 cm across. Colour Red-Purple Group 62A with darker veining of 61C. Leaves dark, glossy green, pointed and finely serrate; up to 6.5 cm long and 3 cm across. Exhibited by R.N. Stephenson Clarke, Borde Hill, Haywards Heath, Sussex, England.

Creation Blush. *(C.x williamsii),* McCaskill Gardens Nursery Catalogue, 1959: A sport of **Creation.** Light pink, each petal bordered white. All other characteristics the same as the parent. Originated by McCaskill Gardens, Pasadena, California, USA.

Creation Variegated. *(C.x williamsii),* McCaskill Gardens Nursery Catalogue, 1959 as 'Creation Var.': A sport of **Creation.** White with occasional pink spots. Originated by McCaskill Gardens, Pasadena, California, USA.

Credoca. *(C.japonica),* Harrison, ed., 1838, *Floricultural Cabinet,* vol.6, p.149: Double, red wirh white stripes. Originated in England.

Creek. *(C.sasanqua),* ACRS., 1989, *Camellia News,* No.111, p.13, reg. No. 379: Originated by Frank Lazzaroni, West Pymble, NSW, Australia. A chance seedling that first flowered in 1985. Single, white flowers with 9 petals, l0 cm across x 4 cm deep. Blooms early on an upright, rapid growing plant. Leaves ovate, keeled, glossy, dark green, margins serrate, apex blunt acute, 7 cm x 4 cm. Flowers from simple cup-shape to fluted, knotched petals, stamens higo-like.

Creeping Camellia. Charette, 1956, SCCS., *The Camellia Review,* vol. 17, No.8, p.11. Synonym for *C.japonica* var. *rusticana.*

Creevi. *Gardeners' Chronicle,* 1841. Synonym for **Elegans.**

Cremoise Panaché. Isola Madre Catalogue, 1845. Orthographic error for **Cramoisi Panaché.**

Crenata Elegans. Shneiderff, Enrico, ed., 1841, *Catalogo delle piante che si Trovano nel Giardino,* p.8. Synonym for **Elegans.**

Crenulata. *(C.japonica),* Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. Originated by Ridolfi in Italy. No description. (Believed extinct).

Creo Pink. Overlook Nursery Catalogue, 1940-1941. Name corrected to **Creole Pink** in SCCS, 1951, *The Camellia. Its Culture and Nomenclature.*

Creole Pink. *(C.japonica),* Overlook Nursery Catalogue, 1940-1941 as 'Creo Pink': Large single flower, 10-11 cm across. The flower has 7 large, wavy petals and numerous yellow stamens which form a cylindrical mass in the centre. Colour, purplish pink with darker veins. Originated in the USA. SCCS, 1951, *The Camellia. Its Culture and Nomenclature.* Abbreviation: 'Creo Pink'.

Crêpe Ballerina. *(C.japonica),* Mason's Nurseries Catalogue, 1968: Medium size, white single with creped petals and golden stamens.Originated in New Zealand.

Crêpe de Chine. *(C.japonica),* McIlhenny, 1935, *List of Camellias Growing ... at Avery Island:* White, semidouble blossoms inclined to be cup shaped. Some blossoms have reddish cast towards the centre. This camellia has proved variable as later descriptions read: White, rose pink or variegated. Medium size, semidouble. Late. Originated in USA.

Crêpe Rosette. *(C.japonica),* Gerbing's Azalea Gardens Catalogue, 1941-1942: A new camellia from Middleton Gardens, (Middleton No.6) measuring 11 cm in diameter. The deep pink semi-double blooms have three rows of outer petals which are twisted and intermingled with the stamens. They are veined with red, and white margins mark each petal of this variety, which is considered one of the best in the Middleton Gardens. Foliage, light green. Symetrical growth of medium height. Early to late flowering. One of the old plants in Middleton Gardens, Charleston, South Carolina, USA, which was either an import from Europe with lost label, or, more probably a seedling originating in this old garden. There is a variegated form known as **Crepe Rosette Variegated.**

Crêpe Rosette Variegated. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* A virus variegated form of **Crêpe Rosette** - Deep pink blotched white. Originated in USA.

Crerrii. Berlèse, 1841, *Iconographie,* facing pl.19. A marketing name for 'Chandleri Elegans'. (**Elegans**).

Cresta Blanca. *(C.japonica x C.reticulata),* Camelliana Catalogue, 1961-1962, p.1: White, very large, semi-double hybrid, originated by D.L. Feathers. A large group of yellow stamens, occasionally with petalets and petaloids of white. Heavy substance, long lasting. Heavy, glossy foliage. Blooms mid-season to late. Rapid, upright growth. SCCS, 1962, *Camellia Nomenclature,* p.120: White. Very large, semi-double. Vigorous, upright growth. Mid-season to late flowering. A seedling from *C.japonica x C.reticulata* 'Crimson Robe', (**Dataohong**), originated by D. Feathers, Lafayette, California, USA.

Crested Satin. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.105. Synonym for **Monjusu**.

Creusa. *(C.japonica),* Burdin Maggiore & Co., 1849-1850, Catalogue Général: Carmine rose, central tuft with stripes of white. Lichtenthal. 1852, *Manuale botanico enciclopedico popolare:* Carmine rose with stripes of white. Informal double with a tuft of petals. Originated in Italy.

Creville's Red. Seidel, 1816-1817, *Allgemeinen Deutschen Garten Magazins,* 2:VIII. Orthographic error for 'Grevill's Red', a synonym for **Rubra Plena.**

Crewii. Hovey, 1839, *Magazine of Horticulture.* An abbreviation for 'Lord Crew' which is a synonym for **Elegans.** Colla, 1843, *Camelliografia* pl.141, erroneously gives it as a synonym for 'Chandleri'.

Crichton. Vanderbilt, 1940, *Camellia Research,* p.3. Synonym for **Tricolor California.**

Cridania. *(C.japonica),* van Houtte Catalogue, 1849-1850, 38:38: Imbricated. Vivid pink and vermilion. Originated in Italy by Conte Calciati Borghia. Orthographic error 'Cridonia'.

Cridonia. Alexis Dalliere, 1852, Price List, p.15. Orthographic error for **Cridania.**

Crimison Perfection. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.10. Orthographic error for **Crimson Perfection.**

Crimson. Desportes, 1847, *Revue Horticole,* ser.3, vol.1, p.214. Abbreviation for **Crimson Perfection.**

Crimson Anemone. *(C.japonica),* Treseder's Special Camellia List, 1965: Small crimson, anemone form. Originated in England.

Crimson Ball. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Taohong Xiuqiu.**

Crimson Bowl. Ikeda, 1976, *American Camellia Yearbook,* p.141. Synonym for **Hongwan Cha.**

Crimson Bride. *(C.sasanqua),* Overlook Nursery Catalogue, 1939-1940, p.24: Flower single, a good size. Crimson colour with yellow stamens. Leaves medium. A seedling originated by K. Sawada, Mobile, Alabama, USA. See p.292, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III, black and white photo.

Crimson Buoy. *(C.japonica), New Zealand Camellia Bulletin,* 1981, Vol.XII, No.2, p.7, Reg. No.168: A seedling raised by L.E. Jury, New Plymouth, New Zealand from a cross of *C.japonica* 'Fuyajo' (**Kon-Wabisuke**) x *C.japonica* **Australis** that first bloomed 1970. Growth is slow to form a plant of average habit and open density. The dark green leaves measure 7 cm x 4 cm. The single, crimson flower, 8.5 cm x 4.5 cm, has 5 petals, golden yellow anthers and cream filaments. Flowers mid-season to late.

Crimson Butterfly Wings. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Fenhong Diechi.**

Crimson Candles. (*C.reticulata c C.fraterna*). ACS, Aug. 1995, *The Camellia Journal,* vol.50, No.3, p.37, Reg. No.2340: Medium sized rose, single *C.hybrid* chance seedling of an unnamed *C.reticulata x C.fraterna* seedling. Blooms mid-season. Originated by Dr Clifford R. Parks, Chapel Hill, North Carolina,USA. ACS 1995, *American Camellia Yearbook,* p.4 with colour photo: The 19 year old seedling first bloomed in 1981. Average flower size is 8 cm across x 3.2 cm deep with 8 petals, yellow anthers and pink filaments. The flower buds have deep red sepals which are exposed all the winter on plants with heavy bud set. The plants, buds and flowers have excellent cold hardy qualities. Plant growth is upright and rapid with dark green leaves 7.5 cm long x 3 cm wide.

Crimson Crown. *(C.japonica.x C.reticulata),* Hilsman, 1966, *American Camellia Yearbook,* p.134: A *C.japonica* **Christine Lee** x *C.reticulata* 'Crimson Robe'. (**Dataohong**), hybrid originated by Dr. Hilsman, Georgia, USA, No description. SCCS., 1981, *Camellia Nomenclature,* p.172: Crimson. Large single. Vigorous, open growth. Mid-season to late flowering.

Crimson Cup. Camellia Grove Nursery Catalogue, 1946, p.6. A synonym for the Japanese Higo, **Shiranui,** originally imported from Japan to Australia by David Chandler about 1936. The name has also been used as a synonym for **Kimberley** in England. See p.152, RHS, *The Rhododrendron and Camellia Yearbook,* 1960.

Crimson Corn Poppy. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Yumeiren.**

Crimson Embroidered Ball. Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.17. Synonym for **Taohong Xiuqiu.**

Crimson Emperor. Forrest 1985, *Trees and Shrubs Cultivated in Ireland.* Synonym for **Emperor of Russia.**

Crimson Fantasy. *(C.japonica), American Camellia Yearbook,* 1992, p.32, Reg. No.2235, colour photo between pp.40-41. A seedling of (**Lady Mary Cromartie** x **Ville de Nantes Red**) x unknown pollen parent. Originated by H. Hall, San Anselmo, California, USA. The 18 year old seedling first flowered 1979. Average flower size is 12.5 cm across x 6 cm deep with 30 petals, 10 petaloids and yellow-white filaments. Open cup-shape with bud centre. Plant growth is upright and average with glossy dark green leaves 10 cm long x 6 cm wide.

Crimson Fire. *(C.japonica), Nagoya Camellia Society Bulletin, Tsubaki,* 1994, No.27, colour page 5, No.14: Chance seedling of **Kaga-hassaku.** Crimson red, semi-double. Early blooming; mildly fragrant. Originated in Japan by Dr Funakoshi.

Crimson Five Hearts. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Hongwuxin.**

Crimson Gem. *(C.japonica),* Vanderbilt, 1940, *Camellia Research,* p.3. No description. Originated in USA. (Believed extinct.)

Crimson Glory. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.28: Crimson red. Large semi-double with petaloids and red stamens. Slow, open growth. Blooms mid-season to late. Originated by B.F. McKenzie, Columbia, Mississippi, USA.

Crimson Gown. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for Jinpaohong.

Crimson Jewel. Savige, 1983, *International Camellia Journal,* No.15, p.46. Synonym for Daohong Wubao.

Crimson King. *(C.sasanqua),* Wada 1937, *Japanese Garden Treasures,* p.37: Thick, broad petalled flowers of great substance, well shaped, deep crimson with attractive golden stamens. 12 cm across; semi-double. See pl.3 opposite p.44, G.S. Thomas, 1957, *Colour in the Winter Garden.* Originated in Japan.

Crimson Lion. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for Yushizi.

Crimson Morning Light. Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.15. Synonym for Taohong Zhaoyang.

Crimson Mume. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Hongmei.**

Crimson Osmanthus Leaf. Ikeda, 1976, *American Camellia Yearbook,* p.138. Synonym for 'Qingmeihong Guiye'.

Crimson Paeony. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Taohong Mudan.**

Crimson Peony. Feng et al., 1981, *Yunnan Shanchahua,* p.134. Synonym for **Taohong Mudan.**

Crimson Perfecta. van Houtte Catalogue, 1839, 1:2. However as all subsequent catalogues used the orthography **Crimson Perfection,** this form is considered valid.

Crimson Perfection. *(C.japonica),* van Houtte Catalogue, 1839, 1:2 as 'Crimson Perfecta'. In later catalogues the only description is: "Imbricated salmon red", where it is given as a synonym for 'Elata de Rollisson'. Berlèse, 1843, *Iconographie,* vol.3, pl.259: The flower is 9-10 cm across, it is round, regular and full and the colour is red orange-carmine. The petals, disposed in 7-8 rows are a little long but broad, rounded, deeply notched at the apex, veined with deep red, the edges washed with rose-pink and imbricated with regularity from the circumference to the centre. Orthographic variants: 'Crimson's Perfection', 'Crimson Perfecta', 'Crimson Perfectum'. Orthographic error: Crimison Perfection'. Abbreviation: 'Crimson'. Leguay, Jan.1853, *Revue Horticole* has both 'Elata de Rollisson' and 'Elata de Cunningham' as synonymous with 'Crimson Perfection'. However Berlèse figures and describes the three as separate cultivars in his *Iconographie,* 1843. **Crimson Perfection,** pl.259; **Elata Cunninghamii,** pl.156; and **Elata Rollissonii,** pl.168. While the plates are similar, the descriptions contain enough differences to warrant retaining them as three separate and valid cultivars.

Crimson Perfection. Feng et al., 1981, *Yunnan Shanchahua,* p.47. An invalid synonym for **Taohong Zhaoyang.**

Crimson Perfectum. Isola Madre Catalogue, 1845. Orthographic variant for **Crimson Perfection.**

Crimson Petaloid. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Hongjinling.**

Crimson Plum Osmanthus Leaf. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.160. Synonym for **Meihong Guiye.**

Crimson Robe. SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* The approved western synonym for the Chinese *C.reticulata* **Dataohong.**

Crimson Robe Variegated. *(C.reticulata),* Tammia Nursery Catalogue, 1965 - 1966 as 'Crimson Robe Var.'. A virus variegated form of **Dataohong** ('Crimson Robe') - Dark crimson moired with white. Originated in USA.

Crimson Ruffle. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.37: Crimson. Large, semi-double with ruffled petals. Vigorous, compact, upright growth. Mid-season to late flowering. Originated by Harvey Short, California, USA.

Crimson Shell. Chandler & Booth, 1831, *Illustrations and Descriptions of Plants which compose the Natural Order of Camellieae,....* Synonym for **Imbricata.**

Crimson Shell-flowered. Booth, 1830, *Transactions of the Horticultural Society of London.* Synonym for **Imbricata.**

Crimson Sunset. *(C.japonica),* SCCS., 1942, *Camellia Classification,* p.3: Red peony form, 7.5 cm across. Early blooming. SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.31: Deep pink to crimson. Large, full peony form. Medium, upright growth. Originated by Hearn Nursery, California, USA. Description from their catalogue of 1958: A ball type of good size and colour, varying in colour as the sunset, some plants rich pink, others crimson. A good bloomer, keeper and grower. Extra fragrant.

Crimson Tide. *(C.sasanqua),* Hume, 1955, *Camellias in America* with colour photo. Originated by Tom Dodd, Jr., Semmes, Alabama, USA. SCCS., 1958, *Camellia Nomenclature,* p.92:- Red. Semi-double with ruffled petals. Also see p.34, Sharp, 1957, *Camellias Illustrated* for colour plate.

Crimson Tulip. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Qingkou.**

Crimson Velvet. Overlook Nurseries Catalogue, 1943-1944, p.4. Orthographic variant for **Crimson Velvetti.**

Crimson Velvetti. *(C.sasanqua),* Overlook Nurseries Catalogue, 1941: The flower is single with 8-9 petals. The colour of the flower is beautiful crimson with a velvety tone. From 1948 and on it has been catalogued as 'Velvety'. Synonyms: 'Crimson Velvet', 'Velvety'. Originated by Sawada, Overlook Nurseries, Mobile, Alabama, USA.

Crimson Waratah. Camellia Grove Nursery Catalogue, 1946, p.5. Synonym for **Mariana.**

Crimson's Perfection. Leroy, André, Catalogue, 1847, p.48. Orthographic error for **Crimson Perfection.**

Crinkles. *(C.x williamsii),* ANZCRS, 1957, *Camellia Annual,* p.7, Reg. No.24: Number 6 in the batch of seedlings raised by E.G. Waterhouse, Gordon, N.S.W. Australia from the one plant of *C.saluenensis* in 1946. A many petalled, semi-double, amaranth rose, petals crinkled. Strong, stocky grower. Mid-season blooming.

Crinkly Red. McIlhenny Catalogue, 1941, p.4. Orthographic variant for **Red Crinkly.**

Crinoline. *(C.reticulata* hybr.), ACRS, 1985, *Camellia News,* No.95, p.20, reg. No.336 and colour plate on back cover: Originated by E.R. Sebire, Wandin North, Victoria, Australia. A seedling of **Lasca Beauty** that first flowered 1980. The very large, semi-double to rose form double,

15cm salmon pink flowers with wavy petals, blooms mid-season on an upright, open plant with large, dark green leaves, 12 cm x 6 cm, with pronounced serrations.

Crisantimi. *(C.japonica),* Grilli, 1886, *R. Società Toscana di Orticultura Bollettino* [1 of 2nd series], pp.177, 178. No description. Originated in Italy by Grilli. (Believed extinct.)

Crisiatas. *(C.japonica),* de Bisschop Nursery Catalogue, 1937, p.12. No description. Originated in Italy. (Believed extinct.)

Crispata. *(C.japonica),* Loddige's Nursery Catalogue, 1848, p.34. No description. Originated in England. (Believed extinct.)

Crispata Candida. Isola Madre Catalogue, 1845. Abbreviation for **Coronata Crispata Candida.**

Crispata Candida Rosea. Joseph Baumann, 1849, Prix Courant, p.4. Synonym for **Coronata Crispata Rosea.**

Crispata Miniata Nova. Joseph Baumann, 1849, Prix Courant, p.4. Synonym for **Coronata Miniata Nova.**

Crispata Rosea. Isola Madre Catalogue, 1845. Abbreviation for **Coronata Crispata Rosea.**

Crista Galli. Verschaffelt Catalogue, 1844-1845, p.24. Orthographic variant for **Cristagalli.**

Cristagalli. *(C.japonica),* Burnier & Grilli Catalogue, 1846-1847: Flower, large, cinnabar coloured, with a few petals that stand up like a cock's comb. Originated in Italy by Burnier & Grilli, Florence. As this name was given by the originator it is given priority over 'Crista Galli'.

Cristine Day. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings,* p.8, colour photo: Dark red, open, informal double; the centre a mixture of golden anthered stamens, petaloids and small twisted petals. Originated by Richard Dodd, Marshallville, Georgia, USA as a seedling of **La Reine.**

Christofaro. Jean Vervaene fils, 1864, Price List, No.1, p.5. Orthographic error for **Cristoforo Colombo.**

Cristoforo. van Houtte Catalogue, 1875-1876, 163:304. Abbreviation for **Cristoforo Colombo.**

Cristoforo Allori. *(C.japonica),* Stefano Pagliai Catalogue, 1867-1868, p.56: Large size, carmine red with some veins of white. Originated in Italy.

Cristoforo Colombo. *(C.japonica),* van Houtte Catalogue, 1858, 72:10: Brilliant rose pink, centre paler. Imbricated. Orthographic variants: 'Cristoforo Columbo', 'Christopher Columbus'. Abbreviation: 'Cristoforo'. Orthographic error 'Christofaro'. Originated in Italy.

Cristy. *(C.japonica),* ACRS., *Camellia News,* 1989, No.111, p.13, Reg. No.376: Originated by Alan Savage, Mount Pleasant, Western Australia. A chance seedling that first flowered 1980. A formal double of 75 petals, soft, pastel pink (RHS.CC.56D), 8 cm across x cm deep. Blooms mid-season on a bushy, slow growing plant. Leaves ovate, flat, deep green, matt surface, finely serrate. bunt apex, 7.5 cm long x 4.5 cm wide. First opens with a pointed bud centre.

Crocciata. Jacob Makoy, et Cie Catalogue, 1839, p.16. Orthographic error for **Cruciata.**

Crociata. Burdin Maggiore & Co. Catalogue, 1845, p.41. Orthographic error for **Cruciata.**

Crowley's Red. Vanderbilt, 1841, *Camellia Research, II,* p.2. Synonym for **Jarvis Red.**

Crown Jewels. Wilmot,1945, *Camellia Variety Classification Report*, p.7. Synonym for **John Barber.**

Crown Prince. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.140. Synonym for **Shintsukasa.**

Crowned Prince. *(C.japonica), American Camellia Yearbook,* 1959, p.270, Reg. No.390: A 7 year old chance seedling originated by R.P. Holmes, Mount Olive, North Carolina, USA which first bloomed 1957. The leaves are 10 cm long by 3.5 cm wide. The creamy white flowers, 11.5 cm across and 6.5 cm deep, have 16 petals and 20 petaloids. There are bright yellow stamens around 6-7 petals and numerous stamens appear to form a crown of gold. Flowers mid-season.

Crowning Glory. *(C.japonica), American Camellia Yearbook*, 1977, p.208, Reg. No.1451: Medium size blush pink, formal double that flowers mid-season to late. A 16 year old chance *C.japonica* seedling that first bloomed 1976. Originated by David Feathers, Lafayette, California, USA. The anemone form, loose with upright petals, bloom is white centre, lavender with pink tips, 9-11 petals, numerous petaloids, yellow anthers, white filaments. Average size 6cm across by 3.5cm deep. Blooms early to late. Plant growth, upright, dense and medium in rate with mid-green leaves, 9cm x 4cm.

Crradino. de Bisschop Nursery Catalogue, 1937, p.6. Orthographic error for **Corradino.**

Cruciata. *(C.japonica),* Berlèse, 1840, *Monographie,*. ed.2, p.185: Flower about 8 cm across, double, deep orange red crossed by white. The petals, which are broad, rounded, numerous and well imbricated, form a corolla like an open rose of deep orange red, parted by two fairly broad lines of pure white, crossing the centre and cutting the flower into 4 distinct parts. Roda Catalogue, 1885, p.54: (Ridolfi) Large size, double flower, regularly imbricated, red with

every petal edged with white. Orthographic errors: 'Crociata', 'Cruciato', 'Crusciata', 'Cruiciata', 'Crucita', 'Cruciatas', 'Crutiana', 'Crocciara'. Synonym: 'Cruciata Vera'. Originated in Italy by Ridolfi.

Cruciata Curbatifolia. *(C.japonica),* Angelo Longone Catalogue, 1861. Originated in Italy. No description. (Believed extinct).

Cruciata de Pronay. Verschaffelt Catalogue, 1847-1848, p.55 as 'Cruciata Nova'(Pronay). No description. de Jonghe, 1851, *Traité de la Culture du Camellias,* p.103. No description. Sport: 'Maculata Perfecta'. Originated in Germany by Pronay. Synonyms: 'Cruciata Nova de Pronay', 'Cruciata Nova'(Pronay). Synonym for **Cruciata.**

Cruciata Nova. *(C.japonica),* Verschaffelt, 1849, *Nouvelle Iconographie,* Book V, pl.I, index with reference to 'Maculata Perfecta'. Roda Catalogue, 1885, p.54: (Negri). Double imbricated flowers, red with white stripes. Originated in Italy by Negri. Sport **Maculata Perfecta.** Orthographic variant: 'Cruciata Nuova'. Synonym; 'Cruciata Vera o Nova'.

Cruciata Nova, de Pronay. Verschaffelt, 1844-1845, Catalogue, p.24. van Houtte Catalogue, 1849-1850, 38:45. Orthographic variant for 'Cruciata de Pronay', synonym for **Cruciata.**

Cruciata Nova (Pronay). Verschaffelt Catalogue, 1846, p.52. Synonym for **Cruciata.**

Cruciata Nuova. Mercatelli Catalogue, 1881, p.16. Orthographic variant for **Cruciata Nova.**

Cruciata Panaché. van Houtte Catalogue, 1858, 72:17. Syonym for **Maculata Perfecta.**

Cruciata Vera. Verschaffelt, 1849, *Nouvelle Iconographie,* Book V, pl.I. From the description this appears to be a synonym for **Cruciata.**

Cruciata Vera o Nova. Hillebrand & Bertolazzi, *Antiche Camelie del Lago Maggiore*, 2003, p.149 with colour photo. Appears to be a synonym for **Cruciata Nova.**

Cruciato. Vuylsteke, Charles, Catalogue, 1876-1877, p.19. Orthographic error for **Cruciata.**

Cruenta. Floy Nursery Catalogue, 1832. Synonym for **Clintonia.**

Cruenta de Knight. Jacob Makoy et Cie Nursery Catalogue, 1838. As Makoy obtained many of his camellia from Knight in England it is considered that this is Floy's 'Cruenta' and hence a synonym for **Clintonia.**

Cruenta Nova de Knight. Jacob Makoy et Cie Catalogue, 1836, p.15. Synonym for **Clintonia.**

Crusader. *(C.japonica),* Walter Allan Nursery Catalogue, 1949-1950; Fruitland Nursery Catalogue, 1949-1950, p.29: Deep red. Very large semi-double to rose form double. Vigorous, compact growth. Late flowering. The use of this name as a synonym for **Prince of Orange** would seem erroneous as they appear to be two separate seedlings raised by two different originators. Sport: **Governor William Bradford.** Originated by J.S. Bradford, Wayside Nurseries, Ocean Springs, Mississippi, USA.

Crusader Variegated. River View Nursery Catalogue, 1957-1958, p.12, as 'Crusader Var.'. Synonym for **Governor William Bradford.**

Crusciata. Jean Verschaffelt Catalogue No.14, 1869-1870, p.51. Orthographic error for **Cruciata.**

Crusciata Nova. Jean Verschaffelt Catalogue No.14, 1869-1870, p.51. Orthographic error for **Cruciata Nova.**

Crushed Strawberry. *(C.japonica), Camellia Digest* 1(3),1943. No description. SCCS., 1954, *The Camellia. Its Culture and Nomenclature:* Red, pink and white. Medium size formal double. Originated at the Riverbank Nursery, California, USA.

Crussel1e. *(C japonica), American Camellia Yearbook,* 1957, p.199. Reg. No.308: An 11 year old chance seedling, originated by T.A. Crusselle Sr, Atlanta, Georgia, USA that first bloomed 1954. Leaves average 8.8 cm long by 4.5 cm wide and are a medium, dark green. The bright red flowers resemble **Blood of China** in form but are lighter in colour and have 39 petals interspersed with golden stamens. Late flowering. See colour photo p.12, Sharp's 1957, *Camellias Illustrated* and p.78, Macoboy, 1981, *The Colour Dictionary of Camellias.*

Crutiana. Peer, 1956, *American Camellia Yearbook,* p.54. Orthographic error for **Cruciata.**

Crystal City. *(C.reticulata.x C.japonica),* SCCS., 1981, *Camellia Nomenclature,* p.172: Bright pink with irridescent petals. Large to very large, semi-double to loose peony form. Upright but pendulous growth. Mid-season to late blooming. Originated by A.N. Funari, Santa Clara, California, USA from the cross *C.reticulata* 'Cornelian' (**Damanao**) x *C.japonica.* There is also a variegated form.

Crystal City Variegated. *(C.reticulata x C.japonica),* Cannon, 1984, ACS., *The Camellia Journal,* vol.39, No.4, p.19 as 'Crystal City Var.': A virus variegated form of **Crystal City** - Irridescent, bright pink and white. Originated in USA.

Crystal Lake. Griffiths, 1952, *American Camellia Yearbook,* p.37. Synonym for **Colonial Lady.**

Crystal Palace. *(C.japonica),* Vanderbilt, ed., 1943, *Camellia Digest,* 1(3): Bright red, medium size formal double. Medium, compact rowth. Blooms mid-season. Originated by Lindo Nursery, Chico, California, USA.

Crystal Pure. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.141. Synonym for **Suishôhaku.**

Cucamonga. *(C.japonica), American Camellia Yearbook,* 1981, p.96, Reg. No.1698: A medium vermilion red, rose form double *C.japonica* sport of Kramer's Supreme. Mid-season to late flowering. Originated by Kramer Bros Nursery, Upland, California, USA. Blooms are fragrant. Plant growth is bushy.

Cuchesse Visconti. Peer, 1956, *American Camellia Yearbook,* p.54. Orthographic error for **Duchesse Visconti.**

Cudania. Downing Nursery Catalogue, ca.1858. Orthographic error for **Cridania.**

Cue Ball. *(C.japonica),* Cannon, 1971, ACS., *The Camellia Journal,* vol.26, No.1. No description. Originated in USA. No valid listing located.

Culd Hardy. Pépinières Thoby, Carquefou, France, Plant List, 2003, p.16; Orthographic error for 'Cold Hardy'.

Cullen W. Coates. *(C.reticulata).* ACS, *The Camellia Journal,* Aug. 2001, p.21, colour photo p.20, Reg. No.2548. A semi-double peony form chance seedling with red flowers (RHS.CC.58B) having purple undertones. Flowers mid-season. Plant is upright and vigorous. Originated by Barbara C. Tuffli, Atherton, Calif., USA. *American Camellia Yearbook,* 2001, p.94, colour photo p.c13. The 10 year old seedling first flowered in 1991. Long lasting flowers are 16.5 cm across x 7.5 cm deep, with 23 heavy textured petals and yellow anthers. The dark green leaves are 12.7 cm long x 5.7 cm wide.

Cum Spirituo Tuo. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings,* p.14, colour photo: A red, loose, informal double with 2-3 rows of fluted, irregular outer petals and a centre of mixed stamens, petaloids and small, erect petals. Size about 10 cm across. A seedling of **Rosary** originated by Richard Dodd, Marshallville, Georgia, USA.

Cuma Dan Gore. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings,* p.8, colour photo: A 'Neil Lindsay' (**Lindsay Neill**) seedling originated by Richard Dodd, Marshallville, Georgia, USA. It is 11 cm across, red, peony form double with lilac tones.

Cumbahee. *(C.japonica),* Cannon, 1962, ACS., *The Camellias Journal,* vol.17, No.1, back cover. No description. Originated in USA. No valid listing located.

Cumingii. Berlèse, 1841, *Iconographie,* p. facing pl.99. Orthographic error for **Cummingii.**

Cumminghii. Harrison, ed., 1835, *Floricultural Cabinet,* vol.III, p.186, under British hybrid having dark red flowers. Synonym: 'Cumminghii Nova'. Orthographic error for **Cummingii.**

Cumminghii Nova. Burdin Maggiore & Co. Catalogue, 1835. Synonym for **Cummingii Nova.**

Cummingii. *(C.japonica),* Harrison, ed., 1835, *Floricultural Cabinet,* Vol.III as 'Cumminghii'; Berlèse, 1841, *Iconographie,* vol.1, pl.99: The flower, nearly 8 cm in diameter, is a good double of light cherry-red with a few touches of colour similar to **Coronata.** The exterior petals are in four rows, though few in number, wide compared to their length, rounded, well imbricated, deeply notched, reflexed and forming an opened cup-shape. In the middle is a small number of petals, short, narrow and unequal forming a depressed centre similar to the flowers of **Chandleri.** This variety was obtained from seed in Italy by Casoretti, Chief Gardener for M. Traversi of Desio. Orthographic error: 'Cumingii'.

Cummingii Nova. *(C.japonica),* Burdin Maggiore & Co. Catalogue, 1835, p.38. No description. Originated in Italy. (Believed extinct.)

Cuningham. Trillon, Le Mans, Catalogue, 1843, p.4. Orthographic error for **Cunninghamii.**

Cuningham Mutabilis. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Cunninghamii.**

Cuninghammi. Berlèse, 1837, *Monographie,* ed.1, p.132, in index. Orthographic error for **Cunninghamii.**

Cuninghammi Mutabilis. Berlèse, 1837, *Monographie,* ed.1, p.121. Synonym for **Cunninghamii.**

Cunningam's Perfection. Burdin Maggiore & Co. Catalogue, 1845, p.41. Orthographic error for **Cunningham's Perfection.**

Cunninghami Elata. Charles van Geert Catalogue, 1845, p.4. Orthographic error for **Elata Cunninghamia.**

Cunningham Perfection. Isola Madre Catalogue, 1845. Orthographic error for **Cunningham's Perfection.**

Cunninghamii. *(C.japonica),* Paxton, 1836, *Magazine of Botany & Register of Flowering Plants,* vol.II, p.122 as 'Cunninghami', but 'Cunninghami Mutabilis' on pl: Flowers bright crimson, striped with white, varying in almost every flower. Petals arranged with great regularity. This camellia was raised by Mr Cunningham of Comely Bank Nursery near Edinburgh, Scotland, from seed of 'Warratah' (Anemoniflora) impregnated with the 'Common Striped' (Variegata) and named by him 'Mutabilis' from the various coloured flowers produced on the same plant. Many of the flowers are striped with pure white while others are entirely a rich crimson. Synonyms: 'Cunninghamii Mutabilis', 'Cuninghammi Mutabilis', 'Mutabilis', 'Mr. Cunningham's'. Orthographic errors: 'Cuninghammi', 'Cunongham'.

Cunninghamii Mutabilis. Berlèse, 1840, *Iconographie,* ed.2, p.219-220 as 'Cunninghami Mutabilis'. Synonym for **Cunninghamii.**

Cunninghamii Perfecta. Burdin Maggiore & Co., 1849-1850, General Catalogue. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare* as 'Cunninghami Perfecta'. Orthographic variant for **Cunningham's Perfection.**

Cunninghammi Perfection. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France,* vol.40, p.130. Orthographic error for **Cunningham's Perfection.**

Cunningham's Caelestrina. Charles van Geert, List of synonyms in 1845 Catalogue. Orthographic error for 'Coelistina', synonym for **Celestina.**

Cunningham's Elata. *Gardeners' Chronicle,* 1841. Charles van Geert, 1848, Catalogue, No.105, p.108. Synonym for **Elata Cunninghamia.**

Cunningham's Perfection. *(C.japonica),* Jacob Makoy et Cie Catalogue, 1839, p.16. No description. *Catalogue des plantes la Royale Société d'Horticulture Belgique,* 1842. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare* as 'Cunninghami Perfecta': Red with a whitish centre. Imbricated. Originated in Italy. Orthographic variants: 'Cunninghamii Perfecta', 'Cunningham Perfectum', 'Cunningam's Perfection'. Synonyms: 'Perfection', 'Perfection Cunningham'.

Cup of Beauty. *(C.japonica),* van Houtte, 1857, *Flore des Serres,* vol.12, p.183, F.1278: Brought from China by Robert Fortune and placed on sale by Glendinning. The name **Cup of Beauty** is a literal translation of its Chinese name. It is irreproachably imbricated with petals very rounded, white, lightly striped with a rose-pink tint. It has two sports: **Madame de Cannart d'Hamale** and **Myrtifolia (Australia).** In America it has been known as 'Cup of Beauty'(France) and 'Cup of Beauty'(Australia). Other synonyms are 'Cup of Beauty' (Fortune), 'Coupe de Beauté', 'Tasse de Beauté'. For a colour illustration see pl.VIII, Waterhouse, 1952, *Camellia Trail* and Verschaffelt, 1858, *Nouvelle Iconographie,* Book V, pl.III. The name was used erroneously as a synonym for **Derbyana** in USA.

Cup of Beauty. (Australia). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Cup of Beauty.**

Cup of Beauty (Fortune). Vervaene, J., Catalogue No.11, 1888. Synonym for **Cup of Beauty.**

Cup of Beauty (France). SCCS., 1951, *The Camellia. Its Culture and Nomenclature.* Synonym for **Cup of Beauty.**

Cup of Beauty (J.G.). McIlhenny Camellia Catalogue, 1945-1946, p.3. 'Note: This is the same blossom shown in G.G. Gerbing's book, and supposedly originating in his nursery and now called **David Gerbing.** This is a seedling from my nursery and has been on the market for more than 20 years'. The name **David Gerbing** was prior listed in 1941 and is regarded as the valid name.

Cup of Beauty Rosea. Hazlewood & Jessep. 1972, *Checklist - Camellia Cultivars from Nursery Catalogues.* p.51. Synonym for **Myrtifolia (Australia).**

Cup of Beauty (United States). *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.31: Rose red. Large, rose form double to semi-double of cupped form. Mid-season blooming. This cultivar was erroneously listed in the Fruitland Nursery Catalogues from 1938 up to 1962 as 'Cup of Beauty'. It is a variety of unknown origin from Magnolia Gardens, Charleston, South Carolina, USA. See p.85, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II for black and white photo.

Cupcake. *(C.x williamsii). Camellia Nomenclature* 2006, p.173. Small, single form, coral pink lighter towards middle, with occasional deeper coral pink stripes. Average, bushy, compact, upright growth. Introduced by Nuccio's Nurseries, Altadena, Calif., USA. (N#9132). RHS, United Kingdom, Nomination for Award of Merit, 2008. Petals to 5 cm long, of various widths.

White flushed pink generally in apical half (55B) exterior apical portion pink (55C). Anthers yellow (162B), filaments cream (158B). Leaves 8.5 cm x 3.5 cm, dentate, acuminate, mostly glossy, some semi-glossy, dark green.

Cupid. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1945-1946: Medium size, imbricated, rose-pink, opening with a rosebud centre. Originated at Tea Gardens, South Carolina, USA.

Cupid's Blush. Vanderbilt, 1940, *Camellia Research,* p.3. Synonym for **Sacco.**

Curio. Camellia Grove Nursery Catalogue, 1944. Synonym for **Speciosa.**

Curlee Pet. Mark S. Cannon Scion Catalogue, 1962, p.3. No description. Originated in USA. No valid listing located.

Curly. *(C.sasanqua). New Zealand Camellia Bulletin,* March 2007, No.156, p.88, Reg. No 475. Registered by N. Haydon, Takanini, New Zealand. A chance seedling that first flowered in 2000. The plant is dense, low and spreading and of medium to slow growth rate. Dark green leaves are 6.5 cm x 2.5 cm and somewhat curled particularly from end to end. The lightly scented flower is of semi-double form, 7 cm wide by 2.5 cm deep, with about 11 rich pink (RHS.CC. 74C) petals, yellow anthers and cream filaments. Flowers early to mid-season. The distinguishing feature of this cultivar is a zigzag habit of branching which gives the plant its low spreading form, and combined with the curled leaves, giving an unusual "crunched up" appearance.

Curly Lady. *(C.japonica),* Van Vliet New Plants, Netherlands, Information Sheet. A sport of **Lady Campbell,** with twisted branches and leaves. Semi-double red flowers. Plant Variety Right EU22751 granted June 2008.

Curranm's Mathotiana. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.51. Synonym for **Sultana.**

Cursi. Nantes, 1980, - *Services des Espaces - Collections.* Orthographic error for 'Tersii', (**Terzi**).

Curtain Call. *(C.reticulata),* Nuccio's Nurseries Catalogue, 1979; *American Camellia Yearbook,* 1980, p.162, Reg. No.1607: A very large, deep, coral rose, semi-double *C.reticulata* chance seedling, Altadena, California, USA. The 4 year old seedling first bloomed 1976. Flower size, 15-17.5 cm across. Plant growth is open and rapid with light green leaves, 12.5 cm long by 6 cm wide. Colour photo inside front cover ACS., 1980, *The Camellia Journal,* vol.35, No.4 and on the front cover of SCCS, 1981, *The Camellia Review,* vol.42, No.4. Sport: **Curtain Call Variegated.** Chinese synonym: 'Xiemu'.

Curtain Call Variegated. *(C.reticulata),* Gentry, 1986, ACS., *The Camellia Journal,* vol.41, No.4, p.23 as 'Curtain Call Var.'. A virus variegated form of **Curtain Call** - Deep coral rose mottled with white. Originated in USA.

Curvataeflora. Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 87. Orthographic error for **Curvatifolia**.

Curvataefolia. Anonymous, 1834, *Revue Horticole,* p.508-509. Orthographic error for **Curvatifolia.**

Curvathaefolia. SCCS., 1958, *Camellia Nomenclature.* Orthographic error for **Curvatifolia.**

Curvathaoeflora. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Curvatifolia.**

Curvatheaefolia. Berlèse, 1837, *Monographie,* ed.1, p.53, 125. Orthographic error for **Curvatifolia.**

Curvatheefolia. Berlèse, 1843, *Iconographie* facing pl.141. Orthographic error for **Curvatifolia.**

Curvatheifolia. Berlèse, 1845, *Monographie,* ed.3, p.100. Orthographic error for **Curvatifolia.**

Curvatifolia. *(C.japonica),* Anonymous, 1834, *Revue Horticole,* p.508-509 as 'Curvataefolia'. No description. Berlèse, 1837, *Monographie,* ed.1, p.53, 125 as 'Curvateaefolia': Leaves like those of tea, 7.5 cm long and 5 cm wide, very acute, apex singularly recurved in the form of a hook; flower white, regular, very double, 8.5 cm across; petals disposed in a regular rosette, of very pure white, those of the circumference emarginate, slightly sinuous; those of the centre, irregular and a little twisted. Originated in England about 1833. Orthographic variants and errors: 'Curvatafolia', 'Curvathaoefolia', 'Curvathaefolia', 'Curvitifolia', 'Curvataefolia', 'Curvatheifolia', 'Curvathefolia', 'Curvatheefolia'.

Curved Petal. Waterhouse, 1970, ACRS., *Camellia News,* No.40, p.7. Synonym for **Zhuanban.**

Dafugui. (Great Wealth & Rank), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China,* p.49, No.299: Large size, 9-11 cm across, red, semi-double with 9-11 petals. Blooms mid-season. Originated in China.

Dagmar Berghoff. *(C.hybrid). International Camellia Journal* 2005, p.129 with colour photo; Reg. No. 56. An open pollinated seedling of *C.pitardii var. yunnanica.* Originated by Peter Fischer, Wingst, Germany. First flowered 1985. A dense upright shrub of medium growth rate. Highly floriferous, early to late season. Pink flowers in variable shades (RHS.CC. 55C-D), single to semi-double, 7.5 cm diameter x 3.5 cm deep. Considered to be a cold hardy plant in Germany. Parent sourced from 1200 metres.

Dagongdeng. *Chinese Camellia Culture,* 2003, p.251 with colour photo; A *C.hybrid* developed by Mr Huang Delin, Shanghai, China. First flowered 1991. Large, pure pink semi-double with 4-5 layers of petals. Diameter 10-11 cm. Late flowering.

Daguiye. (Large Osmanthus Leaf), *(C.reticulata),* Yü, 1950, RHS., "Camellia Reticulata and its Garden Varieties". *Camellias and Magnolias Conference Report,* pp.13-25 as 'Takeiyeh': A medium large flower, 9-11 cm across, petals about 20 in 4-5 whorls, elliptic-obovate, notched at the apex, semi-double to peony form with some petaloids; central petals, wavy and erect; stamens few, divided into 3-4 fascicles, connate with inner petals. mid-season flowering. Leaves obovatelanceolate, margins revolute, apices acute and recurved, bases cuneate, 6-9 cm long by 2.6-3.5 cm wide. Leaves similar to those of the *Osmanthus fragrans.* They are also similar to **Liuye Yinhong** except that the apex is broader and more curved. The cultivar originated in Dali, Kunming, China. Western synonym: 'Large Osmanthus Leaf'. Different readings: 'Ta-kuei-yeh', 'Takueiyeh'. For colour plates see p.66 Feng et al., 1981, *Yunnan Shanchahua* or p.50, 1986, *Yunnan Camellias of China;* also Macoboy, 1981. *The Colour Dictionary of Camellias*. Corruptions of the name: 'Takeyeh', 'Takeiyeh', 'Takeyeh', 'Takieyeh'.

Daguetti Odorata. Verschaffelt Catalogue, !850, p.46. Orthographic error for **Duguetti Odorata.**

Dahailun. Gao, Jiyin, Ltr 30 July 1990. Chinese synonym for **Helen Bower.**

Dahejin. (Dahe Brocade). Gao & Zhuang, 1989, *The Camellia in China,* p.34, No.341, colour photo, No.199. Synonym for the Japanese cultivar, **Yamato-nishiki.** Chinese names of sports: 'Baidahejin' & 'Fendahejin'. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.418. Chinese synonym 'Feihou Ribenjin'.

Dahlieflora Rosea. Trillon, Le Mans Nursery Catalogue, 1843, p.4. Synonym for **Dahliiflora Rosea.**

Dahliiflora. *(C.japonica),* Redouté et al.,1828, *Annales Société Horticulture de Paris,* 2:281-287 erroneously as 'Dahliaeflora'. It was also listed in the *Floricultural Cabinet,* vol.III, 1835, p.186 as a "British hybrid with pale or light red flowers." Berlèse in the three editions of his *Monographie,* 1837, 1840 and 1845, had the cultivar as being originated in England by Knight and described it as: Leaves deformed, some elliptical, a little obtuse, others lanceolate, acute, narrow, undulate, wrinkled, irregular, sabre or scythe form, of a greyish green; buds, pointed, scales green; flower semi-double, depressed, 6.8 cm across, rose-pink. The variation in its foliage gave it the synonym 'Heterophylla' or 'various leaved'. The name 'Dahliaeflora' has been invalidly applied to two other cultivars; an Italian one originated by Casoretti, which is properly known as **Ignescens** and an American one raised by Seavey in California. Synonym: 'Dahlaeiflora Heterophylla'. Orthographic errors: 'Dahliaeflora', 'Dahlieflora', 'Dahlaeflora', 'Dahleaeflora'.

Dahliiflora Alba. *(C.japonica),* Shneiderff, ed., 1841, *Catalogo delle piante che si Trovano nel Giardino,* p.8, erroneously as 'Dahliaeflora Alba', No description. Originated in Italy. (Believed extinct.)

Dahliiflora Coccinea. *(C.japonica),* Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.13 erroneously as 'Dahliaeflora Coccinea'. No description. Originated in Italy. (Believed extinct.)

Dahliiflora Nivea. *(C.japonica),* Jacob Makoy et Cie Catalogue, 1842, p.9, erroneously as 'Dahliaeflora Nivea'. No description. Geldorf, Const., 1844, Catalogue of Plants and Price List, p.5, as 'Dahliaeflora Nivea': Very double, white with revolute petals. Originated in Italy.

Dahliiflora Rosea. *(C.japonica),* Anonymous, Jun.1839, *Revue Horticole,* p.205-207 as 'Dahliaeflora Rosea'. No description. Charles van Geert , 1846, Catalogue Général, p.65: Beautiful imbricated, dark pink. First class. Orthographic errors; 'Dahliaeflora Rosea', 'Dahlaeiflora Rosea'. Originated in Italy.

Dahliiflora (Seavey). *(C.japonica),* SCCS., 1954, *The Camellia. Its Culture and Nomenclature,* p.38 invalidly and erroneously as 'Dahliaeflora': Raspberry red with darker veining. Medium semidouble, peony to anemone forms with centre petals, pointed and swirled as in a dahlia. Vigorous, compact growth. Mid-season blooming. Originated by T.H. Seavey, Alhambra, California, USA.

Dahlohnega. *(C.japonica), American Camellia Yearbook,* 1986, p.189, Reg. No.1995: A small to medium size, Canary yellow formal double *C.japonica*, (**Witman's Yellow** x [seedling x (**Elizabeth Boardman** x **Colonial Dame**)]), mid-season blooming; originated by W.F. Homeyer Jr., Macon, Georgia, USA. The 11 year old seedling first bloomed 1983. Average flower size 7.5 cm across x 1.6 cm deep with 85 petals and 21 smaller central petals. Plant growth is upright, average, open and slow with dark green leaves, 10.5 cm long x 5.5 cm wide. Synonym: 'Nuccio's Golden Anniversary'. Chinese synonym: 'Huangda'. See colour photos: Rear cover, ACS., Feb.1987, *The Camellia Journal,* vol.42, No.1, and front cover, SCCS., 1989, *The Camellia Review,* vol.50, No.4.

Dahong. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.406; Chinese synonym for the Japan *C.japonica* **Ô-niji.**

Dahong Baocha. (Crimson Precious Pearl), *(C.japonica),* Chang Shao Yun, 1987, *Camellias from Zhejiang,* p.70, 72: An excellent cultivar like **Huabaozhu** but a scarlet anemone form with less petaloids, smoother on the petal margins. Leaves darker, thinner and shorter than **Huabaozhu**. Note: This cultivar is different to **Wuhe Pengqui** whose synonym, 'Dahong Baozhu', is only a local name in Shaoxin. To avoid confusion, Chang, in her book, used the Hangzhou name instead. See colour photo, Gao & Zhuang, 1989, *The Camellia in China,* No.117. Synonyms: Jinpan Lizhi', 'Wuhe Pengqiu' and 'Hongbaozhu'. Originated in China.

Dahong Bao Ta. *(C.japonica), Collected Papers,* ICS Congress, Falmouth, 2008, Genetic Analysis on 20 Camellia Varieties by ISSR Markers, Sui Ni and Jiyuan Li; Bright red. Semi-double form. From Wenzhou and Hongzhou.

Dahong Cha. (Crimson Camellia), *(C.reticulata),* Gao & Zhuang, 1989, *The Camellia in China,* p.61, No.412, colour photo No.269: Large size, 12-16 cm across, crimson, semi-double with 25-30 large, rounded, incurved petals and a small, central stamen cluster. Blooms mid-season. Leaves large, elliptic, channelled, serrulate, deep green. Similar to **Shizitou** except that the flowers are a little smaller and a deeper red. Originated in Tengchong County, Yunnan, China.

Dahong Chuanmudan. *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.569 as 'Dahongchuanmudan'. Fast growing shrub. Leaf elliptic, 7-7.5 cm x 3-3.5 cm, middle vein asymetrical. Flower semi-double to peony, deep red, 8-10 cm diameter. Petals 2-3 rows, stamen petaloids in centre, irregular arrangement. Flowers mid-season. From Sichuan Province, China.

Dahong Furong. (Crimson Hibiscus), *(C.japonica),* Shanghai Botanic Gardens List, 1985. No description. Savige, 1986, *International Camellia Journal,* No.18, p.107, 108: Light red, irregular,

peony form, some deeper veining. Centre mass of petaloids with small, twisted petals and stamens intermixed. Outer petals large, variable and twisted. Originated in China.

Dahong Guiye. (Red Osmanthus Leaf), *(C.reticulata),*, Tsui Wah Garden, 1974, *Chungkuo Shangtung Moutan, Yunnan Chahua Chanlan.* No description. Different readings: 'Tahungkueiyeh', 'Ta-hung Kuei-yeh'. Originated in China.

Dahong Jinxin. Gao, Jiyin, Ltr January 31st, 1993. Orthographic variation for 'Jinxin Dahong'. Synonym for **Biejia Cha** in the Sichuan Province.

Dahong Juban. (Red Chrysanthemum Petal), *(C.reticulata),* Chuang, Mao-Chang, 1959, *Yunnan Shan-chahua.* No description. Different readings: 'Tahungtsueban', 'Ta-hung Chû-pan'. Originated in China.

Dahonglian. (Scarlet Lotus), *(C.japonica),* Wang & Yü, 1981, *Shancha Hua: A* medium sized, scarlet anemone double with 2-3 rows of large, outer, lobed petals and a small, compact centre of petaloids. Synonyms: 'Zhongban Baozhu', 'Saiyanghong', 'Haiyunxia'. See colour pl. Chang Shao Yun, 1987, *Camellias from Zhejiang,* p.61 as 'Haiyunxia'. Originated in China.

Dahong Mudan. (Scarlet Peony), *(C.japonica),* Wang & Yü, 1981, *Shancha Hua:* Rose form double to peony form, medium size crimson. Used as a synonym for **Qixinhong.** Originated in China.

Dahong Mudan. *China Flowers & Horticulture*, Jan 2006, No.2, p.49; Chinese synonym for the *C.hiemalis* **Shishigashira.**

Dahongpao. (Bright Red Gown), *(C.reticulata),* Yü and Bartholomew, 1980, *American Camellia Yearbook,* p.13, 24: Different reading: 'Ta-hung-p'ao'. Western synonym: 'Bright Red Gown'; invalidly 'Crimson Robe'. Feng et al, 1981, *Yunnan Shancha Hua::* p.71, colour photo: Flower deep pink (RHS.CC, 58B), 12-14 cm across with 24-27 petals in 5-6 rows with a stamen centre, mostly petaloid. Leaves, mid-green, keeled, broad-ovate to sub-orbicular, apices acuminate, bases bluntly rounded, finely and sharply serrate, 7-11 cm long x 4-7 cm wide. Flowers midseason. Originated in China at the Kunming Botanic Gardens, Yunnan as a new cultivar selected from open pollenated seedlings.

Dahongqiu. (Scarlet Ball), *(C.japonica),* Wang and Yü, 1981, *Shancha Hua: A* scarlet, full peony of many small, twisted petals forming a ball shape. Colour photos [p.141], Chang, Shao Yun, 1987, *Camellias from Zhejiang,* and Gao & Zhuang, 1989, *The Camellia in China,* No.126. Synonyms: 'Dahong Shiziqiu', 'Zaochun Dahongqiu'. Originated in China.

Dahong Shiziqiu. (Crimson Lion's Ball), Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.31. Synonym for **Dahongqiu.**

Dahong Songzike. Chuang, 1958, *Yunnan Shanchahua.* Different readings: 'Tahungsungtzeke', 'Ta-hung Sung-tzu-k'o'. Synonym: 'Red Pine Cone Shell'. Synonym for **Songzike.**

Dahong Wubao. (Crimson Jewel), *(C.japonica),* Liu, 1959, *Chung Kuochu Ming Tichi Chung Hua Hui* as the crimson form of **Wubao.** Different reading: 'Ta-hung Wu-p'ao'. Originated in China.

Dahong Xiuqiu. (Scarlet Embroidered Ball), *(C.japonica),* Shanghai Botanic Gardens List, 1985, No description. Savige, 1986, *International Camellia Journal,* No.18, p.108: *A* red coloured, complete informal double, spherical, like **Debutante** in form. See Gao & Zhuang, 1989, *The Camellia in China,* p.43, No.234 and colour photo No.127. Originated in China.

Dahua Jinxin. (Large Flower Gold Heart), *(C.japonica),* Wang & Yü, 1981, *Shan Chahua:* Light red, single, with large stamen cluster, medium size, 7-8 cm across, 2 rows 6 petals. See Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.45, colour photo [p.119]. Originated in China.

Dai Kagura. SCCS., 1942, *Classification of Camellias,* p.3. Different reading for **Daikagura,** however, in this case used erroneously for **Benidaikagura.**

Dai Kagura Variegated. SCCS., 1942, *Classification of Camellias,* p.3. Synonym for **Daikagura.**

Daianna Wanghou. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.431; Chinese synonym for the New Zealand *C.japonica* **Queen Diana.**

Daiao Meigui. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.431; Chinese synonym for the Australia *C.japonica* **Dionisia Poniatowski Rosea.**

Dai-aso. Different reading for **Ô-aso.**

Daibai. (Large White), *(C.sasanqua),* Yang, 1965, *Camellia Varieties of Taiwan* as 'Tai Pai': *A* large white, semi-double. Originated in Taiwan.

Daibi. Chinese synonym for N.Z. *C x williamsii* **Debbie.**

Daidi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.431; Chinese synonym for the USA *C.japonica* **Diddy Mealing.**

Daibutsu-sakiwake. (Diversified Flowers of Great Buddha), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1968, pl.554: Medium size semi-double to double, white with streaks and dashes of rose-pink and scarlet, with soft pink at the base of the petals. Centre petals becoming erect. Originated in Japan. (Believed extinct.)

Daibutsu-sakiwake. (Diversified Flowers of Great Buddha), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.569: Medium size white, rose form double with yellow cast at the base of the petals with dispersed stamens. Originated in Japan. (Believed extinct.)

Daibutsu-usuiro. Synonym for **Daibutsu-usuiro-sazanka.**

Daibutsu-usuiro-sazanka. (Pale Coloured Great Buddha Sasanqua), *(C.sasanqua), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.506: Large white washed heliotrope pink on petal margins, 5 petals, short stamen cluster, brown anthers. Synonym: 'Daibutsu-usuiro'. Originated in Japan. (Believed extinct.)

Daibyakuren. Different reading for **Ô-shirahasu.**

Daichirimen. Different reading for 'Ohchirimen', (**Ô-chirimen**).

Daidôzan. (Mount Daidô), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.8 as 'Daido-zan': Pure pink. Large single with round petals. Originated in Japan.

Daifu Boshi. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.107. Chinese synonym for **Doctor Dave**, as 'Dr Dave'.

Daifukkô. Sebundô Shinkôsha, 1979, *Senchinshû,* p.206. Different reading for 'Daifuku-beni; synonym for **Kakuju.** This is a local name in Toyama Prefecture.

Daifuku-beni. Synonym for **Kakuju.**

Daifukurin. (Large White Border), *(C.japonica),* Kasuya Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in the section on variegated leaves. Itô, Ko'emon, 1879, *Chinka Shu: A* variegated leaf Camellia. Flowers are small rose red singles. Originated in Japan. Different readings: 'Ohfukurin', 'Daihukurin'. See JCS., 1969, Tsubaki, No,7, p.37.

Daigo. (Deep Taste). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.152 with colour photo; English translation p.104. Medium size, vermilion, bowl-shaped single, round and thick petals, circular stamens. Flowers mid-season to late. Leaves elliptic, medium size, somewhat waved. Spreading, vigorous growth. A chance seedling, originated and released by Fumio Naitô in 1973. From Hyogô Prefecture.

Daigokuden. (Main Imperial Palace Building), *(C.japonica),* Satô, 1975. *Chûbu* no *Tsubaki,* p.74, colour photo: Medium size, campanulate, deep crimson single, 6-7 large outer petals, compact cylinder of stamens, golden anthers, very pale cream filaments. Leaves, dark green, elliptical with blunt acute apex, serrate margins. Blooms late season. Originated in the Chûbu area,

Japan. A chance seedling, originated and released by Fumio Naitô in 1973. See also colour photo, Sebundô Shinkôsha, 1979, *Senchinshû,* p.93.

Daihaku. (Large White), *(C.japonica),* Mizuno, Motokatsu, 1681, *Kadan Kômoku:* Large, white semi-double. See JCS., 1965, *Tsubaki*, No.5, p.29. Shirai, 1926, *Scientific Japan. Past and Present*, p.213-227. Different reading: 'Ôhaku'. Originated in Japan. (Believed extinct.)

Daihakkan. Sebundô Shinkôsha, 1979, *Senchinshû,* p.93. Different reading for **Daihakukan.**

Daihakukan. (Large White Diadem), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki*, p.70: Medium size, cup shaped, pale flesh coloured to white single with a Higo-like stamen cluster, pale yellow anthers and white filaments. Leaves, wide-ovate, dark, dull green, shallow serrations, sharp apex. Originated in Inazawa City, Aichi Prefecture,, Japan. See p.93 & 229, Sebundô Shinkôsha, 1979, *Senchinshû* as 'Daihakkan'. Named by Toshiaki Kosaki in 1963, released by Yoshiaki Itô.

Daihakuren. Itô, Ihei, 1695, *Kadan Chikinshô.* Different reading for **Ô-shirahasu.**

Daihakuren. (Great White Lotus), *(C.japonica),* Tuyama, 1966, *Camellia Cultivars of Japan,* p.96, and 1968, *Camellias of Japan,* pl.21, p.11 as 'Dai-haku-ren', p.91 description: Leaves, broadly oblong or oblong-elliptic, shortly acuminate, with glabrous petioles. Flowers single, pure white; petals roundish, crimped at margin. Stamens cylindrical, pale yellow anthers, white filaments. The *Kadan Chikinshô* variety is read as 'Ôshirahasu' and is obsolete; Tuyama's Camellia is a modern one, originated in Sofue-chô, Nakajima-gun, Aichi Prefecture, Japan in 1933. The Chinese reading is 'Daibaihe'.

Daihannya. (Great Wisdom Personified), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.213, 559: Large white single with creped, irregular margins and Higo-like stamens. Originated in Japan. Different reading: 'Ohannya'. Resembles **Yukimiguruma.** (Believed extinct.)

Daihassaku. (Great Hassaku). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.154 with colour photo; English translation p.106. Medium size, red vertical stripes on pink ground, trumpet shaped single, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size, waved. Upright growth. A chance seedling of **Hassaku-shibori**. Originated and named by Katsuomi Inoue, released by the Kagawa Branch of the JCS in 1997. From Kagawa Prefecture.

Daihassu. Chugai Catalogue, 1939-1940. Synonym for **Dewatairin.**

Daihiryû. (Great Scarlet Dragon), *(C.sasanqua),* Yôshun-en Engei Hôchi, 1954, No.586, p.26: Scarlet, large. Winter blooming. Originated in Japan.

Daihiryû-nishiki. (Great Scarlet Dragon Brocade), *(C.sasanqua),* Yôshun-en Engei Hôchi, 1955, No.589, p.19: Large red with white spots. Winter blooming. Originated in Japan.

Daihôkan. (Great Treasure Diadem), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.252, description, p.253, colour photo: Medium size, blush pink ground, finely peppered with red, wide campanulate single, with 5 broad, rounded, overlapping, crinkled and reflexed petals, and a broad central stamen cylinder with creamy filaments, joined for the lower third, and dark yellow anthers. Blooms very early to mid-season. Leaves dark green, broad ovate, apices abruptly blunt-acute, margins serrate. Originated in the Gifu Prefecture, Japan. Believed to be a seedling of **Kamo-honnami.** *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.154 with colour photo; English translation p.105. History obscure, a tree surviving with a private family in Gifu City. Named by Nagaharu Niwa in 1984, released by Gifu Camellia Club.

Daihô-wabishin. (Great Treasure - Degenerated stamens), (Wabisuke), JCS., 1988, *Japan Camellia*, No.28, p.13, colour photo: Small size, rose-pink, campanulate single of 6 petals; 3 outer, smaller and 3 inner, larger, channelled, somewhat reflexed. Stamen cluster smallish, compact, white, infertile. Leaves long-elliptic, dark green. Selected from wild camellias on Gotô Island,

Nagasaki Prefecture, Japan. Discovered by Shigeru Terawaki in 1983, named and released by Yûichi Fujita.

Daihukurin. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki, Tokushû*, No.10, p.117. Different reading for 'Daifukurin'.

Daii. Different reading for **Ô-i.**

Daijohkan. SCCS., 1978, *Camellia Nomenclature,* p.43. Different reading for **Daijôkan.**

Daijôkan. (Large Castle Crown), *(C.japonica),* Chûbu Tsubaki Kyôkai, 1964, *Tsubaki Meikan;* Tuyama, 1966, *Camellia Cultivars of Japan,* No.74, p.128; Tuyama, 1968, *Camellias of Japan*, pl.45, p.98: Upright with lax branches. Leaves narrowly elliptic, pale green, thin texture, veins impressed; petioles glabrous. Flowers, pure white, petals narrow, 20 or more, a little plicated along the middle and arcuated outward from the middle, having the nature of a Magnolia flowering variety. Petals tend to fall as flower ages. Filaments cylindrical, white. Late flowering. Originated in the Castle of Nagoya, Japan and first released in 1964. Different readings: 'Daijohkan', 'Daijyôkan'. Chinese synonym: 'Dajiaokan'. See p.112, pl.234 & p.325, 1972, *Encyclopedia of Camellias in Colour;* p.107, Satô, 1975, *Chûbu no Tsubaki* and p.94 & 229, Sebundô Shinkôsha, 1979, *Senchinshû,* also p.296, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Synonym: 'Goten-tsubaki' which was the local name in Nagoya, meaning palace camellia, and which was prohibited from being taken outside the castle. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.406; Chinese synonym 'Dachengguan'.

Daijyôkan. Satô, 1975, *Chûbu no Tsubaki,* p.107. Different reading for **Daijôkan.**

Daikagura. (Great Sacred Dance), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Red, semi-double in 2-3 rows, very large, stamens spread in a ring form; early blooming. Originated in Japan. (Believed extinct.) See JCS., 1969, *Tsubaki,* No.7, p.26.

Daikagura. (Great Sacred Dance), *(C.japonica),* Itô, Tokuemon, 1788, *Tsubaki Hanagata Tsuki Obo'echô;* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Red, peony form, large size, double. Blooms early. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki,* list two different cultivars of this name. One is that above, the other is described as a new cultivar. See JCS., 1969, *Tsubaki,* No.7, p.35. Uesa, 1844, *Sômoku Benran;* Itô, Ko'emon, 1879, *Chinka Shû:* Cardinal red mottled white, medium size, peony form, 9-11 cm across. Very early to mid-season flowering. Large, dull green foliage, slow tall growth. Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I, p.94: This cultivar is extremely variable as to colour and form. Normally it is deep pink to carmine rose, blotched white, about 11 cm in diameter x 5.5 cm deep. In some strains it is more nearly white moired pink. The flower is a peony form, incomplete double with notched, wavy and recurved petals. The centre of the bloom is an irregular mass of various sized petaloids, mixed with and joined to, 4 or 5 groups of stamens. It has typical elliptic to wide-elliptic, coarsely serrated and definitely veined, thick leaves with an abrupt acuminate apex. Leaves sometimes show yellow variegation. Originated in Kantô area, Japan. See colour plates: *American Camellia Yearbook,* 1949, facing p.51; *Camellias* by G.G. Gerbing, 1945, p.51 as 'Daikagura Variegated'; Hume, 1946, *Camellias in America,* p.258. Tuyama, 1966, *Camellia Cultivars of Japan,* p.62, pl.31; JCS., ed. 1972, *Encyclopedia of Camellias in Colour,* p.134, pl.266 & p.335; Sebundô Shinkôsha, 1979, *Senchinshû,* p.92 & 229. Yokohama & Kirino, 1989, *Nihon no Chinka,* p.370. Synonyms: 'Shôjitsu', 'Kiyosu', 'Daikagura Variegated', 'Daikagura Variegata', 'Daikagura'(Ward), 'Seihi', 'Lion's Dance', 'Shônichi', 'Shôhi", 'Shibori-daikagura', 'Teruhi', 'Ward's 'Daikagura Marbled', Daikagura', 'Daikagura Variant', 'Daikagure Supreme', 'Daikagure'(Ward's Light), 'Daikagura Ward's Variegated', 'Daikagura Special', 'Tôbusa', and erroneously 'Idaten-shibori'. Different readings: 'Dai Kagura', 'Taikagura', 'Daikakura'. Western corruptions of the Japanese name: 'Dyka-gura', 'Daikgura', 'Daikiagura', 'Daikaguri'. Sports: **Benidaikagura, Benten-kagura,** 'Conrad Hilton', **High Hat.** Seedlings: **Margaret Hearn, Mrs Josephine M. Hearn, Pink**

Dawn, Mrs Marie Keating, Indian Summer. Most early American listings of **Daikagura** were actually of **Benidaikagura,** the self red form. Chinese synonyms: 'Baiban Daikagula', 'Taishenle', and 'Huamudan'.

Daikagura-Beni. Killiow Gardens Catalogue, 1985-1986. Orthographic variant for **Benidaikagura.**

Daikagura-Kansai. Tuyama, 1966, *Camellia Cultivars of Japan.* Synonym for **Benidaikagura.**

Daikagura Marbled. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.52. Synonym for **Daikagura.**

Daikagura Pink. Vanderbilt, 1941, *Camellia Research, II*, p.2. Synonym for **Benidaikagura.**

Daikagura Red. Doty & Doerner, 1954, Catalogue, p.23. Synonym for **Benidaikagura.**

Daikagura Rose. Griffiths & Strother, 1954, ACS., *Nomenclatural Crossreference List.* Synonym for **Benidaikagura .**

Daikagura Rosea. Hazlewood Nursey Catalogue, 1949, p.6. synonym for **Benidaikagura.**

Daikagura Shell Pink. Butterfield, 1952, *Camellia Culture for the Home Gardener Manual,* 5:19. Synonym for **High Hat.**

Daikagura Special. Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I, p.97. Synonym for **Daikagura.**

Daikagura Supreme. Mark S. Cannon Scion Catalogue, 1963-1964, p.4. Synonym for **Daikagura.**

Daikagura Variant. Overlook Nursery Catalogue, 1948-1949, p.25. Synonym for **Daikagura.**

Daikagura Variegata. Overlook Nursery Catalogue, 1942-1943, p.29. Synonym for **Daikagura.**

Daikagura Variegated. McIlhenny, 1937, *600 Varieties of Camellias,* p.2. Synonym for **Daikagura.**

Daikagura (Ward). SCCS., 1960, *Camellia Nomenclature,* p.43. Synonym for **Daikagura.**

Daikagura (Ward's Light). Mark S. Cannon Scion Catalogue, 1964-1965, p.4. Synonym for **Daikagura.**

Daikagura Ward's White. Mark S. Cannon Scion Catalogue, 1962, p.3. Synonym for **Shiro-daikagura.**

Daikagura Ward's Variegated. Thomasville Nurseries Catalogue, 1961. Synonym for **Daikagura.**

Daikagura White. McIlhenny, 1941, *700 Varieties of Camellias,* p.4. Synonym for **Shiro-daikagura.**

Daikagurakyso. River View Nursery Catalogue, 1958. Corruption of the Japanese name **Daikagura.**

Daikakura. Yokohama Nursery Catalogue, 1899. Different reading for Daikagura.

Daikanpô. Different reading for Daikanhô.

Daikanhô. (Appearance of Large Summit), (Higo), ICS., 1990, *Japanese Camellia Cultivar List,* p.5. *Higo Rokka,* [ca.1989], p.32: Large size, 13-15 cm across with 6 petals, white ground with red variegation. Originated in the Kumamoto Prefecture, Japan. There is confusion between **Taikanhô** and **Daikanhô.** They can both be read as 'Taikanpô' or 'Daikanpô'. **Taikanhô** is first listed in *Higo Tsubaki Meikan,* 1961 by Yoshimura. Another alternative reading 'Daikanbô'.

Daikarako. A.J. Mackie Nursery Catalogue, 1963, p.18. Different reading for **Ô-karako.**

Daikichi. (Great Auspice), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.212 colour photo, p.213, description: Medium size, vivid crimson, wide campanulate single with 7 wide, crinkled, reflexed petals, and a central stamen column, pinched in at top, pale yellow to pinkish filaments, joined for the lower half, and yellow anthers. Blooms early to mid-season. Leaves bright green, broad elliptic, margins obscurely serrate. The original tree is growing in Kagamihara City, Gifu Prefecture, history obscure. Named by Nagaharu Niwa in 1987, released by Gifu Camellia Club.

Daikokten. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki, Tokushû,* No.10, p.117. Orthographic error for **Daikokuten.**

Daikokuten. (God of Wealth), *(C.japonica),* Tuyama, 1966, *Camellia Cultivars of Japan,* p.192, pl.113: Dark red semi-double, having deeper veining and 4-5 rows of petals and, in the centre, an irregular group of poor stamens. Orthographic error: 'Daikokten'. Originated in Takarazuki-shi, Hyôgo Prefecture, Japan.

Daikokuji. (Daikoku Temple), *(C.japonica),* Hamamatsu, Utakuni, 1825, *Setsuyô Kikan,* vol.23. No description. Originated in Japan. (Believed extinct.)

Dai-mokkô. Tomita et al., Heibonsha, 1980, *Tsubaki,* p.137. Different reading for **Ô-mokkô.**

Daimonji. (Mountain name in Kyôto), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.84 & 441: Small, irregular, five petalled single; soft pink, red splashed. (Believed extinct), Originated in Japan. On 16 August, a huge firelit character for "dai-great" is a spectacular sight on the slope of Mt. Nyoigatake near Kyôto. This event is called "Daimonji" for short.

Daimonji. (Mountain name in Kyôto), *(C.sasanqua),* Fuji-en Nursery Catalogue, 1955: Pink. Large, blooms very early. Originated in Japan.

Daimio. Hanger, 1956, *Wisley Camellia List.* Synonym for **Daimyô-nishiki.**

Daimyô-nishiki. (Brocade of Feudal Lord), *(C.sasanqua),* Wada, 1941, *Garden Treasures of Japan;* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.8: Semi-double, autumn flowering. A red, striped white, medium size. Originated in Japan. Orthographic error: 'Diamyo-nishiki'.

Dainagon. (Second Rank Court Official), *(C.japonica),* Mainichi Shinbun, 1971, JCS., ed. *Tsubaki;* Yokoyama et al. 1975, *Gendai Tsubaki Meikan,* p.154, our photo; Seibundô Shinkôsha, 1979, *Senchinshû,* p.94, Colour photo, p.229, description: A soft pink semi-double, 9-10 cm across, 4 rows of 20 guard petals, transparent and with creped margins; a small column of light yellow stamens. Leaves, thick, lanceolate-elliptic with long acuminated apex and shallow serrations. Originated in Japan. Its old name was 'Chûbu-hanafûki'. Originated and named by Minoru Satô in 1970.

Dainichi-no-akebono. (Dawn on Mt. Dainichi-dake), *(C.japonica).* The name refers to the "Dainichi Buddha" *"Mahârairocanasatathâga": Kamo Zenji.* 1967, *Kyôto Engei Kurabu, Tsubaki, Tokushû,* No.8; *Encyclopedia of Camellias in Colour,* vol.1, 1972, pl.45, p.53; Seibundô Shinkôsha, 1979, *Senchinshû,* p.94, colour photo: Spherical formed single pink, very small flower, 3-4 cm in diameter, mid-yellow stamen cluster, with white filaments. Blooms early to mid-season. Leaves, broad-oval, blunt, recurved apex, coarse, shallow serrations, gently wavy. See p.72, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated in Takaoka-shi', Toyama Prefecture, Japan. Originated by Zenji Kamo, named by Sukekurô Satô in 1962.

Dainiji. Katayama Catalogue, 1960; *Encyclopedia of Camellias in Colour,* vol. l, 1972, pl.136, p.81 ; Sebundô Shinkôsha, 1979, *Senchinshû,* p.205. Synonym for **Oridono-nishiki.**

Dainikakehashi. (Second Suspension Bridge), (Higo), Tamura, Teruo, 1956, *Higotsubaki Shinkaki,* (9) :33-34: Red spots on white background. Large size. Originated in Japan.

Daintiness. *(C.x williamsii),* Camellia Lodge, 1971, Nursery Catalogue. Trehane Nursery Catalogue, 1972-1973; *New Zealand Camellia Bulletin,* 1975, vol.lX, No.1, P.28, Reg. No.96:

C.saluenensis x C.japonica 'Magnoliiflora'. (**Hagoromo**) Salmon pink, large semi-double of 12 petals, 12 cm across. Yellow anthers, white filaments. Medium, open growth. Flowers mid-season. Colour is in the Red-Purple Group, 62C veined 62A-B. Originated by L.E. Jury, New Zealand. Received RHS., "Award of Merit", 1986, *Rhododendrons with Magnolias and Camellias,* p.87. Colour photo, Front cover, *New Zealand Camellia Bulletin,* vol.X, No.2, 1977.

Daintree Seivers. SCCS., 1962, *Camellia Nomenclature.* Orthographic error for **Daintrie Sievers.**

Daintri Sievers. Trehane Camellia Nursery Catalogue, 1972. Orthographic error for **Daintrie Sievers.**

Daintrie Sievers. *(C.japonica),* Outteridge, 1962, 1000 *Named Camellias in Australia* erroneously as 'Daintree Seivers': Pink. Double centre or waratah form. Large. Late flowering. Originated by Keith Brushfield, Kewita, Gosford, N.S.W., Australia. Orthographic errors: 'Daintri Sievers', 'Daintree Seivers', 'Daintree Sievers'.

Dainty. *(C.japonica),* Overlook Nursery Catalogue, 1939-1940, p.19: "This is the first year we have put this variety on the market. The single flower, 7.5-8.5 cm across is bell-shaped. It has 5 petals of soft pink and numerous, yellow stamens." Originated by Pfingstl, USA. See photo p.164, Sharp's *Camellias Illustrated,* 1957. Synonym: 'Dainty'(South). Two other Camellias have invalidly been named 'Dainty'. See 'Dainty'(California) and 'Dainty' (Oregon).

Dainty Bess. *(C.sasanqua),* Fruitland Nursery Catalogue, 1948-1949, p.32: A salmon pink, medium size, single sasanqua originated by T. Kiyono, USA.

Dainty Bess Rose. *(C.sasanqua),* Fruitland Nursery Catalogue, 1951-1952, p.29. No description. Originated in USA.

Dainty (California). *(C.japonica),* The Pacific Camellia Society, 1945, *Camellia Nomenclature,* p.10 invalidly as 'Dainty'; SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* Sport of **Tricolor,** ('Ezo-nishiki') blush white striped red with fringed and ruffled petals. Vigorous, upright growth. Mid-season blooming. Originated by E.H. Carter, Monterey Park, California, USA. See black and white photo, Hertrich, 1959, *Camellias in the Huntington Garden,* vol.III, p.59. Chinese synonym: 'Xiuli'.

Dainty Dale. *(C.hybrid), American Camellia Yearbook,* 1962-1963, p.216, Reg. No.652: 7 year old hybrid seedling of **Robbie** x **Dr Tinsley** that first bloomed 1957; originated by V.R. James, Aptos, California, USA. Plant growth is upright, dense and rapid with dark green leaves, 9 cm long by 4 cm wide. The loose, peony form to semi-double flower, 11 cm across by 7 cm deep, is shaded orchid pink with yellow anthers and filaments. Blooms have 35 petals and are shaded to a deeped coloured petallage. Flowers mid-season to late.

Dainty Maid. Platt, 1970, RHS., *The Rhododendron and Camellia Yearbook,* p.160. Orthographic error for **Dainty Maiden.**

Dainty Maiden. *(C.japonica),* Waterhouse, 1952, *Camellia Trail,* p.30: Medium size, semi-double to informal double of Rhodamine Pink. (RHS.CC.,527/3). A seedling of **Suibijin,** originated by E.G. Waterhouse, Gordon, NSW, Australia. Received an RHS. "Preliminary Commendation" in 1967. Orthographic error: 'Dainty Maid'.

Dainty Miss. *(C.japonica),* McCaskill Gardens Catalogue, 1948: Soft pink at the base of the petals merging into darker pink at the margins, due to deep pink veining. A medium sized, rose form double with loose, heart shaped petals. Vigorous, spreading growth. Leaves mid-green, elliptic, acuminate, slightly serrate, 8 cm long by 3.6 cm wide. Mid-season flowering. A seedling of **Akebono** originated by V. McCaskill, California, USA. See black and white photo, Hertich, 1959, *Camellias in the Huntington Gardens,* vol.III, p.60. Sport: **Dainty Miss Variegated.**

Dainty Miss Variegated. *(C.japonica),* SCCS., 1960, *Camellia Nomeclature,* p.43 as 'Dainty Miss Var.': A virus variegated form of **Dainty Miss** - Soft pink and white. Originated at McCaskill Gardens, Pasadena, California.

Dainty (Oregon). *(C.japonica),* Portland Camellia Nursery Catalogue, 1948-1949 invalidly as 'Dainty'; SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.31: White. Medium size, formal double. Late blooming. Originated in Oregon, USA.

Dainty Pink. *(C.japonica),* Blackwell Nursery Inc. Catalogue, 1957. No description. Originated in USA.

Dainty Red. Domoto Nursery Catalogue, 1956. A sport of **Dainty (California).** Probably synonymous with **Fred Sander.**

Dainty Rosea. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.52. A sport of **Dainty (California).** Synonym for **Fred Sander.**

Dainty (South). SCCS, 1947, *The Camellia. Its Culture and Nomenclature* as 'Dainty'(So), changed to 'Dainty'(South) in later editions. Synonym for **Dainty.**

Dairan. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.52. Different reading for 'Ohmidare'.

Dairenge. Different reading for **Ôrenge.**

Daisen. (Great Wizard), *(C.rusticana),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.154, black and white photo; Seibundô Shinkôsha, 1979, *Senchinshû,* p.93, colour photo, p.229, description: Dark red. Medium size single, 8 petals, spreading stamen cluster with golden anthers. Blooms early to late. Leaves, large, ovate to elliptic, abruptly acuminate, sharply serrate. Petioles tomentose. Tree vigorous lateral growth. Originated in Mitsuke City, Niigata Prefecture, Japan. Named and released by Yaichi Kawamura in 1966.

Daisen-akadera. (Daisen Red Temple), *(C.japonica),* ICS., 1990, *Japanese Camellia Cultivar List,* p.5: Medium to large size, deep red, tubular single. Blooms mid-season. Originated in the Tottori Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.153 with colour photo; English translation p.105. Small, deep red, tubular to cup-shaped single, slender petals cylindrical stamen cluster. Flowers mid-season to late. Leaves elliptic, medium size. Upright, vigorous growth. Named and released by Nobuo Sasai in 1982.

Daisenbeni. (Red Camellia from Daisen), *(C.japonica), Encyclopedia of Camellias in Colour,* Vol.II ,1978, p.116, pl.262: Small trumpet shaped, red single of 6-7 petals and compact stamen cylindrical cluster, yellow anthers. Blooms early to mid-season. Leaves, long-elliptic, caudate, shallowly serrate, mid-green, raised venation. Selected from wild japonicas growing in the San-in District, Japan and named by Hisatoshi, Nagami. See: p.93 & 229, Seibundô Shinkôsha, 1979, *Senchinshû* and p.194, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Different reading: 'Daisenkô'.

Daisen-fuji-tsukasa-nigô. (Daisen Fujitsukasa No.2), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.164, colour photo and description: Medium size, light red, with a purplish tinge and deep red veins. campanulate single with 5 wide, overlapping, emarginate, reflexed petals, a litle crinkled on the margins, and a slender stamen column with white filaments, joined for the lower third, and yellow anthers. Blooms mid-season. Leaves, bright, strong green, elliptic, apices acuminate, margins serrulate. Originated in the Tottori Prefecture, Japan.

Daisenhaku. (White Camellia from Daisen), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, p.139, pl.335: Small, long, slender, campanulate white single of 6-7 petals and compact stamen cluster, pinched in at top, pale yellow anthers. Blooms mid to late season. Leaves, elliptic, apex acuminate, base wedge shaped, mid-green, serrations obscure. See: pp.93, 229, Seibundô Shinkôsha, 1979, *Senchinshû* and p.23, Yokoyama & Kirino, 1989, *Nihon no*

Chinka. Originated in Tottori Prefecture, Japan, from an old tree in the Yamakage district. Named by Nagami, Hisatoshi, Sakaiminato. Different readings: 'Ôyamajiro', 'Ôyamashiro'.

Daisenkô. Different reading for **Daisenbeni.**

Daisen-seikô. (Pure Light on Mt. Daisen). *(C.japonica),* Seibu Maizuru Institute of Botany, 1987-1988, *Seibu no Tsubaki,* No.319: Trumpet shaped, dark red single with cylindrical stamens. Small to medium size. Originated in San'in District, Japan.

Daisen-wabisuke. (Daisen Wabisuke), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.174, colour photo and description: Very small size, deep red, slender tubular single of 5 petals and small, irregular stamen cluster with some yellow anthers. Blooms mid-season. Leaves deep green, narrow-elliptic to obolanceolate, apices long acuminate, margins shallowly or obscurely serrate. Originated in the Tottori Prefecture, Japan. Note: This cultivar is *a C.japonica* in spite of its name.

Daisetsuzan. (Great Snowy Mountain), (Higo), Jihe'i, Yoshimura's *Higo Tsubaki Meikan,* No.9, 1964; *Encyclopedia of Camellias in Colour,* vol.I, 1972, p.65, pl.88; Seibundô Shinkôsha, 1979, *Senchinshû,* p.93, colour photo, p.229, description: Large, white Higo camellia; 5-7 large outer petals, broad, waved. Large, central burst of stamens, golden anthers, pale yellow filaments. Leaves, dark glossy green, broad-elliptic, finely and sharply serrate, occasionally with yellow variegation. Originated in Kumamoto Prefecture, Japan.

Daishi-no-chôshi. (Fourth tone), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû.* Fourth tone alludes to the yellow colour tone. This remarkable, ancient cultivar was described as a yellow camellia with colour like dead leaves. Large size, single with emarginate petals. See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.114. Different reading: 'Daiyon-no-chôshi'. (Believed extinct.) Originated in Japan.

Daishirotama. A.J. Mackie Nursery Catalogue, 1963, p.18 as 'Dai-Shirotama'. Different reading for **Ô-Shiratama.**

Daishizhige. Shao, Taichong, 1992 *The Observations from the Camellia World,* p.74, No.265. Chinese synonym for the USA *C.japonica* **Mrs D.W.Davis Descanso.**

Daishôhai. (Large Red Cup), *(C.japonica),* Kamo Zenji, 1968, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.8, p.32: Dark red. Large single with higo-like spreading stamen cluster. Originated in Japan by Kamo Zenji. Different reading: 'Ôshôhai'.

Daishuhai. (Large Sake Cup), *(C.japonica),* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.52 as 'Dai-syu-hai'. No description. Originated by Kamo, Zenji in Japan. Believed to be a different cultivar from **Ôsakazuki.**

Daishuhai. (Large Vermilion Cup), *(C.sasanqua),* Hakoda, 1974, *Nôkôdai Nojôhô,* No.6, p.39: Red with a white base, large, single. Blooms early to mid-season. Originated in Fukuoka Prefecture, Japan. Different readings: 'Taishuhai', 'Dai-syuhai'. Chinese synonym: 'Dazhubei'.

Daisy Banks. *(C.japonica),* Gerbing's Azalea Gardens Catalogue, 1943-1944 Supplement: Seedling No.200, named in honor of Mrs J. Banks of Opelika, Alabama. The large, pure white, tissue-like textured flowers, vary in form from loosely peony semi-double to single, with stamens intermingled or prominent. Flowers mid-season to late. Foliage, dull green; growth vigorous and spreading. A white seedling of 'Alba Superba' originated by G.G. Gerbing, Fernandina, Florida, USA, in *Camellias,* 1945: This new white camellia produced flowers of variable formation, 11-12.5 cm across. The petals are waved and very thin, almost transparent. Blooms early. Growth is vigorous, compact and upright. Foliage dull green, deeply serrate.

Daisy Eagleson. *(C.japonica x C.sasanqua), American Camellia Yearbook,* 1961, p.220, Reg. No.546: *Camellia japonica x Camellia sasanqua* **Daisy Eagleson,** a graft chimera sport originated by

Tom Eagleson, Port Arthur, Texas, USA. A japonica seedling scion grafted onto a **Maiden's Blush,** sasanqua understock. Plant growth is rapid, upright and dense with dark green leaves, 7.5 cm long by 6 cm wide. The rose form double flowers. 6 cm across, are light pink and white and have 50 petals. Blooms early to mid-season. See Stewart et al., 1972, 'Camellia 'Daisy Eagleson', a graft chimera', *American Journal of Botany,* vol.59, No.5, pp.515-524.

Dai-syuhai. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.117. Different reading for **Daishuhai.**

Daitairin. Wada, 1941, Hakoneya Nursery Catalogue. Synonym for **Dewatairin.**

Daixing Shiba Xueshi. (Large Type Eighteen Scholars), *(C.japonica),* Yang, 1965, *Camellia Varieties of Taiwan* as 'Tad Hsing Shih-pa-hsueh Shih': Pink, rose form double. Originated in China.

Daiyon-no-chôshi. Different reading for **Daishi-no-chôshi.**

Dajiangshang. Gao, Jiyin, Ltr 30 July 1990. Chinese synonym for **Grand Prix.**

Dajiao Cangyin. (Charming, Great Concealed Silver), *(C.japonica)*, Gao & Zhuang, 1989, *The Camellia* in *China*, p.50, No.308, colour photo, No.178: Large size, 8-10 cm across, rose form double, white with pink patches, 3-4 rows of somewhat irregular emarginate petals, with a centre of small, erect petals, petaloids and golden stamens. Blooms mid-season to late. Leaves deep green, elliptic.

Dajiaokan. Gao, Jiyin, Ltr.30 July, 1990. Chinese synonym for the Japanese **Daijôkan**

Dajin. (Large Brocade), Gao & Zhuang, 1989, *The Camellia in China*. p.76, No.563. Chinese synonym for the Japanese **Ô-nishiki.**

Dajinsui. (Large Golden Tassel), *(C.reticulata)*, Yü and Bartholomew, 1980, *American Camellia Yearbook*, p.10; Feng et al., 1981, *Yunnan Shancha Hua*, p.36-37, colour plate; Feng et al, 1986, *Yunnan Camellias of China*, p.36. colour photo and description: Leaves elliptic to broad-elliptic, 6-8 cm long, 3-4.5 cm wide, apices acuminate, bases cuneate, margins sparsely and shallowly serrate, reclinate in a V shape, margins of bases undulate. Flowers deep red (RHS.CC.53C), diameter 10-11 cm. Petals 7-13, slightly reclinate. Stamens numerous, placed around pistil to form a ring and occupying one third of the flower which gives the appearance of ears of wheat in the centre of the flower. It flowers in mid-season and was selected from an open pollinated plant of *C.reticulata* f. *simplex* in Tengchong, Yunnan, China. Synonyms: 'Early Sunshine', 'Large Golden Tassel'. Different reading: 'Ta-chin-sui'.

Dajixiang. (Good Luck). *(C.japonica), The World's Best Camellia Cultivars,* 1998, p.37 with colour photo; , Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.37 with colour photo; An old cultivar originating in Eastern China. Flowers light red with a few white spots. Anemone to peony form, medium size, 11-16 large petals, broad-round, wrinkled and waved at the edges. Small petals and stamens mixed in the centre. Flowers larger than **Huafoding,** and have less white spots. Leaves mid-green, elliptic. Spreading plant with average growth. Flowers mid-season.

Dajixiang. (Good Luck). Chang, Shao Yun, 1987, *Camellias of Zhejiang*, p.52. Synonym for **Sailuoyang.**

Dakate. Gao, Jiyin, Ltr 25 May 1990. Chinese synonym for **Carter's Sunburst.**

Dakota. *(C.japonica),* ACS, *The Camellia Journal*, June 2004, p.28, Reg. No.2622. An 8-10 year old chance seedling originated by Dr Howard Smith, Gainesville, Fla., USA. Flower is 7.5 cm across, variegated red and white, peony to anemone form with 7 petals and 119 petaloids. Flowers mid-season to late. *American Camellia Yearbook*, 2004, p.91. Plant is upright and open, with average growth rate. Leaves are 9 cm long x 5.7 cm wide.

Dakota Variegated. Camellia Nomenclature 2006, p.33. Variation of published and valid name **Dakota.**

Dale Fitzgerald. *(C.japonica),* ACS, *The Camellia Journal*, Mar. 2008, p.C11 with colour photo, Regn No. 2710. A seedling of **Moonlight Bay**, first flowered 2000. Originated and propagated by Jerry Conrad, Erinon Nurseries, Plymouth, Fla., USA. A 12.7 cm diameter, rose pink, peony form flower with central yellow anthers on cream filaments. Heavy petal texture, and flowers early to mid-season. Plant is upright, dense and vigorous. *American Camellia Yearbook*, 2008, p.109 with colour photo; Dark green leaves 10 cm x 5 cm.

Daleni. Longone Catalogue, 1846. Orthographic error for 'Dahlenii'.

Dali. (Big Oriole). *(C.tunghinensis). Collected Papers*, International Convention on *C.chrysantha;* "A sum-up Report" by Cheng, Jinshu et al. A special clone of *C.tunghinensis* selected in the wild for breeding purposes.

Dali Baozhu. Fang, 1930, *Tiannan Chahua Xiaozhi.* Synonym for **Dali Cha.**

Dali Butterfly Wings. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Western synonym for **Dali Diechi.**

Dali Camellia. Feng et al., 1981, *Yunnan Shancha Hua,* p.143. Synonym for **Dali Cha.**

Dali Cha. (Dali Camellia), *(C.reticulata),* Yü, 1950, RHS., *Camellias and Magnolias Conference Report,* pp.13-25 as 'Talicha' or 'Queen of Tali'. Feng et al., 1986, *Yunnan Camellias of China,* p.98, colour plate and description: Leaves large, thick, broad-ovate to elliptic-ovate, apices acute or acuminate, bases rounded or broad-cuneate, flat or slightly raised, margins undulate, 7.6-10 cm long, 5-6 cm wide. Flowers bright red, becoming lighter after opening (RHS.CC.53D) diameter 12-22 cm, forming a spherical corolla. Petals about 30 in 4-5 whorls, outer petals flat, inner whorls folded, rolled and erect, forming a globular flower. Stamens numerous, united to form a tube or divided into several groups by rolled petals. Pistils mostly well developed, a few rudimetary, fertile. The flowers af this cultivar are large and gorgeous and are the largest amongst the Yunnan reticulatas with a diameter up to 22 cm. It has large, thick leaves, strong axillary bud growth and a loose branching pattern. It flowers early to mid-season. There is a large, old tree of this cultivar in Dapingdi, Guangtong, Yunnan, estimated to be several hundred years old. Western synonym: 'Tali Queen'. Other synonyms: 'Tali Camellia', 'Queen of Tali', 'Dali Camellia', 'Dali Baozhu'. Different readings: 'Ta-li Ch'a', 'Dalicha'.

Dali Diechi. (Dali Butterfly Wings), *(C.reticulata),* Yü & Bartholomew, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.20; Feng et al., 1986, *Yunnan Camellias of China,* p.64 colour plate and description: Leaves ovate to broad-ovate, flat or slightly reclinate, apices short pointed or acute, bases obtusely rounded or broad-cuneate, 6-7.7 cm long, 4.5-5.8 cm wide. Flowers deep pink (RHS.CC.53C-D), diameter 10-13 cm. Petals about 16 in 3-4 whorls, outer whorls large, slightly curved, inner whorls smaller, curved. Stamens numerous, inconspicuously divided into several groups placed amongst curved petals. Pistils well developed, fertile. This is a new cultivar selected from seedlings of **Dali Cha** by researchers of the Kunming Botanic Gardens. Flowers early to mid-season. Synonyms: 'Dali Butterfly Wings', 'Tali Butterfly Wings', 'Hudiecha'. Different reading: 'Ta-li Tieh-ch'ih'.

Dali Mudan. (Dali Peony), *(C.reticulata),* Fang, 1930, *Tainnan Chahua Xiaozhi:* Similar to **Mudan Cha** but the petals are simpler. Originated in Yunnan, China.

Dali Peony. Bartholomew, 1982, *American Camellia Yearbook,* p.150. Synonym for **Dali Mudan.**

Dali Precious Pearl. Bartholomew, 1982, *American Camellia Yearbook,* p.150. Synonym for 'Dali Baozhu'.

Dallas. *(C.reticulata),* Kramer Bros. Nursery Catalogue, 1977: Orchid pink. Large semi-double to loose peony form. Open growth. Flowers mid-season to late. A chance reticulata seedling originated by Kramer Bros, Upland, California, USA.

Dallas Pratt. *(C.japonica), American Camellia Yearbook,* 1974, vol.II, p.231, Reg. No.1311: A 9 year old chance seedling that first bloomed 1966; originated by Mrs W.K. Laughlin, Aiken, South Carolina, USA. Plant growth, upright, medium in rate with dark green leaves, 10 cm x 5 cm. The anemone form, **Elegans** type bloom is medium pink. Average size, 11 cm across by 6 cm deep with 12 petaloids, yellow anthers and white filaments. White splashed petaloids. Blooms early to mid-season.

Dallas Price. *(C.reticulata), American Camellia Yearbook,* 1984, p.176, Reg. No.1937: A large, dark red, rose form double to semi-double *C.reticulata* ('Crimson Robe' (**Dataohong**) x **Arch of Triumph**), mid-season to late flowering. Originated by Frank Pursel, Oakland, California, USA. The 6 year old seedling first bloomed 1978. Average flower size 12.5 cm wide by 4 cm deep. Plant growth is upright and rapid in rate with dark green leaves, 11 cm x 6 cm.

Dalleni. Baumann, Mulhouse Catalogue, 1841-1842, p.13. Orthographic error for Dahlenii', synonym for **Rathmoreana.**

Dallich. *(C.japonica),* Seidel, 1846, Pflanzen Catalog , p.6. Originated in Germany. No description . (Believed extinct).

Dalu Jiuqu. (Nine Bends in Mainland), (*C.edithae* hybrid). Gao, Jiyin, 2007, *The Identification ....Outstanding Camellias,* p.306 with colour photo; Originated in Fujian Province, China. Previously known as 'Jiuqu', and renamed by Professor Gao to distinguish it from another 'Jiuqu', belonging to Taiwan, now named **Taiwan Jiuqu.** Flowers deep pink, formal double, small to medium size, petals obcordate, regularly arranged, tips pointed, sparse flowering. Leaves dark green, cardioid at the base, sunken veins, long pubescence on back surfaces. Spreading plant, tender shoots with long and dense pubescences. Vigorous growth. Late flowering.

Dama de Pao. Ingram, 1951,-American Camellia Yearbook-, p.97. Orthographic error for **Dama do Paço.**

Dama de Tollo. *(C.japonica) Camelia*, Soc. Española de la Camelia, Dec. 2011, p.41 with colour photo; A medium size, rose form double, 7.5-9.5 cm diameter x 4 cm deep with 40-55 petals and 1-7 central petaloids. 0-11 stamens with cream filaments and yellow anthers. Flower colour red (RHSCC 054A). Leaf dark green (RHSCC 147A), 8 cm x 4.5 cm, elliptic, margins serrated, apices pointed. Late flowering. A seedling of **Katie**, first flowered 2005. Originated by Leonor Magariños, Viveros Rio Tollo, Spain.

Dama del Pazo. *(C.japonica),* Escuela de Agricultura de Pontevedra , 1882, Catalogue: Formal double. Delicate pink with paler centre. Originated in Portugal. Spanish translation of **Dama do Paço.** (Before Nomenclature Rules would have made illegal).

Dama do Paço. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.30, & No.9, 1872-1873,p.42: Formal double. Delicate pink with paler centre, striped with white. Originated in Portugal. Spanish translation; 'Dama del Pazo'. Orthographic errors: 'Dama de Pao', 'Dama do Passo'.

Damana Novella. Waterhouse, 1952, *American Camellia Yearbook,* p.31. Orthographic error for **Damiana Novella.**

Damanao. (Large Cornelian), (*C.reticulata*), *Pa Chung Hua P'u,* 1621; Fang, 1930, *Tiannan Chahua Xiaozhu* as 'Hongbai Manao Shizitou', (White-red Cornelian Lion-head). The shape is like

'Jiuxin Shipaban'. When red predominates it is called 'Hongmanao', (Red Cornelian) or 'Xueshi', when white predominated it is called 'Baimanao', (White Cornelian). This camellia is a virus variegated form of **Shizitou,** ('Lion Head'). As the white variegation is not stable, names for selected clones cannot be acepted as valid and can only be regarded as synonyms. Yü in the RHS. *Rhododendron and Camellia Conference Report,* 1950 gave the names 'Tarmarnao' or 'Large Cornelian'. It was originally released in the USA, erroneously as 'Lion's Head'. See colour plate facing p.7, 1950 *American Camellia Yearbook* and p.153, Macoboy, 1981, *The Colour Dictionary of Camellias.* The most complete description and illustration is given in Feng et al., 1986, *Yunnan Camellias of China,* p.96: Leaves oblong-ovate to oblong-obovate, apices acuminate, bases cuneate, slightly reclinate, 6-9 cm long, 3.3-5 cm wide. Flowers bright red with white, diameter 12-13 cm. Petals about 30 in 4-5 whorls, outer whorls flat, inner whorls folded, curved, erect, forming a spherical flower centre. Stamens numerous, divided into several groups by folded petals. Pistils often rudimentary. Fertile. The branches and leaves are very similar to those of **Shizitou**. The only difference is that the flower colour of **Damanao** is red with white. Flowers mid-season. Synonyms: 'Hongbai Manao Shizitou', 'Xueshi', 'Baimanao', 'Hongmanao', 'Manao', 'Large Cornelian', 'Cornelian'. Different readings: 'Ta-ma-nao', 'Tarmarnao', 'Pai-ma-nao', 'Hung-ma-nao'. Originated in Yunnan, China.

Dame Silvia. *(C.japonica hybrid). New Zealand Camellia Bulletin,* March 2002, Issue No.141, vol.XXII, No.5, P.13, Reg. No.442. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between C.hybrid **Fragrant One** x *C.japonica* **Scentasia** which first flowered in 1999. The flower, 10 cm diameter x 5 cm deep, may be variable in form, the registration offered describing it as semi-double, whereas the samples and photos provided best fitted anemone form. On the samples supplied, there were about 12 petals and 25 petaloids mixed with partly-visible stamens, and a clear separation between the petal ring and the stamen/petaloid mass. Colour is an unusual bright scarlet pink, most closely matched to RHS.CC.52A, and the petals have a distinctive heavy texture. There is a moderate, floral, rose-like scent. The plant is upright, and of average density and growth rate with dark green leaves 9 cm long x 5 cm wide. Flowers mid-season to late.

Damiana. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.10. No description. Originated in Italy. (Believed extinct.)

Damiana Novella. *(C.japonica),* de Jonghe, 1851, *Traité de la Culture du Camellia,* p.103 as 'Damiananovella': Formal double, imbricated. A beautiful purplish red, with a bright centre. Said to have been originated by Frére Danien V. Corsi, Italy. Luzzatti, 1851, *Collezione di Camelie,* p.31: Circumference, bright rose pink, the petals in the middle, bright, central deep coloured with a line of white; perfectly imbricated, often in a spiral form. It often has flowers that are all striped with white. Orthographic errors: 'Daminia Novella', 'Comiana Novella', 'Bamiano Novella', 'Damana Novella', 'Damiana Novello'. Originated in Italy according to Verschaffelt, 1854, *Nouvelle Iconographie,* Book X, pl.I as 'Damina Novella', where it is described as: Medium sized, imbricated, outer petals ample, rounded, recurved, a deep cherry red with a few delicate white stripes; intermediate petals, smaller, oblong, bilobate, their red colour intersected at the centre by a white streak; those central, smaller, lanceolate, full and of the same colour as the exterior ones.

Dancing Blaze. *(C.hybrid)* ACS, *The Camellia Journal*, Dec. 2010, p.29 with colour photo; Regn No.2798. Originated by Neville Haydon, Papakura, New Zealand, registered by E. Hulyn Smith, Valdosta, Ga., USA. ACS, *Yearbook* 2010, p.75 with colour photo. A 12 year old cross of **Peggy Burton** x **Black Magic**, which first flowered 2004. Propagated by Mark Crawford, Valdosta. Spreading habit with slow growth rate. Mid-green leaves are 9 cm x 5 cm. Medium size flower is a dark red semi-double, 8.2 cm diameter x 6.2 cm height, with yellow anthers and red filaments. Flowers have a heavy, waxy, glowing texture.

Dancing Flame. *(C.hybrid). New Zealand Camellia Bulletin*, July 2010, p.10; Regn No.486; A cross of **Peggy Burton** x **Black Magic**, made in 1999 and first flowered 2002. Plant is upright, open foliage when young, and of medium growth rate. Mid-green leaves are 8 cm x 4 cm, with crinkled and serrated margins like **Black Magic**. Flower is semi-double, 9 cm x 5 cm, with 16-18 petals and occasionally a few petaloids. Colour is a rich, deep scarlet (RHS.CC. 46B) and the upstanding petals are fluted and frilled at the edges. Stamens are interspersed with the petals and have cream filaments and gold anthers. Originated by Neville Haydon, Takanini, New Zealand.

Dancing Girl. *(C.japonica),* Hillcrest Nursery Catalogue, 1958. No description. Originated in USA.

Illustrated and described in Verschaffelt, 1858, *Nouvelle Iconographie,* Book II, pl.III: The blossoms, larger than average, are composed of many small, rounded petals, regularly imbricated, pure white with a few delicate pink stripes. Foliage small. Originated by Danovaro, Genoa, Italy. Orthographic errors: 'De Novaro', 'De Novara', 'Da Novarro', 'Denavaro', 'Danovara', 'Da Novaro'.

DAN's Alice. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.9 with colour photo; Regn No.627; A chance seedling with medium, upright, bushy growth. Elliptic leaves. New growth bronze, turning dark green, almost black, finally maturing to very dark green. Flowers early to late sasanqua season. Perfumed, small, single, magenta blooms have a spreading ring of cream stamens. Broad petals are also crinkled and notched. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Amanda. *(C.sasanqua)* C. Aust., *Camellia News,* No.184, Spring 2010, p.26 with colour photo; Regn No.650-N. Chance seedling, first flowered 1991. Fragrant, medium size flowers, white with pink edge, single to semi-double. Spreading cluster of cream filaments with yellow anthers. Flowers early to very late sasanqua season. Irregular, fluted and wavy petals are also ruffled, crinkled and notched. Bush is dense, upright and fast growing, with small, oblong leaves. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Anneka. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.9 with colour photo; Regn No.632N. A chance seedling, first flowered 1987. Slow, upright, dense and bushy growth. Dark green elliptic leaves. Flowers mid to late sasanqua season. Fragrant, medium size, white blooms with pale lavender edges and lavender reverse begin as pink buds. Flowers open as formal double, maturing to informal double or semi-double form. Petals broad, smooth and notched. Stamens in a flared column with some petaloids. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Annelise. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.10, colour photo p.9; Regn No.634N; A chance seedling, first flowered 1990. Fast, upright, spreading growth, oblong leaves. Fragrant, medium size flowers are pale pink. Flowers mid to very late sasanqua season. Broad petals are notched and slightly crinkled. Flared, creamy white filaments and yellow anthers. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Audrey. *(C.sasanqua)* C. Aust., *Camellia News,* No.184 Spring 2010, p.26 with colour photo; Regn No 651-N. Seedling of **Dan's Sally**, male parent unknown, first flowered 1995. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust. Medium size, fragrant, semidouble flowers produced early to late sasanqua season.Medium growth on a spreading, vase shaped plant, with glossy, leathery, obovate shaped leaves in average density. Pink petals are twisted and notched, and RHSCC 65A at the centre, shading to 65D at the edges. Spreading ring of yellow filaments and stamens may have occasional petaloids.

DAN's Barbara. *(C.sasanqua),* C. Aust. *Camellia News,* No.191, Autumn 2013, p.28 with colour photo. Regn No.668-N. Chance seedling of **Plantation Pink**. Slightly fragrant, single, small to medium size. White blooms have broad, crinkled incurved petals, with occasional lavender tips, and a central flare of pale yellow stamens. Fast growing, spreading plant, elliptic shaped leaves with acute tip. Originator Kurt Boesen, Dancraft Nurseries, NSW., Aust.

DAN's Birgitte. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.9 with colour photo; Regn No. 626N; A tall, weeping plant, with upright bushy growth at medium rate. Elliptic leaves. Blooms early to late sasanqua season. Fragrant, small, informal double flowers are silvery pink and have very few stamens. Petals are irregular, slightly notched, and may be wavy, fluted, twisted. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Carolyn. *(C.sasanqua),* C. Aust. *Camellia News,* No.191, Autumn 2013, p.28 with colour photo; Regn No.669-N. A chance seedling, released in 2009. Small, fragrant semidouble, with irregular broad, crinkled and notched petals, dark pink (RHSCC 72C), with purple edges (RHSCC 70B). Flared centre of yellow filaments and golden anthers occasionally has a few mingled petaloids. Plant is fast growing, very dense, upright and bushy. Leaves are leathery, matt, elliptic, apex acuminate. Early flowering. Originator Kurt Boesen, Dancraft Nurseries, NSW., Aust.

DAN's Cassandra. *(C.sasanqua),* C. Aust. *Camellia News,* No.191, Autumn 2013, p.29 with colour photo, Regn No.670-N. A chance seedling of **Plantation Pink,** released 2009. Small, lollypop pink single, 5-6 petals. RHSCC 62B at centre and 62A at edges. Petals crinkled and deeply notched. Flared stamens with white filaments and golden anthers. Plant is upright and fast growing. Leaves are obovate with an acuminate apex. Long flowering season from autumn. Originator Kurt Boesen, Dancraft Nurseries, NSW., Aust.

DAN's Chloe. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.10, colour photo p.9; Regn No.635N; A chance seedling of **Plantation Pink**, first flowered 1991. Fast, upright, dense, bushy growth, elliptic leaves. Fragrant, medium size, single blooms are white, with occasional pink edges. Petals are broad, reflexed, notched, with crinkled edges. Stamens are cream in a flared column. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Connie. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.10 with colour photo; Regn No.642N; A chance seedling of *C.sasanqua* **Setsugekka,** first flowered 1992. Strong, fast, upright, dense, bushy growth, with curled, leathery, obovate leaves. Strongly scented, medium size, semi-double flowers are white, outer petals having a dark cerise edge, inner petals a lighter edge. Petals are ruffled, and may also be fluted or wavy, giving height to the flowers.. Solid cluster of filaments are cream, with gold anthers, and is slightly spread, with an occasional petaloid. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Corinne. *(C.sasanqua),* C. Aust. *Camellia News,* No.191, Autumn 2013, p.29 with colour photo; Regn. No.671-N. A chance seedling of **DAN's Hanne**, released 2009. Slightly fragrant, large single blooms. Unusual vivid dark crimson colour (RHSCC 61A). 6 Broad petals are deeply notched. Flared ring of pale yellow stamens with split pistil. Plant is upright and fast growing, with dark green, elliptic leaves, acuminate apex. Originator Kurt Boesen, Dancraft Nurseries, NSW., Aust.

DAN's Elsa. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.9 with colour photo; Regn No.629N; A chance seedling, parentage unknown, first flowered 1985. Medium, upright and spreading, bushy growth. Leaves elliptic. Flowers mid to late sasanqua season on arching branches. Fragrant, medium size semi-double blooms are pale pink with a silvery sheen and a spreading ring of yellow stamens. Petals are narrow, crinkled, creped, notched, and are translucent at the outer edges. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Elvi. *(C.sasanqua),* C. Aust. *Camellia News,* No.191, Autumn 2013, p.29 with colour photo; Regn No.672-N; A chance seedling of **DAN's Alice**, released 2009. Fragrant, small to medium size blooms, single, with a silvery white centre and dark pink to cerise edges. The 5 broad petals are crinkled and notched. Flared column of pale yellow stamens. Slow, upright, compact growth. Leathery, elliptic leaves, acuminate tips. Originator Kurt Boesen, Dancraft Nurseries, NSW., Aust.

DAN's Emily. *(C.hiemalis).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.9 with colour photo; Regn No.628N. A chance seedling of **Rose Ann (Matthews),** first flowered 1983. Fast, upright, dense, bushy growth. Large, obovate leaves, flowers mid to late sasanqua season. Fragrant,

medium size, single, rose pink (RHS.CC.66C) blooms with large, rounded, creped and crinkled petals, slightly paler at the centre. Occasional petaloid, and flared column of pale yellow stamens. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Emma. *(C.sasanqua),* C. Aust. *Camellia News,* No.191, Autumn 2013, p.29 with colour photo; Regn No.673-N; A chance seedling of **DAN's Hanne**. Small to medium size, fragrant, single with 5 to 6 broad petals, which are creped, slightly notched, solid mid-pink. Central flare of pale yellow filaments and yellow anthers. Fast, spreading, dense and pendulous growth. Leathery, elliptic leaves with acuminate tips. Early flowering. Originator Kurt Boesen, Dancraft Nurseries, NSW., Aust.

DAN's Hanne. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.10, colour photo p.9; Regn No.633N; A seedling of unknown *C.sasanqua* 'Hogoku Ruby' purchased around 1975 in Melbourne. Strong, fast growing, bushy, upright plant with elliptic leaves. Flowers mid to very late sasanqua season. Single to semi-double, red blooms with broad, crinkled and notched petals, moired with a lighter centre. Spreading ring of yellow stamens. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Helena. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.11, colour photo p.10; Regn No.645N; A chance seedling of **Dan's Hanne**, first flowered 1995. Slow, dense, bushy growth of upright-vase form, with elliptic leaves. Flowers mid to late sasanqua flowering season. Highly perfumed, medium size, single blooms have long narrow, notched, petals, pink (RHS.CC.68B), and have a somewhat sparse, spreading ring of cream filaments with yellow anthers. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Janice. *(C.sasanqua).* Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, 1997, p.1: White with pale cerise margins, medium size single. Fragrant. Slow to medium, dense growth. C. Aust, *Camellia News*, No. 183 Winter 2010, p.9 with colour photo; Regn No.630N; Slender growth with arching branches. Early to very late sasanqua season. Petals crinkled and twisted. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Jessica. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.11, colour photo p.10; Regn No.644N; A chance seedling of **Jennifer Susan,** first flowered 1993. Fast, upright, dense, bushy growth, with shiny, dark green leaves. Flowers mid to late sasanqua season. Strongly fragrant, medium size, anemone to informal double flowers are white with the occasional pink edge. Petals are irregular and notched. Cream filaments with yellow anthers dispersed among the central petaloids. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Joan. *(C.sasanqua).* C. Aust, *Camellia News*, No. 183, Winter 2010, p.10, colour photo p.9; Regn No.636N; Upright, dense, bushy growth at medium rate. Ovate leaves. Flowers mid to late sasanqua season. Large, fragrant, semi-double blooms are lavender pink, with irregular, ruffled and crinkled petals. Spreading ring of yellow stamens. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Johanna. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.11, colour photo p.10; Regn No.647N; A chance seedling of **Dan's Hanne,** first flowered 1997. Fast, upright, dense, bushy growth, with elliptic and distinctly textured leaves. Blooms mid to late sasanqua flowering season. Strongly perfumed, small, single to semi-double flowers have cream centred petals shading to cerise (RHS.CC.74D) at the edges, with a flared column of yellow stamens. Petals are broad, flat, crinkled and notched. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Kate. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.10 with colour photo; Regn No.637N; A chance seedling, first flowered 1991. Very slow, compact, bushy growth. Oblong leaves. Flowers early to very late sasanqua season. Pink buds open into highly

perfumed, small, cupped, single blooms, which are white flushed pink, with a cerise edge. Spreading ring of yellow stamens. Petals broad, cupped and notched Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Lauren. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.10 with colour photo; Regn No.638N; A chance seedling of **Plantation Pink**, first flowered 1991. Fast, upright, dense, bushy growth with elliptic leaves. Blooms mid to late sasanqua season. Fragrant, small, single to semi-double flowers are white, with dark pink to lavender edges. Petals are irregular, notched, ruffled and creped. Cream filaments with yellow anthers in a flared column. Occasional petaloids. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Mary. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.11, colour photo p.10; Regn No.643N; A chance seedling of *C.sasanqua* **Setsugekka**, first flowered 1992. Dense, slow growth, producing a short, stocky plant, with matt, elliptic leaves. Flowers mid to late sasanqua season. Slightly frgrant, miniature, single to semi-double blooms have white to pale pink centres, with petals edged completely around with purplish pink (RHS.CC.66C). Flared column of yellow filaments and gold anthers. Broad, flat and creped petals. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Melanie. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.10 with colour photo; Regn No.639N; A chance seedling of **Dan's Alice**, first flowered 1991. Fast, upright, bushy growth, with elliptic leaves. New growth has a weeping tendency. Blooms mid to late sasanqua season. Highly perfumed, medium size, single blooms are white to very pale pink at the centre, shading to dark pink or cerise at the edges. Petals are broad, rounded, slightly incurved and creped at the edges. Flared column of cream stamens with a split pistil. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Meredith. *(C.sasanqua).* C. Aust., *Camellia News*, No.192, Winter 2013, p.28 with colour photo; Regn No. 677N; A chance seedling. Medium to large, semidouble, fragrant, pure white blooms have notched, crinkled, elongated petals, which may have reflexed edges. Spreading ring of pale yellow filaments with golden anthers. Plant is spreading, semi-prostrate, and has an average growth rate. Very dense foliage with small elliptic leaves. Early flowering.Flower similar to **Setsugekka**, but a clearer white. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Meta. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.9 with colour photo; Regn No. 625N; A chance seedling, 1981, from **Setsuggekka.** Medium, upright, dense, bushy growth. Leaves shiny, dark green, elliptic. Perfumed, white, medium size, cup-shaped semi-double blooms have a flared column of yellow stamens with golden anthers Occasionally some pink on the reverse of petals. Broad petals are also incurved, creped and notched. Flowers early to late sasanqua season Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Mona. *(C.sasanqua),* C. Aust. *Camellia News,* No.191, Autumn 2013, p.29 with colour photo; Regn No.674-N; A chance seedling of **DAN's Alice**, released 2009. Very fragrant, small to medium size blooms, single, light red. Centre of spreading yellow stamens. Broad crinkled petals. Bushy spreading plant, average growth rate. Leaves obovate with acuminate tips. Originator Kurt Boesen, Dancraft Nurseries, NSW., Aust.

DAN's Natalie. *(C.sasanqua).* C. Aust, *Camellia News*, No. 183, Winter 2010, p.11, colour photo p.10; Regn No.646N; A chance seedling of **Dan's Hanne**, first flowered 1996. Medium, upright growth, with elliptic leaves. Blooms early to late sasanqua flowering season. Highly perfumed, small, informal double flowers. Petals are broad, irregular, notched, and pink fading to silvery pink at the centres. Stamens are multi-clustered and dispersed among the petaloids. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Nicoline. (C.sasanqua). C. Aust., *Camellia News*, No.192, Winter 2013, p.28 with colour photo; Regn No. 678N. Chance seedling of **DAN's Hanne**, released in 1989.Fast-growing, upright, bushy plant with dense foliage. Leaves ovate with acute tip. Slightly fragrant, small to medium size, semidouble blooms. Long flowering season. Petals are crimson (RHSCC 67C) with dark crimson (67A) edges, wavy, ruffled, slightly notched, with crimped and slightly incurved edges. Spreading ring of bright yellow anthers. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Nina. *(C.sasanqua).* C. Aust, *Camellia News*, No. 183, Winter 2010, p.9 with colour photo; Regn No.631N; A chance seedling first flowered 1986. Dense, spreading growth at medium rate. Small elliptic leaves with inconspicuous veining. Blooms mid to late sasanqua season. Fragrant, miniature cup shaped single blooms are porcelain pink with a fine paler pink to white edge. Petals are incurved and notched. Spreading ring of yellow filaments with golden anthers. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Rebecca. *(C.sasanqua).* C. Aust, *Camellia News*, No. 183, Winter 2010, p.11, colour photo p.10; Regn No. 648N; A chance seedling of **Dan's Hanne,** first flowered 1998. Vigorous, upright, dense, bushy growth, with large elliptic leaves. Flowers mid to late sasanqua flowering season. Fragrant, medium size, informal double blooms are shell pink (RHS.CC.66D) with a darker cerise centre (RHS.CC.66B). Petals are irregular, broad and notched. Stamens are multi-clustered and dispersed. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Sally. *(C.sasanqua)* C. Aust., *Camellia News***,** No.184, Spring 2010, p.26 with colour photo; Regn No.649-N. Chance seedling, first flowered 1988. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust. Medium, spreading, dense growth, leaves elliptic. Fragrant, medium size, single flowers, slightly cupped, pastel pink (RHSCC 62B). Flared column of creamy yellow filaments with gold stamens. Flowers early to late sasanqua season. Petals are broad, rounded, crinkled and also incurved and notched.

DAN's Simone. C. Aust. *Camellia News*, No.191, Autumn 2013, p.29 with colour photo; Regn No. 675-N; A chance seedling of **Jennifer Susan**, released 2009. Small to medium size single, fragrant, crimson red. Spreading orange/yellow stamens. The 6 broad petals are smooth and notched. Fast growing, upright plant. Large, glossy, dark green elliptic leaves with acuminate tips. Originator Kurt Boesen, Dancraft Nurseries, NSW., Aust.

DAN's Sonya. *(C.hiemalis).* C. Aust, *Camellia News*, No.183 Winter 2010, p.10 with colour photo; Regn No.640N; A chance seedling of *C.hiemalis* **Shishigashira,** first flowered 1991. Upright, compact, slow growing plant with masses of small to medium size, semi-double to informal double blooms. Pink buds open to a white flower with a strong, sweet fragrance. Irregular, broad petals are waved, and may also be fluted or twisted. Filaments are cream in a flared column, with an occasional petaloid. Glossy, dark green, elliptic leaves. Early and extended sasanqua flowering season. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Stephanie. *(C.sasanqua),* C. Aust., *Camellia News*, No.192, Winter 2013, p.28 with colour photo; Regn No. 679N; Chance seedling of **Plantation Pink**. Upright bushy plant with average growth rate. Elliptic leaves with acute tip. Small to medium size, single, very fragrant. White blooms shade to a crimped cerise edge, long flowering season. Rounded petals are notched. Spreading ring of pale yellow stamens. Originator Kurt Boesen, Dancraft Nurseries, NSW., Aust.

DAN's Susanne. *(C.sasanqua).* C. Aust., *Camellia News*, No. 184, Spring 2010, p.26 with colour photo; Regn No.652-N. Seedling of **Dan's Joan**, male parent unknown, first flowered 2000. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust. Medium size, fragrant, very dark silvery pink (RHSCC 66B) single blooms. Broad, creped, reflexed and

notched petals, and a cluster of large spreading stamens with white filaments and golden anthers. Fast, upright, bushy growth, with leathery, elliptic leaves. Flowers early to late sasanqua season.

DAN's Susie. C. Aust. *Camellia News,* No.191, Autumn 2013, p.29 with colour photo; Regn No.676-N; Chance seedling, parentage unknown, Fragrant, small to medium size blooms. Long flowering period. Pink buds open to white blooms with irregular petals, occasional pink edge. Semidouble to irregular semidouble. Dispersed petaloids may breach the flared group of cream to pale yellow stamens. Slow growing, spreading plant. Elliptic leaves with acuminate tips.

DAN's Tommelise. *(C.sasanqua)* C. Aust, *Camellia News,* No.184, Spring 2010, p.26 with color photo; Regn No.653-N. Chance seedling, first flowered 2001. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust. Very dark pink to red, miniature, fragrant, elegans (anemone) form blooms, sometimes with a splash of white. Flowers early to late sasanqua season. Petals are broad, notched, and creped towards the outer edges. Very few stamens. Very slow, spreading and weeping growth, with very small elliptic leaves. Ideal as a low hedge.

DAN's Valerie. *(C.sasanqua),* C. Aust., *Camellia News,* No.192, Winter 2013, p.28 with colour photo p.28; Regn No. 680N. Chance seedling of **DAN's Hanne**. Small to medium size, irregular semidouble with petaloids, lovely fragrance. Petals are marbled pink/lavender, crinkled and notched, the top layer often twisted. Pale yellow stamens are dispersed and multi-fascicle. Plant is fast growing, upright and bushy. New foliage very dark green, almost black. Leaves elliptic with acute tip. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Virginia. *(C.sasanqua),* C. Aust., *Camellia News,* No.192, Winter 2013, p.29 with colour photo; Chance seedling of **DAN's Hanne.** Fragrant miniature blooms, less than 6.5cm diameter. Irregular semidouble through to elegans form. White, with dark pink tipped or edged petals. Petals irregular, generally broad, wavy and incurved. Pale yellow filaments and bright yellow anthers with petaloids interspersed. Late flowering. Dense, stocky plant with slow growth rate. Leaves small, elliptic with acuminate tip. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

DAN's Zoe. *(C.sasanqua).* C. Aust, *Camellia News,* No. 183, Winter 2010, p.10 with colour photo; Regn No.641N; A chance seedling of **Jennifer Susan,** first flowered 1991. Fast, spreading, bushy growth, with shiny, leathery, elliptic leaves. Fragrant, small, lavender pink, semi-double blooms are produced mid to late sasanqua flowering season. Petals are wavy and slightly notched. Cream filaments in a flared column with an occasional petaloid. Originated by Kurt Boesen, Dancraft Nurseries, Wilberforce, NSW, Aust.

Danse Jiuxin. (Light Coloured Nine Hearts), *(C.reticulata),* Chuang, 1959, *Yunnan Shanchahua.* Listed by Ikeda, 1976, *American Camellia Yearbook,* p.144 as 'Tansechiuhsin'. Different reading: 'Tan-se Chiu-hsin'. No description. Originated in China.

Dansi. Luzzatti, 1855, *Collezione di Camelie,* p.13. Synonym for **Dryade.**

Dante. *(C.japonica),* Luzzatti Catalogue, 1853. No description. Franchetti, 1855, *Collezione di Camelie,* p.24: Ivory white, with vivid carmine stripes and spots. Well imbricated. Verschaffelt, 1857, *Nouvelle Iconographie,* Book IX, pl.III: Its blooms are of the largest size, convex, pure white, with a few small, delicate pink stains and stripes. Its petals are rounded, full and apiculate; at the centre they form **a** compact rosette. Received a medal in 1857 when exhibited at Brussels. Synonym: 'Le Dante'. Not to be confused with the Japanese cultivar **Kagiri,** invalidly known as 'Dante' in the USA. Originated by Negri, Milan, Italy.

Dante. Gerbing's Azalea Gardens Catalogue, 1940-1941. An invalid synonym for **Kagiri** in USA.

Dante's Inferno. *(C.japonica),* Stowe, 1951, *American Camellia Yearbook,* p.283: An incomplete double, 10 cm across x 6 cm deep. The colour is scarlet. It has bright yellow stamens intermixed with petals in the centre of the flower. The plant is a medium to slow, compact grower. Registered in *American Camellia Yearbook,* 1956, Reg. No.275. Originated by A.M. Stowe, Pensacola, Florida, USA.

Dantiflora. *(C.japonica),* Del Lungo & Girardi, 1928, *Le Camelie*, p.159: Bicoloured Camellia. Flowers with red ground, variegated or striped with white. Single. Originated in Italy.

Danuo. Gao, Jiyin, 2007, The *Identification....Outstanding Camellias,* p.411; Chinese synonym for the Italy *C.japonica* **Danovaro.**

Danyu. (Red Jade). *(C.sasanqua). The World's Best Camellia Cultivars,* 1998, p.164 with colour photo; and Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.338 with colour photo; Originated in the areas of Jinhua and Wenzhou, Zhejiang, China. Flower red blotched white, slightly fragrant, semi-double, medium size with 25-30 petals, nearly rounded, slightly waved at edges. Some short yellow stamens in the centre. Leaves dark green, small elliptic, shiny. Plant compact with vigorous growth. Flowers early to mid-season.

Danzador. *(C.japonica),* Wylam, 1957, *American Camellia Yearbook,* p.25, A striking, bold pattern of bright dots and dashes against a blush background. The large, somewhat flat, flower has a graceful flare to the petals. It is an 1947 seedling of unknown parentage. The plant has a slow, compact habit; branches slightly pendulous. Its medium sized foliage is dark green. Flowers mid-season to late. Originated by Mrs S.M. Miller, El Cajon, California, USA.

Danzhi. (Red Iris), *(C.japonica)* Wang & Yu, 1981, *Shancha Hua:* Medium sized, semi-double, white with pink stripes to self pink, 3-4 rows of rounded, emarginated petals with an irregular stamen centre. Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.143: Young twigs purplish red; leaves glossy, deep green, long-elliptic, 5.9-6.8 cm long x 4 cm wide, slightly oblique, convex at apex, broad cuneate at base, sharp, uniform serrations, veins depressed but distinct. Flowers semi-double, lotus type, variegated, base colour light pink to white, white lineate on light pink, pink lineate on white, 8.5-9 cm across with 22-24 petals in 3-4 rows, slightly incurved at first, recurved later, slightly convex at apex. Stamens about 50 in 4 or 5 fascicles, joined as short cylinders, clustered at the centre. Pistils rarely fertile. Buds peach-shaped, green. Blooms mid-season to late. A sport of **Baisan Xueshi.** Originated in China.

Danzhuang Xizi. (Pale faced Western Child), *(C.japonica),* Wang & Yu, 1989, *Camellia*, No.72, p.39: Flowers, glossy, pale pink with 12-15 petals in 3-4 rows with a central group of stamens. Originated in the Fujian Province, China. Blooms mid-season.

Dark Nite. *(C.x williamsii), New Zealand Camellia Bulletin,* vol.XII, No.2, P.7, Reg. No.167: A seedling raised by L.E. Jury, New Plymouth, New Zealand from a cross, *C.hybrid* **Joyful Bells** x *C.japonica* **Australis** that first flowered 1971. Growth rate is medium to form an upright plant of open density. The light green leaves average 7 cm x 4 cm. Colour is crimson with yellow anthers and pink filaments. The 14 outer petals surround a dense centre burst of petaloids. Flowers midseason to late.

Dark of Night. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2009, p.29, Regn No. 2772; Originated by Jim Moon, Portland, Ore., USA. *American Camellia Yearbook,* 2009, p.110 with colour photo; A cross of 'Tinsie' (**Bokuhan**) x 'Fuyajo' (**Kon-wabisuke**), first flowered in 2003. Medium size, 8.2 cm diameter x 3.2 cm deep, dark red semi-double. Yellow anthers and pink filaments in a central column with an occasional mixed petaloid. 15 petals. Filaments and petals are conjoined and fall in one piece.Upright, average growth. Dark green leaves average 9 cm x 4.5 cm. Flowers mid-season to late.

Dark of the Moon. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.37: Maroon. Large, full peony form. Vigorous, upright growth. Flowers mid-season. Originated by Harvey Short, Ramona, California, USA.

Dark of the Moon Variegated. *(C.japonica),* Don Ellison, 1997, "Camellias - A Photo Dictionary", p.31 with colour illustration: Peony form, large size, mid-season blooming. Medium, bushy and upright growth. A virus-variegated, red blotched white form of **Dark of the Moon.** Originated in USA.

Dark Pink Clouds. Fendig, 1953, *American Camellia Catalogue.* Orthographic variant for **Deep Pink Clouds.**

Dark Purple. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...,* Chen Junzhi and Chen Jinshui, p.47; Dark purple pendent group; Dark purple flower, crisped or slitting petals, macro-flora, mid-folia, ovate and broad elliptic leaves.

Dark Red Camellia. Curtis, Saml., 1820, *Monograph on the Genus Camellia,* p.2. Synonym for **Atrorubens.**

Dark Secret. *(C.japonica),* Thompson, 1953, *American Camellia Yearbook,* p.79: (Seedling of **Rainy Sun**) The male parent is probably **Kuro-tsubaki** as its foliage is similar and new leaves are a mahogany colour. The flower is a 10 cm semi-double of dark red, almost maroon. The petals are fringed and the stamens golden. Vigorous, compact growth. Originated by Harvey Short, Ramona, California, USA.

Darkie. *New Zealand Camellia Bulletin,* vol XIV, No.1, 1981, p.25, Reg. No.225: Name withdrawn due to its racial connotation.

Darleen Grace. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2013, p.29 with colour photo; Regn No. 2899; Originated and registered by C.M. & Lillian Gordy, Ocala, Fla., USA. ACS, *Yearbook,* 2013, p.111 with colour photo; Propagated by Loch Laurel Nursery, Valdosta, Ga. The medium size, 8.2cm diameter x 3.8cm deep flower is semi-double to loose peony, cream white with a touch of pink on the outer edges of the petals. Gold anthers and cream filaments mixed with the central petals. Late flowers are sometimes blush pink with darker pink petal edges. Plant is upright with average growth rate. Dark green leaves average 9cm x 4.5cm with medium serration. Flowers mid-season to late.

Darleen Stoner. *(C.hybrid).* SCCS, *The Camellia Review,* Jan-Mar 2010, p.1, colour photo front cover; Bright cranberry-coral with splash of white on centremost petals, semi-double to loose informal double. Crinkled petal edges. Vigorous upright growth, moderately sun tolerant. A seedling of **Coral Delight** x **Kramer's Supreme.** Originated by Martin F. Stoner, Pomona, Calif., USA.

Darling. (*C.reticulata* hybrid). Japanese postcard with colour photo, 1995. Large, bright red semi-double of 17 petals. Outer are large, rounded, waved, inner are smaller, tending to be erect. Central column of stamens with golden anthers. Originated by David L. Feathers, Lafayette, California, USA from a seedling of (*C.reticulata* **Buddha** x *C.fraterna*) x *C.hybrid* **Salab.**

Darling Pink. *(C.japonica),* SCCS., 1964, *Camellia Nomenclature,* p.38, Rose pink with frosty white centre. Large formal double. Mid-season flowering. Originated in USA by Malbis.

Darlington Mathotiana. Levi, 1958, *American Camellia Yearbook,* p.242, 246, 251. Synonym for **Julia Drayton.**

Darsi. *(C.japonica),* Cachet Catalogue, 1840-1841, p.2. No description. van Houtte Catalogue, 1844-1845, 18:10: Violet red, widely stained, with large splashes of white. Very brilliant red of the flowers of the Grenadine, petals firm, round, well displayed with a central tuft. Berlèse, 1843, *Iconographie,* ed.3, pl.278: The flower, about 9 cm across, sometimes 10 cm, is full, irregular, peonyform; animated, pure, vivid carmine red with large splashes of white on the exterior petals; of many rows, well displayed, loosely imbricated. The heart is composed of a great number of unequal petals of different sizes, alternatively white and red. Orthographic errors: 'Darsil', 'Darsii'. Synonym: 'Darsi Vera', 'Darsii Fulgens'.

Darsi Vera. Verschaffelt Catalogue, 1849-1850, p.45 as 'Darsii Vera'. Synonym for **Darsi.**

Darsii. Rousseau, Angers Nursery Catalogue, 1842-1843, p.2. Orthographic error for **Darsi.**

Darsii Fulgens. Catalogus Plantarum, Petrograd, 1860. Synonym for **Darsi.**

Darsil. McIlhenny Catalogue, 1935, p.4. Orthographic error for **Darsi.**

Dartington Pink. *(C.japonica),* Treseder Nurseries Special Camellia List, 1964-1965: Medium sized pink single of 6-8 petals. Originated in England.

Dartington Red. *(C.japonica),* Treseder Nurseries Special Camellia List, 196~1965: Medium sized red single of 5-7 petals. Originated in England.

Daruma. (The founder of Zen Buddhism), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.381: Soft pink. Peony to semi-double camellia with white, laciniated petal margins. Originated in Japan. (Believed extinct). Different reading: 'Taruma'.

Daruma. (The founder of Zen Buddhism), *(C.japonica),* Mizuno, Motokatsu, 1681, *Kadan Kômoku:* Red, double, large. Originated in Japan. (Believed extinct.)

Dashi. (Pageant Carriage for Festival), *(C.japonica),* Sakata, Shubyô Co, 1938, *Engei Tsûshin:* Peony flowered variety. White with red veins. Large. Originated in Japan.

Dashi-karako. (Pageant Festival Carriage Anemone), *(C.japonica),* Himuro, 1982, *Murasuzume:* Large, rose pink single with anemone centre. Originated in Japan.

Dasongzi. (Big Pine Cone), *(C.japonica),* Chang, Shao, Yun, 1987, *Camellias from Zhejiang,* p.57, colour photo [p.141]: Medium size, rose form double, red. with 5-6 rows of imbricated petals, standing apart, rounded, emarginate; opening to show small, confused, stamen centre. Leaves green, wide-elliptic, apices acute, margins serrate, Synonym: 'Wusonghua'. Originated in China. See colour photo No.95, Gao & Zhuang, 1987, *The Camellia in China.*

Datangmi. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.p.130. Chinese synonym for **Tommy Land.**

Dataohong. (Large Peach Red), *(C. reticulata),* Fang, 1930, *Tiannan Chahua Xiaozhi* as 'Daye Taohong' . Yü in the RHS, *Rhododendron and Camellia Report,* 1950, called it 'Tataohung' or 'Large Crimson'. Lammerts in p.42 of the 1952, *American Camellia Yearbook* gave it the presently used Western synonym of 'Crimson Robe'. The best illustration and description is in Feng et al., 1986, *Yunnan Camellias of China,* p.72: Leaves broad-ovate, apices acute and recurved, bases cuneate or broadcuneate, deeply serrate, 9-10 cm long, 4.5-5.8 cm wide. Flowers carmine red (RHS.CC.53B-C), 12-16 cm diameter. Petals waved and crinkled, 21 in about 4-5 whorls; outer whorls more or less flat, inner undulate, sometimes 2-3 petals conate at the base. Stamens numerous, 3-6 fascicles or united to form a tube. Fertile. Flowers early to mid-season. Originated in Yunnan, China. Different Reading: 'Tataohung', 'Ta Tao Hung', 'Ta-t'ao-hung'. Synonyms: 'Daye Taohong', 'Large Crimson', 'Great Peach Bloom'. Corruption of Chinese name 'Tataochung'. Received the RHS "Preliminary Commendation" in 1967 as 'Tataohung'. See colour plates Macoboy, 1981, *The Colour Dictionary of Camellias* and front cover, *New Zealand Camellia Bulletin*, vol.IV, No.1, 1964.

Date. (Showy), *(C.japonica),* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No. l, p.52. No description. Originated in Japan.

Datebeni. Different reading for **Datekurenai.**

Datekarako. (Showy Anemone), *(C.japonica),* Himuro, 1982, *Murasuzume:* White streaked red and pink. Anemone form. Originated in Japan as a seedling of **Kyôkarako.**

Datekurenai. (Showy Red), *(C.sasanqua),* Shunkô-en Catalogue, 1958; Nagao Sôsei-en Catalogue, 1962: Shining red. Double. Originated in Japan. Different reading: 'Datebeni'.

Date-nishiki. (Showy Brocade), *(C.x vernalis),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu:* Red stripes on white ground, medium size, single. Wada, 1941, *Garden Treasures of Japan,* p.32: Light pink striped deeped pink. Medium sized single. Originated in Japan by Minagawa.

Date-nishiki. (Showy Brocade), *(C.x vernalis),* Kirino, Kyôto Engei Kurabu, 1970, *Tsubaki Tokushû,* No.10, p.39; Hakoda, 1987, JCS., *Tsubaki,* No.26, p.50; A triploid cultivar. ICS., 1990, *Japanese Camellia Cultivar List,* p.40: Small size, crimson with white patches, double form. Blooms early to mid-season. Originated in Kawaguchi-shi, Saitama Prefecture, Japan.

Date-nishiki. (Showy Brocade), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Early flowering. Originated in Japan. (Believed extinct),. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.80.

Date-nishiki-beni. (Showy Red Brocade), *(C.x vernalis),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu:* Self red sport of **Date-nishiki** above, (ibid). Originated in Japan by Minagawa.

Date-nishiki-sazanka. (Showy Brocade Sasanqua), *(C.sasanqua),* Hantei, Kinta, 1827, *Sômoku Kihin Kagami:* Variegated flower and leaves. Originated in Japan. (Believed extinct.) See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.5, p.161.

Date-shibori-wabisuke. (Showy Dappled Wabisuke), (Wabisuke), Uekiya, Seijirô, 1874, *Tsubaki Hyakuro no Zu,* vol.2, No.15: White, rose form double showing a small centre stamen cluster when fully open. Originated in Japan. (Believed extinct.)

Dating. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.411; Chinese synonym for the USA *C.japonica* **Mary Agnes Patin**, changed from 'Mali Xiaojie'.

Dattan. (Ancient Japanese name for Tartars), *(C.japonica),* Yashiro, 1841, *Kokon Yôrankô,* vol.310: Anemone form with outer petals white and centre petals red. Originated in Japan. Different reading: 'Tattan'. (Believed extinct.)

Dattan. (Ancient Japanese name for Tartars), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1968, pl.640: A large, single pink with white petal margins and large, central stamen column. Originated in Japan. (Believed extinct.) Different reading 'Tattan'.

Daunoy Variegata. *(C.japonica),* Wilmot, *Camellia Variety Classification Report,* 1945, p.7. No description. Originated in USA. (Believed extinct.)

Dauphin. *(C.sasanqua),* Fendig, 1953, *American Camellia Catalogue.* No description. Originated in USA. Orthographic variant 'Dauphine'.

Dauphine. Fruitland Nursery Catalogue, 1954-1955, p.31. Orthographic variant for **Dauphin.**

Dautel's Supreme. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.32: Sport of **Julia Drayton.** (Invalidly as 'Mathotiana'). Reported in three forms; a darker and heavier **Mathotiana Supreme**; a pom pom centre of petaloids; two rows of large petals with a large cluster of bright yellow stamens. Large. Originated at Dautel's Nursery, Lake Charles, Louisiana, USA.

Dauveriana. *(C.japonica), Jardin la Société Royale de Belgique Catalogue,* 1843. No description. Charles van Geert, 1846, Catalogue Général, p.66: Very large, imbricated flower. Free flowering and very pretty. Ibid: 1848, Catalogue No.105, p.109: Peony form, orange red, first class. Orthographic error: 'Doveriana'.

Dave Bull. *(C.japonica), New Zealand Camellia Bulletin,* 1993, Issue No.114, vol.XVIII, No.1, p.32, Reg. No.324: Originated by Dave Bull, Auckland, New Zealand. First bloomed 1985 on a plant of dense upright habit with medium growth rate. Lea 8 cm long x 4 cm wide. Flower is anemone form, 6.5 cm across x 3 cm deep, soft pink (RHS.CC.58C-D) with some streaks of deeper pink, about 12 petals and 137 petaloids. A few yellow anthers on creamy filaments amongst the petaloids. Blooms last well. Flowers mid-season to late.

Dave Strother. Magnolia Gardens and Nursery Catalogue, 1942-1943. Synonym for **Evening Star.**

Davesii. Gelding, Catalogue of Garden & Farm Seeds, Plants etc., 1887-1888, p.53. Orthographic error for **Daviesii**.

Dave C. Strother. *(C.japonica),* SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.31: Blush peach pink. Large semi-double to anemone form. Vigorous, upright growth. Blooms mid-season to late. Originated by S.J. Katz, Covington, Louisiana, USA. Orthographic variants: 'Dave Strother', 'D.C. Strother'. An early blooming, light pink, single camellia had been given this name by Magnolia Gardens about 1942 without Mr Strother's permission. On his objection it was renamed **Evening Star** and Mr Strother's name transferred to the camellia originated by Mr. Katz.

Dave's Weeper. *(C.fraterna x C.japonica),* Smart, 1977, RHS, *Rhododendrons with Magnolias and Camellias,* p.77: Mr Dave Feathers ...also had a weeping plant with small pink flowers registered as **Dave's Weeper;** this is *C.fraterna x C.japonica.* Actually this cultivar had never been registered and Dr Smart's reference constitutes its first valid listing.

David Alam. George Jackman & Son, 1954-1955, *Planter's Handbook,* No.16, p.18. Orthographic error for **David Allan.**

David Cook. *(C.japonica),* Valley Garden Supply Co. Catalogue, 1948: Rose red. Medium sized, formal double. Flowers mid-season. Originated by Arnesen, California, USA.

David Feathers. *(C.reticulata).* ACS, *The Camellia Journal,* Sept. 2003, p.13 with colour photo, Reg. No.2600. A chance seedling which first bloomed in 1994 with pink semi-double blooms. Originated by David. L. Feathers, Lafayette, Calif., USA. *American Camellia Yearbook,* 2003, p.61, colour photo p.c2. The flower has 23 petals and measures 12.7 cm across x 7.5 cm deep. Plant is upright and average and blooms early to mid-season. The light green leaves measure 10 cm long x 5 cm wide.

David Gerbing. *(C.japonica),* Gerbing's Azalea Gardens Catalogue, 1941-1942: "(Our Seedling), New pink, double rosebud form with 8-10 cm blooms. (See front cover) The opening colour and form resembles that of a 'Pink Radiance' rose. When fully open some show short stamens. Flowers mid-season to late. Foliage is long, medium green. Vigorous, bushy, tall growth, free flowering." See colour plate p.53, *Camellias* by G.G. Gerbing. Originated by G.G. Gerbing, Fernandina, Florida, USA from seed of **Reverend John G. Drayton**. Pseudonym: 'Cup of Beauty'(JG).

David Honour Nelson. *(C.japonica), American Camellia Yearbook,* 1970, p.162, Reg. No.1109: A 13 year old chance seedling that first bloomed 1966; originated by George A. Nelson, Florence, South Georgia, USA. Plant growth is spreading, average, open and medium in rate with dark green leavers, 11 cm x 6 cm. The semi-double 'Herme' (**Hikarugenji**) type bloom is 10.5 cm across and 4 cm deep with 13 petals and 3 or more petaloids. Colour is predominantly white

with a few rose red markings or stripes and deep yellow to orange anthers and white to cream filaments.

David Ratcliff. *(C.japonica),* ACS 1994, *The Camellia Journal,* vol.49, No.4, inside back cover, Valdosta Camellia Scions. No. description. SCCS 1996, *Camellia Nomenclature,* p.32: Bright red, large, loose peony form. Blooms early to mid-season. Average, upright growth. Originated in USA by J.Ratcliff, Tifton, Georgia.

David Ratcliff Variegated. *(C.japonica),* ACS, Aug. 1995, *The Camellia Journal,* vol.50, No.3, p.36, Reg. No.2327 as 'David Ratcliff Var': Large size, bright red with white markings, loose peony form, chance seedling. Blooms early to mid-season. Originated in USA by Jack Ratcliff, Tifton, Georgia. ACS 1995, *American Camellia Yearbook,* p.4 with colour photo: the 15 year old seedling first bloomed 1982. Average flower size is 11.5 cm across x 7 cm deep, with yellow anthers and creamy yellow filaments. Plant growth is upright and average in rate with dark green leaves 7.5 cm long x 2.5 cm wide.

David Ribeiro da Silva. *(C.japonica) List of Portuguese Camellias* 2010, Guedes & Oliveira, pp.16 & 57; Originated about 1950 by David Ribeiro da Silva. Single. Seven pinkish white petals with a carmine pink blotch on each petal, and wide darker veins and spots. Diameter 7-7.5 cm.

David Stuart. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.37: White. Large, semi-double of flat form. Vigorous, upright growth. Mid-season to late blooming. Originated by David Feathers, Lafayette, California, USA.

David Surina. *(C.japonica), American Camellia Yearbook,* 1968, p.129, Reg. No.1005: A 12 year old chance seedling, first bloomed 1957; originated by Surina's Camellia Nursery, Sepulveda, California, USA. Plant growth is upright, dense and medium in rate with light green leaves, 8.5 cm x 5 cm. The formal double flower is 10 cm in diameter. Light red and blooms mid-season to late, Never shows stamens.

David Wilson. *(C.japonica),* ACS., 1990. *The Camellia Journal,* vol.45, No.1, p.12: Large size, white, peony form, *C.japonica* chance seedling. Blooms mid-season to late. Originated by Walter A. Wilson, Augusta, Georgia, USA. ACS., Nov.1990 *The Camellia Journal,* vol.46, No.4, p.18, Reg. No.2185. *American Camellia Yearbook,* 1990, p.88, with colour photo between p.90-91: Average flower size, 11 cm across x 7.8 cm deep, with 36 petals. Cold hardy. Plant growth upright and medium in rate with leaves 10 cm long x 3.8 cm wide.

David Wirth. *(C.japonica), American Camellia Yearbook,* 1956, p.60, Reg. No.255: A 6 year old chance seedling originated by Ernest A. Judice, New Orleans, Louisiana, USA. First flowered 1955. Plant growth upright, slow and compact with large, dark green leaves. Flowers, rich wine red colour, 11-12 cm across with 21 petals, 7 petaloids and 5 groups (97) of stamens. The petals are thick and heavy and stand erect like rabbit ears. Anthers brown. Flowers early. Sport: **David Wirth Variegated.**

David Wirth Variegated. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature* as 'David Wirth Var.': A virus variegated form of **David Wirth** - Wine red blotched white. Originated in USA.

Dawn Lynn. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2008, p.34 with colour photo, Regn. No. 2730; A chance seedling that first flowered in 1994. Originated by Clarence and Lillian Gordy, Ocala, Fla., USA, and propagated by Erinon Nursery, Plymouth, Fla., and Loch Laurel Nursery, Valdosta, Ga. A 10 cm deep pink anemone form flower with largely hidden gold anthers and yellow filaments. Flowers mid-season to late. *American Camellia Yearbook,* 2008, p.109 with colour photo; Dark green leaves 9 cm x 3.8 cm.

Dawn of Creation. (*C.hybrid*) SCCS, *Supplementary List* 2011. Bright rose colour, large semi-double. Rounded, well branched growth. Flowers early to midseason. [(*C.pitardii* var *yunnanica* x *C.yunnanensis*) x **Scentsation**]. Originated in 2011 by Daniel Charvet, Fort Bragg, Calif., USA.

Dawn Song. *(C.x vernalis), American Camellia Yearbook,* 1973, p.189, Reg. No.1233: A 17 year old chance *C.x vernalis* seedling, first bloomed 1960; originated by Camellia Grove Nursery, St Ives, N.S.W., Australia and propagated by L.G. MacDowell, Lakeland, Florida, USA. Plant growth is upright, dense and medium in rate with heavy textured, dark green leaves, 7 cm long x 3.5 cm wide. The semi-double, Frizzle White type, bloom is white edged pink. Anthers are yellow and filaments golden with 21-27 petals. It is 6.5 cm in diamenter and 4 cm deep. The bloom has a faint scent. Blooms early to mid-season.

Dawn Striped. Yashiroda, 1950, *American Camellia Yearbook.* Synonym for **Akebono-shibori.**

Dawn Variegated. Vanderbilt, 1941, *Camellia Research, II,* p.2, as 'Dawn Varie.'. Synonym for **Akebono-shibori** as 'Akebono Variegated'.

Dawn's Early Light. *(C.japonica),* Nuccio's Nurseries Catalogue, 1985-1986, #8016; *American Camellia Yearbook,* 1986, p.89, Reg. No.2023: Medium to large peony, occasionally rose form double. Light orchid pink with deeper pink intermixed, especially on edges. Flower size 10.5 cm across. Flowers early to late. Plant growth is erect, dense and rapid in rate. The 6 year old, chance *C.japonica* seedling first flowered 1980. Originated by Nuccio's Nurseries, Altadena, California, USA. Chinese synonym: 'Daowen De Shuguang'.

Dawn's Own. (*C.japonica),* ACRS, *Camellia News,* 1995, No.135, p.11, colour pl. p.2, Reg. No.445: Originated by Kenneth Brown, Mitcham, Victoria, Australia. A chance seedling of *C.japonica* **Rosemary Elsom**. First flowered 1989. A pink (RHS.CC.62B) flower of anemone form with 10 petals and numerous petaloids, 8 cm across x 5 cm deep. Plant growth is average and bushy. Leaves olive-green, glossy, ovate, flat with serrate margins and acuminate apices, 10 cm long x 5 cm wide. Petals open flat. Filaments and petaloids mixed. Flowers shed whole. Free flowering, mid-season to late.

Dawon. Jean Lebihan, 1971, *Pas de Jardin sans Camellia,* 2nd. ed. p.57. Orthographic error for 'Dawn', synonym for **Ginryû.**

Dawsiana Nouvello. *(C.japonica),* Hovey & Co. Nursery Catalogue, 1857, p.9. No description. Originated in USA. (Believed extinct.)

Dawson Curley Leaf. *(C.japonica), American Camellia Yearbook,* 1969, p.100: One of the oddities noted is **Dawson Curley Leaf,** a *C.japonica*, the leaves of which are deeply serrated and twisted or curled. This unusual variety is from Hugh Shackelford, Albany, Georgia, USA.

Dawson Pink. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.38 as 'Dawson's Pink' but listed as **Dawson Pink** in all subsequent editions: Dark pink. Medium semi-double of tiered form. Medium, pendulous growth. Mid-season blooming. Originated in USA by Bowman.

Dawubao. (Five Large Treasures). Chang Shao Yun, 1987, *Camellias from Zhejiang,* p.93. Synonym for **Hongchang'e Cai.**

Daxianniang. (Great Goddess), *(C.reticulata),* Gao & Zhuang, 1989, *The Camellia in China,* p.60, No.402, colour photo No.259: Large size, 10-13 cm across, crimson. Open peony form with 3 rows of 26-30 large, rounded, emarginate petals and a centre of a few small petals and rare stamens. Blooms early to mid-season. Originated in Tengchong, Yunnan, China.

Day Dream. Mark S. Cannon Scion Catalogue, 1964-1965, p.4. Orthographic variant for **Daydream.**

Daybreak. *(C.japonica),* Gerbing's Azalea Garden Catalogue, 1941-1942: (No.7) A fluffy peony type flower of medium size and soft pink colouring. Dull green foliage, bushy growth, late flowering. Originated at Magnolia Gardens, Charleston, South Carolina, USA. This camellia is very similar to **Debutante** except that it is late flowering. See colour pl. p.55, Gerbing, 1945, *Camellias.*

Daydawn Belle. *(C.sasanqua).* ACRS, *Camellia News,* 1992, No.123, p.4, Reg. No.408: Originated by Keith Abbott, Rossmoyne, Western Australia. A chance seedling that first flowered 1988. The semi-double to rose form double flower is pink (RHS.CC.68D) of 18 petals; 5 cm across x 2 cm deep and blooms early to mid-season on a dense, upright, rapid growing, free flowering plant. Leaves matt green, oval, curved, rare serrations, apices acute, 3.5 cm long x 2 cm wide. Small, rose form flower. Sun hardy.

Daydream. *(C.sasanqua),* McIlhenny Catalogue, 1948-1949, p.14: A large single blossom, each petal deeply V'ed and heavily crinkled; white delicately edged with deep rose-pink, some petals tinted below with rose-pink; stamens light buff tipped yellow ochre. Originated by Mobile Ornamental Nursery, Alabama, USA. See p.87, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, for black and white illustration.

Daydream Believer. *(C.sasanqua)* SCCS, *Supplementary List*, 2014. Originated by Bobby Green, Green Nurseries, Fairhope, Ala., USA. Pure white, medium size single. Flowers early.Fast upright growth.

Daydreams. *(C.japonica), American Camellia Yearbook,* 1948, p.168: "McCaskill Garden's - Seedling No.165". This flower is a semidouble white with fine pink or rose pencilled lines running the length of each petal. The petals are of different lengths and each has three dainty scallops. Stamens and petaloids form the centre. The flower is large, 10-11.5 cm aaoss and blooms early to late. First flowered 1944. The growth is loose, upright and vigorous with bright green leaves, 6.5 cm long x 3.8 cm wide. Parentage unknown. Not to be confused with the *C.sasanqua* **Daydream.** Originated by McCaskill Gardens, Pasadena, California, USA. Orthographic variant: 'Day Dream'. Sport: **Daydreams Pink.**

Daydreams Pink. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.32: Rose pink sport of **Daydreams.** Originated by McCaskill Gardens, Pasadena, California, USA.

Daye Baishitou. (Large Foliage White Lion Head), *(C.japonica),* Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.136 with colour photo; Originated in the Chengdu – Dujiangyan areas, Sichuan, China. Flowers white, anemone to peony form, medium to large. Outside petals broad-round and flat. Small inner petals tightly clustered. Occasionally some larger petals occur in the centre (the lion's mane of the name). Leaves light green, ovate to elliptic, large and shiny. Compact, vigorous plant. Flowers mid-season.

Daye Diechi. Ikeda, 1976, *American Camellia Yearbook,* p.139 as 'Tayehtiechih'. Different reading: 'Ta-eh Tieh-ch'ih'. Synonym: 'Large Leaf Butterfly Wings'. Synonym for 'Houye Diechi'.

Daye Hudie. (Big Leaf Butterfly) *(C.japonica), Chinese Camellia Culture,* 2003, Appendix, p.565; Small tree, erect. Juvenile leaves and buds purple, mature leaves dark green, lustrous, elliptic, 7-8 cm x 3-4 cm, veins obscure, margins sharply serrate. Flower semi-double, hibiscus form, opening pale purple, deep red when fully open, 8-9 cm diameter, outer petals 10-20, somewhat incurved in 2-3 rows, inner petals short and narrow, twisted, erect. Stamens numerous, divided into several bundles. From Zheijiang Province, China.

Daye Taohong. Fang, 1930, *Diannan Chahua Xiaozhi.* Different reading: 'Ta-ye T'ao-hung'. Synonym: 'Large Leaf Crimson'. Synonym for **Dataohong.**

Daye Yinhong. Waterhouse, 1970, ACRS., *Camellia News,* No.40, p.8, as 'Ta Yeh Yin Hung', synonym for **Dayinhong.**

Dayin. (Large Brocade), *(C.sasanqua),* Gao & Zhuang, 1989, *The Camellia in China,* p.76, No.563: Large size, 10-14 cm across, white with red margins and reverse, single with 7-9 petals. Early blooming. Originated in China.

Dayinhong. *(C.reticulata),* Fang, 1930, *Dainnan Chahua Ziaozhi,* as silver red in colour with large flowers. Yü, 1950, RHS., *Rhododendron and Camellia Conference Report* as 'Tayinhung' or 'Large Pink'. Colour plate and description Feng et al., 1986, *Yunnan Camellias of China,* p.56: Leaves ovate to elliptic-ovate, apices acuminate, bases obtusely rounded, slightly reclinate, margins revolute, veins conspicuous, short hairs beneath, 6-8 cm long, 3-4.8 cm wide. Flowers spinel pink (RHS.CC.66C), diameter 10-13 cm. Petals about 28 in 3-4 whorls, outer whorls flat, regularly arranged, inner whorls curved, erect, sometimes two petals connate at the base. Stamens numerous, divided into 5-7 groups, connate at base. Pistils mostly rudimentary. The leaves of this cultivar are similar to **Liuye Yinhong** but broader, the flowers are smaller than those of **Liuye Yinhong** and a deeper colour. This cultivar has abundant axillary flower buds, sometimes 4-5 flower buds per axil. It originated in Kunming, Yunnan, China, about 70 years ago and is said to be a seedling of the cultivar **Liuye Yinhong** growing at the Black Dragon Pool Park. The original tree of **Dayinhong** is on the hillside behind the Golden Temple, Kunming. Synonyms: 'Large Silver Red', 'Large Spinel Pink', 'Great Shot Silk', 'Large Pink', 'Daye Yinhong', 'Large Leaf Spinel Pink'. The accepted Western synonym is 'Shot Silk' .Different readings: 'Ta-yin-hung', 'Tayinhung'. See also colour photo, p.155, Macoboy, 1981, *The Colour Dictionary of Camellias.* Received the RHC, "First Class Certificate" in 1967 as 'Tayinhung' syn. 'Shot Silk'.

Dayouli. Gao & Zhuang, 1988, *The Camellia in China,* p.72, No.522. Chinese synonym for **Grand Jury.** Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.405; changed to 'Dazhurui'.

Daymon Runyon. Fendig, 1952, *American Camellia Catalogue.* Synonym for **Undaunted.**

Dayuanshuai. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.39. Chinese synonym for **Grand Marshal.**

Dayunpian. (Large Cloudy Petal), *(C.reticulata),* Savige, 1980, *International Camellia Journal,* No.12, p.71: A semi-double lotus form. Feng et al., 1986, *Yunnan Camellias of China,* p.41: Leaves broad elliptic, apices acuminate and recurved, bases rounded, margins revolute, rugose,

7.5-8.2 cm long, 4.4-4.5 cm wide. Flowers pink (RHS.CC.55B), diameter 13 cm. Petals 13-15, slightly corrugate. Stamens numerous, around pistil. Fertile. Flowers early to mid-season. The cultivar was selected from an open pollinated plant of 'Wild Form' reticulata. Synonyms: 'Large Cloud Petal', 'Large Cloudy Petal'. Different reading: 'Ta-yün-p'ien'.

Dazaifu. (Ancient Government Office in Kyushu). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.157 with colour photo; English translation p.108. Large and small red stripes, sometimes with wide white border, on pale pink ground. Semi-double to peony form, cylindrical to split stamens. Flowers mid-season to late. Leaves elliptic, medium size. Upright, vigorous, growing in a cone. An old variety, origin details obscure. From Aichi Prefecture.

Dazaifu-no-tsubaki. (Camellia of Dazaifu), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai*, pl.197 as 'Camellia of Dazaifu' and p.216, description as 'Dazaifunotsubaki': A medium to large size semi-double of hose-in-hose form, white with soft pink flush at the base of the petals, developing into veining and some wide, vivid carmine marking. A central cylinder of stamens with golden anthers and light cream filaments. Originated in Japan.

Dazaifu-shibori. (Dazai District Dapple), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû*, p.229, description: Red lines on a white ground, also with small spots, single. Cylindrical stamen cluster, petals thick, flower large. Mid-season blooming. Often produces self red flowers. Leaves medium sized, wide oval, gently undulate, sharply serrate. Plant habit upright, vigorous. Originated in Kurume, Fukuoka Prefecture, Japan.

Dazhengjin. (Dazheng Brocade). Gao & Zhuang, 1989, *The Camellia in China*, p.74, No.537. Chinese synonym for the Japanese sasanqua **Taishô-nishiki.**

Dazhuang Bier. (Dazhuang's Bill Goertz). *(C.japonica),* Gao, Jiyin, Lte 22nd August, 1994. A name given in China for John Wang's seedling No.2, California, USA. No description.

Dazhuang Xiangyuan. (Dazhuang's Fragrant Garden). Gao, Jiyin, Ltr 22nd August 1994. A name given in China for John Wang's seedling No.1, California, USA. No description.

Dazhubei. (Large Crimson Cup), Gao & Zhuang, 1989, *The Camellia in China*, p.74, No.538. Chinese synonym for the Japanese sasanqua **Daishuhai.**

Dazhurui. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.405. Chinese synonym for the New Zealand *C.reticulata* hybrid **Grand Jury.** Former synonym 'Dayouli'.

Dazhusha. (Large Cinnabar Red), *(C.japonica),* Wang & Yü, 1981, *Shanchahua.* Large vermilion, formal double, 10-11 cm across, with 6-7 irregularly imbricated rows of petals totalling 60-70 in number; the centre often consisting of a mass of small, erect petals. Leaves elliptic, 7-10 cm long x 3.5-6 cm wide. See colour photo [p.129], Chang Shao Yun, 1987, *Camellias from Zhejiang*, and Gao & Zhuang, 1988, *The Camellia in China*, p.45, No.256, colour photo No.143,A,B. Originated in the Sichuan Province, China about 1940.

Dazhusha. (Large Vermilion). *American Camellia Yearbook*, 1990, p.191. Chinese synonym for the USA *C.reticulata* hybrid **Howard Asper.**

Dazidie. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.69. (Large Purple Butterfly). Synonym for **Zihudie.**

Dazipao. Fang, 1930, *Diannan Chahua Xinozhi.* Translation is 'Large Purple Gown'. This cultivar has been renamed in Kunming as **Zhusha Zipao** (Cinnabar Purple Gown) as published by Feng & Shi, 1966, *Zhiwu Yinhong Xunhua Jikan*, 2:105, 113, and 'Dazipao' is regarded as a synonym, although not strictly in accordance with the "Horticultural Code". Different reading: 'Ta-tsu-pao'.

Dazzle. *(C.japonica), American Camellia Yearbook,* 1965, p.231, Reg. No.780, black and white photo, p.63: A 12 year old chance seedling that first bloomed 1960; originated by G.C. Clark Jr., Savannah, Georgia, USA. Plant growth is upright and open and medium in rate with mid-green leaves 10 cm long x 5 cm wide. The semi-double bloom, similar to 'Herme' (**Hikarugenji**), measures 15 cm across and 7.5 cm deep with 30 petals. Colour is rose-pink with bright yellow stamens which are interspersed, standing in 5 groups of 20 each with rabbit ears around the centre. Blooms mid-season to late.

Dazzler. *(C.hiemalis),* Nuccio's Nurseries Catalogue, 1960: Rose-red. Semi-double, 8 cm in diameter. Flowers early. Originated by Nuccio's Nurseries, Altadena, California, USA. See colour photo, front cover, SCCS, 1961, *The Camellia Review*, vol.23, No.1. Orthographic error: 'Dazzun'.

Dazzun. Nantes, 1982, *Services des Espaces -Collections.* Orthographic error for **Dazzler.**

De Bugny. *(C.japonica),* Vallon, Apr.1858, *Revue Horticole,* p.188: Red, peony form. Originated in France. Orthographic error: 'Di Brugni'.

De L'Ile. *(C.japonica),* McIlhenny, 1937, *600 Varieties of Camellias,* p.4: Large, peonyform. Rose-red mottled white. Orthographic errors: 'De L'Ille', 'De L'Isle'. Originated in USA.

De L'Ille. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **De L'Ile.**

De L'Isle. Wilmot, *Camellia Variety Classification Report,* 1943. Orthographic error for **De L'Ile**.

De la Chine. André Leroy Catalogue, 1823, p.10. Synonym for **Rawesiana.**

De la Force. *(C.japonica), The Garden,* 1889. No description. Synonym: 'Camellia de la Force'. (Believed extinct.)

De Lancey. *(C.reticulata),* ACRS., 1979, *Camellia News*, No.72, p.26, Reg. No.217: Originated by E.R. Sebire, Wandin North, Victoria, Australia. A chance seedling of **William Hertrich** that first bloomed 1970. The plant is upright with mid-green, 12 cm x 5 cm, lanceolate leaves. The 15 cm, dark red, semi-double flowers, bloom mid-season. Orthographic error: 'Delancey'.

De la Reina. Fratelli Rovelli Catalogue, 1852, p.16. Orthographic error for **De la Reine.**

De La Reine. *(C,japonica),* van Houtte, *Flores des Serres*...vol.2, 1846, p.205, pl.5: Raised by M. Varenbergh of Belgium and named in honour of the Queen of that country. It forms a shrub, very tall, vigorous, of a good shape, ample foliage and is covered with large, strong buds, which, in spite of their numerous petals, open easily. The petals are very large, rounded, shallowly notched, very regularly imbricated, sometimes tiered, all of them pure white with very rare spots or stripes, definitely marked, of pink. It was figured and described in Verschaffelt, 1854, *Nouvelle Iconographie,* Book I, pl.III; Sports: **Bicolore de la Reine, De la Reine Rosea, De la Reine Alba.** Synonyms: 'Reginae', 'Camellia de la Reine', 'Dell'Regina', 'Madame Cavallo', 'De la Reine'(Varenbergh), 'Reine (de la)'. Orthographic errors: 'Della Regina', 'Reine', 'De la Reina'. Originated by C.J. Varenburgh, Sleydinge, near Ghent, Belgium.

De la Reine à Fleurs Rosea. Jean Verschaffelt Catalogue, 1867-1868, p.39. Orthographic variant for **De la Reine Rosea.**

De la Reine Alba. *(C.japonica),* Koch.1862, *Belgique Horticole,* p.119, 120: A pure white form of **De la Reine** that originated in Belgium.

De la Reine Rose. André Leroy ses Enfants, 1889, Catalogue Général, p.34. Vanderbilt, 1940, *Camellia Research,* p.4. Orthographic error for **De la Reine Rosea.**

De la Reine var. Rosea. Verschaffelt, 1856, *Nouvelle Iconographie,* Book I, pl.II. Invalid orthographic variant for **De la Reine Rosea.**

De la Reine Rosea. *(C.japonica),* Verschaffelt, 1856, *Nouvelle Iconographie,* Book I, pl.II, as 'De la Reine var. Rosea': Extremely large, rounded petals, full or sub-emarginate, imbricated, outspread, serried and hooded at the heart, all a delicate pink. A sport of **De la Reine** originated by de Coster, Melle, Belgium. Orthographic errors: 'De la Reine Rose', 'De la Reine à Fleurs Roses', 'De la Reine var. Rosea'. Synonyms: 'Madame Cavallo (Pink Form)', 'De la Reine à Fleurs Rosea', 'Camellia du Roi', 'Camellia de la Reine Rosea'.

De Marii. *(C.japonica),* Oudin Catalogue of Conservatory Plants, 1845, p.3. No decription. Originated in France. (Believed extinct.)

De Medici. *(C.japonica),* Ambroise Verschaffelt, 1850, Catalogue Général, p.46. No description. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.103. No description. Figured and described in Verschaffelt, 1853, *Nouvelle Iconographie,* Book IV, pl.III: Five or six years ago we received this variety from M. Mariani, Milan, Italy. The rather large blossoms are a full peony. The petals of the first two or three rows are ample, outspread, full or bilobate, while all the others are small, serried, ruffled and upright, forming a compact whole. The roseate white colouring is fasciated and stippled with crimson. Orthographic errors: 'De Medicis', 'Demedici', 'Demidei', 'Demideici'.

De Medicis. da Silva, 1880, *Forcing Varieties of Camellias in Oporto,* p.7. Orthographic variant for **De Medici.**

De Medicis (Casoretti). van Houtte Catalogue, 1857, 67:43. Synonym for **Mazzucchelli.**

De Novaro. Luzzatti Catalogue, 1853. Orthographic error for **Danovaro.**

De Soto. *(C.japonica),* McIlhenny Catalogue, 1845-1946, p.13: Medium sized, amaranth pink; Many petaloids blotched white, peony type; petals numerous and deeply cut; large pompom completely fills centre. Originated at Jungle Gardens, Avery Island, Louisiana, USA.

De van Cassel de Gand. *(C.japonica),* Berlèse, 1841, *Iconographie,* pl.24, Index. No description. Originated in Belgium. (Believed extinct.) Probably a synonym for **Casselii.**

Dea di Flora. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.103. Orthographic error for **La Dea Flora.**

Dea Flora. Luzzatti, 1851, *Collezione di Camelie,* p.14. Orthographic error for **La Dea Flora.** Grammatically incorrect, a goddess, being a minor deity, when spoken of should be "The Goddess Flora".

Deacon Dodd. Dodd Nursery Catalogue, 1943-1944. Synonym for **Hanatachibana** as 'Kumasaka Variegated'.

Dean Day Smith. SCCS., 1990, *Camellia Nomenclature,* p.30: Orthographic error for **Deen Day Smith.**

Deane's Darling. *(C.japonica), American Camellia Yearbook,* 2003, p.61, colour photo p.c2, Reg. No.2606. A 12 year old chance seedling which first flowered in 1993. Originated by Hal and Deane Burch, Citrus Heights, Calif., USA. The anemone form flower has 20-25 garnet red, imbricated, incurved, outside petals, with a smallish centre of red petaloids. Plant is upright, dense, slow growing and flowers mid-season to late. The dark green leaves are 7 cm long x 3.8 cm wide. ACS, *The Camellia Journal,* Mar. 2004, p.24 with colour photo. Flowers measure 7.5 cm across.

Deanna J. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997, p.15, Reg. No.2406. A large, rose blush, peony to rose form double chance seedling. Flowers early to late. Originated by O.L. Jacobson, Jacksonville Beach, Fla., USA. *American Camellia Yearbook,* 1997, p.2, colour photo before p.1. The 14 year old seedling first flowered in 1992. Average flower size is 11.5 cm across x 10 cm deep, with 30-40 petals, gold anthers and white filaments. Colour is stated to be unique – a faint rose glow from deep centre, receding to blush in outer edges. Plant growth is spreading and average with light green leaves 9 cm long x 4.5 cm wide.

Dear Jenny. *(C.japonica), American Camellia Yearbook,* 1957, p.299, Reg. No.303: A 12 year old chance seedling originated by C.W. Hand, Pelham, Georgia, USA, that first bloomed 1951. Plant growth is dense and rapid with leaves averaging 7 cm x 4 cm. The white flowers are semi-double,11-12.5 cm across with 15 petals and 15 or more petaloids. Flowers early to late. Chinese synonym 'Aizhanni'.

Dearest. Vanderbilt, 1940, *Camellia Research,* p.3. Synonym for **Finlandia.**

Dearie Mealing. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: White marbled pink. Large flat semi-double of slow growth. Blooms mid-season. For black and white photo see p.99, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I.

Debbi. Champernowne Spring Sale Catalogue, 1980. Abbreviation for **Debbie.**

Debbie. *(C.x williamsii),* R.E. Harrison & Co. Ltd Nursery Catalogue, 1966, p.28: *C.saluenensis x* **Debutante.** An attractive, deep rosy pink, full anemone form to an occasional formal double, medium size. Free flowering. Upright growth. SCCS., 1968, *Camellia Nomenclature,* p.159: Clear spinel pink. Large semi-double to open peony form. Raised in New Zealand by L.E. Jury. Received an "Award of Merit" from the RHS in 1971. Synonym: 'New Zealand Champ'. Colour photos p.183, Macoboy, 1981, *The Colour Dictionary of Camellias;* p.49 *Camellias - A Wisley Handbook,* 1985 and on the front cover, *New Zealand Camellia Bulletin,* 1966, vol.V, No.1. Abbreviation: 'Debbi'. Orthographic error 'Delbie'. Sport: Debbie Variegated. Chinese synonym: 'Daibi'.

Debbie Anderton. *(C.reticulata), New Zealand Camellia Bulletin,* vol**.** XIII, No.6, 1984, p.23, Reg. No.204: A chance seedling of *C.reticulata* **William Hertrich,** originated by T. Lennard, Te Puke, New Zealand, and first flowered 1979. Plant growth is average, upright and dense with dark green leaves measuring 8 cm x 4.5 cm. The peony form blooms are 11 cm across by 5.5 cm deep with 22 petals and pink filaments and anthers. Early flowering with a full, loose peony form, ruffled petals and glowing carmine red colour. (RHS.CC.53C).

Debbie Carnation. Coghurst Nursery, 1994, *Camellias,* p.5. Orthographic variant for **Debbie's Carnation.**

Debbie Odom. (*C.reticulata* hybrid). SCCS *Camellia Nomenclature* 2009, p.139; Large semi-double, pink with fluorescent sheen. Vigorous, open, upright growth. Flowers mid-season to late. (**Trewithen Pink** x 'Tali Queen' {**Dali Cha**}) x **Lilette Witman.** Originted in 2008 by M. Jernigan, USA.

Debbie Stutts.(*C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.44: Deep salmon rose-pink. Large, semi-double with white petaloids. Originated by L.W. Ruffin, Ellisville, Mississippi, USA.

Debbie Variegated. *(C.x williamsii),* Cannon, 1969, ACS., *The Camellia Journal,* vol.24, No.1, as 'Debbie Var.': A virus variegated form of **Debbie -** Spinel pink, blotched white. Originated in USA.

Debbie's Carnation. *(C.x williamsii), New Zealand Camellia Bulletin,* 1984, vol.XIII, No.6, P.22, Reg. No.201: *C.saluenensis x C.japonica* **Debutante,** raised by Felix Jury, Tikorangi, Taranaki, New Zealand and first flowered 1971. The plant is dense, upright and spreading with dark green leaves, 8 cm x 3.5 cm. The peony form flower measures up to 10 cm across and 7 cm deep, featuring a complete rosette of petaloids. The colour is bright, cerise pink. Blooms early to midseason.

Debenette Pink. *(C.japonica),* Lindo Nurseries Price List, 1947-1948, p.4. No description. Originated in USA. (Believed extinct.)

Debo. *(C.hybrid).* ACS, *The Camellia Journal,* Aug. 1998, p.23, Reg. No.2463. A medium size, bright red, single *C.hybrid* (*C.japonica* seedling x *C.vernalis* seedling). Flowers early to mid-season. Originated by Ray Bond, Bond Nursery Corp, Dallas, Tex., USA. *American Camellia Yearbook,* 1998, p.1, colour photo before p.1. The 10 year old seedling first flowered in 1987. Average flower size is 8.2 cm across x 2.5 cm deep, with 6 petals, yellow anthers and yellow filaments. Blooms fall in one piece and are fragrant. Plant growth is spreading, dense and vigorous, with light green leaves 7.5 cm long x 3.8 cm wide.

Debonaire. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Coloured pink and white to solid pink. Small semi-double. Low, spreading growth. Flowers early. Originated by Magnolia Gardens, Charleston, South Carolina, USA.

Deborah Ann. *(C.japonica), American Camellia Yearbook,* 1957, p.60, Reg. No.269: A 6 year old chance seedling originated by Mrs Frank H. Hamel, Yazoo City, Mississippi, USA. First flowered 1955. Leaves 7.5-8 cm long by 5.5 cm wide. Flowers, delicate rose-pink, striped deep rose-pink, similar to 'Herme', (**Hikarugenji**) in form. Average size 12 cm across and 8.5 cm deep. Blooms midseason. Orthographic error: 'Deborrah Ann'.

Deborrah Ann. Tammia Nursery Catalogue, 1960, p.3. Orthographic error for **Deborah Ann.**

Debret. *(C.japonica x C.reticulata), American Camellia Yearbook,* 1983, p.157, Reg. No.1915: A large, salmon pink, peony form *C.hybrid ([C.japonica* **Debutante** x *C.japonica* 'Waterloo' (**Etherington White**)] x *C.reticulata* 'Crimson Robe') (**Dataohong**), very late flowering; originated by D. Feathers, Lafayette, California, USA. The 18 year old seedling first bloomed 1968. Average flower size is 10 cm wide by 7.5 cm deep with 43 petals and 5 petaloids,

yellow anthers and pink filaments. The flower is heavy and dense, many petals are double or treble. Leaves are medium green, 8.5 cm long by 5 cm wide.

Debret S. Levi, 1967, *American Camellia Yearbook,* p.40. Name later registered as **Debret** as above.

Debut. *(C.reticulata x C.japonica),* Nuccio's Nurseries Catalogue, 1977. #7303. *American Camellia Yearbook,* 1979, p.104, Reg. No.1518: A very large, china rose (rich rose red), wavy petalled, loose, peony form hybrid *(C.reticulata x C.japonica)* seedling that blooms mid-season, originated by Nuccio's Nurseries, Altadena, California, USA. The 5 year old seedling first bloomed 1973. Average flower size is 13 cm wide. Plant growth is upright, dense and rapid in rate with dark green leaves, 10 cm x 5 cm. Colour plate front cover, SCCS., *The Camellia Review,* 1977, vol.39, No.2. Sport: **Debut Variegated.** Chinese synonym: 'Shouyan'.

Debut Variegated. *(C.reticulata x C.japonica),* Cannon, 1980, ACS., *The Camellia Journal,* vol.35, No.4 as 'Debut Var.': A virus variegated form of **Debut** - China rose blotched with white. Originated in USA.

Debutanta. F. le Poidevin & Son Nursery Catalogue, 1980. Orthographic error for **Debutante.**

Debutante. *(C.japonica).* Originally listed as 'Sara C. Hastie' by Wilson, 1930, *House & Garden,* 57(3):158, then as 'Sara C. Hastie' (Debutante) by Fruitland Nursery Catalogue, 1836-1937 and finally as **Debutante,** Gerbings Azalea Nurseries, 1938-1939. It is now so widely known as **Debutante** and, because of the number of seedlings and sports that have been derived from it under the name **Debutante,** that it is considered Article 31 of *Nomenclature Code* should be invoked, and **Debutante** established as its valid name and 'Sarah C. Hastie' relegated to synonymity. A beautiful light pink, spherical peony form flower, 8-10 cm in diameter, early flowering. Slow growth with light green foliage. Sports: **Gladys Marie, Debutante Blush, Vernice Anne.** Orthographic error: 'Debutanta'. For colour illustrations see p.57, Gerbings, G.G., 1945, *Camellias* and in the *American Camellia Yearbook,* 1947 facing p.46. Also pl.37, p.32, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Chinese synonym: 'Wutai Xinxiu'.

Debutante Benten. *(C.japonica)* Nuccio's Nurseries Catalogue, 2002-3. A variegated leaf sport of **Debutante.** Nuccio's Nurseries Catalogue, 2007, p.33. Originated by Shirley Real, USA. Light yellow-green edge to leaves, darker green centre, irregular shape. Flowers slightly smaller than parent, not profuse.

Debutante Blush. *(C.japonica),* SCCS., 1974, *Camellia Nomenclature,* p.45: A blush pink sport of **Debutante.** Originated by Dr R.K. Womack, Shreveport, Louisiana, USA.

Delia Williams. RHS, 1965, *The Rhododendron and Camellia Yearbook,* No.19, p.165 and pl.3: RHS., "Award of Merit", April, 21, 1964. Typical of the grex as a whole, this cultivar has narrow leaves attenuated at the tip and some 10 cm long and 3.8 cm wide. The flowers are 10 cm across, contain 8-10 petals and are coloured rose-pink (HCC.427/2) with some darker staining on the outer petals. In the centre is a cluster of stamens, a few of which are petaloid. See coloured illustration pl.3 facing p.56. Exhibited by Mrs Alison Johnstone, Trewithen. Cornwall, England. The priority name for this cultivar is **Citation.**

Delicacy. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.55. No description. Originated in USA. (Believed extinct.)

Delicata Amoena. *(C.japonica),* Verschaffelt, 1859, *Nouvelle Iconographie,* Book X, pl.III: The blossoms, larger than average, are formed of large, ovate petals, emarginate, outspread, regularly imbricated, a delicate rosy white, banded and stippled a vivid pink. Originated in Belgium by Verschaffelt..

Delicata Striata. *(C.japonica),* Verschaffelt, 1851, *Nouvelle Iconographie,* Book I, pl.III: The blossom, of medium size, belongs to the class of perfections by the perfect imbrication of its petals. These are large, rounded-oval, slightly sinuate, emarginated, of a vivid pink, veined a deeper shade and streaked longitudinally by more or less distinct white lines. Originated in Italy. Orthographic variant: 'Delecta Striata'.

Delicate Pink. *(C.japonica),* Hume, 1946, *Camellias in America,* p.330. No description. Originated in the Lindo Nursery, Alabama. USA. (Believed extinct.)

Delicate Pink Imbricated. *(C.japonica),* Hume, 1946, *Camellias in America,* p.330. No description. Originated in the Lindo Nursery, Alabama, USA. (Believed extinct.)

Delicatescent. *(C.hybrid). New Zealand Camellia Bulletin,* 1993, Issue No.115, vol.XVIII, No.2, p.47, colour photo p.48: A seedling of **Dream Baby** x *C.lutchuensis* raised by John Lesnie, Manukau City, New Zealand. Very pale pink to white, small single form.

Delicatissima. *(C.japonica),* Morren, 1834, *L'Illustration Horticole,* vol.2, p.93. No description. Anonymous,1834, *Revue Horticole.* Berlèse, 1837, *Monographie,* ed.1, p.112, 131: Leaves 8.5 cm long by 5 cm wide, ovate-oblong. Flowers, 8.5 cm in diameter, double rose form, heart large, 5.5 cm diameter, petals curled, sinuous, irregular. Those at the periphery larger, being 2.5 cm or more broad, entire, all white striped with rose, stripes both large, small and numerous. Originated in Japan and imported by von Siebold according to Berlèse. See pl.63, Berlèse, 1841, *Iconographie,* vol.1. Orthographic errors: 'Decliatissima', 'Deliciatissima'. Sports: **Delicatissima Rubra, Delicatissima Rosea.** Synonym: 'Delicatissima Nova'. See also Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 23. Mertens says the plant was obtained by British nurserymen in 1831.

Delicatissima Nova. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.55. Synonym for Delicatissima.

Delicatissima Rosea. *(C.japonica),* Verschaffelt Catalogue, No.50, 1844, p.19. A rose-pink sport of **Delicatissima.** Originated in Italy.

Delicatissima Rubra. *(C.japonica),* van Houtte Catalogue, 1843-1844, 12: vv: Salmon red with dawn reflections, covered with spots of white. A sport of **Delicatissima.** Originated in England.

Delight. SCCS Bulletin Vol.11, No.2, Dec 1949. SCCS., 1950, *The Camellia. Its Culture and Nomenclature:* Synonym for **Mrs Josephine M. Hearn.**

Delightful. *(C.japonica),* ACRS., 1988, *Camellia News,* No.107, p.10, Reg. No.350: Originated by Craig Carroll, West Pymble, NSW., Australia. Seed parent *C.japonica,* **White Tulip,** pollen parent unknown. First flowered 1981. A single white, 6 petalled plant, 10 cm across x 6 cm deep. Flowers freely on a upright, rapid-growing plant. Fluted petals with stamens in a column. Flowers fall complete. Leaves ovate, flat, margins serrate, apices acuminate, glossy green, 10 cm long x 5.5 cm wide.

Delimoniana. *(C.japonica),* William Bull Catalogue, 1869, p.79. No description. Originated in England. (Believed extinct.)

Delizia. *(C.japonica),* Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete:* Small flower, formal double, petals pale pink with close carmine stripes, very similar to the rose 'Oeillet Parfait'. Originated in Italy by Delgrande, Rome.

Della Regina. Roda Nursery Catalogue, 1885. Orthographic error for **De la Reine.**

Dell'Universita. *(C.japonica),* Linden Catalogue, 1875. No description. Orthographic error 'Delle Universata'. Originated in Italy. (Believed extinct.)

Della Lamberti. de Bisschop Nursery Catalogue, 1937, p.10. Synonym for **Lambertii.**

Delores Thompson. *(C.japonica),* ACS., Feb.1989, *The Camellia Journal,* vol.44, No.1, p.12, Reg. No.2116: Small size, light pink - almost white, roseform double, *C.japonica* chance seedling. Originated by Johnny Aldrich, Brooklet, Georgia, USA. *American Camellia Yearbook,* 1989, p.120, colour photo, 3p.1324: The 15 year old seedling first bloomed 1977. Average flower size, 7.5 cm across x 3.8 cm deep with 59 petals. Plant growth is spreading and medium with dark green leaves, 9.5 cm x 7 cm.

Delorme. *(C.japonica),* McIlhenny, 1937, *600 Varieties of Camellias,* p.5: Rose madder, blotched white. Medium sized semi-double. Originated by Jungle Gardens, Avery Island, Louisiana, USA.

Delphina. *(C.japonica),* Verschaffelt Catalogue, No.50, 1844-1845, p.24. No description. Originated in Italy. (Believed extinct.)

Delphine. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1944-1945: Large single, salmon pink. Mid-season blooming. Originated at Magnolia Gardens, Charleston, South Carolina, USA.

Delphine Johnson. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1999, p.14, Reg. No.2499. A formal double chance seedling, pale pink with many different sized maroon stripes. Star shaped petals surround the centre of the flower. Originated by Elizabeth R. Scott, Aiken, S.C., USA. *American Camellia Yearbook,* 1999, p.3, colour photo before p.1. The 19 year old seedling first flowered 1986. Average flower size is 9 cm across x 3.8 cm deep, with 55 petals and a bud centre. Flowers have heavy texture and sheen. Plant is upright and dense, and of average growth rate. Flowers profusely, and has dark green leaves 11.5 cm long x 5 cm wide.

Delsii. Cachet Catalogue, 1840-1841, p.2. Orthographic error for **Delesii.**

Delta Dawn. *(C.reticulata.x C.japonica), American Camellia Yearbook,* 1980, p.162, Reg. No.1672: A very large, rose-pink semi-double, *C.reticulata* hybrid (['Cornelian' (**Damanao**) x **Mrs D.W. Davis**] x 'Cornelian'). Mid-season to late flowering; originated by Frank Pursel, Oakland, California, USA. Average flower size, 15 cm wide x 11 cm deep. Plant growth upright, spreading and medium in rate with dark green leaves, 15 cm long x 7.5 cm wide.

Delta King. *(C.japonica),* Camellian Nursery Catalogue, 1961-1962, inside front cover: Bright red, irregular semi-double with folded frilly petals, and a heavy centre of intense yellow stamens in clusters, intermixed with petaloids. Originated by Camelliana Nursery, California, USA.

Delta Queen. *(C.japonica), American Camellia Yearbook,* 1970, p.162, Reg**.** No.1081: A 13 year old chance seedling that first bloomed 1958; originated by Dr John D. Lawson, Antioch, California, USA. Plant growth is upright, average in density and slow in rate, with medium sized, dark green leaves. The formal double bloom is blush with an occasional pink streak, no anthers. It measures 11 cm across and 3.5 cm deep with 60-65 petals. Late flowering.

Delvecchio. *(C.japonica),* van Houtte Catalogue, 1860-1861, 83:44. No description. van Houtte Catalogue, 1864-1865, 104:80: Well imbricated, petals serrated; the central and outer petals a very deep rose-pink, the intermediate petals a pale pink. From Danovaro. Mariotti Catalogue, 1924: Vivid cherry red, centre lighter. Originated in Italy.

Delzii. Charles van Geert Catalogue, No.105, 1848, p.109. Orthographic error for **Delesii.**

Synonyms: 'Depressa d'Italie', 'Depressa Flore Rubro'. Originated in Italy.

Depressa d'Italie. van Houtte Catalogue, 1843-1844, 12:w. Large flower of the type of 'Conspicua' of Loddiges'. Synonym for **Depressa.**

Depressa Flore Rubro. Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani, as 'Depressa Fl. Rubro'. Synonym for **Depressa.**

Dera May. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.44: White with a blotch of red on one or two petals. Medium semi-double to peony form with loose petals. Vigorous, bushy growth. Flowers mid-season. Originated in USA.

Derbejana. Rovelli Catalogue, 1852, p.16. Orthographic error for **Derbyana.**

Derbeyana. Jacob Makoy et Cie Catalogue, 1833; Courtois, 1833, *Magazin d'Horticulture,* 1 [pt.D]:315. Orthographic error for **Derbyana.**

Derbiana. J.E. von Reider, 1834, Die Beschreibung und Kultur der Azaleen, Camelien.., p.218. No description. Berlèse, 1837, *Monographie*, ed.1. Orthographic variant for **Derbyana.**

Derbiana. The Pacific Camellia Society, 1946, *Camellia Nomenclature*, p.11. Synonym for **Cup of Beauty (United States).**

Derbiana Red. Barrios' Nursery Catalogue, 1954-1955. Synonym for **Derbyana.**

Derbiana Vera. Berlèse, 1837, *Monographie*, ed.1, p.108, 130. Orthographic variant for 'Derbyana Vera', synonym for **Derbyana.**

Derbriana. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Derbyana.**

Derbriana Vera. Fendig, 1953, *American Camellia Catalogue* Orthographic error for 'Derbyana Vera', synonym for **Derbyana.**

Derby Red. Vanderbilt, 1941, *Camellia Research, II*, p.2. Synonym for **Derbyana.**

Derbyana. *(C.japonica),* Loddiges Catalogue, 1830, p.21. No description. Harrison, 1835, *Floricultural Cabinet,* vol.III, p.186 as a "British hybrid having dark red flowers". Berlèse, 1837 and 1840, *Monographie,* describe a camellia he called 'Derbiana Vera'. In his 1841 and 1843 *Iconographie* he figures and describes 'Derbiana'. It is believed they are synonymous with **Derbyana.** His description as follows, matches his colour plates: Flowers 10 cm in diameter and often more, double, deep orange-red of a brightness difficult to designate; the exterior petals arranged in several rows, broad, a little spoon shaped, crenate at the apex; those of the interior, narrow, rumpled, of a rose tint with a few sterile stamens in the centre. van Houtte Catalogue, 1841, 7:6 gives as synonyms: 'Ammanta', 'Angresiae', and 'Coloured'. The *Floricultural Cabinet,* 1838, gives 'Amanda' as a synonym and Loddiges Catalogue, 1848 gives 'Angrezia', while Charles van Geert, 1845 gives 'Clartoni', 'Clertonii', 'Clertonia', 'Amanda' and 'Derejana'. See also Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 56. There are also a number of orthographically erroneous names such as 'Derbiana', 'Derbeyana', 'Derbyanna', 'Debriana', 'Delbeiana' as well as the synonyms 'Derbiana Vera', 'Debriana Vera', 'Derby Red' and 'Derbiana Red'. The situation in America is that the synonyms 'Lady Derby's' and 'Zachary Taylor' were used, but also two other invalid names in 'Cup of Beauty' and 'Tasse de Beauté' both of which validly belong to an old Chinese variety which Fortune imported to England in 1857. According to Fendig, 1950, *American Camellia Catalogue* other synonyms that have been attached to **Derbyana** in America are 'Florapena', 'Peonyflora', 'New Orlean's Red', 'Tassa de Beau', 'J.G. Peonyflora' and 'Derbeyiana'.

Derbyana Vera. Berlèse, 1837, *Monographie,* ed.1, p.108, 170 as 'Derbiana Vera' and changed to 'Derbyana Vera' in his 1840 *Monographie,* ed.2, p.185, 186. Synonym for **Derbyana.**

Dernii. Baumann & Baumann, 1835 *Collection de Camellias é1evés à Bollwieler,* No.45 as J.W. 'Dernii' (Augusta). Makoy Catalogue, 1838, gives **Augusta** as the valid name and Berlèse, 1841, *Iconographie* -*'* Augusta Rubra Aurantiaca'. It is a synonym for **Augusta.**

Des Peintres. *(C.japonica),* Cachet Catalogue, 1840-1841, p.1: Pink. Jardin de Société Royale de Belgique Catalogue, 1842, p.21; Jacob Makoy et Cie Catalogue, 1842, p.9. No description. Desert Moon. *(C.reticulata* hybr.) ACS.,May 1989, *The Camellia Journal,* vol.44, No.2, p.9, Reg. No.2120: Large to very large size, light pink with deep pink towards the petal edge; semi-double, *C.reticulata* hybrid, seedling of 'Lasca Beauty'. Blooms mid-season. Originated by Langdon Nursery, Sebastapol, California, USA. *American Camellia Yearbook,* 1989, p.120: The 8 year old seedling first bloomed 1987. Plant growth is upright, dense and rapid.

Desert Sunset. *(C.japonica),* ACS, *Yearbook,* 2013, p.111 with colour photo; Regn. No.2912; Originated and registered by C.M. & Lillian Gordy, Ocala, Fla. USA,, and propagated by Loch Laurel Nursery, Valdosta, Ga. The large, 12.7cm diameter x 5cm deep, flower is bright coral pink, semidouble to peony form, with some petals in rabbit ear form in cooler weather. Large spray of stamens with bright gold anthers and cream filaments mixed with the inner petals. Dense, upright plant with vigorous growth. Dark green leaves average 12cm x 5,7cm, with medium serration. Flowers mid-season

Desertion. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Pale pink. Medium large, rose form double. Blooms mid-season to late. Originated by J. Pfingstl, California, USA.

Desiderio. *(C.japonica),* van Houtte Caralogue, 1858, 72:10 as 'Desiderio'(II): Brilliant red, petals marked and lightly bordered white; very large, ample and perfectly imbricated. Synonym 'Il Desiderio'. Originated in Italy.

Desinganno. Ambroise Verschaffelt, 1854, Catalogue, p.18. Jules Menoreau, Nantes Nursery Catalogue, 1856, p.8. Orthographic error for **Disinganno.**

Desinganus. Auguste van Geert, 1854, Catalogue No.36, p.36. Orthographic error for **Disinganno.**

Desir. A. Stervinou, Catalogue 2008, p.8. French translation of **Desire** – not allowable under International Commission rules.

Desire. *(C.japonica), American Camellia Yearbook,* 1977, p.209, Reg. No.1449: A medium size, pale pink, edged a deeper pink, formal double *C.japonica* (**Dr Tinsley** x **Debutante**), that first bloomed 1973. Originated by David Feathers, Lafayette, California, USA. The bloom has 60 petals and measures 10-10.5 cm across and 5 cm deep. It holds on the bush for a long time. Plant growth is upright, dense and rapid in rate with dark green leaves, 8.5 cm long x 5 cm wide. Colour photo, front cover, *New Zealand Camellia Bulletin,* vol.XII, No.3, 1981 and ACRS., 1990, *Camellia News,* No.113. Chinese synonym: 'Xiwang', later changed to 'Xinyuan'.

Desire Possession. *Camellias,* Y.C. Shen, 2009, p.332 with colour photo; Synonym for **Yuki.**

Desmond Haydon. *(C.williamsii).* NZCS, *Camellia Bulletin,* No.171, March 2012, p.15 with colour photo. Regn No.498 A seedling of **Haydon's Compact,** pollen parent unknown, which first flowered in 2004. Plant is almost globular in shape, dense, and of medium to strong growth rate. Dark green leaves are small, 6.5 cm x 3 cm. Flower is a formal double, 8 cm diameter x

2.5 cm deep, with about 80 petals, usually cupped, size decreasing to tiny at flower centre. No petaloids. Colour is light pink (RHSCC 65C, shading to 65B at petal edges and centre). Late flowering. Originated by Neville Haydon, Papakura, NZ.

Despina. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.10. No description. Originated in Italy by Tagliabue. (Believed extinct.)

Dessa Thompson. *(C.japonica), American Camellia Yearbook,* 1948, p.168, McCaskill Gardens seedling No.153. A very full, complete double, irregular flower, white with a delicate creamy suffusion, 10 cm across. Flowers early to late. Habit compact and upright with medium green leaves, elliptic, acute and serrate, 10 cm long x 4 cm wide. First bloomed 1943. Parentage unknown. Originated at McCaskill Gardens, Pasadena, California, USA. Registration No.43 with SCCS. See p.103, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I for black and white photo.

Destans. *(C.japonica),* Verschaffelt, 1844, Catalogue No.50, p.19. No description. Cachet Catalogue, 1845-1846, p.6; Burdin Maggiore & Co. Catalogue, 1845, p.41. No description. Originated in Italy. (Believed extinct.) Orthographic errors: 'Distans', 'Distons'.

Destiny. *(C.japonica),* Domoto Nursery Price List, 1956, p.2. No description. SCCS, 1956, *The Camellia. Its Culture and Nomenclature,* p.39: A sport of 'Lady Clare', (**Akashigata**) - White streaked deep pink. Imported to USA by Domoto in 1955. See colour plate No.39, p.33, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Chinese synonym 'Disidini'.

Detenne. SCCS., 1968, *Camellia Nomenclature,* p.42. Othographic error for **Deeten.**

Deviana. Bull Retail List, 1872, p.498. Orthographic error for **Devriana.**

Devona. Arnold-Forster, 1948, *Shrubs for the Milder Counties,* p.205. Orthographic error for **Devonia.**

Devonensis. W.J. Marchant's Nursery Catalogue, 1937, p.33. Synonym for **Devonia.**

Devonia. *(C.japonica),* Anonymous, May,1900, *The Gardeners' Chronicle,* ser.3, vol.27, p.302: Single white variety that succeeds perfectly in the open in Devonshire. From Messrs R. Veitch & Son, Exeter. Also recorded in the RHS. Journal 1900-1901, when it gained an "Award of Merit". A single white with 6-9 broadly ovate petals, 4-5 cm x 4 cm, apices rounded and notched, forming a cup-shaped flower, averaging 9 cm in diameter. Stamens are in a loose, central bunch, joined for one third of their length. Leaves glossy, dark green, broadly elliptic, 9 cm x 6 cm, acuminate and serrulate. Puddle & Hanger, 1960. RHS Yearbook No.14 p.145. Orthographic errors include: 'Devona', 'Devonensis', 'Deviana'. It has also invalidly been called 'Devoniana' and 'Devoniensis', names with prior listing for other cultivars. The synonyms: 'Swan', 'Swann' and 'The Swan' that have been given it should be avoided as they have also been used as synonyms for **Yobukodori.** In the UK the name **Devonia** has also sometimes been mistakenly used for **Yukimiguruma.**

Devoniana. Piantaio Comunale Romano, 1859. Orthographic error for 'Devoniensis', synonym for **Fordii.**

Devoniana. Hillier Nursery Catalogue, 1924-1925, p.36, Invalidly for **Devonia.**

Devoniana Striata. Verschaffelt Catalogue, No.50, 1844, p.19. No description. Giacomelli Catalogue, 1855. No description. Orthographic error: 'Divoniana Striata'. (Believed extinct.)

Devoniensis. van Houtte Catalogue, 1845, 23:4 as a synonym for **Fordii.** Burnier & Grilli Catalogue, 1846-1847 repeats this statement. The use of this name as a synonym for **Devonia** by Marchant and others is invalid.

Devoniensis. Slieve Donard Catalogue, 1942, p.5. Anonymous, 1943, *Gardeners' Chronicle,* ser.3, vol.CXIII, p.14. Arnold-Forster, 1948, *Shrubs for Milder Counties,* p.204. An invalid synonym for **Devonia.**

Devriana. *(C.japonica),* van Houtte Catalogue, 1851, 44:8. No description. Verschaffelt, 1860, *Nouvelle Iconographie,* Book XI, pl.IV: Pure white camellia with a few rare crimson stripes. The blossoms, of medium size, are formed of numerous, rounded petals towards the circumference, ovate at the centre and regularly imbricated. Originated by van Eeckhaute, Ledeberg, Belgium.

Dew Drop. Yashiroda, 1950, *American Camellia Yearbook,* p.15. Synonym for **Tsuyu-no-tama.**

Dewaman'e. (Camellia from Province Dewa with many rows of petals), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1968, pl.280 as 'Dewa-man-e': A medium to large, loose peony form, white with streaks of dark crimson. Originated in Japan. (Believed extinct.) "Dewa" is the old name for the northern part of Japan, including the Aomori Prefecture.

Dewatairin. (Large flowering camellia from Dewa Province), (Higo). Itô, Ihei, 1695, *Kadan Chikinshô:* Described as resembling **Shikamura.** Yashiro, 1841, *Kokon Yôrankô,* vol.306. Usamai, Nao-hachi, (ca.1910), *Nagoya Chinzu'e* where it is described as "Large, red." It has not been confirmed that these old cultivars are the same as the modern **Dewatairin.** Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement,* p.71, colour pi., p.57 as 'Taiheiraku': Light rose pink. Large, 13 cm across, single Higo form, often with a mass of white to pink petaloids in the centre. Early flowering. Stamens number in excess of 100. Leaves, large, long-ovate, thinly lustrous, recurved; sometimes yellow variegated. Synonyms: 'Daitairin', 'Pink Fimbriata', 'Golden Temple', 'Bar None', 'Daihassu', 'Hatsusakura', 'Hatsu-zakura', 'Taiheiraku'. 'Osakazuki', 'Taihai' and, invalidly, 'Hinomaru'. Originated in Sofue-chô, Aichi Prefecture, Japan. Colour illustations have been published in: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.30, p.48; Tuyama, 1968, *Camellias of Japan,* pl.286, p.144, 177 & 295. Hiratsuka, 1964, *Higo Camellia* as 'Taihei-raku'; Seibundô Shinkôsha, 1979, *Senchinshû,* p.85 as 'Taiheiraku' and p.102 as 'Dewatairin'. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.136. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.246 erroneously illustrates the variegated form as 'Dewa-tairin'. Received the RHS. "Award of Merit", 1953 as 'Hatsu-Sakura'. The white variegated form is named **Manzairaku.**

Dexiaojie. (Virtuous Young Woman), Gao & Zhuang, 1988, *The Camellia in China,* p.79, No.603. Chinese synonym for **Miss Ed.**

Di Brugni. de Bisschop Nursery Catalogue, 1935. Orthographic error for 'De Brugny'.

Di Negro Nova. *(C.japonica),* Auguste van Geert, 1857, Catalogue, No.43, p.34, as 'Di Nigro Nova'. No description. Ibid. 1863-1864, Catalogue No.54, p.36, as 'De Negro Nova': Formal double bright pink, with deeper coloured veins.van Geert Nursery Catalogue, No.75, 1869-1870, p.51. No description. Originated in Italy. Orthographic variants: 'De Negro Nuova', 'Di Negro Nuova', 'Di Nigro Nova'.

Di Negro Nuova. Mercatelli Catalogue, 1894. Orthographic variant for **Di Negro Nova.**

Diadem. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1944-1945. White striped rose-pink. Large semi-peony to rose form double. Originated in USA by Tea Gardens, Charleston. Synonym: 'Tea Gardens No.383'.

Diadem. *Camellias,* Y.C. Shen, 2009, p.215 with colour photo; Synonym for **Ôkan.**

Diadem di Flora. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.57. Synonym for **Diadema di Flora.**

Diadema. Ridolfi, Florence Catalogue, 1848, p.7: Most beautiful, very red, double, not distinct. Synonym for **Diadema di Flora.**

Diadema di Flora. *(C.japonica),* Cachet Catalogue, 1840-1841, p.1 as 'Diademaflora': Red. van Houtte Catalogue, 1841, 7:6. No description. Berlèse, 1845, *Monographie,* ed.3, p.211: Flower rose form, double, with exterior petals in many rows, those in the centre, smaller and mixed with stamens. Colour dark rose with white stripes. Originated in Italy. Orthographic errors: 'Diademiflora', 'Diademantiflora', 'Diadenia di Flora', 'Diadematiflora', 'Diademathiflora','Diademadiflora'. Synonyms: 'Diadema', 'Diadem Di Flora', 'Diadema di Flora di Milano'.

Diadema di Flora di Milan. Verschaffelt Catalogue, 1847-1848, p.56, as 'Diadamadiflora di Milan'. Synonym for **Diadema di Flora.**

Diadema Flore Plena Rubra. *(C.japonica),* Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani, as 'Diadema Fl. Pl. Rubro. Red formal double flower. Originated by Ridolfi in Italy.

Diademadiflora. Jacob Makoy et Cie Catalogue, 1841, p.10. Orthographic variant for **Diadema di Flora.**

Diademadiflora di Milan. Verschaffelt Catalogue, No.50, 1844, p.19. Orthographic variant for 'Diadema di Flora di Milan', synonym for **Diadema di Flora.**

Diademaflora. Cachet Catalogue, 1840-1841, p.1. Orthographic error for **Diadema di Flora.**

Diademathiflora. Jardin la Société Royale de Belgique Catalogue, 1842, p.21. Orthographic error for **Diadema di Flora.**

Diademantiflora. Burdin Maggiore & Co. Catalogue, 1862. Orthographic error for **Diadema di Flora.**

Diademata. *(C.japonica),* van Houtte Catalogue, 1839, 1:3. No description. Originated in Italy. (Believed extinct.)

Diademiflora. Porcher, 1847, *Revue Horticole,* ser.3, vol.1, p.448. Orthographic error for **Diadema di Flora.**

Diadenia di flora. Downing Catalogue, ca.1858. Orthographic error for **Diadema di Flora.**

Dialbata. *(C.japonica),* Franchetti, 1855, *Collezione di Camelie,* p.25, Peony form, deep pink petals, edged with white. Originated in Italy.

Diamandiana. Joseph Baumann, 1849, Prix Courant, p.4. Orthographic error for **Diamantina.**

Diamandina. Verschaffelt Catalogue, 1847-1848, p.56. Orthographic error for **Diamantina**

Diamantina. *(C.japonica),* van Houtte Catalogue, 1841, 7:6: Delightful pink camellia. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France,* vol.40, p.280: Flower 10-11 cm across, peony form, sometimes an irregular rose form, of a very bright salmon orange red, tinted with rosepink. Exterior petals in 3-4 rows, ample, sometimes with double notches, veins of carmine, wavy and well positioned. The centre is composed of groups of small petals of many shapes, narrow, confused, innumerable, sometimes complete petals; others, whitish petaloids; corolla broad, flat, compact. Originated by van Houtte, Belgium. Orthographic errors: 'Diamandina', 'Diamentina', 'Diamandiana'.

Diamentina. Newman, 1849, *The Florist,* p.95. Orthographic error for **Diamantina.**

Diamond Head. *(C.japonica x C.reticulata), American Camellia Yearbook*, 1961, colour plate facing p.210: Large, irridescent red semi-double with crinkled petals. Erect, open growth. A cross from *C.japonica* **Lady Vansittart** x *C.reticulata* 'Crimson Robe' (**Dataohong**), raised by David Feathers, Lafayette, California, USA. Camelliana Nursery Catalogue, 1961-1962, p.1, with colour photo on front page of catalogue: Rich crimson colour, large, semi-double with

notched and crepy petals. A deep bloom with the look of an hibiscus. Blooms mid-season on a plant with upright, compact growth. Sport: **Diamond Head Variegated.**

Diamond Head Variegated. *(C.japonica x C.reticulata),* Gentry, 1968, ACS., *The Camellia Journal*, vol.23, No.1, (advert.) as 'Diamond Head Var.'. A virus variegated form of **Diamond Head** - Irridescent red blotched white. Originated in USA.

Diamyo-nishiki. SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Orthographic error for **Daimyô-nishiki.**

Dian Fossey. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias*, 2005, p.80 with colour photo; Medium size, peony form (flower shown is anemone form), pink (RHS.CC. 55A to 55B). A selfed seedling of **Moshio**, first flowered 1982. Originated by Dott. Guido Cattolica, Livorno, Italy.

Dian Hartman. *(C.japonica), American Camellia Yearbook,* 1957, p.300, Reg. No.310: A 9 year old chance seedling originated by A.M. Hartman, San Fernando, California, USA, that first bloomed 1952. Plant growth is upright, of medium density and average in rate with 10 cm x 5.5 cm leaves. Flowers are white with slight flecks of reddish pink and 9-10.5 cm in diameter and 4.5 cm deep with 36 petals and 95 petaloids, resembling 'Anemoniflora Alba' (Australia) in form. Late flowering. Sport: **Dian's Fancy.** Illustrations: *American Camellia Yearbook,* 1958, facing p.242. Urquhart, 1960, *The Camellia*, vol,2, pl.XXXI.

Dian Moon. Cannon, 1963, ACS., *The Camelia Journal*, vol.18, No.5, p.28. Orthographic error for **Diana Moon.**

Diana. *(C.japonica),* Cachet Catalogue, 1840-1841, p.2. No description. Berlèse, 1840, *Monographie*, ed.2, p.117, 229: Leaves, 8 cm long x 5.4 cm wide, long-oval, acuminate, apex recurved, horizontal, prominent venation; regular, fine serrations, of a dark green; buds large, obtuse with blackish scales; Flower full, about 9 cm in diameter, cherry-red; exterior petals, 8-9 in number, broad, oblong, some entire, others notched, reflexed, those following are very numerous, forming a corolla like a bowl similar to **Lefévriana'**. Originated by Mariani, Milan Italy. In America this name has been used invalidly as a synonym for **Imura.**

Diana. The Pacific Camellia Society, 1946, *Camellia Nomenclature,* p.11. Invalid synonym for **Imura.**

Diana de Genova. Ludemann's Pacific Nursery Catalogue, 1895-1896, p.4. Orthographic variant for **Diana di Genoa.**

Diana di Genoa. *(C.japonica),* Auguste van Geert, 1853, Catalogue, No.33, p.24, as 'Diana de Genoa'. No description. van Geert Nursery Catalogue, No.75, 1869-1870, p.51. No description. Ludeman's Pacific Catalogue, 1895-1896, as 'Diana de Genova': Deep carmine, smetimes spotted with white. Originated in Italy.

Diana di Nova. Auguste van Geert, 1863-1864, Catalogue, No.54, p.36. Orthographic error for **Diana Nova.**

Diana d'Inghilterra. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias*, 2005, p.81 with colour photo; medium size, rose form double with central petaloids closely packed. Flesh pink (RHS.CC.73D). A seedling of 'Rosa Simplex' **(Aitonia)** x 'Mani pulite', first flowered in 2002. Originated by Dott. Guido Cattolica, Livorno, Italy.

Diana Lennard. *(C.x williamsii), New Zealand Camellia Bulletin,* 1982, vol.XII, No.7, p.51, Reg. No.181: A chance seedling of *C.x williamsii* **Elegant Beauty.** Originated by Trevor Lennard, Te Puke, New Zealand. Growth habit is upright, open and of a medium rate. The light green leaves average, 8 cm x 4 cm. The formal double flower measures 9 cm x 6.5 cm and has 62 petals. Its colour is deep pink shaded lighter. (RHS.CC.51B). Flowers mid-season to late.

Diana Moon. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.33: Soft mauve pink splotched white. Large semi-double with three rows of petals. Upright growth. Flowers mid-season to late. Orthographic error: 'Dian Moon'. Originated by Frank Griffin Sr., Columbia, South Carolina, USA.

Diana Nova. *(C.japonica),* Auguste van Geert Nursery Catalogue, 1848, p.16. No description. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare* as "rose, full, regular". It was figured and described by Verschaffelt, 1855, *Nouvelle Iconographie,* Book 11, pl.III: Its form is comparable to the finest tea rose, its colour, vivid cherry-red, striped with pure white. The petals of the first rows are spread out, the others remain upright and compact. They are very numerous and form blossoms larger that average. Originated in Italy. Orthographic variant: 'Diana Nuova', 'Diana di Nova'.

Diana Nuova. Franchetti, 1855, *Collezione di Camelie,* p.25. Orthographic variant for **Diana Nova.**

Diana Superba. *(C.japonica),* Luzzatti Catalogue, 1853. No description. Franchetti, 1855, *Collezione di Camelie,* p.25: Large size, imbricated, pale pink. Originated in Italy.

Diana's Charm. *(C.japonica),* Duncan & Davies (UK) Ltd, 1995, Wholesale Plant List, p.7: A commercial synonym in the United Kingdom for the New Zealand cultivar **Queen Diana,** that name being unacceptable in the UK due to Royal Protocol.

Dianchi Mingzhu. (Dianchi Lake Bright Pearl). (*C.reticulata).* China Regn No 22. *China Flowers & Horticulture,* Feb 2008, No.4, p.47, with colour photo; An open pollinated seedling of **Zaotaohong** (Early Crimson) originated by Kunming Institute of Botany, Yunnan, China, and named by Lia Xiafang. Flowers loose peony form, pink (RHS.CC. 68B) 15-17 cm diameter. Petals 26-28, outer flat, inner incurving. Well developed stamens distributed among the petals. Leaves long elliptic, bases cuneate, apices long acuminate and curved downward, 10.6-14.2 cm long x 4.5-6 cm wide Flowers mid-season to late.

Diandianhua. (Tiny Spots Flower), *(C.reticulata),* Chuang, 1959, *Yunnan Shancha Hua.* No description. Different reading: 'Tientienhua'. Originated in Dali, China.

Diane. *(C.japonica),* Wilmot, *Camellia Variety Classification Report,* 1943, p.10. Pink formal double, early blooming. Originated in USA.

Diane Carroll. *(C.japonica),* ACS., 1989, *The Camellia Journal,* vol.44, No.3, front cover colour photo and inside front cover: A rose colour, medium size camellia with 70 uniform petals in 7 rows; formal double to rose-form double bloom with abundant, long lasting flowers. Originated as a chance seedling by Ferol and Sam Zerkowsky, Tammia Nurseries, Slidell, Louisiana, USA.

Diane Krauel. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997, p.15, Reg. No.2412. A medium size, light pink centre to dark pink on edges, semi-double chance seedling. Flowers early to mid-season. Originated by Judge R.D. Hendrick, USA, registered by Mary E. Krauel. *American Camellia Yearbook,* 1997, p.2, colour photo before p.1. The 30 year old seedling first flowered in 1971. Average flower size is 10 cm across x 6.5 cm deep, with 25 petals. Plant growth is upright and slow, with light green leaves 8.2 cm long x 5 cm wide.

Dianhong Juban. (Spotted Red Chrysanthemum), *(C.reticulata),* Chuang, 1959, *Yunnan Shancha Hua.* No description. Different readings: 'Tien-hung Chû-pan', 'Tienhungtsueban'. Originated in Dali, Yunnan, China.

Dianna Wuanghou. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.327, p.76. Chinese synoym for the NZ *C.japonica* **Queen Diana,** synonym 'Diana's Charm'.

Dianne Clark. *(C.saluenensis x C.reticulata), New Zealand Camellia Bulletin,* 1964, vol.IV, No.1, p.11, Reg. No.22: A hybrid seedling of *C.saluenensis x C.reticulata* **Captain Rawes** originated by Dr Brian Doak, Papatoetoe, New Zealand. The plant is of vigorous, upright growth, has mid-

green foliage, leaves curled, margins rolled under, apices reflexed. The flowers, 12-15 cm across, are open semi-double with 15-18 petals and varying numbers of petaloids, fascicled stamens with golden brown anthers. Colour phlox pink. (HCC.624/1).

Dianora de Bardi. *(C.japonica),* van Houtte Catalogue,1858, 72:10: Of average size, brilliant rose-pink, veined very dark, petals ribboned regularly with white, imbricated. Originated in Italy. Orthographic error: 'Dianova di Bardi'.

Dianova di Bardi. Verschaffelt Catalogue, 1861-1862, p.22. Orthographic error for **Dianora de Bardi.**

Dian's Fancy. *(C.japonica),* SCCS., 1964, *Camellia Nomenclature.* p.40: Solid pink sport of **Dian Hartman.** Originated by A.M. Hartman, San Fernando, California, USA.

Dianshui. (Water Drops), Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.93. Synonym for **Dianxue.**

Dianthaeflora. Ugolini, 1895, "Le Camilie, il suo passato e il suo avviniere". *R. Società Toscana d'Orticultura, Bollettino,* 20 (10 of 2nd. series):320-328. Orthographic variant for **Dianthiflora.**

Dianthiflora. *(C.japonica),* Sweet, 1826, *Hortus Britannicus,* p.61. as 'Carnation Waratah'. Baumann & Baumann, 1829, *Collection de Camellias élevés à Bollwieler,* p.6, pl.5: The outer petals are vivid red, heart-shaped, and the inner petals are smaller, imbricated and striped with white. This variety sometimes bears single flowers (as illustrated), and sometimes double. Courtois, 1833*, Magasin d'Horticulture,* 1 [pt.D]:315 as 'Knight's Carnation Waratah'. Paxton, 1834, *Magazine of Botany,* vol.1, p.38: "Red ground, striped white". Berlèse, 1837, *Monographie,* ed.1, p.72, 117, 127: Shrub very vigorous, not very graceful, expanded branches; leaves of ordinary size, a little inclined, elongate-oval, strongly veined; bud with blackish scales, elongate, acute; flower broad, sometimes double and often single, cherry-red; petals of the circumference subcordiform, broad, 7 in number; those of the centre, erect, numerous, striated with white and forming an arched centre. Late flowers are single and the centre full of stamens. Synonyms: 'Cariophyllaeflora', 'Knight's Carnation Waratah', 'Carnation Waratah', 'Knightii', 'Knight's New Carnation Waratah', 'Knight's Anemomiflora', 'Knight's Waratah', 'Anemoniflora Knightii', 'Knight's Single Scarlet Waratah', 'Knights', 'Dianthiflora Plena', 'Dianthiflora Waratah', 'Knight's Nova', 'Warratah Striata' 'Double Variegated Waratah de Knight', 'Double Variegated Warratah de la Chine'. A seedling of **Anemoniflora** raised by Knight, King's Road, Chelsea, London, England about 1822. For illustration see Loddige's *Botanical Cabinet,* 1828, vol.XV, fol.1462. Its first listing was in Curtis's *Botanical Magazine,* 1825 as 'Knight's New Carnation Waratah' which is more a description than a name.

Dianthifora Carnea. *(C.japonica),* Harrison ed., 1838, *The Floricultural Cabinet and Florists Magazine,* vol.6, p.11: "Semi-double flesh colour". Originated in England.

Dianthiflora Lineata. *(C.japonica),* Harrison ed., 1838, *The Floricultural Cabinet and Florists Magazine,* vol.6, p.149: "Double white with rose-pink stripe." Originated in England.

Dianthiflora Plena. Cachet Catalogue, 1840-1841, p.2 as 'Diantiflora Plena'. Synonym for **Dianthiflora.**

Dianthiflora Striata. *(C.japonica),* van Houtte Catalogue, 1842, 9:9. No description. Not to be confounded with the camellia of the name Dianthiflora. However in van Houtte's Catalogue, 1844-1845, 18:10 he gives 'Striata' as a synonym and then in his 1846-1847 Catalogue 27:32 he has: 'Striata', synonyms 'Variegata', 'Dianthiflora', 'Dianthiflora Striata'. **Dianthiflora** is rejected as a synonym as the first descriptions vary, whereas **Variegata** is the name of an old Chinese cultivar.

Dianthiflora Striata Nova. *(C.japonica),* Berlèse, 1845, *Monographie,* ed.3, p.250:- Leaves 6-7 cm wide x 10-11 cm long, pointed-oval, prominent venation, fine serration, deep green; bud rounded, scales greenish; flower 9-10 cm in diameter, rose form, often whitish with bands of deep orange-red, sometimes unicolor. Not to be confounded with the old variety **Dianthiflora.** Originated in Italy.

Dianthiflora Striata Plena. *(C.japonica),* Berlèse, 1837, *Monographie,* ed.1, p.112,131: Leaves 7.8 cm x 5 cm, ovate-oblong, acuminate, horizontal, strongly serrate, very distinct venation, of a rather deep green. Flower, large, very double, of a pretty form, resembling very much that of camellia 'Imperialis'. Ground white, striped or spotted with rose. Synonym: 'Elegantissima Striata Alba', according to Berlèse, 1843, *Iconographie,* p. facing pl.184.

Dianthiflora Waratah. Tagliabue, 1840, *Nomenclatore Camelliae.* Synonym for **Dianthiflora.**

Dianthifolia. *(C.japonica),* Baumann & Baumann, 1829-1835, *Collection de Camellia élevés à Bollwieler.* No description. Originated in England. (Believed extinct.)

Diantiflora Plena. Cachet Catalogue, 1840-1841, p.2. Orthographic error for 'Dainthiflora Plena', synonym for **Dianthiflora.**

Dianxi. (Happy Spots), Chang, Shao Yun, 1987, *Camellias from Zhejiang,* p.93. Synonym for **Dianxue.**

Dianxue. (Spotted with Snow), *(C.japonica),* Huang Nursery Catalogue, 1949: Medium sized, 6-7 cm across, red formal double with white spots and 60-70 petals in 5-6 rows. Chang, Shao Yun, 1987. *Camellias from Zhejiang,* p.93: Branches sturdy, winter leaf buds red. Leaves varied in shape and size, oblique, obovate to lanceolate; serrations scarse and obtuse, unsymmetrically acuminate, veins thick and prominent. Flowers red, white or pinkish maculate, petals slightly incurved, almost round, thin, notched, roundish-obtuse with minute lobes at the apex. Buds heart shaped or ovate, greenish-brown. Blooms early to mid-season. See Gao & Zhuang, 1988, *The Camellia in China,* p.46, colour photo No.149. Synonyms: 'Dianxi', 'Dianshu'. Different reading: 'Tien-hsueh'. Originated in China.

Dianyu. (Spotted Jade). *(C.japonica),* Gao, Jiyin, Ltr 21st January 1993. A sport of **Huamudan** with large white spots on the petals. This sport first occurred in 1988 at Qingdao City, Shandong province, China.

Diaojinzhong. (Hanging Golden Bell), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China,* p.33, No.143, colour photo No.67: Medium size, light red, campanulate single, with 5-6 emarginate petals and a central stamen cylinder with creamy filaments, joined for the lower third, and yellow anthers. Blooms early to mid-season. Leaves dark green, broadly elliptic, apices acuminate, margins serrate. Originated in China.

Dias Ferreira. *(C.japonica),* Jacintho de Mattos Nursery Catalogue No. 14, 1900, p.64: Anemone form, bright rose-pink, veined darker, edged pure white. Originated in Portugal.

Diatarin. Fruitland Nursery Catalogue, 1947-1948, p.30. Orthographic error for 'Daitairin', synonym for **Dewatairin.**

Diaviesii. Guichard Soeurs Nursery Catalogue, ca. 1928, p.12. Orthographic error for **Daviesii.**

Diban Zhuliya. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.223, p.69. Chinese synonym for the USA *C.japonica* **Julia France.**

Dichsanii. Fratelli Rovelli Catalogue, 1852, p.16. Orthographic error for **Dicksonii.**

Dichsoni. Luzzatti, 1851, *Collezione di Camelie,* p.14. Orthographic error for **Dicksonii.**

Dick Dodd. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1998, p.23, Reg. No.2464. A large, cherry red, rose form double chance seedling. Flowers mid-season. Originated by Richard E. Dodd, Marshallville, Ga., USA. *American Camellia Yearbook,* 1998, p.1, colour photo before p.1.

The 14 year old seedling has flowers 11.5 cm across x 4.5 cm deep, with 37 petals, golden anthers, and filaments shading from cream to red at the base. Plant growth is upright, dense and average, with dark green leaves 11.5 cm long x 6.5 cm wide.

Dick Goodson. *(C.reticulata.x C.japonica), American Camellia Yearbook,* 1980, p.162, reg. No.1594: A very large, dark red semi-double *C.reticulata* hybrid *(C.reticulata* 'Cornelian' (**Damanao**) x *C.japonica* **Mrs D.W. Davis**), mid-season to late flowering; originated by Frank Pursel, Oakland, California, USA. The 5 year old seedling first bloomed 1976. Average flower size, 13.5 cm wide by 6 cm deep. Plant growth is upright, average in density and medium in rate with dark green leaves 10 cm long x 6 cm wide. Sport: **Dick Goodson Variegated**.

Dick Goodson Variegated. *(C.reticulata.x C.japonica.),* Cannon, 1980, ACS., *The Camellia Journal*, vol.35, No.4 as 'Dick Goodson Var.': A virus variegated form of **Dick Goodson** - Dark red blotched white. Originated in USA.

Dick Hardison. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997, p.17, Reg. No.2437. A large, red edged black, formal double chance seedling. Flowers early to late. Originated by Dick P. Hardison, Tallahassee, Fla., USA. *American Camellia Yearbook*, 1997, p.2, colour photo before p.1. The 8 year old seedling first flowered in 1992. Average flower size is 12.7 cm across x 3.8 cm deep, with 75 petals. Plant growth is dense and average with dark green leaves 6.5 cm long x 3.8 cm wide. Chinese synonym 'Dike'.

Dick Johnson. *(C.japonica),* Hovey, C.M., 1844, *Magazine of Horticulture,* 10:83. Originated by Joshua Pierce, USA. No description. (Believed extinct.)

Dick Parker. *(C.reticulata),* Kramer Bros. Nursery Catalogue, 1975: Lavender pink. Large semi-double with vigorous, open, upright growth. Blooms mid-season to late. A reticulata seedling of unknown parentage, originated by Kramer Bros. Nursery, Upland, California, USA.

Dick Rankin. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962-1963, p.4. No description. SCCS, 1966, *Camellia Nomenclature,* p.42: Crimson shaded blue. Medium to large semi-double to peony form with loose petals. Vigorous, upright growth. Mid-season to late flowering. Originated by Clower, Florida, USA. Chinese synonym: 'Lanken'.

Dickie Thomas. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.30: Pink striped carmine. Medium large semi-double. Medium, open growth. Mid-season flowering. Originated by Miss E.W. Boorman, Temple City, California, USA.

Dicksoni. Luzzatti, 1851, *Collezione di Camelie,* p.14. Orthographic error for **Dicksonii.**

Dicksonii. *(C.japonica),* van Houtte Catalogue, 1841, 7:6 as 'Dicksoni'. No description. Figured and described by Berlèse, 1843, *Iconographie,* vol.3, pl.273 and facing p.: The flower is about 10 cm across and is full, regular and a pure milk white. The petals in 8-9 rows are concave, rounded at the summit, entire, thin, transparent, gracefully displayed, symmetrically imbricated. Starting from the 5th row up to the centre they are channelled. Orthographic errors: 'Diksoni', 'Dicksoni', 'Dichsoni', 'Dichsanii'.

Dictatore Garibaldi. Joseph Vervaene fils, 1875, Price List, No.1, p.6. Ed Pynart van Geert Catalogue, 1888, p.64. Vervaene, J. Catalogue, No.11, 1888. Orthographic error for **Dittatore Garibaldi.**

Didaiwei. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.417. Chinese synonym for the USA *C.japonica* **Dee Davis**

Diddy Mealing. *(C.japonica),* Fendig, 1950, *American Camellia Catalogue,* Large, imbricated, incomplete double; creamy white with pink variegations, 11-11.5 cm in diameter. Occasionally one petal is pink. Petals upright, guard petals rounded, inner petals pointed. Plant habit, slightly pendulous, medium growth rate. Leaves, pale green, long acuminate. Originated by Dr and Mrs H.G. Mealing, Augusta, Georgia, USA from seed thought to be of **Duchess of**

Sutherland. First flowered 1946. Registration No.5 with the ACS in their *Newsletter*, Jan.1949, vol.4, No.1. Sports: **Pink Diddy, Diddy's Pink Organdie, Diddy Mealing Peony.** See illustrations *American Camellia Yearbook,* 1950, p.127. Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III, p.65. Chinese synonym 'Daidi'.

Diddy Mealing Peony. *(C.japonica), American Camellia Yearbook,* 1974, vol.II, p.231, Reg. No.1312: A sport of **Diddy Mealing** first observed 1960. The peony form bloom is white with a rare pink stripe. Average size, 10 cm across and 6 cm deep with many petals and petaloids with yellow anthers and pink filaments. The flower is a heavy peony with many central petals. Blooms early to late. Originated by Dr H.G. Mealing, Augusta, Georgia, USA.

Diddy Mealing Pink. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Pink Diddy.**

Diddy's Pink. Shackleford, 1972, ACS., *The Camellia Journal.* Orthographic error for **Pink Diddy.**

Diddy's Pink Organdie. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* A sport of **Diddy Mealing.** Dawn pink at the base blending to light pink towards the petal edge and edged white. Mid-season flowering. Originated By Dr H.G. Mealing, Augusta, Georgia, USA. Colour illustrations: *American Camellia Yearbook,* 1970 facing p.116; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.79. Pl.40, p.33, *Encyclopedia of Camellias in Colour,* vol.II, 1978. See ACS., 1989, *The Camellia Journal,* vol.44, No.3, p.9, Reg. No.2147. Orthographic variant: 'Diddy's Pink Organdy'. Chinese synonym 'Oujindi'.

Diddy's Pink Organdy. Newman's Nursery Catalogue, 1982-1983. Orthographic variant for **Diddy's Pink Organdie.**

Dido. *(C.japonica), Australian Botanical & Horticultural Society Report,* 1848, A Camden Park Seedling. Waterhouse, 1947, *Camellia Quest,* p.15, 17: Pure white, moderate size, petals well shaped, not numerous, of moderate substance and well formed. Camden Park No.6/50, raised by William Macarthur, Camden Park, N.S.W., Australia.

Didone. *(C.japonica),* Burdin Maggiore & Co. Catalogue, 1845. p.41. No description. Burdin Maggiore & Co., 1849-1850, Catalogue General: Vivid rose, large, regular. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare* as vivid rose-pink, large, regular. Originated in Italy.

Diego Armijo. *(C.hybrid),* SCCS., 1990, *Camellia Nomenclature,* p.146: Light orchid pink, medium size, semi-double with long, notched petals. Vigorous growth. Blooms early to late. A seedling of **Gay Time** x **Angel Wings**, originated by Piet and Gaeta, California, USA.

Diehong Meigui. (Folded Red Rose). *American Camellia Yearbook,* 1992, p.42. Chinese synonym for the USA *C.japonica* **Red Red Rose.**

Dielitz. *(C.japonica),* Luzzatti Catalogue, 1853. No description. Franchetti, 1855, *Collezione di Camelie,* p.25: Closely imbricated, bright pink, shaded with white. Originated in Italy.

Diffusa. *(C.japonica),* Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.13. No description. Originated in Italy. (Believed extinct.)

Dixie. *(C.japonica),* Glen St. Mary Nurseries Co. Catalogue, 1931, *Azaleas and Camellias,* p.5: Medium sized flower, full double, vivid pink. Symetrical, late bloomer. Slow, upright growth. Originated in USA. Synonyms: 'Orson's Pride', 'Vivid Pink', and, invalidly, 'Beali Rosea'. Also invalidly used as a synonym for 'Otome'.

Dixie Beggs. *(C.japonica), American Camellia Yearbook,* 1992, p.92, Reg. No.2256: Originated by W.Stout, Pensacola, Florida, USA. The 15 year old seedling first flowered 1983. Red with some inner petals marked rose-pink, medium sized semi-double. Average flower size is 8.5 cm across x 3.5 cm deep with 25-35 petals, yellow anthers, cream filaments. Plant growth upright, dense and average with dark green leaves 10 cm long x 4 cm wide. Colour photo between pp.40-41.

Dixie Belle. *(C.japonica), American Camellia Yearbook,* 1980, p.162, Reg. No.1632: A large, blush pink, anemone form *C.japonica* chance seedling, early to mid-season flowering; originated by Mrs

Herman Johnson, Madison, Florida, USA. The 8 year old seedling first bloomed 1977. Average size flower, 12.5 cm across and 5 cm deep with 20 petals, 8 petaloids and rabbit ears, yellow anthers and yellow filaments. The flower shades from white, blush pink to deeper pink on outside petals. Stamens not in the centre and also outside the petaloids. Plant growth is spreading, medium in rate with dark green leaves, 9 cm long x 4 cm wide.

Dixie Darling. *(C.japonica),* Rogers, Belle Fontaine Nursery Catalogue, 1970. ACS., 1970, *The Camellia Journal,* vol.25, No.1, p.23: Large, sweet pea, semi-double. Vigorous growth. Originated in USA.

Dixie Knight. *(C.japonica), American Camellia Yearbook,* 1955, p.336, Reg. No.230: An 8 year old seedling; originated by Central Georgia Nurseries, Macon, Georgia, USA. First flowered 1954. Plant growth, upright, vigorous, compact and rapid in rate with midgreen leaves, oval, cordate, abrupt-cuspidate, serrate, 10 cm long x 5 cm wide. Flower buds are large, oval, tapering bases and bronze green. The very dark red flowers, 10-12.5 cm across, are semi-double, similar to **Emperor of Russia.** Stamens in 5 groups. Flowers mid-season to late. See colour plate, p.66, 79, Macoboy, 1981, *The Colour Dictionary of Camellias.* Sports: **Dixie Knight Supreme, Dixie Knight Variegated.** Chinese synonym: 'Nantian Wushi'.

Dixie Knight Supreme. *(C.japonica),* SCCS. 1962, *Camellia Nomenclature,* p.34: Deep red, heavily moired white. A variegated form of **Dixie Knight,** originated by Wheeler's Nursery, Macon, Georgia, USA. See colour photo facing p.22, *American Camellia Yearbook,* 1969 and pl.41, p.33, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Chinese synonym: 'Chaoji Nantian Wushi'.

Dixie Knight Variegated. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.34 as 'Dixie Knight Var.': A virus variegated form of **Dixie Knight** - Deep red streaked with white. Originated in the USA.

Dixie Maid. *(C.japonica),* SCCS., 1981, *Camellia Nomeclature,* p.47: Light pink. Small formal double. Mid-season to late flowering. Originated in USA by Haynie.

Dixie Pink. *(C.japonica),* Lindo Nurseries Price List, 1940-1941. No description. SCCS., 1945, *Camellias,* p.15: Bright rose-pink, formal double. Mid-season flowering. SCCS, 1947, *The Camellia. Its Culture and Nomeclature:* Rose pink. Medium form double. Slow, upright growth, Late flowering. Originated in USA. For black and white photo see p.104, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I.

Dixie Red. *(C.japonica), American Camellia Yearbook,* 1962, p.216, 217, Reg. No.640: A 22 year old chance *C.japonica* seedling that first bloomed 1950; originated by Wheelers Nursery, Macon, Georgia, USA. Plant growth is upright and slow with dark green leaves. The anemone form flowers, similar to **Elegans,** average 10-12.5 cm across with 18 petals. Colour, wine red or mahogany red. The flower resembles a small **R.L. Wheeler** with petaloids. Blooms mid-season to late. Sport: **Dixie Red Variegated.**

Dixie Red Variegated. *(C.japonica),* SCCS., 1968, *Camellia Nomenclature,* as 'Dixie Red Var.': A virus variegated form of **Dixie Red** - Wine red or mahogany red blotched white. Originated in USA.

Dixierama. *(C.japonica), American Camellia Yearbook,* 1961, p.221, Reg. No.524: 12 year seedling of **Imura** x **Lady Mary Cromartie Variegated,** that first bloomed 1951; originated by K. Sawada, Overlook Nurseries Inc., Mobile, Alabama, USA. Growth is medium, dense and rapid in rate with medium textured, serrated, acuminate leaves, 8.5 cm long x 4 cm wide. The rose madder, loose, peony flowers average 12 cm across and 7.8 cm deep, with 40-45 petals. Petals to the centre are crinkled or wavy. There are 100-120 yellow stamens divided into 5-6 groups, intermixed with the petals. Blooms early to mid-season. Sport: **Dixierama Variegated.**

Dixierama Variegated. *(C.japonica),* Tammia Nursery, 1962, ACS., *The Camellia Journal,* vol.17, No.4, p.28 as 'Dixierama Var.': A virus variegated form of **Dixierama** - Rose madder blotched white. Originated in USA.

Diyiliu. *American Camellia Yearbook*, 1993, p.43. Chinese synonym for the Australian *C.x williamsii* **Tiptoe.**

Do d'un Ami. von Biedenfeld, 1856, *Practische Grundlehren der cultur von Camellien,* p.38. Orthographic error for **Don d'un Ami.**

Do Pozo. *(C.japonica), La Camelia .....Diputación Provincial de Pontevedra*, 2004, p.113, Register No. 117. Peony form, 8cm diameter, Rose (RHSCC 54B-55B) with darker veins (55A), petals bordered white, and a few may have white stripes. 16-20 external petals, round or elliptic, internal number variable, elliptic. Leaf 8-8.5 cm x 3.5-4 cm, mid-green, elliptic to lanceolate, apex pointed. Flowers mid-season. Average, shrubby and slightly open growth. Originated by Maciñeira Nursery, Galicia, Spain, in 1986.

Dôan. (Roadside Hermitage), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1968, pl.449: A small, 5 petalled single with a central stamen column. Colour is white flushed with and heavily marked crimson. Originated in Japan. (Believed extinct.) Different reading 'Tôan'.

Dobrada. Loureiro Catalogue No.9, 1872-1873. Synonym for Reticulata Flore Pleno, 'Robert Fortune'.

Dobreei. *(C.japonica),* van Houtte Catalogue, 1843-1844, 18:10: Brilliant poppy, best anemome form known. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France,* vol.40, p.313 as 'Dobrei': Flower, 9-10 cm across, anemone form, similar to 'Princess Royale' of Low; of a poppy orange red, similar to 'Governativa' of Mariani. Petals in 3-4 rows, round-oval, close set, regularly imbricated, a little lined and notched at the apex; those in the centre, are small, innumerable, short, sometimes petaloids, and forming a broad, flat, uniform centre. Orthographic errors: 'Dobreyi', 'Dobrei', 'Dobreii', 'Dobrii', 'Dombreyi', 'Dobrey'. The description of the modern cultivar under this name, which appears to be the same, is as follows: Puddle and Hanger, 1961, RHS., *The Rhododendron and Camellia Yearbook*, No.15, p.113: Bloom, semi-double with rotund petals, 5 cm x 4.5 cm wide rounded, 10-12 outer petals, recurved, inner petals narrower, mixed with petaloids to form a twisted mass in the centre of the flower. Stamens in groups of about 12, many petaloids; 9-10 cm across. Colour carmine (HCC.21 /1). Foliage broadly-elliptic or obovate,9 cm x 4.5 cm, serrate, short acuminate, glossy, mid-green. In commerce it has been confused with **Latifolia** and **Emperor of Russia,** which are different cultivars and both Overlook Nursery and McIlhenny erroneously equated it with **Campbellii.** It is believed to have been named for a Mr Dobree of Guernsey, Channel Isles, who exhibited camellias about 1845.

Dobreel. McIlhenny Catalogue, 1935, p.4: Crimson blossom of medium size. Petals are round, giving a plate-like effect. Centre petals small and lighter at tips. Double variety. Orthographic error: 'Dobrell'. Synonym for **Campbellii (Guichard).**

Dobrei. Auguste van Geert Nursery Catalogue, 1848, p.16. Orthographic error for **Dobreei.**

Dobrell. Vanderbilt, 1940, *Camellia Research,* p.4. Orthographic error for 'Dobreel', synonym for **Campbellii (Guichard).**

Dobrey. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.10. Orthographic error for **Dobreei.**

Doctor Bill Harrison. *(C.japonica), American Camellia Yearbook,* 1961, p.221, Reg. No.530: A 12 year old chance seedling that first bloomed 1955; originated by W.H. Harrison, Marianna, Florida, USA. Growth is upright and rapid in rate with medium, dark green leaves, 15 cm long by 6 cm wide. The rose-pink to deep blush pink semi-double flowers are 15-17 cm in diameter and 10 cm deep with 15-18 petals, white filaments and yellow anthers. Blooms mid-season. Abbreviation: 'Dr Bill Harrison'.

Doctor Bliss Shafer. *(C.japonica), American Camellia Yearbook,* 1972, p.128, Reg. No.1166: A 6 year old chance *C.japonica* seedling that first bloomed 1968, originated by Sadie Mancill, Lafayette, Louisiana, USA. Plant growth is upright, medium in rate with leaves of dark green, 10 cm long x 5cm wide. The peony form bloom is pale pink with rose stripes and yellow

anthers and 50 filaments. It is 12.5 cm across and 7.5 cm deep with 47 petals and 12 petaloids. It blooms mid-season and falls complete. Abbreviation: 'Dr Bliss Shafer'.

Doctor Bob. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* Red. Complete double. Mid-season. *American Camellia Yearbook,* 1954, p.307, Reg. No.146: This plant, over 50 years old, owned by Dr E.J. Petitjean, Opalousa, Louisiana, USA is believed to be a seedling. Plant growth is upright, compact and slow. Flower buds are small, round and light green until colour shows. Flowers are formal double, similar to **Alba Plena.** Petals, 45-53, growing in whorls. Colour is rose-pink. Size of flower, 6 cm across. Flowers mid-season. Originated in USA. Abbreviation: 'Dr Bob'.

Doctor Bob Womack. *(C.hybrid), American Camellia Yearbook,* 1973, p.189, Reg. No.1255: as 'Dr Bob Womack': An 8 year old hybrid cross between *C.japonica* **Letitia Schrader** and **Buddha,** first bloomed 1968, originated by Dr R.K. Womack, Shreveport, Louisiana, USA. Plant growth is upright, medium in rate with light green leaves, 11 cm x 5 cm. The semi-double, **Frizzle White** type, bloom is light red with 10-12 petals and yellow anthers. It measures 14 cm across and 7.5 cm deep. Flowers mid-season.

Doctor Burnside. *(C.japonica), American Camellia Yearbook,* 1962, p.217, Reg. No.658: as 'Dr Burnside': An 8 year old chance seedling that first bloomed 1959, originated by Dr F.A. Burnside Sr., Columbus, South Carolina, USA. Plant growth is upright, average in density and medium in rate with dark green leaves, 10 cm x 7 cm. The semi-double to peony form flowers, 16 cm across and 7.5 cm deep, are true, dark red with yellow stamens and 25-35 petals. Flowers mid-season. Abbreviation: 'Dr Burnside'. Sport: **Doctor Burnside Variegated.**

Doctor Burnsite Variegated. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature,* p.49 as 'Dr Burnside Var.'. A virus variegated form of **Doctor Burnside** - Dark red marbled white. Originated in USA. Abbreviation: 'Dr Burnside Variegated'.

Doctor Campbell. Allan, Walter, Catalogue, ca.1949, according to Steffek, 1949, *Plant Buyer's Guide,* ed.5, p.48. Synonym for **Gigantea Red** as 'Jacksonii'.

Doctor Clifford Parks. *The Plant Finder,* 1990-1991, p.80. Orthographic variant for **Dr Clifford Parks.**

Doctor Cy Echols. *(C.japonica), American Camellia Yearbook,* 1986, p.90, Reg. No.2002 as 'Dr Cy Echols': A deep rose-pink, variegated white, semi-double, *C.japonica* chance seedling, mid-season blooming; originated by Paul Gilley, Grand Ridge, Florida, USA. The 6 year old seedling first bloomed 1983. Average flower size is 12 cm wide by 6 cm deep with 18 petals, 4 petaloids, white filaments and bright gold anthers. Plant growth is average and rapid in rate with dark green leaves 11 cm long by 6 cm wide. Abbreviation: 'Dr Cy Echols'.

Doctor Dan J. *(C.japonica), American Camellia Yearbook,* 1991, p.77, Reg.No.2216 as 'Dr. Dan J': Originated by O.L. Jacobson, Jacksonville Beach, Florida, USA. The 9 year old seedling first flowered 1986. Very large rose-red blending to orange red with a satin sheen; semi-double to rose-form double chance seedling of **Wonderland**. Blooms early to mid-season. Average flower size is 13-15 cm across x 7.5 cm deep chemically treated. Plant growth spreading, medium in rate with dark green leaves 13 cm long x 5.5 cm wide. Colour photo between pp.80-81.

Doctor Dan Nathan Supreme. *(C.reticulata). American Camellia Yearbook,* 1991, p.78, Reg. No.2222, under the abbreviation 'Dr Dan Nathan Supreme': Originated by Marvin Jernigan, Warner Robins, Georgia, USA. Very large pink with fluorescent sheen, semi-double *C.reticulata* ([Homeyer 146-**Trewithen Pink** x 'Tali Queen' (**Dali Cha**)] x **Lilette Witman**). Blooms mid-season. The 11 year old seedling first flowered 1986. Average flower size is 17.5 cm across x 12.5 cm deep with 21+ petals, clear red anthers and filaments. Dark green leaves 11 cm long x 6 cm wide. Colour photo between pp.80-81. ICS *Journal,* 1998, p.87. Don

Ellison, 1997, "Camellias – a Photo Dictionary", p.92 with colour illustration. (The photo in the Ellison book is correct, but the parentage and origin given in the ICS 1998 *Journal* entry are incorrect).

Doctor Dave. (*C.reticulata x C.lutchuensis*). *American Camellia Yearbook,* 1992, p.33, Reg.No.2260 under the abbreviation 'Dr Dave': Originated by Frank Pursel, Oakland, California, USA: Very large, dark red with heavy frosting, semi-double, C.reticulata 'Crimson Robe' (**Dataohong**) x ('Crimson Robe' x *C.lutchuensis*). Blooms mid-season to late. The 15 year old seedling first flowered 1985. Average flower size is 16 cm across x 9 cm deep with 22-28 petals, red anthers and filaments. Plant growth upright and vigorous with dark green leaves 16 cm long x 7.5 cm wide. Colour photo between pp.40-41.

Doctor Donald Koonce. *(C.japonica), American Camellia Yearbook,* 1961, p.221, Reg. No.577: A 10 year old chance seedling, first bloomed 1957, originated by S.L. Marbury, Wilmington, North Carolina, USA. Plant growth is dense, medium in rate with dark green leaves, 7.5 cm x 4 cm. The anemone form flower, 11 cm wide by 5 cm deep, is dark red with yellow stamens and 40 petals. The stamens are interspersed with petals. Blooms mid-season. Abbreviation: 'Dr Donald Koonce'.

Doctor Ecorchard. *(C.japonica),* Claude Thoby, 1993, *Camélias,* pp.10, 17, as 'Dr Ecorchard': Vivid red semi-double. Blooms mid-season. Originated in France.

Doctor Fay Shaw. *(C.japonica), American Camellia Yearbook,* 1969, p.159, Reg. No.1065: A 7 year old seedling of **R.L. Wheeler,** that first bloomed 1965; originated by R.E. May, Gerbing's Camellia Nursery, Florida, USA. Plant growth is dense and rapid in rate with dark green leaves, 8 cm x 6 cm. The semi-double flower, similar to **Frizzle White**, is 12.5 cm wide by 7.5 cm deep. It is deep pink with yellow anthers and white filaments. Mid-season to late flowering. Abbreviation: 'Dr Fay Shaw'.

Doctor Fred E. Heitman. (*C.reticulata* hybrid). ACS, May 1995, *The Camellia Journal,* vol.50, No.2, p.15, Reg. No.2316 as 'Dr Fred E. Heitman': Very large, deep bright red with a fluorescent sheen, rose form double, *C.reticulata* hybrid **Nuccio's Ruby** x **Lilette Witman.** Blooms mid-season. Originated by Jack L. Mandarich, Grants Pass, Oregon, USA. ACS 1995, *American Camellia Yearbook,* p.4 with colour photo: the 10 year old seedling first flowered 1989. Average flower size is 13 cm across x 6 cm deep with 20+ petals with golden anthers. Plant growth is upright, spreading and dense with dark green leaves 10 cm long x 6 cm wide.

Doctor G.A. Bunch. Trues Camellias, 1963, ACS., *The Camellia Journal,* vol.18, No.3, p.28. This was registered with the ACS., 1965, Reg. No.791, as 'Dr George Bunch'. The SCCS., *Camellia Nomenclature,* 1970, p.48 lists it as a synonym for **Sarah R.**

Doctor Geechee. *(C.japonica), American Camellia Yearbook,* 1970, p.162, Reg. No.1071: A 15 year old chance seedling that first flowered 1964, originated by the Robert Burgess Nursery, Savannah, Georgia, USA. Plant growth is upright, spreading, open and rapid in rate with 14 cm x 6.5 cm leaves. The semi-double flower is 15 cm across and 6 cm deep red with yellow anthers. Flowers mid-season. Sport: **Doctor Geechee Variegated**. Abbreviation: 'Dr Geechee'.

Doctor Geechee Variegated. *(C.japonica),* Gentry, 1971, ACS., *The Camellia Journal,.* vol.26, No.4, p.21 as 'Dr Geechee Var.': A virus variegated form of **Doctor Geechee** - Deep red blotched white. Originated in USA. Abbreviation: 'Dr Geechee Variegated'.

Doctor Henry B. Harvey. *(C.japonica),* ACS, May 1995, *The Camellia Journal,* vol.50, No.2, p.16, Reg. No.2315 as 'Dr Henry B. Harvey': Small, soft rose-red, formal double, **High Wide'n Handsome** x **Brother Rose.** Blooms early to mid-season. Originated by Mrs Henry Stone, Baton Rouge, Louisiana, USA. ACS 1995, *American Camellia Yearbook,* p.4 with colour photo: The 15 year old seedling first flowered 1986. Average flower size is 7.5 cm across x 3

cm deep with 84 petals. Blooms are slightly lighter where centre petals are incurved and very pointed. Plant growth is upright, dense and vigorous with dark green leaves 10 cm long x 3 cm wide.

Doctor Horner. Alexis Dalliere, 1852, Price List, p.15. Orthographic variant for **Docteur Horner.**

Doctor Howard House. *(C.reticulata), American Camellia Yearbook,* 1967, p.225, Reg. No.951: A 7 year old chance *C.reticulata* seedling of 'Cornelian', (**Damanao**) that first bloomed 1963. Originated by Dr J.B. Tarver, San Marino, California, USA. Plant growth is upright and spreading, open and rapid in rate with dark green, veined, leaves, 10 cm long x 6 cm wide. The semi-double to peony form flower is 12.5 cm across and 3.5 cm deep, with 12 petals and 11 petaloids. Colour is rose-pink with golden anthers. Rabbit eared. Mid-season to late blooming. Abbreviation: 'Dr Howard House'. Orthographic error: 'Dr Howard Howse'.

Doctor Jean-Paul Anthoine. *(C.japonica),* Claude Thoby, 1993, *Camélias,* pp.10, 17, 25 and colour photo p.5, under the abbreviation 'Dr Jean-Paul Anthoine': Flowers single, velvety red. Stamens with rose mauve filaments. Blooms mid-season. Leaves broad-lanceolate, apices acuminate, margins serrate. Originated in France.

Doctor Judge. *(C.japonica),* ACS, May 1995, *The Camellia Journal*, vol.50, No.2, p.15, Reg. No.2324 as 'Dr Judge': Medium size, pale blush pink with darker petal edges, semi-double. *C.japonica* chance seedling. Blooms mid-season to late. Originated in USA by William H. Smith, Gainesville, Florida. ACS 1995, *American Camellia Yearbook,* p.4 with colour photo: The 15 year old seedling first flowered in 1989. Average flower size is 10 cm across x 6 cm deep with 28 petals, 7 petaloids and yellow anthers. Plant growth is upright, dense, with dark green leaves 10 cm long x 5 cm wide.

Doctor King. Neil McEacharn, 1963, *Catalogue of the plants in the Gardens of Villa Taranto,* p.58. Orthographic variant for **Dr King.**

Doctor Lee. *(C.japonica),* Fruitland Nursery Catalogue, 1940-1941, p.22: Dark red, medium semi-double of round form, 10-11 cm in diameter. Medium, spreading growth with medium to light green leaves, broad ovate, 9.5 cm x 6 cm, short apex, raised venation, broad, shallow serrations. A seedling of unknown parents originated by Dr W.G. Lee, Macon, Georgia, USA about 1920. Orthographic variant: 'Dr W.G. Lee'. Abbreviation: 'Dr Lee'. Sport: **Doctor Lee Variegated.**

Doctor Lee Variegated. *(C.japonica),* Fruitland Nursery Catalogue, 1946-1947, p.27. A virus variegated form of **Doctor Lee** - Dark red mottled white. Originated in USA. Orthographic variant: 'Dr W.G. Lee Variegated'. Abbreviation: 'Dr Lee Variegated'.

Doctor Louis Pollizzi. *American Camellia Yearbook,* 1970, pl. facing p.52. Orthographic error for **Dr Louis Polizzi.**

Doctor Max. *(C.japonica),* Camellia Hall Price List, 1950. No description. Fendig, 1951, *American Camellia Catalogue:* Large red and white single, 12-13 cm across x 5-5.5 cm deep. The red and white is evenly distributed. Petals, nearly round, are 6 cm x 5.5 cm. Stamens are joined at base and attached to the petals in a solid corolla. Filaments white, anthers lemon yellow. Buds ovoid and light green. Leaves mid-green, glossy, ovate, 8 cm x 6 cm, stiff, curled downwards, prominent venation, apices blunt, margins shallowly serrate.. The plant is a hardy, bushy, slow grower. This originated as a Japanese import by Camellia Hall, Sacramento, California which first bloomed in 1940. Before 1940 this was an unnamed Japanese import at the old Camellia City Nursery. It only carried a code number and was confused with 'Miss Sacramento Variegated'. **Doctor Max** is a large, cup-shaped single, 12.5 cm in diameter and 6 cm deep, red marbled white. It develops large seedpods and has been nicknamed the "Apple Camellia". Abbreviation: 'Dr Max'.

Doctor McLean. *(C.japonica),* Wilmot, 1945, *Camellia Variety Classification Report,* p.7. No description. SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.33 as 'Dr McLean':

Rose red. Large semi-double. Vigorous, upright, compact growth. Mid-season flowering. Originated at Huntington Gardens, San Marino, California, USA. Abbreviation: 'Dr McLean'.

Doctor Merilatt. Fruitland Nursery Catalogue, 1947-1948, p.27. Orthographic variant for **Dr Merrillat.**

Doctor Olin Owen. *(C.japonica), American Camellia Yearbook,* 1991, p.78, Reg. No.2221 under the abbreviation 'Dr Olin Owen': Originated by Dr. Olin W. Owen, Charlotte, N.C., USA. Large oriental red semi-double *C.japonica* chance seedling. Blooms mid-season to late. The 25 year old plant first bloomed 1974. Average flower size is 10 cm across x 5.5 cm deep with 32 petals and 6-8 petaloids and wavy upright petals and stamens mingled with petaloids. Light green leaves 9.5 cm long x 4.5 cm wide. Colour photo between pp.80-81.

Doctor Polizzi. *American Camellia Yearbook,* 1970, p.108. Orthographic variant for **Dr Louis Polizzi.**

Doctor Robert Pigford. *(C.japonica), American Camellia Yearbook,* 1967, p.225, Re No.923: An 11 year old chance seedling that first bloomed 1960; originated by W.H. Powell, Garner, North Carolina, USA. Plant growth is average and open, medium in rate with light green leaves, 10 cm x 6 cm. The flower is peony form, 12.5 cm diameter and 7.5 cm deep with 45 petals and 70 petaloids. Colour is true, rose-pink with white filaments. Petals thick. Blooms mid-season. Abbreviation: 'Dr Robert Pigford'.

Doctor Robert Withers. (*C.reticulata* hybrid). ACRS, *Camellia News,* 1994, Issue No.131, p.9, Bob Withers, "A Mother Superior": A seedling of **Suzanne Withers** x **Arcadia.** Originated by Dr. R. Withers, Donvale, Victoria, Australia. A deep pink, almost full formal double.

Doctor Shepherd. Walter Allan Nusrsery Catalogue, ca.1948 according Steffek, 1946, *Plant Buyer's Guide.* Synonym for **Grand Sultan.**

Doctor Thayer. McIlhenny Catalogue, ca.1948 according to Steffek, 1949, *Plant Buyer's Guide.* Synonym for **Dr Oldwig Thayer.**

Doctor Wilds. *(C.japonica),* Fruitland Nursery Catalogue, 1943-1944, p.27: Medium sized white, semi-double. Blooms mid-season. Originated by the Fruitland Nursery, Augusta, Georgia, USA. Abbreviation: 'Dr Wilds'.

Dodici Aprile. *(C.japonica),* Medici Spada, 1854, Catalogue. No description. Franchetti, 1855, *Collezione di Camelie,* p.25: Imbricated, pink with white blotches. Originated in Florence, Italy.

Dody's Delight. *Camellia Nomenclature* 2006, p.35. *C.japonica* sport of unknown parentage. Pale pink with darker pink speckles and stripes. Very large, semi-double form. Upright, vigorous growth. Introduced 2004 by Tom Gilfroy, LaCanada, Calif., USA.

Dogrose. *(C.saluenensis),* Puddle, 1955, SCCS., *The Camellia Review,* vol.16, No.10: Pale rose, medium size single. Blooms mid-season to late. Originated in England by W.J. Marchant, Keeper's Hill Nursery, Dorset.

Dogwood. *(C.japonica),* Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.88, black and white photo, p.90: Single, self white, 10 cm wide by 4 cm deep; petals usually 6, 5.5 cm x 4 cm wide, haft abrupt, broad channelled. Stout column of stamens with white filaments, yellow anthers. Leaves oblong-lanceolate, 8-9 cm long x 3.5-4 cm wide, very dark, glossy green, impressed midrib, margins rolled under, thick leathery, broad, shallow, sharp serrations. Habit upright, loosely branched. Flowers early to mid-season. Originated in USA.

Dôji. (Boy Child), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* See, JCS., 1969, *Tsubaki*, No.7, p.24 and *Yokoyama*, 1982, JCS., *Tsubaki*, No,21, p.100: Large pale pink, semi- double with two rows of petals. Stamens spread like a tea whisk. Originated in Japan. (Believed extinct.) Different reading: 'Dôshi'.

Dôkumasaka. Inazawa Nursery Catalogue, 1980-1981. Curruption of 'Fuiri-kumasaka' as a synonym for **Hanatachibana.**

Dolly. *(C.japonica),* ACRS., 1989, *Camellia News*, p.111, p.12, Reg. No.374: Originated by Keith Abbott, Rossmoyne, West Australia. A chance seedling that first flowered 1985. Semi-double bi-colour flower with 18 petals and a soft pink centre (RHS.SS.49D), shading to deeper pink edging (RHS.CC.54C), 10 cm across x 5.5 cm deep. Petals semi-circular and fold down. Stamens in a central cylinder with golden anthers. Blooms early to mid-season, on an open, upright, medium plant. Leaves elliptic, glossy, dark green, curled, finely serrulate, apices acuminate, 10 cm long x 5.5 cm wide.

Dolly Bowen. Griffin, ed., 1958, *Camellian*, vol.IX, No.1, p.5: Red, large, loose, peony form. Open growth. Synonym for **Moss Point Red,** the solid red form of **Moss Point Variegated.**

Dolly Dyer. *(C.japonica),* ACRS., 1973, *Camellia News,* No.51, p.37, Reg. No.158: Originated by G.W. Hooper, Camellia Vale Nursery, Bexley North, N.S.W., Australia. A chance seedling from **Bokuhan,** ('Tinsie') seed was planted 1967 and first bloomed 1970. The scarlet, 5 cm informal double flowers are produced early to late. The 8 cm x 3.8 cm deep green leaves have sharply pointed apices and small blunt serrations. Growth habit is upright and vigorous. Chinese synonym: 'Duolidaier'.

Dolly Hussey. *(C.japonica),* Ginn, 1959, *New Zealand Camellia Bulletin,* Vol.IV, No.1, P.27: Bright rose-pink. Medium single with 8 slightly cupped petals around a distinctive central mass of petaloids. Originated by Mrs J. Hussey, Wanganui, New Zealand.

Dolly Madison. SCCS., 1947. *The Camellia. Its Culture and Nomenclature.* Synonym for **Orchid Pink.**

Dolly O'Driscoll. *(C.japonica), New Zealand Camellia Bulletin,* 1982, vol.XII, No.7, p.51, Reg. No.180: A chance seedling of *C.japonica* **Betty Sheffield Supreme** raised by T. Lennard, Te Puke, New Zealand. The rate and habit of growth are average. The light green leaves average 9 cm x 5 cm. The formal double flowers measure 11.5 cm across x 7.5 cm deep and have 70 petals. The colour is shell pink (RHS. Red Purple Group 62C) and white in the centre. Flowering mid-season to late.. The flower has a rose bud centre and there is a distinct separation between the white centre and the pink outer petals.

Dolly Parler. *(C,japonica), American Camellia Yearbook,* 1977, p.209, Reg. No.1434: A very large, rose-pink anemone form, 12 year old chance seedling *C.japonica* that first flowered 1968. Originated by A.R. Parler, Elloree, South Carolina, USA. Average size 13 cm across and 6.5 cm deep. Blooms mid-season. Plant growth, upright and medium in rate with light green leaves, 8.5 cm long by 4 cm wide. Sport: **Dolly Parler Variegated.**

Dolly Parler Variegated. *(C.japonica),* Gentry, 1984, ACS., *The Camellia Journal,* vol.39, No.4, P.17, (advert.) as 'Dolly Parler Var.'. A virus variegated form of **Dolly Parler** - Rose-pink marbled with white. Originated in USA.

Dolly Rice. Wade, 1949, *American Camellia Yearbook,* p.194. Synonym for **Mathotiana Alba.**

Dolly West. *(C.reticulata),* ACRS., 1981, *Camellia News,* No.79, p.28, Reg. No.278: Originated by Terry Pierson, Hurstville, NSW, Australia. A chance seedling of *C.reticulata* 'Wild Form'. First flowered 1979. The vigorous, upright plant has 10 cm x 7.5 cm, dark green, heavily reticulate, oblong-elliptic leaves with short apices and fine serration. The semi-double to incomplete

double,13.5 cm diameter by 8.5 cm deep blooms have 13 petals of salmon pink with a white cast, a few petaloids and a large boss of stamens like a Higo. Flowers early to late.

Dolores Edwards. *(C.x williamsii),* SCCS., 1990, *Camellia Nomenclature,* p.146: Light orchid pink, large size, semi-double. Medium, upright growth. Blooms mid-season. Originated by E.H. Smith, Valdosta, Georgia, USA.

Dolores Hope. *(C.reticulata.x C.japonica), American Camellia Yearbook,* 1972, p.129, Reg. No.1204: A 7 years old hybrid seedling, *(C.reticulata x C.japonica)* that first bloomed 1968. Originated by Monique J. Peer, Los Angeles, California, USA. Plant growth is upright, open and rapid in rate with light green leaves, 10 cm x 5 cm. The semi-double, light rose-pink bloom has irregular petals, is 13.5 cm in diameter and blooms mid-season. It is veined with orchid pink and some centre petals are shaded white. See colour photo, front cover, SCCS., 1974, *The Camellia Review,* vol.35, No.5.

Dolores Jackson. *(C.japonica), American Camellia Yearbook,* 1981, p.96, Reg. No.1739: A very large, pure white semi-double to loose peony form *C.japonica* chance seedling, mid-season blooming, originated by Ted Alfter, Bakersfield, California, USA. The 8 year old seedling first bloomed 1979. Average flower size is 11 cm wide by 8 cm deep with 25-32 petals and a few petaloids. Plant growth is upright, open and rapid, with dark green leaves, 11 cm x 6 cm.

Dolores Oates. *(C.japonica), American Camellia Yearbook,* 1974, vol.II, p.231, reg. No.1313: A 15 year old chance *C.japonica* seedling that first bloomed 1962. (**Pink Star** x unknown) Originated by J.T. Oakes, Daphne, Alabama, USA. Plant growth is medium in rate with light green leaves, 10 cm x 5 cm. The anemone form, **Elegans** type bloom is ice pink to darker shading. Average size 11 cm across and 6.5 cm deep with 22-25 petals and 15-18 petaloids, interspersed with yellow tipped stamens having pink filaments. Blooms early to mid-season.

Dolores Taylor. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Soft veined pink striped rose-pink. Medium sized semi-double. Vigorous, upright growth. Mid-season blooming. Originated in USA by Jones.

Dolores Thompson. *(C.japonica),* SCCS., 1990, *Camellia Nomenclature,* p.32: Light pink, small size, rose form to formal double. Blooms mid-season. Plant growth medium in rate, spreading. Originated by J. Aldrich, Brooklet, Georgia, USA.

Doncklaarii Varie. Vanderbilt, 1941, *Camellia Research, II,* p.2. Abbreviation for 'Donckelaeri Variegated', synonym for 'Donckelaeri', synonym for **Masayoshi.**

Doncklaeri. Courtois, 1833, *Magasin d'Horticulture,* 1 [pt.E]:159: The other is the Camellia 'Doncklaeri', so named after M. Doncklaer, Chief Gardener at the Botanical Garden of Louvain who distributed it. The leaves are oval-lanceolate, pointed; the flower is broad, 12 cm across, double, spread out; petals smooth, notched, half of them have a background of pure white, marbled with red, the other half pure red or red marbled white. This cultivar was brought to Belgium from Japan by Franz von Siebold in 1830, together with **Tricolor, Ochroleuca** and **Candidissima,** which were propagated and released by M. Donckelaer. It became a most popular variety and received a number of synonyms as well as having its name misspelt in every possible way. It was figured and described in 1834 by Morren in *L'Horticulture Belge, Journal Jardiners Amateurs,* 2:63, pl.29 with the orthography 'Donkelarii' under the illustration and 'Donckelarii' in the text. This latter orthography had been considered valid until the recent location of the 1833 listing. Considerable research was put into endeavouring to locate an authoritative record of the correct spelling of the name. These include: 'Doncklaer', Courtois, 1833; 'Donckelaer', his signature on letters at the Bruxelles Library, according to C.P. Adams, RHS Journal, 1954; 'Donkläer', Beaton, 1849 also according to Adams and 'Donckelaar', Spae, 1858, *Begique Horticole.* Research by Marc de Coninck, *International Camellia Journal,* 2005 No.37, pp.60-65, reveals that 'Andries Donkelaar' was his signature on his youngest daughter Elisabeth's birth certificate in Leuven records. When he went from the Netherlands to Belgium in 1803, the country was part of France. While old records called the city Leuven, the French called it Louvain, and for reasons of pronunciation, changed the spelling of Donkelaar to Donckelaer. Since he appears to have used both Dutch and French versions in signatures, 'Donckelaeri' is retained as correct orthography. 'Donkelaari' would also be correct orthography if used. However this name is, in fact, only the approved Western synonym for the name of the old Japanese cultivar **Masayoshi,** which was first listed in the *Tsubaki Hangata Tsuki Obo'echô,* 1788 and *Shoshiki Hanagatachô,* 1789. Chinese synonyms are 'Zhengyi' and 'Dongkelarui'. Amongst the many other synonyms that have been used for this cultivare are: 'Aileen', 'Aleen', 'Middleton No.15', 'Winnie Davis', 'Mary Robertson', 'Camellia-T', 'Don Kaleare', 'Angustifolia', 'Tea Garden', 'Georgia', 'Pump House', 'Cantelou', 'English', 'Tallahassee', 'Donckelarii Middleton', 'Donckelarii Special', 'Doncklaari Eddinger's'. 'Donckelaeri' has been the origin of a number of fine sports. These include: **Eugene Bolen, Ville de Nantes** and **Lady Kay.** These latter two, in turn producing **Ville de Nantes Red** and **Lady Kay Red.** Many colour illustrations have been published including: *American Camellia Yearbook,* 1953, facing p.50; *Camellias* by G.G. Gerbing, 1945, p.61; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.80 and pl.1 facing p.20, *The Camellia,* Longhurst & Savige, 1982; *Botanical*

Register, 1836, vol.24, old series pl.1854 as 'Donckelaeri'. In 1978 it received the "National Hall of Fame Award" in the USA and in 1960 the RHS "Award of Merit".

Donna Newton. *(C.japonica), American Camellia Yearbook,* 1979, p.104, Reg. No.1569: A very large, white, loose peony form *C.japonica* chance seedling, mid-season blooming; originated by Mrs W. Grady Griffin, Dawson, Georgia, USA. The 10 year old seedling first bloomed 1975. Average flower size, 12.5 cm across by 5 cm deep. Large petaloids in the centre. Sturdy grower. Plant growth upright, average in density, medium in rate with dark green leaves, 9 cm long by 4.5 cm wide. Sport: **Donna Newton Blush.**

Donna Newton Blush. *(C.japonica),* Cannon, 1984, ACS., *The Camellia Journal,* vol.39, No.4, p.19: A blush pink form of **Donna Newton.** Originated in USA.

Donna Rita. *(C.x williamsii).* ACRS, *Camellia News,* Issue No.127, p.9, Colour photo p.2: Originated by Edgar Sebire, Wandin North, Victoria, Australia. A seedling of *C.x williamsii* **Mary Phoebe Taylor,** pollen parent unknown. First flowered 1987. Light Red (RHS.CC.63B), informal double of 62 petals; 7.5 cm across x 3.5 cm deep. Blooms early to late season on a slow growing, upright, bushy, free flowering plant. Leaves olive green, glossy, flat, elliptic, apices acuminate, margins serrulate, 7.5 cm long x 3.4 cm wide. Petals open flat. A distinctive lavender hybrid.

Donna Timmins. Cannon, 1986, ACS., *The Camellia Journal*, vol.41, No.4, p.27. Abbreviation for **Donna Louise Timmins.**

Donnan's Dream. *(C.japonica), American Camellia Yearbook,* 1984, p.176, Reg. No.1952: A large, white, washed and shaded Orchid pink, formal double, *C.japonica* chance seedling; early to late flowering; originated by Nuccio's Nurseries, Altadena, California, USA. The 8 year old seedling first flowered 1977. Average flower size, 10 cm across. Plant growth, upright, dense and medium in rate with dark green leaves, medium size. See colour photo, front cover SCCS., *The Camellia Review*, vol.46, Nov-Dec., 1984; and p.8, *International Camellia Journal,* No.21, 1989.

Donnybrook. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.39: White. Large semi-double with pointed and turned up petal tips. Originated in USA.

Donrose Pendant. *(C.x williamsii), American Camellia Yearbook,* 1961, p.221, Reg. No.536: An 8 year old hybrid, *(C.saluenensis x C.japonica)* that first bloomed 1957; originated by K.M. White, Axminster, Devon, England. Plant growth is spreading and medium in rate with dark green leaves, 7.5 cm x 3.5 cm. The semi-double, deep pink flowers are 10.5 cm across and 4 cm deep with 13 petals, several petaloids, yellow stamens. Its colour is deeper than **Donation** and often has a long, pointed, rose-bud centre. Flowers mid-season to late.

Doomsday Beauty. (*C.reticulata* hybrid). *International Camellia Journal,* No.23, 1991, p.101, Reg. No.22: Originated by R.H. Ellis, Doomsday Gardens, Horsham, West Sussex, England. Flower: Large size, 11-12.5 cm across x 5 cm deep, semi-double of 20 petals. A chance seedling of **Milo Rowell** that first flowered 1986. Blooms mid-season to late. Buds acorn-shaped, green showing pink. Leaves, medium green, elliptic to oblate, 7.5 cm long x 3.8 cm wide, apices abruptly acuminate, margins bluntly serrate. Plant growth upright and rapid, well branched.

Doomsday Sunshine. (*C.reticulata* hybrid). *International Camellia Society*, No.24, 1992, p.80, Reg. No.23: Originated by R.H. Ellis, Doomsday Gardens, Horsham, West Sussex, England: Small, 8 cm across x 5 cm deep, pink (RHS.CC.55A, 56C) single. A chance seedling of **Milo Rowell** that first flowered 1985 at 7 years of age. Buds round, (RHS.CC.139). Flowers mid-season. Petal texture heavy. Self grooming. Similar to *C.japonica* **Gertrude Preston.** Leaves green, elliptic, 7.5 cm long x 4 cm wide, smooth. Plant growth bushy and rapid.

Doppia Nuova. *(C.japonica),* Giacomelli ed., 1847, *Padova cor tipo della Liviana.* No description. Originated in Italy. (Believed extinct.) 'Dupla-nova' is given as an orthographic variation.

Dora Dee Walker. *(C.japonica), American Camellia Yearbook,* 1967, p.225, Reg. No.955: A 5 year old chance seedling that first bloomed 1966; originated by W.M. Walker, South Georgia, USA. Plant growth is spreading, average in density and medium in rate with dark green leaves, 9 cm x 5 cm. The peony form flower is 12.5 cm across and 6 cm deep with 20 petals and 4 petaloids. Its formation varies from peony to semi-double with fimbriated petaloids. Colour is dark red, blotched white with yellow anthers. Blooms mid-season to late.

Dora Elise. *(C.reticulata), New Zealand Camellia Bulletin,* 1974, vol.VIII, No.6, P.46, 47, Reg. No.91: A chance seedling of 'Crimson Robe', (**Dataohong**), originated by Mrs E.D. Clark, Matamata, New Zealand. It first flowered 1971. Plant growth is upright and well furnished with mid-green foliage, 11 cm long x 4.5 cm wide, sharply serrate. The flowers are large, 15 cm across x 7 cm deep, with 16-20 petals, semi-double with golden anthers on cream filaments. Colour is deep, clear pink, RHS.CC. Red Group 53A. Flowers early to late.

Dora Lee. (*C.reticulata* hybrid). SCCS *Camellia Nomenclature* 2009, p.139; Bright pink, very large semi-double to loose peony form. Vigorous, upright growth. Late flowering. **Valley Knudsen** x **Jean Pursel.** Originated in 2008 by CamelliaShop, Savannah, Ga., USA.

Dora McCarter. Fruitland Nursery Catalogue, 1945-1946. Abbreviation for Miss Dora McCarter.

Dorbrielle. *(C.japonica),* Boblink & Atkins Nursery Catalogue, 1937: Medium sized, crimson, formal double. McIlhenny, (1941) gives 'Tokayama' as a synonym., but this proved to be a pseudonym for **Margherita Coleoni,** which Fendig (1953) gives as a synonym. The 'Dobrielle' listed by McIlhenny, (1937) is also the same variety.

Doria Boschi. *(C.japonica),* Mariotti Catalogue, 1924, p.15: Large flowered, bright pink. Originated in Italy by David Boschi.

Doria Tursi. *(C.japonica),* Rovelli Catalogue, 1892-1893: Imbricated beautifully. Rose-pink, veined and shaded a little brighter, margined with white. Originated in Italy.

Dorian. *(C.japonica),* ACRS., 1960, *Camellia Annual,* No.7, p.23, Reg. No.44: Originated by H.J. Henty, Balwyn, Victoria, Australia as a seedling from **Esther Henty** that first flowered 1955. The flower is an informal double, soft pink with a faint salmon pink tone and consists of 5-6 rows of petals. The outer petals curve up and outwards, the inner, twisted and more erect, giving a loose hose-in-hose effect. Burnt gold tipped stamens intermixed with petaloids and small petals, brushed with white towards the base; 9-11 cm across. Growth, vigorous and spreading. Leaves mid-green, 9 cm x 5 cm, well serrated and pointed.

Dorina. *(C.japonica),* van Houtte Catalogue,1845-1846, 23:4: Vivid rose-pink with splashes and stripes of pure white. Regular. de Jonghe, 1851, *Traité de la Culture du Camélia,* p.104, as 'Dorina Lechi': Regular double flowers, cherry red with rounded petals, speckled with pink. Originated by B. Lecchi, Italy. Synonym: 'Dorina Lecchi'. Orthographic errors: 'Donna Lechi', 'Dorina Lechi'.

Doris Delight. *(C.japonica),* Gentry, 1979, ACS., *The Camellia Journal,* vol.34, No.4. (advert). No description. Originated in USA. No valid listing located.

Doris Ellis. *(C.japonica), American Camellia Yearbook,* 1970, p.162, Reg. No.1089: An 11 year old chance seedling that first bloomed 1963; originated by Frank Ellis and Jay W. Ellis Jr., Jacksonville, Florida, USA. Plant growth is upright, average in density and rapid in rate, with small, light green leaves. The formal double bloom is pale, blush pink with darker pink on the outer petals and a distinct, coral rose centre. Medium size, formal double, completely imbricated with a small, rose-bud centre, 9.5 cm across by 4 cm deep with 94-110 petals. Blooms early. Sport: **Doris Ellis Pink.** See colour plates on front cover, ACS, *The Camellia Journal,* Sept.1969 and pl.44, p.34, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Chinese synonym: 'Ailisi'.

Doris Ellis Pink. *(C.japonica), American Camellia Yearbook,* 1980, p.162, Reg No.1601: A medium size, pale pink, rose form double *C.japonica* mutant of Doris Ellis, blooms early to mid-season. Originated by Paul Gilley, Grandridge, Florida, USA. Average size flower, 9.5 cm wide by 4 cm deep with 30 petals. In place of being as formal as its parent, it tends to open

and incurve with a tendency to swirl. Plant growth is upright, spreading, open with light green leaves, 8 cm x 4 cm.

Doris Fowler. *(C.reticulata* hybr.) , ACS., May 1987, *The Camellia Journal,* vol.42, No.2, p.8, Reg. No.2046: Large size, red, semi-double *C.reticulata* hybrid ('Crimson Robe' (**Dataohong**) x **Jean Pursel**). Blooms mid-season to late. Originated by Frank Pursel, Oakland, California, USA. *American Camellia Yearbook,* 1987, p.80, colour photo facing p.60: The seedling first bloomed 1978. Average flower size 12.5 cm across x 6 cm deep. Plant growth is upright, average, open and rapid in rate, with dark green leaves, 8 cm long x 5.5 cm wide.

Doris Freeman. *(C.japonica),* Sewell, 1956, *American Camellia Yearbook,* p.50-52: Originated by W.H. Barnsley, Apopka, Florida, USA. Large semi-double to incomplete double blooms, pink marbled and blotched white. Compact, upright growth. Blooms mid-season. According to SCCS., *Camellia Nomenclature,* 1972, p.92, the same as **Ma-Dot-Cha.**

Doris Hirst. *(C.japonica),* ACRS., 1961, *Camellia Annual,* No.4, p.24, Reg No.45: Originated by W. Neville, Castle Hill, N.S.W., Australia. A seedling of **Gauntlettii,** pollen parent unknown. First bloomed 1958. The blooms are irregular double, pure white and 12.5 cm across. Flowers midseason. Leaves are large, glossy green. See colour plate, p.21, ACRS., 1977, *Camellia News,* No.66. Chinese synonym 'Baiduoli'.

Doris Madalia. Hume, 1946, *Camellias in America,* p.330. Synonym for 'Beauty of Holland'.

Doris Nadeau. SCCS., 1954, *The Camellia. Its Culture and Nomenclature,* p.39. Orthographic error for **Doris Wadeau.**

Doris Stone. *(C.japonica), American Camellia Yearbook,* 2000, p.3, colour photo p.c9. A deep red semi-double chance seedling with 22 petals, 5 petaloids, yellow anthers and yellow filaments. Blooms show heavy texture, and petals reflex back towards the stem. Average flower size is 12.7 cm across x 6.5 cm deep. Originated by Elizabeth R. Scott, Aiken, S.C., USA. The 17 year old seedling first flowered in 1989. Flowers early to mid-season. Plant is spreading and vigorous, with dark green leaves.

Doris Tag. Hazlewood Nurseries Pty Ptd Catalogue, 1964, p.53. Orthographic error for **Doris Tagg.**

Doris Tagg. *(C.japonica),* Waterhouse, 1952, *Camellia Trail,* p.37: This Camellia is not of Australian origin but was brought out from Monaco about 1920 to Adelaide. It is a charming, light pink (RHS.CC. Fuchsine Pink 627/1) with 6 well rounded petals. It is slightly fragrant. Lighter in colour and smaller than **Spencers Pink**. Orthographic error: 'Doris Tag.

Doris Wadeau. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* Large, deep pink formal double. Flowers mid-season. Orthographic error: 'Doris Nadeau'. Originated in USA.

Dormoyama. *(C.dormoyama),* Sealy, 1956, *American Camellia Yearbook,* p.3. The species *Camellia dormoyama* (Pierre) Sealy from *Thea domoyama* Pierre ex Lanesson, 1886.

Dorothea Blanche. SCCS, 1947, *The Camellia. Its Culture and Nomenclature.* Synonym for **Chô-nohanagata**.

Dorothee Rogers. *(C.reticulata),* ACRS, 1984, *Camellia News,* No.91, p.22, Reg. No.315 with colour photo on rear cover: Originated by T.E. Pierson, Hurstville, N.S.W., Australia. *C.reticulata* **Three Dreams** seedling that first flowered 1982. The 14 cm x 12.5 cm deep flowers are rose-pink, heavily moired darker pink, informal double flowers with distinct rabbit ears. Flowers mid-season to late. The upright, dense plant has dark green, reticulate leaves, ovate, 11.5 cm long x 5.2 cm wide.

Dorothy. *(C.japonica),* Harris' Longview Nursery Catalogue, 1955-1956, p.6. No description. Originated by Clower, Florida, USA.

Dorothy Aimee. (*C.rosiflora* hybrid). *New Zealand Camellia Bulletin,* March 2004, Issue No.147, vol.XXIII, No.5, p.8 Reg. No.455. Registered by Dorothy Hansen, Waikanae, New Zealand. A chance seedling from *C.rosiflora,* pollen parent unknown. Flower is a single, 3 cm diameter x 2 cm deep, somewhat trumpet-shaped, with 8-9 petals that are lightly veined. Colour is a light pink (RHS.CC.62B) with 62A for the veins, and the stamens form a tight column about 0.8 cm across. The plant has a low, spreading habit, dense structure and slow growth rate, making it an attractive plant for small gardens, as do changes in the leaf colour with the seasons. Leaves are generally mid-green, 5 cm long x 2.5 cm wide. Flowers mid-season to late.

Dorothy Ashley. *(C.japonica),* Levi, 1958, *American Camellia Yearbook,* p.242, 250. No description. Hillcrest Nursery Catalogue, 1958: Light rose-pink. Large semi-double. Vigorous, upright growth. Mid-season flowering. Originated at Middleton Gardens, Charleston, South Carolina, USA. Abbreviation: 'Dot Ashley'.

Dorothy B. Decuers. *(C.japonica),* ACS, *The Camellia Journal,* Dec 2008, p.34 with colour photo, Regn No. 2750; A sport of **Happy Birthday,** which first flowered in 1991. Originated and propagated by John W. Shirah, Lakeland, Fla., USA. A 10 cm diameter, rose pink, semidouble to rose form double flower with yellow to orange anthers and ivory filaments. Dark green leaves are 7.5 cm x 3.7 cm. Plant is upright with average growth rate. *American Camellia Yearbook,* 2008, p.110 with colour photo.

Dorothy Henry. *(C.japonica),* ACS., Feb. 1989, *The Camellia Journal,* vol.44, No. 1 , p. 12, Reg. No.2105: Medium size, rose-pink, formal double *C.japonica* chance seedling that blooms mid-season to late. Originated by Johnny Aldrich, Brooklet, Georgia, USA. *American Camellia Yearbook,* 1989, p.120, colour photo [p.132]: The 15 year old seedling first bloomed 1978. Average size bloom, 8 cm across x 3.2 cm deep with 77 petals. Plant growth is upright and medium with light green leaves, 8 cm long x 3.2 cm wide. See colour photo: Front cover, ACS., Aug,1990, *The Camellia Journal,* vol.45, No.4.

Dorothy Hills. *(C.japonica),* Tammia Nursery Catalogue, 1978; *American Camellia Yearbook,* 1977, p.209, Reg. No.1456: A medium sized, white to blush pink, formal double *C.japonica* that flowers mid-season. A 12 year old chance seedling that first bloomed 1970; originated by Ferol Zerkowski, Tammia Nurseries, Slidell, Louisiana, USA. The formal double, **Alba Plena** type, bloom has 120-125 petals. Average size, 9.5 cm across x 5 cm deep. It has swirled, pointed petals. Blooms mid-season. Plant growth is upright and medium in rate with dark green leaves, 8 cm long by 5.5 cm wide. See colour plate, front cover, ACS., 1976, *The Camellia Journal,* vol.31, No.4. Chinese synonym 'Taoshanqiu'.

Dorothy Holmes. *(C.japonica),* Cannon, 1980, ACS., *The Camellia Journal,* vol.35, No.4, (advert.). No description. Originated in USA. No valid listing located.

Dorothy Hooper. *(C.japonica),* ACS., 1985, *The Camellia Journal,* vol.40, No.2, p.31, Reg. No.1973: Medium red, anemone form. *C.japonica* chance seedling that flowers early to mid-season; originated by Gordon B. Hooper, Modesto, California, USA. The 12 year old seedling first flowered 1971. Average flower size, 8 cm wide x 4.5 cm deep with 8 guard petals and 40 petaloids, yellow anthers and white filaments; cluster of petaloids mingled with golden stamens. Flower has some fragrance. Plant growth is upright, spreading and open with dark green leaves, mildly serrate, 12 cm long by 5.5 cm wide.

Dorothy James. *(C.hybrid), American Camellia Yearbook,* 1961, pl. facing p.178 and Yearbook, 1962-1963, p.217, Reg. No.654: A 7 year old *C. hybrid* seedling of **Robbie** x **Dr Tinsley** that first bloomed 1959; originated by V.R. James, Aptos, California, USA. Plant growth is upright and dense, medium slow in rate with light green leaves, 6 cm long x 4 cm wide. The formal double flowers are 8.5 cm across and 3.5 cm deep and have 65 petals. Flowers are flesh pink to white, washed pink with the petal tips a deep pink. Flowers mid-season. See colour plate front cover SCCS, 1962, *The Camellia Review,* vol.24, No.1.

Dorothy Jean. *(C.reticulata* hybrid), ACRS., 1987, *Camellia News,* No.103, p.83, Reg. No.357, with colour photo on back cover: Originated by Dr James I. Luke, Adelaide, South Australia. First flowered 1985. A chance *C.reticulata* seedling of unknown parentage. The flowers are informal double to **Elegans** (anemone) form, with approximately 40 petals and over 100 petaloids of an orange-red colour. The outer guard petals are fluted and veined, with stamens intermixed with the petaloids. The 15 cm x 5 cm flowers, open on an upright, rapid growing plant. Leaves, large, oval, flat, glossy green, margins serrate. The flower has two rows of fluted guard petals and numerous petaloids interspersed with stamens.

Dorothy Jessep. *(C.japonica),* Hazlewood's Nursery Catalogue, 1949, p.7: Medium sized, pink semi-double. Mid-season flowering. Originated at the Royal Botanic Gardens, Melbourne, Victoria, Australia. Orthographic error: 'Dorothy Jessop'.

Dorothy Jessop. Southdown Nursery Catalogue, 1976. Orthographic error for **Dorothy Jessep.**

Dorothy Jocelyn. *(C.japonica), New Zealand Camellia Bulletin,* 1994, Issue No.118, vol.XVIII, No.5, p.31, Reg. No.335: Originated by T. Lennard, Te Puke, New Zealand. Deep pink (RHS.CC.52B), formal double chance seedling, that first bloomed 1989. Flower is 11 cm across x 4 cm deep with about 70 petals set in 12 rows; the central petals forming a 6 pointed star. Flowers mid-season to late. Growth habit is spreading, open and medium in rate with mid-green foliage 9 cm long x 4 cm wide.

Dorothy Johnson. *(C.x williamsii), New Zealand Camellia Bulletin,* 1970, vol.VI, No.5, P.32, Reg. No.44: A seedling of **Donation** originated by Mrs A.B. Durrant, Rotorua, New Zealand that first flowered 1966. The flower is a soft pink with a silvery cast and silver edges to the petals. There are 50-60 narrow, pointed petals in 6-7 rows, opening to show white stamens in the centre. The plant habit is erect, open and vigorous. Flowers mid-season to late. See colour illustration, front cover, *New Zealand Camellia Bulletin,* 1971, vol.VII, No.1.

Dorothy L. Chattin. *(C.japonica),* ACS, *The Camellia Journal,* Dec 2008, p.34 with colour photo, Regn No. 2748; A chance seedling that first bloomed in 1991. Originated and propagated by John W. Shirah Jr., Lakeland Fla., USA. Medium size, pink formal double, incurving petals with a fluorescent sheen. Heavy petal texture. Dark green leaves, 7.5 cm x 3.7 cm. Slow, spreading growth. *American Camellia Yearbook,* 2008, p.111 with colour photo; Flowers mid-season to late.

Dorothy Zerkowsky Rosea. *(C.japonica),* Tammia Nsy., 1977, ACS., *The Camellia Journal,* vol.32, No.4, back cover illustration: A deep, rose-pink formal double sport of **Dorothy Zerkowsky** with colour fading to blush at the centre. Originated by Tammia Nsy., Slidell, Louisiana, USA.

Dorothy's Folly. *(C.japonica),* ACS, *The Camellia Journal,* Nov. 1998, p.24, Reg. No.2471. A medium size, deep rose with a few white stripes, anemone form chance seedling. Late flowering. Originated by Dr Charles Minarik, West Harwich, USA. *American Camellia Yearbook,* 1998, p.2, colour photo before p.1. The 28 year old seedling first flowered in 1976. Average flower size is 10 cm across x 3.8 cm deep, with dark green leaves 18 petals, 4 petaloids, yellow anthers and light pink filaments. Plant growth is upright, dense and vigorous, with dark green leaves 9-10 cm long x 3.8 cm wide. Very cold hardy. Note: The colour photo accompanying the registration shows a flower with white background and numerous rose red stripes and flecks, and is semi-double rather than anemone form.

Dorrie Chandler. *(C.japonica),* ACRS., 1967, *Camellia Annual,* No.28, p.4, Reg. No.77: Originated by E.V.R. Chandler, East St Kilda, Victoria, Australia. A seedling from **The Czar** that first flowered 1958. The rose-pink flowers are 8.5 cm across and 5 cm deep, of an incomplete double form. Early to mid-season flowering. Leaves, light green, 6.5 cm long x 3.2 cm wide. Plant has an upright, open growth habit.

Dorrie Higgins. *(C.reticulata),* ACRS., 1982, *Camellia News,* No.83, p.22, Reg. No.280: Originated by T.E. Pierson, Hurstville, N.S.W., Australia from the cross *C.reticulata* 'Crimson Robe' (**Dataohong**) x **William Hertrich.** First flowered 1980. Flower size, 13 cm across x 9 cm deep. A loose peony, rich plum red colour with a silvery sheen. Flowers early. The upright, open plant has 13 cm long x 6.5 cm wide leaves, dark green, prominent venation, small serrations.

Dorsetia. Buist, 1839, *Camellias,* p.15. Orthographic error for 'Dorsettii', synonym for **Gigantea.**

Dorsetii. Loudon, 1835, *Gardener's Magazine,* vol.11, p.216. Orthographic error for 'Dorsettii', synonym for **Gigantea.**

Dorsetti. Angelo Longone Catalogue, 1861. Orthographic error for 'Dorsettii', synonym for **Gigantea.**

Dorsettia. Buist, 1845, *American Flower Garden Directory,* 3rd ed, p.218. Orthographic error for 'Dorsettii', synonym for **Gigantea.**

Dorsettii. Baumann & Baumann, 1832, *Collection de Camellias élevés à Bollwieler,* pl.34: Large, very double flower, the outer petals are gracefully rounded, and, most often, with a whitish streak at the centre. The inner petals are small and joined in many clusters of different form, and intermixed with the sexual parts. Berlèse, 1837. *Monographie,* ed.1, p.92, 83, 37, 38, 71: Leaves, large, ovate-lanceolate, very acuminate, flat; bud very large, rounded, scales yellowish green; flower very large, 12.5 cm in diameter, very full, of a pale cherry red, mixed with several shade of rose-pink or white; petals very large, close set, imbricated, irregular, numerous; those of the centre smaller, disordered, marked with red and white spots. Synonyms: 'Dorsettii Parthoniana', 'Rex Georgius', Orthographic errors: 'Dorsetia', 'Dorsetii', 'Dorsettia', 'Dorsetti', 'Dorceti', 'Dorcetti', 'Doretti'. Note: As the name **Gigantea** is now regarded as the valid name for the variegated form and **Gigantea Red** for the solid colour form, this cultivar name now becomes the synonym for **Gigantea.**

Dorsettii de Savoire. *(C.japonica),* Trillon, Le Mans Nursery Catalogue, 1843, p.5. Vivid pink. Originated in France by Trillon.

Dorsettii Parthoniana. Colla, 1843, *Camelliografia,* p.125. Synonym for 'Dorsettii', synonym for **Gigantea.**

Dorsettii Pendula. *(C.japonica),* Loudon, 1839, *Hortus Kewensis,* pl.1, p.617, (G.M.xi p.216) as 'Dorsetii Pendula'. No description. Originated in England. (Believed extinct.)

Dôshi. Different reading for **Dôji.**

Dot Ashley. Gerbing, G.G., Nursery Catalogue, 1958. Orthographic variant for **Dorothy Ashley.**

Dot Cady. *(C.japonica), American Camellia Yearbook,* 1981, P.96, Reg. No.1722: A medium size, light pink base to white centre, formal double, *C.japonica,* (**Dr Tinsley** x **Erin Farmer**) flowering mid-season to late. Originated by E.P. Akin, Shreveport, Louisiana, USA. The 9 year old seedling first bloomed 1978. Average flower size 9.5 cm wide by 5 cm deep with 50 petals. Plant growth is spreading, dense and medium in rate with light green leaves, 10 cm x 5 cm.

Dot Spengler. *(C. hybrid), American Camellia Yearbook,* 1978, p.128, Reg. No.1469: A small spirea red, (RHS.CC.025/1) semi-double to loose, peony form *C.sasanqua* hybrid, a cross of the female parent **Crimson King** and the male parent, Asper hybrid No.4, [*C.sasanqua x C.reticulata* 'Lion Head' (**Shizetou**)], originated by Dr C.R. Parks, North Carolina, USA. The 14 year old hybrid first flowered 1968. The flower has 10-12 petals, 5 petaloids, yellow anthers and cream filaments. Average size 7.5 cm across x 4 cm deep. Flowers late. Plant growth, spreading, dense, open and medium to slow in rate with dark green sasanqua type leaves. This hybrid was illustrated in *American Camellia Yearbook,* 1976 facing p.50, invalidly as 'Dorothy Spengler'. The name was changed to **Dot Spengler** on registration.

Dotted Flowered. Chandler & Booth, 1831, *Illustrations and descriptions of the Plants....* Synonym for 'Punctata'.

Dottie Lynch. *(C.japonica), American Camellia Yearbook,* 1961, p.221, Reg. No.565: A 9 year old chance seedling that first bloomed 1956; originated by Dr Gilbert E. Fisher, Alabama, USA. Plant growth is upright and rapid in rate with dark green leaves, 11 cm x 5.5 cm. The peony form flower is 13-16 cm across by 8.5 cm deep and phlox pink with a few white spots and yellow anthers. Flowers mid-season.

Dottor Angelo Borrini. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.83 with colour photo; Medium to large formal double, regularly imbricated, red and white with red variegation (RHS.CC.52B and 52C). A seedling of **Madoni** x **Moshio,** first flowered in 1987. Originated by Dott. Guido Cattolica, Livorno, Italy.

Dottor Ceresa. Franchetti, 1855, *Collezione di Camelie,* p.26. Orthographic error for **Dottore Ceresa.**

Dottor Ernesto. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.84 with colour photo; Medium size, anemone form, red (RHS.CC.58B). A seedling of **Simon Bolivar**, first flowered in 2001. Originated by Dott. Guido Cattolica, Livorno, Italy.

Dottore Albini. *(C.japonica),* Angelo Longone Catalogue, 1891, p.77, as 'Dott Albinii': Large Red. Originated in Italy.

Dottore Ceresa. *(C.japonica),* Franchetti, 1855, *Collezione di Camelie,* p.26 as 'Dottor Ceresa': Bright pink, lined with white. Imbricated. Originated in Italy.

Dottore Panceri. *(C.japonica), Annales d'Agricultura,* 1857 as 'Dott. Panceri Nova'. No description. Stefano Pagliai Catalogue, 1867: New rose, veined, many petals striped white. Imbricated. Originated in Italy.

Dottoressa Stefania Franzetti. *(C.reticulata),* Italian CS, *Notiziario*, 2004, No.1, pp.5-6 with colour photo; Semi-double, medium to large, 10-12 cm diameter, 12-15 petals, cordate, margins entire, colour red (RHS.CC. 52A). Stamens 80-90, irregular and mixed with 3-4 petaloids. Filaments orange-yellow (RHS.CC. 25B), anthers polished gold (RHS.CC. 26B). Leaves 10-11 cm x 4.5-5 cm, narrowly ovate, apex acuminate, margins finely serrate, upper surface green (RHS.CC. 136A), reverse green (RHS.CC. 137C), new growth lightly pink. Originated by Floricoltura Lago Maggiore, Cerro di Laveno, Italy. Synonym 'F.L.M. Dottoressa Stefania Franzetti'.

Dr Charles. Mark S. Cannon Scion Catalogue, 1963-1964, p.5. Named **Dr Charles Petteway**, ACS., Reg. No.836, 1966.

Dr Charles Petteway. *(C.japonica), American Camellia Yearbook,* 1966, p.87, Reg. No.836: An 8 year old chance seedling that first bloomed 1956; originated by H.C. Petteway, Florida, USA. Leaves dark green, 12 cm x 6 cm. Plant growth upright and medium. The rose-pink flower is 9-10 cm across with yellow stamens. Blooms start with a rose-bud shape and open to an irregular semidouble. Mid-season flowering. There is a variegated form. Abbreviation: 'Dr Charles'. Sport: **Dr Charles Petteway Variegated.**

Dr Charles Petteway Variegated. *(C.japonica), American Camellia Yearbook,* 1966, p.87, Reg. No.837 as 'Dr Charles Petteway Var.': the same as **Dr Charles Petteway** except variegated by grafting onto virused understock. Colour rose-pink, heavily variegated with white. Blooms mid-season.

Dr Charles Thompson. (*C.japonica),* SCCS., 1976, *Camellia Nomenclature,* p.49: Light pink striped red. Medium to large semi-double. Vigorous, compact, upright growth. Blooms mid-season. Originated by Haynie, USA.

Dr Clifford Parks. *(C.reticulata.x C.japonica), American Camellia Yearbook,* 1972, p.128, Reg. No.1210: A 6 year old hybrid cross ('Crimson Robe' (**Dataohong**) x **Kramer's Supreme**), first bloomed 1970; originated by Dr Clifford Parks, North Carolina USA. Plant growth is rapid in rate with dark green leaves, 15 cm x 8 cm. The anemone form, red (orange cast) bloom has yellow anthers. It measures 14-15 cm across and 7.4-8 cm deep and flowers mid-season. It has received the "Frank L. Stormont Reticulata Award" for 1976, the "William E. Woodroof Camellia Hall of Fame Award" for 1983, the "Aubrey Harris Hybrid Award" for 1977 and the "National Hall of Fame Award" for 1979, 1981 and 1982. For colour illustrations see: *American Camellia Yearbook,* 1977, facing p.82; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.155 and the front cover SCCS., 1979, *The Camellia Review,* vol.40, No.4. There is also a variegated form. The Chinese synonym is 'Pakesi Xiansheng'. Orthographic variant: 'Doctor Clifford Parks'.

Dr Clifford Parks Variegated. *(C.reticulata x C.japonica),* Gentry, 1975, ACS., *The Camellia Journal,* vol.30, No.4, as 'Dr Clifford Parks Var.': A virus variegated form of **Dr Clifford Parks** - Red blotched with white. Originated in USA.

Dr Colin Crisp. (*C.pitardii* hybrid). *New Zealand Camellia Bulletin,* March 1999, Issue No.132, vol.XXI, No.1, p.15, Reg. No.403. Registered by N. Haydon, Takanini, New Zealand. A seedling of **Nicky Crisp,** pollen parent unknown. The semi-double flowers are medium size, 8 cm diameter x 3.5 cm deep, and are pure white with good weather resistance. This is the first registered pure white pitardii hybrid, and has the usual long-lasting golden anthers. Plant is dense, slow-growing and bushy, with dark green leaves 8 cm long x 3.5 cm wide.

Dr Cy Echols. *(C.japonica), American Camellia Yearbook,* 1986, p.89, Reg. No.2002: A large, deep, rose-pink, variegated white semi-double, chance japonica seedling; originated by Paul Gilley, Grandridge, Florida, USA. The 6 year old seedling first bloomed 1983. Average flower size, 12 cm wide x 6 cm deep with 18 petals, 4 petaloids, white filaments and bright, golden anthers. Plant growth is rapid with dark green leaves, 11 cm x 6 cm.

Dr Gehry Variegated. *(C.japonica),* Mark S Cannon Scion Catalogue, 1962, p.3. No description. Originated in USA. No valid listing located.

Dr George A. Bunch. Mark S. Cannon Scion Catalogue, 1964-1965, p.5. Synonym for **Dr George Bunch.**

Dr George Bunch. *(C.japonica), American Camellia Yearbook,* 1965, p.230, Reg. No.791: An 8 year old chance seedling that first flowered 1960. Propagated by True's Camellias, Columbia, South Carolina, USA and released in 1963 as 'Dr G.A. Bunch' and changed to **Dr George Bunch** on registration. Plant growth is upright, dense and rapid with dark green leaves 12.5 cm long x 7.5 cm wide. The flower is large to very large, heavy peony form with a pink centre grading to white at the margins with some margins deep pink as in **Betty Sheffield Blush.** Flower colour variable, some mostly white with pink markings, true blush and some solid, deep pink. Sports freely. Blooms measure 14-15 cm across x 8.5 cm deep. Blooms mid-season. SCCS., *Camellia Nomenclature* lists this name as a synonym for **Sarah R** (a sport of **Big Beauty**) which was registered the same year, Reg No.808. As **Sarah R** was commercially listed in 1960 this would give it priority if they are, in fact, identical. While the *American Camellia Yearbook*s do not give the names of the actual originators, *Camellia Nomenclature,* under the name 'Dr G.A. Bunch' gives the originator as W.M. Arant, West Columbia, South Carolina, 1962 and **Sarah R** as originated by B. Ruffin, Elliville, Mississippi, 1961 and states that it is also believed to be the same as **Tillie Worth.**

Plant growth, upright, dense and rapid with dark green leaves, 10 cm long x 2 cm wide. The peony form, rose red bloom has yellow anthers and filaments, to rose form double in solid colour or heavily variegated. It measures 11-12.5 cm across and 8-10 cm deep with 100 petals and 20-30 petaloids. Blooms mid-season. There is a variegated form.

Dr James Brown Variegated. *(C.japonica),* Tammia Nursery Catalogue, 1971: A white variegated form of **Dr James Brown,** originated by Tammia Nursery, Slidell, Louisiana, USA. See colour photo, back cover, ACS., 1974, *The Camellia Journal,* vol.28, No.3.

Dr James W. Frick. *(C.reticulata x C.hybrid), American Camellia Yearbook,* 1981, p.97, Reg. No.1771: A very large, clear pink washed silver, *C.reticulata* hybrid, (**William Hertrich** x **Buddha**) that flowers late; originated by Marjorie O'Malley, Woodside, California, USA. The 10 year old seedling first bloomed 1973. Average flower size is 17 cm across and 7.5 cm deep with 9-10 petals, golden anthers, white filaments. Plant growth is upright, open and rapid with dark green leaves,11 cm long x 6.5 cm wide.

Dr J**ane Crisp.** *(C.reticulata.* hybr.), *New Zealand Camellia Bulletin,* 1977, vol.X, No.3, p.15, Reg. No.128: Originated by Mrs Bettie Durrant, Rotorua, New Zealand from *([C.pitardii* var. *yunnanica x C.reticulata* 'Willow Wand' (**Liuye Yinhong**)] x *C.reticulata* 'Willow Wand'). The flower form is open peony with 24-26 petals and an occasional large petaloid. The inner petals are folded and partially joined, giving a very high centre. Colour is silvery pink (RHS.CC. Red Purple Group 66C) with darker veining and silvery edges. Stamens are in fascicles with white filaments and golden anthers. Average flower size is 15.5 cm and 8-9 cm deep. Leaves are mid-green, reticulate with waved edges, fine serration and measure 11 cm x 4.5 cm. Flowers early to late season.

Dr Jane Day. *(C.japonica),* Cannon, 1974, ACS., *The Camellia Journal,* vol.29, No.1. (advert). No description. Originated in USA. No valid listing located.

Dr Jane Norwood. *(C. hybrid), American Camellia Yearbook,* 1981, p.97, Reg. No.1696: A medium size, sweet pea coloured, peony form *C.hybrid* chance seedling that blooms mid-season to late; originated by A.R. Parker, Elloree, South Carolina, USA. The 15 year old seedling first flowered 1965. Average flower size is 9 cm wide by 7 cm deep with about 30 petals, a few petaloids, light yellow anthers and dark yellow filaments. Plant growth is upright, open and rapid with dark green leaves, 8 cm long x 3.5 cm wide.

Dr John D. Bell. *(C.japonica),* NCCS, Bulletin,1950, 4:13, Variegated form of **Beau Harp** - Dark red, heavily variegated white. Incomplete double, 10-12.5 cm across. The petals are notched and crinkled. Petals and large petaloids separate the large tiers of stamens, filaments light yellow, anthers dark, golden yellow. Leaves medium green, wide-oval, 11 cm x 10 cm. Prominent venation, coarsely serrate. See black and white photo, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.93 and colour photo, p.80, 82, Macoboy, 1981, *The Colour Dictionary of Camellias.* Synonym: 'Beau Harp Variegated'. Originated by G.H. Wilkinson, Pensacola, Florida, USA.

Dr John D. Lawson. *(C.reticulata* hybrid*), American Camellia Yearbook,* 1973, p.128, Reg. No.1178: A 6 year hybrid cross, **Fluted Orchid** x **Marjorie Magnificent,** that first bloomed 1969; originated by Dr John D. Lawson, Antioch, Georgia, USA. Plant growth is upright, open and medium in rate with dark green leaves, 9.5 cm long x 5 cm wide. The semi-double bloom is a strong purplish pink (Nickerson fan 7.5 RP7/10) with yellow anthers. It measures 12.5 cm across and 6 cm deep with 9 centre petals and 9 outer petals. It has three or more petaloids and blooms mid-season. The petals are edged with a white line and are crinkled.

Dr. John H. Urabec. *(C.japonica),* Reiners, 1962, NCCS., 1962, *The Camellia Bulletin*, vol.15, No.4, p.20: "An exhibition item which will attract best-of-show awards. The manner of plant growth, type of foliage and degree of floriferousness would be rated neither as outstanding or mediocre. The merit lies in the bloom, which is very large, of an anemone form...the most apt way to describe the new flower is to say that it is **C.M. Wilson** on a grand scale, of somewhat looser construction and a more deep, rich pink."

Dr John Ragland. *(C.japonica),* SCCS., 1962, *The Camellia Review,* vol.23, No.4, p.31: Originated by R.W. Ragland, Orange, California, USA. A 6 year old seedling of 'Magnolia Queen', male parent unknown. Flower semi-double, 12.5 cm across and 6 cm deep. Colour carmine red with white stamens. SCCS Reg. No.62-5.

Dr John Vaughn. *(C.japonica), American Camellia Yearbook,* 1972, p.129, Reg.No.1181: An 18 year old chance seedling that first flowered 1955; originated by Judge H.C. Petteway, Florida, USA. Plant growth, upright, spreading and medium in rate with dark green leaves, 12.5 cm long by 6 cm wide. The formal double bloom is bright rose with 40 petals. It measures 10-12 cm and 5 cm deep and blooms early to mid-season. The blooms are often lighter-coloured in the centre.

A chance seedling from 'Yobeki-dori', that first flowered 1977. Plant is open, spreading, inclined to weep with mid green leaves, 9 cm x 3.5 cm, narrow-elliptic, cuspidate; base acute, margins finely serrate. The 10-11 cm, hose-in-hose, semi-double flowers have 16-18 petals, pointed of palest pink and slender stamen column. Blooms mid-season to late.

Dr Tinsley. *(C.japonica), American Camellia Yearbook,* 1949, p.244: The variety **Dr Tinsley,** 'Tinsley 71', 'Tinsley 7-11', was purchased as a small plant from Heyman's Nursery, Lafayette,

Lousiana, USA in 1940. It is thought to have come from McIlhenny's Jungle Gardens. It first bloomed 1944. Heyman's Nursery obtained the propagating right and sold it as **Dr Tinsley.** The variety blooms freely in mid-season. This incomplete double variety has a white ground colour with a pink blush, becoming progressively deeper towards the petal edges. Stamens have white filaments and yellow anthers. Plant growth is upright and compact. Colour plates in *Garden Plants in Colour* sec.59:4, 1957, Skinner, ed. on p.81 and Macoboy, 1981, *The Colour Dictionary of Camellias,* p.81; Front cover, ACS, 1973, *The Camellia Journal,* vol.28, No.2. It is Reg. No.39, *American Camellia Yearbook,* 1954. Synonyms: 'Tinsley', 'Tinsley 71', 'Tinsley 7-11'. Orthographic variant: 'Doctor Tinsley'. Chinese synonym: 'Tingsili Boshi'. Sport: **Dr Tinsley Supreme.**

Dr Tinsley Supreme. *(C.japonica),* Gerbing Azalea Gardens Catalogue, 1962: A sport of **Dr Tinsley** with double the number of rows of petals. Originated by G.G. Gerbing, Florida, USA.

Dream Awhile. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.47: Light Lavender pink. Medium to large semi-double with upright petals. Medium, bushy growth. Mid-season flowering. Originated by Harvey Short, Ramona, California, USA.

Dream Baby. *(C.hybrid), New Zealand Camellia Bulletin,* 1986, vol.XIV, No.8, p.14, Reg. No.245: A miniature hybrid originated by O. Blumhardt, Whangarei, New Zealand from a cross of **Dream Girl** x (Unnamed 'Buddha' x *C.fraterna).* The seedling is 8 years old and first flowered 1982. It has dark green leaves, 6 cm x 2 cm, on a plant of average habit and growth. The flowers are semi-double, 6 cm across x 2 cm deep, bright pink with 12-14 petals and some central stamens. RHS.CC. Red Purple Group 63B. Flowers mid-season. Synonym: 'Little Dreamer'.

Dream Boat. *(C.x williamsii), New Zealand Camellia Bulletin,* 1976, Vol.IX, No.6, P.27, Reg. No.123: A seedling of *C.saluenensis x C.japonica* **K. Sawada;** originated by F.M. Jury, Waitara, New Zealand. The plant habit is open, upright with dark green leaves, 7.5 cm long x 3.5 cm wide. Formal double flower with up to 50 petals, each with a distinctly incurved margin. Colour is bright pink with a lavender cast. Flower size 11 cm across x 4 cm deep. Flowers mid-season. Colour photo, front cover, *New Zealand Camellia Bulletin,* 1979, vol.XI, No.2. Chinese synonym: 'Mengchuan'.

Dream Castle. *(C.reticulata.x C.japonica),* Nuccio's Nurseries Catalogue, 1972. *American Camellia Yearbook,* 1973, Colour plate facing p.84 - A cross of *C.reticulata* 'Crimson Robe' (**Dataohong**) x *C.japonica* **Coronation.** Silver pink. Very large, semi-double with fluted, upright petals. Vigorous, upright growth. Originated by Nuccio's Nurseries, Altadena, California, USA. Colour plate, front cover SCCS., 1972, *The Camellia Review,* vol.34, No.2. Chinese synonym: 'Gucheng Baomeng', later changed to 'Mengcheng'.

Dream Girl. *(C.sasanqua.x C.reticulata),* Merino, 1966, *American Camellia Yearbook,* p.62: "Another interesting hybrid *(C.sasanqua* **Narumigata** x *C.reticulata* **Buddha**) that has a flower like **Buddha,** a very large semi-double with wavy, upright, irregular petals, approximately 15 cm across and 10 cm deep with light pink colouring. Blooms early. Foliage similar to **Buddha**." Orthographic variant 'Dreamgirl'. Originated by Howard Asper, Escondido, California, USA.

Dream Light. *Camellias,* Y.C. Shen, 2009, p.187 with colour photo; Synonym for **Yume-akari.**

Dream Spinner. *(C.japonica), New Zealand Camellia Bulletin,* 1989, vol.XVI, No.1, p.26, Reg. No.261: Originated by Mrs K.M. Campbell, Wanganui, NZ. The seedling is 12 years old and first flowered in 1980. The plant is slow growing with a dense, upright habit. The leaves are dark green, 8.5 cm long x 5 cm wide. The sweet pea coloured flowers are single with 7 petals and some stamens with white filaments and yellow anthers. The petal edges have fine fimbriation and the colour shades from pale pink centre to deep pink outer edge. Blooms mid-season to late. Flowers measure 9.5-10 cm acros x 4.5 cm deep Colour is from RHS.CC.62D- 62A.

Dream Time. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature,* p.51: Blush pink shaded light orchid. Large semi-double. Medium, upright growth. Mid-season blooming. Originated by Mark Cannon, Alabama, USA.

Dreamgirl. Mount Congreve Wholesale Nursery Catalogue, 1989-1990, p.4. Orthographic variant for **Dream Girl.**

Dreamland. *(C.sasanqua),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.252: Pink blotched white. Originated in USA.

Dreamlover. *(C.sasanqua).* C. Aust, *Camellia News,* No.182, Autumn 2010, p.8 with colour photo; Regn No.606-N.; A seedling of **Jane Morgan.** Semi-double, about 10 cm diameter. White centre with a deep lavender pink edge. Leaves 7 cm x 4 cm. Fast, upright growth. Originated by Roger Nancarrow, Orange, NSW, Australia, and released by Camellia Grove Nursery in 2005.

Dreamy. *(C.japonica), American Camellia Yearbook,* 1980, p.163, Reg. No.1630: A large, red variegated white, semi-double to rose form double *C.japonica* chance seedling, mid-season blooming; originated by Ted Alfter, Bakersfield, California, USA. The 5 year old seedling first bloomed 1979. Average flower size 12.5 cm across x 7.5 cm deep with 20-30 petals, yellow anthers, white filaments. Flower colour from full red to nearly full white. Plant growth, upright, spreading and medium in rate with dark green leaves, 11 cm long x 5 cm wide. Synonym: 'Dreamy Variegated'.

Dreamy Variegated. Gentry, 1984, ACS., *The Camellia Journal,* vol.39, No.4, p.17 as 'Dreamy V.'. Synonym for **Dreamy.**

Dubonnet Variegated. *(C.japonica),* SCCS, 1960, *Camellia Nomenclature,* p.47 as 'Dubonnet Var.': Variegated form of **Dubonnet** - Dark wine red and white. Originated in the USA.

Duc d'Aumale. *(C.japonica),* Verschaffelt, 1851, *Nouvelle Iconographie,* Book XI, pl.I: Obtained from seed recently in Belgium. The blossoms are of medium size, of rich, cherry red colour; The petals are rounded, outspread, convex, imbricated with extreme regularity, longitudinally veined a deeper shade, the emargination at the apex is edged with white; at the centre the petals are lanceolate, intersected with a white stripe. Orthographic variant: 'Duc de Aumale'.

Duc d'Orleans. *(C.japonica),* Jacob Makoy et Cie Catalogue, 1839, p.16. No description. van Houtte Catalogue, 1839, 1:3 as Tamponets. No description. Berlèse 1840, *Monographie,* ed.2, p.155-156, 231: Leaves diverse, mature specimens 5.5 cm wide x 10 cm long, round-oval, a little acuminate, thick, reflexed, apex recurved, prominent venation, of a normal green; buds large, obtuse, solid with scales of yellowish green; the flower is about 10 cm across, full, deep, cherry red carmine, corolla irregularly round; the centre convex, composed of a numerous quantity of petals, equal in length, varying in size, some spoon shaped, the others ovoid, close set, twisted, rumpled, uniting in a compact, uniform mass, entire and imbricated, and forming a central sphere of 4-5 distinct groups, but united and equal: the form of 'Colvilli'. Rollisson & Son, 1875-1876, Plant Catalogue, p.101: Delicate pink striped with carmine. Paeoniflora shape. This is erroneous and would be the start of the confusion with the **Duchesse d'Orleans.** Originated from seed by M Tamponet, France, 1838. The name has invalidly been used as a synonym for the **Duchesse d'Orleans,** and later, in America, it was confused with the variety **Marguerite Gouillon**. Orthographic variant: 'Duca d'Orleans'.

Duc d'Orleans. Thomasville Nursery Catalogue, 1935, p.7, erroneously for **Marguerite Gouillon.** This incorrect listing was used by most American nursermen for the next 25 years.

Duc d'Orleans Pink. McIlhenny Catalogue 1937, p.2 as 'Duc de Orleans Pink'. Synonym for 'Stardust'.

Duc d'Orleans Shell Pink. Vanderbilt, 1941, *Camellia Research, II,* p.2 as 'Duc de Orleans Shell Pink'. Synonym for 'Stardust'.

Duc d'Ursel. *(C.japonica),* Berlèse, 1845, *Monographie,* ed.3, p.253: Flowers full, peony form; exterior petals in 2-3 rows, while the central ones are grouped together in a large sphere. Colour orange red. Originated by van der Maelen, Brussels, Belgium about 1837. Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl.10.

Duc d'Urset. *International Camellia Journal,* 1992. p.46. Orthographic error for **Duc d'Ursel.**

Duc d'York. *(C.japonica),* Verschaffelt Catalogue, 1847-1848, p.56. No description. Originated in Belgium. (Believed extinct.)

Duc de Aumale. Real Companhia Horticolo-Agricola Portuense Catalogue No.29, 1895-1896, p.47. Orthographic variant for **Duc d'Aumale.**

Duc de Bedford. *(C.japonica),* Burdin Maggiore & Co., 1849-1850, Catalogue General. No description. Longone, Angelo, Catalogue, 1861, p.77: Pink and red. Origin unknown.

Duc de Berry. Le Texnier, 1911, *Le camellia, essais sur l'histoire...,* .p.37. Orthographic error for **Duchesse de Berry.**

Duc de Bordeaux. *(C.japonica),* Alex Verschaffelt, 1849-1850, Catalogue, p.45. No description.Verschaffelt, 1850, *Nouvelle Iconograhie,* Book V, pl.II: The petals of this variety are large, well rounded, spread out, imbricated, slightly emarginate, of a pink colour. At the centre they are small, oval, pointed and close set but still spread out. It was obtained as a seedling in France.

Duc de Boutourlin. Louis Leroy, 1868, Catalogue, p.123. Orthographic error for **Conte Bouturlin.**

Duc de Brabant. *(C.japonica),* Oudin, Lisieux Nursery Catalogue, 1844, p.10: Beautiful form. Pure white striped with carmine. This camellia from Belgium seems similar to **Parini** from Mariani. van Houtte Catalogue, 1844-1845, 18:11: Imbricated.White streaked carmine. van Houtte Catalogue, 1846-1847, 27:23: Of the form of the **Duchesse d'Orleans** but a pure white, but larger and presented better with the petals entirely developed. Berlèse, 1844, *Annales Société de Horticulture de Paris*, 34(197):205: The flower is 9-10 cm across, of a milky white with stripes of vivid carmine red, sometimes regularly imbricated, almost at the same time peony form. The outside 3 or 4 rows of petals are large, rounded and veined with marks and lines and further splashes of red. The centre is composed of a group of numerous petals of many shapes. The corolla is similar to **Picturata;** sometimes the flower is regular and generally resembles the **Duchesse d'Orleans.** Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 73. Originated by Moens, Belgium from seed. Orthographic variant: 'Duc de Braband'. Synonym: 'Brabantii Princeps'. Orthographic error: 'Duc de Brabaud'.

Duc de Brabaud. Burdin Maggiore & Co. Catalogue, 1863. Andre Leroy, 1878, Supplement to Catalogue Général, p.55. Orthographic error for **Duc de Brabant.**

Duc de Bretagne. *(C.japonica),* van Houtte Catalogue, 1846-1847, 27:23: Flower dense, exceptionally well imbricated, of a most beautiful vivid rose, striped and spotted with white. Verschaffelt, 1848, *Nouvelle Iconographie,* Book III, pl.III: This variety was obtained from seed by M. Drouard, Nantes, France. The plant is of vigorous growth. Its leaves, 9-10 cm in length and 6-7 cm in width, are round-oval, acuminate, with smooth venation and little serration. The bloom, over 10 cm across, is a beautiful cherry red (Carmine rose HCC., 621 to 621/1), often blotched and striped with white. Orthographic variants: 'Duke of Britain', 'Duca di Brettagna', 'Duke of Brittany'. Orthographic errors: 'Duke de Britagne', 'Duc de Britagne'.

Duc de Britagne. Lindo Nursery price list,1940-1941. Orthographic error for **Duc de Bretagne.**

Duchess of Covington. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Medium to large, white-variegated, incomplete-double, 9-10 cm in diamenter. The colour is white flecked and frosted with pink. Outer petals are round and ruffled on their margins. Some of the inner petals are semi-erect and intermingle with the central stamens. Filaments are yellow, anthers are darker golden yellow. The leaves are medium green, elliptic, averaging 9.5 cm x 4 cm with narrow, prominent tips, prominent veins and shallow serrations. The plant habit is vigorous, bushy, informal and erect. Fixed by grafting by Mrs Sigmund J. Katz, Covington, Louisiana, USA, from a sport of the variety **Duchess of Sutherland** made in 1947. Reg. No.152, *American Camellia Yearbook,* 1954, p.308.

Duchess of Exeter. Standardized Plant Names, 1942. Synonym for **Marchioness of Exeter.**

Duchess of Northumberland. *(C.japonica),* Oudin, Lisieux Nursery Catalogue, 1845-1846, p.43: Majestic imbricated form. Alabaster White, embellished with wide, pink stripes, without any streaks or blotches. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France,* vol.40, p.131 as 'Duchesse de Northumberland': Flower 9-10 cm across, often more; pure milk white, striped pink, cup-shaped formal double, with numerous petals, finely serrate, lightly veined, symmetrically imbricated. van Houtte Catalogue, 1846-1847, 27:23; from Lee & Co. of England. It was listed by Veitch, 1856-1857 as "White, spotted rose" and Wakefield, 1869, *Gardeners' Chronicle,* p.17-18 as "White striped with carmine." Verschaffelt, 1849, *Nouvelle Iconographie,* Book XI, pl.IV as 'Duchesse de Northumberland': The unusual size of its petals, its pure colouring, relieved here and there by broad single or double pink stripes. The exterior petals are convex and inverted; towards the centre, they are erect and recall hybrid, everblooming roses. Orthographic variants: 'Duchesse de Northumberland', 'Duchessa di Northumberland', 'Duchesse of Northumberland'. Orthographic error: 'Duchesse de Notemberland'. The name has been erroneously applied to a cultivar from Magnolia Gardens in USA.

Duchess of Northumberland (MG). *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942--1943, invalidly as 'Duchess of Northumberland': Large satiny, light rose semi-double, 10.5 cm across x 3.5 cm deep. Petals orbicular, tips fringed, forming a cup about centre stamens. Anthers light yellow, filaments white. Leaves mid-green, 8 cm long x 1.8 cm wide, thin texture, depressed venation, deep, coarse serrations. Originated at Magnolia Gardens, St.Johns Island, South Carolina, USA, either from seed of unknown parents or an old lost label variety and named by Rev. John G. Drayton.

Duchess of Orkney. Treseder Special Camellia List, 1965. Orthographic variant for **Countess of Orkney.**

Duchess of Orkney Rose Form. Treseder Special Camellia List, 1965. Synonym for **Countess of Orkney Rosea.**

Duchess of Orleans. Harrison, ed., 1842, *Floricultural Cabinet,* p.105. Orthographic variant for **Duchesse d'Orleans.**

Duchess of Southerland. Orton Nursery Price List, 1947-1948. Orthographic error for **Duchess of Sutherland.**

Duchess of Sutherland. *(C.japonica),* Vanderbilt, 1940, *Camellia Research,* p.4 as 'Duchesse of Sutherland'. No description. Gerbings Azalea Gardens Catalogue, 1941-1942: Semi-double white with 15 cm blooms which occasionally have a white stripe on one petal. Long, glossy, medium-green foliage, spreading growth. Mid-season flowering. See colour plate No.65, G.G. Gerbing's, 1945, *Camellias;* Sharp, 1957, *Camellias Illustrated,* p.83. Sports: **Duchess of Sutherland Pink, Duchess of Covington, Ruth Royer, Claudia Phelps, Patricia Burks.** Originated at Magnolia Gardens, St. John's Island, South Carolina, USA. Orthographic errors: 'Duchess of Sutherlin', 'Duchess of Southerland', 'Duchesse de Sutherland', 'Duchesse of Sutherland'.

Duchess of Sutherland Coral. River View Nursery Catalogue, 1957-1958, p.8. Synonym for **Claudia Phelps.**

Duchess of Sutherland Pink. *(C.japonica),* Fruitland Nursery Catalogue, 1945-1946, p.24: A solid pink sport of **Duchess of Sutherland.** Orthographic variants: 'Pink Duchess of Sutherland', 'Pink Duchess'. Originated in USA.

Duchess of Sutherland Spotted. River View Nursery Catalogue, 1957-1958. Synonym for **Ruth Royer.**

Duchess of Sutherland Variegated. Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.89. Synonym for **Ruth Royer.**

Duchess of Sutherlin. Portland Nursery Catalogue, 1947-1948, p.14. Orthographic error for **Duchess of Sutherland.**

Duchess of Teck. *(C.japonica),* RHS., Journal vol.22, 1898-1899, pl.lxxiii. "Award of Merit" when exhibited by Paul. Medium sized flowers a shade of salmon pink. Originated in England.

Duchess of Windsor. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: White. Large, loose, peony form. Low, bushy growth. Blooms early. Originated in USA.

Duchess of York. *(C.x williamsii).* Trewidden Estate Nursery, 1995, Retail Camellia List, p.4: Large single flower of an unusual shade of pinky mauve. Originated at Tregrehan, Cornwall, England.

Duchess of York. Cook Nursery Catalogue, 1899-1900, p.234-235. Synonym for **Lady Loch.**

Duchess Pink. Vanderbilt, 1941, *Camellia Research, II,* p.2. Synonym for **Mathilde.**

Duchess Pink Variegated. Hillcrest Nursery Catalogue, 1958 as 'Duchess Pink Var.' Synonym for **Ruth Royer.**

Duchess Vicsenti. Guichard Soeurs Nursery Catalogue, 1928. Orthographic error for **Duchesse Visconti.**

Duchesse d'Orleans. *(C.japonica),* Cels, Paris Nursery Catalogue, 1839, p.29: Large, meticulously imbricated. Jacob Makoy et Cie Catalogue, 1839, p.16. No description. van Houtte Catalogue, 1839.1:3, with synonyms: 'Reine d'Angleterre', 'Reine des Camellias', 'Nobilissima Nova' but no description. However in van Houtte Catalogue, 1842, 9:9: Formal double, petals rounded and imbricated. White, very lightly tinted with vermilion, speckled and splashed with carmine. Berlèse 1843, *Iconographie,* vol.3, pl.212: The flower is about 10 cm in diameter, it is full, regular, a soft whitish carmine rose, sometimes with pale red stripes, sometimes a

lively red, according to the season. The petals are numerous, oval-elongate to broad-oval, notched, flat, arranged and close-set, lightly reflexed, regularly imbricated from the circumference to the centre with one or two vertical marks of pale rose-pink; those of the centre are long, acuminate, lanceolate and also well imbricated. The corolla forms a perfect rosette. Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 69. Originated from seed by M. Mariani, Milan, Italy. This cultivar was for many years confused with the **Duc d'Orleans,** but they are in fact separate and distinct cultivars. Orthographic variants: 'Duchess of Orleans', 'Duchessa d'Orleans', 'Duquesa de Orleans', 'Duchesse de Orleans'. Orthographic errors: 'Duchess de Orleans', 'Duchess de l'Orleans', 'Dutchess of Orleans', 'Duches d'Orleanse'. Synonyms: 'Reine d'Angleterre', 'Reine des Camellias', 'Ducissa Aurelianensis', 'Nobilissima Nova', 'Nuova de Genoa', 'Nuova di Genoa', 'Nuova di Genova'. Sports: **Duc de Chartres, Comte de Paris.**

Duchesse de Berrii. Smith, Edwin, Nursery Catalogue, 1893-1894, p.39. Orthographic error for Duchesse de Berry.

Duchesse de Berry. *(C.japonica),* Verschaffelt Catalogue, 1848-1849, p.46 as 'Duchessa di Berry'. No description. Verschaffelt, 1855, *Nouvelle Iconographie,* Book IX, pl.III: Its blossoms could be taken for a white rose, full bodied and of the largest size. Mr Aug. Van Geert received this variety in 1851 from Count B. Lechi, Brescia, Italy. It is thus of Italian origin. However it is named for a French noblewoman, so the French orthography is given precedence. It is a creamy white, large formal to rose form double of 9-10 cm across with waved, heavy textured petals. Occasionally reveals a few stamens when fully open. Leaves light, glossy green, about 7.5 cm long x 5.5 cm wide. Medium, compact growth. Orthographic variant: 'Duchessa di Berry'. Orthographic errors: 'Duchess de Berry', 'Duchesse du Berry', 'Duchesse de Perry', 'Duchesse de Berri', 'Duchess de Berri', 'Duchesse de Berrii', 'Duchesse de Bery'. Duchesse Decaze. Mount Congreve Wholesale Nursery, 1990-1991, Price List, p.4. Orthographic variant for **Duchesse Decazes.**

Duchesse Decazes. *(C.japonica),* Poiteau, Apr.1846, *Review Horticole,* p.6-8: Named at the March Exposition and is the earliest positive listing and gives the name 'Decazes' in one word. It is a place name and the splitting into "De Cazes" is erroneous. Later in the same year, van Houtte, in his Catalogue 27:19, gives **Adonidea,** 'Gallesi d'Italie' and 'Dorusio à bords blancs' as synonyms. The last two are synonyms for **Adonidea,** which was in commerce in 1837, and it is probable that these are all the one cultivar. The **Duchesse Decazes** at present listed by Claude Thoby, Nantes in Colour Catalogue, Apr.1971 as 'Duchesse de Caze' is a soft pink with a veining and edging of white. A medium size, full peony form with vigorous, upright, compact growth. Flowers mid-season. Said to have been introduced by Souchet. Orthographic variant: 'Duchesse Decaze'. Orthographic errors: 'Duchess de Case', 'Duchess de Casa', 'Duchess de Cases', 'Duchess de Casse', 'Duchess de Caze', 'Duchess de Cazes', 'Duchess

de Gaze', 'Duchesse de Casas', 'Duchesse de Case', 'Duchesse de Cases', 'Duchesse de Cassi', 'Duchesse de Caze', 'Duchesse de Cazes', 'Duchesse de Gaze', 'Comtessa de Cazes', 'duches duy Cazes', 'Duchese de Cazes, 'Comtesse de Cages'. See colour illustration, p.115, Fairweather, 1979, *Rhododendrons and Azaleas.* Synonyms received in America include: 'Hime', 'Juanita', 'Opelousa's Peony' and 'Mrs Conrad Wall Jr.'. Sports: **Duchesse Decazes Pink, Duchesse Decazes White.**

Duchesse of Orkney Rose Form. Treseder's Nurseries Catalogue, 1967. Synonym for **Countess of Orkney Rosea.**

Duchesse of Northumberland. Loddiges Catalogue, 1847, p.34. Orthographic variant for **Duchess of Northumberland.**

Duchesse of Sutherland. Vanderbilt, 1940, *Camellia Research,* p.4. Orthographic variant for **Duchess of Sutherland.**

Duchesse Salviati. André; 1864, *Plantes de terre de Bruyères...,* p.234. Orthographic variant for **Duchessa Salviati.**

Duchesse Visconti. *(C.japonica),* Verschaffelt Catalogue, 1849-1850, p.46 as 'Duchesse Viscontii'. No description. de Jonghe, 1851, *Traité de la Culture du Camellias,* p.105: Imbricated; deep flesh colour, streaked with red. Verschaffelt, 1854, *Nouvelle Iconographie,* Book III, pl.II. Van Houtte Catalogue, 1851, 44:9: Flesh white with distinct rays of red. Imbricated. According to Guichard, 1894 - Flesh coloured formal double, striated red. Orthographic variants: 'Duchessa Visconti', 'Duchessa de Visconti', 'Duchesse de Visconte', 'Duchesse Viscontii'. Orthographic error: 'Duchess Viscenti'.

Duchesse Visconti Nova. *(C.japonica),* Jacob Makoy et Cie Catalogue, 1858, p.27: No description. Originated in Italy. (Believed extinct.)

Duchezza Litta. William Prince, 1860, Select Greenhouse Plants, 45th ed, No.13, p.5. Orthographic error for **Duchessa Litta.**

Ducissa Aurelianensis. Colla, 1843, *Camelliografia,* (Illust.), p.125. Synonym for **Duchesse d'Orleans.**

Ducissa Litta. Berlèse 1845, *Monographie,* ed.3, p.240. Orthographic variant for **Duchessa Litta.**

Duck of Caraman. Burdin Maggiore & Co., 1849-1850, Catalogue Général. Burdin Maggiore & Co.Catalogue, 1886. Orthographic error for **Duca di Caraman.**

Duck of Karaman. Burdin Maggiore et Cie Catalogue, 1870-1871. Orthographic error for **Duca di Caraman.**

Dudley Boudreaux. *(C.japonica)* ACS, *The Camellia Journal,* Mar. 2003, p.29, Reg. No. 2588. A white semi-double to loose peony form flower with yellow anthers and white filaments. Plant is upright and vigorous and blooms mid-season. Originated by Hyman. R. Norsworthy, Beaumont, Tex., USA. *American Camellia Yearbook*, 2003, p.62, colour photo p.c3. A 12 year old seedling of (**Elizabeth Boardman** x **Gwenneth Morey**) x **Colonial Dame**, which first flowered in 1995. Flowers measure 9.5 cm across x 7 cm deep, with 35 petals. The dark green leaves are 9 cm long x 5 cm wide.

Duff Alan. Hillier Price List, 1963-1964. Orthographic error for **Duffy Allan.**

Duff Allan. Hillier Nursery, Large Specimen Shrubs Catalogue, 1966-1968, p.12. Orthographic error for **Duffy Allan.**

Duff Allen. Hillier Nursery Catalogue, 1984. Orthographic error for **Duffy Allan.**

Duffy Allan. (*C.sasanqua*), Pearson II, 1957, *Camellian,* vol.VIII, No.1, p.23: Tiny petaloids mixed with stamens. Pink. Orthographic errors: 'Duff Alan', 'Duff Allan', 'Duff Allen'. Originated by Allan's Nursery, South Carolina, USA.

Duftglöckchen. (Scented Bell). (*C.japonica* x *C.lutchuensis*). Peter Fischer, 1990, Kamelien [p.13], colour pl. [p.14]: Salmon rose, small single, honey scented blossom. This new *C.japonica* 'Tinsie' (**Bokuhan**), x *C.lutchuensis* hybrid of elegant form is a worthwhile novely. Originated in Germany by Peter Fischer, Höden, Wingst.

Dughetti (Rosea Odorata). Piantaio Comunale Romano, 1859. Synonym for **Duguetti Odorata.**

Dugueti. *International Camellia Journal,* 1992, p.49. Orthographic error for **Duguetti Odorata.**

Duguetti Adorata. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.10. Orthographic error for **Duguetti Odorata.**

Duguetti Odorata. *(C.japonica),* Geldorf, Const., 1844, Catalogue of Plants and Price List, p.6: Very beautiful, large flowers, similar to Pomponia but deepened in colour. Flowers give off the scent of *Azalea liliflora* and daphne. Graulhie, Jun.1844, *Revue Horticole,* p.69; van Houtte Catalogue, 1844-1845, 18:11, as 'Duquetti Odorata'. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France,* vol.40, p.277: Flower very large, 10 cm when well grown; colour delicate rose-pink. This variety opens to the warmth of the sun spreading an agreeable scent similar to the Azalea 'Liliiflora'. Originated by Pierre Tourres, Macheteaux, France. Orthographic errors: 'Duguetti Adorata', 'Dughetti (Rosea Odorata)', 'Dugnetti Odorata', 'Duquetti Odorata', 'Duqueti Odorata'.

Dujuan Baozhu. (Azalea Precious Pellet). *(C.azalea).* China Regn No.3. *China Flowers & Horticulture*, Mar 2006, No.6, p.49, with colour photo; A bud mutation of *C.azalea*, originated by Fu Bingzhong, Jinhua, Zhejiang, China. Leaves dark green, 5.5 cm long x 2 cm wide, conspicuous midrib, apices concave. Flowers red, anemone form with 8-10 oblong outer petals and a compact hemispherical cushion of folded, erect petaloids.

Dujuancha. *Chinese Camellia Culture,* 2003, p.216. Synonym for **Zhizhucha.**

Duk of Lancaster. Franchetti, 1855, *Collezione di Camelie,* p.27. Orthographic error for 'Duke of Lancaster'.

Duke de Britagne. Lindo Nursery Catalogue, 1948, p.4. Orthographic error for **Duc de Bretagne.**

Duke de Orleans. Kiyono Nursery Catalogue, 1933, p.8. Invalid synonym for **Marguerite Gouillon.**

Duke of Britain. Puddle & Hanger. 1961, RHS., *The Rhododendron and Camellia Yearbook*, No.15, p.113. Synonym for **Duc de Bretagne.**

Duke of Brittany. Fendig, 1953, *American Camellia Catalogue.* Orthographic variant for **Duc de Bretagne.**

Duke of Buccleugh. Scott, J. & Son Nursery Catalogue, 1868. Orthographic error for **Duchess of Buccleugh.**

Duke of Burgundy. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Deep pink fading to white around the petal margin. Large semi-double. Compact growth. Mid-season blooming. Originated at Magnolia Gardens, St John's Island, South Carolina, USA.

Duke of Caraman. Piantaio Comunale Romano, 1859. Orthographic variant for **Duca di Caraman.**

Duke of Devonshire. Jones 1958, *Planting Fields.* Orthographic variant for **Duc de Devonshire**. Invalidly used as a synonym for **C.M. Hovey** in USA.

Duke of Lancaster. *(C.japonica),* Charles van Geert Catalogue, 1846, p.66. No description. Franchetti, 1855, *Collezione di Camelie,* p.27 as 'Duk of Lancaster': Imbricated; pink streaked with white. *Journal of Horticulture,* 1871, vol.1, p.197: Deep rose, large. Osborne & Son Nursery Catalogue, 1880, p.46: Fine, clear rose; large and handsome. Originated in England by Halley. Orthographic errors: 'Duk of Lancaster', 'Duke of Laucaster', 'Duke of Lankaster'.

Duke of Lankaster. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.105. Orthographic error for **Duke of Lancaster.**

Duke of Laucarter. Mariotti Catalogue, 1924. Orthographic error for **Duke of Lancaster.**

Duke of Northumberland. *(C.japonica),* Scott, J. & Son Nursery Catalogue, 1868. Orthographic variant, 'Duc de Northumberland'. No description. (Believed extinct).

Duke of Wellington. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Red, large semi-double with loose petals mixed with stamens. A seedling originated by Magnolia Gardens, St John's Island, South Carolina, USA.

Duke of Windsor. Rubel, 1940-1941, "Floral Gems from China" Catalogue, No.79, p.25. Synonym for **Mathotiana Rosea.**

Duke of Worcester. *(C.japonica),* Greenbrier Farms Catalogue, 1945; Fruitland Nursery Catalogue, 1945-1946, p.27. No description. Orthographic variant: 'Duke of Worchester'. Originated in USA.

Duke of Worchester. Hume, 1946, *Camellias in America,* p.330. Orthographic variant for **Duke of Worcester.**

Duke of York. Beverfield Nursery Catalogue, 1902. Synonym for **Otahuhu Beauty.**

Dulante Xiansheng. *American Camellia Yearbook,* 1993, p.42. Chinese synonym for New Zealand *C.reticulata* hybrid **Tom Durrant.**

Dulcata. Berlèse, 1845, *Monographie,* ed.3, p.242. Orthographic error for **Sulcata,** (synonym 'Bell' Irene').

Dulcie. Caledonia Nursery Catalogue, 1874, p.5. Orthographic error for **Dulcis.**

Dulcis. *(C.japonica),* Jacob Mackoy Catalogue, 1836, p.16. No description. Berlèse, 1840, *Monographie,* ed.2, p.186, 234 :Leaves oblong, shell-like, strongly veined; buds large scales blackish; flowers to 9.5 cm across, full, of deep orange-red, corolla fully grown with a convex rosette, like **Colvilii;** petals of the circumference, broad, few in number, round, spoon shaped; the others are numerous, thick-set, unequal, creped, erect and forming a flattened bowl; in the

centre there is a glimpse of 2 or 3 small petals marked with a longitudinal band of white. Originated in England. Orthographic error: 'Dulcie'.

Dulcis Maddalane. *(C.japonica),* van Houtte Catalogue, 1875-1876, 163: 304. No description. Originated in Italy. (Believed extinct.)

Dulcis Major. van Houtte Catalogue, 1841, 7:21. Synonym for 'Palmer's Superba' according to Berlèse.1843. However the prior name for this camellia is **Vandesiana Carnea.**

Dulmeri. *(C.japonica),* Jacquin, Paris Nursery Catalogue, 1845, p.13. No description. Originated in France. (Believed extinct.)

Duma. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.415; Chinese synonym for the USA *C.reticulata* hybrid **Howard Dumas**.

Dumlaps Imbricata. Volonte Catalogue, 1888, p.112. Orthographic error for **Dunlap's Americana.**

Dumlompi Americana. Maupoil Catalogue, 1853. Orthographic error for **Dunlap's Americana.**

Dumosa. *(C.japonica),* Franco Agostoni, 1844, *Catalogo Plantarum...* No description. Originated in Italy. (Believed extinct.)

Dumouitier. de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias,* p.119. Orthographic error for **Monsieur Dumoustier.**

Duriensis. *(C.japonica), Jardim Portuense,* 1844, No.7, p.106; Dark scarlet flower, regular, and very similar to ‘Myrtifolia Lusitana’. Originated in Portugal.

Durini. *(C.japonica),* Linden Catalogue, 1871-1872, p.16. No description. Originated in Italy. (Believed extinct.)

Durrant’s Dilemma. *(C.japonica), New Zealand Camellia Bulletin,* 1969, vol.IV, No.2, p.9, Reg. No.42: Chance seeding of **Ville de Nantes** raised by Mrs T Durrant, Rotorua, New Zealand, that first flowered, 1964. Plant habit and foliage similar to the seed parent. The leaves are bright green, lanceolate, with broad, shallow serrations. The flower has a distinct, spiral form of 7 radial arms, each with 12-13 petals. Colour is red with a central stripe on some petals. Occasional tiered formation on some flowers. The flowers are 8-10 cm across and become hemispherical. Illustration p.10.

Dusheng. (Superb Metropolis), *(C.japonica),* Chen, Jingyi, 1253, *Quan Fang Bei Zu:* Flowers deep red. Originated in China. (Believed extinct).

Dusty. *(C.japonica), American Camellia Yearbook,* 1986, p.89, Reg. No.2010: A large, dusty rose-pink, formal double, *C.japonica* chance seedling; mid-season to late flowering. Originated by Elmer and Berenice Achterberg, Citrus Heights, California, USA. The 7 year old seedling first flowered 1984. Average flower size, 12.5 cm acoss x 6 cm deep with 80-85 petals. Plant growth is erect and rapid with dark green leaves, 10.5 cm long x 5.5 cm wide.

Dusty Variegated. *(C.japonica),* ACS, February 1996, *The Camellia Journal,* vol.51, No.1, p.29. Valdosta Camellia Scions as 'Dusty V.'. A white blotched, dusty rose-pink, virus variegated form of **Dusty.** Originated in USA. Chinese synonym 'Ban Shajin'.

Dutchess d'Gaze. Rubel, 1940-1941, *Floral Gems from China,* Catalogue No.79, p.24. Orthographic error for **Duchesse Decazes.**

Dutchess of Orleans. Buist, 1839, *Camellias,* p.6. Orthographic error for **Duchesse d'Orleans.**

Dute. (Unique). Chinese synonym for the USA *C.japonica* **One Alone.**

Dutisepala. Hilsman, 1956, SCCS., *The Camellia Review,* vol.17, No.8, p.33. Orthographic error for *C.acutisepala.*

Dux Amori Canus. *(C.japonica),* Veitch, James Jr, 1853, Catalogue of Select Stove Plants..., p.13. Originated in Italy. No description. Orthographic variant 'Dux Amoricanus'. (Believed extinct).

Dux Armoricanus. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.10. No description.

Dux Genove. Isola Madre Catalogue, 1845. Synonym for **Duca di Genova.**

Dux Litta. Charles Van Geert Catalogue, 1846, p.66. Synonym for **Duca di Litta.**

Duxin Dali Cha. (Single Heart Dali Camellia), *(C.reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.22: Scarlet. Mid-season. Kunming. Feng et al. 1986, *Yunnan Camellias of China,* p.99 as 'Duxindalicha': Leaves large, thick, broad-elliptic to elliptic-ovate, apices acute or acuminate, bases round or broad-cuneate, flat or slightly raised, margins undulate, 7.6-10 cm long x 5-6 cm wide. Flowers large, dark red (RHS,CC.53B), diameter 12-18 cm. Petals about 30 in 4-5 whorls, outer whorls flat, inner whorls folded. Stamens numerous, united to form a tube. Pistils mostly well developed; a few rudimentary, fertile. This cultivar was selected from a bud mutation of **Dali Cha** from which it differs by its flattened petals and by the stamens united to form a tube and placed in the centre of the flower. Different readings: 'Tu-hsin Ta-li Ch'a', 'Duxindalicha'.

Duxindalicha. Feng et al., 1981, *Yunnan Chahua,* p.99. Different reading for **Duxin Dali Cha.**

Duxin Diechi. (Single Heart Butterfly), *(C.reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.16: Spinel pink. Mid-season, Kunming. Feng et al.1986, *Yunnan Camellias of China,* p.63: Leaves long, ovate to oblong, thin, apices acuminate and recurved, bases cuneate, reclinate in a V-shape, 6-9 cm long x 2.5-4 cm wide. Flowers spinel pink (RHS.CC.68C), diameter 13-15 cm. Petals 17-19 in 2-3 whorls, folded, erect. Stamens numerous, united to form a tube. This is a new cultivar selected from seedlings of open pollinated seeds by researchers at the Kunming Botanical Garden. This cultivar has pink spinel flowers and folded, erect petals that look like butterflies. Different Reading: 'Tu-hsin Tieh-ch'ih'. Western synonym: 'Single Heart Butterfly'. Synomym: 'Single Heart Butterfly Wings'.

Duxin Guiye. (Single Heart Osmanthus Leaf), *(C.reticulata),* Chuang, 1959, *Yunnan Shanchahua.* No description. Different reading 'Tu-hsin Kuei-yeh', 'Tuhsinkueiyeh'. Originated in China.

Duxin Yinhong. (Single Heart Spinel Pink), *(C.reticulata),* Feng et al.1986, *Yunnan Camellias of China,* p.37 as 'Duxinyinhong': Leaves elliptic, apices acuminate, bases cuneate, 7-8 cm long x 2.5-3 cm wide. Flowers are light spinel pink (RHS.CC.62D), diameter 7.5-8 cm, single. Petals 5-7. Stamens numerous, united at the base to form a ring. Stigmas irregularly lobed. Fertile. This is a new cultivar selected from seedlings of open pollinated seeds by researchers of the Kunming Botanic Gardens. Flowers early. Different reading: 'Tuhsingyinhung', 'Tu-hsin Yin-hung'.

Dwarf Pink. *(C.sasanqua),* Tom Dodd Nurseries Catalogue, 1968-1969, p.6. No description. Originated in USA. No valid listing located.

Dwarf Pomegranate. Bartholomew, 1982, *American Camellia Yearbook,* p.152. Synonym for **Hailiu Cha.**

Dwarf Rose. Yü, 1950, RHS, *Rhododendron and Camellia Conference Report.* Synonym for **Hentiangao.**

Dwarf Rose. *(C.sasanqua), American Camellia Yearbook,* 1959, p.271, Reg. No.354: A 6 year old chance seedling, originated by J.M. Jones, Savannah, Georgia, USA that first flowered 1954. Leaves 4 cm x 2.5 cm. The flowers, 7.5 cm across and 5 cm deep, resemble **Rose Dawn** in form and **Berenice Boddy** in colour. There are 21 petals and 4 petaloids. The light pink flowers, shading to dark at the centre, open to display yellow stamens. Flowers early.

Dwarf Shishi. *(C.sasanqua),* Nuccio's Nurseries Catalogue, 1988-1989, p.16: Originated by Toichi Domoto Nursery, California, USA. Very compact, low growing, small leaved seedling of **Shishigashira.** Small size, bright red semi-double. An outstanding dwarf sasanqua.

Dwarf Shishi White. *(C.sasanqua).* ACS, *The Camellia Journal,* Nov. 1997, p.7, Reg. No.2442. A miniature, white, semi-double sport of **Dwarf Shishi,** discovered and verified by Dr William L. Ackerman, Ashton, Md, USA. Flowers early. *American Camellia Yearbook,* 1997, p.2, colour photo before p.1. First observed in 1986, and has flowered true on several plants for 5 years. Average flower size is 3.8 cm across x 1.2 cm deep, with 10 petals, 2 petaloids, pale yellow anthers and creamy white filaments. Plant growth is spreading, dense and slow, with dark green leaves 5.7 cm long x 1.8 cm wide.

Dwarf White Shishi. *Camellias,* Y.C. Shen, 2009, p.315 with colour photo; Orthographic error for **Dwarf Shishi White.**

Dwight Eisenhower. Nantes, *Services des Espaces, Collections,* 1980. Abbreviation for **General Dwight Eisenhower.**

Dyanthiflora. Burdin Catalogue, 1835, p.38. Orthographic error for **Dianthiflora.**

Dyka-Gura. Chandra Nursery Catalogue, 1928, p.4. Corruption of the Japanese name **Daikagura.**

Dynasty. *(C.reticulata.* hybr.*),* ACS., 1985, *The Camellia Journal,* vol.40, No.4, p.47, Reg. No.1978: A very large, irridescent deep pink, peony form *C.reticulata* hybrid, chance seedling of **Buddha,** midseason blooming; originated by Houghton S. Hall, San Anselmo, California, USA. The 6 year old seedling first bloomed 1980. Average flower size 15 cm across x 10 cm deep with 30 petals, golden anthers and yellowish white filaments. Plant gowth is upright and rapid with light green leaves, 12 cm x 5.5 cm.

E.

E. *(C.japonica),* Carter, 1953, *American Camellia Yearbook,* p.73. A seedling of **Strawberry Blonde** with a formal double flower, up to 10cm across. Colour the same as the parent. Originated in the USA by E.H. Carter, Monterey Park, California.

E.A. McIlhenny. McIlhenny Catalogue, 1946-1947, p.4. Synonym for **Kishû-tsukasa.** Also erroneously used as a synonym for **Shuchûka.**

E.B. Davis. *(C.japonica),* Good, 1955, *American Camellia Yearbook,* p.278. No description. Originated in USA.

E.B. Smith. *(C.japonica),* Shackleford, 1971, ACS., *The Camellia Journal,* vol.26, No.4. No description. Originated in USA. No valid listing located.

E.G. Waterhouse. *(C.x williamsii),* Hazlewood, 1955, *American Camellia Yearbook,* p.70: One of his seedlings is a formal double pink that shows more of the characteristics of its *C.japonica* parent but has *C.saluenensis* foliage. This plant has been named for himself **E.G. Waterhouse.** ACRS., 1957, *Camellia Annual,* No.4, p.7, Reg No.22: A *C.x williamsii* hybrid raised by E.G. Waterhouse in 1946. Flower formal double with many rows of petals, beautifully imbricated. Colour Fuchsine pink, RHS.621/2. Foliage malt green and closer to japonica than saluenensis. Mid-season to late flowering. This cultivar won the "Edward H. Metcalf Award" for 1962 and the "National Camellia Hall of Fame Award" in 1978. See colour plates p.50, Macoboy, 1981, *The Colour Dictionary of Camellias* and on front cover ACRS, 1976, *Camellia News,* No.62. Orthographic error: 'W.G. Waterhouse'. A variegated form is named **E.G. Waterhouse Variegated.** Chinese synonym: 'Wotehaosi'.

E.G. Waterhouse Variegated. *(C.x williamsii),* ACRS, 1957, *Camellia Annual,* vol.4, p.7, Reg. No.23: Colour white, occasionally marked Fuchsine pink. Originated on a grafted plant due to virus infection. Originated in Australia. See colour plate rear cover, ACRS., 1965, *Camellia News,* No.20. Note; This colour description is now regarded as incorrect. Flowers typically show more Fuchine pink than white.

E.G. Weller. *(C.japonica),* ACRS., 1983, *Camellia News,* No.87, p.22, Reg. No.295: Originated by Ezekiel George Weller, Rainworth, Brisbane, Queensland, Australia, a chance seedling of *C.japonica* **Aspasia Macarthur;** first flowered 1963. Peony to formal double, miniature to small flowers, 4-8 cm across. Flowers white, with a lemon tint in the centre. Blooms mid-season. Plant upright and dense with dark green leaves, lanceolate,7 cm long x 4 cm wide.

E.H. Folk. Fruitland Nursery Catalogue, 1951-1952, p.29. Abbreviation for 'Edwin H. Folk', synonym for **Captain Folk.**

E.H. Rust. SCCS., 1942, *Classification of Camellias,* p.1. Synonym for **Utsusemi.**

E. Herrin. Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, p.4. Abbreviation for **Elizabeth Herrin.** See ICS Register, p.552.

E.L. Steele. *(C.japonica),* Glen St. Mary Nursery Catalogue, 1949, p.27: White, medium large, peony form. Fendig, 1953, *American Camellia Catalogue* with colour plate: Medium to large, white, irregular double (peony form), 10 cm across. There are 8-10 rows of rounded and scalloped guard petals. Petals recurve as flower opens. The centre is a small mass of irregular petals mixed with a few stamens. Filaments white, anthers golden. Leaves dull green, 8.5 cm x 2 cm, with shallow serrations. Originated at the Glen St. Mary Nursery, Florida, USA from seed of unknown parents.

E. Lloyd Ansell. *(C.x williamsii),* ACRS., 1980, *Camellia News,* No.75, p.24, Reg. No.226: Originated by E.L. Ansell, Mt. Evelyn, Victoria, Australia. A chance seedling from a *C.saluenensis* that

first bloomed 1969. Vigorous, upright habit of growth with dark green leaves, 7.5 cm x 3.7 cm. Lanceolate, acute apex, tapering base with fine serrations. Flowers, 10 cm across, light pink, informal double. Blooms early to mid-season.

E.M. Myer. Hillcrest Nursery Catalogue, 1958. Orthographic error for **Em Hyer.**

E.T.R. Carlyon. *(C.x williamsii),* RHS, 1972, *Rhododendron and Camellia Yearbook.* Tregrehan Camellia Nurseries Catalogue, 1973, p.1: Semi-double to double, medium size, candid white, very late flowering. Vigorous, upright new gowth. Lamb, 1987, *International Camellia Journal,* No.19, p.53: Two white camellias surprised their raiser... **E.T.R. Carlyon** (**J.C. Williams** x **Adolphe Audusson**), called after Gillian Carlyon's father, a wonderful, begonia-like semi-double which blooms late in the season. Originated by Gillian Carlyon, Tregrehan, Par, Cornwall, UK. Orthographic error 'E.T.R. Carylon'. Synonym: 'Rupert Carlyon'.

E.T.R. Carylon. Costins Nursery Catalogue, Ireland, 1986. Orthographic error for **E.T.R. Carlyon.**

Eago. Donnan, 1981, *American Camellia Yearbook,* p.84. Orthographic error for **Egao.**

Ealon Magee. *(C.reticulata* hybrid), *American Camellia Yearbook,* 1983, p.158, Reg. No.1873: A very large, red, semi-double *C.reticulata* hybrid *(C.reticulata* 'Crimson Robe' (**Dataohong**) x [5X = *(C.reticulata* 'Cornelian' (**Damanao**) x *C.japonica* **Mrs D.W. Davis**) x *C.reticulata* 'Cornelian']). Mid-season to late flowering. Originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first bloomed 1975. Average flower size 13.5 cm wide by 10 cm deep. Plant growth, upright and medium with dark green leaves, l0 cm x 6 cm.

Earl Edison. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.3. No description. Originated in USA. No valid listing located.

Earl Kline. *(C.japonica), American Camellia Yearbook,* 1960, p.195, 196, Reg. No.443: A 9 year old chance seedling; originated by Shady Acres Nursery, Charleston, South Carolina, USA, that first bloomed 1957. Plant growth is upright, open and rapid with dark green leaves, 11 cm x 2 cm. The semi-double, strong red flowers, 13.5 cm across x 6 cm deep, have 15-17 petals of velvety texture and yellow stamens. Blooms mid-season.

Earl of Belmore. *(C.japonica),* Taylor & Sangster Nursery Catalogue, 1887: Soft pink, medium size, anemone to peony form sport of Thomponsii. Originated in Australia.

Earl Smith. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997. p.16, Reg. No.2422. A large, red semi-double chance seedling. Flowers mid-season. Originated by LaRose Smith, Beaufort, S.C., USA. *American Camellia Yearbook,* 1997, p.3, colour photo before p.1. The 7-8 year old seedling first flowered in 1994. Average flower size is 12.7 cm across x 5.7 cm deep, with 9 petals and 6 petaloids. Plant growth is upright, open and average, with dark green leaves 12.7 cm long x 5.7 cm wide.

Early Autumn. *(C.japonica),* ACS, *The Camellia Journal,* Nov. 2001, p.21, colour photo p.20, Reg. No.2555. A formal double chance seedling, with lavender-rose flowers having centre petals edged a deep lavender. Plant growth is upright and vigorous. Flowers early to mid-season. Originated by Clarence Gordy, Ocala, Fla., USA. *American Camellia Yearbook,* 2001, p.94, colour photo p.c13. The 9 year old seedling first flowered in 1995. Long lasting flowers have 78 petals and are 9 cm across x 3.8 cm deep. Dark green leaves are 7.5 cm long x 3.8 cm wide.

Early Bird. *(C.japonica), American Camellia Yearbook,* 1962, p.217, Reg. No.648: A 17 year old chance seedling that first flowered 1951. Originated by Wheelers Nursery, Macon, Geogia, USA. The semi-double flowers are 11 cm across and 3 cm deep and medium pink - similar in formation, colour and size to **Christine Lee.** The flower has 16 petals and blooms early. Sport: **Early Bird Variegated.**

Early Bird Variegated. *(C.japonica),* SCCS, 1968, *Camellia Nomenclature*, p.49: A virus variegated form of **Early Bird** - Medium pink blotched white. Originated in USA.

Early Campbell. *(C.japonica),* Portland Camellia Nursery Catalogue, 1945-1946. No description. Originated in USA.

Early Crimson. Yü, 1950, RHS., *Camellia and Magnolia Conference Report Index* p.130. Western synonym for Zaotaohong.

Early Dawn. *(C.japonica), American Camellia Yearbook,* 1965, p.231, Reg. No.747: A 7 year old chance seedling that first bloomed 1960. Originated by Grady Sheffield, Silsba, Texas, USA. Plant growth is upright and rapid with dark green leaves, 8.5 cm long x 3.5 cm wide. The formal double flowers, 7.5 cm across x 4 cm deep, are dark pink to light purple with 50 petals. Blooms early.

Early Double White. Nobelius Nursery Catalogue, 1939, p.35. Synonym for **Fuji-no-mine.**

Early Girly. *(C.reticulata).* ACS, Sept. 1995, *The Camellia Journal,* vol.50, No.4, p.28, Reg. No.2359: Very large size red, with some pinkish petals and hints of orange, rose form double *C.reticulata* (**Nuccio's Ruby** x **Emma Gaeta**). Blooms early to late. Originated in USA by Thomas Lee, Carmichael, California. ACS 1995, *American Camellia Yearbook,* p.5 with colour photo: The 8 year old seedling first flowered in 1990. Average flower size is 15 cm across x 7 cm deep with 30+ petals, bright yellow anthers and white filaments with high rabbit ears. Plant growth is upright and spreading with dark green leaves 12.5 cm long x 6 cm wide.

Early Kagra. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.65. Synonym for **Kagiri.**

Early Peach Bloom. Peer, 1949, SCCS., *The Camellia Bulletin,* vol.11, No.2, p.11. Synonym for **Zaotaohong.**

Early Peach Red. Waterhouse.1970, ACRS., *Camellia News,* No.4, p.8. Synonym for **Zaotaohong.**

Early Goldheart. Savige, 1983, *International Camellia Journal.* Synonym for **Zaohua Jinxin.**

Early Pearly. *(C.sasanqua), American Camellia Yearbook,* 1972, p.129, Reg. No.1187: A 5 year old chance seedling of *C.sasanqua* that first bloomed 1969; originated by Dr Mervin B. Wine, Thomasville, Georgia, USA. Plant growth is upright, open and medium in rate with dark green leaves, 2.5 cm long x 1.2 cm wide. A white, rose form double with outer rows of blush petals, about 4 cm across and 1.2 cm deep. Blooms early.

Early Peony. Durrant, 1969, *New Zealand Camellia Bulletin,* 1969, vol.V, No.4, p.25. Western synonym for **Zaomudan.**

Early Pink Delight. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.65. Synonym for **Pink Delight.**

Early Prince. ACRS., 1960, *Camellia Annual.* Synonym for **Prince Frederick William.** A name given to an early flowering form.

Early Scarlet Ball. Savige, 1983, *International Camellia Journal.* Synonym for **Zaochun Dahongqui.**

Early Spring. Yang, 1965, *Camellia Varieties of Taiwan.* Synonym for **Zaochun.**

Early Spring Scarlet. Savige, 1986, *International Camellia Journal,* No.18, p.113. Synonym for **Zaochun Dahong.**

Early Striped Ball. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.65: Pink with white stripes, informal double.

Early Sunshine. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Dajinsui.**

Early White. *(C.japonica),* Charlton, J. Nursery Catalogue, 1957: An early white single. Originated in England.

Early White Ball. Hazlewood & Jesep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.65. Synonym for **White Ball.**

Early Woodville Red. *(C.japonica), American Camellia Yearbook,* 1971, p.46, Reg. No.1163: A sport of **Woodville Red** that was first observed 1962. It was propagated by W.F. Wilson, Hammond, Louisiana, USA. Plant growth is upright and slow. The peony form flower is strawberry red and starts blooming very early, otherwise identical to parent.

Earlybright. (*C.chekiangoleosa* hybrid), Camellia Haven Catalogue, 1999, p.12. Selected seedling of *C.chekiangoleosa*, pollen parent unknown. Large, bright orange-red single. Flowers early to late. Strong, tree like growth.

Earnest Wood. Mark S. Cannon Scion Catalogue, 1963-1964, p.5. Orthographic error for 'Ernest Wood'.

East City. *(C.sasanqua),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.252; White, single. Originated in USA.

Easter Mom. Thermal Nurseries (Rotorua) Ltd Catalogue, 1986, p.5. Orthographic error for **Easter Morn.**

Easter Morn. *(C.japonica), American Camellia Yearbook,* 1966, p.87, Reg. No.896: A semi-double flower, similar to 'Tomorrow' in form. Its colour is baby pink with yellow stamens. Its size is 12.8 cm across and 7.5 cm deep and has 45-50 petals. Heavy texture. Blooms mid-season to late. Plant growth is upright and average with dark green leaves, 11 cm long x 6 cm wide. A chance seedling that first bloomed 1964 at 4 year of age. Originated by Dr Carleton C. Wright, Sacramento, California, USA. Won the "Margarete Hertrich Award" for 1971. See colour plates, p.82, Macoboy, 1981, *The Colour Dictionary of Camellias* and pl.74, p.35, *Encyclopedia of Camellias in Colour,* vol.II, 1978; *New Zealand Camellia Bulletin,* 1988, vol.XV, No.7, p.18 as 'Eastern Morn'. Orthographic errors 'Easter Mom', 'Eastern Morn'. Chinese synonym: 'Fuhuojie Zhichen'.

Easter Parade. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Glowing pink, medium large single, blooms along the stem. Vigorous, open growth. Late flowering. This camellia was listed and described by SCCS, in 1954, 1956 and 1958 but was dropped in 1960 *Camellia Nomenclature* and then the name was invalidly restored for a pink formal double in 1966. See **Easter Parade (Shackelford).**

Easter Parade (Shackelford). *(C.japonica),* SCCS., 1966, *Camellia Nomenclature,* p.47, invalidly as 'Easter Parade': Blush pink, medium size, formal double. Originated in USA by Shackelford.

Easter Sunday. *(C.japonica),* Hillcrest Nursery Catalogue, 1958.No description. Originated in USA.

Easterlily. *(C.japonica),* Fruitland Nursery Catalogue, 1950-1951, p.24. No description. Originated in USA.

Eastern Brocade. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.172. Synonym for **Azumanishiki.**

Eastern Light. Savige, 1986, *International Camellia Journal,* No.18, p.108. Synonym for **Dongfangliang.**

Eastern Morn. *New Zealand Camellia Bulletin,* 1988, vol.XV, No.7, p.18. Orthographic error for **Easter Morn.**

Eastern Peony. *Camellias,* Y.C. Shen, 2009, p.311 with colour photo; Synonym for **Azumabotan.**

Eastern Sun. *(C.japonica),* Gerbings Azalea Gardens Catalogue, 1940-1941: A full formed, peony type to rose form camellia with a 10 cm flower, having the outer rows of petals pure white and the inner portion made up of lemon tinted anthers and petaloids and yellow stamens. The deep green foliage is slightly twisted. Growth is slow and bushy. Mid-season flowering. See black and white illustrations p.113, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I.

Eastertide. *(C.japonica),* SCCS Bulletin, vol.11, No.2, p.17, Dec.1949. SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.34: Large white, formal double. Medium, compact, upright growth. Late flowering. Originated in USA by Jenkins. See black and white photo, p.105, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II.

Eastii. *(C.japonica),* van Houtte Catalogue, 1849-1850. No description. (Believed extinct.)

Eawase. Synonym for the *C.sasanqua,* **Myôjô.**

Easy Virtue. *(C . reticulata x C .granthamiana),* ACS., May, 1989, *The Camellia Journal,* vol.44, No.2, p.9, Reg. No.2134: Very large size, bright red with dark red veining, single. *(C.reticulata,* 'Crimson Robe' (**Dataohong**) x *C.granthamiana)* x **Mouchang.** Blooms early to mid-season. Originated by Walter F. Homeyer, Macon, Georgia, USA. *American Camellia Yearbook,* 1989, p.121, colour photo [p.132]: The 14 year old plant first bloomed 1977. Average flower size, 17 cm across x 5.5 cm deep with 6-7 petals. Plant growth is upright, spreading and rapid in rate. Random growth of very large leaves (16 cm x 7.5 cm) interspersed with small, vegetatively notched leaves 12.5 cm x 6cm.

E'awase. Minagawa, 1885. Synonym for *C.sasanqua* **Myôjô.**

Ebe. *(C.japonica),* Fratelli Rovelli Catalogue, 1852, p.16: Anemone form, red. Originated in Italy by Dr. Sacco, Milan.

Ebé. *(C.japonica),* Isola Madre Catalogue, 1845: Large flower, perfectly imbricated, sometimes a small group of petals are disposed in a spiral, of a beautiful milk white, often with small streaks of bright rose-pink. Originated by Delgrande, Rome, Italy.

Ebicha-shikibu. (Reddish Shikibu), *(C.japonica),* Yokoyama & Kirino,1989, *Nihon no Chinka,* p.228, colour photo and description: Small size, lobster red, campanulate single of 5 rounded petals and a tall, central stamen cluster, with white anthers, joined for the lower third, and yellow anthers. Blooms mid-season to late. Leaves elliptic, green, margins serrate. Originated in the Nagasaki Prefecture, Japan. "Ebicha-shikibu" was the nickname for a female student in the Meiji Era, inJapan.

Eboshi. (Black Cap used by Nobility), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinchû,* p.24, colour photo, p.203 description.: Large, flat, saucer shaped single of slightly flushed white, with large, vivid stripes of scarlet and a large, central stamen column with golden anthers and yellow filaments, joined for the lower third. Early blooming. Leaves dark green, keeled, lanceolate with long tapered apex and medium-fine serration. Originated in the Chûbu area, Japan.

Eboshiya. (Hat Shop), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.694: A very dark, crimson single of 6-7 petals and a centre of crimson petaloids mixed with golden stamens. Anemone form. Originated in Japan. The name refers to a hat shop as the flower is full of cap-shaped petaloids. (Believed extinct.) The first character is different to the next cultivar.

Eboshiya. (Hat Shop), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.25; Shirai, Mitsutaro,1926, *Tsubaki kai.* The first character of the name is different to the cultivar above but the meaning is the same. A dark red single with irregular petals and a centre of small petaloids and stamens. Originated in Japan.

Ebur. Herbert, 1837, *Amaryllidaceae & Supplement,* p.367. Synonym for **Eb'urnea.**

Eb'urnea. *(C.japonica),* Herbert, 1837, *Amaryllidaceae & Supplement,* p.367: Very vigorous, pure white; somewhat waratah shaped. Originated by Rev. William Herbert, London, England. Synonym: 'Ebur'.

Eburnea. *(C.japonica), Australian Botanical and Horticultural Society Report,* 1849. A seedling raised by Macarthur, Camden Park, NSW, Australia. No description. Orthographic error: 'Eburnia'. (Believed extinct.)

Eburnia. Scott, J. & Son Nursery Catalogue, 1868. Orthographic error for **Eburnea.**

Ecclefield. *(C.japonica), American Camellia Yearbook,* 1959, p.271, Reg. No.429: An 8 year old seedling of **Joshua E. Youtz;** originated by Mrs Lillian Huthert, Castro Valley, California, USA. Plant growth, upright, dense and rapid with mid-green leaves, averaging 12.8 cm long x 7.5 cm wide. The white, anemone form flowers have 24-28 petals and average 13 cm across. Flowers midseason. Chinese synonym 'Jiaolang'.

Echigo. (Ancient Name for Niigata), *(C.sasanqua),* Itô Ihei, 1695, *Kadan Chikinshô,* vol.II; Yashiro, 1841, *Kokon Yôrankô,* vol.344. Originated in Japan. Large single, pale pink. Resembles a *C.japonica* in shape. Slightly fragrant. (Believed extinct.)

Echigo-asahi. (Echigo Sunrise), (*C.rusticana*), Izu-Ohshima Hawaii Botanic Gardens Catalogue, 1980, p.7 as 'Echigoasahi'. Echigo is an early name for the Niigata Prefecture. No description. Originated in Japan.

Echigo-haku. Synonym for **Shiro-echigo.**

Echigojishi. (Echigo Lion), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.23, colour photo, p.203, description: Medium to large size, deep red, peony form camellia with notched outer petals and ruffled and irregular inner petals. Mid-season blooming. Petioles hirsute. Originated in Higashi-kanbara-gun, Niigata Prefecture, Japan. "Echigo Lion" refers to "Kakube-jishi", a street tumbling act, performed wearing a lion mask. Collected, named and released by Yaichi Kawamura in 1966.

Echigokasuri. ('Echigo' Striped), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.662: A small, 5 petalled single white with crimson streaking and a tubular stamen cluster with golden anthers and white filaments. Originated in Japan. Spotted camellia from "Echigo", an Edo era name for the Niigata Prefecture. Different reading: 'Echigotobi'iri'. (Believed extinct.)

Echigotobi'iri. Different reading for **Echigokasuri.**

Echizan-tsubaki. Sakuden, 1630, *Hyakuchinshû.* Synonym for **Fuji-no-takane.**

Echizen. (Old Name for Fukui Prefecture), *(C.japonica),* Hino, Sukekatsu, 1637, *Sukekatsukyôki; Chinka Zufu,* (before 1700), Yashiro, 1841, *Kokon Yôrankô;* Watanabe, 1969, pl.174: A small 7 petalled single, opens wide, white with dark crimson stripes and a central stamen cluster. Originated in Japan. (Believed extinct.)

Echizen. (Old name for Fukui Prefecture), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.264; Okumura, ca.1810, *Chinka hin'i:* Small, 7 petalled, single white with mauve pink blush towards the base of the petals, ruffled petal edges. Originated in Japan. (Believed extinct.) Thought to be a synonym for the **Echizen** above.

Echizen. (Old Name for Fukui Prefecture), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.67, colour photo and description: Small size, palest pink, fading to white, campanulate

single of 6 broad, rounded, overlapping petals, and a central stamen cylinder with white filaments, joined for the lower half, and yellow anthers. Blooms from very early to mid-season. Leaves green, broad-elliptic, small, flat, apices acuminate, margins serrate. Originated in Echizen-chô, Fukui Prefecture, Japan. A cultivar raised by a private family in Sakai District. Named by Yoshisumi Hiyama in 1972, released by Tokuji Ôoka.

Echizen-bosetsu. (Echizen's Beloved Snow), (*C.rusticana*), Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.301, colour photo and description: Large size, faint, peach pink, semi-double with 2-3 rows of crinkled and thick petals and a central stamen cluster with 2-3 small, erect petals intermixed. Blooms mid-season. Leaves green, elliptic to broad-elliptic, flat, apices acuminate. Originated in Echizen-chô, Fukui Prefecture, Japan. Raised by a private family in Obama City, named by Taksumi Hiyama in 1972, released by Tokuji Ôoka.

Echizenkasuri. (Spotted Camellia from Echizen), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969: Single, opens wide, small to medium size, cylindrical stamens, white with red stripes. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.152. Originated in Japan. (Believed extinct.)

Eckie Johnson. *(C.japonica),* ACS., Nov.1989, *The Camellia Journal,* vol.44, No.4, p.17, Reg. No.2181: Pink, medium to large size, rose form double. Medium, upright growth. *A* chance seedling of **Mrs Bertha A. Harms.** Blooms early to late. *American Camellia Yearbook,* 1989, p.121: The 16 year old seedling first bloomed 1977. Average flower size 11 cm across x 6 cm deep with 60 petals, white anthers and filaments. Plant growth is upright and medium with dark green leaves, 10 cm x 5cm.

Eclatant. Feray's Fine Flowers Catalogue, 1960. Orthographic error for **Eclatante.**

Eclatante. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* Soft pink. Medium to large semi-double. Compact growth. Flowers mid-season. Originated by R. Willis, Thomasville, Georgia, USA. Orthographic errors: 'Eclatant', 'Eclatants'. Sport: **Eclatante Variegated.**

Eclatante Variegated. *(C.japonica),* Cannon, 1947, *Camellian,* vol.VIII, No.3, p.27 as 'Eclatante Var.'. A virus variegated form of **Eclatante**- Soft pink blotched white. Originated in USA.

Eclatants. Tammia Nursery Catalogue, 1958. Orthographic error for **Eclatante.**

Ecume de Mer. *(C.japonica),* Claude Thoby, 1993, *Camélias,* pp.11, 15, 17, 41 and colour photo p.32: Very small single flower, scented, uniform pink. Blooms early to mid-season. Leaves small, undulated, deep green, with irregular, distorted serrations and white margins. Originated in France.

Ed Alsip. *(C.japonica),* ACS, *The Camellia Journal,* June 2005, p.8, colour photo p.9, Reg. No. 2637. A chance seedling that first flowered 1996. Originated by Ed Alsip, Stuart, Fla, USA. The 8.2 cm diameter, formal double flower is baby pink at the edges, decreasing to blush at the centre. Falls in one piece. Pointed and raised centre petals. Flowers mid-season. *American Camellia Yearbook,* 2005, p.41, colour photo p.C4. Plant is upright with average growth rate. Dark green leaves are 9 cm x 3.2 cm.

Ed Anderson. *(C.japonica),* Gerbing Camellia Nursery Catalogue, 1962; *American Camellia Yearbook,* 1964, facing p.20, colour plate: Six and one half inches (16 cm) seedling originated by Mrs J. Ed. Anderson, Timmonsville, South Carolina, USA. *American Camellia Yearbook,* 1965, p.231, Reg. No.747: A 5 year old chance seedling introduced commercially in 1962. Also known as 'Big Ed'. The peony form flower is 15-16 cm across x 7.5 cm deep. Colour is red with goldem anthers and white filaments. The flower is loose peony with 3 rows of petals which open like **Elegans.** Blooms mid-season.According to SCCS., *Camellia Nomenclature,* this is the same as **Tomorrow,** ACS., Reg. No.146, 1954. There is also a variegated form.

Ed Anderson Variegated. *(C.japonica),* Cannon, 1964-1965, Scion Catalogue, p.5. as 'Ed Anderson Var.'. A virus variegated form of **Ed Anderson** - Red blotched white. Originated in USA.

Ed Atkins. *(C.reticulata* hybrid*), American Camellia Yearbook,* 1983, p.158, Reg. No.1908: A very large, red, semi-double *C.reticulata* hybrid ('Crimson Robe' (**Dataohong**) x **Jean Pursel**), early to mid-season blooming; originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first flowered in 1982. Average size, 15 cm across x 7.5 cm deep. Plant growth is upright and medium in rate with dark green leaves, 11 cm long x 6 cm wide.

Ed Combatalade. *(C.japonica),* Kramer Bros.Nursery Catalogue, 1977; *American Camellia Yearbook,* 1979, p.105, Reg. No.1540: A medium red, formal double, *C.japonica* chance seedling; upright, compact and bushy, flowering mid-season to late. Originated by Kramer Bros Nursery, Upland, California, USA. See colour photos: Front cover, SCCS., 1978, *The Camellia Review,* vol.39, No.5 and inside front cover ACS., 1978, *The Camellia Journal,* vol.33, No.l. Chinese synonym 'Aikang'.

Ed Laurent. *(C.reticulata* hybrid), *American Camellia Yearbook,* 1983, p.158, Reg. No.1874: A very large, deep burgundy red, semi-double, *C.reticulata* hybrid ('Crimson Robe' (**Dataohong**) x **Jean Pursel**), blooming mid-season to late and originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first bloomed 1980. Average flower size, 15 cm across x 4 cm deep with numerous petaloids and yellow anthers. Plant growth is upright and medium in rate with dark green leaves, 10 cm long x 7 cm wide.

Ed Powers. *(C.japonica),* ACS, *The Camellia Journal,* June 2006, p.28, colour photo p.29, Reg. No.2679. A chance seedling that first flowered 2000. Originated by Ed Powers, Wilmington, N.C., USA. The 14 to 15 cm diameter, rose form double flower is deep red variegated with white in a moiré pattern. Yellow anthers and white filaments. Heavy petal texture. Plant is open with average growth, and flowers early to late. *American Camellia Yearbook,* 2006, p.55 with color photo; Dark green leaves are 10 cm x 3.8 cm.

Edamitsu. (Place Name). *(C.japonica), Kurume Camellia,* 1997, English translation, p.6; Deep pink, Miniature, campanulate single, Tubular stamen cluster. Flowers mid-season. Named by K.Inoue, Japan.

Eddie G Wheeler. *(C.japonica),* ACS., Oct.1949, *News Letter,* vol.4, No.4, Reg. No.17; SCCS, 1950, *The Camellia. Its Culture and Nomenclature:* Light to medium pink. Large, 10-12 cm across, semi-double with 15-21 petals. Slow, upright growth. *A* chance seedling that first flowered 1943; originated by Wheeler's Nursery, Macon Georgia, USA. Black and white photo, *American Camellia Yearbook,* 1950, facing p.124; Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.106 and a coloured illustration, Fendig, 1950, *American Camellia Catalogue.* Abbreviation: 'Eddie Wheeler'. There is also a variegated form.

Eddie G. Wheeler Variegated. *(C.japonica), American Camellia Yearbook,* 1950, p.122: **Eddie G. Wheeler** - This camellia was named for my wife. It flowered 1943. In 1950 we had three of our grafts produce half white flowers. From this came the variegated form 'Eddie G. Wheeler Var.'. Originated by Wheeler's Nurseries, Macon, Georgia, USA.

Eddie Wheeler. River View Nursery Catalogue, 1957-1958, p.8.Abbreviation for **Eddie G. Wheeler.**

Eddie Gilley. *(C.japonica), American Camellia Yearbook,* 1974, vol.II, p.232, Reg. No.1325: A three year old chance seedling *C.japonica* that first bloomed 1972; originated by Paul Gilley, Grand Ridge, Florida, USA. The semi-double, **Frizzle White** type, bloom- is dark red with 16-18 petals and 34 petaloids with light red anthers and bright yellow filaments. Average size is 13 cm across x 7.5 cm deep. The bloom has a glossy sheen as in **Lady in Red** and is long lasting with some petals folded. Blooms mid-season. There is also a variegated form.

Eddie Gilley Variegated. *(C.japonica),* Gentry, 1977, ACS., *The Camellia Journal,* vol.32, No.4, p.15 as 'Eddie Gilley Var.': A virus variegated form of **Eddie Gilley** - Dark red, blotched white. Originated in USA.

Eddinger's D. Vanderbilt, 1941, *Camellia Research, II,* p.2. Abbreviation for 'Eddinger's Donckelaeri'; synonym for 'Donckelaeri'. (**Masayoshi**).

Ede. *(C.japonica),* Shepherd & Co. Nursery Catalogue, 1883-1884, p.37. Deep rose. Centre petals striped white. Originated in Australia. (Believed extinct.)

Edelweiss. *(C.japonica),* Tourje, 1955, *American Camellia Yearbook,* p.35, black and white photo p.36: "One of the finest camellias developed in Central California, is the huge, white, semi-peony form seedling, originated by Caesar Breschini, San Jose. It is up to 10 cm deep by 13.5 cm across. Blooms early to late." *American Camellia Yearbook,* Reg. No.271, 1956. Vigorous, semi-pendulous, upright growth. For colour photo see p.82, Macoboy, 1981, *The Colour Dictionary of Camellias.* Received the RHS. "Award of Merit" in 1967.

Eden. *(C.japonica),* Verschaffelt Catalogue, 1862-1863, p.44. No description. (Believed extinct.)

Eden Queen. *(C.reticulata), New Zealand Camellia Bulletin,* 1973, vol.VIII, No,3, p.25, Reg. No.86: This is a chance seedling of *C.reticulata* **Damanao** as 'Cornelian', raised by H.J. Clark, Auckland, New Zealand. The plant has an open, upright habit with light green leaves, 9 cm long x 6.5 cm wide. The flower is semi-double, the colour RHS. Red Group 50A and size up to 15 cm across. For colour photo see p.155, Macoboy, 1981, *The Colour Dictionary of Camellias.* Chinese synonym: 'Aideng Huanghou'.

Eden Roc. *(C.reticulata),* SCCS., 1976, *Camellia Nomenclature,* p.165, erroneously as 'Eden Roe': Light creped pink. Large semi-double with irregular petals and narrow column of stamens. Mid-season flowering. Vigorous, upright growth. Seedling of *C.reticulata* wild form, originated by David Feathers, Lafayette, California, USA.

Eden Roe. SCCS, 1976, *Camellia Nomenclature,* p.165. Orthographic error for **Eden Roc**.

Edenton. Joseph Baumann, 1853, Prix Courant, p.2. Orthographic error for **Edentonii.**

Edentonii. *(C.japonica),* Verschaffelt, 1844 Catalogue No.50, p.19. No description. van Houtte Catalogue, 1849-1850, 38:39. No description. Franchetti, 1855, *Collezione di Camelie,* p.28: Similar to **Miniata**, deep red on the circumference, with the centre a little paler. Imbricated. Orthographic errors: 'Edgertonii', 'Edenton'.Originated in Italy.

Edgertonii. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.66. Orthographic error for **Edentonii.**

Edgewood. *(C.japonica),* Sewell, 1956, *American Camellia Yearbook,* p.52: "The best seedling I have been able to develop has been named **Edgewood.** Its flower closely resembles a solid pink 'Herme' (**Hikarugenji**), even to having some perfume though it grows more like its seed parent **Reverent John G. Drayton."** However, in 1986, Sewell registered an apparently different seedling as Edgewood; *American Camellia Yearbook,* 1968, p.129, Reg. No.1007: An 8 year old chance seedling of **Lady Mary Cromartie** that first bloowed in 1963; originated by John and Stella Sewell, Jacksonville, Florida, USA. The semi-double flower in

12.5 cm across and 6 cm deep with numerous petals. Soft rose-pink, (Near Neyron Rose 623/1) with yellow anthers and nearly white filaments. Blooms mid-season.

Edifice of Seven Treasures. *Camellias*, Y.C. Shen, 2009, p.315 with colour photo; Synonym for **Shichihôden.**

Edit de Nantes. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.17; Pink, semi-double.

Edita. *(C.japonica),* van Houtte Catalogue, 1849-1850, 38:40: Milk white, very well imbricated, high, well doubled. Originated in France.

Edith. *(C.japonica),* Guilfoyle, 1875, *Botanic Papers,* p.26: Rose pink. Large rose form double. Originated in Australia by Guilfoyle. (Believed extinct.)

Edith Alexander. *(C.japonica),* Mealing, 1950, *American Camellia Yearbook,* p.131, black and white illustration p.128: First bloomed 1948 when 7 years old. Size, 8-10 cm across. Form: Simple semidouble with a heavy mass of stamens similar to 'Amabilis', (**Kamohonnami**). Colour, shell pink fading to white. Blooms mid-season. Originated by Dr & Mrs H.G. Mealing, North Carolina, USA of seed of unknown parents.

Edith Churchhill. *(C.japonica),* Gerbing Azalea Gardens Catalogue, 1940, White, medium size, loose peony form. Slow, bushy growth. Flowers mid-season. Originated by G.G. Gerbing, Florida, USA.

Edith Churchwell. An early erroneous name for **Edith Churchhill** corrected in SCCS *Camellia Nomenclature,* 1962, p.37.

Edith Cook Fisher. *(C. japonica),* SCCS., 1965, *Camellia Nomenclature,* p.44: Soft, delicate pink. Large, formal double. Vigorous, compact, upright growth. Mid-season flowering. Originated in USA by Fisher.

Edith Hall. *(C.japonica),* Cannon, 1978, ACS., *The Camellia Journal,* vol.33, No.4. No description. *American Camellia Yearbook,* 1980, p.163, Reg. No.1610: A very large, rose-pink, peony form to rose form double *C.japonica* chance seedling; originated by Mrs Adam Grant, Dotham, Alabama, USA. Flowers early to mid-season. Flower size, 12-13 cm across x 5 cm deep. Plant growth, spreading and rapid with dark green leaves, 6.5 m long x 5 cm wide. There is also a variegated form.

Edith Hall Variegated. *(C.japonica),* Cannon, 1978, ACS., *The Camellia Journal,* vol.33, No.4 as 'Edith Hall Var.'. No description. *American Camellia Yearbook,* 1980, p.163, Reg. No.1611: A white splotched form of **Edith Hall.** Originated by Mrs Adam Grant, Dotham, Alabama, USA.

Edith Linton. *(C.japonica),* Hazlewood Nursery Catalogue, 1941: Raised by Alexander Hunter at Camellia Grove, Ashfield and transplanted to Kewita, Somersby. Named and released by Mr. G.C. Linton, the owner of the time. Semi-double, silvery pink with stamens and central petals intermingled. A sport from **Jean Lyne.** Colour illustrations: Waterhouse, 1952, *Camellia Trail,* pl.XI and text, p.24. Also Macoboy, 1981, *The Colour Dictionary of Camellias,* p.82 and p.21, ACRS, 1977, *Camellia News* No.66. Sport: **Edith Linton Deep Pink**. Synonym: Jean Lyne Pink'.

Edith Linton Deep Pink. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.66: A deep pink sport of **Edith Linton.** Flower and foliage form same as parent. Originated in Australia.

Edith Mazzei. *(C.reticulata* hybrid*), American Camellia Yearbook,* 1982, p.171, Reg. No.1845: A very large, red, semi-double *C.reticulata* hybrid, ('Crimson Robe' (**Dataohong**) x **Jean Pursel**); originated by Frank Pursel, Oakland, California, USA. Blooms mid-season to late. The 8 year old seedling first bloomed 1981. Average flower size, 13 cm across x 7.5 cm deep. Plant

growth is upright, open and medium in rate with dark green, heavily serrate leaves, 12.5 cm x 7.5 cm. Colour photo, front cover, *New Zealand Camellia Bulletin,* 1987, No.2. Chinese synonym 'Maize'.

Edith Nichols. SCCS Bulletin, vol.11, No.2, p.17, Dec. 1949. Williams & Thompson, 1950, *American Camellia Yearbook* p.45-47. Synonym for **Miya.**

Edithae. A camellia species *Camellia edithae* Hance in *Annales Science Nat.,* Paris, ser.4, XV, 221. (1861).

Edmond Goeze. *(C.japonica),* José Marques Loureiro Catalogue No.9, 1872-1873, p.47. No description and Catalogue No.19, 1882, p.47; Rose form. Vivid pink with white stripes. Joaquim Moreira da Silva, ACS, *Yearbook*, 1955; Rose form. Bright rose-pink, white stripes. Orthographic variant; 'Edmond Göeze'. Originated in Portugal.

Edmund B. *(C.japonica), American Camellia Yearbook,* 1959, p.271, Reg. No.410: An 11 year old seedling of 'Donckelaeri', (**Masayoshi**); originated by Caesar Breschini, California, USA that first flowered 1953. Plant growth, upright, sturdy and medium in rate with mid-green leaves of average size. The semi-double flower, similar to Finlandia, is rose-pink with deeper veinings and white filaments, 12-14 cm across and 5-6 cm deep with 15-18 petals and 5-6 petaloids. Flowers mid-season to late.

Edmund Harding. *(C.japonica), American Camellia Yearbook,* 1971, p.46, Reg. No.1160: A 10 year old chance japonica seedling that first flowered 1959; originated by S.L. Marbury, Wilmington, North Carolina, USA. Plant growth is upright, open and medium in rate with light green leaves, 8.5 cm long x 5 cm wide. The semi-double, **Frizzle White** type, bloom is 11-12.5 cm wide x 5 cm deep. Colour is medium pink with yellow anthers. It has 18-20 petals and blooms mid-season. There is also a variegated form.

Edmund Harding Variegated. *(C.japonica), American Camellia Yearbook,* 1971, p.46. A virus variegated form of **Edmund Harding** - Medium pink blotched with white. Originated in USA.

Edna Bass. *(C.japonica), American Camellia Yearbook,* 1992, p.33, Reg. No.2248: Originated by Dr W.F. Homeyer Jr, Macon, Georgia, USA. Very large, deep red, semi-double to peony form. A seedling of **Steve Blount** x **Pirates Gold.** The 14 year old seedling first flowered 1984. Average flower size is 13 cm across x 6 cm deep with 40+ petals, 10-20 petaloids, white anthers and filaments. Plant growth is upright, open and medium in rate with dark green leaves 11 cm long x 5.5 cm wide. Colour photo between pp.40-41. Chinese synonym 'Basi'.

Edna Bass Variegated. *(C.japonica),* Don Ellison, 1997, "Camellias - A Photo Dictionary", p.34. Very large, semi-double to peony form flower, early blooming. A deep red, virus-variegated with white blotches, form of **Edna Bass**.

Edna Butler. *(C.sasanqua),* ACRS., 1966, *Camellia News,* No.24, p.36, Reg. No.74: Originated by Arthur Butler, Castle Hill, N.S.W., Australia. A seedling of unknown parents that first flowered 1962, its soft pink, semi-double flower has silvery overtones and petaloids. The flower is 10-11 cm across, petals are crinkled and curled and the plant forms an open, upright specimen. Flowers early to late. Chinese synonym: 'Aidengna Guanjia'.

Edna Butler Alba. C. Aust, *Camellia News*, No.182, Autumn 2010, p.9; Illegal use of latin, altered to **Edna Butler White.**

Edna Butler White. *(C.sasanqua).* C. Aust, *Camellia News,* No.182, Autumn 2010, p.9 with colour photo as 'Edna Butler Alba'. (Use of latin for cultivars is now barred under the Nomenclature Code.) A white sport of **Edna Butler,** other details as for parent. Originated in Australia.

Edna Campbell. *(C.japonica),* Truett, 1952, *American Camellia Yearbook,* p.24: "Probably the best seedling that Mrs Paul Brock has is **Edna Campbell.** It is a semi-double with stamens and

some petaloids. The colour is a dark, mahogany red. The petals are long and slender, some open flat and others curl back slightly. It has a very large flower and blooms mid-season to late." Reg. No.248, *American Camellia Yearbook,* 1955. There is also a variegated form.

Edna Campbell Variegated. *(C.japonica),* Mark S. Cannon Scion Catalogue 1962, p.3 as 'Edna Campbell Var.'. A virus variegated form of **Edna Campbell** - Mahogany red marbled white. Originated in USA.

Edna Carl. Hazlewood & Jessep, 1872, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.66. Orthographic error for **Edna Cato.**

Edna Cato. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.33: Deep pink. Medium large, formal double. Originated in USA. Orthographic error: 'Edna Carl'. There is also a variegated form.

Edna Cato Variegated. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.3 as 'Edna Cato Var.': A virus variegated form of **Edna Cato** - Deep pink, blotched white. Originated in USA.

Edna Deadwyler. *(C.japonica), American Camellia Yearbook,* 1965, p.231, Reg. No.802: A 5 year old seedling that first bloomed 1962; originated by V.A. Boudoff, Charleston, South Carolina, USA. Plant growth is spreading with dark green leaves, 9.5 cm long x 5 cm wide. The anemone form flower is 11 cm across and 6 cm deep with 16 petals and 11 petaloids. Colour is red on white with red and white stamens. Blooms mid-season to late.

Edna Earl. *(C.japonica), American Camellia Yearbook,* 1949, p.242, black and white photo; SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.34: Light pink. Small single to semi-double. Vigorous, compact growth. Mid-season blooming. A seedling of **Mrs F.L. Gibson,** originated by Mrs A.M. Adams, Quitman, Georgia, USA. Reg. No.24, *American Camellia Yearbook,* 1954.

Edna Hannan. *(C.reticulata), New Zealand Camellia Bulletin,* Mar.1991, vol.XVII, No.1, p.47, Reg. No.277: A chance *C.reticulata* seedling, originated by N.T. Hannan, Te Puke, New Zealand. Plant is upright with dark green leaves, 8.5 cm long x 5 cm wide. Flower is glowing red, semidouble,14 cm across x 5 cm deep with 10 petals and dark cream anthers. RHS.CC.53C colour.

Edna Martin. *(C.japonica), New Zealand Camellia Bulletin,* vol.XIV, No.4, 1985, p.39, Reg. No.230: A 5 year old chance seedling, originated by Mrs J. Bennett, Whakatane, New Zealand; a *C. japonica* plant of average growth habits and density, it has dark green leaves measuring 8 cm x 5 cm. The flowers are anemone form but sometimes tend to peony. They average 10-12 cm across x 5 cm deep with 11 heavy textured petals and many petaloids. Flowers mid-season. The colour is unusual with a red base (RHS,CC. Red Purple Group 60A) overlaid with mauve. As the flower ages the mauve colour predominates.

Edna Parkes. *(C.japonica),* ACRS., 1961, *Camellia Annual,* No.8, p.25, Reg. No.48: Originated by Mrs Edna Parkes, Victoria, Australia. Thought to be a seedling of **The Czar,** pollen parent unknown. The 7 year old plant first flowered 1960. Blooms mid-season to late. Incomplete double flower with petaloids and many stamens interwoven. Colour rose-pink, lightly veined carmine. Flower 10 cm in diameter. Plant habit, upright and vigorous.

Edna Raley. *(C.hybrid), American Camellia Yearbook,* 1962-1963, p.217, Reg. No.653: A 7 year old hybrid seedling of **Robbie** x **Charlotte Bradford** that first bloomed 1958. Originated by V.R. James, Aptos, California, USA. Plant growth is upright and dense with light green leaves, 9.5 cm long x 4 cm wide. The semi-double flowers resemble **Frizzle White** but are a pale, flesh pink with white anthers and filaments. Flowers are 11 cm across x 5 cm deep with 20 petals and 12 petaloids. Blooms early to late season.

Edouard de Perrodit. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.66: Violet-scarlet, medium size, formal double. Originated in France.

Edoardo Philipson. *(C.japonica),* Verschaffelt, 1858, *Nouvelle Iconographie,* Book III, pl.I: Received from Carlo Luzzatti in Mar.1857. It belongs, by the regular imbrication of its petals, to the class of perfections; its blossoms, larger than average, are of a double colouring, a vivid cherry red at the circumference, a beautiful pink at the centre with broad, white stripes. Van Houtte Catalogue, 1858, 72:11: Light pink, striped with white. Imbricated. Then in 1868, 123:52, as 'Edouardo Philipson': Very brilliant red, imbricated, apex of petals spotted pure white, beautifully displayed, free flowering. Originated in Italy by Luzzatti, Florence. Orthographic errors: 'Edouardo Philipson', 'Edourdo Philipson', 'Edouard Philipson', 'Edourdo Philison'.

Edoardo Sala. *(C.japonica),* Luzzatti Catalogue, 1853. No description. Franchetti, 1855, *Collezione di Camelie,* p.28. No description. Originated in Italy. (Believed extinct)

Edo-bachizuri. (Printed Pattern of Plectrum of Cymbals from Edo), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1968, pl.323: Large size, semi-double, white to blush pink with thin vermilion streaks with white base, about 18 petal with a centre of a few small petals mixed with the stamens. Originated in Japan. (Believed extinct.)

Edoboshi. (Edo Star), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Red semi-double with white spots and cylindrical stamen cluster. Different readings: 'Edohoshi', 'Yedoboshi'. Originated in Japan. (Believed extinct.)

Edochirimen. (Edo Crêpe), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.286: Medium size, dark crimson informal double. No stamens showing. Resembles **Hijirimen.** Originated in Japan. (Believed extinct.)

Edohoshi. Different reading for **Edoboshi.**

Edogawa. (Edo River), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* description, p.119, illustration No.109: Bush Camellia. Pink single. Leaves elliptic to lanceolate, dark, shining green, margins crenate-serrate, 8 cm x 3 cm, with glabrous petioles, 8 mm long; petals, 6-7, largest 5.7 cm long x 4.8 cm wide; outerside pink (Neyron Rose 623/1) inner paler, wrinkled. Androeceum 3.7 cm long, filaments pale cream. Very late flowering. Originated in Japan. Collected from the wild by Tuyama. Edogawa is the river which forms the boundary between Tokyo and Chiba Prefectures. Different reading: 'Edokawa'.

Edokahei. ('Kahei' from Edo), *(C.japonica),* Shirai-Bunko,1789, *Shoshiki Hanagatachô:* Large size, formal double, red with large white spots. Originated in Japan. (Believed extinct.) See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.77.

Edokawa. Different reading for **Edogawa.**

Edokanoko. (Edo Fawn), *(C.japonica), Tsubaki Hachiboku Sanbokutsuki Meisai,* (before 1868), see Yokoyama, 1982, JCS., *Tsubaki,* p.110: Rose-pink, medium size, with petals in 3-4 rows, with small white spots on the petals. Very splendid. Originated in Japan. (Believed extinct.)

Edomikuni. (Edo Three Countries), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.221 and 457 as 'Edo-mikuni': Medium size, open peony to rose form double. White ground with a few crimson striped. Originated in Japan. Different reading: 'Edosangoku'. (Believed extinct.)

Edomizuhiki. *(C.japonica),* Watanabe, 1969, *Chinka Zufu (before* 1700), as 'Edo-mizuhiki'. Shirai-Bunko,1789, *Shoshiki Hanagatachô:* Double, white with red spots, stamens intermixed with centre petals. See Kyôto Engei Kurabu, 1964, *Tokushû,* No.5, p.77. (Traditional two coloured string for tying presents). Originated in Japan. (Believed extinct.)

Edomokkô. (Edo Woodworker), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.430: Large, semi-double with 16-18 irregular petals, pale pink fading to white towards flower base. Central cylinder of stamens. Originated in Japan. (Believed extinct.)

Edomomiji. Synonym for Kaempfer, 1712, *Amoenitatum Exoticarum* as 'Jedo Momidji'.

Edo-nishiki. (Edo Brocade), *(C.japonica),* [before 1868], *Nennai Kusabana Nayose:* Deep red stripe on white ground, large double, excellent flower. Note: After this publication, for some reason the name was not published in Japan again until 1972, *Encyclopedia of Camellias in Colour*. The reason for this is that apparently the original tree of **Edo-nishiki** had been secretly maintained in the Shino family garden at Kotake-chô, Nerimaku, Tokyo since before 1868 as the owner had not wished to distribute the cultivar. Wilmot Report, 1943, p.10; *Encyclopedia of Camellias in Colour,* vol.I, 1972, p.146, pl.329, description p.340; Seibundô Shinkôsha, 1979, *Senchinshû,* p.24 colour photo, p.203 description: A white semi-double with 3 layers of fluted white petals with broad stripes of crimson and pink. The centre a small stamen cluster with yellow anthers and white filaments. Leaves mid-green, narrow elliptic, apex long acuminate, sharply serrate, strongly wavy and recurved, venation clear. Late blooming. See also: Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.338. Originated in Kantô area, Japan. Sport: **Fukurin-edo-nishiki.** Western synonym: **Lady Vansittart.**

Edo-nishiki-Katayama. (Katayama's Edo Brocade), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.77: White with a red splashes, semi-double. Originated in Japan by Katayama. It was originally named 'Edo-nishiki' but, later, 'Katayama' was added to prevent confusion with the original **Edo-nishiki**. Synonym: 'Edo-nishiki-Kansai'. Resembles **Ezo-nishiki.**

Edo-nishiki-Kansai. Seibundô Shinkôsha, 1979, *Senchinshû,* p.203. Synonym for **Edo-nishiki-Katayama.**

Edo-no-kagayaki. (Brilliance of Edo), (Higo). ICS, Apr.1990, *Japanese Camellia Cultivar List,* p.5. No description. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.41 with colour photo; English translation p.26. Large, red splashed patterns on white base, flat single, apricot stamens. Flowers very early. Leaves obovate, medium size. Spreading growth. A seedling of **Jitsugetsusei.** Named and released by Yoshizawa Camellia Nursery around 1972. From Saitama Prefecture, Japan.

Edo-ô-usuiro. (Edo Large Faint Colour), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.511: A large 5 petalled single, with irregular shaped, fluted petals of soft, washed pink, deepening to petal edge. Open, spreading stamens with light yellow filaments. Originated in Japan. (Believed extinct.)

Edosangoku. Different reading for **Edomikuni.**

Edo-sarasa. (Edo Splashed), *(C.japonica).* Itô, Ihei, 1695, *Kadan Chikinshô,* vol.1: Yashiro, 1841, *Kokon* Yôrankô; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Double with 3-4 rows of petals, white, lotus shape, red splashes. Originated in Japan. (Believed extinct.)

Edo-shibori. (Edo Dapple), *(C.japonica),* Katayama Catalogue, 1960, *Tsubaki Ochabana,* p.8: Pink and white striped, large, single in the variegated flowers section. Originated in Kansai District, Japan.

Edotairin. (Large Flower from Edo), *(C.japonica),* Kaempfer, 1712, *Amoenatatum Exoticarum* as 'Jedo-tairin'; Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Red, single, large size, white speckles. Different readings: 'Yedotairin', 'Jedotairin'. See Kyôto Engei Kurabu, 1964, *Tokushû,* No.5, p.77. (Believed extinct.) Originated in Japan.

Edo-tsubaki. *(C.japonica),* Usami, Naohachi, (ca.1910), *Nagoya Chinzue:* Red, single flower. Synonym: 'Miyuki-sarasa'. See Kyôto Engei Kurabu, 1965, *Tsubaki Tokushû,* No.6, p.127. 'Miyaku-sarasa' is supposed to be the synonym for 'Gyôkô' in the *Zôho Chikinshô.* Originated in Japan. (Believed extinct.)

Edouard Gouillon. *(C.japonica),* Piantaio Comunale Romano, 1859. No description. Originated in Italy. (Believed extinct.)

Edouard Philipson. Real Companhia Horticolo-Agricola Portuguese Catalogue, No.29, 1896, p.47. Orthographic variant for **Edoardo Philipson**

Edouardo Philipson. van Houtte Catalogue, 1865-1866, 110:27. Orthographic variant for **Edoardo Philipson.**

Ed's Red. (*C.reticulata* hybrid). SCCS 1996, *Camellia Nomenclature*, p.128: Light red with reddish sheen. Large to very large size semi-double to rose form double. Average, spreading, upright growth. Blooms mid-season to late. A seedling of the *C.reticulata* hybrid **Hulyn Smith,** originated by E. Atkins, Shalimar, Florida, USA.

Eduardia. *(C.japonica), Jardim Portuense,* 1844, No.7, p.106, Loose double flower, pink. Originated in Porto, Portugal.

Eduardo Brazão. *(C.japonica),* Real Companhia Horticolo-Agricola Portuense, Original Camellia List, Ref. 870. No description. Originated in Portugal.

Eduardo Sequeira. *(C.japonica),* Real Companhia Horticolo-Agricola Portuense, Catalogue No.27, 1892, p.60; Formal double, white with rose pink stripes. Barbarosa Catalogue, 1894: Double, white with rose-pink stripes. Originated in Portugal.

Edourdo Philipson. André, 1864, *Plantes de terre de bruyères...,* p.243. Orthographic error for **Edoardo Philipson.**

Eduige Diosdados. *(C.japonica),* Medici Spada, 1858, *Delle Nuova Camellie....Dalle Semine Romane,* p.5: Flower large, formal double, centre like a rose, petals numerous, concave, well imbricated. Colour, bright, ivory white with carmine rose stripes, clear, large and few. Originated by Delgrande, Rome, Italy.

Edvenita. *(C.japonica),* André Leroy, 1868, Catalogue, p.135: Imbricated, satiny pink. Originated in France.

Edvige Stacchini. Mercatelli Catalogue, 1894. Orthographic variant for **Edwige Stacchini.**

Edward Billing. Duncan & Davies Catalogue,1911. Synonym for **Lady Loch.**

Edward Billings. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Edward Billing', synonym for **Lady Loch.**

Edward Carlyon. *(C.x williamsii),* Gallagher, 1976, *American Camellia Yearbook,* p.122, with colour photo facing p.115: *C.saluenensis x C.japonica* **Adolphe Audusson** gave *C.x williamsii* **Edward Carlyon** the weeping form of **Donation** but with richer colour. Originated at Tregrehan, Cornwall, England by Gillian Carlyon. Orthographic error: 'Edward Caryton'.

Edward Caryton. Baronscourt Nursery Catalogue, 1986-1987, p.2. Orthographic error for **Edward Carlyon.**

Edward Cole. *(C.japonica),* Hazlewood Nursery Catalogue, 1945, p.7: Rose pink, medium large peony form. A seedling from **C.M. Hovey** originated by Hazlewood Bros, Epping, NSW, Australia.

Edward Douglas White. *(C.japonica),* McIlhenny Catalogue, 1945-1946, p.13: Rose-pink lined and veined rose-red tipped white. Medium size, rose form double. Originated by McIlhenny, Avery Island, Louisiana, USA.

Edward Lofving. *(C.japonica),* Mealing, 1950, *American Camellia Yearbook,* p.132, illustration, p.128: First bloomed 1950 at 8 years of age. Size 10-11 cm across. Form, simple semi-double, having a circle of stamens, sometimes club shaped petaloids, forming a tuft with a distinct yellow cast. Petals slightly wavy. Colour light pink and deepening at the margins, fading to centre. Flowers mid-season. Originated at Lookaway Gardens, South Carolina, USA.

Edward Marsh. *(C.japonica),* ACRS., 1956, *Camellia Annual,* No.3, p.6, Reg. No.10: A seedling of unknown parentage, raised by E. Marsh, Victoria, Australia. It is an upright grower,

producing a light pink, peppered and striped carmine bloom; incomplete double, 10-10.5 cm across with 10-14 petals and a number of petaloids. Colour plate see p.22, ACRS., 1977, *Camellia News*, No.66. Sport: **Edward Marsh Variegated**. Chinese synonym 'Aidewade'.

Edward Marsh Variegated. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.66: A virus variegated form of **Edward Marsh** - Light pink striped crimson with white blotches. Originated in Australia.

Edward Marshall Boehm. *(C.x williamsii), American Camellia Yearbook,* 1978, p.129, Reg. No.1497: A very large, bright pink, rose form double *C.hybrid*, a cross of *C.saluenensis* (Exbury form) x *C.japonica* **Cécile Brunazzi,** early flowering. Originated by J.T. Gallagher, Dorset, England. The blooms of this 10 year old hybrid measure 11-12 cm across. Yellow anthers, white filaments. Plant growth is rapid and upright with dark green leaves measuring 9 cm x 6 cm. New foliage is bronze coloured.

Edward Rust. *(C.japonica),* Townsend, 1950, SCCS., Bulletin, vol.II, No.3, p.8: Semidouble white. Originated in USA.

Edward's Dream. (*C.reticulata* hybrid). ACRS, *Camellia News,* 1997, No.143, p.16, colour photo p.23, Reg. No.486. Originated by Mr R.J. Cherry, Kulnura, NSW, Australia. A chance seedling that first flowered in 1993. The flower is deep pink (RHS.CC.57C), semi-double to informal double, with some petaloids, 12 cm diameter x 8 cm deep. Flowers early to mid-season on a vigorous, upright plant. Leaves are deep green, glossy, elliptic, margins serrulate, apex acuminate, 7.5 cm long x 4 cm wide. Petals orbicular.

Edward's Number 102. Fendig, 1953, *American Camellia* Catalogue.Synonym for **Governor Earl Warren**.

Edwardsii. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.66: Reddish purple, semi-doube. Originated in England.

Edwige Stacchini. *(C.japonica),* Anonymous 1879, *R. Societa Toscana di Orticultura Bollettino,* 4:99-102: Imbricated, beautifully marbled, similar to **Elisa Casoretto**. Originated in Italy. Orthographic variant: 'Edvige Stacchini'.

Edwin Folk. Magnolia Garden and Nursery Catalogue, 1948-1949, p.13. Abbreviation for 'Edwin H. Folk', synonym for **Captain Folk.**

Edwin H. Folk. Fruitland Nursery Catalogue, 1946-1949. Synonym for **Captain Folk.**

Edwin H. Folk Variegated. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* A virus variegated form of **Captain Folk** - Dark red blotched white. Originated in USA.

Edwin S. Northrup. *(C.japonica),* Fendig,1950, *American Camellia Catalogue:* Large, creamy white, irregular double, 10 cm in diameter. Petals are notched and form a loose ball in the centre with a few concealed stamens. Foliage medium green, deeply serrate, 7.5 cm x 4 cm. The plant has a vigorous, spreading growth habit. A seedling of unknown parentage, originated by G.H. Wilkinson, Pensacola, Florida, USA. Orthographic error: 'Edwin's Northrop'. Chinese synonym 'Aidewen'.

Edwina Folk. Findlay, RHS., 1968, *The Rhododendron and Camellia Yearbook,* No.22, p.18. Orthographic error for 'Edwin H. Folk', synoym for **Captain Folk.**

Edwin's Northrop. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.66. Orthographic error for **Edwin S. Northrop.**

Effendee. RHS, 1950, *Camellia and Magnolia Conference Report,* index, p.129. A group name added to camellia cultivar names to designate a select, hardy clone, by the Dutch firm of Felix & Dykhuis. Also spelt: "Effende", "Effendi". Used by Treseders Nursery Catalogue, 1964 as synonym for **Rosea Plena.**

Effendee Angustifolia. Felix & Dykhuis Nursery Catalogue, 1975-1976. Synonym for 'Donckelaeri'. (**Masayoshi**).

Effendee Chandler Rustique. Felix & Dykhuis Nursery Catalogue, 1975-1976. Synonym for **Elegans.**

Effendee Dir. Moerlands. Felix & Dykhuis Nursery Catalogue, 1975-1976. Synonym for **Directeur Moerlands.**

Effendee Rosea Plena. Felix & Dykhuis Nursery Catalogue, 1975-1976. Synonym for **Rosea Plena.**

Effendi. Synge, 1957, *The Rhododendron and Camellia Yearbook,* No.11, p.55. Orthographic variant for 'Effendee', synonym for **Rosea Plena**.

Effendi. Macpenny of Bransgore, Nursery Catalogue, 1991, p.1. Orthographic error for 'Effendee'. From the description this would seem to be a synonym for **Masayoshi** as 'Donckelaeri'.

Effendi Multipetala. Byron Hill Nursery Catalogue, 1955. Synonym for **Rosea Plena.**

Effie B. Youtz. Valley Garden Supplies Catalogue, 1946-1947. Synonym for **Candidissima.**

Effendee I. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.66. Synonym for **Elegans.**

Effendee II. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.66, Synonym for 'Donckelaeri', (**Masayoshi**).

Effendee III. Hazlewood & Jessep,1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.66. Synonym for **Rosea Plena**.

Egao. (Smiling Face), (Higo), Uekiya, Bunsuke, 1830, *Uekiya Bunsuke Hikki;* Taniguchi, 1912, *Chinka Kyôkan:* Light pink flower, 9 cm across, 5-6 petals, opening evenly. Stamens fully opened, yellowish, filaments white; petals creped. Late flowering. Fertile. Leaves large, ovate-elliptic to ovoid. See colour photo & description; *Encyclopedia of Camellias in Colour,* vol.I, 1972, p.368; Seibundô Shinkôsha, 1979, *Senchinshû,* p.23 & description, p.203; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.1 17. Originated in Kumamoto Prefecture, Japan.

Egao. (Smiling Face), *(C.japonica),* Asai, Keitarô, Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.71: Medium size, single, pure white with a few red spots. Originated in the Nangû Shrine, Ichino-miya, Aichi Prefecture, Japan. Named by Asai.

Egao. (Smiling Face), *(C.x vernalis), Encyclopedia of Camellias in Colour,* vol.1, 1972, p.218, pl.555, description p.391: Deep pink, deeper pink in the lower half of the petals, semi-double, 9 cm across, 16-20 petals with a cylindrical, centre column of yellow stamens, filaments pale yellow. Blooms mid-season. Leaves oval, mid-green, medium size, acuminate, obscurely serrate. Originated at Kurume, Fuku'oka Prefecture, Japan. Resembles a *C.japonica* flower. This cultivar was imported by Nuccio's Nurseries, Altadena, California from Tereda, Japan, about 1977. Ref: "The Enigma of 'Egao'" by Bill Donnan, SCCS, 1987, *The Camellia Review,* vol.49, No.1, pp.23, 24. Orthographic error: 'Eago'. Sports: **Shibori-egao, Egao-kurenai.** Chinese synonym: 'Xiaoyan'.

Egao Corkscrew. *(C. x vernalis). American Camellia Yearbook,* 2002, p.127, colour photo p.c9, Reg. No.2573. A sport of **Egao,** first observed in 1991, and flowered true on propagations for 8 years. Originated by Nuccio's Nurseries, Altadena, Calif., USA, and introduced in their 2000 catalogue. The semi-double, loose peony ruffled blooms are pink and measure 6.5 - 7.5 cm across with 15 petals. Plant is dense and spreading, with a distinctive zigzag growth habit. Flowers early to mid-season. The dark green leaves are 6.5 cm long x 2.5 cm wide.

Egao Variegated. Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, p.1. Synonym for **Shibori-egao.** See ICS Register, p.1675.

Egao-kurenai. (Red Smiling Face), *(C.x vernalis),* Sakata and Arisumi, 1983, *International Camellia Journal,* No.15, p.22. Red form of **Egao.** Hakoda, JCS., 1987, *Tsubaki,* No.26, p.50: Light red, sometimes with white markings, large size double with a petaloid centre. Leaves mid-green, 7.8 cm long x 3.2 cm wide. A tetraploid camellia. Originated in Japan. Many old trees are growing in Itoshima District, Fukuoka Prefecture. Named by Yukie Hisatomi.

Egao-nishiki. Synonym for **Shibori-egao.**

Egao-tsubaki. Usami, Naohachi, (ca.1910), *Nagoya Chinzu'e;* see Kyôto Engei Kurabu, *Tsubaki Tokushû,* 1965, No.6, p.127. Described as synonym for **Emisugata.**

Egas Moniz. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.30, & No.9, 1872-1873, p.43: Regular rose form with a colour of virginal white, with rare splashes of rose-pink. Originated in Portugal.

Egeria. *(C.japonica),* van Houtte Catalogue, 1842-1843, 9:9: Very double, globular. Very soft rose carmine. Synonyms: 'Egeria Delgrande', 'Egeria d'Italie', 'Nympha Egeria', 'Ninfa Egeria', 'Il Egeria'. Originated by Delgrande, Rome, Italy.

Egeria d'Italie. van Houtte Catalogue, 1843-1844, 12:ww. Synonym for **Egeria.**

Egeria Delgrande. Medici Spada, 1858, *Delle Nuova Camellie....Dalle Semine Romane,* p.5. Synonym for **Egeria.**

Egeria Hombert. *(C.japonica),* Luzzatti Catalogue, 1853. No description. Franchetti, 1855, *Collezione di Camelie,* p.28: Bright rose with some white blotches at the circumference, intermediate petals lightly lined, centre heavily stained with white, large size, perfectly imbricated. Originated in Italy.

Egérie. van Houtte Catalogue,1846-1847, 27:23. Synonym for **Emmeliana.**

Egerstonia. Cels, Paris Nursery Catalogue, 1836-1837, p.9.Orthographic error for **Egertoniae.**

Egerstonioa. Arnaud Catalogue, 1839-1840. Orthographic error for **Egertoniae.**

Egertoniae. *(C.japonica),* Sweet, 1830, *Hortus Britannicus* ed.2, p.74, as 'Mrs Egerton's'. Berlèse, 1837, *Monographie,* ed.1, p.94, 129: Leaves oblong, acuminate, 8.5 cm long x 4 cm wide, obscurely veined, apex recurved, deep, glossy green; buds elongate; flowers 7 cm across, full, deep cherry red, exterior petals, 3 rows, broad, reflexed, crenate; those of the centre smaller, unequal, separated from the first, contorted, short and compact forming an open centre. Orthographic errors: 'Egertonii', 'Egertonia', 'Egertoniana', 'Egerstonia', 'Egerstonioa', 'Eggertonia'. Synonyms: 'Mrs Egerton's', 'Egerton's Superb'. Originated in England.

Egertoniana. Loddige's Catalogue, 1849, p.34. Orthographic error for **Egertoniae.**

Egertonii. Verschaffelt Catalogue, 1847-1848, p.56. Orthographic error for **Egertoniae.**

Egerton's Superb. Hovey & Co. Catalogue, 1834-1835, p.26. Synonym for **Egertoniae.**

Eggertonia. Burdin Maggiore & Co Catalogue, 1835, p.38. Orthographic error for **Egertoniae.**

Egglefield. Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, 1997. Orthographic error for **Ecclefield.** See ICS Register, p.525.

Eglandina. *(C.japonica),* Jacob Makoy et Cie Catalogue, 1849, p.19. No descriphon. Originated in Italy. (Believed extinct.)

Egret. *(C.japonica),* SCCS Bulletin, vol.11, No.2, p.17, Dec. 1949. SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.34: Pure white sport of 'Herme', (**Hikarugenji**).Note: This name is confused as C.S. Hearn also used it as a synonym for **Shiratama.**

Egret. Hearn Catalogue, 1858. Synonym for **Shiratama.** This is the Californian variety and there is further confusion as this does not match the description of the valid Japanese **Shiratama** which is a single white.

Egret FN. Griffiths Jr., 1952, *American Camellia Yearbook,* p.39: The seventh sport of **Hikarugenji** is a self-white variation and must not be confused with the new seedling from Georgia, 'Egret FN'. This name has not been validly published.

Egret (Hearn). Griffiths & Strother, 1954, *Nomenclatural Crossreference List,* p.3. Synonym for Shiratama (California).

Ehigasa. (Colourful Parasol), *(C.japonica),* Satô, 1968, Chûbu Tsubaki Kyôkai, *Tsubaki Meikan.* Satô, 1975, *Chûbu no Tsubaki,* p.67. *Encyclopedia in Colour,* vol.I, 1972, p.149, pl.342, description p.342: Medium size semi-double, white with both light and deep crimson stripes and splashes, 11-13 petals, 8-9 cm across. A centre column of stamens with white filaments and pale yellow anthers. Leaves broad-elliptic, wide, wavy, coarse serrations, acute apex, dark green. A chance seedling of **Esugata.** Different reading: 'Ehikasa'. Mutahon: 'Benigasa'. Synonyms: 'Fukiage-shibori', 'Tanushimaru'. Originated in Aichi Prefecture, Japan by Satô, Minoru in 1962.

Ehikasa. Inazawa Nursery Catalogue, 1980-1981.Different reading for **Ehigasa.**

Ehoshiya. Hamamatsu, Utakuni, 1818-1825, *Setsuyô Kikan,* vol.23. Different reading for **Eboshiya.**

Eighteen Scholars. Peer, 1954, *American Camellia Yearbook,* p.174, 175 as '18 Scholars'. Synonym for **Shiba Xueshi.**

Eijenji. (Eijen Temple). *(C.japonica), Kurume Camellia,* 1997, English translation, p.6; Cardinal red, medium size campanulate single. Tubular stamen cluster. Named by M. Kunitake. Different reading for **Eizenji.**

Eiji-kingyo-kifu. (Eiji's yellow variegated fishtail leaf), Mizuno, 1829, *Sômoku Kinyôshû.* Foliage of fishtail form and variegated with yellow. Originated in Japan. Different reading: 'Eiji-kingyo-kihu'. See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.105.

Eiji-kingyo-kihu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* p.118. Different reading for **Eiji-kingyo-kifu.**

Eikan. (Garland of Laurel), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.27: Large size, white with pink stripes, anemone form single. Originated in the Osaka Prefecture, Japan. A hybrid between *C.japonica* **Tinker Bell** x *C.granthamiana.* Named and released by Kazuo Yoshikawa in 1980s. Chinese synonym 'Rongguan'.

Eikô. (Glory), *(C.sasanqua),* JCS., 1987, *Tsubaki,* No.26, p.42; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.32: Large size, crimson, single. Early blooming. Originated in the Kanagawa Prefecture, Japan.

Eikô. (Glory), *(C.japonica),* Satô, 1968, Chûbu Tsubaki Kyôkai; *Tsubaki Meikan.* Satô, 1975, *Chûbu no Tsubaki,* p.43. Colour photo, p.23, Seibundô Shinkôsha, 1979, *Senchinshû,* p.202 description: Medium to large, deep red, campanulate single of 5-6 fleshy petals, with central cylinder of golden anthered stamens. Blooms mid-season to late. Leaves wide-oval, thick, dark green. Tree upright, bushy and vigorous. Originated in Sofue-chô, Aichi Prefecture, Japan. Seedling of **Iwane-shibori** x **Benimyôrenji.** Named and released by Minoru Satô in 1966.

Eikyû-shibori. (Permanence Striped), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu;* Yashiroda, 1950, *American Camellia Yearbook,* p.21: Pink, deeper pink towards the petal edge, and white base. Large semi-double. Early flowering. Slow, spreading grower. See *Encyclopedia of Camellias in Colour,* vol.I, 1972, p.216, pl.551: Leaves glossy mid-green, 5-6.5 cm long x 2-2.8 cm wide, long and slender, slightly keeled, a little twisted, acuminate, serrated margins. Originated in Japan. Synonym: 'Eikyu Striped'. Resembles 'Kokyô-nishiki'.

Eikyu Striped. *American Camellia Yearbook,* 1950, p.21. Synonym for **Eikyû-shibori.**

Eileen. *American Camellia Yearbook,* 1948, p.48. Orthographic variations: 'Aleen', 'Irene'. Synonym for 'Donckelaeri'. (**Masayoshi**).

Eileen Sebire. *(C.reticulata),* ACRS., 1987, *Camellia News,* No.107, p.22, Reg. No.354: Originated by Edgar Sebire, Wandin North, Victoria, Australia. A chance seedling from 'Cornelian' (**Damanao**) that first flowered 1981. The informal double to peony form flower is 15 cm across x 8 cm deep, cyclamen pink, (RHS.CC.67C), blooming mid-season to late on an upright, dense, rapid growing plant. Leaves elliptic, flat, finely serrate, malt green, 10 cm long x 5 cm wide. Petals fluted, stamens few, flowers fall complete.

Eiraku. (Eternal Pleasure), *(C.japonica),* Katayama, 1957, *Tsubaki Ochabana.* Deep purple red with darker veins, campanulate single of 5-6 petals with a central column of stamens, pinched in with red filaments and golden anthers. Leaves small, long-ovate, dusky green, recurved outwards at the edge. Growth slow and upright. Synonym: 'Kuro-wabisuke'. Illustrations: Tuyama & Futakuchi, 1966, *Camellia Cultivars of Japan,* pl.133, p.229; also Seibundô Shinkôsha, 1979, *Senchinshû,* p.23 colour photo, p.203, description, Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.230. Originated in Ikeda City, Ôsaka Prefecture, Japan by Katayama Juraku'en Nursery. Mutation: **Fukutsuzumi.**

Eishô. (Obscure), *(C.japonica),* Hirayama, *Tsubaki Byôku* (Latter 17th Century); see 1961, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.2. p.48. No description. Originated in Japan. Different reading 'Eisyô'. (Believed extinct.)

Eisho Temple Wabisuke. *Camellias,* Y.C. Shen, 2009, p.219 with colour photo; Synonym for **Eishôji-wabisuke.**

Eishôji-wabisuke. (Eishô Temple Wabisuke), (Wabisuke), Kyôto Engei Kurabu, 1976, *Tsubaki Tokushû,* No.11, p.46-50. Seibundô Shinkôsha, 1979, *Senchinshû,* p.23, colour photo, p.203, description as 'Eisyôji-wabisuke': Small size, deep pink with a mauve tint, wabisuke-like campanulate form, petals channelled and crinkled. Stamens retrograde. Blooms early to mid-season. Resembles 'Kanzaki-aka-wabisuke'. Leaves elliptic, mid-green, prominent midrib, wide, shallow serrations, recurved at apices. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.140, 141. Originated in Kamakura City, Kanagawa Prefecture, Japan. The original tree in Eishô Temple is designated a national monument. Named by Kamakura Camellia Club in 1971.

Eisyô. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.10, p.118. Different reading for **Eishô.**

Eisyôji-wabisuke. Different reading for **Eishôji-wabisuke.**

Eiyô. (Leaves of Glory), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.655: A small, white single with 5 crenate petals surrounding a cushion of white petaloids. Different reading: 'Sakaeba'. Originated in Japan. (Believed extinct.)

Eizenji. (Eizenji Temple). *(C.japonica),* JCS, 1996, *Japan Camellia,* No.51, p.11 with colour plate: Medium size, brilliant red, cup-shaped single of 5-6 petals with tubular stamen cluster and golden anthers. Late blooming. A seedling of wild *C.japonica* originating in the Fukuoka Prefecture, Japan. Different reading 'Eijenji'.

Eiziano. *(C.japonica),* William Bull Catalogue, 1867, p.80. No description. Orthographic error for **Tiziano.**

Ekenholm. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.67. No description. (Believed extinct.)

El Capitan. *(C.japonica),* SCCS Bulletin, vol.11, No.2, p.17, Dec. 1949. SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.34: Pink and white. Large formal double. Vigorous, compact, upright growth. Blooms mid-season. Originated by R. Long, Pasadena, California, USA. Synonym: 'Avocado Leaf'. See black and white photo, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.110.

El Dorado. *(C.hybrid), American Camellia Yearbook,* 1968, colour plate p.118: A hybrid developed by J. Howard Asper, Escondido, California, USA, from the species *C.pitardii* as the seed parent and *C.japonica* **Tiffany** as the pollen parent; 12.5 cm in diameter. A soft pink, open peony form with creped and notched petals and stamens, broken into fasciciles by erect, centre petals. Had previously been known as 'Hazel Asper'. Blooms mid-season. See front cover SCCS, 1967, *The Camellia Review,* vol.29, No.2, and front cover *New Zealand Camellia Bulletin,* vol.VIII, no.4, 1974.

El Greco. *(C.reticulata),* ACRS., 1971, *Camellia News,* No.43, p.36, Reg. No.151: Originated by Fred S. Tuckfield, Berwick, Victoria, Australia. Chance seedling from *C.reticulata* 'Crimson Robe', (**Dataohong**) that first flowered 1964. Plant habit vigorous and upright. The 12.5 cm, semi-double, mid-season bloom is currant red, (HCC.821 /2-/3). The dark green leaves are 12 cm long x 6 cm wide, oblong, reticulate, apiculate, and finely serrate. See colour photo, ACRS., 1977, *Camellia News,* No.66, p.19.

El Matador. *(C.japonica),* Camelliana Nursery Catalogue, 1962; inside front cover: Very rich, velvety, dark red, semi-double. Opens similarly to **Ville de Nantes**, but builds up high as it continues to open and expand. Long, dark leaves and a compact, upright growth habit. SCCS., 1963, *Camellia Nomenclature,* p.45: Dark red, large semi-double with upright petals. Vigorous, compact, upright growth. Blooms mid-season. Originated in USA. There is also a variegated form.

El Matador Variegated. *(C.japonica)* Gentry, 1968, ACS., *The Camellia Journal,* vol.23, No.1 as 'El Matador V.'. A virus variegated form of **El Matador** - Dark red blotched white. Originated in USA.

El Rojo. *(C.japonica), American Camellia Yearbook,* 1973, p.190, Reg. No.1252: A 15 year old chance seedling that first bloomed 1961; originated by W.F. Wilson Jr., Louisiana, USA. Leaves dark green, 11 cm x 5 cm. The rose form double to formal double, is a bright red and has yellow anthers and filaments. It is 10-11 cm in diameter and 5-5.3 cm deep with 50-60 petals and blooms mid-season. There is also a variegated form.

El Rojo Variegated. *(C.japonica),* Cannon, 1970. ACS., *The Camellia Journal,* vol.30, No.1 as 'El Rojo Var.'. A virus variegated form of **El Rojo** - Dark red blotched white. Originated in USA.

El Tramento. Portland Camellia Nursery Catalogue, 1955-1956, p.7. Orthographic error for **Il Tramonto.**

El Tramonto. Portland Camellia Nursery Catalogue, 1955-1956, p.7. Orthographic error for **Il Tramonto.**

Elaine. *(C.reticulata),* ACS, *The Camellia Journal,* Sept. 2013, p.27 with colour photo; Regn No.2872; Originated, registered and propagated by James & Elaine Smelley, Moss Point, Miss., USA. ACS, *Yearbook,* 2013, p.113 with colour photo; An 8 year old seedling of **Curtain Call** x **Pleasant Memories**, first flowered 2008. The very large, 19cm diameter x 10cm deep flower is mid-pink, semidouble form (photo shows a peony form, with stamens mixed among the petals, not described.). 16 fluted petals with heavy texture, flowers fall whole. Plant is upright

and spreading with vigorous growth. Dark green leaves average 14cm x 6.5cm with medium serration. Flowers mid-season to late.

Elaine Smelley. *(C.japonica), American Camellia Yearbook,* 1978, p.129, Reg. No.1495: A medium size, light pink, formal double *C.japonica* mutant of **Aquarius,** blooms mid-season to late; originated by the Belle Fontaine Nursery, Theodore, Alabama, USA.

Elaine Lee. *(C.hybrid).* ACS, *The Camellia Journal,* Nov. 1998, p.25, Reg. No.2482. A medium size, white, semi-double cross of *C.japonica* **Mrs Bertha A. Harms** x *C.oleifera* [PI 162561]. Flowers early to mid-season. Originated by Dr William L. Ackerman, Ashton, Md., USA. *American Camellia Yearbook,* 1998, p.2, colour photo before p.1. The 16 year old seedling first flowered 1986. Average flower size is 9.5 cm across x 3.2 cm deep, with 12-14 petals, yellow-orange anthers and creamy filaments. Flowers especially cold hardy; plant hardy to -12° F. Plant growth is upright, dense and medium, with dark green leaves 7.5 cm long x 3 cm wide

Elaine's Betty. (*C.japonica),* ACS 1994, The vo.49, No.4, inside back cover, Valdosta Camellia Scions: A sport of **Betty Sheffield** fixed by Jim and Elaine Smelley, USA. Chinese synonym 'Ailan'.

Elaine's Betty Pink. *(C.japonica)* SCCS, *Supplementary List* 2011; A sport of **Elaine's Betty**. Medium pink centre shading to deeper pink at petal edges Medium size, peony to rose form with highly ruffled petals. Vigorous open upright growth. Foliage is creped and serrated. Originated by James and Elaine Smelley, Moss Point, Miss., USA.

Elaine's Betty Red. *(C.japonica)* SCCS, *Supplementary List* 2011; A sport of **Elaine's Betty.** Deep rose to red centre shading to deeper red at petal edges. Other details as for **Elaine's Betty Pink.**

Elaski. *(C.x williamsii), American Camellia Yearbook,* 1961, p.222, Reg. No.555: A 4 year old hybrid *C.x williamsii* seedling that first bloomed 1960; originated by K.M. White, Devon, England. Leaves dark green, averaging 9.5 cm long x 4 cm wide. The rose-pink flower, 10 cm across x 6.5 cm deep, is peony form with yellow anthers and has 24 petals and many petaloids. Late flowering.

Elata. *(C.japonica),* Paxton, 1840, Supplement to *Botanical Dictionary* as "bright crimson". Listed by many sources as from "rose red" to "violet crimson". Buist, 1845, The American Flower Garden Directory, 3rd ed, p.218: Violet crimson, spotted with white, flower 8 cm across, perfectly imbricated to the centre and a most pleasing double. Foliage dark green, a plant of good habit. Invalidly used in America, as a synonym for 'Enrico Bettoni' which is, itself, a synonym for 'Haley's Monarch'.

Elata. Overlook Nursery Catalogue, 1939-1940, p.22. Erroneously used as a synonym for 'Enrico Bettoni'.

Elata Cuninghami. Berlèse, 1845, *Monographie,* ed.3, p.164. Orthographic error for Elata Cunninghamia.

Elata Cunningham. Franchetti, 1855, *Collezione di Camelie,* p.28. Orthographic variant for Elata Cunninghamia.

Elata Cunninghamia. *(C.japonica),* Harrison, ed., 1838, *Floricultural Cabinet,* vol.6, p.149 as 'Eleata Cunninghamia' - dark red. Paxton, 1840, Magazine of Botany, vol.7, p.92 as 'Elata': It was raised by Mr Cunningham of Edinburgh, Scotland, has superior foliage, a very upright, tall--growing habit and bright crimson flowers which are as well formed as any other sort within our knowledge. Berlèse, 1843, *Iconographie,* vol.2, pl.156 as 'Elata Cunninghamii': Flower about 10 cm across, full, regular, of a rounded rosette, with the centre depressed, of a soft rose to pure carmine with reflections of rose-pink. The petals, disposed in 6-7 rows, are flat, rounded, numerous, close-set, well notched, channelled and imbricated closely, more or less from the circumference to the centre. In the midst of the flower are 2 or 3 reflexed petals here and there, without affecting the imbrication of their neighbors. Franchetti, 1855, description is

- Very double, globular, petals white and red; as 'Cunninghamii Elata'. Orthographic errors: 'Elata Cuninghami', 'Elata Cunningham', 'Elata Cunninghamii', 'Elata Cunninghammii', 'Elata de Cunningham', 'Cunningham's Elate'. Lequay, in the Jan.1853, *Revue Horticole*, p.29-31 says "same as **Elata de Rollisson** and **Crimson Perfection;** while van Houtte in his catalogues, 1846-1847, 27:23 and 1847-1848, 31:28, equates **Elata de Rollisson** with **Crimson Perfection**. However Berlèse figures and describes the three as separate cultivars in his *Iconographie*, 1843 **Crimson Perfection,** pl.259; 'Elata Cunninghamii', pl.156; 'Elata Rollissonii', pl.168. While the plates are similar the descriptions contain enough differences to warrant retaining them as three separate and valid cultivars, pending any further evidence to the contrary.

Elata Cunninghamii. Berlèse, 1843, *Iconographie*, p. facing pl.156. Orthographic variant for **Elata Cunninghamia.**

Elata Cunninghammi. Del Lungo & Girardi, 1928, *Le Camelie*, p.115. Orthographic error for **Elata Cunninghamia.**

Elata de Chandler. *(C.japonica),* Jacob Makoy Nursery Catalogue, 1836, p.16. No description. Berlèse, 1843, *Iconographie*, vol.3, pl.237: The flower is 9-10 cm in diameter, a little full, fairly irregular, of an orange red. The exterior petals, of 3-4 rows, are fairly ample, spread out, lengthened and deeply notched at the apex. Veins of blood red (whose disposition deepens the colour). Petals of the centre are numerous, lengthened, narrow, erect and forming a heart somewhat resembling the flowers of **Sericea,** except for the colour. Originated by Chandler, England. Orthographic variant: 'Elata' (Chandler). Synonyms: 'Elata de Londres', 'Elata de Londre'.

Elata de Cunningham. van Houtte Catalogue, 1839, 1:3. Synonym for **Elata Cunninghamia.**

Elata de Londre. Fratelli Rovelli Catalogue, 1852, p.16. Synonym for **Elata de Chandler.**

Elata de Londres. van Houtte Catalogue, 1844-1845, 18:11: "Ponceau Imbrigue". Synonym for **Elata de Chandler.**

Elata de Rollinson. Burdin Maggiore & Co. Catalogue, 1845-1846, p.42. Orthographic error for **Elata de Rollisson.**

Elata de Rollison. Fratelli Rovelli, 1852, Catalogue, p.16. Franchetti, 1855, *Collezione di Camelie*, p.28. Orthographic error for **Elata de Rollisson.**

Elata de Rollisson. *(C.japonica),* Jacob Makoy Nursery Catalogue, 1836. p.16. No description. Berlèse, *Iconographie,* 1840, vol.2, pl.168 as 'Elata Rollissonii': Flower 10 cm in diameter, full, regular, a round rosette, imbricated from one extremity to the other with considerable regularity. The colour is a carmine red violet, lightly tinted with a coppery orange. The petals are in 7 rows; those of the 3 main ones are broad, almost round, deeply notched, closely set with order; those of the following rows are very long and oblong, some entire, less serried than the former, a little crinkled and well imbricated; those of the centre are small in number, imperfect, small and pale red. Orthographic errors: 'Elata de Rollison', 'Elata Rollisonnii', 'Elata Rossissoni', 'Elata (Rollinson)', 'Elata Rolisson's', 'Elata di Rollisson', 'Elata de Rollinson', 'Elata de Rollison', 'Elata di Rolisson'. Synonyms: 'Pendula de Rollisson', 'Pendula Rollisson'.

Elata di Rolisson. Burdin Maggiore & Co. Catalogue, 1870-1871. Orthographic error for **Elata de Rollisson.**

Elata di Rollisson. Burdin Marriore & Co. Catalogue, 1856-1857, p.14. Orthographic variant for **Elata de Rollisson.**

Elata Nova. *(C.japonica),* Berlèse, 1840, *Monographie,* ed.2, p.186, 187, 234: Leaves 5.8 cm wide x 12.2 cm long, round-oval, reclined, apex sharp and recurved, quite thick, prominent venation, large

serrations, very dark green; bud long-oval, acuminate with scales of light green; flower over 10.8 cm diameter, full, of an orange red tinted with scarlet of a nuance above **Derbyana** with which there is some resemblance, being very double and very regularly imbricated. Corolla regular, a star-like rosette, entirely round and imbricated, petals broad and oval, terminating at a sharp point at the apex, concave before fully opening, well displayed from one to the other; those of the centre are few in number, small and imbricated with a glimpse in the middle of the cup, of two or three short styles. Originated in England by Cunningham. . Synonyms: 'Elata Nova Angliae', 'Elata Nova de Cunningham'.

Elata Nova Angliae. van Houtte Catalogue, 1843, 12:ww. Synonym for **Elata Nova.**

Elata Nova de Cunningham. Rousseau, Angers Nursery Catalogue, 1842-1843, p.2. Synonym for **Elata Nova.**

Eleanor McKenzie. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogue,* p.67. No decription. Originated in USA. (Believed extinct.)

Eleanor Martin. *(C.japonica), American Camellia Yearbook,* 1965, p.231, Reg. No.784: A 15 year old chance seedling, female parent 'Donckelaeri', (**Masayoshi**) that first bloomed 1955; originated by Caesar Breschini, San Jose, California, USA. Plant growth is upright, open and rapid with dark green leaves, 11 cm x 6 cm. The semi-double flowers are red with yellow stamens, 11-12.5 cm across x 6 cm deep with 15 petals. Flowers mid-season to late. Sport **Eleanor Martin Supreme.**

Eleanor Martin Supreme. *(C.japonica),* Gentry, 1964, ACS., *The Camellia Journal,* vol. 19, No.5, P.25. No description. *American Camellia Yearbook,* 1965, p.232, Reg. No.785: A sport of **Eleanor Martin** first observed 1959. Plant and flower same as **Eleanor Martin** except flower is moired up to 80% white. Originated by Caesar Breschini, San Jose, Califoria, USA. For

colour photo see Macoboy, 1981, *The Colour Dictionary of Camellias,* pp.82, 83. Chinese synonym 'Chaoji Ailinuo'.

Eleanor Martin Variegated. Don Ellison, 1997, "Camellias - A Photo Dictionary", p.34. Synonym for **Eleanor Martin Supreme.** See ICS Register, p.540.

Eleanor Mertson. *(C.japonica), Ameican Camellia Yearbook,* 1982, p.171, Reg. No.1843: A medium to large, dark red, single *C.japonica* chance seedling, flowering mid-season to late; originated by Magnolia Gardens, Charlestown, South Carolina, USA. The 6 year old seedling first bloomed 1980. Average flower is 10 cm wide with deep gold anthers. Its unusual character is due to the contrast of the prominent stamen cluster with the dark red petals. Plant growth is upright with light green leaves, 10 cm x 5 cm.

Eleanor Nichols. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Pinkish white, spotted and lined pink. Small, formal double. Vigorous growth. Late blooming. Originated by Dr W.E. Nichols, Pasadena, California, USA.

Eleanor Nobile. Fruitland Nursery Catalogue, 1942-1943, p.27. Orthographic error for **Elena Nobili.**

Eleanor of Fairoaks. *(C.japonica),* Gerbing's Azalea Gardens Catalogue, 1941-1942: Deep red marbled with white. A rich combination for a loose, peony flower that measures 14-16 cm across. The bright stamens are intermingled with the petaloids. Dull, deep green foliage, vigorous, slender growth. Flowers mid-season to late. A variegated form of **Vedrine**, originated by Bolen, USA. Orthographic errors: 'Eleanor of Fair Oaks', 'Elinor of Fairoaks', 'Elenor of Fair Oaks'. Synonyms: 'Ruby Glow Variegated', 'Vedrine Variegated', 'Variegated Vedrine'. For colour illustrations see G.G. Gerbing, 1945, *Camellias,* pl.67; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.83.

Eleanor of Fair Oaks. Vanderbilt, 1940, *Camellia Research,* p.4. Orthographic variant of **Eleanor of Fairoaks.**

Eleanor Pink. *(C.japonica),* Vanderbilt, 1941, *Camellia Research, II,* p.2. No description. Originated in USA. (Believed extinct.)

Eleanor Vancleve. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature;* Fendig, 1951, *American Camellia Catalogue* as 'Eleanor Vanclieve': Large, varying from white with pink stripes and blotches to solid pink, anemone form, 10-12.5 cm across x 5 cm deep. The petals are round and 5 cm in diameter, the filaments are cream to yellow and the stamens are intermixed with the petals and irregular shaped petaloids. The buds are round, pubescent and gray-green. The leaves are dark green, slender, long-elliptic to lanceolate, 11 cm x 4 cm. Apex is long, slender and recurved, venation prominent below. Originated by S.D. Coleman, Fort Gaines, Georgia, USA from seed of **Lady Vansittart** x **Winnie Davis**. First flowered 1946. Orthographic variants: 'Eleanor Vanclieve', 'Eleanor Van Cleve'.

Eleanor Vanclieve. Fendig, 1951, *American Camellia Catalogue.* Orthographic error for **Eleanor Vancleve.**

Eleanor Waltz. *(C.japonica), American Camellia Yearbook,* 1980, p.163, 164, Reg. No.1673: A medium size, white, formal double, *C.japonica* chance seedling, late blooming; originated by Mr & Mrs E.E. Waltz, Maryland, USA. The 15 year old seedling first bloomed 1970. Average flower size is 10 cm across x 4 cm deep. It has 5 complete swirls of petals radiating from the centre and 66 petals. Plant growth is upright, open and medium with dark green leaves, 11 cm long x 5.5 cm wide

.**Eleanor Wilds.** *(C.japonica),* Fruitland Nursery Catalogue, 1943-1944, p.27, 29: Light pink with the petals faintly margined palest pink. Medium size, semi-double. Slow, compact growth. Originated by Dr R.H. Wilds, Aiken, South Carolina, USA from chance seed. Orthographic errors:

'Elinor Wilds', 'Eleanor Wildes'. See black and white photo, Hertrich, 1955, *Camellias in the Huntington Gardens,* Vol. II, p.113.

Eleanor Wildes. *Camellia Digest,* 1(3),1943. Orthographic error for **Eleanor Wilds.**

Eleanora. *(C.japonica),* Peer, 1956, *American Camellia Yearbook,* p.56. No description.. (Believed extinct.)

Eleanora Franchetti. Backhouse Nursery Catalogue, 1873. Orthographic variant for **Eleonora Franchetti.**

Eleanora Franchetti Pink. Vanderbilt, 1940, *Camellia Research,* p.6. Orthographic variant for 'Eleonora Franchetti Pink'.

Eleata Cunninghamia. Harrison, ed., 1838, *Floricultural Cabinet.* Orthographic error for **Elata Cunninghamia.**

Electa. *(C.japonica),* Burdin Maggiore & Co. Catalogue, 1835, p.38. No description; Loddige's Catalogue, 1836, p.24. No description. Mercatelli, 1881, catalogue: Enormous flower, perfectly imbricated, bright rose-pink, petals veined lighter rose, transparent, oval. Very beautiful. Originated in Italy by Santarelli. Synonyms: 'Collectii', 'Electa Rosea', 'Electa Flore Plena'.

Electa Flore Plena. Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani, as 'Electa Fl. Pl.'. Synonym for **Electa.**

Electa Rosea. Verschaffelt Catalogue, 1849-1850, p.46. Synonym for **Electa.**

Electra. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943. No description. Originated in USA.

Elegance. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.67: Rose pink with a white centre. Originated in USA.

Elegans. *(C.japonica),* Jacob-Makoy, 1830 Catalogue, p.6. No description. Chandler & Booth, 1831, *Illustrations and Descriptions of the plants which compose the Natural order of Camellieae...,* p.26, pl.26: Originated from the seed of the 'Warratah' (**Anemoniflora**), planted by Alfred Chandler of Vauxhall, England in 1823 and described in the above publication as being "of a very delicate rose and measuring from three and a half to four inches (8.5-10 cm) in diameter". **Elegans** is HCC. Rose Opal 022 in colour with slightly darker venation. It is an anemone form and can grow up to 12.5 cm across. The plant is spreading, loosely branched, open and vigorous. Its foliage is deep green, glossy, flat, broadly elliptic; apex shortacuminate, decurved, margins shallowly serrate, averaging 11 cm long x 6.5 cm wide. Early in its history, to separate it from another, much inferior cultivar, also called 'Elegans' by Baumann & Baumann, the word 'Chandleri' or 'Chandlers' was sometimes attached to it. This, unfortunately, has caused more confusion than it has saved as it has involved another of Chandler's seedlings named **Chandleri.** Many synonyms and orthographic variants have been applied to it, some of which are as follows: 'Elegans (Chandler)', 'Elegans Chandleri', 'Elegant', 'Chandleri Rosea', 'Rosea Chandler', 'Chandleri Pink', 'Chandleri Elegans Pink', 'Chandlers Elegans', 'Pink Elegans', 'Pink Chandleri Elegans', 'Elegans (Chandler) Pink', 'Elegans Loudonensis', 'Chandleri Pulcherrima', 'Pulcherrima', 'Francine', 'Pink Francine', 'Gloria Angliae', 'Crewii', 'Lord Crew', 'Veigans', 'Rollini Vera', 'Mr Chandler's Elegant Camellia', 'Elegans de Chandler', 'Chandler Elegans Rose Red'. Orthographic errors include: 'Chandlery Elegans', 'Chanderleri Elegans', 'Chandelerri Elegans', 'Roulini', 'Rollenii', 'Bollenii'. Chinese synonyms: 'Yazhi', (Elegant) and 'Meihong Manao'. A whole family of mutations have arisen from this cultivar. They include: **Elegans Variegated, Barbara Woodroof, C.M. Wilson, Elegans Miniata, Theo's Mini, Elegans Supreme.** These have produced a second generation of mutations which include: **Hawaii, Kona, Shiro Chan, Snow Chan, Elegans Splendor, Elegans Champagne** and **Maui.** For colour illustrations see: p.113, Fairweather, 1979, *Rhododendrons and Azaleas;* p.83, Macoboy, 1981, *The Colour*

Dictionary of Camellias and Fendig, 1949, *American Camellia Catalogue.* In 1981 it received "The National Hall of Fame Award" from the ACS and the RHS., in 1958, awarded it a First Class Certificate. Colour photo, Hillebrand & Bertolazzi, *Antiche Camelie del Lago Maggiore*, 2003, p.166, shows a virus variegated flower, which is **Elegans Variegated.**

Elegans Alba. Berlèse, 1845, *Monographie,* ed.3. Synonym for **Claritas.**

Elegans Angliae. Seidel, 1846, Pflanzen Catalog, p.7. Synonym for **Elegans (Bollweiler).**

Elegans (Bollwieler). *(C.japonica),* James Burnett, 1837, *Magazine of Botany and Gardening,* new ser. vol.3:152 as 'Elegans' (Bolwiller). A semi-double pink or red flower of only ordinary character. Berlèse, 1837, *Monographie*, ed.1, No.85 as 'Elegans': Flower, large single, cherry red; petals veined with purple and rather deeply notched at the summit. There is another variety of this name with a double flower, which is very handsome. This was the listing that caused Berlèse to list the prior valid **Elegans** as 'Elegans'(Chandleri), thereby forever confusing it with its sister cultivar **Chandleri**. Synonym 'Elegans Angliae'.

Elegans Champagne. *(C.japonica),* Nuccio's Nurseries Catalogue, 1977, p.6: Beautiful sport of **Elegans Splendor**. White with cream centre petaloids. Sometimes base of petals showing pink. Early to mid-season blooming. *American Camellia Yearbook,* 1979, p.105, Reg. No.1526: A large to very large, white with cream centre petaloids, sometimes base of petals showing pink, anemone form *C.japonica* mutant of **Elegans Splendor**; originated by Nuccio's Nurseries, Altadena, California, USA. First observed 1970, size 11.5 cm wide x 5 cm deep with markedly fimbriated leaves and low, spreading growth. This cultivar received the "Sewell Mutant Award" for 1980 and the "William Hertrich Award" for 1982. For colour photos see: p.83, 84, Macoboy, 1981, *The Colour Dictionary of Camellias* and on the front cover, SCCS, 1976, *The Camellia Review,* vol.38, No.2. Chinese synonym: 'Baitiane'. (White Swan). Note: The use of any latin word form such as "Elegans" for a new cultivar name or part name is barred by the Horticultural Code from 1958 and onwards. Latin is reserved for botanical use only. This applies to **Elegans Splendor, Elegans Supreme** and **Elegans Supreme Variegated** also, as these four sports were all named after 1958, and they are therefore illegal names acording to the code. However as there is total rejection to a name change by all the National Camellia Societies, they are let stand pro tem.

Elegans Chandelery. Mariotti Catalogue, 1924. Orthographic error for **Elegans.**

Elegans Chandler. Ferreira & Celina, 2000, *O Mundo da Camélia,* p.81; The flower pictured is either **Elegans** or one of its sports. Quality and colour are not good enough to define.

Elegans (Chandler). de Jonghe, 1851, *Traité de la Culture du Camellias,* p.105. Synonym for **Elegans.**

Elegans (Chandler) Variegated. SCCS., 1951, *The Camellia. Its Culture and Nomenclature* as 'Elegans (Chandler), Var.'. Synonym for **Elegans Variegated.**

Elegans (Chandler) Pink. .SCCS, 1951, *The Camellia. Its Culture and Nomenclature.* Synonym for **Elegans.**

Elegans Chandleri. Berlèse, 1837, *Monographie*, ed.1, p.73 as 'Elegans Chandlerii'. Synonym for **Elegans.**

Elegans (Chandlers). Buist, 1839, *American Flower Garden Directory,* p.240. Synonym for **Elegans.**

Elegans Coccinea. *Catalogue des plantes la Société Royale d'Horticulture Belgique,* 1842, p.22. Synonym for **Elegans**. It would appear that the variegated form was common by this time, and this was an attempt to separate out the solid colour form.

Elegans de Chandler. Jacob Makoy et Cie Nursery Catalogue, 1839, p.16. Synonym for **Elegans.**

Elegans Follis Marginatis. *(C.japonica),* Prudente Besson Catalogue, 1864-1865. No description. Originated in Italy. (Believed extinct.)

Elegans Fortesque. *(C.japonica),* Darlington Hall Gardens Camellia List,1986, p.2. No description. Originated in the UK. No valid listing located.

Elegans Improved. *(C.japonica),* ACS, *The Camellia Journal,* Mar. 2010, p.12 with colour photo; A sport of **Elegans** with larger leaves and flowers.

Elegans Londonensis. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.68. Orthographic error for 'Elegans Loudonensis', synonym for **Elegans.**

Elegans Loudonensis. Anonymous, 1837, *Revue Horticole,* p.477. Synonym for **Elegans.**

Elegans Miniature. Fendig, 1958, *American Camellia Yearbook,* p.25. Orthographic error for **Elegans Miniata.**

Elegans Miniata. *(C.japonica),* Youtz, 1949, *American Camellia Yearbook,* p.189: A form of **Elegans** having small leaves and flowers, (10 cm) shading from light variegated pink to nearly pure white. It is a slow grower. Said to have been imported from Australia, probably of English origin. Orthographic errors: 'Elegans Miniature', 'Miniature Elegans',. See black and white photo, p.73, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III.

Elegans Nova. Jacob Makoy et Cie Nursery Catalogue, 1833; Courtois, 1833, *Magazin d'Horticulture,* 1 [pt.D] :315. Synonym for **Elegans.**

Elegans Pale Pink. Hazlewood & Jessep, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.68. Synonym for **C.M. Wilson.**

Elegans Pink. Wilmot, *Camellia Variety Classification Report,* 1943, p.10. Synonym for **Elegans.**

Elegans Red. Wilmot, *Camellia Variety Classification* Report,1943, p.10. Synonym for **Chandleri.**

Elegans Rose Red. Vanderbilt, 1941, *Camellia Research, II,* p.2. Synonym for **Elegans.**

Elegans Rubra. Fruitland Nursery Catalogue, 1943-1944, p.20. Synonym for **Chandleri.**

Elegans Shell Pink. Vanderbilt, 1941, *Camellia Research, II,* p.2. Synonym for **C.M. Wilson.**

Elegans Splendor. *(C.japonica),* SCCS., 1971, *The Camellia Review,* vol.33, No.1 as 'C.M. Wilson Splendour' with front cover colour photo. *American Camellia Yearbook,* 1973, p.190, Reg. No.1116: Originally registered as 'C.M. Wilson Splendor'. The formation and leaves are the same as **Elegans Supreme** except that the colour is the soft pink of **C.M. Wilson.** A sport of **C.M. Wilson**. A notice of this name change was published in the Sept.1972 ACS., *The Camellia Journal.* Originated at Nuccio's Nurseries, Altadena, California, USA. Received the "Sewell Mutant Award" for 1974. See colour photos: p.84, Macoboy, 1981, *The Colour Dictionary of Camellias;* the front cover ACRS, 1982, *Camellia News,* No.83 and *Encyclopedia of Camellias in Colour,* vol.II, 1978, p.36, pl.49. Chinese synonym: 'Saimudan', (Superior Peony). See note under **Elegans Champagne.** Orthographic variant 'Elegans Splendour'.

Elegans Splendour. Mount Congreve Wholesale Nursery, 1990-1991, Price List, p.4. Orthographic variant for **Elegans Splendor.**

Elegans Supreme. *(C.japonica), American Camellia Yearbook,* 1960, p.196, Reg. No.501: A 6 year old mutant of **Elegans,** originated by W.F. Bray, Pensacola, Florida, USA. Plant growth is spreading and dense with dark green leaves, 9.5 cm long x 4 cm wide. The red, anemone form flowers, 12-15 cm across x 3.8 cm deep, have 21 petals, 20-30 petaloids and yellow stamens. The flower is wine red, with ruffled and wavy petals. Blooms mid-season to late. Received the "Sewell Mutant Award" in 1966; the Arminter C. Cawood Camellia Japonica Award for 1976; the "William E. Woodroof Camellia Hall of Fame Award" in 1980 and the "William

Hertrich Award" for 1967. Orthographic error: 'Elgans Supreme'. For colour photos see: *American Camellia Yearbook,* 1966 facing p.18; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.54. The front cover *New Zealand Camellia Bulletin,* 1971, vol.VII, No.3 and the *Encyclopedia of Camellias in Colour,* vol.II, 1978, p.37, pl.50. There is also a variegated form. See note under **Elegans Champagne.** Chinese synonym: 'Chaoji Saimudan'. (Peony Supreme).

Elegans Supreme Variegated. *(C.japonica),* Gentry, 1968, ACS., *The Camellia Journal,* vol.23, No.1 as 'Elegans Supreme Var.': A virus variegated form of **Elegans Supreme** - Wine red blotched white. Originated in USA.

Elegans Variegata. Camellia Forest Catalogue, 1988, p.3. An illegal name according to the Horticultural Code. It should be **Elegans Variegated**.

Elegans Variegated. *(C.japonica),* SCCS., 1946, *The Camellia,* p.18 as 'Chandleri Elegans Var.'. A white blotched form of **Elegans** that was often erroneously listed as **Elegans** as the solid and variegated form were usually treated as identical during the last century. Orthographic abbreviation: 'Elegans Var.', 'Chandler Elegans Var.' Synonym: 'Elegans (Chandler) Variegated', 'Francine Variegated', 'Pride of the Emperor's Garden', 'Elegans Variegated Special', 'Elegans Chandler Variegated'. Chinese synonym: 'Fuse Yazhi', (Multicolour Elegant).

Elegans Variegated Special. Abbott's Nursery Catalogue, 1961. Synonym for **Elegans Variegated.**

Elegans White. Fruitland Nursery Catalogue, 1952-1953, p.21. Synonym for **Madge Miller.**

Elegans 31. Thoby et al., 1988, *Tsubaki, A Propos Camellia,* p.46. Synonym for **Elegans (Bollwieler).**

Elegant. André Leroy Catalogue, 1833, p.13. Orthographic variant for **Elegans.**

Elegant. Seaforde Gardens Catalogue, 1993, p.2. Abbreviation for **Elegant Beauty.**

Elegant Beauty. *(C.x williamsii), New Zealand Camellia Bulletin,* 1962, vol.III, No.1, p.37, Reg. No.10: A hand pollinated hybrid raised by L.E. Jury, New Plymouth, New Zealand from the parentage *C.saluenensis x C.japonica* **Elegans.** The plant has an open, upright habit with dark green leaves, 7.5 cm long x 4 cm wide. The flower is anemone form with 20 petals and numerous petaloids. The outer petals are waved. The colour is deep rose with deeper veining. This camellia had earlier been referred to as 'Elegante' but this was rejected as too close to **Elegans.** Chinese synonym: 'Meimei', (Elegant Beauty).

Elegant Beauty (Hahn). *(C.x williamsii).* ACS 1993, *The Camellia Journal,* vol.48, No.4, p.32. Valdosta Camellia Scions list. No description. A special form of **Elegant Beauty Variegated.** Originated in USA.

Elegant Beauty Variegated. *(C.x williamsii).* Nuccio's Nurseries Catalogue, 1992. A white blotched, virus variegated form of **Elegant Beauty.** Originated in USA.

Elegant Friends. Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III, p.326. Synonym for **Setsugekka.**

Elegante. Hilsman, 1966, *American Camellia Yearbook,* p.135. Synonym for **Elegant Beauty.**

Elegantissima. *(C.japonica),* Jacob Macoy et Cie Nursery Catalogue, 1833, p.16. No description. Courtois,1833, *Magazin d'Horticulture,* 1 [pt.D]:315: Very elegant. Berlèse, 1837, *Monographie,* ed.1, p.73, 113, 127, 131: Leaves a little crenated on edge, apex acute, warped or undulate, of a glossy, deep green; flower, full, 8 cm in diameter; deep, cherry red, sometimes of a rose tint shaded with carmine; outer petals in two rows, large, imbricated to form a cup; those at the centre, numerous, folded, compact and even. Originated by Chandler,

Vauxhall, London, England. Orthographic errors: 'Elegontissima' and 'Eligantissima'. Synonyms: 'Elegantissima Rosea', 'Elegantissima Vera', 'Elegantissima Waratah', 'Elegantissima Flore Plena'. Berlèse listed two different Camellias with this name.

Elegantissima Bicolor. *Magazine of Horticulture,* 1839. Synonym for **Elegantissima Striata.**

Elegantissima Caracciolo. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.10. No description. Originated in Italy. (Believed extinct.)

Elegantissima Flore Plena. Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani, as 'Elegantissima Fl. Pl.'. Synonym for **Elegantissima.**

Elegantissima Nova. *(C.japonica),* Jacob Makoy et Cie Nursery Catalogue, 1839, p.16. No description. Originated in Italy. (Believed extinct.)

Elegantissima Rosea. Maupoil & Figlio Catalogue, 1853, p.38.Synonym for **Elegantissima.**

Elegantissima Striata. *(C.japonica),* Berlèse, 1837, *Monographie,* ed.1, p.113 invalidly as 'Elegantissima': Leaves large, ovate-lanceolate, strongly veined, of a deep green; flower double, 7.5 cm across with a white ground striped with rose-pink. Berlèse, 1843, *Iconographie,* pl.184. This name was corrected from 'Elegantissima' to **Elegantissima Striata** in Berlèse, 1840, *Monographie,* ed.2 index. Originated in Germany. Synonyms: 'Elegantissima Striata Alba', 'Dianthiflora Striata Alba', 'Elegantissima Bicolor'.

Elegantissima Striata Alba. Berlèse, 1843, *Iconographie,* pl.184 in Text. Synonym for **Elegantissima Striata** under plate.

Elegantissima Vera. Charles Van Geert Nursery Catalogue, No.105, 1848, p.110. Synonym for **Elegantissima.**

Elegantissima Waratah. Tagliabue, 1840, *Nomenclatore Camelliae....* Synonym for **Elegantissima.**

Elegontissima. Hovey & Co. Nursery Catalogue, 1834-1835, p.26. Orthographic error for **Elegantissima.**

Elen. *(C.japonica),* Sacco, 1830-1833 according to Schiavone, 1981, *Il Giardino nell Camelie,* pl.59. No description. Originated by Dr Sacco, Milan, Italy. (Believed extinct.)

Elen McCurdie. Mark S. Cannon Scion Catalogue, 1963-1964, p.5. Orthographic error for 'Ellen McCurdie'.

Elena. *(C.japonica),* Loudon, 1840. *The Gardeners' Magazine,* vol.16: Flowers light red with about 10 large, outer petals forming a cup, the inner petals forming a compact, central globe. Originated by Sacco, Italy.

Elena Boutourlin. *(C.japonica),* Burnier & Grilli, Catalogue, 1846-1847, p.52: Medium size flower, regularly imbricated with the centre forming an elegant spiral; colour a splendid rose with the centre a paler rose. van Houtte Catalogue, 1846-1847, 27:23: Imbricated red. Very beautiful. Synonym: 'Elena Sloane'. Orthographic variant 'Elena Bouturlin'. Originated in Italy by Sloane.

Elena Bouturlin. de Jonghe, 1851, *Traité de la Culture du Camelia,* p.105. Orthographic variant for **Elena Boutourlin.**

Elena di Troia. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.85 with colour photo; Medium size, anemone to loose peony, purple pink (RHS.CC.66C). Centre petaloids sometimes have white variegation. A seedling of **Ignea** x 'Rubra Simplex' **(Rubra),** first flowered in 1990. Originated by Dott. Guido Cattolica, Livorno, Italy.

Elena Hugoni. Van Geert Nursery Catalogue, 1848, p.16. Orthographic error for **Elena Ugoni.**

Elena Kyonii. *(C.japonica),* Verschaffelt Catalogue, 1846, p.53. No description. (Believed extinct.)

Elena Longhi. Berlèse, 1845, *Monographie,* ed.3. Orthographic variant for 'Hèléne Longhi'.

Elena Longo. Burdin Maggiore & Co. Catalogue, 1845, p.42.Orthographic error for 'Hèléne Longhi'.

Elena Lorenzo. *(C.japonica),* Tick Tock Nursery, 1967, ACS., *The Camellia Journal,* vol.22, No.4, p.14. No description. *American Camellia Yearbook,* 1968, p.129, Reg. No.990: A 7 year old chance seedling that first bloomed 1973; originated by Dr M.B. Wine, Thomasville, Georgia, USA. Plant growth is upright, dense and rapid in rate with dark green leaves, averaging 7.5 cm long x 3.8 cm wide. The semi-double flower is 10-12.5 cm across x 7 cm deep and has 28-30 petals with an odd petaloid. Colour is rosy red with yellow anthers and filaments. Blooms mid-season. Orthographic error: 'Eleana Lorenzo'.

Elena Monti. *(C.japonica),* Burdin Maggiore & Co. Catalogue, 1845. No description. Oudin, Lisieux Nursery Catalogue, 1845-1846, p.43: Imbricated, white suffused with very delicate pink. Isola Madre Catalogue, 1845. Pure white, medium size double with rare stripes of carmine. Originated in Italy. Orthographic variants: 'Helene Monti', 'Helena Monti' and 'Helena'.

Elena Nobile. Cuvelier, 1887, *Revue de l'Horticulture Belge et Etrangere,* vol.13, p.35. Orthographic error for **Elena Nobili.**

Elena Nobili. *(C.japonica),* Linden Nursery Catalogue, 1875. No description. Mercatelli Catalogue, 1881: Uniform vivid red, most beautiful, regularly imbricated. Originated by Franchetti, Florence Italy. Synonyms: 'Napa Red', 'Finest Napa Red'. Orthographic errors: 'Elena Nobile', 'Eleana Nobile', 'Elena Nobille', 'Eleanor Nobile', 'Elene Nobile', 'Elena Nobilis'. See colour photo, Macoboy, 1981, *The Colour Dictionary of Camellias,* p.83, 85 as 'Elena Nobile'. Chinese synonym: 'Ailena Nuobui'. Chinese synonym 'Yilina'.

Elena Nobille. van Houtte Catalogue, 1906, 307:239. Orthographic error for **Elena Nobili.**

Elena Nobilis. Auguste Van Geert Nursery Catalogue, No.83, 1882-1883. Orthographic error for **Elena Nobili.**

Elena Sloane. Burnier & Grilli, 1846-1847, p.52. As synonym for **Elena Boutourlin.**

Elena Ugani. Jules Monoreau, Nantes Nursery Catalogue, 1862, p.11. Orthographic error for **Elena Ugoni.**

Elena Ugoni. *(C.japonica),* van Houtte Catalogue, 1845-1846, 23:4. Burnier & Grilli Catalogue,1846--1847, p.52: Originated by Casoretti, Italy, 1845. Flower of 70 petals, well imbricated, milk white, splashed and divided with reddish streaks. Oudin Lisieux, Nursery Catalogue, 1845-1846, p.43: Imbricated, White spotted red. Orthographic errors: 'Helena Ugoni', 'Hellena Ugoni', 'Helena Hugonii', 'Elena Ugani', 'Elena Hugoni', 'Helena Ugonie'. See pl.II, Book XI, Verschaffelt, 1857, *Nouvelle Iconographie* as 'Helena Ugoni'.

Elene Longo. Burdin Maggiore & Co. Catalogue, 1871-1872. Orthographic error for 'Hélène Longhi'.

Elene Nobile. Coolridge Rare Plant Garden Camellia Catalogue, 1950. Orthographic error for **Elena Nobili.**

Elenor Franchetti. Gerbings Azalea Gardens Catalogue, 1943-1944. Orthographic error for **Eleonora Franchetti.**

Elenor Greenway. Cannon, 1962, ACS., *The Camellia Journal,* vol.17. Orthographic error for **Eleanor Greenway.**

Elenor Haygood. Gerbings Azalea Gardens Catalogue, 1943-1944. Orthographic error for **Eleanor Hagood.**

Elenor of Fair Oaks. Vanderbilt, 1941, *Camellia Research, II*, p.2. Orthographic error for **Eleanor of Fairoaks.**

Elenora Franchetti. Giardino Allegro Catalogue, No.80, 1930, p.39. Orthographic error for **Eleonora Franchetti.**

Eleonara. Rovelli Catalogue, 1896, p.41. Orthographic error for **Eleonora.**

Eleonor. Isola Madre Catalogue, 1845. Orthographic error for **Eleonora.**

Eleonora. *(C.japonica),* Auguste van Geert Nursery Catalogue, 1848, p.17: Rose form. Beautiful imbricated, brick red with crimson tints, petals regularly marked with a white stripe. Burnier & Grilli Catalogue, 1846-1847, p.52. No description. Fratelli Rovelli Catalogue, 1852, p.17: Imbricated. Bright red with crimson tint, all petals regularly edged white border. Rovelli Catalogue, 1896, p.41 as 'Eleonara': Large, variegated flowers. Originated in Italy. Orthographic variants: 'Ellenora', 'Eleonor'. Orthographic error: 'Eleonara'.

Eleonora d'Este. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.10. No description. Originated in Italy. (Believed extinct.)

Eleonora Campbell. Burdin Maggiore & Co. Catalogue, 1845, p.42. Synonym for **Lady Eleonor Campbell's.**

Eleonora Danovaro. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.66 as 'Eleonora Denavaro'. No description. Nutini Nursery Catalogue, 1869-1870: Flowers ivory white, double, lined with carmine. Orthographic error: "Eleonora Denavaro. Originated in Italy.

Eleonora Denavaro. Stefano Pagliai Catalogue, 1867, p.66. Orthographic error for **Eleonora Danavaro.**

Eleonora Franchetti. *(C,japonica),* Fratelli Roda, 1885, Nursery Catalogue, p.55: Large well made imbricated flowers; vivid red with a few white stripes. Backhouse Catalogue, 1873 as 'Eleanora Franchetti'. No description. Mercatelli Catalogue, 1881, p.18: Medium size imbricated flower, white lined with rose. Originated by Franchetti, Florence, Italy. Orthographic variant 'Elonore Franchetti'. Orthographic errors: 'Elenora Franchetti', 'Eleanora Franchetti', 'Elleanor Franchettii'.

Eleonore. *(C.japonica),* Catalogue des plantes La Société Royale d'horticulture Belgique, 1842, p.22: Rose pink, elongated petals, variegated with white. Originated in Italy.

Eleonore Campell. Baumann, Mulhouse Catalogue, 1841-1842, p.14. Orthographic error for **Lady Eleonor Campbell's.**

Eleonore Franchetti. Seidel, 1897, Preisverzeichnis, p.11. Orthographic variant for **Eleonora Franchetti.**

Elevige Stacchini. Mercatelli Catalogue, 1895. Orthographic error for **Edwige Stacchini.**

Elffeda. Shepherd & Co. Nursery Catalogue, 1883, p.37. Orthographic error for **Elfleda.**

Elfin. *(C.sasanqua), American Camellia Yearbook,* 1959, p.272, Reg. No.355: A 7 year old chance seedling, originated by J.M. Jones, Savannah, Georgia, USA that first flowered 1955. Leaves 6 cm long x 2.5 cm wide. The medium pink, formal double flowers are 6 cm across x 2.5 cm deep and resemble 'Pink Perfection', (**Otome**) and have 38 petals and 4 petaloids. Early flowering.

Elfin Charm. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.49: Oriental red. Miniature, formal double. Medium, compact, upright growth. Flowers mid-season. Originated by Harvey Short, Escondido, California, USA.

Elfin Rose. *(C.x hiemalis),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.95: Rose pink. Azalea form double. Originated by the McCaskill Gardens, Pasadena, California, USA. Chinese synonym 'Aimeigui'.

Elfingaston. Volonte Catalogue, 1888. Orthographic error for **Elphinstoniana.**

Elfleda. *(C.japonica),* Shepherd & Co. Nursery Catalogue, 1880. Red, very large. Originated in Australia. Orthographic errors: 'Elffeda', 'Elfreda'. (Believed extinct.)

Elfreda. Hackett Nursery Catalogue, 1893, p.133. Orthographic error for **Elfleda.**

Elgans Supreme. Liss Forest Nursery Catalogue, 1985, p.29. Orthographic error for **Elegans Supreme**.

Eligantissima. SCCS., 1942, *Classification of Camellia,* p.2. Orthographic error for **Elegantissima.**

Elihu Root. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.68. No description. Originated in USA. (Believed extinct.)

Elilia Borza. Mercatelli Catalogue, 1881. Orthographic error for **Emilia Borsa.**

Elinor. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogue,* p.68. Orthographic error for **Eleanor.**

Elinor Lee. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.68. Orthographic error for **Elinore Lee.**

Elinor of Fairoaks. Rhodellia Nursery Catalogue ca.1945. Orthographic error for **Eleanor of Fairoaks.**

Elinor Wilds. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.68. Orthographic error for **Eleanor Wilds.**

Elinore Lee. *(C.japonica),* SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.35: White. Medium size anemone to peony form. Mid-season flowering. Originated by R. Lee, Pensacola, Florida, USA. Orthographic error: 'Elinor Lee'.

Elinsonii. van Houtte Catalogue, 1841, 7:7 as 'Elinsoni'. Synonym for **Lady Eleanor Campbell's.**

Elira Centurioni. Backhouse Nursery Catalogue, 1873. Orthographic error for 'Elisa Centurioni', synonym for **Madame Elisa Centurioni.**

Elisa. Cachet Nursery Catalogue, 1840-1841, p.1. Orthographic variant for **Eliza.**

Elisa Alba. *(C.japonica),* Ambroise Verschaffelt, 1851-1852, Catalogue Général, p.16. No description. Originated in Belgium. (Believed extinct).

Elisa Casaretto. Mercatelli, 1881, Catalogo della Camelie, p.18. Orthographic error for **Elisa Casoretto.**

Elisa Casoretti. Rovelli Catalogue, 1893-1894. Orthographic error for **Elisa Casoretto.**

Elisa Casoretto. *(C.japonica),* Linden Catalogue, 1875. No description. Mercatelli, Catalogue, 1881, p.18: Medium size regular flower of most beautiful form, blush white, crowded petals; almost all striped rose-pink and carmine red. Deeper at the centre. Orthographic errors: 'Eliabetta Casaretto', 'Elia Casoretto', 'Elivira Casoretti', 'Elisa Casarotto', 'Elisa Casaretto'. Originated by Franchetti, Florence, Italy.

Elisa Casarotto. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.68. Orthographic error for **Elisa Casoretto.**

Elisa Centuriana. Escuela di Agricultura, 1882. Orthographic error for 'Elisa Centurioni', synonym for **Madame Elisa Centurioni.**

Elisa Centurion. Carriere, 1865, *Production & Fixation des variétées dans les végétaux.* Orthographic error for 'Elisa Centurioni', synonym for **Madame Elisa Centurioni.**

Elisa Centurione. Burdin Maggiore & Co. Catalogue, 1862. Orthographic error for 'Elisa Centurioni', synonym for **Madame Elisa Centurioni.**

Elisa Centurioni. *(C.japonica),* de Jonghe, 1851, *Traité de la Culture du Camellia,* p.105; Luzzatti, 1851, *Collezione di Camelie,* p.16. Synonym for **Madame Elisa Centurioni.**

Elisa Centurionii. Seidel, 1870, Pflanzen Catalog, p.6. Orthographic error for 'Elisa Centurioni', synonym for **Madame Elisa Centurioni.**

Elisa Centuroni. Auguste van Geert, 1854, Catalogue No.36, p.36. McIlhenny, 1937, *600 Varieties of Camellias.* Orthographic error for 'Elisa Centurioni', synonym for **Madame Elisa Centurioni.**

Elisa del Lungo. *(C.japonica),* Rovelli Catalogue, 1896, p.38, 41. Large flower, imbricated, ivory white, striped with shining carmine. Originated by Franchetti, Florence, Italy.

Elisa Formento. *(C.japonica),* Burdin Maggiore & Co. Catalogue, 1856-1857. No description. Originated in Italy. Orthographic errors: 'Elisa Frumento', 'Elisa Frumenti'. (Believed extinct.)

Elisa Franchetti. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.69: Splendid rose, veined with some marks of white. Imbricated. Centre cup-like. Originated in Italy by Cesare Franchetti.

Elisa Frumento. Jean Verschaffelt, 1864, Price List No.1, p.6. Verschaffelt Catalogue, 1867-1868, p.40. Orthographic error for **Elisa Formento.**

Elisa Herbert. van den Heede, Mai.1882, *Revue Horticole,* p.196. Orthographic error for **Elisabetta Herbert.**

Elisa Melliez. Nutini Catalogue, 1869-1870. Orthographic error for **Elisa Miellez.**

Elisa Mielez. Contini & Nava of Intra Catalogue, 1900. Orthographic error for **Elisa Melliez.**

Elisa Miellez. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.69: Pink with deeper veining, with the petals bordered by white. Perfect imbrication and serrated centre petals. Orthographic errors: 'Lisa Mielz', 'Eliza Mielez', 'Luisa Miellez', 'Elisa Melliez'. Originated in Italy.

Elisa Mielz. Contini Catalogue, 1915. Orthographic error for **Elisa Miellez.**

Elisa Odenwald. *(C.japonica),* Forrest, 1985, *Trees and Shrubs Cultivated in Ireland.* No description. No valid listing located.

Elisa Odero . *(C.japonica),* Auguste Van Geert Nursery Catalogue, No. 73, 1875-1876. No description. Linden Catalogue, 1875; Scarlatti Catalogue, 1888: Imbricated, ivory white with splashes, streaks and specks of blood red and vivid carmine. Flower medium size. Originated in Italy.

Elisa Reck. Seidel, 1846, Pflanzen Catalog, p.7. Orthographic error for **Eliza von der Recke.**

Elisa Reek. Cachet Catalogue, 1840-1841, p.2. Orthographic error for **Eliza von der Recke.**

Elisabeth. *(C.japonica),* Verschaffelt, 1851, *Nouvelle Iconographie,* book XII, pl.III: This pretty camellia, of Italian origin, belongs to the class of perfections, and is conspicuous for its white blooms with a pale yellow tint at the centre and a rare pink mark, and for its numerous, small, rounded or oblong petals, spread out at the circumference and upright at the centre. In America, the Portuguese variety 'Don Pedro V' (**Dom Pedro V, Rei de Portugal**) has long been known, erroneously, as 'Elisabeth' or 'Elizabeth', and both **Teutonia** and **Montironi** have also been confused with this camellia. However they are all separate and distinct cultivars. **Montironi** is a seedling raised by Casoretti in Italy and **Teutonia** is a German seedling of Gruneburg first listed by both van Houtte and Berlèse in 1843. Other synonyms

listed are 'Teutonia White', 'Trios Marie' and 'Victoria and Albert'. This latter is actually a synonym for **Teutonia.** Orthographic variants: 'Elizabeth','Elisabetta'.

Elisabeth. Henry A Dreer, Philadelphia Catalogue, 1935, p.105. Synonyms variously given are 'Montironi', 'Elizabeth', 'Teutonia White', 'Victoria and Albert', However it appears that the cultivar in question was an erroneous name for **Montironi.**

Elisabeth Aroen. Van den Broek Catalogue, 1976-1977, p.17. Orthographic error for **Elizabeth Arden.**

Elisabeth Blush. Griffiths R., 1958, *American Camellia Yearbook,* p.4, footnote 3. A blush pink sport of 'Dom Pedro V' as 'Elisabeth'. It is thought to fall within the scope of the cultivar **Elisabeth Pink.**

Elisabeth Boardman. Gerbings G.G., 1845, *Camellias,* p.219. Orthographic variant for **Elizabeth Boardman.**

Elisabeth Herbert. Ambroise Verschaffelt, 1857, Catalogue No.63, p.25. Linden Catalogue, 1875. Orthographic variant for **Elisabetta Herbert.**

Elisabeth Holmes. Griffin, ed., 1958, *Camellian,* vol.VIII, No.3, p.19. Orthographic variant for **Elizabeth Holmes.**

Elisabeth Holmes Junior. (*C.japonica), American Camellia Yearbook,* 1958, p.286, Reg. No.332: A 7 year old chance seedling that first flowered 1947; originated by Robert P. Holmes, North Carolina, USA. Plant growth is rapid, upright and dense. The leaves average 8 cm x 3.8 cm. The pale pink, semi-double flowers have 15 petals and 4 petaloids and average 11 cm across and 4 cm deep. Flowers early to mid-season.

Elisabeth Impérial. *(C.japonica),* Cachet Catalogue, 1840-1841, p.2. No description. Orthographic variant: 'Elisabeth Imperiale'. (Believed extinct.) Originated in France.

Elisabeth Imperiale. Baumann, Mulhouse Catalogue, 1841-1842, p.14. Orthographic variant for **Elisabeth Impérial.**

Elisabeth Le Bey. Thoby et al., 1988, *Tsubaki - A Propos de Camellia,* p.46. Orthographic variant for **Elizabeth Le Bey.**

Elisabeth Pink. *(C.japonica),* Vanderbilt, 1941, *Camellia Research, II,* p.2 as 'Elizabeth Pink'. Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I. p.122, 123 with colour plate facing p.132: Size of leaf and other parts follow the form 'Elisabeth', ('Dom Pedro V') so closely that there is no significant difference in this respect. However the heart of the flower is carmine rose 621, shading towards the petal margins to 621/3 and in some areas almost white. Petal venation is pronounced. Previously erroneously known in America as 'Montironi Rosea' and 'Montironi Pink'. Originated in USA. Sport: **Milady.**

Elisabeth Sizemore. *(C.japonica),* SCCS., 1970, *Camellia Nomenclature,* p.51: White. Large, round, semidouble with large, smooth, thick petals. Medium, spreading, upright growth. Early to mid-season blooming. Originated by D. English Jr, Dawson, California, USA.

Elisabeth Variegated. Vanderbilt, 1941, *Camellia Research, II,* p.2. Synonym for **Milady.**

Elisabeth White. Portland Camellia Nursery Catalogue, 1946-1947. Synonym for **Dom Pedro V Rei de Portugal.**

Elisabetta. Angelo Longone Catalogue, 1861. Orthographic variant for **Elisabeth.**

Elisabetta Casaretto. *R. Società Toscana di Orticultura Bollettino,* 1877. Orthographic variant for **Elisa Casoretto.**

Elisabetta Hebert. Stefano Pagliai Catalogue, 1867, p.66. Orthographic error for **Elisabetta Herbert.**

Elisabetta Herbert. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.16: Like the camellia 'Iride' with the colour different, vivid red at the circumference and the central petals, while the intermediate petals are lighter. Perfect imbrication. Verschaffelt, 1856, *Nouvelle Iconographie,* Book I, pl.I: All the petals which form the circumference and middle are ample, imbricated, upright in the form of a rose, of a vivid cherry red colour; those of the heart are compact, outspread and a beautiful pink. Originated in Florence, Italy. Orthographic variants: 'Elisabeth Herbert', 'Elizabeth Herbert', 'Elisa Herbert', 'Elizabetta Hebert'.

Elisabetta Sirani. *(C.japonica),* Anonymous, 1877, *R. Società Toscana di Orticulutura Bollettino,* 2:101-107. No description. Originated in Italy by Santarelli as a seedling of **Rosa Sinensis.** (Believed extinct.)

Elise. Maupoil & Figlio Catalogue, 1853, p.38. Orthographic variant for **Eliza.**

Elise Aldrich. *(C .japonica),* ACS., Feb. 1989, *The Camellia Journal,* vol. 44, No. 1 , p.12, Reg. No.2106: Medium size, white, formal double, *C.japonica* chance seedling. Blooms mid-season to late. Originated by Johnny Aldrich, Brooklet, Georgia, USA. *American Camellia Yearbook,* 1989, p.121: Average size bloom, 10 cm across x 3.2 cm deep with 109 petals, spiraled and cupped. Plant growth is upright, spreading and medium in rate with dark green leaves, 10 cm long x 5 cm wide.

Elise Jury. Hilsman, 1966, *American Camellia Yearbook,* p.139. Orthographic error for **Elsie Jury.**

Elise Reek. Baumann, Mulhouse Catalogue, 1841-1842, p.14. Orthographic error for **Elisa van der Recke.**

Elise Winter. *(C.reticulata x C japonica), American Camellia Yearbook,* 1980, p.164, Reg. No.1655: A very large, rose pink, red veined with fading centre, rose form double *C.reticulata* hybrid ('Crimson Robe' (**Dataohong**) x 10XB [1OX = 'Cornelian' (**Damanao**) x **Mrs D.W. Davis**]), flowering mid-season to late; originated by Frank Pursel, Oakland, California, USA. The 7 year old seedling first bloomed 1978. Average flower size 14.5 cm across x 5 cm deep, with 5 tiers of petals and 18 petals in outer tier. Plant growth is upright, semi-open and rapid with dark green leaves, heavily veined, 12.5 cm x 8 cm.

Elisia. Robert Tyas, 1843, *Popular Flowers,* p.85. Loddiges Catalogue 1844, p.6. Orthographic error for **Eliza.**

Eliska-Deon. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.34: Dark red. Full peony form. Blooms early to mid-season. Originated by Mrs V.D. Myers, McComb, Mississippi, USA.

Elixa. Isola Madre Catalogue, 1845. Orthographic error for **Eliza.**

Eliza. *(C.japonica),* Harrison ed., 1838, *Floricultural Cabinet,* p.149, as 'Double white'; Marnock, 1839, *Floral Magazine,* 3(32):258: Originated by Robert Buist, USA. Large white with a few rose stripes. Charles Van Geert Nursery Catalogue, 1846, p.67 as 'Elisa': Packed, globular, peony form, white flower with yellowish tints. Synonym: 'Grunellii Major'. Orthographic errors: 'Elixa', 'Elise', 'Elisia', 'Elisa'.

Eliza Centurioni. William Bull Nursery Wholesale Catalogue, 1872, p.154. Synonym for **Madame Elisa Centurioni.**

Eliza Centurioni Marquess. Charles van Geert, 1850, Catalogue No.117, p.6. Synonym for **Madame Elisa Centurioni.**

Eliza Lockley. *(C.x williamsii),* ACRS., Dec.1990, *Camellia News,* No.115, p.10, Reg. No.383: Originated by Constance M. Davidson, Roland Ave. Wahroonga, NSW, Australia as a chance seedling of **Margaret Waterhouse**, that first flowered 1982. A semi-double pink flower (RHS.CC.68C), shading to a lighter pink (ME12 A2) at centre of flower, 10-14 petals, 11 cm across x 6 cm deep. Petals notched, veined deeper colour, standing apart. Flowers over a long

season on a slow growing, dense, weeping plant. Leaves glossy green, elongate, serrations average, apex acuminate,9cm x 4cm. Chinese synonym 'Yilida'.

Eliza von der Recke. *(C.japonica),* Jacob Makoy Nursery Catalogue, 1839, p.17. No description. Originated in Germany. Orthographic errors; 'Elisa Reek', 'Elisa Reck'. (Believed extinct.)

Elizabeth. *(C.x williamsii),* G. Reuthe Nursery Catalogue, 1954, p.9: Delicate rose-pink single, seedling of *C.saluenensis x* Alba Simplex. Originated in the UK. Name changed to **Elizabeth de Rothschild,** due confusion with **Elisabeth.**

Elizabeth. McIlhenny, 1937, *600 Varieties of Camellias.* Orthographic variant for 'Elisabeth', pseudonym for 'Dom Pedro V'.

Elizabeth Acree. *(C.japonica),* ACS, Aug. 1996, *The Camellia Journal,* vol.51, No.2, p.31, Reg. No.2376. A medium size, white fading to medium pink outer petals, formal double seedling of 'Magnoliaeflora' (**Hagoromo**). Flowers mid-season to late. Originated by Tom Dodd, Semmes, Ala., USA. *American Camellia Yearbook,* 1996, p.2, colour photo before p.1. The 14 year old seedling first flowered in 1982. Flower size is 10 cm across x 3.8 cm deep, with 40 petals. Plant growth is upright, dense and average in rate, with dark green leaves 7.5 cm long x 5 cm wide.

Elizabeth Allan. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.68. Error for **Elizabeth Arden.**

Elizabeth Ann. *(C.japonica),* ACS, *The Camellia Journal,* Nov. 1999, p.19, Reg. No.2513. A white edged pink, peony to formal double, chance seedling. Flowers mid-season to late. Originated by Dr Tom Dodd, Semmes, Ala., USA. *American Camellia Yearbook,* 1999, p.6, colour photo before p.1. The 16 year old seedling first flowered in 1987. Average flower size is 12.7 cm across x 5 cm deep, with 60 petals, yellow anthers and filaments. Petals are heavy textured with sheen. Plant growth is upright, spreading, dense and vigorous, with light green leaves 9.5 cm long x 5.7 cm wide.

Elizabeth Ann Linhuber. *(C.japonica), American Camellia Yearbook,* 1970, p.163, Reg. No.1109: A 5 year old seedling that first bloomed 1966. Seed parent is 'Lady Campbell Mahogany' and pollen parent 'Joe Reuther'. Originated by Joseph C. Reuther, New Orleans, Louisiana, USA. Plant growth is spreading and rapid with dark green leaves, 8.5 cm long x 4 cm wide. The anemone form flower averages 11 cm across x 6 cm deep with 37 petals and 95 petaloids. Colour is dark red with dark purple veins, yellow anthers and white filaments. Flowers early to mid-season.

Elizabeth Anderson. *(C.x williamsii),* Cobby Camellias Catalogue, 1977: Medium size, pink, formal double. Mid-season flowering. However Baldwins Nursery Catalogue, 1984 has: "Pale pink, semi-double". Originated in England.

Elizabeth Arden. *(C.japonica),* Magnolia Gardens Catalogue, 1942-1943; Gerbings Azalea Gardens Catalogue, 1943-1944: This variegated Camellia opens rose form, when fully developed stamens show with mingled petaloids, semi-double. Often sporting solid rose-red flowers. Late flowering. Foliage, long, narrow, medium green. Originated at Magnolia Gardens, Charleston, South Carolina, USA. Orthographic errors: 'Elizabeth Aroen', 'Elisabeth Areon', 'Elizabeth Allan'. Sport: **Pink Elizabeth Arden.**

Elizabeth Arden Pink. Fruitland Nursery Catalogue, 1945-1946, p.20. Orthographic variant for **Pink Elizabeth Arden.**

Elizabeth Arden Variegated. Fruitland Nursery Catalogue, 1945-1946, p.20 as 'Elizabeth Arden Var'. Orthographic error for **Elizabeth Arden.**

Elizabeth Astles. *(C.reticulata),* ACRS., 1976, *Camellia News,* No.62, p.31, Reg. No.181: Originated by Edgar Sebire, Wandin North, Victoria, Australia. Seed parent *C.reticulata* **Buddha.** First bloomed 1973. The bright pink, 16 cm, semi-double to informal double flowers, blooms in midseason. The dark green, lanceolate leaves are 11.6 cm x 5.5 cm with a short, pointed apex. See colour photo, ACRS, 1979, *Camellia News,* No.71. Sport: **Elizabeth Astles Variegated.**

Elizabeth Astles Variegated. *(C.japonica),* Cannon, 1982, ACS., *The Camellia Journal,* vol.37, No.4 as 'Elizabeth Astles Var.'. A virus variegated form of **Elizabeth Astles** - Bright pink and white. Originated in USA.

Elizabeth B. Hunt. (*C.reticulata* hybrid). ACS, *The Camellia Journal,* June 2008, p.31 with colour photo, Regn No.2721. A chance seedling which first flowered 1998. Originated and propagated by E. Hulyn Smith, Valdosta, Ga., USA. A 9 cm diameter pink, semi-double flower, with golden anthers and white filaments. Heavy petal texture, and flowers early to late. Plant is upright, dense and vigorous. *American Camellia Yearbook,* 2008, p.112 with colour photo; Dark green leaves 12 cm x 7 cm.

Elizabeth Bay. *(C.japonica),* Outteridge, 1962, *1000 Named Camellias in Australia,* p.8: Soft rose coloured informal double. Medium size. Flowers mid-season. Originated as a large old plant growing at Elizabeth Bay, Sydney, NSW, Australia. Removed to the grounds of Sydney University by Professor Waterhouse in the late 1940's.

Elizabeth Bennett. *(C.japonica),* Tammia Nursery Catalogue, 1965-1966. Description not to hand. Originated in USA. No valid listing located.

Elizabeth Boardman. *(C.japonica),* Magnolia Gardens & Nursery Catalogue 1942-1943; Gerbing, G.G., 1945, *Camellias,* p.219: A fine aristocrat from Magnolia Gardens. The exquisite texture combined with large size, make this an exceptional variety. Pure white semi-double flowers, with irregular petals are produced freely, early to mid-season. Large rounded, bright green foliage. The vigorous plants grow upright. Very hardy. Fendig, 1949, *American Camellia Catalogue:* A large white, irregular form. Petal texture resembles a magnolia, 11-12.5 cm across. Satiny, yellow-white stamens intermixed with fluted petals. Flowers mid-season. Leaves large, rounded, light green, tapered ends, blunt apex, finely serrate, 8.5 cm x 3.8 cm. For colour illustrations see: Urquhart, 1960. *The Camellia,* pl.XXIX & XXX; also pl.51, p.38, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Originated as a seedling at Magnolia Gardens, Charleston, South Carolina. Orthographic variant: 'Elisabeth Boardman'. Sport: **Elizabeth Boardman Special Peony.** Chinese synonym 'Bodeman'.

Elizabeth Boardman Peony. Walden Jr., 1965, ACS., *The Camellia Journal,* vol.20, No.3. Synonym for **Elizabeth Boardman Special Peony.**

Elizabeth Boardman Special Peony. *(C.japonica),* Walden Jr., 1964, ACS., *The Camellia Journal,* vol.19, No.2, p.18: A large, peony form of **Elizabeth Boardman,** originated by Walden Jr., USA. Synonym: 'Elizabeth Boardman Peony'.

Elizabeth Bolitho. *(C.x williamsii).* Trewidden Estate Nursery Retail Camellia List 1995, p.4: Single pink with flowers opening flat; free flowering. Original plant is growing at Tregwainton, Cornwall, England. Compact habit, slightly pendulous. The flowers resemble the Higo form.

Elizabeth Carroll. *(C.japonica),* Griffin ed., 1958, *Camellian;* Hillcrest Nursery Catalogue, 1958. No description. SCCS, 1960, *Camellia Nomenclature,* p.49: Large size, semi-double, white. Vigorous, upright growth. Blooms early. Originated in USA at Casadaban Nursery, Abita Springs, Louisiana.

Elizabeth Cole. *(C.japonica),* Hazlewood Nursery Catalogue, 1947, p.7. Irregular double, peony form, self white, to 10 cm across x 4.5 cm deep. Petals 12-15, near orbicular, undulate, multiple irregular notching. Centre of flower, fascicles of petaloids and folded petals, inconspicuous

stamens, white filaments, golden anthers. Mid-season flowering. Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.117. Originated in Australia.

Elizabeth Colville. *Camellia Digest,* 1(3),1943. Synonym for **Lois Hill.**

Elizabeth Cooper. *(C.japonica), American Camellia Yearbook,* 1977, p.210, Reg. No.1461: A medium size, pure white, formal double, mid-season flowering. This 12 year old chance *C.japonica* seedling first bloomed 1973. Originated by Tammia Nursery, Slidell, Louisiana, USA. The bloom has 60 petals. Average size, 8.5 cm across x 5 cm deep with 5 perfect swirls. Plant growth is upright with dark green leaves, 7.5 cm x 5 cm. Colour photo, front cover ACS, 1977, *The Camellia Journal,* vol.32, No.4.

Elizabeth Councilman. *(C.japonica),* Dekker, 1961, *American Camellia Yearbook,* p.59: New introduction, a solid red, semi-double of unknown parents. Good texture and substance. A brilliant red semi-double with fluted petals. Medium, spreading growth. Blooms mid-season to late. Originated by E. Councilman, California, USA.

Elizabeth de Rothchild. Haskins Nursery Lid Catalogue, No.68, 1967, p.4. Orthographic error for Elizabeth de Rothschild.

Elizabeth de Rothschild. *(C.x williamsii),* Peer, 1951, *American Camellia Yearbook,* p.114 as 'Elizabeth Rothschild': "Williamsii varieties of importance include 'Elizabeth Rothschild' (**Adolphe Audusson** x *C.saluenensis)* having large double, pink blossoms." Originated by Mr Hanger, while at Exbury, England it has a medium size, semi-double, rose-pink flower in mid-season to late. Orthographic variants: 'Elizabeth Rothschild', 'Elizabeth de Rotschild', 'Elizabeth de Rotschild', 'Elizabeth de Rothschild'. Under the name 'Elizabeth' G. Reuthe Ltd 1954 catalogue states that it is [*C.saluenensis x* **Alba Simplex**], which is actually **Francis Hanger.**

Elizabeth de Rotschild. Shanahan's Villa Gardens Catalogue, 1967, p.26. Orthographic variant for **Elizabeth de Rothschild.**

Elizabeth Deep Pink. Vanderbilt, 1941, *Camellia Research, II,* p.2. Synonym for **Elisabeth Pink.**

Elizabeth Dell. *(C.japonica), American Camellia Yearbook,* 1966, p.87, Reg. No.854: A 7 year old chance seedling that first bloomed 1960; originated by Julington Nurseries, Jacksonville, Florida, USA from the seed parent **Imura.** Plant growth upright and open. The light green, heavy textured leaves average 8.5 cm long x 4 cm wide. The semi-double flower is white with a few red dashes and has light yellow anthers and white filaments. Size is 11 cm across with 15-18 petals and 16-18 short petaloids. Blooms mid-season.

Elizabeth Dickens. *(C.japonica),* Mulroy Garden's Catalogue, 1963-1964, p.10: Anemone form, large size, blush pink flowers. Vigorous habit and free flowering. Blooms mid-season. Originated in Ireland.

Elizabeth Dowd. *(C.japonica), American Camellia Yearbook,* 1960, p.196, Reg. No.516: A 9 year old chance seedling that first bloomed 1959; originated by H.E. Ashby, South Carolina, USA. Plant growth is upright, rapid and open with light green leaves. The flower is a white rose form double,11-12.5 cm across x 6 cm deep with 25 petals having small dashes of pink on some petals; stamens with golden anthers. Blooms mid-season. Sports include: **Elizabeth Dowd Rose, Elizabeth Dowd Silver, Elizabeth Dowd Stripe**. See colour photo, front cover ACS., 1960, *The Camellia Journal,* vol.16, No.1 and pl.52, p.38, *Encyclopedia of Camellias in Colour,* vol.II, 1978.

Elizabeth Dowd Mystique. *(C.japonica),* ACS, *The Camellia Journal,* Dec. 2013, p.27 with colour photo; Regn No.2885; A 23 year old sport of **Elizabeth Dowd Silver**, first flowered 1988 Originated, registered and propogated by James & Elaine Smelley, Moss Point, Miss., USA. ACS, *Yearbook,* 2013, p.113 with colour photo; Large size, 10cm diameter x 5 cm deep flower is whie to pale pink with darker pink water markings, semi-double to rose form double. Base and edges of petals are white with water markings in the centre. Yellow anthers

and white filaments. Falls whole. Plant is upright and open, with average growth rate. Mid-green leaves average 7cm x 4.5cm with medium serration. Flowers midseason to late

Elizabeth Dowd Rose. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature,* p.55: Sport of **Elizabeth Dowd.** Solid rose pink. Originated by W.F. Wilson, Louisiana, USA.

Elizabeth Dowd Silver. *(C.japonica), American Camellia Yearbook,* 1974, p.169, Reg. No.1289: A 5 year old sport of **Elizabeth Dowd** with same flower size, formation and growth habits. Originated by W.F. Wilson, Louisiana, USA. The 11-12.5 cm across x 6 cm deep, rose form to semi-double flower is blush pink with wide white margins, 25 petals. Occasionally produces a blush form with a red streak. Blooms Mid-season. Chinese synonym: 'Baiban Da Yilishabai'.

Elizabeth Dowd Stripe. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature,* p.55: A sport of **Elizabeth Dowd.** White with numerous red and pink stripes. Originated by W.F. Wilson, Louisiana, USA.

Elizabeth Fleming. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Pink. Medium size, semi-double. Medium bushy growth. Mid-season flowering. Originated as a seedling of 'Donckelaeri' (**Masayoshi**) by A. Boardman, Augusta, Georgia, USA. See black and white photo: Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III, p.76. Sport: **Elizabeth Fleming Variegated.** Orthographic error : 'Elizabeth Flemming'. Synonym: 'Elizabeth Fleming Boardman'.

Elizabeth Fleming Boardman. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.69. Synonym for **Elizabeth Fleming.**

Elizabeth Fleming Variegated. *(C.japonica),* Fruitland Nursery Catalogue, 1945-1946, p.27: A white variegated form of **Elizabeth Fleming** - Pink and white. Originated in USA.

Elizabeth Fox. *(C.japonica), International Camellia Journal,* No.16, 1984, p.77, Reg. No.9: Originated by D.B. Fox, Hockley, Essex, England. Parentage unknown. Flower, medium size, formal double, 7.5 cm across with 57 petals, colour RHS.CC.50B, Red Group with some white stripes at the base of the outer petals. Blooms mid-season, opens flat and shatters similar to **Jouvan.** Leaves flat, oval, finely serrate, medium size. The 8 year old seedling first flowered 1978.

Elizabeth Gibbs. *(C.japonica), American Camellia Yearbook,* 1955, p.336, Reg. No.224: A 4 year old chance seedling originated by Mrs Earl P. Seay, South Carolina, USA. First flowered 1953. The leaves are large, oval, dark green. Flower buds are round. The rose-red flowers, 9-10 cm across, are incomplete double with mixed petaloids, similar to **Nobilissima** with 90-125 petals. Flowering season early.

Elizabeth Glunt. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997, p.16, Reg. No.2416. A miniature, rose pink formal double chance seedling, flowering mid-season. Originated by Charles T. Elliott Sr, Swainsboro, Ga., USA. *American Camellia Yearbook,* 1997, p.3, colour photo before p.1. The 17 year old seedling first flowered in 1990. Average flower size is 7 cm across x 1.8 cm deep with 36 incurved petals. Plant growth is upright, open and average, with dark green leaves 9 cm long x 3.2 cm wide.

Elizabeth Glunt Variegated. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1997, included in Reg. No.2416. A miniature, rose pink variegated white with rose pink stripes. All other details as for **Elizabeth Glunt.**

Elizabeth Gorton. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* A large, pure white, semidouble, about 12.5 cm across. There are 2 rows of large, stiff petals which are notched

and turn down at the tips and 3 rows of outer portion of bloom which are ruffled and turn upward. The columnar stamen centre gives the flower the appearance of a white **Adolphe Audusson.** Leaves are large, stiff and dark green on a plant with an average, compact habit. Originated by H.E. Jenkins, Glendale, California, USA, it first flowered in 1950. Reg. No.156, *American Camellia Yearbook,* 1954, p.309.

Elizabeth Grady. Magnolia Gardens and Nursery Catalogue, 1942-1943. Synonym for **Margaret Higdon.**

Elizabeth Grandy. Gerbing, G.G., 1945, *Camellias,* p.144. Orthographic error for 'Elizabeth Grady', synonym for **Margaret Higdon.**

Elizabeth Herrin. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Light pink. Very large, semi-double. Medium, compact growth. Mid-season blooming. Originated by Herrin, USA.

Elizabeth Hicklin. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.39: Soft pink shading to lighter pink at ruffled edge of petals. Large, rose form double with light stamens and a few crinkled petaloids. Compact, upright growth. Originated by Mrs E.W. Hicklin, Columbia, South Georgia, USA. Sport: **Elizabeth Hicklin Variegated.**

Elizabeth Hicklin Variegated. *(C.japonica),* Gentry, 1968, ACS., *The Camellia Joural,* vol.23, No.1 as 'Elizabeth Hicklin V.'. A virus variegated form of **Elizabeth Hicklin** - Soft pink and white. Originated in USA.

Elizabeth Higdon. The Pacific Camellia Society, 1946, *Camellia Nomenclature,* p.24. Orthographic error for **Margaret Higdon.**

Elizabeth Hill. *(C.japonica), American Camellia Yearbook,* 1965, p.23, Reg. No.676: A 4 year old, miniature *C.japonica* seedling of **Buddy,** pollen parent **Memento,** that first flowered 1962; originated by Wm. F. Hutchison, Texarkana, Arkansas, USA. Medium, slow, spreading growth with dark green leaves 7.5 cm long x 3 cm wide. The anemone form flower, 4.5-6 cm across x 5 cm deep, has 14-16 petals in 2-3 rows, 100-110 petaloids with a few stamens. Occasionally sports a solid pink flower. Blooms early to late.

Elizabeth Holmes. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1952-1953: Light pink with deeper pink markings. Large, cup shaped, semi-double, opening with a bud centre. Late flowering. Compact growth. Originated by Magnolia Gardens, Charleston, South Carolina, USA. Orthographic variant: 'Elisabeth Holmes'.

Elizabeth Holmes Junior. SCCS., 1960, *Camellia Nomenclature.* Orthographic variant for **Elisabeth Holmes Junior.**

Elizabeth Hyatt Haynie. *(C.japonica), American Camellia Yearbook,* 1968, p.130, Reg. No.1003: A 5 year old chance seedling which first flowered 1963; originated by J.M. Haynie, Theodore, Alabama, USA. Plant habit is upright and open with dark green leaves, 8.5 cm long x 4 cm wide. The semidouble flower is 13-15 cm across x 7.5 cm deep. Clear, bright rose with bluish undertones, 18 large petals with 5-7 petals folded and upright. Firm texture. Blooms mid-season to late.

Elizabeth Johnston. Waterhouse, 1952, *Camellia Trail,* p.13. Synonym for **Lady Loch.**

Elizabeth Johnstone. *(C.reticulata),* RHS., 1958, *The Rhododendron and Camellia Yearbook,* No.12, p.107, black and white photo, fig.44 facing p.89: A cross between *C.reticulata* wild form and

an unknown camellia, which has proved hardy in Cornwall and reached a height of 10 feet (3.1 m). The flowers are 11 cm across with 9 waved petals and coloured a bright, rich shade of Camellia Rose (HCC.622/2). It is of interest that the serrations of the leaves are very close together. Exhibited by G.H. Johnstone, Trewithin, Cornwall, UK. Received an RHS, Award of Merit, March 19th 1957.

Elizabeth Le Bey. *(C.japonica),* Fendig, 1950, *American Camellia Catalogue:* Large, rose-pink, incomplete to irregular double, 9-12.5 cm across. There are numerous petaloids, some of which are erect in the centre and partly conceal short stamens. Leaves are yellow-green, lanceolate, 8.5 cm x 3.2 cm. Slightly serrate with petioles 10 mm long, on a plant of rapid, spreading growth. Originated by G.H. Wilkinson, Pensacola, Florida, USA from seed imported from Japan in 1937. First bloomed 1946. Registration No.37 in the ACS., *Quarterly,* 1950, vol.5, No.1. Orthographic variant: 'Elizabeth Lebey', 'Elisabeth Le Bey'. Sports: **Elizabeth Le Bey Blush, Elizabeth Le Bey Variegated, Elizabeth Le Bey White.** See colour photo, front cover, *New Zealand Camellia Bulletin,* 1964, vol.III, No.5.

Elizabeth Le Bey Blush. *(C.japonica), American Camellia Yearbook,* 1967, p.226, Reg. No.949: A sport of **Elizabeth Le Bey,** first observed 1960 by Mrs W.M. Harrison, Pensacola, Florida, USA. The anemone form flowers are 11-12.5 cm across x 7.5 cm deep and have 14 petals and 238 petaloids. Colour light pink, margined with white, with gold anthers and white filaments. Blooms mid-season.

Elizabeth Le Bey Variegated. *(C.japonica),* Tammia Nursery Catalogue, 1958 as 'Elizabeth Le Bey Var.'. A virus variegated form of **Elizabeth Le Bey** - Rosepink and white. Originated in USA.

Ella Drayton. *(C.japonica),* Berckman, 1908, *Country Life in America,* p.548, with black and white illustration: Dark rose, exquisite form, imbricated with slightly cupped inner petals. A lighter coloured centre and loose non-tiered imbrication. Originated at Magnolia Gardens, Charleston, South Carolina, USA. This name has been erroneously used for a number of cultivars, such as **Incarnata** and **Maria Morren**. There is yet a third; a small, formal double, pink fading to lighter pink at the centre which has been reidentified as 'Ella Drayton (Magnolia Gardens)'. Synonyms: 'Lady Margaret', 'Climax'. Sport: **Ella Drayton Variegated.**

Ella Drayton (1). Fendig, 1963, *American Camellia Yearbook.* Erroneously for **Incarnata.**

Ella Drayton (2). Fendig, 1953, *American Camellia Yearbook.* Erroneously for **Maria Morren.**

Ella Drayton (Magnolia Gardens). SCCS, 1954, *The Camellia. Its Culture and Nomenclature:* A pink fading to lighter pink in centre. Small formal double. This is believed synonymous with Berckman's **Ella Drayton.**

Ella Drayton Variegated. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* A white blotched form of **Ella Drayton.** Originated in USA.

Ella Frost. *(C.japonica),* Vanderbilt, 1941, *Camellia Research, II,* p.2. No description. Originated by J.R. Rosa Camellia Nurseries, Tallahassee, Florida, USA.

Ella Gamlin. *(C.x williamsii), New Zealand Camellia Bulletin,* 1972, vol.VII, No.6, p.35, Reg. No.69: a chance *C.saluenensis* seedling originated by B.J. Rayner, Stratford, New Zealand, that first bloomed 1966. The plant is a slow grower with spreading, open habit, the leaves being dark green, averaging 10 cm x 4 cm. The flowers are single with 8 petals and an occasional petaloid, and measures 10 cm across x 4.5 cm deep with a large, central boss of gold stamens with cream filaments, giving the appearance of a Higo camellia. The colour is deep pink and flowers from early to mid-season.

Ella Gayle Hamlin. *(C.japonica),* ACS., Nov. 1989. *The Camellia Journal,* vol.44, No.4, back cover, colour photo and description: A beautiful shade of vivid pink that changes shades at various

times of the day. Outstanding semi-double to peony form with small petaloids surrounding high, bright yellow stamens; 12.5-13 cm across. A mid-season blooming, chance seedling, originated by Ferol & Sam Zerkowsky, Tammia Nursery, Pearl River, Louisiana, USA. See ACS. Nov.1990, *The Camellia Journal,* vol.46, No.4, p.18, Reg. No.2195. *American Camellia Yearbook,* 1990, p.88, colour photo between p.90-91: The 32 year old seedling first bloomed 1960. Average flower size is 12.5 cm across x 8 cm deep with 70 petals, 12 petaloids and bright yellow stamens. Plant growth is upright, spreading and rapid with dark green leaves, 8 cm long x 4 cm wide.

Ella Hearn. SCCS Bulletin, vol.11, No.2, p.17, Dec. 1949. SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.35. Abbreviation for **Ella A. Hearn.**

Ella Jane Metcalf. *(C.japonica),* SCCS., 1981, *Camellia Nomenclature,* p.56: White with a few pink stripes. Medium size, formal double. Mid-season to late flowering. Originated by R. Gentry, Jackson, Mississippi, USA.

Ella Joe. ACS, *The Camellia Journal,* Dec. 2006, p.13 with colour photo; Reg. No.2693. A chance seedling that first flowered 1988. Originated by Dick Hardison, Tallahassee, Fla., USA. The clear pink, 10 cm diameter, formal double flower has 5 frosted centre rows of petals. Falls in one piece. Plant is upright, with average growth, and flowers mid-season. *American Camellia Yearbook,* 2006, p.56 with colour photo; Dark green leaves are are 9 cm x 4.5 cm.

Ella Mine. Antony Estates Nursery Catalogue, 1979-1980. Orthographic error for **Ellamine.**

Ella Ward Parsons. *(C.japonica), American Camellia Yearbook,* 1968, colour illustration facing p.54: Originated as a seedling by Dr J.M. Habel Jr, Suffolk, Virginia, USA and named for the wife of the President of the ACS. White shaded orchid pink. Medium size formal to rose form double.

Ella Weeks. *(C.japonica),* ACS., Nov.1989, *The Camellia Journal,* vol.44, No.4, p.17, Reg. No.2168: Large size, light pink with deeper pink margin, semi-double *C.japonica* chance seedling. Blooms midseason. Originated in USA by Mrs H.C. Scott, Aiken, South Georgia. *American Camellia Yearbook,* 1989, p.121: The 11 year old seedling first bloomed 1984. Average flower size, 11 cm across x 5 cm deep with 20 petals and golden anthers. Cold hardy. Plant growth is spreading and medium in rate with dark green leaves 8 cm x 5 cm.

Ella Wood. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Medium to large, white variegated, incomplete double, 8.8-10.5 cm across. It is frequently variegated with pink stripes or blotches. There are 42-45 petals. The stamens are in 5 separate groups and intermix with large petaloids. Flower buds are large, round and full with white coloration. Leaves are dark green, narrowly oval, 8.5 cm x 4 cm, apex blunt, serrations coarse. Plant habit is open, upright and rapid. Originated by H.D. Ponton, Lake Charles, Louisiana, USA from seed of **Tricolor White** that first flowered 1945. Reg. No.127, *American Camellia Yearbook,* 1954. Mutation: **Ella Wood Pink.**

Ella Wood Pink. *(C.japonica), American Camellia Yearbook,* 1961, p.222, Reg. No.527: A sport of **Ella Wood** originated by the Orange Dale Nursery, Ragby, Louisiana, USA. Habit is upright and open with light green leaves 6 cm long x 3.5 cm wide. Flowers are semi-double to peony form, clear pink with yellow stamen, 10-11 cm across x 6 cm deep. Flowers mid-season.

Ellamine. *(C.x williamsii),* ANZCRS, 1958, *Camellia Annual,* No.5, p.30, Reg. No.31: A saluenensis hybrid raised by E.G. Waterhouse - No.11 in a batch of seedlings - flower large, single, 10 cm across, 8 petals, colour fuschine pink 627/1. Flowers mid-season. Originated by E.G. Waterhouse, Gordon, NSW, Australia. Orthographic errors: 'Ella Mine', 'Ella May'.

Elaski. *(C.x williamsii), American Camellia Yearbook,* 1961, p.222, Reg. No.555: A 4 year old hybrid *C.x williamsii* seedling that first bloomed 1960; originated by K.M. White, Devon, England. Leaves dark green, averaging 9.5 cm long x 4 cm wide. The rose pink flower, 10 cm across x 6.5 cm deep, is peony form with yellow anthers and has 24 petals and many petaloids. Late flowering.

Elsie Brinsley. *(C.sasanqua),* ACRS., 1975, *Camellia News,* No.58A, p.9, Reg. No.172: Originated by Alice Spragg, Sutherland, N.S.W., Australia. First flowered 1970. The semi-double, soft rose-pink flowers bloom early to mid-season on an upright, open, vigorous plant. The 5 cm x 2 cm medium green, lanceolate leaves are bluntly pointed with small serrations.

Elsie Dryden. *(C.reticulata* hybrid), SCCS., 1972, *Camellia Nomenclature,* p.156: Delicate, light pink with a lavender cast. Large semi-double. Medium growth rate. Midseason flowering. A seedling from *C.reticulata* **Confucius** x *C.japonica,* originated by H.E. Dryden, San Marino, California, USA.

Elsie Hughes. *(C.reticulata.x C.japonica), American Camellia Yearbook,* 1985, p.183, Reg. No.1969: A very large, pink, formal double seedling of 'Crimson Robe' (**Dataohong**) x **Cameron Cooper**, that blooms mid-season; originated by Frank Pursel, Oakland, California, USA. The 6 year old seedling first bloomed 1980. Average flower size 14.5 cm across. Plant growth is spreading and medium. Chinese synonym 'Xiusi'.

Elsie Jury. *(C.x williamsii), New Zealand Camellia Bulletin,* 1964, vol.IV, No.1, p.10, Reg No.21: A hybrid seedling of *C.saluenensis x C.japonica* **Pukekura**. Originated by L.E. Jury, New Plymouth, New Zealand. The plant has a spreading, open habit of growth, medium green foliage. The flowers have a deep, rounded, peony form with up to 30 petals and a large number of petaloids. The colour is vivid pink with slight orchid undertones. Stamens pale yellow and it flowers mid-season to late. Size,11-13 cm across x 8-10 cm deep. Also reg. No.799, ACS. It received the "Edward H. Metcalf Hybrid Award" in 1968, the "National Hall of Fame Award" for 1978 and the "Aubrey Harris Hybrid Award", 1967. See colour photo facing p.80, *American Camellia Yearbook,* 1962-1963; the front cover *New Zealand Camellia Bulletin,* 1966, vol.IV, No.6; and p.25, ACRS., 1966, *Camellia News,* No.24. Sport: **Elsie Jury Variegated,** Chinese synonym: 'Aierxi Jurui'.

Elsie Jury Variegated. *(C.x williamsii),* Cannon, 1967, ACS., *The Camellia Journal,* vol.22, No.5 as 'Elsie Jury Var.': A virus variegated form of **Elsie Jury** - Vivid pink and white. Originated in USA.

Elsie Mary. (*C.reticulata* hybrid). NZCS *Camellia Bulletin,* No.169, July 2010, p.12 with colour photo; Regn No.488. Chance seedling, first flowered in 2007. Plant is upright with medium growth rate. Dark green leaves are large and very broad, 16 cm x 10 cm. Flower is a very large semi-double, 16 cm diameter x 10 cm deep, with about 16 petals and no petaloids. Diameter sometimes reaches 20 cm. Colour is rose pink (RHSCC 53D) Numerous stamens, filaments white with a pink base, and anthers yellow. Flowers early to midseason. Originated by Neil W.J. Ingram, New Plymouth, NZ.

Elsie May. *(C.reticulata),* ACRS., 1984, *Camellia News,* No.91, p.22, Reg. No.308: Originated by T.E. Pierson, Hurstville, N.S.W., Australia from a seedling of *C.reticulata* 'Cornelian' (**Damanao**) x **Buddha,** that first flowered 1981. The semi-double to informal double, 14 cm x 8 cm, salmon pink flowers, with distinct rabbit ears, are produced mid-season to late. The open, upright plant has mid-green, narrowly-ovate, reticulate, 13.8 cm x 5.5 cm, leaves.

Elsie Ross. (*C.reticulata* hybrid). ACRS, *Camellia News,* 1996, No.139, p.10, Reg. No.469. Originated by Dr R.M. Withers, Donvale, Victoria, Australia. A cross between *C.reticulata* hybrid **Suzanne Withers** as seed parent x *C.reticulata* hybrid **Jean Pursel** that first flowered 1993. The semi-double to informal double light pink (RHS.CC.68D) flower of 28 petals is 14 cm diameter x 8 cm deep, and flowers mid-season on a rapid growing upright, open plant. Leaves olive green, glossy, keeled, elliptic, acuminate apex, serrate margins, 10 cm long x 5 cm wide. Petals notched, opening flat, filaments columnar.

Elsie Ruth Marshall. *(C.japonica), American Camellia Yearbook,* 1966, p.87, Reg. No.900: This loose, rose form to peony form chance seeding first bloomed 1962. It has 40-50 petals, adnate at the base. Colour is from light pink (2.5R9/3) to light, purplish pink (5RP8/5) Nickerson Colour Fan Munsell Hue. Size is 10-12.5 cm across x 6-7 cm deep. Blooms have a few stamens with yellow anthers. Flowers mid-season to late. Most buds set singly. Plant growth is vigorous, fairly compact and upright. Large, dark green leaves. Originated by M.L. Marshall, San Gabriel, California, USA. Received the "Margarete Hertrich Award" for 1970. See colour photo; front cover, SCCS, 1966, *The Camellia Review,* vol.28, No.1 and pl.53, p.38, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Sport: **Elsie Ruth Marshall Variegated.** Chinese synonym 'Maxieer'.

Elsie Ruth Marshall Variegated. *(C.japonica),* Gentry, 1967, ACS., *The Camellia Journal,* vol.22, No.5, p.28 as 'Elsie Ruth Marshall Var.': A virus variegated form of **Elsie Ruth Marshall** - Light pink blotched white. Originated in USA.

Emelie Gavazzi. *(C.japonica),* van Houtte Catalogue, 1842, 9:52: White striped vivid red. Perfect form. Verschaeffelt, 1848, *Nouvelle Iconographie*, Book VIII, pl.III as 'Emilia Gavazzi': This spendid Camellia is of Italian origin. Leaves are rounded, oval and pointed with few veins and regularly notched. Buds are large, rounded and with greenish scales; the blossom, 9-10 cm across, is full, anemone-shaped, the numerous petals arranged in 9 rows, are regularly imbricated, wide and rounded at the exterior, pointed towards the interior, of a milky white, intersected rarely by a red stripe. Orthographic errors: 'Emilia Gavanzi', 'Emelia Gavazzi', 'Emelia Gavanzi', 'Emelia Gavazzii', 'Emelio Gavazzo', 'Emilia Gavozzi', 'Emilia Govazzi', 'Emelio Gavazzi', 'Emelio Gavazzi', 'Emilie Gavozzi'. Synonyms: 'Eryttens Lineata', 'Emelia Gavazzi d'Italie'. Sport: **Napoleone III.**

Emelie Grandiflora. *(C.japonica),* Jacob Makoy Nursery Catalogue, 1839, p.17. No description. van Houtte Catalogue, 1839, 1:3: Very large, fasciculate, bright red, veined. Originated in Italy. Berlèse, 1840, *Monographie,* ed.2, p.92, 227: Lemaire, 1844, *Des Genres Camelia…,* p.151 as 'Emilia Grandiflora' says this camellia is pink, while Berlèse says it originated in Scotland. Orthographic variants: 'Emelia Grandiflora', 'Emilia Grandiflora', 'Emilie Grandiflora'. Orthographic error: 'Emilii Grandiflora'.

Emelie Taverna. *(C.japonica),* van Houtte Catalogue, 1841, 7:7: Matchless form. Vivid carmine with white centre. Jacob Makoy Nursery Catalogue, 1841, p.10 as 'Emilie Taverna': Medium size, imbricated, many petalled, fiery scarlet, tinted pink, central white stripe. Berlèse, 1843, *Iconographie,* vol.3, pl.266 as 'Emilie Taverna': The flower, 9-10 cm across is full, regular, round of a red, more or less pale, often rose-pink. The petals in about 8 rows. Those of the first rows are round, very close set; the following are long-oval and those at the centre are ovoid. They are channelled and some are divided down the middle by a line of white. Verschaffelt, 1858, *Nouvelle Iconographie,* Book IV, pl.I as 'Emilie Taverna': Blossoms of medium size, but of perfect form, are composed of numerous and ample ovate petals, scarcely emarginate, regularly imbricated, except at the centre, where they are arranged in a sort of ruffled heart, all of a brilliant pink colour with broad, white stripes. Orthographic variants: 'Emilie Taverna', 'Emilia Taverna', 'Emelia Taverna'. Orthographic error: 'Emilie Taverina'.

Emily J. Box. *(C.reticulata),* ACRS, 1970, *Camellia News,* No.40, p.27, Reg. No.130: Originated by Mr & Mrs F.N. Spencer, Cheltenham, Victoria, Australia. A chance seedling from a wild *C.reticulata* that first flowered in 1969. Plant is very vigorous and upright and produces 15 cm diameter x 7.5 cm deep, rose coloured, early flowers. These are semi-double with 15 crimped and fluted petals. The dark green, glossy, reticulate leaves are 9 cm long x 5 cm wide with fine serrations. Abbreviation: 'Emily Box'.

Emily Kate Caple. *(C.pitardii.x C.reticulata), New Zealand Camellia Bulletin,* 1973, vol.VIII, No.2, p.25, Reg. No.87: An open pollinated seedling from *C.pitardii* (Tourje red anthered form), male parent *C.reticulata.* Originated by Mrs A.B. Durrant, Rotorua, New Zealand. Growth is upright, medium density, leaves mid-green, 10 cm x 4.5 cm. Flowers are semi-double to loose peony form with 14 petals and occasional petaloids. The anthers are red-brown before opening, then golden. Filaments are cream. The petals are fluted and frilled and the colour is RHS, Red-Purple Group 66C-D, shading to much paler at the edges and size is 11-13 cm across x 7-8 cm deep. Flowers early.

Emily Mathis. *(C.japonica), American Camellia Yearbook,* 1965, p.232, Reg. No.672: A 6 year old chance seedling that first bloomed 1956; originated by Dr W.F. Mathis, Moultrie, Georgia,

USA. Plant growth is upright and average with dark green leaves 9 cm long x 3.5 cm wide. The semi-double, cream centered, white flower, similar to **Frizzle White,** is 12.5 cm across x 7.5 cm deep with 2-4 notched petals, 2-3 petaloids and 3-4 rabbit eared, twisted petals. The stamens have cream filaments with yellow anthers and are in fascicles, causing the petals to stand apart. Slightly fragrant. Flowers early to mid-season.

Emily Wilson. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue,* Incomplete double. Light pink. Mid-season. *American Camellia Yearbook*, 1954, p.310, Reg. No.178: A 9 year old chance seedling, originated by Arthur T. Wilson, Batesburg, South Carolina, USA, that first flowered 1949. Plant growth is upright and compact and rapid in rate. Leaves are smooth, dark green, with serrated edges and sharp points. The flowers are incomplete double in form with mixed petaloids, similar to Nobilissima and are 10-12.5 cm across. The colour is light pink, similar to 'Star Dust', fading to the centre to the colour of **Martha Brice** at the edges. Flowers mid-season. See colour photo, front cover SCCS., 1957, *The Camellia Review*, vol.18, No.7. Sport: **Emily Wilson Variegated.**

Emily Wilson Variegated. *(C.japonica),* Griffin, ed., 1957, *Camellian,* as 'Emily Wilson Var.'. A virus variegated form of **Emily Wilson** - Light pink and white. Originated in USA.

Emily's Blush. Riverview Nursery Catalogue, 1958. Orthographic error for **Emilie Blush.**

Emin Pasha. *(C.japonica),* Williams, B.S., 1891, Catalogue, p.42. Semi-double, petals deep crimson, anthers yellow, petals small oval. Introduced from Japan by Gerald Waller.

Eminenza. *(C.japonica),* de Jonghe, 1851, *Traité de la Culture du Camellia,* p.106. No description. Originated in Italy. (Believed extinct.)

Emma di Salvadera. Croft Catalogue, (before 1890). Orthographic error for **Emma de Salavedra.**

Emma Gaeta. *(C.reticulata),* SCCS., 1981, *Camellia Nomenclature,* p.173: Deep rose-pink. Very large semi-double with folded, upright centre petals. Vigorous, upright growth. Mid-season blooming. ACS 1994, *The Camellia Journal,* vol.49, No.3, p.34, Reg. No.2296. *American Camellia Yearbook,* 1994, p.60: Originated by Meyer Piet, California, USA, from *C.reticulata* 'Cornelian' (**Damanao**) x **Mouchang,** and commercially introduced in 1979. The 12 year old seedling first flowered 1974. Average flower size is 15 cm across x 8 cm deep with 23 petals, yellow anthers and filaments. Plant growth is open and vigorous with dark green leaves 10 cm long x 5 cm wide. Colour pl. between pp.64-65. Sport: **Emma Gaeta Variegated.**

Emma Gaeta Variegated. *(C.reticulata),* SCCS., 1981, *Camellia Nomenclature,* p.173 as 'Emma Gaeta Var.': A virus variegated form of **Emma Gaeta** - Deep rosepink blotched white. Originated by Meyer Piet, California, USA. See colour photo front cover, SCCS, 1982, *The Camellia Review,* vol.43, No.4. Chinese synonym 'Fuse Aima'.

Emma Grace. *(C.japonica),* ACRS., 1977, *Camellia News,* No.66, p.27, Reg. No.196: Originated by Mrs E.M. Peterson, Kilsyth, Victoria, Australia. Seed parent *C.japonica* **Great Eastern**. First flowered 1971. The vigorous, spreading plant produces 12.5-15 cm, early, informal double, rich scarlet red flowers.

Emma J. Mitchell. *(C.japonica),* ACS, *The Camellia Journal,* Sept. 2003, p.13 with colour photo, Reg. No. 2601. A seedling of **Nancy Mandarich** x **Kim Macgowan** with rose form to formal double flowers and golden stamens. Flowers mid-season to late. Heavy petal texture. Originated by Jack Mandarich, Salinas, Calif., USA. *American Camellia Yearbook,* 2003, p.62, colour photo p.c3. The 11 year old seedling first flowered in 1996. Flower measures 15 cm across x 7 cm deep, with 55 petals and 29 petaloids. Plant is upright, dense and vigorous, with dark green leaves 13.3 cm long x 7 cm long.

Emma Jane. *(C.x williamsii). New Zealand Camellia Bulletin,* 1993, Issue No.114, vol.XVIII, No.1, p.33, Reg. No.329: Originated by Peter Matthews, Auckland New Zealand. A *C.saluenensis* seedling of spreading, open habit with medium growth rate. Semi-double flowers, 10 cm across x 9 cm deep with 13 petals, pure white with dark yellow anthers and white filaments. Flowers mid-season to late.

Emma Jean Crocker. *(C.japonica),* ACS., 1989. *The Camellia Journal,* vol.44, No.3, p.9, Reg. No.2166: A small size, white, peony form to rose form double, *C.japonica* chance seedling pf 'Magnoliiflora', (**Hagoromo**). Blooms mid-season to late. *American Camellia Yearbook,* 1989, p.121, colour photo [p.132]. The 12 year old seedling first bloomed 1987. Average flower size, 6 cm across x 3.8 cm deep with 55-65 petals intermingled with petaloids, and yellow anthers with white filaments. Plant growth is average and medium in rate with light green leaves 8 cm long x 3.8 cm wide.

Emma L. (*C.reticulata* hybrid) *New Zealand Camellia Bulletin,* 1994, Issue No.118, vol.XVIII, No.5, p.32, Reg. No.347: Originated by T. Lennard, Te Puke, New Zealand: A **Dream Girl** seedling. Dark pink (RHS.CC.57C) with deeper pink veining, peony form. Growth habit open, spreading and of medium rate. Leaves mid-green, 9 cm long x 5 cm wide.

Emma Ladd. Wilmot, *Camellia Variety Classification Report,* 1943, p.10. Synonym for **Rose and Snow.**

Emma Lennard. *(C.rosiflora), New Zealand Camellia Bulletin,* 1981, vol.XII, No.2, p.6, Reg. No.160: A chance *C.rosiflora* seedling raised by T. Lennard, Te Puke, New Zealand, which first flowered 1980. The 7.5 cm x 3.5 cm, light green leaves on a plant of medium growth,

becoming open and spreading. Early flowering, the semi-double, salmon pink flowers, (RHS.CC. Red-Purple Group 62A) 5 cm across x 3 cm deep, have 11 petals.

Emma Lester. Wade, 1949, *American Camellia Yearbook,* p.194. Synonym for **Mathotiana Rosea.**

Emma (Nuccio). *(C.japonica),* Fendig, 1953 American Camellia Catalogue as 'Emma'. Nuccio's Nurseries Catalogue, 1955, p.7, as 'Emma': Large size, light pink, rose form to peony form. Very lovely. Originated in USA. Possibly a unicoloured sport of **Emma Seidel.**

Emma Peebles. *(C.sasanqua),* ACRS., 1980, *Camellia News,* No.75, p.24, Reg. No.229: Originated by Alice Spragg, Sutherland, N.S.W., Australia. A chance seedling which first flowered in 1970. The upright, spreading, vigorous plant produces 8 cm flowers of light pink, fading to a delicate pink.

Emma Robin. *(C.japonica), Catalogue des plantes La Société Royale d'horticulture Belgique,* 1842, p.22. No description. Berlèse, 1843, *Iconographie,* pl.283 and facing page: The flower is 10 cm across, sometimes more, it is full, irregular, of a soft rose-pink with touches of red. The outer petals, beginning with 2 rows, are broad, rounded, entire, veined with carmine; the following 3 or 4 rows of petals are of average size, incised and strap-like, long and upright, in comparison with those of the circumference. Their different forms and dimensions intermingle with the small petals, displayed without order and forming an irregular and unequal corolla. Some bands of white in the midst of the petals, add to the style of this variety. Van Houtte Catalogue,1843, 9:53 gives **Emma Robin** as a synonym of 'Jussieui' **(Jussieua),** however Berlèse figures and describes them separately in his 1843 *Iconographie,* the latter under the orthography 'Jussieuana', pl.143. From the descriptions they would appear to be two different cultivars.

Emma Schoeller. *(C.japonica),* Linden Nursery Catalogue No.94, 1875, p.22. No description. (Believed extinct.)

Emma Seidel. *(C.japonica),* Seidel Preisverzeichnis, 1897, p.11, as 'Emma' (Seidel). Originated by Seidel, Dresden, Germany as a sport of **Heinrich Seidel.** Large in the centre, broad, open double flower of finest rose; white striped and bordered. New. Note: SCCS, *Camellia Nomenclature,* 1954, and Hertrich's vol.III 1959, p.77 of *Camellias in Huntington Gardens,* give what appears to be a different cultivar as this variety under the name of 'Emma'. It is possibly a unicoloured sport and is treated as a separate variety under the name **Emma (Nuccio).**

Emma Ulrich. *(C.japonica),* Jean Verschaffelt, 1860-1861, Price List, p.13. No description. Burdin Maggiore & Co. Catalogue, 1862. No description. Originated in Italy. (Believed extinct.)

Emma Watkins. *(C.japonica),* Cotton, 1948, *American Camellia Yearbook,* p.44, 51: Blooms early to late, the flowers are large, incomplete doubles and pink in colour. Originated by Mrs J.K. Dunn, McComb, Mississippi, USA. A sport of **Moore's Majestic.** Synonyms: 'Tylertown Rose', 'Tylertown Pink'. See black and white photo, p.119, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II.

Emma Wilson. *(C.japonica), American Camellia Yearbook,* 1980, p.164, Reg. No.1678: A medium size, light pink, semi-double *C.japonica,* chance seedling of 'Magnoliiflora', (**Hagoromo**), mid-season flowering; originated by Walter A. Wilson, Augusta, Georgia, USA. The 20-25 year old seedling first flowered 1970. Average size of bloom is 9.5 cm across x 5 cm deep. Plant growth is upright and medium in rate with light green leaves, 9 cm long x 4 cm wide.

Emmalene. *(C.japonica), American Camellia Yearbook,* 1977, p.211, Reg. No.1425: A large, light, rose-pink semi-double. A 6 year old chance *C.japonica* seedling that first bloomed 1975. Originated by Paul Gilley, Grandridge, Florida, USA. The **Frizzle White** type, bloom has 20 plus petals and 4-12 petaloids with cream anthers and yellow filaments. Average size is 11 cm

across x 5 cm deep. Blooms early to mid-season. Plant growth is upright and rapid with light green leaves, 9 cm long x 5 cm wide.

Emmalene Variegated. *(C.japonica),* Don Ellison, 1997, "Camellias - A Photo Dictionary", p.36 with colour illustration: Large semi-double flower. Early to mid-season flowering. A virus-variegated, red blotched white form of **Emmalene.** Originated in USA.

Emmeliana. *(C.japonica),* van Houtte Catalogue, 1842, 9:52: Satin rose, peony form, extra double. Originated in Italy. Synonyms: 'Sommelliana', 'Egérie'. Orthographic errors 'Emiliana' 'Emmelina' 'Emmallana'.

Emmelina. van Houtte Catalogue, 1845-1846, 27:23. Synonym: 'Egérie'. Orthographic error for **Emmeliana.**

Emmelina Labiche. *(C.japonica),* McIlhenny Catalogue, 1945-1946, p.12: Semi-double, large blossom, petals rose red, stamens white tipped lemon yellow. An occasional erect petal amongst the stamens. Originated in USA.

Emmet Barnes. Fruitland Nursery Catalogue, 1955-1956. Orthographic error for **Emmett Barnes.**

Emmett Barnes. *(C.japonica),* Doty et al., 1949, *American Camellia Yearbook,* p.145: A seedling grown by Ingleside Nurseries, Baconton, Georgia, USA, who obtained it from F.J. Baker, Macon, Georgia who grew it from seed from the Tokayama Nurseries, Japan. It was bought in flower by A.E. Barnes Jr in 1945 and named for him. An extra large, brilliant white, 12-14 cm across, with yellow stamens mixed in with the petals. An early bloomer, missing the frosts. The flowers are ruffled and twisted, resembling 'Victor Emmanuel', (**Blood of China**). A very vigorous grower. The leaves are 10-12 cm long x 5 cm wide, slightly curled, of such a dark green they appear black from a distance. The plant is heavy and compact in growth. Reg. No.40, *American Camellia Yearbook,* 1954. Orthographic error: 'Emmet Barnes'. See black and white photo, p.79, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III.

Emmett Pfingstl. *(C.japonica),* U.S. Plant Patent No.927, issued May, 21, 1950. A variegated form of **Joseph Pfingstl** - Dark red and white. Synonyms: 'Dorothy Parker', 'Joseph Pfingstl Variegated'. Originated in Pfingstl's Nursery, Montgomery, Alabama, USA. See black and white photo, p.80, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III. Colour plate, p.85, Macoboy, 1981. *The Colour Dictionary of Camellias* and the front cover, ACRS, 1982, *Camellia News,* No.83. Orthographic error: 'Emmett Pfingstle'. Chinese synonym 'Aimeite'.

Emmett Pfingstle. Thomasville Nursery Catalogue, 1953-1954, p.25. Orthographic error for **Emmett Pfingstl.**

Emmy. *(C.japonica),* High Banks Nursery Catalogue, 1994, p.3: A single light red flower. Slow growing shrub with dark, shiny foliage. Originated at Cobland's Nursery, Tonbridge, UK.

Emmy Balchen. *(C.japonica),* Valley Garden Supplies Catalogue, 1946-1947: White. Large, high centered peony of the **Chandleri** type. Vigorous, upright, fairly compact growth with small, rounded, deep green leaves. A lost label plant named in 1946 by W.P. Huested, Glendale, California. Thought to have been one of the varieties imported from Japan 1930, by the Star Nurseries. See black and white photo, p.127, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I.

Emmy Roos. *(C.japonica),* ACRS., 1963, *Camellia News,* No.12, p.26, Reg. No.60: Originated by Mrs E. Roos, Lane Cove, N.S.W., Australia. Seedling from **Constance,** pollen parent **Lady Loch.** An upright, vigorous grower, producing a pink, informal double flower, 11 cm in diameter. Blooms mid-season to late. Medium sized, dark green leaves.

Emory. *(C.japonica), Camellia Digest,* 1(1),1942. No description. Originated in USA. (Believed extinct.)

Emory Prevatt. *(C.japonica), American Camellia Yearbook,* 1973, p.190, Reg. No.1257: A 10 year old chance seedling that first bloomed 1967; originated by Mrs Daniel W. Ellis, Charleston, South

Carolina, USA. Plant growth is spreading, average, open and medium in rate with light green leaves measuring 8 cm long x 6 cm wide. The peony form, **Debutante** type, bloom is 7.5RP6/12, deep purple pink on Munsel Hue, Nickerson Color Fan. It measures 10 cm across x 6.5 cm deep with 247 petals and 39 petaloids. The anthers are yellow and filaments cream. Blooms mid-season. Almost forms a ball with petals curled, twisted and notched, intermixed with petaloids and stamens throughout the flower.

Emperador de Brasil. La Caeira, Establecimiento de Agricultura de Pontevedra, undated. Invalid name for **Dom Pedro II, Imperador do Brazil.**

Emperator. Wilmot, *Camellia Variety Classification Report,* 1944, p.5. Orthographic error for **Imperator.**

Empereur. Frères Noisette, Nantes Nursery Catalogue, 1857, p.35. Orthographic variant for **Emperor.**

Empereur Alexandre. *(C.japonica),* van Houtte Catalogue, 1845-1846, 23:4, as deep rose, imbrication perfect. Originated by Sloane, Italy.

Empereur d'Antriche. Cachet Nursery Catalogue, 1845-1846, p.2. Orthographic error for **Empereur d'Autriche.**

Empereur d'Autriche. *(C.japonica),* Tourres, Macheteaux Catalogue, 1835, p.17. No description. Berlèse, 1837, *Monographie,* ed.1, p.74, 78, 127: Leaves very large, oval, dentate, of an obscure green, prominent veins; buds large, oval with greenish scales at the base and white at the apex; flowers 8 cm across, double, of a cherry red on blooming and paler afterwards, petals recurved, equally imbricated, a few in the centre, small, curled, marked with white and intermixed with stamens. This is a seedling raised by Berlèse and not synonymous with **Monstruosa Italica** as Ellis, 1953, *Old Camellia Varieties* would lead one to believe. Orthographic error: 'Empereur d'Antriche'. For colour plate see Berlèse, 1843, *Iconographie* vol.2, pl.178.

Empereur de China. *(C.japonica),* Peer, 1956, *American Camellia Yearbook,* p.56. No description.

Empereur de Russe. McIlhenny, 1937, *600 Varieties of Camellias,* p.6. Orthographic error for **Empereur de Russie.**

Empereur de Russie. *(C.japonica),* Spae, 1847, *Annales de Gand,* 3:132: Shown at the 50th Exhibition of the Royal Society of Gand. In his 1851 Catalogue, van Houtte describes it as "A large, red flower, well imbricated", and de Jonghe, 1851, *Traité de la Culture du Camellia,* p.106 as: "Beautiful red, imbricated flower, petals at the centre streaked with white"; whilst Franchetti, 1855 says: "Vivid rose flower, the petals streaked with white. Imbricated." Thus it would not appear to be a synonym or orthographic variant for the modern cultivar **Emperor of Russia.** However the 'Emperor of Russia' listed in 1856 by van Geert would seem to be this variety as would other early listings of this name in Europe. Orthographic variant 'Keizer van Rusland'. Orthographic errors: 'Empereur de Russe', 'Emperor di Russia'. Synonym: 'Borgia'.

Emperor di Russia. Jacob Makoy et Cie Nursery Catalogue, 1858, p.27. Orthographic variant for **Empereur de Russie.**

Empereur Nicolas. *(C.japonica),* Bahuaud-Litou Nursery Catalogue, 1914 as "red". Originated in France. Orthographic variant: 'Emperor Nicholas'. (Believed extinct.)

Emperor. *(C.hybrid),* van Houtte Catalogue, 1845-1846, 23:4: Obtained by crossing 'Colvilli' and *C.reticulata.* The flower is very full and of the form and colour of the latter. It carried away the prize of the Horticultural Society of London. Berlèse, 1949, *Annales de la Société Central d'Horticulture de Paris,* Vol.40, p.281: Flower 9-10 cm across, sometimes larger, regular rose form to loose formal double. Soft rose powdered and margined white. Outer 4-5 rows of petals are elongated ovoid, almost entire with a few outspread and indented in a star shaped

arrangement. Not numerous, widely imbricated, blood red veins washed with a rosy white, paler than the base colour. Central petals are diverse, elongated, ruffled, unequal and upright. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.106 as 'The Emperor'. Large, double flower, adhering to the form and colour of *C.reticulata* of which, it is said, to be a variety. The growth is sufficiently vigorous for management as a pyramid. Originated by Davies & Co., Liverpool, England. A large, informal double with twisted and ruffled petals of deep crimson red, fading to a pale tint on the edges. Not to be confused with **Emperor of Russia** or the American 'Emperor'. The name has also erroneously been used for 'Emperor Wilhelm' and **Gigantea.** Synonym: 'The Emperor'. Described and illustrated by Verschaffelt, 1850, *Nouvelle Iconographie,* Book X.

Emperor (Marchant). *(C.japonica),* C.J. Marchant, Keepers Hill Nursery Catalogue, No.8, 1965, p.14, invalidly as 'Emperor': Striking crimson-red, waterlily-like flowers, comprising of 5-7 rows of petals. Originated in England.

Emperor (US). *(C.japonica),* Lindo Nursery Price List, 1940-1941: Semi-double, deep pink. Extremely large. Gerbing Azalea Gardens Catalogue, 1943-1944 invalidly as 'Emperor': This beautifully formed, peony camellia originated in Loxley, Alabama, USA where it was sold under the incorrect name of 'Emperor of Russia'. The very large flowers open early. Free flowering. Foliage deep green, heavily ribbed. Slow, spreading growth. A large, red, peony form. Sport: **Emperor Variegated.**

Emperor Frederick William. SCCS, 1942, *Classification of Camellias,* p.2. Synonym for **Gigantea.**

Emperor Napoleon III. Scott, J. & Son Nursery Catalogue, 1868. Synonym for **Napoleone III.**

Emperor Nicholas. Vanderbilt, 1940, *Camellia Research,* p.4. Orthographic variant for **Empereur Nicolas.**

Emperor of Russia. *(C.japonica),* Gerbing Azalea Garden Catalogue, 1938-1939: Very large, brilliant red flowers of peony form, golden stamens among inner, twisted petals, flower appears to be four or five in one. A dazzling red that takes first place in any garden where it is in bloom. Dark green foliage. Slow, bushy growth. It came from a plant on the old Stevens plantation at Madison, Florida. Magnolia Gardens claim that this may have been a seedling or an old variety renamed by Rev. Drayton. It is not the same as **Emperor** or **Empereur de Russie** although the name 'Emperor' has invalidly been applied to it. Synonyms: 'Stevens', 'Steven's Plant'. Sport: **Emperor of Russia Variegated.** See colour photos: *American Camellia Yearbook,* 1949, facing p.14, and p.85, Macoboy, 1981, *The Colour Dictionary of Camellias.* Orthographic error: 'Emperor of Russion'.

Emperor of Russia Variegata. Camellia Lodge Nursery Catalogue, 1987, p.23: Illegal variant for **Emperor of Russia Vareigated.**

Emperor of Russia Variegated. *(C.japonica),* Thomasville Nursery Catalogue, 1944, as 'Emperor of Russia Var.': A variegated form of **Emperor of Russia** - Scarlet, spotted white. Originated in USA. Synonyms: 'Czarina', 'Aspasia'(United States), 'Great Eastern'(New Zealand), 'Aspacia' and, erroneously, 'Emperor Variegated'. Illegal variant: 'Emperor of Russia Variegata'. Chinese synonym 'Fuse Shahuang'.

Emperor of Russion. Sawada, 1954, *American Camellia Yearbook,* p.153. Orthographic error for **Emperor of Russia.**

Emperor Pink. *(C.japonica),* Caledonia Nursery Catalogue, ca.1924. No description. Originated in UK. (Believed extinct.)

Emperor Russia. Vanderbilt, 1940, *Camellia Research,* p.4. Abbreviation for **Emperor of Russia.**

Emperor Variegata. Gill & Searle's Nursery Catalogue, 1955, p.4. Synonym for **Emperor of Russia Variegated.**

Emperor Variegated. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.44 as 'Emperor Var.'. A variegated form of Emperor (US) - Red marbled white. Originated in USA.

Emperor Variegated. Hazlewood Nursery Catalogue, 1947. Invalid synonym for **Emperor of Russia Variegated.**

Emperor Wilhelm. Vanderbilt, 1941, *Camellia Research, II,* p.2. Synonym for **Gigantea.**

Empire Red. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.178. Synonym for **Mikunikô.**

Empire Rose. *(C.x williamsii). New Zealand Camellia Bulletin,* 1992, Issue No.111, vol.XVII, No.4, p.7, Reg. No.297: Originated by Les Jury, New Zealand from a seedling of **Kimberley** x **Rendezvous.** The 12 year old seedling first flowered 1988. The plant is of average habit and growth rate with dark green leaves 8.5 cm long x 4.5 cm wide. The crimson (RHS.CC.52A) flower is peony form to rose form double. The flower is small to medium size, 8 cm in diameter x 4 cm deep with 47 petals and about 50 petaloids. Yellow stamens are carried on carmine rose filaments. Blooms mid-season. Plant is floriferous with a neat habit.

Empress. Hume, 193. *Azaleas and Camellias,* p.32. Synonym for **Akashigata** as 'Lady Clare' and 'Grandifora Rosea'.

Empress Brock. *(C.japonica),* Belle Fontaine Nursery Catalogue, 1967, ACS., *The Camellia Journal,* vol.22, No.1, p.22. No description. Originated in USA. No valid listing located.

Ena's Joy. *(C.japonica),* ACRS, *Camellia News*, 1993, No.127, p.8, Reg. No.424: Originated by Graham Oke, Bomaderry, NSW, Australia. A seedling of **Tama-no-ura,** pollen parent unknown. First flowered 1991. An informal double of 24 petals, strong red (RHS.CC.53B), 12 cm across x 6 cm deep. Petals fade through pink to a wide, white border. Flowers early to late on a vigorous, open, upright plant. Leaves olive green, elliptic, blunt, margins sparsely serrate, apices acuminate, matt surface, 8.5 cm long x 5 cm wide. Stamens interspersed between petals and petaloids.

Enbô. Fendig, 1953, *American Camellia Catalogue.* Different reading for **Tôbusa.**

Enbukyoku. (Waltz Music), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.24 colour photo, p.203 description: Deep pink, peony form with irregular outer petals and erect, twisted and fluted inner petals with short stamens intermixed. Flowers mid-season. Leaves deep green, elliptic with tapered base and prominent midrib. Originated in Tochio City, Niigata, Japan. Collected by Susumu Ishizawa in 1971, named by Kaoru Hagiya.

Enchanted Evening. *(C.japonica),* ACS, *The Camellia Journal*, Dec. 2013, p.29 with colour photo; Regn No.2901; Originated and registered by C.M. & Lillian Gordy, Ocala, Fla., USA. ACS, *Yearbook,* 2013, p.114 with colour photo; A 10 year old seedling of **Edna Campbell,** first flowered 2007. Propagated by Loch Laurel Nursery, Valdosts, Ga. Medium size, 9.5cm diameter x 5cm deep flower is anemone form, deep lavender with 10 petals, and may have tightly clustered petaloids mingled with the stamens, which have bright gold anthers and pink filaments. Plant habit is open, with average growth rate. Dark green leaves average 9cm x 4.5cm with medium serration. Flowers mid-season.

Enchantress. *(C.japonica),* Gerbing's Azalea Gardens Catalogue. 1941-1942: (Formerly listed as 'Christine Lee'). Large pink, semi-double flower with conspicuous stamens, 10-12.5 cm across. Small, glossy foliage. Tall, upright grower; late flowering. Synonyms: 'Enchantress'(South), 'Christine Lee'(Ala). Originated by Glen Saint Mary Nurseries Co., Glen Saint Mary, Florida, USA according to Hume.1955. Sport: **Enchantress Variegated.**

Enchantress (California). *(C.japonica),* SCCS Bulletin, vol.11, No.2, p.17, Dec. 1949. SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.35 as 'Enchantress'(Calif.): Light, clear pink. Medium sized single. Vigorous, willowy growth. Midseason blooming. Originated in USA by Vern McCaskill, California invalidly as 'Enchantress'. Originally invalidly named 'Enchantress', SCCS, 1942, *Classification of Camellias,* p.3. Changed to **Enchantress (California)** by SCCS, 1950, *The Camellia. Its Culture and Nomenclature,* due to the existance of a previously named cultivar.

Enchantress (South). SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.35 as 'Enchantress'(So.). Synonym for **Enchantress.**

Enchantress Variegated. *(C japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.72: A virus variegated form of **Enchantress** - Pink blotched white. Originated in USA.

Encore. *(C.japonica),* SCCS., 1964, *Camellia Nomenclature,* p.48: A blood red, large, semi-double with leathery textured petals and one or two small, centre petals. Originated in USA by Mrs J.P. Moon, Lake Charles, Louisiana. Sport: **Encore Variegated.**

Encore Variegated. *(C.japonica),* Gentry, 1968, ACS., *The Camellia Journal,* vol.23, No.1 as 'Encore V.'. A virus variegated form of **Encore**- Blood red, blotched white. Originated in USA.

Endersonii. Jose Maria Serra, Establecimiento de Horticultura Catalogue, 1855, p.5. Orthographic error for **Hendersonii.**

Endymião. *(C.japonica),* José Marques Louriero Catalogue No.1, 1865, p.36, & No.9, 1872-1873, p.43: Formal double, cherry colour with streaks of white. Originated in Portugal by Fiaes. Orthographic variant: 'Endymion'.

Endymion. James Nursery Catalogue, 1892. Orthographic variant for **Endymião**.

Enemy. *Camellia Digest,* 1(1),1942. Orthographic error for 'Emery', synonym for **Rose Anemone.**

Enfant de France. *(C.japonica),* Galeotti, M., 1856, *Journal d'Horticulture Pratique de la Belgique...,* vol.14, p.125: Originated by J.B. De Coster, Mille, France. Very deep red with numerous, imbricated petals, closely packed in the centre, concave and perfectly spherical.

Engei-tarô'an. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.103, colour photo and description as 'Engei-tarôan': Medium size, pale pink, cup-shaped single with a broad, central stamen cylinder with white filaments, joined for the lower third, and yellow anthers. Blooms from early to mid-season. Leaves darkish green, broad-lanceolate, apices long acuminate, margins serrulate. Synonym for **Tarô'an'**. Different reading: 'Taro'an'(Engei).

Engladine Number 1. *(C.japonica),* Eastwoodhill Arboretum, 1982, *A List of Trees, Shrubs and Climbers,* p.3. No description. Originated in New Zealand. No valid listing located.

England Ura. *(C.japonica),* Maupoil & Figlio Catalogue, 1847. No description. Originated in Italy. (Believed extinct.)

English. Urquhart, 1856, *The Camellia.* Synonym for 'Donckelaeri'. (**Masayoshi**).

English Apple Blossom. Portland Camellia Nursery Camellia Catalogue, 1947-1948, p.14. Synonym for **Apple Blossom.**

English Kuhne Drews. *(C.japonica),* ACS, *The Camellia Journal,* Mar. 2003, p.29 with colour photo, Reg. No.2590. An anemone form chance seedling with rose pink and white variegated flowers. Plant is upright and slow growing, and flowers early to mid-season. Originated by Rupert Drews, Charleston, S.C., USA. *American Camellia Yearbook,* 2003, p.62, colour photo p.c3. The 20 year old seedling first flowered in 1986. Flower has 38 petals, 180 petaloids, pink anthers and white filaments, and measures 9 cm across x 6.5 cm deep. Light green leaves are 8.2 cm long x 3.8 cm wide.

English Kuhne Drews Variegated. *Camellia Nomenclature* 2006, p.44. Variation of published and valid name **English Kuhne Drews.**

English Magnoliaeflora. Fendig, 1951, *American Camellia Catalogue.* Synonym for 'Fleur de Pêche', itself a synonym for **Fleur Dipater.**

English Oleifera. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Narumigata.**

Enid. *(C.sasanqua),* Nobelius Nursery Catalogue of Fruit and Oriental Trees...1941, p.31: A sasanqua seedling originated by Bert Chandler from the Enid Nursery, Victoria, Australia. Single, pale pink. Sweetly scented.

Enid Alice. *(C.sasanqua).* Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, p.1. Large, pale pink, single flower. Fragrant. Early flowering. Growth upright and bushy. Originated in Australia.

Enid Hilcrist. *(C.japonica),* Dancraft Nurseries Catalogue, Wilberforce, NSW, Australia, p.4. Large shell-pink semi-double on an upright, bushy plant. Originated in Australia.

Enid Reid. *(C.sasanqua),* Eagle Heights Nursery Catalogue, 1968, p.10: Pale pink to darker pink semi-double. Its flowers hold better than most *C.sasanqua.* Bushy growth. Hazlewood Nursery Catalogue, 1971: Medium sized, light pink, semi-double flowers; petals crimped and fluted, darkening in colour towards the edge. Dense, upright growth, suitable for hedges. Originated in Australia. Chinese synonym: 'Yinide Lide'.

Enigma. *(C.japonica),* Magnolia Gardens and Nursery Catalogue,1942-1943: No description. Originated in USA. (Believed extinct.)

Enishi. (Charming Appearance), *(C.sasanqua),* Shimada, 1957, *Kumamoto no Sazanka ni tsuite Dantairin.* Satomi, 1958, *Nomenclature List of Sasanqua of Japan*, p.8 as 'Enshi: Pink, white at the centre of the flower. Medium double. Leaves small and oblong. Flower occasionally has white streaks; 6 cm across, 27-30 petals; leaves are narrow and yellowish green. Originated in Kumamoto Prefecture, Japan. Raised from a seed given by Shigeru Sugiyama to Kiyofusa Saitô. Selected and named by the Higo Sasanqua Society. Different readings: 'Adesugata', 'Enshi'. *Encyclopedia of Camellias in Colour*, vol.I, 1972, p.222, pl.578. Chinese synonym: 'Shengzhuang'.

Enishi (Higo). ('Enishi' from Higo), *(C.x vernalis),* Hakoda, JCS., 1987, *Tsubaki*, No.26, p.48: Small size, light red, double, with many rows of petals. Originated in the Kumamoto Prefecture, Japan. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.307 with colour photo; Rose form to formal double. Leaves narrowly elliptic, small, yellowish green. Spreading growth with dense branching. Originated and named by Kiyofusa Saito, from a seed given by Shigeru Sugiyama.

Enju. (Longevity). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.42 with colour photo; English translation p.27. Medium size, red, tubular single, petaloids mixed with normal stamens, round buds. Flowers very early to late. Foliage elliptic, medium size. Upright, vigorous growth. A chance seedling of **Shiratama,** named and released by Taneo Taoka in 1996. From Osaka.

Enju-kô. (Red Enju). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.42 with colour photo; English translation p.27. Small, scarlet, tubular single with thick petals and cylindrical stamens. Flowers mid-season to late. Foliage broadly elliptic, medium size. Upright, vigorous growth. A natural seedling of **Moshio,** named and released by Ikuo Nishihata in 1995.

Enkaku. (Name of Temple in Kamakura), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô,* see Watanabe, 1964, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.5, p.77: Semi-double, deep red, cup-shaped, white slashed. (Believed extinct.) Originated in Japan.

Enkun. (Meaning uncertain). *(C.x vernalis). Nagoya Camellia Society Bulletin,* No.25, 1992, p.15, colour photo p.55: Originated by Kôji Funakoshi, Nagoya, Japan. A seedling of *C.japonica* 'Engei-tarô'an' (**Tarô'an**) x *C.x vernalis* **Umegaka.** Medium sized, 10 cm across, semi-double, pink, with white cylindrical stamen column or occasionally, divided stamens. Fragrance similar to **Umegaka.**

Enmusubi. (Engagement), *(C.japonica),* Inazawa Nursery Co. Ltd. Catalogue, 1980-1981, p.12, C.66: Medium size, peach pink single. Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.132, colour photo and description: Medium size, rose-pink with some deeper colour veining, campanulate single, with 5 ovate, emarginate petals and a central stamen column with white filaments, joined for the lower half, and yellow anthers. Blooms mid-season. Leaves deep green, broad-elliptic, apices acuminate, margins serrulate. Selected from wild japonicas growing around Izumo Grand Shrine. Named and released by Minoru Satô in 1974.

Enmyôji. (Enmyô Temple), *(C.japonica),* Hamamatsu,, 1818-1825, *Setsuyô Kikan.* No description. Originated in Japan. (Believed extinct.)

Ennen-no-mai. (Dance of Longevity), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.27: Large size, faint rose pink with red base, lotus-form double. Blooms mid-season. A seedling of *C. hiemalis* **Kanjiro** x *C.vietnamensis.* Originated in the Niigata Prefecture, Japan by Kaoru Hagiya in 1982. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.43 with colour photo; English translation p.27.

E-no-kimi. (Ancient Personnal Name), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka*, p.370, colour photo, p.371, description: Large size, open, peony form with 2-3 rows of petals with waved and crinkled margins, white with crimson splashes and a centre of small, erect, waved petals, dividing stamens into a number of fascicles. Blooms mid-season to late. Leaves bright green, broad-ovate, apices blunt acute, margins serrate. The original tree is growing at a private family in Kagoshima City. Named by the Kagoshima Camellia Society in 1985.

Enora. *(C.japonica),* ICS *Journal*, 2008, p.121 with colour photo; An open pollinated seedling originated by Louis Gourant, Plouisy, France. First flowered in 2005 at 5 years of age. Regular plant of moderate growth rate. Flowers late season. A peony form, red (RHSCC 52A) flower of 12 cm diameter x 6 cm deep.

Enoshima-miyakodori. (Enoshima's Gulls), *(C.japonica),* JCS., 1979, *Tsubaki* No.18, illustration on front cover; Siebundô Shinkôsha, 1979, *Senchinshû*, p.24, colour photo, p.203 description: Medium size, (9 cm) trumpet shaped single of 5 long, slender petals, keeled and curved and a compact, central stamen column with golden anthers. Colour white with considerable streaking and speckling of crimson. Leaves, glossy green, wavy, strongly recurved, lanceolate, coarsely, shallowly serrate, tapering, acuminate apex. Mid-season blooming. See Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.256 for colour photo. Resembles **Yuri-tsubaki** and **Himuro-setsugekka.** The original tree is growing in the Enoshima Botanical Garden. Named and released by Saburô Yokoyama in 1979.

Enrico Bettoni. *(C.japonica),* Isola Madre Catalogue, 1845. No description. Van Houtte Catalogue, 1846-1847, 27:24 as a seedling of B. Lechi, Italy. Verschaffelt, 1851, *Nouvelle Iconographie,* Book III, pl.11: Two blossoms, distinctly full, emerging one from the other and forming an open, full-bodied floral effect, of a bright poppy-cherry colour, sometimes striated with white. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.106: Peony form, red with white blotches. In the USA it has been confused with a local variety so that the exact identity is doubtful. A considerable number of synonyms are attached to the name **Enrico Bettoni** but mostly seem to apply to the erroneous form listed in SCCS, *Camellia Nomenclature.*

Enrico Bettoni (US). *(C.japonica),* Fruitland Nursery Catalogue, 1933, p.14; Kiyono Nursery Catalogue,1934-1935, p.11 as 'Enrico Bettoni': Deep, pure pink, peony form. Late flowering. About 10 cm across x 5 cm deep with 2 rows of large petals and yellow stamens mixed amongst petaloids. Tall, upright, vigorous growing with large, light green leaves, acuminate, finely serrate, 8cm x 4cm. Synonyms: 'Elata', 'Red Walker', 'Hite Pink', 'Large Walker', 'June', 'Macey Taylor', 'Lateriatus', 'Maurice Hurst', 'West Coast Sarah Frost' and, erroneously, 'Haley's Monarch' and 'Venus'. Sport: **Enrico Bettoni Variegated.** Orthographic error: 'Eurico Bettoni'. See black and white photo, p.132, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.1, and colour plate facing p.96, Hume, 1946, *Camellias in America.* The variety is thought to have originated at Magnolia Gardens, Charleston, South Carolina, USA, either as a seedling or a lost label, European import. Further synonyms; 'Lateriatis', 'Lateritius', 'Lateritus'. Chinese synonym 'Beituoni'.

Enrico Bettoni Variegated. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1944-1945. This variegated form of the well known **Enrico Bettoni (US)** (invalidly as 'Enrico Bettoni') was found at Magnolia Gardens, Charleston, South Carolina, USA. Synonym: 'Enrico Bettoni Variegated' (California).

Enrico Bettoni Variegated (California.). Mark S. Cannon Scion Catalogue, 1962, p.3 as 'Enrico Bettoni Var.'(Calif.). Synonym for **Enrico Bettoni Variegated.**

Enrico Dandolo. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.16:- Colour of rose, centre a little brighter. Imbricated. Franchetti, 1855, *Collezione di Camelie,* p.29: Imbricated in a spiral, outer petals vivid red, central petals paler and striped with white, large. Verschaffelt, 1857, *Nouvelle Iconographie,* Book V, pl.III as 'Enrico Dendolo': Blossoms of the largest size, with large petals, oval, sub-rounded, emarginate, regularly imbricated, pink, intersected by a broad, roseate white stripe. Originated in Italy by Cesare Franchetti, Florence. Orthographic error: 'Enrico Dendolo'.

Enrico De Meo. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.87 with colour photo; Medium size flower, reflexed semi-double with some central petaloids, flesh pink

with a deeper streak on a petal. A seedling of **Marmorata** x **Alba Simplex,** firstflowered in 1997. Originated by Dott. Guido Cattolica, Livorno, Italy.

Enzantôgyô. (Winter Dawn on Far Mountains), *(C.japonica),* Hino Sukekatsu, 1632, *Sukekatsukyôki.* No description. Originated in Japan. (Believed extinct.)

Enzo Cattolica. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.88 with colour photo; Large flower, loose peony form with the centre a mixture of stamens and smaller petals. Pink with red splashes and streaks (RHS.CC.53D). A seedling of 'Pomponia Semiplena' **(Pomponia Semi-duplex)** x **Tricolor Florentine,** first flowered in 1987. Originated by Dott. Guido Cattolica, Livorno, Italy.

Enzôin. (Enzô Temple), *(C.x vernalis),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.50. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.40: Small size, dark red, single. Blooms to mid-season. Originated in the Aichi Prefecture, Japan.

Eoline Nelson. *(C.japonica), American Camellia Yearbook,* 1965, p.232, Reg. No.678: A 10 year old seedling believed to be a cross between 'Herme' (**Hikarugenji**) and 'Lady Vansittart Variegated' (**Lady Vansittart**), that first bloomed 1960; originated by George A. Nelson, South Carolina, USA. The plant has dark green, glossy leaves, 11 cm x 5.5 cm. The semi-double, pink flower with red stripes, is similar to **Hikarugenji,** but is 5 cm across x 3.5 cm deep with 21 petals and occasional petaloids, brownish yellow anthers, white filaments. Flower buds are elongated, showing pink with a red stripe, opening cup fashion. Late flowering.

Eos. *(C.vernalis).* ACS, *The Camellia Journal,* Sept. 2005, p.28 with colour photo p.29, Reg. No. 2651. A seedling of *C.vernalis* 'Dawn' **(Ginryû)** which first flowered in 1998. Originated by Robert Green, Fairhope, Ala., USA, and propagated by Green Nurseries. The 10 cm diameter, white, lightly edged with pink, semi-double flower has wavy petals. Plant is upright and spreading. Vigorous growth, and flowers freely early to mid-season. *American Camellia Yearbook,* 2005, p.42. Incorrect description of plant and bloom. Colour photo p.c4.

Epsomensis. *(C.japonica),* Chandler & Booth, 1831, *Illustrations and Descriptions of the plants...,* pl.40: Presented to the Horticultural Society by Mr Young of Epsom, England, who raised it. Flowers are similar to the 'semi-double red' ('Semi-plena') but are a deeper colour and have more petals but are variable, some having 10-12 petals, others appear almost double. The exterior row of petals is large and spreading, of rounded form, about 2.5 cm in diameter. The stamen column is deeply coloured at the base. In the more double flowers, some of the stamens are transformed into small, spatulate, striped petals. The colour of the flower is a deep red, approaching scarlet. The blooms measure up to 8 cm across. Synonyms include: 'Epsom', 'Youngii', 'Young's Red', 'Young's Semi-double Red', 'Mr Young's Semi-double Red', 'Floy de Young', 'Floy de Joung', 'Floyi de Young', 'Young's New Red'. Orthographic errors: 'Epsomenses', 'Epsomiana', 'Epsomania Rubra', 'Epsomiana', 'Epsommensis' .

Erhongyang. (Twin Red Suns), *(C.japonica),* Watanabe & Andoh, 1980, *Hana to Kino Bunka. Tsubaki*, p.147 as 'Erh-hung-yang': Pink, medium sized, informal double. Originated in China.

Erh-hung-yang. Watanabe & Andoh, 1980, *Hana to Kino Bunka. Tsubaki*, p.147. Different reading for **Erhongyang.**

Eric Baker. *(C.japonica), International Camellia Journal*, 1992, No.24, p.81, Reg. No.24: Originated by Michael Galsworthy, Trewithin, Truro, Cornwall, England. The flower is average size, white, globular shaped, anemone to peony form. A *C.japonica* chance seedling. Blooms early to mid-season. Petals are folded and blooms fall complete. First bloomed 1977. Leaves green, elongated elliptic, twisted, glossy surface. A compact, upright shrub of moderate growth.

Eric Wilson. *(C.japonica),* ACS., 1989. *The Camellia Journal*, vol.44, No.3, p.9, Reg. No.2162: A very large size, rose-pink, semi-double *C.japonica* chance seedling. Blooms mid-season to late. Originated by Walter A. Wilson, Augusta, Georgia, USA. *American Camellia Yearbook*, 1989, p.121, colour photo [p.133]: The 12 year old seedling first bloomed in 1981. Average flower size 13 cm across with 16 petals. Plant growth is average and medium in rate with mid-green leaves.

Erica. *(C.japonica),* Tammia Nursery Catalogue, 1965-1966, p.4. Description not to hand. Originated in USA. (No valid listing located.

Erica. *(C.japonica),* ACS, *The Camellia Journal*, Aug. 2001, p.21, colour photo p.20, Reg. No.2545. A miniature chance seedling with light pink formal double flowers. Plant is upright with average growth, and flowers early to mid-season. Originated by Julia Leisenring, Aiken, S.C., USA. *American Camellia Yearbook,* 2001, p.94, colour photo p.c14. The 8-10 year old seedling first flowered in 1998. Flowers have 54 petals and measure 5.7 cm across x 5.7 cm deep. The dark green leaves are 5.7 cm long x 3.8-5 cm wide.

Erica McMinn. *(C.japonica),* ACRS., 1965, *Camellia News,* No.20, p.16, Reg. No.70: Raised by Neville McMinn, Camellia Lodge Nursery, Noble Park, Victoria, Australia from a seedling of the cross *C.japonica* **Teringa** x 'Magnoliiflora' (**Hagoromo**) made by Dr. C.R. Merrillees, Melbourne. First flowered 1958. The plant has a vigorous, dense habit. The pale, blush pink, fading to silvery pink, flowers are small, 7.5-9 cm across, of formal double type. Blooms mid-season to late. The medium green, ovate leaves are 7.5 cm x 5 cm. See colour photo, pl.55, p.39, *Encyclopedia of Camellias in Colour*, vol.II, 1978.

Erica Seivers. SCCS., 1962, *Camellia Nomenclature,* p.40. Orthographic error for **Erica Sievers.**

Erica Sievers. *(C.japonica),* Outteridge, 1962, *1000 Named Camellias in Australia,* p.8 erroneously as 'Erica Seivers': Deep rose-pink. Large, semi-double with large, heavily veined petals. Mid-season to late blooming. Originated in Australia by Keith Brushfield, Kewita, Gosford, NSW.

Erica Womersley. *(C.hybrid),* ACRS., 1975, *Camellia News,* No.58A, p.9, Reg. No.170: Originated by Alice Spragg, Sutherland, N.S.W., Australia. The parents are *C.x williamsii* **Charles Colbert** x *C.reticulata* 'Cornelian' (**Damanao**). First flowered 1973. Dense, upright, vigorous growth, sun tolerant. The full double, bud-shaped flowers, (11 cm across) open slowly to semi-double with deep pink, notched, outer petals, faintly mauve edged. Blooms mid-season to late. Leaves, dark green, narrowly elliptic, 9 cm long x 3 cm wide, sharply acute apex, finely serrate.

Erika Merryn. *(C.japonica),* ACRS, *Camellia News*, 1993, No.127, p.9, colour photo p.2, Reg. No.428: Originated by Raymond S. Keightley, Wattle Park, South Australia. A chance seedling that first flowered 1985. The light salmon pink, semi-double flower has 15 petals and occasional petaloids, 11 cm across x 5 cm deep. Flowers appear early to mid-season on a vigorous, open, upright plant. Leaves glossy, olive green, flat, ovate elliptic, apices acuminate, margins

serrate, base broadly cuneate, 10 cm long x 5 cm wide. Broad, rounded petals with a cylindrical bunch of stamens. Flowers hold well and have an iridescent sheen.

Erin Lily. *(C.reticulata* hybr.), ACRS., Dec.1990, *Camellia News,* No.115, p.11, Reg. No.388: Originated by Mildorrie Camellias, Strongs Road, Jaspers Brush, NSW, Australia. A chance seedling of **Brian Variegated** that first flowered 1981. A small, single. scarlet flower of 5 petals with a long lily-like tube. (RHS.CC.53C). Petals, long, slender and curved; filaments in a central boss, joined to the petals. Growth, slow, open and spreading. Flowers early to mid-season. Leaves broad, ovate, glossy, bronze green, keeled, dentate, apex acuminate, 6 cm x 5 cm.

Erin Farmer. *(C.japonica),* Barnes, 1956, *American Camellia Yearbook,* p.35: The flowers are semi-double, large and blush orchid pink in colour. The plant is an upright, vigorous grower. A semi-double flower, similar to **Hikarugenji,** 11-12 cm across x 5 cm deep. Colour is pink and white, sweetpea with golden anthers. Blooms mid-season. Originated in USA by Mr & Mrs H.E. Ashby, Charleston, South Carolina. Reg. No.751, *American Camellia Yearbook,* 1965. Colour photos: Facing p.50, *American Camellia Yearbook,* 1966. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.86. Chinese synonym: 'Aierlan Cunmin'.

Erina. *(C.japonica),* Verschaffelt Catalogue, 1844-1845, p.24. No description. (Believed extinct.)

Erishimai. (Eri Sisters). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.42 with colour photo; English translation p.27. Red stripes on white ground. Small tubular single with cylindrical stamens. Flowers early to mid-season. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Selected from wild camellias from Tabira Town, discovered by Keisaburô Matsushita in 1975, named and released by Zaiki Kajikawa. From Nagasaki Prefecture.

Eriyama-fukurin. (Variegated **'**Eriyama'), *(C.japonica),* Yokoyama & Kirino,1989, *Nihon no Chinka,* p.272, colour photo and description: Medium size, deep pink with deeper pink veining and white border, campanulate single of 6 petals, some fluted or reflexed, and a central column of stamens with yellow anthers. Blooms mid-season. Leaves deep green, broad-ovate, with serrate margins. Originated in Tabira-chô, Nagasaki Prefecture, Japan. Selected from wild japonicas, found by Keizaburô Matsushita, named by Aburatani.

Erjiao. Yü & Bartholomew, 1890, *American Camellia Yearbook,* p.23. Orthographic error for Erqiao.

Erle Stanley Gardner. *(C.japonica), American Camellia Yearbook,* 1966, p.88, Reg. No.847: A 4 year old chance seedling that first bloomed, 1962. Originated by Blanding Drinkard, Mobile, Alabama, USA. Plant growth is upright, open and rapid in rate. The anemone form bloom is salmon rose with a blue cast. Flowers measure over 12.6 cm across x 6-7 cm deep. Flowers early. See colour photo, front cover, ACS., 1965, *The Camellia Journal,* vol.20, No.3.

Ermengarda Bucalossi. *(C.japonica),* Anonymous, 1876, *R. Società Toscana di Orticultura Bollettino.* No description. Originated in Italy. (Believed extinct.)

Ermina Magnani. Mercatelli Catalogue, 1881, p.19. Orthographic error for **Erminia Magnani.**

Ermine. *(C.japonica),* Fruitland Nursery Catalogue, 1947-1948, p.27: Medium, white semi-double. Fendig, 1952, *American Camellia Catalogue:* Medium size, white, semi-double, 8.5 cm x 3.8 cm, of lily formation. Somewhat like 'Leucantha' (**Tricolor White**) but flowers do not have crinkled texture. Stamens long, compact, 3.2 cm, filaments cream, anthers dark yellow. Buds narrow and pointed, petals being unusually short. Leaves medium green, elliptic, 7.5 cm x 4 cm. Veins notable, underside of leaf ridges. Tip prominent. Serrations close together and sharply pointed, holly-like texture. Originated by Fruitland Nurseries, Augusta, Georgia, USA from seed of unknown parents. First flowered 1941.

Ermine Magnani. Peer, 1956, *American Camellia Yearbook,* p.57. Orthographic error for **Erminia Magnani.**

Erminia. *(C.japonica),* Isola Madre Catalogue, 1845. No description. Charles van Geert, 1850, Catalogue No.117, p.7: Perfectly imbricated with petals curled, cherry red, marbled with white. Luzzatti, 1851, *Collezione di Camelie,* p.17 as 'Erminus': Same sort as 'Duca Litta'; dark, crimson red, veins and furrows of pale rose. Orthographic errors: 'Erminius', 'Erminus'. Originated in Italy by Tagliabue.

Erminia Magnani. *(C.japonica),* Linden Nursery Catalogue, 1875. No desciption; Mercatelli Catalogue, 1881, p.19 as 'Ermina Magnani': Medium flower. regular, imbricated; petals white, mostly striped light rose. Magnificent. van Houtte Catalogue, 1882-1883, 199:256: Magnificently imbricated, pure white, sometimes streaked pale pink. Originated in Italy by Magnani. Orthographic errors: 'Ermine Magnani', 'Ermina Magnani', 'Emilia Magnani'. Synonym: 'Baronessa de Tschudy'.

Erminia Sevesi. *(C.japonica), International Camellia Journal,* No. 19, 1987, p.23, Reg. No. 13: Originated by Dr Antonio Sevesi, Piazzale Cadorna, Milano, Italy. The flower is white, loose peony form, with notched petals and central petaloids, white filaments, yellow stamens, RHS.CC.12A mixed with petaloids. Number of petals about 40. Flowering season late and short. Leaves, ovate, flat, glossy mid-green, RHS.138C juvenile, 138A mature, apex acuminate, average serrations, size, 5.9 cm long x 3.5-5.8 cm wide. Plant growth fastigate and slow.

Erminius. Charles van Geert, 1850 Catalogue No.117, p.7. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.10. Orthographic variant for **Erminia.**

Erminus. Van Geert Nursery Catalogue, 1848, *Annotations Manuscrites.* Orthographic error for **Erminia.**

Ernest Aycock. *(C.reticulata* hybrid), ACS., 1988, *The Camellia Journal,* vol.43, No.4, p.22, Reg. No.2100: Very large, deep pink, semi-double, *C.reticulata* hybrid. Mid-season blooming. Originated by Joe Austin, Four Oaks, North Carolina, USA. *American Camellia Yearbook,* 1988, p.187, colour photo opposite p.186: The 4 year old seedling first flowered 1983. Average flower size, 15 cm across x 8 cm deep with 20 petals and 4-5 rabbit ears. Plant growth is upright and rapid in rate with light green leaves. Chinese synonym: 'Aikeke'.

Ernest F. Beale, Sr. *(C.japonica),* ACS, *The Camellia Journal,* June 2003, p.24 with colour photo, Reg. No.2593. A chance seedling with deep coral pink, semi-double flowers, yellow anthers and white filaments. Flowers also have white, very fine edging to the petals. Originated by Ernest F. Beale Sr, Wilmington, N.C., USA. *American Camellia Yearbook,* 2003, p.63, colour photo p.c3. The 38 year old seedling first flowered in 1970. Blooms measure 10 cm across x 5.7 cm deep, with 12 petals and 3 petaloids. Plant is spreading, with average growth rate. Flowers early to mid-season. The dark green leaves are 7.5 cm long x 3.2 cm wide.

Ernest Gill. *(C.japonica),* ACRS., 1967, *Camellia News,* No.28, p.5, Reg. No.85: Originated at Gill's Grendon Nurseries, East Brighton, Victoria, Australia. Seed parent **Jean Lyne** and pollen parent **Gauntlettii.** It has an upright habit and flowers mid-season, 10-12 cm across. White flowers suffused with pale blush pink in the bud. The leaves are dark green, 9.5 cm x 4.5 cm, with fine serrations. See Colour photo pl.57, p.39, *Encyclopedia of Camellias in Colour,* vol.II, 1978.

Ernest Gilley. *(C.japonica),* ACS., 1982, *American Camellia Yearbook,* p.172, Reg. No.1827: A large size, bright, rose-pink, semi-double, *C.japonica* chance seedling; blooms mid-season. Originated by Paul Gilley, Grand Ridge, Florida, USA. The 6 year old seedling first bloomed 1980. Average flower size 11 cm across x 6 cm deep with 25 petals and 6-8 petaloids, creamy filaments and yellow anthers. Plant growth is upright and medium in rate with dark green leaves, 10 cm long x 5 cm wide.

Emest J. Palmer. *(C.japonica), American Camellia Yearbook,* 1966, p.88, Reg. No.819: A chance seedling 8-9 years old, originated by Mrs Ernest J. Palmer, Savannah, Georgia, USA. The plant has long, dark green, serrated leaves with acuminate apex, 9-10 cm long x 4.5-6 cm wide. The rose form, double bloom is between pink and red with deeper coloured veins. Variegated towards the centre with white streaks. Petals wavy and thick, stamens white. Blooms measure 10.5-13 cm across and 4 cm deep with 44-48 petals and 3-5 petaloids. Blooms early to mid-season.

Ernest McDonald. *(C.reticulata* hybrid), *American Camellia Yearbook,* 1981, p.98, Reg. No.1759: A very large, red, semi-double seedling of *C.reticulata* hybrid *(C.reticulata* 'Crimson Robe' (**Dataohong**) x [(*C.reticulata* 'Cornelian' x *C.japonica* **Mrs D.W. Davis**) x *C.reticulata* 'Cornelian' (**Damanao**)]), flowering mid-season to late; originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first bloomed in 1970. Average flower size is 16 cm across x 7.5 cm deep. Anthers are yellow. Leaves, serrated, dark green, 12.5 cm long x 6 cm wide.

Essie B. Walker. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings,* p.12, colour photo: A seedling of Mrs William Thompson, rose form double, palest roseatte white, medium size. Originated by Richard Dodd, Marshallville, Georgia, USA.

Essie M. Rollinson. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.40: White. Very large, (13-15 cm across) full peony form with upright petals. Compact, bushy growth. Early to late flowering. Originated in USA by G.G. Gerbing, Ferdinanda Beach, Florida. Orthographic errors: 'Essem Rawlinson', 'Esslem Rollinson', 'Essiem Rollinson'.

Essiem Rollinson. Belle Fontaine Nursery Catalogue, 1962, p.4. Orthographic error for **Essie M. Rollinson.**

Esslem Rollinson. Shackelford, 1969, ACS., *The Camellia Journal,* Orthographic error for **Essie M. Rollinson.**

Estella d'Ancona. *(C.japonica), American Camellia Yearbook,* 1968, p.130, Reg. No.1008: A sport of 'Drama Girl' first observed 1963 by Wendell M. Levi, Sumter, South Carolina, USA. Propagated 1963. Plant growth upright and rapid with dark green leaves 12.5-16.5 cm long x 7.5-8 cm wide. The peony form flower is over 12.5 cm across x 5 cm deep with 52 or more petals. Rose red with yellow anthers. Blooms mid-season to late.

Estelle. *(C.reticulata),* ACRS *Camellia News,* No.58A, Dec.1975, p.32, Reg. No.175: Originated by Ian R. Crerar, Windsor Street, Pascoe Vale, Victoria, Australia. A seedling of wild form reticulata x *C.reticulata* **Samantha.** First flowered 1970. 14 cm diameter bloom x 7 cm high with China Pink flowers, central stamens and rabbit ears. Blooms early to mid-season. Habit is upright and bushy. Leaves dark green, 10.5 cm long x 5 cm wide.

Ester. *(C.japonica),* Trillon, Le Mans Nursery Catalogue, 1843, p.5. Rovelli Catalogue, 1852, p.17: Lombardy - Large, imbricated white streaked vivid red. Originated in Italy.

Ester Moad. Mark S. Cannon Scion Catalogue, 1963-1964, p.6. Orthographic error for **Esther Moad.**

Esterii (Smith). Verschaffelt, 1844-1845, Catalogue, p.25. Synonym for **Estherae.**

Esterii Smith's. Isola Madre Catalogue, 1845. Orthographic variant for 'Estheri', synonym for **Estherae.**

Esther. *(C.japonica),* van Houtte Catalogue, 1845-1846, 23:4. No description. Franchetti, 1855, *Collezione di Camelie,* p.30: Vivid rose, much paler in the centre, striped with white. Imbricated. Originated in Italy.

Esther Ann. *(C.japonica), American Camellia Yearbook,* 1979, p.211, Reg. No.1426: A large, light red, variegated white, formal double. A 5 year old chance *C.japonica* seedling that first bloomed 1974. Originated by Paul Gilley, Grandridge, Florida, USA. The formal double type bloom is light red, variegated by grafting onto virus affected stock. It has 100 petals. Average size over

10 cm in diameter x 5 cm deep. Bloom has incurved petals, good texture and flowers from early to mid-season. Plant growth is upright and average with dark green leaves, 7.5 cm long x 3.8 cm wide. Chinese synonym 'Yisha'.

Esther Henty. *(C.japonica),* ANZCRS., 1956, *Camellia Annual,* No.3, p.6, Reg. No.11: An unknown seedling originated by Mrs H. Henty, Balwyn, Victoria, Australia. It first flowered 1946. Flowers mid-season. The flowers, 10 cm in diameter, are incomplete double form, soft pink and somewhat resemble **Gloire de Nantes.**

Esther Moad. *(C.japonica), Camellia Digest,* 1(3),1943. No description. ACS., *Quarterly,* vol.6, No.2, p.8, Reg. No.11: A 13 year old seedling of unknown parentage. First flowered, 1943. Originated by Riverbank Camellia Nursery, Riverbank, California, USA. Type of plant is open and upright with light green foliage. Flower buds are round, slightly pointed tip. Pointed petals. Flower is a complete double, mixed petaloids, colour light rose (2-B-5, Maerz & Paul Chart), 8.5-12.5 cm in diameter. Blooms mid-season. Orthographic errors: 'Esther Mood', 'Ester Moad'. Sport: **Esther Moad Variegated.**

Esther Moad Variegated. *(C.japonica),* ACS., *Quarterly,* vol.6, No.2, p.8 as 'Esther Moad Var.'. A virus variegated form of **Esther Moad** - Rose red and white. Originated by Riverbank Nursery, Riverbank, California, USA.

Esther Mood. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Esther Moad.**

Esther Smith. *(C.japonica),* SCCS., 1990. *Camellia Nomenclature,* p.40: Pink and white, medium size, full peony form. Medium growth. Blooms mid-season. Originated in the USA by J.C. Smith, Wensdale, Florida. ACS., Nov.1989, *The Camellia Journal,* vol.44, No.4, p.17, Reg. No.2181: A *C.japonica* chance seedling that first bloomed 1983. Average flower size, 9.5 cm across x 5 cm deep with 90 petals. Plant growth is average and medium in rate, with dark green leaves, 11 cm long x 5.5 cm wide.

Esther Terrell. *(C.japonica),* Truett, 1952, *American Camellia Yearbook,* p.23: Closely resembles C.M. Hovey. Crimson to deep, rose-pink. Medium size, formal double. Originated by R.E. Greene, Tallahassee, Florida, USA.

Esther Wheeler. *(C.japonica),* Anonymous, 1978, ACS., *The Camellia Journal,* vol.33, No.4, p.26: No description. Originated in USA. No valid listing located.

Esther's Tomorrow. *(C.japonica),* ACS, *The Camellia Journal,* June 2013, p.26 with colour photo; Regn No.2853. Originated by Esther Lawrence, Tallahassee, Fla., USA. ACS, *Yearbook,* 2013, p.114 with colour photo; Registered and propagated by Ralph Maphis, Tallahassee, Fla., also propagated by Loch Laurel Nursery, Valdosts, Ga. A 9 year old sport of **Leanne's Tomorrow,** first flowered 2004. Medium to large size bloom is 7.5-10cm diameter x 7.5cm deep, light pink variegated white, occasionaly a darker pink. Described as semi-double to full peony (photo shows a very full peony). Yellow anthers and yellow filaments, falls in one piece. Plant is spreading and open, with average growth rate. Mid-green leaves average 9cm x 5cm with low serration. Flowers midseason.

Esthereii. Dauvesse Catalogue, 1855-1856. Orthographic error for **Estherae.**

Estherae. *(C.japonica),* Buist, 1839, *American Flower Garden Directory,* p.240, as 'Estheri': Originated by Smith. A 12.5 cm, pure white, spotted and striped with rose and pink, petals broad, bold, erect and close set. When open, forms a perfect hemisphere. Contains a few hidden stamens. This variety was very popular in Europe where it was figured and described by Berlèse, 1843, *'Iconographie'*, pl.231 as 'Estheriae': The flower is 11-12 cm in diameter; sometimes it is irregular, sometimes imbricated with some regularity. It is always very full, well made, a delicate rose-pink, stippled with red or a pale carnation or flesh white, always striped with lines of dark rose. The outer petals, in several rows, are large, twisted, placed sideways and reversed, the others are all forms and all sizes, innumerable and forming a fascicled sphere.

Also see Verschaffelt, 1848, *Nouvelle Iconographie,* Book VI, pl.III. Orthographic variants and errors: 'Estherii', 'Estheriae', 'Esther', 'Esthereii', 'Esterii', Estheria', 'Ester', 'Estherii' (Floy), Synonyms: 'Esteri Smith's', 'Estheri' (Smith), 'Esterii' Smith.. Originated in USA.

Ethel Davis Light Pink. Griffin, ed., 1958, *Camellian.* Renamed **Ethel Davis Blush.**

Ethel Davis Tait. *(C.japonica),* Flanders, 1969, *American Camellia Yearbook,* p.108: A deep pink which is fragrant. Originated by C.S.Tait Sr., Brunswick, Georgia, USA.

Ethel Davis Variegated. *(C.japonica),* River View Nursery Catalogue, 1957-1958, p.12 as 'Ethel Davis Var.': Clear pink and white. A virus variegated form of **Ethel Davis.** Synonyms: 'Rebecca Jones', 'Rebecca Jones Variegated', 'Ethel Davis Heavy'.

Ethel Heydon. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.73. Synonym for **Countess of Orkney.**

Ethel McGee. *(C.japonica), American Camellia Yearbook,* 1960, p.196, Reg. No.518: A 9 year old chance seedling that first bloomed 1956. Originated by Mr & Mrs H.E. Ashby, Charleston, South Carolina, USA. Plant growth is upright and open with light green leaves, 11 cm long x 5 cm wide. The peony form, pink flower is 10-11 cm across x 6 cm deep with 45 petals and 25 petaloids, golden stamens. Blooms mid-season.

Ethel McMillan. *(C.hybrid), New Zealand Camellia Bulletin,* 1988, vol.XV, No.6, Reg. No.248: Originated by T. Lennard, Te Puke, New Zealand. A chance seedling of hybrid origin. The plant is about 25 year old and first flowered 1967. It is of open habit with average growth rate. The leaves are about 7 cm x 3.5 cm. The flowers are of loose peony form, measuring about 11 cm x 6 cm with 28 petals and 15 petaloids and are of a dark pink colour with pale pink centre. RHS.CC.68A.

Ethel Nichols. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1862, p.4. No description. Originated in USA. No valid listing located.

Ethel P. Arthus. *(C.japonica), American Camellia Yearbook,* 1960, p.196, Reg. No.478: A 9 year old chance seedling that first bloomed 1957. Originated by Ernest A. Judice, New Orleans, Louisiana, USA. The ivy green leaves average 7.5 cm x 6 cm. The spiraea red (No.025, RHS, No.11) semidouble flower, 11.5-13 cm across x 6 cm deep, has 29 petals, 69 petaloids and 29-50 stamens. Blooms early. Orthographic error: 'Ethel Arthurs'.

Ethel Posey. *(C.japonica),* Griffin, ed., 1956, *Camellian,* No.3, p.22, as 'Ethel Posy': Rose red, very large, semi-double with petals standing apart. Originated by C.D. Posey, Arabi, Georgia, USA.

Ethel Posy. Griffin, ed., 1956, *Camellian,* No.3, p.22. Orthographic error for **Ethel Posey.**

Ethel Rivers. *(C.japonica), American Camellia Yearbook,* 1955, p.337, Reg. No.225: A 10 year old seedling of 'Donckelaeri' (**Masayoshi**), originated by Shady Acres Nursery, Charleston, South Carolina, USA. First flowered 1950. Plant growth is upright, rapid and compact. Leaves are glossy, dark green, round to medium long with deep serrations. The flower buds are round and light green. The dark red flowers, 10-11 cm across, are incomplete double with large petaloids, similar to 'Gloire de Nantes', with 13-20 petals and rabbit ears. Flowers early to mid-season. Sport: **Ethel Rivers Variegated.**

Ethel River Variegated. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1963-1964, p.6 as 'Ethel Rivers Var.': A virus variegated form of **Ethel Rivers** - Dark red blotched with white. Originated in USA.

Ethel Ross. *(C.japonica),* ACRS, 1962, *Camellia Annual,* No.9, p.27, Reg. No.49: Originated by H.J. Henty, Balwyn, Victoria, Australia. A seedling of **Esther Henty,** pollen parent unknown. First bloomed 1960. Blooms mid-season to late. the flower is an incomplete double with two rows of wavy, outer petals and smaller petals and petaloids towards the centre. Colour is pale pink, RHS.427/2-/3. Size of bloom, 11 cm across. A vigorous grower with broadly oval, deeply serrate, sharply pointed and prominently veined leaves.

Ethel Rhyne. *Camellia Nomenclature,* 1990, p.40. Orthographic error for **Ethyl Rhyne.**

Ethel Weber. Valley Garden Supply Co. Catalogue, 1951, p.9. Synonym for **King Lear.**

Ethel 'Nook' Scivique. *(C.japonica),* SCCS *Camellia Nomenclature* 2009, p.47; Small, soft pink, full peony form. Upright, columnar growth. Flowers mid-season. Produced in 1985 by J.L. Scivicque, Denham Springs, La., USA.

Ethelyn Harmon. (C.*japonica),* SCCS., 1984, *Camellia Nomenclature,* p.40: Pale pink in varying shades. Large, peony form. Medium, upright growth. Mid-season blooming. Originated by L.C. Preston, Walnut Creek, California, USA.

Ethereal. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943. No description. Originated in USA. (Believed extinct.)

Etherington White. *(C.japonica),* Kiyono Nursery Catalogue, 1938-1939, p.9, erroneously as 'Ethlington White'. No description. Gerbing Azalea Gardens Catalogue, 1940-1941: Large, semi-double white, petals tissue-paper like texture. Mid-season bloomer, tall, vigorous grower, dark green foliage. Very fine white. Fendig, 1952, *American Camellia Catalogue:* Medium, pure white, anemone form, 8-10 cm across. Sometimes the inner petals are large, sometimes small and are crinkled and of tissue-thin texture. Stamens are interspersed among petals. Filaments are cream, anthers golden yellow. Buds are conical and light green. Leaves medium, dull green, oval, 6.5 cm x 3.8 cm. Plant habit tall and vigorous, not symetrical. The Camellia was named for a family named "Etherington" and the original erroneous spelling of "Ethlington" has been corrected. Orthographic errors: 'Ethlington White', 'Everingham', 'Ethrington', 'Ethrington White'. Originated at the Kiyono Nursery, Crichton, Alabama, USA. Kiyono altered the name to 'Waterloo' in their 1940 Catalogue.

Ethlington White. Kiyono Nursery Catalogue, 1939-1940, p.10. Orthographic error for **Etherington White**.

Ethrington. Gerbing Azalea Garden Nursery Catalogue, 1943. Orthographic error for **Etherington White.**

Ethrington White. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Orthographic error for **Etherington White.**

Ethrusca. Ellis, 1950, *Old Camellia Varieties,* p.132. Orthographic error for Etrusca.

Ethyl Rhyne. *(C.japonica),* ACS., Aug.1987, *The Camellia Journal,* vol.42, No.3, p.6, Reg. No.2048: Large, white with pink edged petals, formal double, *C.japonica* chance seedling. Blooms mid-season to late. Originated by Marshall Rhyne, Belmont, North Carolina, USA. USA. *American Camellia Yearbook,* 1987, p.80; colour photo between pp.60, 61: The 11 year old seedling first bloomed 1979. Average flower size is 10.5 cm across x 6 cm deep with 120 petals. Bloom has a high rose bud centre. Plant growth is upright, average and medium in rate with dark green leaves 7.5 cm long x 3.8 cm wide. Orthographic error: 'Ethel Rhyne'.

Etienne de Bore. McIlhenny Catalogue, 1945-1946. Synonym 'Quartet Mottled', itself a synonym for **Lady Mackinnon.** Although McIlhenny claims to have originated this cultivar at Jungle Gardens, it appears to be the same as the virus variegated form of **Lady de Saumarez** which had originally been introduced by Gerald Walter from Japan about 1890 and named **Lady Mackinnon** at the Caledonia Nursery, Guernsey, Channel Isles.

Etna. *(C.japonica),* van Houtte Catalogue, 1842, 9:10. No description. Berlèse, 1849, *Annales de la Société d'Horticulture Centrale de France,* vol.40, p.306: Formal double, 9-10 cm across, cherry red, more or less deep depending on the season. Petals ample, elongate, serried, sometimes entirely red, sometimes divided by a line of white. Originated in Belgium by Van Houtte. Chinese synonym 'Yitena'.

Etna. *(C.japonica),* Italian CS, *Notiziario,* 1997, No.4, p.3 with colour photo; Formal double, 10 cm diameter, petals 110-120, colour red (RHS.CC. 53B to 45A). Leaves oval, acuminate, margins serrulate, dark green and glossy, 11 cm x 5 cm. Bushy, compact growth. Originated by Buosi Osvaldo, Treviso, Italy in 1989. Parentage **Oki-no-nami** x **San Dimas.** Flowers mid-season to late.

Etoile. *(C.japonica),* van Houtte Catalogue, 1896, 265P:109 in English. Almost double. Splendid red. Originated in Belgium.

Etoile Palaire. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Etoile Polaire.**

Etoile Polaine. Ludeman's Pacific Nursery Catalogue, 1895-1896, p.5. Orthographic error for **Etoile Polaire.**

Etoile Polaire. *(C.japonica), The Floral World,* 1861. No description. Jean Verschaffelt, 1861-1862, Price List, p.35: Imbricated double, full centre, crimson scarlet. Each petal marked at the centre by a white stripe. Obtained from Henderson in sale Oct. 1861. André, 1864, *Plantes des Terres Bruyéres...,* p.243: Very beautifully imbricated flower, carmine pink; all the petals clearly ribboned with metallic white. Illustrated and described in *L'Illustration Horticole,* vol.13, 1866 under the name 'Stella Polare'. The illustration shows definite bands of rosy white on each petal, while the description reads: "The stripes clearly separate the petals into two equal parts, forming a veritable star." Rollisson's Plant Catalogue, 1877-1878 says: "Crimson, with a white bar through the centre of each petal". Van Houtte Catalogue, 1866-1867, 116:49 is different: Flower a little larger than a *C.sasanqua*, pale red, incurving, forming a full rose centre and then in his Catalogue, 1877-1878, 174:245: Flower sometimes pink, streaked with red, sometimes light red, imbricated, incurved, rose-form. Then in his 1882-1883, 199:254 Catalogue as 'Stella Polaire', "from Santarelli". Thus it seem that the variety described in SCCS, *Camellia Nomeclature* is the van Houtte form. The designation "Stella Polare" is Italian for the French "Etoile Polaire" or the English "Pole Star". Orthographic errors include: 'Etoile Polaine', 'Etoile Palaire'. Orthographic variants: 'Stella Polare', 'La Stella Polare'.

Etonia. *(C.japonica),* André Leroy Catalogue, 1833, p.13 as 'Etonnia'. No description. Originated in England. (Believed extinct.)

Etonia Alba. *(C.japonica),* Trillon, Le Mans Nursery Catalogue, 1845, p.4: Peony form. Beautiful White. Originated in England.

Etrusca. *(C.japonica),* van Houtte Catalogue, 1846-1847, 27:24: White, imbricated, very large. White striped with crimson. First released in Italy by Burnier & Grilli, Florence from a seedling raised by Ridolfi, Florence Catalogue, 1848, p.7: Beautifully imbricated, pure white flowers with a few red stripes. Vershaffelt, 1851, *Nouvelle Iconographie*, Book III. pl.III: White, imbricated camellia, petals concave, erect and resembling a rose. They are pure white with a few, rare, purple stripes. Burnier & Grilli Catalogue, 1846-1847, p.56 lists it as 'Onore di Bibbiani' syn. 'Etrusca', however Ridolfi, 1848, says they are well distinct.: "Flower, large, well imbricated white striped with carmine." Synonym for **Granduchessa d'Etruria.** Synonym; 'Etrusca Flore Plena'. Orthographic errors: 'Ethrusca', 'Etrusci'.

Etrusca Flore Plena. Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani, as 'Etrusca Fl. Pl.'. Synonym for **Granduchesssa d'Etruria.**

Etrusci. da Silva, 1880, *Forcing Varieties of Camellias in Oporto,* p.9. Orthographic error for 'Etrusca'.

Etsu-botan. (*C.amplexicaulis* hybrid). *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.100 with colour photo; A cross of *C.amplexicaulis* x **Tama Americana**, originated by S. and Y. Hisatomi, Kurume, Japan, named in 2005. Peach pink, large to very large, loose peony informal double. Stamens dispersed among petals. Vigorous, upright growth. Leaves large, oblong. Flowers early to mid-season. From Fukuoka Pref., Japan.

Ettore Birelli. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.89 with colour photo; Medium size semi-double, white (RHS.CC.155D). A few petaloids mixed with yellow central stamens. A seedling of **Alba Simplex** x 'Rosa Simplex' **(Aitonia),** first flowered in 1982.

Ettore Fiaromossa. Charles van Geert, 1850, Catalogue No.117, p.7. Orthographic error for **Ettore Fieramosca.**

Ettore Fieramosca. *(C.japonica),* Charles van Geert, 1850, Catalogue, No.117, p.7, as 'Ettore Fiaromossa': Perfect form, white with pink stripes. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare:* Large, of a beautiful, delicate rose-pink, shading to white towards the centre. Imbricated. First class. Franchetti, 1855, *Collezione di Camelie,* p.30: Very large. Outer rows of petals vivid pink. Slight whitening of the centre; beautifully imbricated. Originated in Italy by Madoni. Verschaffelt, 1858, *Nouvelle Iconographie,* Book XI, pl.IV: Its blossom is larger than average and formed of ample petals arranged in a double order. Those of the circumference are regularly imbricated, of a delicate pink with a paler streak in the middle, the following are inserted in an irregular spiral, all pink, elegantly variegated with white. Orthographic error 'Ettore Fiaromossa'.

Ettore Maiorana. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.90 with colour photo; Medium size, rose form to formal double, imbricated, red (RHS.CC.53B). One or two petals may have white streaks. A seedling of 'Plutone' x **Moshio**, first flowered in 2003. Originated by Dott. Guido Cattolica, Livorno, Italy.

Eugene Lizé. *(C.japonica),* Guichard Souers Nursery Catalogue, 1894 as 'Donkelaari Eugene Lizé': Peony form, a flower well doubled. Seedling of the variety 'Donckelaeri' (**Masayoshi**), originated by Mathurin Lizé, Nantes, ca.1883. Semidouble to peony form Camellia Rose (HCC.622) blotched and spotted white with 12-14 outer petals, broadly obovate, 6 cm x 5 cm,

refused reflexed, sometimes with a mass of small, central petals and petaloids, irregularly notched and undulated, with some pale yellow stamens visible. Average size 10 cm across. Leaves elliptic, 7 cm x 3.5 cm, serrulate, acuminate, decurved. Early to mid-season blooming. Habit upright with loose branching, slow growing. Colour illustrations: *Camellias* by G.G. Gerbing, 1945, p.85 as 'Eugene Lize'; *American Camellia Yearbook,* 1949 facing p.67. See also Hertrich, 1955, *Camellias in the Huntington* Gardens, vol.II, p.123. Synonyms: 'Lady Jane Grey', 'Donkelaari Eugene Lizé', 'Annie McDonald', 'Archie McDonald', 'Eryldene Number 1', 'Eugene Lizé'(Eryldene). Orthographic errors: 'Eugene Lizze', 'Eugene Lizzie', 'Eugene Lezze', 'Eugene Lise', 'Eugene Lizy'.

Eugenia Hambert. *(C.japonica),* Bournier, Fréderic, 1853, Catalogue del l'Etablissement Agraire-Botanique. Originated in Italy. No description. (Believed extinct.)

Eugenia Howell. *(C.japonica), American Camellia Yearbook,* 1958, p.287, Reg. No.315: A sport of 'Mathotiana Variegated' (**Julia Drayton Variegated**). Originated by Vandie T. Howell, Semmes, Alabama, USA. The large, loose, peony form flowers are deep rose-pink, splotched and flecked with white, with 55 petals and 55 petaloids, interspersed with golden stamens. The flower, 13 cm across x 7.5 cm deep, blooms early to mid-season. Synonym: 'Eugenia Howell Variegated'.

Eugenia Howell Variegated. Tammia Nursery Catalogue, 1965-1966 as 'Eugenia Howell Var.'. Synonym for **Eugenia Howell.**

Eugenia Palavicini. Auguste van Geert Nursery Catalogue, No.65, 1869-1870, p.52. Orthographic error for **Eugenia Pallavicini.**

Eugenia Pallavicini. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.17: A very beautiful, formal double flower, often white with red spots on same tree as red flowers. Imbricated. Although Franchetti, 1855 gave this name as a synonym for 'Marchesa Costabili', it would seem to be a different cultivar. Orthographic errors: 'Eugenia Palavicini', 'Eugenietta Pallavicini'. Originated in Italy.

Eugenia Parlatore. *(C.japonica),* Fenzi, E.0., 1878, *R. Società Toscana di Orticultura, Bollettino,* 3:60-62. No description. Roda Catalogue, 1885: Very large, concave flower, imbricated, rose, more or less completely covered with broad streaks of carmine red. Originated by Franchetti, Florence, Italy.

Eugenia Poly. *(C.japonica),* van Houtte Catalogue, 1858, 72-12. No description. Auguste van Geert, 1863-1864, Catalogue No.54, p.38: Very beautifully imbricated white with yellowish centre. (Believed extinct.)

Eugenia Scarlatti. *(C.japonica),* Roda Catalogue, 1885, p.44: Large size, regularly imbricated, concave flower, rosy white completely splashed and edged carmine red. Fratelli Rovelli, 1896, Catalogue, p.41: Imbricated red with pale pink centre, marbled and streaked vivid red. Orthographic error: 'Eugenio Scarlatti'. Originated in Italy.

Eugénie de Massèna. *(C.japonica),* Rollisson's Plant Catalogue, 1877-1878: Bright rose with a salmon tint, veined with crimson, neatly and broadly bordered white; flowers large and well imbricated. This Camellia is a sport of **Dom Pedro V, Rei de Portugal** and was named for the wife of Napoleon's Marshal, Andre Massèna, Duc de Rivoli, Prince d'Essling. Coloured illustrations: Macoboy, 1981, *The Colour Dictionary of Camellias,* p.86; Waterhouse, 1952, *Camellia Trail,* pl.XII; front cover, ACRS., 1961, *Camellia News,* No.8. Orthographic errors: 'Eugene Massena', 'Eugene Massina', 'Eugene Messener', 'Eugenia Massena', 'Eugenia de Massena', 'Eugenia de Massina', 'Eugenia di Massena', 'Eugenia du Massena', 'Eugenie di Massena', 'Eugene di Massner', 'Eugene de Massina', 'Eugene di Massina', 'Eugenie de Massena'.

Eugénie de Massèna. *(C.japonica),* Jean Verschaffelt, 1865-1866, Catalogue, No.9, p.2: This magnificent variety was obtained by M.Kips of Brussels, which last year he named for his wife Mme Eugénie de Massena. Its habit is beyond reproach and foliage dark green. The large flowers are well imbricated, bright pink with crimson veins and widely bordered pure white. Bull Nursery Catalogue, 1867; Verschaffelt Catalogue, 1867-1868, p.41 and Loureiro Catalogue No.9, 1872-1873 as 'Eugene de Massina' under "foreign novelties", all without description. However *The Floral Magazine,* 1873, pl.84, illustrates and describes 'Eugenie de Massina' as a cupped flower of deep blush colour. The illustration is quite unlike Rollisson's **Eugénie de Massèna** and the date is too early for it to be a sport of 'Dom Pedro V' and it is thus considered a different cultivar with prior claim to the name.

Eugenie de Massina. Loureiro Catalogue No.9, 1872-1873. Orthographic error for **Eugénie de Massèna.**

Eugenietta Bolognini. *(C.japonica),* van Houtte Catalogue, 1852-1853, 48:39: Well imbricated, centre white, intermediate petals, pink, outer petals vivid red. Franchetti, 1855, *Collezione di Camelie,* p.30: Delicate pink. Imbricated. Originated in Italy. Orthographic errors: 'Eugenia Bolognini', 'Eugenietta Boplognini', 'Eugenietta Bolognoni'.

Eugenio Bettoni. *(C.japonica),* Fratelli Rovelli Catalogue, 1852, p.17. 3 from 4 Lechi. No description. Originated in Italy. (Believed extinct.)

Eugenio Scarlatti. Rovelli Catalogue, 1893-1894, p.34. Orthographic error for **Eugenia Scarlatti.**

Eulalie Hovey. *(C.japonica),* Hovey, 1883, *The Garden,* 24:250: A bright rose of satiny texture, exquisitely cupped and imbricated to the last petal; foliage medium size, habit moderately vigorous. First flowered 1852. Originated by C.M. Hovey, Massachusetts, USA.

Eulalia Sally. SCCS., 1946, *Camellias,* p.19. Orthographic variant for 'Eulalie Sally', synonym for **Lady Mackinnon** erroreously as 'Lady de Saumarez'.

Eulalie Sally. Greenbrier Farms Catalogue, ca.1945. Synonym for **Lady Mackinnon** erroneously as 'Lady de Saumarez'.

Eunice Buckley. *American Camellia Yearbook,* 1955, p.337, Reg. No.229. Orthographic error for **Eunyce Buckley.**

Eunyce Buckley. *(C.japonica),* Wheelers Central Georgia Nurseries Catalogue, 1955, p.5: Named in honor of Mrs Eunyce Buckley, an extra large, flat, rose-pink, semi-double. *American Camellia Yearbook,* 1955, p.337, Reg. No.229, as 'Eunice Buckley': A 13 year old chance seedling, originated by the Central Georgia Nurseries, Macon, Georgia, USA. First flowered 1951. Plant growth upright, semi-compact and rapid in rate, Leaves are lanceolate, cordate, cuspidate and crenate. The rose-pink flowers, 10-15 cm across, are semi-double, similar to 'Donckelaeri' (**Masayoshi**) with 15 petals. Occasionally the centre petals are twisted and cause the flower to become an incomplete double form. Flowers mid-season.

Euphrasia. *(C.japonica), Australian Botanical and Horticultural Society Report,* 1849. No description. Originated by William Macarthur, Camden Park, NSW, Australia. (Believed extinct.)

Eureka. Wilmot, 1949, *Camellia Variety Clasification Report,* 1943, p.10. Abbreviation for **Eureka Variegated.**

Eureka Red. *(C.japonica),* Vanderbilt, 1941, *Camellia Research, II,* p.3: Solid red form of **Eureka Variegated.** Originated in USA. Synonyms: 'Radiance', 'Sensation'.

Eureka Variegated. Vanderbilt, 1941, *Camellia Research, II,* p.3: No description. Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.125 as 'Eureka': Incomplete double to complete double rose form; stripes and flecks of Spinel red 0023/self on white ground, 9 cm across x 5 cm deep. A solid coloured sport known as **Eureka Red** occasionally occurs. Petals about 55, obovate, 4.5 cm x 3.5 cm, outer recurved, inner cupped with inrolled margins; centre a bud-like formation hiding scarce petaloids and short stamens. Leaves, oblong, 10 cm long x 5 cm wide, shallow, broad serrations, apex abrupt to long-pointed. Blooms mid-season

to late. Synonym: 'Peppermint Stick'. Abbreviation: 'Eureka'. Sports: **Eureka Red, Eureka White.** Thought to have been imported from Japan by the Star Nursery, California.

Eureka White. *(C.japonica),* Vanderbilt, 1941, *Camellia Research, II,* p.3: A solid white form of **Eureka Variegated.** Originated in the USA.

Eureus. *(C.japonica),* William Bull Nursery Catalogue, 1869, p.79. No description. Originated in England. (Believed extinct.)

Euriodes. Burdin, Chambery Nursery Catalogue, 1834, p.18. Orthographic error for the species *Camellia euryoides* Lindley, 1826.

Eurioides. Anonymous, 1845, *Revue Horticole,* p.46. Orthographic variant for **Euryoides.**

Eurioides Alba. Burnier & Grilli Catalogue, 1846-1847. Synonym for **Euryoides.**

Eurioides Rosea. Burnier & Grilli Catalogue, 1846-1847. Synonym for **Euryoides Rosea.**

Eurioides Rubra. Loddiges Catalogue, 1849, p.33. Synonym for *C.rosiflora.*

Euriphilla. *(C.japonica),* Isola Madre Catalogue, 1845. No description. Originated in Italy. Orthographic errors: 'Enriphilla', 'Henriphylla'. (Believed extinct.)

Eurydice Augusta. *(C.japonica),* Wilder, 1848, *Horticulturalist,* 2:540-542: A perfect regular flower, colour light rose, broadly striped with white and resembles Pressley's **Queen Victoria** but surpasses it in beauty. A seedling of 'Punctata'. Synonym: 'Eurydice Augusta Wilder'.

Eurydice Augusta Wilder. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.106. Synonym for **Eurydice Augusta.**

Euryoides. *(C.euryoides),* Lindley, 1826, *Botanical Register*, t.983 as the species *C.euryoides.* The species *C.rosiflora* was erroneously grown as *C.euryoides* until 1858 when Hooker recognized it as distinct species. Orthographic variants: 'Eurioides', 'Eurioides Alba'. Orthographic errors: 'Henryoides', 'Kenryoides'.

Euryoides Grandiflora. Jacob Makoy Nursery Catalogue, 1838. Synonym for *C.maliflora.*

Euryoides Rosea. *(C.hybrid),* Jacob Makoy Nursery Catalogue, 1836, p.15: "A pretty hybrid which I obtained from seed in 1835." Probably a *C.rosiflora* seedling. Del Lungo e Girardi, 1928, *Le Camelie*: Small single flower, very fertile. Originated in Belgium.

Euryoides Rubra. Loddiges Catalogue, 1849, p.33 as 'Eurioides Rubra' . Synonym for *C.rosiflora.*

Euterpe. *(C.japonica), Australian Botanical & Horticultural Society Report,* 1849. A purplish crimson, double flower, like **Spofforthiae Carnea.** Originated in NSW, Australia by Macarthur of Camden Park. It is believed that **Pilida** is a synonym.

Euterpe (Fiaes). *(C.japonica),* José Marques Loureiro, Catalogue, No.1, 1865, p33, & No.9, 1872-73, p.47 as 'Euterpe': Formal double white. Originated in Portugal by Fiaes.

Euterpe (van Houtte). *(C.japonica),* van Houtte Catalogue,1851, 44:9 as 'Euterpe': Perfect imbrication. Rose bands on white. Originated in Belgium.

Eutonica. *(C.japonica),* Longone Catalogue, 1846. No description. Originated in Italy. (Believed extinct.)

Eva. *(C.japonica),* Burdin Maggiore & Co. Catalogue, 1845. No description. van Houtte Catalogue, 1846-1847, 27:24 from B Lechi. Burdin Maggiore & Co., 1849-1850, Catalogue General: Candid white, peony form. Vallon, 1858, *Revue Horticole,* p.188: Rose red striped white. Imbricated. Originated in Italy.

Eva Corine Hovey. Fendig, 1953, *American Camellia Yearbook.* Orthographic variant for **Eva Corinne Hovey.**

Eva Corinne Hovey. *(C.japonica),* Hovey, C.M., 1883, *The Garden,* 24: 249: A fine, bold, full-sized flower, very double, carmine, every petal finely tipped or bordered with white. First flowered

1850. Originated by C.M. Hovey, Massachusettes, USA. Orthographic variant: 'Eva Corine Hovey'.

Eva Dowling. *(C.japonica), American Camellia Yearbook,* 1960, p.196, Reg. No.465: A 9 year old chance seedling, originated by Mrs W.J. Beasley, South Carolina, USA, that first bloomed 1954. Plant growth habit is slightly pendulous, open and rapid. The light green leaves average 11 cm x 4 cm. The bright pink, rose form double flowers, 10 cm across x 6 cm deep, similar to **General George Patton,** have 24-26 petals in three layers and 3-6 petaloids mingled with yellow stamens. Flowers early to mid-season.

Eva Grace. *(C.japonica), American Camellia Yearbook,* 1960, p.197, Reg. No.502: A 10 year old chance seedling that first bloomed 1953. Originated by Eva Grace Sutton, Minden, Louisiana, USA. Plant habit is spreading, dense and rapid in rate. The dark green leaves average 10 cm x 5 cm. The rose red, rose form double flowers, 9.5 cm across x 6 cm deep, have 15 petals, rare petaloids and yellow stamens. Flowers mid-season to late.

Eva Guilfoyle. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.74. No description. Originated in Australia. (Believed extinct.)

Eva Hill. Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.28. Synonym for **Annie Laurie.**

Eva Ross. *(C.japonica)* ACS, *The Camellia Journal,* June 2011, p.29 with colour photo; Originated by Frank Galloway, Bolivia, N.C., USA. ACS, *Yearbook* 2011, p.140 with colour photo; Regn No.2812. A cross of 'Magnoliaeflora' (H**agoromo**) x **Ville de Nantes**, first flowered in 1995. Medium size flower is 10 cm diameter x 5 cm deep, with 13 – 17 petals and 1 – 3 petaloids. Semi-double, ivory white streaked and splotched cherry red. Cold hardy. Vigorous, spreading growth. Dark green leaves are 9 cm x 3,8 cm. Flowers midseason.

Evaland. *(C.japonica), American Camellia Yearbook,* 1960, p.197, Reg. No.490: A 12 year old chance seedling, originated by F.C. Landman, Gulfport, Mississippi, USA. The dark green leaves average 7.5 cm x 3.5 cm, with obscure venation and shallow, sharp serrations. The veined, watermelon red, semi-double flowers, similar to **Finlandia,** 11.5 cm across x 5 cm deep, have 21 petals and yellow stamens. Flowers mid-season to late.

Evan Davis. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.45: Rose red. Large to very large, fluffy, semi-double to loose, peony form with stamens intermingled with inner petals. Medium to late blooming. Originated in USA by McDonald. Orthographic variant: 'Evan B. Davis'.

Evan B. Davis. River View Nursery Catalogue, 1957-1958, p.9. Orthographic variant for **Evan Davis.**

Evangelia Kalafatas. *(C.japonica),* ACRS., 1989, *Camellia News,* No.111, p.13, Reg. No.375: Originated by Keith Abbott, Rossmoyne, West Australia. A chance seedling that first flowered 1987. Formal double, pink (RHS.CC.54C) flowers, 11 cm across x 6.5 cm deep. Blooms early to mid-season on an upright, medium plant. Leaves ovate, concave, malt surface, deep green, margins finely serrulate, apices acuminate, 11 cm long x 5.5 cm wide. Some spiral form flowers when first opening. Colour deepens with age.

Evangeline. *(C.japonica),* Hillcrest Nursery Catalogue, 1958: Rose-pink shading to pale pink at centre. Miniature, rose form double. Medium, open growth. Blooms mid-season to late. Originated by C. Rose, Temple City, California, USA.

Évangéline. *(C.sasanqua).* Claude Thoby, 1993, Camélias, pp.11, 15, 64 and colour photo p.35: Large single, very bright violet pink to the centre. Scented. Originated in France. Note: The previous entry is a USA *C.japonica* of the same name without the acute accents.

Evalina. *(C.japonica),* van Houtte Catalogue, 1851, 44:9. No description. Originated in Nantes, France. Orthographic error 'Evelina'. (Believed extinct.)

Evalina. *(C.japonica), American Camellia Yearbook,* 1959, p.272, Reg. No.403: A 7 year old seedling of 'Lotus' (**Gauntlettii**), originated by W.F. Wilson Jr, Hammond, Louisiana, USA. First bloomed 1956. Plant growth spreading, open and rapid in rate. The dark green leaves average 12.5 cm x 6 cm. The white, peony form flowers, 12.5-14 cm across and 7-7.5 cm deep with 23-30 petals, 7-28 petaloids and 250-300 yellow stamens. Flowers mid-season.

Evelina. Alexis Dalliere, 1852, Price List, p.16. Orthographic error for **Evalina.**

Evelyn. *(C.japonica),* Stonehurst Nursery Catalogue, 1962: Medium size, bright red single. Flowers mid-season. Originated in England.

Evelyn Chace. *(C.japonica), American Camellia Yearbook,* 1971, p.46, Reg. No.1141: A 10 year old *C.japonica* seedling that first flowered 1964. Parents, female **Imura** x **Debutante** pollen. Originated by W.J. McGill, Adams Run, South Carolina, USA. Plant growth upright, open and rapid with light green leaves averaging 10 cm x 5 cm. The rose form double (Similar to **Shiragiku**) is blush pink in colour with lemon anthers and 64 petals. Blooms mid-season.

Evelyn Fulton. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.51: Soft pink and white. Very large, peony form with loose petals and a centre of intermingled petaloids and stamens. Blooms midseason. Originated in USA by Fisher.

Evelyn Henderson. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.41: Blush pink. Medium large, semi-double with scalloped and fluted petals. Vigorous and upright growth. Mid-season blooming. Originated at Glendale, California, USA by Mrs J. Clairmont.

Evelyn Jernigan. *(C.japonica), American Camellia Yearbook,* 1954, p.310, Reg. No.163: A 15 year old chance seedling originated by Mrs Evelyn Jernigan, Brewton, Alabama, USA. First flowered 1949. Leaves are thick, bright green, narrow and pointed. Flower buds white in colour. Flowers are incomplete double with small petaloids, rabbit ears mixed with stamens in centre. Colour white, size 10-11 cm across with 25-30 petals. Flowers mid-season.

Evelyn Kilsby. *(C.reticulata),* Valdosta Camellias, Nov.1987, ACS., *The Camellia Journal,* vol.42, No.4, p.19. ACS 1994, *The Camellia Journal,* vol.49, p.39, Reg. No.2288. *American Camellia Yearbook,* 1994, p.60: Originated by Frank Pursel, Oakland, California, USA. A very large, deep red semi-double *C.reticulata* chance seedling. Late blooming. The 12 year old seedling first flowered 1983. Average flower size is 15 cm across x 7.5 cm deep with 14 petals and golden anthers. Plant growth is upright, open and vigorous with leaves 10 cm long x 6 cm wide. Colour pl. between pp.64-65.

Evelyn LeBlanc. Fendig, 1953, *American Camellia Catalogue.* Orthographic variant for **Mrs Evelyn LeBlanc**.

Evelyn Poe. *(C.japonica),* Gerbing Camellia Nursery, 1968, ACS. *The Camellia Journal,* vol.23, No.3, inside rear cover; *American Camellia Yearbook,* 1969, P.160, Reg. No.1058: A 12 year old seedling of **Elizabeth Boardman** that first bloomed 1962; originated by W. Lee Poe, Birmingham, Alabama, USA. Plant growth is upright, spreading, dense and medium in rate with dark green leaves, 12-15 cm long x 7-10 cm wide. The peony form flowers, similar to **Daikagura,** are 12.5-15 cm across x 8-10 cm deep. White with a few pink splashes, gold anthers, white filaments. Mid-season blooming. Sports: **Evelyn Poe Blush, Evelyn Poe Pink, Evelyn Poe Pink Variegated, Evelyn Poe Variegated.** See colour photos: Front cover, ACS., 1968, *The Camellia Journal,* vol.23, No.3 and front cover SCCS, 1969, *The Camellia Review,* vol.30, No.6.

Evelyn Poe Blush. *(C.japonica), American Camellia Yearbook,* 1972, p.130, Reg. No.1169: A blush pink sport of 'Evelyn Poe' first observed 1965. It is blush, darker at the centre, gradually shading

to a lighter colour with 2-3 pink markings, gold anthers and white filaments. Flower and plant same as **Evelyn Poe.** Originated by W. Lee Poe, Birmingham, Alabama, USA.

Evelyn Poe Pink. *(C.japonica),* SCCS., 1972, *Camellia Nomenclature,* p.56: Pink sport of **Evelyn Poe.** Originated in Alabama, USA by W. Lee Poe.

Evelyn Poe Pink Variegated. *(C japonica),* Gentry, 1968, ACS., *The Camellia Journal,* vol.23, No.4, p.8 as 'Evelyn Poe Pink Var.': A virus variegated form of **Evelyn Poe Pink** - Pink and white. Originated in USA.

Evelyn Poe Variegated. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.74: A virus variegated form of the red mutation of **Evelyn Poe** - Red blotched white, peony form. Originated in USA.

Evelyn Ramirez. *(C.japonica), American Camellia Yearbook,* 1981, p.98, Reg. No.1741: A very large, rose red semi-double to anemone to loose peony form, *C.japonica* seedling 74/14 x **All American.** Blooms mid-season to late. Originated by Ted Alfter, Bakersfield, California, USA. The 7 year old seedling first bloomed 1978. Average flower size, 16 cm across x 7.5 cm deep with 25-30 petals. Stamens intermingle with the petals. Plant growth is upright and rapid in rate with light to dark green leaves, 10 cm x 5 cm.

Evenemento. *(C.japonica),* de Jonghe,1851, *Traité de la Culture du Camellia,* p.106. No description. Originated in Italy. (Believed extinct.)

Eveneti. Jacob Makoy Nursery et Cie Catalogue, 1849, p.20. Orthographic error for **Evenite.**

Evening Star. *(C.japonica),* Fruitland Nursery Catalogue, 1945-1946, p.25: Light pink. Large single. Fendig, 1952, *American Camellia Catalogue:* Medium size, rose pink, semi-double, 8.5 cm in diameter. Some blooms are single and some petals have occasional blotches of white. Filaments yellowish, anthers brown. Leaves dark green, glossy, 6.3 cm long x 4 cm wide on a vigorous, loose, upright, spreading plant. Orignated by Magnolia Gardens, Charleston, South Carolina, USA, who first named it 'D.C. Strother'. As another variety had been named for him, it was changed to **Evening Star.**

Evenite. *(C.japonica),* Verschaffelt Catalogue, No.50, 1844, p.25. No description. Originated in France. Orthographic errors: 'Eveneti', 'Evennite'. (Believed extinct.)

Evennite. Verschaffelt, 1844, Catalogue No.50, p.19. Corrected to **Evenite** in following catalogue.

Evensong. *(C.japonica),* ACS, *Yearbook,* 2013, p.115 with colour photo, Regn No.2915. An 8 year old seedling, parentage unknown, first flowered 2009. Originated and registered by C.M. and Lillian Gordy, Ocala, Fla., USA, and propagated by Loch Laurel Nursery, Valdosta, Ga. The medium size, 9cm diameter x 3.8cm deep, flower is formal double, mid-pink, falls in one piece. Upright growth at average rate. Mid-green leaves average 9.5cm x 5cm. Flowers mid-season.

Eventide. *(C.japonica), American Camellia Yearbook,* 1988, p.187, Reg. No.2086: A large size, soft to rosepink, veined deeper pink, semi-double *C.japonica* chance seedling that blooms mid-season to late. Originated by Ivan J. Mitchell, Melrose, Florida, USA. The 16 year old seedling first bloomed 1975. Average flower size, 12.5 cm across x 6 cm deep with 18 petals, some petaloids, yellow anthers and white filaments. Plant growth is upright and rapid in rate, with dark green leaves, measuring 13 cm long x 6 cm wide.

Evergreen Pink. *(C.japonca),* Malbis Nursery Catalogue, ca.1945 according to Hume, 1946: Light pink. Medium large, loose peony form with intermingled stamens. Vigorous growth. Midseason blooming. Originated by Malbis Nursery, Daphne, Alabama, USA.

Everham. *(C.japonica),* McIlhenny Catalogue, 1941, p.5. No description. Lindo Nursery Price List, 1940-1941. No description. Originated in USA by Armstrong Nurseries, Ontario, California.

Everingham. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.74. Orthographic error for **Etherington White.**

Evetta Moyer. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.41: Light pink. Large, peony form. Vigorous, upright growth. Mid-season flowering. Originated in USA by Mr Moyer, Johnston, South Carolina.

Exa Dean. (*C.reticulata* hybrid). ACS, November 1995, *The Camellia Journal,* vol.50, No.4, p.4: Valdosta Camellia Scions. No description. Originated in USA. Don Ellison, *Camellias, A Photo Dictionary*, 1997, p.95 with colour photo; Large, dark red, semi-double to peony form. Mid to late season. Medium, upright growth.

Exa Gibson. *(C.japonica),* ACS 1992, *The Camellia Journal,* vol.47, No.4, p.13: Advert. for Valdosta Camellia Scions. No description. Originated by Roscoe Dean Nursery, Lucedale, Mississippi, USA.

Exagona Rubra. *(C.japonica),* Ambroise Verschaffelt, 1854, Catalogue, p.19. No description. von Biedenfeld, 1856, *Practische Grundlehren der Cultur von camellien....* p.40. No description. Verschaffelt, 1858, *Nouvelle Iconographie,* Book VI, pl.I: This variety was sent to us three or four years ago by Mr Luzzatti of Florence, Italy. The blossoms, larger than average, are of a vivid cherry-pink, composed of numerous small petals, ovate and regularly imbricated, often intersected by a faint, white stripe. The name expresses the arrangement of these petals, often imbricated in the form of a star. Orthographic errors: 'Exagono Rubra', 'Hexagona Rubra'.

Exagonalis Alba. *(C.japonica),* Medici Spada, 1858, *Delle Nuove Camellia...Dalle Semine Romane,* p.5: Medium size flower of hexagonal form, perfectly imbricated, 10 rows of petals of a clear white. Originated by Delgrande, Rome, Italy.

Exaltata. *(C.japonica),* Cachet Catalogue, 1840-1841, p.2. No description. Berlèse, 1849, *Annales Société Centrale d'Horticulture de France,* vol.40, p.81: Flowers rose form, double, 9-10 cm across, white, streaked or variegated with rose-pink. Exterior petals in several rows, ample, notched, not numerous; the centre is composed, average size, unequal, twisted and imperfect petals.

Exaltation. *(C.x williamsii),* RHS., 1968, *The Rhododendron and Camellia Yearbook,* pl.9, p.15 and p.236 for notification of a "Preliminary Commendation" awarded Feb.1967. Originated at the Savill Gardens, England as a cross of *C.x williamsii x C.japonica*, **Gauntlettii.** Received an "Award of Merit", 1968 and 1974. A pale pink, semi-double (10 cm across), 15-18 petals, cleft at the apex, fluted, with the centre a mixture of short stamens and a few small, twisted petals.

Exangularis. Burdin Maggiore & Co. Catalogue, 1835, p.37. Orthographic variant for 'Hexangularis', synonym for **Myrtifolia.**

Exangularis Rubra. Burdin Maggiore & Co. Catalogue, 1856-1857. Orthographic variant for 'Hexangularis Rubra', synonym for Myrtifolia.

Exapetala. *(C.japonica),* Ridolfi, 1843, Catalogue of Camellias Cultivated at Bibbiani. Originated in Italy. No description. (Believed extinct). Orthographic error 'Exepetala'.

Exbury. *(C.x williamsii),* RHS, 1980-1981, *Rhododendrons with Magnolias and Camellias,* p.71. Previously invalidly named 'Lanarth' but renamed **Exbury**. Originated in the Exbury Gardens, England. Received an RHS, H.C. Apr.1979 as 'Lanarth'.

Exbury Pink. *(C.x williamsii),* Hilsman, 1966, *American Camellia Yearbook,* p.123. No description. A name given to the *C.saluenensis* hybrid used by Waterhouse and Doak in the breeding of their hybrids.

Exbury Trumpet. *(C.saluenensis),* Treseder's Nursery Special Camellia List, 1962-1963 as 'Saluenensis Exbury Trumpet'. No description; List 1964-1965, p.10: Early to mid-season, phlox-pink, funnel shaped flower of 6 petals. Originated in England. See colour pl.1 facing p.28 in "Growing Camellias" by Treseder and Hyams, 1975.

Excellens. *(C.japonica),* Verschaffelt, 1852, *Nouvelle Iconographie,* Book VIII, pl.III: Large sized blooms with an amplitude of rounded petals with perfect imbrication and coloured a vivid, but delicate pink with the centre of each lineated by a white stripe. Originated in Italy.

Excelsa. *(C.japonica),* Loddige's Catalogue, 1830, p.21. No description. Berlèse, 1837, *Monographie,* ed.1, p.57, 125: Leaves 7.5 cm long x 4 cm wide, form and disposition like **Compacta** and a deep green; flowers white, double, 8-9 cm across, exterior petals large, numerous, regularly arranged, those at the centre cordiform, small, a few short stamens with pale yellow anthers. Orthographic error 'Excelsia'. Synonyms: 'Rolissoni', 'Rollissoni', 'Rollisoni', 'Rollisonii Vera', 'Rollissonii', 'Rollinsonii Vera', 'Rollinsoni Vera'. See colour plate 101, Berlèse, 1843, *Iconographie,* vol.2 as 'Rolissoni' or **Excelsa.** Originated in Italy. No relationship with the American 'Excelsa'.

Excelsa Nova. *(C.japonica),* L.L. Liebig, 1839 *Verzeichnis von Warmen und Kalten Hauspflanzen…,* p.9. Originated in Germany. No description. (Believed extinct).

Excelsa (Reuthe). (C *japonica),* G. Reuthe Ltd. Kent, Catalogue,1935, p.84; van Houtte Pere,1937-1938, Catalogue General, Anonyme Horticole, Belgium, p.5 with black & white illustration as new; invalidly as 'Excelsa': Large single flower, with wavy petals, of a beautiful carmine pink. Originated in England.

Excelsa Rubra. *(C.japonica),* Costa, 1846, *Catalogue de la collection de Camellias présentée à sa majesté L'lmperatrice de toutes les Russies et Reine de Pologne,* p.16. No description. Originated in Italy. (Believed extinct.)

Excelsa (Smith). *(C.japonica),* Hovey, ed.,1837, *Magazine of Horticulture,* 3:206 as 'Excelsa': A very pretty, semidouble white. Originated by James B. Smith, Philadelphia, USA.

Excelsia. Harrison, ed., 1838, *The Floricultural Cabinet,* vol.6, p.28. Orthographic error for **Excelsa.**

Excelsiana. *(C.japonica),* Berlèse, 1837, *Monographie,* ed.1, p.72, 127: Leaves 8 cm long x 6 cm wide, oval, acuminate, prominent veins, deep green; bud oval, acute, scales green; flower, 7-8 cm across, double, cherry red, petals reflexed, not numerous; those at the circumference broad, those at the centre small, rumpled, confused and intermingled with stamens. Originated in Belgium.

Excelsior. *(C.japonica), Horticultural Magazine & Gardeners' and Amateurs' Calendar,* 1868, p.234. No description. Exhibited by J. & W. Gelding. Originated in Australia. (Believed extinct.)

Excima. George G. Whitelegg, 19568, January Camellia List. Orthographic error for **Eximia.**

Exemia. Johnson, 1847, *Dictionary of Modern Gardening.* Orthographic error for **Eximia.**

Exima. Harrison, ed., 1835, *The Floricultural Cabinet,* vol.III, p.186. Orthographic error for **Eximia.**

Eximea. Cook, T.T., Nursery Catalogue, 1899-1900, p.234. Orthographic error for **Eximia.**

Eximea (Chandlers). Buist, 1852, The American Flower Garden Directory, 5th ed, p.211. Synonym for **Eximia.**

Eximia. *(C.japonica),* Sweet, 1830, *Hortus Britannicus,* ed.2, p.74: "Fine double red". Booth & Chandler, 1831, *Illustrations and descriptions of the plants which compose...,* vol.1, p.12, pl.12: (Chandler's Choice-Flowering). The flowers are of a deep rose colour, and measure no less than 10 cm. The outer petals are large, round and spreading, a little divided or notched at

their apex, and about 3.8 cm in diameter. The greatest number are roundish-concave, and laid over one another with the utmost regularity, in close but distinct rows; the petals of the centre becoming narrow, short and pointed and sometimes paler in their colour than those of the extremity. Like the 'Double White' (**Alba Plena**), the centre is considerably elevated and filled with petals. In colour and general appearance it assimilates closely to the variety **Imbricata** or 'Crimson Shell-flowered' lately introduced by the Horticultural Society, but may be at once distinguished by the greater size of the petals, which are rather darker in colour and notched - not entire as the petals of that variety. Raised from seed by Chandler, Vauxhall, England in 1819. Synonyms: 'Chandler's Eximia', 'Eximia Chandler', 'Eximia Coccinea', 'Eximia Vera'. 'Mariotti Rubra', 'Chandleri's Eximea', 'Eximea' (Chandlers). Orthographic errors: 'Exemia', 'Excima', 'Exima', 'Eximea', 'Emixia'. Note: There was a second Camellia by this name originated by Knight and possibly a third as Le Texnier, 1910 Catalogue, p.10 says: 'Received from J.D. Parks of Canton in 1824.'

Eximia Alba. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.33, & Real Companhia Horticolo-Agricola Portuense, Catalogue No.27, 1892, p.61, as 'Eximia Alba (Fiaes)': Irregular rose form, white, small central petals tinged yellow, some of these bright yellow. Originated in Portugal at Fiaes.

Eximia Chandler. Baxter & Wooster, 1850, Supplement Loudon's *Hortus Britannicus,* p.508 as 'Eximia Chandl.'. Synonym for **Eximia.**

Eximia Coccinea. Burdin Maggiore & Co. Catalogue, 1845, p.42. Synonym for **Eximia.**

Eximia (Jackman). *(C.japonica),* Jackman & Son, 1958-1959, *Planter's Handbook,* No.20, p.19, invalidly as 'Eximia': Shapely, many petalled, soft vermilion, anemone centred flowers. Bushy habit. Then in *Planter's Handbook,* No.23, 1961-1962: Double, deep glowing carmine flowers with rosetted, geometrically spaced, angular petals. Bushy habit.

Eximia (Knight). Berlèse, 1837, *Monographie,* ed.1, invalidly as 'Eximia': "There is known in the flower market another camellia under this name, produced by Mr Knight; its flower is semi-double and but little esteemed". *The Magazine of Botany and Gardening* of 1837 vol.3, new ser. p.152, lists an 'Eximia' from Baumann, Bollwieler and an 'Eximia' Chandler & Booth where it is stated: "The foliage of the present subject (Chandlers) and the French 'Eximia' are so similar that even a careful observed would consider them one and the same variety". The first would be that of Knight as he supplied Baumann & Baumann with most of his camellias. Synonym for **Knightii Eximia.**

Eximia Vera. Berlèse, 1837, *Monographie,* ed.1, p.109. From the description this would seem to be a synonym for **Eximia.**

Exoniensis. *(C.japonica),* Jacob Makoy Nursery Catalogue, 1836, p.16. No description. Berlèse, 1837, *Monographie,* ed.1, p.72, 127: Branches short, leaves medium size, oval, acuminate, thick, coarsely serrate, curled or undulated and reflexed, deep green; bud elongated like 'Variegata Plena', scales calycinal, at first green then blackish. The flower in the form of a rose, 10 cm across, double, cherry-red which changes from delicate to vivid; petals well arranged, broad, erect and distorted; those at the centre a little rumpled and striped with white. A few stamens are abortive or petaloid. Originated in England.

Exosma. Peer, 1956, *American Camellia Yearbook,* p.56.Orthographic error for **Eximia.**

Expanded Red. Loudon, 1841, *An Encyclopedia of Plants,* p.1238. Synonym for **Expansa.**

Expanding Crimson. Michael Floy & Sons Nursery Catalogue, 1832, p.54. Synonym for **Expansa.**

Expansa. *(C.japonica),* Loddige's Catalogue, 1814, p.25 as "semi-double" Loudon, 1838, *Arboretum Britannicum,* p.389: The expanded flowered Camellia. Described to be splendid; its flowers red and produced from February to May. *C.japonica* **Martha, Susanna** and **Wadieana** were

raised from seed of this variety. Baumann & Baumann, 1831, *Collection of Camellias éléves à Bollwieler,* p.9, pl.17: The flowers are double, irregular, of average size. The inner petals are red, small, variegated and slightly crowded. Courtois, 1833, *Magazin d'Horticulture,* p.311: Semidouble with regular pink outer petals, interior petals irregular with complete stamens. According to Berlèse, 1837, *Monographie,* ed.1, p.60, 126: Leaves very like those of 'Pinck', obtuse oval, prominent veins, irregulate serrate; bud of medium size, scales blackish; flower, medium size, irregular semi-double, rose coloured; petals of the circumference broad and cyothiform, those of the centre narrow, in two rows, crenate; some stamens in part transformed into irregular petals, red, and striped with white. Produces seed freely. Synonyms: 'Pink', 'Expanded Red'. Originated in England. Orthographic error: 'Expensa'.

Expectation. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...,* Chen Junzhi and Chen Jinshui, p.47; Long pistil group – pistil is raised above stamens by more than 0.5 mm. Red flower, mid-flora, mid-folia.

Expensa. Burdin Catalogue, 1822, p.55. Orthographic error for **Expansa.**

Expetala. Ridolfi, Florence Nursery Catalogue, 1848, p.7. No description. Orthographic error for **Exapetala.**

Expetalata Myrtifolia. Shneiderff, Enrico, ed., 1841, *Catalogo della piante chi si Trovano nel Giardino,* p.8. Synonym for **Myrtifolia.**

Exquisita. *(C.japonica),* Makoy Nursery Catalogue, 1838. No description. Berlèse, 1840, *Monographie,* ed.2, p.157 this name is given as a synonym for the Belgium cultivar 'Fimbriata Rubra'. However in the *Annales de la Société Central d'Horticulture de France,* vol.40, 1849, p.28 he describes a different cultivar Exquisita, raised by Hugh Low, Clapton, England as "Flowers small, a clear cherry-red, formal. Said to be a seedling from *C.sasanqua* pollinated by 'Imbricata Rubra"', but he doubts this. In fact it is unlikely as *C.sasanqua* does not appeared to have reached Europe as early as this date. Also the prior valid name for Low's Camellia is **Exquisite.** Makoy's listing of 'Exquisita' in 1838 would give it priority over 'Fimbriata Rubra' which thus becomes a synonym. Gheldorf Const., 1844, Catalogue of Plants and Price List, p.7, as 'Fimbriata Rubra': Fringed red, often blotched white.

Exquisite. *(C.hybrid),* van Houtte Catalogue, 1845-1846, 23:5: Seedling of sasanqua and the **Imbricata.** Flowers clear red, formal. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.106: Small size, formal double of a beautiful light red. The growth is not vigorous and this variety, it seems, is destined to grow as a bush. It is possible that the seed parent was a *C.oleifera* as *C.sasanqua* had not reached Europe at this time. Originated in England by Hugh Low, Clapton. See colour plate facing p.121 in *The Florist, Fruitist & Garden Miscellany,* 1851. Note; As per the previous entry, the stated parentage is very doubtful.

Exquisite (Paul). *(C.japonica),* Journal of the RHS, vol.17, p.xli, Feb. 13th 1874. First Class Certificate to 'Exquisite', (Salmon red splashed white) from W.Paul and Son.

Exquisite (Waterhouse). *(C.sasanqua),* Camellia Grove Nursery Catalogue, 1947, p.9 invalidly as 'Exquisite': A pale pink single, large. Originated in Australia by E.G. Waterhouse, Gordon, NSW, Australia. See colour photo, p.173, Macoboy, 1981, *The Colour Dictionary of Camellias.* Chinese synonym: 'Meiya' (Exquisite).

Exterii. Burnier & Grilli Catalogue, 1846-1847. Orthographic error for **Estherae.**

Extravaganza. *(C.japonica),* Nuccio's Nurseries Catalogue, 1960: White vividly marked and striped light red; large to very large, anemone form. Mid-season blooming. *American Camellia Yearbook,* 1965, p.233, Reg. No.727: 3SCCS.No.62-184. Originated by Harvey Short, California, USA. A 9 year old seedling of 'Lotus' (**Gauntlettii**), male parent unknown. First flowered 1957. Colour photos: p.86, Macoboy, 1981, *The Colour Dictionary of Camellias* and plate facing p.47, *American Camellia Yearbook,* 1982. Sports: **Extravaganza Pink**

Variegated, Extravaganza Pink. Synonym: 'Extravaganza Striped'. Chinese synonym: 'Kuangxiangqü'.

Extravaganza Pink. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.4. No description. SCCS, 1964, *Camellia Nomenclature,* p.49: Deep pink sport of **Extravaganza.** Originated in USA. Orthographic variant: 'Pink Extravaganza'. Sport: **Extravaganza Pink Variegated.**

Extravaganza Pink Variegated. *(C.japonica),* Cannon, 1963, ACS., *The Camellia Journal,* vol.18, No.1, back cover as 'Extravaganza Pink Var.': A virus variegated form of **Extravaganza Pink** - Deep pink and white. Originated in USA. Orthographic varant: 'Pink Extravaganza Variegated'. Abbreviation: 'Extravaganza Variegated'.

Extravaganza Striped. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.75. Synonym for **Extravaganza.**

Extravaganza Variegated. Tammia Nursery Catalogue, 1965-1966. Abbreviation for **Extravaganza Pink Variegated.**

Exuberance. *(C.x williamsii),* ACRS., 1971, *Camellia News,* No.43, p.35, Reg. No.140: Originated by E.L. Ansell, Lilydale, Victoria, Australia. A chance seedling from a *C.saluenensis* hybrid that first flowered 1967. Habit is upright, dense, vigorous. Flowers profusely in mid-season. Flower is 15.5 cm across with 18 petals, fuchsine pink HCC.67/2 to /3 with deeper veining. The dark green, lanceolate leaves are 7.5 cm long x 3.7 cm wide; base acute; apex acuminate, medium serrations. Chinese synonym 'Fuyu'.

Exuberans. van Houtte Catalogue,1844-1845, 18:21. Synonym for **Violacea Superba.**

Exultans. *(C.japonica),* van Houtte Catalogue, 1841, 7:7: Very beautiful red, well imbricated, but late and difficult to flower. Berlèse, 1849, *Annales de la Société Central d'Horticulture de France,* vol.40, p.76: Flower Waratah form, 9-10 cm across, of a deep cherry-red, almost purple. Outer petals to the number of 7 are ample, well notched, reflexed; those of the interior, close set with small white spots at their apical notches, numerous, equal and forming a flattened sphere. Originated in Italy. Synonym: 'Insultans'.

Eye Bright. (*C.japonica* hybrid). *New Zealand Camellia Bulletin*, March 1998, Issue No.129, vol.XX, No.4, p.22, Reg. No.391. Registered by O. Blumhardt, Whangarei, New Zealand. A seedling of *C.japonica* **Bokuhan** ('Tinsie') with the pollen parent uncertain, but possibly the *C.pitardii* hybrid **Snippet,** which first flowered in 1992. Flowers are miniature, 6 cm diameter x 3 cm deep, anemone form with about 6 petals and 30 petaloids. The petaloids form a compact mass with white tips, giving a "pepper and salt" effect. Petal colour is deep pink (RHS.CC. 55A). Plant is upright with average density and growth rate, with dark green leaves 6 cm long x 3.5 cm wide. Flowers mid-season.

Eyes of March. *(C.japonica),* ACS, Aug. 1996, *The Camellia Journal,* vol.51, No.2, p.31, Reg. No.2375. A small, deep pink veined red, single seedling of **Lady Vansittart,** pollen parent unknown. Late flowering. Originated by Stephenson's Nursery, Willow Springs, N.C., USA. *American Camellia Yearbook,* 1996, p.2, colour photo before p.1. The 20 year old seedling first flowered in 1980. Flower size is 7.5 cm wide x 3.2 cm deep, with 5 petals, bright yellow anthers and white filaments. Plant growth is spreading, dense and vigorous, with dark green leaves 9.5 cm long x 3.8 cm wide. Plants are cold hardy to +10° F - 0°F.

Ezo. (Ancient name for Hokkaidô), (Higo), Uekiya, Bunsuke, 1830., *Uekiya Bunsuke Hikki.* Taniguchi, 1912, *Chinka Kyokan.* Large, red single. Originated in Japan. See Hiratsuka, 1964, *Higo Camellia,* p.124.

Ezakakehashi. (Ezo Bridge), *(C.japonica),* Uekiya Bunsuke, 1830, *Uekiya Bunsuke Hikki.* Pure red form of Kakehashi, see Hiratsuka, 1964, *Higo Camellia,* p.124. Originated in Japan. (Believed extinct.)

Ezo-nishiki. Yashiro, 1841, *Kokon Yôrankô,* vol.311, as cultivated by a nurseryman, Yasaburô, but it is not certain that this is the same as the existing cultivar. Ito, Ko'emon, 1879, *Chinkashû.* (Brocade of Ezo Province). Tuyama, 1966, *Camellia Cultivars of Japan,* pl.8, p.20. Different reading: 'Yezo-nishiki'. Sports: **Nishiki-gasane, Shiro-ezo-nishiki, Miyako-no-nishiki,** 'Aka-ezonishiki', **Tsumaorigasa**. 'Ezo' is the old name for Hokkaidô. Synonym for **Tricolor.**

Ezo-nishiki. (Brocade of Ezo), (Higo), Uekiya Bunsuke, 1830, *Uekiya Bunsuke Hikki:* Red with 6 petals. Taniguchi, 1912, *Chinka Kyôkan.* Higo Camellia Society List, 1956: A variegated form of the Higo **Ezo**. Flower pink, very irregularly there appears white variegation, 10 cm across, 10-12 petals. Stamens white. Leaf medium sized, ovate to oblong-elliptic, yellow variegation. Bears seed. Synonym: 'Higo-ezo-nishiki'.

Ezo-nishiki. (Brocade of Ezo), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Single, cup-shaped, white with red stripes. Originated in Japan. Thought to be the same as 'Ezo-Nishiki's Tricolor', but not confirmed. See: Tuyama, 1966, Camellia Cultivars of Japan, p.20. See JCS., 1969, *Tsubaki,* No.7, p.22. Chinese synonym 'Xiayijin'.

Ezo-nishiki. (Brocade of Ezo), *(C.japonica),* Minamoto, Yoshihiro, 1844, *Sômoku Benran:* Formal double, large white with deep red stripes. Originated in Japan. (Believed extinct.) See Yashiroda, 1971, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.25, p.7.

Ezo-nishiki. (Portugal) (Brocade of Ezo) *(C.japonica),* Ferreira & Celina, 2000, *O Mundo da Camélia*, p.82 as 'Ezo-nishiki' with colour photo; Pink, sprinkled with strong rose markings. Peony form with wavy petals. Large size, flowers mid-season. Originated in Japan. Note; This cultivar does not match any of those known in Japan under the name, therefore it is distinguished by the addition of (Portugal).

Ezo-shibori. (Ezo dappled), *(C.japonica),* McIlhenny, 1941 Catalogue as 'Yezo-shibori'. Katayama, 1957, *Tsubaki Ochabana;* Kyôto Engei Kurabu, 1960, *Tsubaki Tokushû,* No.1, p.52. Large double white, striped crimson. Originated in Japan.

Fairweather Favorite. *(C.hybrid).* ACS, *The Camellia Journal,* Nov. 1998, p.25, Reg. No.2481. A small, white with pinkish underside, semi-double cross of *C.japonica* **Frost Queen** c *C.oleifera* [PI 162561]. Flowers mid-season to late. Originated by Dr William L. Ackerman, Ashton, Md., USA. *American Camellia Yearbook,* 1998, p.2, colour photo before p.1. The 16 year old seedling first flowered in 1985. Average flower size is 7.5 cm across x 3.8 cm deep, with 16 petals, 3 petaloids, yellow-orange anthers and creamy filaments. Extremely floriferous, long blooming season, plant fully hardy to -15° F. Plant growth is upright, dense and medium, with dark green leaves 11.5 cm long x 5 cm wide.

Fairy Blush. (*C.lutchuensis* hybrid). *New Zealand Camellia Bulletin,* 1994, Issue No.118, vol.XVIII, No.5, p.31, Reg. No.341: Originated by M.C. Jury, North Taranaki, New Zealand. A cluster flowering *C.lutchuensis* seedling that first flowered 1988. Apple blossom coloured, single flowers, 5 cm zcross x 2 cm deep which sit in multiples up the leaf stem with brilliant pink buds. Lightly fragrant, anthers yellow on creamy filaments. Flowers early to late. Growth habit upright, open with rapid growth and small, dark green leaves 3 cm long x 2 cm wide.

Fairy Bouquet. *(C.pitardii),* ACRS., 1977, *Camellia News,* No.66, p.26,Reg. No.200: Originated by E.R. Sebire, Wandin North, Victoria, Australia. A seedling *of C.pitardii* var. *pitardii* that first bloomed 1974. The upright, dense plant produces double, informal, 10 cm, light pink flowers, mid-season to late. Leaves mid-green, lanceolate, 9 cm x 4 cm, acute apex, tapered base. Colour pl. p.4.

Fairy Floss. (*C.pitardii* var. *pitardii*). ACRS, *Camellia News,* 1994, No.131, p.7, Reg. No.437, colour photo p.3: Originated by Edgar Sebire, Wandin North, Victoria, Australia. First flowered

1990. The pale mauve pink (RHS.CC.75D) flowers are 5 cm across x 2.6 cm deep, anemone form with 8-10 petals and numerous petaloids. A seedling of *C.pitardii* **Sprite.** Plant growth is low and spreading. Leaves dark, glossy green, keeled, elliptical, apices acute, margins serrate, 5.7 cm long x 3 cm wide. Petals notched. Flowers freely mid-season to late. Chinese synonym 'Xianrenmian'.

Fairy Floss (Marian Grove). *(C.sasanqua).* C. Aust., *Camellia News,* Autumn 2011, No.185, p.20 with colour photo; Regn No.657-N. Chance seedling of **Rowena Gordon,** first flowered 2001. Originated by Justin Jones, Marian Grove Nursery, Mangrove Mountain, NSW, Australia. Small, delicate, pale pink semi-double to informal double blooms on a compact, dwarf growing bush. Flared stamens have cream filaments and golden anthers.

Fairy Fountain. *(C.japonica),* Tammia Nursery Catalogue, 1960, p.4: SCCS., 1960, *Camellia Nomenclature,* p.52: White. Small single, column of white petaloids. Open, spreading growth. Mid-season blooming. Originated in USA by W. Wylam, California.

Fairy Garden. *(C.japonica),* SCCS, 1962, *Camellia Nomenclature,* p.41:-White, miniature single of cone shape. Mid-season blooming. Originated by Harvey Short, Ramona, California, USA.

Fan Henry. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.52: Salmon pink margined white. Large semi-double with irregular petals, to peony form with mixed petals and petaloids to full peony form. Vigorous, upright growth. Mid-season blooming. Originated in USA by Chiles.

Fancy. *(C.japonica),* Lindo Nursey Catalogue ca.1945 according to Hume,1946. No description. SCCS, 1947, *The Camellia. Its Culture and Nomenclature:* Turkey red. Medium formal double to peony form. Medium, spreading growth. Early to mid-season blooming. Originated in USA by Armstrong. For black & white photo see p.125, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II.

Fancy Bowl. *(C.sasanqua),* Hazlewood & Jessep, 1972, *Checklist of Camellia Cultivars from Nursery Catalogues,* p.252. No description. Originated in USA. No valid listing located.

Fancy Dream. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist of Camellia Cultivars from Nursery Catalogues,* p.76. Soft rose pink with white blotches. Originated in USA.

Fancy Free. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.41: White at base, shading out through pale pink to deeper, rosy pink. Large semi-double to rose form double with notched petals and delicate and unusual stamens. Vigorous, compact growth. Mid-season blooming. Originated in USA by McCaskill Gardens, Pasadena, California, USA.

Fancy Hat. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.179. Synonym for **Tsumaorigasa.**

Fancy Pants. *(C.reticulata x C.granthamiana),* SCCS., 1990 *Camellia Nomenclature,* p.123: White to blush pink to lavender edge. Large size, semi-double. Blooms mid-season. Medium, upright growth. A seedling of *C.reticulata* 'Crimson Robe' (**Dataohong**) x *C.granthamiana*, originated by Walter Homeyer, Macon, Georgia, USA. ACS., 1989, *The Camellia Journal,* vol.44, No.4, p.17, Reg. No.2175. *American Camellia Yearbook,* 1989, p.121, 122, colour photo 3p.1334: Average flower size 12.5 cm across x 7 cm deep with 8-10 broad, curly, outer petals, 12-14 curled and fluted inner petals, 0-1 petaloids, white anthers and filaments. Plant growth is upright, average and medium with dark green leavs,10 cm x 6 cm.

Fancy Rena *(C.japonica),* Bob Wines Nursery Catalogue, 1985-1986, p.1. No description. Originated in USA. No valid listing located.

Fandango. *(C.japonica),* SCCS., 1970, *Camellia Nomenclature,* p.55: White and pink with dark red stripes. Large peony form. Vigorous, bushy, upright growth. Blooms mid-season. Originated in USA by V. McCaskill, Pasadena, California. There is a solid red form of this Camellia.

Fandango. SCCS, *Supplementary List* 2011. *C.reticulata* hybrid raised by Daniel Charvet. Name already in use. Allotted the valid name of **Heartwood Fandango.**

Fandango Red. *(C.japonica),* SCCS., 1972, *Camellia Nomenclature,* p.57: Solid red sport of **Fandango,** originated in USA by V. McCaskill, Pasadena, California.

Fandi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.406; Chinese synonym for the unrecorded cultivar 'Fendigs'.

Fanfare. *(C.japonica),* SCCS., 1950, *The Camellia. Its Culture and* Nomenclature, p.36: Pink mottled white. Large formal double. Vigorous, open growth. Mid-season blooming. Originated in USA at the Tea Gardens.

Fangtingchun. (The Spring of Fangting Town), *(C.japonica),* Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.215; Originated in Shifang City (which includes Fangting Town), Sichuan, China. Flowers red, becoming paler towards the centre, rose form double, medium size. Outer petals obovate with notched tips, inner petals smaller and variable with irregular edges, occasionally a few central stamens. Leaves dark green, lance shaped and shiny. Slow growing, compact plant. Flowers early to mid-season.

Fanli. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.76, No.329. Chinese synonym for the USA *C.japonica* **Something Beautiful.**

Fanlisi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.406; Chinese synonym for the USA *C.hybrid* **Felice Harris**.

Fanni. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.406; Chinese synonym for the USA *C.japonica* **Fannie Loughridge**.

Fanni Ester. Isola Madre Catalogue, 1845. Orthographic error for 'Fanny Essler', synonym for **Clowesiana.**

Fannie E. *(C.japonica).* Cannon, 1971, ACS, *The Camellia Journal,* vol.26, No.1. No description. Originated in USA. No valid listing located.

Fannie Laughridge. Tammia Nursery Catalogue, 1960, p.3. Orthographic error for **Fannie Loughridge.**

Fannie Loughridge. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature*, p.52: Red. Large anemone to peony form with upright centre petals. Vigorous, upright growth. Mid-season blooming. Originated in USA by Mrs F. Loughridge, Pascagoula, Mississippi. There is also a variegated form. Orthographic error: 'Fannie Laughridge'. Chinese synonym 'Fanni'.

Fannie Loughridge Variegated. *(C.japonica),* SCCS, 1962, *Camellia Nomenclature-*, p.42 as 'Fanny Loughridge Var.'. A virus variegated form of **Fanny Loughridge** - Red blotched with white. Originated in USA. Chinese synonym 'Hua Fanni'.

Fannie Louise Maphis. (*C.reticulata* hybrid). ACS, *The Camellia Journal,* June 2008, p.31 with colour photo, Regn No.2722. A cross of **Suzanne Withers** x **Delta Dawn** that first flowered 1997. Originated and propagated by E.Hulyn Smith, Valdosta, Ga., USA. A 14 cm diameter, pink, semidouble to rose form double flower with a small centre of golden anthers on white filaments. Heavy petal texture and flowers mid-season to late. Plant is upright, spreading and vigorous. *American Camellia Yearbook,* 2008, p.113 with colour photo; Dark green leaves 11.5 cm x 7 cm.

Fannie M. Strother. *(C.japonica),* Dodd, 1968, *Adventures in Camellia Seedlings,* p.3, colour photo: A red, irregular double of twisted and ragged petals with a centre of a mixture of small, erect petals, petaloids and stamens. Originated in USA by Richard Dodd, Marshallville, Georgia.

Fanny. *(C.japonica),* Sacco Catalogue, 1835 as 'Fanni': A large, semi-double, carmine-rose flower. Orthographic errors, 'Fany', 'Fanni'. Originated in Italy.

Fanny. *(C.sasanqua).* Claude Thoby, 1993, *Camélias*, pp.11, 15, 23, 64: Small, semi-double to double with irregularly imbricated petals. Colour vivid pink to carmine, scented. Originated in France.

Fanny Basil. Glen St Mary Nursery Catalogue, 1938, p.9; Gerbings Azalea Garden Catalogue, 1938-1939. Orthographic error for 'Fanny Bolis', erroneous synonym for **Latifolia Variegated.**

Fanny Boles. Lindo Nurseries Catalogue, 1940-1941. Orthographic error for 'Fanny Bolis', erroneously as a synonym for **Latifolia Variegated.**

Fanny Bolis. *(C.japonica),* Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete*, p.5. No description. Jean Verschaffelt, 1863-1864, Price List, p.37: Formal double with innumerable petals, flesh white spotted and streaked with blood red. van Houtte Catalogue, 1858, 72:12. No description. van Houtte catalogue, 1864-1865, 104:81: Large opulence of rounded petals, numbering more that 80, flesh white streaked and spotted blood-red. From Madoni. Verschaffelt, 1860, *Nouvelle Iconographie,* Book IV, pl.II as 'Fanny Bolis Dr Piantine': Received in 1856 from Count Bernadino Lechi of Brescia, Italy where it was obtained from seed. It is a white variety of the class of perfections, due to the regular imbrication of its petals, of medium size, shaped like a rose at the centre. A few faint, delicate pink stripes adorn the white ground. The name under the plate is 'Fanny Bolis du Piantine'. It appears obvious from the description that the 'Fanny Bolis'(Italy) in the SCCS *Camellia Nomenclature* refers to this cultivar, McIlhenny appears to have imported this into America as he lists it in his 1937 Catalogue as "Imbricated white, striated with rose". However by 1950 the name had been erroneously transferred to **Latifolia Variegated.** In the following confusion in America, the name was also equated with 'Leeana Superba Variegated', **Gloire de Nantes Variegated** and 'Butterfly'. Orthographic errors included: 'Fanny Bollis', 'Fanny Boles', 'Fannie Bolis', 'Fanny Basil', 'Fannie Bolis', 'Fany Bollis', 'Fanny Boliso Dr Piantine'. Vervaene in

Catalogue No.11, 1888 also lists it as a Madoni introduction from Italy. Synonyms: 'Fanny Bolis'(Italy), 'Fanny Bolis du Piantine'.

Farleya Burk Vera. Burdin Maggiore & Co. Catalogue, 1845. Synonym for **Farleya.**

Farragiana Alba. Burdin Maggiore & Co. Catalogue, 1870-1871. No description. Orthographic error for **Farraggiana Alba.**

Farris Red. *(C.japonica),* Orton price list, 1947-1948. No description. SCCS, 1954, *The Camellia. Its Culture and Nomenclature,* p.45: Deep red. Medium sized, formal double. Mid-season to late blooming. Originated in USA by Orton.

Farroli. Hume, 1955, *Camellias in America.* Synonym for **Pie IX.**

Fascicularis. *(C.japonica),* Baumann & Baumann, 1829, *Collection de Camellias élevés à Bollwieler,* No.10 colour plate: The medium sized flowers are double, spotted red and white and joined in fascicules or bundles. Berlèse, 1837, *Monographie,* ed.1, p.74: Leaves oval-elongate, deeply dentate, prominently veined, deep green. Flower small, regular, cherry red, petals bifid, imbricated, arranged in three rows, a little recurved, sometimes spotted white; stamens abortive or petaloid, united in a fascicle about the stigma. Originated in England. Orthographic error: 'Fasicularis'.

Fascicularis Alba. *(C.japonica),* Seidel, 1846, Pflanzen Catalog, p.7. White sport of **Fascicularis.** Originated in England.

Fascicularis Rosea. *(C.japonica),* Tagliabue, 1840, *Nomenclatore Camelliae....* No description. Originated in Italy. (Believed extinct.)

Fasciculata. *(C.japonica),* Berlèse, 1833, *Horticulteur Belge Journal Jardin Amateur,* 1:82. No description but given as a seedling of M. Negri of Italy, but later described in his *Monographie,* 1837, ed.1, p.60: A vigorous shrub, leaves 8.5 cm x 4 cm. elongate-oval, sharply acuminate, slightly serrate, glossy green; bud oblong, large, scales greenish, bordered with black. Flower, 7-7.5 cm across, colour rose-pink, petals broad, sometimes striped white, some stamens in the centre. Illustrated by Berlèse, 1841 *Iconographie,* pl.37.

Fasciculata Alba. *(C.japonica),* Cachet Catalogue, 1840-1841, p.1 as white. Stewart, Salt-Hill Nurseries, 1842, *Gardeners' Chronicle,* 324(7):105. No description. van Houtte Catalogue, 1842, 9:10.

No description. Berlèse, 1845, *Monographie,* ed.3, p.102: White, rose form with centre petals mixed with stamens. Originated in Italy. Synonyms: ‘Flore’, ‘Flora’, ‘Flavescens Alba’.

Fasciculata Alba Venosa. *(C.japonica),* Isola Madre Catalogue, 1845.No description. Originated in Italy. (Believed extinct.)

Fasciculata Nova. *(C.japonica),* P. Verleeuwen, Catalogue 1835-1836, p.12. Cels, Paris Nursery Catalogue, 1836-1837, p.9. No description. Cachet Catalogue, 1840-1841, p.1 as "pink". Berlèse, 1840, *Monographie,* ed.2, p.93, 94, 227: Leaves 6 cm wide x 7 cm long, oval, almost round, a little acuminate, thick, convex, of a deep green, serrations small and wide. Bud, oval-obtuse, scales blackish at the base and yellowish at the apex. Flower over 8.5 cm across, full, of a pale rose. Corolla rose-like, a little reflexed. Exterior petals in two rows, long, very wide, spoon shaped; the others reflexed, deeply notched at the apex. Those of the interior, separated from those of the circumference, small, short, thick-set, very numerous, strap-like, some with stripes of white, the others pale red. Originated in Belgium by Cazier. Orthographic error: ‘Fassiculata Nova’.

Fasciculata Nova (Sacco). Del Lungo & Girardi, 1928, *Le Camelie,* p.101. Synonym for **Fasciculata Novissima.**

Fasciculata Novissima. *(C.japonica),* Sacco, 1832-1833, Paintings in Library of Natural Sciences, Milan, pl.41; Berlèse, 1840, *Monographie,* ed.2, p.122, 229: Leaves 6 cm wide by 7 cm long, oval almost round, a little acuminate, thick, horizontal, a little convex, strongly veined, of a deep green, serrations irregular; bud oval, obtuse, scales blackish at the base and yellowish at the apex; flower 8 cm across, full, soft cherry-red; exterior petals in many rows, some are wide, oblong, others are rounded; some are flat, others are spoon-shaped, irregularly disposed; interior petals very numerous, spaced, unequal, very small, but united in many irregular groups and forming, by their assembly, a wide, uneven centre. Originated by Dr Luigi Sacco, Milan, Italy.

Fasciculata Speciosa. *(C.japonica),* Harrison ed., 1838, *The Floricultural Cabinet,* vol.6, p.28: Double, flesh coloured with a white stripe. Originated in England.

Fasciculata Venosa. *(C.japonica),* Sacco, 1830-1833 according to Schiavone, 1981, *Il Giardino nell Camelie,* pl.29; Jacob Makoy et Cie Catalogue, 1839, p.17. No description. Cachet Catalogue, 1840-1841, p.2 as "blotched white". Berlèse, 1843, *Iconographie* states "an older and less beautiful variety than the one called **Fasciculata Venosa Vera**". Berlèse, 1845, *Monographie,* ed.3, p.167: Flowers full peony form with petals irregularly disposed in 5 rows. Those of the fifth row are disposed in a star and surround those of the centre, which are very numerous and close packed. Originated in Italy by Sacco, Milan.

Fasciculata Venosa Nova. Verschaffelt Catalogue, 1847-1848, p.57. Synonym for **Fasciculata Venosa Vera.**

Fasciculata Venosa Vera. *(C.japonica),* Berlèse, 1843, *Iconographie,* vol.3, pl.239: The flower, 12 cm across, is full, irregular, of cherry-red colour with nuances of soft scarlet. The exterior petals are in 5-6 rows, long, slightly notched, lightly veined deep red, some vestigal, others horizontal, channelled, separated, irregularly imbricated; those of the last internal row are long, radiating and embracing those of the centre, which are very numerous and all forms and sizes, curved to the summit and forming a convex centre, sometimes with spots of white. In commerce there are two camellias with the name **Fasciculata Venosa,** an older one and with less merit, but this one here in question is of considerable beauty. Originated by Dr Luigi Sacco, Milan, Italy.

Fasciculata Waratah Superba. *(C.japonica),* Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.7, as 'Fasciculata Warratah Superba': No description. Originated in Italy. (Believed extinct).

Fascination. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: White striped rose-pink. Medium peony form. Variable as to form and colour. Originated by Magnolia Gardens, Charleston, South Carolina, USA.

Fascination (Marchant). *(C.x williamsii),* C.J. Marchant, Keepers Hill Nursery Catalogue, No.6, Ca.1958 invalidly as 'Fascination': Bell shaped, single, rich rose ageing to salmon pink. Originated in UK.

Fashion Lady. *(C.japonica),* Belle Fontaine Nursery Catalogue, 1961, p.5. No description. Originated in USA. No valid listing located.

Fashion Girl. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia* Cultivars *from Nursery Catalogues,* p.76. No description. Originated in USA. No valid listing located.

Fashion Note. *(C.japonica),* Thompson, 1953, *American Camellia Yearbook,* p.78: (Seedling of 'Lotus' [**Gauntlettii**]). White with a faint blush, this big semi-double has style. Large, waved petals form the outer rim while other big petals are stuck in here and there. A huge stamen mass and a few petaloids make the centre. Flowers are 11-12.5 cm across. Mid-season blooming. Originated by Harvey Short, Ramona, California, USA.

Fashion Note. *(C.sasanqua),* SCCS, 1960, *Camellia Nomenclature,* p.119, Cream with rose-pink border. Large single with occasional upright petals. Originated in USA.

Fashion Plate. *(C.sasanqua),* SCCS., 1958, *Camellia Nomenclature,* p.93: White edged medium to dark pink. Very large single. *American Camellia Yearbook,* 1959, p.272, Reg. No.425: An 11 year old chance seedling, originated by Casadaban's Nursery, Louisiana, USA. Plant growth is upright, dense and rapid in rate with dark green leaves 4.5 cm x 2 cm. The large, single flowers, cream with rose-pink border, average 10 cm across and have yellow stamens and an occasional rabbit ear. Flowers very early.

Fashionata. *(C.japonica),* Gentry, 1964, ACS., *The Camellia Journal,* vol.19, No.5, p.25. No description. *American Camellia Yearbook,* 1965, p.233, Reg. No.790: A 10 year old chance seedling that first flowered 1960; originated by Fred Everette, Mobile, Alabama, USA. Plant growth is upright, open and rapid with dark green leaves averaging 10 cm x 6 cm. The semi-double flowers, similar to **Reg Ragland**, are apricot pink with yellow anthers and filaments. Blooms measure 13 cm across x 6 cm deep and have 20 or more petals and 8 or more petaloids. Outer petals curled and creped. Blooms mid-season. See colour pl.58, p.39, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Sport: **Fashionata Variegated.** Chinese synonym: 'Fengliu'.

Fashionata Variegated. *(C.japonica),* Belle Fontaine Nursery, 1967, ACS, *The Camellia Journal,* vol.22, No.2. A virus variegated form of **Fashionata** - Apricot pink and white. Originated in USA. Synonym: 'Sawada Number 14 Variegated'. Chinese synonym 'Fuse Fengliu'.

Fasicularis. Irene Mehrling, 1957, *American Camellia Yearbook,* p.213-214. Orthographic error for **Fascicularis.**

Fassiculata Nova. Trillon, Le Mans Nursery Catalogue, 1843, p.5. Orthographic error for **Fasciculata Nova.**

Fay Charles. *(C.sasanqua),* ACRS., 1980, *Camellia News,* No.74, p.24, Reg. No.242: Originated by Alice Spragg, NSW, Australia. A chance seedling that first bloomed 1970. The leaves vary from 5.2 cm x 3 cm to 3.6 cm x 1.7 cm and are dark green with fine serrations. The 9 cm flower is light rose-pink with large, broad petals of good substance. Blooms early to mid-season.

Fay Wheeler. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Faye Wheeler.**

Faye Wheeler. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue,* as 'Fay Wheeler'; *American Camellia Yearbook,* 1956, p.61, Reg. No.256: A 14 year old chance seedling, originated by Central Georgia Nurseries, Macon, Georgia, USA. First flowered 1948. Plant growth upright, dense and rapid in rate, strong and erect with leaves 8.5 cm x 5.5 cm, thick, dark green and glossy. Flowers light pink, incomplete double with 10 regular and 15-20 irregular petals and 30-35 petaloids,11 cm across x 6 cm deep. Petals are large and long, stamens between each group of petals cause the irregular petals to stand up in the centre of the flower. Mid-season blooming. Orthographic error: 'Fay Wheeler'.

Fayrleya. L.L. Liebig, 1839 *Verzeichnis von Warmen und Kalten Hauspflanzen…,* p.9. Orthographic error for **Fairleya.**

Fayun. (Name of Temple), *(C.reticulata),* China Regn No. 47, *China Flowers & Horticulture,* June 2009, No.12, p.48 with colour photo; Flowers rose form, deep peach red, 9-11 cm diameter, 23 petals, some centrals stamens changed to petaloids. Flowers mid-season. Leaves dark green, ovate, flat or wavy, 7.2-8.8 cm x 3.5-4.5 cm, bases cuneate, apices caudate, veins obvious, margins serrulate. Original tree planted in Fayun Temple in the Qing Dynasty. Now propagated by the local people.

F.B.I.. *(C.hybrid),* SCCS., 1981, *Camellia Nomenclature,* p.195: Sport of **Bonnie Marie.** Light lavender. Miniature anemone form. Originated in USA.

Feast Perfection. *(C.japonica),* Hewton Nurseries Catalogue, 1973-1974, p.3: Pink single. Originated in UK.

Feasti. Burdin Maggiore & Co Catalogue, 1856-1857. Orthographic error for **Feastii.**

Feastie. Rhodellia Nursery Catalogue, ca.1945. Orthographic error for **Feastii.**

Feastii. *(C.japonica),* Amateur, 1841, *Magazine of Horticulture,* 7:99. In the camellia house we noticed a fine collection of plants, including excellent specimens of Mr Feast's seedling **Feastii,** now offered for sale. It is of strong and rapid growth, good erect habit, and with large, deep green foliage; the flowers are white, delicatedly spotted and flaked with pale rose, the spots so minute sometimes as to be scarcely discernible a few feet from the plant. It is of the form of **Imbricata,** perfectly double and 13 cm in diameter. Hovey, 1844, *Magazine of Horticulture,* 19:86. Originated by Mr Feast, Baltimore, USA. Synonyms: 'Blushing Bride', 'Kenchiu'. Sports: **Elizabeth Stanton, Sharon Raye Pearson, Feastii Alba, Feastii Striata.** Orthographic errors: 'Festi', 'Feasti', 'Feastie'. For black and white illustration see p.127, Hertrich,1955, *Camellias in the Huntington Gardens,* vol.II.

Feastii Alba. *(C.japonica),* van Houtte Catalogue, 1848, p.11: Imbricated. Pure white, very large flower. A sport of **Feastii.** Originated in Belgium. (Believed extinct.)

Feastii Striata. *(C.japonica),* Jacob Makoy et Cie Catalogue, 1848, p.19. No description. Leroy, André, 1868, Catalogue: Imbricated; white lined red. A sport of **Feastii,** originated in France.

Feast's Perfection. *(C.japonica),* Smith, J. J. ed. 1857, *Horticulturalist,* 7:350-352; Feast's Catalogue, 1858, p.16. No description. Verschaffelt, 1860, *Nouvelle Iconographie,* Book XI, pl.II: The flowers have the form of a full-bodied anemone. The petals of the periphery are rounded, ample, outspread, a delicate pink, veined, obscurely striped vivid crimson. Foliage oblong-lanceolate. Originated in USA by Samual Feast, Baltimore, Maryland. Orthographic error: 'Feat's Perfection'.

Feast's Triumph. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Triumph of Baltimore.**

Feast's Triumphe. Wilmot, 1947, *American Camellia Yearbook,* p.15. Synonym for **Triumph of Baltimore**.

Feather Robe. Yashiroda, 1950, *American Camellia Yearbook,* p.22. Synonym for **Hagoromo.**

Feathered Robe. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.58. Synonym for **Hagoromo.**

Feather's Darling. *(C.hybrid), International Camellia Journal,* 1984,p.96, colour plate p.44B: **Buddha** x (*C.fraterna* x **Salab**). Deep red semi-double with large waved and fluted petals, with a central column of stamens. Fragrant. Blooms mid-season. Originated by David Feathers, Lafayette, California, USA.

Feathers of Wild Goose. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.122. Synonym for **Toki-no-hagasane .**

Feather's Red Peony. *(C. x williamsii),* Hilsman, 1966, *American Camellia Yearbook,* p.122: *C.saluenensis x C.japonica* 'Tinsie', (**Bokuhan**). No description. Originated by David Feathers, Lafayette, California, USA.

Feathery Touch. *(C.japonica), American Camellia Yearbook,* 1972, p.130, Reg. No.1209: A sport of Frizzle White, originated by Charles R. Butler, Mobile, Alabama, USA. Plant growth is spreading and slow with light green leaves, 6 cm x 3.2 cm. The semi-double flower, white with blush pink background, is highly ruffled. Buds are pink fading to white as they open. Mid-season blooming. Chinese synonym: 'Changyumao'.

Feat's Perfection. Jose Loureiro, 1872-1873, Catalogue No.9, p.54. Orthographic error for **Feast's Perfection.**

Febaldo Brusati. *(C.japonica),* Jean Vervaene fils, 1864, Price List, No.1, p.6. No description. Originated in Italy. (Believed extinct).

Febo. *(C.japonica),* Auguste van Geert Nursery Catalogue, 1848, p.17. No description. (Believed extinct.)

Febvriana. *(C.japonica),* Maupoil & Figlio Nursery Catalogue, 1847. No description. Originated in Italy. (Believed extinct.)

Federation. *(C.japonica),* ACRS, *Camellia News,* Autumn 2003, No.161, p.8, colour photo front cover, Reg. No.546. Originated by Ray Garnett, Beaumaris, Vic., Australia. A cross of *C.japonica* **Dr Tinsley** seed parent, x *C.japonica* **Silver Cloud** First flowered 2000. The loose peony form, blush to bicolour (RHS.CC.54B) of 40 petals and 80 petaloids is deep pink at edge of petals, shading to white at the base of petals, and is 12 cm diameter x 7 cm deep. Flowers freely mid-season on an upright, bushy plant of medium growth. Leaves glossy green, keeled, elliptic, 9 cm long x 4.5 cm wide.

Federicco Gonfalonieri. Jose Maria Serra, Establecimiento de Horticultura Catalogue, 1855, p.5. Orthographic error for **Federico Confalonieri.**

Federici. *(C.japonica),* Verschaffelt Catalogue, 1849-1850, p.46. No description; Fratelli Rovelli, 1852, Catalogue, p.18: Imbricated, clear red. Fickle. Franchetti, 1855, *Collezione di Camelie,* p.30: Imbricated in a spiral, veined bright rose, becoming bluish with age. Verschaffelt,1859, *Nouvelle Iconographie*, Book VIII, pl.III: Originated by F. Mariani, Genoa., Italy. Flowers 10 cm in diameter with full serried heart and large, rounded, hooded petals resembling the full garden anemone. Colour a deep, blood red, quite dark when the bloom is half open. Originated in Italy. Orthographic errors: 'Frederici', 'Fredrici'.

Federico Alba Vera. Luzzatti Catalogue, 1853. Synonym for **Frédéric-le-Grand Flore Alba Pleno.**

Federico Confalonieri. *(C.japonica),* Verschaffelt Catalogue, 1849-1850, p.46. No description; Franchetti, 1855, *Collezione di Camelie,* p.31: No description. Verschaffelt, 1855, *Nouvelle Iconographie*, Book IV, pl.III, as 'Frederico Confalonieri': Originated by Louis Slade, Lake Como, Italy. Its unusually large blooms, by the disarray of their innumerable petals, contrast with the perfections. The tumbled and serried arrangement of the central petals surrounded by larger ones, recalls our full herbaceous peonies; all are a vivid cherry carmine colouring. Mid-season. Orthographic variants and errors: 'Frederic Gonfalonieri', 'Frederico Confalonierii', 'Frederico Confalonieri', 'Frederico Gonfalonieri', 'Frederico Confallonieri', 'Frederica Confalonieri', 'Federicco Gonfalonieri'.

Federico Franchetti. *(C.japonica),* Ambroise Verschaffelt, 1850, Catalogue, p.19. No description. Burnier Catalogue, 1855-1856. No description; Franchetti 1855, *Collezione di Camelie,* p.31: Large flower, imbricated in a spiral, splendid rose with many petals in the centre striped with shades of white. Verschaffelt, 1855, *Nouvelle Iconographie,* Book XII, pl.IV as 'Frederico Franchetti': Sent in the fall of 1853 by Mr Franchetti of Florence, Italy, who obtained it from seed. Flowers medium sized, perfectly imbricated, vivid rose colour with a few delicate, white stripes. Orthographic variant: 'Frederico Franchetti'. Orthographic error: 'Frederich Franchetti'.

Federico il Grande. Del Lungo & Girardi 1928, *Le Camelie,* p.91. Synonym for **Frédéric-le-Grande Flore Alba Pleno.**

Federico Mylius. *(C.japonica),* van Houtte Catalogue, 1859, 77:56: (from Villa). No description. André, 1864, *Plantes de terre de bruyéres...*, p.243 as 'Frederico Milius': (Genoa) Magnificent, large, completely imbricated flower, pure white, widely ribboned with carmine. van Houtte Catalogue, 1864-1865, 104:81: 'Federico Myllus'. Imbricated, white clearly striped carmine on the upper and underside of petals. Originated in Italy. Orthographic variants: 'Frederico Milius', 'Frederico Mylius', 'Frederica Millius', 'Federico Myllus'.

Federico Myllus. van Houtte Catalogue, 1864-1865, 104:81. Orthographic error for **Federico Mylius.**

Federique Hulman. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.70: Flower almost always cup shaped; the colour a brilliant rose for the petals of the circumference, while those in the centre are small, paler and pointed. Imbricated. Originated in Italy by Franchetti.

Fedora. Barnham Nursery Catalogue, 1962-1963, p.36. Orthographic error for **Feodora.**

Fée de l'Aulne. *(C.reticulata),* Originated by Roger Salaün, "Stervinou", Guipronvel, France. A 16 year old plant, first flowered 2009, parentage unknown. Plant is upright and rapid growing with dark green reticulate type leaves, 14cm x 6cm. Flower is a rose form double, colour brilliant rose, 13-14cm diameter x 3-4cm deep. Loose central stamens have yellow anthers and white filaments. Flowers fall whole. Long flowering period, mid-season to late

Fengshan Cha. *(C.reticulata),* Yü & Bartholomew, 1980, p.18, 26: Carmine. Mid-season. Fengqing County. Feng et al., 1986, *Yunnan Camellias of China*, p.87 colour photo and description: Leaves broad-lanceolate to oblong-lanceolate, apices short-acuminate and recurved, bases broad-cuneate, bright deep green above, 6.5-9.5 cm long, 3-4.5 cm wide. Flowers deep red (RHS.CC.53C), diameter 10-13 cm. Petals about 30 in 4-5 whorls, flat, slightly reclinate when fully open. Stamens numerous, divided into several groups placed in the flower centre, very few petaloids. Pistils rudimentary. The leaves of this cultivar are similar to **Liuye Yinhong** but longer and broader. The flowers are a deep rose-red, large and like a ball. The petals are regularly arranged. Branches are slender and pliable so that this cultivar is also called 'Ruanzhi Xiuqiu'. Flowers from early to mid-season. This cultivar was found by the Dapingdi Production team of the Fengqing County, Yunnan, during the 1963 investigation of camellia resources. The parent tree is about 90 year old with a height of over 4 metres. Synonyms: 'Fengqing Cha', 'Ruanzhi Xiuqiu', 'Fengqing Camellia'. 'Fengshan Camellia', 'Fengshan's Camellia'. Different reading: "Feng-shan-ch'a" .

Fengshan's Camellia. Yü & Bartholomew, 1980, *American Camellia Yearbook*, p.18: Synonym for **Fengshan Cha.**

Fengxian. (Phoenix Goddess), *(C.japonica),* Wang & Yü, 1981, *Shanchahua.* No description. Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.64, colour photo, [p.149] - Light pink, 5-6 rows of 21-24, overlapping, emarginate, rounded petals, opening flat, with a centre of small, semi-erect, twisted petals and petaloids. Leaves green, ovate, sharply serrate, acuminate, 7.8-8.5 cm long x 4.3-4.5 cm wide. Originated in China.

Fengxiang Cha. (Sweet Gum Camellia), *(C.japonica),* Huang Nursery Catalogue, 1949. No description. Originated in China. Different reading 'Feng-hsien Cha'. "Fengxiang Shu" is the Chinese Sweet Gum. *(Liquidamber taiwaniana).*

Fengxue. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.148. Chinese synonym for **Snow Flurry.**

Fenhe. (Pink Lotus), *(C.japonica),* Chang, Shao Yun, 1987, *Camellias from Zhejiang*, p.97, colour photo, [p.135]: Small size, pink, formal double with a fine veining of deeper colour, 5-6 rows of rounded petals, long, somewhat incurved, 62-82 in 6 rows. The first 3 rows are incurved on opening, giving depth, then petals spread out in full bloom, petals obtuse, rounded at apex. Buds elliptic to short heart-shaped, yellowish green. Flowers mid-season to late. Leaves ellip-

tic, glossy, dark green, 6.9-10.9 cm long x 4.1-4.8 cm wide, flat, sometimes thickened, margins serrulate, apices short acute, bases cuneate, veins prominent, curved, petioles 7 mm long. Introduced from Jinhua to Hangzhou in 1965.

Fenhehua. (Pink Lotus Flower), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:* Pink, rose form double. Medium size. Mid-season blooming. Originated in China by Lin Zhaohong, Chengnan Hongwu Tree & Flower Garden, Jinhua.. *Chinese Camellia Culture*, 2003, p.256 with colour photo.

Fenhong. (Pink). *(C.japonica),* Chen Jingyi, 1253, *Quan Fang Bei Zu:* Pink flower. Originated in China. (Believed extinct).

Fenhong Diechi. (Pink Butterfly Wings), *(C.reticulata),* Fang, 1930, *Diannan Chahua Xiaozhi;* Feng et al., 1986, *Yunnan Camellias of China,* p.67 colour photo and description: Leaves ovate, apices acuminate, bases cuneate to bluntly rounded, flat, 8-11 cm long, 3.5-5.5 cm wide. Flowers spinel pink (RHS.CC.67D), diameter 14-15 cm. Petals 18-20, irregularly arranged whorls, most petals folded in the middle or one third down, forming a rolled petal centre. Stamens numerous, divided into fascicles placed amongst the petals. Flowering season is early mid-season. This is a new cultivar selected from seedlings of open pollinated seed by researchers at the Kunming Botanial Garden. Different reading: 'Fen-hung Tieh-chih'. Synonyms: 'Light Pink Butterfly Wings', 'Pink Butterfly Wings'.

Fenhong Meirencha. *(C.japonica), Collected Papers,* ICS Congress, Falmouth, 2008, Genetic Analysis on 20 Camellia Varieties by ISSR Markers, Sui Ni and Jiyuan Li, as 'Fen hong mei ren cha'; Pink with white speckles, single form. From Jiangsu, China.

Fenhong Shang. (Pink Robe), *(C.sasanqua),* Yang, 1965, *Camellia Varieties of Taiwan* as 'Fen-hung Shang': A large, light pink, semi-double sasanqua. Erect growth, leaves light green, margin crenate 7.5 cm x 5 cm, petals 24, stamens 52. Flowers early. Originated in Taiwan.

Fenhong Songzilin. (Pink Pine Cone), *(C.reticulata),* Gao & Zhuang, 1989, *The Camellia in China*, p.59, No.398, colour photo, No.255: Large size, deep pink, semi-double, 10-10.7 cm across with 33-35 fluted and crinkled petals and a small, central stamen cluster. Leaves mid-green, elliptic, apices tapering acute, margins serrulate. Originated in Tengchong, Yunnan Province, China.

Fenhong Xiuqiu. (Pink Silk Ball), *(C.reticulata).* China Regn No.30, *China Flowers & Horticulture*, July 2008, No.14, p.40 with colour photo; Selected from the wild forest in Tenchong, Yunnan, China, and named by the Camellia Base Administration. Flowers peony form, pink, 10-12 cm diameter. Petals 29-36 in 6-8 whorls, outer sinuate, inner incurved. Stamens in several bundles among the petals and in the centre. Pistil undeveloped. Leaves elliptic to elliptic-ovate, 7-9 cm long x 3.3-4.8 cm wide, apices aacuminate to obtuse, bases broad cuneate, incurved in V shape, veins prominent, margins shallowly serrate

Fenhonglian. (Pink Lotus), *(C.reticulata).* China Regn No.23. *China Flowers & Horticulture*, Feb 2008, No.4, p.47 with colour photo; An open pollinated seedling of **Damanao** originated by the Kunming Institute of Botany, Yunnan, China, and named by Xia Lifang. Flowers rose form double, 13-14 cm diameter, spinel red (RHS.CC. 57D), with white dots. Petals 30-33 in 5-6 whorls, flat, a few central stamens. Leaves long elliptic, apices acuminate, bases broad cuneate, 10.3-14 cm long x 4.8-6.7 cm wide. Flowers mid-season to late.

Fenhonshan. Waterhouse, 1965, *International Camellia Journal,* p.26. Taiwanese for **Fenhong Shang.**

Fenhongxing. (Pink Star), *(C.reticulata),* Yü & Bartholomew, 1981, *American Camellia Yearbook*, p.13: Crimson. Mid-season. Tengchong. Feng et al., 1986, *Yunnan Camellias of China,* p.54 colour photo and description:- Leaves oblong, apices short-pointed and bases cuneate, reclinate in a

V-shape, veins conspicuously sunken, about 10 cm long, 3.2-5 cm wide. Flowers pink (RHS.CC.60D), diameter about 9.5 cm. Petals about 15, slightly curved. Stamens numerous, around pistils. Flower from early to mid-season. This cultivar was selected from an open pollinated plant of the wild form *C.reticulata.* Synonyms: 'Pink Star', 'Light Pink Star'. Different reading: 'Fen-hung-hsing'.

Fen-hsin Chuan-pan. Liu, 1959, *Chung Kuo Chu Ming Ti Chi Chung Hua Hui.* Different reading for **Fenxin Zhuanpan.**

Fenhua. (Pink Flower), *(C.japonica),* Savige, 1986, *International Camellia Journal,* No.18, p.108: A small, pink, campanulate single to semi-double with 9-12 petals and a small group of creamy white petaloides in the centre. Synonym: 'Pink Flower'. Originated in China.

Fenhuanchao. (Phoenix's Nest). *(C.japonica),* Gao Jiyin, 1996, *The Observations from the Camellia World,* back page, CR2: a sport of *C.japonica* **Fendan,** originated by Mr Jiang Zongwang, East Flower Nursery, Wenzhou, Zheijiang, China in 1988. Red to pink, splashed white or many radial stripes on petals. Medium to large size, formal double. Other characteristics same as parent.

Fenhuanle. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.424; Chinese synonym for the USA *C.hybrid* **Leah Gay.**

Fenhudie. (Pink Butterfly), *(C.japonica),* Wang & Yü, 1981, *Shanchahua:* A medium size, pink, open peony form. Chang, Shao Yun, 1987, *Camellias from Zhejiang,* as 'Xinhong Mudan': Small, spreading tree; leaves elliptic, green, apex acuminate, recurved, base cuneate, venation distinct; petioles reddish. Flowers abundant, semi-double, rarely double, 10 cm across; petals pink with deeper coloured veins, large, in 2-3 whorls, separate. Stamens normal, some in centre, others scattered in inner petals; pistil normal; buds oval, scales green, tan edges, short downy. Flowers mid-season. see also Gao & Zhuang, 1989, *The Camellia in China,* p.35, No.165. Originated in China. Synonyms: 'Pink Butterfly', 'Xinhong Mudan'.

Fenhudie. (Pink Butterfly), *(C.reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.15: Spinel pink. Mid-season, Kunming. Feng et al., 1986, *Yunnan Camellias of China,* p.63, colour photo and description: Leaves small, elliptic to long-elliptic, thick, flat, apices acuminate, bases cuneate, 7-9 cm long, 3-4 cm wide. Flowers pink (RHS.CC.62B), diameter 9-11 cm. Petals 9-11 in 3-4 whorls, outer whorls large, flat, inner whorls curved, erect. Stamens numerous, divided into several groups placed amongst the curved petals. Pistils mostly rudimentary, flattened, some fertile. This is a new cultivar selected from seedlings of **Zaotaohong** by members of the Kunming Botanical Garden. It is a vigorous grower, well branched and foliated, with an elliptical crown. The flowers are very similar to **Fenmudan** but a little darker and smaller. Flowers early to mid-season. Synonyms: 'Pink Butterfly', 'Butterfly Pink'. Different reading:. 'Fen-hu-tieh'.

Fentianjiao. (Pink Heaven Elegant) *(C.reticulata).* China Regn No.31. *China Flowers & Horticulture,* July 2008, No.14, p.41 with colour photo; Selected from the wild forest in Tenchong County, Yunnan, China. Selected by Yang Dakui, Heshun, Yunnan. Flowers semi-double, lotus form, pink with irregular white spots, 11-13 cm diameter. Petals 20-25 in 4-5 whorls, flat and imbricated arrangement. Many stamens change to petals, some remain central in the flower. Pistil undeveloped. Leaves long elliptic-ovate, 6.5-12 cm long x 3.6-4.7 cm wide, apices acuminate and bent downwards, bases broad cuneate, veins prominent, slightly incurved. Flowers early to mid-season.

Fentongcao. *(C.reticulata),* Feng et al., 1986, *Yunnan Camellias of China,* p.85, colour photo and description: Leaves elliptic, apices acuminate and recurved, bases cuneate, flat, 5-8 cm long, 2-4 cm wide. Flower spinel pink, diameter 6-9 cm. Petals more than 30 in 6-8 whorls, flat, outer whorls large, inner whorls gradually smaller, imbricately arranged. Stamens few, undeveloped. Pistils rudimentary. Flowers early to mid-season. This cultivar was selected from an open pollinated plant of wild form *C.reticulata* in Tengchong. Synonym: 'Pink Chrysanthemun Petal'. Different readings: 'Fen-t'ung-ts'ao','Fent'ungts'ao'.

Fenyu. (Pink Jade), *(C.reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.10: Light pink. Mid-season. Tengchong. Feng et al., 1986, *Yunnan Camellias of China,* p.30, colour photo and description:- Leaves oblong, flat, thin, declinate, apices acuminate, bases cuneate, 7.5-8.5 cm long, 3-3.5 cm wide. Flower pink with white, diameter 8-9 cm. Petals 10. Stamens and pistil well developed. Pistil protruding beyond stamens. Flowers early to mid-season. This cultivar was selected from an open pollinated plant of the wild form *C.reticulata* in Tengchong, Yunnan, China. Synonyms: 'Pink Jade', 'Pinkish Jade'. Different reading: 'Fen-yü'.

Fenyu (Shanghai). *(C.sasanqua). American Camellia Yearbook,* 2009, p.111 with colour photo, as 'Fenyu' (Name already used); A 21 year old cross of **Shishigashira** x **Shinonome**, first flowered in 1992. Originated by Jian-guo Fei, Yong-hong Hu and Ya-li Zhang at the Shanghai Botanical Gardens, China. Flower is 7.5 cm diameter x 3.2 cm deep, Opens as a pink rose form double, maturing to a semi-double white edged pink (RHS.CC. 68A to 68B). 20 petals, yellow anthers and light yellow filaments . Fragrant. Dense growth at average rate. Dark green leaves are 4.5 cm x 2.5 cm. Flowers early.

Fenyulan. (Pink Magnolia), *(C.reticulata),* Feng et al., 1986, *Yunnan Camellias of China,* p.32, colour plate and description: Leaves oblong, apices acuminate, bases cuneate, 9-11 cm long, 3.5-4.5 cm wide. Flower deep spinel pink (RHS.CC.68B), diameter 8.5-9 cm. Petals 7, long. Stamens numerous, bases united to form a tube. Pistils well developed, fertile. This is a new cultivar selected from seedlings of open pollinated seeds by researchers at the Kunming Botanic Gar-dens. Synonym: 'Pink Magnolia'. Different reading: 'Fen-yü-lan', 'Fenyülan'.

Fenyulan. (Pink Magnolia). *Chinese Camellia Culture,* 2003, p.251 with colour photo; A *C.hybrid* developed by Mr Huang Delin, Shanghai, China. First flowered 1991. Pink semi-double with degenerate stamens and pistils, some changed to petaloids. 3-4 layers of petals. Flowers mid-season.

Fenyülan. Feng et al., 1986, *Yunnan Camellias in China,* p.163. Different reading for **Fenyulan.**

Fenyun. Chinese synonym for USA *(C.japonica)* **Pink Clouds.**

Fenzhaoyun. (Rosy Clouds), *(C.reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.11: Spinel Pink. Mid-season. Tengchong. Feng et al., 1986, *Yunnan Camellias in China,* p.43, colour photo and description: Leaves elliptic to oblong, apices acuminate, bases cuneate, margins sparsely and shallowly serrate, veins conspicuous, 7-8.5 cm long, 3.5-4 cm wide. Flowers Spinel pink, diameter 8-10 cm. Petals 15-17, bent slightly outwards. Stamens numerous, around pistils. Pistils well developed or rudimentary. Flowers early to mid-season. This cultivar was selected from an open pollinated plant of wild form *C.reticulata* in Tengchong. Synonyms: 'Rosy Clouds', 'Pink Morning Cloud'. Different reading: 'Fen-chao-yün', 'Fenchaoyun'.

Fenzhou. ACS, 1993, *American Camellia Yearbook,* p.42. Chinese synonym for USA C.reticulata hybrid **Pink Crepe de Chine.**

Fenzhuangnü. (Girl in Pink), *(C.reticulata),* Gao & Zhuang, 1989, *The Camellia in China,* p.58, No.384, colour photo, No.242: Large size,11-12 cm across, semi-double to open peony form, with 18-20 large, rounded, emarginate, outer petals, and a few erect centre petals dividing the stamen cluster. Leaves shining, deep green, elliptic, 9.2-10.2 cm long x 4.2-5.5 cm wide. Originated in Tengchong, Yunnan Province, China.

Feodora. *(C.japonica),* Cothran, 1957, SCCS., *The Camellia Review,* vol.18, p.12; Anonymous, 1956, *Camellias Grown at Kew.* No description. Festi. Gerbing's Azalea Gardens Catalogue, 1938-1939. Orthographic error error for **Feastii.**

Festiva *(C.japonica),* Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete,* p.6: One of the greatest flowers obtained by Delgrande, of great size and admirable perfection. Ten rows of petals, those external, round and broad, the others relatively small, of fullness and perfection, the central group all small with a general colour of cherry-red with reflections and reticulated with carmine. At its time of origin it was called 'Cosmopolita' but renamed **Festiva** as this name was already in use as 'Cosmopolitana'. See colour plate 2125, van Houtte, *Flore des Serres....* vol.XX, 1874, p.120 as 'Festiva del Grande'. L.R. Russell Nurseries Catalogue, 1963-1964, p.21 erroneously uses the name 'Festiva' for what seems to be 'Rubescens Major'. Synonyms: 'Festiva (del Grande)', 'Festiva del Grande'. Orthographic errors: 'Fastiva', 'Festivia'. Invalidly used as a synonym for 'Maria Morren' in USA. Originated in Italy by Delgrande, Rome. There is a variegated form.

Festiva del Grande. van Houtte, 1874, *Flore des Serres...* under pl.2125. Synonym for **Festiva.**

Festiva Variegata. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.69: Vivid carmine, veined a little deeper with most of the petals marbled or splashed with white. A white variegated form of **Festiva.** Originated in Italy.

Festival. *(C.japonica),* Kramer Bros. Nursery Catalogue, 1970: Blush pink. Medium to large, formal double. Vigorous, compact, upright growth. Flowers mid-season. Originated by Kramer Bros Nursery, Upland, California, USA.

Festival of Lights. (*C.pitardii* hybrid). *New Zealand Camellia Bulletin,* March 2001, Issue No.138, vol.XXII, No.2, p.21, Reg. No.424. Registered by N. Haydon, Takanini, New Zealand. A chance seedling having *C.pitardii* var. *pitardii* as seed parent and an unknown pollen parent. First flowered in 1995. The flower is single, 4.5 cm diameter x 3 cm deep, with 6-7 petals that are pale pink (RHS.CC.65D) with deeper pink flashes on some petals. The stamens are in a tight erect ring in the flower centre, in 2 ranks, the inner rank about half the height of the outer one. The plant is very floriferous, with well displayed flowers. Growth habit is columnar, and of average density and growth rate and with dark green leaves 3.5 cm long x 1.5 cm wide.. Flowers mid-season to late.

Festivia. River View Nursery Catalogue, 1957-1958. Orthographic error for 'Festiva', erroneously for **Maria Morren.**

Fevriana. *(C.japonica),* Cachet Catalogue, 1840-1841, p.1. Pink. Originated in France. (believed extinct.)

Fiery Furnace. *(C.japonica),* SCCS., 1962, *Camellia Nomenclature,* p.42: Fiery red. Large peony form, with mixed petals and petaloids, of full form. Vigorous, compact, upright growth. Blooms midseason to late. Originated by Harvey Short, Ramona, California, USA.

Fiesta. *(C.japonica),* Wylam.1957, *American Camellia Yearbook,* p.26: An especially attractive seedling of **California** with warm rose, semi-double to peony form blooms, averaging 12.5 cm across. The low, bushy plants of **Fiesta** bloom over a long season from mid-season to late. Originated at Marshall's Camellia Nursery, San Gabriel, California, USA. Sport: **Fiesta Variegated.**

Fiesta Grande. (*C.reticulata* hybrid) SCCS., 1984, *The Camellia Review,* vol.45, No.4, p.15, March-April, colour plate: A **Flower Girl** cross with *C.sasanqua.* Light purple bud, flower opens light lavender with white speckles, 10-11 cm across. Long blooming. Sasanqua-like leaves and growth. Originated in USA by Meyer Piet and Lee Gaeta, California.

Fiesta Grande Variegated. (*C.reticulata* hybrid). SCCS 1993, *Camellia Nomenclature,* p.125 as 'Fiesta Grande Var.': a virus variegated form of **Fiesta Grande.** Light lavender pink and white. Originated in the USA by Piet and Gaeta.

Fiesta Variegated. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.52 as 'Fiesta Var.': A virus variegated form of **Fiesta** - Light coral red blotched with white. Originated in USA.

Fifth Avenue. *(C.japonica),* SCCS., 1970, *Camellia Nomenclature,* p.56, as '5th Avenue': White. Medium to large, full peony form. Medium, compact growth. Mid-seasom blooming. Originated in the USA by Shackelford.

Fifty First Battalion. *(C.japonica),* ACRS, *Camellia News,* No.119, p.11, Reg. No.403: Originated by Keith Abbott, Rossmoyne, Western Australia. A chance seedling that first bloomed 1986. Light crimson, (RHS.CC.46A) semi-double of 21 petals, 10 cm across x 5 cm deep. Flowers early to late on a rapid growing, dense, upright bush. Leaves deep glossy green, curved, elliptic, margins serrulate, 9 cm long x 4 cm wide. Petals are fluted, filaments in a column with occasional petaloids.

Figgini. *(C.japonica),* Franchetti, 1855, *Collezione di Camelie,* p.31: Large, pointed petals, deep red with broad, whitish stripes. Orthographic error: 'Figini'. Originated in Italy.

Figini. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. Orthographic error for **Figgini.**

Fight On. *(C.hybrid),* SCCS., 1984, *Camellia Nomenclature,* p.117: Dark red with red stamens tipped with golden anthers. Large semi-double, 10-11 cm across. Medium, compact, upright growth. Late flowering. a cross of *C.hybrid* **Flower Girl** x *C.reticulata* 'Crimson Robe', (**Dataohong**) originated by Meyer Piet and Lee Gaeta, California, USA. Originally given the name 'USC Fight On'. See this entry for further information. Chinese synonym 'Fendou'.

Fikizutsumi. Marchants, Keeper's Hill Nursery Catalogue, 1956. Orthographic error for **Fukuzutsumi.**

Filadelfia Vera. Contini Catalogue, 1915. Orthographic error for 'Philadelphica Vera', synonym for **Ne Plus Ultra.**

Filadelfica Vera. Contini & Nava of Intra Catalogue, 1900. Orthographic error for 'Philadelphica Vera', synonym for **Ne Plus Ultra.**

Filangeri. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. No description. Originated in Italy. (Believed extinct.)

Filinto Elvsio. Joaquim Moreira da Silva, ACS *Yearbook*, 1955. Orthographic error for **Filinto Elysio.**

Filinto Elysio. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.35, & No.9, 1872-1873, p.43: Formal double. Light rose marked with white. Originated in Portugal. Orthographic error 'Filinto Elvsio'.

Filippo Parlatore. *The Floral Magazine,* 1863, vol.3, pl.147. Abbreviation for **Professore Filippo Parlatore.**

Filippo Parlatori. Volonte Catalogue, 1880-1881. Orthographic error for **Professore Filippo Parlatore.**

Filla de Tollo. *(C.japonica),* Sociedad Española de la Camelia, *Camelia,* July 2008, p.34 with colour photo. Originated by Viveiros Rio Tollo, Goián, Pontevedra, Spain in 1992.. A rose cerise (RHSCC 35C) incomplete double with 14-30 petals and 85-102 petaloids which have some white striping. Stamens grouped in fascicles among the petaloids. Cream filaments, rose coloured at the base, gold anthers. Leaves dark green, 7.7 cm x 4.6 cm, elliptic. Plant has tree-like appearance, medium to rapid growth rate.

Filo Junior. *(C.japonica), American Camellia Yearbook,* 1954, p.311, Reg. No.208: An 11 year old chance seedling, originated by Filo H. Turner, Pensacola, Florida, USA that first flowered 1950. Plant growth is pendulous, open and compact with leaves, elliptical, tapering, acuminate and crenate. The light pink flowers are incomplete double with mixed petaloids similar to **Nobilissima;** 11-13 cm across by 5-6 cm deep. Mid-season flowering.

Filoli Red. (*C.reticulata* hybrid). ACS, Aug. 1996, *The Camellia Journal,* vol.51, No.2, p.31, Reg. No.2387. A very large, brilliant red, semidouble hybrid from 'Shot Silk' (**Dayinhong**), pollen parent unknown. Flowers mid-season to late. Originated by Houghton S. Hall, San Anselmo, Calif., USA. *American Camellia Yearbook,* 1996, p.3, colour photo before p.1. The 16 year old seedling first flowered in 1987. Flower size is 15 cm across x 7.5 cm deep, with 13 petals, 2-3 petaloids, golden anthers and white filaments. Plant growth is upright and rapid with dark green, finely serrated leaves 10 cm long x 5 cm wide.

Filomena Gallo. *(C.japonica),* Cattolica, G., **Le mie Camelie, My Camellias,** 2005, p.93 with colour photo; Single flower, medium size, white streaked and splashed with pink (RHS.CC.67D). A seedling of **Alba Simplex** x 'Rosa Simplex' **(Aitonia),** first flowered in 1982. Originated by Dott. Guido Cattolica, Livorno, Italy.

Fimariata. Charles Vuylsteke, 1899-1900, Trade Catalogue, p.7. Orthographic error for **Fimbriata.**

Fimbriata. *(C.japonica),* Transactions *of the London Horticultural Society,* 1816; Loddige's *Botanical Cabinet,* 1817. No description. Loddige's *Botanical Cabinet,* 1826, vol.XII, fol.1103: "There is an uncommon degree of delicacy and beauty in this flower. The original double white camellia is doubtless a most exquisite plant which scarely anything can surpass, yet the one now before us, from the finely fringed edge of the petals, has a novel character peculiarly its own. In the foliage it is scarely, if at all, distinguishable from the double white." (**Alba Plena**). Originated in China as a sport of **Alba Plena.** Brought to England in 1816 for Colvill, a nurseryman of King's Road, Chelsea. Illustrations: Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 46; Macoboy, 1981, *The Colour Dictionary of Camellias,* p.87; *American Camellia Yearbook,* 1975 facing p.180; Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I, p.135; Front cover, *New Zealand Camellia Bulletin,* 1975, Vol.IX, No.2. Synonyms: 'Alba Fimbriata', 'Fimbriata Alba', 'Fringed White', 'Alba Plena Fimbriata', 'Double Fringed White', 'Fimbriata Plena', 'Fimbriata Improved', 'Alba Fimbriata', 'Fimbriata Amplissima', 'Fimbriata Alba Plena', 'Fringed Petal'. Orthographic errors: 'Fimbriatta', 'Fimbricata Alba', 'Fimariata'. Although this was an ancient camellia originally imported from China, they now have no record of its original name and have given it the synonym: 'Xiuya Baichilun'.

Fimbriata Alba. Tourres, Macheteaux Catalogue, 1835, p.17. Synonym for **Fimbriata.**

Fimbriata Alba Plena. Sprenger Catalogue, 1906. Synonym for **Fimbriata.**

Fimbriata Alba Pleno. Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.14. Synonym for **Fimbriata.**

Fimbriata Amplissima. Costa, 1846, Catalogue. p.5. Synonym for **Fimbriata.**

Fimbriata Blush. *(C.japonica), The Plant Finder,* 1990-1991, p.89. No description. Listed by Coghurst Nursery, 1989. No valid listing located.

Fimbriata Carnea. *(C.japonica),* Costa, 1846, *Catalogue de la collection de camellias présentée à sa majesté L'Imperatrice de toutes les Russies et Reine de Pologne,* p.5. No description. (Believed extinct.)

Fimbriata Improved. *The Garden,* Apr.17th, 1875, p.318. Synonym for **Fimbriata.**

Fimbriata Kaiyo-tsubaki. *(C.japonica),* RHS, *Journal,* vol.59, p.clxxxi, 1934 - Shown by Canon Boscowan, Ludgvan, Cornwall. This would seem the same as the "oakleaved variety of **Fimbriata** referred to in *The Garden*, 1875.

Fimbriata Nuova. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.66. No description. Originated in Italy. (Believed extinct.)

Fimbriata Plena. Lindo Nurseries price list, 1940-1941. Synonym for **Fimbriata.**

Fimbriata Quercifoglia. Besson & Figlio Catalogue, 1878. Orthographic error for **Fimbriata Quercifolia.**

Fimbriata Quercifolia. *(C.japonica),* Prudente Besson Catalogue, 1865. No description. Henderson & Son, 1871 Catalogue. A sport of **Fimbriata.** Rollisson & Son, 1875-1876, Plant Catalogue, p.103: A sport of **Fimbriata** resembling the parent in bloom, but the foliage is most peculiar, resembling that of an oak or certain hollies. Originated in Italy. Abbreviation 'Quercifolia'. Orthographic error 'Fimbriata Quercifoglia'.

Fimbriata Red. Vanderbilt, 1941, *Camellia Research, II,* p.3. Synonym for **Fred Sander.**

Fimbriata Rosea. *Magazine of Horticulture,* 1839. Synonym for **Exquisita.**

Fimbriata Rubra. *(C.japonica),* Harrison, ed.1839, *The Floricultural Cabinet,* vol.7, p.56. No description. Charles van Geert, 1846, Catalogue General, p.67: Beautiful fimbriated form, orange-carmine red, sometimes striped with red, sometimes striped white. Originated in Belgium. Synonym 'Exquisita'.

Fimbriata Scarlet. Vanderbilt, 1941, *Camellia Research, II,* p.3. Synonym for **Fred Sander.**

Fimbriata Superba. Reuthe Nursery Catalogue, 1932. Synonym for **Fred Sander.** Orthographic error 'Frimbriata Superba'.

Fimbriata Superba Variegated. SCCS., 1947, *The Camellia. Its Culture and Nomenclature* as 'Fimbriata Superba Var.'. Synonym for **Fred Sander Variegated.**

Fimbriated Fragrance. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 1999, Issue No.132, vol.XXI, No.1, p.17, Reg. No.412. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between C.hybrid **Scented Sun** x *C.japonica* **Kramer's Supreme**. Flowers are rose form double, 9 cm diameter x 5 cm deep, with 60-70 fimbriate petals, no obvious petaloids and stamens with bright yellow anthers. Colour is a tomato red, (RHS.CC. 52A) and the flower has a light scent. Plant is upright and of average growth rate and density, with dark green leaves 9 cm long x 5 cm wide.

Fimbriato Plena. Lindo Nurseries price list, 1947. Orthographic error for **Fimbriata.**

Finalandia Variegated. Skinner, ed.1957, *Garden Plants in Color,* 60:6. Orthographic error for **Finlandia Variegated.**

Findelmannii. Franco Agostoni.1844, *Catalogo Plantarum....,* as 'Findelmanni'. Orthographic variant for **Fintelmannii.**

Fine Day. *(C.sasanqua),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.253: White flushed pink, single. Originated in USA.

Finest Daikagura. Lindo Nursery Price List, 1940-1941. Same as **Daikagura,** but predominantly white. Synonym for **Daikagura.**

Finest Daikagura Variegated. Lindo Nursery price list, 1941-1942 as 'Finest Daikagura Var.'. Synonym for **Daikagura.**

Finest Red Napa. Lindo Nursery price list, ca.1945. Synonym for **Elena Nobili.**

Finest Vallevareda. Lindo Nursery price list, 1941-1942. Synonym for **Valtevareda.**

Finlandi. Gerbing's Azalea Gardens Supplement, 1943-1944. Orthographic error for **Finlandia.**

Finlandi Variegated. Dodd Nursery Catalogue, 1949-1950, p.12. Orthographic error for **Finlandia Variegated.**

Finlandia. *(C.japonica),* Vanderbilt, 1941, *Camellia Research, II,* p.3. No description. McIlhenny Catalogue, 1941, p.5 as 'Finliandia': Large open flower. White with prominent stamens. SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* Large, open flower with prominent stamens. Medium size, 10 cm across, semi-double with swirled and fluted petals. Medium, compact growth. Early to mid-season flowering. Synonyms: 'Dearest', 'Nellie White', 'White Herme', 'White Jordan', 'Finlandia Alba', 'Finlandia White'. Sports: 'King Lear', 'Monte Carlo', 'Sunset Oaks', 'Finlandia Blush', 'Finlandia Red', 'Finlandia Variegated', 'Roselle Bell'. This variety was originally propagated by Jannoch Nurseries, Pasadena, California, USA under the name 'White Jordan' but due to it being confused with 'Jordan's Pride', the synonym for **Hikarugenji** it was changed to **Finlandia** in 1937. Jannoch obtained the variety from the old Busch Gardens where it probably originated as a sport of **Finlandia Variegated** which is the true parent of this group of mutations and which is believed to have come from Japan about 1910. Orthographic error: 'Finland'. The name 'Finlandia' and 'Finlandia F.N.' were erroneously used for the cultivar **Rosary** in the USA.

Finlandia Alba. Portland Wholesale Nursery Co. Wholesale price list, 1958-1959, p.41. Synonym for **Finlandia.**

Finlandia Blue. Morrison, 1958, *American Camellia Yearbook,* p.225. Orthographic error for **Finlandia Blush.**

Finlandia Blush. *(C.japonica),* Fendig,1953, *American Camellia Catalogue:* A blush pink sport of **Finlandia,** originated by Paul Shepp, Pasadena, California, USA. Synonym: 'Marie Griffin'. See black and white photo p.84, Hertrich, 1959, *Camellias in the Huntington Gardens,* Vol.III.

Finlandia F.N. Fruitland Nursery Catalogue, 1943-1944. Renamed Rosary due to confusion with **Finlandia.**

Finlandia F.N. Variegated. SCCS, 1947, *The Camellia. Its Culture and Nomenclature* as 'Finlandia F.N. Var.'. Synonym for **Rosary Variegated.**

Finlandia Pink. Portland Wholesale Nursery price list, 1952, p.27. Synonym for **Rosary.**

Finlandia Pink F.N. Portland Camellia Nursery Camellia Catalogue, 1947-1948, p.15. Synonym for **Rosary.**

Finlandia Red. *(C.japonica),* Woodroof, 1947, SCCS., *Bulletin,* 8(6):3: Salmon red form of **Finlandia;** originated in USA at the McCaskill Gardens, Pasadena, California. Synonyms: 'Pert', 'Red Margaret Jack', 'Aurora Rosea', 'Finlandia Rosea'. See black & white photo, p.85. Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III.

Finlandia Rosea. Fruitland Nursery Catalogue, 1949-1950, p.29. Synonym for **Finlandia Red.**

Finlandia Rosea Variegated. Magnolia Gardens and Nursery Catalogue, 1949-1950 as 'Finlandia Rosea Var.'. Synonym for **King Lear.**

Finlandia Speckled. Magnolia Gardens and Nursery Catalogue, 1947-1948, p.6. Synonym for **Finlandia Variegated.**

Finlandia Variegata. Fairlight Camellia Nursery Catalogue, 1987. Illegal orthographic variant for **Finlandia Variegated.**

Finlandia Variegated. *(C.japonica),* Fruitland Nursery Catalogue, 1943-1944, p.27: A variegated form of **Finlandia** - White streaked crimson. It is considered that this cultivar is the parent of the **Finlandia** complex of sports and that it originated in Japan. See photo p.92, Sharp, 1957, *Camellias Illustrated* and colour plate, Fendig, 1950, *American Camellia Catalogue;* also black & white photo p.137, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I. Synonyms: 'Margaret Jack', 'Variegated Finlandia', 'Speckles', 'Finlandia Speckles'. 'Aurora Borealis'. Orthographic errors: 'Finlandi Variegated', 'Finalandia Variegated', 'Finlandia Variegata', 'Finlandia Var.' Chinese synonym 'Fuse Fenlandiya'.

Finlandia White. McIlhenny Catalogue, 1945-1946. Synonym for **Finlandia.**

Fintelmannii. *(C.japonica),* Baumann, Mulhouse Nursery Catalogue, 1841-1842, as 'Fintelmanni'. No description. Orthographic variant: 'Findelmannii'. (Believed extinct.)

Fiona Capp. *(C.japonica),* ACRS., 1971, *Camellia News,* No.43, p.35, Reg. No.141: Originated in Australia by R. Wilkins, Rosanna, Victoria. A chance seedling of **The Czar** that first bloomed 1968. Growth habit, dense, spreading with medium vigour. The large, 12.5 cm single white flowers are produced early to mid-season. The leaves vary from 10 cm x 5 cm to 13 cm x 6 cm and are dark green, acuminate apex and regular serrations of average pitch.

Fiona Colville. *(C. x williamsii), International Camellia Journal,* No.13, 1981. No description. *International Camellia Journal,* No. 16, 1984, p.77, Reg. No.10: Originated by Lt. Colonel N.R. Colville, Penheale Manor, Egloskerry, Launceston, Cornwall, UK. Colour Neyron Rose; RHS.CC.55B. This is a mutant of **Donation** and is identical except for flower colour. The sport was first noticed 1960 and has bloomed true for 20 years. Listed by Penheale Nurseries, Cormwall, 1990-1991, p.2: Hybrid. Semi-double, deep pink, bushy.

Fionana. Berlèse, 1845, *Monographie,* ed.3, p.305. Orthographic error for **Fioniana.**

Fioniaena. J.E. von Reider, 1834, *Die Beschreibung und Kultur der Azaleen, Camelien..,* p.218. Orthographic error for **Fioniana.**

Fioniana. *(C.japonica),* Burdin Maggiore & Co. Catalogue, 1835, p.38. No description. Loddige's Catalogue, 1836, p.24. No description. Berlèse, 1837, *Monographie,* ed.1, pp.119, 132: Leaves small, lanceolate; flowers small, red, splashed with white, double. It is an old variety derived from Variegata. Originated by Fion of Paris, France. Orthographic error: 'Fionana'.

Fiordilige. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. No description. Originated in Italy by Tagliabue. (Believed extinct.)

Fiore di Maria. *(C.japonica),* Burnier & Grilli Catalogue, 1846-1847, as 'Fleur de Marie'; Fratelli Rovelli Catalogue, 1852, p.18: [from] Croff. Pearl white with reddish streaks and blotches. Originated in Italy by Croff. Orthographic variant: 'Fleur de Marie'.

Fiorentina Superba. Burdin Maggiore & Co. Catalogue, 1856-1857. Orthographic variant for **Florentina Superba.**

Fir-ball. McIlhenny Catalogue, 1941, p.5. Orthographic error for 'Fire Ball' (**Ignescens**).

Fir Cone. *(C.japonica),* Rhodelia Nursery Catalogue, 1945: A miniature rose form, blood red, double. Flowers mid-season. Originated by Otto Schwabe, Rhodelia Nursery, Oregan, USA. Average flower size is 5.5 cm across with great depth. The orthography 'Fircone' was later used by the SCCS, 1947, *The Camellia. Its Culture and Nomenclature* and, under this spelling, the cultivar was registered by the ACS, Reg. No.1768, *American Camellia Yearbook,* 1981, p.98. See colour plate, p.131, Macoboy, 1981, *The Colour Dictionary of Camellias; American Camellia Yearbook,* 1983 facing p.95; Front cover, *New Zealand Camellia Bulletin,* vol XII, No.1, 1981. In 1982 it received the "John A. Taylor Jr. Miniature Award". Orthographic error: 'Fire Cone'. Sport: **Fir Cone Variegated.** Chinese synonym 'Yansongguo'.

Fir Cone Variegated. *(C.japonica),* Williams & Thompson, 1952, *American Camellia Yearbook,* p.2 as 'Fircone Variegated': A small camellia distributed in the early 1940's by Rhodelia Nurseries, Oregon, USA. It is a rather tight semi-double shaped like a fir cone, blood red in colour and dotted in clear white spots. The flowers are about 5 cm in diameter and in height. Othographic variant 'Fircone Variegated'. Orthographic error: 'Firecone Variegated'. Reg. No.1769, *American Camellia Yearbook,* 1981, p.98. Colour photo, *Encyclopedia of Camellias in Colour,* Vol.II, 1978, pl.60, p.40.

Fircone. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Orthographic variant for **Fir Cone.**

Fire Ball. *(C.japonica),* Menoreau catalogue, France, 1890. Hillebrand & Bertolazzi, *Antiche Camelie del Lago Maggiore,* 2003, p.185 with colour photo; Large spherical peony form blooms, very deep, almost dark, red. Leaves large, rounded, slightly serrate. Flowers mid-season to late.

Fire Ball. Auguste van Geert Nursery Catalogue, 1849, p.18. Synonym for **Ignescens.**

Fire Balle. Verschaffelt Catalogue, 1847-1848, p.57. Orthographic error for 'Fire Ball', synonym for **Ignescens.**

Fire Bird. *(C.sasanqua),* Wada,1941, *Japanese Garden Treasures,* p.22: A new and outstanding strain of giant flowers with many petals of thick texture; broad and crinkled - white blotched with deep crimson. Originated in Japan. Not to be confused with **Firebird.**

Fire Bird. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.79. Orthographic variant of **Firebird.**

Fire Bird Variegated. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.79 as 'Fire Bird Var.'. Orthographic variant for **Firebird Variegated.**

Fire Brand. Rhodelia Nursery Catalogue, ca.1945. Orthographic variant for **Firebrand.**

Fire Chief. *(C.japonica x C.reticulata),* SCCS., 1968, *Camellia Nomenclature,* p.159: Deep red. Large (13-16 cm across) semi-double to peony form. Medium, spreading, upright growth. Mid-season to late blooming. Originated in USA by Howard Asper, Escondido, California from the cross *C.japonica* 'Donckelaeri' (**Masayoshi**) x *C.reticulata* 'Cornelian', (**Damanao**). Sport: **Fire Chief Variegated.** For colour photo see front cover SCCS., 1965, *The Camellia Review,* vol.27, No.2. Chinese synonym: 'Huoshenye'.

Fire Chief Variegated. *(C.japonica x C.reticulata),* SCCS., 1968, *Camellia Nomenclature,* p.159 as 'Fire Chief Var.': A virus variegated form of **Fire Chief** - Deep red moired white. Originated in USA. Chinese synonym: 'Fuse Huoshenye'.

Fire Cone. Holden, 1956, *American Camellia Yearbook,* p.228. Orthographic error for **Fir Cone.**

Fire Dance. *(C.japonica), American Camellia Yearbook,* 1980, p.164, Reg. No.1684: A medium deep red semi-double *C.japonica* chance seedling, mid-season blooming; originated by Nuccio's Nurseries, Altadena, California, USA. The 23 year old seedling first bloomed 1957. Average flower size is 10 cm across. Plant growth is upright, average, dense and medium in rate with light green leaves, 8.5 cm x 5 cm. Originally listed in Nuccio's 1979 Catalogue as 'Firedance'. Chinese synonym: 'Huowu'.

Fire Dragon. Griffiths, 1953, ACS., *Quarterly,* 8(1):4, 5, 7, 8 with illustration. Synonym for **Hiryû.**

Fire Falls. *(C.japonica),* Thompson, 1953, *American Camellia Yearbook,* p.78: A seedling of **Professor Sargent.** A hemisphere of vivid red of the appearance of a loose double in which each petal stands for itself instead of being imbricated. Originated by Harvey Short, Ramona, California, USA. Orthographic variant: 'Firefalls'. Colour plate 61, p.40, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Sport: **Fire Falls Variegated.**

Fire Falls Variegated. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1963-1964, p.5 as 'Fire Falls Var.': A virus variegated form of **Fire Falls** - Vivid red blotched white. Originated in USA. Chinese synonym 'Fuse Huopubu'.

Fire Gold. Fruitland Nursery Catalogue, 1943-1944, p.26. Orthographic variant for 'Firegold', a synonym for **Grand Sultan.**

Fireball. Wilmot, 1944, *Camellia Variety Classification Report,* p.5. Synonym for **Rose Anemone** as 'Rose Emery'.

Firebird. *(C.japonica),* ACS., 1961, *The Camellia Journal,* vol.16, No.3, p.32, Reg. No.571: A 9 year old chance seedling that first bloomed 1956; originated by Milo E. Rowell, Fresno, California, USA. Plant growth is open, somewhat scraggly and wide spreading with leaves averaging 10 cm x 5 cm. The early blooming flowers are anemone to tight peony form; in mid-season the flowers become more semi-double with 10-12 large, broad, twisted, channelled guard petals and 6-8 erect, large, irregular petaloids. The peony form flowers are 11-12 cm across, and the semi-double 11-13 cm in diameter. The flowers are a shiny, strong red (Munsel 10 RP4/12-5/12 strong purplish red). Sport: **Firebird Variegated.** Note: A different Camellia to **Fire Bird** although this orthography has been erroneously used for it.

Firebird Variegated. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1963-1964, p.4 as 'Firebird Var.'; SCCS., 1966, *Camellia Nomenclature,* p.54: A virus variegated form of **Firebird** - Satin red blotched white. Originated in USA. Orthographic variant: 'Fire Bird Variegated'.

Firebrand. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Large semi-double, scarlet red flowers with prominent stamens in the centre. Slow, symmetrical, upright growth. Foliage deep green. Flowers mid-season. Originated in USA at Magnolia Gardens, Charleston, South Carolina either as a seedling or a lost label plant. For other forms see **Louise Weick** and **Firebrand Variegated.** Orthographic error: 'Firebrands'. Black and white photo, p.139, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I.

Firebrand Variegated. *(C.japonica),* Fruitland Nursery Catalogue, 1945-1946, p.25: A virus variegated form of **Firebrand-** Scarlet blotched with white. Originated at the Longwood Gardens, USA -.Orthographic variants: 'Variegated Firebrand', 'Firebrand Var.'.See black and white photo p.140, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I.

Firebrands. Nantes, *Services des Espaces, Collections,* 1980. Orthographic error for **Firebrand.**

Firecone. Mark S. Cannon Scion Catalogue, 1962, p.4. Orthographic error for **Fir Cone.**

Firecone Variegated. Mark S. Cannon Scion Catalogue, 1964-1965, p.6, as 'Firecone Var.'. Orthographic error for **Fir Cone Variegated.**

Firecracker. *(C.japonica),* SCCS, 1956, *The Camellia. Its Culture and Nomenclature,* p.46: Red-hot red. Medium large semi-double. Vigorous, compact growth. Blooms mid-season. Originated in USA by McCaskill Gardens, East Pasadena, California as a chance seedling.

Firedance. Nuccio's Nurseries Catalogue, 1979. Changed to **Fire Dance** on registration.

Firedance Variegated. *(C.japonica),* ACS 1993, *The Camellia Journal,* vol.48, No.4, p.28 in Nuccio's advert. as 'Firedance Var': A white blotched, virus variegated form of **Fire Dance.** Originated in USA.

Firefalls. Fendig, 1953, *American Camellia Catalogue.* Orthographic variant for **Fire Falls.**

Firefly. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1942-1943: Bright red, sprinkled white. Medium size semi-double of vigorous growth. Mid-season to late flowering. Originated in USA by Magnolia Gardens, Charleston, South Carolina.

Firegold. Gerbings Azalea Gardens Catalogue, 1941-1942 with colour photo on back page. Synonym for 'Te Deum', itself a synonym for **Grand Sultan.**

Firelight. *(C.japonica),* ACRS., 1969, *Camellia News,* No.36, p.14, Reg. No.107: Originated by H.P. Matthews, Victoria, Australia. Planted from seed received from USA; parents unknown. First bloomed 1967. The 11-12.5 cm diameter, single, very deep red flowers have bunched, pink anthers and bright yellow pollen. Blooms early to mid-season on a dense, erect plant. Leaves dark green, 10 cm x 5 cm, blunt acute.

Fire'n'Ice. *(C.japonica x C.oleifera). American Camellia Yearbook,* 1992, p.33, Reg. No.2253: Originated by Dr W. Ackerman, Ashton, Maryland, USA. Bright red, medium to large size semi-double to rose form double. A seedling of *C.japonica* **Ezo-nishiki** x *C.oleifera* that is cold hardy to -10 degrees F. Late blooming. The 11 year old seedling first flowered 1986. Average flower size is 9.5 cm across x 5 cm deep with 20-40 petals, 2-6 petaloids, yellow anthers on cream filaments. Plant growth is upright, dense and medium with dark green leaves 10 cm long x 3.5 cm wide. Colour photo between pp.40-41.

Fireworks. *(C.sasanqua). New Zealand Camellia Bulletin*, July 2010, p.9; Regn No. 485; A chance seedling that first flowered 2002. Plant is upright, dense, and of medium growth rate. Dark green leaves are 4 cm x 1.5 cm and elliptic. Flower is 6-7 cm diameter x 2 cm deep, single to semi-double with 8-11 petals, which are rounded to blunt at the edge. Radial stripes of alternating clean, deep rose red (RHS.CC. 57B) and light pink to white. Light, dusty scent. Stamens in a loose column, with light yellow filaments and bright yellow anthers. Flowers early season. Radial stripes in sasanquas are very rare, and this is believed to be the first offered in New Zealand. Originated by Neville Haydon, Takanini, New Zealand.

Firey King. SCCS., 1950, *The Camellia. Its Culture and Nomenclature.* Synonym for **C.M. Hovey.**

Firre Ball. Fratelli Rovelli Catalogue, 1852, p.18. Orthographic error for 'Fire Ball', synonym for **Ignescens.**

First Blush. *(C.hybrid).* ACS 1992, *The Camellia Journal*, vol.47, No.3, p.13. Valdosta Camellia Scions. No description. SCCS 1996, *Camellia Nomenclature,* p.158: Small to medium size formal double to rose form double. Blush pink edged pink. Average, compact, upright growth. Blooms mid-season. Originated at Kramer's Nurseries, California, USA.

First Brilliance. *Camellias,* Y.C. Shen, 2009, p.316 with colour photo; Synonym for **Hatsuhikari.**

First Cherry Blossom. Urquhart, 1956, *The Camellia.* Synonym of **Dewatairin** as 'Hatsusakura'.

First Class Crimson. Feng et al., 1981, *Yunnan Shanchahua,* p.127. Synonym for **Yipinhong.**

First Class Red. Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.20. Western synonym for **Yipinhong.**

First Day-Spring Men. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings,* p.16, colour photo: A seedling of **Ville de Nantes** originated in USA by Richard Dodd, Marshallville, Georgia. A medium size, brilliant red semi-double with irregular, crinkled petals and an irregular stamen cluster.

First Flush. *(C.cuspidata x C.saluenensis), American Camellia Yearbook,* 1949, p.27: Plants sent to America (from England) in 1948 included a variety called **First Flush** - A fine plant with vigorous, erect growth, reticulated leaves and an early, profuse crop of flowers, smaller than J.C. Williams, blush pink. Single, early flowering. Originated by Marchant, Keeper's Hill Nursery, England. Note: It is doubtful that this included *C.cuspidata* in its make-up. It is probably a *C.x williamsii.*

First Formal. *(C.hybrid),* Sharp, 1957, *Camellias Illustrated,* p.144: Baby pink, medium size formal double. A seedling of the hybrid **Sylvia May,** originated by Vernon James, California, USA.

First Lady. *(C.japonica), American Camellia Yearbook,* 1965, p.233, Reg. No.805: A 9 year old chance seedling that first bloomed 1959; originated in USA by Robert L. Sparkman, Florida. Plant growth is rapid with dark green leaves, 11 cm x 6 cm. The semi-double flowers, 15 cm in diameter x 7 cm deep have two or more rows of 12-14 petals with some petaloids. Colour is white with yellow anthers and white filaments. Blooms early to mid-season.

First Light of Dawn. *Camellias,* Y.C. Shen, 2009, p.74 with colour photo; Synonym for **Kagiroha.**

First Love. *(C.japonica),* SCCS Bulletin, vol.11, No.6, p.4, June 1950. SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Deep rose-pink. Medium large semi-double. Vigorous, compact growth. Mid-season blooming. See black and white photo, p.87, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III. Originated by Fred Bergstrom, Pasadena, California, USA.

First Prom. *(C.japonica), American Camellia Yearbook,* 1965, p.234, Reg. No.719: (SCCS.No.63-12) A 3 year old chance seedling that first bloomed 1959; originated by Leslie Marshall, San Gabriel, Califomia, USA. The formal double flower is white with blush undertones and is 10 cm across with 70-75 petals. Plant growth is vigorous, compact and upright. Flowers early to mid-season.

First Yellow. *Camellias,* Y.C. Shen, 2009, p. 73 with colour photo; Synonym for **Shokô.**

First Yellow Variegated. *(C.japonica x C.chrysantha), Camellias,* Y.C. Shen, 2009, p.61 with colour photo; A virused form of **Shokô** with heavy yellow variegation on the leaves**.**

Firstborn. *(C.japonica), American Camellia Yearbook,* 1961, p.222, Reg. No.528: A 5 year old chance seedling that first bloomed 1957. Originated in USA by Rex H. Smelser, Louisiana. First listed in SCCS, *Camellia Nomenclature,* 1960, p.53. Growth is upright with dark green leaves, 8.5 cm x 5 cm. Flowers are semi-double, bright red with yellow stamens, 12.5 cm across x 6 cm deep with 19-23 petals and 5-8 petaloids. Blooms mid-season. Colour photo, front cover, ACS, 1961, *The Camellia Journal,* vol.16, No.4. Sport: **Firstborn Variegated.**

Firstborn Variegated. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1963-1964, p.6 as 'Firstborn Var.': A virus variegated form of **Firstborn** - Bright red blotched with white. Originated in USA.

Fischer Jubiläums Rubin. *(C.japonica), Kamelien,* Peter Fischer catalogue, 2008, p.28 with colour photo; A seedling of **Rubina**, first flowered 2003. Unusual anemone form with folded petaloids topped by a single row of flat petals. Ruby red, 9 cm diameter, scented. Dark green leaf 9 cm x 6 cm. Upright growth. Raised by P. Fischer, Wingst, Germany, and named for the 75th aniversary of his nursery.

Fischer's Samtglut. *(C.japonica), Kamelien, 75 Years of Camellia*, Catalogue 2008, p.30 with colour photo; A seedling of **Kuro-wabisuke**, first flowered 2004. Originated by Peter Fischer, Wingst, Germany. A single flower, cup-shaped, 5-7 petals, glowing red (RHSCC 45) diameter 5.5cm, and tubular yellow stamens. Abundant flowers for a long period. Leaves glossy deep green. Compact, rounded growth.

Fischer's Schnee Traverso. *(C.japonica), International Camellia Journal* 2005, p.128 with colour photo; Reg. No. 52. A sport of **Giuseppe Traverso,** first observed 1998, and stable under propagation from 1999. Originated by Peter Fischer, Wingst, Germany. Pure white flower, peony to rose form double, 8 cm x 5 cm, which fall whole. Other characteristics as for **Giuseppe Traverso.**

Fish Blood. Yü, 1964, *Camellian,* p.6 of "The Garden Camellias of Yunnan". Synonym for **Yuxie-hong.**

Fisher Number 10. *(C.japonica),* Hillcrest Nursery Catalogue,1958 as 'Fisher #10'. No description. Originated in USA.

Fisher's Rose. *(C.japonica),* McIlhenny Catalogue, 1941, p.5: Rose-pink Large, full peony form. Originated in USA by Jungle Gardens, Avery Island, Louisiana. See black and white photo, p.129, Hertrich, 1955, *Camellias in the Huntington Gardens*, vol.II.

Fishtail. RHS., Index, 1937, p.282. Synonym for 'Quercifolia'. Known in Japan as 'Kingyoba-tsubaki' and **Kingyo-tsubaki.**

Fishtail White. *(C.japonica),* Coghurst Nursery, 1994, *Camellias,* p.11. Blooms mid-season. Large white single to semi-double with fishtail foliage. Occasionally flowers pale pink. This resembles **Shirokingyoba-tsubaki** of Japan, but its origin is uncertain.

Fish-tailed Camellia. Barral, 1866, *Revue Horticole,* p.63. Synonym for 'Quercifolia', synonym for **Kingyo-tsubaki.**

Fitzharding Dark. *(C.japonica),* Spencer, 1957, ANZCRS., *Camellia Annual,* No.4, p.22: Very dark, purplish red rose form double. Origin unknown.

Five Continents. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.174. Synonym for **Godaishû.**

Five-O. *(C.reticulata),* Kramer Bros. Nursery Catalogue, 1975: Large semi-double of medium pink. Vigorous, open, upright growth. A *C.reticulata* seedling, originated by Kramer Bros, Upland, California, USA.

Five Precious Things. Yang, 1965, *Camellia Varieties of Taiwan.* Synonym for **Wubao.**

Five Small Stars. Yü, 1964, *Camellian,* p.6 of "The Garden Camellias of Yunnan". Synonym for **Xiaowuxing.**

Five Star General. *(C.japonica),* Griffin ed., 1957, *Camellian.* No description. SCCS, 1960, *Camellia Nomenclature*, p.53: Medium to dark red. Very large, peony form with loose petals. Vigorous, upright growth. Mid-season blooming. Originated in USA by Shackelford.

Fiziano. Linden Catalogue No.95, 1875, p.22. Orthographic error for **Tiziano.**

Fl. Minor. Parmentier, 1818, *Catalogue des Arbres et Plantes...,* p.18. Synonym for 'Flore Minor'.

Fl. Pl. Carneo. Edwards, 1821, *Botanical Register,* t.547 as 'Camellia sasanqua B. stricta a.', 'fl. pl. Carneo', 'Mrs Palmer's Camellia'. Synonym for **Maliflora**

Fl. Pl. Variegato. Piccioli Catalogue, 1841, p.11. Abbreviation for 'Flore Pleno Variegato', synonym for **Variegata.**

Fl. Plena (Pompon). Parmentier, 1818, *Catalogue des Arbres et Plantes...,* p.16. Abbreviation for 'Flora Plena', a synonym for **Pompone.**

Fl. Pleno Rubra Major. Parmentier, 1818, *Catalogue des Arbres et Plantes...,* p.15: Abbreviation for 'Flore Plena Rubra Major', synonym for **Rubra Plena.**

Fl. Pleno Varieg. Drapiez, 1837, *Herb. de l'Amatuer de florale,*VII, pl.502. Synonym for **Variegata.**

Flaccida. *(C.japonica),* Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:315: No description. Berlèse, 1840, *Monogaphie,* ed.2, p.121, 229: Flowers, red single. Leaves, large deep green. Orthographic variant: 'Flacida'. Originated in Italy.

Flacida. Isola Madre Catalogue, 1845. Orthographic variant for **Flaccida.**

Flag of Truce. *(C.japonica),* Purchase Nursery Catalogue, 1893. No description. Originated in Australia. (Believed extinct.)

Flamboyante. *(C.japonica),* Seidel, 1846, Pflanzen Catalog, p.7. No description. (Believed extinct).

Flame. *(C.japonica),* Lindo Nursery Catalogue, 1940; SCCS, 1945, *Camellias,* p.17: Scarlet, semi-double, mid-season. Fendig, 1949, *American Camellia Catalogue:* Large semi-double, flame-red with showy golden stamens. Flowers average 12.5 cm across with a crepe texture to the petals and have a short, central stamen cluster. Two rows of petals numbering 11 are 6 cm long. Leaves large, dark green, noticeably but finely serrate and tapered at both ends, 10 cm x 4cm. Upright habit, free bloomer. Imported from Japan and introduced by Domoto, Hayward, California about 1917. Believed to be the same as the Japanese cultivar **Tsurikagari.** See black and white photo, p.141, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I. There is also a variegated form.

Flame. J.H. Newington Ltd Nursery Catalogue, 1984-1985, p.8. Invalid synonym for **Moshio.**

Flame (Australia). Anderson's Nursery Catalogue, 1958 as 'Flame' (Aust). Synonym for **Moshio.**

Flame (Australian). Mark S. Cannon Scion Catalogue, 1964-1965, p.6. Orthographic variant for 'Flame'(Australia), synonym for **Moshio.**

Flame Cup. *(C.japonica), Collected Papers,* ICS Congress, Jinhua 2003, *Naming new Cultivars of "Naidong" Camellias...,* Chen Junzhi and Chen Jinshui, p.47; Red gem pendent group. Red flower, cupped corolla.

Flame Fimbriated. *(C.japonica),* Camellia Forest Nursery Catalogue, 1988, p.4. No description. ACS 1992, *The Camellia Journal,* vol.47, No.4, p.13: Valdosta Camellia Scions as 'Flame (Fim)': A fimbriated form of **Flame**. Originated in the USA.

Flame Variegated. *(C.japonica),* Wilmot, 1943, *Camellia Variety Classification Report,* p.10 as 'Flame Var.'. No description. SCCS, 1945, *Camellias,* p.19: Variegated vivid red semidouble. Blooms mid-season. SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* A variegated form of **Flame** - Deep flame red spotted white. Originated in USA. See black and white photo, p.130, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II. Chinese synonym 'Hua Huoyan'.

Flame Variegated Fimbriated . *(C .japonica),* Cannon, 1970, ACS., *The Camellia Journal,* vol.25, No.1 as 'Flame Var. Fim.'. A fimbriated form of **Flame Variegated.** Originated in USA.

Flamenco. *(C.reticulata),* ACRS., 1980, *Camellia News,* No.74, p.24, Reg. No.249: Originated by E.R.Sebire, Wandin North, Victoria, Australia from a seedling of **Buddha;** first flowered 1973. Flower is 12 cm across, semi-double to incomplete double, ruffled, high centred flower, cerise pink in centre, fading to pale pink at petal edge. Blooms early to late season. Orthographic error: 'Flameno'. See colour plate p.41, ACRS, 1981, *Camellia News,* No.79.

Flamenco Dancer. *(C.x williamsii), American Camellia Yearbook,* 1981, p.98, Reg. No.1706: A small to medium deep coral rose, shaded to light pink, *C.saluenensis* hybrid, chance seedling; blooms mid-season. Originated in USA by Kramer Bros. Nursery, Upland, California. Blooms have some rabbit ears, furled petals and petaloids. Plant growth is slow. SCCS., 1981 *Camellia Nomenclature,* p.184, erroneously listed this cultivar as a *C.saluenensis* species, however amended this in the 1984 issue.

Flameno. Cannon, 1980, *ACS., The Camellia Journal,* vol.35.Orthographic error for **Flamenco.**

Flaming Star. *(C.japonica),* McCaskill Gardens Catalogue, 1950; Fendig,1951, *American Camellia Catalogue:* Large, bright flame pink, single, 10-11 cm across. The 6 large wavy petals of irregular length are twisted and fluted to form a striking flower of unusual shape. There is a large cluster of red stamens in the centre of the flower. Leaves, medium green, elliptic, 10 cm x 5.5 cm, slightly acute and serrate. Growth habit slow, sturdy, compact attaining pyramidal shape. Originated by McCaskill Gardens, East Pasadena, California, USA from seed of unknown parents. First flowered 1942. It was first named 'Casilda' but later renamed due to the existence of another cultivar with prior use of the name.

Flaming Youth. *(C.reticulata), American Camellia Yearbook,* 1977, p.211, Reg. No.1447: A large, brilliant, light red, single seedling *C.reticulata* that blooms early to mid-season. A chance seedling of a wild form reticulata that first bloomed 1970. Originated by David L. Feathers, Lafayette, California, USA. It is a single type bloom of 9-11 petals with yellow anthers and white filaments. Average size 12.5 cm across x 7.5 cm deep. Blooms early to mid-season. Plant growth is open and rapid in rate with light green leaves, 12.5 cm x 5.5 cm.

Flamingo. *(C.japonica),* Doty et al., 1949, *American Camellia Yearbook,* p.246: Seedling from Camellia Nurseries, Tallahassee, Florida, USA. Blush pink about the colour of 'Magnoliiflora', (**Hagoromo**). Flowers medium size, usually semi-double but they often vary. Sometimes petaloids mingle with golden yellow stamens. Blooms early and holds well. Good grower. Average size 8 cm across. Leaves medium green, long-elliptic, 11 cm x 5 cm. Apex tapering acuminate, base cuneate, midrib distinct light green, other veins obscure. Serrations wide and shallow. See black and white photo, p.131, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II; colour plate No.62, p.40, *Encyclopedia of Camellias in Colour,* vol.II, 1978.

Flamingo. Parramore, 1957, ANZCRS, *Camellia Annual,* No.4, p.26. Invalidly as a synonym for **Fukuzutsumi.**

Flamiola Superba. Architetto Catalogue, 1858. Orthographic error for 'Flammeola Superba', synonym for **Elphinstoniana.**

Flammea. *(C.japonica),* Jacob Makoy et Cie Catalogue, 1830, p.6.. No description. Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:315. No description. Berlèse, 1837, *Monographie,* ed.1, p.95, 129: Leaves narrow, elongate; flower, small, deep cherry-red with pointed petals. Originated in England. There appears to be no English record of this name. Del Lungo e Girardi, 1928, says "a dark single flower used for understock". It is probably the old single red species.

Flammeola. *(C.japonica),* Loddige's Nursery Catalogue, 1836, p.24. No description. Originated in England. (Believed extinct.)

Flammeola Superba. Jacob Makoy et Cie Catalogue, 1839, p.17. van Houtte Catalogue, 1839, 1:3, 4. Synonym for **Elphinstoniana.**

Flanders. *(C.japonica),* Guilfoyle, 1875, *Botanic Papers,* p.26. No description. Originated in Australia. (Believed extinct.)

Flander's Field. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Chinese red. Large single with a mass of yellow stamens. Medium, compact growth. Originated in USA.

Flapper Girl. *(C.japonica),* Bloomingdale Nursery Catalogue, 1953. No description. Originated in USA.

Flashdance. *(C.japonica),* ACRS., 1989, *Camellia News,* No.111, p.11, Reg. No.365: Originated by Donal Coe, Albury, NSW, Australia. A chance seedling of **Tiffany** that first bloomed 1979. Informal double to peony form, white with red and pink stripes (RHS.CC.52D), 12.5 cm across x 6.5 cm deep. Leaves mid-green, ovate to obovate, apices abruptly acute, venation obscure, margins serrulate, surface smooth, 9 cm long x 5.5 cm wide. Medium growing, open, upright plant, flowering early to mid-season. Deep, waved petals with scattered stamens and central petaloids in various degrees. Colour photo, p.2, *Camellia News,* June, 1990, No.113.

Flashlight. *(C.japonica),* Longhurst & Savige, 1982, *The Camellia,* p.136, pl.48: A single camellia of 7 petals, white with brilliant rose-pink stripes, a central stamen column with white filaments and pale yellow anthers. Originated in Australia at "Eryldene", the garden of E.G. Waterhouse, Gordon, NSW.

Flat Dali Camellia. SCCS., 1984, *Camellia Nomenclature,* p.117.Western synonym for **Pingban Dalicha.**

Flat Petalled Tali Camellia. Ikeda, 1976, *American Camellia Yearbook,* p.139. Synonym for **Pingban Dalicha.**

Flat Tali Camellia. Bao, 1980, ACS., *The Camellia Journal,* vol.35,No.2, p.18. Synonym for **Pingban Dalicha.**

Flava. RHS, 1950, *Camellia & Magnolia Conference Report,* p.129. The species *Camellia flava* (Pitard) Sealy in Kew Bulletin, 1949, p.217. A yellow flowered species from Vietnam.

Flava. Fulham Nursery, 1826 Catalogue, p.9. Synonym for **Incarnata.**

Flavescens. Sweet, 1818, *Hortus Suburbanus Londinensis.* Synonym for **Incarnata.**

Flavescens Alba. van Houtte Catalogue, 1846-1847. Orthographic variant for 'Alba Flavescens', according to Baumann, 1841. Synonym for **Fasciculata Alba.**

Flavescens Minor. Harrison ed., 1838, *The Floricultural Cabinet,* p.149. Synonym for **Flavescens Nana.**

Flavescens Nana. *(C.japonica),* Fisher Holmes Nursery Catalogue, 1832-1834. No description. Originated in England. (Believed extinct.) Synonym: 'Flavescens Minor'.

Flavescens Nova. van Houtte Catalogue,1846-1847, 27:24. Synonym for **Fasciculata Alba.**

Flavescens Pink. Vanderbilt, 1941, *Camellia Research, II,* p.3. Synonym for **Incarnata.**

Flavia. *(C.japonica),* Cachet Nursery Catalogue, 1845-1846, p.2. No description. Originated in France. (Believed extinct.)

Flawless Jade. Savige, 1985, *International Camellia Journal.* Synonym for **Wuxiayu.**

Flecked Pink. Camellia Grove Nursery Catalogue, 1946, p.6. Synonym for **Jubilee.**

Fleming. *(C.japonica),* Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.132, pl.133: Flower: Complete double, imbricated type; Neyron Rose 623/ self /1 and /2, lighter towards the centre, 8 cm in diameter x 3 cm deep. Petals about 40, obovate to near spatulate to the centre; buds globular. Leaves: Elliptic to broad-lanceolate, 11 cm x 5 cm, dark glossy green, firm, leathery texture; serrations broad, very shallow; apices long pointed. Habit upright, openly branched. Mid-season to late flowering. Originated in USA.

Flesh Coloured Camellia. *Botanical Repository,* 1812. Synonym for **Incarnata.**

Flesh Pink Peony. Overlook Nurseries Catalogue, 1942-1943, Synonym for **Daybreak.**

Fletcher Pearson Crown. *(C.japonica),* Belle Fontaine Nursery Catalogue, 1961, p.5. No description. SCCS., 199O, *Camellia Nomenclature,* p.42: Rose pink, medium size, anemone form. Medium growth. Blooms early to mid-season. Originated by Mrs A.A. Geiger, Atlanta, Georgia, USA.

Fleur de Pecker. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Fleur de Pêche', synonym for **Fleur Dipater.**

Fleur de Pommier. ICS Journal 2013, p.22, colour photo. No details.

Fleur Dipater. *(C.japonica),* Bahuaud-Litou Nursery Catalogue, 1914-1920 No description; Peed's Nursery Catalogue 1935 as 'Peachblossom'. Medium sized, 7-9 cm across, semi-double with 15-20 obovate petals 4-5 cm x 3:3.5 cm wide, apices slightly notched, elevated, of a soft claret-rose, 21/3, with central stamens of unequal length, intermixed with petaloids. Leaves, dark green, leathery, narrowly-ovate.9 cm x 4.5 cm; apices long-acuminate, finely serrate, tending to twist; on a compact bush, spreading with age. This is an European variety grown under various names over a period of time. Synonyms: 'Fleur de Pêche', 'Fleur de Pêcher', 'Peachblossom', 'Peach Blossom'. Orthographic error: 'Fleur de Patis'. In USA it has been confused with **Magnoliiflora** and has been known as 'English Magnoliaeflora' and 'Magnoliaeflora' (England). For black and white illustration see, p.274, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II as 'Peachblossom'. For colour illustration see pl.XIII, Waterhouse, 1952, *Camellia Trail* as 'Peach Blossom'.

Fleur du Jura. *(C.japonica),* Bergami Catalogue,1858. No description. (Believed extinct.) p.4: Rose-red. Small, formal double. Slow, bushy growth. Originated in USA by McCaskill Gardens, East Pasadena, California. There is also a variegated form.

Fleurette. *(C.japonica),* SCCS Bulletin, vol.11, No.2, p.17, Dec 1949: Rose red. Small formal double. Slow bushy growth. Blooms mid-season. Originated in USA.

Fleurette Variegated. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.53 as 'Fleurette Var.': A virus variegated form of **Fleurette** - Rose red, blotched white. Originated in USA.

Fleuri. Creech, 1958, *Camellia Culture,* p.380. Orthographic error for a small, yellow flowered species from Indo-China. *Camellia fleuryi* (A.Chev.), Sealy in *Kew Bulletin,* 1949, p.217.

Fleurs de Renaissance. *(C.japonica),* Portland Camellia Nursery, Camellia Catalogue, 1948-1949, p.8: Red, medium sized semi-double. Mid-season flowering. Originated in USA.

Flicker. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Large semi-double, crimson. Slow, compact, dwarf growth. Flowers mid-season to late. Originated in USA by Clarence Hearn.

Flip. *(C.japonica), American Camellia Yearbook,* 1980, p.164, Reg. No.1661: A medium white or pink with red spots, formal double *C.japonica* chance seedling, late flowering. Originated by Dr J.M. Habel, Suffolk, Virginia, USA. The 22 year old seedling first bloomed 1964. Average flower size 8.5 cm wide x 5 cm deep with 85 petals. Plant growth is upright, medium in rate and with light green leaves.

Flirtation. *(C.x williamsii),* Dekker, 1960. *American Camellia Yearbook,* p.4: Armstrong Nurseries, Ontario, California, USA are introducing a hybrid which is a cross of *C.japonica* **Lady Vansittart** with *C.saluenensis.* They have named this Flirtation. The plant is upright, bushy and slow with dark green foliage. This shrub, a profuse bloomer, bears irregular, single, light pink, medium sized blooms, early to mid-season.

Floadrian. Gentry, 1974, ACS., *The Camellia Journal,* vol.29. Orthographic error for **Flo-Adrian.**

Flo-Adrian. *(C.japonica),* Gentry, 1974, ACS., *The Camellia Journal,* vol.29 as 'Floadrian'. No description. SCCS, 1981, *Camellia Nomenclature,* p.62: White. Medium formal double. Compact growth. Flowers mid-season to late. Originated in USA.

Flo. Pleno Variegato. Parmentier Catalogue, 1908. Abbreviation for 'Flore Pleno Variegato', synonym for **Variegata.**

Flor da Romã. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.32, & No.9, 1872-1873, p.43: 'Pompony' form (similar to **Pompone**), bright scarlet, very full. Orthographic error; 'Flor da Roma'. Originated in Portugal.

Flora. *(C.japonica),* Robinson, W. ed., 1903, *Flora & Silva,* vol.1, facing p.66 with illustration: White. Large single with 2 rows of waved and crinkled petals. Originated in Japan and imported to England by Sander of St Albans. Robert Veitch, 1929 lists a semi-double white as 'Flora'.

Flora Celeste. Sharp, 1948, *Camellias Illustrated,* pp.127, 135. Orthographic variant for 'Flore Celeste', synonym for **Aspasia Macarthur.**

Flora Cooper. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1998, p.23, Reg. No.2457. A small to medium, pink, chance seedling. Usually formal double, occasionally rose form double with several stamens. Flowers mid-season to late. Originated by William C. Stout, Pensacola, Fla., USA. *American Camellia Yearbook,* 1998, p.3, colour photo before p.1. The 21 year old seedling first flowered 1982. Average flower size is 7-8.2 cm across x 3.2-3.8 cm deep, with 75-85 petals. Bloom has up to 12 rows of petals, and when fully opened has a hexagonal appearance. Plant growth is upright, open and average, with dark green fimbriated leaves 9 cm long x 3.8 cm wide.

Flora Ellen. *(C.japonica), American Camellia Yearbook,* 1954, p.311, Reg. No.135: The 9 year old seedling of unknown parentage, bloomed for the first time 1951. Originated by Alison J. Parsons, Norfolk, Virginia, USA. Plant growth open, pendulous and medium in rate. Leaves

9-12 cm long x 4-6 cm wide, finely serrate, elongated acuminate apex. Flower buds large, elongated. Flowers simple semi-double, similar to 'Donckelaeri', (**Masayoshi**) 10-12 cm in diameter, with petal formation similar to 'Magnoliiflora' (**Hagoromo**). Petals 18, colour white. Flowers early to mid-season.

Flora Eyster. *(C.japonica),* Tammia Nursery 1986, ACS., *The Camellia Journal,* vol.41, No.4, back cover illustration: Twenty large, snow white, fluted petals, surrounding 30 petaloids. Flowers 12.5 cm across x 7.5 cm deep. A chance seedling originated by Ferol and Sam Zerkowsky, Slidell, Louisiana, USA. Mid-season flowering. Reg. No.2031 with the ACS, 1987. *American Camellia Yearbook,* 1987, p.81 with colour photo between p.60-61: The 8 year old seedling first bloomed 1983. Average flower size, 12.5 cm across x 7.5 cm deep with 20 large, flared petals, 30 petaloids, yellow anthers and white filaments. Plant growth is upright, spreading, average and medium in rate with dark green leaves 7.5 cm x 3.2 cm.

Flora Hollingsworth. *(C.japonica),* ACS., *Quarterly,* 1951, p.19: Light pink. Large peony form. Medium, open growth. Flowers mid-season. Originated by C. Norwood Hastie Jr., Magnolia Gardens, Charleston, South Carolina, USA. It was passed on to McCaskill Gardens who released it in 1956.

Florence Hollis. *(C.japonica),* ACS., 1948 Newsletter, 3(2):2. Doty et al., 1949, *American Camellia Yearbook,* p.246: A seedling produced by Mrs J.L. Hand, Pelham, Georgia, USA from seed planted in 1939. It first flowered in 1944. The incomplete china-white flowers have fascicles of stamens with white filaments interspersed among the upright inner petals, making the flower distinctive. Leaves thin, narrow, medium green, glossy, 7.5 cm long x 3.2 cm wide.

Serrations hairlike. Hardy, tall, vigorous grower. ACS., Reg. No.33, *Quarterly*, 1950, vol.5, No.1.

Florence Hovey. *(C.japonica),* Hovey, C.M. ed.1883, *The Garden*, 24:250: Originated by Hovey. Colour new, rich, violet-rose. The flower is full, medium size, almost globular, with that equisite incurving which adds so much to the beauty of the best roses; foliage large. First flowered 1852. Originated in USA.

Florence Hudson. *(C.japonica),* Wylam, 1957, *American Camellia Yearbook,* p.26: Medium size, 12-15 guard petals surrounding a mound of sharply pointed petaloids. Delicate blush with a lilac tint. A seedling of **Chiffon.** Leaves are narrow, medium green and plant growth is open, vigorous and bushy. As seedling H.S. #101 it was awarded the "Frank Williams Trophy" for 1957. Mid-season flowering. Originated by Earl Hudson, USA.

Florence Jane. *(C.japonica),* ACRS., 1973, *Camellia News,* No.51, p.37, Reg. No.162: Originated by F.S. Spencer, Victoria, Australia. A chance seedling from **Angel** that first bloomed 1971. The 11 cm diameter, blush pink to white, incomplete double, flowers are produced mid-season to late. Leaves, dark green, ovate-lanceolate, 10 cm x 5 cm; mucronate apex, base acute, deeply veined, slightly rugose and concave.

Florence Kirby. *(C.japonica),* SCCS., 1974, *Camellia Nomenclature,* p.61: Dark pink. Large to very large formal double. Mid-season blooming. Originated in the USA by Wilson. Sport: **Florence Kirby Variegated.**

Florence Kirby Variegated. *(C.japonica),* Gentry, 1978, ACS., *The Camellia Journal,* vol.33, No.4. A virus variegated form of **Florence Kirby** - Dark pink blotched with white. Originated in USA.

Florence Lowden. *(C.japonica),* Rhodellia Nursery Catalogue, ca.1945: Large red single to semi-double. There is also a variegated form. Originated in USA. The name has been applied invalidly as a synonym for 'Yoheijiro', as **Shirabyôshi.**

Florence Lowden. SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.46. Erroneous synonym for 'Yoheijiro'.

Florence Lowden Variegated. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* Variegated semi-double red. Mid-season.Originated in USA.

Florence Sharp. *(C.japonica),* Gentry, 1967, ACS., *The Camellia Journal,* vol.22,, No.5, p.28. No description. Originated in USA. No valid listing located.

Florence Stratton. *(C.japonica),* McIlhenny, 1941, *List of 700 Varieties of Camellias,* p.6: Jungle Garden's seedling. Imbricated. Large, white, some petals solid pink. Fendig, 1952, *American Camellia Catalogue:* Large, white-variegated, complete double, completely imbricated (formal).10-11 cm in diameter. White with some solid Tyrian pink petals. No stamens. Leaves, medium green, thin, 8 cm x 4 cm. Tip prominent, base tapered, veins prominent and raised. Serrations close and deep. Habit, vigorous, bushy and hardy. Originated by E.A. McIlhenny, Jungle Gardens, Avery Island, Louisiana, USA. First bloomed 1943. See illustration, p.135, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II. Sports: **Florence Stratton Blush, Sieur de Bienville.** Chinese synonym: 'Siteladun'.

Florence Stratton Blush. *(C.japonica), American Camellia Yearbook,* 1981, p.98, Reg. No.1767: A medium to large blush pink, with some petals solid pink, formal to rose-form double *C.japonica* mutant of **Florence Stratton,** late flowering. Plant and flowers have the same characteristics as the parent. Originated by J.K. Blanchard, North Carolina, USA.

Florence Wood. *(C.japonica), American Camellia Yearbook,* 1968, p.130, Reg. No.1014: A chance seedling that first flowered 1966, originated by C. Dewey Norwood, Thomasville, Georgia,

USA. Plant growth is average density and medium in rate, with dark green leaves averaging 6 cm x 4 cm. The peony form flower, similar to **Debutante**, is 9-11 cm across x 5 cm deep with 10-12 petals. Deep pink with golden anthers. Blooms early to mid-season.

Florence's Debutante. *(C.japonica)* ACS, *The Camellia Journal,* June 2013, p.25 with colour photo; Regn No.2837; ACS, *Yearbook,* 2013, p.115 with colour photo; Originated, registered and propagated by Florence Crowder, Denham Springs, La., USA. A 14 year old seedling of **Debutante** x **Mathotiana Supreme,** first flowered 2005. Medium size, 9cm diameter x 5cm deep flower, semidouble to peony form with 58 petals and 11 petaloids,, pink bordered with a darker rose pink. Petals incurved. Lemon yellow anthers and white filaments. Spreading, vigorous growth. Dark green leaves average 9cm x 9.5cm with high serration. Flowers early to late.

Florist's Pink. *(C.japonica),* Treseder Special Camellia List, 1964-1965, p.4: Pink peony form, excellent cut flower variety. Originated in UK.

Florita. *(C.sasanqua), American Camellia Yearbook,* 1970, p.163, 164, Reg. No.1078: A 12 year old chance seedling sasanqua that first flowered 1961; originated by Dr John D. Lawson, Antioch, California, USA. Plant growth is upright, medium and open with dark green leaves 4 cm long x 2.5 cm wide. The anemone form bloom is white with back of the petals pink, with yellow anthers and filaments. It measures 6.5 cm across x 6 cm deep with 5 petals and 36-45 petaloids. Blooms early. Commercially introduced 1963.

Florrie Burke. *(C.reticulata* hyb.), *New Zealand Camellia Bulletin,* 1984, vol.XIII, No.6, p.25, Reg. No.218: A chance seedling of **Buddha** which first flowered in 1978 It was crossed with an unnamed *C.reticulata* 'Crimson Robe' x *C.saluenensis* plant. Originated by Mrs Ida Berg, Whakatane, New Zealand. It has strong, upright, medium growth with light green leaves, 12

cm long x 5 cm wide. The medium to large semi-double flowers are a light salmon pink, 10-12 cm in diameter x 5 cm deep with 10 petals, 5 petaloids, dark cream filaments and light brown anthers. Flowers mid-season.

Florrie's Theme. *(C.reticulata* hybrid), *New Zealand Camellia Bulletin,* vol.XV, No.6, 1988, Reg. No.251: Originated by M. Burke, Whakatane, New Zealand. A 7 year old seedling that first bloomed 1985, with upright, open growth and light green leaves averaging 9.5 cm long x 3.5 cm wide. Flower, formal double, 9.5-10.5 cm across with about 60 petals. Colour a deep, salmon pink. RHS.CC.54C Red Group. Blooms mid-season.

Florulenta. *(C.japonica), Biblioteca Agraria,* 1829: Flower colour lilac-rose, numerous petals, some streaked, those in the centre erect and united. Originated in Italy.

Flos Virginica. *(C.japonica),* Lichtenthal, 1852, *Manuale botanico enciclopedico popolare:* Dark red. Beautiful form. Originated in Italy.

Flosackii. Harrison, ed.1836, *The Floricultural Cabinet*. Orthographic error for **Hosackii.**

Flossie Goodson. *(C.japonica),* SCCS., 1978, *Camellia Nomenclature,* p.63: Clear pink. Large semi-double to loose peony form. Medium upright growth. Flowers mid-season. Originated in USA by C.V. Bozeman, Hattiesburg, Mississippi. Chinese synonym 'Foluoxi'.

Flossie Smith. *(C.japonica), American Camellia Yearbook,* 1966, p.88, Reg. No.824: A 15 year old chance seedling that first flowered 1957. Originated by Smith's Nursery, Theodore, Alabama, USA. Plant growth habit is upright, open and medium in rate with dark green leaves averaging 7.8 cm x 5 cm. The peony form flower is 7.5-8 cm across x 5 cm deep with 18 petals and 185-300 petaloids. Colour light red. Flowers mid-season.

Flovescens. Prince Catalogue, 1828. Orthographic error for 'Flavescens'.

Flower Boy. *(C.hybrid),* ACRS., 1982, *Camellia News,* No.83, p.22, Reg.No.284: Originated by Edgar Sebire, Wandin North, Victoria, Australia. Seed parent *C.hybrid* **Flower Girl,** pollen parent unknown, first bloomed 1980. The spreading, open plant resembles **Flower Girl.** The roseform, 10 cm mauve-pink flowers are produced mid-season to late. Leaves. 9 cm x 5 cm, are lanceolate, tapering apex, dark green, fine serrations, stout petiole.

Flower Crest. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.93. Synonym for **Hanata-chibana.**

Flower Garden. *(C.japonica), Camellias,* Y.C. Shen, 2009, p.125 with colour photo; Red peony form, gold stamens and white flag petaloids widely dispersed and intermingled with large frilled red petaloids. Leaves elliptic, bright, apex acuminate. Plant upright and vigorous. Originated in Niigata, Japan. Note; This cultivar may have a prior Japanese name which would take precedence as the valid name.

Flower Girl. (*C.sasanqua* x *C.reticulata*), SCCS., 1966, *Camellia Nomenclature,* p.151: Pink. Large semidouble to peony form. (*C.sasanqua* **Narumigata** x *C. reticulata* **Damanao**) Originated by Howard Asper, Escondido, California, USA. See colour illustration front cover SCCS., 1969, *The Camellia Review,* vol.30, No.3. Orthographic variant: 'Flowergirl'. Chinese synonym: 'Huanü', & 'Maihua Guniang'.

Flower in Snow. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.132. Synonym for 'Sec-chucka'.

Flower in Wine. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.178. Synonym for **Shuchûka.**

Flower of Honour. Macoboy, 1981, *The Colour Dictionary of Camellia,* p.93. Synonym for **Hanafûki.**

Flower Song. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Pink. Complete double. Early. SCCS., 1954, *The Camellia. Its Culture and Nomenclature:* Salmon rose pink. Medium formal double, shaped like a dahlia. Medium, compact, upright growth. Flowers early to mid-season. Originated by Harvey Short, Ramona, California, USA.

Flower Time. Abbott's Nursery Catalogue,1961. Synonym for **Kikutoji.**

Flower Viewing Bamboo Hat. *Camellias,* Y.C. Shen, 2009, p.212 with colour photo; Synonym for **Hanamigasa.**

Flower Wood. Sharp, 1957, *Camellias Illustrated,* p.144. Orthographic variant for **Flowerwood.**

Flower Wreath. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.81. No description. Originated in USA. No valid listing located.

Flowers in Waves. *Camellias,* Y.C. Shen, 2009, p.153 with colour photo; Synonym for **Nami-no-hana.**

Flowerwood. *(C.japonica),* Thompson, 1950, *American Camellia Yearbook,* p.144: Flowerwood is a fimbriated form of 'Mathotiana' (**Julia Drayton**). According to Fendig, 1952, *American Camellia Catalogue* with illustration it is: A large, dark red, complete double, incompletely imbricated, 11 cm or more in diameter x 5 cm deep. There about 20 thick petals which are fimbriated; otherwise colour, form and other characteristics are the same as **Julia Drayton** (as 'Mathotiana'). It was a mutant of **Julia Drayton** found on a plant in the Flowerwood Nurseries, Illinois, USA and originated by the Domoto Nursery, Hayward, California. It was Reg. No.55 with SCCS. and received plant patent No.1004. See pl.137, 138, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II and colour plates, p.88, Macoboy, 1981, *The Colour Dictionary of Camellias* and facing p.146, *American Camellia Yearbook,* 1952. There is also a variegated form. Chinese synonym: 'Huaxianzi'.

Flowerwood Variegated. *(C.japonica),* Fendig, 1958, *American Camellia Yearbook,* p.27 as 'Flowerwood Var.': Red variegated white. Fimbriated. A virus variegated form of **Flowerwood** - Dark red spotted white. Originated in USA.

Floy. Berlèse, 1838, *Annales de la Société d'Horiculture de Paris,* 22:230-232: The Camellia 'Floy' was introduced into Europe last year (1836) by M. Alex. Verschaffelt of Ghent. This gardener sold it for a very high price to M. Makoy of Liege, who has given it the name 'Grand-Fréderic'. Orthographic error for **Floyi.**

Floya. Mertens and Fontaine Catalogue, 1845, p.46 under 'Prattii'. Orthographic error for **Floyi.**

Floy C.Grand Fréderic. Prudent Besson Catalogue, 1865. Synonym for **Floyi.**

Floy de Brougham. Berlèse, 1841, *Iconographie* facing pl.15. Synonym for **Wardii.**

Floy de Broughem. Berlèse, 1842, *Iconographie* facing pl.188. Synonym for **Wardii.**

Floy de Joung. Berlèse 1841, *1conographie,* facing pl.15. Synonym for 'Youngii'.

Floy de Loddiges. Berlèse, 1840, *Monographie,* ed.2, p.229. Orthographic variant for 'Floyi de Loddiges', synonym for **Floyi.**

Floy de Ward. Berlèse, 1841, *Iconographie,* facing pl.15. Synonym for **Wardii.**

Floy de Young. Berlèse, 1843, *Iconographie,* facing pl.170: Introduced into commerce by the English horticulturalist Mr Young of London, who obtained the seed from Mr Floy of New York. Synonym for 'Youngii'.

Floy Johnson. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.37: Dark Red. Medium large semi-double. Compact, upright growth. Early to Mid-season flowering. Originated in USA by Mrs A.S. Behling, South Carolina.

Floy Virginica. Berlèse, 1849, *Annales de la Société Central d'Horticulture de Paris,* vol.40, p.274. Synonym for **Virginica.**

Floyd A. Rowe. *(C.japonica),* SCCS., 1967, *Camellia Nomenclature,* p.62: Peppermint striped. Large peony form. Vigorous, upright growth. Early to mid-season flowering. Originated in USA by F.A. Rowe, Waverly, Georgia.

Floyd Magee. *(C.japonica),* Tammia Nursery Catalogue, 1975: White anemone. Large. *American Camellia Yearbook,* 1978, p.130, Reg. No. 1463: A large, pure white, anemone to peony form *C japonica* chance seedling that blooms mid-season; originated by R. Stanley Magee, Bogalusa, Louisiana, USA. Flowers of the 12 year old plant first bloomed 1970 and have 40 petals, 80 petaloids, yellow anthers and filaments. Average size 13.5 cm across x 6 cm deep. Plant growth is upright and average in rate with dark green leaves, 7.5 cm long x 4 cm wide.

Floyi. *(C.japonica),* Floy's Catalogue, 1832: Pink and white centre. The largest of all Camellias, very double. Wilder, M.P., 1837, *Magazine of Horiculture,* 3:133: This is an American seedling raised by Mr Floy of New York, whose name it bears. It is in all respects one of the most, if not the most, remarkable seedling camellias that has ever been brought to notice. The foliage is large than any other variety; the leaves, when fully grown, measure 16 cm x 8 cm. The flower is a clear, fine, rose colour; the petals heart shaped, well arranged, and when luxuriantly grown, measure nearly half a foot (15 cm) in diameter. The variety was purchased by Verschaffelt who sold it to Makoy of Leige who renamed it for the European market, as 'Grand Frédérick'. It gained many variations of both this and **Floyi,** including: 'Floy', 'Floya', 'Floyii', 'Floydi', 'Floyi de New York', 'Floy C.Grand Frederic', 'Frederic', 'Frederick the Great', 'Frédéric le Grand', 'Grand Frederick', 'Grand Frederique', 'Gran Federico', 'Frederici', 'Prince Frederick', 'Frederic il Grand', 'Frédéric le Grande', 'Fred The Great', 'Fluy'. Synonyms: 'Grand Frédéric', 'Le Grand Frédérick'.

Floyi Alba. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.107. Synonym for **Frédéric-le-Grand Flore Albo Pleno.**

Floyi de Brougham. van Houtte Catalogue,1844-1845, 18:21. Synonym for **Wardii.**

Floyi de Loddiges. Berlèse, 1840, *Monographie* ed.2, p.229 as 'Floy de Loddiges'; Berlèse, 1843, *Iconographie,* p. facing pl.131: The flower is about 11 cm in diameter, full, deep cherry red to pure carmine, sometimes clear red depending on the season. The exterior petals are in 4-5 rows, alternatively, almost round, broad, notched, reflexed, imbricated symetrically, but a little separated one from the other. Those of the middle, anemone-like, sometimes displaying a level centre like 'Chandleri', but forming a conical centre, disposed like an open pine cone. Originated by Floy, New York, USA. Synonym for **Floyi.**

Floyi de New York. van Houtte Catalogue, 1839, 1:4. Synonym for **Floyi.**

Floyii. *Magazine of Horticulture,* 1835, 1(1):17. Orthographic error for **Floyi.**

Floy's Neoboracensis. Breck, Jos., 1847, *Horticulturalist* 1:514. Synonym for 'Neoboracensis', (**Novaboracensis**).

Floy's New York. *Magazine of Horticulture,* 1849. Synonym for 'Neoboracensis', (**Novaboracensis**).

Floy's Powhatan. Downing, A.J., ed., 1847, *Horticulturalist,* 1:433: Synonym for **Powhatanii.**

Floy's Salicifolia. van Houtte Catalogue, 1841, 7:18. Synonym for **Crassiflora**.

Floy's Virginica. van Houtte Catalogue, 1844-1845, 18:12. Synonym for **Virginica.**

Fluctuans Lineata. *(C.japonica),* van Houtte Catalogue, 1841, 7:8. No description. (Believed extinct.)

Fluff. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* White variegated. Irregular double. Mid-season. SCCS., 1954, *The Camellia. Its Culture and Nomenclature:* Creamy white, blended with soft pink. Medium large, full peony form. Vigorous, compact, upright growth. Mid-season blooming. Originated in USA by Harvey Short, Escondido, California.

Fluffy Ruffled. *(C.japonica),* River View Nursery Catalogue, 1958-1959, p.11. No description. Originated in USA.

Flush Pink Peony. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* No description. Originated in USA.

Flushed White. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Biyu**.

Flushed White Jade. Feng et al., 1981, *Yunnan Shancha Hua,* p.32. Synonym for **Biyu.**

Fluted Orchid. *(C.saluenensis.x C.reticulata), American Camellia Yearbook,* 1959, p.272, Reg. No.427: A 5 year old seedling hybrid *C.saluenensis x C.reticulata* 'Crimson Robe', (**Dataohong**). Originated by David Feathers, Lafayette, California, USA. Plant growth is bushy, open and rapid in rate with dark green leaves averaging 8.5 cm long x 4 cm wide. The light, orchid pink, single flowers with a maximum diameter of 1.5 cm x 7.5 cm deep, have 8 petals, golden anthers and occasional petaloid. Flowers early to mid-season. For colour plates see *American Camellia Yearbook,* 1960 facing p.192; Macoboy 1981, *The Colour Dictionary of Camellias,* p.148. Chinese synonym: 'Aolan'.

Fluted Silk. *(C.reticulata),* ACS., Feb.1989, *The Camellia Journal,* vol.44, No.1, p.12, Reg. No.2108: Very large, phlox-pink, semi-double *C.reticulata.* chance seedling of 'Shot Silk' (**Dayinhong**). Originated by Houghton S. Hall, San Anselmo,[3p.133]: The 11 year old seedling first bloomed 1983. Average flower size, 17.5 cm across x 10 cm deep with 18 petals, 2-3 petaloids, golden anthers, creamy white filaments. A very large, fluted, flared and high crowned flower with above average petal substance, central petaloids tinged with white. Plant growth is upright, average and rapid in rate with dark green leaves 10.5 cm long x 4 cm wide.

Fluted White. Wylam, 1952, *American Camellia Yearbook,* p.12, 21. Synonym for **Setsugekka.**

Fluttering Sleeves. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.176. Synonym for **Mai-nosode**.

Fluy. Ysabeau, 1848, *Journal d'Horticulture Pratique de la Belgique ou Guides des Amateurs et Jardiniers,* p.348. Orthographic error for **Floyi.**

Flying Bird. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.81: Rose-pink, striped pink, medium size. Originated in USA.

Flying Clouds. Bao, 1980, ACS, *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Feixia.**

Flying Dragon. Yashiroda, 1950, *American Camellia Yearbook,* p.28. Synonym for **Hiryû.**

Flying Saucer. *(C.japonica),* SCCS., 1960. *Camellia Nomenclature,* p.54: Bright red. Very large, semi-double with 3 rows of wavy petals and stamens in the centre. Vigorous, compact, upright growth. Mid-season blooming. Originated in USA by Ashby.

Flying Star. SCCS., 1958, *Camellia Nomenclature,* p.77. Synonym for 'Seihi'.

Flynn Sans. *(C.japonica),* SCCS., 1964, *Camellia Nomenclature,* p.52: Soft pink shaded deep pink at edge. Miniature semi-double with folded petals. Medium growth. Mid-season blooming. Originated by E. Metcalf, California, USA.

Fobo. Gao 1993, *The Observations from the Camellia World,* No.533, p.67. Chinese synonym for the USA *C.reticulata* hybrid **Frank Pursel.**

Foca. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quite,* p.11. No description. Originated in Italy. (Believed extinct.)

Foding Cha. *(C.japonica),* Yang, 1965, *Camellia Varieties of Taiwan,* as 'Fo-ting Cha'.A medium sized, anemone centered dark red. This cultivar is most probably the 'Fu Ting' illustrated in the "Reeves Paintings". When it arrived in Europe it received many local names as well as a number of orthographic errors. The correct Pinyin orthography is 'Foding Cha'. (Buddha's Crown Camellia) which has been variously listed as 'Fu Ting', 'Futing', 'Futting', 'Futteng', 'Futung', 'Futtung'. In 1826, Loudon, on p.341, vol.1 of *The Gardener's Magazine* gave it the name **Rawesiana** which, at the present time, must be regarded as the prior valid name. This, in turn, received various orthographic variants and synonyms: 'Rawe's Showy', 'Speciosa', 'Raweriana', 'Rawesii Vera', 'Rozeana', 'Speciosa Vera', 'Roseana'.

Foersteri. Jacob Makoy et Cie Catalogue, 1849, p.20. Orthographic error for **Fosterae.**

Foestiva. Bahuaud-Litou Nursery Catalogue, 1914-1920. Orthographic error for **Festiva.**

Fohl's Red. *(C.japonica),* Griffin Nursery Catalogue, ca.1945. No description. Originated in USA.

Fohui. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.415; Chinese synonym for the Japan *C.japonica* **Ryûge**.

Fojiniya Kate. Gao, Jiyin Ltr 30 July 1990. Chinese synonym for **Virginia W. Cutter.**

Fol. Variegatis. Loddiges Catalogue, 1823. Abbreviation for **Foliis Variegatis.**

Foleide. Gao, Jiyin Ltr 30 July 1990. Chinese synonym for **Fred Sander.**

Folia Variegata. Harrison, ed., 1838, *The Floricultural Cabinet,* vol.6, p.149. Orthographic variant for **Foliis Variegatis.**

Foliacea. Burdin Catalogue, 1835. Orthographic error for **Foliolosa.**

Foliacea Grandiflora. *(C.japonica),* Cels, Paris Nursery Catalogue, 1839, p.29. No description. Originated in France. (Believed extinct.)

Foliis Argenteo-Variegatis. Verschaffelt Catalogue, 1867-1868, p.42 as 'Fol. Arg. Var.' Synonym for **Foliis Variegatis.**

Foliis Aureomarginatis. *(C.japonica),* Barthere, Toulouse Catalogue, 1838, p.11. No description except that arising from its name which describes its leaves as having yellow margins. (Believed extinct.)

Foliis Elegantissimus. *(C.japonica),* Auguste van Geert, 1852, Catalogue, p.32: Leaves edged with white; very stable, magnificent.

Foliis Marginatis. *(C.japonica),* Rovelli Catalogue, 1896-1897: New variety. Leaves consistently margined, the variegation effect resembling the *Eurya latifolia variegatis.* Originated in Italy.

Foliis Variegatis. *(C.japonica),* Seidel, 1816-1817, *Allgemienen Deutche Garten Magazin,* 2:VIII: A small pink single with foliage variegated with silver. Orthographic variants: 'Folia Variegata', 'Folius Variegatis', 'Japonica Foliis Variegatis', 'Foliis Argenteo-Variegatis', 'Variegata à feuilles Panachées'. Received a RHS. F.C.C. in 1865. There is a further camellia with variegated foliage which was figured and described by Berthold Seeman, 1866, pl.XLII, *The*

Journal of Botany as *Camellia japonica* var. *variegata.* It was introduced from China by Robert Fortune. Veitch also introduced a camellia from Japan, with golden variegated leaves, which he listed in 1864 as 'Japonica Variegata'. André also listed it in the same year as 'A Feuillées Panachées'

Foliis Variegatis. *(C.sasanqua),* Shirley Hibbert, 1868, *The Floral World and Garden Guide,* vol.4, New Series, p.183. Illustrated in *l'Illustration Horticole,* T.581. A red single with golden variegated foliage. Originated in Japan.

Foliolosa. *(C.japonica),* Herbert, 1837, *Amaryllidaceae & Supplement,* p.368: "A flower shaped like the *Paeonia edulis* var. *rosea,* red with about 350 petals". This variety was also listed in *The Floricultural Cabinet,* 1837, p.172, as 'Foliosa' in the pale or light red group. Verschaffelt also illustrates it on pl.II, Book I, 1850, *Nouvelle Iconographie* and states: "This variety owes its name to the unusual size of the peripheral petals of its blossoms which resemble our full-bodied official peony. The blossoms, of bright cherry red, are 13 cm in diameter and somewhat irregular and are composed of a great number of petals". Synonyms: 'Amalthéa', 'Rouge'. Orthographic errors: 'Foliosa', 'Foliosea'. Originated by Rev. Herbert, England.

Foliosa. Harrison ed.,1837, *The Floricultural Cabinet,* p.172.Orthographic error for **Foliolosa.**

Foliata. *(C.japonica),* Alexis Dalliere, Price List, p.16. No description. Originated in Belgium. (Believed extinct).

Fordiana. Miller, John, Nursery Catalogue, 1838. Orthographic error for **Fordii.**

Fordii. *(C.japonica),* Loudon, 1834, *The Gardeners' Magazine* vol.10, p.594: "This is a variety between **Incarnata** and **Myrtifolia.** We have just seen a plant sent to London for exhibition by Mssrs Luscombe, Pince & Co". Paxton, 1836, *Magazine of Botany,* vol.2, p.25, coloured pl.XIV: Very double, petals arranged in the greatest regularity, large flower, rose coloured. It is one of the most perfectly formed camellias that has been produced. Nothing can surpass the regularity and symmetry of its petals and tint of its delicate, rose-coloured flowers. Originated by William Ford, Exeter, England. For colour illustration see pl.249, Berlèse, 1843, *Iconographie,* vol.3: Cherry red with delicate rose reflections. Imbricated, 8-9 cm in diameter. Synonyms: 'Devoniensis', 'Sarniensis(Ancien)', 'Sarniensis Vera', 'Fordii Vera'. Orthographic errors: 'Foordii', 'Fordi', 'Fordia', 'Fordiana', 'Fordi o Devon', 'Fordy'.

Fordi o Devon. *Agrario Botanico,* 1861-1862. Synonym for **Fordii.**

Fordii Vera. Burdin Maggiore & Co. Catalogue, 1880-1881, p.73. Synonym for **Fordii.**

Fordy. Angelo Longone Catalogue, 1861. Orthographic error for **Fordii.**

Forest Fire. *(C.japonica), American Camellia Yearbook,* 1968, p.130, Reg. No.992: A 12 year old seedling of **White Queen** that first bloomed 1962. Originated by James R. Moore, Hampton, Virginia, USA. Leaves dark green, 10 cm x 5 cm. The semi-double flower, similar to 'Donckelaeri', (**Masayoshi**) is 12.5 cm across x 7.5 cm deep and has 14 petals and 7 petaloids. Colour Turkey red with red stamens, which are split into 7 or 8 sections amongst petaloids and 2-4 rabbit ears. Blooms mid-season.

Forest Green. *(C.japonica),* Fendig, 1963, *American Camellia Catalogue.* Red. Formal double. Mid-season. SCCS., 1954, *The Camellia. Its Culture and Nomenclature,* p.46: Medium red. Medium large, formal double. Vigorous, compact, upright growth with dark green foliage. Mid-season to late flowering. Originated by Harvey Short, Ramona, California, USA.

Foresta. *(C.japonica),* Verschaffelt, 1856, *Nouvelle Iconographie,* Book IX, pl.III: From Mr van Geersdale of Ghent...it has large blossoms composed of ample, oval petals, faintly emarginate, outspread to the centre, all are bright pink with a broad, white, longitudinal stripe in the middle. Originated in Belgium.

Forever Amber. McIlhenny Catalogue, 1945-1946, p.4. Synonym for **Lady Mary Cromartie Variegated.**

Formality. *(C.japonica), American Camellia Yearbook,* 1960, p.197, Reg. No.469: A 9 year old chance seedling of **Governor Mouton,** originated by Dr R.K. Womack, Shreveport, Louisiana, USA that first bloomed 1955. Plant growth is spreading and dense and medium in rate with dark green leaves averaging 7.5 cm x 5 cm. The red, formal double flowers, 10 cm across x 5 cm deep, have 90 petals. Blooms early to mid-season.

Formoriana. *(C.japonica),* Giles & Son Nursery Catalogue, 1881. No description. Originated in Australia. (Believed extinct.)

Formosa. *(C.japonica),* Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:315. No description. Cachet, 1840-1841, Catalogue, p.2: Red. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.7: Well imbricated, double pink, fading to orange-red. Charles van Geert Catalogue, 1845, p.6: Rose form, very large and very double. rosy red. Buist, 1845, *American Flower Garden Directory,* p.200: Foliage, vey dark green; flower fully 10 cm across, of a dark rose colour, regular, double, petals large and erect, interior shortened, covering a few stamens. Verschaffelt, 1858, *Nouvelle Iconographie,* Book IV, pl.III: Originated in England by Mr Chandler, Wandsworth Road, London. Its floral form, above medium size, recalls that of **Daviesii,** but larger, more labrinthine and of a deeper colouring. The petals are grouped in compact fascicles, separated from one another by large petals, giving the appearance of several blossoms in one. The colour is a vivid cherry red. Leaves, 8.5 cm x 5 cm, ovate-oblong to lanceolate, thick texture, prominent veins, dark green. Synonyms: 'Formosa Ancien', 'Angularsii Vera', 'Anglarri', 'Formosissima'. Although van Houtte gives **Angulans** as a synonym it is, in fact, the variegated form of **Formosa.** Chinese synonym: 'Xiuomuye'.

Formosa. *(C.japonica),* van Houtte Pere Catalogue, 1896, 265P:109: Single, pure white. Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 57. Originated in Belgium.

Formosa Alba. *(C.japonica),* Verschaffelt, 1844-1845, Catalogue, p.25. No description. Burnier & Grilli Catalogue, 1846-1847: Large flower, well imbricated. 'Angulas' is given as a synonym, but this is considered a variation of 'Angulans'. 'Formosa Alba' is illustrated and described in Verschaffelt, 1850, *Nouvelle Iconographie,* Book II, pl.II where it is given as an Italian seedling, pure white of faultless imbrication.

Formosa Ancien. Berlèse, 1845, *Monographie,* ed.3, p.168. Synonym for **Formosa.**

Formosa de Young. *(C.japonica),* Makoy Nursery Catalogue, 1838: No description. Berlèse, *Iconographie,* p. facing pl.157: Produced from seed by Young of Epsom, England. The flower is double, anemone form, deep red with a touch of purple, sometimes completely red, sometimes with blotches of white. The petals of the circumference are round-oval, notched, mostly imbricated with the edges soemtimes white. Those at the centre are erect in fascicles, average, intermingled, rounded, emarginate and forming a large, central, upright and elevated sphere. Frère Noisette, Nantes Nursery Catalogue, 1857, p.35: Bright cherry-red, variegated with white, anemone form. Synonyms: 'Formosa Youngii', 'Formosa di Young', 'Formosa'(Young's).

Formosa di Young. Del Lungo & Girardi, 1928, *Le Camelie,* p.116. Orthographic variant for **Formosa de Young.**

Formosa Nova. *(C.japonica),* Rousseau, Angers Catalogue, 1842-1843, p.2: Very deep, crimson red. Originated in Italy.

Formosa sem Senão. *(C.japonica),* José Marques Loureiro Catalogue No.6, 1869, p.8, & No.9, 1872-1873: Formal double pure white, lanceolate central petals. Originated in Portugal.

Formosa Striata. Verschaffelt Catalogue, No.50, 1844, p.20. Synonym for **Angulans.**

Formosa Villaeta. Trillon, Le Mans Catalogue, 1843, p.5. Orthographic error for **Formosa Vittata.**

Formosa Vittata. *(C.japonica),* van Houtte Catalogue, 1842, 9:52: Globe like, very full, white with broad ribbons of amaranth. In his catalogues 1844 thru 1849, van Houtte gives this as a synonym for 'Lineata Superba', However **Formosa Vittata** appears to have priority as the earliest published name. Orthographic error: 'Formosa Villaeta'.

Formosa Youngii. Berlèse, 1843, *Iconographie* p. facing pl.157. Synonym for **Formosa de Young.**

Formosa(Young's). Oudin, Lisieux Nursery Catalogue, 1844, p.11. Synonym for **Formosa de Young.**

Formosissima. Berlèse, 1837, *Monographie,* ed.1, p.75: Leaves 7.5 cm long x 6 cm wide, ovate-oblong to lanceolate, thick, prominent veins, dark green; buds obtuse with greenish scales; flowers full, 7.5 cm across, of clear rose lake, aging to cherry red; exterior petals in 3 rows, broad, crenate, reflexed; the others smaller, narrow, erect, numerous, irregular. Later Berlèse, in his *Iconographie,* 1841 on p. facing pl.59, gives 'Formosissima' as a synonym for **Formosa** and on p. facing pl.20, as a sport of 'Variegata Plena'.

Formosissima Nova. *(C.japonica),* Hovey ed., 1837, *Magazine of Horticulture.* No description. (Believed extinct.)

Fornali. Shao, Taichong, 1992, *The Observations from Camellia World,* p.75, No.303. Chinese synonym for the USA *C.japonica* **Kathryn Funari.**

Fornaria. Auguste van Geert Nursery Catalogue, No.65, 1869-1870, Orthographic error for **Fornarina.**

Fornarina. *(C.japonica),* van Houtte Catalogue, 1845-1846, 23:5: Imbricated, very full, white lined with carmine or rose. Franchetti, 1855, *Collezione di Camelie,* p.31: Milk white streaked with pink and carmine. Imbricated with a small, central tuft. Orthographic error: 'Fornaria', 'Fornarini'. Originated in Italy by Casoretti.

Fornarina de Florence. *(C.japonica),* Charles van Geert, 1847 Catalogue, No.101, p.16: Admirable, perfectly imbricated form. Very pure white. Originated in Italy.

Fornarini. Charles van Geert, 1848, Catalogue, No.105, p.111.Orthographic error for **Fornarina.**

Forosetta. *(C.japonica),* Medici Spada, 1858, *Delle Nuova Camellie, Dalle semine Romane,* p.6: Flower medium size, 10 rows of petals; outer and middle rows reflexed; centre petals star shaped. Colour bright blush pink with reflections of vivid carmine. Originated in Italy by Delgrande, Rome.

Forrestii. Sealy, 1937, RHS., *Journal,* 62(8):363. This is the species *Camellia forrestii* (Diels) Cohen Stuart.1916.

Forstergi. Seidel, 1846, Pflanzen Catalog, p.7. Orthographic error for **Forstergia.**

Forstergia. *(C.japonica),* Tagliabue, 1840, *Nomenclatore Camelliae....* No description. Originated in Italy. Orthographic error: 'Forstergi'. (Believed extinct.)

Fortieth Anniversary. *(C.reticulata),* ACS., 1985, *The Camellia Journal,* vol.40, No.4, p.47, Reg. No.1985: A very large, ruby-red semi-double *C.reticulata* hybrid *(C.reticulata* 'Crimson Robe' x [*C.reticulata* **Arch of Triumph** x *C.japonica* **Mrs D.W. Davis**]), early flowering. Originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first bloomed 1983. Average flower size is 13 cm across. Plant growth is upright, spreading and rapid in rate with dark green leaves measuring 11 cm x 5.5 cm.

Fortinta. *The Gardeners' Chronicle and Agricultural Gazette,* No.12, Mar.24, 1856, p.280. Orthographic error for **Fortuita.**

Fortuba. *(C.japonica),* de Jonghe, *Traité de la Culture du Camellia,* p.107: Perfectly imbricated, pure white, petals well rounded. Originated in Italy.

Fortuita. *(C.japonica),* Herbert 1837, *Amaryllidaceae & Supplement,* p.367: Very large and very double, white with a few pink stripes; occasionally one or two anthers. Originated by Rev. Herbert,

England by crossing the single white with pollen of **Pompone.** He gives 'Fort'una' as a synonym. Van Houtte 1851-1852, lists **Fortuita** as a synonym of **Carswelliana Alba,** which, also according to van Houtte, 1843-1844 is a synonym of **Tumida.** However as **Tumida** is reported as being originated by Gruneberg, this synonymity is rejected. Synonyms: 'Fortune Herbert', 'Fort'una'. Orthographic errors: 'Fortuite', 'Fortinta'.

Fortuita. van Houtte Catalogue,1851-1852, 44:5, erroneously as synonym for **Tumida.**

Fortuite. Warren's Descriptive Catalogue, 1844, p.37. Orthograhic error for **Fortuita.**

Fort'una. Herbert, 1837, *Amaryllidaceae & Supplement,* p.367. Synonym for **Fortuita.**

Fortuna. *(C.hybrid), New Zealand Camellia Bulletin,* 1980, vol.XI, No.5, p.18, Reg. No.155: A hybrid seedling, *C.reticulata* **Buddha** x *C. x williamsii* **Donation,** originated by P.R. McNab, Levin, New Zealand. It first flowered 1970. The plant has average, upright growth with dark green leaves, 14 cm x 4 cm and flowers early to late. The flower is semi-double with 20-24 petals, golden stamens, cream coloured filaments and is 13 cm across x 6.5 cm deep. The colour is rosepink (RHS.CC.57D, red-purple group).

Fortunata (La). van Houtte Catalogue, 1858, 72:13. Orthographic variant for **La Fortunata.**

Fortune Herbert. De Bisschop Nursery Catalogue, 1935. Synonym for **Fortuita.**

Fortune Teller. *(C.japonica),* SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.46: Glowing, light rose-pink. Large, full peony form. Vigorous, bushy growth. Mid-season blooming. Originated by Harvey Short, California, USA. Reg. No.730, *American Camellia Yearbook,* 1963. There is also a variegated form.

Fortune Teller Variegated. *(C.japonica),* Cannon, 1968, ACS., *The Camellia Journal,* vol.23, No.1 as 'Fortune Teller Var.': A virus variegated form of **Fortune Teller** - Light rose-pink and white. Originated in USA.

Fortunei. André, 1896, *Revue Horticole,* p.264. Synonym for **Jaune.**

Fortune's Hand Drum. *Camellias,* Y.C. Shen, 2009, p.219 with colour photo; Synonym for **Fukuzutsumi.**

Fortune's Smile. *(C.x williamsii), New Zealand Camellia Bulletin,* 1962, vol.III, No.1, p.37, Reg. No.9: A hand pollinated seedling originated by L.E. Jury, New Plymouth, New Zealand. *C.saluenensis x C.japonica* **Hassaku** that first bloomed 1959. Habit is dense, spreading and slow growing. Flowers, single,10 cm across. Colour deep rose, veined, good texture. Plant dwarf in habit. Early flowering.

Fortune's Yellow. van Houtte Catalogue, 1852-1853, 48:40 as 'Jaune de la Chine', (Fortune's Yellow). Synonym for **Jaune.**

Fortune's Yellow Camellia. SCCS., 1958, *Camellia Nomenclature,* p.96. Synonym for **Jaune.**

Fortuni. Backhouse Nursery Catalogue, 1870, p.36. Synonym for **Jaune**.

Forty-Niner. *(C.reticulata x C.japonica), American Camellia Yearbook,* 1971, p.46, Reg. No.1121: A hybrid that first bloomed 1962, whose parents are: female 'Butterfly Wings' (**Houye Diechi**); male **Indian Summer.** Originated by Howard Asper, Escondido, California, USA. Commercially introduced 1969. Plant growth upright, dense and rapid in rate. The peony form bloom is 12-15 cm across and flowers early to mid-season. Colour brilliant red. There is also a variegated form. Chinese synonym: 'Taojin', later changed to 'Taojinzhe'.

Forty-Niner Variegated. *(C.japonica),* Gentry, 1969, ACS., *The Camellia Journal,* vol.24, No.1 as 'FortyNiner V:'. A virus variegated form of **Forty-Niner** - Brilliant red blotched with white. Originated in USA.

Forza del Destina. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings,* p.10 colour photo: A brilliant red, peony form seedling of 'Magnoliiflora', (**Hagoromo**), 10.5 cm across. Originated in USA by Richard Dodd, Marshallville, Georgia.

Fossii. *(C.japonica),* Seidel, 1870, Pflanzen Catalog, p.8. No description. (Believed extinct).

Fostergii. Anonymous, 1839, *Revue Horticole,* p.205-207. Orthographic error for **Fosterae.**

Fosterae. *(C.japonica),* Berlèse, 1843, *Iconographie,* vol.2, pl.122 as 'Fosterii': Flower is about 10 cm across, full, irregular, of a deep, orange-red, the outer petals are of small number, well placed, broad, first elegantly channelled, reflexed, then cup-like, deeply notched, very deep in colour to the apex; those of the centre are long, narrow, of a large number, close set and forming a large spherical centre. Synonym: 'Lady Foster', 'Fosterae Rubra'. Orthographic errors: 'Fostergii', 'Fosterii', 'Foersteri'.

Fosterae Rubra. Verschaffelt Catalogue, 1847-1848, p.57, as 'Fosterii Rubra'. Synonym for **Fosterae.**

Fosterii. Berlèse, 1843, *Iconographie,* vol.2, pl.122. As named after Lady Foster, this orthography is in the incorrect gender and should be **Fosterae.**

Fosterii Rubra. Verschaffelt Catalogue, No.50, 1844, p.20. Orthographic error for 'Fosterae Rubra'.

Foster's Rosea. *(C.japonica),* Verschaffelt Catalogue, No.50, 1844, p.20. No description. Originated in the UK. (Believed extinct.)

Fostine. *(C.japonica),* Jules Menoreau Catalogue, 1890: Yellowish white. anemone form. Originated in France. Has been erroneously confused with **Nobilissima** in the USA.

Fostine Rose. *(C.japonica),* Nantes, *Service des Espaces, Collections,* 1980. No description. Originated in France. Believed to be a rose-pink sport of **Fostine.**

Foundling. *(C.hybrid),* RHS., *Rhododendron and Camellia Yearbook,* 1972. Preliminary Certificate to the Crown Estates (Seville Gardens) for the cross **Parkside** x **Inamorata.** The flowers are a large single, clear pink, more saucer shaped than the usual *C. x williamsii,* with very upright growth.

Fourteen B. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Hakutsuru.**

Four Bits. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature,* p.63: White. Miniature, loose peony form. Medium, upright growth. Mid-season flowering. Originated in USA by Haynie.

Four Winds. *(C.reticulata x C.japonica),* SCCS., 1972, *Camellia Nomenclature,* p.156: Orchid pink. Large to very large semi-double. Mid-season blooming. A cross *C.reticulata* 'Crimson Robe' x *C.japonica* **Tiffany,** originated in USA by Howard Asper, Escondido, California. See colour photo, front cover, ACRS., 1988, *Camellia News,* No.107.

Fo-ting Cha. Yang, 1965, *Camellia Varieties of Taiwan.* Different reading for 'Foding Cha', (**Rawesiana**).

Fovi-no-tsuki. RHS., 1968, *Camellia and Magnolia Yearbook,* p.18. Corruption of unknown Japanese name, possibly **Mado-no-tsuki.**

Fox's Fancy. Thermal Nurseries (Rotorua) Ltd Catalogue, 1986, p.7. Orthographic error for **Foxy's Fanny.**

Foxy's Fanny. *(C.japonica),* Cannon, 1973, ACS., *The Camellia Journal,* vol.28, No.1. No description. Thermal Nurseries (Rotorua), Ltd Catalogue, 1986, p.7 as 'Fox's Fancy': Bright red, formal double. Originated in USA.

Foytonii. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete* p.11. No description. Originated in Italy. (Believed extinct.)

Fozuolian. *(C.reticulata) Fine Camellia Garden, Chuxiong*, 2012, p.21 with colour photo. No details. Photo shows a red semi-double, 2-3 outer petal layers flat, inner 2-3 layers raised and cupped. Central stamen column.

Fra Arnold de Brescia. Williams Nursery Catalogue, 1870, p.75. Orthographic error for **Fra Arnaldo da Brescia.**

Fra Arnalda da Brescia. Harris' Longview Nursery Catalogue, 1955-1956, Retail Price List, p.3. Orthographic variant for **Fra Arnaldo da Brescia.**

Fra Arnaldo. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. Abbreviation for **Fra Arnaldo da Brescia.**

Fra Arnaldo da Brescia. *(C.japonica),* van Houtte, 1851-1852, *Flore des Serres,* vol.17, p.17, pl.652: Orignated by B. Lechi, Italy in July, 1850. It has large flowers, perfectly imbricated, of a satin rose, marbled and with bands of white raying from the centre to the circumference. The leaves are small, elliptic-lanceolate, acuminate and finely serrate. This cultivar was illustrated and described in vol.II, *La Belgique Horticole,* 1852, pl.246, where the name is correctly spelt on the plate but as 'Frère Arnold de Brescia' in the text. The SCCS. *Camellia Nomenclature* lists it as "Rose-pink striped white. Medium large, formal double. Medium spreading growth". Synoynms given are 'Meig's Variegated', 'Silvery Pink', 'Meig's Semi-double'. Abbreviations: 'Fra Arnaldo', 'Fra Arnold de Brescia'. 'Fra Arnoldo', 'Fra Arnoldi'. Orthographic errors are: 'Arnaldo da Brescia', 'Fra Arnoldo de Brescia', 'Fra Arnolde du Brescia', 'Fra Arnoldo di Brescia', 'Fra Arnalda da Brescia', 'Frère Arnold de Brescia', 'Arnolda de Brescia', 'Fra Arnoldi da Brescia'.

Fra Arnaldo de Brescia. SCCS, 1951, *The Camellia. Its Culture and Nomenclature.* SCCS, 1996, *Camellia Nomenclature.* Orthographic variant for **Fra Arnaldo da Brescia.**

Fra Dolcino. *(C.hybrid).* Cattolica, G., *Le mie Camelie, My Camellias*, 2005, p.94 with colour photo; Medium size anemone to peony form, purple pink (RHS.CC.67C). A seedling of *C.x williamsii* **Debbie** x 'Rosa Simplex' **(Aitonia),** first flowered in 1997. Originated by Dott. Guido Cattolica, Livorno, Italy.

Frabs van Dam. Everton Nursery, Hampshire Catalogue, 1986-1987. Orthographic error for **Frans van Damme.**

Fragrance. *(C.japonica), American Camellia Yearbook,* 1954, p.311, Reg. No.131: A 10 year old seedling of **Elegans** and unknown parent. Originated by Mrs H. Curtis Murphy, Georgia, USA. It was introduced in 1952. Leaves large, wide and dark green. Buds rounded, rose coloured. Flower, incomplete double, similar to **Nobilissima.** Colour light rose; size 7.5-8 cm across.

Fragrance Jonquill. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **Fragrant Jonquil.**

Fragrance of Ancient City. *Camellias,* Y.C. Shen, 2009, p.82 with colour photo; Synonym for **Koto-no-kaori.**

Fragrance of Sleeve. *(C.japonica x C.kissi), American Camellia Yearbook,* 1984, p.177, Reg. No.1923: A miniature, very pale pink with darker pink venation, single *C.hybrid (C.japonica* P1275054 x *C.kissii* P1252064) early to mid-season flowering; originated by Dr William L. Ackerman, Washingtom D.C., USA. The 18 year old seedling first flowered 1967. Average flower size 6 cm across x 2 cm deep with 5 petals, yellow anthers and creamy yellow filaments. Strong, pleasant fragrance, petals long, narrow and reflexed towards centre. Commercially introduced 1983. Plant growth is upright, open, medium in rate with dark green leaves 8.5 cm x 4 cm.

Fragrance Striped. Fendig, 1953, *American Camellia* Catalogue.Orthographic error for 'Fragrant Striped', synonym for **Colonial Lady.**

Fragrans. (*C.sasanqua*), Anonymous, 1938, *Gardeners' Chronicle,* ser.3, 104:362: Preliminary Commendation, RHS., 1938. This free flowering variety is stated to be hardy in Sussex. It is of graceful, erect habit, bearing ovate-lanceolate leaves and fragrant, white flowers which have a neat cluster of golden stamens. Shown by Lt.-Col. L.C.R. Messel, Nymans, Handcross, Sussex, England. The name has been erroneously applied to Narumigata in UK. Synonym: 'Fragrans Comber'.

Fragrans Comber. *(C.sasanqua),* Woodward, 1987, *International Camellia Journal,* p.80. Synonym for **Fragrans.**

Fragrant. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.47: Red. Large, full peony form. Spicy fragrance. Originated in USA.

Fragrant Boutonniere. *(C.japonica), New Zealand Camellia Bulletin,* 1992, Issue No.111, vol.XVII, No.4, p.47, Reg. No.306: Originated by J.R. Finlay, Whangarei, New Zealand. A 9 year old seedling of the cross **Nioi-fubuki** x **Kramer's Supreme** that first flowered 1988. Average, upright growth with dark green leaves 7 cm long x 4.5 cm wide. Flowers peony form, 9 cm across x 5 cm deep with 40 petals and 20 petaloids. Colour bright red (RHS.CC.46D, white filaments, yellow anthers. Flowers mid-season. Fragrant.

Fragrant Burgundy. (C.hybrid). *New Zealand Camellia Bulletin,* March 2002, Issue No.141, vol.XXII, No.5, p.10, Reg. No.432. A cross of C.hybrid **Fragrant One** x *C.yuhsienensis,* which first flowered in 1988. The flower is dark rose red (RHS.CC.53C), an open peony form, 9 cm diameter x 5 cm deep, with about 12 petals and 7-10 petaloids. The many stamens, with mustard coloured pollen, are grouped in clumps separated by the petals and petaloids. The flower has a strong, attractive rose + clove scent. The plant is upright, and of average density and growth rate with dark green leaves 7 cm long x 5 cm wide. Flowers mid-season to late.

Fragrant Camellia. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.82. Synonym for **Hikarugenji.**

Fragrant Cascade. (*C.japonica* hybrid). New Zealand Camellia Bulletin, 1994, Issue No.118, vol.XVIII, No.5, p.32, Reg. No.347: Originated by J.R. Finlay, Whangarei , New Zealand. A seedling of *C.japonica* **Mrs Bertha A. Harms** x (**King's Ransom** x **Scentuous**). Flowers of pale pink, shading darker on petal reverse, single of 8 petals, 8 cm across x 2 cm deep. Anthers are mustard colour, filaments white. Blooms have fragrance similar to *C.lutchuensis*. Blooms open facing down on plant of weeping habit. Growth is dense and medium in rate. Leaves are 7 cm long x 4 cm wide, mid-green. Flowers open early to late.

Fragrant Cloud. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.194. Synonym for **Kô-un.**

Fragrant Dream. *(C.hybrid),* ACRS., 1989, *Camellia News,* No.111, p.11, Reg. No.364: Originated by G.W. Hooper, Camellia Vale Nursery, Bexley North, NSW, Australia. A controlled cross of *C.hybrid* **Tiny Princess** x *C.lutchuensis* that first flowered in 1985. Small, soft pink, (RHS.CC.65A) single flowers, 4 cm across x 3 cm deep with 5-6 notched petals. Fragrant. Flowers freely on a vigorous, tall, willowy plant. Blooms early to mid-season. Leaves elongate, flat surface, green malt, apices acute, serrations almost absent, 7 cm long x 3.5 cm wide.

Fragrant Drift. *(C.hybrid). New Zealand Camellia Bulletin,* 1994, Issue No.118, vol.XVIII, No.5, p.32, Reg. No.346: Originated by J.R. Finlay, Whangarei, New Zealand. Fragrant seedling from unnamed seedling x **Scentuous.** Peony form China rose pink, 9 cm across x 5 cm deep with 24 petals and 84 petaloids. Flowers are self grooming. Free flowering. Slow, dense, upright growth. Blooms mid-season to late.

Fragrant Fairies. (*C.pitardii x C.fraterna*). ACRS, *Camellia News,* 1994, No.131, p.7, Reg. No.434: Originated by Marjorie Baker, Macleod, Victoria, Australia. A chance seedling of *C.pitardii* var. *pitardii* x *C.fraterna* **Snow Drop** that first flowered 1989. Single, 6 petalled flower, pale pink, (RHS.CC.76D), 5 cm across x 2.6 cm deep with an occasional stripe. Plant is upright and vigorous, long flowering and scented. Leaves matt, dark green, flat, elliptic, apices acuminate, margins serrate, 3.3 cm long x 2 cm wide. Petals notched and creped, stamens columnar; flowers shed whole.

Fragrant Frill. *(C.japonica),* SCCS., 1962, *Camellia Nomeclature,* p.44. White, blush or pink. Large anemone form. Compact growth. Mid-season flowering. Originated in the USA by E. Luce, Half Moon Bay, California. Chinese synonym 'Xiangzhebian'.

Fragrant Genesis. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 1999, Issue No.132, vol.XXI, No.1, p.15, Reg. No.405. Registered by J.R. Finlay, Whangarei, New Zealand. A cross of a seedling [(**Mrs Bertha A. Harms** x **Salab**) x **Tama-ikari**] x *C.japonica* **Kramer's Supreme,** which first flowered in 1986. Flowers range from anemone to peony form and are 10 cm diameter x 5 cm deep, with about 14 petals and about 80 quite large petaloids and a few stamens. The outer ring of petals is a bright light red (RHS.CC. 52A) and the flower has a light "honeycomb" fragrance. Plant is upright and of average growth rate and density. The dark green leaves are 9 cm long x 5 cm wide.

Fragrant Girl. *(C.japonica),* ACS 1992, *American Camellia Yearbook,* p.73, Reg. No.2236: Originated by Houghton S. Hall, San Anselmo, California, USA. A medium to large, shell pink, formal double, *C.japonica* chance seedling; blooms mid-season to late. The 26 year old seedling first flowered 1971. Average flower size is 10 cm across x 5 cm deep with 44 and a few petaloids in the centre. Fragrant. Plant growth is upright, average and rapid in rate with light green leaves 8.8 cm long x 3.7 cm wide. See colour photo between pp.40-41.

Fragrant Jewel. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 2002, Issue No.141, vol.XXII, No.5, p.11, Reg. No.433. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between C.hybrid **Fragrant One** x *C.japonica* **Kramer's Supreme,** which first

flowered in 1998. The flower is 9 cm diameter x 4.5 cm deep, somewhat variable between anemone and peony form, with about 15 petals and 100 petaloids. Colour is bright pink (RHS.CC.52B), with an attractive and moderately strong carnation + clove scent. The plant is upright, and of average density and growth rate, with dark green leaves 9 cm long x 5 cm wide, and flowers early to mid-season.

Fragrant Jonquil. *(C.japonica),* Thompson, 1953, *American Camellia Yearbook,* p.79: (Seedling of **Snow Maiden**). A close packed, central group of petaloids which are abnormally long, rise up in a tight column from the centre, then spread out in a mushroom shape. There is a single row of guard petals. The flower is pure white with no stamens and is fragrant. Vigorous, open growth. Originated by Harvey Short, Ramona, California, USA.

Fragrant Joy. (*C.rusticana x C.lutchuensis), American Camellia Yearbook,* 1983, p.158, Reg. No.1897: A miniature, dark lavender pink, rose form double *C.rusticana x C.lutchuensis* seedling, mid-season flowering; originated by Dr William L. Ackerman, D.C., USA. The 19 year old seedling first bloomed 1968. Average flower size is 5 cm across x 2.5 cm deep, with 18 petals, 16 petaloids, yellow anthers and cream filaments. Highly fragrant. Plant growth is upright and average in rate with dark green, sharply pointed leaves with strongly toothed margins. Leaves average 7.5 cm long x 2.8 cm wide.

Fragrant Lady. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 1997, Issue No.126, vol.XX No.1, p.20, Reg. No. 383. Registered by J.R. Finlay, Whangarei, New Zealand. A seedling of (*C.japonica* **Mrs Bertha A. Harms** x C.hybrid **Salab**) x *C.japonica* **Erin Farmer**. The flower is a large semi-double, of waterlily shape, 11 cm in diameter x 4 cm deep, with about 11 petals and 32 petaloids and has a light fragrance. Colour is ivory white with a pink flush on the outer petals, particularly along the central spine of those petals. Overall impression corresponds to RHS.CC. 55C. Plant is rather open in structure, and of average growth rate. Leaves are 10 cm long x 3 cm wide. Flowers mid-season to late.

Fragrant Legend. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 2002, Issue No.141, vol.XXII, No.5, p.10, Reg. No.431. A cross between C.hybrid **Fragrant One** x *C.japonica* **Kramer's Supreme,** which first flowered in 1988. The bright red (52A) flower is of peony form, 11 cm diameter x 6 cm deep, with about 20 petals and 25 petaloids. Some of the petaloids are halfway to being petals, but pleated and folded back on themselves, mixed in with more typical petaloids. The flower is scented. The plant is spreading, of average height, slow-growing, with light green leaves 9 cm long x 4 cm wide.

Fragrant Mist. *(C.reticulata* hybrid), Dryden, 1970, SCCS, *The Camellia Review,* vol.31, No.6, p.22: All having a nice pink sheen that Maitland calls a mist. Originated by Maitland, San Fernando Valley, California, USA.

Fragrant One. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 1998, Issue No. 129, vol.XX, No.4, p.20, Reg. No.385. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between a seedling (*C.japonica* **Mrs Bertha A. Harms** x C.hybrid **Salab**) x an unknown pollen parent, which first flowered in 1980. The flower is a large single of 7 petals, 10 cm diameter x 3.5 cm deep, with a columnar ring of stamens, and has a light fragrance. The petal tips and back are a medium pink, the face of the petals are light pink, shading to near-white towards the centre of the flower (RHS.CC. 62B tips, main colour 62D). Plant is spreading and open with dark green leaves 7 cm long x 3.5 cm wide. Flowers early to late.

Fragrant Pathfinder. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 1999, Issue No.132, vol.XXI, No.1, p.16, Reg. No.407. Registered by J.R. Finlay, Whangarei, New Zealand. A cross between C.hybrid **Scented Sun** x *C.japonica* **Kramer's Supreme.** The single flowers of 8 petals are 11 cm diameter x 4 cm deep. The many spreading stamens take up half the diameter of the flower, giving a starburst effect. Colour is a deep pink (RHS.CC. 52B) and the

flowers have a hay-like scent. Plant is spreading and open, and of average growth rate with light green leaves 8 cm long x 4 cm wide.

Fragrant Pink. *(C.rusticana x C.lutchuensis), American Camellia Yearbook,* 1970, p.163, Reg. No.1092: A 7 year old controlled cross hybrid that first bloomed 1964. Female parent P.I.223187 *C.japonica* var. *rusticana* **Yoshida** and male parent P.I.226756 *C.lutchuensis.* Originated by Dr William L. Ackerman, Glenn Dale, Maryland, USA. Commercially introduced 1966 and a description was published in the Crops Research Division, release U.S.D.A.,1966. Plant growth is spreading, average density and medium in rate with light green leaves, 6 cm long x 4 cm wide. The peony form bloom is deep pink with orange-yellow anthers and pale yellow filaments. It measures 5.5 cm across x 3 cm deep with 10 petals and 12 petaloids. It blooms early to mid-season. It has a pleasant fragrance similar to sweet osmanthus. Received an Award of Merit in 1982 from the RHS. Chinese synonym: 'Fenxiang'.

Fragrant Pink Improved. *(C.hybrid),* SCCS., 1978, *Camellia Nomenclature,* p.188: A fragrant flowered polyploid form of **Fragrant Pink** produced by colchicine treatment. Originated by Dr William L. Ackerman, Glenn Dale, Maryland, USA. See colour photo, p.192, Macoboy, 1981, *The Colour Dictionary of Camellias.* Chinese synonym: 'Fenxiangbian'.

Fragrant Pixies. *(C.hybrid).* ACRS, *Camellia News,* 1995, No.135, p.12, Reg. No.455: Originated by Mrs. M. Baker, Macleod, Victoria, Australia. A chance seedling that first flowered 1993. A single flower of 5-6 petals, pale pink (RHS.CC.62C), in the centre, shading to deep pink (RHS.CC.63B), at edges, 3.2 cm across x 1.4 cm deep. Flowers early on a slow growing, weeping plant. Leaves dark grey-green, matt, flat, ovate with serrate margins and cuminate apices, 5 cm long x 2.5 cm wide. Pleasant perfume. Petals notched and open flat. Filaments columnar. Flowers shed whole.

Fragrant Purple. Macoboy 1981, *The Colour Dictionary of Camellias,* p.194. Synonym for **Kôshi.**

Fragrant Red. *(C.japonica),* Nantes, *Services des Espaces, Collections,* 1980. No description. No valid listing located.

Fragrant Ripple. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 1999, Issue No.132, vol.XXI, No.1, p.16, Reg. No.409. A cross between a hybrid seedling [(**Mrs Bertha A. Harms** x **Salab**) x **Tama-ikari**] x *C.japonica* **Kramer's Supreme**. Flowers are anemone form, 9-10 cm diameter x 4-5 cm deep, having about 11 petals in a flat ring and 70-80 petaloids bunched in a central mass with some anthers. The flower is variegated; the main colour is white or very light pink, while about 3% of the petal area is marked with stripes of light pink (RHS.CC. 62C) and about 16% with darker pink stripes (RHS.CC. 58B). The flower has a light gardenia scent. The plant is of growth form and rate, first flowered 1990, and flowers mid-season. The dark green leaves are 10 cm long x 5 cm wide.

Fragrant Ruby. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 2005, Issue No.150, vol.XXIV, No.2, p.35, Reg. No. 464. Registered by J.R. Finlay, Whangarei, New Zealand. A 9 year old cross of C.hybrid **Fragrant One** x *C.japonica* **Tama Glitters,** which first flowered in 2000. The flower is peony form, 11 cm across x 5 cm deep, with 12 petals, 53 petaloids, and a scattering of bright yellow anthers on ivory filaments among the petaloids. The flower is fragrant, has firm-textured petals, is self-grooming and falls in one piece. Colour is red (RHS.CC.46B), darkening as the flower matures. The plant is upright, and of average density and growth rate, with dark green leaves 8 cm long x 4 cm wide. Flowers early to mid-season. Note: The naming of this flower was in support of a "ruby" theme for the 2005 NZ National Convention, which co-incided with the 40th anniversary of its Whangarei Branch.

Fragrant Star. *(C.japonica), American Camellia Yearbook,* 1958, p.287, Reg. No.384: A 10 year old seedling of **Imura** that first flowered 1954; originated by Ben D. Colombo, California, USA.

The long, narrow, pointed, deep green leaves average 10 cm x 5 cm. The white flowers, 11 cm in diameter and 7.5 cm deep have 35-40 petals, Several of these are narrow and upright in the centre of the flower. The flowers are fragrant. Blooms mid-season.

Fragrant Striped. Valley Garden Supply Catalogue, 1946-1947. Synonym for **Colonial Lady.**

Fragrant Striped. The Pacific Camellia Society, 1946, *Camellia Nomenclature,* p.5. Synonym for **Bidwell Variegated.**

Fragrant Striped Hermes Sport. Semmes Catalogue, 1950-1951, p.24. Synonym for **Colonial Lady.**

Fragrant Sweet. *(C.sasanqua), American Camellia Yearbook,* 1961, p.223, Reg. No.526: A 12 year old sasanqua seedling of unknown parentage that first bloomed 1955. Originated by Overlook Nurseries, Mobile, Alabama, USA. Plant growth is slow, dwarfed, spreading and dense. Leaves medium textured, crenulated, 5 cm x 2.5 cm. Flowers white, single and sweet scented, 7.5 cm in diameter x 2.5 cm deep with 7-8 petals. Blooms early.

Fragrantasia. (*C.japonica* hybrid). *New Zealand Camellia Bulletin,* March 2002, Issue No.141, vol.XXII, No.5, p.10, Reg. No.430. Registered by J.R. Finlay, Whangarei, New Zealand. A cross of C.hybrid **Fragrant One** x *C.japonica* **Scentasia,** which first flowered in 1998. The flower is a large single, 10 cm diameter x 2.5 cm deep with about 7 waved petals of heavy substance. Colour is deep bright pink (RHS.CC.52C), and it flowers early to mid-season. The plant is upright, and of average density and growth rate with mid-green leaves 6 cm long x 3 cm wide. The flower has a strong fragrance.

Frakfortensis. *The Gardener and Practical Florist,* vol.2, 1843. Orthographic error for **Francofurtensis.**

Fran Blackwell. *(C.japonica),* ACRS., 1983, *Camellia News,* No.87, p.22, Reg. No.303: Originated by Mrs E.M. Geeland, Arcadia, N.S.W., Australia. A seedling from the cross 'Magnoliiflora', (**Hagoromo**) x **Great Eastern.** The semi-double, bright rose-red, 11.5 cm across, flowers bloom early to mid-season. The dense, upright, vigorous growing plant has dark green leaves. See colour photo on p.13.

Fran Boudolf. *(C.japonica),* ACS, *The Camellia Journal,* May 1998, p.18, Reg. No. 2454. A small, light pink with dark pink edge, formal double chance seedling. Flowers early to mid-season. Originated by Ed Atkins, Shalimar, Fla., USA. *American Camellia Yearbook,* 1998, p.3, colour photo before p.1. The 10 year old seedling first flowered in 1993. Average flower size is 6.5 cm across x 5 cm deep, with 60 petals. Plant growth is upright, dense and average, with dark green leaves 9 cm long x 5 cm wide.

Fran Homeyer. *(C.japonica), American Camellia Yearbook,* vol.II, 1974, p.233, Reg No.1331: A 9 year old japonica seedling that first bloomed 1971; originated by Dr W.F. Homeyer Jr, Macon, Georgia, USA. Plant growth is spreading, dense and medium in rate with light green leaves, 8 cm x 5 cm. The formal double, **Alba Plena** type, bloom is pearl-rose to Persian-rose. Average size, 11-12.5 cm in diameter x 4.5-5 cm deep with 97-119 petals. Long lasting, good texture with long, fluted, pointed petals, buds sparsely. Blooms early to mid-season. See colour photo No.64, p.41, *Encyclopedia of Camellias in Colour,* vol.II, 1978 as 'Frau Homeyer'. Chinese synonym 'Xiumuye'.

Fran Houser Variegated. Mark S. Cannon Scion Catalogue, 1964-1965, p.6 as 'Fran Houser Var.'. Orthographic error for **Frank Houser Variegated.**

Fran Mathis. *(C.japonica), American Camellia Yearbook,* 1961, p.223, Reg. No.553: A 10 year old chance seedling that first bloomed 1958; originated by Dr W.F. Mathis, Moultrie, Georgia, USA. Plant growth is rapid and upright, with dark green leaves averaging 10.5 cm x 5 cm.

The semi-double flowers, similar to 'Hermes' (**Hikarugenji**), are champagne pink with white filaments and light yellow anthers. The flowers are 10-11 cm across and 6 cm deep with 46 petals and 5-7 petaloids. There are 8 rows of petals, ruffled towards the centre. Blooms early to mid-season. See colour photo, front cover, ACS, 1965. *The Camellia Journal*, vol.20, No.1.

Fran Mathis Variegated. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1964-1965, p.5 as 'Fran Mathis Var.'; *American Camellia Yearbook,* 1966, p.88, Reg. No.824: A sport of **Fran Mathis** first observed in 1962 by Dr W.F. Mathis, Moultrie, Georgia, USA. Champagne pink marked with white; otherwise plant and flower characteristics the same as parent.

France-jiro. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.44 with colour photo; Synonym for **Furansujiro.**

Frances. *(C.japonica),* Fendig, 1951, *American Camellia Catalogue:* Small (miniature type), white, semi-double, 5-6 cm in diameter. Substance of petals like **Snowdrift**. Outside petals 2.5 cm in length, becoming smaller towards the centre. Bud develops slowly until colour shows then rapidly elongates. Leaves dark green, obovate, 7.5 cm x 3.8 cm. Apex slim, 10 mm long. Texture stiff. Serrations shallow, about 2 mm pitch. Tapered base. Plant habit pendulous, compact and hardy. Originated by Miss Harriet Brandon, Thomasville, Georgia, USA from seed of unknown parents. First flowered 1947. Reg. No.91. *American Camellia Yearbook.*

Frances B. Homer. *(C.japonica), American Camellia Yearbook,* 1979, p.105, Reg. No.1506: A very large, blush pink, semi-double to peony form *C.japonica* seedling of **Elizabeth Boardman** x **Don-Mac** which flowers in mid-season. Originated by Dr W.F. Homeyer Jr., Macon, Georgia, USA. The 12 year old seedling first flowered in 1972. The flower has yellow anthers and white filaments. Average size 14 cm across. Heavy substance, good texture, poor budset. Colour deepens with age. Plant growth is upright, spreading and dense with dark green leaves, 8.5 cm x 5.5 cm. See colour photo, inside back cover ACS, feb.1983, *The Camellia Journal*, vol.38, No.1. Orthographic error: 'Francis B. Homer'. Chinese synonym: 'Hema'.

Frances B. Muckenfuss. *(C.japonica),* ACS, *The Camellia Journal,* Aug. 1999, p.14, Reg. No. 2500. A light to medium pink chance seedling with dark pink on petal tips. Yellow anthers and pale pink filaments. Originated by A.A. Muckenfuss, Jr, Summerville, S.C., USA. *American Camellia Yearbook,* 1999, p.3, colour photo before p.1. The 14 year old seedling first flowered in 1992. Average flower size is 7.5 cm across x 4.5 cm deep, with 34 petals. Plant growth is upright and dense, with average growth rate. The dark green leaves are 10 cm long x 3.8 cm wide.

Frances Black. *(C.japonica),* Tammia Nursery Catalogue, 1980. *American Camellia Yearbook,* 1981, p.98, Reg. No.1710: A large, medium pink, rose form double *C.japonica* chance seedling, originated by Ferol and Sam Zerkowsky, Louisiana, USA. The 11 year old seedling first bloomed in 1970. Average flower size is 12.5 cm across x 7.5 cm deep with 68 petals. Blooms both solid and variegated blooms on the same plant. Plant growth is upright, spreading, dense and medium in rate with dark green leaves, 12.5 cm x 5.5 cm.

Frances Boswell. *(C.japonica), American Camellia Yearbook,* 1974, p.169, Reg. No.1274: An 8 year old chance japonica seedling that first bloomed 1966, originated by Milton Boswell, Ocala, Florida, USA. Plant growth is upright and medium with light green leaves, 10 cm x 6 cm. The rose form double, 'Purity', (**Shiragiku**) type, bloom is pink shading lighter with 42 petals, yellow anthers and white filaments. It measures 11 cm across x 6 cm deep. Blooms mid-season.

Frances Boswell Sport. Bob Wines Nursery Catalogue, 1985-1986, p.2. No description. Originated in USA. No valid listing located.

Frances Butler. *(C.japonica), American Camellia Yearbook,* 1959, p.272, Reg. No.358: A 5 year old chance seedling of 'Magnoliiflora', (**Hagoromo**). Originated by R.W. Ragland, Orange, California, USA. First flowered 1955. The dark green leaves average 8.5 cm x 4 cm. The semi-double, tulip shaped flowers, soft, deep coral rose in colour are 8.5 cm across x 5 cm deep with notched petals - 9 outer petals and 5 erect, inner petals surrounding a compact column of stamens. Flowers midseason.

Frances Council. *(C.japonica), American Camellia Yearbook,* 1972, p.130. Reg. No.1219: A 7 year old chance seedling that first flowered 1968; originated by Ferol Zerkowsky, Slidell, Louisiana, USA. Plant growth is upright and medium with dark green leaves, 8.5 cm x 4 cm. The formal double, white bloom has 65-70 petals and measures under 6 cm across and 4 cm deep. Blooms mid-season. See colour illustration No.63, p.41, *Encyclopedia of Camellias in Colour,* Vol.II, 1978. Orthographic error: 'Frances Councill'.

Francis Councill. SCCS., 1974, *Camellia Nomenclature*, p.62. Orthographic error for **Frances Council.**

Frances Garoni. *(C.japonica), American Camellia Yearbook,* 1958, p.287, Reg. No.331: An 9 year old chance seedliong that first flowered 1955; originated by William Garoni, Greenville, South Carolina, USA. Plant growth is medium, rapid and open. The long, tapering, sharply pointed leaves average 11 cm x 3 cm. The loose peony form flowers average 13 cm across x 6 cm deep and are soft, rose-pink in colour with 15-19 large, outer petals, 11-13 fluted and twisted petals, 1-5 trumpets and a large cluster of bright, golden stamens. Blooms mid-season to late. Sport: **Frances Garoni Supreme.**

Frances Garoni Supreme. *(C.japonica),* Cannon, 1963, ACS., *The Camellia Journal,* vol.18, No.1, back cover: A virus variegated form of Frances Garoni - Soft rose-pink and white. Originated in USA. Synonym: 'Frances Garoni Variegated'. Orthographic error: 'Francis Garoni Supreme'.

Frances Garoni Variegated. Tammia Nursery Catalogue, 1965 as 'Frances Garoni Var.'. Synonym for **Frances Garoni Supreme.**

Frances Goore Dodd. *(C.japonica),* Dodd, 1968, *Adventure* in *Camellia Seedlings,* p.10, colour photo. A crimson with mauve tones; informal double seedling of **Lindsay Neill.** The centre consists of small, erect, ruffled and twisted petals mixed with yellow stamens. Size is 10 cm across. Originated in USA by Richard Dodd, Marshallville, Georgia, USA.

Frances Hill. *(C.japonica),* Outteridge, 1962, *1000 Named Camellias in Australia,* p.9: Pink informal double, large, 10.5 cm across. Blooms mid-season. Originated by Mrs F. Hill, Warrawee, NSW, Australia.

Frances Howell. *(C.japonica), American Camellia Yearbook,* 1966, p.89, Reg. No.813: A 4 year old chance seedling that first bloomed 1963. Originated by Byron W. Howell, Thomasville, Georgia, USA. Plant growth is rapid in rate with dark green leaves, 8.5 cm long x 5 cm wide. The peony form flower is 13 cm across x 7.5 cm deep with 30 petals. Colour is light red with gold anthers and white filaments. Blooms very early.

Frances Kryger. *(C.japonica),* SCCS., 1970 *Camellia Nomenclature,* p.58: Rose pink, medium, formal double. Medium, compact, upright growth. Early to mid-season flowering. Originated by L. Kryger, Pasadena, California, USA.

Frances Leonard. *(C.japonica), American Camellia Yearbook,* 1954, p.312, Reg. No.206: A 12 year old chance seedling, originated by Filo H. Turner, Pensacola, Florida, USA. Plant growth is open and rapid in rate. Leaves are oval, tapering, acuminate and lightly serrate. The coral to shell--pink flowers are complete double, imbricated in form, similar to **Alba Plena**, 9-12 cm across and late flowering.

Frances Lunsford. *(C.japonica),* ACS., 1989, *The Camellia Journal,* vol.44, No.3, p.9, Reg. No.2145: Large size, white, semi-double *C.japonica* chance seedling of **Elizabeth Boardman.** Blooms mid-season to late. Originated by Marvin Jernigan, Warner Robins, Georgia, USA. *American Camellia Yearbook,* 1989, p.122, colour photo, [p.133]: The 6 year old seedling first bloomed 1986. Average flower size, 12.5 cm across x 7.5 cm deep with 30 petals, yellow anthers and white filaments. Plant growth is upright, spreading, open and average in rate with dark green leaves 13 cm x 6 cm

Frances M. Solomon. *(C.japonica), American Camellia Yearbook,* 1959, p.273, Reg. No.398: Sport of **Frau Geheimrat Oldevig**; originated by Judge Arthur W. Solomon, Savannah, Georgia, USA. First bloomed in 1954. Plant growth is upright and of average density, the leaves average 11 cm long x 5.5 cm wide. The soft, rose-pink, semi-double bloom has 18-20 petals and is about 12.5 cm across x 5 cm deep. Blooms mid-season.

Francis Rooney. *(C.japonica). American Camellia Yearbook,* 1954, p.312, Reg. No.202: A 10 year old chance seedling, originated by Filo H. Turner, Pensacola, Florida, USA. First flowered 1950. Plant growth is open and rapid in rate with light green leaves, oval, tapering acuminate and heavily serrate. The pink flowers are incomplete double in form, with large petaloids, similar to **Gloire de Nantes**. Size of blooms, 10.5 cm across x 5.5 cm deep. Flowers from early to late. Orthographic error: 'Frances Rooney'.

Francis Saunders. *(C.japonica),* Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.139 with black & white photo: Flower: Complete double formal, almost tiered; crimson 22/1 base to 22/2, innermost tone, 22/self venation; to 9 cm across x 4 cm deep. Petals about 30, oval to obovate, conspicuous veins, 3.5 cm long x 3-3.5 cm wide. In the centre of the flower there are about 20 additional petal segments, about half size, with some incomplete at the heart, which has a few short, crimped stamens hidden until fully open. Leaves broad-elliptic, channelled, 9 cm long x 5 cm wide, cupped, dark glossy green, stiff, leathery texture; serrations broad and shallow; apices short pointed. Habit: Spreading, open; mid-season flowering. Originated in the Huntington Gardens, San Marino, California, USA.

Francofurtensis. *(C.japonica), Allegemeine Garten Zeiten,* 1834, pp.342,343. Loudon, 1835, *The Gardeners' Magazine,* p.265: Originated by J. Rinz, Frankfurt-am-Main, Germany, March 19th, 1835. I have gained, from the seed of *C.japonica* **Argentea,** a splendid variety. It flowered last year. It is as large as the *C.reticulata.* Rousseau, Angers Catalogue, 1842-1843, p.2: Imbricated, red fading to rose. It was figured and described in Vershaffelt, 1849-1850, *Nouvelle Iconographie,* Book VIII, pl.II: The blossom measures not less than 12-13 cm across, the numerous petals are very regularly imbricated. Those at the periphery are broad, rounded and deeply bilobate, the others, oblong, oval, cut at the apex into 2 or 3 irregular lobes. The central ones are compact, lanceolate, undulate and emarginate. A brilliant, rich cherry colour. Berlèse also figured and described the variety as C. 'Francofurtensis', vol.2, 1843, pl.152. The decription is basically the same as Verschaffelts. See also Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 49. A popular camellia for 150 years, its name has been misspelt many ways including: 'Francfortensis', 'Francfurtensis', 'Franckfurtensis', 'Francofortensis', 'Francofurstensis', 'Franco-Furtana', 'Frankenfortensis', 'Frankfortensis', 'Frankofortensis', 'Frankofurtensis', 'Frankofortensis', 'Francfoutensis', 'Franco Furtensis', 'Frankfortiensis'. It also received a number of synonyms: 'Wellingtonio', 'Wellingtonia', 'Wellingtoni', 'Dark Fulgens', 'Dark Fukgens'(Rinz).

Francofurtensis Alba. *(C.japonica),* Verschaffelt Catalogue, 1849-1850, p.46, as 'Franckfurtensis Alba'. No description. Originated in Belgium. (Believed extinct.)

Frank Anderson. *(C.japonica),* Thomasville Nursery Catalogue, 1957. No description. Originated in USA.

Frank Baker. *(C.japonica),* Fendig, 1951, *American Camellia Catalogue:* Large, white, incomplete double (Anemone form), 12-14 cm across. There are 14 outer petals which are thin, rather square and fluted. Stamens are central but in 5 separate groups. Leaves glossy green, 3 times as long as wide. Slightly serrate. Plant habit, open and slow growing. Originated by Frank F. Baker Jr., Macon, Georgia, USA from seed imported from Japan in 1939. Registered with ACS, *American Camellia Yearbook,* 1954, Reg. No.76.

Frank Bisbee. *(C.japonica), American Camellia Yearbook,* 1961, p.223, Reg. No.867: This large, semi-double flower is a chance seedling that bloomed for the first time 1957. Originated by Frank D. Bisbee Sr., Jacksonville, Florida, USA. Plant growth is average with dark green leaves, 7.5 cm long x 4 cm wide. The white flowers are 11-12.5 cm across x 7.5 cm deep with a peony form centre, variable, incomplete double, occasionally formal double; 60 petals, 30 petaloids with yellow stamens interspersed. Early to mid-season blooming.

Frank Brownlee. *(C.japonica), American Camellia Yearbook,* 1966, p.89, Reg. No.867: This large, semi-double flower is a chance seedling that bloomed for the first time 1959 at 8 years of age. It is a deep red with golden anthers and yellow filaments. Its size is 12.5-13 cm across x 5.5 cm deep with 26 petals. Plant growth is upright and medium with dark green leaves, 10 cm long x 6 cm wide. Late flowering.

Frank Edison. Thomasville Nursery Catalogue, 1956, p.25. Orthographic error for **Frank Eidson.**

Frank Eidson. *(C.japonica),* Wine, 1956, *American Camellia Yearbook,* p.43: Frank Eidison was originated by Mrs Frank Eidson, Thomasville, Georgia, USA. The flower is a large semi-double to peony white, splashed with pink and red. Early flowering. Mutants include: **Blush Eidson, Rose Eidson.** Orthographic error: 'Frank Edison'.

Frank Foote. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.54: Deep pink. Large semi-double with creped and ruffled outer petals, fimbriated inner petals and a few petaloids amongst the stamens. Originated by Mrs H.S. Hagerty, Hattiesburg, Mississippi, USA.

Frank Gibson. *(C.japonica),* Doty et al., 1949, *American Camellia Yearbook,* 1949, p.246, black & white photo, p.242: A most outstanding seedling of unknown parentage, raised by Mrs F.L. Gibson, Thomasville, Georgia, USA and named for her late husband. Large, incomplete double, with one row of large, pure white petals, a high centre of very golden petaloids and a few short, golden stamens. Nearest to yellow of any camellia to date. See colour pl. facing p.146, *American Camellia Yearbook,* 1953. Illustrated by Fendig, 1951, *American Camellia Catalogue. American Camellia Yearbook.* 1954, Reg. No.25. It is a rapid, open grower with mid-green leaves, 8 cm x 4 cm, thin texture, raised venation, shallow serrations and cuneate base. Orthographic error: 'F.L. Gibson'.

Frank House Variegated. Mark S. Cannon, 1965, ACS., *The Camellia Journal,* vol.20, No.1, as 'Frank House Var.'. Orthographic error for **Frank Houser Variegated.**

Frank Houser. *(C.reticulata* hybr.), Mark S. Cannon Scion Catalogue, 1962, p.4. No description. ACS., Nov.1989, *The Camellia Journal,* vol.44, No.4, p.17, Reg. No.2178: Very large size, deep glowing pink to red with darker veins, semi-double to loose peony form hybrid. (**Buddha** x **Steve Blount**) Blooms early to mid-season. Originated by Walter E. Homeyer, Macon, Georgia, USA. *American Camellia Yearbook,* 1989, p.122: The 11 year old seedling first bloomed 1984 (sic). Average flower size, 15.5 cm across x 8 cm deep with 9-13 broad, fluted and curled outer petals, 9-14 rabbit eared inner petals with occasional petaloids and white anthers and filaments. Plant growth is upright, open and rapid in rate with dark green leaves, 11 cm long x 5.5 cm wide. There is also a variegated form. Chinese synonym 'Haosi'.

Frank Houser Variegated. *(C.reticulata* hybr.), Mark S. Cannon Scion Catalogue, 1964-1965 as 'Fran Houser Var.': A virus variegated form of **Frank Houser** - Deep glowing pink to red, blotched white. Originated in USA. Orthographic error: 'Frank House Variegated'. Chinese synonym 'Hua Haosi'.

Frank Parsons. Overlook Nursery Catalogue, 1956-1957.Orthographic error for **Frank Persons.**

Frank Persons. *(C.sasanqua),* Overlook Nursery Catalogue, 1955-1956, p.12: Flower semi-double to loose peony form, 7.5 cm across with 14 guard petals and 18-20 small petaloids intermixed with a few short stamens in the centre, Colour of flower bud is pinkish, but, when open, the flower is self white. Leaves medium size. Originated by K. Sawada, Mobile, Alabama, USA and Reg. No.291, *American Camellia Yearbook,* 1954. First bloomed 1951. Plant growth dense, upright, somewhat columnar. Early blooming. See black & white photo, p.35, Sharp, *Camellias Illustrated.* Orthographic error 'Frank Parsons'.

Frank Pursel. *(C.reticulata* hybr.), *American Camellia Yearbook,* 1988, p.187, Reg. No.2076, colour photo between p.186-187: Very large size, red, peony form *C.reticulata* hybrid ([X-5 *C.reticulata* 'Cornelian' (**Damanao**) x *C.japonica* **Mrs D.W. Davis**] x *C.reticulata* 'Cornelian'), blooms mid-season to late. Originated by Frank Pursel, Oakland, California, USA. Average flower size, 17.5 cm across x 10.5 cm deep. Plant growth is upright and rapid with dark green leaves, 12.5 cm long x 6 cm wide.

Frank Robinson. *(C.japonica),* Fendig, 1951, *American Camellia Catalogue:* Medium to large, rose-red with a tinge of orange, semi-double to incomplete double (Anemone form), 9-11 cm across with about 20 petals, 3.2 cm x 3.8 cm, notched at the tips. The flower is of a loose formation and the petals, towards the centre, tend to fold and curl and are mixed with the central stamens. Filaments are pink and anthers yellow. Buds are oval and green. The leaves are glossy dark green, lanceolate, 9.5 cm x 5 cm. The tip and stem are prominent, veins light yellow and notable. Serrations very shallow, about 3 mm pitch. Plant habit compact, upright and a fairly fast grower. Originated by Mrs Frank Robinson, Anderson, South Carolina, USA from seed of unknown parents. First bloomed 1946. Reg. No.61, ACS., *American Camellia Yearbook,* 1954.

Frank Waghorn. (*C.pitardii* hybrid). ACRS, *Camellia News,* 1995, No.135, p.11, Reg. No.447: Originated by Kenneth Brown, Mitcham, Victoria, Australia. Chance seedling from the species *C.pitardii* var. *pitardii.* First flowered 1990. Flower colour deep pink (RHS.CC.61D), single of 5 petals, trumpet form, 5 cm across x 4.5 cm deep. Flowers early to late on a slow growing, open plant. Leaves olive-green, glossy, ovate, curled, margins finely serrate, apices acuminate, 5 cm long x 2 cm wide. Petals notched. Filaments in a central bunch. Flowers shed whole.

Frank Williams Jr.. (*C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Orange red. Large, fluted semi-double. Vigorous, upright but pendulous growth. The petals are large and wavy, the central ones folded with prominent stamens intermixed. Originated by Frank D. Williams, Beverley Hills, California, USA.

Frankie Winn. *(C.japonica),* Tammia Nursery Catalogue, 1975. *American Camellia Yearbook,* 1978, p.130, Reg. No.1480: A large, pastel pink, peony form *C.japonica* chance seedling. Blooms mid-season to late. Originated by Mrs James Luker, Savannah, Georgia, USA. The 6 year old plant first bloomed 1974 with 51 petals, 12 petaloids, golden anthers, cream filaments. Size, 12.5 cm across x 5 cm deep. Soft, glowing sheen, medium texture, long lasting, falls whole. Plant growth upright, average, rapid in rate with dark green leaves 7 cm long x 5 cm wide.

Frankie Winn Variegated. *(C.japonica),* ACS, *The Camellia Journal,* Nov. 2000, p.30, colour photo p.29, Reg. No.2535. A virus variegated form of **Frankie Winn,** originated by William Sutton, Savannah, Ga., USA. The pastel pink, variegated white flowers show a special fluorescence. Flowers mid-season to late. *American Camellia Yearbook,* 2000, p.3, colour photo p.c9. The 22 year old seedling first flowered in 1978. Average flower size is 12.7 cm across x 5 cm deep, with 51 petals and 12 petaloids. Plant growth is upright and average in rate, with dark green leaves 7 cm long x 5 cm wide. Note: There are differences in the description from the solid coloured **Frankie Winn.**

Freckles. *(C.japonica),* ACS, *The Camellia Journal*, May 1997, p.21, Reg. No.2402. A miniature, white with pink dots and flecks, formal double chance seedling. Originated by David L. Feathers, Lafayette, Calif., USA. *American Camellia Yearbook*, 1997, p.3, colour photo before p.1. The seedling is over 15 years old. Average flower size is 5 cm across x 2.5 cm deep, with 30+ petals. Plant growth is upright, and average with light green leaves.

Fred A. Sander. Potomac Valley Camellia Society Newsletter, 1986. Orthographic error for **Fred Sander.**

Fred Gerald. *(C.japonica), American Camellia Yearbook,* 1969, p.160, Reg. No.1057: A 12 year old chance seedling that first bloomed 1964. Originated by Kenneth G. Durio Jr, Opalousa, Louisiana, USA. Plant growth is upright, dense and slow with dark green leaves, 10 cm x 4 cm. The peony form bloom is 11 cm across x 7 cm deep with 15 petals and 22-28 petaloids. Red and white with yellow anthers and white filaments. Flowers mid-season to late.

Fred H. Smith. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.55: Light pink. Large semi-double. Vigorous, upright growth. Blooms mid-season. Originated by W.H. Smith, Statesboro, Georgia, USA.

Fred Lee. *(C.reticulata),* ACS, 1985, *The Camellia Journal*, vol.40, No.4, p.47, Reg. No.1981: A very large, red, semi-double to peony form *C.reticulata* hybrid, chance seedling, originated by Frank Pursel, Oakland, California, USA. The 10 year old seedling first bloomed 1981. Average flower size, 19 cm across x 10 cm deep. Plant growth is upright and rapid, with dark green leaves, 13 cm x 6 cm. For colour photo see front cover ACS., 1986, *The Camellia Journal*, vol.41, No.4.

Fred Mayo. *(C.japonica),* ACS, *The Camellia Journal,* Mar. 2007, p.28 with colour photo; Reg. No.2703. A chance seedling that first flowered 1995. Originated by Fred Mayo, Fayetteville N.C., USA, and propagated by Leighton McKeithen, Fayetteville. A 10 cm diameter, bright red, formal double with rosebud centre. Flowers mid-season to late. Plant growth is upright, dense and vigorous. Described as very suitable for hedging as well as exhibition. *American Camellia Yearbook*, 2007, p.68 with colour photo.

Fred Parkes. (*C.reticulata* hybrid) ACRS, *Camellia News*, 1992, No.123, p.5, Reg. No.414: Originated by Mrs Edna Parkes, East Brighton, Victoria, Australia. A cross between *C.reticulata* hybrid **William Hertrich** seed parent, and *C.reticulata* **Mouchang** pollen parent.. First flowered 1982. A deep pink, incomplete double to loose peony form flower of 31 petals. Colour RHS.CC.51A. Size 17 cm across x 8 cm deep. Flowers mid-season on an upright, spreading plant. Leaves glossy green, elliptic, flat, finely serrated apices acuminate, 14 cm long x 7 cm wide. Petals fluted. Flowers shed whole.

Fred S. Tuckfield. *(C.reticulata),* ACRS., 1968, *Camellia News*, No.32, p.18, Reg. No.102: Originated by F.S. Tuckfield, Berwick, Victoria, Australia. Seed parent *C.reticulata* **Confucius,** pollen parent unknown. First flowered 1966. The 11-13 cm flowers at first have a bud centre but open to show a few stamens. It has 3-4 rows of porcelain Rose, RHS.HCC.620/2, with darker veining and is a late bloomer. The leaves are dark olive green, rugose and strongly reticulate, 10.5 cm long x 6 cm wide, with acute apex and serrulate.

Fred Sander. *(C.japonica),* Bois, May,1913, *Revue Horticole*, p.224 and Garnier Oct,1913, *Revue Horticole*, p.476: Flowers measure 12-14 cm across with petals slashed and curled at the rim, undulate, of a brilliant scarlet. They resemble large carnations. The edges of the petals are indented and curled, the silvery centre cluster, surrounded by golden anthers, adds to the attraction of this plant. Slow, compact, upright growth. This description is accompanied by a

beautiful plate by the flower painter, A, Goosens. This camellia is a fimbriated sport of **Lady de Saumarez,** to which it has a strong tendency to revert. Its leaves are medium green, elliptic, 9 cm x 4.5 cm, waved and twisted, finely serrate, acuminate. The original plant still stood in the Sander Nursery at St André, in the 1960's, but largely reverted to **Lady De Saumarez.** Received an RHS., "Award of Merit" in 1921. Originated by Sander Ltd Nursery, Bruges, Belgium. Sports: **Cinderella, Fred Sander Variegated.** Synonyms: 'Fimbriata Superba', 'Fringed Red'. Orthographic errors: 'Fred Sanders', 'Fred Saunders', 'Fred A Sander.'. Chinese synonym: 'Foleide'.

French Vanilla. *(C.sasanqua).* SCCS, 1997, *The Camellia Review*, vol.59, No.1, p.9, Nuccio's Nurseries advertisement. No description. Originated by Nuccio's Nurseries, Altadena, Calif., USA. Nuccio's Nurseries Catalogue, 1999-2000, p.16. Large, creamy white single. Fast, upright, somewhat open growth.

French Variegated. *(C.japonica),* Lindo Nurseries Price list.1940-1941. No description. SCCS., 1950, *The Camellia, Its Culture and Nomenclature*, p.37 as 'French Var.': Medium size with pink blotched white, formal double. Flowers mid-season. Originated in USA by Lindo Nurseries.

French White. Tuyama, 1968, *Camellias of Japan,* p.103. Synonym for **Furansujiro.**

French White. Hovey, ed.,1837, *Magazine of Horticulture.* Synonym for **Alba Plena.**

French White. Anon., 1830, "Ueber die Cultur der Kamellien", in *Der Blumen Gaertner,* p.51, as 'French Whit'. James Burnell, 1837, *The Magazine of Botany and Gardening*, vol.3, new series, p.153. Synonym for **Gallica Alba.**

Frére Arnold de Brescia. Morren, Ch., 1852, *Belgique Horticole,* p.246-247. Orthographic variant for **Fra Arnoldo da Brescia.**

Fressolini. Cachet Catalogue, 1845-1846, p.7. Orthographic variant for **Frezzolini.**

Freya. ACRS., 1978, *Camellia News,* No.70, p.16, Reg. No.206, erroneously for **Freyda.**

Freyda. *(C.sasanqua),* ACRS., 1978, *Camellia News*, No.70, p.16, Reg. No.206 erroneously as 'Freya': Originated by Alice Spragg, Sutherland, NSW, Australia. First flowered 1971. The dense, upright plant has 5.5 cm x 2 cm, dull green leaves and flowers early to mid-season. The informal 7.7 cm across flowers have light, rose-pink petals with some petaloids showing white. Some of the outer petals are notched and show deeper colour at their base.

Frezolini. Isola Madre Catalogue, 1845. Orthographic error for **Frezzolini.**

Frezzolini. *(C.japonica),* Verschaffelt, 1844, Catalogue No.50, p.20. No description. Isola Madre Catalogue, 1845 as 'Frezolini'. No description. Cachet Catalogue, 1845-1846 as 'Fressolini'. No description. Verschaffelt, 1848, *Nouvelle Iconographie,* Book XI, pl.III as 'Frezzolinii': Leaves elongated ovals, pointed, lightly veined, fully serrate with deep notches. The blossoms, 10-11 cm across, are anemone form, shaped with numerous, rounded petals, faintly emarginate; the central ones are smaller, folding on themselves, denoting a perfect imbrication. Colour deep to pale rose madder. Originated in Italy by Mariani, Florence. However de Jonghe, 1851 attributed it to Caraccioli. Named for Madame Nencini Frezzolini, a distinguished vocalist. Orthographic errors: 'Fressolini', 'Fresolini', 'Frezzolinii', 'Frezzonia', 'La Frezzolini'.

Frezzonia. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.83. Orthographic error for **Frezzolini.**

Fridoline. *(C.japonica),* Guilfoyle, 1875, *Botanic Papers,* p.26. No description. Originated in Australia. (Believed extinct.)

Fridoline. Seidel, Pflanzen Catalogue, p.7. Synonym for **Frederic der Gerechte.**

Frieda Petersen. *(C.japonica), Kamelien,* Peter Fischer catalogue, 2008, p.13 with colour photo p.12; Single, 7 to 8 petals, bright vermilion red, bright yellow tubular stamen centre, 7cm diameter, trumpet shape with petals slightly reflexed at edges. Leaves dark green and arched, 8 cm x 5 cm. Compact growth. A chance seedling that has proved very cold hardy in Germany for the last 20 years.

Friederich der Gerechye. Seidel, 1846, Pflanzen Catalog, p.7. Originated in Germany. No description. Orthographic variant for **Frederic der Gerechte.**

Friedrich Engels. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.97 with colour photo; Medium size flower, rose form double, red (RHS.CC.47B). Sometimes some petaloids streaked with white in the centre. A seedling of 'Rubra Simplex' **(Rubra)** x 'Plutone', first flowered in 1984. Originated by Dott. Guido Cattolica, Livorno, Italy.

Friendfield. *(C.japonica),* SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.37: Dark red. Very large, round semi-double. Blooms mid-season. Medium, compact, upright growth. Originated in USA by Allan.

Friendly Skies. *(C.hybrid), American Camellia Yearbook,* 1980, p.165, Reg. No.1657: A large, rose-pink semi-double *C.hybrid* chance seedling, early flowering. Originated by David L. Feathers, Lafayette, California, USA. The 7 year old seedling first bloomed 1977. Average flower size, 12.5 cm across x 7.8 cm deep with 20 petals, yellow anthers and cream filaments. Petal formation is incurved at the apex and has slightly paler petal margins. Plant growth upright and medium with dark green leaves, 10 cm x 4.5 cm.

Friend's Coat. Hertrich, 1959, *Camellias in Huntington Gardens,* vol.III, p.318. Synonym for **Onigoromo.**

Friendship. *(C.japonica),* SCCS., 1966, *Camellia Nomenclature,* p.57. White, large, tiered semi-double. Vigorous growth. Mid-season to late flowering. Originated in the USA by David L. Feathers, Lafayette, California.

Frilled White. *(C.sasanqua),* Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III, p.293 illustration, p.290 text: Flower: single, white 7 cm across. Buds: Elliptical. Petals: About 7, roughly truncate, margins deeply scalloped. Centre of flower: A small cluster of stamens, creamy white filaments 1.5cm long, small yellow anthers. Leaves: Elliptic, semi-glossy, dark green, leathery, 5.7 cm long x 2-3 cm wide, margins crenate, apices tapered, venation pronounced on upper surface. Plant habit spreading, free flowering, early. Originated in USA as a seedling from Coolidge Gardens, Pasadena, California.

Fringed Double White. Booth & Chandler,1831, *Illustrations and Descriptions of Plants....* Synonym for **Fimbriata.**

Fringed Kumasaka. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.4. A form of **Kumasaka** with fringed petals. Originated in USA.

Fringed Petal. Curtis, Saml., 1820, *Monograph on the Genus Camellia,* p.2. Synonym for **Fimbriata**.

Fringed Scarlet. Vanderbilt, 1941, *Camellia Research, II,* p.3 as 'Fringed Scar.'. Synonym for **Fred Sander.**

Fringed Tricolor. Puddle, 1957, ANZCRS., *Camellia Annual,* No.4, p.5. A proposed synonym for **Fred Sander.**

Fringed White. Michael Floy & Son Nursery 1832, Catalogue, p.35. Baumann & Baumann, 1835, *Collection de Camellias élèves à Bollweiler,* p.11, pl.24. Herbert, 1837, *Amaryllidaceae & Supplement,* p.370. Synonym for **Fimbriata.**

Fritz Taylor. *(C.japonica), American Camellia Yearbook,* 1956, p.62, Reg. No.261: An 8 year old seedling of 'Tricolor', originated by R.L. Taylor, Norfolk, Virginia, USA. First flowered 1953. Plant growth is average in density, upright and slow with light green leaves. Flower buds round and deep pink. Flowers white, graduating to deep pink on outer petals; incomplete double; imbricated, similar to Alba Plena in form, 8 cm across. Late blooming.

Frivolity. *(C.sasanqua),* NCCS., 1964, vol.17, No.2, p.15: Black & white photo. Large, white, single to semi-double with rumpled, notched irregular petals and large stamen cluster. Pink in the bud. Originated in USA.

Frizoliniz. *(C.japonica),* Joseph Baumann, 1849, Prix Courant, p.5. No description. Originated in Italy. (Believed extinct).

Frizzle White. *(C.japonica),* Overlook Nursery Catalogue, 1940-1941: "(Our seedling #128). Semi-double, 9-11 cm across, very wavy, crinkled petals intermixed with numerous yellow stamens. Resembles **Nobilissima** but larger. The flowers are pure white. The leaves are small, narrow and pointed." Originated in the USA by Overlook Nurseries, Mobile, Alabama from seed imported from Japan in 1925. Synonym 'Susan Carter'. See p.147, Hertrich, 1954, *Camellias in the Huntington Gardens* vol.I for black and white photo. See also Macoboy, 1981, *The Colour Dictionary of Camellias,* p.89. Chinese synonym: 'Jueshifa'.

Frolic. *(C.rosiflora* hybr.), *New Zealand Camellia Bulletin,* Mar. 1991 , vol.XVII, No. 1 , p.46, Reg. No.286: An 8 year old *C.rosiflora* seedling that first bloomed 1988. Raised and named by Mrs Dorothy Hansen of Waikanae, New Zealand, from a newly germinated seedling supplied by Mrs Phyllis Austin, New Plymouth, New Zealand. It has spreading growth, average density and slow growth rate. The leaves are dark green, 7 cm long x 3 cm wide, while the flower is single, 4 cm across x 2 cm deep with 6-8 petals and 2-4 petaloids, white with a touch of pink. Filaments are white with gold anthers and it flowers early to late season. The bud is pink with the flower opening out flat, with the petals shading pink to the margins. A small, funnel-shaped stamen cluster is intermingled with petaloids. The plant has a tendency to weep and is very floriferous. RHS.CC.56D colour.

Frolic. *(C.sasanqua).* ACS 1992, *The Camellia Journal,* vol.47, No.4, p.13. Name is invalid as there is already a *C.rosiflora* hybrid of this name registered in New Zealand in 1991.

Fronteiro de Beja. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.31, & No.9, 1872-1873, p.44: Formal double. Light cherry colour with deeper veining. Originated in Portugal.

Froostii. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. Orthographic error for 'Frostii', synonym for **Sarah Frost.**

Froostii Alba. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. Orthographic error for **Frostii Alba.**

Frost Prince. *(C.hybrid), American Camellia Yearbook,* 1979, p.106, Reg. No.1533: A medium deep pink, (RHS.CC.68B) single *C.hybrid (C.hiemalis* **Shishigashira** x *C.oleifera* (PI 162561); early flowering. Originated by Dr William L. Ackerman, Washington, DC., USA. The 9 year old seedling first bloomed 1974. The flower has 6-8 petals, deep yellow anthers, creamy yellow filaments. Average flower size is 10 cm across x 3.2 cm deep. Plants are cold hardy

and growth is upright and medium in rate with dark green leaves, 6 cm long x 2.5 cm wide. See colour photo facing p.76, *American Camellia Yearbook.* 1981.

Frost Princess. *(C.hybrid), American Camellia Yearbook,* 1981, p.98, Reg. No.1742, with colour photo facing p.76: Medium lavender pink, semi-double *C. hybrid, (C .hiemalis* **Bill Wylam** x *C. oleifera)* , early flowering. Originated by Dr William L. Ackerman, Washington, DC, USA. The 11 year old seedling first bloomed 1975. Average flower size is 9.5 cm across x 4 cm deep with 13 petals, yellow anthers and creamy yellow filaments. Very cold hardy. Leaves measure 6 cm long x 3.2 cm wide. Chinese synonym 'Binghuang Gongzhu'.

Frost Queen. *(C.japonica), American Camellia Yearbook,* 1973, p.191, Reg. No.1250: A 16 year old chance seedling *C.japonica,* that first flowered 1960. Originated by the "Crop Research Division", USDA., Glen Dale, Maryland, USA. Plant growth is upright, dense and slow with dark green leaves, 8-10 cm long x 4-5 cm wide. The semi-double bloom is white with golden anthers and pale cream filaments. It measures 11-12.5 cm across x 4-4.5 cm deep with 12-14 petals. Late flowering. Cold hardy. Chinese synonym 'Bingshuang Wanghou'.

Frosted Pink. *(C.hiemalis).* SCCS *Camellia Nomenclature* 2009, p.131; Medium size formal double. Blush pink with frosted cast on petals. Upright, spreading growth. Flowers early to mid-season. Originated in 2000 by Art Landry, Baton Rouge, La., USA.

Frosted Star. *(C.sasanqua).* Nuccio's Nurseries, 1993-1994, Retail Price List, p.19: (Synonym 'Caudata false'); Small semi-double with narrow petals; white toned light pink. Leaves narrow with medium, bushy, upright, somewhat spreading growth. Renamed from 'Caudata false'. Chinese synonym 'Shuangxing'.

Frosti. Burdin Maggiore & Co, 1849-1850, Catalogue. Orthographic variant for 'Frostii', synonym for **Sarah Frost.**

Frostii. Ritchie & Dick, 1844, *Magazine of Horticulture,* 10:248. Orthographic errors: 'Froostii', 'Frosh', 'Frostii Buist'. Synonym for **Sarah Frost.**

Frostii Alba. *(C.japonica),* Vershaffelt, 1849, *Nouvelle Iconographie,* Book XII, pl.III as 'Frosti Alba': Received from M. de Pronay who died before giving its origin. Large convex blossoms with full petals, also convex, rounded, deeply emarginate, a pure white, sometimes distinctly striated with a delicate pink. Orthographic error: 'Froostii Alba'. Originated in Germany.

Frostii Buist. Burnier & Grilli Catalogue, 1846-1847. Synonym for **Sarah Frost.**

Frosty. *(C.sasanqua), American Camellia Yearbook,* 1959, p.273, Reg. No.356: A 6 year old chance seedling, originated by J.M. Jones, Savannah, Georgia, USA, which first flowered 1957. The leaves are 8.5 cm long x 3.8 cm wide and dark green. The white flowers are 7.5 cm across x 5 cm deep with 23 petals and 5 petaloids. Early blooming.

Frosty Morn. *(C.japonica),* Overlook Nurseries Catalogue, 1945-1946: Very Large, 13-15 cm across, white, anemone to peony form. Medium, open growth. Flowers mid-season to late. Leaves wavy and deeply serrate. A seedling from 'Lotus', (**Gauntlettii**) raised by Harvey Short, Ramona, California, USA. See black and white photo, p.91, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III and facing p.76, *American Camellia Yearbook,* 1953; also pl.65, p.41, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Orthographic variant: 'Frosty Morne'.

Froth. *(C. x williamsii), New Zealand Camellia Bulletin,* 1980, vol.XI, No.5, p.18, Reg. No.156: Seedling of **Elegant Beauty** x **Donation** raised by P.R. McNab, Levin, New Zealand which first flowered 1972. The plant is slow growing with dark green leaves, 11 cm x 4 cm. The flower is

semi-double to peony form with 15-24 petals and 15 petaloids. Average size is 10 cm x 4 cm. The colour is a clear, medium pink, (RHS.CC.52B) and it flowers early to mid-season.

Frotty. Auguste van Geert Catalogue, 1848, p.17. Orthographic error for **Frostii.**

Fructii Pyriformis. *(C.japonica),* Jakob Makoy et Cie Nursery Catalogue, 1838. No description. (Believed extinct.)

Frùhlingsglanz. *(Glossiness in springtime) (C.japonica),* An 11 year old seedling, first flowered 2007. Originated by Dr Karl-Heinz Hùbbers, Kranenburg, Germany, registered by Julia Westhoff, Bremen. Propagated by Klaus-Jùrgen Eberts, Tangstedt. Parentage **Nioi-fubuki-beni** x **Lady Vansittart Pink**. Plant is upright with average growth rate. Leaves dark green 10.5 cm x 4.5 cm. Semidouble flower, red (RHSCC 45A – 46A), 11.5 cm x 3.5 cm, with petaloids among the dispersed whorls of stamens. Filaments pink, anthers yellow. Late flowering.

Fruitland Swan. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Il Cigno.**

Fu Dei Qiuan. (Butterfly Springs), (*C.reticulata* hybrid), ACS, *Yearbook,* 2012, p.56 with colour photo; Large size, Wang "WW#19" x **Ruta Hagmann**. Photo shows a formal double, medium pink, inner petals incurved, outer petals reflexed. Originated by John Wang, Orinda, Calif., USA.

Fu-shih Shan-cha. Chinese name for *C.forrestii* in Wade-Giles transliteration.

Fu-ting. Courtois, 1833, *Magazin d'Horticulture* as 'Futting'. Different reading for 'Foding Cha', (**Rawesiana**).

Fubuki-ayatori. (Speckled 'Ayatori'), *(C.japonica),* ICS, Apr.1990, *Japanese Camellia Cultivar List,* p.6: Small size, peach pink to dark peach pink ground with white blotches, bud centered double flower. Originated in Shizuoka Prefecture, Japan.

Fubuki-shiratama. (Speckled 'Shiratama'), *(C.japonica),* Seibundô Shinkôsha, "Garden Life", 1975, *Tsubaki to Sazanka,* with colour photo inside back cover: A campanulate to cup-shaped single of 5-6 petals, blush pink, speckled crimson, central stamen cluster with golden yellow anthers. Early to mid-season flowering. Leaves oval, medium size, acuminate, thick, smooth, shallowly, sharply serrate. Slightly fragrant. See colour photo No.362, p.148, *Encyclopedia of Camellias in Colour,* vol.II, 1978, and p.133, Seibundô Shinkôsha, 1979, *Senchinshû,* description p.244. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.226 with colour photo; English translation p.158. A natural seedling of Shiratama. Originated in Kawaguchi City, named and released by Eiichi Kaneko, Tokorozawa City around 1960.

Fubuki-wabisuke. (Snowstorm Wabisuke). (Wabisuke). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.258 with colour photo; Splayed stripes of white on pale pink ground, small, sake-cupped single. Flowers early to mid-season. Leaves elliptic, small. Upright growth. A chance seedling of **Shimofusa-wabisuke,** released in 2000.

Fucatus. *(C.japonica),* McIlhenny, 1934, *List of Camellia japonica for Sale,* p.3, 4: Light red, medium large, full peony form. Orthographic error: 'Fugatus'.

Fuchijiro. Different reading for **Fuchishiro.**

Fuchishiro. (Edged White), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.712: A small, trumpet-shaped single of 5 petals, colour deep crimson with each petal sharply edged white. Originated in Japan. Resembles **Tama-no-ura.** Different reading 'Fuchijiro'. (Believed extinct.)

Fuchû. (Place name), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.336: A large, flat white single of 7-8 petals, white with a few rare, scarlet flecks or marks. A compact, central column of stamens with white filaments and yellow anthers. Originated in Japan. Resembles **Hakkan.** (Believed extinct.)

Fudanji. (Fudan Temple), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.6: Medium size, pale peach pink, tubular single. Originated in the Niigata Prefecture, Japan.

Fudao. (Fu Island), Gao & Zhuang, 1989, *The Camellia in China,* p.76, No.571. Chinese synonym for Japanese sasanqua **Shikishima.**

Fudaraku-no-yuri. (Lily of Hodaraku). (*C.amplexicaulis* hybrid), *Japan Camellia* 101, May 2014, p.5 with colour photo, JCR Regn No.2014-9, (ser. No.22). A selected seedling of *C.amplexicaulis*, pollen parent an unknown *C.japonica*. Pink, single, thick petals with a slight wide border; Long, lily-like, tubular form, height of flower more than 10cm. Prominent group of central stamens. Leaves large, flat, slightly waved at edges as with the seed parent. A 9 year old seedling, first flowered in 2011. Originated by Kimihide Hashimura.

Fudayama-aka-yabu A. (Red Wild Camellia of Fudayama, A.). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.116. No details. From China.

Fudayama-aka-yabu B. (Red Wild Camellia of Fudayama, B.). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.117. No details. From China.

Fudi. *(C.sasanqua),* (Mount Fuji), Gao & Zhuang, 1989, *The Camellia in China,* p.75, No.552. Medium size, 7-8 cm across, red, double. Early blooming. Originated in China.

Fudinchu. Waterhouse, 1965, *International Camellia Journal*. Taiwanese for 'Foding Cha', (**Rawesiana**).

Fugaku-no-suzume. (A Sparrow on Mt. Fuji), *(C.japonica),* Inazawa, Nursery Co. Ltd. Catalogue, 1986-198, p.9, A-467: Clear, peach pink, campanulate single. Originated in Kurume, Fukuoka Prefecture, Japan. Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.130, colour photo and description: Small size, pink, tubular to campanulate single with 5 broad, rounded, reflexed, overlapping petals and a central stamen cylinder with white filaments, joined for the lower third, and yellow anthers. Leaves mid-green, elliptic, apices long acuminate, margins serrate. Seedling of **Fukumuzume.** Released by Yûgi Imamura in 1970. Blooms mid-season to late. Synonym: Yûbi' a local name for this cultivar.

Fugatus. Vanderbilt, 1940, *Camllia Research,* p.4. Orthographic error for **Fucatus.**

Fugenkai. (Sea of Wisdom), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.8: Pure white. Large semi-double with round petals. Originated in Japan.

Fugen-yabu (Wild japonica from Fugen) (*C.japonica*) from Hachiôji, Tokyo, *Japan Camellia* No.82 published in February 2007: Crimson, single, tubular to campanulate, medium size, cylindrical stamens, long pistil, blooming in February to March. A natural seedling of a wild japonica. Tree upright, vigorous. Leaves elliptic, medium. Found and named by Hiroshi Okado in 2005.

Fugenzô. (Elephant of Wisdom), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.8: Light pink. Large double with long petals. Originated in Japan.

Fuggitiva. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. No description. Originated in Italy at the Giardino Borghese. (Believed extinct.)

Fugiama White. *American Camellia Yearbook,* 1949, p.188. Invalid synonym for **Nobilissima.**

Fugi-No-Mine. Vanderbilt, 1943, *Trade Available Camellia Stocks.* Orthographic error for **Fuji-no-mine.**

Fugu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.429; Chinese synonym for the Japan *C.sasanqua* **Fukuzutsumi.** Previously 'Fugushou'.

Fu-Hizen. (Specked Camellia of Hizen) *(C.japonica*) from Nagasaki Pref., *Japan Camellia* No.78, August 2005: A cross of *C.japonicas* **Tama-no-ura** × **Iwane-shibori.** Red speckled white, flat semi-double, medium to large size, stamens tubular, blooming mid-season to late. Leaves elliptic, medium. Branches and tree upright growth. Originated by Kaoru Kusumoto

Fuhuojie Zhichen. Gao, Jiyin, Ltr. 31st July, 1990. Chinese synonym for the USA *C.japonica* **Easter Morn.**

Fuiri-funatsu. (Variegated 'Funatsu'), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.234, colour photo and description: Small size, pink blotched white, campanulate, compact single of 6 emarginate petals. A virus variegated form of **Funatsu.** Blooms mid-season to late. Originated in Izu Oshima, Japan. Named and released by Takeo Ogawa in 1985. Resembles **Mishô** but larger than it.

Fuiri-kanka-shibori. ('Kanka-shibori' with variegated foliage), *(C.japonica),* Minagawa, 1949, *Chinkashû:* White, streaked and blotched pink. Large semi-double to peony form; mid-season flowering. Variegated foliage. Different readings: 'Huirikanka-shibori', 'Madarairi-kanka-shibori'. "Fuiri" means variegated and also applies to plants with variegated leaves while "kanka" means a flower festival and "shibori" dappled or variegated. See Seibundô Shinkôsha, 1979, *Senchinshû,* p.208. described as 'Kanka-shibori' with variegated leaves. Different reading: 'Huiri-kanka-shibori'.

Fuiri-karako. (Variegated form of 'Karako'), *(C.japonica),* Yûsuke Sakata & Ken-ichi Arisumi, 1983, *International Camellia Journal,* No.15, p.21. No description. Originated in Japan.

Fuiri-kingyo-tsubaki. (Variegated, fish-tail leaf Camellia), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in the section on variegated leaves. Itô, Ko'emon, 1879, *Chinkashû:* A small single, rose-pink flower. Leaves with multiple apices, like the tail of a goldfish, and variegated with pale yellow. Different readings: 'Huiri-kingyo-tsubaki', 'Madarairi-kingyo-tsubaki'. Originated in Japan.

Fuiri-kochôtakai. (Exalted Butterfly), Fendig, 1953, *American Camellia Catalogue* as 'Madarairi-kochotokai'. Corruption for **Fuiri-kochô-wabisuke** from Itô, Kotemon, 1879.

Fuiri-kochô-wabisuke. (Butterfly Wabisuke with variegated leaves), (Wabisuke), Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in the section on variegated leaves. Itô, Ko'emon, *1879*, *Chinkashû:* A variegated leaf form of **Kochô-wabisuke.** Originated in Japan. Corruption: 'Fuiri-kochôtakai'. Different readings: 'Madarairi-kochô-wabisuke', 'Huirikochô-wabisuke'.

Fuiri-kôkirin. ('Kôkirin' with variegation.), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.130 illustration, p.243, description: Irregular, open peony form, dark crimson with white markings; centre petals and stamens intermixed. Leaves, glossy mid-green, elliptic, acuminate, shallowly serrate. A mutation of **Kôkirin.** Synonyn: 'Kôkirin-hoshi-iri'. Originated in Kantô, Japan. Sport: 'Kyôbotan'.

Fuiri-konronkoku. (Variegated Konron Black), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.129, colour photo, p.243 description: A variegated form of **Konronkoku.** Bright, dark scarlet, moired with white. Late flowering. Leaves, long-oval, medium size, thick, acuminate, dark green with yellow variegation. Originated in Kantô District, Japan.

Fuiri-kumasaka. ('Kumasaka' with variegated leaves), *(C.japonica),* Itô, Ko'emon, 1879, *Chinkashû:* A rose form double to peony form, rose-pink, blotched with white. Leaves variegated yellow. Originated in Japan. Different readings: 'Madarairi-kumasaka', 'Huiri-kumasaka'.

Fuiri-miden-jaku. Fendig, 1953, *American Camellia* Catalogue.Corruption of Japanese name **Fuiri-mikenjaku.**

Fuiri-mikenjaku. (‘Mikenjaku’ with variegated leaves), *(C.japonica),* Minagawa, 1949, *Chinkashû:* Rose-pink marbled white. Large semi-double with large outer petals. Vigorous, slow, spreading growth. Late blooming. A mutation of **Mikenjaku** with leaves variegated with yellow. Originated in Japan. Different readings: ‘Huiri-mikenjaku’, ‘Madarairi-mikenjaku’. Corruption of Japanese name: ‘Fuiri-miden-jaku’. Synonym: ‘Fuiri-nagasaki’.

Fuiri-nagasaki. SCCS., 1958, *Camellia Nomenclature,* p.38. Synonym for **Fuiri-mikenjaku.**

Fuiri-negishikô. *(C.sasanqua),* Ishi, Yûgi. 1933-1934, *Jissai Engei* 15. *Chabai no Hinshu Kaisetsu.* Yashiroda, 1950, *American Camellia Yearbook,* p.15 as ‘Fuiri Negishi-ko’: Different reading for **Negishikô-fuiri.**

Fuiri-oimatsu. (Leaf variegated form of ‘Oimatsu’), *(C.japonica),* Tateyama Nursery Catalogue, 1957: Red mottled white, medium sized double. Slow, spreading growth. Mid to late season flowering. Originated in Japan. Different readings: ‘Madarairi-oimatsu’, ‘Huiri-oimatsu’, ‘Oimatsufu’.

Fuiri-otome. (‘Otome’ with variegated leaves), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in section on variegated leaves. Itô, Ko’emon,1879, *Chinkashû:* Medium, shell pink formal double. Blooms early to late. Variegated foliage. Synonym: ‘Fu-otome’. Different readings: ‘Huiri-otome’, ‘Madarairi-otome’.

Fuiri-sangokaku. (Variegated ‘Sangokaku’). (*C.reticulata* hybrid). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.220 with colour photo; English translation p.154. Large, deep red mottled white, long trumpet-shaped single, gutter-like petals. Flowers early to late. Leaves narrowly elliptic. Somewhat spreading growth. A variegated form of **Sangokaku** (Coral Palace). Named and released by Takeo Ogawa in 1985. From Izu Ôshima.

Fuiri-shiragiku. (‘Shiragiku’ with variegated leaves), *(C.japonica),* Satomi, 1956, *Camellia Varieties of Japan:* White, rose form double, medium size. Mid-season blooming with variegated foliage. Originated in Japan. Different readings: ‘Huiri-shiragiku’, ‘Madarairi-shiragiku’.

Fuiri-shishigashira. (Variegated ‘Shishigashira’), *(C.hiemalis),* Satomi, 1960, *Engei Techô No.10. Sazanka no Daihyô Hinshu Kaisetsu:* Red, double, small flower, early to mid-season flowering. Yellow variegated leaves. A sport of **Shishigashira.** Originated in Japan.

Fuiri-shunshokô. (Variegated ‘Shunshokô’), (C.*japonica)* Andoh, 1971, *Tsubaki Meika no Shôkai to Saibai*. p.211 as ‘Fuiri-shunshokoh’. A soft rose-pink with white blotches, semi-double, yellowish cast at the centre of flower, opening cup-shaped, petals rounded. Leaves dark green. Midseason flowering. A white variegated sport of **Shunshokô.** Originated in the Kantô District, Japan. Different readings: ‘Fuiri-shunshokoh’, ‘Fuiri-shunshokkô’. Synonym: ‘Shunshokônishiki’.

Fuiri-yubakô. (Variegated ‘Yubakô’), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.365: White spots on red ground, double to peony form. Early blooming. A sport of **Yubashibori** (as ‘Kusudama’). Originated in Kyôto, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.220 with colour photo; English translation p.154. Named and released by Misoji Yamaguchi in 1981.

Fuiri-shunshokoh. Different reading for **Fuiri-shunshokô.**

Fuiri-shunshokkô. Seibundô Shinkôsha, 1979, *Senchinshû,* p.129. Different reading for **Fuiri-shunshokô.**

Fuji. (Peerless), (Higo), JCS, 1958, *Nomenclature List of Higo Camellia Varieties;* Adachi, 1960, *Camellia. Its Appreciation and Artistic Arrangement,* p.56, colour photo: Medium to large size, white with a pink cast at first opening, flat, Higo camellia, 8-10 cm across, 5-6 petals with wavy apices and a burst of 150-200 pale yellow stamens. Leaves, large, wide-oval,

sharply serrate, medium green, sometimes with yellowish variegation. Plant habit errect and vigorous. Flower style is somewhat triangular in appearance. Blooms mid-season to late. Originated in Japan. See colour plate, p.12, *Higo Camellia,* 1964 by Hiratsuka with description on p.7 and p.11 in English; and in *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.93, pp.66, 305, description. Also p.58, Yokoyama & Kirino, 1989, *Nihon no Chinka* and Seibundô Shinkôsha, 1979, *Senchinshû.* Different reading: 'Huji'.

Fuji. (Mt Fuji), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.236: Small, bell-shaped red and white single of 7-9 petals, crimson variegated white. Originated in Japan. Thought to be a synonym for **Shokkô**, but not confirmed. Different reading: 'Fujisan'.

Fujian Dahong. (Crimson of Fujian Province), *(C.japonica),* Gao & Zhuang, 1989, *The Camellia in China,* p.49, No.304: Large size, red. Originated in China.

Fujian Hua Bing Lang. *(C.japonica), Collected Papers,* ICS Congress, 2008, Genetic Analysis on 20 Camellia Varieties by ISSR Markers, Sui Ni and Jiyuan Li; Formal double, red with white stripe. From Fujian, China.

Fujian Manao. (Fujian Agate), *(C.japonica),* Shanghai Botanic Gardens List, 1984: A large, crimson semi-double with white spots on ruffled petals. See colour photo, *International Camellia Journal,* No.18, 1986, p.80F. Originated in China.

Fujibakama. (Name of Autumn Flowering Grass), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1959, *Tsubaki Irohanayose Irotsuki:* White, single. Medium size with protruding central stamens. (Believed extinct). Originated in Japan. Different reading: 'Huji-bakama'.

Fujibakama. (Skirt of Wisteria). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.225 with colour photo; English translation p.158. Small, purplish red, tubular to trumpet shaped single, round petals, cylindrical stamen column. Flowers early to mid-season. Leaves narrowly elliptic, medium size. Upright growth. A natural seedling of **Hatsu-arashi.** Originated by Nobuo Sasai, released in 1997. From Okayama Prefecture.

Fujibotan. (Peerless Peony), *(C.japonica),* Anonymous, ca.1874, *Tsubaki Hyakuro no Zu* vol.III: Medium sized, formal double white with red spots. Originated in Japan. (Believed extinct).

Fujiginu. (Wisteria Robe), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.I, 1972, p.367,& vol.II, 1978, pl.307, p.129, description, p.244: Small size, campanulate to cup-shape, 5 petals, soft, pale pink single, with compact, tubular, central stamen cluster. Petals edges a little lacinated and creped. Leaves long-oval, small, wavy, glossy green. Plant habit erect and vigorous. See Seibundô Shinkôsha, 1979, *Senchinshû,* pp.132, 244. Originated in Shido Town, Kagawa Prefecture, Japan. Named and released by Saneichi Koyama in 1972.

Fuji-goromo. (Lavender Robe), *(C.sasanqua),* JCS., 1989, *Tsubaki,* No.26, p.39; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.32: Large size, crimson, single. Blooms early to mid-season. Originated in Kumamoto Prefecture, Japan. Synonym: 'Hi-no-koromo'.

Fujihikari. (Wisteria Light). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.226 with colour photo; English translation p.158. Large, purplish red, anemone, occasionally with many stamens. Flowers mid-season to late. Leaves elliptic, medium size. Upright growth, medium rate. A natural seedling of unknown parentage. Named and released by Totsurô Nakamura in 1980. From Tokyo.

Fujihime. (Wisteria Princess), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.244: Wide, vertical, clear red stripes on a white ground. Semi-double with a cylindrical stamen cluster. Large size. Flowers late-season. Leaves, dark green, medium size, ovate, apices acuminate, recurved.

Plant semi-erect, spreading bushy. Originated in the Chûbu District, Japan. Thought to be synonym for **Fujimusume.**

Fujikurenai. (Wisteria Red), *(C.japonica),* Iwasaki, 1829, *Honzô Zufu:* Single red with white spots. Originated in Japan. (Believed extinct.) See JCS., 1981, *Tsubaki,* No.20, p.109.

Fujimusume. (Wisteria Maiden), *(C.japonica),* Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.216; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.335, p.147, description, p.341: Large size, semidouble, white with occasional clear crimson streak and 15-17 large, round petals in 3 rows, the inner petals erect and reflexed, surrounding a central column of about 90 stamens, white filaments and pale yellow anthers. Leaves reflexed with folded edges, elliptic, apices blunt acute, deep, glossy green, margins medium serrations. Blooms mid-season. Selected from seedlings made by Yoneichi Fujioka, Inazawa City. Named and released by Minoru Satô about 1950. See Satô.1975, *Chûbu no Tsubaki,* p.84. Possibly a synonym for **Fujihime.**

Fûjin. (God of the Wind), *(C.x vernalis),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.40: Medium size, deep red, single. Blooms early to mid-season. Originated in the Shizuoka Prefecture, Japan.

Fujinami. (Wave of Wisteria), *(C.sasanqua),* Itô, Jukyû, 1739, *Honzô Hanamaki'e,* vol.l6: Light pink, large flower. Originated in Japan. (Believed extinct.)

Fujinami. (Wave of Wisteria), *(C.japonica),* Seibundô Shinkôsha,1979, *Senchinshû,* p.132 & 244: Small size, campanulate single, light red on white base, with 5 oval petals surrounding a compact, central, stamen cluster. Heavily floriferous. Leaves small, mid-green, elliptic to long-elliptic, apices long acute, base cuneate, medium serrate margins. Habit erect, slender, of average vigor. Originated in the Kansai District, Japan. Released by Katayama Juraku'en Nursery in 1979. Synonym: 'Tarô'.

Fujinami-no-Satô. (Wisteria Wave Village), *(C.japonica),* Himuro, 1981, Murasuzume: White striped rose. Formal double. Originated in Kanagawa Prefecture, Japan.

Fuji-no-akebono. (Dawn on Fuji), *(C.japonica),* Inazawa Nurseries Co. Ltd Catalogue, 1986-1987, p.1, A-18: Medium size, Peach pink, tubular to campanulate single. Colour suitable for Chaseki (Tea ceremony feast). Probably a chance seedling of **Hagoromo.** Named and released by Minoru Satô in 1959.

Fujino-hana. (Fujino's flower). *(C.x williamsii). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.282 with colour photo; Deep pink, very large semi-double, lotus form with tight central column of stamens. Flowers mid-season to late. Leaves ovate, medium size. Upright, vigorous growth. A chance seedling of **Tulip Time,** named and released by Soshin Hirai, Saitama Pref., Japan in 2007.

Fuji-no-kagayaki.. (Glow of Mt. Fuji). *(C.hiemalis). "Sasanquas, The Winter Flowers"* ICS Congress, Kurume 2010, English translation p.65; White, peony to formal double, large, early. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.299 with colour photo; Leaves elliptic, medium size. Somewhat spreading, vigorous growth. A seedling of **Fuji-no-mine,** many central petals distorted. Selected and named by Shiro Funaki, Tokyo, Japan.

Fuji No Mene. Chandler & Son Nursery Catalogue, 1947, *Rare Plant Catalogue,* p.889. Corruption of the Japanese name **Fuji-no-mine.**

Fuji-no-mine. (Peak of Fuji), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshôen Chaibaifu;* Nihon Shokubutsu Kaisha Ltd Catalogue, 1912-1913: Large size, pure white double, about 8.5 cm across. Petals are numerous and rounded. Stamens rarely visible. Vigorous, upright, fast grower, but with thin branches. See colour pl.34, p. l l 5, Ishii's *Selected Japanese Camellias, including Sasanquas,* 1979 and colour photo No.518, p.210, *Encyclopedia of Camellias in*

Colour, vol.I, 1972, description p.383. This is an old Japanese cultivar and many catalogues have erroneously listed this and **Mine-no-yuki** as synonyms, but the latter is a different camellia, being bushy and a larger double with longer petals and stamens concealed. Orthographic errors: 'Fuji No Mene', 'Fugi No Mine'. Synonyms: 'Fuyo-no-mine', 'Shiro-otome'. Different readings: 'Huji-no-mine', 'Fujinomine'. Received a RHS P.C. in 1958. Chinese synonym: 'Qiushaoyao', later changed to 'Fushi Zhi Feng'.

Fuji-no-mine-fuiri. (Variegated form of 'Fuji-no-mine'), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu: A* variegated leaf form of **Fuji-no-mine.** Originated in Japan.

Fuji-no-mine (Higo). SCCS., 1984, *Camellia Nomenclature* p.45. Erroneously for **Fuji-no-yuki.**

Fujinomine. Reuthe Ltd. Fox Hill Hardy Plant Nursery, supplement to Catalogue No.68, 1939-1940. Different reading for **Fuji-no-mine.**

Fuji-no-monogurui. Synonym for **Nishiki-shibori.**

Fuji-no-ne. (Fuji Ridge) (*C.hybrid*) from Ehime Pref,. *Tsubaki* No.38, published by the Japan Camellia Society in 1999. Seed parent *C.japonica* 'Fuji', pollen parent *C.granthamiana*. Pale pink, single, flat, medium, early blooming. Leaves resembling but smaller than those of *C.granthamiana*. Tree upright growth, vigorous. Originated by Hiroyasu Watanabe in 1997.

Fuji-no-sai. (Wisteria Festival), *(C.japonica),* Threlkeld, 1962, *The Camellia Book,* p.181: Large size, white, double. Originated in Japan. Note: The characters for this name are usually read 'Fuji-no-matsuri'

Fuji-no-takane. (Fuji's Lofty Peak), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû: A* single of 5 petals, with each petal having a different pattern, red, pink, striped, white and splashed. Originated in Japan. Different reading: 'Huji-no-takane'. Possible synonym: 'Eichizen' from the *Chinka Zufu,* (before 1700). (Believed extinct.)

Fuji-no-yama. (Mount Fuji), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* vol.I; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose, Irotsuki:* large size, eight fold red and white flower. Stamens are tubular. Different readings: 'Huji-no-yama', 'Fujisan', 'Fujiyama', 'Hujiyama'. Originated in Japan. (Believed extinct.)

Fuji-no-yuki. (Snow of Fuji), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô* in the section on sasanqua. No description. Originated in Japan. (Believed extinct.)

Fuji-no-yuki. (Snow on Fuji), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* vol.I; Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Yashiro, 1841, *Kokon Yôrankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* The corolla is snow white, thick and convex in shape, double flower. Different reading: 'Huji-no-yuki'.

Fuji-no-yuki. (Snow on Fuji), (Higo), Taniguchi, 1912, Kaika'en *Chinka Kyôkan:* A white Higo form camellia, 8-9 cm across, 6 petals, a little incurved, 110-150 stamens, white filaments with pale yellow anthers, some small, spatulate petaloids. Flowers mid-season. Leaves obovate-elliptic, thick, deep green. Its old name was 'Hakutsuru', but in 1961 the Higo Society of Japan approved the change to **Fuji-no-yuki.** Synonyms: 'Higo-fuji-no-yuki', 'Fuji-no-yuki-Higo'. Sport: **Kikarako.** Originated in Kumamoto Prefecture, Japan. For colour photos & description see pl.26, p.13, Tuyama, 1968, *Camellias of Japan* and p.132 & 244, Seibundô Shinkôsha, 1979, *Senchinshû,* also Hiratsuka, 1964, *Higo Camellia,* p.9 & 11 in English.

Fuji-no-yuki. (Snow on Fuji), (*C.rusticana*), *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.458, p.185, description, p.362: Leaves medium green, with wide, irregular margins of creamy yellow, lanceolate, apices sharply acuminate, bases cuneate, margins fine, sharp serrations, petiole hirsute. Growth spreading and weak. Flowers deep red, campanulate single, 6 petals, edges fluted, central stamen column, reddish filaments, golden anthers. Late flowering. Selected

from wild camellias in the Niigata Prefecture, Japan. Named and released by Jitarô Nagao. For other colour photos & description see p.132 & 244, Seibundô Shinkôsha, 1979, *Senchinshû* and p.208, Yokoyama & Kirino, 1989, *Nihon no Chinka.*

Fuji-no-yuki. (Snow on Fuji), *(C.hiemalis),* Shimada, Yaichi, 1957, *Kumamoto no Sazanka ni Tsuite, Dantairin;* Satômi, 1958, *Nomenclature List of Sasanqua of Japan,* p.8: White, blush on tips when beginning to bloom. Large, double. Originated in Kumamoto Prefecture, Japan. Selected and named by Matasaburô Tsuda, released by Shinji Shinoda in 1957. See JCS., 1988, *Tsubaki,* No.26, p.48 and Nokodai, 1974, *Nôjôhô,* p.40. Chinese synonym: 'Jieli'.

Fuji-no-yuki-Higo. Tuyama, 1968, *Camellias of Japan,* pl.26, p.92. Synonym for the Higo cultivar **Fuji-no-yuki.**

Fuji-no-yuki-Kansai. Tuyama, 1968, *Camellias of Japan,* p.92. Synonym for the *C.japonica* cultivar **Fuji-no-yuki.**

Fuji-otome. (Maiden under the Wisteria), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.8: Lavender colour. Large size, single with broad petals. Originated in Japan.

Fujisakigû. Different reading for 'Fujisakimiya', synonym for **Hachimangû.**

Fujisakimiya. Yoshimura Meika-en Nursery, *Higo Tsubaki Meikan* No.5, 1961. Synonym for **Hachimangû.**

Fuji-sakura. (Wisteria Cherry). *(C.hybrid). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.278 with colour photo; Bluish wisteria-pink, small single, tubular stamen ring. Flowers early to mid-season. Leaves lanceolate, small. Upright growth. A descendant of *C.saluenensis* hybrids, originated and named by Shinichi Noguchi, Tokyo, Japan, in 2005.

Fujisan. *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.641. Different reading for **Fuji.** Under the alternative reading 'Fujiyama' it has been erroneously applied as a synonym for **Nobilissima** in USA.

Fujisan. Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki,* described as a double, large, tubular stamens cluster and thought to be a synonym for the **Fuji-no-yama** from the *Kadan Chikinshô,* 1695.

Fujisankai. (Meaning obscure), *(C.japonica),* Yashiro, 1841; Ichijima, 1906, *Kokon Yôrankô,* vol.310, reprint. No description. Originated in Japan. (Believed extinct.)

Fuji-sazanka. (Wisteria Sasanqua), (*C.sasanqua*), Inazawa Nursery Co.Ltd Catalogue, 1980-1981, B16: White, many petals double. Originated in Japan.

Fujita-wabisuke. (Fujita's Wabisuke). (Wabisuke). *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.114. No details. From Kurume City, Japan.

Fujitomoe. (Fuji Whirl Pattern), *(C.japonica),* Kasuya, Kamegorô. 1859, *Tsubaki Irohanayose Irotsuki:* Pale red to purple. Four or five layers of petals in a whirl shape, medium size. Originated in Japan. (Believed extinct.)

Fuji-tsubaki. (Fuji Camellia), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.366: Small size, red and white, tubular single of 5 petals. Different reading: 'Huji-tsubaki'. Originated in Japan. (Believed extinct.)

Fuji-tsubaki. (Wisteria Camellia), *(C.japonica), Chinka Zufu* (before l700), Watanabe, 1969, pl.16: Medium size, red and white single of 7 petals with a central stamen column. Cup shaped. Different characters to camellia above. (Believed extinct.)

Fujitsubo-hime. (Princess Fujitsubo, a court lady of the middle ages), *(C.hybrid),* Hagiya, 1986, *Studies on Interspecific Hybridization of Camellias,* No.2, p.5, colour photo No.5, p.4: A seedling of

Barbara Clark x *C.lutchuensis,* originated by Dr Kaoru Hagiya, Niigata University, Japan. Flower: Small size, 5-6 cm across, light peach pink with the centre slightly deeper in colour; petals 15-16, ovate, overlapping, semi-double, Stamens approximately 30, anthers split, filaments white, fragrant. Early flowering in the leaf axils. Leaves small, venation and serration obscure. Plant habit spreading with slender branches.

Fuji-wabisuke. (Wisteria Wabisuke). (Wabisuke). *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.226 with colour photo; English translation p.158. Miniature, wisteria-purple red, sake cup-shaped single, degenerated stamens. Flowers early to mid-season. Leaves elliptic, medium size. Upright, vigorous growth. A natural seedling of **Funatsu**. Named and released by Takeo Ogawa in 1991.

Fujiyama. SCCS., 1954, *The Camellia. Its Culture and Nomenclature,* p.47. Different readings: 'Fujisan', 'Fuji-no-yama'. A pseudonym for **Nobilissima** in the USA.

Fujiyama White. Youtz, 1949, *American Camellia Yearbook,* p.188 as 'Fugiyama White'. A pseudonym for **Nobilissima** in the USA.

Fujizome-goromo. (Lavender Coat), *(C.sasanqua),* Satômi, 1958, *Nomenclature List of Sasanqua in Japan,* p.8: Deep pink, large double with round petals. Originated in Japan.

Fukachû-kakehashi. Different reading for **Shinchû-kakehashi.**

Fukachû-otome. Different reading for **Shinchû-otome.**

Fukachû-surugamiyage. Different reading for **Shinchû-surugamiyage.**

Fukadani. (Place of Origin), *(C.rusticana),* Tuyama, 1968, *Camellias of Japan,* pl.233, p.160 as 'Fukadani' Leaves ovate to lanceolate- elliptic, apices acute, margins crenate, midrib elevated, 8 cm long x 3.5 cm wide. Flower, complete double, petals incurved, hairy petals 3-5, normal 30-62, china-rose 024/1. Stamens and pistils undeveloped. Flowers mid-season to late. Originated in Fukadani, Yatsuochô, Toyama Prefecture, Japan.

Fukai-nishiki. (Unopened Brocade), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* black and white illustration and description, p.201. Seibundô Shinkôsha, 1979, *Senchinshû,* pp.130, 243, colour photo & description: Red, tubular, large semi-double, opening to campanulate. Many flowers do not open fully. A few white marks, 16-18 petals, uneven, notched, some petaloids mixed with the central stamens. Flowers mid-season. Leaves long-oval, apices acuminate, large, shallowly but sharply serrate, flat. Originated by Minagawa in the Kantô District, Japan.

Fukakusa-no-shôshô. (Commander of Fukakusa), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.6 as 'Fukakusa-no-syosyô': Small size, vivid red, campanulate single. Late blooming. Originated from a wild japonica in Hagi City, Yamaguchi Prefecture, Japan. Collected by Jûrô Saneyasu, named and released by Shigeru Yoshimatsu in 1984. Different reading: 'Fukakusa-no-syôsyô'.

Fukashigi. (Mysterious). *(C.hybrid). Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.287 with colour photo; Pale pink bordered white, veins noticeable, large semi-double. Petals long, narrow, rounded and in separated layers. Flowers mid-season to late. Leaves narrow-elliptic, medium size. Upright growth. A sport of **Hô'ô,** named and released by Soshin Hirai, Saitama Pref, Japan, in 2005.

Fukaya-komachi. (Beauty of Fukaya), *(C.japonica),* Seibundô Shinkôsha,1979, *Senchinshû,* p.130, colour photo, p.243, description: Large size, soft pink, semi-double of lotus form, with crimson streaks. Petals in 3-4 rows, 18-20, with a centre cluster of short stamens with the odd petaloid, yellow anthers, light yellow filaments. Blooms mid-season. Leaves, medium size, long-oval, wavy. Originated in the Kantô District, Japan. Named and released by Noboru Shimizu in 1975.

Fûki. (Wealth & Honor), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Large, formal double, red flower. *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.111: Rose form to formal double with numerous, imbricated, small petals of soft, pale pink. Different readings: 'Fukki', 'Huki', Hûki', 'Fuki'. Originated in Japan. (Believed extinct.)

Fûki. (Wealthy and Noble). (Higo). *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.237 with colour photo; Pale pink, large flat single. Filaments pale yellow, ume-jin (apricot type). Flowers mid-season to late. Leaves elliptic, large, dark green. Upright, vigorous growth. A cross of **Mangetsu** x **Takasago**, made by Tomoya Nishimura, Kumamoto Pref., Japan, and recognised by the Higo Camellia Society in 1999.

Fukiage. (Place name), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô;* for this see: 1964, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.5, p.78: Deep red stripes on pale pinkish white ground, double. Resembles **Fukiage-shibori.** Originated in Japan. Different reading: 'Hukiage'. (Believed extinct.)

Fukiage-chôja. (Fountain Wealth), *(C.japonica),* Himuro, Shôji, 1982, *Murasuzume:* Soft pink, striped rose. Anemone form. Originated in Kanagawa Prefecture, Japan by Himuro.

Fukiage-shibori. (Dappled Fountain), *(C.japonica),* Uesa, 1844, *Sômoku Benran:* Single, white with red stripes, medium size. *Encyclopedia of Camellias in Colour,* vol.I, 1972, photo No.345, p.150, description, p.342: Medium size, semi-double with 14-16 petals, white with crimson stripes. Similar to **Ezo-nishiki** but clearer stripes. Flowers 9-11 cm across with long, slender petals, the inner semi-erect. Sometimes produces a bright red sport. Leaves mid-green, elliptic, apices long-acuminate, recurved, margins coarsely, sharply serrate, strongly wavy. Vigorous, upright growth. Different reading: Hukiage-shibori'. This is an old cultivar from Tanushimaru Machi, Ukiha Sub-prefecture, Fuku'oka Prefecture, Japan. Synonyms: 'Tanushimaru'. Another synonym 'Ehigasa'. See Tuyama, 1966, *Camellia Cultivars of Japan,* pp.334, 479, pl.191 as 'Tamushimaru'. Chinese synonym 'Chuishangjiao'.

Fukibeni. (Red Splashed), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Semi-double in two rows, petals incurved, red with white spots, streaks and splashes. Originated in Japan. Different reading: 'Hukibeni'.(Believed extinct.) See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.78.

Fuki-fude. Fendig, 1953, *American Camellia Catalogue.* Corruption of the Japanese name **Nuki-fude.**

Fûkihime. (Noble Princess), *(C.japonica),* Tuyama, 1968, *Camellias of Japan,* pl.178, p.90, description, p.141: Leaves variable, oblong to rhomeo-elliptic to narrow-obovate, apices finely acuminate, margins depressed crenate, 8 cm long x 4.3 cm wide. Flowers semi-double, inner much smaller, red (Carmine 21/1), hairy petals 3, normal 8-15, obovate, shallowly emarginate, inner petals wavy. Androecium 3.7 cm high, often divided into 4 or 5 groups, intermingled with irregular, small petals and petaloids. Late flowering. Different reading 'Hukihime'. Originated in Momoyama, Fushimi-ku, Japan.

Fukizutsumi. Yokohama Nursery Catalogue,1891. Orthographic error for **Fukuzutsumi**

Fukki. Andoh, 1984, *International Camellia Journal,* No.16, p.48. Different reading for **Fûki.**

Fukudô. (Fortune's Child), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.243: White variegation on red ground, single, campanulate with cylindrical stamens. Medium size. Mid-season to late flowering. Leaves small, obovate, apices blunt acute, gently curved, small serrations. Plant habit side spreading. Selected from wild japonicas in Ogôri City, Fuku'oka Prefecture, Japan. Named and released by Katsumi Miyahara in 1975.

Fukudo-no-homare. (Fukudô's Pride). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.114. No details. From Kurume City, Japan.

Fukudzutsumi. Tokio Nurseries Catalogue, 1896. Different reading for **Fukuzutsumi.**

Fukuen. (Happy Flame). *(C.reticulata* hybrid) *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.283 with colour photo; Large, peach red, peony form with stamens dispersed among the irregular petals. Flowers mid-season. Leaves elliptic, medium size. Upright growth. Selected from seedlings of **Flower Girl.** Originated by Shunsake Hisatomi, Fukuoka Pref., Japan in 2002.

Fukugasane. (Heaps of Fortune), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.47, colour photo and description: Medium to large size, anemone form, red with white blotches, 7-9 large, rounded guard petals surrounding a compact, anemone centre. Leaves broad-ovate, apices acuminate, dark green, venation obscure. Originated in Chûbu District, Japan.

Fukuhisa. (Personal Name). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.222 with colour photo; English translation p.155. Small, pink, tubular to trumpet-shaped single, cylindrical stamen column. . Flowers mid-season to late. Leaves elliptic, small, somewhat flat, recurved. Somewhat upright growing. A natural seedling of unknown parentage. Named and released by Inokichi Fukuhisa in 1965.

Fukujin. (God of Fortune), *(C.japonica),* Wada, 1941, *Japanese Garden Treasures,* p.28: Single, funnel, campanulate, large; exquisite, palest shell pink. Originated in Japan. *Meaning is obscure as Kanji is not shown in Wada's catalogue.

Fukujuji-akayabu. (Wild Red Camellia of Fukujuji Temple), *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.30 with colour photo; Rose red tubular single, medium size. Vigorous, somewhat spreading growth. Branches zigzag shaped. Leaves medium size, elliptic, and recurved at both extremities. Tubular stamen cluster with yellow anthers and red filaments. Flowers mid-season to late. A 300 year old tree at the Fukujiji Temple, Aikawa-machi, Japan.

Fukujuji-norikoboshi. ('Norikoboshi' of Fukujuji Temple). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.221 with colour photo; English translation p.155. Medium size, deep red mottled white, sake cup-shaped single. Flowers early to late. Leaves elliptic, somewhat small. Somewhat spreading growth. A natural seedling collected at Fukujuji Temple in Inuyama City. Named and released by Minoru Satô in 1976. From Aichi Prefecture.

Fukujuji-yae-tsubaki. (Double Camellia of Fukujuji Temple). *(C.japonica), "Camellias in Kurume",* ICS Congress, Kurume 2010, p.23; Deep rose, large size, double. A 200 year old tree from Aikawa-machi, Japan.

Fukumitsu. (Name of Town where found). *(C.rusticana), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.222 with colour photo; English translation p.156. Small, deep red single. Anthers blacken at place of origin, closed stamen cylinder on the Pacific side of Japan. Flowers early to late. Leaves narrowly elliptic, medium size. Spreading growth. Selected in the growing area of *C.japonica ssp. rusticana* in Fukumitsu Town. Named and released by Takeo Ogawa in 1979. From Toyama to Izu Ôshima.

Fukumitsu-no-shiro. (White from Fukumitsu), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.56, colour photo and description: Small to medium size, white, wide campanulate single of 5 broad, rounded, reflexed, overlapping petals and a central stamen cylinder with greenish tinted filaments, joined for the lower third, and golden anthers. Blooms early to mid-season. Leaves dark lustrous green, broad-lanceolate, margins coarsely serrate. Originated in Fukumitsu Town, Toyama Prefecture, Japan. Named and released by Toyama Rusticana Lovers Club in 1980.

Fukumusume. (Happy Maiden), *(C.japonica),* Watanabe, 1961, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.2, p.28; Tuyama, 1968, *Camellias of Japan*, pl.117; Yokoyama et al.1975, *Gendai Tsubaki Meikan*, p.201; Seibundô Shinkôsha,1979, *Senchinshû,* p.131: Leaves dark green, ovoid, thick, strongly serrate, shortly acuminate. Flowers pink, (Spirea red 025/3) semi-double, widely cup-shaped, inner petals somewhat irregular. Stamen cluster widens at apex, sometimes divides into 2-3 groups, filaments white. Late flowering. See colour photo, p.308, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Discovered as a natural seedling in Kurume, Fuku'oka Prefecture, Japan in 1953 and named by Tamura, Teruo. Different reading; 'Huku-musume'.

Fukuno-botan. (Fukuno Peony), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List*, p.6. No description. Originated in the Toyama Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.222 with colour photo; English translation p.155. Large, pink with white border and small stripes, peony form. Late flowering. Leaves somewhat narrowly elliptic, somewhat large. Upright, vigorous growth. A cultivar at a private family in Fukuno Town, Higashi-tonami District. Named and released by Keiji Tsukamoto in 1980s. From Toyama Prefecture.

Fuku-no-hami. Fendig,1953, *American Camellia Catalogue.* Corruption of the Japanese name **Fukuno-kami.**

Fuku-no-kami. (God of Happiness), *(C.sasanqua),* Chûgai Nursery Catalogue, 1938-1939, p.20: Pink double, irregular shaped, large flowers. Originated in Japan.

Fukurasuzume. (Fluffed up Sparrow), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.131, colour photo, p.244, description: Round, almost spherical, soft pink, single with a wide group of about 80 light yellow stamens. Flowers early. Leaves dark green, ovate, small, flat. Originated in the Sabae City, Fukui Prefecture, Japan. Named and released by Tokuji Ôoka in 1970s. Fukura-suzume is also the name of a decorative knot for the obi sash for girls.

Fukurasuzume (Niigata). (Sparrow of Fukura). *(C.hybrid). Nippon Tsubaki - Sasanqua Meikan*, 1998, p.223 with colour photo; English translation p.156. Miniature, deep pink to peach red, anemone to rose form double, profuse flowerer. Flowers early to mid-season. Leaves elliptic, small, recurved. Spreading growth. A cross between *C.hiemalis* and *C.hybrid* **Tiny Princess.** Named and released by Kaoru Hagiya in 1978. From Niigata Prefecture.

Fukurin-akinoyama. (Bordered **'**Aki-no-yama'), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan*, p.202; Seibundô Shinkôsha, 1979, *Senchinshû,* colour photo, p.131, description, p.244: Small size, campanulate single of 5-6 petals, colour pink with a white border, or white with red variegations or pink with a white edge. Early flowering. Leaves long-ovate, medium size, margins shallowly serrate, strongly wavy and twisted. Plant habit erect and vigorous. See colour photo, p.263, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated in the Kantô District, Japan. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.223 with colour photo; English translation p.156. A sport of **Aki-no-yama**. Named by Totsurô Nakamura in 1972.

Fukurin-benikarako. Williams & Thompson, 1950, Star Camellia Nursery, *American Camellia Yearbook*, p.41. No description. However from the name, "Fukurin" = ornamental border; "beni" = red; and "karako" = a tight anemone centre. This cultivar was imported from Japan to California by Mr Uyematsu of the Star Nursery in 1930. The name is a synonym for **Kifukurin-benikarako.**

Fukurin-benten. Yûsuke Sakata & Ken-ichi Arisumi, 1983, *International Camellia Journal*, No.15, p.20: A small size, red, single with a white border and variegated leaves. Synonym for **Kifukurin-benten.**

Fukurin-edo-nishiki. (Bordered Tokyo Brocade), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.II, 1978, colour photo No.413, p.166, description, p.258: Medium size, semi-double, deep pink at haft of petal, fading out through deeper venation, to very pale pink at margin, with 16-18 long, narrow petals in 3 rows in a lotus flower shape; outer petals rounded with the inner somewhat erect and pointed, surrounding a cylinder of stamens, with golden anthers and cream filaments. Late flowering. Leaves dark green, long-ovate, apices acminate, reflexed, strongly wavy with edges under-curved and margins shallowly, sharply serrate. A sport of **Edo-nishiki.** See colour photo, p.349, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated in the Kantô District, Japan. Note: This appears identical to the **Lady Vansittart** sport **Yours Truly.**

Fukurin-esugata. (Bordered Esugata). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.223 with colour photo; English translation p.156. Pink, bordered white, semi-double, medium to large. Flowers mid-season to late. Upright growth with dense branches. A variegated sport of **Esugata.** Named and released by Minoru Satô in 1976. From Aichi Prefecture.

Fukurin-futa'ezuru. (Margined 'Futa'ezuru'), *(C.japonica),* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.1, p.55 as 'Hukurin-hutae-zuru'. No description; however this is a descriptive name: "Fukurin" = bordered; "futae" = double and "Zuru" is the white Japanese Crane with the red crest. A white bordered sport of the cultivar **Futaezuru.** Originated in Japan.

Fukurin-hanamiguruma. (Bordered 'Hanamiguruma'), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.244: White ornamental borders are produced with vertical red stripes on a pale pink ground. A medium size, single, with a whorl of stamens. Flowers early. Leaves medium size, dull green, wide-ovate, thick, apices blunt-acute, flat. Mutation of **Hanamiguruma** from Chûbu area, Japan. Resembles **Shôwa-no-hikari.**

Fukurin-haru-no-utena. (White-bordered 'Haru-no-utena'), *(C.japonica),* Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.431; No description. Chinese synonym 'Fulun Chunzhitai'. *"Camellias in Kurume",* ICS Congress, Kurume 2010, p.114. No description. From Kurume City, Japan.

Fukurin-hina-wabisuke. (Margined 'Hina-wabisuke'), (Wabisuke), Inazawa Nursery Co. Ltd Catalogue, 1984-1985, p.4, A-155: Light red small single, the petals bordered with white. A mutation of **Hina-wabisuke** which itself is a sport of **Shiro-wabisuke.** Originated in Japan.

Fukurin Ikky. Fendig, 1953, *American Camellia* Catalogue. Corruption of the Japanese name **Fukurin-ikkyû.**

Fukurin-ikkyû. (Bordered 'Ikkyû'), (*C.rusticana*), Kasuya, Kamegorô,1859, *Tsubaki Irohanayose Irotsuki* in the section on variegated leaves. Itô, Ko'emon, 1879, *Chinkashû: A* variegated sport of **Komomiji.** Leaves lanceolate, long, apices acuminate, variegated olive-green with small areas of dark green in the central part of the leaf blade. impressed venation, recurved. Flowers, double, smaller than **Komomiji,** white or pale pink, shaded deeper pink with a white border, or red in various degrees up to solid red as in colour photo No.351, p.194, *Camellias of Japan* by Tuyama, 1968. Late flooming. See colour photo & description, p.348, 349, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Tuyama, 1966, *Camellia Cultivars of Japan,* pl.7, p.18; Seibundô Shinkôsha, 1979, *Senchinshû,* p.131 & 244. Originated in Kantô area, Japan. Different reading: 'Hukurin-ikkyû'. Western corruption of the name: 'Fukurin ikky'. Chinese synonym 'Fulun Yixiu'.

Fukurin-kyôbotan. (Bordered 'Kyôbotan'), (C.*japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.131, colour photo, p.244, description: A large size, open, peony form with petals finely marked and veined pink towards the heft and a wide, white border. Stamens are intermixed with erect

centre petals. Leaves oval to long-oval, medium size, apices acuminate, smooth. Plant habit is spreading, of average vigor. A sport of **Kyôbotan,** originated in Kantô area, Japan. Sports: **Kôkirin, Fuiri-kôkirin.**

Fukurin-meigetsu. (Bordered 'Meigetsu'), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu:* Large, white, red bordered flowers. Originated in Japan.

Fukurin-nishiki-mino. (Bordered 'Nishiki-mino'), *(C.japonica),* Nakamura, Tsuneo, 1965, *Tsubaki to Sazanka; Encyclopedia of Camellias in Colour,* vol.I, 1972, colour photo, No.384, p.163, descriphon, p.349: A pink sport of **Shibori-karako,** synonym 'Nishiki-mino'. The flower is a medium size, anemone form with 5 outer guard petals of pink with the odd crimson mark and a paler margin. The centre is typical 'karako' (anemone) type with a tight cushion of small, erect, folded petaloids. Originated in the Kansai District Japan. Synonym: 'Fukurin-shibori-karako' as p.244, Seibundô Shinkôsha, 1979, *Senchinshû.* This is its popular name in the Kantô District.

Fukurin-otome. (Bordered 'Otome'), *(C.japonica),* ICS., apr.1990, *Japanese Camellia Cultivar List,* p.6: No description. Originated in the Kagawa Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.223 with colour photo; English translation p.156. Medium size, formal double, pink bordered white, occasionally with red stripes. Flowers mid-season to late. Leaves elliptic, medium size, somewhat recurved, thick. Upright, vigorous growth. Selected from cultivars raised by a private family in Mure Town. Named and released by Saneichi Koyama in 1990. From Kagawa Prefecture.

Fukurin-shibori-karako. Seibundô Shinkôsha, 1979, *Senchinshû,* p.131, colour photo, p.244. Synonym for **Fukurin-nishiki-mino.**

Fukurin-Shichijin-benten. (Bordered 'Shichijin-benten'), *(C.japonica),* Kaoru, Hagiya, 1979, *Tsubaki no Sazanka,* p.27, No.1: Irregular leaves, green with irregular, narrow, yellow margins. No serrations. Originated in Niigata Prefecture, Japan.

Fukurin-shokkô. (Bordered 'Shokkô'), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.I, 1972, colour photo No.148, p.85, description, p.313: A pink sport of **Shirayuki** with white edges of the cultivar **Shokkô-nishiki.** A 6 petalled, cup-shaped single with large petals, a little fluted and irregular. Colour a soft pink, finely veined deeper pink with an irregular, white border to the edge of each petal and an occasional red streak or patch. A large, cylindrical, central cluster of stamens, spreading towards the apex in a ring form, yellow anthers, off-white filaments. Flowers early to mid-season. Leaves dark green, leathery, broad-ovate, apices blunt acute, recurved, finely serrate. Plant habit erect and vigorous. Originated in the Kansai area, Japan. Synonym: 'Yukari-no-iro'. Different reading: 'Fukurin-syokkô'. See colour photo & description, p.269, Yokoyama & Kirino, 1989, *Nihon no Chinka;* Seibundô Shinkôsha, 1979, *Senchinshû,* p.131 & 244.

Fukurin-syokkô. Satô, 1975, *Chûbu no Tsubaki,* p.109, colour photo. Different reading for **Fukurinshokkô**.

Fukurin-uraku. (Bordered 'Uraku'). (Wabisuke). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.223 with colour photo; English translation p.156. Small, pink bordered white, tubular single cylindrical stamens mixed partly with infertile anthers. Flowers mid-season to late. Leaves narrowly elliptic, medium size. Upright, vigorous growth. A natural seedling of **Tarôkaja** ('Uraku'). Named and released by Ikuo Nishihata in 1990. From Nara Prefecture.

Fukurin-wabisuke. (Bordered 'Wabisuke'), (Wabisuke), Mainichi Shinbun, JCS.,1971, *Tsubaki,* p.119; Satô, 1975, *Chûbu no Tsubaki,* p.21, colour photo; Seibundô Shinkôsha, 1979, *Senchinshû,* p.132, colour photo, p.244, description: A soft pink, fading to very pale pink at the petal edge, campanulate single of 5 petals and a central column of stamens, pinched in at the apex.

Flowers early to mid-season. Ovaries densely, silky tomentose. Leaves matt green, thick, narrow-elliptic, apices caudate, margins serrulate, petioles hirsute. Different reading: 'Hukurin-wabisuke'. A sport of **Hatsukari** from the Chûbu area, Japan. Named and released by Minoru Satô in 1960. See colour photo, p.262, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Small trumpet shaped single, with cylindrical, degenerate stamens. Pink flowers margined white. Flowers early to mid-season. A pink sport of **Hatsukari** is called **Momoiro-shôwa-wabisuke** and a pink margined white is called **Fukurin-wabisuke.** They are identical to **Hatsukari** in flowering season, growth and leaf shape. Sport: **Momoiro-shôwa-wabisuke.**

Fukurin-washi-no-yama. (Bordered 'Washi-no-yama'), *(C.japonica), Encyclopedia of Camellias in Colour:,* vol.I, 1972, colour photo, No.133, p.80, description, p.310: A sport of **Washi-no-yama.** A campanulate single of 6-8 petals, 7 cm across, coloured a veined pink, fading to almost white at the petals margins. Leaves obovate-elliptic, dark green, size medium to small, apices acute, reflexed, venation impressed, margins finely serrate. Flowers early. Originated in the Kantô area, Japan. See Seibundô Shinkôsha, 1979, *Senchinshû,* p.132 Orthographic error 244.

Fukurin-yûzuru. (Bordered 'Yûzuru'), *(C.rusticana), Encyclopedia of Camellias in Colour,* vol.II, 1978, colour photo No.438, p.173, description, p.261: A loose, anemone form to open peony form bloom, with 15-25 outer petals in 2-3 rows, medium size. Petals somewhat reflexed, margins a little irregular, colour deep rose-pink with fine venation and a distinct, irregular, white border around each petal and an occasional red stripe. The centre consists of an intermingling of stamens and petaloids. Leaves dull green, ovate, outward curved, medium size; petioles hirsute. Plant habit spreading and slow growing. A sport of **Yûzuru,** originated in Niigata Prefecture, Japan. Named and released by Tokuji Ôoka in 1970s. See Seibundô Shinkôsha, 1979. *Senchinshû,* p.132 & 244.

Fukushima. (Place name), *(C.sasanqua),* Itô Jukyû, 1739, *Honzô Hanamaki'e,* vol.16: Purplish red, semidouble, large. Originated in Japan. (Believed extinct.)

Fukushima-beni. (Fukushima Red), *(C.sasanqua),* Yashiro, 1841, *Kokon Yôrankô,* vol.344. No description. Different reading: 'Fukushima-kô'. Originated in Japan. (Believed extinct.)

Fukushima-kô. Different reading for **Fukushima-beni.**

Fukushima-yuri. (Fukushima Lily), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.175, colour photo and description: Medium size, bright red, campanulate single, with 5 ovate, emarginate, reflexed petals in a lily form, and a central stamen column with pinkish filaments, joined for the lower half, and bright yellow anthers. Blooms mid-season to late. Leaves mid--green, elliptic to broad-elliptic, margins rolled or twisted, obscurely serrulate. Selected from wild japonicas in Tabira Town, Fukushima-chô, Nagasaki Prefecture, Japan. Discovered and released by Sadao Tokuda in 1981.

Fukusutsune. Cobland's Nursery Catalogue, 1985-1986. A corruption of the Japanese name **Fukuzutsumi.**

Fuku-suzume. (Fortunate Sparrow), *(C.sasanqua),* Hakoda, 1974, *Nôkôdai Nôjôhô,* No.6, p.40; JCS., 1987, *Tsubaki,* No.26, p.44; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Medium size, white, semi-double. Blooms mid-season to early. Originated in Tokyo, Japan with the Seto family.

Fukutsuzumi. (Fortune's Hand Drum), *(C.japonica),* Andoh, 1971, *Tsubaki Meika no Shôkai to Saibai,* p.216; Seibundô Shinkôsha, 1979, *Senchinshû,* colour photo, p.130, description, p.243: Campanulate single of 5 deep red petals, with a slight orange cast and some white markings. The central stamen column is compact and pinched in at the apex. Anthers yellow, filaments red. Late blooming. Leaves dark green, elliptic, recurved, apices short acuminate, venation

obscure. A variegated form of **Kuro-wabisuke** (Synonym: 'Eiraku'). Originated in Chûbu area, Japan. Named and released by Minoru Satô in 1969. See colour photo, p.247, Yokoyama & Kirino, 1989, *Nihon no Chinka.*

Fukuwarai. (Happy Smile), *(C.sasanqua),* Hakoda, 1974, *Nôkôdai Nôjôhô,* No.6, p.40; JCS., 1987, *Tsubaki,* No.26, p.44; Yûsuke Sakata & Ken-ichi Arisumi, 1983, *International Camellia Journal,* No.15, p.22. No description. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.33: Medium size, white flushed red graduation towards the margins, single. Originated in Kumamoto Prefecture,Japan.

Fukuwarai. (Happy Smile), *(C.rusticana),* Yokoyama et al., 1975, *Gendai Tsubaki Meikan,* p.203; Seibundô Shinkôsha, 1979, *Senchinshû,* p.196: Double to peony form, medium to large size, peach pink with fine red veins, late flowering. Leaves thick, serrations prominent, petioles hirsute, stamens wide spread. Originated in Tsugawa-chô, Niigata Prefecture, Japan. Resembles **Akai-tsubasa.**

Fuku-wa-uchi. (Come in Lucky), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.254, colour photo and description: Medium size, faint pink ground with a peppering and small splashes of red and pink, open, cup-shaped, semi-double, with 2 rows of rounded, emarginate petals and a short, central stamen cylinder, with white stamens, joined for the lower third, and yellow anthers. Blooms early to late. Leaves dark green, broad-ovate, apices blunt acute, margins serrulate. Originated in the Chûbu area, Japan. In early spring, February 6th, during "Setsubun Festival", to welcome the first day of spring and send out the last day of winter, children scatter beans to scare away the devil of winter and cry "Fuki-wa-uchi" and "Oni-wa-uchi", meaning "Come in lucky" & "Go away devils". *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.222 with colour photo; English translation p.155. A cross between **Shûfûraku** and **Kotobuki.** Named and released by Minoru Satô in 1986.

Fukuzen. (Place Name), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.130, colour photo, p.243, description: A trumpet shaped single with 6-7 petals of soft pink and a compact, central column of stamens. Leaves light green, elliptic to obovate, flat, apices acute, margins fine, shallow serrations. Mid-season flowering. Plant habit horizontally spreading. Originated in Ehime Prefecture, Japan.

Fukuzuksumi. da Silva & Filhos Nursery Catalogue, 1959-1960. Corruption of the Japanese name **Fukuzutsumi.**

Fukuzutsuki. da Silva & Filhos Nursery Catalogue, No.49, 1927, p.27. Corruption of the Japanese name **Fukuzutsumi.**

Fukuzutsumi. (Bundle of Fortune), *(C.sasanqua),* Minagawa, Iza'emon, 1885, *Nisshôen Chabaifu:* White, large, cup-shaped flower. Originated in Japan.

Fukuzutsumi. (Bundle of Fortune), *(C.sasanqua),* Yohohama Catalogue, 1891, p.9: Red and white, large single; Yokoyama Nursery Catalogue, 1895, p.13: Large, spotted. 7.5 cm across. Different readings: 'Fukutsutsumi', 'Hukuzutsumi', 'Fukudzutsumi'. Western corruptions: 'Fukusutsune', 'Fukuzutsuki', 'Fukizutsumi', 'Fukuzuksumi'. Synonyms: 'Chandler's Special', 'Flamingo', 'Zerbe', 'Zerbia", 'Hodgins Special Pink', 'No Mene' and, erroneously 'Apple Blossom'. The clone distributed in Australia and the USA was originally imported from the Yokohama Nursery Co. by Basil Hodgins, a Victorian nurseryman, and from there was sent to W. Wylams, California. See p.XI, Hertrich's *Camellias in the Huntington Gardens* vol.III, 1959. There remains a doubt that it is identical to the present Japanese cultivar of the same name. Chinese synonym 'Fugu'.

Fukuzutsumi. (Bundle of Fortune), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû:* Red semi-double, large cup-shape. Originated in the Kantô District, Japan. Synonymous with **Mai-no--sode.**

Fukuzutsune. Cobland's Nursery Catalogue, 1985-1986, p.56, Corruption of the Japanese name of **Fukuzutsumi.**

Fulaideli. Gao, Jiyin, 1993, *The Observations from the Camellia World,* No.507, p.65 Chinese synonym for the USA *C.reticulata* hybrid **Fred Lee.**

Fulangxi. Chinese synonym for USA *C.reticulata* hybrid **Francie L.**

Fulgens. *(C.japonica),* Prince, 1828, *A Short Treatise on Horticulture,* p.169. No decription. Harrison, ed., 1835, *The Floricultural Cabinet,* p.186: British hybrid with dark red flowers. Buist, 1832, *American Flower Garden Directory*, p.79: Flower large and very bright red double, approaching 'Atrorubens' but more brilliant. Foliage a lucid green, very smooth, young wood and wood buds have a reddish appearance. We have no doubt that it will set seed. Berlèse says that it came from England as a seedling of 'Rubra Simplex'. Prince, 1844, p.104, gives 'Fulgida' as synonym, but Berlèse in his 1837 *Monographie* lists and describes **Fulgens** and **Fulgida** as two separate and distinct cultivars and in his description of **Fulgens** says "There is another flower which bears the same name, the flowers of which are double, large and beautiful." It believed that this is **Fulgens d'Italie,** listed in the van Houtte Catalogue, 1841, 7:8. Synonym: 'Fulgens Anglais'.

Fulgens Anglais. *Société deFlores Catalogue,* 1838. Synonym for **Fulgens.**

Fulgens d'Italie. *(C.japonica).* van Houtte Catalogue,1841, 7:8. No description. van Houtte Catalogue, 1844-1845, 18:12: Vivid red with white stripes; imbricated. Vershaffelt, 1853, *Nouvelle Iconographie*, Book V, pl.I as 'Fulgens Plenissima': A vivid colouring, numerous and serried petals with a tendency to form a 6 pointed star, and the white streaks, sometimes striated with purple, which separate them longitudinally. Synonyms include: 'Fulgens Superba (Novae)', 'Fulgens Nova', 'Fulgens Doppio', 'Fulgens Italica', 'Duchesse de Parme', 'Fulgens d'Italia', 'Fulgens Italica Nova', 'Plutone Nova', 'Plutone Vera', 'Fulgens Plenissima', 'Duc de Parma'. Originated in Italy.

Fulgens de Gand. Jacob Makoy, 1852, Catalogue, p.5 as synonym for **Rubricaulis.**

Fulgens Doppio. Scarlatti Catalogue, 1856. Synonym for **Fulgens d'Italie.**

Fulgens Grandiflora Nova. *(C.japonica),* Vershaffelt Catalogue, No.50, 1844, p.20. No description. (Believed extinct.)

Fulgens Italica. Burnier & Grilli Catalogue, 1846-1847. Synonym for **Fulgens d'Italie.**

Fulgens Italica Nova. Trillon, Le Mans Nursery Catalogue, 1843, p.5. Synonym for **Fulgens d'Italie.**

Fulgens Nova. van Houtte Catalogue,1844:1845, 23:5. Synonym for **Fulgens d'Italie.**

Fulgens Plenissima. Jacob Makoy et Cie Nursery Catalogue, 1841, p.10. Synonym for **Fulgens d'Italie.**

Fulgens Striata. *(C.japonica),* Verschaffelt Catalogue, 1847-1848, p.57. No description. (Believed extinct.)

Fulgens Superba (Novae). Harrison ed., 1849, *The Floricultural Cabinet,* vol. 17, p.76. Synonym for **Fulgens d'Italie.**

Fulgent Flowered. Prince & Co., 1828, *A Short Treatise on Horticulture,* p.169. Synonym for **Fulgens.**

Fulgentissima. *(C.japonica),* Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:315; No description. Berlèse, 1837, *Monographie,* ed.1, p.75: Leaves 5 cm wide x 7.5 cm long, very acuminate, of a delicate green; flower double, very large, 8-10 cm across, cherry red; exterior petals in 3 rows, broad, those of the middle, long, narrow, in strips, crowded, striped with white and intermingled with stamens. Resembles **Cliviana.** Originated in Belgium. Synonym: 'Plutone Nova'.

Fulgida. *(C.japonica),* Jacob Makoy et Cie Nursery Catalogue, 1833. No description. Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:315. No description. Berlèse, 1837,*Monographie,* ed.1, p.95, 125: Leaves 8 cm long x 5.5 cm wide, round-ovate, a little acuminate, reflexed, venation prominent, deep green; buds large, elongated, scales green; flower 8 cm in diameter, single with 6 petals, deep cherry-red, broad, slightly curled, resembling **Spatulata.** Originated in England.

Fulikoana Makino. Satômi, 1958, *Nomenclature List of Sasanqua of Japan,* p.6. Japanese name for *C.hiemalis* Nakai. Synonyms 'Kantsubaki' and 'Shishigashira'.

Fuljung. Burdin, Chambery Nursery Catalogue, 1834, p.19. Orthographic error for 'Futtung'; synonym for **Rawesiana.**

Fuljung Webbiana. Tagliabue, 1840, *Nomenclatore Camelliae*....Synonym for **Webbiana.**

Full House. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1964-1965, p.6. No description. SCCS., 1974, *Camellia Nomenclature,* p.63: White, occasionally streaked or splashed with pink. Large, rose form double, often showing a tuft of small petals in the centre. Willowy growth. Flowers mid-season. Originated in the USA by Ashby about 1960. Sport: **Full House Pink.**

Full House Pink. *(C.japonica),* Gentry, 1977, ACS., *The Camellia Journal,* vol.32, No.4: A solid pink form of **Full House.** Originated in USA.

Full Moon. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Light pink, flecked and striped deeper pink. Medium size, rose form double. Flowers mid-season. Originated in the USA by Camellia Hall Nursery.

Full Moon. Yashiroda, 1950, *American Camellia Yearbook,* p.16. Synonym for the *C.sasanqua* **Meigetsu.**

Full Moon. *Camellias,* Y.C. Shen, 2009, p.215. Synonym for **Mangetsu.**

Fulling. Baumann, Mulhouse Nursery Catalogue, 1841-1842, p.14. Orthographic error for 'Futtung', synonym for **Rawesiana.**

Fultoniana. van Houtte Catalogue, 1841, 7:8. Synonym for **Fultonii.**

Fultonii. *(C.japonica),* Buist, 1852, *American Flower Garden Directory,* p.211 : Pale, waxy rose, regular flower of medium size; profuse bloomer. Originated in USA. Synonym: 'Fultoniana'.

Fully Double Peony. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Synonym for **Juanban Mudan.**

Fultung. Trillon, Le Mans Nursery Catalogue, 1843, p.5. Orthographic error for 'Futtung', synonym for **Rawesiana.**

Fulun Chunzhitai. Gao, Jiyin, 2007, The Identification....Outstanding Camellias, Chinese synonym for the unrecorded variety 'Fukurin-haru-no-utena'.

Fulun Yixiu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.431; Chinese synonym for the Japan *C.japonica* **Fukurin-ikkyû.**

Fumaikô. Seibundô Shinkôsha, 1979, *Senchinshû,* p.207. Synonym for **Kasenzan.**

Fumon-in. (Fumon Temple), *(C.japonica).* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.66, colour photo and description: Small to medium size, faint pinkish white, tubular to campanulate single of 5 emarginate, petals, becoming reflexed, and a short, compact, central stamen column with white filaments, joined for the lower half, and yellow anthers. Late blooming. Leaves thick, lustrous, deep green, elliptic, apices acuminate, margins shallowly serrate. Originated in Matsu'e City, Shimane Prefecture, Japan. Released by San-in Camellian Club around 1980.

Fumoto-no-haru. (Spring at the Foot of the Mountain). *(C.japonica), Kurume Camellia,* 1997, English translation, p.7; Pink single. Tubular Stamen cluster. Flowers mid-season. Named by K. Miyahara.

Funabashi. Seibundô Shinkôsha, 1979, *Senchinshû,* p.211. Synonym for **Gin-no-takara.**

Funaimachi. (Obscure), *(C.japonica),* Mizuno, 1681, *Kadan Kômoku.* Double, red ground; textured. Originated in Japan. Different reading: 'Hunaimachi'. (Believed extinct.) See JCS., 1965, *Tsubaki,* No.5, p.28.

Funae. (Boat Harbour), *(C.rusticana),* Izu-Ohshima Hawaii Botanic Garden Catalogue, 1980. No description. Originated in Japan.

Funaki-beni. (Funaki's Red Sasanqua) (*C.hiemalis*) from Tokyo, *Sazanka, Winter Flowers* published by National Museum of Japanese History in 2001. Deep red, single, small, blooming early to mid-season. Flower shape resembling that of wild japonica. Leaves dark green. Tree upright growth with dense branching. Has been grown at Funaki Nursery in Tokyo, history unknown in detail.

Funan. Different reading for 'Bunan'.

Funatsu. (Originator's Name), (Wabisuke), JCS., 1979, *Tsubaki,* No.18, p.6, 8; Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû,* No.11, p.87, 88; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.122, colour photo and description: Small size, light pink, campanulate single of 6 emarginate, crinkled, overlapping petals and a short, central stamen column with ivory coloured filaments, and yellow anthers. Blooms early to mid-season. Leaves bright green, elliptic, apices acuminate to tapering acuminate, margins coarsely serrate. Originated in Tokyo, Japan as a seedling of **Tarôkaja** x a wild camellia, by Funatsu, Kanematsu. Named and released by Takeo Ogawa.

Funatsu-shibenashi. (Scooped Stamen 'Funatsu'), *(Wabisuke),* Kyôto Engei Kurabu, 1982, *Tsubaki Tokushû,* No.11, p.87, 89; ICS, Apr.1990, *Japanese Camellia Cultivar List,* p.6: Small size, light crimson, single. No stamens seen. Originated in Tokyo, Japan by Funatsu, Kanematsu. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.323; English translation p.238. Flowers early to mid-season. Leaves narrowly elliptic, small. Spreading, vigorous growth. A natural seedling of **Funatsu.** Named by Takeo Ogawa.

Funkô. (Perfumed White), *(C.japonica),* JCS., 1987, *Japan Camellia,* No.25, p.4, colour photo: Originated by Funakoshi, Kôji, Aichi Prefecture, Japan as a selected seedling of **Matoba-nishiki.** White flower, medium to large size, semi-double, 2-3 rows of heavy textured petals. Blooms mid-season. Perfume similar to a peony. Late flowering. Sterile.

Funny Face Betty. *(C.japonica),* Tammia Nursery Catalogue, 1961. A sport of **Betty Sheffield.** *American Camellia Yearbook,* 1962, p.218, Reg. No.608: Sport of **Betty Sheffield,** first observed 1955 at Tammia Nursery, Slidell, Louisiana, USA. Plant growth and habit the same as the parent. The semi-double to peony form bloom, 11-12 cm across, is blush pink, changing to neyron rose (HCC.623/1) with white stamens. It does not have the **Hikarugenji** markings like 'Blush Betty'. Blooms mid-season. Synonyms: 'Charming Betty', 'Charming Betty

Sheffield'. Sport: **Funny Face Betty Variegated.** See colour photo, No.66, p.41, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Chinese synonym: 'Guaimian Beidi'.

Funny Face Betty Variegated. *(C.japonica),* Tammia Nursery, 1969, ACS., *The Camellia Journal*, vol.14, No.1 as 'Funny Face Betty Var.': A virus variegated form of Funny Face Betty - Blush pink and white. Originated at Tammia Nursery, Slidell, Louisiana, USA.

Fû-no-sato. (Place name), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.184, colour photo and description: Medium size, deep scarlet, campanulate single of 5 rounded, emarginate, reflexed, overlapping petals with a central stamen column having pinkish filaments, joined for the lower half and bright yellow anthers. Blooms early to mid-season. Leaves bright green, broad-elliptic, margins shallowly serrate. Original tree is near the Fû Shrine, Shinjiko, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1980. Different reading: 'Fu-u-no-sato'.

Fu-otome. (Variegated Maiden), *(C.japonica),* Taniguchi, 1912, *Chinka Kyôkan:* Pink dotted white. Medium size, formal double. Different reading 'Madara-otome'. Originated in Kumamoto Prefecture, Japan. Considered to be a synonym for **Fuiri-otome.**

Furansujiro. (French White), *(C.japonica),* Minagawa, 1933, *Chinkashû;* Wada, 1941, *Japanese Garden Treasures,* p.28: Autumn flowering form of **Shiragiku;** pure white, fully double, the type of 'Purity'. See colour photo & description, No.61, p.31, Tuyama, 1968, *Camellias of Japan* and pl.413, p.173 & 353, *Encyclopedia of Camellis in Colour,* vol.I, 1972; Seibundô Shinkôsha, 1979, *Senchinshû,* p.133 & 245.: Flowers formal double, white, numerous petals; imbricated, convex or keeled on inner surface. Early flowering. Plant habit dense and bushy. Leaves broad-obovate to long-ovate, apices acuminate, recurved, margins wavy finely serrate, venation impressed. Different reading: 'Furansushiro', 'Huransu-jiro'. Synonyms: 'French White', 'French Double'. Similar to **Kagiri,** 'Nankinjiro' and **Hasumijiro.** Corruptions of name: 'Furan-su-shior', 'Furanso Jiro', 'Husanoshiro'. Originated in the Kantô area, Japan.

Furan-su-shior. Fendig, 1953, *American Camellia Catalogue*. Corruption of the Japanese name **Furansujiro.**

Furansushiro. Different reading for **Furansujiro.**

Furin-ichigo. (Wind Bell Number 1). (*C.lutchuensis* hybrid). *Kurume Camellia,* 1997, English translation, p.20. Deep red, small, open, campanulate single. Fragrant. Flowers mid-season. Originated in Japan.

Fûrin-no-tani. (Wind Bells in the Valley), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.130, colour photo, p.243 description: A white, campanulate single of 6-7 petals surrounding a compact column of stamens with pale yellow anthers and cream filaments, joined for the lower half. Early flowering. Leaves small, elliptic, apices suddenly acute, bases cuneate, venation obscure, glossy green. Originated in Kanazawa City, Ishikawa Prefecture, Japan with a private family. Named and released by Seizou Matsui in 1980.

Furin Number 1. *(C.hybrid),* Durrant, 1982, *The Camellia Story,* p.12, with illustration: A small, 5 petalled, pink, campanulate single. Leaves ovate, apices short acuminate, mid-green, margins finely serrate. Originated in Calfornia, USA by Toichi Domoto.

Furisode. (Long Sleeves of a Kimono), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.126, description, p.127, colour photo: Medium size, soft pink single of 7 broad, overlapping petals, fluted and crinkled at the margins, apices acute, and a central stamen cluster with ivory filaments, joined for the lower half, and golden anthers. Blooms mid-season to late. Leaves bright green, elliptic, apices acuminate, margins serrate. Originated in Kurume, Fuku'oka Prefecture, Japan. A seedling of **Jurô-an.**

Furô-an. (Hermitage of Perpetual Youth), *(C.japonica),* Waterer Nursery Catalogue, 1954-1955: Soft pink, medium size, single of cupped form with 5-6 petals, themselves cupped, cleft and crimped at the apex. The pink colour fades towards the haft. The petals surround a slightly irregular stamen cluster. Buds globular. Leaves elliptic to long-ovate, apices bluntly acuminate, recurved, sharply serrate. Plant habit erect with slender branches. For colour photos see Satô, 1975, *Chûbu no Tsubaki,* p.28; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.40, p.50; Seibundô Shinkôsha, 1979, *Senchinshû,* p.133, desription, p.245.Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.110. Different readings: 'Furohan', 'Hurôan'. It is one of the three representative flower for Chûbu, Japan, together with **Tarô´an'** and **Jurô-an.** In England the cultivar under this name has been confused with **Apple Blossom,** ('Joy Sander'). Received an 'Award of Merit' from the RHS in 1956. Considered to be a cross of **Tarô´an** and a *C.rusticana.*

Furohan. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.216. Different reading for **Furô-an.**

Furôkaku. (Palace of Perpetual Youth), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.26, colour photo and description; *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.81, p.122; Seibundô Shinkôsha, 1979, *Senchinshû,* p.133 colour photo, p.245, description: A cyclamen red, with deeper fine red streaks, single, opening through spherical to vase shaped, 5-6 petals with creped edges, surrounding a central column of stamens with pale yellow anthers and light cream filaments, united for their lower third. Leaves mid-green, broad-ovate, margins serrate. Originated in Chûbu area, Japan. Blooms early to mid-season. See colour photo & description, p.289, Yokoyama & Kirino, 1989, *Nihon no Chinka.* A seedling of **Furô-an.**

Furômon. (Gateway to Perpetual Youth), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.8: Pure white. Large double with rounded petals. Originated in Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.228 with colour photo; English translation p.159. Medium to large, white, semi-double, somewhat lotus-formed, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium to large. Upright growth. The original tree is growing in Reikanji Temple in Kyoto. Was called 'Shiro-botan' (White Peony) in the *List of Kanaoka Chinju'en Nursery* in 1967. From Kyoto.

Furômon. *Encyclopedia of Camellias in Colour,* vol.I, 1972. Seibundô Shinkôsha, 1979, *Senchinshû,* p.133 & 245. Synonym for *C.japonica* **Reikanji-hakubotan.**

Furong. (Hibiscus), *(C.japonica),* Shanghai Botanic Gardens List, 1985: Deep pink, incomplete, informal double with fascicles of golden stamens mixed with small, erect, twisted petals in the centre. Originated in China.

Furue. (Old Creek), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Red, semi-double, white spotted, large, peony form. Originated in Japan. (Believed extinct.)

Furun. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.429; Chinese synonym for the Italy *C.japonica* **Bella di Firenze.**

Furu-nishiki. (Ancient Brocade), *(C.japonica),* Williams & Thompson, 1950, *American Camellia Yearbook,* p.41. No description. Imported from Japan by the Star Nursery about 1930.

Furusato. (Ancient Village), *(C.japonica),* Okumura, Shigetarô, 1810, *Chinka Hin'i.* No description. Originated in Japan. (Believed extinct.)

Furusato-no-nishiki. (Home Village Brocade), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* No description. Originated in Japan. (Believed extinct.)

Furusunago-fu. Mizuno, 1829, *Sômoku Kinyôshû,* vol.5 in the "dotted leaf" section. Different reading for **Kosunago-fu.**

Furutemari. (Worn Out Ball), *(C.japonica),* Himuro, Shoji, 1982, *Murasuzume,* No.44: Rose-pink striped deeper pink, medium size, formal double. Originated by Himuro, Kanagawa Prefecture, Japan.

Fûryû. (Elegance), *(C.hybrid),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.27: Small size, pale pink, single. Seedling of *C.tsaii* x **Kuro-tsubaki.** Originated in the Osaka Prefecture, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.221 with colour photo; English translation p.154. Miniature, sake cup-shaped. Flowers mid-season. Leaves narrowly elliptic, miniature, somewhat waved. Dwarf, spreading growth, weeping branches. Named and released by Kazuo Yoshikawa in 1980.

Fusae. (*C.fraterna* hybrid). *Camellia Photo Collection,* Japan 1997, p.177 with colour photo; ; White, with pink shading on reverse of petals. Loose peony to rose form double, with small central group of stamens.

Fusai-in. (Fusai Temple), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.101, colour photo and description as 'Fusaiin': Small size, pale pink, saucer-shaped single with 7 fluted and reflexed petals and a central stamen column with creamy filaments, united for the lower third, and yellow anthers. Blooms early to mid-season. Leaves mid-green, ovate, apices abruptly acute, margins serrate. Selected from wild japonicas in Miyake-jima, Izu Isles, Japan. Named and released by Takeo Ogawa in 1985.

Fusasaki. (Name of Originating Nursery). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.224 with colour photo; English translation p.157. Medium size, white blotches on pink ground including red, tubular single, cylindrical stamen column. Flowers mid-season to late. Leaves elliptic, medium size, flat. Upright growth. Selected by Takeo Koymama (Fusasaki Nursery) from a wild japonica community in Mure Town. Named and released by Saneichi Koyama in 1980. From Kagawa Prefecture.

Fusca. *(C.japonica),* Hogg, 1838, *Magazine of Horticulture,* 4:155: Fine maroon. Very double. Originated by Floy, USA.

Fuscata Alba. *(C.japonica),* Longone Catalogue, 1910-1911. Ivory white, imbricated. Early flowering. Originated in Italy.

Zaochun Dahongqiu. Originated by Mr. Jiang Zongwang, East Flower Nursery, Wenzhou, Zheijiang, China, in 1993. Deep red, marbled white with dark veins on petals. Other characteristics the same as the parent.

Fusekô. (Fire Red), (*C.sasanqua*), Itô, Ihei, 1695, *Kadan Chikinshô,* vol.II. Yashiro, 1841, *Kokon Yôrankô,* vol.344: White, single, medium size, pink at the base. Fragrant. Yashiroda, 1950, 1950, *American Camellia Yearbook,* p.13 as 'Fusekoo': Medium size, single, white with a suspicion of red at the bottom. Musk-like perfume. Originated in Japan.

Fusekoo. Yashiroda, 1950, *American Camellia Yearbook,* p.13. Different reading for **Fusekô.**

Fusen. (Common Hermit), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.6. No description. Originated in the Shimane Prefecture, Japan.

Fusen'in-aka-yabu. (Wild Red Camellia of Fusen'in Temple), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.217, colour photo and description: Small size, bright red, wide, campanulate single with 5 irregular, pointed petals and a central stamen column, pinched in at the apex, with white filaments, joined for the lower third, and yellow anthers. Blooms mid-season. Leaves long, flat green, elliptic, apices tapering acuminate, margins serrate. Plant habit: Branches spreading horizontally. Selected from wild japonicas growing at Fusen'in Temple, Saga City, Japan. Named and released by Michiyo Izumi in 1982.

Fushakkin. (Unsparing to possess), (*C.sasanqua*), Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.8: Pink shaded lavender. Large single with round and incurved petals. Originated in Japan.

Fushi. (Wealthy Scholar). Gao & Zhuang, 1989, *The Camellia in China,* p.73, No.531 as 'Fusi'. Chinese synonym for the Japanese *C.sasanqua* **Hinode-fuji.** Orthographic error 'Fusi'.

Fushi Zhi Feng. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.428; Chinese synonym for the Japan *C.sasanqua* **Fuji-no mine**. Previous synonym 'Qiushaoyao'.

Fushigi. (Unimaginable Marvel), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.219: White, medium size, open peony form with a few pink streaks and a centre of intermingled petaloids and stamens. Originated in Japan. (Believed extinct.)

Fushiki-an. (Fushiki Hermitage), *(C.japonica),* Inazawa Nurseries Co. Ltd Catalogue, 1986-1987, p.2, A-85: Pale pink, becoming white, cylindrical to campanulate blooms, small size, cylindrical stamen column. Flowers early to mid-season. Originated in Jô'etsu City, Niigata Prefecture, Japan. Selected by Mutsuo Sakata around 1985.

Fushimi. (Place Name), *(C.japonica),* Tuyama, 1968, *Camellias* in Japan, pl.81, p.41, description, p.110: A bush camellia of upright and stout growth. Leaves broad-elliptic, dark green, a little wavy, margins crenate, 5.5-8 cm long x 3-4.5 cm wide. Flowers widely campanulate, single with recurved petals, pale rosy pink (Spinel Pink 0625/3). Petals 6-8, broad, rounded, wrinkled and wavy at the margins. Stamens in a compact column, 3 cm long, filaments yellowish. Flowers midseason to late. Different reading: 'Hushimi'. Originated in Fushimi-ku, Kyôto Prefecture, Japan.

Fushimi-tsubaki. (Camellia from Fushimi). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.226 with colour photo; English translation p.158. Small, dark red, semi-double, pale purplish mottles on inner petals, thick, split stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size, somewhat curved outwards. Upright, vigorous growth. Selected from cultivars grown by a private family in Mure Town. Named by Saneichi Ogawa. Released by Kagawa Branch of the JCS in 1979. From Kagawa Prefecture.

Fushimi-no-yuki. (Snows of Fushimi), (*C.rusticana*), Tuyama, 1968, *Camellias of Japan,* pl.7, p.8, description, p.86: Leaves dark green, veins impressed or flat, narrowly lanceolate, 4-6 cm wide x 9-10, 5 cm long; petioles 11-12 mm long and hairy. Hairy petals 1-2, normal, usually 5, apex rounded, widely opened, single, white. Stamen group columnar, 4 cm long, pale creamy filaments, yellow anthers. Different reading: 'Hushimi-no-yuki'. Originated in Fushima, Kyôto Prefecture, Japan.

Fushitsu. (Heirloom not allowed out of Premises). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.225 with colour photo; English translation p.157 as 'Fushutsu'. Medium size, pale pink, lotus-form semi-double, split stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size. Upright, vigorous growth. Bought by Kazutoshi Ôhira in Nrima Tokyo in 1960s. Named and released by Totsurô Nakamura in 1994.

Fusi. Gao & Zhuang, 1989, *The Camellia in China,* p.73, No.531. Orthographic error for 'Fushi', Chinese synonym for **Hinode-fuji.**

Fusi. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.429; Chinese synonym for the New Zealand *C.x williamsii* **Wilber Foss.**

Fusô. (Ancient Chinese Name for Japan), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.533: Medium size, 6-8 petalled single, white with blush areas and some crimson streaks, inner petals semi-erect~around a central stamen cluster. Different reading 'Huso'. Originated in Japan. (Believed extinct.)

Fussi. *(C.japonica),* Baptist & Son Nursery Catalogue, 1861, p.9. No description. Originated in Australia. (Believed extinct.)

Futabana-sazanka. Satômi, 1958, *Nomenclature List of Sasanqua of Japan,* p.6. Japanese name for *C.oleifera.* See 'Biflora'.

Futae. (Double), *(C.japonica),* Hirayama, (Latter 17th Century), *Tsubaki Byôbu.* No description. See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.48. Shirai, Mitsutarô, 1926, *Tsubaki Kai.* Also called 'Yuri-zaki', meaning lily form, but not the same as **Yuri-tsubaki.** No description. Different reading 'Hutae'. Originated in Japan.

Futaebeni. (Double Red), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841, *Kokon Yôrankô,* vol.344: Semi-double red, medium size. Originated in Japan. Different reading 'Nijûbeni'. It is not certain that this is the same as Satomi's 'Nijû'. (Believed extinct.)

Futae-benten. (Double 'Benten'), *(C.japonica),* Chûbu Tsubaki Kyôkai, 1960, *Tsubaki Meikan:* Medium size, red, single with genetically variegated foliage, distorted shapes, green with white and light green, double markings. See colour photos & description: *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.447, pp.183, 359, and Seibundô Shinkôsha, 1979, *Senchinshû*, p.108 & 235, as **Nijû-benten.** Resembles a branch mutation of **Tafuku-benten.** Originated in the Chûbu area, Japan. Different reading: 'Hutae-benten', **Nijû-benten.**

Futaedairin. Different reading for **Futaetairin.**

Futaekuchibeni. (Double Rouge), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô;* Ichijima, 1906, *Kokon Yôrankô,* vol.344. (Yashiro 1841 reprint): White, semi-double, red margins, small size. Originated in Japan. It is not confirmed that this is the same as Satômi's 'Nijû-kuckibeni'. Different reading: 'Nijû-kuchibeni'.

Futaetairin. (Large Double Flower), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô:* Yashiro, 1841, *Kokon Yorankô,* vol.306; Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* Red, semi-double, large, thick petals. Cylindrical stamen cluster. Different readings: 'Hutaetairin', 'Futaedairin', 'Nijûtairin'. Originated in Japan. (Believed extinct.)

Futaesokobeni. (Double, Red Base), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshô;* Yashiro, 1841,. *Kokon Yôrankô,* vol.344: Pale ink, red at the base, semi-double, large size. Originated in Japan. (Believed extinct.) Different reading: 'Nijû-sokobeni'. It is not confirmed if this is the same as Satomi's 'Nijû-sokobeni'.

Futaetsuru. Different reading for **Futaezuru.**

Futaezuru. (Doubled Crane), *(C.japonica),* Katayama, 1960, Juraku-en Nursery Catalogue, p.9: Under flowers for the tea ceremony. Large size, with petals piled up. Originated in Japan. Different readings: 'Futaetsuru', 'Hutaezuru', 'Nijûzuru'. Synonym: 'Genji-guruma'. Sport: **Hanaguruma.**

Futagami-tsubaki. (Camellia at Mt. Futagami), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.6. No description. Makino, Kameria Nursery Catalogue, 1990. p.3: Pale pink to white, cup-shaped. Medium size. Early flowering. Originated in the Toyama Prefecture, Japan.

Futa-iro. (Two Coloured), *(C.japonica),* Hirayama, Tokuo, (Latter 17th Century), *Tsubaki Byôbu.* See 1961, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.2, p.48. No description. Different reading 'Huta-iro'. Originated in Japan. (Believed extinct.)

Futairo-wabisuke. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.210. Synonym for **Wabisuke** as **Kochô-wabisuke.**

Futari. (Two People), *(C.japonica),* Okumura, ca.1810, *Chinka Hin'i.* No description. Originated in Japan. (Believed extinct.)

Futari-shizuka. (Serene Couple), *(C.japonica),* ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.6: Small size, dark red, peony form. Blooms mid-season. Originated in Chiba Prefecture, Japan.

Futa-omote. (Two Faces), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.678 as 'Futao--mote': Large size, dark crimson, multi-layered semi-double, with stamens surrounded by erect, centre petals. Different readings: 'Hutaomote', 'Nimen'. Originated in Japan. (Believed extinct.)

Futa-omote. (Two Faces), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.186: as 'Futao--mote': A 5 petalled single, white with crimson markings and compact, central stamen cluster. Different reading: 'Hutaomote'. Originated in Japan. (Believed extinct.)

Futayo-no-tsuki. (The Second Moon), *(C.japonica),* Hirayama, Tokuo, (Latter 17th Century), *Tsubaki Byôbu.* see Kyôto Engei Kurabu, *Tsubaki Tokushû,* 1961, No.2, p.48. No description. Different reading: 'Hutayo-no-tsuki'. Originated in Japan.

Futsuka-no-tsuki. (The Second Moon), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû,* p.8 under the classification: Different colours on the same branch, striped, splashed and mottled. Red, medium size, full double in which appears a few white stamens or petaloids, without anthers. See *Chinka Zufu* as 'Futsukazuki'. Different reading: 'Hutska-no-tsuki', 'Hutsukazuki'. Originated in Japan. (Believed extinct.)

Futsukazuki. *Chinka Zufu,* (before 1700), Watanabe, 1969, pl.629. Different reading for **Futsuka-no-tsuki.**

Futteng. Le Texnier, 1911, *Le camellia essais sur l'histoire....*Synonym for 'Foding Cha', synonym for **Rawesiana.**

Futting. Courtois, 1833, *Magazin d'Horticulture,* 1 [pt.D]:316 as 'Rossii'(Futting). Synonym for 'Foding Cha'.

Futtung. Cels, Paris Nursery Catalogue, 1836-1837, p.9. Synonym for 'Foding Cha'.

Futung. Berlèse, 1840, *Monographie,* ed.2, p.187. Synonym for for 'Foding Cha'.

Fu-u-no-sato. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.6. Different reading for **Fû-no-sato.**

Fuxiaohong. (Appears Dawn Red). Gao & Zhuang, 1989, *The Camellia in China,* p.73, No.528. Chinese synonym for the Japanese *C.sasanqua* **Akebono Pink.**

Fuwa. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars*, p.47. Chinese synonym for **Imbricata.**

Fuyajô. Chûgai Nursery Catalogue, 1936-1937, p.25: Blackish red, small size, single. New growth purple colour. Originated in Japan. See colour photo, p.89, Macoboy, 1981, *The Colour Dictionary of Camellias.* Orthographic error: 'Fuyujo'. Synonym for **Kon-wabisuke.**

Fuyô. (Lotus or Rose Mallow), *(C.japonica),* Hamamatsu, Utakuni, 1825, *Setsuyô Kikan,* vol.23. No description. Originated in Japan. (Believed extinct.)

Fuyôkô. (Pink Lotus). *(C.sasanqua),* Satômi, 1958, *Nomenclature List of Sasanqua of Japan,* p.8: Deep pink, large size, single with round, incurved petals. Originated in Japan.

Fuyô-mine. Synonym for 'Fuyô-no-mine', (**Fuji-no-mine**).

Fuyu. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.428; Chinese synonym for the Australia *C.x williamsii* **Exuberance.**

Fuyu-akane. (Winter Madder Red), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon* no *Chinka,* p.221, colour photo and description as 'Fuyuakane': Small size, bright vermilion red, wide campanulate single, with 6 rounded, broad, emarginate, overlapping petals, and a tall, central stamen column with pale yellow filaments, joined for their lower half, and golden anthers. Blooms mid-season to late. Leaves dark green, elliptic, apices tapering acute, flat, slihtly recurved, margins serrate. Originated in the Ishikawa Prefecture, Japan. Named and released by Tadao Yamaguchi in 1984.

Fuyugomori. (Winter Confinement), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,* vol.I; Yashiro, 1841, *Kokon Yôrankô,* vol.306: Large and eight-fold flower of pale pink with white splashes. Different readings: 'Fuyukomori', 'Huyugomori'. Orignated in Japan. (Believed extinct.)

Fuyugomori. (Winter Confinement), *(C.japonica),* Kasuya, Kamegorô, 1859 *Tsubaki Irohanayose Irotsuki:* White, single, cup-shaped. Blooms early to mid-season. Originated in Japan. (Believed extinct.) See JCS., 1969, *Tsubaki,* No.7, p.28.

Fuyujo. Newman's Nursery Catalogue, 1982-1983. Corruption of the Japanese name 'Fuyajô', **(Kon-wabisuke).**

Fuyuki. (Obscure), *(C.japonica),* Uekiya, Seigoro, 1874, *Tsubaki Hyakuro no Zu,* vol.1: Medium size, white, formal double with numerous petals. Originated in Japan. (Believed extinct)

Fuyukomori. Different reading for **Fuyugomori.**

Fuyuyokonami. (Winter Cross Waves), *(C.japonica),* Uesa, 1844, *Sômoku Benran:* Rose-pink, moired white, medium size, single. Originated in Japan. (Believed extinct)

Fuyazaki-no-shiratama. (Winter Flowering 'Shiratama'), *(C.japonica),* Iwasaki, 1829, *Honzô Zufu,* p.24: A medium size, white, compact single, that flowers early. Originated in Japan. Thought to be synonymous with **Shiratama** or 'Hatsuarashi-shiratama'.

Fuzankai. Kasuya Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* as synonym for **Tamatori.**

G.

G.A. McGilvary. (C.*japonica),* Hazelwood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.86. No description. Originated in Australia. (Believed extinct).

G.C. Linton. *(C.japonica),* Hazlewood Nursery Catalogue, 1941: Raised at Camellia Grove Nursery, Ashfield, NSW, Australia and transplanted to the garden of G.C. Linton, Somersby, N.S.W., through whose courtesy it is now offered for the first time. A refined, shapely, semi-double bloom of bright red.

G.W.M. *(C.japonica),* River View Nursery Catalogue, 1958-1959, p.10. No description. Originated in USA.

G.W. Ellis. *(C.japonica),* The Pacific Camellia Society, 1946, *Camellia Nomenclature,* p.16: Rose pink flecked white. Large formal to rose form double. Medium, compact growth. (Similar to **Rosea Superba**). Originated in the USA by Huested.

G.W. Towle. *(C.japonica),* Wilmot, 1944, *Camellia Classification Report,* p.5: White streaked carmine. Medium sized semi-double. Vigorous, compact growth. Mid-season blooming. Imported from China and named by G.W. Towle. Synonym: 'George W. Towle'.

Ga. National Fair. ACS, Aug. 1995, *The Camellia Journal,* vol.50, No.3, p.37. Abbreviation for **Georgia National Fair.**

Gabbie Laver. *(C.japonica),* ACRS., 1983, *Camellia News,* No.87, p.22, Reg. No.293: Originated by R. Hawkes, Woodside, South Australia as a seedling of **Mary Wheeler** that first flowered 1976. The light red, 8-10 cm, anemone form flowers are early to mid-season. A compact habit of growth with lanceolate,10 cm x 5 cm, leaves, light green, slightly serrate.

Gabisan. (Emeishan, a Mountain in China), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.8: Pure white. Large semi-double with round and incurved petals. Originated in Japan.

Gabriel Rossetti. Medici Spada, 1858, *Catalogo nel Giardino a Villa Quiete,* p.6. Orthographic variant for **Gabrielle Rossetti.**

Gabrielle Rossetti. *(C.japonica),* Franchetti, 1855, *Collezione di Camelie,* p.32: Vivid and soft pink, petals streaked with white with subtle shading, imbricated. Orthographic variant: 'Gabriel Rossetti'. Originated in Florence, Italy.

Gael's Dream. *(C.reticulata* hybrid), *New Zealand Camellia Bulletin,* vol.XV, No.5, p.24, Reg. No.247: Originated by Trevor Lennard, Te Puke, New Zealand. A seedling of *C.reticulata* hybrid **Dream Girl** x *C.reticulata* that first flowered 1984. The plant is upright, rapid grower with dark green leaves, 9 cm x 5 cm. The semi-double flowers are early, soft rose-pink, shading to carmine. (RHS.CC.52B) Size up to 15 cm across x 6.7 cm deep with 9-10 petals and some rabbit ears, cream anthers and yellow filaments.

Gaetano Baroni. *(C.japonica)* Stefano Pagliai Catalogue, 1867, p.70: Small flowered, vivid pink, slightly darker at the centre. Perfect imbrication. Originated in Italy by Cesare Franchetti.

Gagari-tsubaki. (Serrated Camellia), Aoyama Kinta, 1827, *Sômoku Kihin Kagami.* Described as a synonym for **Sakuraba-tsubaki.** Sport: **Hasegawa-tsubaki.** See Kyôto Engei Kurabu, 1966, *Tsubaki Tokushû,* No.7, p.157, 158.

Gaier. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.426; Chinese synonym for the Australia *C.sasanqua* **Sandra Gail.**

Gaiety. *(C.japonica),* Verschaffelt, 1854, *Nouvelle Iconographie,* Book IV, pl.II: This camellia was obtained from seed in England and it is amongst the variegated varieties by the arrangement

of the pink stripes or fasciae which streak the petals. These are rounded, convex, faintly emarginate; at the centre they are very small, upright and form a compact and ruffled heart. The colouring resembles **Tricolor.** The name has been used erroneously in the USA for a form of **Gigantea,** with reduced variegation.

Gaiety. Vanderbilt, 1940, *Camellia Research,* p.4. Orthographic error: 'Gaity'. Invalid synonym for **Gigantea.**

Gaity. SCCS., 1942, *Classification of Camellias,* p.3. Orthographic error for 'Gaiety' as a synonym for **Gigantea.**

Gaijûsanshû. (Thirteen Provinces), *(C.reticulata),* Satomi, 1956, *Camellia Varieties of Japan,* p.6: Soft rose-pink. Large semi-double with irregular, ruffled petals. Mid-season blooming. The full translation of the name is "Victorious Thirteen Provinces" and the Chinese name is 'Kaishi Sansheng', with the different reading of 'K'ai-shih San-sheng'. Originated in China.

Gail. *(C.japonica), American Camellia Yearbook,* 1960, p.197, Reg. No.447: A 6 year old seedling of **Lindsay Neill** that first bloomed 1957; originated by Dr Reeves F. Wells, Panama City, Florida, USA. Plant growth is spreading, of average density, with dark green leaves 11-12.5 cm long x 5.5 cm wide and are acuminate, serrate, heavily veined and slightly twisted. The deep pink, semi-double flowers, 11cm across x 4 cm deep, have 12-14 petals, occasional petaloids, 4-5 rabbit ears and golden stamens. Flowers early to mid-season.

Gail Evans. *(C.japonica), American Camellia Yearbook,* 1959, p.273, Reg. No.431: A 9 year old seedling of 'Magnoliiflora', (**Hagoromo**); originated by R.W. Ragland, Orange, California, USA that first bloomed 1955. Growth habit is upright, open and rapid in rate with dark green leaves, 10 cm x 5.5 cm. The semi-double, blush pink flowers, 10 cm across x 5 cm deep, have 19 petals, 12-16 petaloids and white stamens. Flowers mid-season.

Gail Hooks. *(C.japonica),* ACS, *The Camellia Journal,* June 2006, p.28, colour photo p.29, Reg. No.2684. A chance seedling that first flowered 2001. Registered by Senator George Hooks, Americus, Ga, USA. A chance seedling that first flowered 2001. The 9.5 cm diameter, crimson, formal double flower has 65 petals. Plant is dense with average growth rate. Flowers late. *American Camellia Yearbook,* 2006, p.57 with colour photo. Originated by Etha Prickett Carson. Dark green leaves are 9.5 cm x 4.5 cm.

Gail Phelan. *(C.japonica),* ACS, Aug. 1995, *The Camellia Journal,* vol.50, No.3, p.37, Reg. No.2350: Medium size, deep rose semi-double, *C.japonica* chance seedling. Late blooming. Originated in USA by Dr Charles E. Minarik, West Harich, Maryland. ACS, 1995, *American Camellia Yearbook,* p.5 with colour photo: The 10 year old seedling first flowered 1988. Average flower size is 8 cm across x 5 cm deep with 20 petals and 5 petaloids. Very cold hardy. Plant growth is upright, dense and average in rate with dark green leaves 8 cm long x 5 cm wide.

Gainsborough. *(C.reticulata).* ACRS., 1971, *Camellia News,* No.43, p.35, Reg. No.148: Originated by F.S. Tuckfield, Berwick, Victoria, Australia. Seed parent *C.reticulata* **Confucius**, pollen parent unknown. First flowered 1966. Habit of growth is open and dense. Flowers mid-season. The semi-double to incomplete double flowers are Spinel pink HCC.025/1, 15-16 cm across, with fluted inner petals and some rabbit ears. The leaves are 10 cm x 4 cm with medium serrations. Gao, Jiyin, 2007, The Identification....Outstanding Camellias, p.406; Chinese synonym 'Ganbolao'.

Gairinzan. (See Note), (Higo), ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.6. No description. Originated in the Kumamoto Prefecture, Japan. *Higo Rokku,* [ca.1989], p.32: Medium size, 7-8 cm across with 7-8 petals, pink ground with red and white markings. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.334. English translation p.228. A mutation of **Tanchô,** designated as a Higo by the Higo Camellia Society in 1984. Note: 'Gairinzan' is an outer rim of a volcanic crater.

Gaisen. (Triumphal Return), *(C.x vernalis),* Sakata & Arisumi, 1983, *International Camellia Journal*, No.15, p.19. Flower clear red, small, single with spreading stamens and having green leaves, 4.9 cm long x 2.4 cm wide. Tanaki et al., 1986, "Cytogenetic Studies on the origin of *C.x vernalis"; Journal of the Japanese Society for Horticultural Science*, vol.55, No.2, pp.207-209: This tetraploid cultivar is considerted to be a primary hybrid between *C.sasanqua* and *C.japonica* and was found in the wild on Hiradi Island, Japan. Discovered and named by Saburô Kumasawa in the early 1970s. The original tree is estimated at 400 years of age. Cultivars very similar if not the same as **Gaisen,** were found in several districts of Japan. These include 'Hoshihime', Kôrei', 'Koohira-ko'. Synonyms: 'Taizôji', 'Yôhiki', 'Showa-no-kagayaki'. Originated in Japan. Chinese synonym 'Kaixuan'.

Gaiwen. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.67, No.198. Chinese synonym for the USA *C.japonica* **Alta Gavin.**

Gakkô. Cho, [before 1867], *Chinkafu.* Different reading: 'Gekkô'. See, Kyôto Engei Kurabu, 1960, *Tsubaki Tokushû,* No.1, p.21 and Tuyama, 1968, *Camellia Cultivars of Japan,* p.224. The name refers to the Bodhisattva Gakkô and also means moonlight. Synonym for **Bokuhan.**

Gakuyô. (Grandfather), *(C.japonica),* JCS., 1973, *Tsubaki,* No.12, p.5, colour photo, p.13 description: Light purple to dusky red, medium sized semi-double, sometimes with central petaloids. Stamens imperfect. Leaves long-ovate, 11 cm x 5 cm, apex acuminate, light green. Flowers mid-season. Originated in the gardens of Kagogawa City, Hyôgo Prefecture, Japan from an 80 year old plant. Named by Yamazaki Taro.

Gala Park. *(C.japonica),* Forrest, 1985, *Trees and Shrubs Cultivated in Ireland.* No description. No valid listing located.

Galalee. River View Nursery Catalogue, 1958-1959, p.10. Orthographic error for **Galilee.**

Galante. *(C.japonica),* Verschaffelt Catalogue, 1847-1848, p.57. No description. Franchetti, 1855, *Collezione di Camelie,* p.32: Large size, imbricated, pale pink. Originated in Italy.

Galante Nova. *(C.japonica),* Jean Verschaffelt, 1861-1862, Price List, p.22. André, 1864, *Plantes de terre de bruyère...,* p.243: Flower imbricated, cup-shaped, very large, petals high, flesh-white, with wide ribbons of carmine and dotted with rose, carnation like. Originated in Italy. Orthographic variant: 'Galanthe Nuova'.

Galanthe Nuova. William Bull Catalogue, 1869-1870. Orthographic variant for **Galante Nova.**

Galatea. *(C.japonica),* Cachet, 1840-1841, Catalogue, p.1: Red. van Houtte Catalogue, 1841, 7:8 as 'Galathea': No description. Berlèse, 1843, *Iconographie,* pl.290 and facing page: An irregular, complete double of pale, rose madder, about 11 cm across, with a centre of numerous, erect, small narrow petals and 3-4 rows of large, outer petals. Franchetti, 1855, *Collezione di Camelie,* p.32: Vivid pink with large white blotches, fine imbrication. Del Lungo e Girardi, 1928, *Le Camelie,* p.140, as 'Galateo': Full rose form red flowers with outer petals in 3-4 rows, lightly veined, imbricated and distinct for numerous and packed inner petals. Originated and named in Italy by Mariani. Synonym: 'Galathea d'Italie'. Orthographic variants: 'Galathea', 'Galatée', 'Galateo'.

Galatea (M.G.). *(C.japonica),* Magnolia Gardens and Nursery Catalogue 1942-1943, invalidly as 'Galatea': Light pink. Large semi-double. Spreading growth. Flowers mid-season. Originated in USA by Magnolia Gardens, Charleston, South Carolina.

Galatée. Berlèse, 1845, *Monographie,* ed.3, p.256. Orthographic variant for **Galatea.**

Galateo. Del Lungo & Girardi, 1928, *Le Camelie,* p.140. Orthographic variant for **Galatea.**

Galli. *(C.japonica),* de Jonghe, 1851, *Beknopte Handleiding tot het Kweeken von Camellias,* p.112, as 'Camellia Galli': Originated in Italy by Burdin. Imbricated, delicate pink striped crimson. Synonym: 'Valerio'.

Gallia. Giles & Son Nursery Catalogue, 1881, p.91. Synonym for **Galli.**

Gallic Moods. *(C.japonica), American Camellia Yearbook,* 1974, p.169, Reg. No.1285: An 8 year old chance japonica seedling that first bloomed 1964. Originated by Mrs M.J. Witman, Macon, Georgia, USA. Plant growth is upright and rapid in rate with dark green leaves, 11 cm x 5 cm. The semi-double, 'Donckelaeri' (**Masayoshi**) style, blooms have 6 colours, ranging from white to pink to red with yellow anthers and white filaments. Average size is 12.5 cm across x 4 cm deep with 4 rows of petals and a few petaloids. Unusual and attractive colours, solid pink, white with a touch of blush pink, blush with coral splashes, light moire, pink edges on blush background, all on the one bush. Blooms mid-season.

Gallica. Tourres, Macheteaux Nursery Catalogue, 1839, p.22.Abbreviation for **Gallica Alba.**

Gallica Alba. *(C.japonica),* Jacob Makoy et Cie Catalogue, 1833. No description. Courtois, 1833, *Magazin d'Horticulture,* 1[pt.D]:315: No description. Baumann & Baumann, 1835, *Collection de Camellies élevés à Bollwieler,* pl.38 as 'Pomp. Gallica Alba': Large semi-double flower, perfect, milk white, yellowish in the centre; the outer petals are large, rounded and heart-shaped, central petals white, elongated, indented and intermixed with large stamens. James Burnett, 1837, *The Magazine of Botany & Gardening,* vol.3, new series, p.153: The flower is of that peculiar and delicate colour known as french white. It is semi-double, the petals much cupped, interspersed with large stamanea and frequently lightly touched with pink. Berlèse, 1837, *Monographie,* ed.1, p.54, 125: Vigorous shrub; leaves ovate-oblong, finely serrate, long acuminate; buds oval, pointed, scales green; Flower large, 8.5 cm across, semi-double, of milk white; circumferential petals broad, rounded cordiform; those central, smaller, elongated and intermingled with the stamens. Synonyms: 'Gallica', 'Pomponia Gallica Alba', 'French White'. Orthographic error: 'Gallicia Alba'. Originated in France. See colour pl.28, Berlèse, 1841, *Iconographie,* vol.I.

Gallica Grandiflora. *(C.japonica),* Berlèse, 1840, *Monographie,* ed.2, p.225: Irregular double white. Originated in Italy.

Gallicarium Pressii. Anonymous, 1841, *Gardeners' Chronicle* as a synonym for 'Imperialis', itself a synonym for **Gray's Invincible.**

Gallicia Alba. Burnette ed., 1837, *Magazine of Botany & Gardening,* vol.3, p.153. Orthographic error for **Gallica Alba.**

Gallilee. James Rare Plant Nursery, California, Catalogue, 1854-1855, p.7. Orthographic error for **Galilee.**

Gallini. *(C.japonica),* van Houtte Catalogue, 1842, 9:10: Globular, superb, very full, pure white with flashes of carmine. Originated in Italy. Orthographic errors: 'Gallonni', 'Gallenii'.

Garyia de Knight. Makoy Catalogue, 1838. Synonym for **Graya.**

Garyobin. Fendig, 1953, *American Camellia Catalogue.* Different reading for **Karyôbin.**

Gary's Red. *(C.japonica), American Camellia Yearbook,* 1967, p.226, Reg. No.946: A 5 year old chance seedling that first bloomed 1963, originated by Mr & Mrs Henry Stone, Baton Rouge, Louisiana, USA. Plant growth is spreading, dense and rapid in rate with dark green leaves about 7.8 cm long. The semi-double flower, similar to 'Donckelaeri', (**Masayoshi**) is 10 cm in diameter and 6 cm deep with 12 petals. Colour is turkey red with golden anthers and bright red filaments. When buds first open they show black and the petal edge become a deep purple. Blooms early to mid-season. See colour pl.67, p.42, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Sport: **Gary's Red Variegated.** Orthographic error: 'Garvey Red'.

Gary's Red Variegated. *(C.japonica),* SCCS., 1981, *Camellia Nomenclature,* p.88 as 'Gary's Red Var.': A virus variegated form of **Gary's Red** - Turkey red blotched white. Originated in USA.

Garyû. (Reclining Dragon), *(C.rusticana),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.186, colour photo and description: Medium size, deep scarlet, campanulate single with 5 wide, rounded, overlapping petals, and a central column of stamens with yellow anthers. Blooms mid-season to late. Leaves mid-green, ovate, apices blunt acuminate, margins serrate. Originated in Ôzu City, Ehime Prefecture, Japan.

Gaskensasen. Waterhouse, 1965, *International Camellia Journal,* No.3, p.26. Taiwanese for **Kaishisan Sheng.**

Gaspara Stampa. *(C.japonica),* van Houtte Catalogue, 1858, 72:13: Vivid crimson red, the petals widely rayed with white with the centre remaining clear. Magnificently imbricated. For colour plate see Verschaffelt, 1859, *Nouvelle Iconographie* Book III, pl.I: Received in 1857 from Mr Luzzatti of Florence, Italy. Its blossoms, almost 10 cm in diameter, belong to the perfections. They are vivid pink, rounded, faintly emarginate and intersected by a band of white. Orthographic errors: 'Gaspare Stampa', 'Gaspard Stampa'. Originated by Rossi, Italy.

Gaspard Stampa. Schneider, Sept.1894, *Revue Horticole,* p.432. Orthographic error for **Gaspara Stampa.**

Gaspare Stampa. Volonte Catalogue, 1888. Orthographic error for **Gaspara Stampa.**

Gaston Allard. *(C.japonica),* Bahuaud-Litou Nursery Catalogue, 1914-1920: Rose striped. Imbricated. Originated in Nantes, France.

Gatata Alba. Downing Nursery Catalogue, [before 1858]. Orthographic error for 'Guttata Alba'.

Gate of Heaven. *(C.japonica), American Camellia Quarterly*, 1956, No.4, p.13: Pink with white radiating from the centre. Medium sized semi-double. Mid-season blooming. Originated in the USA by Baker. Orthographic errors: 'Gate to Heaven', 'Gates of Heaven'.

Gate to Heaven. River View Nursery Catalogue, 1957-1958, p.9. Orthographic error for **Gate of Heaven.**

Gates of Heaven. Hillcrest Nursery Catalogue, 1958. Orthographic error for **Gate of Heaven.**

Gathering Storm. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.107. Synonym for **Oki-no-nami.**

Gaudichaudii. Sealy, 1956, *American Camellia Yearbook,* p.7. The species *Camellia gaudichaudii* (Gagnep.), Sealy in Kew Bulletin, 1949, p.217.

Gaulthieri. Le Texnier, 1911, *Le camellia, essais sur l'histoire de quelques fleurs d'ornement,* p.29 as 'Gautheri'. Grown about 1842 by Pierre Tourres at Nacheteaux, near Tonniens, France. Orthographic error 'Gautheri'. Synonym for **Adrien Lebrun.**

Gauntlettii. *(C.japonica),* Gauntlett Nursery Catalogue, 1909-1910, p.11: A new Japanese camellia, large, single, white flowers, 10-12.5 cm across when expanded, with a tuft of rich, golden stamens. A flower of good substance, of delicious, soft appearance. Puddle & Hanger, 1960, RHS, *The Rhododendron and Camellia Yearbook,* 1960, No.14, p.148, fig.42: Form: Semi-double. Petals: 10-17, usually 15, orbicular with a short haft, 6 cm long, 6 cm wide, distinctly notched, petals elevated at first to form a cup-shaped flower, but later becoming flat with outer petals recurved. Stamens: Arranged in a loose central ring. A few white petaloids are often mixed with stamens. Diameter: 12 cm. Colour: White with a creamy tendency in the centre. Foliage: Deep to yellowish green, large elliptic, 10-12 cm long x 5-6 cm wide, thick, heavily veined, margins serrate. Habit: A somewhat slow grower, upright when young, eventually forming an open branched plant, not well clothed with foliage. This camellia is of Japanese origin from the Kantô area and old trees are plentiful around Shikoku. First listed and illustrated by the Yokohama Nursery Co in their 1905 catalogue as *Camellia japonica* grandiflora. As this name had previously been used in the *Floricultural Cabinet* in 1826 it is invalid for this camellia. The Japanese name 'Sodekakushi' does not appear to be published before 1912. It was imported into England by Gauntlett and renamed **Gauntlettii.** Both the names 'Grandiflora Alba' and 'Alba Grandiflora', which have been used for this cultivar, are invalid as previously used for other camellia cultivars. In England it has received three "Awards of Merit", one as 'Compton Brow White', one as 'Alba Grandiflora' and one as 'Sodegakushi'. In America it is known by the synonym 'Lotus'. Synonyms include: 'Sodegakushi', 'Sodekakushi', 'Lady Lotus', 'Lotus', 'Compton Brow White', 'Gauntlett's White', 'Mrs Sander', 'Yokohama', and invalidly 'Alba Grandiflora', 'Grandiflora Alba', 'Grandiflora'. This cultivar is a triploid and has been seed parent to many fine camellias. For colour illustration see *The Camellia,* 1956 by Urquhart, and Tuyama, 1966, *Camellia Cultivars in Japan,* p.110, pl.62, also *Encyclopedia of Camellias in Colour,* 1972, p.118, pl.254 and Katei Gahô, ed. 1984, *Chabana Koyomi vol.I, Tsubaki,* p.46, as 'Sodekakushi'. This Japanese name means to conceal under the sleeve, which alludes to the fact that the flower is so attractive that it could be concealed under a person's sleeve. Chinese synonym 'Gangte'. Gao, Jiyin, 2007, The Identification....Outstanding Camellias, p.422 Chinese synonym 'Hehua', as 'Lotus'.

Gauntlett's White. Robinson, W. ed., 1904, *Flora & Sylva,* vol.2, p.302. Synonym for **Gauntlettii.**

Gausonia. Buist, 1939, *American Flower Garden Directory,* p.242. Orthographic error for **Goussoniae.**

Gauzy Sleeves. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.175. Synonym for **Kasumi-nosode**.

Gavazzi. *(C.japonica),* Isola Madre Catalogue, 1845. No description. Fratelli Rovelli Catalogue, 1852, p.18: Lombardy. Imbricated, pure white striped red. Originated in Italy.

Gay. *(C.sasanqua),* ANZCRS., 1957, *Camellia Annual*, No.4, p.8, Reg. No.26: A seedling raised by Dr Ducker, NSW, Australia, parentage unknown. Size of bloom, 6.5-7.5 cm, single white, slightly cupped. Early flowering.

Gay Ann Stewart. *(C.japonica),* SCCS., 1978, *Camellia Nomenclature,* p.66: Crimson with purple cast on petal tips. Large semi-double with folded inner petals. Medium, upright growth. Early to midseason flowering. Originated in USA by Haynie, Alabama.

Gay Baby. *(C.hybrid), New Zealand Camellia Bulletin,* 1978, vol.X, No. 4, p.24, Reg. No.135: The female parent is [*C.saluenensis x C.japonica* 'Fuyajô' **Ruby Bells***] x C.hybrid* **Tiny Princess;** originated by O. Blumhardt, Whangarei, New Zealand and first flowered 1975. The plant has an open habit with dark green foliage, 5 cm x 2.5 cm. The flowers are semi-double with a form similar to the female parent, measure 5 cm x 3 cm, colour a deep, orchid pink. New growth is conspicuously bronze-purple. Chinese synonym 'Wantong'.

Gay Border. *(C.sasanqua),* Thermal Nurseries (Rotorua), Ltd Catalogue, 1986, p.21: Light pink to white, heavily shaded rose-red. Large size, single to semi-double. Originated in New Zealand by Jack Clark, Auckland. Orthographic variant: 'Gayborder'.

Gayborder. Camellia Haven Catalogue, 1991, p.17. Orthographic variant for **Gay Border.**

Gay Boy. SCCS., 1947, *The Camellia. Its Culture and Nomenclature.* Synonym for **Hanatachibana** as 'Kumasaka Variegated'. Orthographic variant 'Gayboy'.

Gayboy. Fendig, 1953, *American Camellia Catalogue.* Orthographic variant for 'Gay Boy', synonym for **Hanatachibana.**

Gay Buttons. (*C.pitardii* hybrid). *New Zealand Camellia Bulletin*, March 2003, Issue No.144, vol.XXIII, No.2, p.13, Reg. No.445. Registered by Mark Jury, Tikorangi, New Zealand. A cross between *C.japonica* 'Tinsie' (**Bokuhan**) x *C.pitardii* var. *pitardii* that first flowered 1990. Flower is a miniature single, 4 cm diameter x 2 cm deep, with about 6 petals, cerise pink (RHS.CC.67B) in colour. The 80 or so stamens form a wide central mass containing a mixture of stamens and petaloids, which have a small white flap over an apparently normal anther. The flower has a cupped, bright and perky appearance. The plant is upright, open and of medium growth rate, with dark green leaves 4.5 cm long x 3 cm wide. Flowers early to mid-season.

Gay Chieftain. *(C.japonica),* SCCS., 1966, *Camellia Nomenclature,* p.56: Pink and vivid red striping and off white. Large, 13 cm across, semi-peony with upright petals and deep golden stamens. Vigorous, open growth. Mid-season to late flowering. Originated in USA by Harvey Short, Ramona, California. See colour photo front cover, SCCS, 1966, *The Camellia Review*, vol.27, No.3. Sport: **Gay Chieftain Red.** Chinese synonym: 'Kuailouwang'. Spelling later altered to 'Kuailewang'.

Gay Chieftain Red. *(C.japonica),* SCCS., 1976, *Camellia Nomenclature,* p.64: A vivid red sport of **Gay Chieftain.** Originated by Harvey Short, Ramona, California, USA.

Gay Lily. Coolidge Gardens, 1955-1956, *Harvey Short's Camellias of Tomorrow.* Orthographic variant for **Gaylily.**

Gay Magnolia. *(C.hybrid),* ACRS., 1969, *Camellia News,* No.32, p.18, Reg. No.99: Originated by F.S. Tuckfield, Berwick, Victoria, Australia. Parents unknown. Found growing in Melbourne Botanic Gardens and thought to be a stock survival from a Japanese importation. The foliage is hard and narrow, of the "Wabisuke" type. The flower is 6.5-7.5 cm across, white with a pinkish lavender throat. It has a solid pink sport. Habit, bushy with leaves 11 cm x 4 cm.

Gay Marmee. *(C.japonica),* Savige, 1959, *New Zealand Camellia Bulletin,* vol.I, No.4, p.18: A light pink semi-double, campanulate. Originated by Mrs Sayce, Victoria, Australia. See colour photo, pl.68, p.42, *Encyclopedia of Camellias in Colour,* vol.II, 1978.

Gay Mini. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.87. No description. Originated in USA. No valid listing located.

Gay McKenzie. *(C.japonica),* SCCS., 1972, *Camellia Nomenclature,* p.63, Flesh pink. Large anemone form. Vigorous, upright growth. Mid-season blooming. Originated by L.D. Baggs, Macon, Georgia, USA.

Gay Pixie. *(C.pitardii),* ACRS., 1979, *Camellia News,* No .72, p.28, Reg. No. 219: *C.pitardii var. pitardii* hybrid, originated in Australia from chance seed by Edgar Sebire, Wandin North, Victoria. First flowered 1975. The upright, open plant has mid-green, 8 cm x 4 cm leaves. Flowers, 11 cm across, incomplete double, light, orchid pink petals with darker pink stripes. Flowers mid-season to late.

Gay Sue. *(C.sasanqua), New Zealand Camellia Bulletin,* 1981, vol.XII, No.2, p.5, Reg. No.159: A chance seedling of *C.sasanqua* originated by T. Lennard, Te Puke, New Zealand. It is of upright, dense growth of medium rate, with light green leaves, 5 cm x 2.5 cm. The white flowers with cream anthers and musk scent, have 12 frilled petals and are 8 cm across x 4 cm deep, Buds pink tipped. Flowers early.

Gay Time. *(C.x williamsii),* Nuccio's Nurseries Catalogue, 1973-1974, p.26: Light pink, formal to semi-double. Upright, bushy growth. Mid-season blooming. Originated by Les Jury, New Plymouth, New Zealand from *C.saluenensis x C.japonica* **Julia Drayton** as 'Mathotiana'. Received the RHS "Award of Merit", 21 Apr.1987 *Rhododendrons, 1987-8 with Magnolias and Camellias,* p.98: Plant fairly vigorous, erect, free flowering. Leaves 9.5 cm x 4.5 cm, fairly light, glossy green. Flowers, 11cm across, double with 9 rows of petals, between Red Purple Group 62A and B. Lower half of midrib fading to white. Orthographic variant: 'Gaytime'. Chinese synonym 'Huanle Shiguang'.

Gayana. *(C.japonica),* Colla, 1843, *Camelliografia,* p.106, 122: Petals terracotta red, the more central striped with white. The corolla is of numerous petals, regularly and alternatively disposed in good order, very approximately, smooth, round-oval; gradually becming smaller to the centre. Approximately like 'Billottii', particularly in its form, but the flowers are smaller and the colour more intense while the central tuft is scarcely streaked. Originated in Italy by Burnier in 1839.

Gayle. *(C.japonica),* Tammia Nursery Catalogue, 1965-1966. No description. Originated in USA. No valid listing located.

Gayle Beardon. *(C.japonica),* ACS *Journal,* June 2014, p.30 with colour photo; Regn No.2916. Originated by Vi & Hank Sone, Baton Rouge, La., USA.

Gayle Gibson. *(C.japonica)* SCCS., 1974, *Camellia Nomenclature,* p.64: Light pink, dashed and striped lighter pink. Small anemone form. Mid-seasom blooming. Originated by Haynie, Alabama, USA.

Gayle Walden. *(C.japonica), American Camellia Yearbook,* 1954, p.313, Reg. No.171: A 9 year old seedling of unknown parentage, originated by Spencer Walden Jr., Georgia, USA, that first flowered 1950. Plant growth is upright and rapid and leaves are unusually large. The flower is light pink, 12-15 cm in diameter, incomplete double with small petaloids, similar to **Elegans.** Blooms mid-season. Chinese synonym 'Aodeng'.

Gaylily. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Orange red, large single, recurved, twisted petals. Vigorous, bushy growth. Mid-season flowering. Originated by Harvey Short, Ramona, California, USA. Orthographic variant: 'Gay Lily'.

Gaynell. *(C.japonica), American Camellia Yearbook,* 1969, p.160, Reg. No.1036: An 11 year old seedling, originated in USA by W.F. Bray, Pensacola, Florida. Plant growth is average, open and medium in rate with dark green leaves, 7.5 cm x 4 cm. The anemone form bloom is 12.5-13.5 cm across x 6 cm deep with 21 petals. Bright, clear pink. Blooms mid-season. Has three rows of outer guard petals with a full anemone centre of petals and rabbit ears intermingled with small petals and petaloids.

Gaytime. Wilson Jr., 1974, *American Camellia Yearbook,* p.129. Orthographic variant for Gay Time.

Geannind Milli. Henderson, E.G. Catalogue, 1867, p.33. Orthographic error for **Giovannina Milli.**

Geant. *(C.japonica),* de Jonghe, *Beknopte Handleiding tot het Kweeken von Camellias,* p.121: Red with white stripes. Synonym: 'Raizen-Camellia'. Originated in Belgium by Drouart. Orthographic variant for **Le Géant.**

Geante des Battailes. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Giante des Battailles', synonym for Rawesiana as 'Speciosa'.

Geara. Joseph Baumann, 1849, Prix Courant, p.5. Orthographic error for **Gearo.**

Gearo. *(C.japonica),* Verschaffelt Catalogue, 1844-1845, p.25. No description. Orthographic error 'Geara'. (Believed extinct.)

Gèdalte Marzighe. Contini Catalogue, 1915. Orthographic error for **Tebaldo Marzichi.**

Gee. Cannon, 1973, ACS. *The Camellia Journal,* vol.28, No.3. Abbreviation for **Gee Homeyer.**

Gee Homeyer. *(C.japonica), American Camellia Yearbook,* 1974, p.170, Reg. No.1264: A 7 year old *C.japonica* seedling that first flowered 1970. Plant growth is upright, open and rapid in rate with medium dark green leaves, 8-10 cm long x 4-5.5 cm wide. Originated by Dr W.F. Homeyer Jr., Macon, Georgia, USA, from the cross **Elizabeth Boardman** x **Dixie Knight.** The formal double bloom is glowing pink with dark red veins. It is 9-11 cm across x 4-5 cm deep with 91 petals. Blooms mid-season. See colour photo, back page, ACS., 1977, *The Camellia Journal,* vol.32, No.2. Chinese synonym 'Jihe'.

Geenxi. Gao, Jiyin, 1998, *The World's Best Camellia Cultivars,* p.124. Chinese synonym for **Pat Gurnsey.**

Geerdaeli. Charles van Geert, 1846, Catalogue Général, p.68. Orthographic error for 'Ghiersdaelli', synonym for **Rawesiana.**

Geerdalii. Mertains & Fontaine Catalogue, 1845, p.23. Pl.16 as 'Guersdalii'. Large flowers, regular shape, rounded and notched at top. Irregular petals in the centre, folded and notched. Originated by Van Geersdaele, Gent, Belgium before 1835.

Geersdaeli. Charles van Geert Catalogue, 1845, p.6. Orthographic error for 'Ghiersdaelli', synonym for **Rawesiana.**

Gegan-tsubaki. (Double Pale red Camellia), *(C.japonica),* Joshua Condor,1893, *Landscaping in Japan,* p.117: Pale red double. Originated in Japan. (Believed extinct.)

Geisha Girl. *(C.japonica), American Camellia Yearbook,* 1959, p.273, Reg. No.362: An 8 year old chance seedling from Huntington Botanic Gardens, San Marino, California, USA. Plant growth habit is medium, upright and medium rapid with light green leaves, 11 cm long x 5.5 cm wide, with broad tips, smooth edges and prominent venation. The semi-double flowers, 11-13 cm across, have 17-19 petals and are light pink with darker stripes and blotches. Flowers mid-season. Sports include: **Geisha Girl Pink** and **Geisha Girl Variegated.**

Geisha Girl Pink. *(C.japonica),* Garner, 1967, *American Camellia Yearbook,* p.70: "**Geisha Girl** has thrown a solid colour sport which has been propagated. The flower is a striking, solid pink with an iridescent effect. Size is as good with better substance." Originated by L.W. Strohmeyer, San Gabriel, California, USA. Sport: **Geisha Girl Variegated.**

Geisha Girl Variegated. *(C.japonica),* Gentry, 1967, ACS., *The Camellia Journal,* vol.22, No.4, p.28 as 'Geisha Girl V'. A virus variegated form of **Geisha Girl Pink** - Solid pink blotched white. Originated in USA.

Geishun. (Welcoming New Year), *(C.japonica),* Yokoyama & Kirino. 1989, *Nihon no Chinka,* p.210, description, p.211, colour photo: Small size, brilliant crimson, vase-shaped single with 5 emarginate, concave, overlapping petals and a central stamen cylinder, with pinkish filaments, joined for the lower half, and golden anthers. Blooms early to mid-season. Leaves medium to deep green, elliptic to broad-elliptic, apices tapering acute, margins obscurely serrate. Selected from wild japonicas in Hirado City, Nagasaki Prefecture, Japan. Discovered by Mamoru Oda in 1978. Named and released by Saburô Kumasawa.

Ge-Juan Wilkes. *(C.japonica), American Camellia Yearbook,* 1980. p.1, Reg. No.1631: A large, pink semidouble *C.japonica* chance seedling, early to mid-season blooming; originated by Mrs Herman Johnson, Florida, USA. The 7 year old seedling first bloomed 1976. Average flower size is 11 cm across x 6 cm deep with 15 petals, 5 petaloids and rabbit ears and white filaments. Petals are slightly ruffled. Plant growth is upright and medium with dark green leaves, 10.5 cm long x 5 cm wide.

Gekkabijin. (Beauty under the Moonlight), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.22; Seibundô Shinkôsha, 1979, *Senchinshû,* p.50 & 212: Campanulate single red with white spots, 6-7 large, rounded petals, broad, central stamen column with golden anthers and pinkish filaments. Leaves mid-green, broad-ovate, raised venation; abrupt, acuminate apex; fine, shallow serration. Originated in Inazawa, Aichi Prefecture, Japan as a seedling of **Benimyorenji.** Originated and named by Shunichi Sakuragi in 1974.

Gekka-no-mai. Satomi, 1956, *Camellia Varieties in Japan,* p.15. (Dance in the moonlight). Synonym for **Gekka-no-nami.**

Gekka-no-nami. (Waves in the Moonlight), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* White, very large, leaves variegated with white. Synonym: 'Gekka-no-mai'. Originated in Kumamoto Prefecture, Japan.

Gekkô. Different reading for 'Gakko', synonym for **Bokuhan.**

Gekkô. (Moon Light), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô,,* vol.2: Pink, double, large size. Originated in Japan. (Believed extinct.) Note: This cultivar is distinct from the same named cultivar which is thought to be synonymous with **Bokuhan.**

Geladisi. Gao, Jiyin, 1993, *The Observations from the Camellia World,* No.560, p.69. Chinese synonym for the USA *C.reticulata* hybrid **Gladys Parks.**

Gelande. Shao, Taichong, 1992, *The Observations from the Camellia World,* No.433, p.82. Chinese synonym for USA *C.hybrid* **Fiesta Grande.**

Gelao. *American Camellia Yearbook,* 1993, p.36. Chinese synonym for the Australian hybrid **Alpen Glo.**

Gelarii Rosea. Fratelli Rovelli Catalogue, 1852, p.13. Orthographic error for **Gelasii Rosea.**

Gelasii Rosea. *(C.japonica),* Berlèse, 1843, *Iconographie,* vol.3, pl.253: The flower is over 10 cm across. It is large and disposed in a double star, rather full, of a deep orange-red with touches of lighter colour, similar to **Reevesiana.** The exterior petals, disposed in 4 rows are free, few in number, long, channelled, notched, irregularly imbricated, standing apart and disposed alternatively, this way then the other, with touches of very deep red. The corolla is sometimes closed up in the centre with many of the petals in a star shape, long, unequal, twisted and forming a rather full heart. Originated in France.

Geli. Gao, Jiyin, Ltr, 22nd August, 1994. Chinese synonym for USA *C.japonica* **Annette Gehry.**

Gelifin. Shao, Taichong, 1992, *The Observations from the Camellia World,* p.72, No.271. Chinese synonym for the USA *C.japonica* **Jane Griffin.**

Gelsii. Cachet, 1840-1841, Catalogue, p.2. Orthographic error for **Celsia.**

Genjiho. (Genji's Treasure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.86 with colour photo; English translation p.58. Changing to white, pink graduation in outer petals, tubular, miniature size single, degenerated stamens. Flowers mid-season to late. Leaves elliptic, medium size, channelled. Upright, vigorous growth. A natural seedling of **Kuro-tsubaki,** originated by Siichiro Sasai, named and released by Nobuo Sasai in 1986. From Okayama Prefecture.

Genpachi. (Personal Name). *(C.rusticana).* Seibu Maizuru Institute of Botany, 1991-1992, *Seibu no Tsubaki,* No.291: Bright red, tubular single with a short stamen tube. Small to medium size. Originated in the Ishikawa Prefecture, Japan.

Gensii. *(C.japonica),* Cachet Catalogue, 1840-1841, p.2. No description. Originated in France. (Believed extinct.)

Gentaku. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.86 with colour photo; English translation p.58. Miniature, dark red, tubular to cup-shaped single, slender, glossy petals, tubular stamen cylinder. Flowers mid-season to late. Leaves somewhat oblong, small. Upright growth. A chance seedling of **Kuro-tsubaki,** originated by Nobuo Sasai in 1985, released in 1997. From Okayama Prefecture.

Gem. *(C.japonica),* Rollisson Plant Catalogue, 1871. 'Gem'(Rollisson), carmine, with light pink centre, large, stiff, and shell-like petals; flowers large, imbricated and beautifully cupped; truly a gem. (Cat.1877-78). Originated in England by Rollisson.

Gem-C. *(C.japonica),* SCCS., 1951, *The Camellia. Its Culture and Nomenclature:* Dark rose-pink shading to purple. Large peony form. Medium, compact growth. Early flowering. Originated in USA by H.G. Whigham, Spring Hill, Alabama, USA. Reg. No.47, *American Camellia Yearbook,* 1954.

Gemella. Jacob Makoy et Cie Nursery Catalogue, 1849, p.20. Synonym for **Stockiana.**

Gemingqi. (Revolutionary Flag), *(C.japonica),* Wang & Yu, 1989, *Camellias*, No.82, pp.42, 43: Petioles and base of midrib slightly purplish. Flower red with 8-10 rows of imbricated petals, some central stamens; 10 cm across. Blooms mid-season. Originated by Chen, X.R. in Sichuan, China in 1926. Synonym: 'Hongkui'.

Gemingqi. Gao, Jiyin, Ltr, 21st January,1993. Synonym for **Tianfu Mudan.**

Gemma Belgica. *(C.japonica),* Burdin, Chambery Catalogue, 1834, p.19. No description. Burdin Maggiore & Co. Catalogue, 1835, p.38. No description. Originated in Italy. (Believed extinct.)

Gemma Fiani. *(C.japonica),* Scarlatti Catalogue, 1888: Large flower, perfectly imbricated, pearl white. Originated in Italy.

Gemo. Gao, Jiyin, 1993, *The Observations from the Camellia World,* ,No.439, p.62. Chinese synonym for the Italian *C.japonica* **Comte de Gomer.**

Gempaku. (Personal Name). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.35 with colour photo; White semi-double, medium size, lotus form with long narrow petals in separated layers. Pinched stamen column. Flowers mid-season to late. Leaves ovate, small. Upright, fairly compact growth. A chance seedling, originated by Soshin Hirai, Saitama Pref., Japan in 2006.

Gena Owens Fredrickson. *(C.japonica),* ACS *Journal,* June 2012, p.30 with colour photo; Regn No.2821; Originated by Edward W. Fredrickson, Wilmington, NC, USA. ACS, *Yearbook* 2012, p.174 with colour photo; A 28 year old seedling, first flowered 1992. Medium size, 9cm x 5cm, loose peony form flower has a light pink centre, shading to darker pink at edges, with 12 petals and up to 50 petaloids. Light yellow anthers and white filaments. Upright, average growth. Flowers midseason.

Gen'an. Synonym for **Gen'an-tsubaki.**

Gen'an-tsubaki. (Scholar's Hermitage), *(C.japonica),* Nakayama, 1847, *Senkaôden:* Double, light pink flower. Originated in Japan. Synonym: 'Gen'an'. See Kyôto Engei Kurabu, 1963, *Tsubaki Tokushû,* No.4, p.79.

Gendayû. (Origin Entertainer), *(C.japonica),* ICS., Apr.1990. *Japanese Camellia Cultivar List,* p.7: Medium size, rose-pink, double, opening flat. Late flowering. Originated in the Totori Prefecture, Japan.

Gene King. *(C.reticulata* hybrid), *American Camellia Yearbook,* p.172, Reg. No.1846: A very large, deep red, semi-double *C.reticulata* hybrid ('Crimson Robe' (**Dataohong**) x **Jean Pursel**), flowers mid-season to late; originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling first bloomed 1981. Average flower size, 15-16 cm across x 7.5 cm deep. Plant growth is upright, spreading and medium in rate with dark green leaves, 15 cm x 8 cm.

Gene Ploof. *(C.japonica),* Julington Nursery Catalogue, 1965. *American Camellia Yearbook,* 1966, p.89, Reg. No.856: A 10 year old chance seedling that first bloomed 1959, originated by Julington Nurseries, Jacksonville, Florida, USA. Plant growth is average, open and medium in rate with light green leaves averaging 7.5 cm x 4 cm. The peony form bloom is bright pink with light yellow anthers and light pink filaments. Size is 8.5 cm across x 5 cm deep and has 32-34 petals. It is a loose, peony form with centre petals wavy and folded, standing erect. Blooms mid-season.

General Baccalari. *I Giardino giornal d'orticultura,* 1857. Orthographic error for **Generale Boccalari.**

General Backseleri. de Bisschop Nursery Catalogue, 1935, p.7. Orthographic error for **Generale Boccalari.**

General Basculoni. Backhouse Catalogue,1871. Orthographic error for **Generale Boccalari.**

Général Bem. *(C.japonica),* Fratelli Rovelli Catalogue, 1852, p.18: Madoni. Imbricated, rounded, bright pink petals, lightly spotted with white. Franchetti, 1855, *Collezione di Camelie,* p.32: (Madoni). Large, vivid pink flower, rounded petals netted with white stains. Perfect imbrication. Verschaffelt, 1856, *Nouvelle Iconographie,* Book V, pl.I: The blossoms of medium size, uniform pink veined a deeper pink. The petals are rounded, obovate, emarginate and imbricated. Originated in Italy by Madoni of Brescia. General Bem was a Polish General and a Turkish Pasha according to Phillippo, 1881. Orthographic errors: 'General Ben', 'General Benn'.

Général Bem (Franchetti). *(C.japonica),* Franchetti, 1855, *Collezione di Camellia,* p.32, invalidly as 'Général Bem': Outer and central petals pale pink, intermediate, light pink, sometimes pink. Spiral imbrication. Originated by Cesare Franchetti, Florence, Italy. Mercatelli, 1881 also listed two camellias of this name, giving the Madoni originated cultivar as pink variegated with white and the the second as a solid colour camellia from Franchetti.

General Drout. Lemaire, 1852, *Iconographie des Camellias.* Orthographic error for **Général Drouot.**

Général Drouot. *(C.japonica),* Verschaffelt, 1852, *Nouvelle Iconographie,* Book VI, pl.I: This new Camellia was obtained from seed by Mr Lecomte, Nancy, France. It is distinguished from other varieties by its size, outspread and convex with a slightly depressed centre, forming a heart. The petals are numerous, rounded, somewhat bilobate, of a bright, cherry rose. It passes, without fading, to a violet-purple like **Arciduchessa Augusta.** It was named for the Comte Antoine, General Drouot, 1774-1847. Orthographic errors: 'General Drouat', 'General Drouet', 'General Drounot', 'General Drout', 'General Druot', 'General Dru'.

General Dru. Burdin Maggiore & Co. Catalogue, 1863. Orthographic error for **Général Drouot.**

General Druot. Burdin Maggiore & Co. Catalogue, 1856-1857. Orthographic error for **Général Drouot.**

Général Dufour. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. No description. van Houtte Catalogue, 1858, 72:13: Bright rose with all the petals striped with white, the centre pale purplish. Imbricated beautifully. Verschaffelt, 1859, *Nouvelle Iconographie,* Book XII, pl.II: Sent by Mr Franchetti of Florence, Itally, where it was obtained from seed. It is a perfection in the fullest meaning... Its blossoms are of the largest size, of a most unusual shade of pink, with numerous, broad, white streaks in the middle of the petals, which, imbricated with the utmost regularity, are quite ample, rounded, elegantly and fully bilobate.

General Dwight Eisenhower. *(C.japonica),* SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* Deep red. Large, full peony to anemone form. Vigorous, upright, compact growth. Mid-season flowering. Originated in the USA as a seedling of **Elegans** by Hubert Reeves, Pomona, California, USA about 1946. Abbreviations: 'Gen. D. Eisenhower', 'General D. Eisenhower', 'General Eisenhower', 'Gen. Dwight Eisenhower', 'General Ike'. Sport: 'Admiral Halsey'. See colour photo p.89, Macoboy, 1981, *The Colour Dictionary of Camellias* and black & white photo, p.148, Hertrich, 1954, *Camellias in the Huntington* Gardens, vol.I.

General Dwight Eisenhower Variegated. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Admiral Halsey.**

General Eisenhower. Henderson, 1951, SCCS., *The Camellia Review,* vol.15, No.5, p.13. Abbreviation for **General Dwight Eisenhower.**

General Gaula. da Silva & Filhos Catalogue, 1955, p.77. Orthographic error for **General Caula.**

General George Patton. *(C.japonica),* Coolidge Rare Plants Gardens Catalogue, 1946. No description. SCCS, 1946, *Camellias,* p.15: Medium large, coral pink, formal double to peony form double, 9-10 cm across. Centre sometimes filled in with petaloids. Vigorous, upright, open growth with dark, glossy green oval leaves, 8.5 cm x 4 cm, shortly acute apex, tapered base, finely serrate. Originated in USA by Coolidge Rare Plant Gardens, Pasadena, California, USA as a seedling of 'Purity', (**Shiragiku**). Synonym: 'Pink Purity'. Abbreviations: 'Gen George Patton', 'Gen. Geo. Patten', 'General George S. Patton', 'Gen. Geo. S. Patton', 'George Patton', 'General Patton', 'General G. Patton'. See black & white photo, p.149, Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I. Sport: **George Patton Variegated.** Chinese synonym 'Badun Jiangjun', changed from 'Patun' and 'Padun'.

General George Patton Variegated. Griffin, ed. 1958, *Camellian,* Vol.IX, No.1, p.8 as 'General George Patton Var.'. Synonym for **George Patton Variegated.**

General George Washington. *(C.japonica),* Gunnel, 1843, *Magazine of Horticulture*, 9:261: Originated in the USA by J.S. Gunnel. A thrifty growing plant with foliage about the size of **Variegata,** but flatter; buds oval, calyx green; flower of a light, cherry red to deep rose colour, with a small, white stripe running through a few petals, very symmetrically formed, beautifully imbricated, as double to the centre as the old double white (**Alba Plena**). Synonym: 'Washington'(Gunnel's), 'Washington de Floy'. Abbreviations: 'Gen. Geo. Washington', 'George Washington'. Orthographic errors: 'Georges Washington', 'George Wasington', 'General G. Washington'.

Général Georges Patton. Thoby et al., 1988, *Tsubaki. A Propos de Camellia,* p.46. Orthographic variant for **General George Patton.**

General Gordon. *(C.japonica),* William's Nursery Catalogue, 1891, p.42: Flowers small and compact, double, petals acutely pointed. Rose colour towards the centre of the flower, rosy crimson to outer edge, incurved and fleshy at the tips. The whole distinctly striped a rosy white. Introduced from Japan through Gerald Waller.

General Guardine. *(C.japonica),* Peer, 1956, *American Camellia Yearbook,* p.56. No description. (Believed extinct.)

General Hector MacDonald. *(C.japonica), Gardeners Magazine,* 1900, p.143: Magnificent semi-double camellia with very broad rounded segments, which are of a very soft, yet rich scarlet colour with a suspicion of rose towards the centre. Anonymous, 1900, *Gardeners' Chronicle,* ser.3, vol.27, p.142: a very fine, new, semi-double camellia, flowers 5 inches (12.5cm) across and of a pleasing shade of rose colour. From F. Sander & Co, St. Albans, England. RHS. "Award of Merit".1900.

General Henry Lee. *(C.japonica),* Gunnel, 1840, *Magazine of Horticulture*, 6:337: A full, crimson flower with 20 large, rose-edged petals and 10 smaller, irregular ones, an imperfect stype, and some stamens. A seedling of the old single red. (**Rubra**). Originated in USA by J.S. Gunnel.

General Jacopetti. Franchetti, 1855, *Collezione di Camelie*, p.33: Othographic variant for **Generale Jacopetti.**

General Jenny Lind. Charles Vuysteke Nursery Catalogue, 1888-1889, p.12. Orthographic error for **Jenny Lind.**

General John Le Jeune. Steffek, 1949, *Plant Buyer's Guide* ed.5, p.49. Orthographic error for **General John Lejeune.**

General John Lejeune. *(C.japonica),* McIlhenny Catalogue, 1945-1946, p.12 as 'Gen. John Lejeune': Deep rose-pink with white stamens, tipped light brown and a few pink petaloids. Medium large, loose, semi-double with broad, recurved petals. Originated in USA by McIlhenny, Jungle Gardens, Avery Island, Louisiana, USA. Orthographic errors: 'General John Le Jeune', 'General John Lejuene'.

General John Lejuene. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for **General John Lejeune.**

General La Fayette. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete*, p.11. Orthographic variant for **General Lafayette.**

General Lafayette. *(C.japonica),* van Houtte, Apr.1848, *Flore des Serres et des* Jardins...,vol.4, pl.342: This variety is distinguished by the turn up on the petal's apex. The colour is rose with broad bands of white equally dividing each petal longitudinally. The variety was grown from seed in the USA and placed in commerce by Mr Boll of that country. Hovey, ed., 1848, 14:402, *Magazine of Horticulture:* "Originated by Boll. A very showy variety, found, we believe, in the collection of camellias purchased by Mr Boll of New York from J.B. Smith of Philadelphia. The flowers are of deep rose, regularly imbricated, incurved at the edges, each petal having a broad, white stripe through the centre." Orthographic errors: 'General La Fayette', 'General Lafoyette', 'General Laffayette', 'Gen. Lafayette', 'General Lafaytte'. Synonym: 'Caroline Smith'. Orthographic variant: 'Generale Lafayette'. Verschaffelt figured and described it twice in his *Nouvelle Iconographie;* 1948, Book X, pl.III and 1853, Book VIII, pl.I.

General Lafaytte. Stefano Pagliai Catalogue, 1867, p.66. Orthographic error for **General Lafayette.**

A variety of **Marchese Costabili.** Raised in Genoa, Italy by Borsone according to Mercatelli, 1881. Orthographic errors: 'General Montevicchae', 'General Monte Vecchio', General Monerecchio'. A sport of **Marchese Costabili.**

General Moultrie. *(C.japonica),* ACS., *Quarterly,* 1951, 6(2):7: A seedling of unknown parentage from the Garden Hill Nursery, Summerville, South Carolina, USA, age 7 years. First flowered 1949, introduced 1950. Type of plant growth is open and upright. Manner of growth is rapid. Leaves are long, heavily veined on the top side, colour medium green. Flower buds oval and green. Flower is incomplete double, mixed petaloids. Colour velvety red, fading towards the centre. Mid-season blooming. ACS., 1954, *American Camellia Yearbook,* Reg. No.109. See black and white photo, p.93, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III.

General Mousinho. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.31, & No.9, 1872-1873, p.44: Formal double. Bright double cherry red colour. Originated in Portugal. Orthographic error; 'General Monsinho'.

General Nelson. *(C.japonica),* G.H.F., 1839, *Magazine of Horticulture,* é:210: Originated by Gunnell. Has foliage like **Conchiflora,** but much more pointed; the flower is nearly like **Derbyana** in colour and shape, though much more double, having 30 large petals, and some small, centre ones, a little variegated, with anthers and style tolerably good; green pericarp. Also a seedling of **Anemoniflora.** Originated in USA.

General Pallavicino. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.70: Large, perfectly imbricated flower, very full, rose-pink with petal tips a little brighter, and with extremely fine, vivid veining all over and lines of rose and white. Sport of 'Professore Giovanni Parlatore'. Originated in Italy. Orthographic error: 'General Pallavincini'.

General Pallavincini. Scarlatti Catalogue, 1888. Orthographic error for **General Pallavicino.**

General Passos. *(C.japonica),* José Marques Loureiro Catalogue, No.1, 1865, p.37, & No.9, 1872-1873, p.44. Irregular rose form. White striped with vermilion. Originated in Portugal.

General Patton. Coolidge Gardens Catalogue, 1949. Abbreviation of **General George Patton.**

General Pepe. *(C.japonica),* van Houtte Catalogue, 1858, 72:13: Well imbricated, very dark red lined with white. Originated in Italy by Rovelli. Named for Baron Guglielmo Pepe, 1783-1855, Italian General and author. Orthographic variant: 'Generale Pepe'.

General Pescetto. Grilli, 1883, *R. Società Toscano di Orticultura Bollettino,* vol.8, pp.197, 300. Abbreviation for **Generale Federico Pescetto.**

General Pescietto. Del Lungo e Girardi, 1928, *Le Camelie:* p.147: Orthographic error for **Generale Federico Pescetto.**

General Petreya. Vanderbilt, 1940, *Camellia Research,* p.4. Orthographic error for **Giardino Petreia.**

General Pinelli. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.70: Blush white, striped carmine, imbricated. Originated in Italy.

General Pisarro. Real Companhia Horticolo-Agricola Portuense, Catalogue, No.29, 1895-1896, p.49. Orthographic variant for **General Pizarro.**

General Pizarro. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.36, & 9, 1872-1873, p.44: Formal double, bright pink. Originated in Portugal. Named for a Portuguese General, died in the Portuguese war of liberation. Orthographic error: 'General Pisarro'.

General Renagni. Linden Catalogue, 1875, p.22. No description. Real Companhia Horticolo-Agricola Portuense, Catalogue, No.29, 1895-1896, p.49: Formal double, bright pink. Originated in Italy.

General Richard Mellon. *(C.japonica),* Dodd, 1968, *Adventure* in *Camellia Seedlings,* p.5, colour photo: A large, informal double to open peony form, red with lilac tones and a central mix of petaloids, stamens and small petals. A seedling of **Frau Geheimrat Oldevig.** Originated by Richard Dodd, Marshallville, Georgia, USA.

General Robert E. Lee. Magnolia Gardens and Nursery Catalogue, 1945-1946 as 'Gen. Robt. E. Lee'. Synonym for **Robert E. Lee.**

General Santarelli. Vanderbilt, 1940, *Camellia Research,* p.4. Orthographic error for **Giardino Santarelli.**

General Schatt. Peer, 1956, *American Camellia Yearbook,* p.56. Orthographic error for **General Scott.**

General Scott. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. No description. Orthographic error: 'General Scotti'. (Believed extinct.)

General Scotti. Carlo Costantini Catalogue, 1886. Orthographic error for **General Scott.**

General Silveira. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.36, & No.9, 1872-1873, p.44: Formal double, bright cherry, striped and spotted white. Originated in Portugal.

General Simpson. *(C.japonica),* Jean Verschaffelt, 1860-1861, Price List, p.13. Burdin Maggiore & Co. Catalogue, 1862. No description. Named for Sir James Simpson, English general at the Crimea. Orthographic variant: 'Generale Simpson'.

General Sonnaz. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.70: Carmine with the centre a little lighter, and some lines of white. Perfect imbrication. Originated in Italy by Pepin.

General Stewart. *(C.japonica),* Carriere, Apr.1885, *Revue Horticole,* p.147. Won a Certificate of Merit when exhibited by M.J. Moentjens, Ghent. No description. (Believed extinct.)

General Toussaint Beauregard. *(C.japonica),* McIlhenny Catalogue, 1945-1946 as 'General Toutant Beauregard': Purplish rose pink, veined purplish red. Medium sized, anemone form with a whirled centre of small petals and petaloids. Originated in the USA by McIlhenny, Jungle Gardens, Avery Island, Louisiana, USA. Named for Petre Gustavus Toussaint Beauregard, 1818 - ??, a General in the American civil war.

General Wade Hampton. *(C.japonica),* Magnolia Gardens and Nursery Catalogue, 1945: Deep red fading to light red. Very large, loose semi-double. Originated in USA at Magnolia Gardens, Charleston, South Carolina.

General Washington. *(C.japonica),* Hovey, ed. 1844, *Magazine of Horticulture,* 10:7. Originated by J.B. Smith. Van Houtte Catalogue, 1846-1847, 27:24: Well imbricated, white with reflections of creamy white, spotted and streaked with rose, some flowers are half rose and half white. Oudin Nursery Catalogue, 1845-1846, p.44: White, well imbricated, with yellowish centre and pink streaks. Verschaffelt, 1851, *Nouvelle Iconographie,* Book VII, pl.III. Sport:

Distinction. Synonyms: 'Washington'(Boll), 'Gigantea Alba', 'Washington'(Smith). Orthographic errors: 'General Waschington', 'Général Wasington', 'Generale Warinton'. Abbreviation: 'Gen. Washington'. No relationship with 'General George Washington'.

General Waschington. Corbelli Catalogue, 1882. Orthographic error for **General Washington.**

General Wasington. Alex Verschaffelt, 1846, Catalogue, p.54. Orthographic error for **General Washington.**

General Wayne. *(C.japonica),* Hovey, ed., 1844, *Magazine of Horticulture,* 10:85: Originated by Joshua Pierce. Red. Originated in USA. (Believed extinct.)

General William Bradford. Semmes C, Nursery Catalogue, 1950-1951, p.24 as 'Gen Wm. Bradford'. Orthographic error for **Governor William Bradford.**

General Zaccaii. *Journal of Horticulture and Cottage Gardener,* Jun.3, 1862, p.170. Orthographic error for 'General Zucchi', synonym for **Varischi.**

General Zighsi. *(C.japonica),* Alex Verschaffelt, 1846, Catalogue, p.54, as 'General Zighsii'. No description. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.107. Imbricated, rose steaked or striped with white. Originated in Italy by Casoretti. Orthographic error: 'General Zighsii'.

General Zighsii. Alex Verschaffelt Catalogue, 1846, p.54. Orthographic error for **General Zighsi.**

General Zocchi. de Bisschop Nursery Catalogue, 1935. Orthographic error for 'Général Zucchi', synonym for **Varischi.**

Général Zucchi. van Houtte Catalogue, 1842, 9:58. Orthographic errors 'Generale Zaccaii', 'General Zocchi', 'General Zucchini', 'General Zuicj'. Synonym for **Varischi.**

General Zucchini. Vanderbilt, 1940, *Camellia Research,* p.4. Orthographic error for 'Général Zucchi', synonym for **Varischi.**

General Zuchii. Verschaffelt, 1844, Catalogue No.50, p.20. Orthographic error for 'Général Zucchi', synonym for **Varischi.**

Generale Menabrea. Rovelli Catalogue, 1886. Orthographic variant for **General Menabrea.**

Generale Mengaldi. Fratelli Rovelli Catalogue, 1852. Orthographic error for **Generale Mengaldo.**

Generale Mengaldo. *(C.japonica),* Fratelli Rovelli Catalogue, 1852, p.18 as 'Generale Mengaldi': [from] Lechi. No description. Franchetti, 1855, *Collezione di Camelie,* p.33 as 'General Mengaldo': Deep carmine with large, pure white colour blotches. Very large, perfectly imbricated. See pl.II, Book III, Verschaffelt, 1856, *Nouvelle Iconographie.* Orthographic variant: 'General Mengaldo'. Orthographic errors: 'General Mangaldo', 'Generale Mengaldi'. Abbreviation: 'Gen. Mengaldo'. Erroneously used as a synonym for **Mercury Variegated** in USA.

Generale Pepe. Catalogo della Stablimento Agrario-Botanico de Castagnola e Casabono, 1867-1868. Orthographic variant for **General Pepe.**

Generale Pescetto. Anonymous, 1879, *R. Società Toscana di Orticultura Bollettino,* 4:66-71. Abbreviation for **Generale Federico Pescetto.**

Generale Simpson. Volonte Catalogue, 1888, p.112. Orthographic variant for **General Simpson.**

Generale Wasington. Fratelli Rovelli Catalogue, 1852, p.18. Orthographic error for **General Washington.**

Generale Zucchi. Fratelli Rovelli, 1852, Catalogue, p.18. Synonym for **Varischi.**

Genetreya. Vanderbilt, 1941, *Camellia Research, II,* p.3. No description. (Believed extinct.)

Genevensis. *(C.japonica),* Burdin Maggiore & Co. Catalogue, 1845, p.42. No description. Burnier & Grilli Catalogue, 1846-1847: A form of **Imbricata**; white like **Incarnata.** Oudin Nursery Catalogue, 1844, p.11: A form of **Imbricata;** white tinted blush. van Houtte Catalogue, 1854-1855, 53:41: Formal double except that the centre, which is like a butterfly, deep, rose white, all sprinkled and striped with carmine. Synonym: 'Marquise Isabella Spinola', according to van Houtte,1851.

Genevieve de Barbier. SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.38. Synonym for **Collettii.**

Genij-Karako. Ghisleni, Pier Luigi, 1982, *Le Camelie,* p.190. Corruption of the Japanese name **Genji-karako.**

Genji. (Family name of 12th Century Shôgun), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû; Chinka Zufu,* (before 1700), Watanabe, 1969, pl.667: The variety is like the red and white flag of Genji, a famous Shogun of the 12th century. A small, 5 petalled, campanulate single with a deep pink centre fading out to white at the petal edge. Synonyms: 'Genji-tsubaki'. See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.108. Originated in Japan.

Genji-awase. (Genji United – [see Note]), *(C.japonica),* Kasuya Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki,* in the section on new cultivars. Itô Ko'emon, 1879, *Chinkashû: A* semi-double of 16-18 petals of soft pink, streaked and veined deep pink and with a white border. Centre cluster of stamens with occasional petaloids or small petals. Leaves narrow-obovate with long, acuminate apex and wedge shaped base, mid-green, regularly serrate. Originated in Kantô District, Japan. See pl. l83, Tuyama, 1966, *Camellia Cultivars of Japan* and colour photo, Seibundô Shinkôsha, 1979, *Senchinshû,* .p.50 as 'Genji-awase (A)'; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.348. The name refers to the flag of the Genji Clan of medieval Japan. Different readings: 'Genjigô'. Note: Genji-awase is also a classic card game. Also "Awase" is usually given as the name of a cultivar which produces a variety of coloured blooms.

Genji-awase (A). Seibundô Shinkôsha, 1979, *Senchinshû,* p.50. Synonym for **Genji-awase.**

Genji-awase (B). (United Genji – [see Note above]), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.50, description, p.212: Medium sized, semi-double with about 24 petals in 3-4 rows and a central column of stamens with light yellow anthers and pale cream filaments.

Petals deeply notched, apices recurved, rose coloured with some broad, red streaks and an irregular, white edge, petals channelled. There are two camellias named **Genji-awase** which have been distinguished in the *Senchinshû* by the affixes (A) and (B). The first with the affix (A) refers to the old variety of the last century and is thus reduced to synonymity, the second, more modern variety, with the affix (B), is accepted as valid to distinguish it from the earlier cultivar. Originated in the Kantô District, Japan.

Genji-banobo. *(C.japonica),* The Sunningdale Nursery Catalogue, 1956, p.7: Small size, double, rose colour. Appears to be a corruption of an unknown Japanese name.

Genjigô. Sakata & Co. Catalogue, July, 1938. Different reading for **Genji-awase.**

Genji-guruma. (Carriage for the ancient Court Nobles), *(C.japonica),* Kasuya Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki* in the section for peony form. Itô, Ko'emon, 1879, *Chinkashû;* Tuyama, 1968, *Camellias of Japan,* pl.235, description, p.161, also p.51; *Encyclopedia of Camellias in Colour,* 1972, vol.I, p.19, pl.166; Seibundô Shinkôsha, 1979, *Senchinshû,* p.213 description: Leaves ovate to oblong, thick, flat, petiole glabrous. Flowers of peony type. The colour of this cultivar was originally described as pink streaked deep red, but this is now rather rare. Illustrations mostly show the self red form (Carmine 21/1) sport of **Hanaguruma.** The expected form has stamens arranged in a circle around a central crown of petaloids and small, erect petals. Late flowering. Originated in Japan. Synonyms: 'Kyobotan', 'Futaezuru'.

Genji-guruma. (See above), *(C.sasanqua),* Itô Jukyû, 1739, *Honzô Hanamaki'e,* vol. l6: Double, white petals with pink margins; medium size. Long, narrow leaves. Originated in Japan. (Believed extinct.)

Genji-guruma. (See above), *(C.sasanqua),* Kajitsuen, 1905, *Chabaika Meikan:* Medium size, pink, anemone form flower. Originated in Japan.

Genji-guruma. (See above), *(C.sasanqua),* McIlhenny, 1937, *600 Varieties of Camellias:* Single. Rose--pink mottled white, tipped rose-red. Medium size. Originated in Japan.

Genji-isahaya. (Genji from Isahaya), *(C.japonica), Chinka Zufu,* (Before 1700), Watanabe, 1969, pl.410: A trumpet shaped single, with 5-6, deep crimson with white spots, irregular, fluted petals. Originated in Japan. Resembles **Shokkô.** (Believed extinct.)

Genji-karako. (Genji's Anemone), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* in section of anemone forms. Itô, Ko'emon, *Chinkashû;* Tuyama, 1968, *Camellias of Japan,* pl.369, p.188, description, p.199; *Encyclopedia of Camellias in Colour,* 1972, p.164, pl.388 and p.349; also Seibundô Shinkôsha, 1979, *Senchinshû,* p.50, colour photo, p.212, description: Leaves small, oblong to elliptic-oblong, shortly acuminate, obscurely crenate on margin. Flowers double with large, irregular petaloids in the centre, anemone form, rosy pink to pink margined white, occasionally self rose (Spinel red 0023/1). Late flowering. Originated in Kantô District, Japan. Orthographic errors: 'Genji-karoko', 'Genij-Karako'.

Genji-karoko. Vanderbilt, 1940, *Camellia Research,* p.4. Corruption of Japanese name, **Genji--karako.**

Genji-sanemori. (Sanemori of the Genji Clan), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.602: Medium sized, semi-double to open peony form with ruffled, garnet red petals and an irregular stamen cluster. Originated in Japan. (Believed extinct.)

Genji-shibori. (Genji Dapple), *(C.japonica),* Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.112, black and white photo; *Encyclopedia of Camellias in Colour,* vol.II, 1978, colour photo, pl.436: Medium sized, open, peony form of about 30 petals with a white background having a fine peppering of soft rose dots and some streaks of deep rose and light rose. The centre consists of about 5 fascicles of stamens divided by small, erect centre petals. Leaves flat and lustrous, elliptical with acuminate apex and medium serrations. Late blooming. See colour photo & description, p.371, Yokoyama & Kirino, 1989, *Nihon no Chinka* and Seibundô Shinkôsha,

1979. *Senchinshû.* pp.51, 213. Corruption of name: 'Garneshiba'. Originated in Kantô District, Japan. A sport of **Hikarugenji.**

Genji-tsubaki. Uesa, 1844, *Sômoku Benran.* Synonym for **Genji.**

Genkai-awayuki. ('Awayuki' from Genkai). *(C.japonica), Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010, p.45 with colour photo; Miniature, pale pink single, cupped petals. Flowers mid-season. Leaves small, rounded. Upright growth. Collected from a camellia forest at Genkai Nuclear Power station by Kitada around 1975, named and released by Katsuhiko Higuchi. From Saga pref., Japan.

Genna. (See below), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû; Chinka Zufu,* (before 1700), Watanabe, 1969, pl.106: Medium sized, dark crimson, peony form. Originated in Japan. This name refers to the era 1615-1624 as it was produced in the first year of the Genna era. (Believed extinct.)

Genna. (See above), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.688: Medium sized, deep pink peony with a white edge. Originated in Japan. (Believed extinct.)

Gennaibotan. (Gennai Peony), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.213: White graduations on a peach-pink coloured ground, peony form, large; mid-season to late flowering. Leaves small, short, wide-ovate. Originated with a private family in Shido Town, Kagawa Prefecture, Japan. Named and released by Saneichi Koyama in 1979.

Gennaiguro. Seibundô Shinkôsha, 1979, *Senchinshû,* p.213. Different reading for **Gennaikoku.**

Gennaikoku. (Gennai's Black), *(C.japonica), Encyclopedia of Camellias in Colour,* vol.I, 1972, p.367 & vol.II, 1978, pl.416 as 'Gennai-koku': Medium sized, semi-double to open informal double with small, erect petals amongst the central stamen cluster. Deep purple colour. Leaves large, thin, wide-ovate, dull, light green. Named because of its association with Hiraga Gennai, a Japanese scholar (1728-1779), scientist and botanist who loved camellias in the Edo era. Originated with a private family in Shido Town, Kagawa Prefecture, Japan. Named and released by Saneichi Koyama in 1972.

Genna-kasuri. (Genna Variegated), *(C.japonica), Chinka Zufu,* (before 1700), Watanabe, 1969, pl.78: Small red with white spots, peony form with fasciciles of stamens visible amongst the petals. Originated in Japan. Different reading: 'Genna-tobi'iri'. Orthographic error: 'Genna-shibori'. (Believed extinct.)

Genna-shibori. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû* No.10, p.119. Orthographic error for **Genna-kasuri.**

Genna-tobi'iri. Different reading for **Genna-kasuri.**

Genolden Blush. *(C.japonica), American Camellia Yearbook,* 1984, p.177, Reg. No.1963: A medium blush peony form *C.japonica* chance seedling of 'Magnoliiflora' (**Hagoromo**), mid-season flowering; originated by Raymond H. Enfinger, Florida, USA. The 10 year old seedling first bloomed 1979. Average flower size 8.5 cm across x 5 cm deep, with 30 petals, 180 petaloids, golden anthers, white filaments. Plant growth is of average density and medium rate with dark green, 9 cm x 5 cm leaves.

Genpei. (Minamoto & Taira Clans), *(C.japonica),* Vanderbilt, 1940, *Camellia Research,* p.4 as 'Genpie'. No description. Originated in Japan. Different reading 'Gempei'.

Genpei-kagura. (Genpei Shinto Dance), *(C.japonica),* Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû* No.10, p.119. No description. Originated in Japan.

Genpei-nishiki. (Genpei Brocade), *(C.sasanqua),* Kajitsuen, 1905, *Chabaika Meikan:* Medium size, white, with red graduations. Originated in Japan.

Genpei-shibori. (Genpei Dappled), *(C.rusticana),* Tuyama, 1966, *Camellia Cultivars of Japan,* p.362 as 'Gempei-shibori'; Tuyama, 1968, *Camellias of Japan,* pl.393, p.200, description, p.206: Leaves broadly elliptic, base rounded, shortly acuminate, green to dark green, minutely serrulate, average size, 7.5 cm x 4.3 cm; petioles hairy. Flowers complete double, (formal double) cup-shaped, white striped red (Crimson 22 or 22/1) or blooming red and white in sectors; petals embracing each other. Flowers mid-season to late. Originated in Nagoya, Japan. Genpei is an abbreviation for Genji and Heike, two famous families of medieval Japan with symbolic flags of red and white respectively. See color photo & description, Satô, 1975, *Chûbu no Tsubaki,* p.94. Resembles **Tobi'iri-otome,** which has narrower leaves and a wider form. Different reading: 'Gempeishibori'. Named and released by Minoru Satô around 1938.

Gensanmi. (Name of an Order in ancient Japan), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.180, colour photo, p.181, description: Small size, brilliant red, tubular single of 5 fluted petals and small stamen cluster, flowering apical and ancillary, early to mid-season, with white degenerated anthers like **Wabisuke.** Leaves, small, mid-green, narrow lanceolate with long tapering, acuminate, recurved apices and shallowly serrate margins. Originated in the Mihama-chô, Fukui Prefecture, Japan. Synonym: 'Mihama-wabishin'.

Gentaku. (obscure). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.86 with colour photo; English translation p.58. Miniature, dark red, tubular to cup-shaped single, slender, glossy petals, tubular stamen cylinder. Flowers mid-season to late. Leaves somewhat oblong, small. Upright growth. A chance seedling of **Kuro-tsubaki,** originated by Nobuo Sasai in 1985, released in 1997. From Okayama Prefecture.

Gentil Bresclana. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.108. Orthographic error for **Gentile Bresciana.**

Gentil Bresciana. Antofilo ed., 1857-1858, *I Giardino giornal d'orticultura,* vol.IV, p.97. Orthographic variant for **Gentile Bresciana.**

Gentile. *(C.japonica),* Sacco, 1830-1833, according to Schiavone,1981, *Il Giardino nell Camelie,* pl.29. No description. Originated in Milan, Italy by Dr Sacco. Orthographic error: 'Gentille'. (Believed extinct.)

Gentile Bresciana. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.19: Formal double, vivid rose. Originated in Italy by Brozzoni. Orthographic errors: 'Gentil Bresclana', 'Gentil Bresciana'.

Gentille. Cachet Catalogue, 1840-1841, p.2. Orthographic error for **Gentile.**

Gentle Breeze. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.140. Synonym for **Soyokaze.**

Genü. Chinese synonym for USA *C.hybrid* **Show Girl.**

Genuae Perfecta. *(C.japonica),* Piataio Comunale Romano Catalogue, 1858. No description. Originated in Italy. (Believed extinct.)

Genwa. Different reading for **Genna.**

Geo. Barrett. Blackwell Nursery Catalogue, 1956-1957, p.9. Abbreviation for **George B. Barrett.**

Georgia Bell. Mark S. Cannon Scion Catalogue, 1963-1964, p.6. Orthographic error for **Georgia Belle.**

Geoff Hamilton. *(C.japonica),* ACRS., 1981, *Camellia News,* No.79, p.28, Reg. No.265: Originated by Dr R.M. Withers, Hawthorn, Victoria, Australia. A mutant of the *C.japonica* **Yirgella,** first appearing 1979. The flower is pale pink with white edging. All other characteristics similar to parent.

Geoffrey Davis. (*C.reticulata* hybrid). ACRS, *Camellia News,* 1996, No.139, p.9, colour photo p.2, Reg. No.465. Registered by Mrs Edna Parkes, East Brighton, Victoria, Australia. a chance seedling

with *C.reticulata* hybrid characteristics that first flowered 1994. The pink (RHS.CC.54A) informal double flower has 60 petals and 120 petaloids, and diameter is 11 cm x 7 cm deep. Flowers mid-season to late on a slow growing, spreading, open plant. Leaves dark green, glossy, keeled, elliptic, acuminate apex, serrate margins, 11 cm long x 7 cm wide. Petals notched, folded and fluted. Filaments in groups with petaloids.

Geoffrey James. *(C.sasanqua).* ACRS, *Camellia News,* 1998, No.147, p.13, colour photo p.19, Reg. No.510. Originated by Colleen Sherrington, Balwyn North, Victoria, Australia. A chance seedling that first flowered 1994. A light pink (RHS.CC.63C) Elegans-form flower of 12 petals and numerous petaloids with deeper edged petal margins (RHS.CC.63B). Flower size is 5 cm across x 2 cm deep. Flowers early to mid-season on an upright plant of medium growth. Leaves light olive green, matt, ovate, moderate serrations, 4.5 cm long x 2 cm wide. Petals flat, filaments scattered. Strong perfume. Flowers can open formal double.

Geometrica. *(C.japonica),* van Houtte Catalogue, 1842, 9:52: Very soft rose of perfect form. Originated in Italy by Casoretti. Orthographic error: 'Geometricans'. Synonym: 'Geometrica Casoretti'.

Geometrica Cororettii. Verschaffelt, 1844, Catalogue No.50, p.20. Orthographic error for 'Geometrica Casoretti', synonym for **Geometrica.**

Geometrica Florentina. *(C.japonica),* Isola Madre Catalogue, 1845. No description. Originated in Italy. (Believed extinct.)

Geometricans. Verschaffelt Catalogue, 1846, p.54. Orthographic error for **Geometrica.**

George. Forrest ed., 1985, *Trees & Shrubs Cultivated in Ireland.* Abbreviation for **George Blandford.**

George Ansel Nelson. *(C.japonica), American Camellia Yearbook,* 1967, p.226, Reg. No.956: A 7 year old chance seedling that first bloomed 1963; originated by George A. Nelson, South Carolina, USA. Plant growth is average with yellowish, green leaves, 9 cm x 4 cm. The semi-double flower, similar to **Finlandia,** is 10-11 cm across x 4 cm deep with 2 rows of 14 petals and 3-10 petaloids interspersed with stamens. Colour is hibiscus red, filaments are white with a reddish cast at base of yellow anthers. Blooms mid-season.

George B Barrett. *(C.japonica), American Camellia Yearbook,* 1949, p.251, black and white photo, Reg. No.4; plant patent No.866: Large white, incomplete double, 13 cm across x 6 cm deep with fluted, outer, guard petals, golden stamens intermingled with petals and petaloids. Leaves mid-green, thin, acuminate, 8 cm x 5 cm. Habit bushy, upright, medium growth. Originated by Mrs E.W. Hagler, Augusta, Georgia, USA. Patent applied for in 1947 and assigned to the Orton Plantation. Abbreviation: 'Geo. Barrett'.

George Blandford. *(C.x williamsii),* Williams, 1962, RHS., *The Rhododendron and Camellia Yearbook,* p.95: Pinkish mauve. Flowers a month earlier than **Caerhays.** A semi-double with some petaloids to peony form. Early blooming with a spreading habit. *C.saluenensis x C.japonica* 'Lady Clare'. (**Akashigata**). Originated in England by Julian Williams, Cornwall. Received an RHS "Award of Merit" in 1965 & 1974. Abbreviation: 'George'. Orthographic error 'George Blanford'.

George Blanford. Mount Congreve Wholesale Nursery 1988, Price List, p.3. Orthographic error for **George Blandford.**

George Brockman. *(C.japonica),* SCCS., 1981, *Camellia Nomenclature,* p.67: Rose-red veined deeper. Miniature formal double. Vigorous, compact growth. Mid-season flowering. Originated by Ray Gentry, Jackson, Mississippi, USA. Sport: **George Brockman Variegated.**

George Brockman Variegated. *(C.japonica),* Gentry, ACS., 1984, *The Camellia Journal,* vol.39, No.4, p.17 as 'George Brockman V.': A virus variegated form of **George Brockman** - Rose-red blotched with white. Originated in the USA by Ray Gentry, Jackson, Mississippi.

George Clegg. (*C.japonica), American Camellia Yearbook,* 1980, p.165, Reg. No.1623: A very large, rose pink semi-double, *C.japonica* chance seedling, early to mid-season flowering; originated by George R. Clegg, Tallahassee, Florida, USA. The 13 year old seedling first bloomed 1969. Average flower size 12 cm across x 8 cm deep with 16 petals, golden anthers and white filaments.The stamens separate into a 5-pointed star. Plant growth is upright and rapid with dark green leaves, 10.5 cm x 5cm.

George Counts. *(C.japonica),* SCCS., 1970, *Camellia Nomenclature,* p.61: White. Very large semi-double. Vigorous, upright growth. Mid-season blooming. Originated by the Roadside Nursery, Savannah, Georgia, USA.

George Firth. *(C.reticulata),* Cannon, 1984, ACS., *The Camellia Journal,* vol.39, No.4, p.19. No description. *American Camellia Yearbook,* 1985, p.183, Reg. No.1962: A very large, dark red, variegated, peony form *C.reticulata* hybrid chance seedling of **Maud Sugg;** mid-season flowering; originated by Paul Gilley, Sandridge, Florida, USA. The 6 year old seedling first flowered 1982. Average size is 13 cm across x 7.5 cm deep with 28 petals, some folded. The bloom has pink anthers and yellow filaments. Plant growth is average with dark green, serrated leaves, 11 cm x 7.5 cm.

George Firth Variegated. *(C.reticulata).* ACS, *The Camellia Journal,* vol.47, No.4, p.31: A virus variegated form of **George Firth.** Originated in the USA.

George Gerbing. *(C.reticulata x C.japonica).* ACS, Feb 1994, *The Camellia Journal,* vol.49, No.1, p.36, Reg. No.2281; ACS 1994, *American Camellia Yearbook,* p.60: Originated by Marvin Jernigan, Warner Robins, Georgia, USA. A very large pink semi-double. A seedling of *C.reticulata* **Patricia Coull** x *C.japonica* **Ville de Nantes.** Commercially introduced in 1993. The 11 year old seedling first flowered 1987. Average flower size is 16 cm across x 8 cm wide with 19 petals, clear anthers and white filaments. Plant growth is upright, open and vigorous with dark green, fimbriated leaves 17 cm long x 7,5 cm wide. Colour pl. between pp.64-65.

George McGee. *(C.japonica),* Hillcrest Nursery Catalogue, 1958. No description. Originated in USA.

George Mason. Hovey ed., 1840, *Magazine of Horticulture.* Abbreviation for **George Mason, Sen..**

George Mason, Sen. *(C.japonica),* G.H.F., 1837, *Magazine of Horticulture,* 5:210: Originated by Gunnell, USA. This variety is a vigorous grower, having foliage very much like **Floyi;** the pericarp green, and the flower very double; about 40 large petals, of a fine red colour; the petals nicely imbricated, except a small part of the centre, which is full of very diminutive petals. A seedling of the old **Anemoniflora.** Abbreviation: 'George Mason'. Orthographic error: 'General Mason Sr.'.

George Monk. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.88: Blush mauve. Originated in USA.

George O. Anderson. *(C.japonica), American Camellia Yearbook,* 1959, p.273, Reg. No.400: A 5 year old seedling from Japanese seed; originated by Dr John B. Anderson, Mississippi, USA that first bloomed 1957. Plant growth is open, spreading and medium in rate. The dark green leaves average 8.5 cm x 4 cm. In form the flowers range from semi-double to rose form double similar to 'Mathotiana', (**Julia Drayton**). The flowers are rose-pink like **Simeon** and have 36-50 petals, 7-10 petaloids and yellow stamens - all central. Size is 10-11 cm across x 7.5-8 cm deep. Flowers mid-season to late.

George Orman. *(C.japonica),* James Trehane & Sons Ltd Camellia Nursery Catalogue, 1991: Colour photo inside front cover. Originated at the Trehane Nursery. A seedling of **Tarô-an** and with the same trailing habit, making it ideal for cascading. Flowers large, white, semi-double with

bright yellow stamens. Blooms early to late. Note: Illustration shows a single of 7 petals with some fimbriation. Named for the nursery's late manager.

George Patton. Mark S. Cannon Scion Catalogue, 1962, p.4. Abbreviation for **General George Patton.**

George Patton Variegated. *(C.japonica),* Hillcrest Nursery Catalogue, 1958: A virus variegated form of **General George Patton** - Bright pink blotched white. Originated in USA. Synonym: 'General George Patton Variegated'.

George Priest. *(C.japonica), American Camellia Yearbook,* 1980, p.177, Reg. No.1942: A large red and white semi-double *C.japonica* chance seedling of **Lady in Red;** originated by Ted Alfter, Bakersfield, California, USA. The 10 year old seedling first bloomed in 1978. Average flower size is 12.5 cm across x 7.5 cm deep with 16-18 petals. Plant growth is upright, spreading and rapid in rate with dark green leaves, 11 cm x 6 cm.

George Shepherd. *(C.japonica), American Camellia Yearbook,* 1961, p.223, Reg. No.551: A 4 year old chance seedling that first bloomed 1961; originated by George W. Shepherd, Orlando, Florida, USA. Plant growth is slow, upright and open with dark green leaves, 7.5 cm x 4 cm. The semidouble flowers, 10.5 cm across x 6 cm deep, are satiny rose with golden stamens and have 30 petals and 5 petaloids. The petals have a ruffled edge, and the very edge is a dark rose colour. Blooms mid-season. For another form see **George Shepherd Variegated.**

George Shepherd Variegated. *(C.japonica),* Cannon, 1970, ACS., *The Camellia Journal,* vol.25, No.4 as 'George Shepherd Var.'. A virus variegated form of Geo**rge Shepherd** - Satiny rose blotched with white. Originated in USA.

George Spencer. *(C.reticulata),* ACS, *The Camellia Journal,* Mar. 2009, p.29, Regn No.2752. Originated by John L. Spencer, Lakeland, Fla, USA. *American Camellia Yearbook,* 2008, p.113 with colour photo; A 10 year old seedling of **Frank Houser,** first bloomed 2004. A podmate of **Professor John L. Spencer.** Rose coloured flower is formal double with no stamens. Diameter 12.7 cm x 3.8 cm deep, heavy petal texture. Plant is upright and slow growing. Flowers early to mid-season. The dark green leaves are 9.5 cm x 5 cm.

George Stewart. *(C.japonica), American Camellia Yearbook,* 1980, p.165, Reg. No.1596: A large to very large medium red, semi-double *C.japonica* seedling, originated by George Stewart, Sacramento, California, USA. The 10 year old seedling first bloomed 1974. Average flower size, 12.5 cm across x 6 cm deep. Blooms have a deeper red veining. Plant growth is upright, dense and rapid in rate. For another form see **George Stewart Variegated.**

George Stewart Variegated. *(C.japonica),* Cannon, 1982, ACS, *The Camellia Journal,* vol.37, No.4 as 'George Stewart Var'. A virus variegated form of **George Stewart** – Medium red and white. Originated in USA.

Geris. Jacob Makoy et Cie Nursery Catalogue, 1849, p.20. Orthographic error for **Geri.**

Germaine de Kerret. *(C.japonica),* A 20 year old seedling of **Madame Lourmand**, first flowered 1994. Originated by Dominique Cueff, Kergarapec, France, registered and propagated by "Stervinou", Guipronvel, France. Plant is upright with rapid growth, with dark green, elliptic

leaves, 8-9cm x 5cm. Flowers are white, single, 6-7cm diameter x 3-5cm deep. Stamens are columnar with yellow anthers and white filaments. Flowers early and for up to 5 months. Flowers fall whole.

Germaine Niel. *(C.japonica),* Pépinières Thoby, Carquefou, France, Plant List, 2003, p.17. No details. J & F Thoby, Gaujacq, France, Catalogue, 2005, p.42; A seedling of **Madame Martin Cachet.** White formal double with some rose-pink stripes. Compact growth.

Gerry Auchtenbach. *(C.japonica),* Dodd, 1968, *Adventures in Camellia Seedlings,* p.14, colour photo: Medium size, carmine, semi-double with 3-4 rows of ruffled petals and a ragged stamen cluster. A seedling of **Shirobotan.** Originated in USA by Richard Dodd, Marshallville, Georgia.

Gerry O'Brien. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings,* p.8, colour photo: Medium size, irregular, incomplete double of Rhodonite pink. Petals, twisted, fluted and reflexed. A seedling of **Lindsay Neill.** Originated by Richard Dodd, Marshallville, Georgia, USA.

Gertrude Cirlot. *(C.japonica), American Camellia Yearbook,* 1969, p.161, Reg. No.1052: A 12 year old chance seedling that first bloomed 1964; originated by J.M. Cirlot, Moss Point, Mississipi, USA. Plant growth is average with thick, dark green leaves, 8 cm x 5 cm. The peony form flower, similar to **Debutante,** is 12 cm across x 5.5 cm deep with three back rows of large petals and a trumpet shaped rosette of many petals. Wine red. Early flowering. For a different form see **Gertrude Cirlot Variegated.**

Gertrude Cirlot Variegated. *(C.japonica),* Gentry, 1972, ACS., *The Camellia Journal,* vol.27, No.4 as 'Gertrude Cirlot V.'. A virus variegated form of **Gertrude Cirlot** - Wine red and white. Originated in USA.

Gertrude Jekyll. *(C.japonica), Liste des Espèces, Variétés et Cultivars de la Collection de Camélias du Parc Floral de Paris,* March 1995. No description. Originated in the UK.

Gertrude Murray. SCCS., 1956, *The Camellia. Its Culture and Nomenclature,* p.49. Synonym for **Colonial Dame.**

Gertrude Preston. *(C.japonica),* Puddle, ed., 1962, *International Camellia Journal,* No.1, p.9 and front cover black and white photo: A seedling of the *C.japonica* cultivar known as **Apple Blossom** in Britain, received the RHS "Award of Merit" in April, 1962. It is very free flowering, being clothed with single flowers which are Neyron Rose when fully open but deeper in bud. Of vigorous growth it promises to be an excellent garden camellia and is a credit to the raiser, Mrs G. Preston, Haywards Heath, Sussex, England. The flower consists of 8 petals, HCC.623/2, (RHS.CC. 55C) when fully open, measures 8.5 cm across. Stamens in a centre cluster.

Gervaise Smelser. *(C.japonica),* Griffin ed., 1958, *Camellian,* vol.IX, No.3, p.14: Large, flesh-pink semidouble. Similar colour and formation to 'Magnoliiflora' (**Hagoromo**) only larger. Flowers mid-season to late. Originated in Portugal by da Silva.

Gervasina. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.19: Colour rose shadings, imbricated. Originated in Italy by Carlo Luzzatti, Florence.

Gessekai. (Lunar World), *(C.rusticana),* Minagawa, 1956, *Chinkashû.* Tuyama, 1968, *Camellias of Japan,* pl.135, p.68, description, p.128: Wild snow camellia type, with leaves variegated yellow-green. Flowers very small with red, incurved petals. Stamens scattered and short. Leaves oblong-elliptic, venation strongly impressed; petioles 3-5 mm long, very hairy. The whitish-yellow variegation of the leaves is broad and along the margins, extending in between the side veins. Late flowering. Originated in Japan in the Niigata Prefecture. Different readings: 'Tsukisekai', 'Getsusekai'. See colour photo, Seibundô Shinkôsha, 1979, *Senchinshû,* p.50.

Gesshô. (Moonshine), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.39, colour photo and description: Medium size, white, campanulate single with 5 wide, rounded, somewhat emarginate, over-lapping petals, a little reflexed, and a central stamen column, pinched in at the top, with white filaments and deep gold anthers. Blooms early to mid-season. Leaves dark green, flat, broad-ovate, apices abrupt acute, margins serrulate. Originated in the Chûbu area, Japan by Tôhei Takahashi of Nishio City in 1981..

Gesshôji-beni. (Red of Gesshô Temple), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.213, colour photo and description: Large size, brilliant scarlet, wide campanulate single, with 6 broad, overlapping, emarginate, crinkled petals and a central stamen column, with reddish filaments, joined for the lower half, and golden anthers. Blooms late. Leaves dark green, broad-ovate to lanceolate, apices acuminate, margins shallowly serrate. Original tree is in the precincts of Gesshô Temple, Matsu'e City, Shimane Prefecture, Japan. Named and released by San-in Camellian Club in 1975.

Gesshoku. (Eclipse of the Moon), *(C.japonica),* Sakuden, 1630, *Hyakuchinshû:* Red with white petaloids, large single with petals curved to the outside. Originated in Japan. Different reading: 'Gessyoku'. (Believed extinct.)

Gessyoku. Different reading for **Gesshoku.**

Getsusekai. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû* No.1, p.53, as 'Getsu-sekai'. Different reading for **Gessekai.**

Gettan. (See below), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.105, colour photo and description: Medium size, bright pink, paler pink at the base, campanulate single with a central stamen cylinder, pinkish filaments, yellow anthers. Blooms mid-season. Leaves pale to midgreen, elliptic, apices acuminate, margins serrulate. Selected from a wild japonica community in Matsu'e City, Shimane Prefecture, Japan. "Gettan" was the penname of Matsudaira, Aritsune, son of Matsudaira, Fumaikô, owner of the Matsu'e Castle. Named and released by San-in Camellian Club in 1980.

Gewen. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias*, p.423. Chinese synonym for **Gwen Pike.** Previously 'Gewenzhui'.

Gewenzhui. Gao & Zhuang, 1989, *The Camellia in China,* p.78, No.592: Chinese synonym for the Australian *C.sasanqua,* **Gwen Pike.** Later amended to 'Gewen'.

Gexin. (Innovation), Gao & Zhuang, 1989, *The Camellia in China,* p.72, No.524: Chinese synonym for the Feather's reticulata hybrid, **Innovation.**

Ghentry J.. *(C.japonica),* ACS., 1989, *The Camellia Journal,* vol.44, No.3, p.9, Reg. No.2146: A very large size, white and blush white, rose form double *C.japonica* chance seedling. Blooms early to midseason. Originated by O.L. Jacobson, Jacksonville Beach, Florida, USA. *American Camellia Yearbook,* 1989, p.122: The 7 year old seedling first bloomed 1986. Average flower size, 15 cm across x 7.5 cm deep. Blooms have twisted and curled petals and petaloids. Leaves dark green, 12.5 cm long x 7.5 cm wide.

Ghiersdaelii. van Houtte Catalogue,1842, 9:57. Synonym for **Rawesiana.**

Ghiersdali. van Geert Catalogue, 1845. Orthographic error for 'Ghiersdaelii', synonym for **Rawesiana.**

Ghitina. Charles van Geert Catalogue, 1846, p.68. Orthographic error for **Ghittina.**

Ghittina. *(C.japonica),* Jacob Makoy et Cie Nursery Catalogue, 1837, p.17. No description. van Houtte Catalogue, 1858, 72:14, as 'Gitana': Pale carmine red with streaks of white. Spiral imbrication. Originated in Italy. Synonyms: 'La Gitana', 'Gitana', 'Gitana d'Italie'. Orthographic errors: 'Ghittrin', 'Ghitana', 'Gittana'.

Ghittrin. Cachet Catalogue, 1840-1841, p.2. Orthographic error for **Ghittina.**

Giacomo Leopardi. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. No description. Originated in Italy by Tagliabue, Milan. (Believed extinct.)

Giacomo Odero. Mariotti Catalogue, 1930, p.32. Synonym for **Giacomo Odero II.**

Giacomo Odero II. *(C.japonica),* Mariotti Catalogue, 1924, p.17: Large formal double of light red striped with white. Originated in Italy. See black & white photo, fig.28, Del Lungo & Girardi, 1928. *Le Camelie.* Synonym: 'Giacomo Odero'.

Giaconda. Colla, 1843, *Camelliografia,* p.120. Orthographic error for **Gioconda.**

Giadino Franchetti. de Bisschop Nursery Catalogue, 1935, p.12. Orthographic error for **Giardino Franchetti.**

Giadino Petraja. Charles Vuysteke Catalogue, 1891. Orthographic error for **Giardino Petraia.**

Gialla. *Annuale di Agriculture,* 1854. Orthographic variant for **Jaune.**

Gialla d'Ignota Origine. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete.* p.11. This translates as "yellow of unknown origin" and as **Jaune** is also listed as 'Gialla della China', this is let stand. (Believed extinct.)

Gialla della China. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. Synonym for **Jaune.**

Giallo Bianca. Giacomelli 1847, *La coltivazione delle Camelie.* Synonym for **Ochroleuca.**

Giamma. *(C.japonica),* de Jonghe, 1851, *Traité de la Culture du Camelie,* p.108: Flower, average size, imbricated, red with spots of white. Originated in Italy.

Gian Bologna. *(C.japonica),* Anonymous, 1876, *R. Società Toscana di Orticultura Bollettino:* Vivid carmine with some white lines. Perfectly imbricated. Originated in Italy by Franchetti, Florence.

Gian Luigi del Fiesco. *(C.japonica),* André, 1864, *Plantes de terre de bruyéres...,* p.244: (Genoa) Flower well imbricated, very beautiful, vivid rose veined very deep rose at the circumference and the centre, but intermediate petals paler. Originated in Italy.

Giannina Milli. *(C.japonica),* Anonymous, 1862, *R. Società Toscana di Orticultura Bollettino:* Obtained as a seedling in Tuscany, Italy. Stefano Pagliai Catalogue, 1867, p.70 as 'Giannini Melli': Ivory white, involute imbricated. Orthographic errors: 'Gionnina Milli', 'Giannini Melli', 'Grovanimini Milli'.

Giannini Melli. Stefano Pagliai Catalogue, 1867, p.70. Orthographic error for **Giannina Milli.**

Giannone. *Notizzario della Societè Italiana della Camelie,* Dec.1989, No.4, p.17. Orthographic error for **Giunone.**

Giannoni. *(C.japonica),* Verschaffelt Catalogue, 1847-1848, p.57. No description; 1855, *Nouvelle Iconographie,* Book VII, pl.I: Its blossoms are of the largest size and belong to the class of perfections, because of the perfect imbrication of the petals, all of a rose colour. The interior petals are oval-acute, full and those of the exterior, obtuse and emarginate. Originated in Italy by F. Mariani.

Giant of Battles. Vanderbilt, 1941, *Camellia Research, II,* p.3. Orthographic variant for 'Giante des Batailles', synonym for **Rawesiana** as 'Speciosa'.

Giant White. Magor, Ann, 1968, RHS., *The Rhododendron and Camellia Yearbook,* No.22, p.226. Orthographic error for **White Giant.**

Giante de Baittailles. SCCS., 1958, *Camellia Nomenclature,* p.80. Orthographic error for 'Giante des Batailles', synonym for **Rawesiana** as 'Speciosa'.

Giante de Battailes. Fendig, 1953, *American Camellia Catalogue.* Orthographic error for 'Giante des Batailles', synonym for **Rawesiana** as 'Speciosa'.

Giante de Battailles. Hume, 1955, *Camellias in America.* Orthographic error for 'Giante des Batailles', synonym for **Rawesiana** as 'Speciosa'.

Giante de Fiaes. da Silva Nursery Catalogue, 1955, p.77. Orthographic variant for **Gigante de Fiaes.**

Giante de Rose. *(C.japonica),* Sander's St Albans Catalogue, ca.1914. No description. Originated in Belgium. (Believed extinct.)

Giante des Batailles. McIlhenny, 1937, *600 Varieties of Camellias,* p.2, as 'Giante des Battailles'. Orthographic errors and variants: 'Giant of Battles', 'Giante de Baittailles', 'Giante de Battailes', 'Giant de Battailles', 'Giantes des Battalles', 'Gigantea de Battales', 'Geant des Batailles'. Synonym for **Rawesiana** as 'Speciosa'.

Giantes des Battalles. Vanderbilt, 1941, *Camellia Research II,* p.3. Orthographic error for 'Giante des Batailles', synonym for **Rawesiana.**

Giaour. *(C.japonica),* Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. No description. Originated in Italy, by Tagliabue, Milan. (Believed extinct.)

Giardina Franchetti. Jean Verschaffelt, 1860-1861, Price List, p.12. Evans, 1893, *Gardeners' Chronicle,* ser.3, 13: 323. Orthographic error for **Giardino Franchetti.**

Giardina Petrazzo. Auguste van Geert, 1863-1864, Catalogue, No.54, p.39. Orthographic error for **Giardino Petraia.**

Giardina Smith. Rovelli Catalogue, 1896, p.41. Orthographic error for **Giardino Schmitz.**

Giardine Schmitz. Vanderbilt, 1949, *Camellia Research,* p.4. Orthographic error for **Giardino Schmitz.**

Giardini Franchetti. Shepherd & Co. Nursery Catalogue, 1883-1884, p.37. Orthographic error for **Giardino Franchetti.**

Giardini Schmitz. Halliday, 1880, *Practical Camellia Culture.* Orthographic error for **Giardino Schmitz.**

Giardino Antonelli. *(C.japonica),* Medici Spada, 1858, *Delle Nuove Camellie...dalle Semine Romane,* p.6: Large, flesh coloured flower, broadly striped carmine; spirally imbricated or star shaped. Originated in Italy by Albertini, Rome.

Giardino Borrini. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.99 with colour photo; Medium size, anemone form, white with some pink petaloids (RHS.CC.66C). The petaloids assume a yellowish tinge. A seedling of **Alba Simplex** x 'Giorgia Bianca', first flowered in 1982. Originated by Dott. Guido Cattolica, Livorno, Italy.

Giardino Botti. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.70: No description. Mercatelli Catalogue,1881: Imbricated, and cupped. Vivid red. Originated in Italy by Botti of Chiavari.

Giardino d'ltalia. *(C.japonica),* van Houtte Catalogue, 1860-1861, 83:45: Clear rose with large, longitudinal splashes of white. Originated in Italy.

Giardino del Cardinale Antonelli. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.70: [from] Cardinale Antonelli. Satiny carmine pink, with the edges of the petals a little paler. Perfect imbrication. Originated in Italy by Cardinale Antonelli.

Giartino Degl'Innocenti. *(C.japonica),* Scarlatti Catalogue, 1888: Dark red, spotted with white. Large flower. Originated in Italy by Scarlatti, Florence.

Giardino della Petraja. Scarlatti Catalogue, 1888. Orthographic variant for **Giardino Petraia.**

Giardino Delgrande. *(C.japonica),* Medici Spada, 1858, *Delle Nuove Camellie...dalle Semine Romane,* p.6: Originated in Italy by perfect arrangement like a spiral. Outer and middle petals, large and weakly waved; central petals upright and pointed, all with incomparable symmetry. The fundamental colour is a smooth rosy white, diaphanous, with stripes of different degrees of brilliant carmine, very clearly marked like those of the best Flemish carnations.

Giardino Fantarelli. Peer, 1956, *American Camellia Yearbook,* p.56. Orthographic error for **Giardino Santarelli.**

Giardino Franchell. de Bisschop Nursery Catalogue, 1937. Orthographic error for **Giardino Franchetti.**

Giardino Franchelli. de Bisschop Nursery Catalogue, 1935. Orthographic error for **Giardino Franchetti.**

Giardino Franchetti. *(C.japonica),* Luzzatti, 1851, *Collezione di Camelie,* p.19: A new variety, large flower, imbricated, petals broad and of a vivid rose, all veined light red; with the central and circumferential petals all bordered with pure white and striped, largely, with carmine. This cultivar was figured and descibed by Verschaffelt in 1852, *Nouvelle Iconographie,* Book II, pl.II as "The large size of the petals, their delicate pink colouring, which fades towards the edge, where it becomes a band of white, finely veined red with large, vivid, red stripes." Verschaffelt states that it was obtained from seed by Franchetti. Luzzatti says, originated from **Targioni,** while Mercatelli Catalogue, 1881, p.21 has it as a sport of 'Teresa Targioni'. It appears that Mercatelli was in error and it is more likely a seedling of **Targioni.** Orthographic errors include: 'Giardino Franchitti', 'Giardino Franchelli', 'Giadino Franchelli', 'Giardino Franchiettii', 'Giardino Franchell', 'Girardino Franchetti', 'Gierdino Franchetti', 'Giardini Franchetti', 'Giardina Franchetti', 'Guiardino Franchetti', 'Giardino Franco', 'Giordino Franchetti'.

Giardino Franchiettii. Newmans Nursery Catalogue, 1886-1887, p.116, 119. Orthographic error for **Giardino Franchetti.**

Giardino Franco. Gibbons, H.C. General Catalogue, 1910-1911. Orthographic error for **Giardino Franchetti.**

Giardino Gigli. *(C.japonica),* Scarlatti Catalogue, 1888: Large, perfectly imbricated flower of tender rose with lines of white. Originated in Italy by Scarlatti, Florence.

Giardino Magnani. *(C.japonica),* Mercatelli Catalogue, 1881, p.21: Pure white, some petals with rose stripes. Perfectly imbricated. Very beautiful. Originated in Italy by Magnani, Florence.

Giardino Mazzarosa. *(C.japonica),* Jean Vervaene fils, 1864, Price List, No.1, p.6. No description. Verschaffelt Catalogue, 1867-1868, p.41. No description. Companhia Horticolo-Agricola Portuense Catalogue No.29, 1895-1896, p.49: Formal double white. Originated in Italy.

Giardino Micheletti. *(C.japonica),* Scarlatti Catalogue, 1888: Beautiful, full form, a flower of great size and perfect imbrication. Soft, flesh white, diaphanous petals, splashed and lined with small and large rose stripes. Originated in Italy by Micheletti.

Giardino Mozzi. *(C.japonica),* Stefano Pagliai Catalogue, 1867, p.70: Pearl white coloured, formal double with splashes and speckles of carmine and pink. Originated in Italy by Mozzi.

Giardino Nicolay. *(C.japonica),* Scarlatti Catalogue, 1888: Ivory white formal double. Originated in Italy.

Giardino Petraia. *(C.japonica),* van Houtte Catalogue, 1858, 72:13: Very large flower, imbricated, soft rose striped with white. Verschaffelt, 1860, *Nouvelle Iconographie,* Book I, pl.IV as 'Giardino Petraja': Resembling **Corradino** by the size of its blossoms, arrangement and colouring, this variety, which is a perfection, is distinguished by its petals, somewhat less numerous and larger, more deeply emarginate, the centre of each longitudinally intersected by

a pale, pink stripe set off by the deeper backgound. Sent to us by Cesar Franchetti in 1858. Orthographic errors and variants: 'Giardino Petraja', 'Giardino Petreya', 'Giardino della Petraja', 'Giardino Petrajzo', 'Giardino Petraja', 'Giardino Petrazzo', 'Giardina Petrazzo'.

Giardino Petraja. Jean Verschaffelt, 1860-1861, Price List, p.13. Orthographic variant for **Giardino Petraia.**

Giardino Petrajo. André Leroy Catalogue, 1873, p.135. Orthographic error for **Giardino Petraia.**

Giardino Petrajzo. Auguste van Geert Nursery Catalogue, No.65, 1869-1870, p.53. Orthographic error for **Giardino Petraia**.

Giardino Petreya. de Bisschop Nursery Catalogue, 1935. Orthographic error for **Giardino Petraia.**

Giardino Petrazza. Auguste van Geert Nursery Catalogue, No.75, 1877-1878, p.40. Orthographic error for **Giardino Petraia.**

Giardino Rovelli. *(C.japonica),* Rovelli Catalogue, 1913-1914. No description. Originated in Italy. (Believed extinct.)

Giardino Santarelli. *(C.japonica), R. Società Toscana di Orticultura Bollettino,* 1862 as having been exhibited by Santarelli in 1856. Stefano Pagliai Catalogue, 1867, p.70: Very large, perfectly imbricated flower, usually with a vivid red centre, and the rest of the flower almost white, sometimes with a red centre with other petals widely spotted with white, remarkable for the two colours almost separated from each other. Williams, 1869, *Choice Stove & Greenhouse Flowering Plants*, p.206 as 'Giardino Santarella': Petals smooth and cupped, blush white striped with rosy carmine. Van Houtte, 1874, *Flore des Serres et des Jardins...* vol.20, p.120, pl.2120: This variety is beautifully imbricated. The centre is a very beautiful rose colour, the circumference being occupied by large white petals, often spotted with the centre colour. Rollisson's Plant Catalogue, 1877-1878 has "Beautifully imbricated, very large, bright cerise, some petals red and white, frequently all white." Originated by Santarelli, Florence, Italy. Orthographic errors: 'Giardino Fantarelli', 'Giardino Zantarelli', 'Giardino Santarella'.

Giardino Schmidt. Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.145. Orthographic variant for **Giardino Schmitz.**

Giardino Schmith. Besson & Figlio Catalogue, 1878. Orthographic error for **Giardino Schmitz.**

Giardino Schmitz. *(C.japonica),* Jean Verschaffelt, 1861-1862, Price List, p.22.Lemaire, 1864, *L'Illustration Horticole,* vol.XI, pl.410: The illustration is a true portrait of the variety which is a perfection. It is of Italian origin. The flowers are most regularly imbricated, composed of petals, rounded, notched at the apex, of a soft pink, sometimes bordered with white. A sport of 'Elisa Centurioni' according to *R. Società Toscana di Orticultura Bulletin,* 1862. SCCS., *Camellia Nomenclature* erroneously gives it as a sport of **Teutonia.** There is confusion in USA with this cultivar. McIlhenny, 1948, gives it as a semi-double red, variegated and *Camellia Nomenclature* as a rose-pink sport of **Teutonia** which would validly be **Teutonia Pink.** Abbreviation: 'Schmitz'. Orthographic errors: 'Giardine Schmitz', 'Giardino Smith', 'Giradino Schmitz', 'Giardini Schmitz', 'Giardina Schmitz'. 'Giardino Schmidt', 'Giardina Smith', 'Giardino Smitz', 'Giordino Schmitz', 'Giardino Schmith'. Originated by Schmitz, Florence, Italy. Chinese synonym 'Sikemi'.

Giardino Smith. Rovelli Catalogue, 1886. Orthographic variant for **Giardino Schmitz.**

Gibbsii. *(C.japonica),* van Houtte Catalogue 1842, 9:52 as 'Gibbii'. No description. Orthographic errors: 'Gibsii', 'Gibbii'. (Believed extinct.)

Gibsii. van Houtte Catalogue, 1843, 12:xx. Orthographic error for Gibbsii.

Giboshi. (Ornamental Cap of Post for Railing), *(C.japonica),* Usami, Naohachi, ca. l910, *Nagoya Chinzue* see Asai, Keitarô, 1966, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.7, p.127: Red striped with white; medium size, single. Original tree was in the garden of the botanist Kume, Nagoya City, Japan. Synonym: 'Kumeshi-karahashi'. (Believed extinct.)

Gibson Girl. *(C.japonica),* SCCS Bulletin, vol.11, No.2, p.17, Dec. 1949. SCCS., 1950, *The Camellia. Its Culture and Nomenclature,* p.39: White striped red. Large semi-double. Vigorous, compact, upright growth. Mid-season blooming. For another form of this variety see **John Clairmont.** See black and white photo, p.146, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II. Originated at Descanso Gardens, La Canada, California, USA, from plants purchased from the Star Nursery by Manchester Boddy, 1942.

Gibson Semi-double White. *(C.japonica),* Vanderbilt, 1940, *Camellia Research,* p.4 as 'Gibson Semi Do. White'. A large white semi-double. Mid-season flowering. Originated in USA.

Gibson Single Red. *(C.japonica),* Vanderbilt, 1940, *Camellia Research,* p.4 as 'Gibson's Single Red'. A medium sized red single. Mid-season flowering. Originated in USA.

Gibson Variegated. *(C.japonica),* Fruitland Nursery Catalogue, 1948-1949, p.31. No description. Originated in USA.

Gibson White. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue.* A single white, early blooming. Originated in USA.

Gierdino Franchetti. Vanderbilt, 1940, *Camellia Research,* p.4. Orthographic error for **Giardino Franchetti.**

Gielsi. van Houtte Catalogue,1841, 7:8. Orthographic error for **Gilesii.**

Gifu. (Place Name), *(C.sasanqua),* Satomi, 1958, *Nomenclature of Sasanqua of Japan,* p.9: White, small semi-double, occasinally with pink dots. Originated in Japan. Different reading: 'Gihu'.

Gifu. (Devoted woman), *(C.sasanqua),* Itô, Ihei, 1695, *Kadan Chikinshû;* Yashiro, 1841, *Kokon Yorankô,* vol.344: Semi-double with petals in two rows, white with red streaks, small. Originated in Japan as a sport of **Shiro-gifu.** (Believed extinct.)

Gifu. (Meaning obscure), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Pale pink. Large, thick petals. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.81. Different reading: 'Gihu'. (Believed extinct.) Originated in Japan.

Gigante de Fiaes. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.32, & No.9, 1872-1873, p.44: Peony form. Light cerise colour. Originated in Portugal at Fiaes. Orthographic error: 'Giante de Fiaes', Orthographic variant; Gigante de Fiães'..

Gigantea. *(C.japonica),* Sweet, 1830, *Hortus Britannicus,* ed.2, p.74: "Rose coloured. Large double". Berlèse, 1837, *Monographie,* ed. l, pp.37, 76, 128, describes it as "Vigorous shrub; leaves large, 11 cm x 8.5cm, ovate-lanceolate, slightly acuminate, firm, thick, deeply serrate, of a dull green; buds oval, obtuse, as large as pigeons eggs, scales green; flower, 11 cm across, double, of a pale red to rose, exterior petals numerous in three rows; those at the centre, short, in a rosette, whitish, intermingled with stamens." The present SCCS. *Camellia Nomenclature* description is: Red marbled white. Very large semi-double to rose form double to peony form. Vigorous, upright, open growth. The Sweet and Berlèse descriptions show that the cultivar was originally self coloured, the white blotching occuring later, probably due to virus infection. See colour plates: Macoboy, 1981, *The Colour Dictionary of Camellias,* p.89 and the RHS., 1961, *The Rhododendron and Camellia Yearbook,* No.15, pl.7 as 'Kelvingtoniana' under which name the RHS awarded it an F.C.C. in 1869. Hume in his *Camellias of America,* 1946, facing p.160 as 'Kellingtonia'. The many synonyms include: 'Emperor Wilhelm', 'Emperor Frederick Wilhelm', 'Magnolia King', 'Mary Bell Glennan', 'Fanny Davenport', 'Kellvingtonia', 'Kilvingtoniana', 'Kelvingtoniana', 'Jolly Roger' 'Kellingtonia',

'Kellingtonia'(France), 'Gigantea d'America', 'Gigantea Special', 'Gigantea d'Amerique', 'Long's No.351'. Also the following names have been used erroneously as synonyms: 'Anne Lindbergh', 'Firebird', 'Gaiety', 'Monstruosa Rubra'. According to Berlèse, 1840, *Monographie* the variety is of English origin. As the name **Gigantea** is firmly established on a world wide basis for the variegated form, this is let stand and the solid colour form is designated **Gigantea Red.** As the variegation is unstable, the various names given to certain patterns of variegations cannot be accepted as applying to different forms and are all reduced to synonyms of **Gigantea.**

Gigantea. SCCS., 1962, *Camellia Nomenclature,* p.109. Abbreviation for **Gigantea (Wada).**

Gigantea Alba. McIlhenny, 1934, *List of Camellia Japonica for Sale.* Synonym for **General Washington.**

Gigantea d'America. Medici Spada, 1857, *Catalogo nel Giardino a Villa Quiete,* p.11. Synonym for **Gigantea.**

Gigantea d'Amerique. Cachet Catalogue, 1845-1846, p.4. Synonym for **Gigantea.**

Gigantea de Battales. Lindo Nurseries Price List, 1947, p.7. Orthographic error for 'Giante des Batailles' synonym for **Rawesiana** as 'Speciosa'.

Gigantea Red. *(C.japonica),* McIlhenny Catalogue, 1945-1946, p.4: Very large rose red, outer petals large, small petals and petaloides clustered in the centre. Late flowering. The solid colour form of **Gigantea**. Synonyms: 'Red Emperor Wilhelm', 'Dr Campbell', 'Magnolia King Red'. Erroneous synonyms: 'Jacksonii', 'Gaiety'. Chinese synonym: 'Huoshaoyun'.

Gigantea Special. Fruitland Nursery Catalogue, 1946-1947, p.28. Synonym for **Gigantea.**

Gigantea (Wada). *(C.hiemalis),* SCCS., 1962, *Camellia Nomenclature,* p.109 as 'Gigantea': Red. Large single. The name *Camellia sasanqua* 'Gigantea' was used by Wada, 1941, *Japanese Garden Treasures,* p.32 to designate a group of *C.sasanqua* with very large flowers.

Gigantia. Overlook Nursery Catalogue, 1940-1941. Orthographic error for **Gigantea.**

Gigantic. *(C.sasanqua),* Fendig, 1953, *American Camellia Catalogue:* Large, white, semi-double, approximately 3.1 inches (8 cm) in diameter. The colour is pure white, but reflects the colour of the anthers giving it a creamy hue. There are two layers of widely spaced, spoon shaped petals numbering 5-6. The petals are fluted and notched. Filaments are greenish yellow, anthers are golden.The leaves are light green, 5.5 cm x 2.5 cm. The texture is thin and the leaf turns upward from the prominent, centre vein. Tip is short and blunt, serrations are fine. Very fast growth habit, upright with reddish brown new growth. Originated by Walter Allan, Summerville, South Carolina, USA, about 1934 from seed of unknown parents. Synonyms: 'Allen's Gigantea', 'Allen's Gigantic'.

Gigantocarpa. Camellia Haven Catalogue, New Zealand, 1997, p.11. An abbreviation for the species *C.gigantocarpa.* Expert opinion is currently divided as to whether this should be regarded as a separate species, or merged with *C.crapnelliana* Tutch., with which it has both similarities and differences.

Gihei. (Personal name), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* Double, lotus form; deep peach pink, large size flower. See Kyôto Engei Kurabu, 1964, *Tsubaki Tokushû,* No.5, p.80. Originated in Japan. (Believed extinct.)

Gihu. Watanabe, 1970, Kyôto Engei Kurabu, *Tsubaki Tokushû ,* No.10, p.119. Different reading for **Gifu.**

Gil Vicente. *(C.japonica),* José Marques Loureiro Catalogue No.1, 1865, p.38, & No.9, 1872-1873, p.44: Rose form double. Purple striped with white. Originated in Portugal by Fiaes.

Gilacea Alba. *(C.japonica),* van Houtte Catalogue, 1851, 44:12. No description. Originated in France. Orthographic error: 'Giliaccea Alba'. (Believed extinct.)

Gilbean's Pink. Hume, 1946, *Camellias in America,* p.331. Orthographic error for 'Gilbeau Pink', synonym for **Paeoniiflora.**

Gilbeau Pink. Gerbing's Azalea Gardens Catalogue, 1938-1939. Synonym for **Paeoniiflora.** Orthographic errors: 'Gilbean's Pink', 'Gilbeau's Pink', 'Gilheau's Pink'.

Gilbeau's Pink. Vanderbilt, 1940, *Camellia Research,* p.4. Synonym for **Paeoniiflora.**

Gilheau's Pink. Lindo Nursery Price List, 1941-1942. Orthographic error for 'Gilbeau Pink', synonym for **Paeoniiflora.**

Gilbert E. Fisher. Fendig, 1953, *American Camellia Catalogue.* Orthographic variant for **Gilbert Fisher.**

Gilbert Fisher. *(C.japonica),* Fendig, 1951, *American Camellia Catalogue:* Large, deep rose-red semi-double to anemone form, 11-13 cm across x 3.8 cm deep. Petals are 5.5 cm x 4 cm. Stamens numerous, compact and central with white filaments and yellow anthers. Leaves, mid-green, ovate to lanceolate, 11 cm x 5 cm; apex long and slender, impressed venation, shallow serrations. SCCS, 1951, *The Camellia. Its Culture and Nomenclature:* Light rose-pink, sometimes spotted white. Very large semi-double with large petaloids. Vigorous, loose, upright growth. Flowers mid-season. A seedling originated by Malbis Nursery, Daphne, Alabama, USA. *American Camellia Yearbook,* 1954, Reg. No.92. Orthographic variants: 'Dr Gilbert Fisher', 'Gilbert E. Fisher', 'Dr Gilbert E. Fisher'. See black & white photo p.95, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III.

Gilda Pagan. Ludemann's Pacific Nursery Catalogue, 1895-1896. Orthographic error for **Gilda Pagano.**

Gilda Pagano. *(C.japonica),* Linden Catalogue, 1875, p.23. No description. Originated in Italy. (Believed extinct.) Orthographic error: 'Gilda Pagan'.

Gilded Snow. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.117. Translation of 'Neige Doreé', synonym for **Shiragiku.**

Giles' Striped. Chandler & Booth, 1831, *Illustrations & Descriptions of Camellias...,* pl.43. Synonym for **Gilesii.**

Gilesiana. Harrison ed., 1842, *The Floricultural Cabinet,* p.107. Synonym for **Gilesii.**

Gilesii. *(C.japonica),* Chandler & Booth, 1831, *Illustrations & Descriptions of Camellias...,* pl.43: This variety is named after Mr William Giles, gardener to Mr John Dodson, Clapham, England, who raised it in 1826 from seed of 'Warratah'. (**Anemoniflora**). It flowered for the first time in 1831. The flowers are well striped, being of a dark red colour with the white very distinct and measures 10-12.5 cm across. Sometimes, like the flowers of the 'Double-Striped', (**Variegata**) they come entirely of a deep red, but their usual character is to have as much white as red. The outer petals are about 2.5 cm broad and strongly veined. The inner ones are irregular with larger and smaller mixed in the centre. Buist, 1845, *Flower Garden Directory,* p.220: Distinguished for fragrance as well as beauty. Mertens & Fontaine, *Collection de cent espèces.....camellia,* 1845, pl. 42. Synonyms: 'Dark Coccinea', 'Dark Crimson', 'Reevesi Carminea', 'Rewesii Carmine', 'Giles Striped', 'Dark Imbricata of Gilsi', 'Nancy Dawson'. Orthographic errors: 'Gilloesii', 'Gillesii', 'Gillaesi', 'Giliesi', 'Gielsi', 'Gilesiana', 'Gillesiana'. Figured and described by Berlèse, 1843, *Iconographie,* vol.2, pl.105 as **Gillesii.**

Gilford. *(C.reticulata),* ACRS., 1970, *Camellia News,* No.40, p.27, Reg. No.129: Originated by Mr & Mrs F.N. Spencer, Cheltenham. Victoria, Australia. Seed parent wild *C.reticulata.* First flowered 1969. Plant habit is upright, open and vigorous with dark green, thick, lanceolate

leaves, 11 cm x 5 cm with fine serrations. Flowers early to mid-season with large, up to 17 cm across, bright red, semi-double flowers of 10 petals.

Giliaccea Alba. Alexis Dalliere, 1852, Price List, p.17. Orthographic error for **Gilacea Alba.**

Giliesi. van Houtte Catalogue, 1839, 1 :3, 4, 6. Orthographic error for **Gilesii.**

Giliola Birelli. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.100 with colour photo; Medium size formal double, white (RHS.CC.156C). Petaloids assume yellowish tinge. A seedling of 'Semidoppia Bianca' x 'Giorgia Bianca', first flowered in 1977. Originated by Dott. Guido Cattolica, Livorno, Italy.

Giliseppe Mazini. Bahuaud-Litou Nursery Catalogue, 1914-1920. Orthographic error for **Giuseppe Mazzini di Genova.**

Giliseppi Mazzini. Vanderbilt, 1940, *Camellia Research,* p.4. Orthographic error for **Giuseppe Mazzini di Genova.**

Gill Red. *(C.japonica),* McIlhenny, 1937, *600 Varieties of Camellia:* Rose-pink shading to blush pink at the centre. Small, formal double. Originated in USA. Orthographic errors: 'Gill's Red', 'Gil's Red'.

Gillardii Rosea. *(C.japonica), Catalogue des Plantes la Société Royale d'Horticulture de Belgique,* 1842, p.22 as 'Gillarii Rosea'. No description. Burdin Maggiore & Co. Catalogue, 1845, p.42. No description. Burdin Maggiore & Co., 1849-1850, Catalogue Général as 'Gillardi Rosea': Large vivid rose with small central tuft. Lichtenthal, 1852, *Manuale botanico enciclopedico popolare:* Vivid rose, large with small central tuft. Originated in Italy. Orthographic errors: 'Gillari Rosea', 'Gillarii Rosea'.

Gillesii Nancy. Longone Catalogue, 1846. Synonym for **Gilesii.**

Gillette's Fluffy Red. *(C.japonica),* Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.144, pl. 147: Flower: Irregular double, china rose 024/1 base 024/self veins; 10-11 cm across, occasionally 12 cm broad x 6-7 cm deep. Petals: 8-10 obovate guard petals, some reflexed or folded back, firm texture, shallow notching. Centre: Tight mass of folded petals and petaloids, hiding stamens. Leaves: Elliptic-oblong to broad-elliptic, 9-10 cm long x 6-7 cm wide, dull, dark green, lighter below, heavy texture, sharp serrations, apices short to long pointed. Flowers mid-season. Originated in USA.

Gilley's White. *(C,japonica),* Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II, p.149: Flower: Incomplete double, self white, 10 cm across x 5 cm deep. Petals: About 12 orbicular guard petals, 4.5-5 cm x 4-4.5 cm wide, sharp notched. Centre: Loosely arranged cluster of folded petals mixed with 4 cm long stamens with dark, golden anthers. Leaves: Elliptic, cupped from depressed midrib, margins rolled under, dull dark green, medium heavy leathery; serrations finely shallow; apices short to long pointed. Habit: Upright, densely foliated. Mid-season flowering. Originated in USA.

Gilley's-34. *(C.japonica), American Camellia Yearbook,* 1976, p.160, Reg. No.1388: An 8 year old chance seedling that first bloomed 1973; originated by Paul Gilley, Grandridge, Florida, USA. Plant growth is upright, open and rapid in rate, with dark green leaves, 10 cm x 2 cm. The peony form, **Daikagura** type, bloom is coral rose, 30-35 petals and 3-4 petaloids with white

filaments and yellow anthers. The centre petals are rabbit eared. Average size, 15 cm across x 7.5 cm deep. Blooms early to mid-season.

Gillian Carlyon. *(C.x williamsii),* Tregrehan Camellia Nurseries Catalogue, 1963: Deep pink, single. Small flower. A sport of a unnamed seedling, white with a pink fleck. Originated at Tregrehan, Cornwall, England.

Gillian Hawke. (*C.reticulata* hybrid) ACRS, *Camellia News,* 1995, No.135, p.11, Reg No. 440: Originated by Jason Hawke, Boonooroo Park, Carrara, Queensland, Australia. A chance seedling that first bloomed 1988. Deep red (RHS.CC.60B-C), loose informal double of 20 petals that darken slightly at the margins, 15 cm across x 5 cm deep. Flowers mid-season to late on a slow growing, upright plant. Leaves dark green, glossy, keeled, ovate, apices acute, margins serrate, 9 cm long x 5 cm wide. Filaments in groups. Petals fluted and notched. Flowers shed whole. Similar to *C.reticulata* 'Purple Gown' (**Zipao**).

Gilliesii. *(C.japonica),* Jacob Makoy et Cie Nursery Catalogue, 1836, p.16. No description. Rousseau, 1842-1843, Catalogue as 'Gilliesi' (Nancy Dawson): Dark red washed pure white. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.7: Irregular, imbricated double, very deep orangy red. Trillon, 1843, Catalogue, p.5 as 'Gillessii': Variegated, dark red. Jacquin, Paris Nursery Catalogue, 1845, p.13: Full double, strongly glistening orange red. Synonyms: 'Nancy Dawson', 'Gilliesii Nancy', 'Gilliesii'(Nancy Dawson). Orthographic error: 'Gillisii'. Originated in England.

Gilliesii Nancy. Maupoil & Figlio Catalogue, 1847. Orthographic error for **Gilliesii.**

Gilliesii (Nancy Dawson). *Catalogue des plantes de la Société Royale d'Horticulture de Belgique,* 1842, p.22. Synonym for **Gilliesii.**

Ginditte Rosani. Auguste van Geert, 1853, Catalogue, No.33. Orthographic error for **Giuditta Rosani.**

Ginetta Frediani. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.101 with colour photo; Medium to large, peony form, red (RHS.CC. 46B). A seedling of 'Rubra Simplex' **(Rubra),** x 'Rosa Simplex **(Aitonia),** first flowered in 1986. Originated by Dott. Guido Cattolica, Livorno, Italy.

Ginette Walters. *(C.japonica),* Tammia Nurseries, 1984. ACS., *The Camellia Journal,* vol.39, No.4, Reg No.1948, with colour plate on back cover: Very large white with highlights of pink. Semi-double to peony form; 70 large, erect petals in 5 rows give substance. A chance *C.japonica* seedling, originated by Sam and Ferol Zerkowsky, Slidell, Louisiana, USA.

Ginba-tsubaki. Different reading for **Ginyô-tsubaki.**

Ginga. (Milky Way), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* White speckled with pink. Large. Originated in Japan.

Ginger. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1963-1964, p.6. No description. SCCS., 1964, *Camellia Nomenclature,* p.56: Ivory white. Miniature, full peony form. Medium, upright growth. Mid-season to late flowering. Originated in USA by Hartman.

Gingetsu. (Silver Moon), *(C.sasanqua),* Tsukamoto, Yôtarô, 1967, *Genshoku Engei Shokabutsu Zukan; Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.583, p.223: Large sized, white single of 6-7 petals; creped and frilled. Blooms early. Originated in Kumamoto Prefecture, Japan. *Latest Illustrated Book of Japanese Camellias, (Camellias of Japan),* 2010 ,p.296 with colour photo; Petal tips tinged with red, a Higo type sasanqua. Buds pale red. Leaves large, elliptic, yellowish green. Upright, vigorous, dense growth. Authorised by the Higo Sasanqua Society in 1970s.

Gingyoku. (Silver Treasure), *(C.japonica),* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki.* Snow white, double, imbricate petals in a whirl form. Originated in Japan. (Believed extinct.)

Ginkyoku. *Sômoku Kinyôshû,* 1829. Synonym for **Chôzaemon.**

Ginkakuji. (Silver Tower Temple), Saitama Botanic Gardens Plant List, 1960, No.218. p.52. Abbreviation for **Ginkakuji-tsubaki.**

Ginkakuji-tsubaki. (Silver Tower Temple Camellia), *(C.japonica),* Kawo-en Nursery Catalogue, 1955, p.22: White spots on dark red, similar to 'Wabisuke-tsubaki', (**Wabisuke**). Originated in Japan.

Ginkan. (Silver China or Han Dynasty), *(C.japonica),* JCS., 1973, *Tsubaki,* No.12, colour photo 19, p.5, description p.13: White. Rose form double. Medium size. Petals about 40. Leaves large, flat, light green, coarsely serrate. Some immature stamens when fully open. Blooms mid-season. A seedling from under **Ezo-nishiki** raised by Yamazaki, Japan. Similar to **Brides Bouquet.**

Ginlia. Verschaffelt Catalogue, 1846, p.54. Orthographic error for **Giulio d'Italia.**

Ginlio. Cachet Catalogue, 1840-1841, p.2. Orthographic error for **Giulio d'Italia.**

Ginlio d'Italie. van Houtte Catalogue, 1843-1844, 12:xx. Orthographic error for **Giulio d'Italia.**

Ginmô. (Silver Fierceness), *(C.sasanqua),* Kajitsu-en 1905, *Chabaika Meikan:* Medium size, red flower. Originated in Japan.

Gin-no-kaze. (Silvery Wind), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.31, colour photo and description: Small size, white, tubular to vase-shape single of 5 slightly pointed, long, overlapping petals and a central column of stamens with ivory filaments and yellow anthers. Blooms mid-season to late. Leaves deep green, narrow and long, apices acuminate, margins obscurely serrate. Originated in the Okayama Prefecture, Japan as a seedling of 'Kujaku-tsubaki', (Peacock Camellia). Named and released by Nobuo Sasai in 1982.

Gin-no-ma. Wada, 1941, *Japanese Garden Treasures,* p.32. Synonym for **Gin-no-zai.**

Gin-no-sai. Different reading for **Gin-no-zai.**

Gin-no-suzu. (Silver Bell), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.40, colour photo and description, p.211: Small size, white, wide campanulate single with 6-7 pointed, ovate petals, slightly crinkled towards the apex and long slender stamens in a ring form, with ivory filaments, joined for the lower half, and yellow anthers. Late blooming. Leaves matt green, elliptic to broad elliptic, apices acute, margins shallowly serrulate. Originated in the Gifu Prefecture, Japan. An old tree named by Nagaharu Niwa, released by Gifu Camellia Club.

Gin-no-takara. (Silver Treasure), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.46, colour photo, p.211 description: Medium sized, cupped, single white of 5 broad petals with a large, central boss of stamens in a ring form, cream filaments, pale yellow anthers. Early flowering. Leaves large, obovate to wide-ovate; apex acuminate, fine, shallow serrations, glossy mid-green, margins reflexed. Originated in Chûbu District, Japan by Toshiaki Kosaki in 1975.. A seedling of **Dewatairin**. Synonym: 'Funabashi'.

Gin-no-tsuki. (Silver Moon), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.46, colour photo, p.211 description: Medium sized, campanulate white of 6 broad petals, showing minute red marks while opening and a compact, central stamen cluster, white filaments, yellow anthers. Leaves medium size, dull mid-green, elliptic, blunt acuminate, recurved. Originated in Chûbu, Japan. A chance seedling of unknown parentage, originated and released by Toshiaki Kosaki.

Gin-no-zai. (Silver Baton), *(C.sasanqua),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô,* as a new cultivar. Shokubutsu Kaisha, Ltd. Catalogue, 1910, p.46: White, medium size single, with erect petaloids at the centre of the flower, and with clove-like aroma. Long, narrow leaves. Originated in Kansai District, Japan. Different reading: 'Gin-no-sai'. Corruption of Japanese name: 'Giu-no-sai'.

Ginny Anderson. *(C.japonica), American Camellia Yearbook,* 1982, p.172, Reg. No.1828: A large, light rose, peony form *C.japonica* chance seedling; mid-season flowering; originated by Paul Gilley, Grandridge, Florida, USA. The 5 year old seedling first bloomed 1980. Average flower size, 11 cm across x 6 cm deep with 30-40 petals, cream anthers and yellow filaments. Plant growth is average with light green leaves 7.5 cm x 4 cm. Chinese synonym 'Jini'.

Ginny Ellsworth. *(C.japonica),* SCCS., 1958, *Camellia Nomenclature,* p.40: Flesh pink with a few pink stripes. Medium large semi-double to peony form to rose form double. Flowers mid-season to late. Originated by Dr Fisher, USA.

Ginpai. (Silver Cup), (Higo), Yokoyama, 1975, *Gendai Tsubaki Meikan,* p.107*;* Seibundô Shinkôsha, 1979, *Senchinshû,* p.46 colour photo: Large, white single with 5-6 broad, rounded petals and a central, spreading ring of stamens, slightly fragrant. Early blooming. Tree erect with somewhat pendulous branches. Leaves medium size, wide-ovate, curved outwards, shallowly serrate, dark green. Resembles **Shirayuki** and **Gin-no-takara.** Originated in Chûbu District, Japan.

Ginpai. (Silver Cup). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan*, 1998, p.80 with colour photo; English translation p.54. Medium size, white, sake cup-shaped single, circular stamens, slightly fragrant. Flowers early to late. Leaves broadly elliptic, large. Spreading vigorous growth. A chance seedling of unknown parentage, originated and released by Toshiaki Kosaki in 1976. From Aichi Prefecture.

Ginpô. (Silver Phoenix), *(C.sasanqua),* Seibundô, Ishii, Yûgi, 1932, *Genshoku Engei Shokubutsu Zufu;* Wada, 1941, *Garden Treasures of Japan,* p.32: Single with central petaloids, white, red edges, attractive central disc, large. Yashiroda, 1950, *American Camellia Yearbook,* p.27: Raised as a seedling of **Gin-no-zai;** petals are lightly touched with pink on the edge and has few petaloid stamens, often lacking them. Originated in Japan. Different readings: 'Gimpô', 'Gimpow'.

Ginpô. (Silver Jewel), *(C.hybrid),* Hakoda, JCS., 1987, *Tsubaki,* No.26, p.51; ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.27: Small size, white, single, sometimes with an anemone centre. Seedling of *C.oleifera.* Originated in Japan.

Ginrei. (Silver Peak), *(C.japonica),* Satô, 1975, *Chûbu no Tsubaki,* p.90, colour photo and description: Wide, flaring, medium sized semi-double, with a pure white background. In the centre a compact stamen cluster with yellowish filaments and deep yellow anthers. Leaves elliptic; base

cuneate; apex blunt acute; dull mid-green, reflexed and keeled, margins medium-fine serrate. Originated in the Chûbu District, Japan. A sport of **Gunrei.**

Ginriu. Tokyo Nurseries Catalogue, 1896. Different reading for **Ginryû.**

Gin-Rye. Glen St. Mary Nurseries Co. Price List, 1958, p.18. Corruption of Japanese name **Ginryû.**

Ginryô. Nihon Shokubutsu Kaisha Ltd. Catalogue, 1912-1913, p.27. Different reading for **Ginryû.**

Ginryoh. Andoh, 1971, *Tsubaki, Meika no Shôkai to Saibai,* p.9, pl.24. Different reading for **Ginryû.**

Ginryû. (Silver Dragon), *(C.x vernalis),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô:* Pure white, semi-double to formal double, large. Tokio Nursery Catalogue, 1896, p.14 as 'Ginriu'. See colour photo, pl.24, p.9, Andoh, 1981, *Tsubaki ,Meika no Shôkai to Saibai:* White, sometimes suffused pink, semi-double to double. Synonyms: 'Dawn', 'Vernalis'. Different readings: 'Ginryoh', 'Ginryô', 'Ginriu'. Corruption of Japanese name: 'Gin-Rye'. Parent of **Star Above Star.** Chinese synonym: 'Yinlong'.

Ginsei. (Silvery Voice). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.79 with colour photo; English translation p.53. Medium size, pale pink bordered white, long-tubular to trumpet shaped single with cylindrical stamens. Flowers mid-season to late. Leaves narrowly elliptic, medium size, wavy. Upright, vigorous growth. A mutation of **Nukifude,** discovered, named and released by Kan Utsugi in 1983. From Chiba Prefecture.

Ginsekai. (Silver World), *(C.japonica),* Minagawa, 1935, *Chinkashû.* Angyô, 1955, *Shokubutsu Shunjû,* p.5: Whiter than snow-white. Tuyama, 1966, *Camellias Cultivars of Japan,* pl.59, p.107. Seibundô Shinkôsha, 1979, *Senchinshû,* p.45 colour photo: Medium sized semi-double, white, 9-10 cm across with 10-12 large, rounded petals with crimped edges. Stamens small and imperfect. Plant habit spreading and somewhat pendulous. Leaves elliptic to obovate; apex sharp acuminate; venation prominent; margins medium serrulate. Late flowering. Note: Originated by Minagawa Jisuke, Kantô District, Japan as: White, double, large. In the Kansai district there is a different cultivar named **Ginsekai-Kansai**. Resembles **Tsuki-no-Miyako** and **Tamaginsekai.**

Ginsekai. Synonym for **Ginsekai-Kansai.**

Ginsekai-higo. (Silver World Higo), (Higo), Yoshimura, 1963, *Higo Tsubaki Meikan,* No.7 as 'Ginsekai'. Large white, leaves round. Originated in Kumamoto Prefecture, Japan.

Ginsekai-Kansai. (Silver World from Kansai), *(C.japonica),* Tuyama, 1966, *Camellia Cultivars of Japan,* p.106: White single. Medium sized, Early flowering. Originated in Kansai District, Japan.

Ginshô. (Silver Bell), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.24, colour photo and description: Small size, white, campanulate single, with 5 rounded, overlapping petals and a central stamen column, with pale yellow filaments and yellow anthers. Blooms mid-season to late. Leaves medium green, narrow elliptic, apices long, tapering acuminate, margins shallowly serrate. Originated in the Hamada City, Shimane Prefecture, Japan.

Ginu. Different reading for 'Kinu'.

Gin'yô-tsubaki. (Silver Leaf Camellia), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.157; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.153, Colour photo and description: Small size, peach red, single, opening globular with 5 convex petals with incurved margins and central stamen cluster with yellow anthers. Blooms early to mid-season. Leaves silver green, with dark green edge, upper surface, narrow-lanceolate, apices long, tapering acuminate, sharply serrate with teeth thickened and turned up. Synonym: 'Ginyô-yasuri'. Different

reading: ‘Ginba-tsubaki’. Originated in Izu Ohshima, Japan. Selected by Shu Ôta from wild japonicas in his garden, rleased by Takeo Ogawa.

Gin’yô-yasuri. Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.6, A-278. Synonym for **Gin’yôtsubaki.**

Gioachino Rossini. Burdin Maggiore et Cie Catalogue, 1856-1857. Orthographic error for ‘Giovacchino Rossini’, synonym for **Rossini.**

Gioacchimo Rossini. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.108. Orthographic error for ‘Giovacchino Rossini’, synonym for **Rossini.**

Gioacchino. Corbelli Catalogue, 1882. Orthographic error for ‘Giovacchino Rossini’, synonym for **Rossini.**

Gioacchino Rossini. Linden Catalogue, 1878-1879. Orthographic error for ‘Giovacchino Rossini’, synonym for **Rossini.**

Gioberti. *(C.japonica),* van Houtte Catalogue, 1845-1846, 23:5. No description. Originated in Italy by Conte Caraccioli. Synonym: ‘Gioberto Caraccioli’. (Believed extinct.)

Gioberto Caraccioli. Burdin Maggiore & Co. Catalogue, 1862. Synonym for **Gioberti.**

Giocachini Rossini. Seidel, 1870, Pflanzen Catalog, p.8. Synonym for **Rossini.**

Giocomo Odero. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.89. Orthographic error for **Goffredo Odero.**

Gioconda. *(C.japonica),* van Houtte Catalogue, 1841, 7:8. No description. Van Houtte Catalogue,1842, 9:10: White. Peony form. Originated in Italy by Negri. Orthographic errors: ‘Giaconda’, ‘Giocunda’. Synonym: ‘Gardeniiformis’as ‘Gardeniaeformis’.

Giocunda. Verschaffelt Catalogue, 1846, p.54. Orthographic error for **Gioconda.**

Gioffredi Nova. Auguste van Geert Catalogue, No.65, 1869-1870, p.53. Orthographic error for **Goffredo Nova.**

Giofredo Odero. Auguste van Geert Catalogue, No.74, 1876-1877, p.61. Orthographic error for **Goffredo Odero.**

Gioga della Gazza. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.108. Orthographic error for **Gioiella della Garza.**

Gioia. *(C.japonica),* Berlèse, 1840, *Monographie* ed.2, p.188, 234 as ‘Gioja’: Leaves very large, rounded, lanceolate, veined, strongly serrate. Buds round with greenish scales; Flowers about 10.8 cm across, of an orange-red like ‘Magniflora’; circumferential petals in 3-4 rows, oblong, obtuse at the summit, almost all of irregular form, imbricated, but without order, of unequal spacing, one from the other, deeply notched; those at the centre very small with a small number of petaloids, short, erect and clustered. For illustration see Berlèse, 1843, *Iconographie,* pl.277. Do not confuse with another variety **Bella Gioia.** Originated in Italy by Mariani. Orthographic variant: ‘Gioja’.

Gioia della Gazza. Ambroise Verschaffelt, 1850, Catalogue Général, p.47. Orthographic error for **Gioiello della Gazza.**

Gioiello della Garza. *(C.japonica),* Burdin Maggiore & Co., 1849-1850, Catalogue General: The first rows of petals are rose coloured, the others, white striped carmine; ranuncular form. de Jonghe, 1851, *Traité de la Culture du Camellia,* p.108 as ‘Gioga della Gazza’: The main colour of the petals is rose, others are white bordered with carmine. Formal double. Originated in Italy. Orthographic errors: ‘Giojella della Garza’, ‘Gioga della Gazza’, ‘Gioza della Gazza’, ‘Gioia della Gazza’.

Gioiello di Firenze. Del Lungo & Girardi, 1928, *Le Camelie*, p.117. Synonym for **Il Gioiello.** (The Jewel)

Gioja. Berlèse, 1840, *Monographie,* ed.2, p.215. Orthographic variant for **Gioia.**

Giojello della Garza. Lichtenthal, 1853, *Manuale botanico enciclopedico popolare.* Orthographic variant for **Gioiello della Garza.**

Gion. (Pleasure Garden in Kyôto), *(C.japonica), Chinka Zufu*, (before 1700), Watanabe, 1969, pl.556, 580: Small to medium sized semi-double to incomplete double peony form, pink with wide, white border to petals and red streaks. Centre, erect petals and stamens intermixed. Originated in Japan. (Believed extinct.) Resembles **Hikarugenji.**

Gion. (Pleasure Garden in Kyôto), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.242, colour photo and description: Medium size, dark scarlet with white blotches, campanulate single, with 6 rounded, overlapping, emarginate petals and a long, central stamen column with pinkish filaments, joined for the lower half, and yellow anthers. Late flowering. Leaves deep green, wide ovate, margins serrate. Originated in the Chûbu area, Japan. A seedling of unknown parentage, originated and released by Fumio Naitô in 1989.

Gion-no-kami. *(C.japonica)* Oita Agricultural Park, Japan, *Camellia List* May 2011 – Gardens of Excellence Application. No details.

Giordino Franchetti. Hydon Nurseries, Surrey, Catalogue, 1960, p.16. Orthographic error for **Giardino Franchetti.**

Giorgio Di Meo. *(C.japonica),* Cattolica, G., *Le mie Camelie, My Camellias,* 2005, p.102 with colour photo; Medium size, formal double with incurved petals, red (RHS.CC.51A). Sometimes some petals are streaked with white. A seedling of 'Rubra Simplex' **(Rubra)** x **Oki-no-nami,** first flowered in 1998. Originated by Dott. Guido Cattolica, Livorno, Italy.

Giorgio Santarelli. *(C.japonica),* Auguste van Geert Catalogue, No.76, 1878-1879, p.76: White, sometimes showing irregular carmine streaks on the petals, concave, well arranged, bushy plant. Originated in Italy by Santarelli.

Giorgio Vasari. *(C.japonica), R. Società Toscana di Orticultura, Bollettino*, 1876: Seedling of **Emilio Bandiera.** Perfectly imbricated, colour dark rose. Originated in Italy by Santarelli, Florence.

Giorgio's Pride. *(C.reticulata), American Camellia Yearbook*, 1984, p.177, Reg. No.1948: A very large, dark red semi-double *C.reticulata* ('Crimson Robe' (**Dataohong**) x **Mary Stringfellow**); midseason to late flowering; originated by Frank Pursel, Oakland, California, USA. The 8 year old seedling's average flower size is 15 cm across x 8 cm deep with 40 petals and yellow anthers. Plant growth is average with dark green leaves, 12.5 cm x 7, 5 cm.

Gioseppe Savoldi. Waterhouse, 1953, *American Camellia Yearbook,* p.92. Orthographic error for **Giuseppina Savoldi.**

Giovacchino Rossini. Luzzatti, 1851, *Collezione di Camelie,* p.20. Synonym for **Rossini.** Orthographic errors: 'Giocaccino Rossini', 'Gioacchimo Rossini', 'Gioacchino Rossini', 'Gioachino Rossini'.

Giovaccino Rossini. Linden Catalogue, 1875. Orthographic error for 'Giovacchino Rossini', synonym for **Rossini.**

Giovachino Rossini. Real Companhia Horticolo-Agricola Portuense, Catalogue, No.29, 1895-1896, p.49. Orthographic variant for 'Giovacchino Rossini', synonym for **Rossini.**

Giovana Santa. Peer, 1956, *American Camellia Yearbook,* p.56. Orthographic error for **Professore Giovanni Santarelli.**

Giovani Nancini. Jean Verschaffelt, 1860-1861, Price List, p.12. Orthographic error for **Giovanni Nencini.**

Glad Rags. *(C.x williamsii),* ACRS., 1969, *Camellia News,* No.36, p.9, illustration. The seed parent was *C.japonica* **Party Girl** and the pollen parent *C.saluenensis.* The flower is a large, soft pink, variable in form and number of petals giving the bloom a ragged appearance. The plant is upright, inclined to be pendulous. Originated by H.K.C. Dettman, Wahroonga, NSW, Australia. Chinese synonym: 'Caiqi'.

Glad Tidings. *(C.x vernalis),* ACS., 1986, *The Camellia Journal,* vol. 41, No. 1, p. 28, Reg. No. 1987: A medium deep rosy pink to red, semi-double *C.x vernalis* seedling of **Yuletide,** early to late flowering. Originated in USA by Houghton S. Hall, San Amselmo, California. The 10 year old seedling first bloomed 1981. Average flower size 8 cm wide x 3.7 cm deep with 15 petals, golden anthers and yellow filaments. Plant growth is erect, dense and rapid in rate with dark green leaves, 5 cm x 2.5 cm.

Gladys Darling. *(C.japonica), American Camellia Yearbook,* 1973, p.191, Reg. No.1237: A 9 year old chance japonica seedling that first bloomed 1968; originated by Joseph H. Morton, Georgia, USA. Plant growth is upright, average with light green leaves, 11 cm x 5.5 cm. The

semi-double 'Herme' (**Hikarugenji**) type bloom is rose red with white spots, yellow anthers, cream filaments. It has 33 petals and 4 rabbit ears and measure 11 cm across x 6 cm deep. Early blooming.

Gladys Fendig. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue,* with colour plate: Medium sized pink-variegated semi-double, 9-10 cm across. Base colour is mallow purple (RHS.CC.630/2) but is heavily flecked with deeper colour (630). The red stripes on the lighter pink resemble **Anita.** The bloom is flat and recurved; petals number 14-28 with a small stamen cluster; filaments pale, creamy pink, anthers golden yellow. Leaves light green with yellowish tinge, 9.5 cm x 2 cm, recurved, thin texture, depressed venation. Upright, slow, bushy growth. Sport: **Deneen Fendig.** Originated by C.S. Tait Sr., from the USA from seed of unknown parentage.

Gladys Glansier. Hazlewood & Jessep, 1972, *Checklist- Camellia Cultivars from Nursery Lists,* p.90. Orthographic error for **Gladys Glausier.**

Gladys Glausier. *(C.japonica), American Camellia Yearbook,* 1967, p.226, Reg. No.937: An 8 year old chance seedling, first bloomed 1965; originated by C.E. Glausier, Quitman, Georgia, USA. Plant growth, medium with dark green leaves, 10 cm x 5 cm. The semi-double flower is 12 cm across x 4 cm deep with 14 petals; light pink with gold anthers and white filaments. Colour similar to **Mona Monique.** Flowers early. Orthographic error: 'Gladys Glansier'.

Gladys Herbert. *(C.reticulata),* Kramer Bros Nursery Catalogue, 1973; Gentry, 1973. ACS., *The Camellia Journal,* vol.28, No.4, p.28. No description. Gloire de Nantes. *(C.japonica),* Guichard Soeurs Catalogue, 1894: Rose pink, medium sized semi-double to incomplete double with medium, compact, upright growth. Early flowering. Orthographic errors: 'Glory de Nantes', 'Glorie de Nantes', 'Glory of Nantes', 'Gloria de Nanted', 'Gloire de Nates', 'Glory de Nanthes', 'Glore de Nantes', 'Gloire d'Nantes', 'Glori de Nantes', 'Gloide de Vantes'. Synonyms: 'Rose Glory', 'Autumn Rose', 'Rose Glorey'. See black and white photo, p.153, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II. Colour photo, p.117, Fairweather, 1979, *Rhododendrons and Azaleas.* In the USA **Gloire de Nantes** has, at various times, been erroneously equated with **Latifolia, Leeana Superba, Superbissima, Althaeiflora** and 'Fanny Bolis Red'. It was originally imported to USA by McIlhenny from Guichard, France. It received a RHS., "Award of Merit" in 1956. Originated by Henri Guichard in 1885. Sport: **Gloire de Nantes Variegated.**

Gloire de Nantes Variegated. *(C.japonica),* Vanderbilt, 1941, *Camellia Research, II,* p.3 as 'Gloire de Nantes Varie.' No description. SCCS., 1945, *Camellias,* p.19: Variegated semi-double red. Blooms mid-season. SCCS., 1947, *The Camellia. Its Culture and Nomenclature:* Rose-red blotched white. Medium large semi-double to incomplete double. Vigorous, bushy growth. Originated in the USA. Synonyms: 'Lady Ruth', 'Rose Glory Variegated'. Erroneously as 'Leeana Superba Variegated', 'Fanny Bolis'.

Gloire d'Nantes. Blackwell Nursery Catalogue, 1950-1951, p.6. Orthographic error for **Gloire de Nantes.**

Gloire de Nates. Coolidge Rare Plant Gardens Catalogue, 1949. Orthographic error for **Gloire de Nantes.**

Gloire de Paulina. *(C.japonica),* McIlhenny, 1937, *600 Varieties of Camellias,* p.6: Large, full imbricated. Dark red, heavy petals. SCCS, 1951, *The Camellia, Its Culture and Nomenclature* states that it is as large single rose-red.

Gloire de Verbano. Giles &c Son Nursery Catalogue, 1881, p.91. Orthographic error for **Gloria del Verbano.**

Glora del Verbano. da Silva, 1880, *Forcing Varieties of Camellias in Oporto,* p.11. Orthographic error for **Gloria del Verbano.**

Glore Crimson. van Houtte Catalogue, "Choix des Camellias", 1854, No.52, p.41, No.166: "Sloane. Very curious; flower of two different colours, half rose, half pale blood red with a triple fascicule". van Houtte erroneously attributes this camellia to Sir Hans Sloane. This cannot be so as Sloane was a contemporary of Petiver and acquired his collection, which he bequeathed to form the British Museum in 1759. However it indicates that it may have been a Chinese cultivar. Orthographic error for Globe Crimson. See ICS Register, p.710.

Goffredo Nuova. Luzzatti, 1851, *Collezione di Camelie,* p.20. Orthographic variant for **Goffredo Nova.**

Goffredo Odero. *(C.japonica),* Anonymous, 1877, *R. Società Toscana di Orticultura Bollettino,* No.1, p.107: There is not one flower of the plant of the same form and colour. Sometimes they are white lined with carmine, or red or rosy white, sprinkled and streaked rose, sometimes entirely light rose and darker at the centre. Exterior petals reflexed, those at the centre erect. Orthographic error: 'Gioffredo Odero'. Originated in Italy by Odero of Genoa. See colour photo, p.35, Feb.1988, *Gardenia,* No.46.

Gogaku-no-yuki. (Snow on Five Peaks), (Higo), *Higo Rokka,* ca.1989, p.31: Large size, 8-10 cm across with 5 snow white petals. A new cultivar with petals a superior pure white. ICS., Apr.1990, *Japanese Camellia Cultivar List,* p.7. No description. Originated in the Kumamoto Prefecture, Japan.

Goggy. *(C.japonica), American Camellia Yearbook,* 1979, p.106, Reg. No.1567: A medium light pink, almost white, formal double *C.japonica* chance seedling. Originated by E. Ray Bond, Dallas, Texas, USA from a J.S. Howard seedling. The 5 years old seedling first bloomed 1974. The

flower has 68 petals, average size, 8.5 cm across x 4.5 cm deep. Plant growth is upright, dense and medium in rate with light green leaves, 7.5 cm x 4.5 cm.

Gogô-an. (Gogô Hermitage), *(C.rusticana),* Inazawa Nurseries Co. Ltd. Catalogue, 1986-1987, p.8, A-367; Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.210, colour photo and description: Medium size, vivid scarlet, vase-shaped single, of 5 rounded, overlapping, concave petals and a central stamen column of reddish filaments, joined for the lower third, and bright yellow anthers. Blooms mid-season to late. Leaves medium to deep green, ovate to broad ovate, apices blunt acute, margins serrate. Plant habit horizontally spreading and slow growing. Selected from wild japonicas growing on Kunigami Mountain, Wakemizu Town, Niigata Prefecture, Japan. "Gogô-an" was the hermitage of the famous monk poet Ryôkan (1758-1831) in the Niigata Prefecture. Named and released by Hieyo Katô in 1980.

Gohô-no-yiki. (Snow on Five Mountains). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, p.104 with colour photo; English translation p.71. Medium size, white tubular to trumpet shaped single, with round and waved petal apices, and cylindrical stamen column. Flowers mid-season to late. Leaves narrowly elliptic, medium size, somewhat plicate. Upright growth. Selected from wild japonicas growing in Mure Town. Collected and named by Saneichi Ogawa in 1997. From Kagawa Prefecture.

Goin-no-sato. (Goin Village), *(C.japonica),* Sakuden.1630, *Hyakuchinshû.* Formal double, pink, about the same size as **Semi-no-hagoromo.** See Kyôto Engei Kurabu, 1961, *Tsubaki Tokushû,* No.2, p.115. Originated in Japan. (Believed extinct.) Different readings: 'Goi-no-sato', 'Go'on-nosato'.

Goi-no-sato. Andoh, 1984, *International Camellia Journal,* No.16, p.48. Different reading for **Goinno-sato.**

Go-ishi. (Go Stones), *(C.japonica),* Itô, Jukyû, 1739, *Honzô Hanamaki'e* vol.15; Shirai-bunko, 1812, *Tsubaki Nayosechô* as 'Goishi'; Kasuya, Kamegorô, 1858, *Tsubaki Irohanayose Irotsuki;* Itô, Ko'emon, 1879, *Chinkashû:* Medium sized double of three layers; white stars on red ground. Satomi, 1956, *Camellia Varieties of Japan,* p.6: Pink mottled white. Large double peony form. Vigorous, upright, open growth. Mid-season blooming. Tuyama, 1966, *Camellia Cultivars of Japan,* p.264, pl.152; Tuyama, 1968, *Camellias of Japan,* pl.311, p.157, description, p.183: Leaves narrowly elliptic, angustrate at both ends, venation slightly impressed, petioles glabrous. Flower double (rose form double), red (carmine 21), blotched white. Staminal tube poor, contained in a central ovoid mass of petals. Late flowering. "Go" is a Japanese game played with white pebbles. The mottled markings on the camellia are likened to the white pebbles used in the game. The modern cultivar is the same as the ancient one, which has existed since ancient times. In the USA it has erroneously been equated with 'Pink Perfection', (**Otome**). Synonym: 'Goishi (2)'. Orthographic error: 'Goishii'. For colour photos see *Encyclopedia of Camellias in Colour,* vol.1, 1972, p.135, pl.300, Originated in Kantô area, Japan. Resembles **Kasugano, Benichidori** and **Azuma-shibori.** Chinese synonym 'Jishi'.

Goishi (2). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Go-ishi.**

Goishii. The Pacific Camellia Society, 1946, *Camellia Nomenclature,* p.16. Corruption of the Japanese name **Go-ishi.**

Gojinka. (Divine Eruption of Mt. Mihara), *(C.japonica),* Yokoyama,1975, *Gendai Tsubaki Meikan,* p.119 illustration and description; Seibundô Shinkôsha, 1979, *Senchinshû,* p.59 colour photo, p.216 description: An irregular, open, peony form, deep scarlet red with stamens scattered amongst erect, centre petals. Late flowering. Leaves mid-green, ovate; apex blunt acute, shallowly serrate. Originated in Kantô Area, Japan, by Minagawa Camellia Nursery around 1970.

Gokayama-shibori. (Five Mountains - Spotted), (*C.rusticana*), Seibundô Shinkôsha, 1979, *Senchinshû,* p.216: Faint peach pink ground with sparse red lines. Opens to a semi-double with short "yuki" style stamens. Medium sized. Mid-season flowering. Leaves, large-ovate, gently undulate; petiole hirsute. Plant habit spreading and vigorous. See colour photo, p.376, Yokoyama & Kirino, 1989, *Nihon no Chinka.* In the Murakami Family's garden, Ecchû, Gokayama village there is the original ancient tree, designated an important cultural asset. Toyama Prefecture, Japan. Named and released by Mitsuroku Makino.

Goke-tsubaki. (Widow's Camellia). Seibundô Shinkôsha, 1979, *Senchinshû,* p.219. Synonym for **Shibenashi-wabisuke.**

Gokô. (Royal Visit), *(C.japonica),* Kasaya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki:* White, semi-double with petals in two rows, cylindrical stamen cluster. Originated in Japan. (Believed extinct.) May be a synonym for **Miyuki.** Note: Kasuya lists both **Gokô** and **Miyuki.** The kanji characters are the same and descriptions are similar.

Gokurakuchô. (Bird of Paradise), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.186, description, p.187, colour photo: Medium sze, deep crimson, open campanulate single, with 6 emarginate, overlapping petals, and a central stamen column with red filaments, joined for the lower half, and yellow anthers. Late flowering. Leaves glossy, deep green, with small, blackish spots, ovate to broad-ovate, apices recurved, blunt acute, margins shallowly crenate to serrate. A seedling of **Kon-wabisuke.** Originated in the Chûbu area, Japan. Originated and released by Fumio Naitô in 1983.

Gold Crest. *(C.japonica),* Slocock Nurseries Catalogue, 1975-1976: Foliage variegated. Flower carmine, semi-double. Originated in England.

Gold Dust. *(C.japonica),* Azalea Glen Nursery Catalogue, 1955: Golden red. Medium semi-double to peony form. Vigorous, open growth. Mid-seasom blooming. Originated in USA by Azalea Glen Nursery.

Gold Edged Peony. Ikeda, 1976, *American Camellia Yearbook,* p.144. Synonym for **Jinbian Mudan.**

Gold Fishtail. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.91. Synonym for **Kingyo-tsubaki.**

Gold Leaf Lion's Head. Ikeda, 1976, *American Camellia Yearbook,* p.144. Erroneous synonym for **Jinye Dahong Jiuxin** as 'Chunyehtahung chiuhsin'.

Gold Leaf Nine Hearts. Waterhouse, 1970, ACRS., *Camellia News,* No.40, p.9. Synonym for **Jinye Dahong Jiuxin** as 'Chun Yeh Ta Hung Chiu Hsin'.

Gold Silk Jade Butterfly. Savige, 1986, *International Camellia Journal,* No.18, p.110. Synonym for **Jinsi Yudie.**

Gold Spangles. Wall Cottage Nursery Catalogue, 1982. Abbreviation for **Golden Spangles.**

Gold Splash. *(C.sinensis).* ACS, *Yearbook* 2011, p.133. Yellow variegated leaves. Offered by Camellia Forest Nursey, Chapel Hill, N.C., USA.

Gold Striped Purple Gown. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.144. Synonym for 'Zipao Jindai', itself synonym for **Zipao.**

Gold Tone. *(C.japonica), American Camellia Yearbook,* 1962, p.219, Reg. No.627: A 10 years old chance seedling that first bloomed 1955. Originated by W.F. Wilson Jr., Hammond, Louisiana, USA. Plant growth is upright, slightly spreading, of average density with medium green leaves, 9 cm x 4.5 cm. The anemone form flowers, 11-12.5 cm across x 5-6 cm deep are white with very yellow stamens and have 10-12 petals and 125-200 petaloids. Form is

variable from formal to semidouble to anemone. The bright yellow of the anthers and the yellow cast of the petaloids gives the appearance of a yellow flower. Blooms mid-season.

Golden Age. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.5. No description. Originated in USA. No valid listing located.

Golden Anniversary. See 'Nuccio's Golden Anniversary'.

Golden Belt Nine Hearts. Waterhouse, 1970, ACRS., *Camellia News,* No.40, p.7. Synonym for **Jindai Jiuxin** as 'Chin Tai Chiu Hsin'.

Golden Brocade. *Camellias,* Y.C. Shen, 2009, p.74 with colour photo; Synonym for **Kogane-nishiki.**

Golden Dome. *(C.japonica), American Camellia Yearbook,* 1981, p.99, Reg. No.1772: A very large, white, semi-double *C.japonica* chance seedling of **Pink Elephant.** Late flowering. Originated by Marjorie O'Malley, Woodside, California, USA. The 7 years old seedling first bloomed 1976. Average flower size is 15 cm across x 3.6 cm deep with 13 petals, 2-3 petaloids. Anthers gold, filaments white. Plant growth is upright and medium with light green leaves, 9.5 cm long x 5.5 cm wide.

Golden Door. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.91. Synonym for **Hassaku-tsubaki.**

Golden Dragon. *(C.sinensis).* ACS, *Yearbook* 2011, p.133. Yellow variegated leaves. Offered by Camellia Forest Nursey, Chapel Hill, N.C., USA.

Golden Embers. *(C.japonica),* ACRS., 1967, *Camellia News,* No.28, p.4, Reg. No.80: Originated by Gordon Lang, Wahroonga, N.S.W., Australia. A chance seedling from Camellia Grove Nursery, St. Ives. It has a single, 9-10 cm across, turkey red bloom in mid-season and an upright growth habit with 10 cm x 7 cm deep green, heavily and coarsely serrated leaves.

Golden Fleece. *(C.x williamsii),* Hilsman, 1966, *American Camellia Yearbook,* p.136: *C.japonica* **Frank Gibson** x *C.x williansii* **Feathers Red Peony.** White. Large, loose peony with golden stamens. Medium, compact growth. Blooms mid-season to late. Originated in USA by David Feathers, Lafayette, California, USA.

Golden Gate. *(C.japonica), American Camellia Yearbook,* 1976, p.160, A 10 years old chance seedling that first bloomed 1973, originated by Houghton Hall, San Anselmo, California, USA. Plant growth is upright, open and rapid with very dark green leaves, 12.5 cm long x 5.5 cm wide of heavy, leathery texture. The anemone form, **Elegans** style, blooms (large centre petaloid burst) has 13 white, outer guard petals about a massive golden yellow petaloid centre group, 6 cm across; anthers golden, filaments yellow. Average size 12.5 cm across x 3.8 cm deep. Heavy petal texture. Blooms mid-season to late.

Golden Glimmer. (*C.reticulata* hybrid). ACRS, *Camellia News,* Autumn 2003, No.161, p.8, Reg. No.547. Originated by Geoffrey and Colleen Sherrington, Balwyn North, Vic., Australia. A controlled cross between a wild form of *C.reticulata* (seed parent) x an unnamed hybrid seedling (**Suzanne Withers** x *C.nitidissima*) – amended parentage as per ACRS *Camellia News,* Autumn 2005, No.167, p.18. First flowered 2000. The semi-double flower is white with the faintest pink blush, and a light shading of yellow at base of petals, 15 cm diameter x 7 cm deep. Flowers freely mid-season on an upright, spreading plant of medium growth. Leaves dark green, keeled, obovate, 8 cm long x 5 cm wide. Long lasting flowers.

Golden Glow. (*C.nitidissima* hybrid). ACS, Nov. 1994, *The Camellia Journal,* vol.4, No.4, p.2, in "Progress in Hybridising with *C.chrysantha* by Nuccio's Nurseries" by Julius Nuccio: Nuccio seedling No.NXO#8729. A seedling of (**Guilio Nuccio** x *C.pitardii*) x *C.nitidissima,* raised by Nuccio's Nurseries, Altadena, California, USA. Medium sized, heavy textured semi-double,

creamy white with some yellow at the base of the petals, slightly pink buds. Very bushy growth, typical of *C.japonica.* Fertile, sets sed.

Golden Heart Bright Red. Yü & Bartholomew, 1980, *American Camellia Year Book,* p.10. Synonym for **Jinxin Dahong.**

Golden Heart Jewellery. Bao, 1980, ACS., *The Camellia Journal,* Vol.35, No.2, p.18. Synonym for **Jinxin Baozhu.**

Golden Spangle. Muncaster Nursery Catalogue, 1976-1977. Orthographic error for **Golden Spangles.**

Golden Spangles. *(C. x williamsii),* Hillier, 1960, RHS., *The Rhododendron* and Camellia Yearbook-, No.14, p.138: There is to be found growing in some gardens a form of *C. x williamsii* with golden variegated leaves and, as a rule it is labelled 'Mary Christian'. Mr Ralph S. Peer wrote, pointing out that we had sent him this particular form and asked if the variegation was typical of the variety 'Mary Christian'. On reference to Mr Julian Williams of Caerhays Castle, we were informed that he has never seen this variegation on any plants at Caerhays. This plant was first noticed early in 1946 amongst a batch of plants of different forms of *C. x williamsii* at Wisley. It was then labelled 'Mary Christian'. It is not known whether this plant arose as a separate seedling or a bud mutation of 'Mary Christian'. To avoid confusion it was given the name **Golden Spangles** with the following description: A vigorous, lax growing shrub of good constitution, the flowers and leaves in form are typical of this hybrid. The flowers are about 3 inches (7.5 cm) across, bright cherry rose, a little deeper in colour than **Mary Christian** but not so dark as **St Ewe**. The stigma is rather shorter than the stamens which tend to conceal it. The leaf is a dark, dull green above with a central splash of soft yellow green, the leaves are finely and regularly serrated, the lower surface is a polished green. Received RHS., "Award of Merit", Apr.1987.: Plant vigorous, erect, slightly spreading. Leaves 8cm x 4 cm, fairly dark green, midrib area blotched light green. Flowers 9 cm across, single with 2 rows of petals. Red Purple Group 62A delicately veined 58C. Mid-season to late flowering. Originated in England. Orthographic errors: 'Gold Spangles', 'Golden Spangle'. Chinese synonym 'Jinye Feidie'.

Golden Stamen Hibiscus. Bao, 1980, ACS., *The Camellia Journal,* vol.35, No.2, p.18. Western synonym for **Jinrui Furong.**

Golden State. *(C.japonica),* Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.92. No description. Originated in USA. No valid listing locted.

Golden Temple. Chandler & Son Nursery Catalogue, 1939. Synonym for **Dewatairin** as 'Daitairin'.

Golden Wedding. *(C.japonica),* Ashwood Nursery Catalogue, 1994. No description. Ashwood Nurseries, West Midlands, England, 1996, Catalogue: Bold, golden variegated foliage and single, red flower of 5-6 petals. Leaves reddish tinted on new growth. Origin unknown but thought to be an English cultivar.

Golden World. *Camellias*, Y.C. Shen, 2009, p.58 with colour photo; Synonym for **Kinsekai.**

Goldfish Camellia. Macoboy, 1981, *The Colour Dictionary of Camellias*, p.97. Synonym for **Kingyotsubaki.**

Goldfish Tail Camellia. Fendig, 1953, *American Camellia Catalogue.* Synonym for **Kingyo-tsubaki.**

Goldilocks. Mark S. Cannon Scion Catalogue, 1963-1964, p.6. Synonym for **Colonial Dame.**

Goshiki-chiritsubaki. (Five Coloured Petal Scattering Camellia), *(C.japonica),* Ono, Ranzan, 1803, *Honzô Kômoku Keimô.* vol.32; Minagawa, 1933, *Chinkashû* as 'Chiri-tsubaki', but this name was changed to **Goshiki-chiritsubaki** to avoid confusion with another ancient cultivar. Tuyama, 1966, *Camellia Cultivars of Japan,* p.346, pl.197; Illustration 362, p.184, Tuyama, 1968, *Camellias of Japan:* Flowers and leaves very similar to **Chiri-tsubaki-Reikanji,** which may be a sport. Petals falling completely after flowering. The colour of the flower is various from pure white to pure rosy pink, (Spinel Pink 0625/1) through every shade and striped forms. Late flowering. Old trees of this cultivar are many around Kyôto. It is also known as 'Goshiki-no-tsubaki', 'Goshikitsubaki', 'Goshikiyaechiri-tsubaki', 'Goshiki-shibori'. A big old tree of this was in the Jizô-in, famous as the Camellia Temple Tsubakidera, in Kyôto; thought to be the original tree. See colour photo and description, p.61, Katei Gahô, 1984, *Chabana Koyomi, vol.1, Tsubaki* as 'Goshikiyaechiritsubaki' and p.351, Yokoyama & Kirino, 1989, *Nihon no Chinka* as'Goshiki-yaechiri-tsubaki'. Published as *Camellia japonica* f. *polypetala* Makino, *Journal of Japanese Botany* vol.V, p.46, 1928 and again as *C.japonica* var. *polypetala* Makino, ditto, l.c. VIII:44, 1933. Resembles 'Denkôji-chiri-tsubaki', **Nara-shichifukujin.** Orthographic error: 'Goshiki-yaeziri'. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.96 with colour photo; English translation p.65. An old tree in the garden of the Okuno family in Kyôto City is designated as a national monument. Chinese synonym 'Wuse Bachong Sanchun'.

Goshiki-karanishiki. (Five Coloured Chinese Brocade), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.216: The diversity of the flower colours range from white to pink, red, spotted red, and white margined red. Reflexed whorls, semi-double, to anemone, cup shaped blossoms, medium size, early flowering. Plant habit upright, well branched, vigorous. Leaves wide-ovate, acuminate, somewhat keeled, undulate. Originated in the Toyama District, Japan. Named and released by Zenji Kamo in 1967.

Goshiki-no-tsubaki. Kitamura, 1956, *American Camellia Yearbook*, p.18. A synonym for **Goshiki-chiritsubaki.**

Goshiki-shibori. Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki, Tokushû.* Synonym for **Goshiki-chiritsubaki.**

Goshiki-tsubaki. Boten-en Catalogue, 1955. Different reading for 'Goshiki-no-tsubaki', synonym for **Goshiki-chiritsubaki.**

Goshiki-tsubaki (Chubu). (Five-coloured Camellia). *(C.japonica), Nippon Tsubaki - Sasanqua Meikan,* 1998, pp.96 with colour photo; English translation p.65. Small, tubular single. Various coloured flowers, red striped on white, pink bordered white, all white, all red etc. Flowers shatter. Flowers early to late. Leaves small, elliptic. Upright, vigorous growth. One of old camellias raised at Nagoya Castle.

Goshikiyaechiri-tsubaki. Watanabe, 1963, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.4, p.32. Synonym for **Goshiki-chiritsubaki.**

Goshiki-yae-chiri-tsubaki. Seibundô Shinkôsha, 1979, *Senchinshû,* p.59. Synonym for **Goshiki-chiritsubaki.**

Goshiki-yaeziri. Royal Botanic Gardens, Kew, Inventory, 1975. Orthographic error for 'Goshiki-yaechiri', synonym for **Goshiki-chiritsubaki.**

Goshobeni. Yashiro, 1841, *Kokon Yôrankô,* vol.344 and Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.9. Synonym for **Goshobeni-sazanka.**

Goshobeni-sazanka. (Royal red Sasanqua), *(C.sasanqua),* Yashiro, 1841, *Kokon Yôrankô,* vol.344; Itô, Ihei, 1719, *Kôeki Chikinshô,* 1:24-40: Large sized, purplish red. Originated in Japan. Sport: **Gosho-nishiki.** Synonym: 'Goshobeni', 'Goshoko'.

Goshodaiu. (Personal name), *(C.japonica),* Anonymous, ca.1874, *Tsubaki Hyakuo no Zu,* 3-24: Medium sized, saucer-shaped single white with red spots. Originated in Japan. (Believed extinct.)

Goshogaruma. Vanderbilt, 1940, *Camellia Research,* p.4. Corruption of Japanese name **Goshoguruma.**

Goshoguruma. Hakoda, 1974, Nôkôdai, Nôjôhô, No.6, p.41: Large semi-double, white with red margins. Synonym for **Inazuma.**

Goshoguruma. (Royal Carriage), *(C.japonica),* Itô, Ihei, 1695, *Kadan Chikinshô;* Itô, Jukyû, 1739, *Honzô Hanamaki'e;* Kasuya, Kamegorô, 1859, *Tsubaki Irohanayose Irotsuki,* Medium sized, anemone double, red flower variegated with white. Itô, Ko'emon, 1879, *Chinkashû.* Colour illustrations and descriptions: pl.306, p.155, Tuyama, 1968, *Camellias of Japan;* Tuyama, 1966, *Camellia Cultivars of Japan,* pl.24, p.50; *Encyclopedia of Camellias in Colour,* vol.I, 1972, pl.371, p.158; Seibundô Shinkôsha, 1979, *Senchinshû,* pp.59, 216: A sport of **Kara-ito** according to Tuyama, 1968. Flowers of large anemome form, but the central mass of small petals and petaloids is loosely arranged and variable, often exposing stamens. Petals red (Claret rose 021) with white blotches, petaloids variegated white, Late flowering. Leaves large elliptic, apex acute, yellow variegated. Different readings: 'Gosyoguruma', 'Gosho-guruma', 'Gosho Guruma'. Synonyms: 'Rhodellia King'. 'Goshoguruma-variegated', 'Hoshi-karaito'. Corruptions of the Japanese name: 'Gosho-garuma', 'Goshaguruma', 'Gosko-Guruma', 'Gosho Huruma'. Originated in Kantô District, Japan.

Goshoguruma Pink. Fruitland Nursery Catalogue, 1946-1947. Synonym for **Kara-ito.**

Goshoguruma (Pugh). *(C.japonica),* McIlhenny Catalogue, 1948-1949: Large spinel red, spotted with white, semi-double, with inner petals and stamens loosely filling the centre. Late flowering.

Goshoguruma Variegated. Hillcrest Nursery Catalogue 1958. Orthographic error: 'Toshoguruma Variegated'. Synonym for **Goshoguruma.**

Gosho Huruma. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues*, p.253. Corruption of the Japanese name **Goshoguruma.**

Goshokagami. (Royal Mirror), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Blushed pink with white edges. Medium size. See colour illustrations: Adachi, 1960, *Camellia. Its Appreciation...*, pl.54; Hiratsuka, 1964, *Higo Camellia*, pp.16, 22, 12 in English - Black and white photo: Light cherry-pink with red veining, 8 cm across, 5-6 petals, about 150 light yellow stamens, pistil faint red in an open centre burst. Leaves small, ovate; apex acute; margins sharply serrate, deeply keeled. Flowers mid-season to late. Originated in Kumamoto Prefecture, Japan. For description see Seibundô Shinkôsha, 1979, *Senchinshû*, p.214. Different reading: 'Gosyokagami'.

Goshokagami. Different reading for **Gondô-shibori.**

Goshokagura. (Royal Shinto Dance), (Higo), Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No.1, p.53. No description. Originated in Japan.

Goshokô. Different reading to 'Goshobeni', synonym for **Goshobeni-sazanka.**

Gosho-nishiki. (Royal Brocade), (*C.sasanqua*), Ishii, Yûgi, 1933-1934, *Jissai Engei 15. Chabai no Hinshu Kaisetsu;* Chûgai Nursery Catalogue, 1935-1936, p.26: Rose-pink, dotted and striped white. Medium sizes semi-double with 12-13 curved petals. Originated in Saitama Prefecture, Japan. A sport of **Santôzaki.** Synonym: 'Gosho-shibori'

Gosho-nishiki. (Royal Brocade), *(C.japonica), Encyclopedia of Camelliasin Colour,* vol.I, 1972, pl.144, pp.83, 312: Light pink single of 7 petals with occasional crimson streak and white margins. The pink colour consists of myriads of fine dots. Central column of stamens with dull yellow anthers, light yellow filaments. Leaves, elliptic, mid-green, raised venation, medium serrations, thick and leathery. Late blooming. See also colour plate, p.59, Seibundô Shinkôsha, 1979, *Senchinshû*, and p.253, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Seedling of **Goshozakura** originating in Kurume, Fuku'oka Prefecture, Japan. Named and released by Tadashi Hisatomi in 1945.

Goshosakura. Different reading for **Goshozakura.**

Gosho-shibori. Synonym for the sasanqua **Gosho-nishiki.**

Goshozakura. (Cherry Blossom in the Royal Garden), (Higo), Taniguchi, 1912, *Chinka Kyôkan:* Light pink with white base. Medium size, 7 cm across, 6-7 petals. Stamens in an irregular circle, white. Petals curled when fully open. Leaf, small, obovate-elliptic. Flowers early to mid-season. See black and white photo, p.21, Adachi, 1960. *Camellia. Its Appreciation...*, also *Encyclopedia of Camellias in Colour,* 1972, vol.I, p.28. Originated in Kumamoto Prefecture, Japan. Different readings: 'Gosyozakura', 'Goshosakura'. Synonyms: 'Tsukumiguruma-Nagoya', 'Chûbu-tsukimiguruma'. *Nippon Tsubaki - Sasanqua Meikan*, 1998, p.99 with colour photo; English translation p.67. Stated to be the same variety as **Chûbu-tsukimiguruma.** Chinese synonym 'Yusuoying'.

Goshozakura. (Cherry Blossom in the Royal Garden), *(C.sasanqua),* Ashizawa, Yagorô, 1898, *Chabaika Taishû:* Single, small size, white with red margins and small leaves. Originated in the Kantô District, Japan.

Goshozakura. (Cherry Blossom in the Royal Garden), *(C.sasanqua),* Wada, 1941, *Japanese Garden Treasures*, p.31 under "Single Autumn Fowering Varieties of Sasanquas" - Pink suffused, medium, cherry shade. See also Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.9*:* Synonym 'Sakurabeni' -Cherry pink. Medium single with petals notched at the point. Originated in Japan. Different reading 'Gosyozakura'.

Goshozome. (Imperial Dyeing), *(C.japonica),* Shirai-Bunko, 1789, *Shoshiki Hanagatachô.* See, 1964, Kyôto Engei Kurabu, *Tsubaki Tokushû,* No.5, p.79: Medium size, single, sake-cup shape, blush pink, red stripes. Originated in Japan. (Believed extinct.)

Gosko-Guruma. Loder, 1958, RHS, *The Rhododendron and Camellia Yearbook,* No.12, p.79. Corruption of Japanese name **Goshoguruma.**

Gossamer Wings. *(C.sasanqua),* Fendig, 1953, *American Camellia Catalogue:* Light pink single; originated in the USA by McCaskill Gardens, Pasadena, California. See black and white photo, Hertrich,1959, *Camellias in the Huntington Gardens,* vol.III, p.297.

Gosyoguruma. Kyôto Engei Kurabu, *Tsubaki Tokushû,* Mar.1968, p.161. Different reading for **Goshoguruma.**

Gosyokagami. Hiratsuka, 1964, *Higo Camellias* p.12. Different reading for **Goshokagami.**

Gosyozakura. *Kurume Camellia,* 1997, English translation, p.20. Different reading for **Goshozakura.**

Goten-tsubaki. (Camellia in the Royal Residence), Tuyama,1966, *Camellia Cultivars of Japan,* p.128. Local name for **Daijôkan**, which was in the Nagoya Castle.

Gotterdammerung. *(C.japonica),* Dodd, 1968, *Adventure in Camellia Seedlings,* p.3, colour photo: Rhodonite red, open, informal double, large, fluted and crimped outer petals; centre an irregular group of small, twisted petals, petaloids and stamens. Originated in USA by Richard Dodd, Marshallville, Georgia.

Goubunantina. Anderson & Co. Nursery Catalogue, 1887, p.70. Orthographic error for **Gubernativa.**

Gouchuixue. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.408; Chinese synonym for the Japan Higo **Nioi-fubuki.**

Goudetii. *(C.japonica),* Le Texnier. 1911, *Le Camellia essais sur l'histoire quelques fleurs d'ornement* as 'Goudeti': Grown from seed by Goudet of Toulouse, 1859. No description. Originated in France.

Gousonii. Anonymous, 1841, *Gardeners' Chronicle.* Orthographic error for **Goussoniae.**

Goussonia. Barthere, Toulouse Nursery Catalogue, 1838, p.11. Orthographic variant for **Goussoniae.**

Gousonia Vera. Berlèse, 1840, *Monographie,* ed.2, p.94. Synonym for **Goussoniae.**

Goussoniae. *(C.japonica),* Sweet, 1830, *Hortus Britannicus,* p.74 as "rose, Mrs Goussone's Camellia". Flower clear rose, 10 cm across, double, with large exterior petals. Originated in England. Orthographic errors: 'Goussonia', 'Gaussonia', 'Gaussonii', 'Gausonia', 'Goussonia Vera', 'Goussoniana', 'Gaussonii Vera', 'Goussonii', 'Goassonia'. Synonym: 'Lindleyi'.

Goussoniana. Bosse, 1840, *Handbuch der Blumengartnerii,* p.443. Maupoil & Figlio Catalogue, 1853. Orthographic variant for **Goussoniae.**

Goussonii. Anon. 1830, "Euber die cultur der Kamellien" in *Der Blumen Gaertner,* p.52. Orthographic error for **Goussoniae.**

Gouvernor Mouton. RHS., 1967, *Rhododendron & Camellia Yearbook,* p.11. Orthographic error for **Governor Mouton.**

Gouye Daquban. (Grooved Leaf, Bent Petal), *(C.reticulata),* Gao & Zhuang, 1989, *The Camellia in China,* p.59, No.394, colour photo, No.251: Large size, 11-14 cm across x 6-6.5 cm deep, red, semi-double of 15-16 large, fluted and waved petals with frilly margins, and 3 or 4 small, central fascicles of stamens. Leaves ovate, V'ed, 9.5-11 cm long x 5-6 cm wide, mid-green, apicea acute. Originated in Tengchong, Yunnan Province, China.

Governor Dan McCarthy. SCCS., 1951, *Camellia Nomenclature.* Synonym for 'Variabilis', (**Pompone**) as 'Horkan'.

Governor Earl Warren. *(C.japonica),* Oregon Camellia Society, 1949, *Camellias as a Hobby,* p.42; Magnolia Gardens and Nursery Catalogue, 1949-1950, p.7 as 'Gov. Earl Warren': Discovered by John Edwards of Edwards Nursery, Palo Alto, California, USA growing in a private home as a seedling. First identified as 'Edwards No.102', it was named in honor of the Governor of Califomia. Large, bright, rose-pink, incomplete double, 10 cm across, with occasional white variegation. Outer petals rounded and widely spaced, those central, semi-erect, and twist and curl with occasional stamens interspersed. Leaves, dark, glossy green, broadly-ovate, 7.5 cm x 3.5 cm, with a short, sharp apex. Medium serrations. Plant is vigorous, open, upright and profuse bloomer. Flowers mid-season. See colour photo, p.90, Macoboy, 1981, *The Colour Dictionary of Camellias* and pl.71, p.43, *Encyclopedia of Camellias in Colour,* vol.II, 1978. Orthographic error: 'Gov. Earn Warren'. For another form see **Governor Earl Warren Variegated.**

Governor Earl Warren Variegated. *(C.japonica),* SCCS., 1954, *The Camellia, Its Culture and Nomenclature,* as 'Governor Earl Warren Var.': A virus variegated form of **Governor Earl Warren-** Rose-pink blotched white. Originated in USA. Abbreviation: 'Gov. Warren Var.'.

Governor Faubus. *(C.japonica),* Cannon, 1963, ACS., *The Camellia Journal,* vol.18, No.1, back cover as 'Gov. Faubus'. No description. Originated in USA. No valid listing located.

Governor Hampton. Steffek, 1948, *Plant Buyer's Guide,* ed.5, p.49. Abbreviation for **Governor Wade Hampton**.

Governor Hugh White. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue* Red, peony form, early blooming. *American Camellia Yearbook,* 1954, p.314, Reg. No.186: A 16 years old seedling, hand pollinated by Mrs & Mr T.S. Clower, Gulfport, Mississippi, USA, which bloomed for the first time 1946. Type of growth is open, upright and rapid in rate. Leaves are large and dark green. There are two rows of guard petals, with the petals turned down; the centre has several rows of petals in a semi-peony form with a few golden anthers. The colour is magenta red and the flower 10-10.5 cm across. Flowers early.

Governor Kennon. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* Incomplete double, rose-pink, mid-season. *American Camellia Yearbook,* 1954, p.314, Reg. No.144: A 9 years old seedling of unknown parentage that first bloomed 1950. Originated by Filo Turner, Pensacola, Florida, USA. Leaves, olive green, long, evenly serrate. Flowers, incomplete double with mixed petaloids, similar to **Nobilissima.** A double row of guard petals, notched and firm in texture, with a centre of stamens interspersed with petaloids and petals. Colour rose-pink. Size 11 cm across. Flowers early to mid-season. Abbreviation: 'Gov. Kennon'.

Governor Leche. Steffek, 1949, *Plant Buyer's Guide,* ed.5, p.49. Abbreviation for **Governor Richard W. Leche.**

Governor Lester Maddox. *(C.japonica),* SCCS., 1974, *Camellia Nomenclature,* p.67: Deep pink with heavy veining. Large semi-double to formal double. Mid-season blooming. Originated in USA by W. Stewart, Savannah, Georgia.

Governor Mouton. *(C.japonica),* McIlhenny, 1934, List *of Camellias for Sale,* p.1: Pure red, irregular double, blotched white, 10.5 cm across x 5 cm deep. There are two rows of large petals, outer row consisting of 9. The centre is made up of a few large petals mixed with petaloids and some stamens. Leaves, dark green, twisted, 7.5 cm x 5 cm. Plant growth wide, spreading, willowy and medium in rate. The original plant grew in the old home of Governor Mouton, Lafayette, Louisiana, USA and is believed to be a lost label plant from the 19th century. There is also a similar old plant from which the cultivar **Aunt Jetty** originated which appears to be a solid colour form of **Governor Mouton**. SCCS., *Camellia Nomenclature* lists **Aunt Jetty** as a synonym as solid colour blooms are not uncommon of **Governor Mouton.** However this is quite common with cultivars variegated by virus and the solid and variegated forms are accepted as individual varieties. Orthographic errors: 'Gov. Mouton', 'Governor Mouzan', 'Governeur Moutans', 'Gouvernor Mouton'. Synonyms: 'Governor Mouton Variegated', 'Variegated Governor'. Colour pl. facing p.242, 1954, *American Camellia Yearbook* and Gerbing, 1945, *Camellias,* p.97.

Governor Mouton Red. Sharp, 1948, *Camellias Illustrated,* p.124, 128. Synonym for **Aunt Jetty.**

Governor Mouton Variegated. Laurel Lake Nursery Catalogue, 1964. Synonym for **Governor Mouton.**

Governor Mouzan. Magnolia Gardens and Nursery Catalogue, 1942-1943. Orthographic error for **Governor Mouton.**

Governor Richard W. Leche. *(C.japonica),* Fruitland Nursery Catalogue, 1945-1946, p.27; McIlhenny Catalogue, 1945-1946, p.5: Large, deep rose-pink, lightly lined rose colour. Semi-double, petals long and narrow, upstanding, cupped around a compact group of long stamens. Late flowering. Abbreviations: 'Gov. Richard Leche', 'Governor Leche', 'Gov. Richard W. Leche'.

Governor Richards. *(C.japonica), American Camellia Yearbook,* 1981, p.99, Reg. No.1754: A medium to large, deep red *C.japonica* chance seedling, originated by Robert Welsh, Tallahassee, Florida, USA. The 12 years old seedling first bloomed 1968. Average flower size is 10 cm across x 5 cm deep with 10 petals and 3-4 petaloids, yellow anthers and red filaments. Flowers are a deep, waxy red with conspicuous red stamens. Growth is spreading, dense and medium in rate with dark green leaves 8 cm long x 3.8 cm wide.

Governor Robert Holmes. *(C.japonica), American Camellia Quarterly,* 13(4), 1958, Reg. No.348: A 10 years old chance seedling, originated by Dr Gilbert E. Fisher, Union Springs, Alabama, USA. The coral pink flower, 12.5 cm across x 6 cm deep resembles **Jessie Katz** in form and has 9-10 petals and 3-4 petaloids. Flowers mid-season.

Governor Variegated. *(C.japonica),* Lindo Nurseries Catalogue,1940-1941. No description. Vanderbilt, 1940, *Camellia Research,* p.4. No description. An unnamed plant at the Governor's Mansion, 16th Street and K Street, Sacramento, Califomia, USA.

Governor Wade Hampton. *(C.japonica),* Fruitland Nursery Catalogue, 1946-1947, p.29. No description. Originated in USA. Abbreviation: 'Governor Hampton'.

Grace. *(C.japonica), American Camellia Yearbook.* 1983, p.158, Reg. No.1891: A medium to large rose-pink, formal double *C.japonica* chance seedling, mid-season to late blooming. Originated by S.T. Brown, Charleston, Georgia, USA. The 10 years old seedling first bloomed 1977. Average flower size is 9-10 cm across x 3.2 cm deep with 39 petals. Plant growth is upright, average in density and medium in rate with dark green leaves, 7.5 cm x 4.5 cm.

Grace Albritton. *(C.japonica), American Camellia Yearbook,* 1972, p.130, Reg. No.1197: A 10 years old chance *C.japonica* seedling, which first bloomed 1967. Originated in USA by A.D. Albritton. Tallahassee, Florida. Plant growth is average and it has dark green leaves, 7.5 cm x 3.5 cm. The formal double, light pink flower measures 7 cm across x 2.5 cm deep. It has 50-60 petals with no stamens or pistil. It blooms mid-season. Each petal is tipped darker pink. Received the Arminta C. Cawood Camellia Japonica Award for 1977, the William E. Wylam Miniature Award, 1979; the John Illges Award, 1978 and the National Camellia Hall of Fame Award, 1980. Sports: **Grace Albritton Blush, Grace Albritton Flair, Grace Albritton Pink, Grace Albritton Starfire, Grace Albritton White, Grace's Sweet Pea.** Chinese synonym: 'Aobodun'

Grace Albritton Blush. *(C.japonica), American Camellia Yearbook,* 1980, p.165, Reg. No.1638: A small, blush pink formal double *C.japonica* mutant of **Grace Albritton,** originated by Ray Gentry, Jackson, Mississippi, USA. First observed 1978. Flower size and characteristics the same as for the parent.

Grace Albritton Flair. *(C.japonica), American Camellia Yearbook,* 1980, p.165, Reg. No.1640: A small, white flecked pink, formal double *C.japonica* mutant of **Grace Albritton** that blooms mid-season to late. Originated by Ray Gentry, Jackson, Mississippi, USA. First observed 1978. Flower and plant characteristics same as for parent.

Grace Albritton Pink. *(C.japonica), American Camellia Yearbook,* 1981, p.99, Reg. No.1629: A miniature to small, solid pink, formal double *C.japonica* mutant of **Grace Albritton** that blooms mid-season to late. Originated by Ray Gentry, Jackson, Mississippi, USA, first observed 1978. Flower and plant same characteristics as parent.

Grace Albritton Red. *(C.japonica),* ACS, Nov. 1992, *The Camellia Journal,* vol.47, No.4, p.13, Valdosta Camellia Scions as 'Grace Albritton (Red)'. The red sport of **Grace Albritton Pink.** Originated in USA.

Grace Albritton (Red). ACS, Nov. 1992, *The Camellia Journal,* vol.47, No.4, p.13. Orthographic variant for **Grace Albritton Red.**

Grace Albritton Starfire. *(C.japonica), American Camellia Yearbook,* 1980, p.166, Reg. No.1629: A small, light pink shading to darker pink at centre and flecked with red, formal double, *C.japonica* that flowers mid-season. Originated by Clyde X. Copeland, Mississippi, USA. Average flower size 7 cm across. Flower and plant characteristics the same as parent, **Grace Albritton.**

Grace Albritton White. *(C.japonica), American Camellia Yearbook,* 1980, p.166, Reg. No.1639: A small, white, formal double *C.japonica* mutant of **Grace Albritton** that blooms mid-season. Originated by Ray Gentry, Jackson, Mississippi, USA. First observed 1976. Flower and plant characteristics same as parent.

Grace Anglin. *(C.japonica), American Camellia Yearbook,* 1970, p.164, Reg. No.1114: An 8 years old chance seedling that first bloomed 1965. Originated by Murray Anglin, Bogalusa, Louisiana, USA. Plant growth is average with dark green leaves, 9.5 cm x 5.5 cm. The semi-double, 'Herme' (**Hikarugenji**) type, bloom is 11 cm across x 5 cm deep with 23 petals; petaloids vary from none to few. Colour is soft pink with yellow anthers. Blooms mid-season.

Grace Bunton. *(C.japonica),* Fendig, 1951, *American Camellia Catalogue,* with colour plate: Medium to large, deep rose-pink on petal margins, fading to creamy white at base; semi-double, 9-11 cm

across with 17-10 petals, darker above. Buds are green and oval and turn bright, rosy pink before opening. Leaves are dark green, glossy, long-elliptic, serrate. Plant growth is compact, upright and rapid in rate. A chance seedling of unknown parent originated by Wm.I. Robinson and C.J. Hayes, Norfolk, Virginia, USA. First flowered 1946. *American Camellia Yearbook*, 1954, Reg. No.56. Black and white photo, p.96, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.III. Orthographic error: 'Grace Button'.

Grace Burkhard. SCCS., 1950, *Bulletin*, 11(3):19, 22. Synonym for **C.M. Wilson.**

Grace Button. Thoby et al., 1988, *Tsubaki. A Propos Camellia*, p.46. Orthographic error for **Grace Bunton.**

Grace Capel. Marwood Hill Garden Catalogue, 1985. Orthographic error for **Grace Caple.**

Grace Caple. *(C.pitardii x C.japonica), New Zealand Camellia Bulletin*, 1974, Vol.VIII, No.6, p.47, Reg. No.93: An open pollinated seedling of *C.pitardii* var. *pitardii x C japonica,* originated by Mrs T. Durrant, Rotorua, New Zealand. The plant is small and compact. First flowered 1971. Flowers are semi-double to peony form with 30 narrow, elongated petals and measure 12 cm x 7 cm. Colour is a faint blush pink (RHS.CC.62D) shading to white. Orthographic error: 'Grace Capel'.

Grace Chow. *(C.japonica),* ACS., 1989, *The Camellia Journal*, vol.44, No.3, p.9, Reg. No.2163: Medium to large size, delicate pink with red stripes and flecking, semi-double. **High Wide'n Handsome** x **Betty Foy Sanders.** Blooms early to late. Originated by Dr Leland Chow, Bakersfield, California, USA. *American Camellia Yearbook*, 1989, p.122, colour photo 3p.1334: The 11 year old seedling first flowered, 1984. Average flower size 10.5 cm across x 8 cm deep, with 18 petals and, occasionally, petaloids, off-white filaments and yellow anthers. Plant growth is upright, spreading, open and rapid in rate, with dark green leaves, 10 cm long x 7.5 cm wide.

Grace Gamlin. *(C.saluenensis* hybrid), *New Zealand Camellia Bulletin*, 1979, vol.XI, No.3, p.21, Reg. No.149: A chance seedling of *C.saluenensis*, grown by A.P. Gamlin, Manaia, New Zealand which first flowered 1977. Male parent unknown. Growth habit is upright, of medium density with dark green leaves, 9.5 cm x 4.5 cm. Blooms are anemone form with 15 petals and a mass of petaloids (up to 120) in the centre. Colour is deep cyclamen pink; size up to 13 cm across x 6.5 deep. Flowers mid-season.

Grace Gerdel. *(C.japonica), American Camellia Yearbook*, 1979, p.106, Reg. No.1572: A large, pink, anemone form *C.japonica* (**Tiffany** x **Julia Drayton**), originated by R.W. Gerdel, Roseville, California, USA. The 9 years old seedling first bloomed 1976. Flower has 24 petals, 50-100 petaloids, yellow anthers and pinkish white filaments. Average size, 11 cm across x 3.5 cm deep. Late blooming. Plant growth is upright, open and rapid in rate with dark green leaves, 10 cm x 5cm.

Grace Gordon. *(C.japonica),* Peit, SCCS., 1986, *The Camellia Review,* vol. 48, No.2, p.7: Obtained from China. Small, 5-6 cm, white formal double with an occasional pink stripe. Imported to USA by Meyer Piet, California.

Grace Hutchinson. *(C.japonica),* Allan, Walter, Catalogue, 1946; Fendig, 1950, *American Camellia Catalogue*, with colour plate: Medium to large, ruby red, formal double, 9-11 cm across x 5 cm deep. Some flowers are two toned, outer petals ruby red, inner much lighter. Open, cup shaped, sometimes showing stamens when fully open. Flowers mid-season. Leaves dark to medium green, lanceolate, stiff, glossy, 7.5 cm x 5 cm, veins prominent, apex acute. Plant habit, hardy, vigorous and bushy. Originated by Walter Allan, Summerville, South Carolina, USA presumably from seed of 'Donckelaeri' (**Masayoshi**) as it was found under a plant of that variety at the "Tea Farm" about 1933, First bloomed 1938. See black and white photo, p.155, Hertrich, 1955, *Camellias in the Huntington Gardens,* vol.II. *American Camellia Yearbook*, 1954, Reg. No.100.

Grace Marie. *(C.japonica), American Camellia Yearbook,* 1960, p.198, Reg. No.484: A 12 years old chance seedling that first bloomed 1953, originated by Julington Nurseries Inc., Jacksonville, Florida, USA. Plant growth is upright and average with dark green leaves 6 cm x 3.8 cm. The formal double, white flowers, 6-7.5 cm across x 1.3 cm deep, are heavily dashed and flecked light red and have 75-80 petals. Blooms mid-season.

Grace Rogers. *(C.reticulata),* ACRS., 1984, *Camellia News,* No.91, p.22, Reg. No.310: Originated by T.E. Pierson, Hurstville, N.S.W., Australia. *C.reticulata* **Damanao** x **Buddha.** First flowered 1981. The informal double, 12 cm x 6 cm rose-red flowers, bloom mid-season to late. The spreading, open plant has 12.5 cm x 4 cm lanceolate, mid-green, reticulata type leaves.

Grace S. Wilder. Le Texnier, 1911, *Le camellia essais* sur *l'histoire de quelques fleurs d'ornement,* p.40. Synonym for **Reine des Beautés.**

Grace Sherwin Wilder. Manning, R., 1887, *Biographical Sketch of Marshall P. Wilder.* Synonym for **Reine des Beautés.**

Grace Sherwin Wright. Urquhart, 1956, *The Camellia.* Orthographic error for 'Grace Sherwin Wilder', synonym for **Reine des Beautés.**

Grace Ward. *(C.japonica), American Camellia Yearbook,* 1988, p.187, Reg. No.2088, colour photo between p.186-187: A large coral rose, peony form, *C.japonica* chance seedling of **Cécile Brunazzi** that blooms mid-season. Originated by John B. Ferrin, Gainesville, Florida, USA. The 1975 seedling first flowered 1981. Average flower size, 12.5 cm across x 7.5 cm deep, with 36 petals and 40 petaloids, yellow anthers and white filaments. Plant growth is average and medium in rate with dark green leaves, 10 cm long x 5 cm wide. Chinese synonym 'Kuanhou'.

Graceland. *(C.japonica), American Camellia Yearbook,* 1982, p.172, Reg. No.1792: A medium, light pink, edged deeper pink, rose form double *C.japonica* chance seedling that flowers mid-season. Originated by David Feathers, Lafayette, California, USA. The 15 years old seedling first bloomed 1969. Average flower size, 8.5 cm wide x 6 cm deep. Plant growth is dense and medium with mid-green leaves, 12.5 cm long x 5.5 cm wide.

Grace's Sweet Pea. *(C.japonica), American Camellia Yearbook,* 1982, p.172, Reg. No.1825: A miniature white with pink undertones, formal double mutant of **Grace Albritton.** Blooms mid-season to late. Originated by Ray Gentry, Jackson, Mississippi, USA. Mutant first observed 1977. Average flower size 5 cm across. It has no colour on the petal tips, but pink colour in the bottom of the bloom. (Sweet pea colouring). Same growth characteristics as the parent.

Gracie. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1962, p.5. No description. Originated in USA. No valid listing located.

Gracilis. *(C.japonica),* Verschaffelt, 1852, *Nouvelle Iconographie,* Book IX, pl.IV: Of Italian origin and grown commercially since 1850 - comparatively small size of bloom. The petals are rounded, faintly emarginated, quite imbricated, of a vivid carmine rose colour with a more or less clear white margin. At the centre they are small and form a small, compact heart. The name has since been used botanically for *Camellia gracilis* Hemsley (1895) now considered synonymous with *Camellia caudata* Wallich, 1829.

Gracilis Miniata. *(C.japonica),* Verschaffelt, 1858, *Nouvelle Iconographie,* Book IX, pl.III: Obtained from seed in Belgium from where we acquired it 3 years ago. Its blossoms, of medium size, are of a vivid carmine colouring with bands of delicate pink (rather than white), are composed of biform petals. The exterior petals are rounded, full or scarcely lobate; those of the interior are much smaller, ovate-lanceolate and acute, all imbricated with the utmost regularity.

Graciosa. van Houtte Catalogue, 1844-1845, 18:19 as synonym for 'Rugosissima Major', itself a synonym for **Rugosissima.**

Grand Prix. *(C.japonica),* Nuccio's Nurseries Catalogue 1968: Brilliant red. Very large semi-double with irregular petals. Vigorous, upright growth. Mid-season flowering. Received the "Margarete Hertrich Award" for 1969 and the "William E. Woodroof Camellia Hall of Fame Award" for 1978. *American Camellia Yearbook,* 1978, Reg. No.1523. Colour photo, *American Camellia Yearbook,* 1969, facing p.118; *New Zealand Camellia Bulletin,* 1974, vol.VIII, No.6, colour plate between pp.24-25. Originated at Nuccio's Nurseries, Altadena, California, USA. Sport: **Grand Prix Variegated.** Chinese synonym: 'Dajiangshang'.

Grand Prix Variegata. Stonehurst Nursery Catalogue, 1980. Illegal variant for **Grand Prix Variegated.**

Grand Prix Variegated. *(C.japonica),* Gentry, 1968, ACS.,*The Camellia Journal,* vol.24, No.4 as 'Grand Prix V.': A virus variegated form of **Grand Prix** - Brilliant red blotched with white. Originated in USA.

Grand Slam. *(C.japonica),* Nuccio's Nurseries Catalogue, 1962; *American Camellia Yearbook,* 1965, p.235, Reg. No.694: 3SCCS, 62-304 This is a 10 years old seedling of unknown parentage that first bloomed 1957. Originated by Nuccio's Nurseries, Altadena, Califonia, USA. The flower is a brilliant, dark red, ranging in form from anemone to semi-double. Size up to 13 cm across. Blooms mid-season. The plant is an upright, open, vigorous grower with glossy, deep green leaves. Received the John Illges Medal of the ACS for 1969. Received a RHS "Award of Merit" in 1975. See colour photos: pl.74, p.44, *Encyclopedia of Camellias in Colour,* vol.II, 1978; also front cover, SCCS, 1963, *The Camellia Review,* vol.24, No.4 and front cover ACRS, 1987, *Camellia News,* No.103. Sport: **Grand Slam Variegated.** Chinese synonym: 'Damanguan'.

Grand Slam Variegated. *(C.japonica),* Mark S. Cannon Scion Catalogue, 1964-1965, p.7 as 'Grand Slam Var.'. SCCS., 1966, *Camellia Nomenclature,* p.61: A virus variegated form of **Grand Slam** - Brilliant, dark red blotched with white. Originated in USA. Chinese synonym: 'Damanguan Xinzhong'.

Grand Sultan. *(C.japonica),* Anonymous, May,1841, *The Gardeners' Chronicle* where it is given as synonymous with 'Reticulatiflora'. Verschaffelt, 1849, *Nouvelle Iconographie,* Book XII, pl.IV: "Although this camellia, of Italian origin, has been grown commercially for 4 or 5 years, we did not know it until M.A. Dalliere sent us a plant. An exceptionally full foliage, a large blossom formed of rounded or oblong-lanceolate petals, regularly imbricated and of unusual size as well as a vivid red colouring (Dark Crimson) are merits..." There has been considerable discussion on Professor Waterhouse's contention that the camellia known for many years in Europe, Australia and New Zealand as **Mathotiana** and 'Mathotiana Rubra' was, in fact, **Grand Sultan.** See discussion under **Grand Sultan** in Urquhart's, *The Camellia,* 1956. Until future information shows otherwise, this contention is accepted. Synonyms: 'Te Deum', 'Reticulatiflora', 'Midsummer's Day'. Other synonyms collected in the USA against the name 'Te Deum' are 'Dr Shepherd', 'Firegold', 'Morague', 'Shah of Persia', 'Pasha of Persia'. Orthographic variants: 'Gran Sultana', 'Gran Sultano', 'La Gran Sultana', 'Le Grande Sultane', 'Grand Sultana'. Sports: **Augusto Leal de Gouveia Pinto, Shepherdess.**

Grand Sultana. Joseph Baumann, 1849, Prix Courant, p.5. Orthographic variant for **Grand Sultan.**

Grand Tamerlan. *(C.japonica),* de Jonghe, 1851, *Traité de la Culture du* Camellia, p.108. No description. Verschaffelt, 1858, *Nouvelle Iconographie*, Book VIII, pl.IV: Received 2 or 3 years ago from Italy. Its blossoms, of medium size, are a vivid pink with broad, pure white bands, are ranked with the perfections due to the regular imbrication of their large oval or rounded petals, fasciculate and serried at the centre in a small heart. Orthographic variant: 'Tamerlan' (Grand).

Granda Duchessa d'Etruria. van Houtte Catalogue, 1844-1845, 18:12. Orthographic error for **Granduchessa d'Etruria.**

Grandandy. *(C.reticulata),* ACS, *The Camellia Journal*, June 2013, p.26 with colour photo; Regn No.2852; Originated by Hulyn Smith, Valdosta, Ga., USA. ACS, *Yearbook*, 2013, p.116 with colour photo; Propagated and registered by Ralph Maphis, Tallahassee, Fla. A 25 year old seedling of 'Crimson Robe' (**Dataohong**) x *C.lutchuensis*, first flowered 1990. The very large, 13.4cm diameter x 10cm deep flower is semidouble to peony form, red with a distinctive white frosting. Heavy petal texture. Yellow anthers and white filaments. Upright plant with average growth. Dark green leaves average 6.5cm x 3.8 cm with low serration. Late flowering.

Grandiflora Rosea. *(C.japonica), Catalogue General des plantes, la Société d'Horticulture de Belgique,* 1842, p.22. Gheldorf, Const., 1844, Catalogue of Plants and Price List, p.7. Regular double. Originated in Belgium. No description.

Grandiflora Rosea. The Pacific Camellia Society, 1946, *Camellia Nomenclature.* Pseudonym for **Akashigata** as 'Lady Clare'.

Grandiflora Rosea. *(C.japonica),* Paul J. Howard, 1935, Horticultural Establishment Catalogue, p.15: This is probably the largest flowering camellia now available. The semi-double flowers are clear, rose pink, the centre stamens are golden tassled with rose. Fruitland Nursery Catalogue, 1937-1938, p.18. Plate, p.159, Hertrich, 1954, *Camellias in the Huntington* Gardens, vol.I: Semi-double, usually incomplete double. Crimson 22 at margins shading to 22/3 towards the centre, very dark venation,12 cm wide by 6 cm deep. Petals: 10 guard segments, sharply recurved, highly variable, 5.5 cm long and wide, irregularly notched. Centre: Irregularly shaped central petals, intermingled with stamens, stout filaments, dark golden anthers. Leaves: Broad-elliptic, glossy, dark green, 8-9 cm long x 4-5 cm wide; serrations broad, shallow; apices, short to long acuminate, recurved. Habit: Upright, loosely branched. Blooms mid-season. Synonyms: 'Louise Maclay', 'Tea Gardens 13', 'Grandiflora Rosea (2)', 'Grandiflora Superba (Wada)'. Sport: **Grandiflora Rosea Variegated.** This cultivar came from the Yokohama Nursery, Japan according to Domoto. Due to its similarity with 'Lady Clare',(**Akashigata**) the two camellias have been confused. For example 'Empress' has been used as a synonym for them both.

Grandiflora Rosea (1). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Akashigata** as 'Lady Clare'.

Grandiflora Rosea (2). Fendig, 1953, *American Camellia Catalogue.* Synonym for **Grandiflora Rosea.**

Grandiflora Rosea Simplex. *(C.japonica),* Baumann & Baumann, 1831, *Colllection de camellia élevés à Bollwieler,* pl.13, p.9: The flowers are large, single, rose colour and always in clusters to the number of 2 or 3. The plant habit is erect and somewhat vigorous, the leaves are green, but slightly darker on the upper side. Buds are green, elongated and pointed. Orthographic variant: 'Grandiflora Simplex Rosea'.

Grandiflora Rosea Variegated. *(C.japonica),* Vanderbilt, 1943 *Trade Available Camellia Stocks:* A variegated form of **Grandiflora Rosea;** crimson blotched white. Originated in USA. Synonym: 'Louise Maclay Variegated'. Abbreviation: 'Grandiflora Variegated'.

Grandiflora Rosea Variegated. The Pacific Camellia Society, 1946, *Camellia Nomenclature,* p.16. Pseudonym for **Ô-niji** as 'Empress Variegated'.

Granduchessa d'Etruria. *(C.japonica),* van Houtte Catalogue, 1841, 7:9: as 'Gr. Duchessa d'Etruria'. No description. van Houtte Catalogue, 1844-1845, 18:12 as 'Grande Duchessa d'Etruria': Peony form, white base foundation colour, white, stripes of rose. van Houtte, 1846, *Flore des Serres....* vol.2, pl.3 as 'Grande Duchessa d'Etruria': This camellia, which originated in Italy, is a attractive variety with good, regular coloured flowers. It is tall, robust and well branched, leaves oval, briefly acuminate at the apex, dark green, fine serrations and prominent venation on upper surface and inclined to be pendant. The flowers are up to 10 cm across, double, petals well displayed, imbricated, coloured a very soft rose with lighter tints. The petals are striped, spotted and stippled with bright rose. The outer petals are large, convex and notched at the apex and diminish in size towards the centre, which is dense and irregular. Verschaffelt, 1852, *Nouvelle Iconographie,* Book III, pl.II, as 'Duchesse d'Etrurie'. The correct Italian orthography of the name is **Granduchessa d'Etruria,** that used by van Houte being partly Italian and partly French is lingualistically incorrect. Synonym: 'Etrusca'. Orthographic variants and errors: 'Grande Duchesse d'Etrurie', 'Duchessa d'Etruria', 'Duchesse d'Etrurie', 'Grande Duchessa d'Etruria', 'Gran Duchessa d'Etrurie', 'Grand Duchesse d'Elrude'.

Great Day. *(C.japonica), American Camellia Yearbook,* 1968, p.131, Reg. No.993: A 12 years old seedling of **Governor Earl Warren,** that first bloomed 1962, originated by James R. Moore, Hampton, Virginia, USA. Plant growth is upright, dense and rapid in rate with dark green leaves averaging 11 cm x 5.5 cm. The semi-double flower, similar to Silver Ruffles, is 10-13 cm across x 7.5 cm deep and has 17-25 petals. Rose-red with white stamens. Long lasting, folded and twisted petals, stamens interspersed. Blooms mid-season.

Great Eastern. *(C.japonica),* Shepherd & Co Nursery Catalogue, 1872: Large semi-double blooms of brilliant crimson, often with a small group of small petals in the centre with the stamens. It is probably a seedling of **Chandleri** and may have originated at Camden Park. It is an Australian variety. For colour illustrations see pl.V, Waterhouse, 1947, *Camellia Quest,* also front cover ACRS, 1964, *Camellia News,* No.16. Synonym: 'Great Eastern Australian'. Note: SCCS., 1945, *Camellias,* p.19 erroneously gives 'Variegated Emperor of Russia' as a synonym. Chinese synonym 'Dadongfang'.

Great Eastern Australian. Duncan & Davies Nursery Catalogue, 1968. Synonym for **Great Eastern.**

Great Eastern (New Zealand). Hazlewood Nursery Catalogue, 1945, p.9. Synonym for **Emperor of Russia Variegated.**

Great Mount Aso. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.139. Synonym for **Ô-aso.**

Great Peach Bloom. Peer, 1947, SCCS., *Bulletin,* 11(2):11. Synonym for **Dataohong.**

Great Peach Blossom. (*C.reticulata* hybrid) SCCS, *Supplementary List* 2011. Soft mid-pink. Medium size semi-double. Strong upright growth. [(*C.pitardii* var *yunnanica* x **Zipao** 'Purple Gown') x *C.nitidissima* hybrid **Golden Glow**]. Flowers midseason. Originated in 2008 by Daniel Charvet, Fort Bragg, Calif., USA.

Great Red Chrysanthemun Petal. Waterhouse, 1970, ACRS., *Camellia News,* No.40, p.7. Synonym for **Dahong Juban** as 'Ta Hung Chu Pan'.

Great Sacred Dance. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.79. Synonym for **Daikagura.**

Great Sacred Dance Red. Macoboy, 1981, *The Colour Dictionary of Camellias,* p.71. Synonym for **Benidaikagura.**

Great Shot Silk. Peer, 1949, SCCS., *Bulletin,* 11(2):11. Synonym for **Dayinhong.**

Great Western. *(C.japonica),* Veitch, James Jr, 1853, Catalogue of Select Stove Plants…, p.14. Veitch Nursery Catalogue, 1856: Deep rose-pink, variable form, informal double. Synonym: 'Lady Duntz'. Originated in England.

Great White. Waterhouse, 1962, ACRS., *Camellia News,* No.9, p.5. Translation of 'Dabai' as 'Tai Pei'. Synonym for **Alba Plena.**

Greavill's Double Red. Buist, 1839, *Camellias,* p.10. Synonym for **Rubra Plena.**

Green Jade. Feng et al.1981, *Yunnan Shanchahua,* p.32. Synonym for **Biyu.**

Green Pearl. Huang, 1979, *American Camellia Yearbook,* p.120. Synonym for 'Luzhu'.

Greenelii. Jacob Makoy Nursery Catalogue, 1838. Orthographic error for **Grunellii.**

Green's Blues. *(C.hiemalis).* ACS, *The Camellia Journal,* March 2004, p.24 with colour photo; Reg. No. 2610. A 12 year old seedling of **Shishigashira,** pollen parent unknown, first flowered 1998. Originated by Bobby Green, Green Nurseries, Fairhope, Ala., USA. The 6.5 cm across flower is rose form double, violet to purple colour, ageing to blue. Long lasting flowers, unusual colour, cold hardy. *American Camellia Yearbook,* 2004, p.91, colour photo p.c1. Plant is spreading and dense with slow growth rate. Flowers early to mid-season. Dark green leaves are 4.5 cm long x 1.8 cm wide.

Greensboro Red. *(C.japonica), American Camellia Yearbook,* 1960, p.198, Reg. No.496: A chance seedling of unknown parentage originated by Lindley Nurseries, Greensboro, North Carolina, USA from an old plant growing before 1900. Plant growth is upright and medium with dark green leaves, 7.5 cm x 5 cm. The light red, semi-double flowers, 9-10 cm across x 6 cm deep have 14 petals and yellow stamens. Late flowering.

Greenville Variegated. *(C.japonica),* Hume, 1946, *Camellias in America,* p.332 from the Malbis Nursery. No description. Originated in USA.

Guaiguaihua. (Broken Flower), *(C.reticulata),* Chuang, 1959, *Yunnan Shanchahua:* A heavily variegated form of **Damanao**. Different reading: 'Kuai Kuai Hua'. Originated in Yunnan, China.

Guaimian Beidi. Chinese synonym for USA *(C.japonica)* **Funny Face Betty.**

Gualala Glow. (*C.reticulata* hybrid), Heartwood Nursery, Seedling List 2009; a 15 cm diameter, glowing coral pink semi-double. Narrow glossy leaves on a compact plant. [(*C.pitardii* var *yunnanica* x **Forty-Niner**) x (**Buddha** x **Coral Delight**)]. Flowers midseason. Originated by Daniel Charvet, Fort Bragg, Calif., USA (HW9814).

Guanban Xianzi. (Moon Goddess), *(C.reticulata),* CSC, 1989, *Report of the Camellias of China:* Rose form, light pink, petals in perfect order, becoming flat on opening, slightly incurved at the apex, shaped like the petals of *Prunus mume,* 7-9cm across, 15-18 petals in 3-4 whorls. Stamens scarce, separate, a few clustered, adnate basally to inner petals. Petaloids with large anthers. Pistil degenerate, twisted, cleft to base. Flowers mid to late season. Leaves narrow, long-elliptic, 6-9 cm long x 2.2-3 cm wide Originated in Yunnan, China.

Guancia di Venere. *(C.japonica),* Anonymous, 1876, *R. Società Toscana di Orticultura Bollettino.* Large flower, perfectly imbricated, soft, transparent, pearl white, the centre flesh colour, irregularly marked with small stripes of tender red. Originated in Italy.

Guangdongfen. Yang, 1965, *Camellias* of *Taiwan* under the different reading of 'Kuang-tun Fen'. Chinese synonym for **Otome.**

Guangyuanshi. Gao & Zhuang, 1989, *The Camellia in China,* p.55, No.362, colour photo No.220. Chinese synonym for **Hikarugenji.**

Guaxian. (Hanging Thread), Chang, Shao Yun, 1987, *Camellias* from *Zhejiang,* p.94, colour photo [p.121]: Medium size, white, formal double, sometimes loosely imbricated, marked with an occasional red tick on the petals; 6-7 rows of rounded, emarginate, somewhat wavy petals. Synonym for **Zhuapolian.**

Guanyinbai. (White Goddess of Mercy), *(C.japonica),* Huang Nursery Catalogue, 1949. White formal double. Different reading 'Kuan-yin Pei'. Guanyin is the Buddhist Bodhisattva of Mercy.

Guanyin Cha. (Goddess of Mercy Camellia), *(C.japonica), Camellia Varieties of Taiwan, 1965,* under the different reading 'Kuan-yin Cha': Leaves dark green, 8.5 cm x 4.5 cm. Flower colour light red, small size formal double with up to 116 petals, 6.5 cm across. Originated in China.

Gubernatica. Paillet, 1844, In Lemaire, p.153. Orthographic error for **Gubernativa.**

Gubernatina. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.94. Orthographic error for **Gubernativa.**

Gubermantina. Hazlewood Nursery Catalogue, 1947, p.8. Orthographic error for **Gubernativa.**

Gubernativa. *(C.japonica),* Berlèse, 1840, *Monographie,* ed.2, pp.159, 160, 232: Leaves broad, long-oval, numerous, of a deep green; buds large, scales yellowish green; Flower to 13.5 cm across, full, cherry-red, crimson lake; corolla a rosette of the form of a dahlia; petals well imbricated from the circumferece to the centre, width over 2.7 cm, deeply notched at the apex, reflexed here and there; the petals at the centre, to the number of 2 or 3, are a little crêped and reflexed. Originated in Italy by Mariani. Orthographic errors: 'Gobermantina', 'Gobernativa', 'Governativa', 'Gubermantina', 'Gubernatica', 'Gobermantina', 'Gubernatina', 'Governative'. Synonym: 'Erecta'.

Gubijin. (Field Poppy), *(C.japonica),* Andoh, 1971, *Tsubaki Meika no Shôkai to Saibai,* pl.199, pp.64, 214: Medium sized, pink, open, peony form with irregular, short stamens clustering amongst erect centre petals. Large outer petals, notched at the apex. Leaves obovate, acuminate with fine serrations, lustrous, light green. See colour photo & description, Seibundô Shinkôsha, 1979, *Senchinshû,* pp.49, 212. Originated in Kansai District, Japan. Many of this cultivar are seen in Yoshino Park, Kagoshima Prefecture. Discovered and named by Yoshiaki Andoh at a private family in Kyûshû.

Guchengbao Meng. Gao, Jiyin, Ltr, 22nd August 1994. Chinese synonym for Nuccio's *C.reticulata* hybrid **Dream Castle.** Later changed to 'Mengcheng'.

Gudesen. Gao, Jiyin, Ltr, 5th August, 1992. Chinese synonym for USA *C.reticulata* hybrid **Dick Goodson.**

Guellia. *(C.japonica),* Verschaffelt, 1844-1845, Catalogue, p.25. Originated in Italy. No description. (Believed extinct).

Guerneria. *(C.japonica), Jardim Portuense,* 1844, April, No.7, p.105; Beautiful flower, pink with white stripes, and some petals semi-bordered with the same colour; opens regularly; it is commonly known as 'Imperial', or 'Guerner's'. Obtained by Mr. G. Guerner, Porto, Portugal.

Guernsey Beauty. *(C.japonica),* Lort-Phillips, 1964, *New Zealand Camellia Bulletin,* vol.III, No.5, p.5. No description. Originated in the Channel Isles. No valid listing located.

Guerriera. *(C.japonica),* Verschaffelt, 1859, *Nouvelle Iconographie,* Book X, pl.IV: Remarkable amongst the perfections by the amplitude of its petals, of medium size and bright pink; the

rounded petals are scarcely emarginate and regularly imbricated. Sent from Italy by Conte B. Lechi, Brescia in 1856. Orthographic error: 'Gurriera'.

Guest of Honor. *(C.japonica),* Thompson, 1953, *American Camellia Yearbook,* p.76: A 13 cm hemisphere of salmon pink, composed of evenly spaced, medium sized petals, standing out individually with stamens interspersed. It is like **General George Patton** in appearance. A seedling of 'Lotus'. (**Gauntlettii**) originated by Harvey F. Short, Ramona, California, USA. Sport: **Guest of Honor Variegated.** Orthographic variant: 'Guest of Honour. Received the RHS, "Award of Merit" in 1967. *American Camellia Yearbook,* 1965, Reg. No.724. See black and white photo, p.97, Hertrich, 1959, *Camellias in the Huntington Gardens,* vol.lII. Chinese synonym: 'Zhubin'.

Guest of Honor Variegated. *(C.japonica),* SCCS., 1960, *Camellia Nomenclature,* p.58, as 'Guest of Honor Var.': A virus variegated form of **Guest of Honor** - Salmon pink blotched white. Originated in USA.

Guest of Honour. Hillier Nursery Catalogue, 1971. Orthographic variant for **Guest of Honor.**

Guest Officer. Yang, 1965, *Camellias of Taiwan.* Synonym for 'Binsao'.

Guest Star. *(C.japonica), American Camellia Yearbook,* 1974, vol.II, p.233, Reg. No.1343: A 7 years old chance seedling that first bloomed 1970. Originated by J.R. Moore, Hampton, Virginia, USA. Plant growth is medium and dense with dark green leaves, 10.5 cm long x 4 cm wide. The formal double flower, similar to **Ella Ward Parsons,** is pink, shading to white. Average size is 9.5 cm across x 3.8 cm deep with numerous petals. Blooms mid-season to late.

Guilio Nuccio. *(C.japonica),* Tourje, 1955, *American Camellia Yearbook,* p.36: A huge flower, 13-15 cm across. It is a semi-double, 7.5 cm deep with 12-15 petals, including 3-5 rabbit ears. The colour is coral rose which lightens towards the edge of the petals. Early to mid-season flowering. Sports: **Guilio Nuccio Fimbriated, Guilio Nuccio Variegated, Guilio Nuccio Fimbriated Variegated, Guilio Nuccio Pink, Rare Encounter.** This cultivar received "The Margarete Hertrich Award" in 1956; the "John Illges Award" in 1958 and both the "National Hall of Fame Award" and the "William E. Woodroof, Hall of Fame Award" in 1978. See colour photos: *American Camellia Yearbook,* 1957 facing p.208 and Macoboy, 1981, *The Colour Dictionary of Camellia,* p.92. Orthographic errors: 'Giulio Nuccio', 'Guillio Nuccio', 'Guillio Nucco'. It is a seedling of the fishtail camellia **Mermaid.** *American Camellia Yearbook,* 1959, Reg. No.384. Chinese synonym 'Da Niuxi'ao'.

Guilio Nuccio Fimb. Stewart's Florist & Nursery Catalogue, 1964, p.2. Abbreviation for **Guilio Nuccio Fimbriated.**

Guilio Nuccio Fimbriated. *(C.japonica), American Camellia Yearbook,* 1964, colour plate facing p.52: A sport of 'Guilio Nuccio' with prominent, thickened, fimbriated petals. First observed 1960. *American Camellia Yearbook,* 1965, Reg. No.749. Originated by Ferol Zerkowsky, Slidell, Louisiana, USA. See colour photo, front cover, SCCS, 1964, *The Camellia Review,* vol.25, No.6. Sport: **Guilio Nuccio Fimbriated Variegated.** Chinese synonym: 'Chiban Guliao'.

Guilio Nuccio Fimbriated Variegated. *(C.japonica),* Stewart, 1967, ACS., *The Camellia Journal,* vol.22, No.4, p.20 as 'Guilio Nuccio Fimbriated Var.': A virus variegated form of **Guilio Nuccio Fimbriated** - Coral Rose blotched with white. Originated in USA. See clour photo: *New Zealand Camellia Bulletin,* 1982, vol.XII, No.6, between pp.16-17.

Guilio Nuccio Fimbrie. Thoby et al., 1988, *Tsubaki, A Propos de Camellia-,* p.46. Orthographic variant for **Guilio Nuccio Fimbriated.**

Guilio Nuccio Hirano. *(C.japonica), Camellias,* Y.C. Shen, 2009, p. 57 with colour photo; A form of **Guilio Nuccio** with genetically variegated leaves held at Nuccio's Nurseries. Dark green leaves with irregular bright gold splashes.

Guilio Nuccio McVey's Strain. Lattin, 1968, SCCS., *The Camellia Review,* Nov., p.7. Synonym for **Guilio Nuccio Variegated.**

Guilio Nuccio Pink. *(C.japonica), American Camellia Yearbook,* 1974, p.170, Reg. No.1284: A sport of **Guilio Nuccio.** Colour soft pink as in **Faith.** Large to very large semi-double with rabbit ears. Plant habit same as parent. Originated by Dr Mervin B. Wine, Thomasville, Georgia, USA.

Guilio Nuccio Special. Trues Camellias, 1961, ACS., *The Camellia Journal,* vol.12, No.4, p.41. Synonym for **Guilio Nuccio Variegated.**

Guilio Nuccio Supreme. Cannon, 1967, ACS., *The Camellia Journal,* vol.22, No.1. **Synonym for Guilio Nuccio Variegated.**

Guilio Nuccio Variegata. Hillebrand Nursery Catalogue, 1976. Illegal variant for **Guilio Nuccio Variegated.**

Guilio Nuccio Variegated. *(C.japonica),* Wylam, 1957, *American Camellia Yearbook,* p.27: A vividly variegated form of **Guilio Nuccio** secured last season by Nuccio's Nurseries by grafting. The white variegation is sharp and clear. Originated by Nuccio's Nurseries, Altadena, California, USA. As this variegated form is virus induced it is not stable and a number of names given to special forms have been reduced to synonyms, i.e. 'Guilio Nuccio Special', 'Guilio Nuccio Supreme', 'Guilio Nuccio McVey's Strain'. See colour photo, front cover, SCCS, 1979, *The Camellia Review,* vol.40, No.5 and on the front page ACS, 1965, *The Camellia Journal,* vol.21, No.1. Chinese synonym: 'Wuban Daniuxiao', later changed to 'Fuse Da Niuxi'ao'.

Guillanna. Peer, 1956, *American Camellia Yearbook,* p.56. Orthographic error for **Guillaume IV.**

Guillaume II. Verschaffelt Catalogue, No.50, 1844, p.20.. Probably meant for **Guillaume III,** listed by Verschaffelt, 1852 and many others.

Guillaume III. *(C.japonica),* Verschaffelt, 1852, *Nouvelle Iconographie,* Book VI, pl.IV. Originated from seed in Belgium, this camellia bloomed for the first time in 1850. The blossoms are amongst the largest, being not less than 13 cm in diamter. The crimson, cherry red colour is uniform. The very numerous petals are spread out, oval-lanceolate and delicately lobulate at the summit.

Guillaume IV. *(C.japonica),* Trillon, Le Mans Nursery Catalogue, 1843, p.6. No description. Berlèse, 1845, *Monographie,* ed.3, p.217: Shrub thickset, well furnished; leaves average, long-oval, acuminate, lightly serrate, of a deep green. Flowers, 9-10 cm across, double, rose form, of a deep red, imbricated with petal rows separated. Originated in Belgium. Orthographic variant: 'Guillaume II'. Orthographic error: 'Guillanna'.

Guillaume Tell. *(C.japonica),* van Houtte Catalogue, 1848, 33:15: Carmine red with white lines at the centre of each petal, perfectly imbricated...three outside rows of very bright pink, the other rows up to the centre are a softer pink, each petal having a wide white line. Originated by Baumann, Bollweiller. Orthographic variants: 'Guglielmo Tell', 'Guillome Tell', 'Guillermo Tell'.

Guixia. Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.15, 25. Synonym for **Captain Rawes.** Different reading: 'Kuei-hsia'. Translation: 'Returning Cloud'.

Guiye Jinxin. (Osmanthus Leaf Gold Heart), *(C.japonica),* Chang, Shao Yun, 1987, *Camellias* from *Zhejiang,* p.47: Single, scarlet, 4-4.5 cm across, petals 5, notched, basally connate, campanulate. Stamens and pistil fertile; buds elliptic or ovate, pointed, green. Blooms mid-season to late. Leaves long-elliptic, small, dark green, glossy. Originated in China. See also, Gao & Zhuang, 1989, *The Camellia in China,* p.32, No.133.

Guiyemei. (Rosy Osmanthus Leaf), *(C.reticulata),* Gao & Zhuang, 1989, *The Camellia in China,* p.57, No.381, colour photo No.239: Medium size, red, semi-double of 15-16 large, rounded, reflexed petals in 2-3 rows, petals becoming erect towards the centre, a few small stamens. Leaves midgreen, 7-9 cm long x 3.8-4 cm wide, lanceolate, apices tapering acuminate. Originated in Tengchong, Yunnan Province, China.

Guiye Taohong. (Osmanthus Leaf Crimson), *(C.reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.13, 24. Feng et al., 1981, *Yunnan Shanchahua,* p.69 colour plate: Large spinel pink, open peony (Colour RHS.CC.54A), 13 cm in diameter, 22 petals in 4-5 rows. Leaves elliptic, blunt acuminate, matt mid-green, fine serrations, size 10 cm x 5.2 cm. Originated in Tengchong, Yunnan, China. Different reading: 'Kuei-yeh T'ao-hung'. Synonyms: 'Osmanthus Leaf Crimson', 'Osmanthus Leaf Spinel Pink'.

Guiye Tongcao. *(C.reticulata) Fine Camellia Garden, Chuxiong,* 2012, p.25 with colour photo. No details. Photo shows a semi-double, pink, with some darker and lighter pink areas visible. Small central group of stamens.

Guiye Yanghong . (Osmanthus Leaf Carmine), *(C. reticulata),* Yü & Bartholomew, 1980, *American Camellia Yearbook,* p.25, 14; Feng et al., 1986, *Yunnan Camellias* of *China,* p.57, colour plate: Leaves oblong-ovate to elliptic-ovate, apices acuminate and recurved, bases cuneate,

margins slightly undulate, 6-10 cm long, 2-5 cm wide. Flowers pure red (RHS.CC.53C), diameter 12-14 cm. Petals imbricately arranged, 20-22 in 4-5 whorls, reclinate in a V-shape. Stamens about 40, inconspicuously divided into several groups placed in the flower centre, partly petaloid. Pistils rudimentary. This cultivar has abundant axillary flower buds. The flowering season is early. This is a new cultivar selected by researchers of the Kunming Botanical Gardens. Different reading: 'Kuei-yeh Yang-hung'. Synonym: 'Osmanthus Leaf Carmine'.

Guiye Yinhong. (Osmanthus Leaf Silver Red), *(C.reticulata),* Fang, 1930, *Diannan Chahua Xiaozhi:* The leaves are narrow and long like the osmanthus and the petals are simple. Gao & Zhuang, 1989, *The Camellia in China,* p.61, No.410, colour photo, No.267: Large, open peony form, 9-11 cm across with 20-25 petals, broad, rounded, a little emarginate, red. Leaves 6-9 cm long x 3-3.5 cm wide, mid-green. Originated in Yunnan, China. Different reading: 'Kuei-yeh Yin-hung'.

Gujinlan. Gao, Jiyin, 2007, *The Identification....Outstanding Camellias,* p.409; Chinese synonym for the Japan *C.vernalis* **Kokinran.**

Gujô-otome. ('Otome' from Gujô), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.49, colour photo, p.212, description: Small flower, light bluish red with venation of a deeper colour, normal double, 28-32 petals, outer petals rounded, becoming pointed towards the centre, rare sterile stamens at centre when fully open. Leaves elliptic, yellowish green, medium serrations, prominent venation. Early blooming. Dwarf growth. Originated in the Chûbu District, Japan.

Gulf Breeze. *(C.sasanqua),* Harris' Longview Nursery Retail Price List, 1955-1956; *American Camellia Yearbook,* 1957, p.300, Reg. No.290: A 10 years old chance seedling, originated by K. Sawada, Mobile, Alabama, USA. First bloomed in 1951. Plant growth is upright, dense and medium in rate with very dark green, thick textured leaves 4 cm x 2.8 cm. The flowers are very large singles, similar to 'Papaver', 10-11 cm across x 2.8 cm deep with 7-8 petals. Colour phlox pink to carmine rose. Early flowering.

Gulf Coast Flapper. *(C.sasanqua),* Fendig, 1953, *American Camellia Catalogue:* White variegated single red, early blooming. Originated in the USA.

Gulf Glory. *(C.sasanqua),* Overlook Nursery Catalogue, 1948-1949, p.36: Single, large size, 8-10 cm across. Pure white, blooming from October to December. Upright but somewhat spreading. Sharp, 1948, *Camellias Illustrated,* black and white photo, p.62: White, very large single, petals wedge shaped, creped and notched at the apex. Stamens flare out in a sunburst fashion, filaments light yellow, anthers dark yellow. Pseudonym: 'Grandifora Alba'. Originated by K. Sawada, Mobile, Alabama, USA from seed of unknown parents.

Gulf Park. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue:* A medium sized, white-variegated, incomplete double. The colour is predominantly white splashed with spirea-red. Flower form similar to **Gloire de Nantes.** Buds are light green, long and slender. Leaves light green, elliptic, 7.5 cm x 3.8 cm. Texture is thin, apex sharp and slender, veins prominent, serration shallow and medium. Plant habit open, spreading and slow in rate. Originated by Mr & Mrs T.S. Clower, Gulfport, Mississippi, USA from seed of the cross **Gloire de Nantes** x 'Herme'. (**Hikarugenji**). First bloomed 1943. *American Camellia Yearbook,* 1954, Reg. No.132.

Gulfport Purple. *(C.japonica),* Clower, 1950, *American Camellia Yearbook,* p.427. No description. Fendig, 1951, *American Camellia Catalogue,* with colour plate: Large crimson-madder with purple or blue flecks, irregular double, 10-12.5 cm across. The guard petals are 4 cm long and notched at the apex. In inner portion of the flower is a large ball of petals and petaloids. Buds are round with a blunt point, dark green and grey. Leaves dark green, oval, 9.5 cm x 5 cm. Apex cuspidate, thin texture, veins depressed, serrations fade out towards the base. Originated

by T.S. Clower, Gulfport, Mississippi, USA. First flowered 1948. *American Camellia Yearbook,* 1954, Reg. No.53. Sport: **Gulfport Purple Variegated.**

Gulfport Purple Variegated. *(C.aponica),* Mark S. Cannon Scion Catalogue, 1962, p.5 as 'Gulfport Purple Var.': A virus variegated form of **Gulfport Purple** - Crimson madder blotched with white. Originated in USA.

Gwavas. *(C.x williamsii),* Tregrehan Camellia Nursey, 1973: A hand pollinated cross by Gillian Carlyon, Cornwall, England of **J.C. Williams** x **The Mikado**. It varies from a formal double to peony form. Strong, upright grower, very late flowering. Dusty pink. Colour plate facing p.115, *American Camellia Yearbook,* 1976.

Gwen Pike. *(C.sasanqua),* ACRS., 1968, *Camellia News,* No.32, p.17, Reg. No.93: Originated at Ferguson's Nursery, N.S.W., Australia about 1925, parents unknown. It has a slow, dense, compact,

upright habit of growth. Flowers, 6 cm across, semi-double, shell-pink. Early to mid-season flowering. Leaves, dark green, 4 cm long x 1.6 cm wide. Chinese synonym 'Gewen'.

Gwen Washbourne. *(C.reticulata), New Zealand Camellia Bulletin,* 1974, Vol.VIII, No.6, p.46, Reg. No.90: A chance seedling of *C.reticulata,* grown by Mrs G. Washbourne, Morrinsville, New Zealand from seed distributed by the NZCS. It first flowered in 1969. The flower is large, (15-16 cm across) semi-double to open peony form with 18 petals and some rabbit ears. The colour is pinkish red. (RHS.CC.Red Group 52B with darker veins and gradually fading to 52C when fully open) Anthers are golden with cream filaments; the foliage dark green (12 cm x 5 cm) with fine serrations.

Gwenda. *(C.sasanqua).* C.Aust., *Camellia News,* Autumn 2006, No.160, p.12, Reg. No.564. Originated by Albert Raymond and Gwenda Norris, Capalaba, Qld, Australia. A chance seedling that first flowered in 1994. A loose peony, cup-shaped flower of 32 petals and petaloids, pale pink with lavender tonings, 9 cm across x 3.5 cm deep. Flowers freely, mid-season to late on an upright, medium growing plant. Leaves mid-green, ovate, serrate margins, 6 cm x 4 cm. Flowers shatter. Flowers last well.

Gwyneth Scott. *(C.reticulata), New Zealand Camellia Bulletin,* Mar.1991, Vol.XVII, No.1, p.47, Reg. No.289: A chance seedling of **Nuccio's Ruby;** originated by J.A. Hansen, Waikanae, New Zealand. It is 6 years old and first bloomed 1988. Leaves are 10 cm long x 5 cm wide and dark green. The plant is upright, with open growth and medium in rate. The semi-double to loose peony form blooms measure 14 cm across x 7 cm deep and have 22 petals with light pink filaments and gold anthers. The deep, glowing red blooms with upright, wavy petals, open midseason to late. Colour RHS.CC.46A.

Gwynne Walker. *(C.japonica), American Camellia Yearbook,* 1961, p.224, Reg. No.545: A 12 years old chance seedling that first bloomed 1965; originated by Mrs M.H. Walker, Lafayette, Louisiana, USA. Plant has a slow, spreading and dense growth with dark green leaves, 12.5 cm long x 7.5 cm wide. The single flowers, similar to 'Amabilis' **(Kamohonnami)** but larger, are red No.5 on Fischer's Colour Chart, with white filaments tipped with yellow anthers. They are 13-14 cm across and have 5 large petals and, occasionally, one or two petaloids. The flower has a trumpet of about 150 stamens. Blooms early to mid-season. Sport: **Gwynne Walker Variegated.**

Gwynne Walker Variegated. *(C.japonica)* Cannon, 1970, ACS., *The Camellia Journal,* vol.25, No.1 as 'Gwynne Walker Var.'. A virus variegated form of **Gwynne Walker** - Red blotched white. Originated in USA.

Ltd Catalogue, 1986-1987, A-479, p.10: Very faint pink, medium size, single with overlapping petals. Yokayama & Kirino, 1989, *Nihon no Chinka,* p.68, colour photo and description: Single, white, campanulate blooms with cylindrical stamen column. Flowers early to midseason. Medium size, buds faint pink. Leaves long oval, prominent venation, petiole slightly hairy, margins sharply serrate. A wild "Yabu-tsubaki" from Nagasaki Prefecture, Japan. Discovered by Meitoku Ôishi in 1976, named by Zaiki Kajikawa.

Gyokuhaku. (Jewelled Oak), Itô Ihei, 1733, *Chikinshô Furoku,* vol.III: Different reading for **Tamagashiwa-tsubaki.**

Gyokuhô. (Embrace Jewel), *(C.japonica), Encyclopedia of Camellias in Colour,* vol. II, 1978, pl.447, p.176: Small, anemone centered camellia with 5 light red guard petals surrounding a compact centre cushion of pinkish cream coloured, folded petaloids. Leaves dark green wavy, broad-oval, bluntly acute with shallow, sharp serrated margins. Late flowering. See colour photo and descriptions: Seibundô Shinkôsha, 1979, *Senchinshû,* pp.45, 211; also p.355, Yokoyama & Kirino, 1989, *Nihon no Chinka.* Originated in Ishikawa Prefecture, Japan.

Different reading: 'Gyokuhoh'. Resembles **Momoiro-bokuhan** but smaller than it. Raised by a private family in Takagoe Village, named and released by Takashi Shiota in 1970.

Gyokuhoh. Different reading for **Gyokuhô.**

Gyokumeika. Tashiro, 1841, *Kokon Yôrankô,* vol.344. Japanese group name for *C.sasanqua.* Chinese reading: 'Yuminghua', synonyms: 'Taitôka', 'Kaikôka', 'Chabai'.

Gyokuren. (Jewelled Lotus), *(C.japonica),* Taniguchi, 1912, *Chinka Kyôkan:* White, small, double. Originated in Japan.

Gyokuren. (Jewelled Lotus). *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.77 with colour photo; English translation p.52. Large, yellowish pink, single with cupped petals, yellowish centre. Somewhat spreading, slow growth. A cross between *C.reticulata* hybrid **Mouchang** and *C.nitidissima.* Named and released by Kazuo Yoshikawa in 1996.

Gyokuryoku. Different reading for **Tamamidori.**

Gyokusenshu. (Best Collection), *(C.sasanqua),* Satomi, 1958, *Nomenclature List of Sasanqua of Japan,* p.9: Carmine pink. Large single with petals incurved at the edge. Originated in Japan.

Gyokusui. Different reading for **Tamadare.**

Gyokusui. (Jewelled Water), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.45, colour photo and description: Medium size, white, open, campanulate single with 5-6 rounded, over-lapping, emarginate, somewhat crinkled petals with a central stamen cylinder, having white filaments, joined for the lower third, and yellow anthers. Blooms mid-season to late. Leaves dark green, elliptic, margins serrate. Originated in the Chûbu area, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.76 with colour photo; English translation p.51. A cross between **Chûbu-yobukodori** and **Kamogawa**. Named and released by Minoru Satô in 1975.

Gyoku-un. (Jewelled Cloud), *(C.japonica),* Seibundô Shinkôsha, 1979, p.222: Red ground with white spots. A sport of **Shiratama-shibori.** Originated in the Kantô District, Japan.

Gyôkyô. (Echoes of Dawn), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.211: Medium size, irregular, tubular shape, with stripes of dark red on white. Flowers early to mid-season. Leaves ovate, hairy, rather undulate, folded at the midrib, fleshy, thick, dark green. Originated in Chûbu District, Japan. *Nippon Tsubaki - Sasanqua Meikan,* 1998, p.75 with colour photo; English translation p.50. A cross between *C.rusticana* **Azuma-shibori** and *C.japonica* **Shikainami-Nagoya.** Originated and named by Minoru Satô in 1974.

Gyôshû. (Autumn Dawn). *(C.japonica x C.sasanqua). Nagoya Camellia Society Bulletin,* No.25, 1992, p.17 and color plate p.57: Originated by Kôji Funakoshi, Nagoya Japan. A seedling of *C.japonica* **Takane-no-yuki** x *C.sasanqua* **Ôzora.** Medium sized, 9-10 cm across, single of 7 petals; white washed with bright pink and almost cylindrical stamens. Sasanqua type fragrance. Blooms mid-season. Small leaves and pubescent petioles.

Gyô-un. (Dawn Cloud), *(C.japonica),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.211: Light red graduations appear on a faint peach pink background. Single, campanulate form with central cylindrical stamen cluster. Large size. Early flowering. Leaf edges are somewhat curved outwards, thick. Plant habit is upright, vigorous with sideways spreading branches. A seedling of **Tanima-no-tsuru,** originated in Ishikawa Prefecture, Japan by Sizô Matsui in 1972.

Gyôsei. (Voice of Dawn), *(C.rusticana),* Seibundô Shinkôsha, 1979, *Senchinshû,* p.211: Soft red graduations on a pink background. Semi-double with overlapping petals, curved inwards. Large size and early flowering. Leaves oval to wide-oval, medium large, reticulate veining, coarse hair, concave. Plant habit upright and vigorous. A seedling of **Seiôbo** from Ishikawa, Japan. Originated and released by Sizô Matsui in 1975.

Gyôshû. (Autumn Dawn). *(C.japonica x C.sasanqua). Nagoya Camellia Society Bulletin,* No.25, 1992, p.17 and color plate p.57: Originated by Kôji Funakoshi, Nagoya Japan. A seedling of *C.japonica* **Takane-no-yuki** x *C.sasanqua* **Ôzora.** Medium sized, 9-10 cm across, single of 7 petals; white washed with bright pink and almost cylindrical stamens. Sasanqua type fragrance. Blooms mid-season. Small leaves and pubescent petioles.

Gyôzan. (Mountains at Dawn), *(C.japonica),* Watanabe, 1960, Kyôto Engei Kurabu, *Tsubaki Tokushû*, No,1, p.120; *Encyclopedia of Camellias in Colour,* vol.II, 1978, pl.426, p.170; Seibundô Shinkôsha, 1979, *Senchinshû,* p.45 colour photo, p.211, description: This camellia is a soft pink, with darker centre, peony to anemone form, with an outer row of guard petals; the centre full of twisted and folded petals and petaloids mixed with some stamens. Leaves, long-oval, medium large, curved, small serrations. Originated at Kurume, Fuku'oka Prefecture, Japan. The parents of this cultivar are the same as those for **Chikushi-no-homare,** which it resembles.

Gyozan-tsubaki. (Gyozan Camellia), *(C.japonica),* Yokoyama & Kirino, 1989, *Nihon no Chinka,* p.157, colour photo and description: Small size, scarlet, with a purplish cast, campanulate single with 7 petals, rounded, reflexed, in two rows with small, irregular, central stamen cluster with yellow, degenerate anthers, ovary hirsute. Blooms early to mid-season. Leaves medium small, flat, green, broad elliptic, apices blunt acuminate, margins shallowly serrate. Originated in Sanzen-in Temple, Ôara, Kyôto Prefecture, Japan. Released by Taki Ishii. Synonym: 'Sanzen-in-wabisuke'. Note: "Gyozan" was the old place name for Ôara, Kyôto City.

Gypsy. *(C.japonica),* SCCS.,1945, *Camellias,* p.17: Rose red rose form. Vigorous, compact, upright growth. Late blooming. Originated in USA by Doty & Doerner Nursery, Portland, Oregon. There is also a variegated form. See p.161. Hertrich, 1954, *Camellias in the Huntington Gardens,* vol.I. for black and white photo. Synonym: 'Gipsy'. Synonym: 'Long's Purple Dawn'.

Gypsy Caravan. *(C.japonica), American Camellia Yearbook,* 1948, p.170, Parentage unknown. Medium to large flower of a medium pink ground with deep carmine streaks through the petals. First flowered 1947. Originated by Fruitland Nurseries, Augusta, Georgia, USA.

Gypsy Fair. Hazlewood & Jessep, 1972, *Checklist - Camellia Cultivars from Nursery Catalogues,* p.95. Orthographic eror for **Gypsy Flair.**

Gypsy Flair. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue,* Red. Semi-double, early. SCCS, 1954, *The Camellia. Its Culture and Nomenclature:* Ruby red. Medium large, semi-double with smaller centre petals. Medium, bushy growth. Mid-season flowering. Originated in USA. Orthographic error: 'Gypsy Fair'.

Gypsy Lights. (*C.reticulata* hybrid), Heartwood Nursery, Seedling List 2009; A 7.5 cm diameter, single, white with pink blush, profuse. Strong, upright, well branched habit, self grooming. {*C.pitardii* var *yunnanica* x [**Dataohong** 'Crimson Robe' x (**Dataohong** 'Crimson Robe' x *C.fraterna*)]}. Originated by Daniel Charvet, Fort Bragg, Calif., USA (HW9619).

Gypsy Rose. *(C.japonica),* ACRS., 1980, *Camellia News,* No.74, p.24, Reg. No.225: Originated by E.R. Sebire, Wandin North, Victoria, Australia. Seed parent **Lady Kay**. First bloomed 1974. Plant habit, vigorous, open with dark green leaves, lanceolate, 11 cm long x 5 cm wide. Flowers, 10 cm across, formal double, red fimbriated petals. Blooms mid-season to late. Chinese synonym: 'Jipusai Meigui'.

Gypsy Variegated. *(C.japonica),* Fendig, 1953, *American Camellia Catalogue*-: A virus variegated form of **Gypsy** - Dark red blotched white. Originated in the USA.
